## Articles

**1. GDP and the Economy: Advance Estimates for the First Quarter of 2011**

Real GDP increased 1.8 percent after increasing 3.1 percent in the fourth quarter of 2010. Imports turned up, consumer spending and nonresidential investment slowed, and federal government spending decreased more.

**6. Preview of the Upcoming Annual NIPA Revision (section)**

**8. Annual Industry Accounts: Advance Statistics on GDP by Industry for 2010**

Economic growth turned up in 2010, reflecting widespread recovery across industries. The largest contributors to the upturn were durable-goods manufacturing and retail trade.

**26. BEA Briefing: Modernizing and Enhancing BEA's International Economic Accounts: A Progress Report**

A look at BEA's efforts to modernize these accounts to better align them with updated international guidelines.

**40. Local Area Personal Income for 2009**

Personal income declined in 1,740 counties, grew in 1,312 counties, and was unchanged in 58 counties in 2009. Growth ranged from 189 percent in Slope County, ND, to -46 percent in Sully County, SD.

**73. Research Spotlight: Regional Price Parities by Expenditure Class for 2005–2009**

An update on BEA's development of regional price parities, which show price level differences across geographic areas and expenditure classes. These parities were used to adjust regional per capita personal income measures for 2005–2009.

### Upcoming in the Survey...

***U.S. Travel and Tourism Satellite Accounts.*** Updated output, employment, and other statistics for travel and tourism for 2006–2009.

## Director's Message

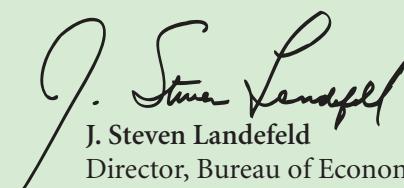

In this issue, we are pleased to provide an update on our efforts to construct regional price parities (RPPs), which measure price level differences across regions. A *Research Spotlight* presents RPP estimates for the 50 states and the District of Columbia and for metropolitan areas for 2005–2009. The article also presents per capita personal income estimates adjusted with RPPs and describes the updated methodology used to derive the RPPs.

In another article, we take a look at recently released local area personal income statistics. For 2009, personal income declined in 1,740 counties, grew in 1,312 counties, and was unchanged in 58 counties. The weighted average of all counties decreased 1.7 percent in 2009, compared with an increase of 4.0 percent in 2008.

Regarding our international statistics, a *BEA Briefing* provides an update on BEA's multiyear efforts to improve its international economic accounts by incorporating recommendations from international organizations such as the International Monetary Fund and the Organisation for Economic Co-operation and Development, along with other changes. The article reports on progress on key issues and details changes that will be incorporated in the June 2011 annual revision of the international transactions accounts.

Advance statistics on gross domestic product (GDP) by industry, released in April, are detailed in another article. The economic recovery in 2010 was widespread, as 20 of 22 industry groups contributed to real GDP growth.

And finally, as part of our monthly look at GDP estimates, please note a one-page item on our “flexible annual revisions” process and how that will affect the upcoming annual revision of the GDP accounts.

J. Steven Landefeld  
Director, Bureau of Economic Analysis

## Taking Account...

### **BEA releases summary estimates of MNC activity**

Employment by U.S. multinational companies (MNCs) worldwide decreased 4.1 percent in 2009 to 31.3 million workers, with decreases in both the United States and abroad. Employment in the United States by U.S. parent companies decreased 5.3 percent to 21.1 million workers, which mirrored the percent change in total private-industry employment in the United States.

In April, as is customary, the Bureau of Economic Analysis (BEA) released advance summary statistics of employment, capital spending, and sales by U.S. parent companies, their foreign affiliates, and U.S. affiliates of foreign MNCs. Statistics based on more complete source data, including country and industry detail, will be released later this year.

The statistics presented in the release were based on data collected by BEA in two surveys of MNC operations: (1) a survey of U.S. MNCs that covered the operations of both U.S. parent companies and their foreign affiliates and (2) a survey that covered the operations of U.S. affiliates of foreign MNCs.

The survey of U.S. MNCs for 2009 was a benchmark survey, which is more comprehensive both in terms of companies covered and information collected than the surveys conducted in nonbenchmark years. Benchmark surveys are conducted

roughly every 5 years. Because benchmark survey processing is currently ongoing, information from other sources was used in combination with benchmark survey data to construct the estimates for U.S. parent companies and foreign affiliates for 2009.

Additional details:

- Employment in the United States by majority-owned U.S. affiliates of foreign MNCs decreased 7.9 percent in 2009 to 5.2 million workers. U.S. affiliates accounted for 4.7 percent of U.S. private-industry employment in 2009, down from 4.8 percent in 2008.
- Employment by U.S. parents accounted for almost one-fifth of total U.S. employment in private industries in 2009. Abroad, employment by the majority-owned foreign affiliates of U.S. MNCs decreased 1.5 percent to 10.3 million workers.
- Employment in the United States by U.S. parent companies accounted for 67 percent of the worldwide employment of U.S. MNCs in 2009, down from 68 percent in 2008.
- Worldwide capital expenditures by U.S. MNCs decreased 20.6 percent in 2009 to \$544 billion. Capital expenditures in the United States by U.S. parent companies decreased 20.7 percent to \$395 billion. Capital expenditures abroad by their majority-owned foreign affiliates

decreased 20.2 percent to \$150 billion.

- The U.S. parent share of the worldwide capital expenditures of U.S. MNCs in 2009 was 73 percent, which was unchanged from 2008.
- Sales by U.S. parent companies decreased 15.9 percent to \$7,819 billion in 2009. Sales by their majority-owned foreign affiliates decreased 10.9 percent to \$4,885 billion.
- Capital expenditures by majority-owned U.S. affiliates of foreign MNCs fell 15.6 percent to \$159 billion in 2009, and sales by these affiliates fell 15.7 percent to \$2,963 billion.

For more information, see the press release at [www.bea.gov/newsreleases/international/mnc/2011/mnc2009.htm](http://www.bea.gov/newsreleases/international/mnc/2011/mnc2009.htm).

### **New FAQ item on BEA Web site**

A new item has been placed in the Frequently Asked Questions (FAQs) area of the BEA Web site, providing an answer to the following question: “Do differences between the United States and Europe in measuring and reporting GDP tend to favor the United States?” BEA relaunched the popular FAQ service this year, enhancing it with an upgraded user interface, more intuitive navigation features, and simpler search tools. The service, which features hundreds of items on a variety of topics, is available by clicking on FAQs at [www.bea.gov](http://www.bea.gov).

# GDP and the Economy

## Advance Estimates for the First Quarter of 2011

REAL GROSS domestic product (GDP) increased 1.8 percent at an annual rate in the first quarter of 2011, according to the advance estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).<sup>1</sup> In the fourth quarter of 2010, real GDP increased 3.1 percent.

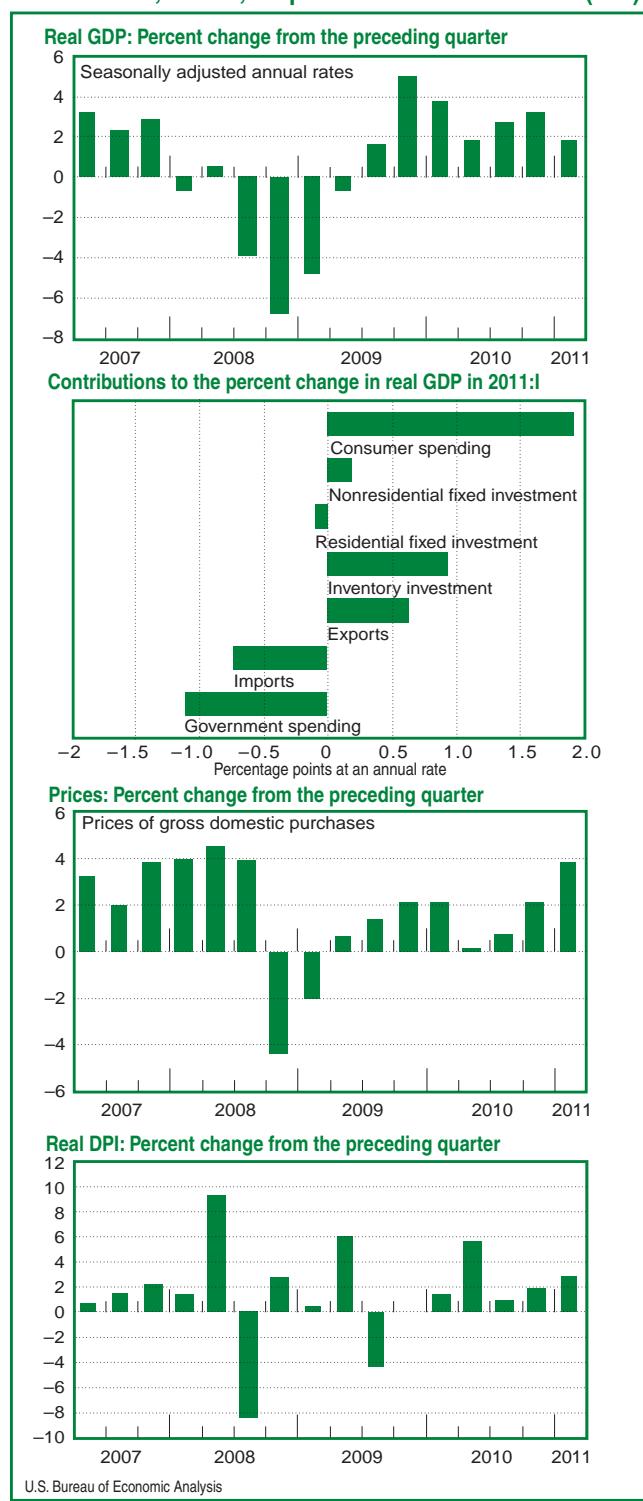

The deceleration in real GDP in the first quarter primarily reflected a sharp upturn in imports, a deceleration in consumer spending, a larger decrease in federal government spending, and decelerations in nonresidential fixed investment and in exports that were partly offset by a sharp upturn in private inventory investment.<sup>2</sup>

- Prices of goods and services purchased by U.S. residents increased 3.8 percent in the first quarter after increasing 2.1 percent in the fourth quarter. Energy prices and food prices both accelerated in the first quarter (see page 3). Excluding food and energy, gross domestic purchases prices increased 2.2 percent after increasing 1.1 percent. The federal pay raise for military personnel added about 0.1 percentage point to the first-quarter percent change in the gross domestic purchases price index.
- Real disposable personal income (DPI) increased 2.9 percent in the first quarter after increasing 1.9 percent, reflecting an acceleration in current-dollar DPI. The acceleration in current-dollar DPI reflected an acceleration in personal income that was partly offset by an acceleration in personal current taxes (see page 4).
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 5.7 percent in the first quarter; in the fourth quarter, it was 5.6 percent.

1. "Real" estimates are in chained (2005) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data. More information can be found at [www.bea.gov/about/infoqual.htm](http://www.bea.gov/about/infoqual.htm) and [www.bea.gov/faq/national/gdp\\_accuracy.htm](http://www.bea.gov/faq/national/gdp_accuracy.htm). Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

2. In this article, "consumer spending" refers to "personal consumption expenditures (PCE)," "inventory investment" refers to "change in private inventories," and "government spending" refers to "government consumption expenditures and gross investment."

**Chart 1. GDP, Prices, Disposable Personal Income (DPI)**

## Real GDP Overview

**Table 1. Real Gross Domestic Product (GDP) and Components**  
 [Seasonally adjusted at annual rates]

1. The estimates of GDP under the contribution columns are also percent changes.

Note. Percent changes are from NIPA table 1.1.1, contributions are from NIPA table 1.1.2, and shares are from NIPA table 1.1.10.

Consumer spending slowed in the first quarter of 2011, reflecting a slowdown in spending for goods that was partly offset by a slight pickup in spending for services. The largest contributor to the slowdown in goods was a slowdown in motor vehicles and parts.

Nonresidential fixed investment slowed, reflecting a downturn in structures that was partly offset by a pickup in equipment and software. A downturn in power and communications was the largest contributor to the downturn in structures. An upturn in transportation equipment was the largest contributor to the pickup in equipment and software. In contrast, information processing equipment and software slowed.

Inventory investment turned up, adding 0.93 percentage point to real GDP growth after subtracting 3.42 percentage points.

Exports slowed, reflecting a slowdown in exports of goods and a downturn in exports of services. The slowdown in goods exports mainly reflected downturns in foods, feeds, and beverages and in nonautomotive consumer goods and a slowdown in nonautomotive capital goods. In contrast, "other" exports turned up, mainly reflecting the territorial adjustment, and automotive vehicles, engines, and parts picked up. The downturn in services exports mainly reflected a downturn in travel.

Imports turned up reflecting an upturn in imports of goods and a smaller decrease in imports of services. The largest contributor to the upturn in goods was a much smaller decrease in petroleum and products. Upturns in most other major goods categories also contributed, but "other" imports of goods turned down. The largest contributor to the smaller decrease in services imports was an upturn in "other" transportation.

Federal government spending decreased more than in the fourth quarter, primarily reflecting a larger decrease in spending for national defense.

Real final sales of domestic product, real GDP less inventory investment, increased 0.8 percent in the first quarter after increasing 6.7 percent.

Motor vehicle output turned up in the first quarter, increasing 81.8 percent, the largest percent increase since the third quarter of 2009 (during the "Cash for Clunkers" program), after decreasing 11.6 percent. The upturn added 1.40 percentage points to real GDP growth after subtracting 0.27 percentage point.

Final sales of computers slowed, increasing 19.6 percent after increasing 72.8 percent.

**Table 2. Real Gross Domestic Product (GDP) by Type of Product**

[Seasonally adjusted at annual rates]

	Share of current-dollar GDP (percent)	Change from preceding period (percent)				Contribution to percent change in real GDP (percentage points)

State and local.....	0.9	0.2	4.0	6.5	0.10	0.03	0.46	0.74
<b>Addenda:</b>								
Gross domestic purchases:								
Food.....	1.3	1.2	2.9	6.0	0.07	0.06	0.15	0.31
Energy goods and services.....	-17.4	5.2	26.5	40.4	-0.73	0.19	0.94	1.41
Excluding food and energy.....	0.8	0.4	1.1	2.2	0.72	0.40	1.01	2.04
Personal consumption expenditures (PCE):								
Food and beverages for off-premises consumption.....	1.6	0.3	1.4	6.3	.....	.....	.....	.....
Energy goods and services.....	-17.5	5.4	24.3	40.5	.....	.....	.....	.....
Excluding food and energy.....	1.0	0.5	0.4	1.5	.....	.....	.....	.....
<b>Gross domestic product (GDP)</b>	<b>1.9</b>	<b>2.1</b>	<b>0.4</b>	<b>1.9</b>	.....	.....	.....	.....
Exports.....	4.8	0.2	8.4	11.4	.....	.....	.....	.....
Imports.....	-7.7	-8.1	18.7	22.3	.....	.....	.....	.....

1. The estimates under the contribution columns are also percent changes.

NOTE. Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are calculated from index numbers in NIPA table 2.3.4. Contributions are from NIPA table 1.6.8. GDP, export, and import prices are from NIPA table 1.1.7.

Prices paid by U.S. residents, as measured by the gross domestic purchases price index, accelerated, increasing 3.8 percent in the first quarter after increasing 2.1 percent in the fourth. The federal pay raise for military personnel added about 0.1 percentage point to the first-quarter percent change in the gross domestic purchases price index. The pay raise is treated as an increase in the price of employee services purchased by the federal government.

Consumer prices accelerated, reflecting a sharp acceleration in goods prices and a pickup in services prices. The largest contributors to the acceleration in consumer prices were gasoline and other energy goods, food and beverages purchased for off-premises consumption (groceries), and housing and utilities.

Prices paid for nonresidential fixed investment increased 0.9 percent, the same rate as in the fourth quarter.

Prices paid by government accelerated, reflecting accelerations in prices paid by state and local governments and by the federal government, which included the military pay raise.

Consumer prices excluding food and energy, a measure of the “core” rate of inflation, picked up, increasing 1.5 percent after increasing 0.4 percent.

The GDP price index increased 1.9 percent, 1.9 percentage points less than the percent increase in the price index for gross domestic purchases, reflecting a larger increase in import prices (22.3 percent) than in export prices (11.4 percent).

### Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services. It is derived from the prices of personal consumption expenditures (PCE), private investment, and government consumption expenditures and gross investment.

BEA also produces price indexes for all components of GDP. The PCE price index is a measure of the total cost of consumer goods and services, including durable goods, nondurable goods, and services. PCE prices for food, energy goods and services, and for all items except food and energy are also estimated and reported. Because prices for food and energy can be volatile, the price mea-

sure that excludes food and energy is often used as a measure of underlying, or “core,” inflation. (The core PCE price index includes purchased meals and beverages, such as restaurant meals, and pet food. See [FAQ 518](#) on BEA's Web site.)

BEA also prepares a supplemental PCE price index, the “market-based” PCE price index, that is based on market transactions for which there are corresponding price measures. This index excludes many imputed expenditures, such as financial services furnished without payment, that are included in PCE and the PCE price index. BEA also prepares a market-based measure that excludes food and energy.

## Personal Income

**Table 4. Personal Income and Its Disposition**

### Saving

Personal saving—disposable personal income less personal outlays—was \$663.6 billion in the first quarter, an increase of \$23.6 billion. The increase reflected a sharp increase of \$192.7 billion in disposable personal income that exceeded the increase of \$169.1 billion in personal outlays. The \$23.6 billion increase in saving followed a fourth-quarter decrease of \$41.0 billion.

Personal income, which is measured in current dollars, accelerated in the first quarter, increasing \$256.0 billion after increasing \$128.5 billion. The acceleration primarily reflected a downturn in contributions for government social insurance (a subtraction in the calculation of personal income) and accelerations in rental income of persons, in personal dividend income, and in supplements to wages and salaries.

Supplements to wages and salaries accelerated, increasing \$20.0 billion after increasing \$11.7 billion. The acceleration was in employer contributions for government social insurance for regular state unemployment programs that reflected changes in state tax rates and wage caps that went into effect in January.

