## Articles

**1. GDP and the Economy: Advance Estimates for the First Quarter of 2007**

Real GDP increased 1.3 percent after increasing 2.5 percent, reflecting a downturn in exports, an upturn in imports, a deceleration in consumer spending for nondurable goods, and a downturn in Federal Government spending.

**6. Returns for Domestic Nonfinancial Business**

BEA publishes aggregate rates of returns and Q-ratios roughly once a year. In 2006, the rate of return for nonfinancial corporations increased, continuing a trend that began in 2002. For this first time, rates of returns for various industries and industry groups are also presented.

**12. Annual Industry Accounts: Advance Estimates for 2006**

U.S. economic growth reflected accelerated growth in both the private services-producing sector and the private goods-producing sector.

**17. Comparing Aggregate Measures of Goods and Services Production in BEA's Industry and National Accounts (box)**

**26. Local Area Personal Income for 2005**

Personal income in most of the Nation's 3,111 counties slowed in 2005. Nonmetropolitan counties grew slower than metropolitan counties. Personal income growth in some counties, especially in Louisiana, was significantly affected by natural disasters.

**60. BEA Regional Program Outreach in 2007**

BEA's regional economic accounts provide detailed estimates of gross state product and personal income for states, counties, and metropolitan areas. To help users better understand and use these accounts, BEA participates in various conferences and workshops around the country.

### Upcoming in the Survey...

**Travel and Tourism Satellite Accounts.** Updated estimates for these accounts will be published in the June Survey.

**Health Care Studies.** Various papers presented at BEA-organized sessions of the annual Allied Social Sciences Association meetings in Chicago will also be published in the June Survey.

## Director's Message

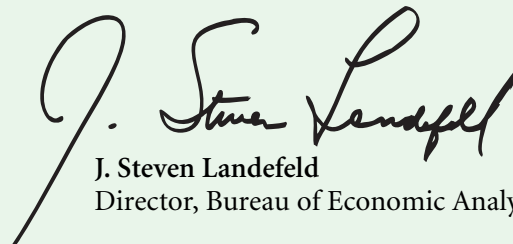

---

This month's SURVEY OF CURRENT BUSINESS includes our annual update on aggregate rates of returns for nonfinancial businesses. This year, we expanded our discussion to include rates of returns for various industry groups, including the information-communications-technology-producing industries. These return estimates will be valuable to economic officials and others who are exploring resource investment issues and are thus interested in comparing various rates of returns.

Another article presents advance estimates of gross domestic product (GDP) by industry for 2006. This marks the third year that BEA has published advance estimates, which give users an early look at value added and price changes for industries. The advance estimates do a good job identifying the direction of change in real growth and indicating if real growth was well-above, well-below, or about average compared with GDP growth. Last year's advance estimates correctly identified the direction of change in 13 of the 16 industry groups and identified real growth relative to GDP in 14 industry groups. As usual, more detailed GDP-by-industry estimates will be published later this year.

Also, newly released local area personal income statistics show that the slowdown in income growth in 2005 was widespread: Growth slowed in most of the Nation's 3,111 counties, averaging 4.7 percent, compared with 5.5 percent in 2004. The article rounds out our presentation of regional income data; estimates for states and metropolitan areas have been previously released.

In addition, please note the short one-page update on our regional outreach activities in the near future. Our regional data is of critical importance to policy makers and economic officials in every state. We welcome the opportunity to better explain our services. We hope to see you at one these events.

J. Steven Landefeld  
Director, Bureau of Economic Analysis

## Taking Account...

### **BEA to Incorporate Derivatives Data**

On May 15, the Department of the Treasury released quarterly transactions and investment position data on financial derivatives for the first time. These data cover transactions for 2006 and positions from December 2005 to December 2006. The Bureau of Economic Analysis (BEA) plans to incorporate these data into its international transactions accounts as part of its annual revision to be released on June 15 and into its international investment position accounts to be released on June 28. These releases will also incorporate other new and updated source data and methodologies.

The incorporation of the financial derivatives data is the culmination of several years of planning, research, and effort by the Treasury Department, the Federal Reserve Board, the Federal Reserve Bank of New York, and BEA to capture international transactions arising from this important class of financial instruments.

The derivatives data on transactions will be included as a separate line item in BEA's quarterly international accounts presentation with a one-quarter lag. The derivatives data on gross positive and gross negative positions in

derivatives will be included as separate line items in BEA's annual international investment position presentation.

### **BEA Releases Summary Estimates of MNC Activity**

Worldwide employment growth by U.S. multinational companies (MNCs) decelerated slightly in 2005, while capital spending turned up, according to summary estimates of multinational activity released by BEA. Also, capital spending by U.S. affiliates of foreign MNCs rose, while employment declined slightly.

Worldwide employment by U.S. MNCs increased 1.8 percent in 2005, following a 2.2-percent increase in 2004. Domestic employment by U.S. parent companies increased 1.1 percent, following a 0.6-percent increase. Employment abroad by majority-owned foreign affiliates of U.S. MNCs increased 3.6 percent, following a 6.1-percent increase. U.S. employment by majority-owned U.S. affiliates of foreign MNCs decreased 0.7 percent in 2005, following a 2.0-percent decrease in 2004.

Worldwide capital expenditures of U.S. MNCs increased 15.2 percent in 2005, following a decrease of 2.4 percent in 2004. The increase reflected a 15.3-percent increase in capital

spending in the United States by U.S. parent companies, following a decrease of 6.3 percent. Capital spending abroad by their majority-owned foreign affiliates increased 14.9 percent, following a 9.0-percent increase. For majority-owned U.S. affiliates of foreign MNCs, capital expenditures increased 7.1 percent in 2005, following a 3.5-percent increase in 2004.

Sales by U.S. parent companies rose 8.7 percent, following a 6.9-percent increase, and sales by their majority-owned foreign affiliates increased 14.4 percent, following a 14.8-percent increase. Sales by majority-owned U.S. affiliates of foreign MNCs increased 8.8 percent, following an 8.6-percent increase.

Domestic employment by U.S. parent companies accounted for 70 percent of the worldwide employment of U.S. MNCs in 2005, down from 71 percent in 2004. The U.S.-parent share of the worldwide capital expenditures of U.S. MNCs in 2005 was 71 percent, the same share as in 2004.

The estimates, with tables in .xls format, are available at <[www.bea.gov/newsreleases/international/mnc/2007/mnc2005.htm](http://www.bea.gov/newsreleases/international/mnc/2007/mnc2005.htm)>. Estimates based on more complete source data will be released later this year.

# GDP and the Economy

## Advance Estimates for the First Quarter of 2007

IN THE first quarter of 2007, U.S. economic growth slowed and inflation accelerated, according to the “advance” estimates of the national income and product accounts (NIPAs).<sup>1</sup>

Real gross domestic product (GDP) increased 1.3 percent, following a 2.5-percent increase in the fourth quarter of 2006 (chart 1 and table 1).<sup>2</sup>

The slowdown primarily reflected a downturn in exports, an upturn in imports (which are subtracted in the calculation of GDP), a deceleration in consumer spending for nondurable goods, and a downturn in Federal Government spending.<sup>3</sup> The deceleration was moderated by a smaller decrease in inventory investment, an upturn in equipment and software investment, a smaller decrease in residential investment, and an acceleration in consumer spending for durable goods

- Residential investment fell 17.0 percent after falling 19.8 percent (page 2). The first-quarter decline was the sixth consecutive decline.
- Prices of goods and services purchased by U.S. residents increased 3.6 percent, following a 0.2-percent increase (page 3). Energy prices turned up after dropping sharply, and food prices accelerated.
- Real disposable personal income (DPI) increased 4.5 percent, following a 5.3-percent increase (page 4). The deceleration reflected an upturn in the PCE implicit price deflator that is used to deflate current-dollar DPI, which accelerated.
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was -1.0 percent in the first quarter; in the fourth quarter, it was -1.2 percent.

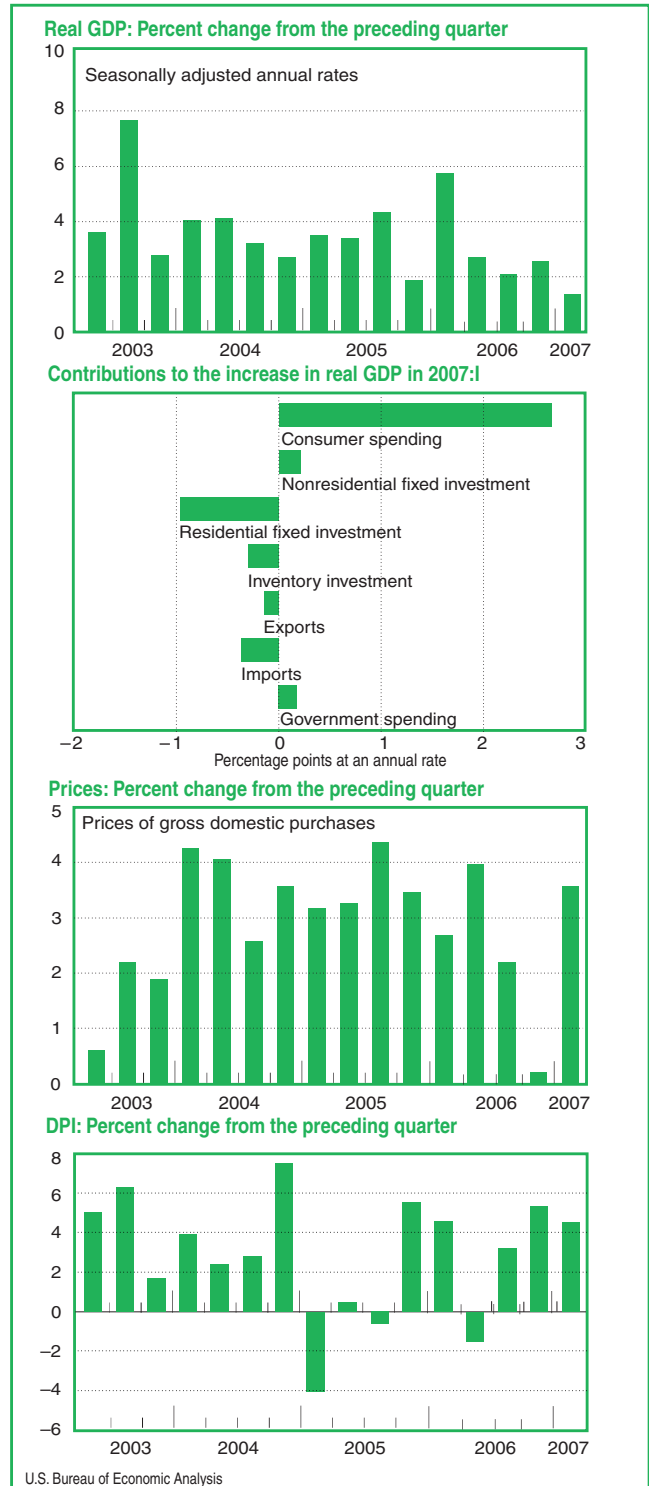

1. Each GDP estimate for a quarter (advance, preliminary, and final) incorporates increasingly comprehensive and improved source data. More detailed information can be found at <[www.bea.gov/bea/about/infoqual.htm](http://www.bea.gov/bea/about/infoqual.htm)> and at <[www.bea.gov/bea/faq/national/gdp\\_accuracy.htm](http://www.bea.gov/bea/faq/national/gdp_accuracy.htm)>. Quarterly estimates are expressed at seasonally adjusted annual rates, a value that assumes the rate of activity for a quarter were maintained for a year.

2. “Real” estimates are in chained (2000) dollars, and price indexes are chain-type measures.

3. In this article, “consumer spending” refers to the NIPA series “personal consumption expenditures,” “inventory investment” refers to “change in private inventories,” and “government spending” refers to “government consumption expenditures and gross investment.”

*Christopher Swann prepared this article.*

**Chart 1. GDP, Prices, Disposable Personal Income (DPI)**

State and local.....	12.3	4.0	1.9	2.7	3.3	0.48	0.23	0.33	0.39	

NOTE. Percent changes are from NIPA table 1.1.1, and contributions to percent change are from NIPA table 1.1.2. Shares are from NIPA table 1.1.10.

Consumer spending increased 3.8 percent after increasing 4.2 percent. The largest contributor to the slowdown was a deceleration in spending for food.

Nonresidential fixed investment picked up and added 0.21 percentage point to real GDP growth, reflecting an upturn in investment in information processing equipment and software.

Residential investment decreased for the sixth consecutive quarter.

