

Data-Driven 3D Primitives for Single Image Understanding

Additional Primitive Examples

David F. Fouhey, Abhinav Gupta, Martial Hebert

In this document, we show primitives organized thematically by row and selected to have a fixed number of each type of primitive. In order: two rows of objects; two rows of complex primitives, one row of vertical line primitives; six rows of two-plane intersections; two rows of vertical single-plane primitives; one row of horizontal single-plane primitives.