Rental income of persons picked up, increasing \$17.3 billion after increasing \$4.6 billion, primarily reflecting a downturn in closing costs (an expense in the calculation of rental income), reflecting the pattern of mortgage originations.

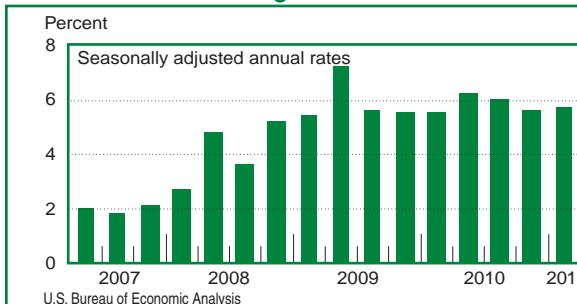

Personal dividend income accelerated, increasing \$18.2 billion after increasing \$9.2 billion.

Personal current transfer receipts, which includes government social benefits to persons, decelerated. Within government social benefits to persons, a slowdown in "other" government social benefits, mainly the earned income credit, was offset by a pickup in old-age, survivors, disability, and health insurance benefits, particularly Medicare.

The downturn in contributions for government social insurance was more than accounted for by a 2.0 percentage point reduction in the social security contribution rate for 2011.

The acceleration in personal current taxes reflected an acceleration in federal income taxes that was partly offset by a deceleration in state and local income taxes. The acceleration in federal taxes reflected a sharp acceleration in withheld taxes resulting from the expiration of the "Making Work Pay" credit provision of the American Recovery and Reinvestment Act at the end of 2010.

## Chart 2. Personal Saving Rate

## Source Data for the Advance Estimates

**Table 5. Source Data and Key Assumptions for the Advance Estimates of GDP for the First Quarter of 2011**  
 [Billions of dollars, seasonally adjusted at annual rates]

	2010			2011		
	Oct.	Nov.	Dec.	Jan.	Feb.	March <sup>1</sup>
<b>Private fixed investment:</b>						
Nonresidential structures:						
Value of new nonresidential construction put in place .....	260.0	266.7	257.9	237.4	239.6	238.5

<b>State and local government structures:</b>						
Value of new construction put in place.....	281.6	274.1	270.0	265.6	261.6	263.6

1. Assumption.

2. Nonmonetary gold is included in balance-of-payments exports and imports, but it is

not used directly in estimating exports and imports in the national income and product accounts.

### Source Data and Key Assumptions for the Advance Estimates of GDP

While the advance estimates of many components of GDP are based on 3 months of source data, some estimates are based on only 2 months of data. For the following items, the number of months for which data are available is shown in parentheses.

*Personal consumption expenditures:* sales of retail stores (3), unit auto and truck sales (3), and consumers' shares of auto and truck sales (2);

*Nonresidential fixed investment:* unit auto and truck sales (3), construction spending (value put in place) (2), manufacturers' shipments of machinery and equipment excluding aircraft (3), shipments of civilian aircraft (2), and exports and imports of machinery and equipment (2);

*Residential investment:* construction spending (value put in place) (2), single-family housing starts (3), sales of new homes (3), and sales of existing houses (3);

*Change in private inventories:* trade and nondurable-goods manufacturing inventories (2), durable-goods manufacturing inventories (3), and unit auto and truck inventories (3);

*Net exports of goods and services:* exports and imports of goods and services (2);

*Government consumption expenditures and gross invest-*

*ment:* federal outlays (3), state and local government construction spending (value put in place) (2), and state and local government employment (3);

*Compensation:* employment, average hourly earnings, and average weekly hours (3); and

*Prices:* consumer price indexes (3), producer price indexes (3), and values and quantities of petroleum imports (2).

### Unavailable source data

When source data were unavailable, BEA made various assumptions for March, including the following (table 5):

- A small decrease in nonresidential structures,
  - A small decrease in aircraft shipments,
  - A small decrease in single-family structures and a very slight decrease in multifamily structures,
  - An increase in the change in inventories of nondurable-goods manufacturing industries and a large increase in the change in nonmotor vehicle merchant wholesale and retail trade inventories,
  - An increase in exports of goods excluding gold and a larger increase in imports of goods excluding gold, and
  - An increase in state and local government structures.
- A more comprehensive list is available on BEA's Web site.

## Preview of the Upcoming Annual NIPA Revision

On July 29, 2011, the Bureau of Economic Analysis will release the results of the annual revision of the national income and product accounts (NIPAs) together with the advance estimate of gross domestic product (GDP) for the second quarter of 2011. In addition to the regular revision of estimates for the most recent 3 years and for the first quarter of 2011, this “flexible” annual revision will result in revisions to GDP and some components back to the first quarter of 2003.<sup>1</sup>

In cases for which the estimates for the reference year (2005) will be revised, this will result in revisions to the levels of the related index numbers and chained-dollar estimates for the entire historical period, though the percent changes will not be affected for periods before the first quarter of 2003.

The components that will be revised for longer time spans include the following:

- Personal consumption expenditures (PCE) will be revised back to 2003 to incorporate source data from the 2007 Economic Census (specifically, final data on merchandise lines) and data from the Census Bureau annual and monthly retail trade and food services surveys and from the Census Bureau service annual survey that have been benchmarked to the economic census. In addition, for 2008 forward, improved price indexes will be used for deflating PCE for property and casualty insurance.
- The estimates of petroleum imports will be revised back to 2007 to incorporate improvements in the seasonal adjustment of real petroleum imports. Under the improved method, real petroleum imports will be derived by directly seasonally adjusting the quantity data for petroleum imports; currently, BEA seasonally adjusts the petroleum price index and calculates seasonally adjusted real petroleum imports by deflation.
- The estimates of communication equipment in private fixed investment, in exports, and in imports will be

---

1. BEA's plans to undertake "flexible annual revisions" that include revisions for longer periods than the traditional 3-year period were described in the June 2008 SURVEY OF CURRENT BUSINESS at [www.bea.gov/scb](http://www.bea.gov/scb).

revised back to 2003 to incorporate quality-adjusted price indexes from the Federal Reserve Board. (During the 2010 NIPA annual revision, the Federal Reserve price indexes were incorporated only back to 2007.<sup>2</sup>)

In addition, the 2011 annual revision will incorporate the usual annual source data for 2008 through 2010 that are more complete and more detailed than those previously available, including the following:

- Census Bureau annual surveys of manufactures, of merchant wholesale trade, of retail trade, of services, and of state and local governments
- Census Bureau monthly surveys of construction spending (value put in place)
- Bureau of Labor Statistics quarterly census of employment and wages
- BEA international transactions accounts data;
- Federal government budget data
- Internal Revenue Service tabulations of tax returns for corporations and for sole proprietorships and partnerships
- Department of Agriculture farm statistics

The annual revision will also incorporate improvements in the presentation of the estimates and refinements to estimating methodologies, including the following:

- In NIPA tables 2.1 and 2.6, which show components of personal income, a new, consistent presentation of government social benefits will focus on the largest and most significant programs: social security, Medicare, unemployment insurance, veterans benefits, Medicaid, and “other” benefits.
- Starting with the first quarter of 2011, the quarterly and monthly estimates of PCE for portfolio management and investment advice services will reflect the incorporation of newly available Census Bureau quarterly services survey data on “other financial investment activities.”

# Annual Industry Accounts

## Advance Statistics on GDP by Industry for 2010

By Teresa L. Gilmore, Edward T. Morgan, and Sarah B. Osborne

DURABLE-GOODS manufacturing and retail trade were among the leading contributors to the upturn in U.S. economic growth in 2010, according to preliminary statistics on real gross domestic product (GDP) by industry from the Bureau of Economic Analysis. The economic recovery was widespread: 20 of 22 industry groups contributed to real GDP growth.

The advance statistics on GDP by industry were released by the Bureau of Economic Analysis (BEA) on April 26, 2011. These statistics reflect preliminary source data on the distribution of growth in real GDP and inflation by industry.

Highlights for 2010 include the following:

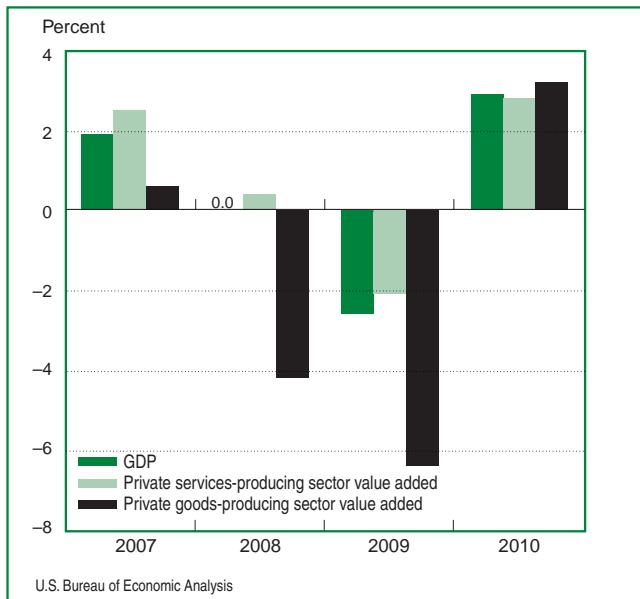

- Value added, which measures an industry's contribution to GDP, for the private goods-producing sector rose 3.2 percent in 2010 after falling 6.4 percent in 2009 (chart 1); manufacturing value added rose 5.8 percent. All major goods-producing industry groups except construction contributed to GDP

growth. The sector's share of current-dollar GDP rose to 18.1 percent in 2010.

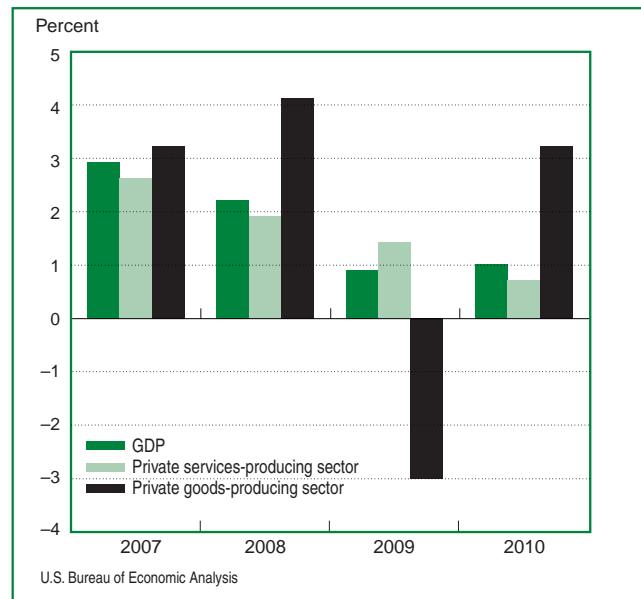

- Value added for the services-producing sector grew 2.8 percent in 2010. Retail trade value added grew 5.2 percent, reflecting increased consumer purchases after 2 consecutive years of contraction.
- Growth in the GDP price index rose slightly to 1.0 percent (chart 2). Growth in value-added prices for the goods-producing sector turned up, increasing 3.2 percent after decreasing 3.0 percent in 2009; the upturn reflected a sharp upturn in prices for mining and agriculture. Growth in value-added prices for the private services-producing sector, which accounts for more than two-thirds of GDP, decelerated in 2010, increasing 0.7 percent after increasing 1.4 percent in 2009.

These preliminary statistics were prepared for major industry groups using a methodology that incorporates summary source data from the March 2011 update of the national income and product accounts

**Chart 1. Annual Growth in Real GDP**

**Chart 2. Annual Growth in Value-Added Prices**

(NIPAs). In addition, this release incorporates expanded Quarterly Services Survey data for the following industries: air transportation; warehousing and storage; rental and leasing services; ambulatory health care services; social assistance; arts, entertainment, and recreation; and other services.

The advance statistics provide reliable information on the direction of change in real growth for major industry groups and an indication of whether industries' real growth was well-above, well-below, or about average with respect to overall GDP growth.

The statistics presented in this article will be revised as part of the 2011 annual revision of the annual industry accounts. This annual revision will incorporate more detailed industry source data and the results from the 2011 annual NIPA revision.

### Data Availability

The advance statistics on value added by industry are presented in current dollars, chained (2005) dollars, chain-type quantity indexes, and chain-type price indexes.

Annual input-output accounts for 2010 will be available in the fall of 2011. The statistics for 2010 and the full set of annual industry accounts are available interactively on BEA's Web site. For more information, visit [www.bea.gov/industry/index.htm#annual](http://www.bea.gov/industry/index.htm#annual).

For a guide to the annual industry accounts, see "Measuring the Nation's Economy: An Industry Perspective: A Primer on BEA's Industry Accounts" [www.bea.gov/pdf/industry\\_primer.pdf](http://www.bea.gov/pdf/industry_primer.pdf).

### Acknowledgments

Edward T. Morgan, Chief of the Inter-Industry Statistics Branch of the Industry Applications Division (IAD) supervised the preparation of the statistics. Brian C. Moyer, Deputy Director of the Bureau of Economic Analysis, Nicole M. Mayerhauser, Chief of the Industry Sector Division (ISD), and Erich H. Strassner, Chief of IAD, provided overall guidance. Thomas F. Howells III, Chief of the Input-Output Systems Branch in IAD, managed the economic information systems used to produce and review the statistics.

The statistics for 2010 were prepared by Brian M. Lindberg. The following staff provided guidance and contributed to the preparation of the industry statistics and analysis: Kevin J. Muck, Chief of the Goods and Distributive Services Branch in ISD, Sherlene K.S. Lum, Chief of the Information and Business Services Branch in ISD, and Patricia A. Washington, Chief of the Personal Services and Government Branch in ISD. Robert J. McCahill, Program Coordinator in ISD, Gabriel W. Medeiros in IAD, and William H. Nicolls IV in IAD provided valuable assistance. Maxine V. Tiggle and Pat A. Wilkinson provided administrative and program assistance.

The following staff also contributed to the preparation of the advance statistics:

*Agriculture, mining, construction, and manufac-*

*ting:* Matthew M. Donahoe, Aaron A. Elrod, Donald D. Kim, Mariana Matias, and Simon N. Randrianarivelo.

*Distributive services:* Ricky L. Stewart, Anna M. Jacobson, Patrick H. Martin, and Justin H. Settles.

*Information and professional services:* Robert J. Corea, Olympia Belay, Mandy C. Roberts, and Matthew B. Schroeder.

*Finance, insurance, real estate, rental and leasing, and management services:* Soo J. Kim, James M. Green, Lolita V. Jamison, Erin M. Ludlow, and Ricci L. Reber.

*Transportation and government enterprises:* Paul V. Kern, Alvin D. Blake, Stanislaw J. Rzeznik, and Steven L. Zemanek.

*Health, education, and government services:* Tameka R. L. Harris, Daniel W. Jackson, Sarah Pack, and Darlene C. Robinson-Smith.

*Value added:* Jennifer Lee, Teresa L. Gilmore, William A. Jolliff, and Brian M. Lindberg.

*International trade and inventory:* Matthew Russell, Peter D. Kuhbach, Gregory R. Linder, and Sarah B. Osborne.

*Operations:* Amanda S. Lyndaker, Jeffrey M. Bellone, Rajeshwari R. Bhosale, and Douglas B. Leung.

*Balancing and reconciliation:* Bradlee A. Herauf, Kathleen M. Karlon, and Jeffrey A. Young.

## Real Value Added

**Table A. Percent Changes in Real Value Added by Industry Group**

	2007	2008	2009	2010	
<b>Gross domestic product .....</b>	<b>1.9</b>	<b>0.0</b>	<b>-2.6</b>	<b>2.9</b>	Real GDP increased 2.9 percent in 2010, reflecting increases in 20 of 22 major industry groups.
<b>Private industries.....</b>	<b>2.1</b>	<b>-0.7</b>	<b>-3.0</b>	<b>2.9</b>	Construction value added declined for the sixth consecutive year, decreasing 3.7 percent.
Agriculture, forestry, fishing, and hunting .....	-7.4	9.1	5.3	0.9	
Mining.....	3.0	-3.4	27.4	3.0	
Utilities.....	3.4	6.0	-9.0	1.3	
<b>Construction.....</b>	<b>-5.3</b>	<b>-5.7</b>	<b>-15.6</b>	<b>-3.7</b>	Manufacturing value added rose 5.8 percent in 2010, a sharp return to growth after declining for 2 consecutive years.
<b>Manufacturing.....</b>	<b>3.3</b>	<b>-4.8</b>	<b>-8.6</b>	<b>5.8</b>	
Durable goods.....	3.7	1.0	-12.7	9.9	Durable-goods manufacturing turned up, increasing 9.9 percent after declining 12.7 percent in 2009.
Nondurable goods.....	2.8	-11.8	-3.4	0.8	
Wholesale trade .....	5.6	-0.1	2.8	4.2	
Retail trade .....	1.3	-6.9	-1.9	5.2	Retail trade value added grew 5.2 percent in 2010, following 2 consecutive years of contraction.
<b>Transportation and warehousing .....</b>	<b>0.9</b>	<b>0.8</b>	<b>-13.0</b>	<b>1.8</b>	Transportation and warehousing grew 1.8 percent in 2010, recovering from a 13.0 percent decline in 2009.
<b>Information .....</b>	<b>8.5</b>	<b>4.1</b>	<b>-2.5</b>	<b>4.9</b>	Information rose 4.9 percent, recovering from a 2.5 percent decline.
Finance, insurance, real estate, rental, and leasing .....	1.7	0.0	1.1	1.7	
Finance and insurance .....	-2.2	-4.0	6.1	3.2

Federal.....	0.01	0.10	0.15	0.12
State and local .....	0.09	0.16	-0.04	-0.06
<b>Addenda:</b>				
Private goods-producing industries <sup>2</sup> .....	0.12	-0.82	-1.20	0.58
Private services-producing industries <sup>3</sup> .....	1.71	0.24	-1.42	1.91
Information-communications-technology-producing industries <sup>4</sup> .....	0.36	0.35	-0.02	0.68

Durable-goods manufacturing and retail trade were among the leading contributors to GDP growth in 2010; 20 of 22 industry groups contributed to real GDP growth.