Inventory investment subtracted 0.30 percentage point from the change in real GDP growth after subtracting 1.16 percentage points from the fourth-quarter change.

Exports decreased 1.2 percent after increasing 10.6 percent. The downturn in goods exports was primarily due to downturns in nonautomotive capital goods and in industrial supplies and materials. The downturn in services exports was primarily reflected a deceleration in "other" private services and a downturn in travel.

Imports increased 2.3 percent after a 2.6-percent decrease. Goods imports turned up, led by an upturn in petroleum and products. Imports of services slowed.

Federal Government spending decreased 3.0 percent after increasing 4.6 percent. The downturn reflected a downturn in defense spending.

State and local government spending accelerated slightly, increasing 3.3 percent, compared with an increase of 2.7 percent.

Table 2. Real Gross Domestic Product (GDP) by Type of Product

[Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)				Contribution to percent change in real GDP (percentage points)				
	2007	2006			2007	2006				2007
	I	II	III	IV	I	II	III	IV	I	
<b>Gross domestic product<sup>1</sup>.....</b>	<b>100.0</b>	<b>2.6</b>	<b>2.0</b>	<b>2.5</b>	<b>1.3</b>	<b>2.6</b>	<b>2.0</b>	<b>2.5</b>	<b>1.3</b>	
Final sales of domestic product.....	99.9	2.1	1.9	3.7	1.6	2.11	1.90	3.62	1.56	
Change in private inventories.....	0.1	.....	.....	.....	.....	0.44	0.06	-1.16	-0.30	
Goods.....	31.3	3.6	3.8	4.0	2.1	1.12	1.17	1.25	0.66	
Services.....	58.4	2.4	2.8	4.1	2.5	1.40	1.63	2.32	1.42	
Structures.....	10.3	0.3	-7.4	-9.9	-7.6	0.04	-0.84	-1.11	-0.82	
<b>Addenda:</b>										
Motor vehicle output.....	2.9	-9.4	27.4	-32.0	3.3	-0.31	0.76	-1.18	0.09	
GDP excluding motor vehicle output.....	97.1	3.0	1.2	3.8	1.2	2.87	1.20	3.63	1.17	
Final sales of computers.....	0.6	6.7	11.7	40.9	6.7	0.04	0.07	0.22	0.04	
GDP excluding final sales of computers.....	99.4	2.5	1.9	2.2	1.2	2.51	1.89	2.23	1.22	

NOTE. Percent changes are from NIPA table 1.2.1, and contributions to percent change are from NIPA table 1.2.2. Shares are calculated from NIPA table 1.2.5.

Real final sales of domestic product, real GDP less inventory investment, increased 1.6 percent, compared with a 3.7-percent increase.

Motor vehicle output turned up, increasing 3.3 percent after a 32.0-percent decrease.

Final sales of computers decelerated, increasing 6.7 percent after a 40.9-percent increase.

Prices

State and local .....	5.4	3.4	2.9	5.5	0.61	0.38	0.33	0.63
<b>Addenda:</b>								
Gross domestic purchases:								
Food .....	1.7	3.0	2.3	5.1	0.16	0.28	0.21	0.48
Energy goods and services .....	30.6	0.6	-33.8	15.0	1.37	0.03	-2.03	0.67
Excluding food and energy .....	2.9	2.2	2.4	2.8	2.49	1.85	2.04	2.43
Personal consumption expenditures (PCE):								
Food .....	1.7	2.9	1.9	4.8				
Energy goods and services .....	29.7	3.7	-36.0	16.1				
Excluding food and energy .....	2.7	2.2	1.8	2.2				
"Market-based" PCE .....	4.2	2.2	-1.6	3.5				
Excluding food and energy .....	2.7	1.9	1.6	2.2				
Gross domestic product .....	3.3	1.9	1.7	4.0				

NOTE: Most percent changes are from NIPA table 1.6.7; percent changes for personal consumption expenditures on food and on energy goods and services and for personal consumption expenditures excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions to percent change are from NIPA table 1.6.8.

Prices paid by domestic purchasers increased 3.6 percent, compared with a 0.2-percent increase in the fourth quarter. About 0.2 percentage point of the increase was accounted for by a pay raise for Federal civilian and military personnel, which is treated as an increase in the price of employee services purchased by the Federal Government. Energy prices turned up. Food prices accelerated after decelerating. Excluding food and energy prices, prices increased 2.8 percent.

Consumer prices turned up, mainly reflecting an upturn in prices paid for gasoline, fuel oil, and other energy goods.

Prices of private fixed investment slowed, reflecting decelerations in prices paid for nonresidential structures and in prices paid for residential investment.

Prices paid by government accelerated, reflecting accelerations in the prices paid by the Federal Government, mainly reflecting the pay raise, and by state and local governments.

Consumer prices excluding food and energy, a measure of the "core" rate of inflation, increased 2.2 percent, following a 1.8-percent increase.

The "market-based" PCE price index turned up, increasing 3.5 percent after decreasing 1.6 percent. (For more information, see the box on prices.)

The GDP price index increased 4.0 percent, 0.4 percentage point more than the increase in the price index for gross domestic purchases. The larger increase in the GDP price index reflected a smaller increase in import prices than in export prices.

**Note on Prices**

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services. It is derived from the prices of personal consumption expenditures (PCE), private investment, and government consumption and investment.

BEA also produces price indexes for all components of GDP. The PCE price index is a measure of the total cost of consumer goods, and services including durable goods, nondurable goods, and services. PCE prices for food, energy goods and services, and for all items except food and energy are also estimated and reported. However, because prices for food and energy can be volatile, the price measure that excludes food and energy is often used a measure of underlying, or "core," inflation.

BEA also prepares a supplemental PCE price index, the "market-based" PCE price index, which is based on market transactions for which there are corresponding price measures. This index excludes many imputed expenditures, such as services furnished without charge by financial intermediaries, that are included in PCE and the PCE price index. BEA also prepares a market-based measure that excludes food and energy.

More information on these market-based measures is available on BEA's Web site at <[www.bea.gov/bea/faq/national/markbsdPCE.htm](http://www.bea.gov/bea/faq/national/markbsdPCE.htm)>. For a comparison of price measures, including a comparison of the PCE price index and the Consumer Price Index, visit <[www.bea.gov/bea/papers.htm](http://www.bea.gov/bea/papers.htm)>.

## Personal Income

CCAAdj Capital consumption adjustment

Personal income, which is measured in current dollars, increased \$245.7 billion, compared with an increase of \$126.1 billion. The acceleration primarily reflected accelerations in wage and salary disbursements and in personal current transfer receipts and an upturn in interest income.

Wages and salaries increased \$140.0 billion, compared with an increase of \$84.7 billion. The acceleration was more than accounted for by a first-quarter adjustment of \$50 billion (at an annual rate) for unusually large bonus payments and the exercise of stock options.

Personal interest income turned up, primarily reflecting an upturn in interest rates.

The acceleration in personal current transfer receipts primarily reflected an upturn in state and local Medicaid payments and an acceleration in Federal social security payments, which included a January cost-of-living adjustment.

Personal current taxes accelerated, reflecting accelerations in both Federal income taxes and in state and local income taxes.

Current-dollar disposable personal income accelerated, reflecting a sharp acceleration in personal income that was moderated by an acceleration in personal current taxes.

### Saving

Personal saving—disposable personal income less personal outlays—was -\$102.8 billion in the first quarter. Saving from current income may be near zero or negative when outlays are financed by borrowing (including borrowing financed through credit cards or home equity loans), by selling investments or other assets, or by using saving from previous periods. See “Alternative Measures of Personal Saving” in the February 2007 SURVEY OF CURRENT BUSINESS.

**Chart 2. Personal Saving Rate**

## Source Data for the Advance Estimates

1. Assumption.

2. Nonmonetary gold is included in international-transactions-accounts exports

and imports but is not used directly in the estimation of national income and product account exports and imports.

### Summary of the Source Data for the Advance Estimates of GDP for the Fourth Quarter of 2006

The advance estimates of many components of GDP are based on 3 months of source data, but the estimates of some components are based on only 2 months of data. For the following items, the number of months for which data are available is shown in parentheses.

*Personal consumption expenditures:* Sales of retail stores (3), unit auto and truck sales (3), and consumers' shares of auto and truck sales (2);

*Nonresidential fixed investment:* Unit auto and truck sales (3), construction put in place (2), manufacturers' shipments of machinery and equipment other than aircraft (3), shipments of civilian aircraft (2), and exports and imports of machinery and equipment (2);

*Residential investment:* Construction put in place (2), single-family housing starts (3), sales of new homes (3), and sales of existing houses (3);

*Change in private inventories:* Trade and nondurable-goods manufacturing inventories (2), durable-goods manufacturing inventories (3), and unit auto and truck inventories (3);

*Net exports of goods and services:* Exports and imports of goods and services (2);

*Government consumption expenditures and gross investment:* Federal outlays (3), state and local government construction put in place (2), and state and local government employment (3);

*Compensation:* Employment, average hourly earnings, and average weekly hours (3);

*GDP prices:* Consumer price indexes (3), producer price indexes (3), and values and quantities of petroleum imports (2).

#### Unavailable source data

When source data were unavailable, BEA made various assumptions for March, including the following:

- An increase in nondurable-goods manufacturing inventories,
- An increase in nonmotor vehicle merchant wholesale and retail inventories,
- Increases in exports and in imports of goods excluding gold.

Table 5 shows the assumptions for key series; a more comprehensive list is available on BEA's Web site at <[www.bea.gov/national/index.htm#supp](http://www.bea.gov/national/index.htm#supp)>.

## Returns for Domestic Nonfinancial Business

By Paul R. Lally, George M. Smith, Andrew W. Hodge, and Robert J. Corea

**R**OUGHLY once a year, the Bureau of Economic Analysis publishes aggregate rates of return for domestic nonfinancial corporations along with various Q-ratios, which generally indicate the financial market value of assets relative to depreciated replacement-cost value. This year, for the first time, BEA includes additional information on the rates of return for major industries for 1997–2005.

Taken together, these broad measures of profitability may be useful to economists and policy makers. These returns show which industries are gaining in returns and the relative volatility of returns, allowing for better comparisons.

The returns for nonfinancial corporations are based on preliminary estimates from the national income and product accounts (NIPAs) and the fixed assets accounts. The industry returns estimates are calculated using data from the annual industry accounts, the NIPAs, and the fixed asset accounts, another step toward fulfilling BEA's goal of providing more information that integrates data from across BEA's major accounts. To calculate the Q-ratios, additional data were drawn from the Federal Reserve Board's flow of funds accounts.

### Nonfinancial corporate returns

**Aggregate returns.** In 2006, the profitability of domestic nonfinancial corporations increased, continuing an upward trend that began in 2002. Before subtracting corporate profits taxes, the rate of return on capital for nonfinancial corporations increased to 10.3 percent in 2006 from 9.5 percent in 2005 (table 1 and chart 1). After subtracting corporate profits taxes, the rate increased to 7.7 percent in 2006 from 7.1 percent in 2005.

The return is calculated as the ratio of the net operating surplus to produced assets. For nonfinancial corporations, the net operating surplus is the return accruing to capital after labor costs and intermediate inputs are deducted from receipts. The net operating surplus can be measured as the sum of corporate profits, net interest, and business current transfer payments (table 2).<sup>1</sup> Produced assets refer to the net stock of capital plus inventories valued at current cost.

1. Corporate profits and net interest are based on tabulations of "company" data rather than "establishment" data. As a result, net operating surplus of nonfinancial corporations includes the income earned by the corporations' financial services-producing establishments, and it excludes income earned by the nonfinancial establishments of financial corporations.

NOTE: Nonfinancial industries' net operating surplus will be available from the December 2007 update of the annual industry accounts.

1. Consists of agriculture, forestry, fishing and hunting; transportation and warehousing; information; rental and leasing services and lessors of intangible assets; professional, scientific, and technical services; administrative and waste management services; educational services; health care and social assistance; arts, entertainment, and recreation; accommodation and food services; and "other

services, except government."

2. Information-communication-technology (ICT) producing industries: Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services. Computer and electronic products are included in manufacturing; the other ICT-producing industries are included in "other" industries.

**Q-type ratios.** “Tobin’s Q,” or simply “Q,” is the ratio of financial-market valuation of corporate assets to the current-cost value of the assets. A value of Q above 1 indicates that financial-markets value of corporate assets is above the replacement costs, reflecting the perceived potential for positive returns on the assets. Such a situation may induce businesses to invest in newly produced physical assets instead of acquiring existing assets at financial-market costs; alternatively, it may induce financial investors to reduce the prices that they offer for financial assets. Similarly, a value of Q below 1 indicates that the cost of purchasing existing physical assets (companies) at financial market prices would be less than the replacement costs of assets.

