

## October 2006 – Volume 86, Number 10

### iii. Director's Message

### iv. Taking Account

#### 1. GDP and the Economy: Final Estimates for the Second Quarter of 2006

Real GDP increased 2.6 percent after increasing 5.6 percent. The deceleration reflected downturns in consumer spending for durable goods, in business investment in equipment and software, and in Federal Government spending and a deceleration in residential investment.

#### 6. Newly Available NIPA Tables

Government current and capital expenditures by function, the relationship between NIPA Federal Government spending and Federal budget receipts and outlays and between NIPA state and local government spending and Census Bureau data, and seasonally unadjusted estimates.

#### 14. Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade for the Fourth Quarter of 2002 to the Second Quarter of 2006

The estimates, including the estimates of inventories for manufacturing by stage of fabrication, have been updated to incorporate the results of the annual NIPA revision.

#### 18. U.S. International Services: Cross-Border Trade in 2005 and Sales Through Affiliates in 2004

U.S. exports of services increased to \$360.5 billion, and U.S. imports increased to \$280.6 billion. Sales of services abroad by foreign affiliates of U.S. companies increased to \$489.6 billion, and U.S. sales by U.S. affiliates of foreign companies increased to \$382.8 billion.

#### 75. U.S. International Transactions: Second Quarter of 2006

The U.S. current-account deficit increased \$5.2 billion to \$218.4 billion, mainly reflecting increases in the deficits on goods and on income. Net unilateral current transfers to foreigners increased. In the financial account, net financial flows decreased \$17.5 billion to \$154.1 billion.

#### 110. State Personal Income: Second Quarter of 2006 and Revised Estimates for 2003-2005 and the First Quarter of 2006

Personal income growth for the Nation, slowed, increasing 1.7 percent after increasing 2.2 percent in the first quarter of 2006. Growth in all regions except the Great Lakes region slowed.

## BEA Current and Historical Data

### D-2. National Data

### D-58. International Data

### D-70. Regional Data

### D-81. Appendixes

### Looking Ahead . . .

*U.S. Direct Investment Abroad.* Preliminary results from the 2004 benchmark survey that update, and provide additional data for, the annual series on the operations of U.S. multinational companies will be published in the November SURVEY.

*An R&D Satellite Account.* BEA's new research and development account estimates R&D activity and its impact on the economy. An article in the November SURVEY will introduce the account.

## **Director's Message**

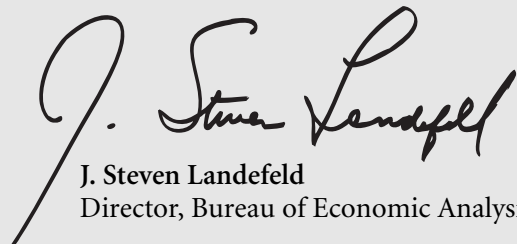

Toward the end of every fiscal year, BEA undertakes a Bureau-wide assessment of our progress toward meeting the goals set forth in our strategic plan.

For the 2006 fiscal year, we met all of our major goals for enhancing BEA's estimates. In September, we released preliminary estimates of the new R&D satellite account. We've expanded the geographic detail for our international transactions accounts. And we incorporated more real-time data into our estimates of consumer spending and investment. This is only a partial list of accomplishments—we'll keep you updated about further enhancements.

In this month's SURVEY OF CURRENT BUSINESS, several articles highlight recent improvements or planned improvements to our accounts.

The article on updated state personal income estimates notes that BEA released 1990–2000 estimates of earnings by state using the 2002 North American Industry Classification System (NAICS). This release meets an important BEA strategic plan goal to extend the NAICS-based state income estimates back to 1990. The article also includes a box that explains BEA's new methodology for estimating quarterly growth in wages and salaries.

The article on updated international services transactions estimates includes a box that provides an overview of BEA's efforts to improve our estimates of international sales of services through affiliates of multinational firms. Improvements in three areas are discussed: Insurance services, wholesale and retail trade services, and financial services. We'll provide a more detailed discussion of these topics in an upcoming SURVEY article.

J. Steven Landefeld  
Director, Bureau of Economic Analysis

## Taking Account...

### BEA Releases Preliminary R&D Satellite Account

The Bureau of Economic Analysis (BEA) has released a new satellite account that estimates research and development (R&D) activity and its impact on the economy.

Satellite accounts do not affect BEA's core accounts, but they provide an opportunity to develop new methodologies and provide greater detail about specific economic activity, such as R&D. The release updates earlier BEA work on R&D from 1994, 2002, and 2005. The preliminary estimates show the following:

- Recognizing R&D as investment increases the level of GDP by an average of about 2½ percent between 1959 and 2002.
- R&D investment and the income arising from accumulated R&D capital accounted for about 4½ percent of growth in real GDP between 1959 and 2002. Between 1995 and 2002, its contribution to GDP growth rose to about 6½ percent. In comparison, business investment in commercial and other types of buildings accounted for just over 2 percent of real GDP growth between 1959 and 2002.
- Estimates of gross private domestic investment (in cur-

rent dollars) in 2002 would be more than 11 percent, or \$178 billion, higher after recognizing R&D as investment; the 2002 national saving rate would be 16 percent, instead of 14 percent.

The satellite account details how R&D, treated as investment rather than consumption, would affect BEA's measures of economic activity in various sectors, such as business, nonprofit institutions serving households, and general government. The proposed treatment of R&D is similar to BEA's treatment of software, which was capitalized in the national income and product accounts (NIPAS) in 1999.

An article about the new R&D account will be published in a later issue of the *SURVEY OF CURRENT BUSINESS*. In fall 2007, final R&D account estimates are scheduled to be released.

If resources allow, BEA plans to incorporate R&D into its input-output accounts in 2012 and into the NIPAs around 2013. These actions are expected to be recommended by the next version of the *System of National Accounts*, an internationally accepted standard for economic accounting practices.

The R&D satellite account was developed with the National Science Foundation, which pro-

vided the expenditure data used to produce the account, reviewed the estimates, and provided general guidance.

The R&D satellite account marks another step by BEA toward its goal of providing more data about the effect of intangibles on the economy. BEA is currently engaged in research about health care, human capital, and education. The new R&D account is available on BEA's Web site, <[www.bea.gov](http://www.bea.gov)>.

### BEA Holds Government Data Users Conference

BEA recently held a conference in Washington, DC, for users of its government statistics. Similar to a conference held in September 2004, this year's event gave users an opportunity to hear about BEA research, provide feedback on key issues, and discuss the future development of BEA's government accounts. BEA Director Steve Landefeld delivered opening remarks.

Topics discussed included government accounts and the revised *System of National Accounts*, government insurance programs, new territorial adjustments, and new perspectives on government pensions.

Material from the event is available on the BEA Web site at <[www.bea.gov/bea/dn/govt\\_conf\\_2006.htm](http://www.bea.gov/bea/dn/govt_conf_2006.htm)>.

# GDP and the Economy

## Final Estimates for the Second Quarter of 2006

REAL gross domestic product (GDP) slowed and inflation accelerated in the second quarter of 2006, according to the “final” estimates of the national income and product accounts (NIPAs).<sup>1</sup> Real GDP increased 2.6 percent, revised down 0.3 percentage point from the “preliminary” estimate, after a 5.6-percent increase in the first quarter (chart 1 and table 1).<sup>2</sup>

The slowdown primarily reflected downturns in consumer spending for durable goods, in business investment in equipment and software, and in Federal Government spending; decelerations in consumer spending for nondurable goods and in exports; and a larger decrease in residential fixed investment. The slowdown was softened somewhat by a deceleration in imports, an acceleration in consumer spending for services, and an upturn in inventory investment.<sup>3</sup>

- Corporate profits increased \$22.7 billion (1.4 percent at a quarterly rate) after increasing \$175.6 billion (12.6 percent) in the first quarter.
- Prices of goods and services purchased by U.S. residents increased 4.0 percent, following a 2.7-percent increase. The acceleration reflected a sharp upturn in energy prices that was muted somewhat by a deceleration in food prices.
- Real disposable personal income (DPI) increased 1.7 percent, 0.2 percentage point more than the “preliminary” estimate, following a 4.6-percent increase (revised).
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was -0.6 percent; in the first quarter, it was -0.3 percent.
- Real gross national product (GNP) increased 2.3 percent in the second quarter, compared with a 6.1-percent increase.

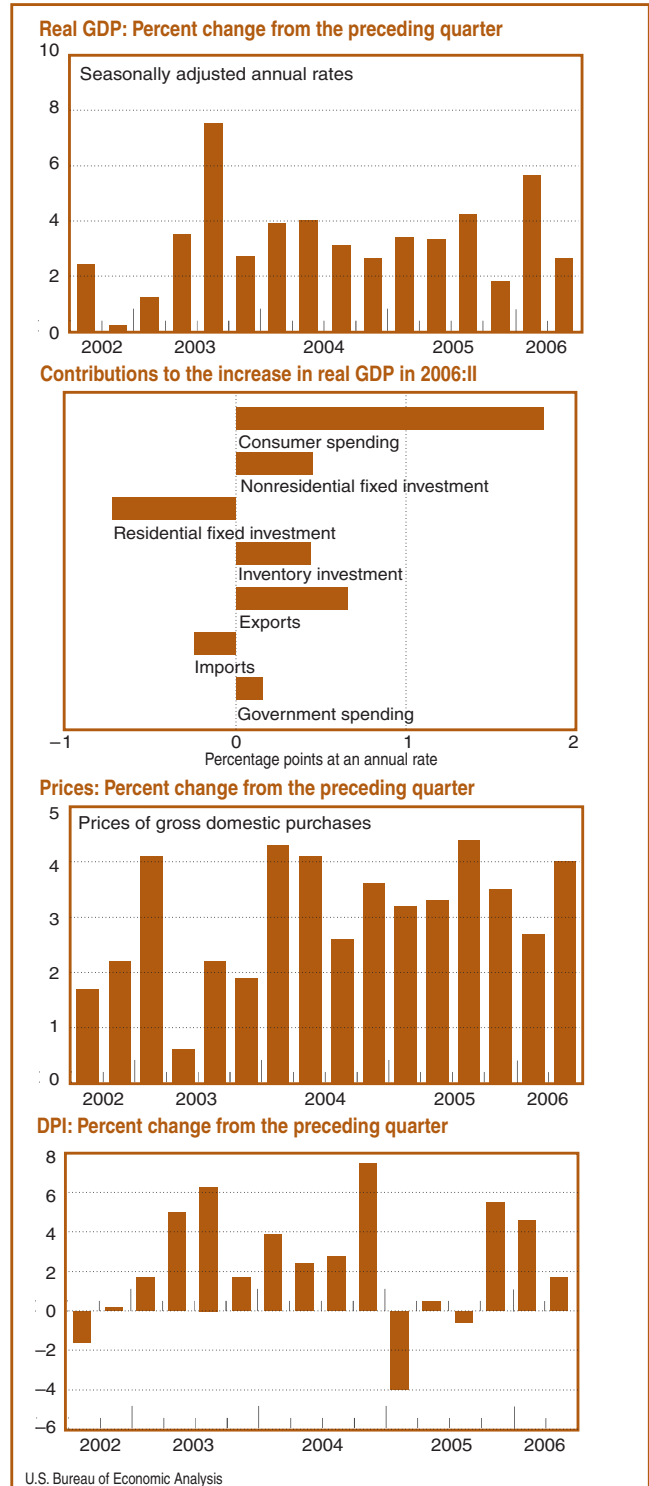

1. Each GDP estimate for a quarter (advance, preliminary, and final) incorporates increasingly comprehensive and improved source data. More information can be found at <[www.bea.gov/bea/about/infoqual.htm](http://www.bea.gov/bea/about/infoqual.htm)> and <[www.bea.gov/bea/faq/national/gdp\\_accuracy.htm](http://www.bea.gov/bea/faq/national/gdp_accuracy.htm)>. Quarterly estimates are expressed at seasonally adjusted annual rates, a value that assumes the rate of activity for a quarter were maintained for a year.

2. “Real” estimates are in chained (2000) dollars, and price indexes are chain-type measures.

3. In this article, “consumer spending” refers to the NIPA series “personal consumption expenditures,” “inventory investment” refers to the NIPA series “change in private inventories,” and “Federal Government spending” refers to “Federal Government consumption expenditures and gross investment.”

*Christopher Swann prepared this article.*

1. The estimates for GDP under the contribution columns are also percent changes.

NOTE: Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

Consumer spending decelerated, increasing 2.6 percent after increasing 4.8 percent, and accounted for about half of the slowdown in real GDP. Durable goods spending turned down, reflecting a downturn in motor vehicles and parts and a slowdown in furniture and household equipment. Nondurable-goods spending decelerated. Spending for services accelerated, driven by an upturn in electricity and gas.

Nonresidential fixed investment slowed, increasing 4.4 percent after increasing 13.7 percent. The slowdown was attributable to a downturn in investment in equipment and software, which was moderated by a sharp acceleration in investment in structures.

Residential investment decreased 11.1 percent, the third consecutive decrease and the largest decrease since the second quarter of 1995.

Inventory investment turned up, adding 0.44 percentage point to real GDP growth; inventory investment by mining, utilities, and construction industries and by merchant wholesalers increased.

Exports slowed, increasing 6.2 percent after increasing 14.0 percent; goods exports decelerated sharply.

Imports decelerated, increasing 1.4 percent after a 9.1-percent increase, reflecting a downturn in goods imports. In contrast, services imports accelerated.

Federal Government spending turned down, decreasing 4.5 percent after increasing 8.8 percent.

Real final sales of domestic product (real GDP less inventory investment) slowed, increasing 2.1 percent after increasing 5.6 percent.

### GDP and Gross Domestic Purchases

In addition to gross domestic product (GDP), another related measure of economic growth—gross domestic purchases—is included in the national income and product accounts (NIPAs).

GDP measures the market value of final goods and services produced by labor and property in the United States, including the goods that are added to, or subtracted from, inventories. GDP is defined as the sum of consumer spending, business and residential investment, inventory investment, government spending, and exports less imports.

Gross domestic purchases is defined as GDP less exports plus imports. It measures domestic demand for goods and services regardless of their origin. Exports represent foreign demand for U.S. goods and services. Subtracting exports

from GDP yields a measure of expenditures that focuses on domestic buyers. Imports can be viewed as the value of goods and services that exceed the domestic supply and that expand the consumption and investment alternatives for domestic purchasers.

Differences between GDP and gross domestic purchases reflect patterns in imports less exports: As imports exceed exports, gross domestic purchases exceeds GDP.

For annual and quarterly estimates of these measures, see NIPA tables 1.4.1 and 1.4.3–1.4.6.

For more information on GDP and gross domestic purchases, see also “A Guide to National Income and Product Accounts of the United States” on BEA’s Web site at [www.bea.gov/bea/an/nipaguid.pdf](http://www.bea.gov/bea/an/nipaguid.pdf).

## Revisions to GDP

Final sales of domestic product.....	2.3	2.1	-0.2	2.27	2.11	-0.16
Gross domestic purchases price index.....	4.0	4.0	0.0			
GDP price index.....	3.3	3.3	0.0			

1. The estimates for GDP under the contribution columns are also percent changes.

The 2.6-percent final estimate of real GDP growth is 0.3 percentage point less than the preliminary estimate. The downward revision primarily reflected a downward revision to private inventory investment, an upward revision to imports of services, and a downward revision to residential fixed investment. An upward revision to PCE for services muted the downward revisions. For 1978–2005, the revisions, without regard to sign, averaged 0.3 percentage point from the preliminary to final estimates.

PCE for services was revised up 0.2 percentage point, reflecting upward revisions to “other” household operation and to recreation.

Residential fixed investment was revised down 1.3 percentage points, largely reflecting a revision to single-family structures.

The downward revision to private inventory investment reflected revisions to both nonfarm and farm industries. Within nonfarm industries, the largest contributor to the downward revision was durable-goods manufacturing.

Imports of services was revised up 5.4 percentage points. The largest contributor was royalties and license fees.

### Source Data for the Final Estimates

The final estimates of gross domestic product for the second quarter incorporated the following source data.

*Personal consumption expenditures:* Retail sales for June (revised). Quarterly services survey for the second quarter (new).

*Nonresidential fixed investment:* Construction put-in-place data for May and June (revised).

*Residential fixed investment:* Construction put-in-place data for May and June (revised).

*Change in private inventories:* Manufacturers’ and trade

inventories for June (revised).

*Exports and imports of goods and services:* International transactions accounts data for the first and second quarters (revised).

*Government consumption expenditures and gross investment:* State and local government construction put-in-place data for May and June (revised).

*GDP prices:* Export and import prices for April through June (revised), unit value index for petroleum imports for June (revised), and prices of single-family houses under construction for the second quarter (revised).

## Corporate Profits

**Table 3. Corporate Profits**

[Seasonally adjusted]

	Billions of dollars (annual rate)					Percent change from preceding quarter (quarterly rate)

Financial.....	483.9	-77.2	94.7	51.4	41.7	-20.7	32.0	13.1	9.4
Nonfinancial .....	868.1	-37.5	59.6	94.5	-32.8	-4.8	8.0	11.7	-3.6
Rest of the world.....	239.9	38.2	-27.1	29.8	13.8	20.6	-12.1	15.2	6.1
Receipts from the rest of the world.....	402.0	16.6	16.6	15.7	25.7	5.1	4.8	4.4	6.8
Less: Payments to the rest of the world.....	162.1	-21.7	43.7	-14.0	11.9	-15.2	36.3	-8.5	7.9
Less: Taxes on corporate income	476.1	-13.9	45.7	32.3	19.2	-3.5	12.1	7.6	4.2
<i>Equals:</i> Profits after tax.....	1,115.7	-62.6	81.4	143.2	3.6	-6.6	9.2	14.8	0.3
Net dividends .....	631.1	15.8	17.0	14.7	15.4	2.8	2.9	2.5	2.5
Undistributed profits from current production .....	484.6	-78.4	64.4	128.5	-11.8	-20.5	21.2	34.9	-2.4
Net cash flow .....	1,350.3	20.9	-6.8	125.3	1.1	1.7	-0.5	10.2	0.1

NOTE: Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.

Corporate profits from current production increased \$22.7 billion, or 1.4 percent at a quarterly rate, after increasing \$175.6 billion, or 12.6 percent.

Profits of financial corporations increased 9.4 percent after increasing 13.1 percent.

Profits of nonfinancial corporations decreased 3.6 percent after increasing 11.7 percent.

Taxes on corporate income increased 4.2 percent after increasing 7.6 percent.

After-tax profits increased 0.3 percent, following a 14.8-percent increase.

Undistributed corporate profits (a measure of net saving that equals after-tax profits less dividends) decreased 2.4 percent, following a 34.9-percent increase.

Net cash flow from current production (a profits-related measure of internally generated funds available for investment) increased 0.1 percent after increasing 10.2 percent.

### Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. This measure is partly based on tax return

information from the Internal Revenue Service; BEA uses tax accounting measures as a source of information on profits for two reasons: They are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries. BEA also uses other sources of information to estimate pretax profits, including information from the Census Bureau.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging) and capital consumption allowances (tax return depreciation).

## Corporate Profits by Industry

**Table 4. Corporate Profits by Industry**  
[Seasonally adjusted]

Industry profits with inventory valuation adjustment increased \$34.9 billion, or 2.0 percent at a quarterly rate. This increase is larger than the increase in profits from current production because it excludes the capital consumption adjustment, which fell \$12.2 billion in the second quarter.

Profits of domestic financial industries decelerated, increasing \$44.3 billion, or 9.5 percent.

Profits of utilities industries accelerated, increasing \$7.1 billion, or 17.7 percent.

Profits of manufacturing industries turned down, decreasing \$10.8 billion, or 3.6 percent.

Profits of wholesale trade industries turned down, decreasing \$8.9 billion, or 8.3 percent.

Profits of transportation and warehousing industries accelerated, increasing \$11.3 billion, or 41.4 percent.

Profits from the rest of the world decelerated, increasing \$13.8 billion, or 6.1 percent.

NOTE: Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D. IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

**Chart 2. Corporate Profits With Inventory Valuation Adjustment: Change From the Preceding Quarter, 2006:II**

### Corporate Profits by Industry

Industry profits are corporate profits by industry with inventory valuation adjustment (IVA). The IVA removes the effect of prices on inventories. The IVA is the difference between the cost of inventory withdrawals at acquisition cost and replacement cost. Ideally, BEA would also add the capital consumption adjustment (CCAdj) for each indus-

try. However, estimates of the CCAdj are only available for two broad categories: Total financial industries and total nonfinancial industries. For more information about BEA's methodology, see "Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends" at <[www.bea.gov/beam\\_p\\_national.htm](http://www.bea.gov/beam_p_national.htm)>.

## Newly Available NIPA Tables

As part of the 2006 annual revision of the national income and product accounts (NIPAs), this report presents NIPA tables 3.18B, 3.19, 8.1–8.6, and new NIPA tables 3.20 and 3.21.

The August 2006 SURVEY includes most of the revised NIPA tables. It also includes an article that summarizes the results of the annual revision and describes changes in the data and methods used to prepare the estimates.

The September issue presented newly available NIPA tables 3.15.1–3.15.6, 3.16, 3.17, 5.9, 7.15, and 7.19. NIPA tables 2.9 and 7.20 are scheduled to be published in the November 2006 SURVEY.

The NIPA tables that were published in the August and September issues and in this issue are available on BEA's Web site. For interactive access, go to <[www.bea.gov/bea/dn/nipaweb/index.asp](http://www.bea.gov/bea/dn/nipaweb/index.asp)>.

**Errata for NIPA table 7.19.** The estimates of the “misreporting adjustment included in personal income” (line 21) and of the “AGI gap less misreporting adjustment” (line 22) for 2003 and 2004 that were published in the September SURVEY have been corrected. The corrected estimates of the misreporting adjustment are \$425.4 billion for 2003 and \$458.4 billion for 2004, and the corrected estimates of the AGI gap are \$602.3 billion for 2003 and \$629.8 billion for 2004.

1. Contributions received, interest received, and dividends received are included in the NIPA personal sector. Capital gains net of losses are excluded from the NIPAs.

2. Consists of employer and employee contributions, except employer contributions to their own employee retirement plans.

3. Prior to 1968, dividends received is included in interest received (line 5).

4. Prior to 1985, capital gains (net of losses) of state and local employee retirement plans is included in line 11.

5. Unemployment insurance is recorded as a Federal program in the NIPAs.

6. Consists of estate and gift taxes and Federal investment grants.

7. Excludes current expenditures of Indian tribal government enterprises.

8. In the NIPAs, final expenditure components of GDP are recorded net of sales or receipts; all current-account sales by general government are therefore deducted in the calculation of NIPA current expenditures. However, most sales by general government are included in Census total revenue; a reconciliation item for

these sales is therefore required for both receipts and expenditures. The amount of the reconciliation item is less than the sales shown in table 3.10.5 because Census total revenue does not include medical vendor payments made by state and local governments to public institutions (classified as an intragovernmental transaction by Census) or the administrative expenses of state and local employee retirement plans (treated in the NIPAs as sales by government to the personal sector).

9. Includes timing differences that arise from restating the Census Bureau data to a year ending June 30. Census Bureau measures of state and local government revenue and expenditures (lines 1 and 25) primarily represent a fiscal year ending June 30, but some governments use other fiscal years. The NIPA measures shown in this table are for the fiscal year ending June 30 and are consistent with the not seasonally adjusted estimates in table 8.4.

10. These transactions are included in the NIPA personal sector.

11. Net investment is gross investment less consumption of fixed capital for government enterprises and general government.

NOTE: State receipts plus local receipts and state expenditures plus local expenditures do not sum to the consolidated state and local government account totals because grants-in-aid from states to local governments and from local to state governments are netted in the consolidated account totals. In addition, the receipt category "surplus of government enterprises" and the

expenditure category "subsidies" do not sum to the consolidated account totals because the level of government making subsidy payments accounts for them as subsidies while recipient governments account for them as surpluses of government enterprises.