Durable-goods manufacturing accounted for over 25 percent of the upturn in real GDP in 2010, after contributing nearly 35 percent to the downturn in 2009.

Retail trade turned up in 2010 and accounted for over 7 percent of the upturn in real GDP growth.

Professional and business services accounted for 17 percent of the upturn in GDP growth in 2010. This sector accounted for 38 percent of the downturn in 2009.

Information-communications-technology-producing industries accounted for 24 percent of real GDP growth in 2010.

1. The estimates of gross domestic product under the contributions columns are percent changes.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

NOTE. Percentage-point contributions do not sum to the percent change in real gross domestic product because the contribution of the "Not allocated by industry" line is excluded.

## Value-Added Prices

**Table C. Percent Changes in Chain-Type Price Indexes  
for Value Added by Industry Group**

	2007	2008	2009	2010	
<b>Gross domestic product .....</b>	<b>2.9</b>	<b>2.2</b>	<b>0.9</b>	<b>1.0</b>	Growth in the GDP prices increased slightly in 2010, reflecting an acceleration in value-added prices for private industries that was partly offset by a deceleration in value-added prices for government.
<b>Private industries .....</b>	<b>2.7</b>	<b>2.4</b>	<b>0.5</b>	<b>1.2</b>	
Agriculture, forestry, fishing, and hunting .....	27.6	1.4	-21.0	14.7	Value-added prices for agriculture, forestry, fishing, and hunting turned up in 2010, rising 14.7 percent after falling 21.0 percent in 2009. This upturn primarily reflected strong increases in prices for crops.
Mining.....	7.8	29.1	-40.4	13.4	Value-added prices for mining turned up, rising 13.4 percent after falling 40.4 percent in 2009.
Utilities.....	1.8	-0.4	12.2	1.5	
Construction.....	6.6	0.6	2.1	-2.3	Value-added prices for construction turned down for the first time since 1992, decreasing 2.3 percent after increasing 2.1 percent in 2009.
Manufacturing.....	-0.4	1.9	5.3	2.5	Manufacturing price growth slowed in 2010, increasing 2.5 percent after increasing 5.3 percent in 2009. The slowdown reflected a slowdown in durable-goods manufacturing that was partly offset by a pickup in nondurable-goods manufacturing.
Durable goods.....	-1.5	-2.7	7.2	0.8	
Non durable goods.....	1.0	8.0	3.1	4.6	
Wholesale trade .....	0.1	1.3	-7.7	-0.7	Retail price growth turned up in 2010, increasing 0.1 percent after decreasing 0.5 percent.
Retail trade .....	-0.1	1.9	-0.5	0.1	
Transportation and warehousing .....	1.6	2.4	6.9	2.6	
Information .....	-1.6	-1.0	0.5	-0.1	Value-added prices for information declined for the eighth time in 9 years.
Finance, insurance, real estate, rental, and leasing .....	2.3	2.9	1.1	0.1	
Finance and insurance .....	2.7	3.2	0.3	2.1	
Real estate and rental and leasing .....	2.1	2.7	1.5	-1.2	
Professional and business services .....	5.5	0.9	1.3	1.3	
Professional, scientific, and technical services.....	4.9	2.0	1.1	1.0	
Management of companies and enterprises .....	11.4	-1.3	-3.2	2.6

Federal .....	0.18	0.09	0.07	0.06
State and local .....	0.40	0.31	0.30	0.17
<b>Addenda:</b>				
Private goods-producing industries <sup>2</sup> .....	0.63	0.79	-0.55	0.56
Private services-producing industries <sup>3</sup> .....	1.75	1.31	0.99	0.46
Information-communications-technology-producing industries <sup>4</sup> .....	-0.21	-0.16	-0.03	-0.09

The largest private-industry contributors to the 1.0 percent increase in the GDP price index were manufacturing, mining, and educational services, health care, and social assistance.

Mining contributed 0.23 percentage point to GDP price growth in 2010 after subtracting 0.99 percentage point in 2009. The strong increase in value-added price growth was primarily due to the increase in oil and gas prices driven by the widespread economic recovery.

Nondurable-goods manufacturing contributed 0.23 percentage point to the growth in the GDP price index.

Wholesale trade subtracted from the growth in the GDP price index for the second consecutive year.

The private goods-producing sector contributed 0.56 percentage point to the price growth of GDP.

Value-added prices for information-communications-technology-producing industries have subtracted from GDP price growth every year since 1992—19 consecutive years.

1. The estimates of gross domestic product under the contributions columns are percent changes.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

NOTE. Percentage-point contributions do not sum to the percent change in the chain-type price index for gross domestic product because the contribution of the "Not allocated by industry" line is excluded.

## Current-Dollar Value Added

State and local.....	8.6	8.9	9.3	9.0
<b>Addenda:</b>				
Private goods-producing industries <sup>1</sup> .....	19.6	19.1	17.7	18.1
Private services-producing industries <sup>2</sup> .....	67.9	68.0	68.7	68.5
Information-communications-technology-producing industries <sup>3</sup> .....	4.1	4.2	4.2	4.7

Private industries' share of current-dollar GDP recovered slightly, but it is still its second lowest share since 1995.

Construction's share of current-dollar GDP shrank to 3.4 percent, its lowest level since 1947, the first year for which these statistics are available.

Manufacturing's share of current-dollar GDP rebounded, primarily reflecting an increase in the share of durable-goods manufacturing.

Real estate and rental and leasing's share of current-dollar GDP fell to 12.7 percent in 2010, returning to 2007 levels.

Government's share of GDP fell, reflecting a decrease in the share of state and local government.

The information-communications-technology-producing industries sector's share is at its highest level since 1987, the first year for which statistics on this sector are available.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

## Methodology for the Advance Statistics

The advance statistics for 2010 were prepared for broad industry groups using a methodology that was developed to incorporate summary source data. The advance statistics are published at approximately the two-digit sector level of the 2002 North American Industry Classification System (NAICS). The preparation of the statistics uses a methodology that draws heavily on data from the national income and product accounts (NIPAs) for both current-dollar and real value added by industry statistics. This methodology and level of industry detail differ from the methodology and level of detail found in the annual industry accounts.<sup>1</sup>

### Current-dollar statistics

The advance statistics on current-dollar value added by industry for 2010 are prepared by extrapolating the major components of value added by industry, compensation of employees, “taxes on production and imports less

subsidies,” and gross operating surplus for 2009 forward, using published and unpublished industry source data from the NIPAs, from other government agencies, and from private institutions. Statistics for farms and general government are obtained directly from the NIPAs.

### Real statistics

The advance statistics on chain-type price and quantity indexes and the advance statistics on chained-dollar value added by industry are prepared using the single-deflation method. An industry’s current-dollar value-added statistics are divided by the industry’s gross output price index.<sup>2</sup> A Fisher aggregation of the detailed industries yields the chain-type price and quantity indexes for industry groups. The gross output price indexes for detailed industries are implicit price deflators that are computed as current-dollar gross output divided by chained-dollar gross output.

1. The annual industry accounts for 1998–2009 are published at the NAICS three-digit industry level using a more comprehensive methodology. For more information, see Tameka R.L. Harris, William A. Jolliff, Amanda S. Lyndaker, and Matthew B. Schroeder, “[Annual Industry Accounts: Revised Statistics for 2007–2009](#),” SURVEY OF CURRENT BUSINESS 91 (January 2011): 16.

2. Single deflation approximates the results obtained by double deflation when the prices of an industry’s intermediate inputs increase at about the same rate as its output prices. For more information, see Robert E. Yuska, “[Gross Domestic Product by Industry: A Progress Report on Accelerated Estimates](#),” SURVEY 82 (June 2002): 21.

1. The NIPA reconciliation item shows the differences between the Annual Industry Accounts (AIAs) and the National Income and Product Accounts (NIPAs) that result from the incorporation of source data in the AIAs that were not available to be incorporated in the NIPAs. These differences do not indicate future revisions to the NIPAs, which will reflect the incorporation of additional key source data.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. The NIPA reconciliation item shows the differences between the Annual Industry Accounts (AIAs) and the National Income and Product Accounts (NIPAs) that result from the incorporation of source data in the AIAs that were not available to be incorporated in the NIPAs. These differences do not indicate future revisions to the NIPAs, which will reflect the incorporation of additional key source data.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assis-

tance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of the "Not allocated by industry" line reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Note. Percentage-point contributions do not sum to the percent change in real gross domestic product because the contribution of the "Not allocated by industry" line is excluded.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

NOTE: Percentage-point contributions do not sum to the percent change in real gross domestic product because the contribution of the "Not allocated by industry" line is excluded.

## ■ BEA BRIEFING

# Modernizing and Enhancing BEA's International Economic Accounts

## A Progress Report

By Kristy L. Howell and Ned G. Howenstine

AS PART OF a broad effort to improve the timeliness, accuracy, and relevance of economic statistics, the Bureau of Economic Analysis (BEA) is engaged in a multiyear effort to modernize and enhance the international economic accounts by introducing changes recommended by new international statistical standards along with other improvements. These changes, once implemented, will bring the U.S. international economic accounts into closer alignment with those of other nations and will increase the overall usefulness of the accounts for BEA's customers. The recent global economic crisis has highlighted the critical importance of economic statistics that depict, in a timely manner, major developments in both the real and financial sectors of economies around the world and that provide greater insights into cross-border economic activities.

In addition to efforts to improve the international economic accounts, BEA is actively collaborating with its U.S. statistical agency partners to improve economic statistics on several other fronts. For example, BEA continues to work with the Federal Reserve Board (FRB) and the Bureau of Labor Statistics (BLS) to better integrate data from its economic accounts with the FRB's flow of funds accounts and with BLS productivity data. BEA is also developing satellite accounts for research and development (R&D) and health care and is exploring how the existing national, industry, and regional accounts can be used to produce new statistics on the sustainability of trends in investment, savings, asset values, and finance. BEA continues to collaborate with international organizations to improve economic statistics for policy and surveillance. For example, BEA is leading a United Nations working group developing a manual designed to assist nations in their efforts to produce more highly integrated economic statistics.<sup>1</sup> BEA is also actively participating in a United Nations

task force to develop a manual about the impact of globalization on national economic accounts.<sup>2</sup> In addition, BEA is cooperating with the International Monetary Fund (IMF) and the Organisation for Economic Co-operation and Development (OECD) in their efforts to develop more timely and relevant indicators of financial soundness and in related efforts to better integrate national accounts, balance sheets, and cross-border financial flows.

The new standards for international economic accounts are presented in the sixth edition of the IMF's *Balance of Payments and International Investment Position Manual* (BPM6) and in the fourth edition of the OECD's *Benchmark Definition of Foreign Direct Investment* (BD4).<sup>3</sup> In the last 2 years BEA has introduced several improvements into the U.S. international transactions accounts (ITAs) and the U.S. international investment position accounts that have started the process of aligning these statistics more closely with the new international standards. An article in the May 2010 SURVEY OF CURRENT BUSINESS described these improvements and provided an overview of BEA's plans for introducing further improvements.<sup>4</sup> It also provided a summary of the new international statistical standards, focusing on recommended changes that are noteworthy for their impact on the U.S. international economic accounts. Finally, the article provided prototypes for key tables that BEA plans to use in the future for its standard presentations.

The remainder of this article provides an update on BEA's plans, describes changes that will be included in

2. A draft version of the globalization manual will be submitted to the Conference of European Statisticians for endorsement in June.

3. *Balance of Payments and International Investment Position Manual*, 6<sup>th</sup> ed. (Washington, DC: International Monetary Fund, 2009). *Benchmark Definition of Foreign Direct Investment*, 4<sup>th</sup> ed. (Paris: OECD, 2008).

In addition, manuals related to statistics on merchandise and services trade are nearing completion. Drafts of these manuals—*International Merchandise Trade Statistics: Concepts and Definitions 2010* and *Manual on Statistics of International Trade in Services 2010*—are available at [unstats.un.org](http://unstats.un.org).

4. Kristy L. Howell and Robert E. Yusavage, "Modernizing and Enhancing BEA's International Economic Accounts: Recent Progress and Future Directions," SURVEY OF CURRENT BUSINESS 90 (May 2010): 6–20.

1. A draft of the manual—*Guidelines to Integrated Economic Statistics*—was formally discussed at the 42nd session of the United Nations Statistical Commission in February. See [unstats.un.org](http://unstats.un.org). The guidelines are expected to be finalized in the summer of 2011.

the June 2011 annual revision of the ITAs, reports progress on key issues, and introduces additional prototype tables.

### **Timetable for Implementation**

BEA has adopted a phased approach to implementing new international standards that accounts for the feasibility of implementation due to factors such as source data availability, resource requirements, and consistency with BEA's national, industry, and regional accounts. BEA is considering not only the economic and statistical significance of changes but also other factors such as information technology (IT) requirements, estimation needs, and implications for publication tables and data dissemination. The timetable also accounts for the impact of other important BEA initiatives on its resources, such as a major long-term effort currently underway to significantly upgrade and improve BEA's IT systems.

As a result of these considerations, BEA has grouped the recommendations into three categories: (1) changes that do not require major new methodologies or resources, new data sources, or changes in presentation, (2) more complex changes and changes in presentation that will most likely be introduced by 2014, and (3) changes for which implementation either does not appear feasible or cannot be determined at this time. Some of the changes in the first category have already been introduced and were discussed in the May 2010 SURVEY article; others will be introduced in the June 2011 annual revision and are discussed later in this article.

This article also provides an update on BEA's research on the more complex changes in the second and third categories. As indicated in last year's article, several require new source data, such as manufacturing services on physical inputs owned by others, goods flows associated with merchanting transactions, detail on transactions related to intellectual property, and financial instruments associated with insurance, pension, and standardized guarantee schemes. Others require the development of new estimation methodologies, such as financial intermediation services indirectly measured. Still others require major changes in presentations, such as restructuring the financial and investment income accounts in order to classify transactions by functional category and to present direct investment on an asset/liability basis.

To provide a preview of how BEA's standard presentations will change, last year's article provided prototypes of key tables; this article provides prototypes for several additional tables. These prototype tables were developed to assist BEA customers with the transition to the new presentation tables. The prototype tables

will be maintained as a work-in-progress until implementation of the recommendations of the new standards is completed.

As indicated earlier, BEA plans to introduce changes in its presentation of the ITAs along with the more complex new treatments by 2014, when it anticipates that most of the feasible changes will be ready for release. At that time, the accounts will be presented as a consistent quarterly time series back to at least 2003. A principal reason for targeting 2014 for full implementation is to avoid confusion about the interpretation of the statistics until most of the key changes can be put in place on a consistent time series basis. Last year's article suggested that full implementation could possibly be achieved by 2012, but it has become increasingly clear that developing new source data and methodologies for several of the major changes will take longer than initially anticipated. For example, new key source data that BEA is proposing to collect on the 2011 Benchmark Survey of Selected Services and Intellectual Property would not be available until late 2012 or early 2013. Source data needed to implement the new treatment of goods for processing will not be available until even later. Other countries have also concluded that full BPM6 implementation will require several years (see the box "Other Timetables"). This timetable also recognizes that the resources required to implement complex changes on a consistent time series basis are extensive and that BEA's ability to implement these changes depends critically on ongoing efforts to modernize and improve its IT systems, a high-priority Bureau-wide initiative.

### **Progress Report**

#### **Changes scheduled for June**

This section describes the changes in definitions, classifications, and methodology that are scheduled to be introduced in the ITAs in the upcoming June 2011 annual revision. Changes planned for June 2011 affect only the current account.

**Reclassify cruise fares from passenger fares to travel.** In the ITA services accounts, cruise fares are currently included in passenger fares along with other fares for passage aboard air and ocean carriers.<sup>5</sup> BPM6 recommends that cruise fares be classified as travel because they cover onboard expenditures for goods and services similar to expenditures related to land travel, such as accommodations, meals, and entertainment.

---

5. BPM6 does not identify a passenger fares service category; instead, airfare and other transactions for transporting passengers from one place to another are included in transport services. Passenger fares excluding cruise fares are included in transport services in the prototype tables presented later in this article.

Beginning with statistics for 1999, cruise fares will be excluded from passenger fares and will be included in travel.

**Reclassify distribution rights for film and television from “other” private services to royalties and license fees.** Charges for the right to distribute film and television recordings are currently classified in “other” private services along with other audiovisual services, such as those related to the production of motion pictures and radio and television programs. Beginning with statistics for 1999, the distribution rights related to film and television recordings will be classified under royalties and license fees. This change aligns the treatment of these charges with BPM6 recommendations for the classification of transactions related to the rights to distribute intellectual property.

### Other Timetables

The IMF plans to present balance of payments statistics on a BPM6 basis in *Balance of Payments Yearbook* and *International Financial Statistics* in the summer of 2012 with data for year 2011. Because some countries will not be able to submit their statistics to the IMF on a BPM6 basis, the IMF is developing a strategy for converting statistics of these countries to a BPM6 basis. In addition, the IMF plans to provide guidance and technical assistance to countries that need help converting to BPM6, including guidance related to developing historical time series and statistical overlap periods. A survey conducted by the IMF in 2009 about BPM6 implementation found that many countries are moving forward with plans to implement the new standards, but most do not expect to achieve full implementation for several years, perhaps later than the IMF’s 2012 target date.

The European Union has decided that its members will be required to convert their presentations for reference year 2013 to a BPM6 basis in 2014. Until then, the international accounts statistics for European Union countries will continue to be compiled and presented on a BPM5 basis.

Several other countries, including Canada and Japan, have indicated that they plan to provide their international accounts on a BPM6 basis by 2014 as part of broader redesign efforts. For example, Canada will convert to a BPM6 basis by the spring of 2014 as part of an overall comprehensive revision of the Canadian System of National Accounts. In contrast, Australia converted its international accounts to a BPM6 basis in 2010, but will continue to also provide its accounts on a BPM5 basis for some time. Many countries have not yet announced their plans and are still in the process of determining when complete implementation will be feasible.

**Reclassify postal services from U.S. government miscellaneous services to “other” transportation.** Currently, settlements between the U.S. Postal Service and foreign postal services for the delivery of letters, printed materials, and parcels are included in U.S. government miscellaneous services. Beginning with statistics for 1999, these transactions will be included in “other” transportation services, based on BPM6 guidelines. This change is consistent with ongoing efforts to better classify government services transactions according to the type of service performed.

