

DIABETES MELLITUS

Case Definition Type: Health Service Contact Prevalence Incidence Rate Lifetime Prevalence

Case Definition:

- One or more hospitalizations with a diabetes mellitus diagnostic code, OR
- Two or more practitioner visits with a diabetes mellitus diagnostic code within one year, OR
- Two or more insulin prescriptions within one year, OR
- Two or more confirmed* antihyperglycemic (including metformin) prescriptions within one year, OR
- One insulin and one or more confirmed* antihyperglycemic (including metformin) prescription within one year.

* A confirmed prescription has one practitioner visit with a diabetes mellitus diagnostic code within one year of the prescription.

Update to CDR V2022/23:

All diabetes medications except insulin now require confirmation of being prescribed within one year of a practitioner visit with a diabetes mellitus diagnostic code to be considered in the diabetes case detection algorithm. This prevents off-label use of diabetes medications from being used to identify cases. This change is applied across all years displayed on the dashboard, however rates from more recent years may appear lower if compared to data obtained from past dashboard updates.

Signed-off BC Case Definition: Yes - V2022 No

Notes: Cases of suspected gestational diabetes in women aged 10-54 years are not included by excluding hospitalizations, practitioner claims or prescriptions within the time period 120 days preceding or 180 days after hospital records containing birth-related diagnostic codes (see gestational diabetes exclusion codes below).

Age Restriction: 1+ years