# U.S. International Services

## Cross-Border Trade in 2005 and Sales Through Affiliates in 2004

By Jennifer Koncz, Michael Mann, and Erin Nephew

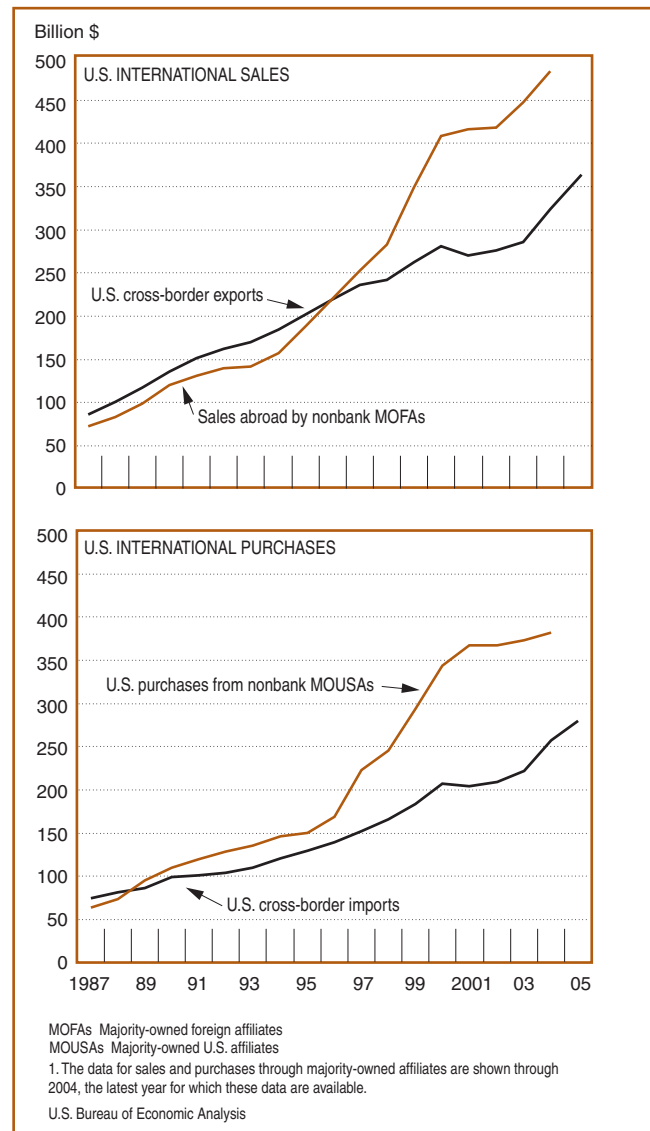

THE Bureau of Economic Analysis (BEA) takes a broad perspective in this presentation of U.S. international sales and purchases of services, including information on services that cross borders and are recorded in the international transactions accounts as exports and imports and information on services that are delivered through the channel of direct investment. This perspective recognizes the importance of affiliates that are located in—but owned outside of—the markets that they serve. Because a local commercial presence is often necessary to deliver services to foreign customers, many companies choose to serve foreign markets, in part or in whole, through their affiliates. In 2004 (the latest year for which data on sales through affiliates are available), the majority of both U.S. international sales and purchases of services continued to be through affiliates (table A and chart 1).<sup>1</sup>

In 2005, U.S. cross-border exports of private services, at \$360.5 billion, exceeded U.S. cross-border imports of private services, at \$280.6 billion, resulting in a U.S. surplus on cross-border trade in private services of \$79.9 billion, up from \$70.8 billion in 2004. In contrast to the large and growing U.S. deficit on international trade in goods, which reached \$782.7 billion in 2005, the United States has historically run surpluses on trade in services. In 2004, U.S. sales of services to foreign markets through the foreign affiliates of U.S.

companies, at \$489.6 billion, exceeded foreign sales to the U.S. market through U.S. affiliates of foreign companies, at \$382.8 billion.

In 2005, cross-border exports of services increased 10 percent after increasing 13 percent in 2004, and imports increased 9 percent after increasing 16 percent

### The 2004 Benchmark Survey of U.S. Direct Investment Abroad and the Treatment of Nonbank Units of U.S. Banks

The estimates of sales of services abroad by foreign affiliates of U.S. companies for 2004 are based on preliminary results from the 2004 benchmark survey of U.S. direct investment abroad. Additional results from the benchmark survey—including employment, value added, capital expenditures, and numerous other items—will be published in November. Benchmark surveys, which are conducted once every 5 years, are BEA's most comprehensive surveys of U.S. direct investment abroad in terms of both coverage of companies and subject matter. The preliminary results from the benchmark survey include estimates of data for reports that could not be fully processed in time for publication. The final results (to be published in 2007) will incorporate data from reports processed after the publication of the preliminary results.

Benchmark surveys also provide an appropriate opportunity to implement changes that affect comparisons over time, including changes in reporting requirements. Beginning with the 2004 benchmark survey, the nonbank units of U.S. banks (including bank and financial holding companies) were consolidated in the reports of the banks that owned them; previously, these units were required to file separate reports.<sup>1</sup> Because BEA's annual data series on the operations of U.S. multinational companies currently cover only nonbank U.S. parent companies and their nonbank foreign affiliates, the change resulted in the nonbank foreign affiliates of these nonbank units of U.S. banks dropping out of the data on foreign affiliate sales and other measures of operations.

The change in reporting requirements reduced the measured year-to-year increase in total sales of services and in sales of services to foreign markets in 2004 by roughly 2 percentage points. In the table in this box, the estimates of sales of services abroad by major area and selected country and by selected industry were adjusted to remove the effects of the consolidation of nonbank U.S. parents with the banks that own them. In the table, the affiliates that dropped out of the nonbank 2004 data were removed from the estimates for 2003.<sup>2</sup> Thus, the table provides a rough approximation of sales of services abroad on a comparable basis in both years and enables year-to-year changes to be studied without the effects of

1. Similarly, reporting requirements for U.S. affiliates of foreign companies have also been changed, beginning with the 2002 benchmark survey of foreign direct investment in the United States. U.S. affiliates that are banks or bank holding companies have been consolidated with their majority-owned U.S. affiliates in nonbanking industries and are required to report as banks. The reclassification of U.S. affiliates did not create the same discontinuity as the change in the treatment of U.S. parents, because fewer U.S. affiliates were affected by the change and the size of those affiliates' sales of services was generally small.

2. Adjustments were made only to estimated sales of services in "finance (except depository institutions) and insurance" because few other industries were affected by the change and the effects in industries other than nonbank finance and insurance were minimal.

the change in reporting requirements. Throughout this article, the discussion of changes in sales of services by foreign affiliates refers to changes after adjusting to remove the effects of the new reporting requirements.

Comparing the adjusted estimates for 2003 in this table with the estimates in table 9 indicates that sales of services abroad through affiliates increased in all the major areas, both before and after the adjustment to remove the effects of the change in reporting, and that the estimates for some countries were substantially affected by the change. For example, after the adjustment, the sales of services abroad by affiliates in Europe increased \$24.9 billion, accounting for 53 percent of the total increase in 2004; before the adjustment, sales increased \$22.1 billion, accounting for 59 percent of the total increase.<sup>3</sup> Sales by affiliates in Canada were also particularly affected by the change; after the adjustment, sales increased \$6.2 billion, or 15 percent, and before the adjustment, sales increased \$4.2 billion, or 10 percent.

By industry sector, the impact of the change in reporting requirements was concentrated in "finance (except depository institutions) and insurance." After the adjustment, sales of services in this industry increased 5 percent; in contrast, before the adjustment, sales decreased 3 percent.

3. These percentage changes and shares may not match those that are calculated from the accompanying tables. The shares in the text are generally derived from underlying data that are available at a greater level of precision than those in the published tables.

#### Sales of Services to Foreign Persons by U.S. MNCs Through Their Nonbank MOFAs, with Adjusted 2003 Estimates

D Suppressed to avoid disclosure of data of individual companies.

1. The estimates for sales of services in 2003 shown in this table differ from those shown in other tables in this article because they reflect an adjustment to the "finance (except depository institutions) and insurance" industry to remove foreign affiliates affected by a change in reporting requirements that became effective beginning with data reported for 2004. This change required nonbank U.S. parents of these affiliates to be consolidated on the reports of the banks that owned them. Because the data on sales of services abroad cover only sales by affiliates of nonbank U.S. parents, the change in reporting requirements caused the affiliates of the affected parents to drop out of the estimates beginning in 2004. In industries other than nonbank finance and insurance, the impact of the change was small.

MNCs Multinational companies

MOFAs Majority-owned foreign affiliates

(table B). In 2005, cross-border exports increased in all major categories: Increases in “other private services” (such as “business, professional, and technical ser-

vices,” financial services, insurance services, and education) and travel contributed the most to the increase in exports in dollar terms, while “other transportation” had the largest increase in percentage terms (table C). Cross-border imports of services also increased in each of the major categories: The largest increases were in “other private services” and “other transportation.” For both exports and imports, every major category increased at a slower rate in 2005 than in 2004.

n.a. Not available

1. The estimates for 2002–2004 are revised from those published in last year's article in this series. See Christopher L. Bach, "Annual Revision of the U.S. International Accounts, 1995–2005," *SURVEY OF CURRENT BUSINESS* 86 (July 2006): 36–48.

2. The estimates for 2003 are revised from those published in last year's article. The estimates for 2004 are preliminary.

3. The figures shown in this column for 1986–88 have been adjusted, for the purposes of this article, to be consistent with those for 1989 forward, which reflect definitional and methodological improvements made in the 1989 Benchmark Survey of U.S. Direct Investment Abroad. The primary improvement was that investment income of affiliates in finance and insurance was excluded from sales of services. The adjustment was made by assuming that investment income of finance and insurance affiliates in 1986–88 accounted for the same share of sales of services plus investment income as in 1989.

4. Beginning in 1997, sales by U.S. affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System; the estimates for prior years were based on codes derived from the 1987 Standard Industrial Classification System. This change resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by U.S. Affiliates" in the October 1999 *SURVEY*, page 61, available at <www.bea.gov>.

5. Beginning in 1999, sales by foreign affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System; the estimates for prior years were based on codes derived from the 1987 Standard Industrial Classification System. This change resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by Foreign Affiliates" in the November 2001 *SURVEY*, page 58, available at <www.bea.gov>.

6. In 2004, BEA began to require that the nonbank units of U.S. banks (including bank and financial holding companies), which were required to file separately in the past, be consolidated on the reports of the banks that owned them. Because the data on sales of services abroad cover only sales by affiliates of nonbank U.S. parents, the change in reporting requirements caused the affiliates of the affected parents to drop out of the data. As a result, the measured change in sales between 2003 and 2004, as computed from the table above, was reduced by about 2 percent. After allowing for the effects of the change, the increase in 2004 would have been about 11 percent. (A parallel change was introduced in the series on sales by U.S. affiliates of foreign companies in 2002, but it did not result in a material discontinuity in the estimates.)

**Table C. Cross-Border Services**

[Percent change from the preceding year]

	Exports		Imports	
	2004	2005	2004	2005
Private services.....	13	10	16	9
Travel.....	16	10	14	5
Passenger fares.....	20	11	13	10
Other transportation.....	19	13	21	15
Royalties and license fees.....	12	9	22	6
Other private services.....	11	9	13	9

After an adjustment to remove the effects of a change in reporting requirements, U.S. sales of services abroad through the foreign affiliates of U.S. companies increased 11 percent in 2004 after increasing 7 percent in 2003.<sup>2</sup> This was the second year of improved sales growth, following a historical low of 0.4-percent growth in 2002. The 2004 increase in foreign affiliates' sales of services resulted from several factors, including a pickup in real economic growth in many foreign markets served by affiliates. The weakening of the U.S. dollar against a number of major foreign currencies boosted the dollar value of affiliates' sales. The increase was also affected by changes in the corporate structure of multinational companies, including increased ownership in affiliates so that minority-owned affiliates became majority-owned affiliates, and the restructuring of a large foreign media company as a U.S. company.

Sales in the United States through the U.S. affiliates of foreign multinationals increased 2 percent in 2004, the same as in 2003. Sales by U.S. affiliates continued to grow slowly despite a pickup in economic growth in the United States and an increase in foreign companies' spending to acquire or establish U.S. businesses. Most of the growth was driven by increased sales by existing affiliates rather than by sales of newly acquired or established affiliates.

Sales of services delivered through cross-border trade cannot be precisely compared with sales through

2. The change computed from the accompanying tables is 8 percent, but the change would have been 11 percent in the absence of a change in reporting requirements for nonbank units of U.S. banks.

affiliates because of differences in coverage, measurement, and classification.<sup>3</sup> For example, sales of services through cross-border trade are generally classified by type of service, whereas sales through affiliates are classified by the primary industry of the affiliate. Despite these differences, the large gap between sales through

cross-border trade and sales through affiliates suggests that the latter is the larger channel of delivery for both U.S. sales of services abroad and foreign sales of services in the United States (charts 2 and 3).

The remainder of this article consists of two major sections and two appendixes. The first section focuses on international services transactions through cross-border exports and imports. It presents the preliminary estimates of exports and imports of private services for 2005 and revised estimates for 2002–2004.<sup>4</sup>

3. One source of the difference in coverage between cross-border trade and sales through affiliates is the inclusion of services provided by banks in cross-border transactions but not in sales through affiliates, which cover only sales by nonbank affiliates; to address this gap in coverage, BEA collected data on sales of services by bank affiliates in its most recent benchmark surveys of U.S. direct investment abroad (covering 2004) and foreign direct investment in the United States (covering 2002). Differences in measurement—for example, in the treatment of insurance services—is currently being addressed by new data collections; see the box “New Measures of Insurance, Trade Services, and Financial Services Sold Through Affiliates.”

4. These estimates can also be found in summary form in the U.S. international transactions accounts. In the quarterly articles on U.S. international transactions, table 1 presents cross-border exports of private services in lines 6–10 and cross-border imports in lines 23–27; table 3 provides additional details.

**Chart 2. U.S. International Sales and Purchases of Services by Major Area in 2004**

**Chart 3. U.S. International Sales and Purchases of Services by Major Country in 2004**

The second section presents preliminary estimates of sales of services abroad through nonbank majority-

owned affiliates of nonbank U.S. companies and sales in the United States by nonbank majority-owned U.S.

### New Measures of Insurance, Trade Services, and Financial Services Sold Through Affiliates—Continues

In its efforts to improve its estimates of U.S. international services, BEA has recently addressed several issues in the measurement of three major types of services—insurance, wholesale and retail trade services, and financial services.<sup>1</sup> This article describes BEA's efforts to improve its estimates of such services delivered through direct investment—that is, through affiliates in local markets—and provides preliminary estimates of sales to U.S. residents by affiliates of foreign multinational companies in 2002.

The measurement of services delivered by affiliates in insurance, wholesale and retail trade, and finance is complicated by special factors. For example, sales may include nonservice elements or may exclude the value of services provided without an explicit charge. To overcome such complications, BEA has developed new methodologies, initiated new data collections, and drawn on data from outside sources.

The improved measures raise the total estimate of sales of services to U.S. residents by U.S. affiliates in 2002 by \$125.0 billion, to \$492.6 billion (see the table). These estimates are provisional but provide an indication of how the new measures compare with the current measures. An article providing detail on methodologies and estimates for additional years will be published in a forthcoming issue of the *SURVEY OF CURRENT BUSINESS*.

#### Impacts of Changes in the Measurement of Insurance, Wholesale and Retail Trade, and Financial Services on the Estimates of Goods Sold and Services Provided to U.S. Residents by Majority-Owned U.S. Affiliates, 2002 (Billions of dollars)

	Services provided	Goods sold <sup>1</sup>
Current measure.....	367.6	1,421.1
Effects of new measures:		
Insurance services.....	-40.4	No change
Wholesale and retail trade.....	134.9	-134.9
Financial services.....	30.5	No change
New measure.....	492.6	1,286.2

1. The sales of goods to U.S. residents by U.S. affiliates have been estimated from data on their exports of goods because the data on these sales are not disaggregated by destination.

#### Insurance

BEA's current methodology measures sales of insurance services through affiliates as services-related operating revenues. These revenues consist mostly of premium income, but they also include fees for auxiliary insurance services. BEA's new treatment of insurance services includes enhancements in two key areas.

**Premiums less normal losses.** The current measure of

services sold through insurance affiliates is based on gross premiums with no deductions for losses paid out. However, international economic accounting guidelines recommend a net premiums approach that deducts a measure of losses from premiums.<sup>2</sup> This approach reflects the reality that some portion of premiums is simply the amount of funds that flow from all policyholders to policyholders who suffered losses. BEA's new treatment adopts a net premium approach. Specifically, it will adopt BEA's current treatment of cross-border trade in insurance and the domestic insurance industry by deducting a proxy measure of insurers' expected losses, called "normal" losses, which is based on the long-term relationship between premiums earned and claims paid.

**Premium supplements.** The current measure omits the investment income earned on technical reserves. Clearly, insurance premiums would be higher if insurance companies could not use this income to defray their expenses. In recognition of this fact, the 1993 *System of National Accounts* (SNA) included income earned on reserves in its recommended measure of insurance industry output. Specifically, the income is treated as accruing to the policyholders, who pay it back to insurers as supplements to cover the full cost of the insurance services they receive. Accordingly, BEA's new measure will include a measure of premium supplements, representing income earned on prepaid premiums and reserves against outstanding losses.

To estimate insurance services under the new approach, BEA collected data on the premiums earned and losses paid by majority-owned U.S. affiliates with operations in insurance on the 2002 benchmark survey of foreign direct investment in the United States (FDIUS). These items were subsequently added to the follow-on annual surveys of FDIUS and the surveys of U.S. direct investment abroad (USDIA), beginning with the 2004 benchmark survey. These new items are combined with data on the domestic insurance industry from

2. Guidance for compiling the national accounts is provided in the Commission of European Communities, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations and World Bank, *System of National Accounts, 1993* (Brussels/Luxembourg, New York, Paris, and Washington, 1993). Guidance for compiling statistics on trade in services for the international transactions accounts is provided in International Monetary Fund, *Balance of Payments Manual, 5th edition* (Washington, DC, 1993). The Commission of European Communities, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations, United Nations Conference on Trade and Development, and World Trade Organization, *Manual on Statistics of International Trade in Services* (Geneva, Luxembourg, New York, Paris, Washington, 2002) provides guidance for compiling data on cross-border trade in services and services delivered through affiliates.

1. See Obie G. Whichard and Maria Borga, "Selected Issues in the Measurement of U.S. International Services," *SURVEY OF CURRENT BUSINESS* 82 (June 2002): 36–56.

affiliates of foreign companies for 2004 and revised estimates for 2003. The estimates of sales of services through affiliates are from the larger data sets on the operations of U.S. multinational companies and of

### New Measures of Insurance, Trade Services, and Financial Services Sold Through Affiliates

A.M. Best to estimate the new measure of insurance services sold to U.S. residents through U.S. affiliates.<sup>3</sup>

The net effect of these changes for 2002 is a \$40.4 billion reduction, to \$47.7 billion, in the estimate of insurance services sold to U.S. residents through U.S. affiliates. The two components of the change are also affected normal losses, which are deducted from premiums and are an estimated \$45.9 billion for U.S. affiliates' sales to U.S. residents, and premium supplements which are an estimated \$5.4 billion.

#### Wholesale and retail trade

The wholesale and retail trade industries provide distributive services—that is, selling, or arranging for the sale of, goods to intermediate and final users. Distributive services include merchandise handling, stocking, selling, and billing. In the SNA and in the NIPAs, distributive services are measured as trade margins—wholesale or retail sales of goods less the cost of the goods resold. Gross output of wholesale and retail trade excludes goods for resale from the value of intermediate inputs because these goods are subject to only minimal processing, such as cleaning or packaging.

In 2005, these services accounted for almost 13 percent of U.S. gross domestic product.<sup>4</sup> In contrast, the wholesale and retail trade industries are hardly noticeable in the estimates of services through affiliates. Affiliates in wholesale and retail trade accounted for less than 3 percent of all sales of services by U.S. affiliates to U.S. residents in 2004 and for less than 5 percent of all sales of services by foreign affiliates to foreign residents.

BEA's new treatment of sales through affiliates will tend to reduce this disparity. In BEA's current treatment, the total values of sales associated with wholesale and retail trade are treated as sales of goods. Thus, the estimates of services provided by wholesalers and retailers cover only secondary activities of these affiliates and not their distributive services. For example, the repair services provided by a car dealer are included in the estimates of sales of services, but the distributive services the dealer provides in selling cars are not. Instead, the value of the distributive services is included in the estimates of sales of goods. When the data collection system for sales of services through affiliates was established, BEA chose to treat sales in wholesale and retail trade as sales of goods

because most of their value is attributable to the goods being sold and not to distributive services. As a result, the value of services provided by wholesale and retail trade affiliates is underestimated.

To construct estimates of distributive services supplied through affiliates, BEA collected data on the cost of goods sold and the beginning- and end-of-year inventories of the goods for resale on its 2002 benchmark survey of FDIUS. These items have been included on the follow-on annual surveys of FDIUS and were introduced on the surveys of USDIA beginning with the 2004 benchmark survey.

Under the new approach, U.S. affiliates supplied an estimated \$134.9 billion in distributive services to U.S. residents in 2002. Including this estimate raises the estimate of sales of services through affiliates 37 percent in 2002. This amount is currently included in the estimates of U.S. affiliates' sales of goods to U.S. residents in BEA's broader statistics on the activities of U.S. affiliates. Thus, this amount is not an addition to sales through affiliates but are a reclassification from goods to services. The \$1,421.1 billion of sales of goods through affiliates to U.S. residents in 2002 would be reduced 9 percent by the reclassification.

#### Financial services

BEA's current coverage of sales through financial services affiliates excludes estimates for bank affiliates. The absence of banks caused a potentially large gap in the coverage of financial services sold through affiliates and an understatement in the total sales through affiliates.

To better account for bank affiliates, BEA collected data on the 2002 benchmark survey of FDIUS that can be used as the basis for estimating U.S. bank affiliates' explicit fees for services (which are separately charged by banks) and implicit fees for services (which banks earn by paying lower interest rates on deposits than they charge on loans). These same data items were added to the 2004 benchmark survey of USDIA. Bank affiliates were asked to supply data on their total sales of services by destination (as nonbank affiliates are asked to do) and on their total interest paid and received. Based on the data collected on the benchmark survey, services provided by majority-owned U.S. bank affiliates to U.S. residents are estimated to have been \$30.5 billion in 2002. Of this total, \$14.1 billion was estimated to be from explicit fees and commissions, and \$16.4 billion was the imputed value of services for which explicit charges were not made.

U.S. affiliates of foreign companies, which are described in annual articles.<sup>5</sup> The appendix “Modes of Supply and Channels of Delivery of Services Sold in International Markets” describes the delivery of services on the basis of the General Agreement on Trade in Services and the relationship of these modes to BEA’s channels of delivery. The appendix “Improvements to the Estimates of Cross-Border Trade in Services” describes recent changes in BEA’s data collection and methodology.

**U.S. Cross-Border Trade in 2005**

U.S. exports of private services (receipts) increased 10 percent, to \$360.5 billion, in 2005 after increasing 13 percent in 2004. U.S. imports of private services (payments) increased 9 percent to \$280.6 billion after increasing 16 percent. The services surplus increased for the first time since 1999, as the increase in the value of services exports outpaced imports.

Growth in both exports and imports was strong, but not as brisk as in 2004. Services export growth slowed from an unusually fast rate, partly because of slower economic growth in several key partner countries in 2005. Similarly, slower growth in the United States in 2005 slowed growth in demand for services imports. In the United States, real gross domestic product (GDP) grew 3.2 percent in 2005, down from 3.9 percent in

2004. Real GDP growth in the United Kingdom slowed to 1.8 percent from 3.1 percent; real GDP growth in the euro area slowed to 1.3 percent from 2.1 percent. Real GDP growth in Canada was unchanged, at 2.9 percent, in 2005. Real GDP growth in Japan accelerated slightly, to 2.7 percent from 2.3 percent.

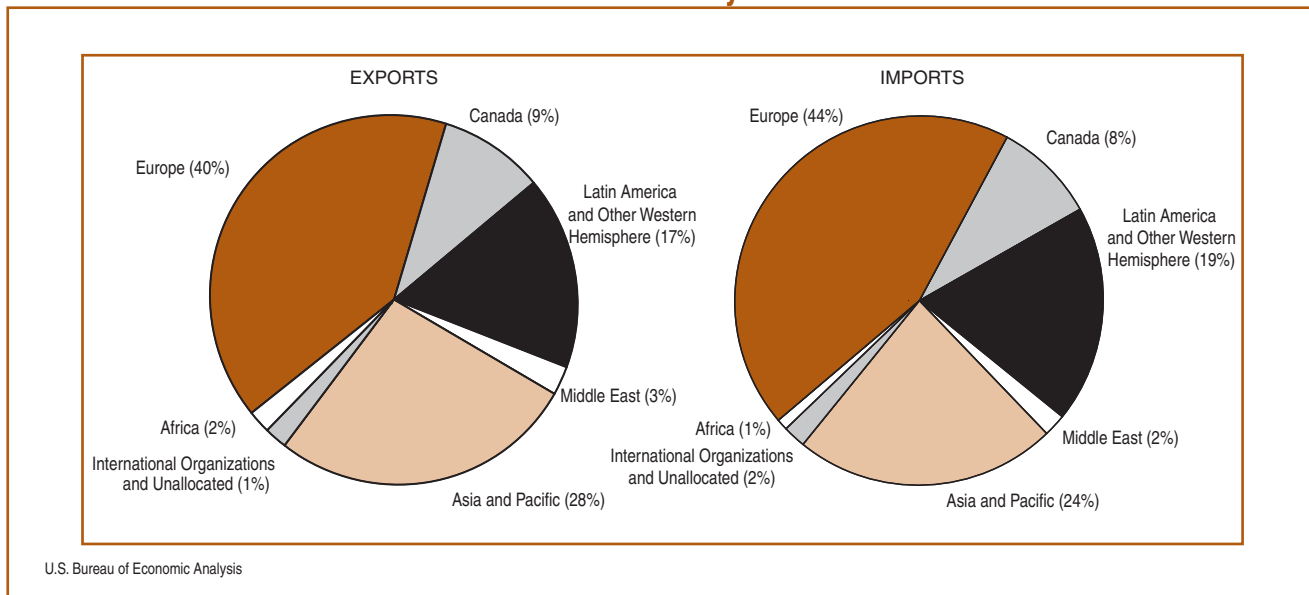

Much of the growth in both exports and imports of private services in 2005 was accounted for by increases in “other private services,” especially in business, professional, and technical services and in financial services. Growth in travel, passenger fares, and “other transportation” in 2005 decelerated; payments slowed more than receipts, reflecting slowdowns in international travel and in the growth of goods exports and goods imports transported by both ocean and air carriers.

Trade with Europe and Asia accounted for two-thirds of total U.S. cross-border exports and imports of private services in 2005 (chart 4). The composition of trade by area was little changed. Japan, the United Kingdom, Canada, and Mexico continue to be the largest services trading partners of the United States (table D). Although China and India grew rapidly in comparison with other countries, they remain small markets for U.S. exports and imports of services.

Trade within multinational companies (affiliated trade) accounted for 25 percent of total exports of private services in 2005 and for 21 percent of total imports of private services (table E). Affiliated exports of private services increased 9 percent in 2005 after increasing 7 percent in 2004. Affiliated imports of private services increased 14 percent after an 11-percent increase.