**Reclassify expenditures of foreign nationals working at international organizations in the United States.** Foreign nationals living in the United States and employed by international organizations located in the United States are currently treated as foreign residents in the ITAs; therefore, their purchases of goods and services are included in U.S. exports of services.<sup>6</sup> However, according to BPM6, these foreign nationals should be treated as U.S. residents. As a result, their purchases of goods and services should be excluded from the ITAs because these purchases represent transactions between U.S. residents. In addition, because of their status as U.S. residents for statistical purposes, the compensation that foreign nationals receive from international organizations should be included in U.S. income receipts from abroad. To align the U.S. accounts with this recommendation, the U.S. purchases of foreign nationals employed by international organizations in the United States will be excluded from “other” private services, and the compensation that the foreign nationals receive will be added to compensation of employees, beginning with statistics for 1999.

**Record income on holdings of special drawing rights on a gross basis.** Currently, income flows associated with U.S. holdings and allocations of special drawing rights (SDRs) are included in the “U.S. government receipts” account on a net basis; that is, the amount recorded is equal to interest receipts on SDR holdings net of interest payments on SDR allocations. However, BPM6 recommends that interest receipts and payments be recorded on a gross basis. Accordingly, beginning with statistics for 2003, interest receipts will be recorded in “U.S. government receipts,” and interest payments will be recorded in “U.S. government payments.”

### Changes planned for later years

This section provides an update on BEA research on major changes that cannot be introduced in June 2011 but that are being considered for implementation in a

6. According to international standards, expenditures on goods and services in the host economy by nonresident employees of international organizations should be included in the services account.

later annual revision. These changes generally are more complex than those that have already been made and that are planned for this year's annual revision. These major changes involve changes in definitions, classifications, methodology, or presentations and require either new source data or additional research. In a few cases, it is not clear that implementation will prove feasible even within the next 3 years. (Additional discussion of several of these issues can be found in the May 2010 article.)

**Introduce manufacturing services on physical inputs owned by others (goods for processing).** BEA's current treatment of goods sent abroad for processing without a change in ownership follows the fifth edition of the *Balance of Payments Manual* (BPM5). According to this treatment, when goods cross the border, a change in ownership is imputed and the goods are included in trade as goods exports and imports. Under the new BPM6 standard, no change in ownership is imputed; the goods are excluded from goods trade, and the processing fee charged by the manufacturing service provider is recorded as services trade.<sup>7</sup> In BPM6, this service is referred to as "manufacturing services on physical inputs owned by others." The fee for this service is related to the difference between the value of the goods exported for processing and the value of the goods returned (imported) after processing.

At this time, the source data for U.S. goods trade statistics do not include information about whether the exported or imported goods involved change in ownership or whether the trade involves goods that have been sent abroad for processing. These source data are compiled by the U.S. Census Bureau from customs documents filed with the U.S. Customs and Border Protection. It is unlikely this information will be collected in these documents in the near future. Furthermore, data are not currently available in the U.S. statistical system on the processing fees that should be recorded in the services accounts. In the absence of information related to the goods trade or the processing fees, implementation of this new standard will be very challenging, a situation faced by many other countries.

Nevertheless, BEA continues to conduct research and to investigate options to determine feasible approaches for implementing this new treatment. In anticipation of the likely need to develop its own survey to collect data on fees associated with processing services, BEA added a question to its 2009 Benchmark

Survey of U.S. Direct Investment Abroad to identify U.S. parent companies that meet the BPM6 criteria for engaging in goods for processing. BEA will soon begin to evaluate the responses to this question. BEA is also exploring the feasibility of obtaining information on the 2011 Benchmark Survey of Selected Services and Intellectual Property on certain aspects of this activity. In addition, BEA and the Census Bureau are exploring options for identifying the merchandise trade transactions of U.S. firms that indicated in the 2007 Economic Census that they purchased manufacturing services from overseas contractors.

Because a change in the treatment of goods for processing would also have important effects on BEA's national and industry accounts and because it is also closely connected with an ongoing effort by U.S. statistical agencies to improve the industry classification of "factoryless goods producers" in U.S. economic statistics, BEA is taking a coordinated approach to ensure that changes are made consistently throughout all of the economic accounts and throughout the U.S. statistical system.<sup>8</sup>

**Reclassify merchanting from services to goods and identify the underlying flows of goods.** BEA currently classifies merchanting—which is the purchase and subsequent resale of goods abroad without substantial transformation and without the goods entering or exiting the United States—as a service transaction. BPM6 recommends classifying merchanting as a component of trade in goods under the new category "net exports of goods under merchanting." BPM6 also recommends presenting the gross flows associated with merchanting transactions—goods acquired under merchanting and goods sold under merchanting. However, BEA's source data on goods do not cover these flows, because the goods do not cross the U.S. customs frontier. BEA is currently evaluating the possibility of collecting this information on the 2011 Benchmark Survey of Transactions in Selected Services and Intellectual Property. BEA has contacted several potential survey respondents to assess their ability to identify these transactions in their accounting records and to accurately report them.

**Reclassify transactions related to intellectual property.** BEA is also evaluating the possibility of collecting additional information on transactions related to intellectual property on the 2011 Benchmark Survey of Transactions in Selected Services and Intellectual

7. According to both BPM5 and BPM6, cross-border trade is recorded only when a change in ownership occurs. Thus, goods trade covers only goods in which economic ownership changes between residents and non-residents.

8. "Factoryless goods producers" are business units that control the entire manufacturing process but subcontract out all manufacturing transformation activities. For more information, see "Economic Classification Policy Committee (ECPC) Recommendation for Classification of Outsourcing in North American Industry Classification System (NAICS) Revisions for 2012" at [www.bea.gov](http://www.bea.gov).

Property in order to implement the BPM6 recommendations related to such property. To conform to the recommendations, transactions for the rights to use intellectual property, the rights to reproduce or distribute intellectual property, and the outright sale of intellectual property should be treated differently. Currently, transactions for the use of intellectual property and some transactions for the sale of intellectual property are commingled in BEA's source data and are recorded indistinguishably under the services category "royalties and license fees." BEA has asked potential survey respondents if they can separately identify intellectual property transactions for rights to use, rights to reproduce or distribute, and outright sales. The feedback from respondents will guide BEA's efforts in this area.

**Introduce financial intermediation services indirectly measured (FISIM).** FISIM captures the fees implicitly received by financial intermediaries for their lending and deposit-taking services through the margin between interest payable for loans and deposits and the cost of funds. FISIM has been introduced into BEA's national accounts but not the international accounts. BEA continues to evaluate potential methods for estimating FISIM in the international accounts, including a reference rate method, and to study how FISIM on financial intermediaries' loans and deposits would be applied to existing source data.

**Other changes.** BEA's plans for implementing the following changes that were discussed in the May 2010 article are unchanged: restructuring the financial account and investment income account in order to classify transactions by functional category; presenting direct investment on an asset/liability basis; and introducing new financial instruments identified in BPM6, including insurance, pension, and standardized guarantee schemes, and employee stock options (ESOs). Prototype tables introduced later in this article show how the restructured financial and investment income accounts will appear in detailed ITA tables.<sup>9</sup>

**Incorporate data on credit card expenditures into statistics on travel.** BEA currently estimates cross-border travel expenditures by multiplying the number of travelers by their average travel expenditures. Although this methodology is fundamentally sound, some limi-

tations of the source data have raised questions about the reliability of the statistics. BEA has taken steps to address these concerns by obtaining data on travel expenditures made using credit, debit, and charge cards from a quarterly survey of card issuers. Credit card transactions can provide data drawn from business records on a significant portion of spending by travelers abroad and in the United States by country of origin and destination. The data cover transactions abroad made with U.S.-issued cards and transactions in the United States made with foreign-issued cards. Both purchases of goods and services at merchant establishments and cash advances and withdrawals are included.

In addition, BEA conducted a survey of international travelers to determine spending by method of payment. BEA is currently evaluating the reported data and determining the methodology that will be used to estimate U.S. international travel receipts and payments. Two issues that are particularly important relate to coverage of the surveys: confirming that only travel-related transactions, which are not captured elsewhere, are covered and ensuring that transactions by all payment methods are included.

BEA is closely inspecting the reported data on expenditures made using credit, debit, and charge cards to ensure that the data do not include nontravel transactions or transactions that are captured elsewhere in the travel accounts. Nontravel transactions are transactions made via a payment card between U.S. residents and nonresidents that are not associated with international travel, such as those related to electronic commerce, workers' remittances sent via prepaid cards, or expenditures by U.S. military personnel stationed abroad. Transactions that should be covered in travel but that are already captured elsewhere include transactions by foreign students in the United States or U.S. students abroad. Because students' expenditures are estimated using other source data and methods, the travel estimates based on card transactions should exclude these transactions to avoid double-counting.

Because the new survey data cover only transactions made by a payment card between residents and nonresidents, methods and source data are needed to determine total travel-related transactions by all payment methods, regardless of how or to whom payment was made. The survey of international travelers to and from the United States provides a basis for determining travel purchases made using other payment methods (for example, cash from home or traveler's checks) and transactions for foreign travel with merchants that are resident in the traveler's home country (for example, travel agents or large hotel chains). Methodologies are being refined that will combine this information

---

9. Direct investment is presented on an asset/liability basis in the prototype tables to the extent possible, given the data that are available (see the May 2010 article for more information). The new financial account category "insurance, pension, and standardized guarantee schemes" is presented in the prototype tables, but no data are available. The granting and exercising of ESOs—which BPM6 classifies in the financial account in a functional category with financial derivatives—and the corresponding offset in the current account for compensation of employees are not reflected in the statistics in the prototype tables, because no source data or methodologies on cross-border ESOs are available.

with data collected on transactions using credit, debit, or charge cards to determine the total value of international travel transactions. Estimates based on the new source data are being examined in relation to current estimates of travel expenditures for the purpose of developing a consistent historical time series.

**Introduce quarterly international investment position (IIP) accounts.** The IMF Executive Board recently prescribed quarterly reporting of IIP statistics with a 4-year transition period as a requirement of the Special Data Dissemination Standard, to which the United States is a subscriber.<sup>10</sup> Consistent with this prescription, BEA plans to introduce quarterly IIP statistics by the end of 2012. These statistics will provide users with more frequent and more timely information on the U.S. investment position that can be compared with quarterly ITA statistics and other information on current market developments and trends. It will also improve the comparability of the U.S. IIP statistics with those of partner countries, many of whom already publish the statistics on a quarterly basis.

Quarterly positions for most types of investment can be derived from the same source data used to compile the quarterly ITAs, but estimates for some investment categories will require new methodologies. For example, producing quarterly current-cost measures of the inward and outward direct investment positions will require new estimation methods because some key source data needed to produce the estimates are only available annually. Another challenge is obtaining more timely data on positions in financial derivatives.

10. Currently IIP statistics are required to be reported annually. The IMF recommendation represents an effort to increase the timeliness of information on cross-border linkages, including IIP statistics. It is one of a number of recommendations provided by the IMF and the Financial Stability Board at the request of the Group of Twenty (G–20) finance ministers and central bank governors that are aimed at closing information gaps that came to light during the financial crisis.

## Changes in presentation

In the May 2010 article, prototypes were presented showing new presentations for two tables: table A, a summary table of high-level aggregates with an emphasis on balances and net flows, and table 1, the main international transactions table showing additional detail for the current account, the capital account, and the financial account.

In this article, prototypes for several additional tables are presented. These tables provide detail for goods, services, primary income, and portfolio investment. Like the prototypes for table A and table 1 presented last year, these prototype tables attempt to present the accounts essentially as they will appear in the new presentation that is planned for release by 2014. Whenever possible, adjustments based on current data have been made to existing statistics to match the definitions and classifications recommended by the new standards.

However, as noted earlier, many accounts will require additional methodological work or more detailed source data to fully implement BPM6 definitions and concepts. For some accounts, the required source data are not currently available, or transactions are included in existing accounts but cannot be separately identified. These are denoted “n.a.” (not available) and include items such as manufacturing services on physical inputs owned by others in the current account and insurance technical reserves, pension entitlements, and standardized guarantee schemes in the financial account.

## Prototype tables

Prototype table 1 presented in this article is largely unchanged in structure from the version presented in last year's article. However, the statistics have been updated with annual data for 2006–2009, consistent with the June 2010 annual revision of the ITAs. The new prototype tables are presented in tables 2–6, along with

### Feedback on Proposed Changes

This article informs BEA's customers about changes under consideration for the international economic accounts before the changes are officially released. The prototype tables in this article provide a preview of planned major changes to the standard presentation and descriptions of how changes in definitions and classifications will affect the accounts. These prototype tables will be maintained as a work-in-progress on BEA's Web site. For the latest updates, for a table that allows users to compare the current ITA table 1 with the prototype table

1, and for other background information on the modernization efforts, customers should refer to “Modernizing BEA's International Economic Accounts” ([www.bea.gov/international/modern.htm](http://www.bea.gov/international/modern.htm)).

In addition, BEA will continue to provide updates to its plans and information on other developments in periodic progress reports. BEA encourages its customers to look closely at the proposed changes and to provide comments and suggestions to help guide its efforts. Comments can be directed to [internationalaccounts@bea.gov](mailto:internationalaccounts@bea.gov).

annual time series statistics for the same period. These illustrative estimates, while based largely on published statistics, are intended to give users a preliminary indication of the magnitude of the changes to the accounts and should not be viewed as official international accounts statistics.

**U.S. trade in goods table.** The prototype table for trade in goods, table 2, would retain the same focus as the current ITA table 2.<sup>11</sup> However, the new table would adopt the structure recommended by BPM6, which distributes goods trade into three categories: general merchandise, net exports of goods under merchanting (for exports only), and nonmonetary gold. Additional detail on U.S. trade in general merchandise by end-use category would also be included. The reconciliation between Census-basis goods and balance-of-payments-basis goods is also retained. Current plans are to provide the geographic detail now shown in the current table 2 in an additional ITA table (a prototype of this table will be provided in the future).

**Services transactions table.** The prototype table for services transactions, table 3, would replace the current table 3 that covers private services. The new table would provide considerably more detail on services by type than the current table and would cover all services categories, not just private services.<sup>12</sup> The number of services categories published quarterly will be increased from 13 to 29. With this new presentation, BEA will make progress towards providing the level of services detail identified in the Extended Balance of Payments Classification system presented in the recently updated *Manual on Statistics of International Trade in Services*. Detail is introduced for travel, including separate identification of business and personal travel, and for transport, including separate identification of passenger, freight, and port services for both sea and air transport.<sup>13</sup> New detail for financial services and insurance services by type of service has also been added. Supplemental information on insurance premiums and losses and on services transactions by relationship to the counterparty (affiliated and unaffiliated parties)—currently shown in the

11. For the current or standard presentation of the international transactions accounts, see, for example, table A and tables 1–12 in Sarah P. Scott and Alexis N. Chaves, “*U.S. International Transactions: Fourth Quarter and Year 2010*,” SURVEY 91 (April 2011): 12–47.

12. Following BPM6 recommendations, government services are no longer shown separately from private services. Services are classified according to the type of service to the extent possible; services that are related to a government function and cannot be classified to a specific service type are included in “government goods and services, n.i.e.”

13. Some transactions derived from existing source data for travel can be identified as personal or business, but most cannot. Data from the new survey of credit card transactions may provide information that will allow business and personal travel transactions to be separately identified. See the section “Incorporate data on credit card expenditures into statistics on travel.”

other private services table—is excluded from the new presentation; current plans are to provide this information in an additional ITA table (a prototype of this table will be provided in the future).

**Primary income table.** The prototype table for primary income, table 4, would replace the current table 4, which only covers investment income. The new table would cover all the components of income, including investment income, compensation of employees, and other primary income, which includes rent and certain taxes.<sup>14</sup> Investment income is classified according to functional category—direct investment, portfolio investment, other investment, and reserve assets—and then by the type of income—income on equity and investment fund shares and interest income.

**Portfolio investment table.** The prototype table for portfolio investment, table 5, would provide information on transactions that are currently spread across several current ITA tables, including table 5, which covers all transactions with foreign official agencies, table 8, which covers long-term securities, table 9, which covers nonbank-reported assets and liabilities, table 10, which covers bank-reported assets, and table 11, which covers bank-reported liabilities.

The new table would introduce a parallel presentation for both assets and liabilities, including detailed information by instrument—equity and debt—and by maturity. Total short-term debt securities would be shown together for the first time, and U.S. liabilities to

14. BPM6 introduces other primary income as a new component of income. BEA currently does not have source data or methodologies to estimate this new component.

## Acknowledgements

BEA's International Economic Accounts Modernization and Enhancement Steering Committee made significant contributions to this article. Steering committee members include Robert E. Yuskavage, Associate Director for International Economics and Acting Chief of the Balance of Payments Division (BPD), David H. Galler, Chief of the Direct Investment Division, Ned G. Howenstein (chair), Assistant BPD Chief for Research and Analysis, Paul W. Farell, Assistant BPD Chief for Goods and Services Trade, Christopher A. Gohrband, Chief of BPD's Private Capital Branch, Maria Borga, Chief of BPD's Research Branch, and Kristy L. Howell, Special Assistant to the Associate Director for International Economics. Other BPD staff who contributed to the article include Jennifer L. Koncz-Bruner, Anne Flatness, Michael A. Mann, Elena L. Nguyen, and Kyle L. Westmoreland.

foreign official agencies and U.S. liabilities to other foreigners, which are shown separately in the current tables, would be combined.<sup>15</sup> As a result, this new table would provide a complete picture of total U.S. portfolio investment transactions with foreigners. This table would also show portfolio investment assets and liabilities by U.S. sector (part B): for assets, the sector is that of the U.S. holder, and for liabilities, the sector is that of the U.S. issuer.<sup>16</sup>

---

15. U.S. transactions with foreign official agencies will be presented in a supplemental table on BEA's Web site.

16. Much of the sector detail is currently unavailable. However, BEA expects to provide this information once new source data from the Treasury International Capital (TIC) system become available. The new TIC Form SLT, "Report of U.S. and Foreign Resident Aggregate Holdings of Long-term Securities," will provide monthly information on cross-border portfolio investment holdings of long-term securities by sector. For more information on Form SLT, see [www.treasury.gov](http://www.treasury.gov).

