²Microsoft Research, Redmond, Washington

March 2018

Table 1: Hyper-parameters used in our experiments. d_1 - dropout rate between layers 3 and 4, d_2 - dropout rate between layers 6 and 7, d_3 - dropout rate between layers 8 and 9, n_8 - number of hidden units in layer 8, and N_e - number of training epochs. Note that N_e includes the 16 extra epochs for ensemble learning over checkpoints

RGB Video I						
Experiments		Hyper-parameters				
		d_1	d_2	d_3	n_8	N_e
<hr/>						
<i>HEART RATE</i>						
Participant-dependent	Motion-only CNN	0.25	0.25	0.50	128	48
	Stacked CNN	0.25	0.25	0.50	128	48
	CAN	0.50	0.50	0.25	128	48