5. See Raymond J. Mataloni Jr., “U.S. Multinational Companies: Operations in 2003,” SURVEY OF CURRENT BUSINESS 85 (July 2005): 9–29, and Thomas W. Anderson and William J. Zeile, “U.S. Affiliates of Foreign Companies: Operations in 2004,” SURVEY 86 (August 2006): 195–211. The preliminary estimates and a discussion of the operations of U.S. multinational companies and their foreign affiliates for 2004, which were covered by the latest benchmark survey, will be published in the November SURVEY.

**Chart 4. U.S. Cross-Border Services Transactions: Share by Area in 2005**

## Travel

**Receipts.** Travel receipts increased 10 percent, to \$81.7 billion, in 2005 after increasing 16 percent in 2004. Although growth in travel receipts slowed, 2005 marked the second straight year of strong increases after declining for 3 years. Most of the slowdown in 2005 was attributable to travel receipts from overseas visitors, which increased 9 percent in 2005 after increasing 16 percent in 2004. Growth in the number of visitors from overseas slowed to 7 percent in 2005 from 13 percent in 2004. The slowdown also reflected higher airline ticket prices. Growth in the number of visitors from Japan slowed to 4 percent in 2005 from 18 percent in 2004. Similarly, the growth in the number of visitors from the euro area slowed to 11 percent from 15 percent. Average expenditures of overseas visitors in the United States increased 2 percent in 2005, roughly the same as in 2004.

Growth in travel receipts from Canada fell to 12 percent in 2005 from 17 percent in 2004. Growth in the number of travelers from Canada slowed slightly, to 5 percent from a 6-percent increase.

Travel receipts from Mexico increased 9 percent in 2005 after increasing 10 percent in 2004. The number of Mexican travelers to the U.S. border area, which accounts for approximately 95 percent of Mexican travelers to the United States, was down slightly; most of the increase in receipts from Mexico in 2005 was due to an increase in average expenditures by border travelers. In contrast, the number of Mexican travelers to the interior of the United States and their average expenditures

increased strongly in 2005. Receipts from Mexican travelers to the interior increased 13 percent in 2005, up from 10 percent.

**Payments.** Travel payments increased 5 percent, to \$69.2 billion, in 2005 after increasing 14 percent in 2004. The slowdown reflected higher airline ticket prices, mainly attributable to higher fuel costs. Like travel receipts, payments increased for the second straight year after declining for 3 years. The increases in travel payments have been smaller than those in travel receipts, resulting in an improved trade balance in travel services for the second year in a row.

Growth in travel payments to overseas countries slowed to 6 percent in 2005 from 15 percent in 2004. The slowdown was most pronounced for U.S. travelers to Asia. Growth slowed to 10 percent in 2005 from 25 percent in 2004, as higher fuel prices contributed to higher airline ticket prices, particularly for long, trans-Pacific flights. In addition, the growth rate in 2004 was unusually strong, reflecting a rebound from the combined effects of September 11th, the start of the war in Iraq, and Severe Acute Respiratory Syndrome (SARS), events that disrupted travel in recent years.

Travel payments to Canada turned down, decreasing 4 percent in 2005 after increasing 14 percent in 2004. The number of U.S. travelers to Canada decreased 9 percent, reflecting a depreciation of the U.S. dollar against the Canadian dollar. The drop in the number of travelers was partly offset by an increase in

1. Ranked by dollar value of total exports or imports.

U.S. travelers' average expenditures.

Growth in travel payments to Mexico slowed to 10 percent in 2005 from 13 percent in 2004. Most of the slowdown in payments reflected less travel to the interior of Mexico, where Hurricane Wilma destroyed major tourist areas and constrained U.S. travel to Mexico

in the last 3 months of 2005. The depreciation of the U.S. dollar against the Mexican peso may have also contributed to the slowdown. In contrast, travel payments to the Mexican border region increased strongly, as the number of U.S. travelers increased 3 percent and their average expenditures rose strongly.

\* Less than \$50 million.

1. Equal to "affiliated other transportation" in table 1.

2. Equal to "affiliated royalties and license fees" in table 1.

3. Equal to "affiliated other private services" in table 1.

4. Includes affiliated insurance and affiliated telecommunications transactions; see footnotes 13 and 14 in table 1.

5. Prior to 2001, management and consulting services were included in "other" services. Beginning in 2001, data on management and consulting services were collected as a separate type of service.

6. Prior to 2001, research and development and testing services were included in "other" services. Beginning in 2001, data on research and development and testing services were collected as a separate type of service.

7. In addition to transactions with its foreign parent, a U.S. affiliate's receipts and payments include transactions with other members of its foreign parent group. The foreign parent group is defined as (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the foreign person below it, up to and including the ultimate beneficial owner, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

## Passenger fares

**Receipts.** Receipts for passenger fares increased 11 percent, to \$20.9 billion, in 2005 after increasing 20 percent in 2004. The slowdown partly reflected a slowdown in the growth of foreign visitors to the United States, to 1 percent in 2005 from 6 percent in 2004. However, in 2005, airline ticket prices (especially for business class) increased, and more in-flight services were offered by U.S. carriers on international routes, both of which provided a strong boost for passenger fares.

In 2005, jet fuel prices increased 52 percent. Higher fuel prices affected passenger fares on Asia-Pacific routes more than on trans-Atlantic routes, mainly because of the longer distances and higher fuel consumption on trans-Pacific flights. However, the commodity-like nature of a passenger seat has forced airlines to

compete for customers mainly on the basis of price, particularly for economy class seats on trans-Atlantic routes. These seats are often deeply discounted, and with low-cost carriers increasingly emerging in the international market, there was incomplete passthrough of higher fuel costs and other costs to economy class customers. As a result, carriers in developed countries—including the United States—have adopted a variety of strategies to increase revenues by attracting passengers who are willing to pay higher ticket prices. One strategy was to charge higher business class fares in exchange for value-added services and amenities, such as Internet access, teleconferencing facilities, and redesigned cabins that provide more comfort and privacy. Another strategy was to shift capacity from highly competitive national markets to more profitable (particularly for business class) international routes. U.S. carriers' domestic capacity shrank in 2005, while their capacity in international markets increased. The higher volume of U.S. carriers' international flights, combined with their ability to charge higher business class fares that more than offset lower economy class fares, has contributed to the increase in passenger fares receipts in 2005.<sup>6</sup>

**Payments.** Payments for passenger fares increased 10 percent, to \$26.1 billion, in 2005 after a 13-percent increase in 2004. The slowdown partly reflected slower growth in the number of U.S. travelers—1 percent in 2005, compared with 5 percent in 2004. The share of U.S. travelers on foreign-flag carriers changed little. Sizable increases in ticket prices resulted primarily from higher fuel costs. Passenger fare payments to Europe and Asia and Pacific increased in 2005, and the increases offset the decreases in payments to Latin America and Canada.

## Other transportation

**Receipts.** Receipts for “other transportation” services increased 13 percent, to \$42.2 billion, in 2005 after increasing 19 percent in 2004. Slowdowns in both freight receipts and port services receipts reflected slowdowns in U.S. goods exports to, and imports from, all major countries and areas in 2005. Growth in the volume of U.S. goods exports slowed to 7 percent in 2005 from 9 percent in 2004; growth in the volume of U.S. imports slowed to 7 percent in 2005 from 11 percent in 2004.

### Data Sources

The estimates in this article are primarily based on data from the surveys that are conducted by the Bureau of Economic Analysis (BEA), but the estimates of some services are based on data from a variety of other sources, including U.S. Customs and Border Protection, surveys conducted by other Federal Government agencies, private sources, and partner countries.

BEA conducts several mandatory surveys of services; some surveys are targeted to specific services industries and, for intrafirm transactions, to specific types of investment. The survey forms and instructions are available on BEA's Web site at [www.bea.gov/bea/di/home/more.htm](http://www.bea.gov/bea/di/home/more.htm).

The data on intrafirm trade in services and on sales by majority-owned affiliates are collected in BEA's surveys of U.S. direct investment abroad and of foreign direct investment in the United States. For the methodologies for these surveys, see *Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey* and *U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey*. For additional information on the methodology used to prepare the estimates of both affiliated and unaffiliated cross-border trade, see *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures*. These publications and other detailed information on the changes in the methodology since 1990 can be accessed on BEA's Web site at [www.bea.gov/bea/mp\\_international.htm](http://www.bea.gov/bea/mp_international.htm).

For a summary of the changes since 1990, see “Improvements to BEA's Estimates of U.S. International Services, 1990–2003,” in Borgia and Mann, *SURVEY* 83 (October 2003): 74–76. The *SURVEY* articles for 1994–2005 are available at [www.bea.gov/bea/pubs.htm](http://www.bea.gov/bea/pubs.htm).

6. For an analysis of competitive conditions in the international passenger fare market, see U.S. International Trade Commission, “Air Transportation Services,” in *Recent Trends in U.S. Services Trade: 2006 Annual Report* (June 2006): 3.1–3.8.

Nonetheless, the continued increases in export and import volumes contributed to the strong growth in transportation receipts.

The increase in freight receipts was attributable mostly to an increase in air freight rates. Several air carriers raised rates as early as the first quarter of 2005 in response to soaring fuel prices. The airlines then repeatedly raised prices over the course of the year as fuel prices continued to increase. In contrast, ocean freight rates, particularly for U.S.-operated tramp and tanker vessels, were down in 2005. In 2004, tanker and tramp rates rose sharply, partly as a result of China's rapid export-led economic expansion. Returns from higher rates and increased trade with Asia prompted an increase in ship building, which added many new ships to the world's fleet. In 2005, rates decreased because of increased capacity and the slowing growth of world trade.

The increase in port services receipts was attributable to increases in both ocean and air port services. The increase in ocean port receipts reflected increases in bunker fuel revenues and in imports and exports transported by foreign-operated vessels. The increase in air port services receipts reflected higher jet fuel prices and increases in nonpetroleum imports and exports and in the number of foreign visitors to the United States. Jet and bunker fuel prices increased significantly because of strong global demand for oil and the disruption in U.S. refinery production and capacity as a result of Hurricanes Katrina and Rita late in the year.

"Other transportation" receipts from all areas except Africa rose in 2005. Receipts from Europe, Japan, and Latin America increased strongly in 2005, reflecting higher trade volumes.

**Payments.** Payments for "other transportation" services increased 15 percent to \$62.1 billion in 2005 after increasing 21 percent in 2004. The increase in 2005, which was mostly in ocean freight payments, reflected increases in import volumes that were partly offset by decreases in ocean freight rates.

Port services payments increased, reflecting an increase in air port services. In contrast, ocean port services decreased. The increase in air port services, which includes fuel purchases, was attributable to higher jet fuel prices and an increase in the number of U.S. travelers overseas. The decrease in ocean port services was attributable to a decrease in the export and import volumes transported by U.S.-operated liner, tanker, and tramp vessels.

"Other transportation" payments increased in all areas, reflecting strong U.S. economic growth and increased demand for goods imports from all regions.

The increase in import volumes from Asia was less robust in 2005 than in 2004. The increase in 2004 was especially strong, leading to record high ocean liner rates that reflected tight vessel capacity.

### Royalties and license fees

**Receipts.** U.S. receipts of royalties and license fees increased 9 percent, to \$57.4 billion, in 2005 after increasing 12 percent in 2004. Most of the increase in 2005 was accounted for by U.S. parents' receipts from their foreign affiliates; affiliated receipts accounted for nearly 75 percent of receipts for royalties and license fees in 2005, about the same share as in recent years. Affiliated transactions account for a large portion of royalty and license fees partly because firms with marketable intellectual property usually prefer to exercise some degree of control over the distribution and use of this property, which may be instrumental to the firm's competitive position in the global market.<sup>7</sup> U.S. parents' receipts from their foreign affiliates accounted for 90 percent of affiliated receipts; in multinational firms, the parent companies rather than the affiliates are generally the holders of intellectual property.

U.S. parents' receipts from their foreign affiliates increased 7 percent to \$36.0 billion in 2005. The largest increases were receipts from foreign affiliates in the wholesale trade and transportation equipment manufacturing industries. By area, receipts from affiliates in all the major areas increased. The largest increase was from affiliates in Europe. Within Europe, the increase was generally widespread across countries; affiliates in Switzerland accounted for the largest increase. Receipts from affiliates in Asia and Pacific also increased substantially; affiliates in Japan accounted for the largest increase.

U.S. companies' receipts from unaffiliated foreign companies increased 14 percent, to \$15.3 billion, in 2005. The increase was mostly accounted for by receipts for the use of industrial processes, including patents and trade secrets, that are used in connection with the production of goods. The increase also reflected increased unaffiliated receipts for the rights to distribute and use general use computer software. Additional receipts from software licensing agreements were transacted through affiliated channels, but the value of these receipts cannot be separately identified (see the box "Delivery of Computer Services to Foreign Markets").

7. Lee Bransetter, Raymond Fisman, and C. Fritz Foley, "Do Stronger Intellectual Property Rights Increase International Technology Transfer? Empirical Evidence from U.S. Firm-Level Data" (National Bureau of Economic Research working paper no. 11516, July 2005); <[papers.nber.org/papers/w11516.pdf](http://papers.nber.org/papers/w11516.pdf)>.

**Payments.** U.S. payments of royalties and license fees increased 6 percent, to \$24.5 billion, in 2005, after increasing 22 percent in 2004. The slowdown was due primarily to a falloff in U.S. companies' payments to unaffiliated foreigners. Unaffiliated payments tend to spike in years that include major international sporting events, when U.S. companies pay international sports organizations for the rights to broadcast and record live events. The latest such spike occurred in 2004, an Olympic year.

Although unaffiliated payments accounted for most of the slowdown, affiliated payments continued to account for the largest share of U.S. payments in 2005, 84 percent. U.S. affiliates' payments increased 13 percent. The largest increases were payments by affiliates in the wholesale trade, chemicals manufacturing, and transportation equipment manufacturing industries. In wholesale trade, automobile wholesalers and pharmaceutical wholesalers were large contributors to the increase. By country, affiliates with parents in Japan had the largest increase, followed by affiliates with parents in Switzerland, the Netherlands, and Germany.

### Other private services

Receipts for "other private services" increased 9 percent, to \$158.2 billion, in 2005 after increasing 11 percent in 2004. The largest dollar increases were in "other business, professional, and technical services" and financial services (table 1 and tables 5–8). Payments for "other private services" increased 9 percent, to \$98.7 billion, after increasing 13 percent. The largest dollar increases were in computer and information services and "other business, professional, and technical services" (table 1). "Other private services" consists of education, financial services, insurance services, telecommunications, and business, professional, and technical services.

### Education

**Receipts.** Receipts for education increased 4 percent, to \$14.1 billion, in 2005 after increasing 2 percent in 2004. The increase in 2005, like that in 2004, resulted primarily from a continued increase in tuition rates. Tuition rates at private 4-year colleges and universities increased 6 percent in academic year 2005–2006 after

### Delivery of Computer Services to Foreign Markets

The delivery of computer-related services and of many other types of services may be further divided within the two major channels of cross-border trade and sales through affiliates. As a result, the total value of these services may be scattered across several categories of cross-border trade and sales by affiliates in the tables. In addition, some computer-related services may be embedded in goods that are exported to foreign markets, or they may be delivered in ways that result in entries in the U.S. international transactions accounts under income rather than under trade in goods and services.

Cross-border receipts from unaffiliated foreigners for "computer and data processing services" and "database and other information services" are shown under "business, professional, and technical services" in table 1.<sup>1</sup> Computer-related services that are delivered to foreign markets through cross-border software-licensing agreements, such as onsite licenses, are shown under "royalties and license fees."<sup>2</sup> Specifically, receipts through agreements with unaffiliated foreign persons are shown in "general-use computer software" in table 4. Receipts

through agreements with affiliated foreigner persons (intrafirm trade) are included in affiliated royalty and license fee transactions in table 1, but their value cannot be separately identified. Intrafirm receipts for computer and information services, which consist of computer and data processing services and of database and other information services, are shown in table 1 and table E.

The wages of U.S. residents who provide computer services to nonresidents are included in "compensation receipts" in the international transactions accounts (ITAs) (table 1, line 17), but their value cannot be separately identified. Compensation covers the earnings of U.S. individuals who are employees of nonresident firms and the earnings of certain independent individuals who provide services to nonresidents; it is classified in the ITAs as "income" rather than as services. If a U.S. resident goes abroad to provide these services, the length of stay must be less than 1 year; otherwise, the individual is considered a foreign resident.

Sales of computer-related services to foreign residents through foreign affiliates exceeded cross-border exports of these services in 2004, reflecting the advantages of a local commercial presence when delivering these services to foreign customers (table 10.2). The available data on sales through affiliates are classified by the primary industry of the affiliate rather than by type of service, but computer-related services may also be sold through affiliates in several other industries, particularly machinery manufacturing and wholesale trade.

1. For detailed estimates of receipts for these services by country and by area, see table 7.

2. Receipts and payments for general-use software that is packaged and physically shipped to or from the United States are included in trade in goods. The value of software that is preinstalled on computer equipment and peripherals is captured in the value of this hardware and thus is also included in trade in goods.

increasing 6 percent in 2004–2005. Tuition at public 4-year colleges and universities continued to increase, but the rate of increase slowed in 2005.<sup>8</sup> Slowing growth in public tuition rates may have contributed to the slowdown in the rate of decrease in the number of foreign students enrolled in U.S. higher education institutions. The number of foreign student enrollments decreased 1 percent in 2005 and more than 2 percent in 2004 after decades of annual increases. Most of the decrease in 2005 was attributable to undergraduate students, 80 percent of whom rely on personal and family funds to finance their educations (most foreign graduate students receive support from U.S. sources, primarily from the institutions where they study).

The total number of students from the top three countries of origin—India, China, and the Republic of Korea—increased in 2005. The rate of growth in the number of students from India, which remains the country from which the most foreign students in the United States originate, slowed to 1 percent in 2005 from 7 percent in 2004 and 12 percent in 2003. The total number of students from China increased 1 percent in 2005, a turnaround from a 5-percent decrease in 2004. The total number of students from the Middle East, Northern Africa, and countries with majority Muslim populations in Asia continued to decrease in 2005. However, decreases in students from countries with majority Muslim populations were not as sharp as in previous years; since 2001, the number of these students has decreased 18 percent.

**Payments.** Payments for education increased 13 percent, to \$4.0 billion, in 2005 after increasing 13 percent in 2004. The increase reflected increases in both the number of students from U.S. universities participating in study abroad programs and the number of students enrolled directly in universities abroad. The United Kingdom, Italy, Spain, and France continue to

be the top destinations for U.S. students in study abroad programs. The number of students studying abroad in China nearly doubled after the programs that were cancelled as a result of the SARS outbreak resumed. Further, the number of students studying abroad in financial centers in Asia (such as Japan, Hong Kong, Republic of Korea, and Singapore) increased. Business and management majors' share of U.S. students studying abroad increased, while foreign-language majors' share decreased. Since the end of the 2001–2002 academic year, the number of students from the United States studying in the Middle East, Northern Africa, and countries with majority Muslim populations in Asia has continued to grow.

### Financial services

**Receipts.** Financial services receipts increased 13 percent, to \$34.1 billion, in 2005 after increasing 26 percent in 2004. The deceleration was due primarily to unaffiliated services, which slowed from 35-percent growth in 2004 to a still strong 16 percent in 2005 (table F). The slowdown in unaffiliated services resulted mainly from a slowdown in management and advisory services; fees for these services had surged in 2004 as a result of large inflows of capital to both established and newly formed investment funds and a strong rebound in merger and acquisition activity. Affiliated receipts for financial services continued to decrease, falling 2 percent in 2005 after falling 6 percent in 2004.

In 2005, fees for securities transactions increased, largely as a result of growth in private placement and underwriting services for foreign securities issued in the United States. Credit card and credit-related services increased, mostly from continued strong growth in credit card transactions. “Other financial services” also increased, reflecting gains in securities lending, electronic fund transfers, and other financial services.

**Payments.** Financial services payments increased 7 percent, to \$12.3 billion, in 2005 after increasing 17 percent in 2004. In 2005, strong growth in unaffiliated

8. *Trends in College Pricing 2005* (Princeton, NJ: The College Board); <[www.collegeboard.com](http://www.collegeboard.com)>.

1. Includes brokerage, underwriting, and private placement services.

2. Includes financial management, financial advisory, and custody services.

3. Includes securities lending, electronic funds transfer, and other financial services.

payments was partly offset by a slowdown in affiliated payments. The increase in unaffiliated payments resulted from increases in most categories of financial services. "Other financial services" recorded the largest gain as a result of a surge in securities lending services. Securities transactions were higher as a result of increased trading in foreign stocks and bonds, which were partly offset by decreased underwriting services for U.S. securities issued abroad. Payments for management and advisory services increased as both finan-

cial management and financial advisory activity picked up. Credit card and credit-related services decreased, as a deceleration in credit-related activity was partly offset by steady growth in credit card services. Affiliated payments for financial services decreased, falling 6 percent after increasing 7 percent in 2004.

#### Insurance services

**Receipts.** Insurance services receipts remained flat, at \$6.8 billion, in 2005 after increasing 14 percent in

### Types of Cross-Border Services: Coverage and Definitions—Continues

The estimates of cross border transactions cover both affiliated and unaffiliated transactions between U.S. residents and foreign residents. Affiliated transactions consist of intrafirm trade within multinational companies—specifically, the trade between U.S. parent companies and their foreign affiliates and the trade between U.S. affiliates and their foreign parent groups. Unaffiliated transactions are with foreigners that neither own, nor are owned by, the U.S. party to the transaction.

Cross border trade in private services is classified in the same five broad categories that are used in the U.S. international transactions accounts—travel, passenger fares, "other transportation," royalties and license fees, and "other private services."

**Travel.** These accounts cover purchases of goods and services by U.S. persons traveling abroad and by foreign travelers in the United States for business or personal reasons. These goods and services include food, lodging, recreation, gifts, entertainment, local transportation in the country of travel, and other items incidental to a foreign visit. U.S. travel transactions with both Canada and Mexico include border transactions, such as day trips for shopping and sightseeing.

A "traveler" is a person who stays less than a year in a country and is not a resident of that country. Diplomats and military and civilian government personnel are excluded regardless of their length of stay; their expenditures are included in other international transactions accounts. Students' educational expenditures and living expenses and medical patients' expenditures for medical care are included in "other private services."

**Passenger fares.** These accounts cover the fares received by U.S. air carriers from foreign residents for travel between the United States and foreign countries and between two foreign points, the fares received by U.S. vessel operators for travel on cruise vessels, and the fares paid by U.S. residents to foreign air carriers for travel between the United States and foreign countries and to foreign vessel operators for travel on cruise vessels.

**"Other transportation."** These accounts cover U.S. international transactions arising from the transportation of goods by ocean, air, land (truck and rail), pipe-

line, and inland waterway carriers to and from the United States and between two foreign points. The accounts cover freight charges for transporting exports and imports of goods and expenses that transportation companies incur in U.S. and foreign ports. Freight charges cover the receipts of U.S. carriers for transporting U.S. exports of goods and for transporting goods between two foreign points and the payments to foreign carriers for transporting U.S. imports of goods. (Freight insurance on goods exports and imports is included in insurance in the "other private services" accounts.)

Port services consist of the value of the goods and services purchased by foreign carriers in U.S. ports and by U.S. carriers in foreign ports.

**Royalties and license fees.** These accounts cover transactions with nonresidents that involve patented and unpatented processes, formulas, and other intangible assets and proprietary rights used in the production of goods; transactions involving trademarks, copyrights, franchises, broadcast rights, and other intangible rights; and the rights to distribute, use, and reproduce general use computer software.

**"Other private services."** These accounts consist of education; financial services; insurance; telecommunications; business, professional, and technical services; and "other services."

Education consists of expenditures for tuition and living expenses by foreign students enrolled in U.S. colleges and universities and by U.S. students for study abroad. This category excludes fees for distance-learning technologies and for educational and training services provided on a contract or fee basis; these transactions are included in training services in other business, professional, and technical services in table 1.

Financial services include funds management and advisory services, credit card services, fees and commissions on transactions in securities, fees paid and received on bond dealing, fees on credit related activities, and other financial services.

Insurance services consist of the portion of premiums remaining after provision for expected or "normal" losses, an imputed premium supplement that represents

2004. A decrease in reinsurance services was partly offset by an increase in primary insurance services. The decrease in reinsurance resulted primarily from a fall in premium supplements and from premium rates that were lower in 2005 than in previous years.<sup>9</sup> In 2005, the United Kingdom continued to be the top U.S. export market for insurance services, but Japan became the second largest market. Receipts from Japan surpassed receipts from Germany and Canada—traditionally the second and third top export markets—for the first time.

**Payments.** Insurance services payments decreased 2 percent, to \$28.5 billion, in 2005 after increasing 15 percent in 2004. The decrease was primarily the result of a decrease in premium rates, which fell slightly for most types of policies. Before September 11, 2001, premium rates had been rising because of consolidation in the insurance industry and the need to recoup investment losses after the stock market downturn in 2000; after September 11th, premium rates increased sharply, resulting in strong increases in 2002 and 2003. In 2004, growth in premium rates slowed.

9. See the box “Types of Cross-Border Services: Coverage and Definitions” for more information about how BEA estimates insurance services.

The decrease in insurance services payments appears unrelated to Hurricanes Katrina and Rita, which caused damage in late 2005. Insurance services payments are mostly based on premiums, and the premiums on most policies were set before the hurricanes occurred.

### Telecommunications

**Receipts.** Receipts for telecommunications services increased 6 percent, to \$4.7 billion, in 2005 after remaining nearly flat in 2004. Globally, landline telecommunication services increased less than 2 percent for the second consecutive year. The slow growth in the use of landlines for international telephone traffic reflects the increasing use of wireless communications technology. Globally, wireless transmission services accounted for 47 percent of total telecommunication services revenue in 2005, up from 26 percent in 2000.