### Other prototype tables

The prototype tables presented in this article are part of a broader set of the detailed ITA tables that will be available when the new presentation is introduced by 2014. Prototypes for other tables that will provide detailed information for other accounts in ITA table 1, such as for direct investment, are being developed.<sup>17</sup> In addition, new presentations are being developed for the IIP accounts tables and the detailed services tables that are published in the October SURVEY. Prototypes of these new presentations, which will be consistent with the new ITA tables, will be presented in a future SURVEY article or will be available on the BEA Web site for review and comment.

---

17. In addition to a full set of new ITA tables, BEA plans to provide information for certain series shown in the current tables that will be discontinued in the new presentations, such as statistics on U.S. government transactions and transactions with foreign official agencies. These series will be provided in supplemental tables on BEA's Web site.

*Tables 1 through 5 follow.*

n.a. Data are not currently available for these transactions.

n.i.e. Not included elsewhere.

1. Statistics currently cover only insurance services.

2. Statistics currently cover only explicit charges for financial services.

3. Statistics currently include transactions for the outright sale, rights to use, and rights to distribute intellectual property.

4. Statistics currently cover only sports, performing arts, and training services.

5. Statistics currently cover only financial derivatives transactions.

6. Net financial flows less the sum of the current-account and capital-account balances (line 132 – line 125 – line 131).

7. Net acquisition of financial assets less net incurrence of liabilities plus financial derivatives (line 73 – line 102 + line 123).

n.a. Data are not currently available for these transactions.

n.i.e. Not included elsewhere

1. Statistics currently cover only postal services. Courier services are included in "Air transport, freight" (lines 11 and 62) but are not separately identifiable.

2. Total travel does not equal the sum of the components because data for "other business travel" and "other personal

travel" are not separately identifiable. Data for the two components combined are included in the total.

3. Statistics currently cover only insurance services.

4. Statistics currently cover only explicit charges for financial services.

5. Statistics currently include transactions for the outright sale, rights to use, and rights to distribute intellectual property.

6. Statistics currently cover only sports, performing arts, and training services.

n.a. Data are not currently available for these transactions.

1. Interest receipts and payments are not currently adjusted to exclude interest that represents charges for services. These charges are often referred to as implicit service fees or financial intermediation services indirectly measured. BEA

plans to develop estimates of the portion of interest that represents such charges and adjust the accounts to remove them from interest and include them in services.

2. Statistics currently cover only income attributable to insurance policyholders.

n.a. Data are not currently available for these transactions.

1. Includes U.S.-resident commercial banks and other U.S. depository institutions, such as saving and loan associations, homestead associations, cooperative banks, and credit unions, excluding the Federal Reserve System.

2. Includes U.S.-resident investment funds, insurance companies, pension funds, and other financial intermediaries, excluding deposit-taking institutions and the Federal Reserve System. Other financial intermediaries include securities

brokers and dealers, bank holding companies, financial holding companies, investment banks, credit card issuers, and finance companies.

3. Includes for-profit companies and non-profit institutions that produce goods or non-financial services.

4. Includes U.S. federal, state, and local government and municipalities.

5. U.S. Treasury securities are the predominant type of U.S. government security held by foreigners.

# Local Area Personal Income for 2009

By David G. Lenze

PERSONAL income in the United States fell in 2009, the first annual decrease in the 41-year time span covered by BEA's local area personal income statistics.<sup>1</sup> The 1.7 percent national decline is a weighted average of personal income declines in 1,740 counties, growth in 1,312 counties, and no change in 58 counties. In 2009, county personal income growth ranged from 189 percent in Slope County, ND, to -46 percent in Sully County, SD, with growth slowing in all but 95 of the nation's 3,113 counties.<sup>2</sup> Inflation, as measured by the national price index for personal consumption expenditures, was 0.2 percent in 2009.

In contrast to the decline in 2009, U.S. personal income grew 4.0 percent in 2008. County personal income growth ranged from 65 percent in Cavalier County, ND, to -38 percent in Slope County. Inflation was 3.3 percent in 2008.

The county personal income estimates presented in this article complete the successively more detailed series of data releases depicting the geographic distribution of the nation's personal income for 2009. A national estimate was released in January 2010, state estimates were released in March 2010, and metropolitan statistical area (MSA) estimates were released in August 2010. The county estimates provide the first glimpse of property income and transfer receipts in nonmetropolitan counties in 2009 and a more detailed look at the distribution of economic activity and sources of income within multicounty MSAs.<sup>3</sup>

This article discusses the patterns and sources of personal income growth and decline in 2009 with an emphasis on nonmetropolitan counties. It also takes

an in-depth look at several components of personal income, such as earnings in the oil and gas extraction industry (especially in western North Dakota), homeowner assistance payments (in the Gulf Coast counties of Louisiana and Mississippi), and countercyclical income transfers. The article concludes with a statistical portrait of four newly organized counties in Alaska and a discussion of the source data used to prepare the estimates. A box discusses alternative measures of county employment and wages.

## Nonmetropolitan Counties in 2009

Nonmetropolitan counties tend to be sparsely populated areas with a strong presence of industries that specialize in the acquisition and use of natural resources—activities such as farming and mining.

For statistical purposes, nonmetropolitan counties are those counties that are not part of an MSA. As defined by the Office of Management and Budget, an MSA has at least one urbanized area of 50,000 or more residents plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. MSAs are defined in terms of whole counties. By these criteria, BEA publishes data for 2,032 nonmetropolitan counties and 1,081 metropolitan counties in the United States.

Although the population of nonmetropolitan counties in 2009 ranged as high as 193,000 (in Sussex County, DE), population was less than 50,000 in almost 90 percent of the counties and as few as 45 in Loving County, TX. Personal income ranged from \$6.8 million in Loving County to \$9.5 billion in Litchfield County, CT, and was less than \$1.8 billion in 90 percent of the counties. Wage and salary employment was less than 22,000 in 90 percent of the nonmetropolitan counties.

Overall, the nonmetropolitan share of the nation's earnings in natural resources in 2009 was much larger than its share of the nation's earnings in other industries. Nonmetropolitan counties accounted for 10 percent of U.S. earnings, but they accounted for 34 percent of national earnings in the natural resources sector (table A). The nonmetropolitan share of manufacturing earnings (15 percent), government earnings (14 percent), and transportation earnings (13 percent) are also relatively high. In contrast, relatively little,

1. Personal income is the sum of net earnings by place of residence, property income, and personal current transfer receipts. Net earnings is the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income less contributions for government social insurance plus an adjustment to put place-of-work data on a place-of-residence basis.

2. Data for 2009 are available for 3,113 of the 3,143 counties identified by Federal Information Processing Standards (FIPS) codes. BEA combines some small counties (mostly in Virginia but also in Hawaii) with larger nearby counties. Because of recent reorganizations of Alaskan boroughs and census areas, 2008 data for three counties (Wrangell City and Borough, Petersburg Census Area, and Prince of Wales-Hyder Census Area) are not available for calculating percent change for 2008–2009. Data for another two areas (Skagway Borough and Hoonah-Angoon Census Area) are unavailable for counting the number of counties with an acceleration or deceleration in personal income growth.

3. Estimates of county compensation for 2009 were released in December 2010.

about 4 percent, of earnings in the information and professional services industries comes from nonmetropolitan counties. Those activities were concentrated in metropolitan counties.

### Growth and decline in 2008 and 2009

In 2009, the personal income decline in the nonmetropolitan portion of the United States was much smaller than in the metropolitan portion. On average, personal income fell 0.6 percent in nonmetropolitan counties and 1.9 percent in metropolitan counties (table B). In 2008, these counties grew 5.8 percent and 3.8 percent, respectively.

The milder personal income loss in nonmetropolitan counties can be accounted for by different rates of change and relative importance of the three major components of personal income (net earnings by place of residence, property income, and personal current transfer receipts). The decline in net earnings accounted for 2.7 percentage points of the personal in-

come decline in the metropolitan portion of the county and 2.5 percentage points in the nonmetropolitan portion. The decline in property income (dividends, interest, and rent) accounted for 1.2 percentage points of the decline in personal income in the metropolitan portion but only 0.8 percentage point in the nonmetropolitan portion. The declines in these two components of personal income were softened by rising personal current transfer receipts. Transfers added 1.9 percentage points to personal income growth in metropolitan counties and 2.8 percentage points in nonmetropolitan counties.

Another way to understand the milder personal income loss in nonmetropolitan counties is to compare the dollar change in the major components of personal income. In nonmetropolitan counties, the \$44 billion increase in transfer receipts (which include unemployment compensation and social security benefits) more than offset the \$40 billion net earnings decline in 2009 (table B). In contrast, in metropolitan counties the \$209 billion increase in transfers was insufficient to offset the \$287 billion decline in net earnings.

**Table A. Industrial Structure of Metropolitan and Nonmetropolitan Portions of the United States for 2009**

	Earnings by place of work (billions of dollars)		Industry's share of area's total earnings (percent)		Non-metropolitan share of national earnings (percent)

<b>Total</b> .....	<b>7,891.3</b>	<b>919.9</b>	<b>100.0</b>	<b>100.0</b>	<b>10.4</b>

1. Consists of farm; forestry, fishing, and related activities; and mining.

2. Consists of professional and technical services; management of companies and enterprises; and administrative and waste services.

3. Consists of arts, entertainment and recreation; accommodation and food services; and other services, except public administration.

### Growth and decline by industry

Nonmetropolitan counties distinguished themselves from metropolitan counties not only by the industrial composition of their earnings losses but also by the percentage of counties that continued to grow during the recession in 2009:

- Almost all of the earnings losses in nonmetropolitan counties (\$36 billion out a total of \$38 billion loss) were in farming, construction, and manufacturing (table C). In metropolitan areas, those three industries accounted for about half of the total earnings losses (\$160 billion of \$306 billion).
- Personal income grew in 889 (or 44 percent of) nonmetropolitan counties, while personal income grew in only 39 percent of metropolitan counties.

Some insight into the resilience of personal income growth in these counties during the recession is provided

**Table B. Personal Income Change by Component for U.S. Metropolitan and Nonmetropolitan Portions**

	Percent change				Contribution to percent change in personal income			Dollar change (millions)			
	Personal income	Net earnings <sup>1</sup>	Dividends, interest, and rent	Transfer receipts	(percentage points)			Personal income	Net earnings <sup>1</sup>	Dividends, interest, and rent	Transfer receipts

1. Earnings by place of work net of contributions for government social insurance and net of the residence adjustment.

by an examination of specific sources of personal income: earnings of workers in the private nonfarm sector, earnings of government employees, farm income, and transfer receipts.<sup>4</sup> In 224 of the counties with personal income growth, private nonfarm earnings grew. In another 112 counties, growth in government earnings offset declines in the private nonfarm sector so that total nonfarm earnings grew. In another 500 counties, growth in transfer receipts offset declines in nonfarm earnings.

Swings in farm income from 2008 to 2009 were large in many counties. Farming accounted for the bulk of the growth in 12 of the 20 nonmetropolitan counties with the largest percentage increases in personal income (the top 1 percent of nonmetropolitan counties) and for the bulk of the decline in 18 of the 20 nonmetropolitan counties with the largest percentage declines in personal income. The extreme personal income growth rates of Slope County, ND, (up 189 percent) and Sully County, SD, (down 47 percent) illustrate the magnitude of the variability of farm income.

## Selected Components of Personal Income

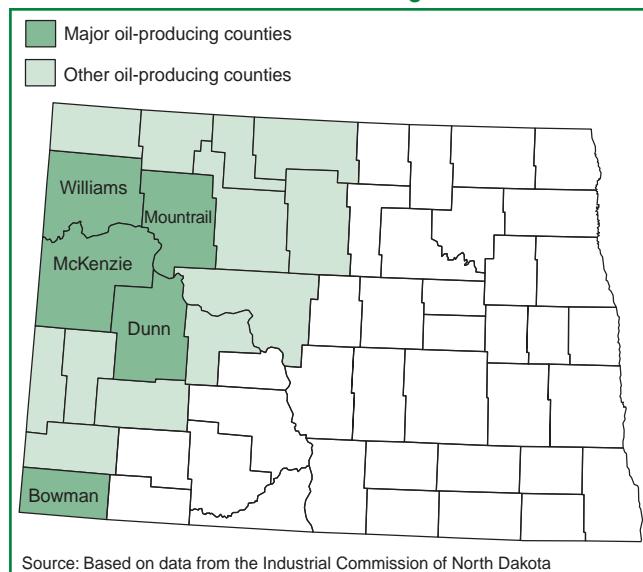

### Oil and gas extraction

Earnings in the oil and gas extraction industry fell 12 percent nationally in 2009 but were still above the level of 2007. This decline was associated with a drop in oil prices from \$93.05 per barrel in 2008 to \$58.42 per barrel in 2009.<sup>5</sup> The decline was widespread across the country with the notable exceptions of Alaska and

4. Farm income is farm earnings less employer contributions for government social insurance.

5. Average annual oil price calculated from the Weekly United States Spot Price FOB Weighted by Estimated Import Volume from the Energy Information Administration.

### Chart 1. North Dakota Oil-Producing Counties

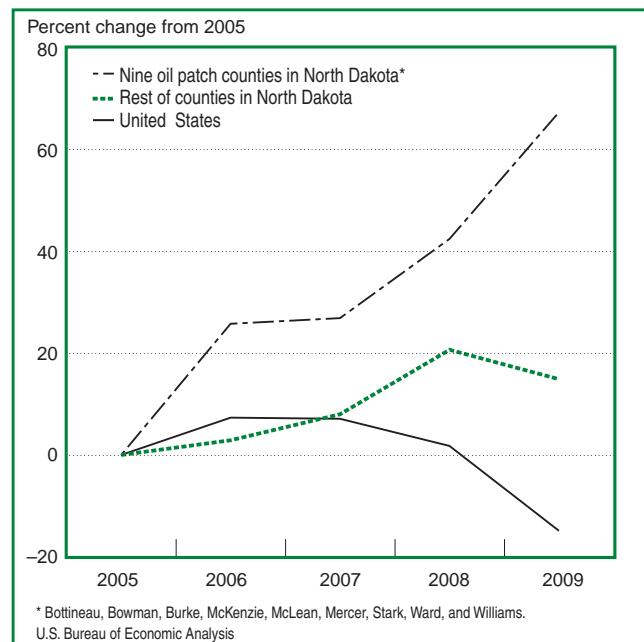

North Dakota. Earnings increased 5.6 percent in Alaska and 1.2 percent in North Dakota.

The case of North Dakota is particularly interesting because the industry in that state has recently begun developing the Bakken shale formation. The U.S. Geological Survey recently estimated that the Bakken formation contains up to 4.3 billion barrels of technically recoverable oil and industry experts think that could make North Dakota's oil production second only to Texas in a few years. In 2009, the Industrial Commission of North Dakota reported oil production in 17 western counties (the "oil patch") with about 85 percent of the oil produced in just five counties: Bowman, Dunn, McKenzie, Mountrail, and Williams (chart 1).

Earnings in the oil and gas extraction industry in North Dakota were \$127 million in 2009. Far larger, given the early stage of development of the industry, were the \$385 million of earnings in support activities for mining. In addition, development of the Bakken formation requires the services of the construction industry. Construction earnings were up 17 percent in 2009 in nine oil patch counties at the same time that construction earnings were down 4.8 percent in the rest of North Dakota and were down 16 percent for the nation (chart 2).<sup>6</sup>

6. Construction earnings are not disclosed in 1 or more years from 2005–2009 for 8 of the 17 oil patch counties in North Dakota. The earnings statistics in this paragraph are merely suggestive of the ripple effects of the development of the Bakken formation on the other industries in this region of North Dakota. A comprehensive examination of the economic impact of drilling for oil is possible with BEA's Regional Input-Output Modeling System (RIMS II).

### Chart 2. Construction Earnings in North Dakota and the United States

## Countercyclical income transfers

In many nonmetropolitan counties, legislated income transfers intended to combat the weak economy were an important part of personal income growth in 2009, as they were in 2008; however, the regional distribution of the transfers was different in each year. The American Recovery and Reinvestment Act provided income transfers of \$12.5 billion to nonmetropolitan counties in 2009, most of which were directed toward unemployed workers.<sup>7</sup> In contrast, the Economic Stimulus Act of 2008 provided income transfers of \$5.6 billion targeted towards lower income persons in the form of income tax rebates.

## Homeowner assistance payments

The 2007–2009 local area personal income estimates for Louisiana and Mississippi reflect the receipt of federal payments to rebuild residences destroyed or damaged by Hurricanes Katrina and Rita in 2005. These payments, arising from homeowner assistance programs initiated at the end of 2006, are counted as part of the property income component (dividends, interest, and rent) of personal income.<sup>8</sup> The bulk of the payments were received by persons living in counties on or near the coast. In 2009, the amounts distributed declined in most Louisiana and Mississippi counties.

Construction earnings in the primary counties receiving the assistance began falling in 2009 but are still 38 percent above 2005 in Mississippi and 36 percent above 2005 in Louisiana.<sup>9</sup> In contrast, construction earnings in all other U.S. counties are 16 percent below 2005 (chart 3).

## Data for Newly Organized Areas

Wrangell City and Borough was incorporated on June 1, 2008, as Alaska's 18th organized borough. Unlike most of the lower 48 states, Alaska is subdivided politically into boroughs that cover the entire state. Eighteen of these

7. The estimate for 2009 also includes a small amount of transfers provided under the Economic Stimulus Act of 2008.

8. Louisiana's Road Home Program and Mississippi's Homeowner Assistance Program are special housing programs financed through Community Development Block Grants from the U.S. Department of Housing and Urban Development. In personal income, this assistance is treated as a housing subsidy, a component of the rental income of persons, rather than as a transfer receipt, because owner-occupied housing is regarded as a household enterprise. A profit (net rental income) is imputed to these enterprises and defined as space rent plus subsidies less various expenses, such as net interest and taxes. County estimates of the homeowner assistance payments were based on data obtained from the state agencies administering the programs. For a detailed derivation of rental income of persons, see lines 133–140 in table 7.12 in the national income and product accounts on BEA's Web site.