Three Q-type ratios for domestic nonfinancial corporations are defined as follows:

- Q1 is calculated as the market value of outstanding equity divided by the net stock of produced assets.<sup>2</sup>
- Q2 adds the book value of outstanding corporate bonds to the numerator used in Q1.<sup>3</sup> The inclusion of bonds makes Q2 a more complete measure of invested capital, but including them at historical cost is clearly inconsistent with the underlying rationale for Q, which is to provide a comparison of market valuation with replacement cost.
- Q3 adds an estimate of the market value of outstanding corporate bonds and net liquid assets to the numerator used in Q1. It also subtracts land from the numerator (because land is not included in the denominator).<sup>4</sup>

All three ratios trace similar patterns (chart 2 and table 3). They reached record levels in 1999; all three dropped sharply in 2000 and continued decreasing until 2002. In 2003–2004, all three ratios rose. In 2005–2006, all three ratios decreased.

2. The market value of outstanding equity is the market value of all assets owned by U.S. firms, including assets held outside the United States, while the net stock of produced assets includes only inventories and assets in the United States and capitalized in the national accounts.

3. “Outstanding bonds” is a gross estimate; it is not net of financial assets and debt held by nonfinancial corporations.

4. The market value of bonds outstanding is approximated by a procedure developed by James Tobin and Dan Sommers. In brief, the process begins with published book values of bonds outstanding and an assumption that a bond matures in 10 years and carries a coupon rate equal to the Baa rate that prevailed in the year the bond was issued. The value of land is estimated as the difference between the value of real estate and the value of structures and of equipment and software. Net liquid assets is estimated as financial assets less liabilities other than municipal securities, corporate bonds, and mortgages. The data are from the Board of Governors of the Federal Reserve System, *Flow of Funds Accounts of the United States*, statistical release Z.1 and “Selected Interest Rates,” statistical release H.15 (Washington, DC: Board of Governors). The data are available on the Federal Reserve’s Web site at <[www.federalreserve.gov/releases/Z1/](http://www.federalreserve.gov/releases/Z1/)> and <[www.federalreserve.gov/releases/h15/](http://www.federalreserve.gov/releases/h15/)>.

## Nonfinancial industry returns

Aggregate returns can also be calculated using data from BEA’s annual industry accounts, which provide annually updated data on 65 industries. Like rates of return of nonfinancial corporations, the rate of return of nonfinancial industries is also calculated as the ratio of net operating surplus to produced assets (table 2).

Specifically, the net operating surplus includes corporate profits, net interest, business current transfer payments, as well as proprietors’ income, which mainly reflects the income of the unincorporated self-employed. In addition, real estate, which includes owner-occupied housing, is excluded from the nonfinancial industry data—the net operating surplus and

2005 .....	1.07	1.36	0.81
2006 .....	1.05	1.34	0.71

1. Q1 is the market value of outstanding equity divided by the net stock of produced assets valued at current cost.

2. Q2 is the market value of outstanding equity plus book value of outstanding corporate bonds divided by the net stock of produced assets valued at current cost.

3. Q3 is the market value of outstanding equity plus book value of outstanding corporate bonds plus net liquid assets and less the value of land divided by the net stock of produced assets valued at current cost.

**Chart 2. Q-Type Ratios and Market Capitalization of Domestic Nonfinancial Corporations, 1960–2006**

produced assets—to allow for a better comparison with the nonfinancial corporate returns data, which do not reflect homeownership.

The pretax rate of return for nonfinancial industries rose to 14.3 percent in 2005 from 13.9 percent in 2004. The annual industry accounts do not provide after-tax data. The industry rate of return for 2006 will be included with the December 2007 update of the annual industry accounts.

The inclusion of proprietors' income in industry net operating surplus clearly accounts for most of the difference between the industry rate of return and the corporation rate of return. However, several definitional and statistical differences between the annual industry accounts and the NIPAs also affect the estimates. Notably, the annual industry accounts include adjustments that (1) exclude the financial services-producing establishments of primarily nonfinancial corporations and (2) include the nonfinancial services-producing establishments of primarily financial corporations as well as a share of the NIPA statistical discrepancy.<sup>5</sup>

5. For more information, see Brian C. Moyer, Mark A. Planting, Mahnaz Fahim-Nader, and Sherlene K. S. Lum, "Preview of the Comprehensive Revision of the Annual Industry Accounts," *SURVEY OF CURRENT BUSINESS* 84 (March 2004) and Ann M. Lawson, Brian C. Moyer, Sumiye Okubo, and Mark A. Planting, "Integrating Industry and National Economic Accounts: First Steps and Future Improvements," in *A New Architecture for the U.S. National Accounts*. (Chicago: The University of Chicago Press): 215–261.

Despite the difference between the industry rate and the pretax corporation rate, the annual pattern of change of both is similar (chart 3).

### Specific industry groups

Returns were also calculated for four broad nonfinancial industry groups for 1997–2005: Mining, construction, and utilities; manufacturing; wholesale and retail trade; and other nonfinancial industries. Returns were also calculated for the information-communication-technology (ICT) industries subset.<sup>6</sup>

**ICT-producing industries.** The pattern of the rates of return for ICT-producing industries was similar to the pattern of returns for nonfinancial industries overall, but were generally more volatile (table 1). The return for ICT-producing industries declined to –0.7 percent in 2001 from 22.7 percent in 1997. Although ICT-producing industries accounted for only 5 percent of nonfinancial industries' net operating surplus, these industries significantly deepened the decline in nonfinancial industries' overall rate of return (chart 3).

Also of note, the return to ICT-producing industries fell below the nonfinancial industry average in 2000

6. The subset of ICT-producing industries consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer design and related services. Computer and electronic products are included in the manufacturing group; the other ICT-producing industries are included in the other nonfinancial industries group.

and has remained there through 2005. The produced assets of ICT-producing industries grew rapidly in 1998–2001, rising 38.7 percent. In 2002–2005, produced assets grew only 4.0 percent growth.

**Specific industries.** The rates of return for the mining, construction, and utilities industry group in 1997–99 were 4 percentage points or more below the nonfinancial industry average. Returns rose to within 2 percentage points of the industry average in 2000 and have remained in that range. Produced assets rose 19.9 percent in 1997–2001 and then accelerated to 29.8 percent in 2001–2005.

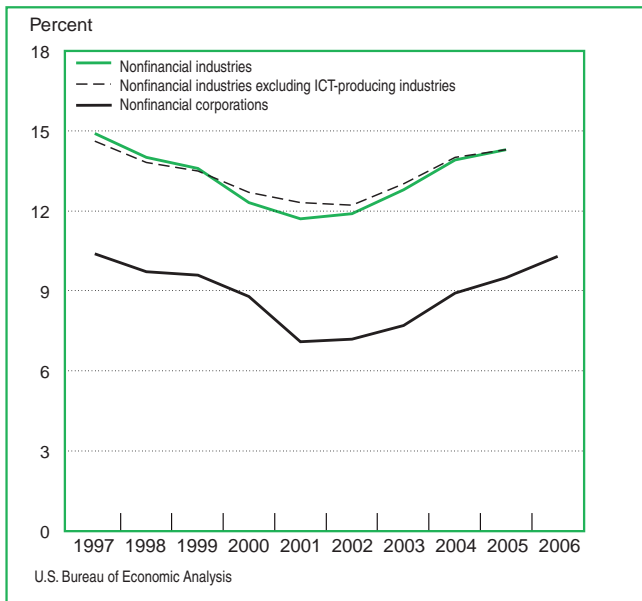

Returns for the manufacturing, wholesale and retail trade, and “other” nonfinancial industry groups followed patterns similar to the returns for nonfinancial

corporations overall, declining steadily from 1997 through 2000 (chart 4).

Returns for the manufacturing group and “other” nonfinancial industry group continued to decline in 2001. In 2002–2005, returns for all three industry groups increased largely uninterrupted, but none have surpassed their 1997 levels.

In contrast, the return for the mining, construction, and utilities industry group, which was lowest among the four groups in 1997, decreased only in 1998 and 2002 and surpassed its 1997 level in 2003, 2004, and 2005. These more recent increases largely reflected the runup in both corporate profits before tax and proprietors’ income in the oil and gas extraction industry within mining.

**Chart 4. Rates of Return for Domestic Nonfinancial Industry Groups, 1997–2005**

## Annual Industry Accounts

### Advance Estimates for 2006

By Thomas F. Howells III and Kevin B. Barefoot

THE private services-producing and private goods-producing sectors of the U.S. economy remained strong in 2006, as real growth accelerated in both, according to advance estimates of gross domestic product (GDP) by industry. In addition, GDP price growth remained stable, as accelerating price growth in the private services-producing sector was offset by sharply decelerating price growth in the private goods-producing sector.

The advance estimates of GDP by industry were released by the Bureau of Economic Analysis (BEA) on April 24, 2007. These estimates reflect newly available source data on the distribution of growth in real GDP and inflation by industry. Highlights of the estimates include the following:

- The private services-producing sector grew 4.1 percent in 2006, up from 3.7 percent in 2005. All 15 industry groups in the services sector expanded in 2006 (chart 1).
- Real growth in the private goods-producing sector accelerated to 2.5 percent from 2.1 percent in 2005.

**Chart 1. Annual Growth in Real Value Added**

Growth in four of the five industries in this sector improved in 2006. Construction increased 1.3 percent, compared with a 3.9-percent increase in 2005.

- Manufacturing continued to experience strong real growth, increasing 3.3 percent in 2006 after increasing 2.2 percent in 2005. Real growth in durable-goods manufacturing accelerated to 6.7 percent in 2006 from 4.9 percent in 2005.
- Information-communications-technology (ICT)-producing industries experienced double-digit real growth for the third consecutive year, increasing 12.5 percent in 2006, compared with 13.3 percent in 2005.<sup>1</sup> These industries accounted for 3.9 percent of the economy but 14.2 percent of real GDP growth (table A).
- Slower value-added price growth in mining, largely due to slowing crude petroleum prices, was the primary contributor to decelerating value-added price growth in the private goods-producing sector (3.4 percent in 2006, compared with 6.1 percent in 2005).
- Private industries' share of current-dollar GDP increased for the third straight year, accounting for 87.6 percent of the economy in 2006. This trend largely reflected rising shares for the mining, construction, "real estate and rental and leasing," and "professional, scientific, and technical services" industry groups.

The advance estimates were prepared for broad industry groups using a methodology that incorporates summary source data from the "final" estimate of fourth-quarter GDP in the national income and product accounts (NIPAs). The advance estimates will be revised in the fall of 2007 to incorporate more detailed industry source data.<sup>2</sup> The revised estimates will be prepared using BEA's integrated annual industry accounts methodology, which includes both the annual

1. ICT-producing industries consist of computer and electronic products within durable-goods manufacturing; publishing industries (includes software) and information and data processing services within information; and computer systems design and related services within professional, scientific, and technical services.

2. BEA will also release revised annual industry estimates for 2004–2005.

GDP-by-industry accounts and the annual input-output accounts.

The remainder of this article includes a discussion of industry trends and developments, an appendix describing the methodology used to prepare the advance estimates, and nine tables that present the advance estimates for 2006 and the more detailed estimates from the integrated annual industry accounts methodology for 2003–2005 (see the box “Data Availability”).