**Payments.** Payments for telecommunications services increased 3 percent, to \$4.7 billion, in 2005 after increasing 7 percent in 2004. The slowdown may be partly attributable to the increasing availability of lower cost means of communicating across borders, such as e-mail.

### Types of Cross-Border Services: Coverage and Definitions

the investment income of insurance companies on funds that are treated as belonging to policyholders, and auxiliary insurance services.<sup>1</sup> Primary insurance mainly consists of life insurance and property and casualty insurance, and each type may be reinsured.<sup>2</sup>

Telecommunications consists of receipts and payments between U.S. and foreign communications companies for the transmission of messages between the United States

and other countries; channel leasing; telex, telegram, and other jointly provided basic services; value-added services, such as electronic mail, video conferencing, and online access services (including Internet backbone services, router services, and broadband access services); and telecommunications support services.

Business, professional, and technical services cover a variety of services, such as legal services, accounting services, and advertising services (see the list in table 1).

“Other services” receipts consist mainly of expenditures (except employee compensation) by foreign governments in the United States for services such as maintaining their embassies and consulates; noncompensation-related expenditures by international organizations, such as the United Nations and the International Monetary Fund, that are headquartered in the United States; expenditures of foreign residents employed temporarily in the United States; and receipts from foreigners for the display, reproduction, or distribution of motion pictures and television programs. “Other services” payments consist primarily of payments by U.S. distributors to foreign residents for the rights to display, reproduce, or distribute foreign motion pictures and television programs.

1. The portion of total premiums required to cover “normal losses” is estimated by BEA on the basis of the relationship between actual losses and premiums averaged over several years. Auxiliary insurance services include agents’ commissions, actuarial services, insurance brokering and agency services, claims adjustment services, and salvage administration services. For a detailed description of the imputed premium supplement, see Christopher L. Bach, “Annual Revision of the U.S. International Accounts, 1989–2003,” SURVEY 84 (July 2004): 60–62. For a description of other components of insurance services, see Christopher L. Bach, “Annual Revision of the U.S. International Accounts, 1992–2002,” SURVEY 83 (July 2003): 35–37 and Christopher L. Bach, “Annual Revision of the U.S. International Accounts, 1995–2005,” SURVEY 84 (July 2006): 42.

2. Reinsurance is the ceding of a portion of a premium to another insurer who then assumes a corresponding portion of the risk. It provides coverage for events with such a high degree of risk or liability that a single insurer is unwilling or unable to underwrite insurance against their occurrence.

## Business, professional, and technical services

**Receipts.** Business, professional, and technical (BPT) services receipts increased 12 percent, to \$80.9 billion, in 2005 after increasing 10 percent in 2004. BPT services consist of five major categories: Computer and information services; management and consulting services; research, development, and testing services; operational leasing services; and “other BPT services.” Unaffiliated receipts accounted for most of the increase, and “other BPT services” accounted for nearly all of the increase in unaffiliated receipts.

Receipts for computer and information services decreased 8 percent, to \$8.2 billion, in 2005. A drop in unaffiliated receipts was dampened by a modest increase in affiliated receipts. Receipts for management and consulting services continued to increase strongly, increasing 24 percent, to \$6.4 billion, in 2005 after increasing 22 percent in 2004. The increase in 2005 was attributable to an increase in both affiliated and unaffiliated receipts. Receipts for research, development, and testing services increased 15 percent, to \$10.1 billion, in 2005 after decreasing 7 percent in 2004. Most of the increase was attributable to affiliated receipts, which increased 17 percent in 2005 after decreasing 9 percent in 2004. Affiliated receipts typically account for most of the receipts for research, development, and testing services because companies often prefer to retain control over their intellectual property. Receipts for operational leasing services increased 11 percent, to \$9.5 billion, primarily because of an acceleration in unaffiliated receipts.<sup>10</sup>

Receipts for “other BPT services” increased 15 percent, to \$46.6 billion, in 2005 after increasing 14 percent in 2004. The slight acceleration was accounted for by unaffiliated receipts, which increased 26 percent after increasing 15 percent; affiliated receipts decelerated, increasing 5 percent after increasing 13 percent. “Other BPT services” include a variety of services that are not recorded in the other categories of BPT services and costs that parent firms charge to their affiliates that are not further disaggregated by type of service.<sup>11</sup> Most

of the acceleration in unaffiliated receipts was accounted for by industrial engineering, trade-related services, and installation, maintenance, and repair of equipment.

**Payments.** Payments for BPT services increased 17 percent, to \$47.6 billion, in 2005 after increasing 12 percent in 2004. The acceleration was accounted for by affiliated payments, which increased 19 percent in 2005 after increasing 8 percent in 2004; unaffiliated payments decelerated, increasing 11 percent after increasing 20 percent.

Payments for computer and information services increased 34 percent, to \$9.0 billion, in 2005 after increasing 22 percent in 2004. Increases in affiliated payments accounted for most of the increases in both years. Affiliated payments increased 41 percent in 2005 and 28 percent in 2004. The increase in 2005 was driven by increased payments from U.S. affiliates to their foreign parents; the increase in 2004 was driven by payments from U.S. parents to their affiliates. Unaffiliated payments increased 19 percent in 2005 and 10 percent in 2004. Canada continues to be the top provider of unaffiliated computer and information services to the U.S. market. Payments for management and consulting services increased 19 percent, to \$5.9 billion in 2005. An acceleration in affiliated payments accounted for most of the increase. The greater focus on risk management and governance standards contributed to the growth in management and consulting services. Payments to firms that specialize in assisting companies in the United States (and other major industrialized countries) with offshoring business processes also account for some of the increase in unaffiliated management and consulting services. Payments for research, development, and testing services increased 35 percent, to \$6.7 billion, in 2005, as payments by U.S. affiliates to their foreign parents surged after remaining flat in 2004. Payments for operational leasing services increased 5 percent, to \$1.2 billion, after increasing 37 percent in 2004.

Payments for “other BPT services” increased 8 percent, to \$24.8 billion, in 2005 after increasing 5 percent in 2004. Affiliated payments accounted for most of the acceleration. Unaffiliated payments decelerated; a deceleration in accounting, auditing, and bookkeeping services partly accounted for the deceleration in unaffiliated payments; despite the deceleration, the growth in these services was still strong, which may reflect U.S. companies’ outlays to comply with Sarbanes-Oxley accounting and auditing standards, which came into effect in 2004.

10. This category covers rentals of transportation equipment (such as ships, aircraft, and railcars) without crews or operators; if crews or operators are provided, the transaction is included under transportation services.

11. As part of “other BPT services,” BEA collects and publishes additional details on transactions with unaffiliated foreign persons that cover more than a dozen types of services (see the addenda to table 1). For affiliated trade in BPT services, allocated expenses for research and development services and management services are sometimes identified and charged; when they are, the values are recorded in the categories provided for those services. When they cannot be identified, the values are recorded under affiliated “other BPT services.”

## Film and television tape rentals

**Receipts.** Receipts for film and television tape rentals increased 2 percent, to \$10.4 billion, in 2005 after increasing 4 percent in 2004. Film and television tape rentals cover the rights to display, reproduce, and distribute U.S. motion pictures and television programming abroad.

**Payments.** Payments for film and television tape rentals more than doubled, to \$0.9 billion, in 2005 after nearly doubling in 2004. Payments to Australia have accounted for most of the increases since 2003. Although payments have increased rapidly, they continue to be only a small fraction of receipts, reflecting the relatively small U.S. audience for foreign films and television programs, compared with the large foreign audience for U.S. films and television programs.

## Sales Through Affiliates in 2004

In 2004, sales of services by nonbank U.S. multinationals through their nonbank majority-owned foreign af-

filates to both foreign and U.S. persons were \$525.2 billion, up 12 percent from 2003, after an adjustment to remove the effects of the change in reporting requirements for nonbank units of U.S. banks (table G). Before the adjustment, the year-to-year increase in 2004 was 9 percent. Worldwide sales of services by foreign multinationals through their nonbank majority-owned U.S. affiliates rose 4 percent, to \$415.2 billion.

Sales of both goods and services through affiliates are typically dominated by local transactions—that is, transactions with parties in the same country as the affiliate. In 2004, local sales accounted for 78 percent of the worldwide sales of services by foreign affiliates of U.S. multinational companies and for 60 percent of their worldwide sales of goods. Local sales account for a particularly large share of worldwide sales by U.S. affiliates of foreign multinational companies, reflecting the large U.S. market. In 2004, local sales accounted for 92 percent of worldwide sales of services by U.S. affiliates of foreign companies and for an estimated 92 percent of their worldwide sales of goods.<sup>12</sup>

Both the sales of services by foreign affiliates of U.S. companies to the local host market and to other for-

### Acknowledgments

The estimates of cross-border trade were prepared by the following staff members of the Balance of Payments Division and the International Investment Division.

Travel and passenger fares—Joan E. Bolyard and Laura L. Brokenbaugh

Other transportation—Patricia A. Brown

Royalties and license fees and “other private services,” affiliated—Gregory G. Fouch (for transactions of U.S. affiliates) and Mark W. New (for transactions of U.S. parents)

Royalties and license fees and “other private services,” unaffiliated—Christopher J. Emond, Pamela Aiken, Felix Anderson, Stacey Ansell, Damon C. Battaglia, Rachel Blanco, Annette Boyd, Faith M. Branham, Jamela Des Vignes, Hope R. Jones, Eddie L. Key, Irina Leonova, Kiesha Middleton, Steven J. Munro, Mark Samuel, Gregory Tenentes, Helen Yiu, John A. Sondheimer, Robert A. Becker, Erin Nephew, and Matthew J. Argersinger.

The estimates of sales of services through majority-owned affiliates were prepared by staff members of the International Investment Division.

The information in tables 1, 2, 3, and 5 was consolidated by John A. Sondheimer. Computer programming for data estimation and the generation of the other tables was provided by Marie Colosimo, Carole J. Henry, Neeta B. Kapoor, Fritz H. Mayhew, Xia Ouyang, and Diane I. Young.

Anne Flatness made major contributions in writing the sections on cross-border trade in services and the appendix on the modes of supply and channels of delivery.

12. Because data on sales of goods by U.S. affiliates of foreign companies are not collected by destination, the shares of local and foreign sales of goods have been estimated from data on exports of goods shipped by U.S. affiliates. In 2004, exports represented 8 percent of U.S. affiliates' sales of goods.

**Table G. Sales of Services by U.S. MNCs Through Their Nonbank MOFAs and by Foreign MNCs Through Their Nonbank MOUSAs, 2003–2004**

NOTE: Depository institutions are excluded because data are not available.

In this table, sales of services through affiliates are generally defined to be economic outputs that are intangible. Intangible assets are typically associated with establishments in the following NAICS sectors: utilities; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional, scientific, and technical services; management of companies and enterprises; administrative and support and waste management and remediation services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; other services (except public administration); and public administration. Additionally, the output of establishments that provide support activities for agriculture and forestry or mining are typically intangible.

MNCs Multinational companies  
MOFAs Majority-owned foreign affiliates  
MOUSAs Majority-owned U.S. affiliates

foreign markets and the sales of services to U.S. persons (local sales) by U.S. affiliates of foreign companies represent the delivery of services to international markets through the channel of direct investment. Sales by country of foreign affiliate and by country of the U.S. affiliate's ultimate beneficial owner (UBO) for 1997–2004 are presented in table 9.<sup>13</sup> Sales by primary industry of the foreign affiliate cross-classified by country for 2003 and 2004 are presented in tables 10.1 and 10.2. Sales by primary industry of the U.S. affiliate cross-classified by country of UBO for 2003 and 2004 are presented in tables 11.1 and 11.2.

### Foreign affiliates' sales to foreign persons

Sales of services to foreign persons by nonbank majority-owned foreign affiliates of nonbank U.S. companies were \$489.6 billion in 2004. By area, foreign affiliates in Europe had the largest share of sales of services to foreign persons, accounting for 54 percent of total sales. Affiliates in Asia and Pacific accounted for 23 percent; affiliates in Latin America and Other Western Hemisphere, for 12 percent; and affiliates in Canada, for 10 percent. By country, affiliates in the United Kingdom had the largest sales of services to foreign persons, followed by affiliates in Japan, Canada, Germany, and France.

By industry sector, sales of services to foreign persons by affiliates were largest in "finance (except depository institutions) and insurance," in information, and in professional, scientific, and technical services.<sup>14</sup> In nonbank finance and insurance, more than 70 per-

13. The UBO of a U.S. affiliate is that person, proceeding up the affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. Unlike the foreign parent, the UBO of an affiliate may be located in the United States. The UBO of each U.S. affiliate is identified to ascertain the person that ultimately owns or controls the U.S. affiliate and therefore ultimately derives the benefits from ownership or control.

cent of sales of services abroad were accounted for by insurance carriers and related activities; affiliates in Asia and Pacific accounted for the largest share of these sales. In information, affiliates in telecommunications accounted for the largest share of sales, followed by affiliates in publishing industries, and in "Internet services providers, web search portals, data processing services, internet publishing and broadcasting, and other information services." In professional, scientific, and technical services, affiliates in computer systems design and related services had the largest sales, accounting for more than half of the sector's total sales.

After an adjustment for the change in reporting requirements for the nonbank units of U.S. banks, sales of services abroad by foreign affiliates increased 11 percent in 2004 after increasing 7 percent in 2003.<sup>15</sup> The increase in 2004, which was spread across several industries, reflected increased demand as real economic growth picked up in most major markets served by foreign affiliates. In addition, the dollar value of foreign affiliates' sales of services was boosted by the depreciation of the U.S. dollar against several major currencies, including the euro, the British pound, the Canadian dollar, and the Japanese yen.

In 2004, sales of services abroad by foreign affiliates increased in all major areas. Affiliates in Europe had the largest increase in sales, accounting for over 50 percent of the total increase, followed by affiliates in Asia and Pacific and Canada. Within Europe, the increase was widespread; the largest increases were in the United Kingdom, Germany, and the Netherlands. In the United Kingdom, the largest increases were in accommodation and food services and in administration, support, and waste management. In accommodation and food services, the increase was largely attributable to majority-owned foreign affiliates

14. The largest industry in the U.S. direct investment position abroad is holding companies. Although this industry accounts for the largest share of direct investment income, it accounts for a relatively small share of sales of services by foreign affiliates because most of the operating revenues are recorded as investment income and not as sales of services (even though a substantial portion of the income in this industry is ultimately attributable to sales of services). Sales of services by affiliates owned by holding companies are recorded in the country and industry of the owned affiliates.

15. Before the adjustment, the increase computed from the accompanying tables is 8 percent in 2004. For more information on the change in treatment and its effects, see the box "The 2004 Benchmark Survey of U.S. Direct Investment Abroad and the Treatment of Nonbank Units of U.S. Banks."

#### Data Availability

The estimates of cross-border trade for 1986–2005 and the estimates of sales through majority-owned affiliates for 1989–2004 are available as files that can be downloaded from BEA's Web site. To access these files, go to <www.bea.gov> and click on International, and then, under International Services, click on "Detailed Estimates."

that had previously been minority-owned (and therefore excluded from the data set) and to increased sales by existing affiliates. In administration, support, and waste management, affiliates in employment services were the largest contributors to the increase. In Germany, increases were spread across several industry sectors but were largest in utilities and in professional, scientific, and technical services. In utilities, the increase was largely attributable to new affiliates in natural gas distribution. In the Netherlands, the largest increase was in professional, scientific, and technical services, mainly due to acquisitions by existing affiliates in “other professional, scientific, and technical services.” Within Asia and Pacific, affiliates in Japan had the largest increase, accounting for more than 40 percent of the increase for the area. In Japan, the largest increases were in information and in professional, scientific, and technical services. In information, sales by majority-owned telecommunications affiliates that had previously been minority owned contributed to the increase. In Canada, the largest increase was in utilities, due to sales by newly acquired affiliates in natural gas distribution.

By industry sector, the largest increases in sales of services abroad were in information, in professional, scientific, and technical services, and in administration, support, and waste management. In information, the increase was broadly based among subsectors and countries; affiliates in Japan, Luxembourg, and Italy recorded the largest increases. Changes in corporate structure contributed substantially to the increase in sales of services, especially in telecommunications, in “broadcasting (except Internet),” and in “other information services.” Corporate restructurings—such as an increased ownership share by U.S. companies of minority-owned affiliates and the restructuring of a foreign media company with worldwide operations as a U.S. company—boosted sales by adding new majority-owned affiliates to the universe.

In professional, scientific, and technical services, the largest increase was in computer systems design and related services, reflecting continued growth in affiliates’ services activities relative to computer equipment manufacturing and sales and the reclassification of some affiliates into the industry.<sup>16</sup> In administration,

16. In 2004, the industry classifications of several affiliates in software publishing or in “professional and commercial equipment and supplies wholesaling” were changed to computer systems design and related services. Although the reclassification of an affiliate increases (decreases) sales of services in the industries to which (from which) it is classified, the change in industry classification does not affect the overall year-to-year change in sales of services abroad.

support, and waste management, affiliates in employment services had the largest increase in sales, reflecting improved market conditions, increased use of flexible staffing, and higher hourly rates.

### U.S. affiliates’ sales in the United States

Sales of services to U.S. persons by U.S. affiliates of foreign companies were \$382.8 billion in 2004. By area, sales of services by affiliates with ultimate beneficial owners (UBOs) in Europe were the largest, accounting for 68 percent of total sales. Affiliates with UBOs in Asia and Pacific had the next largest share, accounting for 12 percent of the total. Affiliates with UBOs in Canada accounted for 10 percent and affiliates with UBOs in Latin America and Other Western Hemisphere, for 9 percent. By country of UBO, affiliates with owners in the United Kingdom had the largest sales, followed by Germany, France, and Canada.

By industry sector, sales of services to U.S. residents by U.S. affiliates of foreign companies were largest in “finance (except depository institutions) and insurance” and in information. In nonbank finance and insurance, affiliates in insurance accounted for 77 percent of sales. In information, affiliates in telecommunications had the largest sales.

In 2004, the growth in sales of services in the United States by U.S. affiliates remained modest, at 2 percent, despite strong real economic growth in the United States. The growth of U.S. affiliates’ sales of services in the United States has been modest since 2002, when sales were flat. In contrast, in 1998–2000, strong growth in U.S. affiliates’ sales was fueled by a wave of international mergers and acquisitions. In 2004, spending by foreign persons to establish or acquire U.S. businesses increased, but outlays for new investment were just 26 percent of their peak level in 2000.<sup>17</sup> Most of the growth in sales of services to U.S. residents in 2004 was fueled by increased sales by existing affiliates. Selloffs of some affiliates and corresponding decreases in sales dampened the overall increase.

Sales of services in the United States by U.S. affiliates with UBOs in all the major areas except Canada and

17. According to data from BEA’s survey of new foreign direct investment in the United States, outlays to acquire or establish U.S. businesses were \$86.2 billion in 2004, up from \$63.6 billion in 2003; see Lawrence R. McNeil, “Foreign Direct Investment in the United States: New Investment in 2005,” SURVEY 86 (June 2006): 32–39. These data only cover transactions involving U.S. businesses that are newly acquired or established by foreign direct investors. For additional information on foreign direct investment and the operations of both new and existing U.S. affiliates, see Anderson and Zeile, “U.S. Affiliates of Foreign Companies: Operations in 2004,” and Jennifer L. Koncz and Daniel R. Yorgason, “Direct Investment Positions for 2004: Country and Industry Detail,” SURVEY 85 (July 2005): 40–53.

the United States increased in 2004. The largest increase was by affiliates with UBOs in Latin America and Other Western Hemisphere, followed by Asia and Pacific and Europe. Within Latin America and Other Western Hemisphere, affiliates with UBOs in Bermuda, particularly affiliates in the insurance carriers and related activities industry, accounted for the largest share of the increase. The increase was largely due to the reorganization of the foreign owners of U.S. affiliates, which caused the location of the UBOs to shift from the United Kingdom to Bermuda.<sup>18</sup> Within Asia and Pacific, affiliates with UBOs in Japan and Australia had the largest increases in sales of services to U.S. residents, which were widespread by industry sector. Within Europe, affiliates with UBOs in Germany and in France more than accounted for the increase. For Germany, the largest increases were in machinery manufacturing and in information. In machinery manufacturing, the increase was attributable to increased sales in affiliates' secondary services activities. In information, the addition of new customers significantly increased sales in wireless telecommunications. For affiliates with UBOs in France, the largest increase was in professional, scientific, and technical services, mainly reflecting increased sales by existing affiliates in advertising and related services. In contrast, sales of services to U.S. residents decreased for affiliates with UBOs in the Netherlands, mainly because of selloffs of affiliates in the insurance carriers and related activities industry.

By industry sector, affiliates in professional, scientific, and technical services had the largest increase, followed by affiliates in utilities and in manufacturing. In professional, scientific, and technical services, sales by existing affiliates with French UBOs in advertising and related services increased substantially. In utilities, some affiliates' industry classification shifted from pipeline transportation to natural gas distribution, and sales by existing affiliates in electric power generation, transmission, and distribution increased. In manufacturing, the increase largely reflected growth in the secondary services activities of affiliates in machinery manufacturing. In contrast, sales of services to U.S. residents decreased in "finance (except depository institutions) and insurance," reflecting selloffs of affil-

---

18. Similar to a change in an affiliate's industry classification, a change in the location of an affiliate's UBO results in decreased (increased) sales of services for affiliates with UBOs in the country from which (to which) ultimate beneficial ownership is transferred.

ates in insurance carriers and related activities and reduced premium income for life insurance carriers.

## Revisions

The revised estimates of cross-border trade in services published in this article are consistent with the less detailed estimates that were published in the July 2006 SURVEY. The revised estimates of sales through affiliates are presented for the first time. The revised estimates published in this article supersede those presented in the October 2005 SURVEY.

**Cross-border trade.** The estimates of cross-border exports of private services for 2004 have been revised up \$4.6 billion, or 1 percent, to \$328.0 billion, and the estimates of cross-border imports have been revised down \$0.8 billion, or less than 1 percent, to \$257.2 billion. For 2003, exports were revised down \$2.4 billion, or less than 1 percent, to \$289.1 billion, and imports were revised down \$2.8 billion, or 1 percent, to \$221.8 billion. For 2002, both exports and imports were virtually unrevised.

These revisions to the estimates of cross-border trade in services reflect the regular annual revisions that are released in June and are published in the international transactions accounts in the July SURVEY. These revisions generally reflect the incorporation of regular source data as well as statistical and methodological improvements. The revisions also include the incorporation of the results from BEA's benchmark surveys, such as the 2002 benchmark survey of foreign direct investment in the United States and the 2004 benchmark survey of financial services transactions with unaffiliated foreigners.

**Sales through affiliates.** The estimates of sales of services through affiliates for 2004 are preliminary.

The estimates for 2003 have been revised to reflect the incorporation of newly available and improved source data, the correction of errors or omissions, or other changes resulting from the regular annual revision of the data on multinational companies' operations. Estimates for 2002 and the preceding years are unchanged.

For 2003, the estimates of sales of services abroad through nonbank majority-owned foreign affiliates of nonbank U.S. multinational companies were revised down \$25.0 billion, or 5 percent, to \$452.5 billion. The estimates of sales of services to U.S. persons by U.S. affiliates of foreign multinational companies were revised down \$7.3 billion, or 2 percent, to \$374.1 billion.

## Appendix: Modes of Supply and Channels of Delivery of Services Sold in International Markets

BEA's presentation of U.S. international sales and purchases of services takes into account two channels of delivery: Cross-border exports and imports, which BEA records in its international transactions accounts, and sales of services through direct investment. However, the General Agreement on Trade in Services (GATS)—the outcome of the Uruguay Round of trade negotiations—takes a different approach. It distinguishes international delivery of services through four “modes” that categorize how services are sold in international markets. This appendix describes these modes and how they relate to BEA data.<sup>19</sup>

BEA is not able to precisely identify trade through each mode, though in some cases, the mode may be evident from the nature of the service. There are important definitional differences between BEA's data on channels of delivery and the GATS modes of supply.

### BEA channels of delivery

BEA collects data according to two distinct channels.

**Cross-border trade.** This channel covers transactions in which the residents of one country sell services to the residents of another country. These transactions include both trade within multinational companies (intrafirm trade) and trade between unaffiliated parties. They are recorded in the international transactions accounts of both countries—as exports of services by the seller's country and as imports of services by the buyer's country.

**Direct investment.** This channel covers sales delivered through the foreign affiliates of multinational companies. From the U.S. viewpoint, these transactions include sales to foreigners by foreign affiliates of U.S. companies and sales to U.S. residents by the U.S. affiliates of foreign companies. These sales are not considered U.S. international transactions, because under the residency principle of balance-of-payments accounting, affiliates of multinational companies are considered residents of the countries where they are located rather than of the countries of their owners. Thus, sales abroad by foreign affiliates of U.S. companies are transactions between foreign residents, and sales in the United States by U.S. affiliates of foreign companies are transactions between U.S. residents.

### GATS modes of supply

The GATS, which became effective in January 1995, defines four “modes” through which services may be supplied internationally.

- GATS mode 1 is cross-border supply, which covers services supplied from one country to another without either the producer or the consumer traveling to the country of the other. In effect, the service crosses the border (for example, a lawyer provides legal services to a foreigner by telephone or e-mail).
- GATS mode 2 is consumption abroad, which covers consumers traveling abroad to obtain a service in another country (for example, medical services in which a resident of one country travels to another country to obtain medical care).
- GATS mode 3 is commercial presence, which covers companies from one country setting up subsidiaries, branches, or other operations to provide services in another country (for example, banks setting up an operation in a foreign country or construction services provided through short-term operations abroad).
- GATS mode 4 is the presence of “natural” persons, which covers individuals traveling temporarily from their own country to supply services in another country (for example, consultants).<sup>20</sup>

In general, modes of supply 1, 2, and part of 4 correspond to cross-border trade, and mode 3 corresponds, with minor exceptions, to direct investment. However, there are significant differences in concepts and definitions between GATS modes of supply and BEA's channels of delivery.