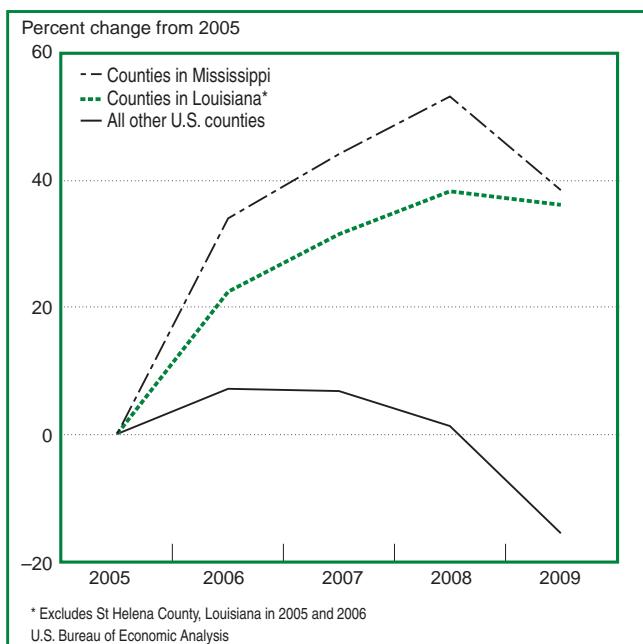

9. In Louisiana, these counties are Allen, Ascension, Beauregard, Calcasieu, Cameron, East Baton Rouge, Iberia, Jefferson, Jefferson Davis, Orleans, Plaquemines, Pointe Coupee, St. Bernard, St. Charles, St. Helena, St. James, St. John the Baptist, St. Tammany, Tangipahoa, Terrebonne, Vermilion, and Washington. In Mississippi, these counties are Hancock, Harrison, and Jackson.

boroughs are organized, and one is unorganized. For statistical purposes, BEA and other federal agencies subdivide the unorganized borough into 11 census areas. Most of Wrangell had been part of the Wrangell-Petersburg

**Table C. Percent Change and Dollar Change in Earnings by Place of Work for Metropolitan and Nonmetropolitan Portions of the United States for 2009**

**Chart 3. Construction Earnings in Primary Counties Receiving Homeowner Assistance Payments and All Other U.S. Counties**

Census Area. The remainder of that census area was renamed the Petersburg Census Area (chart 4). In addition, a small part of the new Wrangell borough is from the old Prince of Wales-Outer Ketchikan Census Area. The old Prince of Wales-Outer Ketchikan Census Area also lost some territory annexed by the Ketchikan Gateway Borough and as a consequence, has been renamed Prince of Wales-Hyder Census Area.

The new borough is relatively small compared with the average nonmetropolitan county in the United States (table D). In 2009, it had a population of 2,147 (compared with an average 24,435), 868 jobs (9,155), and personal income of \$76 million (\$767 million). Although its per capita income \$35,197 was higher than that of the average nonmetropolitan county (\$31,402), average compensation per worker was lower: \$41,285 compared with \$42,854.

Unlike nonmetropolitan counties in the lower 48 states, Wrangell had no farm earnings in 2009. Its government sector was large, accounting for 45 percent of earnings. In the average nonmetropolitan county, the government sector accounted for 24 percent of earnings, about half as much as in Wrangell.

Starting with data for 2009, BEA will publish separate estimates for (1) Wrangell City and Borough, (2) Petersburg Census Area, and (3) Prince of Wales-Hyder Census Area. For earlier years, data only for Wrangell-Petersburg Census Area and Prince of Wales-Outer Ketchikan Census Area are available.

## Source Data

The primary 2009 county-level data used by BEA to prepare the estimates of local area personal income presented in this article were wage and salary data from the Bureau of Labor Statistics, benefits paid by the Social Security Administration, and Medicaid payments from state departments of social services. In addition, tabulations of 2008 federal income tax returns

from the Internal Revenue Service were used, primarily for dividends, interest, and proprietors' income.<sup>10</sup>

Farm cash receipts, government payments, crop production, and livestock inventories by county for 2009 from the Department of Agriculture were used in the estimation of local area farm income.

Number of personnel by county for 2009 from the Department of Defense was used to estimate military earnings.

New 2009 county-level data from the Consolidated Federal Funds Report and Federal Assistance Award Data System were used to prepare estimates of some components of personal current transfer receipts.

Because current county-level Medicare benefits were not available, prior year estimates were extrapolated to 2009 using the change in county Medicare enrollment and forced to sum to the state total. In addition, state estimates of a few small components of personal income were allocated to counties on the basis of 2009 population data from the Census Bureau.

10. For complete details about the estimation methodology and data sources, see *Local Area Personal Income and Employment Methodology* on BEA's Web site.

(D) Data are suppressed to avoid the disclosure of confidential information but are included in total earnings.  
(L) Less than \$50,000, but the estimate is included in total earnings.

1. The statistics for the average nonmetropolitan county are calculated from the estimates of the U.S. nonmetropolitan portion. That portion is the sum of 2,032 counties.

## Chart 4. Southeast Alaska

### Alternative Measures of County Employment and Wages

Three widely used measures of county employment and wages by place of work are (1) employment and payroll in the *County Business Patterns* (CBP) series from the Census Bureau, (2) employment and wages from the Quarterly Census of Employment and Wages (QCEW) program from the Bureau of Labor Statistics (BLS), and (3) wage and salary disbursements and employment from the Bureau of Economic Analysis (BEA). These measures differ in source data and coverage.

The CBP data are derived from Census Bureau business establishment surveys and federal administrative records. The QCEW data are tabulations of monthly employment and quarterly wages of workers who are covered by state unemployment insurance programs or by the unemployment insurance program for federal employees.<sup>1</sup> The BEA estimates of employment and wages are primarily derived from the BLS data; the estimates for industries that are either not covered or not fully covered in the QCEW are also based on supplemental data from other agencies, such as the Department of Defense, the U.S. Department of Agriculture, and the Railroad Retirement Board.

The coverage of the Census Bureau data differs from that of the BLS data primarily because the Census Bureau data exclude most government employees and because the BLS data cover civilian government employees.<sup>2</sup> The CBP data also exclude several private industries that are partly covered by the QCEW: crop and animal production; rail transportation; insurance and employee benefit funds; trusts, estates, and agency accounts; and private households. However, the CBP data cover the employees of educational institutions, membership organizations, and small nonprofit organizations in other industries more completely than the BLS data.<sup>3</sup> In addition, the Census Bureau reports employment only for the month of March; the BLS employment data are quarterly and annual averages of monthly data.

In 2001, both BLS and BEA began to include employees of Indian tribal councils in local government. These employees were previously included in the relevant private industries.<sup>4</sup> In the Census Bureau data, these employees are still classified in private industries.

BEA estimates of employment and wages differ from the BLS data because BEA adjusts the estimates to account for

employment and wages that are not covered or that are not fully covered by the unemployment insurance programs. BEA adds estimates of employment and wages to the BLS data to bridge small gaps in coverage for nonprofit organizations that do not participate in the unemployment insurance program (in several industries), for students and their spouses employed by colleges or universities, for elected officials and members of the judiciary, for interns employed by hospitals and by social service agencies, and for insurance agents classified as statutory employees. In addition, BEA uses supplemental source data to estimate most, or all, of the employment and wages for the following: farms, farm labor contractors and crew leaders, private households, private elementary and secondary schools, religious membership organizations, rail transportation, and military. BEA also adjusts for employment and wages subject to unemployment insurance, but not reported by employers. Other adjustments to wages include estimates for unreported tips, judicial fees paid to jurors and witnesses, compensation of prison inmates, and marriage and license fees paid to justices of the peace.<sup>5</sup>

The Census Bureau released 2008 data for total employment and payrolls for counties on its Web site on July 29, 2010. BLS released county data on total employment and average weekly pay for 2009 on its Web site on July 7, 2010. BEA released preliminary estimates for 2009 and revised estimates for 2007–2008 of total wage employment and total wage and salary disbursements for counties on its Web site on December 21, 2010.

5. For a detailed description of the sources and methods used to prepare the estimates, go to [www.bea.gov/regional/methods.cfm](http://www.bea.gov/regional/methods.cfm).

### National Estimates of Wages and Salaries in the BEA County Estimates and Payrolls and Wages From the Census Bureau and BLS

[Billions of dollars]

	2007	2008	2009
Total payroll, Census Bureau .....	5,027.0	5,131.0	n.a.
Plus: Differences in coverage:			
Civilian government wages, BLS <sup>1</sup> .....	951.2	996.6	n.a.
Other differences, net <sup>2</sup> .....	39.9	14.6	n.a.
Equals: Total wages, BLS .....	6,018.1	6,142.2	5,859.2
Plus: Adjustments by BEA:			
For unreported wages and unreported tips on employment tax returns...	95.7	91.4	89.2
For wages and salaries not covered or not fully covered by unemployment insurance:			
Private .....	188.9	198.5	192.9
Government .....	113.2	121.3	126.8
Other adjustments <sup>3</sup> .....	-1.4	-1.9	-1.4
Equals: Wage and salary disbursements, BEA <sup>4</sup> .....	6,414.5	6,551.4	6,266.7

1. BLS wages were adjusted to remove the wages of Indian tribal councils because these data were already included in the Census Bureau's total payroll data.

2. Includes differences of coverage in private education, membership organizations, and government.

3. Consists of adjustments to the wage and salary estimates to remove employees of U.S. companies stationed overseas and to reflect updates to QCEW data.

4. The national total of county estimates of wage and salary disbursements consists of the earnings of persons who live in the United States and of foreign residents working in the United States. The BEA regional total differs from the national estimate; see the box "Personal Income in the NIPAs and State Personal Income," SURVEY OF CURRENT BUSINESS 90 (October 2010): 104.

Note. Details may not equal totals because of rounding.

n.a. Not available

Nathan Patterson

1. The QCEW data account for 93 percent of BEA's wages and salaries.

2. The Census Bureau data cover only those government employees who work in government hospitals, federally chartered savings institutions and credit unions, liquor stores, and wholesale liquor establishments, and university publishers. The BLS data in most states exclude state and local elected officials, members of the judiciary, state national and air national guardsmen, temporary emergency employees, and employees in policy and advisory positions.

3. The BLS data do not cover certain religious elementary and secondary schools, because a Supreme Court decision exempts some of these schools from unemployment compensation taxes. The BLS data also exclude college students (and their spouses) who are employed by the school in which they are enrolled and student nurses and interns who are employed by hospitals as part of their training. In half of the states, the BLS data only include nonprofit organizations with four or more employees during 20 weeks in a calendar year.

4. For example, employees of casinos owned by tribal councils were included in "Amusement, Gambling, and Recreation Industries."

### Acknowledgments

The annual estimates of local area personal income were prepared by the Regional Income Division under the direction of Sharon C. Carnevale, Chief. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. The preparation of the estimates was a division-wide effort.

The estimates of nonfarm wages and salaries and supplements to wages and salaries were prepared by the Regional Compensation Branch under the supervision of John A. Rusinko, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, Tina C. Highfill, John D. Laffman, Nathan D. Patterson, and James M. Scott. Contributing staff members were Peter Battikha, Michael L. Berry, Susan P. Den Herder, Alexander I. Dumer, Terence J. Fallon, Michael W. Jadoo, Russell C. Lusher, Paul K. Medzerian, Nathaniel R. Milhous, Michael A. Reid, Ross A. Stepp, and Thomas M. Wiederhold.

The estimates of nonfarm proprietors' income, property income, personal current transfer receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional

Income Branch under the supervision of Mauricio Ortiz, Chief. Major responsibilities were assigned to Toan A. Ly, Brian J. Maisano, Lisa C. Ninomiya, and James P. Stehle. Contributing staff members were Suet M. Boudhraa, Carla R. Jenkins, W. Timothy McKeel, Linda M. Morey, Anand N. Seeram, Joseph L. Stauffer, and Troy P. Watson.

The estimates of farm wages and salaries, farm supplements to wages and salaries, and farm proprietors' income were prepared by the Farm Income and Employment Section under the supervision of James M. Zavrel, Assistant to the Division Chief. Major responsibilities were assigned to Carrie L. Litkowski. Contributing staff members were Daniel R. Corrin, Michelle A. Harder, and Nicole S. McCall.

The public use tabulations and data files were assembled and the tables were prepared by the Data and Administrative Systems Group. Major responsibilities were assigned to Michael J. Paris and Callan S. Swenson. Contributing staff members were Brooke N. Huotari, Jeffrey L. Newman, Monique B. Tyes, Melanie N. Vejdani, and Jonas D. Wilson.

### Data Availability

This article presents summary estimates of personal income and per capita personal income for 2007–2009. More detailed estimates for 1969–2009 are also available.

The following annual estimates for counties, metropolitan statistical areas, micropolitan statistical areas, metropolitan divisions, combined statistical areas, and BEA economic areas are available at [www.bea.gov/regional/reis/](http://www.bea.gov/regional/reis/):

- Personal income, per capita personal income, and population for 1969–2009
- County income and employment summary (featuring the derivation of personal income, including nonfarm personal income, and employment totals for a continuous time series) for 1969–2009
- Compensation of employees by industry by North American Industry Classification System (NAICS) subsectors for 2001–2009 and by Standard Industrial Classification System (SIC) two-digit industries for 1998–2000
- Personal income by major source and earnings by NAICS subsectors for 2001–2009 and by SIC two-digit industries for 1969–2000
- Full-time and part-time employment by NAICS sectors for 2001–2009 and by SIC division-level industries for 1969–2000

- Regional economic profiles (featuring a selection of personal income and employment data) for 1969–2009
- Personal current transfer receipts by major program for 1969–2009
- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and for measures of farm income) for 1969–2009
- The counties with the highest and lowest per capita personal incomes in 2009
- Total wage and salary disbursements, total wage and salary employment, and average wage and salary disbursements per job for 1969–2009
- Gross commuters' earnings flows for 1990–2009
- BEARFACTS, a narrative about an area's personal income that uses current estimates, growth rates, and a breakdown of the sources of personal income

The local area personal income estimates are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA to disseminate the estimates in their states. For a list of the BEA User Group on BEA's Web site, go to [www.bea.gov/regional/docs/usergrp.cfm](http://www.bea.gov/regional/docs/usergrp.cfm).

For more information, call BEA's Regional Economic Information System at 202–606–5360, fax 202–606–5322, or e-mail [reis@bea.gov](mailto:reis@bea.gov).

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of

source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change from the preceding period was calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It

differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

3. Virginia combination areas consist of one or two independent cities with populations of less than 100,000 combined with an adjacent county. The county name appears first, followed by the city name(s). Separate estimates for the jurisdictions making up the combination areas are not available.

## Research Spotlight

# Regional Price Parities by Expenditure Class, 2005–2009

By Bettina H. Aten, Eric B. Figueroa, and Troy M. Martin

PRICE indexes are commonly used to measure price level differences between time periods; the consumer price index (CPI), published by the Bureau of Labor Statistics (BLS), is among the better known examples of these temporal measures of inflation. Less common are price indexes that measure price level differences between one place and another. These spatial price indexes are less common, in part because the methodology and sampling requirements for the two measures differ in important ways. Fortunately, advances in regional analysis and in the techniques used in estimating period-to-period indexes, such as hedonic regressions, are applicable to the estimation of place-to-place indexes.

This article describes an update to the method developed by the Bureau of Economic Analysis (BEA) to create measures of regional price level differences. Percent differences in regional price levels are called regional price parities (RPPs).

The main difference between a temporal index and the price parities described here is that the former measures changes in price levels across different time periods for one specific place, while the latter captures differences in price levels across various places for one specific time period.

RPPs have several applications. They can be used to compare price levels across different geographic areas, such as states or metropolitan areas. For more information on such comparisons, see the box “How to Interpret Regional Price Parities.” Another important application of RPPs is to adjust measures of income

and output for price level differences. This provides users with a better sense of differences in quantities, also known as volume differences, because the price level differences have been removed to the extent possible (Schreyer and Koechlin 2002). The “Selected Results” section below includes discussion of using the RPPs to adjust regional measures of per capita personal income published by BEA.<sup>1</sup>

BEA, in a joint project with BLS, first estimated regional price parities for 38 metropolitan and urban areas of the United States for 2003 and 2004 (Aten 2005, 2006). These areas, for which BLS produces the CPI, represent about 87 percent of the total population. The method was expanded to cover the remaining nonmetropolitan portions of each state, and estimates for 2005 and 2006 were reported in the SURVEY OF CURRENT BUSINESS in November 2008 (Aten 2008; Aten and D’Souza 2008).

The estimates in this article differ from previously published prototype estimates in a number of important ways. They incorporate the recently released 5-year American Community Survey (ACS) from the Census Bureau, which includes rural areas; they use updated expenditure data that reflect a regional distribution of rural weights; and they parallel the rolling

1. Annual income data for 2005 to 2009 are adjusted using a single RPP covering the 5-year period. Although the RPPs do not vary across the 5-year period, the ratio of unadjusted to adjusted incomes does vary slightly. This is a result of rebalancing so that for each year, total unadjusted incomes across geographic areas equal the sum of RPP-adjusted incomes across the areas. The adjustments are relatively minor as the balancing factors are close to one.

### How to Interpret Regional Price Parities (RPPs)

RPPs compare the price level of a geographical region (such as a state or metropolitan area) with the total national average price level over all reference areas. The national price level is 100. The price level of the comparison area is expressed as a percentage of the national average price level. For example, the price level of all goods and services in California is about 15 percent higher (114.8 /100) than the national average (table 2). We can also use the RPPs to compare two areas by examining their RPP ratio. While the price level in California is high when compared with the national average, it is about 1.4 percent lower than in the state of New York (114.8 /116.4).