**Table A. Contributions to Percent Change in Real Gross Domestic Product Relative to Industry Group Size, 2006**

[Percent]

	Share of real GDP growth <sup>1</sup>	Share of GDP <sup>2</sup>	Ratio <sup>3</sup>
Information .....	9.4	4.4	2.1
Durable goods manufacturing .....	13.6	6.9	2.0
Real estate and rental and leasing .....	23.0	13.1	1.8
Agriculture, forestry, fishing, and hunting .....	1.5	0.9	1.7
Professional, scientific, and technical services .....	10.9	7.0	1.6
Administrative and waste management services .....	4.2	3.0	1.4
Finance and insurance .....	10.0	7.8	1.3
Retail trade .....	8.2	6.5	1.3
Health care and social assistance .....	7.0	6.9	1.0
Arts, entertainment, and recreation .....	0.9	0.9	1.0
Accommodation and food services .....	2.1	2.6	0.8
Educational services .....	0.6	0.9	0.7
Transportation and warehousing .....	1.5	2.7	0.6
Wholesale trade .....	3.0	6.0	0.5
Construction .....	1.8	4.9	0.4
State and local government .....	3.0	8.5	0.4
Utilities .....	0.6	2.0	0.3
Other services, except government .....	0.6	2.2	0.3
Management of companies and enterprises .....	0.3	1.8	0.2
Mining .....	-0.3	1.9	-0.2
Federal government .....	-0.9	3.9	-0.2
Nondurable goods manufacturing .....	-1.5	5.2	-0.3
<b>Addenda:</b>			
Private goods-producing industries <sup>4</sup> .....	15.2	19.8	0.8
Private services-producing industries <sup>5</sup> .....	83.3	67.8	1.2
Information-communications-technology-producing industries <sup>6</sup> .....	14.2	3.9	3.6

1. Equals the industry's contribution to growth in real GDP, divided by the growth in real GDP, times 100.

2. Equals the industry's value added, divided by GDP, times 100.

3. Equals the share of real GDP growth divided by the share of GDP.

4. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

5. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

6. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

### Data Availability

The advance estimates of value added by industry are presented in current dollars, chained (2000) dollars, chain-type quantity indexes, and chain-type price indexes. Annual input-output accounts for 2006 will not be available until late 2007. The estimates for 2006 and the full set of annual industry accounts are available interactively on BEA's Web site; go to <www.bea.gov>, and under “Industry,” click on “Interactive Tables: GDP by Industry.”

### Industry Performance

The private goods-producing and private services-producing sectors remained strong in 2006; real growth in both sectors accelerated. GDP price growth remained

stable as accelerating value-added price growth in the services sector was offset by a sharp deceleration in goods-sector price growth (chart 2). In addition, the advance estimates for 2006 reflect continuing trends in the U.S. economy. ICT-producing industries experienced double-digit growth for the third straight year. Goods-sector value-added price growth was above 3.0 percent for the fourth straight year. And private industries' share of current-dollar GDP rose for the third straight year.

**Chart 2. Annual Growth in Chain-Type Price Indexes for Value Added**

### Real economic growth

**Private services-producing sector.** Real value added accelerated to 4.1 percent in 2006 from 3.7 percent in 2005 (table B).<sup>3</sup> Strong growth in the services sector was marked by expansions in all 15 services-sector industry groups. The services sector continued to drive real economic growth, accounting for more than 80 percent of real GDP growth while accounting for less than 70 percent of the economy in 2006. Services-sector growth reflected more rapid growth in “finance, insurance, real estate, rental, and leasing” that offset slower growth in the retail trade, information, and “professional and business services” industry groups.

The “finance, insurance, real estate, rental, and leasing” industry group increased from 3.0 percent in 2005 to 5.4 percent in 2006. Growth in this industry group was led by “real estate and rental and leasing” which

3. Real value added reflects the contribution of an industry's labor and capital to real GDP.

**Table B. Percent Changes in Real Value Added by Industry Group**  
[Percent Change]

	2003	2004	2005	2006
<b>Gross domestic product</b> .....	<b>2.5</b>	<b>3.9</b>	<b>3.2</b>	<b>3.3</b>

<b>Addenda:</b>				
Private goods-producing industries <sup>1</sup> .....	0.6	4.8	2.1	2.5
Private services-producing industries <sup>2</sup> .....	3.3	4.1	3.7	4.1
Information-communications-technology-producing industries <sup>3</sup> .....	7.2	13.7	13.3	12.5

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

increased 6.0 percent in 2006. “Real estate and rental and leasing” accounted for 23.0 percent of real GDP growth, nearly double its 13.1-percent share of current-dollar GDP.

Information was the fastest growing industry group for the third consecutive year, increasing 7.2 percent in 2006 after increasing 9.0 percent in 2005. Information industries were the largest contributor to real GDP growth relative to their size in the economy, accounting for 9.4 percent of real growth, more than double their 4.4-percent share of current-dollar GDP. The “professional, scientific, and technical services” industry group increased 5.2 percent in 2006 and accounted for more than 10 percent of real GDP growth.

ICT-producing industries, which include industries from both the information and “professional, scientific, and technical services” industry groups, experienced double-digit growth for the third consecutive year, increasing 12.5 percent in 2006. ICT-producing industries accounted for 3.9 percent of current-dollar GDP but for 14.2 percent of real GDP growth.

**Private goods-producing sector.** Real growth in this sector strengthened in 2006, increasing 2.5 percent after increasing 2.1 percent in 2005. This sector accounted for 15.2 percent of real GDP growth and 19.8 percent of current-dollar GDP. In 2006, stronger growth in this sector reflected improved growth in four of the sector’s five industry groups.

In this sector, durable-goods manufacturing increased 6.7 percent, up from 4.9 percent in 2005, and “agriculture, forestry, fishing, and hunting” increased 5.0 percent, up from 0.1 percent in 2005. Both mining and nondurable-goods manufacturing continued to decrease in 2006, but at a slower rate than in 2005. Mining decreased 0.7 percent in 2006 after decreasing 2.6 percent, and nondurable-goods manufacturing decreased 0.9 percent in 2006 after decreasing 1.3 percent. Real growth in the construction industry slowed to 1.3 percent after increasing 3.9 percent.

The manufacturing industry group experienced accelerating real growth in 2006, increasing 3.3 percent after increasing 2.2 percent in 2005. This acceleration largely reflected stronger real growth in durable-goods manufacturing, which accounted for 13.6 percent of real GDP growth, or nearly twice its 6.9-percent share of current-dollar GDP.

### Value-added price growth

**Private services-producing sector.** Growth in the value-added price index for the services-producing sector increased 2.6 percent in 2006, up from 2.3 percent in 2005.<sup>4</sup> This increase reflected more rapid price growth in the “real estate and rental and leasing” and “transportation and warehousing” industry groups. “Real estate and rental and leasing” increased 3.5 percent in 2006, its largest increase since 2001, and accounted for 15.5 percent of GDP price growth (table C). The value-added price index for “transportation and warehousing” increased 3.6 percent, its largest increase since 1998. Accelerating value-added price growth in these two industries offset slower growth in wholesale trade, which increased 4.3 percent in 2006 after 2 years of price growth above 6 percent.

Accelerating value-added price growth in “professional, scientific, and technical services” and a smaller decrease in information also contributed to the acceleration in price growth in the services sector.

**Private goods-producing sector.** Growth in value-added prices for this sector decelerated sharply to 3.4 percent in 2006 from 6.1 percent in 2005 (table D). Despite slowing, value-added price growth remained above the average annual rate of growth throughout the 1990s (less than 1 percent).

The deceleration stemmed mainly from mining, reflecting less rapid increases in crude petroleum prices.

4. The value-added price index for an industry reflects both the prices that it receives for its output and the prices that it pays for its intermediate inputs. For more information, see the box “Interpreting the Value-Added Price Index” in Robert E. Yuskavage and Mahnaz Fahim-Nader, “Gross Domestic Product by Industry for 1947–86,” SURVEY OF CURRENT BUSINESS 85 (December 2005): 77.

Despite slowing, the mining industry's value-added price index continued to experience double-digit growth, increasing 10.5 percent in 2006, down from 39.2 percent in 2005 and 19.0 percent in 2004. In 2006, mining accounted for 6.6 percent of GDP price growth, or more than 3 times its 1.9-percent share of current-dollar GDP.

Manufacturing and construction also contributed to the slowing private goods-sector value-added price growth rate in 2006. The manufacturing industry group increased 2.4 percent in 2006 after increasing 3.2 percent in 2005. This slowdown reflected decelerating growth in nondurable-goods manufacturing, which increased 5.1 percent in 2006 after increasing 8.4 percent. Value-added price growth in construction slowed to 4.7 percent in 2006 after increasing 8.7 percent.

### Current-dollar shares

Private industries' share of current-dollar GDP rose for the third consecutive year, to 87.6 percent in 2006. The private services-sector share rose 0.3 percentage point to 67.8 percent in 2006, while the private goods-sector share fell 0.1 percentage point to 19.8 percent. In the goods sector, the manufacturing industry's share of current-dollar GDP held steady in 2006 at 12.1 percent after declining every year from 1999 to 2005.

**Table C. Contributions to Percent Change in the Chain-Type Price Index for Gross Domestic Product Relative to Industry Group Size, 2006**  
[Percent]

	Share of GDP price growth <sup>1</sup>	Share of GDP <sup>2</sup>	Ratio <sup>3</sup>
Mining .....	6.6	1.9	3.5
Nondurable goods manufacturing .....	9.0	5.2	1.7
Management of companies and enterprises .....	3.1	1.8	1.7
Construction .....	7.9	4.9	1.6

Private services-producing industries <sup>5</sup> .....	61.0	67.8	0.9
Information-communications-technology-producing industries <sup>6</sup> .....	-6.9	3.9	-1.8

1. Equals the industry's contribution to the percent change in the chain-type price index for GDP divided by the percent change in the chain-type price index for GDP, times 100.

2. Equals the industry's value added, divided by GDP, times 100.

3. Equals the share of real GDP growth divided by the share of GDP.

4. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

5. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

6. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

## Appendix: Methodology for the Advance 2006 Estimates

The advance estimates for 2006 were prepared for broad industry groups using a methodology that was developed to incorporate summary source data. The advance estimates are published at the 1997 North American Industry Classification System (NAICS) two-digit industry level. The preparation of the estimates uses a methodology that draws heavily on data from the NIPAs for both the current-dollar estimates and the real estimates of value added by industry. This methodology and level of industry detail differ from the methodology and level of detail found in the integrated annual industry accounts.<sup>5</sup>

**Current-dollar estimates.** The current-dollar estimates of value added by industry are prepared by extrapolating the industry estimates of compensation of employees, gross operating surplus, and "taxes on production and imports less subsidies" using published and unpublished industry data from the NIPAs.<sup>6</sup> Compensation of employees by industry is extrapolated by

5. The annual industry accounts for 1998–2005 were prepared at the NAICS three-digit industry level using a more comprehensive methodology that integrates detailed source data within an input-output framework that balances and reconciles industry production with commodity usage. For more information, see Brian C. Moyer, Mark A. Planting, Mahnaz Fahim-Nader, and Sherlene K.S. Lum, "Preview of the Comprehensive Revision of the Annual Industry Accounts," SURVEY 84 (March 2004): 38–51.

6. Current-dollar value added in the annual industry accounts is measured as the sum of industry distributions of compensation of employees, gross operating surplus, and "taxes on production and imports less subsidies."

**Table D. Percent Changes in Chain-Type Price Indexes for Value Added by Industry Group**  
[Percent Change]

Information-communications-technology-producing industries <sup>3</sup> .....	-5.7	-6.3	-4.3	-4.8

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

the sum of industry wage and salary accruals and supplements to wages and salaries. Gross operating surplus by industry is extrapolated by the sum of industry corporate profits, proprietors' income, capital consumption allowances, net interest, and net business current transfer payments. These components account for nearly all of the gross operating surplus for most industries. Industry estimates of "taxes on production and imports less subsidies" are extrapolated by applying industry group estimates directly to each detailed industry.<sup>7</sup> Estimates of value added for farms and general government are obtained from the NIPAs.

**Real estimates.** Chain-type price and quantity indexes and chained-dollar estimates of value added by industry are prepared using a single-deflation methodology. An industry's current-dollar estimate of value added is deflated using the industry's gross output price index.<sup>8</sup> A Fisher aggregation of the detailed industries yields the chain-type price and quantity in-

dexes for industry groups. The gross output price indexes for detailed industries are implicit price deflators that are computed as current-dollar gross output divided by chained-dollar gross output. For detailed industries, both current-dollar and real gross output are extrapolated by a variety of source data from the NIPAs, from other Federal Government agencies, and from private institutions.

**Reliability.** The advance estimates continue to provide reliable information on the direction-of-change in real growth for industry groups and an indication of whether industries' real growth was well-above, well-below, or about average with respect to overall GDP growth. Last year's (2005) advance estimates correctly identified the direction of change in 13 of 16 industry groups and correctly identified the magnitude of real growth relative to GDP in 14 industry groups.

7. Estimates at the NAICS two-digit industry level are applied to the NAICS three-digit industry level for taxes on production and imports, and the ratio of an industry's share of total subsidies is held constant from the previous year.

8. Single deflation best approximates the results obtained through double deflation when an industry's input prices and output prices are growing at about the same rate. Under double deflation, real value added is computed indirectly as the difference between real gross output and real intermediate inputs. For more information, see Robert E. Yuskavage, "Gross Domestic Product by Industry: A Progress Report on Accelerated Estimates," *SURVEY* 82 (June 2002): 21.

