Foreword vii

Chapter 1. THE BASIC PHYSICAL CONCEPTS AND MODELS OF SUBTERRANEAN FLUID MECHANICS 1

1.1. Natural Reservoirs. Porous Medium 1
1.2. The Seepage Flow Velocity. Continuity Equation 7
1.3. The Seepage Flow Law for a Homogeneous Newtonian Fluid 9
1.4. The Constitutive Equations 15
1.5. Incompressible Fluid Flow Through Nondeformable Porous Media 21
1.6. Flows of Slightly Compressible Fluid in an Elastic Porous Medium. The Elastic Seepage Drive 28
1.7. Gas Flow Through an Incompressible Porous Medium 31
1.8. Flows of Homogeneous Fluids in Slightly Deformable Fractured Porous Media 34
1.9. The Flows of Non-Newtonian Fluids Through Nondeformable Porous Media 44
1.10. Flow of a Slightly Compressible Fluid Through an Elasto-Plastic Porous Medium. The Elasto-Plastic Drive 52

Chapter 2. CLASSICAL LINEAR MODELS OF THE FLOW OF A HOMOGENEOUS FLUID THROUGH POROUS MEDIA 57

2.1. Simplest Steady Flows 57
2.2. Qualitative Methods in the Theory of Confined Flows of an Incompressible Fluid Through a Nondeformable Porous Medium 66
2.3. Rectilinear Parallel Flow for the Elastic Drive 76
2.4. Axisymmetric Flow and Well Interference for the Elastic Drive 82
2.5. Some Special Problems of the Elastic Drive 89
2.6. Inverse Problems of the Elastic Drive Theory 100
2.7. The Approximate Analytical Solutions of Elastic Drive Problems 110

Chapter 3. CLASSICAL NONLINEAR MODELS OF HOMOGENEOUS FLUID FLOW THROUGH POROUS MEDIA 126

3.1. General Properties of Nonlinear Models. Invariant Solutions. Self-Similar Gently Sloping Unconfined Flows at Zero Initial Fluid Level 126
3.2. Gently Sloping Unconfined Flows with Zero Initial Fluid Levels: Limiting Self-Similar Solutions. Axisymmetric Self-Similar Solutions 141

3.3. Self-Similar Fluid Flows with Nonzero Initial Fluid Level or Gas Pressure 149
3.4. Some Special Self-Similar Flows 163
3.5. Groundwater Mound Spreading Over an Impervious Bed 176

Chapter 4. NONCLASSICAL MODELS OF THE FLOW OF HOMOGENEOUS FLUIDS 187

4.1. Basic Problems of Unsteady Homogeneous Fluid Flow in Fractured Porous or Layered Reservoirs 187
4.2. Steady Flow of Non-Newtonian Fluids Through Porous Media 197
4.3. Unsteady Flow of Non-Newtonian Fluids Through Porous Media 212
4.4. Basic Problems of Fluid Flow Through Elasto-Plastic Porous Media 223

Chapter 5. TWO-PHASE FLOW AND WATER-OIL DISPLACEMENT 230

5.1. The Basic Concepts of the Theory of Two-Phase Flow Through Porous Media 230
5.2. Large-Scale Structure of Two-Phase Flow. The Buckley–Leverett Theory 247
5.3. Small-Scale Structure of Two-Phase Flow. Stabilized Zone. Capillary Phenomena in Porous Media 262
5.4. Two-Phase Unsteady-State Flow and Immiscible Displacement in Double-Porosity Media 286
5.5. Stability of the Displacement of Immiscible Fluids 296
5.6. The Displacement of Non-Newtonian Fluids by Water. The Effect of the Viscoplastic Properties of Oil on Recovery 306

Chapter 6. PHYSICO-CHEMICAL HYDRODYNAMICS OF ENHANCED OIL RECOVERY 320

6.1. Heat and Mass Transfer in Porous Media 321
6.2. The Displacement of Oil by Solutions of Active Additives (Mathematical Theory of Physico-Chemical Flooding) 338
6.3. Effects of Diffusion and Nonequilibrium on Oil Recovery by Solutions of Active Additives 361