Specifically, to be included in cross-border trade, a transaction must occur between a resident and a non-resident; this definition is consistent with international standards for balance-of-payments accounting and bases the residency of a person (broadly defined to include both individuals and businesses) on a 1-year rule; that is, if the person stays, or intends to stay, in a country for 1 year or more, with few exceptions, he is regarded as a resident of that country. In contrast, GATS allows different and more flexible rules to determine whether an individual's or business' presence in a foreign country falls within the scope of the GATS agreement. For example, in the case of individuals, mode 4 applies to individuals whose period of residence or employment in a foreign country is nonper-

19. For a more detailed discussion of how the modes of supply correspond to balance-of-payments concepts, see the *Manual on Statistics of International Trade in Services*; <[unstats.un.org/unsd/tradeserv/manual.htm](http://unstats.un.org/unsd/tradeserv/manual.htm)>.

20. The concepts and definitions related to mode 4 trade in services and a statistical framework for measuring mode 4 transactions are currently being discussed by a group chaired by the United Nations Statistics Division with membership from national banks and national and international statistical agencies. BEA is an active participant in the group.

manent, but “permanence” is not defined; in practice, countries commonly use periods of 2–5 years rather than the 1-year rule used in determining residency for balance-of-payments purposes.

In the case of businesses, GATS generally considers enterprises operating in foreign countries to be supplying services in that country through mode 3 even if the duration of the operations is, or will be, less than a year. In contrast, only sales of services by business enterprises in a foreign country for 1 year or more and otherwise qualifying as a foreign affiliate are included in the direct investment channel.

### Primary modes of supply and channels of delivery

Although some services can be delivered equally well through various modes of supply or either channel of delivery, the type of service provided often determines the primary mode of supply and the channel of delivery. For example, travel, medical, and education services and some services purchased by carriers in foreign ports are primarily supplied through GATS mode 2 (consumption abroad) and delivered through the cross-border channel, because they usually require the movement of consumers outside their country of residence. In contrast, business, professional, and technical services are often supplied through GATS mode 3 (commercial presence) and delivered through the direct investment channel, because of the need for close, continuing business contact between the service providers and their customers.

The effect on the economy of the four modes of supply and the two channels of delivery varies. U.S. exports of services supplied through GATS modes 1 and 2 or the channel of cross-border trade usually affect the U.S. economy more than the equivalent services supplied through GATS mode 3 or the channel of direct investment, because most, or all, of the income generated by the production accrues to U.S.-supplied labor and capital. In contrast, for GATS mode 3 and direct investment, only the U.S. parent company’s share in profits accrues to the United States (and is recorded as an international transaction); the other income generated by production—including compensation of employees—typically accrues to foreigners. For GATS mode 4, portions of the income generated by services production may accrue to the United States in the form of exports of services or receipts of income or remittances, but a portion may also accrue to the foreign host economy.

BEA’s traditional presentation of services includes most, but not all, of the data that are conceptually in-

cluded in the four GATS modes of supply. The following briefly describes how BEA’s data relate to the four GATS modes.

**Mode 1 (cross-border supply).** In BEA’s international accounts, royalties and license fees, financial services, and telecommunications are examples of services supplied through GATS mode 1. Although some of these services may include a combination of GATS modes 1 and 4 (for example, when a financial advisor or manager travels abroad to discuss the terms of a deal), most of the value of these services represent delivery through GATS mode 1.

**Mode 2 (consumption abroad).** Travel, port services, education, and medical services are primarily supplied through GATS mode 2.<sup>21</sup> However, education and medical services could also be supplied through GATS mode 4 if professors and physicians travel abroad to provide their services. Education and medical services are increasingly supplied through GATS mode 1 as communications technology advances. The provision of education services through online coursework (distance learning) or of medical services through remote monitoring and diagnostics via the Internet are methods for delivering these services that did not exist until recently.

**Mode 3 (commercial presence).** Sales through affiliates are a substantial subset of GATS mode 3 services. However, in cases in which a company with a commercial presence outside its home country is not considered a resident of its host country, BEA considers any services sold abroad by the company to have been delivered through the cross-border channel. For example, a construction company may set up an unincorporated site office in a foreign country to carry out a short-term construction project, establishing a foreign commercial presence but not a foreign affiliate. The construction services provided by this company to foreign residents fall under GATS mode 3, but they are accounted for under the cross-border channel of delivery rather than the direct investment channel.

**Mode 4 (presence of persons).** Services supplied through GATS mode 4 are often connected with the cross-border supply (GATS mode 1) of business, professional, and technical services. Supply through the presence of persons in the country of the consumer often occurs when the cross-border supply of services requires some direct contact between the service providers and their customers but does not require a

---

21. Goods purchased by travelers, though a component of “travel” in the U.S. international transactions accounts, should conceptually be excluded from mode 2 trade in services. However, BEA does not have the source data to separately identify goods.

commercial presence (GATS mode 3). For example, the services of an architect who designs a project and delivers drawings via mail or e-mail and visits the country of the consumer during the implementation phase of the project would be apportioned between modes 1 and 4.

The differences in definitions and coverage between BEA data on channels of delivery and the GATS modes of supply are significant for mode 4. In addition to the differing definitions of residency, services supplied through mode 4 may be directly supplied by self-employed individuals abroad or by employees abroad sent by nonresident firms to the host country, or services may be indirectly supplied by individuals working for a service supplier resident in the host country. Only services directly supplied by a nonresident supplier to a resident consumer would be counted as international trade in services in BEA's trade accounts, in accordance with international guidelines. When a service is indirectly supplied by a U.S.-resident who is employed by an enterprise resident in the host country, the remuneration of this individual is recorded under "compensation of employees" in BEA's international transactions accounts if the individual resides in the host country for less than a year (otherwise, the individual is deemed to be a resident of the host country).

Compensation of employees is classified in the international transactions accounts as "income" rather than as services, and it covers income in the form of wages, salaries, and other compensation received by nonresidents of a country regardless of whether those individuals are employed in manufacturing, agriculture, or industries primarily producing services. BEA does not have the source data to separately identify the part of compensation of employees arising from the production of services.

### Appendix: Improvements to the Estimates of Cross-Border Trade in Services

As part of its continuing efforts to improve the data on international services, BEA has recently initiated several improvements to the estimates of cross-border trade in services.<sup>22</sup> Some of these improvements have already been implemented; others are under way.<sup>23</sup>

**Geographic detail.** Beginning with estimates for

22. For a list of the improvements implemented from 1990 to 2004, see the appendixes in Maria Borga and Michael Mann, "U.S. International Services: Cross-Border Trade in 2002 and Sales Through Affiliates in 2001," SURVEY 83 (October 2003): 74–76, in Borga and Mann, "Trade in 2003 and Sales in 2002," SURVEY 84 (October 2004): 41–43, and in Erin Nephew, Jennifer Koncz, et al., "Trade in 2004 and Sales in 2003," SURVEY 85 (October 2005): 43–44.

23. For the details about these improvements, see Christopher L. Bach, "Annual Revision of the U.S. International Accounts, 1995–2005" SURVEY 86 (July 2006).

2005, the presentation of the U.S. international transactions accounts has been greatly expanded in order to portray cross-border trade in services with foreigners in substantially greater geographic detail. The U.S. international accounts now provide quarterly estimates of trade in services that were previously available only annually in this article. The expanded presentation now shows quarterly estimates for the euro area, Africa, the Middle East, and Asia and Pacific. Within Europe, additional country detail is available for Belgium, France, Germany, Italy, Luxembourg, and the Netherlands. Within South and Central America, additional country detail is available for Argentina, Brazil, and Venezuela. Within Africa, new country detail is available for South Africa. Within Asia and Pacific, new country detail is available for China, Hong Kong, India, the Republic of Korea, Singapore, and Taiwan. These estimates for 2005 forward are available in the interactive data tables on BEA's Web site.<sup>24</sup>

**Affiliated transactions.** The estimates of royalties and license fees and "other private services" between U.S. affiliates and their foreign parents for 2002–2005 were revised to incorporate the results of BEA's 2002 Benchmark Survey of Foreign Direct Investment in the United States and to incorporate new or adjusted data from sample surveys for those years.

**Financial services.** The estimates of financial services were revised to incorporate the results of BEA's Benchmark Survey of Financial Services Transactions Between U.S. Financial Services Providers and Unaffiliated Foreign Persons covering transactions in 2004. The benchmark survey is more comprehensive than BEA's quarterly surveys of financial services transactions, principally because of lower reporting thresholds. In addition to revised survey results, BEA conducted research into the bid-ask spreads that are used to estimate dealer fees and commissions on U.S. and foreign bond transactions. BEA estimates bond commissions by applying average, market-based bid-ask spreads to cross-border transactions in bonds reported by the U.S. Treasury. BEA's research indicates that in recent years, these spreads have fallen significantly, both in the United States and abroad. The decline is attributable to technological advances in executing trades in global bond markets, to heightened transparency of bond transactions cost data, and to increased efficiency and competition in global and U.S. bond markets. In recognition that bid-ask spreads in recent years have dropped below those included in previously published estimates, the estimates have been

24. To access these interactive tables, go to <[www.bea.gov/bea/international/bp\\_web](http://www.bea.gov/bea/international/bp_web)>.

revised to incorporate updated, smaller spreads.

**Benchmark survey.** BEA has proposed to consolidate its reports of cross-border services transactions. Under this proposal, data for affiliated and unaffiliated foreign persons will be reported on the same form, beginning with the benchmark survey of transactions in selected services and intangible assets that BEA will conduct in early 2007, covering 2006 transactions. In addition, BEA will collect more detailed data by type of service for affiliated transactions. By collecting unaffiliated and affiliated trade data by type of service, BEA will be able to provide a more complete picture of services trade by type of service. Moreover, the detailed data on affiliated services are of analytical interest for several purposes, including questions related to offshore outsourcing.

The quality of BEA's estimates should improve because the collection of unaffiliated and affiliated trade data on the same form should reduce the potential for duplicate reporting or for omissions. In addition, the benchmark survey will include an open-ended "other services" category for transactions with unaffiliated foreign persons for the first time, which will make the estimates more comprehensive. Finally, BEA also plans a number of steps to simplify reporting, such as eliminating the requirement to report detailed information about trade in several types of services for which U.S. trade has been small.

**Insurance services.** BEA has refined its method of calculating the shares of premiums attributable to insurance services and to normal losses. Premiums over and above those required to cover normal losses were regarded as payments for the provision of insurance services. In calculating "normal" losses, BEA previously had separately averaged actual past losses in relation to premiums for primary insurance and for reinsurance. Separate averaging was done because the relationship between premiums and losses varies systematically by type of insurance: Losses relative to pre-

miums are generally higher for reinsurance than for primary insurance.

BEA is now treating "finite reinsurance" as a third category of insurance for which premium-related service charges are separately calculated. Finite reinsurance is a type of insurance in which the reinsurer's risk is limited by a number of possible contractual conditions, such as loss caps or rights to receive rebates of premiums if actual losses are lower than expected. Because the reinsurer's obligation for claims is usually known with a high degree of confidence to be within narrow bounds, the share of premiums attributable to insurance services is assumed to be much lower for this type of reinsurance than for either primary insurance or other types of reinsurance.

**Strategies to improve coverage.** BEA has adopted a number of long-term strategies for improving its estimates of cross-border trade in services. These strategies include an external review of its statistical procedures for estimating unreported transactions, an external review of the clarity of its surveys and instructions, and increased outreach to survey respondents. BEA has also been working with the Census Bureau and the Internal Revenue Service to expand its access to Census Bureau information that would help BEA expand its mailing list of companies that receive its surveys. This past year, BEA has reached an agreement with the Census Bureau to include a screening question on its 2006 Company Organization Survey to identify companies that import services so that they can be included in subsequent BEA surveys on international services trade. Additionally, BEA will fund a large expansion to the Census Bureau's survey sample. BEA will continue working to improve its mailing lists and plans to request contact information from the Census Bureau's business register in the future.

European Union <sup>1</sup> .....	35,282	37,185	40,816	45,589	47,038	53,319	60,912	67,642	77,872	77,154	78,991	84,971	95,917	105,902	

1. The European Union includes Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, and the United Kingdom; beginning with 1995, it also includes Austria, Finland, and Sweden; and beginning with 2004, it also includes Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia,

and Slovenia. (Estimates for 2004 and 2005 reflect the addition of the last 10 countries beginning in the second quarter of 2004, when they joined the Union.)

<sup>\*</sup> Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

<sup>1</sup> See table 1, footnote 11.

<sup>2</sup> Most insurance services transactions are deemed to be unaffiliated even when they are between affiliated companies, because the services are deemed to be provided to the policyholders who pay the insurance premiums and who are unaffiliated with either company. Only primary insurance services between a U.S. company that is not an insurance company and an affiliated foreign insurance company, such as a captive foreign insurance affiliate, are considered to be affiliated. Data on affiliated trade in insurance services are included in affiliated "other business, professional, and technical services."

nical services."

<sup>3</sup> Transactions in basic telecommunications services are deemed to be unaffiliated, even when the services flow through affiliated channels, because they represent the distribution of revenues collected from unaffiliated customers. Other types of telecommunications services, such as value-added services, may flow through either affiliated or unaffiliated channels. For the latter, unaffiliated telecommunications transactions are included under "telecommunications"; data on affiliated transactions are not separately available and are included in affiliated "other business, professional, and technical services."

<sup>4</sup> See table 2, footnote 1.

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. The \$5,974 million in receipts for insurance services in 2003 consisted of the share of premiums that represents charges for insurance services of \$3,794 million (total premiums were \$16,193 million and premiums for settlement of normal losses were \$12,399 million), auxiliary insurance services of \$440 million, and premium supplements of \$1,740 million. (See note below.)

2. The \$25,234 million in payments for insurance services in 2003 consisted of the share of premiums that represents charges for insurance services of \$18,661 million (total premiums were \$54,956 million and premiums for settlement of normal losses were \$36,295 million), auxiliary insurance services of \$524 million, and premium supplements of \$6,049 million. (See note below.)

3. The \$11,573 million in losses paid in 2003 consisted of \$10,621 million paid on reinsurance and \$952 million paid on primary insurance.

4. The \$33,778 million in losses recovered in 2003 consisted of \$33,702 million recovered on reinsurance and \$76

million recovered on primary insurance.

5. See table 2, footnote 1.

NOTE: Insurance services consist of: (1) A share of premiums (the remaining share is for settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums, averaged over several years), (2) auxiliary insurance services, such as agents' commissions, actuarial services, brokering and agency services, and salvage administration services, and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim. This income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. Differences between the portion of premiums allocated to loss settlement and the amount of losses actually incurred or recovered—sometimes termed "net insurance settlements"—are recorded in unilateral current transfers in the U.S. international transactions accounts. A positive (negative) amount for net insurance settlements would occur if losses paid are less (greater) than normal and/or if losses recovered are greater (less) than normal. In 2003, net insurance settlements were -\$1,692 million (losses paid were \$826 million less than normal and losses recovered were \$2,517 million less than normal).

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. The \$6,838 million in receipts for insurance services in 2004 consisted of the share of premiums that represents charges for insurance services of \$4,079 million (total premiums were \$18,953 million and premiums for settlement of normal losses were \$14,874 million), auxiliary insurance services of \$840 million, and premium supplements of \$1,918 million. (See note below.)

2. The \$29,038 million in payments for insurance services in 2004 consisted of the share of premiums that represents charges for insurance services of \$21,582 million (total premiums were \$65,260 million and premiums for settlement of normal losses were \$43,679 million), auxiliary insurance services of \$629 million, and premium supplements of \$6,826 million. (See note below.)

3. The \$10,843 million in losses paid in 2004 consisted of \$9,583 million paid on reinsurance and \$1,259 million paid on primary insurance.

4. The \$32,150 million in losses recovered in 2004 consisted of \$31,939 million recovered on reinsurance and \$211

million recovered on primary insurance.

5. See table 2, footnote 1.

NOTE: Insurance services consist of: (1) A share of premiums (the remaining share is for settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums, averaged over several years), (2) auxiliary insurance services, such as agents' commissions, actuarial services, brokering and agency services, and salvage administration services; and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim. This income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. Differences between the portion of premiums allocated to loss settlement and the amount of losses actually incurred or recovered—sometimes termed net insurance settlements—are recorded in unilateral current transfers in the U.S. international transactions accounts. A positive (negative) amount for net insurance settlements would occur if losses paid are less (greater) than normal and/or if losses recovered are greater (less) than normal. In 2004, net insurance settlements were -\$7,496 million (losses paid were \$4,032 million less than normal and losses recovered were \$11,528 million less than normal).

D Suppressed to avoid disclosure of data of individual companies.

1. The \$6,831 million in receipts for insurance services in 2005 consisted of the share of premiums that represents charges for insurance services of \$4,421 million (total premiums were \$18,409 million and premiums for settlement of normal losses were \$13,987 million), auxiliary insurance services of \$854 million, and premium supplements of \$1,556 million. (See note below.)

2. The \$28,482 million in payments for insurance services in 2005 consisted of the share of premiums that represents charges for insurance services of \$22,344 million (total premiums were \$63,997 million and premiums for settlement of normal losses were \$41,653 million), auxiliary insurance services of \$464 million, and premium supplements of \$5,676 million. (See note below.)

3. The \$14,625 million in losses paid in 2005 consisted of \$13,673 million paid on reinsurance and \$951 million paid on primary insurance.

4. The \$43,867 million in losses recovered in 2005 consisted of \$43,434 million recovered on reinsurance and \$433

million recovered on primary insurance.

5. See table 2, footnote 1.

NOTE: Insurance services consist of: (1) A share of premiums (the remaining share is for settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums, averaged over several years), (2) auxiliary insurance services, such as agents' commissions, actuarial services, brokering and agency services, and salvage administration services, and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim. This income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. Differences between the portion of premiums allocated to loss settlement and the amount of losses actually incurred or recovered—sometimes termed "net insurance settlements"—are recorded in unilateral current transfers in the U.S. international transactions accounts. A positive (negative) amount for net insurance settlements would occur if losses paid are less (greater) than normal and/or if losses recovered are greater (less) than normal. In 2005, net insurance settlements were \$1,576 million (losses paid were \$637 million greater than normal and losses recovered were \$2,213 million greater than normal).

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2003, total net receipts of \$2,564 million were derived as gross operating revenues of \$5,446 million less merchandise exports of \$430 million and foreign expenses of \$2,452 million. The components of the total are as follows: Construction services - net receipts of \$557 million were derived as gross operating revenues of \$2,425 million less merchandise exports of \$293 million and foreign expenses of \$1,575 million. Architectural, engineering, and other technical services - net receipts of \$2,006 million were derived as gross operating revenues of \$3,021 million less merchandise exports of \$137 million and foreign expenses of \$877 million. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. Data for this type of affiliated services are not separately available. However, these data are included in "other" affiliated services and in total affiliated services.

3. Data for this type of affiliated services are not separately available. However, these data are included in total computer and information services and in total affiliated services.

4. Consists of affiliated services except for the following services that are shown in the adjacent columns: computer and information services; research, development and testing services; management, consulting, and public relations services; and operational leasing services.

5. Consists of accounting, auditing, and bookkeeping services; agricultural, mining, and on-site processing services; medical services; miscellaneous disbursements (see footnote 6 table 1); sports and performing arts; trade-related services (see footnote 7 table 1); training services; and other business, professional, and technical services (see footnote 8 table 1). Receipts for mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2003, mining services net receipts of \$86 million were derived as gross operating revenues of \$303 million less merchandise exports of \$14 million and foreign expenses of \$203 million. Payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

6. See table 2, footnote 1.

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2004, total receipts were \$3,466 million for construction, architectural, and engineering services. The components of the total are as follows: Construction services - receipts of \$345 million were derived as gross operating revenues of \$2,327 million less merchandise exports of \$308 million and foreign expenses of \$1,674 million. Architectural and engineering services - receipts of \$3,121 million were derived as gross operating revenues of \$4,681 million less a BEA estimate of \$1,560 million for merchandise exports and foreign expenses. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. Data for this type of affiliated services are not separately available. However, these data are included in "other" affiliated services and in total affiliated services.

3. Data for this type of affiliated services are not separately available. However, these data are included in total computer and information services and in total affiliated services.

4. Consists of affiliated services except for the following services that are shown in the adjacent columns: computer and information services; research, development and testing services; management, consulting, and public relations services; and operational leasing services.

5. See table 7.1, footnote 5. In 2004, mining services receipts were \$133 million. Receipts and payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

6. See table 2, footnote 1.

<sup>1</sup> Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2005, total receipts were \$4,080 million for construction, architectural, and engineering services. The components of the total are as follows: Construction services - receipts of \$423 million were derived as gross operating revenues of \$2,002 million less merchandise exports of \$236 million and foreign expenses of \$1,343 million. Architectural and engineering services - receipts of \$3,657 million were derived as gross operating revenues of \$5,486 million less a BEA estimate of \$1,829 million for merchandise exports and foreign expenses. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. Data for this type of affiliated services are not separately available. However, these data are included in "other" affiliated services and in total affiliated services.

3. Data for this type of affiliated services are not separately available. However, these data are included in total computer and information services and in total affiliated services.

4. Consists of affiliated services except for the following services that are shown in the adjacent columns: computer and information services; research, development and testing services; management, consulting, and public relations services; and operational leasing services.

5. See table 7.1, footnote 5. In 2005, mining services receipts were \$59 million. Receipts and payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

6. See table 2, footnote 1.

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. For MOFAs, "country" is the country of the affiliate; for MOUSAs, it is the country of the affiliate's ultimate beneficial owner.

2. Beginning in 2004, sales by foreign affiliates are classified as goods or services based on their tangible or intangible nature. In cases where a sale consists of both tangible goods and intangible services that cannot be unbundled, sales are classified based on whichever accounts for the majority of value. In previous years, sales were classified as goods or services based on the industry of sales. For 1999–2003, sales were classified as services based on industry codes derived from the North American Industry Classification System (NAICS); the estimates for prior years were based on codes derived from the 1987 Standard Industrial Classification System (SIC). The change from the use of SIC to NAICS-based codes resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by Foreign Affiliates" in the November 2001 Survey of Current Business, page 58, available at <www.bea.gov>.

3. Beginning in 2002, sales by U.S. affiliates are classified as goods or services based on their tangible or intangible nature. In cases where a sale consists of both tangible goods and intangible services that cannot be unbundled, sales are classified based on whichever accounts for the majority of value. In previous years, sales were classified as goods or services based on the industry of sales. For 1997–2001, sales by U.S. affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System (NAICS); the estimates for prior years were based on codes derived from the 1987 Standard Industrial Classification System (SIC). The change from SIC to

NAICS-based codes resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by U.S. Affiliates" in the October 1999 Survey, page 61, available at <www.bea.gov>.

4. Foreign affiliates classified in "international" are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-drilling equipment. Beginning with the estimates for 1999, BEA no longer uses the "international" category in tabulations of direct investment estimates. This change was made to conform to international guidelines for the compilation of international transactions and direct investment statistics set forth by the International Monetary Fund's Balance of Payments Manual, 5th ed. In accordance with the guidelines, affiliates formerly classified in "international" were reclassified in the country of operator of the ship or equipment. In most cases the country of the operator is the same as the country of incorporation. In the few cases where the country of the operator is the United States, the affiliates were defined out of BEA's direct investment estimates.

5. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

6. The European Union comprises Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom; beginning in 2004, it also includes Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia.

MNCs Multinational companies  
MOFAs Majority-owned foreign affiliates  
MOUSAs Majority-owned U.S. affiliates

Table 10.1 Sales of Services to Foreign Persons by U.S. MNCs Through Their Nonbank MOFAs, Industry of Affiliate by Country of Affiliate, 2003

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Because sales resulting from construction activities are recorded as sales of goods rather than as sales of services, the sales of services through MOFAs represent sales in secondary, nonconstruction industries. In 2003, sales of goods to

foreign residents through MOFAs classified in construction were suppressed to avoid the disclosure of data of individual companies.

MNCs Multinational companies  
MOFAs Majority-owned foreign affiliates

Table 10.2 Sales of Services to Foreign Persons by U.S. MNCs Through Their Nonbank MOFAs, Industry of Affiliate by Country of Affiliate, 2004

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Because sales resulting from construction activities are recorded as sales of goods rather than as sales of services, the sales of services through MOFAs represent sales in secondary, nonconstruction industries. In 2004, sales of goods to

foreign residents through MOFAs classified in construction were suppressed to avoid the disclosure of data of individual companies.

MNCs Multinational companies

MOFAs Majority-owned foreign affiliates

\* Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries. In 2004, sales of goods to U.S. residents by MOUSAs in construction were estimated to be \$32.5 billion. These sales of goods

were estimated by subtracting exports of goods from the total sales of goods.

MNCs Multinational companies  
MOUSAs Majority-owned U.S. affiliates  
UBO Ultimate beneficial owner

## Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, 2002:IV–2006:II

THE quarterly estimates that are presented in this report incorporate the results of the recent annual revision of the national income and product accounts. The monthly estimates for January 2006 to April 2006 have also been revised; the estimates for May and June are new, and the estimates for July are preliminary.

Tables 1B, 2B, 3B, and 4B present chain-weighted estimates. Table 1B presents inventories, and table 2B presents sales. Table 3B presents the inventory-sales ratios that can be used to assess the likelihood that businesses will add to, or reduce, inventories in response to changes

in demand; these ratios supplement the quarterly current-dollar and real estimates of ratios of inventories to final sales of domestic business, of nonfarm business, and of goods and structures that are presented in NIPA tables 5.7.5B and 5.7.6B. Table 4B presents estimates of manufacturing inventories by stage of fabrication.