### Current Initiatives

BEA is currently researching two improvements to the advance estimates of GDP by industry. First, research is under way to incorporate a double-deflation procedure for computing real value added by industry. This method would be similar to that used for the integrated annual industry accounts, but the estimates would be prepared in a partly balanced, rather than a fully balanced, I-O framework and would incorporate preliminary source data. This research has already allowed BEA to improve the advance estimates prepared using the current single-deflation methodology. Second, BEA is evaluating the feasibility of increasing the level of industry detail in order to include many of the industries that are currently published only as part of the integrated annual industry accounts and to include additional estimates, such as gross output, intermediate inputs, and the components of value added.

### Acknowledgments

Thomas F. Howells III of the Current Industry Analysis Division (CIAD) supervised the preparation of the estimates. Sumiye Okubo, Associate Director for Industry Accounts, and George M. Smith, Chief of CIAD, provided overall guidance. The estimates for 2006 were prepared by Kevin B. Barefoot and Justin M. Monaldo. Erich H. Strassner, Chief of the Industry Research Group, and Robert E. Yuskavage, Senior Economist in the Office of the Associate Director for Industry Accounts, provided valuable assistance. Pat A. Wilkinson provided administrative and program assistance.

The following CIAD staff also contributed to the preparation of the advance estimates:

*Agriculture, business services, and personal services:* Sherlene K.S. Lum, Robert J. Corea, Vincent A. Davis, Edward A. Kocis, and Brian M. Lindberg. *Transportation, utilities, and government:* Paul V. Kern, Greg R. Linder, Mariana Matias, and Sarah R. Mattingly. *Mining, construction, manufacturing, and trade:* Robert J. McCahill, Kevin B. Barefoot, Anna M. Jacobson, Amanda C. Roberts, and Shawn L. Snyder. *Value added, real measures, and prices:* Thomas F. Howells III, Kathleen M. Karlon, Amanda S. Lyndaker, and Justin M. Monaldo. *Processing:* Felicia V. Candela, Douglas B. Leung, and William H. Nicolls IV.

Staff members in BEA's National Income and Wealth Division and Government Division also contributed to the development of the estimates.

### Comparing Aggregate Measures of Goods and Services Production in BEA's Industry and National Accounts

BEA's annual industry accounts (AIAs) include aggregate measures of value added by the private goods-producing and private services-producing sectors. These measures differ in several ways from the aggregate measures of goods and services in gross domestic product (GDP) from BEA's national income and product accounts (NIPAs). In 2006, real value-added in the private goods-producing sector (the AIA measure) increased 2.5 percent, while real GDP goods (the NIPA measure) rose 6.2 percent. Real value-added in the private services-producing sector increased 4.1 percent, while real GDP services grew 2.3 percent.

Specific differences between the two measures include the following.

**Concepts.** The NIPA measure of goods represents final expenditures for goods in personal consumption expenditures, in business and government investment, and in net exports, while the AIA measure of the private goods-producing sector sums up value added across all private goods-producing industries. For example, the final purchase of an automobile would be included in the NIPA measure of GDP goods. The value of that purchase implicitly includes the value added by all industries contributing to the various stages of the automobile production and distribution process. Contributing industries might include the mining industry (raw materials), the miscellaneous professional, scientific, and technical services industry (auto design), the motor vehicles, bodies and trailers, and parts manufacturing industry (auto assembly), the transportation services industry (auto delivery), and the retail trade industry (auto sales). In the AIAs, the value of the automobile purchase would be divided among each of the private goods- and private services-producing industries that contributed to the production and distribution of the automobile.

**Classifications.** In the AIAs, an industry that produces both goods and services output is classified wholly

as a goods-producing or services-producing industry based on primary output. For example, the printing and related support activities manufacturing industry is classified as a goods-producing industry even though it also produces technical services as secondary output. In addition, the secondary output of most industries includes structures and software output produced with their own labor and capital.

**Sectors.** The NIPA measure of GDP comprises goods, services, and structures, while the AIAs divide GDP into the value added of goods-producing industries, services-producing industries, and government. In the AIAs, structures are produced principally by the construction industry, a goods-producing industry.

**Valuations.** GDP in the NIPAs is measured in purchasers' prices; therefore, trade and transportation margins are included in GDP goods. In the AIAs, value added is measured in producers' prices, and the value added of the trade and transportation industries is included in the services-producing sector.

**Imported goods.** Imports are excluded from GDP in the AIAs and NIPAs. But in the AIAs, the gross margins from distributing these goods are included, mainly in the value added of the trade and transportation industries.

The AIAs' input-output total requirements tables show that in 2005, private services-producing industries accounted for nearly three-fourths of the current-dollar purchasers' value of GDP goods and that private goods-producing industries and government combined accounted for nearly a third of the current-dollar purchasers' value of GDP services. Clearly, real growth in GDP goods and services reflects the real value-added growth of all private services-producing industries, private goods-producing industries, and government that contribute to production. For more information, go to [faq.bea.gov](http://faq.bea.gov) and search by keyword for "final expenditures versus value added."

**Chart 1. Annual Growth in Real GDP by Product Type and Real Value Added by Sector**

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of not allocated by industry reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

NOTE: Percentage-point contributions do not sum to the percent change in gross domestic product because the contribution of "not allocated by industry" is excluded.

## Local Area Personal Income for 2005

By David G. Lenze

PERSONAL income growth slowed in most of the Nation's 3,111 counties in 2005, averaging 4.7 percent, compared with 5.5 percent in 2004, according to the most recent estimates by the Bureau of Economic Analysis.<sup>1</sup> At the same time, inflation, as measured by the national price index for personal consumption expenditures, increased to 2.9 percent from 2.6 percent.

The county estimates discussed in this article complete the increasingly detailed depiction of the geographic distribution of the Nation's personal income for 2005. The first glimpse of personal income for 2005—for the Nation—was published in the February 2006 issue of the *SURVEY OF CURRENT BUSINESS*. That was followed by estimates for states in the April issue and for metropolitan statistical areas (MSA) in the September issue. The county estimates presented here reflect newly available and more complete source data.

This article discusses the general pattern and sources of growth in 2005 and disaster-related effects on personal income, including a look at Louisiana, in particular St. Bernard Parish. The article also explains the effect of the Microsoft dividend on personal income in 2004 and the impact of residence adjustments in 2005. The article concludes with a discussion of source data and revisions.

### Pattern and Sources of Growth, 2005

County growth rates were tightly clustered in 2005—the three middle quintiles ranged from 2.9 percent to 6.7 percent (chart 1). In 2004, they ranged from 2.8 percent to 8.7 percent. Nonmetropolitan counties on average grew slower than metropolitan counties in both years. Nonmetropolitan counties grew 4.5 percent in 2005, compared with 5.0-percent growth for metropolitan counties. In 2004, nonmetropolitan counties grew 5.1 percent, compared with 6.3-percent growth for metropolitan counties. Geographically, the

1. Personal income is the income received by all persons from all sources; it is defined as the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and personal current transfer receipts. A residence adjustment is also made to account for income earned by county residents at work sites outside of their county of residence and for income paid at work sites in the county to non-residents.

slowest growing counties were in hurricane-hit Louisiana and in the farming regions of Illinois, Iowa, Missouri, Arkansas, Nebraska, and eastern South Dakota. The fastest growing counties were also farm counties, concentrated in North Dakota, western South Dakota, and western Kansas.

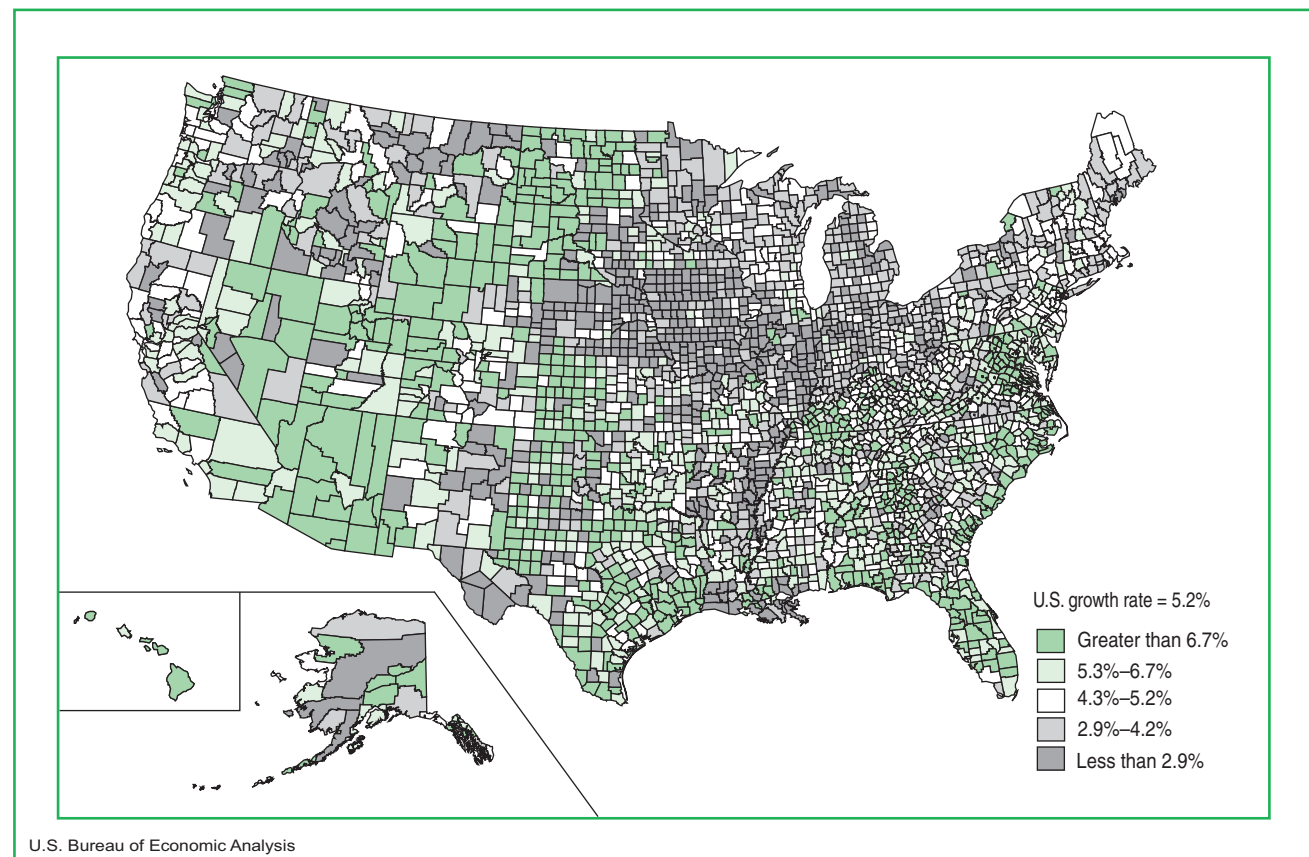

The nonmetropolitan portion of the country differ from the metropolitan portion in more ways than population density. Manufacturing and natural resources (primarily farming and mining) are much more important to nonmetropolitan counties. These industries accounted for more than a fourth of earnings in nonmetropolitan counties but slightly more than an eighth of earnings in metropolitan counties (table A). Government is also a much larger sector in nonmetropolitan counties, accounting for 22 percent of earnings, compared with only 16 percent in metropolitan counties.

In contrast, the professional and business services, finance and insurance, and information industries are

**Table A. Industrial Structure of Metropolitan and Nonmetropolitan Areas for 2005**

much more important in metropolitan counties, generating 28 percent of earnings, compared with only 11 percent in nonmetropolitan counties.

Earnings in the metropolitan portion of the United States grew 5.7 percent in 2005, but earnings in the nonmetropolitan portions grew only 4.5 percent. The

### Acknowledgments

The annual estimates of local area personal income were prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. The preparation of the estimates was a division-wide effort.

The estimates of nonfarm wages and salaries and supplements to wages and salaries were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, John D. Laffman, Michael G. Pilot, Mauricio Ortiz, John A. Rusinko, James M. Scott, and Elizabeth F. Stell. Contributing staff members were Peter Battikha, Michael L. Berry, Ji Byun, Susan P. Den Herder, Terence J. Fallon, Tina C. Highfill, Mark W. Hodgins, Russell C. Lusher, Paul K. Medzerian, Nathan D. Patterson, Melanie N. Vejdani, and Jaime Zenzano.

