

## Step: 0

Consider a collection of networks  $G_i$

## Step:1

Extract summary statistics  $x_{ij}$

## Step:2

Construct feature vectors  $X_i = [x_{ij}]$

## Step:3a

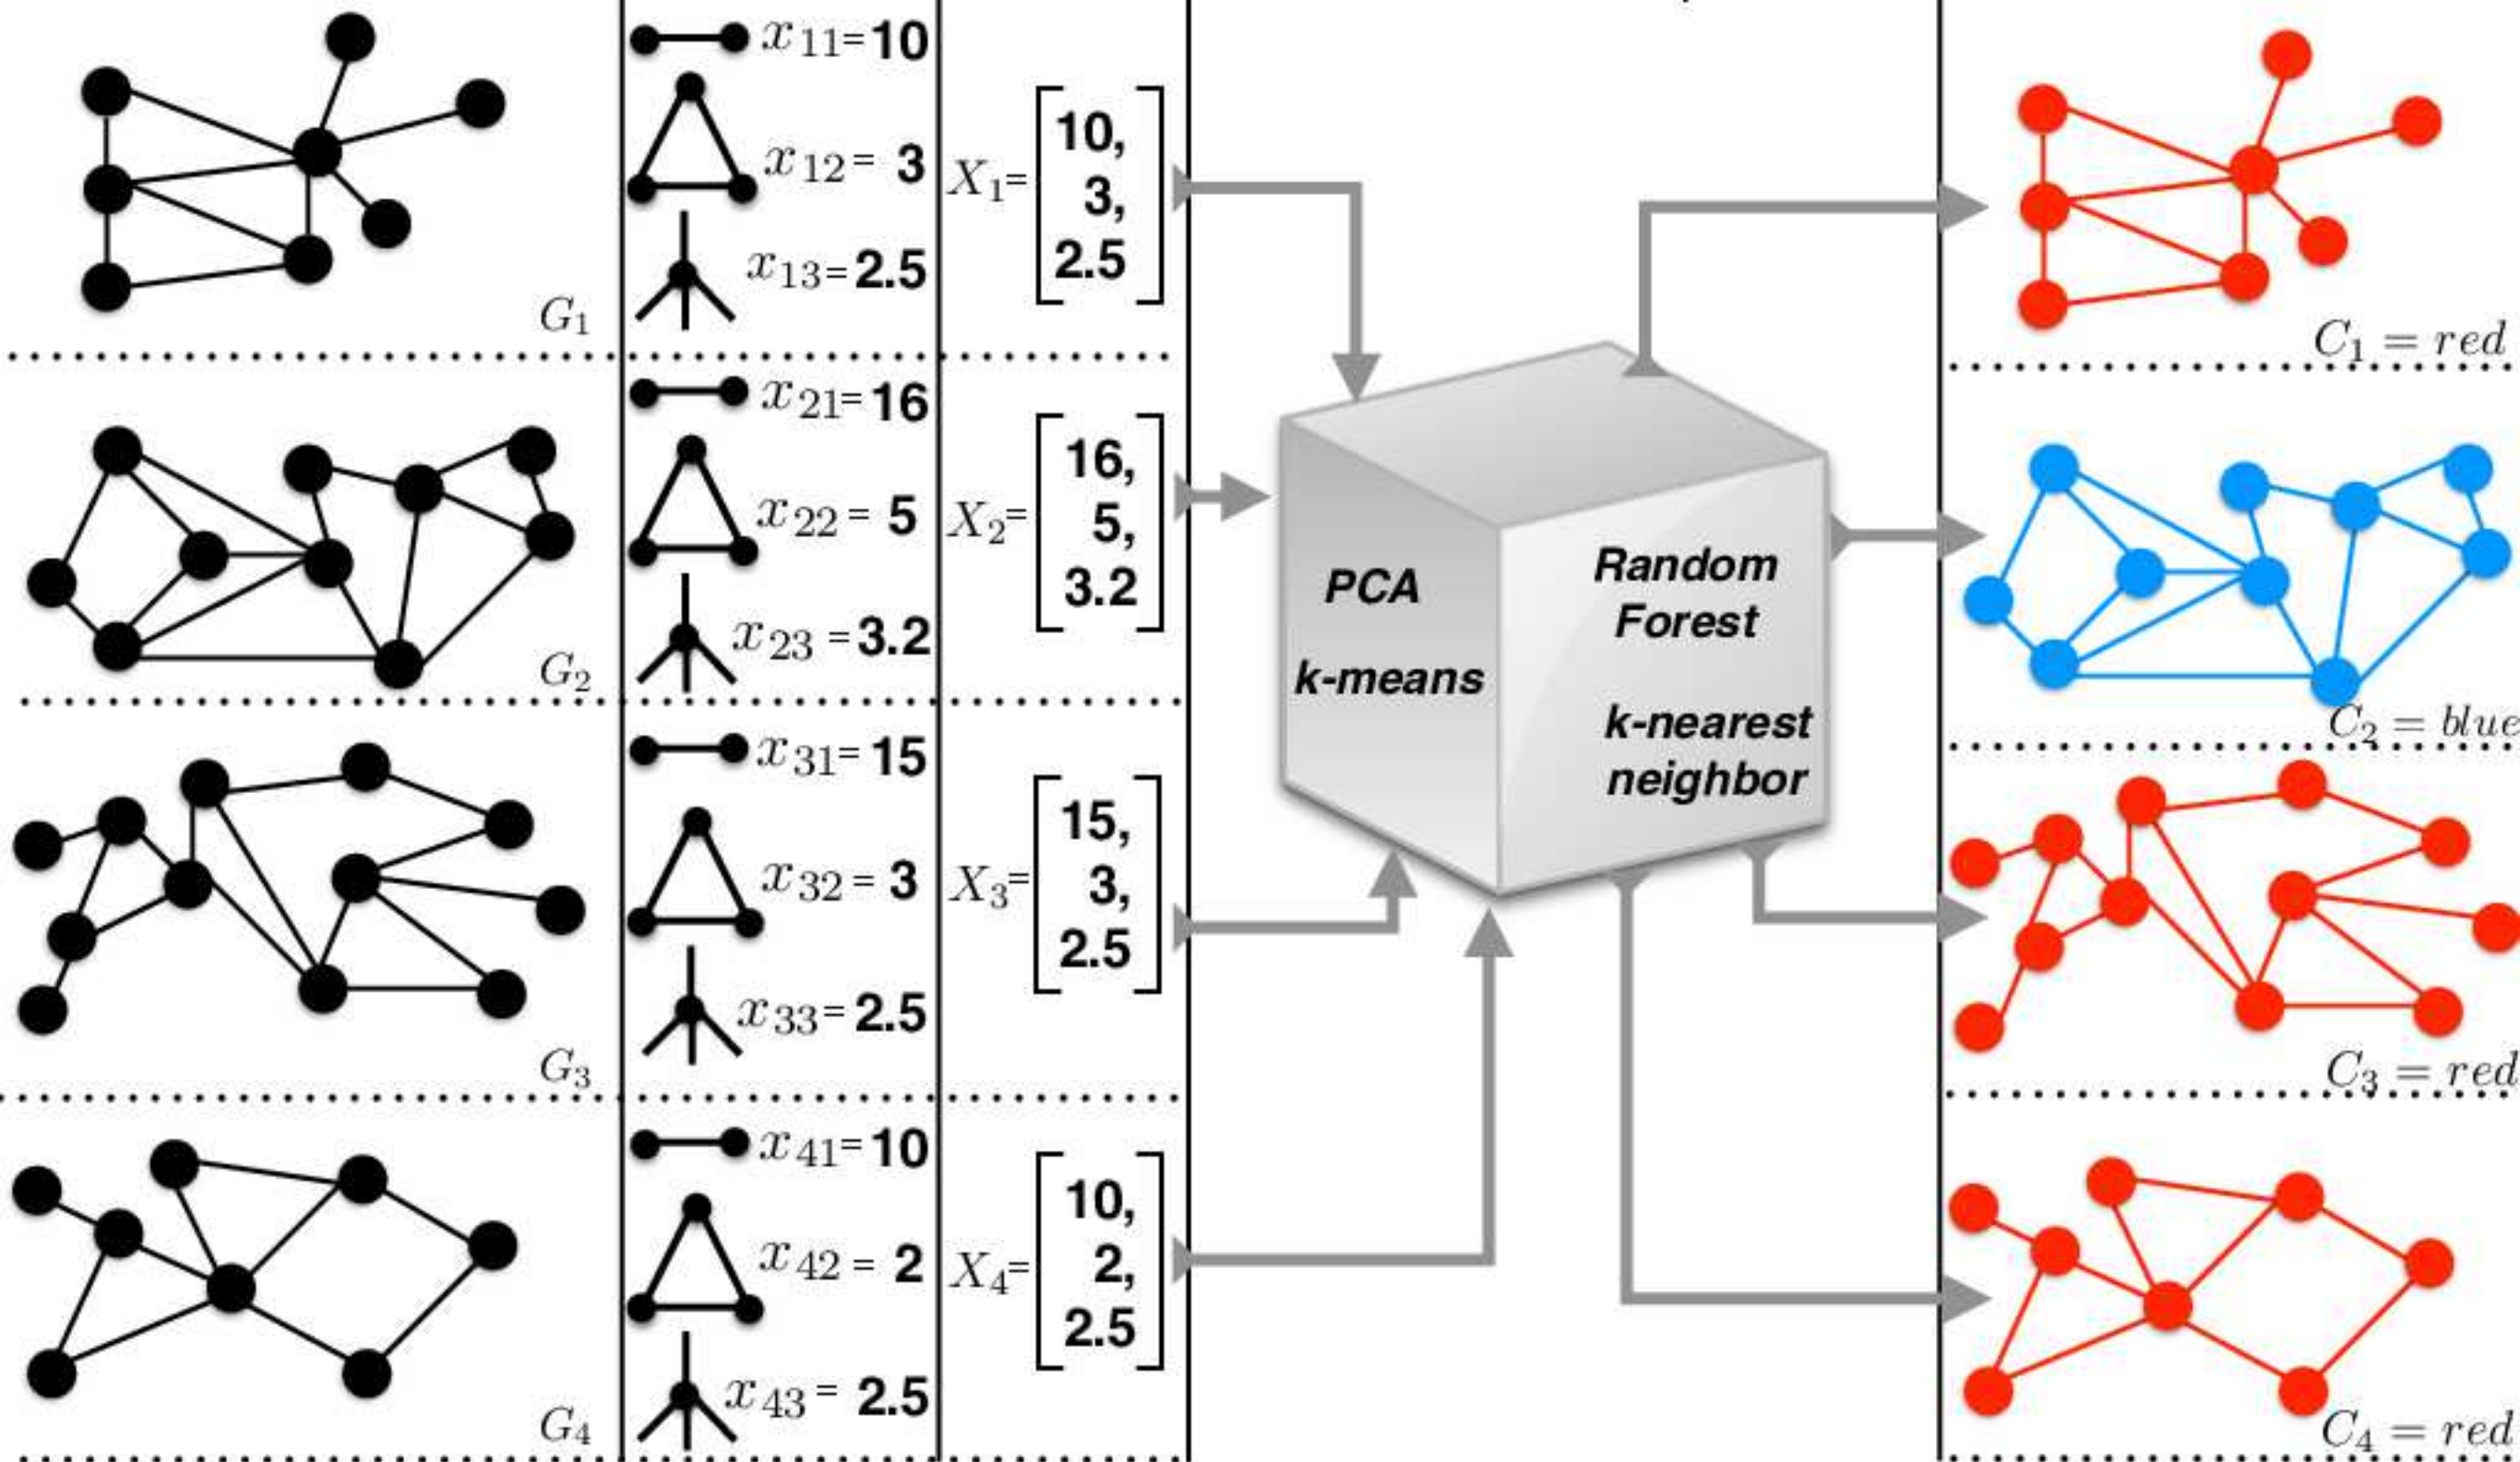

Input feature vectors into a classifier

## Step:3b

Classifier assigns a class to each feature vector as output

## Step:4

Networks Classified into different classes  $C_i$  (here in two classes red and blue)

### Symbols

●—● Number of edges

▲ Number of triangles

⋄ Average degree