The estimates for 1967 forward are available in interactive tables on BEA's Web site at <www.bea.gov>. Click on "Gross Domestic Product," and under "Supplemental Estimates," click on "Underlying detail tables" and then on "List of Underlying Detail Tables."

<sup>p</sup> Preliminary  
NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).  
Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for

2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

p Preliminary

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar sales are calculated as the product of the chain-type quantity index and the 2000 current-dollar

value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 3B. Real Inventory-Sales Ratios for Manufacturing and Trade, Seasonally Adjusted

[Ratio, based on chained (2000) dollars]

# U.S. International Transactions

## Second Quarter of 2006

By Douglas B. Weinberg, Kelly K. Pierce, and Erin M. Whitaker

THE U.S. current-account deficit—the combined balances on trade in goods and services, income, and net unilateral current transfers—increased to \$218.4 billion (preliminary) in the second quarter of 2006 from \$213.2 billion (revised) in the first quarter (table A, chart 1).<sup>1</sup> The increase was mostly accounted for by increases in the deficits on goods and on income. Net unilateral current transfers to foreigners also increased, and the surplus on services was virtually unchanged.

In the financial account, net financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—decreased to \$154.1 billion in the second

quarter from \$171.5 billion in the first quarter. Net acquisitions by foreign residents slowed more than net acquisitions by U.S. residents.

The statistical discrepancy—errors and omissions in recorded transactions—was a positive \$65.2 billion in the second quarter, compared with a positive \$43.4 billion in the first quarter.

The following are highlights for the second quarter:

- Goods exports slowed but remained moderately strong. Goods imports picked up as a result of a sharp upturn in petroleum and products.
- Both receipts and payments of “other” private income (which consist of interest and dividends) and U.S. Government income continued to increase strongly as a result of increases in interest rates.
- Net foreign purchases of U.S. securities other than U.S. Treasury securities slowed after exceptionally strong net foreign purchases in the first quarter.

1. Quarterly estimates of U.S. current-account and financial-account components are seasonally adjusted when series demonstrate statistically significant seasonal patterns. The accompanying tables present both adjusted and unadjusted estimates.

r Revised  
p Preliminary

- Both U.S. claims and U.S. liabilities reported by banks increased much less in the second quarter than in the first quarter, when they increased by especially large amounts.

**Chart 1. U.S. Current-Account Balance and Its Components**

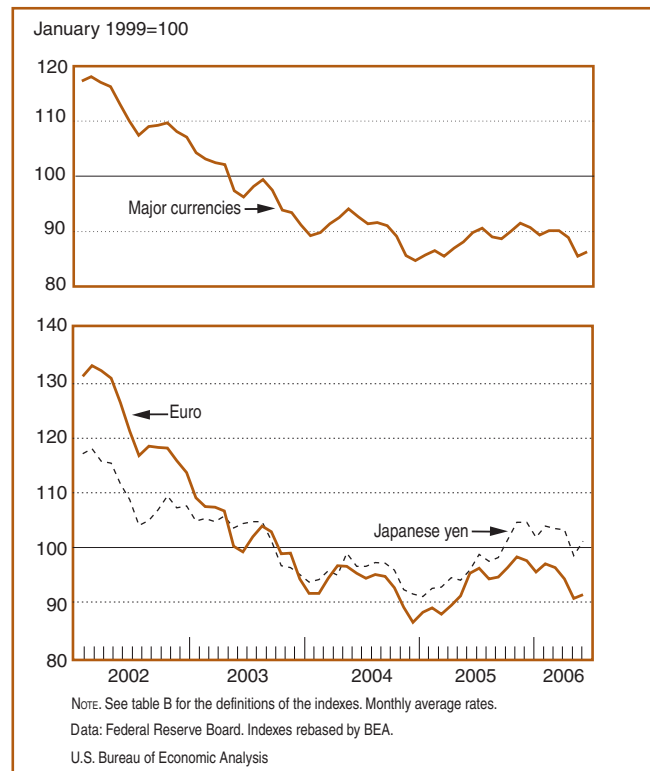

**Selected economic and financial market developments**

In the second quarter, the U.S. dollar depreciated 3 percent on a nominal, trade-weighted, quarterly average basis against a group of seven major currencies that are widely traded in international markets (table B, chart 2). The U.S. dollar depreciated 4 percent against the euro, 3 percent against the Canadian dollar, and 2 percent against the Japanese yen.

In the United States, data releases in the second quarter indicated that U.S. economic growth picked up considerably in the first quarter. Releases indicated that the U.S. deficit on trade in goods and services on a

**Chart 2. Nominal Indexes of Foreign Currency Price of the U.S. Dollar**

**Revisions to the Estimates**

The preliminary estimates of U.S. international transactions for the first quarter that were published in the July 2006 SURVEY OF CURRENT BUSINESS have been revised.

The current-account deficit was revised to \$213.2 billion from \$208.7 billion. The goods deficit was unrevised at \$208.0 billion; the services surplus was revised to \$16.8

billion from \$17.2 billion; the balance on income was revised to a deficit of \$2.5 billion from a surplus of \$1.9 billion; and unilateral current transfers were revised to net outflows of \$19.5 billion from \$19.9 billion. Net financial inflows were revised to \$171.5 billion from \$157.6 billion.

3-month moving-average basis fell slightly. U.S. monetary authorities raised the target level for the Federal funds rate by 50 basis points in two steps, to 5.25 percent. The target level has now increased 425 basis points in the last 2 years. After an extended period of growth, major U.S. and foreign stock market indexes decreased in the second quarter. U.S. long-term interest rates continued to increase and reached their highest levels in several years.

In Europe, data releases indicated that euro area economic growth in the first quarter picked up. Among countries with the largest economies, economic activity in Germany, France, and Italy strengthened, and activity in Spain remained relatively strong. Euro area monetary authorities raised the minimum bid rate on main refinancing operations, a key policy-controlled interest rate, to 2.75 percent.

In Japan, reports showed that economic growth in the first quarter remained moderately strong. Japanese monetary policy was unchanged, and the key overnight lending rate remained zero.

In Canada, reported economic growth in the first quarter strengthened. Canadian monetary authorities raised the target for the overnight rate to 4.25 percent.

### Current Account

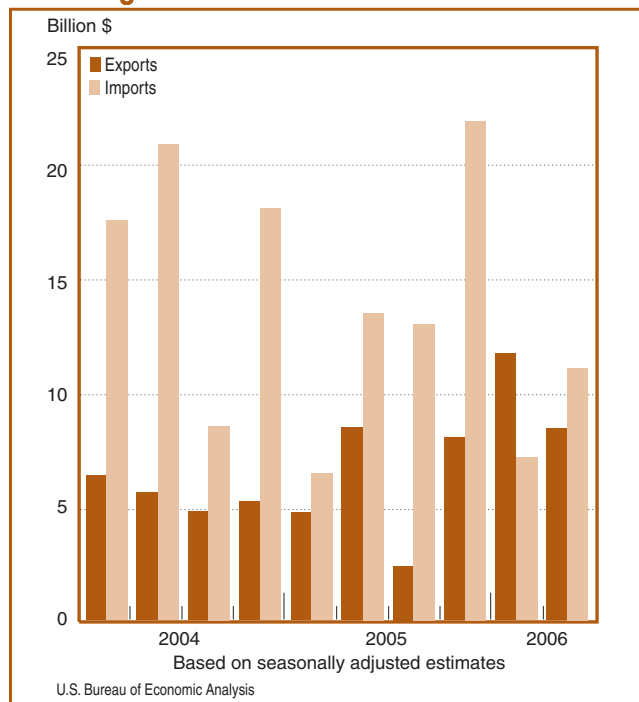

#### Goods and services

The deficit on goods and services increased \$2.7 billion to \$193.8 billion in the second quarter from \$191.1 billion in the first quarter. The deficit on goods increased \$2.6 billion, and the surplus on services was virtually unchanged.

#### Goods

The deficit on goods increased to \$210.6 billion in the second quarter from \$208.0 billion in the first quarter, as exports slowed and imports picked up (chart 3). The deficit on petroleum and products, which is sizable

1. For more information on the nominal and real indexes of the foreign exchange value of the U.S. dollar, see *Federal Reserve Bulletin*, vol. 84 (October 1998): 811-18.

2. Weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of U.S. trading partners, including the currencies of the euro-area countries, Australia, Canada, Japan, Sweden, Switzerland, United Kingdom, Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

3. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that circulate widely outside the country of issue, including the currencies of the euro-area countries, Australia, Canada, Japan, Sweden, Switzerland, and the United Kingdom. The weight for each currency is its broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the major currency index. Data: Federal Reserve Board.

Monthly and quarterly average rates. Index rebased by BEA.

4. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that do not circulate widely outside the country of issue, including the currencies of Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. The weight for each currency is its broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the other important trading partners index. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

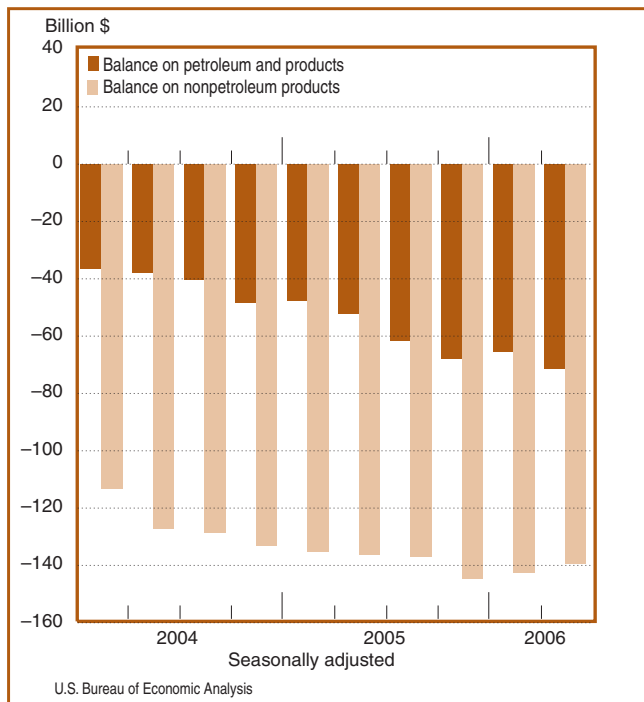

5. Data: Federal Reserve Board. Monthly and quarterly average rates. Indexes prepared by BEA.

6. The euro area includes Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, and Spain.

because of a large imbalance between exports and imports, increased as a result of a sharp upturn in imports (chart 4). Petroleum imports account for 17 percent of total imports.

**Chart 4. U.S. Trade in Goods: Balances on Petroleum and Products and on Nonpetroleum Products**

**Exports.** Exports increased \$8.3 billion, or 3.4 percent, to \$252.8 billion (table C). Real exports increased 1.9 percent, and export prices increased 1.5 percent.<sup>2</sup>

Current-dollar exports have increased solidly in the last three quarters. In the last two quarters, nonagricultural industrial supplies and materials have increased strongly (chart 5).

In the second quarter, nonagricultural industrial supplies and materials increased \$4.9 billion. The increase was accounted for by increases in metals and nonmetallic products (mostly nonferrous metals), in chemicals, and in energy products (mostly petroleum and products). The increases in nonferrous metals and in petroleum and products were largely due to higher prices, and the increase in chemicals resulted from a rise in volume. Prices of nonferrous metals have increased strongly in recent quarters.

Capital goods increased \$2.2 billion. The increase was considerably smaller than the increases in the last two quarters because of a downturn in civilian aircraft, engines, and parts. In the second quarter, increases were strong in semiconductors, in oil drilling, mining, and construction machinery, and in telecommunications equipment. The increase in semiconductors was the largest in nearly 6 years.

Agricultural products increased \$0.9 billion, the second consecutive quarter of elevated growth. More than

2. Quantity (real) estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters. Real estimates are expressed as chained (2000) dollars. Price indexes (2000 = 100) are also calculated using a chain-type Fisher formula.

<sup>r</sup> Revised

<sup>p</sup> Preliminary

1. Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.

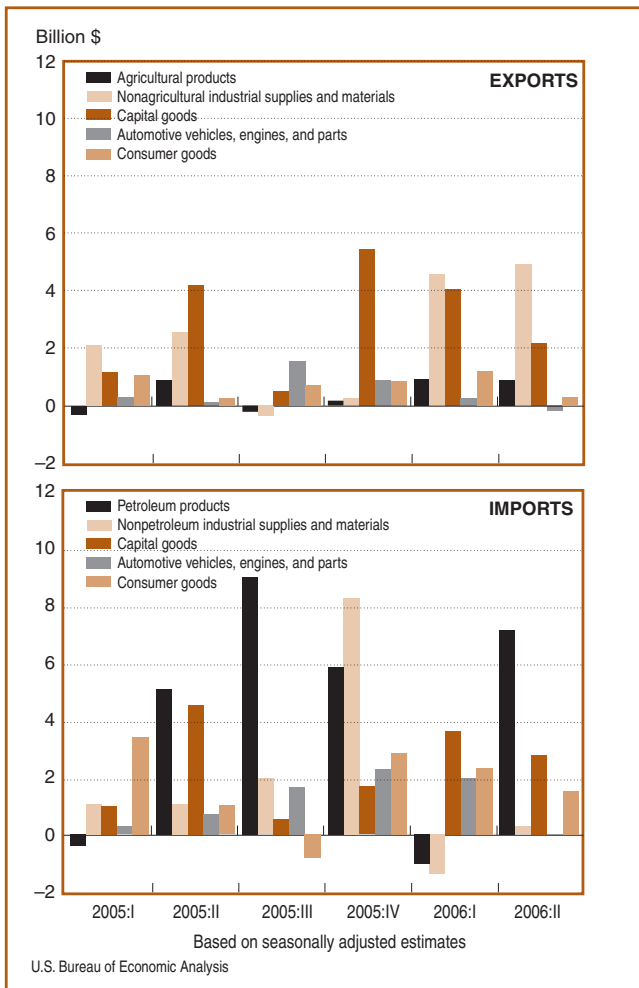

NOTE: Percent changes in quarterly estimates are not annualized and are expressed at quarterly rates.

half of the second-quarter increase was accounted for by a surge in exports of corn, mostly to Mexico, the Republic of Korea, and Indonesia; corn exports were the highest since the fourth quarter of 1996. Exports of vegetables, fruits, nuts, and preparations, mainly to Canada, also increased.

Consumer goods slowed after three quarters of accelerating growth. The slowdown was attributable to a decline in nondurable goods, mostly medical, dental, and pharmaceutical preparations to France and the United Kingdom. In contrast, durable goods continued to grow robustly.

Automotive vehicles, parts, and engines decreased \$0.2 billion, the first decline in almost 3 years. The decrease resulted from decreases in passenger cars—mostly to Mexico, Canada, and the Middle East—and in other vehicles to Mexico.

**Chart 5. U.S. Trade in Goods by Selected End-Use Categories: Change From Preceding Quarter**

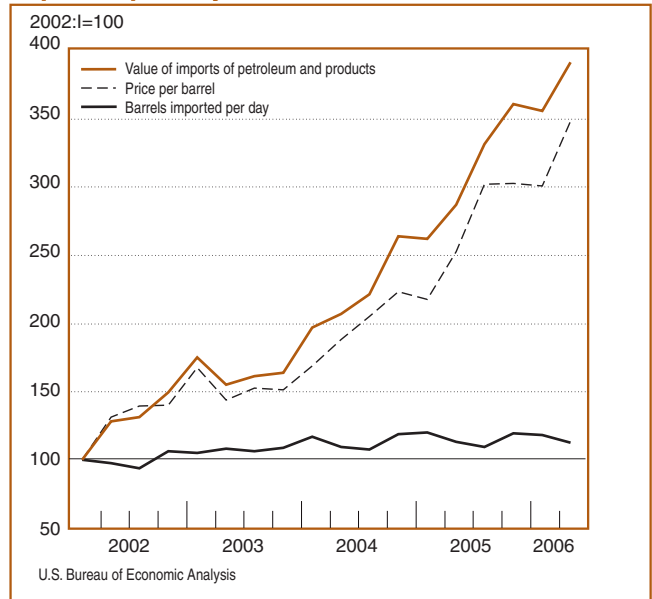

**Imports.** Imports increased \$11.0 billion, or 2.4 percent, to \$463.4 billion in the second quarter (table C). Real imports decreased 0.1 percent, and import prices increased 2.6 percent. The increase in value was mostly accounted for by increases in petroleum and products and in capital goods.

After a first-quarter downturn, petroleum and products increased \$7.2 billion in the second quarter, resuming their sharp climb of recent years (chart 6). In the second quarter, imports from all principal suppliers increased, but the largest increases were from members of OPEC, the European Union, and Russia. Among OPEC members, increases from Algeria and Saudi Arabia were partly offset by decreases from Venezuela and Nigeria. Following two quarters of little change, the average price per barrel rose 16 percent, to \$63.75, in the second quarter, largely as a result of concerns about potential disruptions in world oil supplies. In contrast, the average number of barrels imported daily decreased 5 percent, to 13.63 million. U.S. domestic petroleum production continued to recover from the hurricane-related disruptions in the second half of 2005, rising 2 percent after an increase of 7 percent in the first quarter.

Capital goods increased \$2.8 billion. Growth in these products was moderately strong despite the first decline in U.S. domestic investment in equipment and software in more than 3 years. In the second quarter,

**Chart 6. Imports of Petroleum and Products: Indexes of Value, Price per Barrel, and Barrels Imported per Day**

imports of “other” industrial, agricultural, and service industry machinery and of electric generating machinery each increased \$0.7 billion. Among high-technology products, computers, peripherals, and parts increased \$0.5 billion, and semiconductors changed little; telecommunications equipment changed little for the third consecutive quarter after earlier strong growth. In the second quarter, civilian aircraft, engines, and parts decreased after increasing in the previous two quarters.

Consumer goods increased \$1.5 billion. A rise in nondurable goods was partly offset by a fall in durable goods. Among nondurable goods, textile apparel and household goods increased strongly, mostly because of a 23-percent surge in imports of textile apparel products from China. In contrast, durable goods decreased after three quarters of growth. The drop was more than accounted for by a large decline in household and kitchen appliances, mostly from China, the Republic of Korea, and Mexico.

Nonpetroleum industrial supplies and materials increased \$0.3 billion. A large increase in nonferrous metals was mostly offset by a large decrease in natural gas. Nonferrous metals rose strongly for the third consecutive quarter, mainly as a result of an increase in prices. In contrast, natural gas dropped for the second consecutive quarter, mainly as a result of a decrease in its price.

Automotive vehicles, parts, and engines decreased slightly after increasing substantially for three quarters. The decrease resulted from a decline in passenger cars, mostly from Canada. Other automotive imports increased.

Foods, feeds, and beverages decreased \$0.2 billion after increasing for six consecutive quarters. The decrease resulted from a substantial decline in meat products and poultry—mostly from Canada—and from a drop in vegetables, fruits, nuts, and preparations—mostly from Chile and Mexico.

**Balances by area.** Increases in the goods deficits with Asia and Pacific, the Middle East, Europe, and Africa were partly offset by decreases in the deficits with Canada and Latin America and Other Western Hemisphere.<sup>3</sup> The increase in the deficit with Asia and Pacific resulted from a rebound in the deficit with China,

3. Seasonally adjusted estimates of exports for areas and countries are derived by applying seasonal factors for total U.S. agricultural and nonagricultural exports to the unadjusted agricultural and nonagricultural exports for areas and countries and then summing the seasonally adjusted estimates. Seasonally adjusted estimates of imports for areas and countries are derived by applying seasonal factors for total petroleum and nonpetroleum imports to the unadjusted petroleum and nonpetroleum imports for areas and countries and then summing the seasonally adjusted estimates. (The seasonal factors are derived from the seasonal adjustment of U.S. exports and U.S. imports by five-digit end-use commodity categories.)

which had decreased in the previous two quarters. The deficits with the Middle East, Africa, and Europe were boosted by higher petroleum imports from members of OPEC and from Russia.

### Services

The surplus on services was virtually unchanged, at \$16.8 billion, in the second quarter. Both services receipts and services payments increased similar amounts.

After changing little for three quarters, travel receipts increased \$1.0 billion to \$21.7 billion in the second quarter. The increase was mostly attributable to a rise in receipts from overseas visitors to the United States. Travel payments also increased \$1.0 billion to \$18.7 billion. The rise mostly reflected increases in U.S. travelers’ payments to countries overseas and to Canada as a result of a rise in the number of U.S. travelers. Passenger fare receipts decreased \$0.2 billion to \$5.4 billion, and passenger fare payments increased \$0.5 billion to \$7.3 billion.

“Other” transportation receipts increased \$0.5 billion to \$12.1 billion. The increase was mostly attributable to increases in ocean and air port services, reflecting higher expenditures for bunker fuel and jet fuel by foreign vessels and air carriers. “Other” transportation payments increased \$0.2 billion to \$16.4 billion. An increase in payments for air port services, mostly reflecting higher expenditures for jet fuel by U.S. air carriers, was largely offset by a decrease in payments for ocean freight services.

“Other” private services receipts increased \$1.4 billion to \$43.7 billion. The rise was attributable to increases in receipts for unaffiliated services—mostly for financial services and business, professional and technical services—and for affiliated services. “Other” private services payments increased \$1.3 billion to \$28.3 billion as a result of increases in payments for unaffiliated and affiliated services.

### Income

The deficit on income increased to \$4.1 billion in the second quarter from \$2.5 billion in the first quarter. For the third consecutive quarter, the balance on income was a deficit. In the second quarter, both income receipts and income payments increased strongly, but payments increased more than receipts.

Receipts of income on U.S. direct investment abroad increased \$4.2 billion to \$72.9 billion. Foreign affiliates’ earnings increased in all major industries except finance and insurance. A substantial rise in crude oil prices contributed to higher earnings of petroleum-related affiliates in “other” industries and, to a lesser

extent, in holding companies and in manufacturing. Holding companies' earnings were also boosted by higher earnings of nonpetroleum affiliates in Europe.

Payments of income on foreign direct investment in the United States increased \$2.4 billion to \$36.9 billion. The increase was attributable to increases in U.S. affiliates' earnings in finance and insurance, mostly nondepository financial affiliates, and in wholesale trade, mostly petroleum-related affiliates.

Both receipts and payments of "other" private and U.S. Government income continued to rise strongly, largely because of increases in interest rates (chart 7). Receipts of "other" private income increased \$9.9 billion to \$79.8 billion. The increase reflected increases in interest receipts on bank and nonbank claims and in dividends and interest earned on U.S. holdings of foreign stocks and bonds. Receipts of income on U.S.

Government assets increased \$0.1 billion, to \$0.7 billion.

Payments of "other" private income increased \$10.0 billion to \$82.8 billion. The rise resulted from increases in interest payments on bank and nonbank liabilities and in dividends and interest paid on foreign holdings of U.S. stocks and bonds. Payments of income on U.S. Government liabilities increased \$3.4 billion to \$36.3 billion, as a result of an increase in payments on U.S. Treasury and agency securities.

### Unilateral current transfers

Net unilateral current transfers to foreigners were \$20.4 billion in the second quarter, up from \$19.5 billion in the first quarter. The increase was accounted for by increases in private remittances and other transfers and in U.S. Government grants.

**Chart 7. Other Private and U.S. Government Income**

#### Data Availability

The estimates that are presented in tables 1–11 of the U.S. international transactions accounts are available interactively on BEA's Web site at <[www.bea.gov](http://www.bea.gov)>. Users may view and download the most recent quarterly estimates for an entire table, or they may select the period, frequency, and lines that they wish to view. The estimates are available in an HTML table, in an Excel file, or as comma-separated values.

### Capital Account

Net capital account payments (outflows) were \$0.9 billion in the second quarter, down from \$1.8 billion in the first quarter.

### Financial Account

Net financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$154.1 billion in the second quarter, down from \$171.5 billion in the first quarter. Net acquisitions by foreign residents slowed more than net acquisitions by U.S. residents.

### U.S.-owned assets abroad

Net U.S.-owned assets abroad increased \$212.3 billion in the second quarter after a record increase of \$356.0 billion in the first quarter. The slowdown mostly reflected a much smaller increase in U.S. claims on foreigners reported by U.S. banks in the second quarter than in the first quarter.

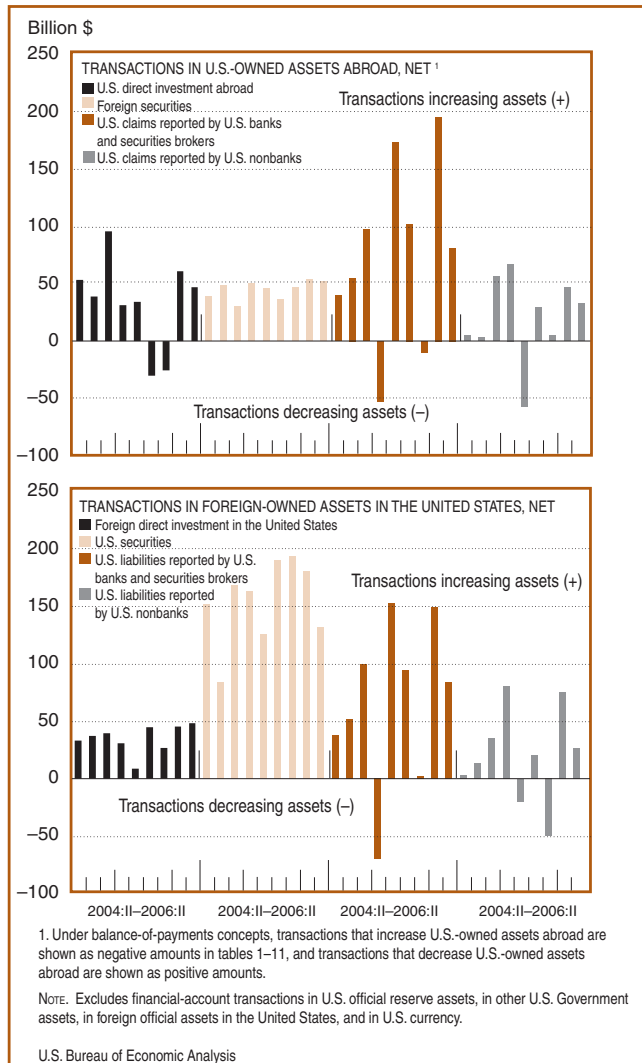

**U.S. official reserve assets.** U.S. official reserve assets increased \$0.6 billion in the second quarter after decreasing \$0.5 billion in the first quarter. The second-quarter increase was largely accounted for by an increase in the U.S. reserve position in the International Monetary Fund (IMF), which resulted from the IMF's establishment of a new investment account.