The estimates of farm wages and salaries, farm supplements to wages and salaries, proprietors' income,

property income, personal current transfer receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional Income Branch under the supervision of James M. Zavrel, Chief. Major responsibilities were assigned to Carrie L. Litkowski, Toan A. Ly, Jeffrey L. Newman, and James P. Stehle. Contributing staff members were Daniel R. Corrin, Michelle A. Harder, Carla R. Jenkins, Brian J. Maisano, W. Tim McKeel, Loren C. Morales, Julia T. Nguyen, Gregory D. Parnell, and Troy P. Watson.

The public use tabulations and data files were assembled and the tables were prepared by the Regional Economic Information System Branch under the supervision of Kathy A. Albetski, Chief. Major responsibilities were assigned to Gary V. Kennedy. Contributing staff members were Alison M. Adam, Giselle Cubillos-Moraga, H Steven Dolan, Michael J. Paris, Callan S. Swenson, and Monique B. Tyes.

industry contributing the most to metropolitan growth was professional and business services, which grew 8.5 percent. Growth rates for most industries were similar in both the metropolitan and nonmetropolitan portions, but the total growth rates were higher in the metropolitan portion because employment was relatively concentrated in the faster growing industries (table B):

- Construction, manufacturing, trade, health, and government each contributed at least a 0.5 percentage point to growth in metropolitan counties. The same is true in nonmetropolitan counties; however, government growth was much stronger.
- Professional and technical services and “finance and insurance” also provided at least 0.5 percentage point to growth in metropolitan counties.
- Farming subtracted 0.5 percentage point from earnings growth in nonmetropolitan counties.

## Disaster Effects

### Disaster adjustments

Some effects of the natural disasters in 2005, such as the effects on wage and salary disbursements, are embedded in the source data used to estimate personal income and do not require special estimation. Other effects, such as uninsured losses of fixed assets, are not reflected in the source data. BEA estimated those effects and adjusted the various components of personal income accordingly (table C).<sup>2</sup> However, there are some differences between the estimates presented in table C and those presented earlier.

First, some estimates are different because an adjustment is no longer necessary now that source data in which the hurricane and flood impacts are embedded are available (for example, social security and Medicaid benefits). As more complete source data become available, this adjustment may be reduced.

Second, some estimates, such as Federal Emergency Management Agency (FEMA) disaster assistance, are based on different source data that are more complete than those previously available.

Third, there is an estimate for another transfer receipts component, Other Needs Assistance, a hurricane impact that is clearly identifiable in the detailed source data that is now available.

Fourth, the adjustment to proprietors' income now includes a “recovery surge” in Mississippi and Louisiana. This adjustment and the “business interruption adjustment” are temporary. When the source data (tabulations of Federal income tax returns) used to estimate proprietors' income become available, these adjustments will no longer be necessary.

Fifth, the residence adjustment was modified. The standard residence adjustment methodology is able to account for some of the consequences of the hurricanes on income flows. Job losses in a hard-hit parish after the disaster automatically reduce gross wage outflows from that parish (a certain proportion of wages in the parish are assumed to be earned by workers living outside the parish) and reduce gross wage inflows into the parishes where the workers live. However, the methodology does not automatically reduce gross wage inflows to a parish in response to population losses there (a constant proportion of wages earned in nearby parishes are assumed to be earned by the residents of a given parish). As a result, the residence ad-

2. For more information about the accounting principles, data sources, and estimation methodology BEA used for these adjustments, see David. G. Lenze, “Personal Income for Metropolitan Areas for 2005,” SURVEY OF CURRENT BUSINESS (September 2006): 130–134.

L Less than \$0.05 million or 0.05 percent.

1. Deductions are adjustments to proprietors' income for uninsured losses and business interruption, and the adjustment to dividends, interest, and rent for uninsured losses and loss of use. The population dispersal adjustment to transfer receipts is also a deduction in parishes, such as St. Bernard, that lost population.

2. Additions are FEMA disaster assistance, Other Needs Assistance, the adjustment to proprietors' income for the recovery surge, and the adjustment to current transfer receipts for net insurance settlements. The population dispersal adjustment to transfer receipts is also an addition in counties, such as Harris, Texas, that gained population.

justments for five parishes with large population losses (St. Bernard, Orleans, Plaquemines, Jefferson, and Cameron, LA) was modified. Otherwise, the surging wages in some parishes due to population gains would flow back to the parishes that lost population.<sup>3</sup>

The largest adjustment is in Orleans Parish. Uninsured losses there amounted to \$12.6 billion (table C). In addition, transfers receipts and proprietors' income were reduced by a combined \$335.1 million because of population dispersal. These losses were offset by \$4.0 billion in net insurance settlements (for consumer durable goods), and \$1.2 billion in Federal assistance

(rent subsidies, FEMA disaster assistance, and Other Needs Assistance).

The relative magnitude of the disaster adjustments, by county, is shown by two measures in table C—one for the impacts that reduced personal income and the other for the impacts that raised personal income. The first measure combines all of the deductions from personal income and expresses them as a percentage of personal income before the adjustments. The largest relative impact is in St. Bernard Parish, LA, where the adjustments exceed personal income by 23 percent. The second measure combines all of the additions to personal income. The largest relative impact is again in St. Bernard Parish where the additions amounted to almost half of personal income. The counties with the

3. Because of the complexity of the residence adjustment, it is not possible to quantify the effect of the natural disasters on this component on income in table C.

largest deductions relative to personal income are in Louisiana and Mississippi (chart 2), but deductions were as high as 4.9 percent of personal income in Mobile, AL, 1.9 percent in Jefferson County, TX, and 0.5 percent in Broward County, FL.

**Louisiana after Hurricane Katrina**

County wage growth in Louisiana after the hurricanes and flood varied considerably; in parishes that suffered the greatest damage, wages declined in 2005 or grew more slowly than in 2004. However, in other parishes, wage growth surged in response to the arrival of evacuees and to recovery spending (table D).

**St. Bernard Parish**

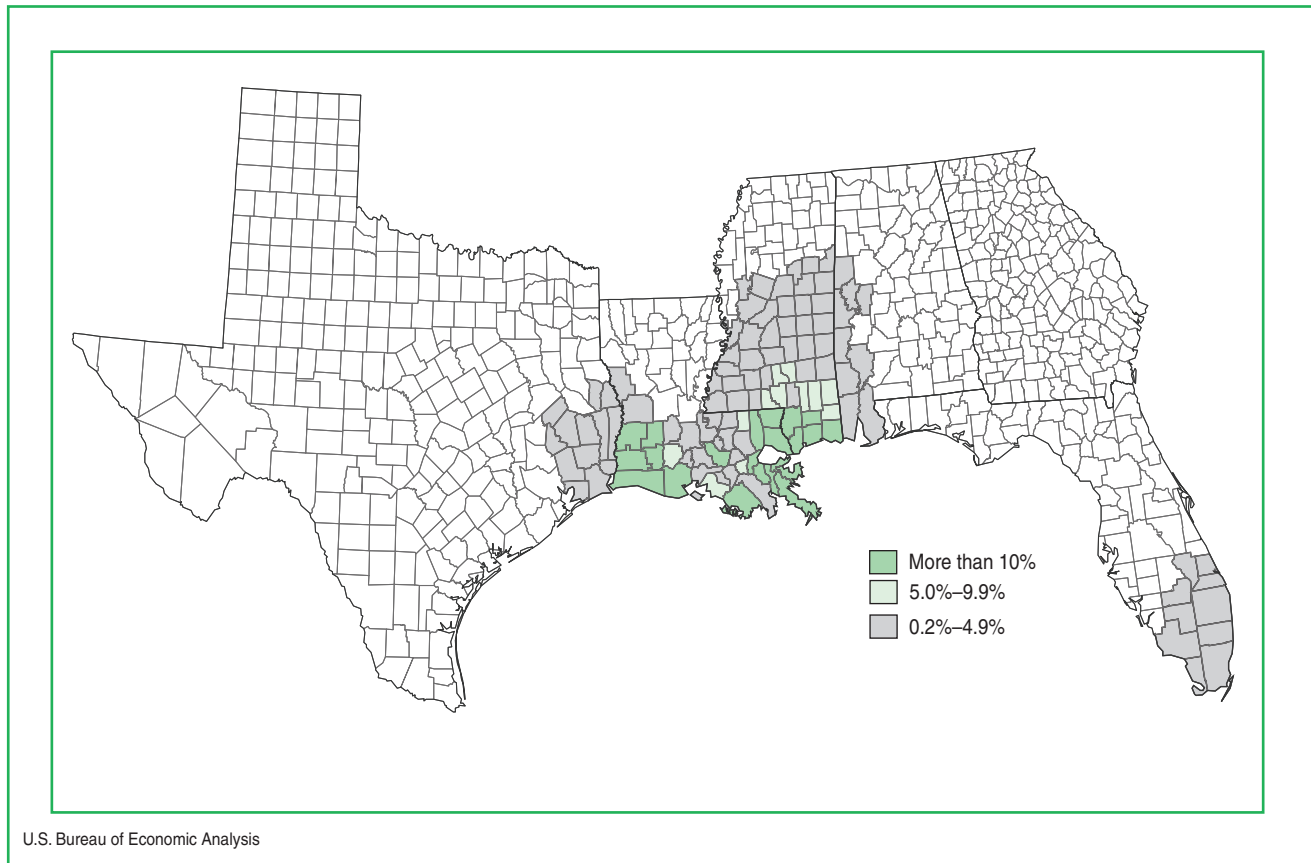

The effects of natural disasters like Hurricane Katrina on personal income can be illustrated by St. Bernard Parish, one of the hardest hit parishes in Louisiana. Personal income in St. Bernard Parish fell from \$1.65 billion in 2004 to \$335.4 million in 2005, an 80-percent decline (table E). Per capita personal income fell from \$25,249 in 2004 to \$5,148 in 2005. The losses were concentrated in two components of income—rent and proprietors’ income—both of which were negative in 2005. Rent and proprietors’ income are examples of income from household enterprises and represent income net of expenses. Damage to housing and other fixed assets is an expense (consumption of fixed capital). Expenses soared because extraordinary damages net of insurance claims exceeded the income of the enterprises for the year. Hence, the losses recorded for proprietors’ income and rent.

Most residents who evacuated from St. Bernard Parish have not returned—an out-migration that is not reflected fully in the population estimate used to calculate per capita personal income for 2005. BEA uses Census Bureau midyear population estimates. The Census Bureau estimates that the population of St. Bernard Parish on July 1, 2005, was 65,147, down 389

1. Contributions for government social insurance are deducted in the derivation of personal income.

persons from a year earlier. On July 1, 2006, however, the Census Bureau estimates that the population was only 15,514, a loss of 76 percent from 2 years earlier.

In contrast, BEA's employment estimates are averages of monthly data, and reflect job losses after the hurricane. On an annual basis, wage and salary employment fell 18 percent (from 18,984 in 2004 to 15,595 in 2005), but from the fourth quarter of 2004 to the fourth quarter of 2005, employment fell 65 percent. From either perspective, the impact on employment is less than the impact on the July 2006 population.

Compensation in St. Bernard Parish declined 10 percent in 2005. This decline is smaller than the population loss for several reasons. Compensation is a flow of income over the entire year, but population is the stock on a particular day. There were 8 months of normal compensation in the parish before Hurricane Katrina. In addition, inflation and productivity growth would push compensation higher during this period, compared with the same period in 2004. The decline in compensation is also smaller than the decline in employment; as a result, compensation per job increased 10 percent.

The residence adjustment for St. Bernard Parish fell

#### Data Availability

This article presents summary estimates of personal income and per capita personal income for 2003–2005. More detailed estimates for 1969–2005 are also available.

The following annual estimates for counties, metropolitan statistical areas, micropolitan statistical areas, metropolitan divisions, combined statistical areas, and BEA economic areas are available at <[www.bea.gov/beat/regional/reis](http://www.bea.gov/beat/regional/reis)>:

- Personal income, per capita personal income, and population for 1969–2005
- County income and employment summary (featuring the derivation of personal income that includes non-farm personal income, and employment totals for a continuous time series) for 1969–2005
- Compensation of employees by industry by North American Industry Classification System (NAICS) subsectors for 2001–2005 and by Standard Industrial Classification System (SIC) two-digit industries for 1998–2000
- Personal income by major source and earnings by NAICS subsectors for 2001–2005 and by SIC two-digit industries for 1969–2000
- Full-time and part-time employment by NAICS sectors for 2001–2005 and by SIC division-level industries for 1969–2000
- Regional economic profiles (featuring a selection of personal income and employment data) for 1969–2005
- Personal current transfer receipts by major program for 1969–2005

- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and for measures of farm income) for 1969–2005
- The counties with the highest and lowest per capita personal incomes in 2005
- Total wage and salary disbursements, total wage and salary employment, and average wage per job for 1969–2005
- BEARFACTS, a narrative about an area's personal income that uses current estimates, growth rates, and a breakdown of the sources of personal income

In addition, the entire set of estimates for all areas will be available in May 2007 on a DVD-ROM that also includes an updated description of the sources and methods used to estimate local area personal income. To order the free DVD-ROM *Regional Economic Information System, 1969–2005* (product number RCN-0852), call the Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666).