We can also compare price levels across regions within expenditure categories. Education services (including college tuition) are higher in states such as New York (125.8) and Maryland (134.6) but lower in Florida (82.6) and Kansas (83.3). Furthermore, we can compare the relative cost of education services to goods (such as college textbooks) within an area. The price level of education services relative to goods in Maryland ( $1.3 = 134.6/104$ ) is also higher than in Kansas ( $0.8 = 83.3/99.3$ ), where education services are relatively less expensive than goods. The overall RPP for the education services category (100.2) is the average price of education services in all areas relative to the price of all other expenditures at national prices.

multiyear average of the ACS that begins in 2005–2009 and continues next year with 2006–2010 and so forth. In addition, RPPs will be available on an experimental basis for expenditure classes such as food, apparel, recreation, transportation, housing, education, medical, and other goods and services as well as for rents.

The remainder of this article is organized as follows. First, the article discusses the 2005–2009 RPP estimates and the results of their application to adjusting measures of income. Second, the article explains the updated, two-stage methodology used to estimate the RPPs. Finally, the article discusses areas of future research.

## Selected Results

### States

Table 1 shows RPPs and unadjusted and adjusted per capita personal income for 50 states and the District of Columbia. In 2005–2009, South Dakota had the lowest price parity of all states at 84 percent of the national

average. Kentucky, Missouri, North Dakota and West Virginia were the other four states with the lowest price parities. Over the same period, Hawaii had the highest price parity, 19 percent higher than the national average. California, Connecticut, New Jersey and New York joined Hawaii as the five states with the highest price parities.

The range between the highest and lowest state per capita incomes shrinks when the data are adjusted using regional price parities. In 2009, the unadjusted range was \$38,443. After adjustment, that figure shrinks 26 percent to \$28,504.

State rankings in terms of per capita personal income shift when comparing unadjusted and adjusted data. In general, states with the lowest RPPs saw the largest increases in rank. While South Dakota's unadjusted per capita income fell in the middle of the distribution, after adjusting for its comparatively low price level, it had the fifth highest per capita personal income among all states in 2009.

1. PCPI is calculated using preliminary population estimates.

Note. Adjusted results are balanced to ensure that the sum of nominal income across states equals the

sum of adjusted incomes across states. The annual balancing factors for states from 2005 to 2009 are 0.99780, 0.99721, 0.99709, 0.99797, 0.99846, respectively.

States with the highest RPPs saw the largest declines in rank. Hawaii's unadjusted per capita income fell in the top third of the distribution; however, after adjusting for its relatively high price level, it dropped to the fifth-lowest among all states in terms of per capita personal income in 2009. Despite its inclusion among the five states with the highest RPPs, Connecticut saw only a slight drop in its 2009 rank, from second to third highest on an unadjusted and adjusted basis, respectively. The slight drop was due to the state's relatively high level of per capita personal income, which was 40 percent higher than the national average in 2009.

Our results show that the RPPs vary systematically with respect to services and goods: areas with higher overall RPPs tend to have a higher RPP for services than for goods, while areas with lower overall RPPs tend to have a lower RPP for services than for goods. This pattern is seen in RPPs for states (table 2), metropolitan, micropolitan and rural areas (see table 3 on the next page), and BLS index areas (see table 4 on

page 78).

Table 2 summarizes the overall 5-year RPP by state and the RPP specific to each expenditure class for goods and services in nine categories: apparel, education, food, household, medical, recreation, transportation, rent, and other. To compare the price levels of two areas, examine the ratio of the two. For example, the average price level in New York is 1.4 times higher than that in South Dakota (116.4 / 83.8).

The range of area price levels varies by expenditure category. In general, services tend to have a broader range of price level differences than goods. By expenditure category, rents varied the most across the states, with the average price level in Hawaii being 2.2 times higher than in West Virginia (146.0 / 65.8). Transportation goods (comprising new and used vehicle purchases) varied the least, with most states being close to the national price average; California (104.7) had the highest average price level and South Dakota (93.3) had the lowest.

## Metropolitan, micropolitan, and rural areas

Table 3 summarizes RPPs by three geographical categories (metropolitan, micropolitan, and rural) as well as for nine expenditure classes of goods and services within those areas.<sup>2</sup>

**Table 3. Regional Price Parities for Metropolitan, Micropolitan, and Rural Areas, by Expenditure Class, 2005–2009**

All classes.....	100.8	103.8	94.9	84.3	92.6	79.5

Metropolitan area price levels are 1.2 times higher on average than rural areas ( $102.8 / 84.6$ ). Additionally, as these economic areas become less rural and more urban, services by expenditure class tend to become more expensive relative to goods. For example, the price level ratios of transportation services to goods in rural, micropolitan, and metropolitan areas were 0.92, 0.94, and 1.02, respectively. One category that defies this tendency is medical services, including visits to physicians, dentists and other professionals. While the RPPs of medical goods such as over-the-counter drugs are lower in rural and micropolitan areas, they are relatively constant across the three geographic definitions for medical services, with metropolitan areas having a slightly lower price level (98.9) than in micropolitan (101.3) and rural (100.2) areas.

## Detailed metropolitan areas

Table 5 (page 83) shows metropolitan area per capita personal income adjusted by RPPs for 2005–2009. Over this period, Jefferson City, MO, had the lowest price parity at 79 percent of the national average. Metropolitan areas with the lowest RPPs also include Jonesboro, AR, Cape Girardeau-Jackson, MO-IL, Morristown, TN, and Danville, IL. Over the same period, Bridgeport-Stamford-Norwalk, CT, had the highest RPP, which was 24 percent higher than the national average. Metropolitan areas with the highest RPPs also

2. A metropolitan area is defined by the Office of Management and Budget as one or more counties with a high degree of social and economic integration, with a core urban population of 50,000 or more. Micropolitan areas have an urban core population of less than 50,000 but more than 10,000, and the remaining areas are rural.

include San Jose-Sunnyvale-Santa Clara, CA, San Francisco-Oakland-Fremont, CA, New York-Northern New Jersey-Long Island, NY, and Santa Cruz-Watsonville, CA.

For metropolitan areas, the range between the highest and lowest per capita incomes shrank when these data were adjusted using RPPs. In 2009, the unadjusted range was \$54,258. After adjustment, the figure shrank 29 percent to \$38,510.

Metropolitan area rankings of per capita personal income change when comparing unadjusted and adjusted data. Among all metropolitan areas in 2009, Jefferson City, MO, increased the most. In 2009, the area increased from the second quartile in terms of unadjusted per capita personal income to the top quartile on an adjusted basis.

The five metropolitan areas with the highest RPPs were not among the areas with the largest declines in rank when comparing adjusted and unadjusted per capita personal income. For example, the area with the largest RPP, Bridgeport-Stamford-Norwalk, CT, only experienced a slight drop in its 2009 rank, from first on an unadjusted basis to third on an adjusted basis. The slight decrease is due to the area's relatively high level of per capita personal income, which was 81 percent higher than the national average in 2009.

Among all metropolitan areas in 2009, Poughkeepsie-Newburgh-Middletown, NY, experienced the largest decline in rank when comparing unadjusted and adjusted per capita personal income. The area dropped from the top quartile of metropolitan areas in terms of unadjusted per capita personal income to the bottom quartile on an adjusted basis.

## Overview of the Methodology

### First stage

**Hedonic adjustment.** The BEA estimation begins with the individual price observations used in the CPI. The CPI collects price quotes for hundreds of consumer goods and services, ranging from new automobiles to haircuts, as well as price information on rents and owners' equivalent rents. There are more than 1 million price quotes observed each year, which are organized into eight groups of goods and services: housing excluding rents, transportation, food, education, recreation, medical, apparel, and other goods and services. Rents and owners' equivalent rents are treated separately and discussed in the following section.

Each of the eight groups is subdivided into categories termed "item strata," such as major appliances, and then into more detailed categories termed "elementary level items (ELIs)," such as refrigerators

and freezers. Some ELIs are further subdivided into clusters. A full listing of item strata, ELIs and clusters can be found in "CPI Requirements of CE" by William Casey (2010).

In cooperation with BLS, we estimate hedonic regression models that take into account differences in characteristics of the goods and services, such as differences in packaging, unit size, and type of outlet where they are sold.

We derive approximately 150 individual hedonic regressions for each year at the most detailed level possible, subject to the data.<sup>3</sup> The regressions cover the 75 most important item strata in terms of their overall contribution to total expenditures. These item strata account for approximately 85 percent of total expenditures.<sup>4</sup>

**Rents and owners' equivalent rents.** Rents and owners' equivalent rents account for 30 percent of overall consumer expenditures.<sup>5</sup> As a result, the regression models for these two categories will have the largest impact on the overall price levels. An analysis of this sensitivity is given in Aten (2005). Because of their importance, regressions that account for differences in characteristics of rents and owners' equivalent rents require a more sophisticated treatment than the regressions described above for other goods and services.<sup>6</sup>

Characteristics used in the regressions of rents include the timing of the collection cycle and the classification of each observation as a rental or as an owners' equivalent rental. In addition, numerous housing characteristics are available, including structure type, number of rooms and bathrooms, utilities, parking, air conditioning, rent control status, length of occupancy, and approximate age of the unit.

As described above, relative price levels are obtained from hedonic regressions for the top 75 item strata and from the detailed regressions for rents and owners' equivalent rents. For the remaining item strata, we estimate relative price levels using a short cut approach called a weighted country product dummy method.<sup>7</sup> This is equivalent to a weighted geometric mean across

3. Details of a hedonic regression for an ELI are available in Aten (2005).

4. We use the term "expenditures" to refer to the cost weights associated with each item and each area. Cost weights are derived from the Consumer Expenditure Survey (CE) but are adjusted internally by BLS for use with CPI price data and do not match exactly the CE distributions which are published every two years.

5. Owners' equivalent rents (also referred to as rental equivalence) are estimates of the amount a homeowner would pay to rent, or would earn from renting, his or her home in a competitive market. For more information, see [www.bls.gov/cpi/cpifact6.htm](http://www.bls.gov/cpi/cpifact6.htm).

6. See Moulton (1995).

7. For information about the weighted country product dummy method, see Summers (1973), Sergeev (2004), Silver (2004), Diewert (2002), Rao (2004), and Selvanathan and Rao (1994).

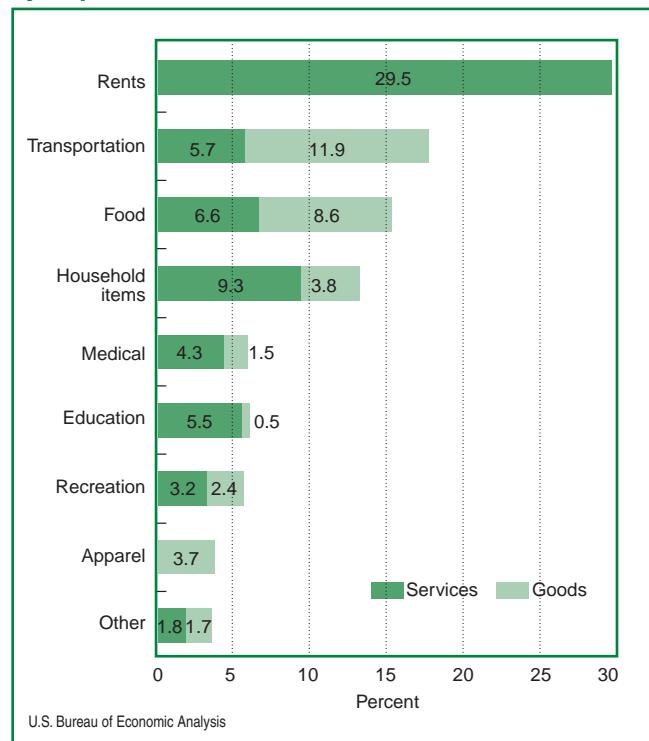

all ELIs within an item stratum when there are no missing observations.

**Multilateral aggregation.** The price observations and the relative price levels undergo an outlier checking procedure called Quaranta analysis, modeled after the methods used in the OECD, Eurostat, and in the International Comparison Program of the United Nations and World Bank. For each year of data, three rounds of Quaranta analysis were completed, removing approximately 1.3 percent of the observations.

Once the Quaranta analysis has been completed, we take the individual item strata price levels for each of the 38 areas and aggregate them into 16 expenditure classes: food (at home and away-from-home), apparel, education (goods and services), medical (goods and services), housing (goods and services), recreation (goods and services), transport (goods and services), other (goods and services), and imputed and actual rents.

Chart 1 shows the percentage of all expenditures in each class, categorized by goods and services. Goods account for about one-third of expenditures, while services are two-thirds, but the number of item strata in each grouping is reversed: only one-third for services (68 out of 207) and two-thirds for goods (139 out of 207).

**Chart 1. Share of Household Expenditures by Expenditure Class**

The detailed item strata price levels for the 38 geographic areas are aggregated to the 16 expenditure classes using the Geary multilateral formula below.<sup>8</sup>

#### Geary Aggregation

$$P_{\text{Geary}}^c = \frac{\sum_{n=1}^N p_n^c q_n^c}{\sum_{n=1}^N \pi_n q_n^c}$$

$$\pi_n = \sum_{c=1}^M \frac{p_n^c}{P_{\text{Geary}}^c} \frac{q_n^c}{\sum_{d=1}^M q_n^d}$$

$P_{\text{Geary}}$ =	Geary multilateral price index
$p$ =	item price
$q$ =	notional quantity = $(pq)/p$
Subscript $n$ =	1 ... N indicates items
Superscript $c, d$ =	1 ... M indicates areas

One advantage of the Geary system is that it is additive, meaning that we can obtain price indexes at any level of aggregation and that they are consistent with the overall index. This is done by dividing the unadjusted expenditures( $pq$ ) by the adjusted expenditures( $\pi q$ ), where  $\pi$  is the reference price defined as the average price level across all areas for each item  $n$ .

Table 4 summarizes the first-stage multilateral results. It shows the average RPP across the 5 years for two categories of expenditures: goods and services, including rents. The total RPP across all items is also shown.

The range of RPPs for services is much greater than for goods, as might be expected, and there is an inverse relationship between the two with respect to the total RPP; that is, the RPP for services is higher than the RPP for goods in the areas with higher total RPPs but lower than the RPP for goods in the areas with lower total RPPs. New York City, for example, has the highest total RPP of 136.3, with a goods RPP of 107.3 and a services RPP of 149.8. The Midwest nonmetropolitan urban areas have the lowest total RPP of 79.3, with a goods RPP of 86.3 and a services RPP of 75.5.

8. The notations and formulas are from Deaton and Heston (2010).

#### Second stage

**BLS index area and states and metropolitan areas.** To extend the study beyond these 38 areas to states and metropolitan areas, it is necessary to obtain an estimate of price levels for the broad BLS index areas and price levels for the rural areas not covered by the CPI. Once again, we separate the process into two stages: estimates of rents and estimates of all other goods and services.

With respect to rents, the only comprehensive price level measure available for both the broad BLS index areas and for the rural areas not covered by the CPI is in the housing data from the 5-year American Community Survey (ACS) released by the Census Bureau in December 2010. The ACS consists of nearly 8

**Table 4. Regional Price Parities for BLS Index Areas, 2005–2009

1. Primary sampling unit. See "Consumer Price Index" in *BLS Handbook of Methods* (June 2007): 12–17; [www.bls.gov](http://www.bls.gov).

2. These correspond to Bureau of Labor Statistics (BLS) area definitions used in the CPI and are not the same as metropolitan statistical areas. For more information on BLS area definitions, see chapter 17 in the *BLS Handbook of Methods*.

million observations on housing units for 2005–2009. Approximately 3 million of these are for rents, enabling us to make estimates at a very detailed level of geography, including for rural versus urban portions of counties.

We estimate a hedonic regression for rents from the ACS with the following characteristics: the number of rooms and bedrooms and the age and type of housing unit. In our previous work, we included the housing cost data for owners, and ran separate regressions for those with mortgages and those without (Aten and D’Souza 2008). However, since the ACS does not collect information on the length of mortgage loans or the applicable interest rates, we focus only on the rental price levels. The rents in the ACS and the rents in the BLS are conceptually the same, but owner-cost levels in the ACS are different conceptually from the owner-equivalent rents of the BLS.<sup>9</sup>

For the remaining goods and services other than rents, we assume that the within-area price levels are the same as the average for the area; that is, if a BLS index-area is made up of  $n$  counties, the price level for each of the  $n$  counties will be the same. This applies to all counties within an area, including rural counties.

Of the 38 index areas, 31 are metropolitan areas made up of predominantly urban counties, 4 areas are denoted as “small metropolitan areas,” and 3 areas are

denoted as “urban, nonmetropolitan areas.” The latter two groups may have rural counties or parts of counties that are sparsely populated and would thus fall under Census Bureau-designated rural tracts.

Although we did not have any price level information for these rural counties or for the parts of counties that are rural, BLS provides a distribution of expenditure weights for four broad rural regions, corresponding to the Northeast, Midwest, South and West.

We distribute the expenditure weights to counties within an index area based on a uniform per capita expenditure distribution; that is, the per capita expenditure distribution in the index area is assumed to be equal to the per capita expenditure distribution in the counties within that area, with the exception of the rural counties. For rural counties, we use the rural regional distribution and assume that the per capita expenditure distribution in each region is equal to that of the rural counties within the region. In other words, we allocate expenditure weights to the counties based on the ratio of their populations to the total population of the index area or rural region.

**Multilateral aggregation.** Once the price levels and weights by all expenditure classes have been allocated to all the counties in each year, we reaggregate them up to (1) the states and to (2) the metropolitan areas as defined by the Office of Management and Budget. This reaggregation is simply the weighted geometric mean of the counties within states and metropolitan areas.

At this stage, we substitute the BLS rents price levels with the ACS rents price levels. The latter are more robust because they are derived directly at the state and metropolitan area levels and are not weighted geometric means built up from the 38 allocated index areas.

Thus, we have a stacked panel of five years of annual data, one each for states and for metro areas, with price levels and weights for the 16 major expenditure classes. The panels are the final inputs to a multilateral Geary aggregation that yields the overall regional price parity (RPP). These multiyear RPPs cover the 5-year period; RPPs are not developed for individual years.