**Claims reported by banks and by nonbanks.** U.S. claims on foreigners reported by U.S. banks and securities brokers increased \$81.5 billion in the second quarter, following a record \$196.4 billion increase in the first quarter (chart 8).

Banks' own claims denominated in dollars increased \$28.8 billion, following an increase of \$144.7 billion in the first quarter. The second-quarter increase

was largely attributable to a rise in deposits and brokerage balances, as U.S.-owned banks lent funds to their own offshore offices. In contrast, resale agreements decreased, mostly as a result of a cutback in lending by securities brokers and dealers.

**Chart 8. Selected Financial-Account Transactions, 2004:II–2006:II**

Banks' domestic customers' claims denominated in dollars increased \$36.7 billion after an increase of \$30.5 billion. In the second quarter, both deposits and negotiable certificates of deposit increased substantially.

Claims reported by U.S. nonbanking concerns increased \$32.4 billion after an increase of \$46.2 billion. The second-quarter increase was more than accounted for by an increase in deposits, mostly in the United Kingdom.

**Foreign securities.** Net U.S. purchases of foreign securities were \$52.2 billion in the second quarter, down from \$53.7 billion in the first quarter. A substantial decrease in net U.S. purchases of foreign stocks was nearly offset by a substantial increase in net U.S. purchases of foreign bonds.

Net U.S. purchases of foreign stocks were \$17.4 billion, down from \$41.1 billion. U.S. investors' demand for foreign stocks was dampened by the first decline in foreign stock markets in local currency terms in seven quarters. In the second quarter, transactions in stocks in Asia shifted to net U.S. sales after three quarters of strong net U.S. purchases, partly because of a shift to net sales to Japan. In contrast, net U.S. purchases from the United Kingdom increased.

Net U.S. purchases of foreign bonds were a record \$34.8 billion, up from \$12.6 billion. The step-up may have partly reflected some U.S. investors' shift of funds into foreign bond markets in response to the poor performance of foreign stock markets. A strong increase in net U.S. purchases from Europe was partly offset by a shift to net U.S. sales to Latin America and an increase in net U.S. sales to Asia.

**Direct investment.** U.S. direct investment abroad increased \$47.1 billion in the second quarter after increasing \$61.3 billion in the first quarter. The slowdown was partly attributable to a shift from an increase to a decrease in intercompany debt investment abroad. In addition, net equity capital investment abroad slowed, mostly as a result of a drop in U.S. acquisitions of foreign companies. In contrast, reinvested earnings increased.

**Foreign-owned assets in the United States**

Net foreign-owned assets in the United States increased \$366.4 billion in the second quarter after a record increase of \$527.5 billion in the first quarter. The slowdown was attributable to smaller increases in U.S. liabilities reported by U.S. banks and by nonbanking concerns in the second quarter than in the first quarter and to a slowdown in net foreign purchases of U.S. securities other than U.S. Treasury securities.

**Foreign official assets.** Foreign official assets in the United States increased \$74.9 billion in the second quarter after an increase of \$75.7 billion in the first quarter. Assets of European countries increased less in the second quarter than in the first quarter, and assets of most other areas of the world increased more in the second quarter than in the first quarter.

**Liabilities reported by banks and by nonbanks.** U.S. liabilities reported by U.S. banks and securities brokers, excluding U.S. Treasury securities, increased \$84.2 billion in the second quarter after a very large increase of \$148.9 billion in the first quarter.

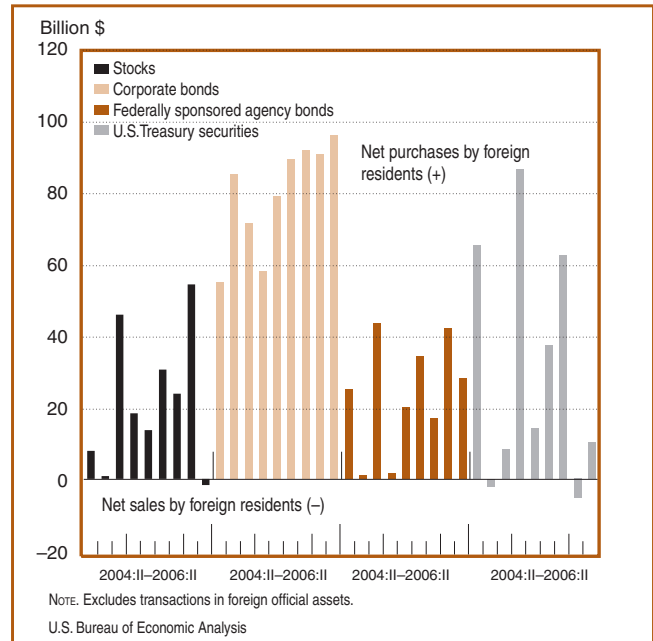

Banks' own liabilities denominated in dollars decreased \$5.0 billion, in contrast to an increase of \$131.3 billion in the first quarter. The decrease resulted from the repayment of previously borrowed funds by foreign-owned banks in the United States and by U.S. securities brokers and dealers, which reduced their repurchase agreements. In contrast, borrowing by U.S.-owned banks picked up.

Banks' customers' liabilities denominated in dollars increased a very substantial \$91.2 billion after an increase of \$9.9 billion.

U.S. liabilities reported by U.S. nonbanking concerns increased \$26.1 billion after an increase of \$75.0 billion. The second-quarter increase was mostly accounted for by an increase in liabilities to Europe.

**U.S. Treasury securities.** Transactions in U.S. Treasury securities shifted to net foreign purchases of \$10.1 billion in the second quarter from net foreign sales of \$5.2 billion in the first quarter (chart 9). Although total returns on U.S. Treasury securities were negative, some foreign investors may have shifted funds into the

**Chart 9. Transactions in U.S. Securities, 2004:II–2006:II**

safety of U.S. Treasury securities in response to downturns in U.S. and foreign stock markets. Transactions in U.S. Treasury securities by Asia shifted to substantial net purchases from net sales, and net sales by Caribbean financial centers decreased.

**Other U.S. securities.** Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$121.6 billion in the second quarter, down from a record \$186.0 billion in the first quarter. The decrease resulted from a shift to net foreign sales of U.S. stocks from net foreign purchases and a decrease in net foreign purchases of federally sponsored agency bonds. In contrast, net foreign purchases of U.S. corporate bonds were a record \$95.2 billion.

Transactions in U.S. stocks shifted to net foreign sales of \$1.6 billion from net foreign purchases of \$54.0 billion. The U.S. stock market weakened in the second

quarter, but it weakened less than most major foreign stock markets (in local currency terms). The shift to net foreign sales was mostly attributable to a large drop in net purchases from Europe and a shift to net sales by Caribbean financial centers.

Net foreign purchases of U.S. federally sponsored agency bonds decreased to \$28.0 billion from a near-record \$41.9 billion. The decrease was mostly attributable to a shift to net sales by Caribbean financial centers. Net purchases by Asia fell slightly but remained sizable.

Net foreign purchases of U.S. corporate bonds were a record \$95.2 billion, up from \$90.1 billion. Net foreign purchases have been especially strong in recent quarters, as the yields available on U.S. corporate bonds have increased and become more attractive to investors than the yields available on foreign bonds (chart 10). In addition, U.S. economic growth and corporate profits have remained robust and bond default rates have remained low. In the second quarter, net purchases of U.S. corporate bonds by investors in Caribbean financial centers, in Europe, and in Asia all increased.

**Direct investment.** Foreign direct investment in the United States increased \$48.4 billion in the second quarter after increasing \$45.3 billion in the first quarter. The pickup resulted from a shift from a decrease to an increase in net intercompany debt investment in the United States and, to a lesser extent, from an increase in reinvested earnings. In contrast, net equity capital investment in the United States slowed despite a few moderately large acquisitions of U.S. companies by foreign companies.

## Footnotes to U.S. International Transactions Tables 1–11

**General notes for all tables:** <sup>P</sup> Preliminary. <sup>r</sup> Revised. \* Less than \$500,000 (+/-). <sup>D</sup> Suppressed to avoid disclosure of data of individual companies. Quarterly estimates are not annualized and are expressed at quarterly rates.

### Table 1:

1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2a.

3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 25.

4. Includes transfers of goods and services under U.S. military grant programs.

5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.

6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.

7. At the present time, all U.S. Treasury-owned gold is held in the United States.

8. Includes sales of foreign obligations to foreigners.

9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.

11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 5.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

Additional footnotes for historical data in July issues of the SURVEY:

14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.

15. For 1978–83, includes foreign currency-denominated notes sold to private residents abroad.

16. Break in series. See Technical Notes in the June 1989–90, 1992–95, and July 1996–2006 issues of the SURVEY.

### Table 2a:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 SURVEY), except for 1974–81, when they represent transactions values, f.a.s. foreign port of exportation (see July issues of the SURVEY for historical data). From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" monthly data supplied by the Census Bureau (see Technical Notes in the December 1985 SURVEY). Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The sea-

sonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see technical Notes in the June 1980 SURVEY, in the June 1988 SURVEY, and in the June 1991 SURVEY). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975–80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.

2. Adjustments in lines A5 and A13, B20, B75, and B130 reflect the Census Bureau's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.

3. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 11, line 5 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 11, line 22 (direct defense expenditures).

4. Addition of electric energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the SURVEY for historical data).

5. Coverage adjustments for special situations in which shipments were omitted from Census data; the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair; and the adjustment of software imports to market value. Also includes addition of understatement of inland freight in f.a.s. values of U.S. imports of goods from Canada in 1974–81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the SURVEY for historical data).

6. For 1988–89, correction for the understatement of crude petroleum imports from Canada.

7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 11, lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: Members of OPEC: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (excludes Ecuador beginning in January 1993 and Gabon beginning in January 1995). Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates.

### Table 3:

1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

2. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

### Table 4:

1. Complete instrument detail is only available beginning with 2003.

2. Prior to 2003, includes only demand deposits and nonnegotiable time and savings deposits.

### Table 5:

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93–199, section 4,

and subsequently authorized (for many recipients) under similar legislation—are included in line A4. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A4 items, part of these military expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A4 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of line A4, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A48.

2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are *not* included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.

3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.

4. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.

5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contra-entry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.

6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.

8. Excludes transactions of the U.S. Enrichment Corporation since it became a non-government entity in July 1998.

**Table 6a:**

1. For bank affiliates, includes only interest on permanent debt investment by their parent companies. Excludes interest between financial parent companies and nonbank financial affiliates.

2. For bank affiliates, includes only permanent debt investment by their parent companies. Excludes intercompany debt between financial parent companies and nonbank financial affiliates.

**Table 7a:**

1. Beginning with 2005, source data for new issue estimates are no longer separately available. New issues continue to be included in net purchases.

2. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

**Table 8a:**

1. Prior to 2003, securities brokers' claims on and liabilities to their foreign affiliates are included in the estimates. They are excluded beginning in 2003.

2. Complete instrument detail is only available beginning with 2003.

3. Financial intermediaries' accounts are shown under "other claims (liabilities)" because the majority of these claims (liabilities) are in the form of intercompany balances. Financial intermediaries' accounts represent transactions between firms in a direct investment relationship (that is, between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreign parent groups), where both the U.S. and foreign firms are classified in a finance industry, but the firms are neither banks nor securities brokers.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

**Table 9a:**

1. Beginning with 2003, includes securities brokers' claims on their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. Includes foreign official agencies and international and regional organizations. Prior to 2003, also includes government-owned corporations and state, provincial, and local governments and their agencies.

4. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

5. Commercial paper issued in the U.S. market by foreign incorporated entities and held in U.S. customers' accounts. Excludes commercial paper issued through foreign direct investment affiliates in the United States.

6. Prior to 2003, includes negotiable certificates of deposit and other negotiable and transferable instruments.

7. Prior to 2003, includes only deposits.

8. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

**Table 10a:**

1. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates.

2. Complete instrument detail is only available beginning with 2003.

3. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreign-owned.

4. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

**Table 11:**

For footnotes 1–13, see table 1.

14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Finland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.

15. Quarterly estimates for Mexico are available beginning with 2004.

16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.

17. Details are not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

19. At the global level, the statistical discrepancy represents net errors and omissions in recorded transactions. For individual countries and regions, it may also reflect discrepancies that arise when transactions with one country or region are settled through transactions with another country or region.

NOTE. Country data are based on information available from U.S. reporting sources. In some instances the statistics may not necessarily reflect the ultimate foreign transactor. For instance: U.S. goods export statistics reflect country of reported destination; in many cases the goods may be transhipped to third countries (especially true for the Netherlands and Germany). The geographic breakdown of securities transactions reflects the country with which transactions occurred but may not necessarily reflect the ultimate sources of foreign funds or ultimate destination of U.S. funds.

## State Personal Income

### Second Quarter of 2006 and Revised Estimates for 2003–2006:1

By David G. Lenze

**P**ERSONAL income growth in the United States slowed to 1.7 percent in the second quarter, following two quarters of 2.2-percent growth, according to recent estimates from the Bureau of Economic Analysis (BEA). At the same time, inflation, as measured by the national price index for personal consumption expenditures, accelerated to 1.0 percent from an average 0.6 percent in the previous two quarters. Personal income growth slowed in all eight regions of the country except the Great Lakes region, which maintained its 1.8-percent growth rate.

This article discusses second-quarter personal income estimates and presents revised estimates for 2003 through the first quarter of 2006. This article also

introduces BEA's new methodology for estimating quarterly wages and salaries. See the box "Improved Preliminary State Estimates of Quarterly Wage and Salary Disbursements."

#### Second quarter of 2006

Personal income is the income received by all persons from all sources; it is defined as the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and personal current transfer receipts. Personal income for the Nation is the sum of personal income estimates for all states and the District of Columbia.

**Earnings by industry.** Nationally, total earnings,

#### Acknowledgments

The annual revision of state personal income was prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. John W. Ruser, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a divisionwide effort.

The estimates of nonfarm wages and salaries and supplements to wages and salaries were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, John D. Laffman, Michael G. Pilot, Mauricio Ortiz, John A. Rusinko, James M. Scott, and Elizabeth F. Stell. Contributing staff members were Peter Battikha, Michael L. Berry, Ji S. Byun, Susan P. Den Herder, Terence J. Fallon, Tina C. Highfill, Mark W. Hodgins, Russell C. Lusher, Paul K. Medzerian, Nathan D. Patterson, Melanie N. Vejdani, Katherine M. Yang, and Jaime Zenzano.

The quarterly estimates of state personal income and the annual estimates of farm wages and salaries, farm supplements to wages and salaries, farm proprietors' income, property income, personal current transfer

receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional Income Branch under the supervision of James M. Zavrel, Chief. Major responsibilities were assigned to Carrie L. Litkowski, Toan A. Ly, Jeffrey L. Newman, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Suet M. Boudhraa, Daniel R. Corrin, Eli F. Dourado, Michelle A. Harder, Carla R. Jenkins, Brian J. Maisano, W. Tim McKeel, Loren C. Morales, Gregory D. Parnell, and Troy P. Watson.

The estimates of personal current tax receipts were prepared by Ann E. Dunbar under the supervision of Robert L. Brown.

The public use tabulations and data files were assembled and the tables were prepared by the Regional Economic Information System Branch under the supervision of Kathy A. Albetski, Chief. Major responsibilities were assigned to Gary V. Kennedy. Contributing staff members were Alison M. Adam, Giselle Cubillos-Moraga, H. Steven Dolan, Michael J. Paris, Callan S. Swenson, and Monique B. Tyes.

the largest component of personal income historically, grew 1.7 percent in the second quarter, down substantially from 2.7-percent growth in the first quarter.<sup>1</sup> The

1. Total earnings, or earnings by place of work, is the sum of proprietors' income, wages and salaries, and supplements to wages and salaries.

slowdown was widespread across most industries; it was particularly noticeable in construction, which was a major contributor to first-quarter growth. Construction earnings grew only 1.3 percent, down from 5.0 percent.

Professional services, finance, health care, and

### Data Availability

This article presents summary estimates of annual personal income and disposable personal income for 2000–2005, estimates of annual personal income by major source and earnings by industry for 2003–2005, estimates of quarterly personal income for the third quarter of 2002 to the second quarter of 2006, and quarterly personal income by major source and earnings by major industry for the fourth quarter of 2004 to the second quarter of 2006. These estimates and more detailed estimates of personal income and employment for states are available interactively on BEA's Web site.

The following annual state estimates are available at <[www.bea.gov/regionalspi](http://www.bea.gov/regionalspi)>:

- Personal income, per capita personal income, and population for 1929–2005
- Disposable personal income and per capita disposable personal income for 1948–2005
- State income and employment summary for 1948–2005
- Personal income by major source and earnings by industry (North American Industry Classification System (NAICS) three digit) for 1990–2005, (Standard Industrial Classification System (SIC) two digit) for 1958–2000, and (SIC division level) for 1929–57
- Personal income by major source and earnings by major industry (SIC division level) for 2001
- Compensation of employees by industry (NAICS three digit) for 2001–2005 and (SIC two digit) for 1998–2000
- Compensation of employees by industry (SIC division level) for 2001
- Wage and salary disbursements by industry (NAICS three digit) for 2001–2005, (SIC two digit) for 1958–2000, and (SIC division level) for 1929–57
- Wage and salary disbursements by major industry (SIC division level) for 2001
- Full-time and part-time employment by industry (NAICS three digit) for 2001–2005, (SIC two digit) for 1969–2000, and (SIC division level) for 2001
- Full-time and part-time wage and salary employment by industry (NAICS three digit) for 2001–2005, (SIC two digit) for 1969–2000, and (SIC division level) for 2001
- State economic profiles (a selection of personal income and employment data for each state) for 1958–2005
- Personal current transfer receipts by major program

for 1948–2005

- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and for measures of farm income) for 1969–2005
- Personal current tax receipts by level of government and by type for 1948–2005

The following quarterly state estimates are available at <[www.bea.gov/regionalsqpi](http://www.bea.gov/regionalsqpi)>:

- Personal income for the first quarter of 1948 to the second quarter of 2006
- Quarterly income summary for the first quarter of 1948 to the second quarter of 2006
- Personal income by major source and earnings by major industry (NAICS two digit) for the first quarter of 2001 to the second quarter of 2006
- Personal income by major source and earnings by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001
- Compensation of employees by industry (NAICS two digit) for the first quarter of 2001 to the second quarter of 2006
- Compensation of employees by industry (SIC division level) for the first quarter of 1998 to the fourth quarter of 2001
- Wage and salary disbursements by major industry (NAICS two digit) for the first quarter of 2001 to the second quarter of 2006
- Wage and salary disbursements by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001

In addition, the entire set of estimates for all states will be available in October 2006 on CD-ROM; it will include an updated description of the sources and methods used to estimate state personal income. To order the free CD-ROM *State Personal Income, 1929–2005* (product number RCN-0752), call the Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666).

The state personal income estimates are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA disseminate the estimates in their states. For a list of the BEA User Group on BEA's Web site, go to <[www.bea.gov/regionalspi/docs/usergrp.cfm](http://www.bea.gov/regionalspi/docs/usergrp.cfm)>.

For more information about these estimates, call the Regional Economic Information System at 202-606-5360, fax 202-606-5322, or e-mail [reis.remd@bea.gov](mailto:reis.remd@bea.gov).

durable-goods manufacturing made the largest contributions to U.S. earnings growth in the second quarter (table A). In the states with the fastest earnings growth, the largest contributors were typically goods-producing industries: Mining in Texas and Wyoming, construction in Florida, Arizona, and Utah, and

durable-goods manufacturing in Oregon, Washington, and Ohio.

The impact of mining, which includes oil and gas extraction, and durable-goods manufacturing on second-quarter growth was extensive: In more than half of the states, one of these industries was the largest

See the footnotes at the end of the table.

contributor. In several states (Indiana, Kansas, and Wyoming), these industries contributed more than a third of total earnings growth.

**Property income and transfers.** Growth in property income (dividends, interest, and rent) accelerated in the second quarter to 2.3 percent from 1.0 percent,

as higher interest rates boosted personal interest income. However, higher interest rates pushed down rental income 13 percent; mortgage interest is an expense in the computation of rental income. Rental income is a much smaller component of property income than either dividends or interest. Excluding the

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income.

2. "Other" consists of the wage and salary disbursements to U.S. residents employed by international organizations and

foreign embassies and consulates in the United States.

3. Data are suppressed to avoid disclosure of confidential information.

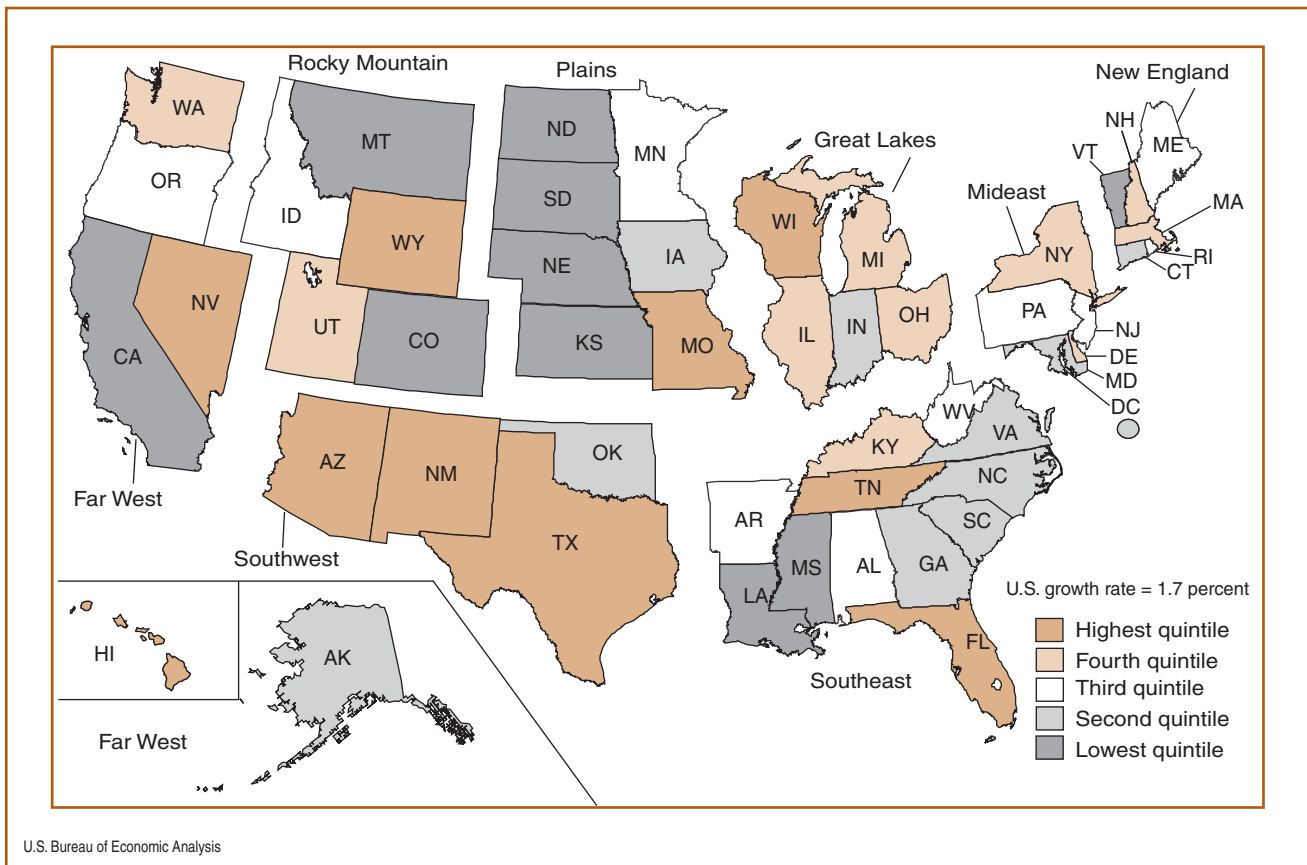

4. Not meaningful.

third quarter of 2005, an abnormal quarter because of Hurricane Katrina, rental income has fallen to the lowest level since the fourth quarter of 1991. Transfers grew only 1.2 percent, down from 2.0-percent growth. The first-quarter increase reflected cost-of-living increases, which historically have been distributed in the first quarter.

**State growth.** Two states grew at rates that differed substantially from the national average: Nevada, whose population is growing four times faster than the Nation's, grew 2.3 percent, while Louisiana, which is still experiencing repercussions from last year's natural disasters, grew only 0.8 percent (chart 1).

The accommodations and construction industries

**Chart 1. Personal Income: Percent Change, 2006:I–2006:II**

**Earnings for 1990–2000 by State and NAICS-Based Industries**

The Bureau of Economic Analysis has released state estimates of earnings for 1990–2000 based on the 2002 North American Industry Classification System (NAICS). The release of the estimates meets an important BEA strategic plan goal to extend the NAICS-based state income estimates back to 1990. Previously, these estimates were only available by Standard Industrial Classification (SIC) industries. The NAICS-based estimates for 1990–2000 are now consistent with the industry detail for 2001–2005.

