

- |   |  |
|---|--|
| 1 ion binding                             | 19 enzyme binding                                |
| 2 DNA binding                             | 20 transcription factor binding                  |
| 3 oxidoreductase activity                 | 21 lyase activity                                |
| 4 transmembrane transporter activity      | 22 transferase activity                          |
| 5 RNA binding                             | 23 helicase activity                             |
| 6 peptidase activity                      | 24 protein binding transcription factor activity |
| 7 kinase activity                         | 25 isomerase activity                            |
| nucleic acid binding transcription factor |  |
| 8 activity                                | 26 methyltransferase activity                    |
| 9 ATPase activity                         | 27 unfolded protein binding                      |
| 10 enzyme regulator activity              | 28 hydrolase activity                            |
| 11 signal transducer activity             | 29 hydrolase activity                            |
| 12 structural molecule activity           | 30 nucleotidyltransferase activity               |
| 13 ligase activity                        | 31 nuclease activity                             |
| 14 cytoskeletal protein binding           | 32 transferase activity                          |
| 15 lipid binding                          | 33 protein transporter activity                  |
| 16 phosphatase activity                   | 34 protein binding                               |
| 17 transferase activity                   | 35 histone binding                               |
| 18 GTPase activity                        |  |