The local area personal income estimates are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA to disseminate the estimates in their states. For a list of the BEA User Group on BEA's Web site, go to <[www.bea.gov/beat/regional/docs/usergrp.cfm](http://www.bea.gov/beat/regional/docs/usergrp.cfm)>.

For more information, call BEA's Regional Economic Information System at 202-606-5360, fax 202-606-5322, or e-mail [reis.remd@bea.gov](mailto:reis.remd@bea.gov).

34 percent, reflecting both job losses in nearby Orleans Parish and the evacuation of three-fourths of the population of St. Bernard Parish.

Dividends and interest increased 5 percent, reflecting an assumption that the residents who left were disproportionately lower income residents with relatively little in savings or investment income. This assumption is supported by the increase in compensation per job after the evacuation.

Personal current transfer receipts excluding net insurance settlements in St. Bernard Parish increased 9 percent. Among other things, this increase reflects \$65.8 million in assistance provided to victims (primarily FEMA disaster assistance and Other Needs Assistance) and a \$35.0 million reduction in standard transfer programs, such as social security and Medicare, because the recipients had moved outside the parish. Net insurance settlements increased from \$0.4 million to \$545 million in 2005. These settlements were primarily for consumer durable goods.

### Microsoft Dividend

The national estimate of personal dividend income for 2004, the year Microsoft paid its special \$25.0 billion dividend, has now been allocated to states and counties, based on recently released data from the Internal Revenue Service (IRS). Specifically, the estimates of county dividend income are based on a tabulation of income tax returns filed in the first 39 weeks of 2005. The amount of dividends reported in King County, WA, appeared too low, so using publicly available information, BEA estimated the amount of the dividend received by the three largest Microsoft insider shareholders and added it to the amount reported in the IRS data.

Together, dividends, interest, and rent contributed 7.4 percentage points to personal income growth in King County in 2004. Surprisingly, there were 14 counties where dividends, interest, and rent contributed even more to income growth. The highest contribution, 13.5 percentage points, occurred in Collier County, FL. For the United States, dividends, interest,

and rent contributed less than 1 percentage point to income growth.

### Residence Adjustment

Commuting flows between counties complicate the interpretation of local area personal income growth rates. This complication can be unraveled by the residence adjustment, the difference between net earnings by place of work and by place of residence.<sup>4</sup> Montgomery County, TN, was one of the fastest growing counties in 2005, with a personal income growth rate of 14.5 percent. Yet this high growth was largely due to income earned at work sites in neighboring Christian County, KY, rather than in Montgomery County. Net earnings by place of work—that is, earnings generated at work sites in Montgomery County—contributed only 2.4 percentage points to personal income growth. The residence adjustment contributed 10.1 percentage points, and property income and personal current transfer receipts contributed the remaining 2.0 percentage points.

### Source Data and Revisions

The primary data sources used by BEA to prepare the estimates of local area personal income for 2005 were wages and salaries from the Bureau of Labor Statistics; farm production and income from the U. S. Department of Agriculture and state agricultural statistical agencies; benefits paid by the Social Security Administration; Medicaid payments from the Centers for Medicare and Medicaid Services and state departments of social services; various transfer receipts from the *Consolidated Federal Funds Report*, *Federal Assistance Award Data System*, *State Government Finances*, and *State and Local Government Finances*; and population data from the Census Bureau. Medicare benefits were extrapolated using enrollment data for 2005. The residence adjustment and dividends, interest, and rent for 2005 were extrapolated from tabulations of Federal in-

4. BEA does not publish net earnings by place of work, which is calculated net of contributions for government social insurance.

come tax returns from the IRS for 2004. Estimates of nonfarm proprietors' income for 2005 were extrapolated from IRS data for 2003.<sup>5</sup>

Estimates for 2003 and 2004 were revised. The revisions to estimates of personal income for 2003 were small. For nearly three-fourths—or 2,269—of the counties, personal income was revised up or down by 1.0 percent or less (chart 3). The revisions to the 2004 estimates were larger, reflecting the incorporation of newly available data on property and nonfarm proprietors' income. Nevertheless, the average algebraic revision was only -0.1 percent for 2003 and -0.2 percent for 2004, and the mean absolute revisions were 0.9 percent for 2003 and 1.9 percent for 2004.<sup>6</sup>

In 2003, most of the largest revisions to total personal income were mainly attributable to farm proprietors' income, particularly to revised crop production data. In addition, a Census Bureau revision to pension contributions for state employees in Kansas contributed to relatively large upward revisions in personal income in 2003 in several counties, such as Shawnee (where the state capital is), Douglas (home of the University of Kansas), and Pawnee (a small nonmetropolitan county in which the state government accounts for about half of nonfarm earnings). In 2004, most of the largest revisions were due to the introduction of newly available data on dividends, interest, and rent and to revised state totals for farm proprietors' income.

5. For details about the estimation methodology and data sources, see *Local Area Personal Income and Employment Methodology* on BEA's Web site at [www.bea.gov/regional/docs/lapi2005/](http://www.bea.gov/regional/docs/lapi2005/).

6. The standard deviation of the algebraic revisions was 1.4 in 2003 and 2.6 in 2004.

**Chart 3. Frequency Distribution of Revisions to County Personal Income**

### Alternative Measures of County Employment and Wages

Three widely used measures of county employment and wages by place of work are employment and payroll in the *County Business Patterns (CBP)* series from the Census Bureau, employment and wages from the Quarterly Census of Employment and Wages (QCEW) program from the Bureau of Labor Statistics (BLS), and wage and salary disbursements and employment from the Bureau of Economic Analysis (BEA). These measures differ in source data and coverage.

The *CBP* data are derived from Census Bureau business establishment surveys and Federal administrative records. The QCEW data are tabulations of monthly employment and quarterly wages of workers who are covered by state unemployment insurance programs or by the unemployment insurance program for Federal employees.<sup>1</sup> The BEA estimates of employment and wages are primarily derived from the BLS data; the estimates for industries that are either not covered or not fully covered in the QCEW are also based on supplemental data from other agencies, such as the Department of Defense, the U.S. Department of Agriculture, and the Railroad Retirement Board.

The coverage of the Census Bureau data differs from that of the BLS data primarily because the Census Bureau data exclude most government employees and because the BLS data cover civilian government employees.<sup>2</sup> The *CBP* data also exclude several private industries that are partly covered by the QCEW: Crop and animal production; rail transportation; insurance and employee benefit funds; trusts, estates, and agency accounts; and private households. However, the *CBP* data cover the employees of educational institutions, membership organizations, and small nonprofit organizations in other industries more completely than the BLS data.<sup>3</sup> In addition, the Census Bureau reports employment only for the month of March; the BLS employment data are quarterly and annual averages of monthly data.

In 2001, both BLS and BEA began to include employees of Indian tribal councils in local government. These employees were previously included in the relevant private industries.<sup>4</sup> In the Census Bureau data, these employees are still classified in private industries.

The BEA estimates of employment and wages differ from the BLS data because BEA adjusts the estimates to account for employment and wages that are not covered or that are not fully covered by the unemployment insurance programs. BEA adds estimates of employment and wages to the BLS data to bridge small gaps in coverage for nonprofit organizations that do not participate in the unemployment insurance program (in several industries), for students and their spouses employed by colleges

or universities, for elected officials and members of the judiciary, for interns employed by hospitals and by social service agencies, and for insurance agents classified as statutory employees. In addition, BEA uses supplemental source data to estimate most, or all, of the employment and wages for the following: Farms, farm labor contractors and crew leaders, private households, private elementary and secondary schools, religious membership organizations, rail transportation, military, and U.S. residents who are employed by international organizations and by foreign embassies and consulates in the United States. BEA also adjusts for employment and wages subject to unemployment insurance, but not reported by employers. Other adjustments to wages include estimates for unreported tips, judicial fees paid to jurors and witnesses, compensation of prison inmates, and marriage and license fees paid to justices of the peace.<sup>5</sup>

The Census Bureau released 2004 data for total employment and payrolls for counties on its Web site on June 15, 2006; go to <[www.census.gov/epcd/cbp/view/cbpview.html](http://www.census.gov/epcd/cbp/view/cbpview.html)>. BLS released county data on total employment and average weekly pay for the fourth quarter of 2005 on its Web site on July 26, 2006; go to <[www.bls.gov/cew](http://www.bls.gov/cew)>; annual QCEW data for 2005 are also available. BEA released preliminary estimates for 2005 and revised estimates for 2003-2004 of total wage employment and total wage and salary disbursements for counties on its Web site on December 29, 2006. To access the data, go to <[www.bea.gov/region/reis/](http://www.bea.gov/region/reis/)>.

5. For a detailed description of the sources and methods used to prepare the estimates, go to <[www.bea.gov/region/articles/lapi2003](http://www.bea.gov/region/articles/lapi2003)>.

### Relation of BEA Wage and Salary Disbursements to Census Bureau Payroll and BLS Wages for the United States

[Billions of dollars]

	2003	2004	2005
Total payroll, Census Bureau.....	4,040.9	4,254.0	n.a.
Plus: Differences in coverage:			
Civilian government wages, BLS <sup>1</sup> .....	803.8	834.6	n.a.
Other differences, net <sup>2</sup> .....	-18.4	-1.0	n.a.
Equals: Total wages, BLS .....	4,826.3	5,087.6	5,351.9
Plus: Adjustments by BEA:			
For unreported wages and unreported tips on employment tax returns.....	110.5	114.0	115.8
For wages and salaries not covered or not fully covered by unemployment insurance:			
Private .....	90.4	99.0	100.3
Government.....	79.8	85.3	91.0
Other adjustments <sup>3</sup> .....	0.3	0.2	0.3
Equals: Wage and salary disbursements, BEA <sup>4</sup> ..	5,107.3	5,386.1	5,659.3

1. BLS wages were adjusted to remove the wages of Indian tribal councils because these data were already included in the Census Bureau's total payroll data.

2. Includes differences of coverage in private education, membership organizations, and government.

3. Consists of adjustments to the wage and salary estimates to remove employees of U.S. companies stationed overseas, to add U.S. residents who are employed by international organizations and by foreign embassies and consulates in the United States, and to reflect updates to published Quarterly Census of Employment and Wages data.

4. The national total of county estimates of wage and salary disbursements consists of the earnings of persons who live in the United States and of foreign residents working in the United States. The BEA regional total differs from BEA's national estimate of wage and salary disbursements because national income and product account income includes the earnings of Federal civilian and military personnel stationed abroad and U.S. citizens on foreign assignments for less than a year. Unlike the regional estimates, the national estimate only includes the earnings of foreign nationals if they live and work in the United States for a year or more.

n.a. Not available

John D. Laffman

Tables 1 through 3 follow

1. The QCEW data account for 95 percent of BEA's wages and salaries.

2. The Census Bureau data cover only those government employees who work in government hospitals, federally chartered savings institutions and credit unions, liquor stores, and wholesale liquor establishments, and university publishers. The BLS data in most states exclude state and local elected officials, members of the judiciary, state national and air national guardsmen, temporary emergency employees, and employees in policy and advisory positions.

3. The BLS data do not cover certain religious elementary and secondary schools, because a Supreme Court decision exempts some of these schools from unemployment compensation taxes. The BLS data also exclude college students (and their spouses) who are employed by the school in which they are enrolled and student nurses and interns who are employed by hospitals as part of their training. In half of the states, the BLS data only include nonprofit organizations with four or more employees during 20 weeks in a calendar year.

4. For example, employees of casinos owned by tribal councils were included in the North American Industry Classification System subsector "Amusement, Gambling, and Recreation Industries."

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of

source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the new county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2005, and December 2006) for Federal statistical purposes.

Table 2. Personal Income and Per Capita Personal Income by Economic Area, 2003-2005

Area name	Personal income				Per capita personal income <sup>1</sup>				Area name	Personal income				Per capita personal income <sup>1</sup>				
	Millions of dollars			Percent change <sup>2</sup>	Dollars			Rank in U.S.		Millions of dollars			Percent change <sup>2</sup>	Dollars			Rank in U.S.