The portion of earnings accounted for by wages and salaries and supplements to wages incorporates the 1990–2000 Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW), a tabulation of wages and employment that are covered by the unem-

ployment insurance program. The QCEW data was recoded by BLS to a NAICS basis from an SIC basis and reported on the BLS Web site.

The national estimates of wages and employment by industry that are included in these earnings estimates for 1998–2000 differ from those previously released as part of the national income and product accounts (NIPAs) and the estimates of gross domestic product (GDP) by industry, because these estimates do not yet include the recoded QCEW data, which were not available when the NIPA and GDP-by-industry estimates were released in 2003 and 2004, respectively. The estimates will incorporate the 1998–2000 NAICS-based QCEW data as part of the next comprehensive NIPA revision.

were the primary contributors to Nevada's growth in the second quarter.

The slow growth in Louisiana principally reflected declining emergency assistance and unemployment benefits: Transfer receipts in Louisiana fell 2.6 percent in the second quarter, compared with 1.2-percent growth nationally. However, net earnings grew 1.6 percent, the same as the national growth rate.

### Revisions

Quarterly and annual estimates of state personal income have been revised, beginning with the first quarter of 2003. Estimates are usually revised each September in order to incorporate source data that are more complete, more detailed, and otherwise more appropriate than those previously available (table B). The revisions also incorporate the results of the recent

**Table B. Major New or Revised Source Data in State Personal Income and Personal Current Taxes Since the March 2006 Release**

Component of personal income	Annual estimates			Quarterly estimates	
	2003	2004	2005	2006:I	2006:II
<b>Wage and salary disbursements by industry</b>	New CBP estimates; revised USDA farm labor expenses.	Revised QCEW wage data; new RRB state payroll data; revised <i>Official Catholic Directory</i> data; new Census of Governments data; revised USDA farm labor expenses.	New QCEW wage data; revised DOD personnel and average pay data; revised Coast Guard payroll data; new <i>Official Catholic Directory</i> data; new USDA farm labor expenses.	New QCEW wage data; revised DOD personnel and average pay data; revised Coast Guard payroll data; revised CES data for March; revised Department of Transportation payroll data.	New CES employment data for April, May, and June; new DOD personnel and average pay data; new Coast Guard payroll data; new Department of Transportation payroll data.
<b>Supplements to wages and salaries by industry</b>	Revised NASI self-insured benefits data; revised Census Bureau data on contributions to state and local government retirement systems; revised USDA farm labor expenses.	Revised QCEW data on contributions to unemployment insurance funds; new NAIC earned premium data; new Census Bureau data on contributions to state and local government retirement systems; new Census Bureau data on state-administered workers' compensation programs; new NASI self-insured benefits data; revised USDA farm labor expenses.	New QCEW data on contributions to unemployment insurance funds; new FRA data on casualties; new USDA farm labor expenses and number of hired farm workers.		
<b>Farm proprietors' income</b>	Revised USDA estimates of gross income and expenses.	Revised USDA estimates of gross income and expenses.	New USDA estimates of gross income and expenses.	Revised USDA estimates of farm cash receipts for January and February, new estimates for March; revised USDA U.S. level farm income forecast.	New USDA estimates of farm cash receipts for April and May; revised USDA U.S. level farm income forecast.
<b>Nonfarm proprietors' income by industry</b>	New IRS data on net receipts and profits of proprietorships and partnerships.				
<b>Dividends, interest, and rent</b>		New ACS data on the aggregate value of dwellings and mobile homes; new IRS income tax data on dividends, taxable interest, S Corporation distributions, and gross rents and royalties; revised Census Bureau population data; revised data on gross rental value of farm dwellings.			
<b>Personal current transfer receipts</b>		New Census Bureau state and local government finance data on disability and income maintenance payments and federal finance data on Pell Grants, Refundable Earned Income Tax Credits and railroad retirement benefits; new SSA data on social security benefits.	New CMS and DOD medical payments data; new DVA payments to veterans data; new HHS family assistance data; new USDA food stamps data; revised Department of Labor unemployment benefits data.	Revised Department of Labor unemployment benefits data.	New Department of Labor unemployment benefits data.
<b>Employee and self-employed contributions for government social insurance</b>			New DVA data on premiums paid for veterans' life insurance; new data on personal contributions for state unemployment insurance; revised RRB contributions data.		
<b>Personal current taxes</b>	Revised Census Bureau quarterly tax collections data.	New IRS income tax data; revised Census Bureau quarterly tax collections and state tax collections data; new Census Bureau local tax collections data; new tax collection data from the states.	New Census Bureau quarterly tax collections and state tax collections data; new tax collection data from the states.

Average absolute revision .....	0.5	1.0	1.2	1.5
Standard deviation of revision .....	0.7	1.4	1.4	1.7

NOTE: The annual revisions are computed from the March 2006 release, and the quarterly revisions are computed from the June 2006 release.

standard deviation of 1.4 in 2005 (table C and chart 2). The average revisions were even smaller in 2003 (0.1 percent down) and 2004 (less than 0.05 percent up). Averages and dispersions of the revisions are similar to those in previous years.

In general, most of the revisions to state personal income are attributable to the incorporation of new state-level Internal Revenue Service data (for dividends, interest, and nonfarm proprietors' income) and to new wage data from the Bureau of Labor Statistics (BLS) for the fourth quarter of 2005. Notable revisions include the following:

- **District of Columbia.** Personal income was revised up 2.4 percent for 2005. The revision can be accounted for by a reduction in the District's large residence adjustment—more than half the compensation paid to workers in the District is to nonresidents.
- **Florida.** Personal income was revised up 2.7 percent for 2005. The revision reflects new source data for property income in 2004 that were extrapolated to 2005.
- **South Dakota.** Most of the 3.3-percent upward revision was due to higher property income, but new source data for farm proprietors' income also contributed.
- **West Virginia.** The 4.4-percent downward revision was the largest among states in 2005. The revision reflected a large downward revision to workers' compensation (a component of personal current transfer receipts) due to the incorporation of new data from the Census Bureau and a downward revision to contributions for social insurance by employees and the self-employed.

**Chart 2. Frequency Distribution of Revisions to State Personal Income, 2003–2005**

### Improved Preliminary State Estimates of Quarterly Wage and Salary Disbursements

BEA's preliminary estimates of quarterly state wage and salary disbursements, released 3 months after the end of the reference quarter, are generally extrapolations of the prior quarter's wages and salaries. The extrapolations are based on employment growth as measured by the Current Employment Statistics (CES) program of the Bureau of Labor Statistics (BLS). These estimates are replaced the next quarter with actual measurements of wages from the BLS Quarterly Census of Employment and Wages (QCEW).

BEA research has shown that the accuracy of the preliminary estimates can be improved by modifying this extrapolation procedure. In essence, the extrapolations are adjusted by state-specific "scaling factors" that reduce or increase the extrapolations, compared with what they would be based on employment growth alone. For more information, see "Using Efficiency Tests to Reduce Revisions in Panel Data: The Case of Wage and Salary Estimates for U.S. States," by former BEA economist Jeremy J. Nalewaik. This paper is available at <[www.bea.gov/beat/regional/articles.cfm?section=papers](http://www.bea.gov/beat/regional/articles.cfm?section=papers)>.

With this release of quarterly state personal income, BEA has incorporated this methodological adjustment for the District of Columbia and all states except Washington.<sup>1</sup>

#### The old methodology

The old method assumed, in effect, that there was a one-to-one relationship between state-specific employment growth and state-specific wage growth—if one grew 2 percent, so would the other. This assumption formed the basis for estimating wages by extrapolating based on employment growth. Specifically, for most industries, BEA received monthly, not seasonally adjusted CES data on employment, averaged the monthly data to convert it to quarterly data, seasonally adjusted the data, and then used the percent change from the previous quarter to extrapolate a value for wages and salaries. The base for the extrapolation was the level of wages from the prior quarter based on QCEW data. These estimates were then adjusted so that they summed to national wage and salary estimate independently derived from the BLS establishment survey.

#### The improved methodology

Revisions to BEA's quarterly state wage and salary estimates occur when the values based on extrapolation are

1. Washington was excepted because BEA receives advance QCEW wage data for two major industries in that state—software publishers and aerospace product and parts manufacturing—which markedly improves the quality of the states' preliminary estimate.

replaced with estimates from QCEW. Analysis has shown that these revisions can be reduced through a modification of the old methodology's extrapolation procedure. BEA's new methodology first estimates a statistical relationship between CES job growth and wage and salary disbursement growth for each state. The analysis indicates whether for each state, wage and salary growth tends to be faster or slower than employment growth. This analysis yields a scaling factor for each state, which indicates wage growth relative to employment growth. The new methodology accordingly scales (multiplies) the CES job growth rates by the estimated scaling factors, and the extrapolation of wages is then based on scaled employment growth. The resulting wage estimates are then controlled to (made equal to) the national total.

As a scaling factor approaches zero (as in the case of Delaware), it implies that the CES job growth has very little information relevant for estimating state-specific wage growth, while a scaling factor close to one (as in the case of Texas) implies that CES job growth is an excellent indicator of state-specific growth.

BEA has been preparing two sets of wage estimates each quarter for the past year. The published set of estimates used the old methodology; an unpublished set used the new scaling factors. A comparison confirmed the improvement anticipated in Nalewaik's working paper.

		Wyoming .....	0.70

\* The scaling factor for Washington has been set equal to 1.00, in effect retaining the old methodology (see the text).

**First-quarter revisions.** The estimates for the first quarter of 2006 that were released in June were also revised to incorporate newly available tabulations of wages covered by state unemployment insurance from BLS. Previously, the first-quarter estimates were extrapolated from the fourth-quarter estimates using employment data from BLS. The average revision to personal income for all states was 0.9 percent (table B). The 3.2-percent revised first-quarter growth estimate

for U.S. wages and salaries was the strongest in 6 years. Wage growth surged in almost all industries and almost all states.

Beginning with the second-quarter, BEA has introduced an improvement in its wage estimation methodology (see the box “Improved Preliminary State Estimates of Quarterly Wage and Salary Disbursements”).

### Personal Income in the NIPAs and State Personal Income

The personal income estimates in the national income and product accounts (NIPAs) mainly differ from the state personal income estimates because of differing treatments of the income of U.S. citizens living and working abroad and of foreign nationals living and working in the United States.

The differences mainly stem from different concepts of residence. For NIPA personal income, a U.S. resident has a center of economic interest in the country and resides, or expects to reside, in the country for a year or more. For state personal income, a resident is a participant in a U.S. regional economy, regardless of the individual's national allegiance or duration of residence.<sup>1</sup>

In general, the NIPA measure of personal income is broader than state personal income. Here are some key differences and similarities:

- NIPA personal income includes the earnings of Federal civilian and military personnel stationed abroad and the investment income received by the Federal retirement plans of these workers. The regional measure of personal income does not include this income.<sup>2</sup>
- NIPA personal income includes all income earned by U.S. citizens living abroad for less than a year. State personal income excludes the portion earned while an individual lives abroad. Both NIPA and state personal income exclude the income of private U.S. citizens living outside the country for a year or more.
- NIPA personal income includes the income of foreign nationals only if they live and work in the United States for a year or more. State personal income includes the income of resident foreign nationals working in the United States—including migrant workers—regardless of length of residency.

1. See “State Personal Income Methodology, 2005” at <[www.bea.gov/region/articles/spi2005](http://www.bea.gov/region/articles/spi2005)>.

2. For more information, see the box “New Treatment of State Estimates of Military Compensation,” SURVEY OF CURRENT BUSINESS 85 (October 2005): 116.

- Both measures include the income of U.S. residents employed by international organizations or by other countries while living in the United States and exclude the income of foreign nationals employed by their home governments or by international organizations in the United States.

The annual estimates of personal income in the NIPAs also differ from the national totals of state personal income because of differences in the timing of the availability of source data. For example, farm proprietors' income in the NIPAs for 2005 was \$0.2 billion lower than in state personal income, because the state estimates of farm proprietors' income incorporated revised USDA data that were not available until after the NIPA estimate was released.

r Revised

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. The population estimates were released by the Bureau of the Census in December 2005.

2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

**Table 3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region**

Area name	Disposable personal income							Per capita disposable personal income <sup>1</sup>							Rank in United States
	[Millions of dollars]						Percent change <sup>2</sup>	[Dollars]

<sup>r</sup> Revised  
 1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. The population estimates were released by the Bureau of the Census in December 2005.  
 2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

**Table 4. Personal Income by Major Source**  
[Millions]

p Preliminary

r Revised

D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.

1. The estimates of earnings are based on the 2002 North American Industry Classification System (NAICS).

2. Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.

3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less

wage and salary disbursements to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

## Schedule of BEA News Releases in 2007

<b>January</b>	U.S. International Trade in Goods and Services, November 2006*	Jan. 10
	Gross Domestic Product, 4 <sup>th</sup> quarter 2006 (advance)	Jan. 31

# BEA Current and Historical Data

## National, International, and Regional Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission, and citing the SURVEY OF CURRENT BUSINESS and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at <www.bea.gov>. These estimates are available in a variety of formats, including interactive access. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

### National Data

<b>A. Selected NIPA tables [A, Q]</b>	
1. Domestic product and income .....	D-2
2. Personal income and outlays .....	D-18
3. Government current receipts and expenditures ...	D-21
4. Foreign transactions .....	D-33
5. Saving and investment .....	D-37
6. Income and employment by industry .....	D-42
7. Supplemental tables.....	D-43
<b>B. Other NIPA and NIPA-related tables</b>	
B.1 Personal income and its disposition [A, M] .....	D-46
B.2 Value added by industry [A].....	D-47
<b>C. Historical measures [A, Q]</b>	
C.1 GDP and other major NIPA aggregates.....	D-48
<b>D. Charts</b>	
Selected NIPA series .....	D-52

### International Data

<b>E. Transactions tables</b>	
E.1 U.S. international transactions in goods and services [A, M] .....	D-58
E.2 U.S. international transactions [A, Q] .....	D-59
E.3 U.S. international transactions by area [Q] .....	D-60
E.4 Private services transactions [A] .....	D-63
<b>F. Investment tables [A]</b>	
F.1 U.S. international investment position.....	D-64

F.2 USDIA: Selected items.....	D-65
F.3 Selected financial and operating data of foreign affiliates of U.S. companies.....	D-66

Statistical conventions.....	D-81
Reconciliation table [A, Q] .....	D-82
<b>B: Suggested reading .....</b>	
	D-83

## National Data

### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components that were released on September 28, 2006. These estimates include the “final” estimates for the second quarter of 2006.

The selected set presents quarterly estimates

that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to <[www.bea.gov](http://www.bea.gov)> and subscribe. The “Selected NIPA Tables” are available later that day.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Gross housing value added .....	12	833.8	856.7	853.3	857.2	863.2	878.2	886.8

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
  2. Equals gross domestic business value added excluding gross farm value added.
  3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
  4. Equals compensation of general government employees plus general government consumption of fixed capital.
- NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE: Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.  
NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

## 3. Government Current Receipts and Expenditures

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).  
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.  
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.  
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).  
 2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.  
 3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.  
 4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.  
 5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2, and real growth rates are shown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable non-automotive consumer goods.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 20

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Residential structures.....	29	471.8	513.9	510.4	521.3	528.8	530.8	513.7

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures.....	29	3.67	3.66	3.74	3.66	3.74

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal.

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

The estimates in this table were published in tables 1 and 4 in "Annual Industry Accounts: Advance Estimates for 2005" in the May 2006 SURVEY.

1. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of not allocated by industry reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.</

### C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2006 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

**Table C.1. GDP and Other Major NIPA Aggregates—Continues**

# International Data

## E. Transactions Tables

Table E.1 presents estimates of U.S. international trade in goods and services that were released on October 12, 2006. It includes preliminary estimates for August 2006 and revised estimates for July 2006.

The sources for the other tables in this section are noted.

For BEA's full set of detailed estimates of U.S. international transactions, visit BEA's Web site at <www.bea.gov>.

p Preliminary  
r Revised

1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.  
2. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.  
Source: Table 3 in "U.S. International Transactions: Second Quarter of 2006" in the October Issue of the SURVEY OF CURRENT BUSINESS.

**Footnotes to Tables E.2. and E.3.**

1. Credits, +; Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).  
Debits, -; Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).  
2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see tables 2a and 2b in "U.S. International Transactions, First Quarter of 2006" in the July 2006 SURVEY OF CURRENT BUSINESS.  
3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 25.  
4. Includes transfers of goods and services under U.S. military grant programs.  
5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.  
6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.  
7. At the present time, all U.S. Treasury-owned gold is held in the United States.  
8. Includes sales of foreign obligations to foreigners.  
9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.  
10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.  
11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 5 in "U.S. International Transactions, First Quarter of 2006" in the July 2006 SURVEY.

12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.  
13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in the SURVEY. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

**Additional footnotes to Table E.3:**

14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Finland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.  
15. Quarterly estimates for Mexico are available, beginning with 2004.  
16. Includes, as part of international and unallocated (not shown here), taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also included the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.  
17. Details are not shown separately; see totals in lines 56 and 63.  
18. Details not shown separately are included in line 69.  
19. At the global level, the statistical discrepancy represents net errors and omissions in recorded transactions. For individual countries and regions, it may also reflect discrepancies that arise when transactions with one country or region are settled through transactions with another country or region.

p Preliminary

r Revised

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes in coverage, capital gains and losses of direct investment affiliates, and other adjustments to the value of assets and liabilities.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

5. Also includes paid-in capital subscriptions to international financial institutions and resources provided to foreigners under foreign assistance programs requiring repayment over several years. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

THE U.S. IN THE INTERNATIONAL ECONOMY

## Regional Data

## H. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income are available on CD-ROM. For information on state personal income, e-mail [reis.remd@bea.gov](mailto:reis.remd@bea.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, e-mail [gspread@bea.gov](mailto:gspread@bea.gov); write to the Regional Economic Information System, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census. The population estimates were released by the Bureau of the Census in December 2005.  
 2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 "State Personal Income: Second Quarter of 2006 and Revised Estimates for 2003-2006:1" in the October 2006 SURVEY OF CURRENT BUSINESS.

Table H.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. The population estimates were released by the Bureau of the Census in December 2005.

2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 "State Personal Income: Second Quarter of 2006 and Revised Estimates for 2003–2006:1" in the October 2006 SURVEY OF CURRENT BUSINESS.

**Table H.4. Gross State Product (GSP) by Industry for States and Regions, 2004**  
 [Millions of dollars]

State and region	Rank of total GSP	Total GSP	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

Note. Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except office equipment. GSP and GDP also have different revision schedules.

Source: This table reflects the GSP estimates for 2004 that were released on June 6, 2006. Detailed estimates are available on BEA's Web site at <[www.bea.gov/region/gsp.htm](http://www.bea.gov/region/gsp.htm)>.

<sup>p</sup> Preliminary

<sup>1</sup> Per capita personal income was computed using Census Bureau midyear population estimates.

<sup>2</sup> Percent change calculated from unrounded data.

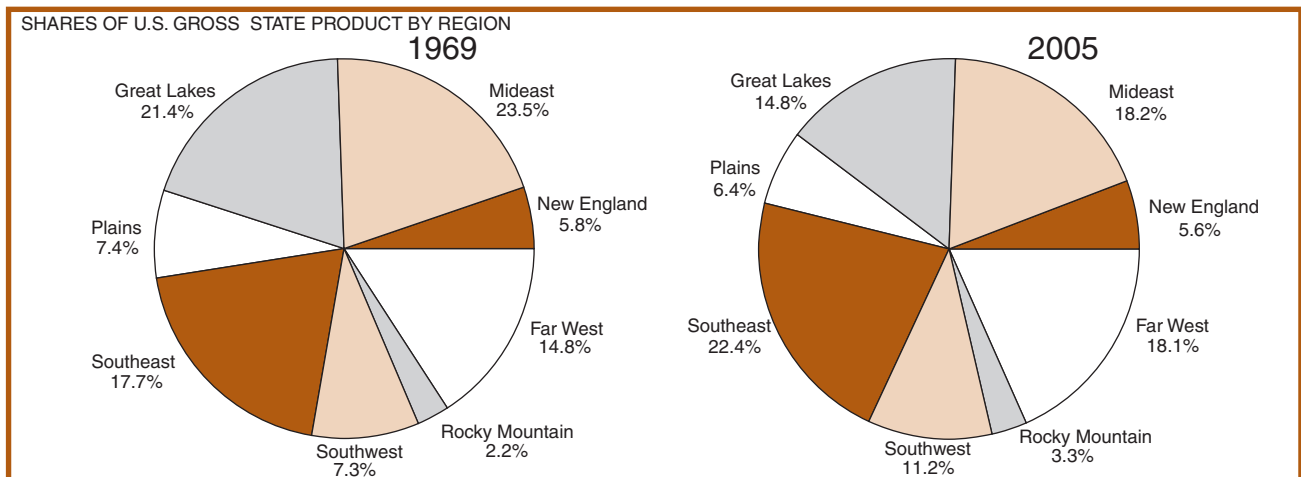

<sup>3</sup> The metropolitan area definitions used by BEA for its personal income estimates are the new county-

based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, and December 2005) for federal statistical purposes.

### Additional Information About the NIPA Estimates

#### Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in “real GDP.”) For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP in 1997–98 uses prices for 1997 and 1998 as weights, and the 1997–98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula.<sup>1</sup> These annual changes are “chained” (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated “chained (1996) dollar estimates.” These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled \$100 in 1996 and if real output for this component increased by 10 percent in 1997, then the “chained (1996) dollar” value of this com-

ponent in 1997 would be \$110 ( $\$100 \times 1.10$ ). Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components do not add to the chained-dollar value of GDP or to any intermediate aggregates. A “residual” line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2–8.6.

BEA also publishes the “implicit price deflator” (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100; the values of the IPD and of the corresponding “chain-type” price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths—for example, quarters and years—may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

*Percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_o} \right)^{m/n} - 1 \right] \times 100,$$

where  $r$  is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_o$  is the level of activity in the earlier period;  $m$  is the periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and  $n$  is the number of periods between the earlier and later periods (that is,  $t - o$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.

## Reconciliation Table

**Table 1. Relation of Net Exports of Goods and Services and Net Receipts of Income in the NIPAs to Balance on Goods and Services and Income in the ITAs**

[Billions of dollars]

	Line	2004	2005	Seasonally adjusted at annual rates					
				2005				2006	
				I	II	III	IV	I	II
<b>Exports of goods and services and income receipts, ITAs</b> .....	1	1,526.8	1,749.9	1,661.1	1,717.3	1,771.7	1,849.4	1,937.6	2,040.2

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.  
ITAs International transactions accounts  
NIPAs National income and product accounts

## Appendix B

### Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at <www.bea.gov>; see "Methodology Papers" and the SURVEY OF CURRENT BUSINESS under "Publications."

#### National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

**National income and product accounts (NIPAs).** This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

*An Introduction to National Economic Accounting* (1985) [also in the March 1985 SURVEY]

*Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends* (2002)

*Government Transactions* (1988)

*Personal Consumption Expenditures* (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following SURVEY articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003)

Statistical Changes (September 2003)

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty In-

surance in the NIPAs: Changes in Concepts and Methods" (October 2003)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2006) presents revisions and describes any changes in the data and the methods that are used to prepare the estimates.

"Updated Summary NIPA Methodologies" (November 2005) describes the source data and the methods that are used to prepare the current-dollar and real estimates of GDP.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary, and final quarterly estimates of GDP.

**Fixed assets and consumer durable goods.** *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the comprehensive NIPA revision. "Fixed Assets and Consumer Durable Goods for 1993–2003" (September 2004) describes additional improvements that were incorporated into these estimates as part of the annual NIPA revision.

#### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov> under "About BEA."

## Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross-domestic-product-by-industry accounts) and one satellite account.

**Annual industry accounts.** “Improved Annual Industry Accounts for 1998–2003” (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

“Annual Industry Accounts” (December 2005) presents the annual revision of these accounts and describes the source data and any changes in the methods that are used to prepare the estimates.

In addition, see the following articles.

“Preview of the Benchmark Input-Output Accounts for 2002” (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

“Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts” (March 2004) provides the details about the comprehensive revision.

“Benchmark Input-Output Accounts for the U.S. Economy, 1997” (December 2002)

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Travel and Tourism Satellite Accounts”

For 1996 and 1997 (July 2000)

For 1998–2003 (September 2004)

For 2001–2004 (June 2005)

For 2002–2005 (June 2006)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

**International transactions accounts (ITAs).** *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2006 SURVEY.

**Direct investment.** *International Direct Investment: Studies by the Bureau of Economic Analysis* (1999) is a collection of previously published articles on U.S. di-

rect investment abroad and foreign direct investment in the United States. It includes “A Guide to BEA Statistics on U.S. Multinational Companies,” which is also available in the March 1995 SURVEY, and “A Guide to BEA Statistics on Foreign Direct Investment in the United States,” which is also available in the February 1990 SURVEY

In addition, the updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey* (2004), and in *Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey* (2001).

**International services.** *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis* (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

## Regional accounts

The regional accounts include estimates of personal income and gross state product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

“Comprehensive Revision of State Personal Income for 1969–2003” (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

“The Reliability of the State Personal Income Estimates” (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

“Comprehensive Revision of Local Area Personal Income for 1969–2002” (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the DVD-ROM *Regional Economic Information System, 1969–2004*.

**Gross state product.** “Comprehensive Revision of Gross State Product” (January 2005) summarizes the sources and the methods that are used to prepare the estimates.

“Gross State Product by Industry for 1998–2005” (July 2006) presents the most recent annual revision.