## BEA Regional Program Outreach in 2007

BEA's regional economic accounts provide detailed estimates of gross domestic product by state and personal income for states, counties, and metropolitan areas. BEA also provides regional economic multipliers at low cost. BEA's regional services are widely used by government officials, economists, researchers, and

state budget officials. To help users better understand and use its services, BEA participates in various conferences and workshops around the country. For more information about BEA's regional economic accounts and related services, please visit [www.bea.gov](http://www.bea.gov) and click on "Regional."

### Denver Association of Business Economics

June 4, 2007 in Denver, CO

BEA staff will provide information about BEA's regional economic accounts.

### C2ER Annual Conference

June 5–8, 2007 in Denver, CO

At the annual conference of the Council for Community and Economic Research (formerly ACCRA), BEA will discuss the upcoming release of gross domestic product by metropolitan area.

### RIMS II Input-Output Users Workshop

June 21, 2007 at BEA in Washington, DC

BEA staff will provide hands-on training for beginning and advance users of BEA's RIMS II economic multipliers, which are used to analyze the local effects of development projects and economic changes. These workshops will cover the basics of input-output modeling and will include case studies.

### National Association of Counties

July 13–17, 2007 in Richmond, VA

BEA staff will provide information about BEA's products.

### American Agricultural Economics Association Annual Meeting

July 29–August 1, 2007 in Portland, OR

BEA staff will provide information about BEA's regional economic accounts.

### Federation of Tax Administrators Revenue Estimating Conference

September 16–19, 2007, Raleigh, NC

BEA staff will provide information about BEA's regional economic accounts.

### AUBER Annual Conference

October 13–16, 2007 in Pensacola, FL

At the annual conference of the Association for University Business and Economic Research, BEA staff will discuss recent improvements in BEA's estimates of gross domestic product by state, gross domestic product by metropolitan area, and state-level R&D.

### Association of Public Data Users Annual Conference

October 25–26, 2007 in Alexandria, VA

BEA staff will provide information about BEA's regional economic accounts.

### Annual Meetings of the North American Regional Science Association International

November 8–10, 2007 in Savannah, GA

BEA staff will provide information about BEA's regional economic accounts.

## BEA Current and Historical Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission. Citing the SURVEY OF CURRENT BUSINESS and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at <www.bea.gov>. These estimates are available in a variety of formats. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

### National Data

#### A. Selected NIPA tables [A,Q]

- 1. Domestic product and income .....D-2
- 2. Personal income and outlays.....D-18
- 3. Government current receipts and expenditures ...D-21
- 4. Foreign transactions .....D-33
- 5. Saving and investment.....D-37
- 6. Income and employment by industry .....D-42
- 7. Supplemental tables.....D-43

#### B. NIPA-related table

- B.1 Personal income and its disposition [A, M] .....D-46

#### C. Historical measures [A, Q]

- C.1 GDP and other major NIPA aggregates .....D-47

#### D. Charts

- Selected NIPA series .....D-51

### Industry Data

#### E. Industry table

- E.1 Value added by industry [A] .....D-57

### International Data

#### F. Transactions tables

- F.1 U.S. international transactions in goods and services [A, M].....D-58
- F.2 U.S. international transactions [A, Q] .....D-59
- F.3 U.S. international transactions by area [Q] .....D-60
- F.4 Private services transactions [A] .....D-63

#### G. Investment tables [A]

- G.1 U.S. international investment position.....D-64

- G.2 USDIA: Selected items.....D-65

- G.3 Selected financial and operating data of foreign affiliates of U.S. companies .....D-66

- G.4 FDIUS: Selected items .....D-67

- G.5 Selected financial and operating data of U.S. affiliates of foreign companies.....D-68

#### H. Charts

- The United States in the international economy .....D-69

### Regional Data

#### I. State and regional tables

- I.1 Personal income [Q] .....D-70

- I.2 Personal income and per capita personal income [A] .....D-71

- I.3 Disposable personal income and per capita disposable personal income [A] .....D-72

- I.4 Gross domestic product by state [A] .....D-73

#### J. Local area table

#### B. Suggested reading .....D-83

## National Data

### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on April 27, 2007. These estimates include the “advance” estimates for the first quarter of 2007.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA’s Web site within minutes after the release. To receive an e-mail notification of the release, go to <www.bea.gov> and subscribe. The “Selected NIPA Tables” are available later that day.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Gross housing value added .....	12	856.7	887.8	878.2	886.8	892.9	893.4	894.8

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.
  2. Equals gross domestic business value added excluding gross farm value added.
  3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
  4. Equals compensation of general government employees plus general government consumption of fixed capital.
- NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

NOTE: Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

				Value added, in billions of chained (2000) dollars				
<b>Gross value added of nonfinancial corporate business</b> <sup>2</sup>	40	5,852.9	6,132.6	6,111.2	6,069.0	6,158.9	6,191.3	
Consumption of fixed capital <sup>3</sup>	41	681.6	670.5	666.1	669.2	672.0	674.6	676.8
Net value added <sup>4</sup>	42	5,171.2	5,462.1	5,445.0	5,399.8	5,486.9	5,516.7	

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.  
2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.  
2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 4.2.2, and real growth rates are shown in table 4.2.1.  
3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

## 5. Saving and Investment

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.  
 2. Excludes software "embedded," or bundled, in computers and other equipment.  
 3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.  
 4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.  
 5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.  
 6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Nonresidential structures.....	28	250.6	272.8	258.6	270.7	280.7	281.2	282.7
Residential structures.....	29	513.9	499.2	530.8	513.7	489.3	459.2	435.3

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

NOTE. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures.....	29	3.66	3.74	3.75	3.73	3.74

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE: Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal.

<b>Addenda:</b>								
Final sales of motor vehicles to domestic purchasers .....	43	528.4	530.0	528.0	522.9	540.3	528.9	525.1
Private fixed investment in new autos and new light trucks .....	44	171.1	179.0	188.3	173.0	179.1	175.5	174.4
Domestic output of new autos <sup>2</sup> .....	45	102.5	102.7	107.9	101.4	103.3	98.1	96.2
Sales of imported new autos <sup>3</sup> .....	46	93.6	98.3	93.4	97.3	100.6	102.2	101.0

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

NOTE: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

## B. NIPA-Related Table

Table B.1 presents the most recent estimates of personal income and its components and the disposition of personal income. These estimates were released on April 30, 2007.

### C. Historical Measures

This table is derived from the “Selected NIPA Tables” that are published in this issue and from the “GDP and Other Major NIPA Series” tables that were published in the August 2006 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

**Table C.1. GDP and Other Major NIPA Aggregates—Continues**

## International Data

### F. Transactions Tables

Table F.1 presents estimates of U.S. international trade in goods and services that were released on May 10, 2007. It includes revised estimates for February 2007 and preliminary estimates for March 2007.

The sources for the other tables in this section are noted.

For BEA's full set of detailed estimates of U.S. international transactions, visit BEA's Web site at <www.bea.gov>.

**Table F.1. U.S. International Transactions in Goods and Services**

<sup>p</sup> Preliminary

<sup>r</sup> Revised

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and definitions used to prepare BEA's international and national accounts.

2. Contains goods that cannot be separately identified.

Source: U.S. Bureau of Economic Analysis and U.S. Bureau of the Census.

<sup>p</sup> Preliminary

<sup>r</sup> Revised

1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.  
 2. Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

p Preliminary

r Revised

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes in coverage, capital gains and losses of direct investment affiliates, and other adjustments to the value of assets and liabilities.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

5. Also includes paid-in capital subscriptions to international financial institutions and resources provided to foreigners under foreign assistance programs requiring repayment over several years. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

THE U.S. IN THE INTERNATIONAL ECONOMY

## Regional Data

### I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available on CD-ROM. For information on state personal income, e-mail [reis.remd@bea.gov](mailto:reis.remd@bea.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail [gspread@bea.gov](mailto:gspread@bea.gov); write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census. The population estimates were released by the Bureau of the Census in December 2006.

2. Percent change was calculated from unrounded data.

NOTE: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 "State Personal Income: Fourth Quarter of 2006 and Annual Estimates for 2006" in the April 2007 SURVEY OF CURRENT BUSINESS.

Table I.4. Gross Domestic Product (GDP) by State for Industries, 2005

[Millions of dollars]

State and region	Rank of total GDP by state	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

D Suppressed to avoid disclosure of data of individual companies.

NOTE. Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GDP by state excludes, and national GDP includes, the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad

and for military equipment, except office equipment. GDP by state and national GDP also have different revision schedules.

Source: This table reflects the GDP-by-state estimates for 2005 that were released on October 26, 2006. Detailed estimates are available on BEA's Web site at <www.bea.gov>.

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of

source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the new county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2005, and December 2006) for federal statistical purposes.

### A. Additional Information About the NIPA Estimates

#### Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2000—equal to 100.<sup>1</sup>

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2001–2002 uses prices for 2001 and 2002 as weights, and the 2001–2002 annual percent change in the GDP price index uses quantities for 2001 and 2002 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2000) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2000 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2000 and if real output for this component increased by 10 percent in 2001, then the chained (2000) dollar value of this component in 2001 would be \$110 (\$100 × 1.10). The percent changes calculated from the chained (2000) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such differences is provided by a “residual” line—the differ-

ence between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_o} \right)^{m/n} - 1 \right] \times 100$$

where  $r$  is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_o$  is the level of activity in the earlier period;  $m$  is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and  $n$  is the number of periods between the earlier periods and the later periods (that is,  $t-0$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.

ITAs International transactions accounts

NIPAs National income and product accounts

## B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at <www.bea.gov>; see "Methodology Papers" and the SURVEY OF CURRENT BUSINESS under "Publications."

### National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

**National income and product accounts (NIPAs).** This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

*An Introduction to National Economic Accounting* (1985) [also in the March 1985 SURVEY]

*Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends* (2002)

*Government Transactions* (1988)

*Personal Consumption Expenditures* (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following SURVEY articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003)

Statistical Changes (September 2003)

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty In-

urance in the NIPAs: Changes in Concepts and Methods" (October 2003)

In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2006) presents revisions and describes any changes in the data and the methods that are used to prepare the estimates.

"Updated Summary NIPA Methodologies" (November 2006) describes the source data and the methods that are used to prepare the current-dollar and real estimates of GDP.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

"Gross Domestic Product: Revisions and Source Data" (February 2006) describes the categories of data that are used for the advance, preliminary, and final quarterly estimates of GDP.

**Fixed assets and consumer durable goods.** *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the most recent comprehensive NIPA revision.

"Fixed Assets and Consumer Durable Goods for 1995–2005" (September 2006) provides estimates that reflect the incorporation of the most recent annual NIPA revision.

### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov> under "About BEA."

## Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross-domestic-product-by-industry accounts) and one satellite account.

**Annual industry accounts.** “Improved Annual Industry Accounts for 1998–2003” (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

“Annual Industry Accounts” (December 2006) presents the annual revision of these accounts and describes the source data and any changes in the methods that are used to prepare the estimates.

In addition, see the following articles.

“Preview of the Benchmark Input-Output Accounts for 2002” (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

“Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts” (March 2004) provides the details about the comprehensive revision.

“Benchmark Input-Output Accounts for the U.S. Economy, 1997” (December 2002)

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“Research and Development Satellite Account”

For 1959–2002 (December 2006)

“U.S. Travel and Tourism Satellite Accounts”

For 1996 and 1997 (July 2000)

For 1998–2003 (September 2004)

For 2001–2004 (June 2005)

For 2002–2005 (June 2006)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

**International transactions accounts (ITAs).** *The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2006 SURVEY.

**Direct investment.** *International Direct Investment: Studies by the Bureau of Economic Analysis* (1999) is a

collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It includes “A Guide to BEA Statistics on U.S. Multinational Companies,” which is also available in the March 1995 SURVEY, and “A Guide to BEA Statistics on Foreign Direct Investment in the United States,” which is also available in the February 1990 SURVEY.

In addition, the updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey* (2004), and in *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* (2006).

**International services.** *U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis* (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

## Regional accounts

The regional accounts include estimates of personal income and gross state product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

“Comprehensive Revision of State Personal Income for 1969–2003” (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

“The Reliability of the State Personal Income Estimates” (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

“Comprehensive Revision of Local Area Personal Income for 1969–2002” (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the DVD-ROM *Regional Economic Information System, 1969–2004*.

**Gross state product.** “Comprehensive Revision of Gross State Product” (January 2005) summarizes the sources and the methods that are used to prepare the estimates.

“Gross State Product by Industry for 1998–2005” (July 2006) presents the most recent annual revision.