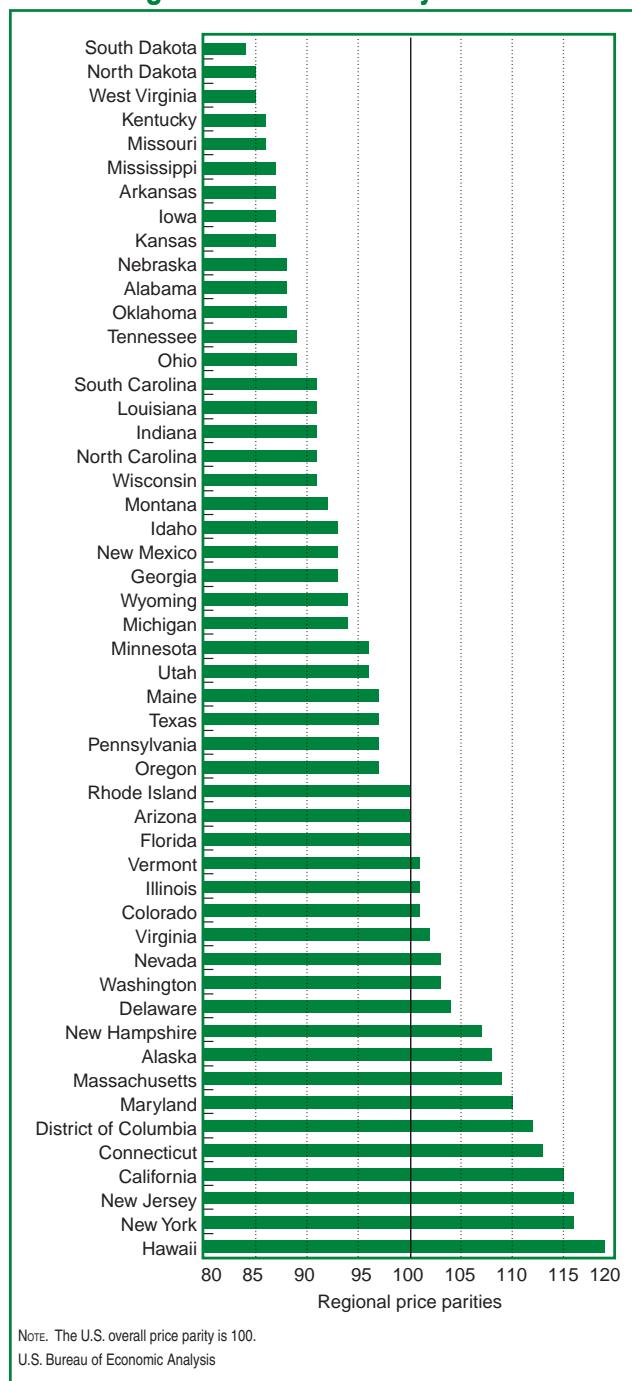

The state-level RPP estimates are summarized in chart 2. The lowest RPP is for South Dakota at 84, and the highest is for Hawaii at 119. New York and New Jersey are close behind at 116, and California is ranked fourth at 115. West Virginia and North Dakota join South Dakota on the lower end of the scale with RPPs of 85. (The RPP for the entire United States is 100).

### Acknowledgments

Part of the work reported here is based on a 5-year agreement with the Bureau of Labor Statistics (BLS) to access consumer price index data in the Office of Prices and Living Conditions. We would like to thank Walter Lane, Frank Ptacek, Josh Klick, Robert Cage and Lyubov Rozental in the Consumer Price Indexes program, at BLS as well as Roger D’Souza at BEA for their technical and programmatic assistance in this and in previous versions of our estimates. Another important part of the work was based on the five-year American Community Survey housing data, and we thank the support of Trudi Renwick in the Poverty Statistics Branch and David Johnson in the Housing and Household Economic Statistics Division of the Census Bureau.

## Chart 2. Regional Price Parities by State

## Future Research

An important extension of this work would be to explore the development of RPPs that reflect more than consumption goods and services, such as investment and government price level differences. In international comparisons, the price level of consumption is often a good approximation for gross domestic prod-

uct price levels from the expenditure side because the relative prices of investment and government change systematically in opposite directions when measured across per capita incomes. It is not clear whether this pattern would be found across states or metropolitan areas within a country, but it seems worth examining. One approach to this would be to see if there is a geographic pattern in the prices of inputs and outputs related to construction, producers' durable equipment, and government compensation.

Another extension would be to use additional indicators of housing costs, perhaps creating a hybrid approach using BLS owner-equivalent data, ACS owner cost data, and other sources of asset-based estimates of housing. Since rents and owners' equivalent rents are jointly the most important expenditure heading, it is critical to make explicit the commonalities and differences between the two sources of data.

A separate but important issue with respect to rents is how to reconcile the personal consumption expenditure (PCE) weights in the national accounts with the expenditure weights in the Consumer Expenditure Survey (CE). The national share of rents out of total expenditures is significantly lower in the PCE than in the CE. Although the PCE does not have a regional distribution of weights, we would like to analyze whether redistributing that share to all other expenditure categories would affect the RPPs systematically.

Lastly, we made a strong, albeit transparent, assumption about the price levels of all other goods and services excluding rents: that they are uniformly distributed across counties within a BLS index area. For example, the food price level in Jefferson County (WV), in Prince George's County (MD), and in Alexandria City (VA), are assumed to be the same as the average in the entire Washington-DC-MD-VA-WV area. Arguably, the more remote areas may purchase goods and services in the larger population centers, but there may be food "deserts" and higher transportation costs that are not captured by using the average for the metropolitan area. However, neither BLS nor the Census Bureau collects relative prices of other consumption goods and services at this finer detail of geography, and obtaining supplementary local price and expenditure information was beyond the scope of this study.

Similarly, we do not have the relative distribution of expenditures across item strata below the 38 BLS index areas. Thus we assume the same relative distribution for the smaller counties and for the larger area. Since total expenditures are highly correlated with total populations, this is a reasonable assumption. Research is

underway to possibly use a measure of income or of earnings. But whether we use income, earnings, or population, the main constraint is that we would still not capture variations across expenditure headings within the areas; that is, the proportion spent on food versus apparel or rents for different counties within larger areas is unknown. The ACS does have a measure of the proportion of unadjusted income that households spend on rents, and we would try to incorporate that information in future estimates.

1. Adjusted results are balanced to ensure that the sum of nominal income across metropolitan areas equals the sum of adjusted incomes across metropolitan areas. The annual balancing factors for metropolitan areas from 2005 to 2009 are 0.99522, 0.99455, 0.99436, 0.99528, 0.99617, respectively.

## National Data

### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on April 28, 2011. These estimates include the advance estimates for the first quarter of 2011.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to [www.bea.gov](http://www.bea.gov) and subscribe. The "Selected NIPA Tables" are available later that day.

### 1. Domestic Product and Income

Personal consumption expenditures excluding food and energy <sup>1</sup> .....	36	1.8	1.5	1.2	0.8	0.9
Market-based PCE <sup>2</sup> .....	37	2.2	1.7	1.3	1.1	1.7
Market-based PCE excluding food and energy <sup>2</sup> .....	38	1.4	1.1	1.1	0.8	0.9

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

NOTE: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

**Table 1.3.1. Percent Change From Preceding Period in Real Gross Value Added by Sector**

Residual	11	9.3	5.5	6.8	6.6	5.1	3.5	-0.5
<b>Addendum:</b>								
Gross housing value added	12	1,190.3	1,188.4	1,190.6	1,191.4	1,187.3	1,184.2	1,181.4

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions; the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households; and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.  
 2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).  
 3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

5. Excludes software "embedded," or bundled, in computers and other equipment.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

Note. Except as noted in footnotes 1, 2 and 3, chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Uses gross domestic purchases price index as deflator.

2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.

3. This measure is called "real gross national income" in the System of National Accounts, 2008.

4. Uses net domestic purchases price index as deflator.

5. Ratio (multiplied by 100) of the price index for gross domestic product to the price index for gross domestic purchases.

6. Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.

7. Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.

8. Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas services.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

#### 4. Foreign Transactions

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

 Imports of nonpetroleum goods 54 87.632 103.521 96.736 103.859 106.918 106.572 108.532

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. Excludes software "embedded," or bundled, in computers and other equipment.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

6. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Residential structures	29	276.6	268.0	266.3	277.3	265.1	263.2	259.6

1. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded," or bundled, in computers and other equipment.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

Note: Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

<b>Ratios of private inventories to final sales of domestic business:</b>					
Private inventories to final sales	2.47	2.45	2.54	2.59	2.69
Nonfarm inventories to final sales	2.23	2.22	2.28	2.31	2.38
Nonfarm inventories to final sales of goods and structures	4.32	4.31	4.41	4.40	4.55

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

NOTE. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2005) dollar inventory series are calculated to ensure that the chained (2005) dollar change in inventories for 2005 equals the current-dollar change in inventories for 2005 and that the average of the 2004 and 2005 end-of-year chain-weighted and fixed-weighted inventories are equal.

Sales of imported new autos <sup>3</sup> .....	46	74.3	81.9	79.9	79.5	83.5	84.7	98.4

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

**NOTE.** Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

## B. NIPA-Related Table

Table B.1 presents the most recent estimates of personal income and its disposition. These estimates were released on April 29, 2011.

**Table B.1 Personal Income and Its Disposition**

## C. Historical Measures

This table is derived from the “Selected NIPA Tables” that are published in this issue and from the “[GDP and Other Major NIPA Series](#)” tables that were published in the August 2010 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

**Table C.1. GDP and Other Major NIPA Aggregates—Continues**

[Quarterly estimates are seasonally adjusted at annual rates]

Year and Quarter	Billions of chained (2005) dollars			Percent change from preceding period		Chain-type price indexes [2005=100]		Implicit price deflators [2005=100]		Percent change from preceding period			
	Gross domestic product	Final sales of domestic product	Gross national product	Real gross domestic product	Real final sales of domestic product	Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product	Chain-type price index		Implicit price deflators	
										Gross domestic product	Gross domestic purchases	Gross domestic product	Gross national product
1959 .....	2,762.5	2,764.0	2,780.5	7.2	6.3	18.348	17.972	18.340	18.320	1.1	1.2	1.2	1.2

## D. Charts

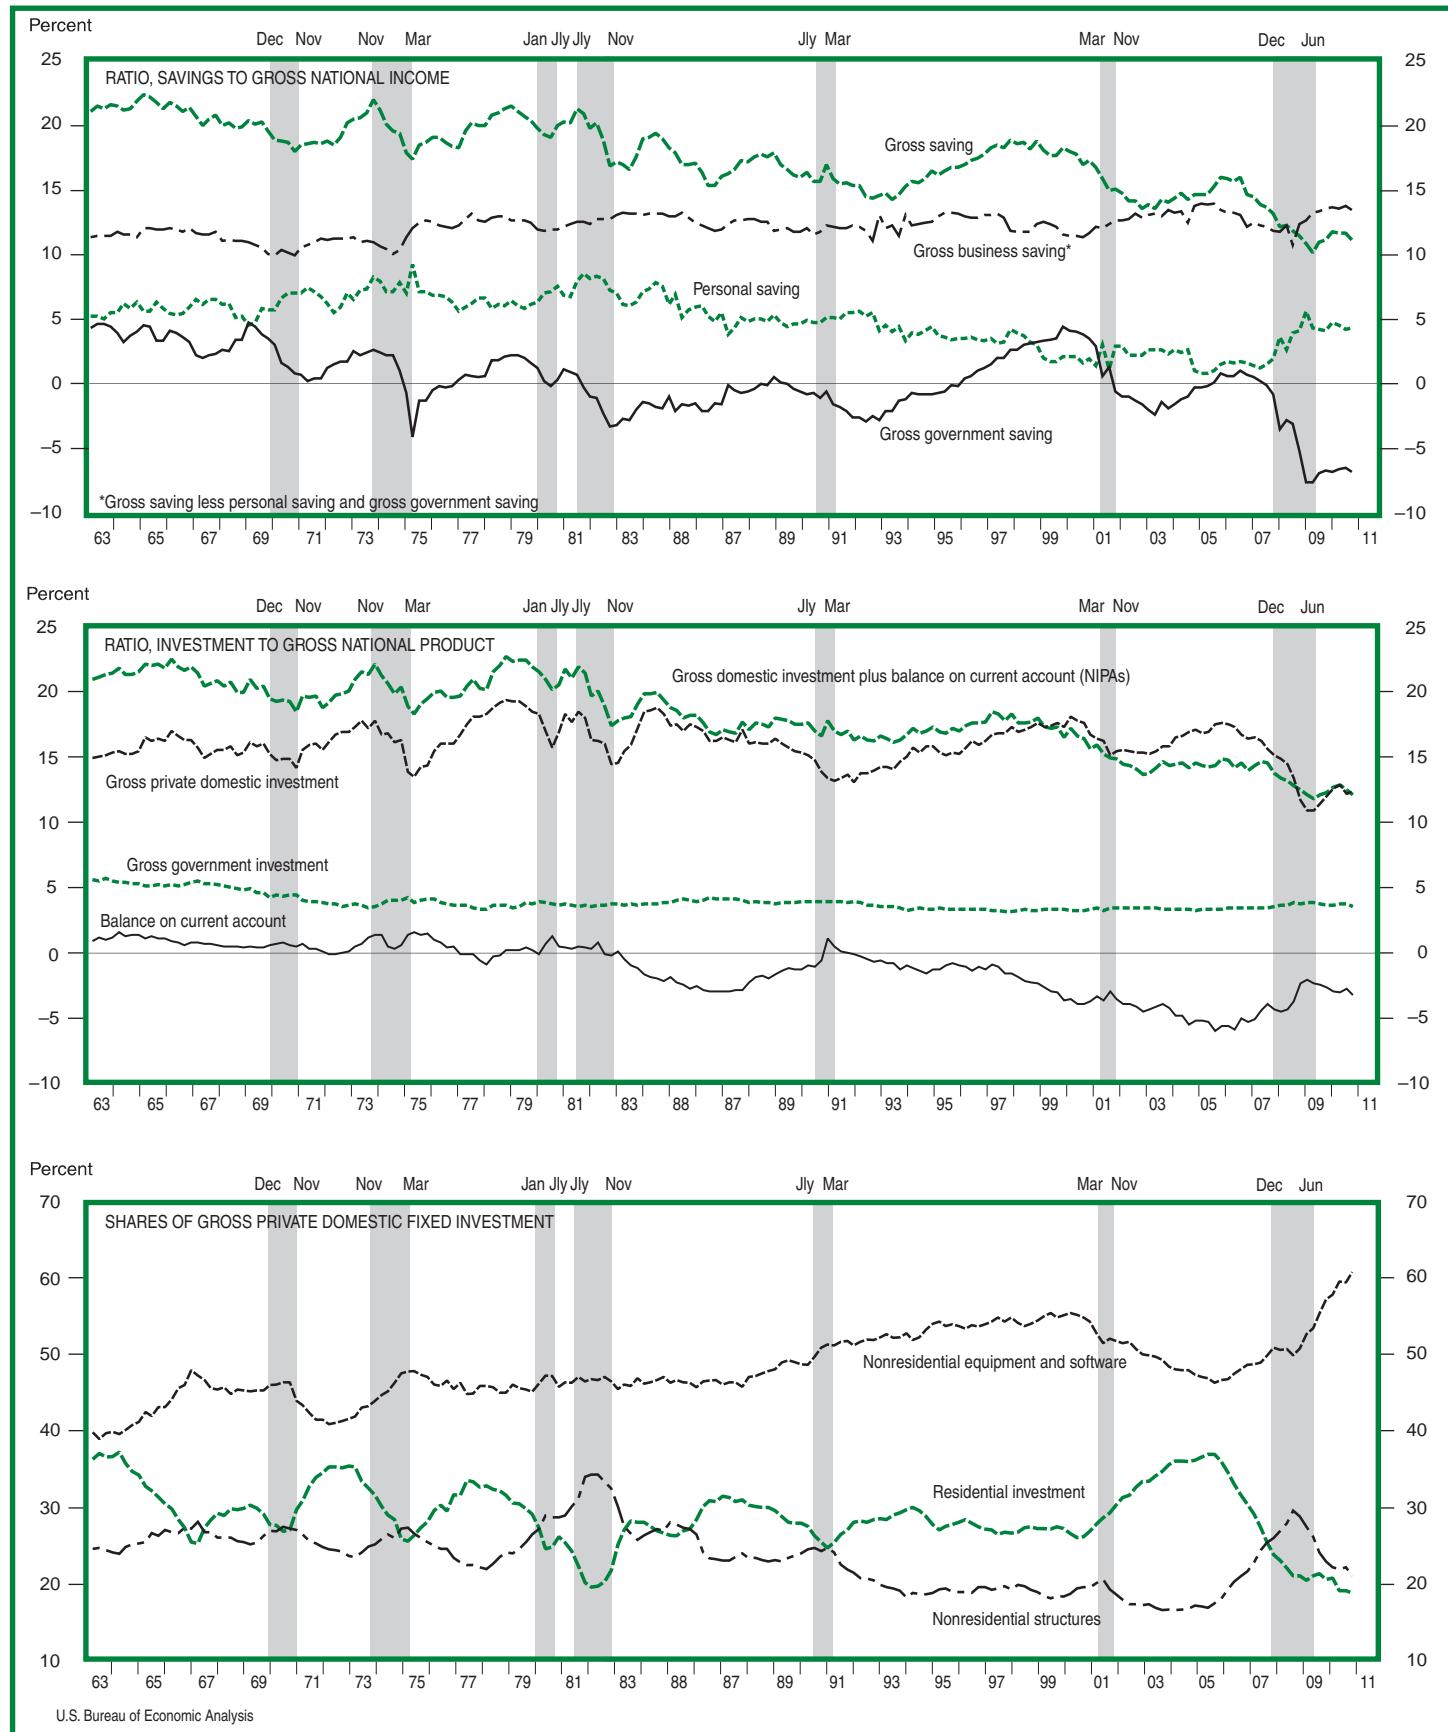

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

<sup>p</sup> Preliminary

<sup>r</sup> Revised

1. Reflects adjustments necessary to bring Census Bureau data in line with the concepts and definitions used by BEA

to prepare international and national accounts.

2. Contains goods that cannot be separately identified.

<sup>p</sup> Preliminary<sup>r</sup> Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

Table F.4. Private Services Transactions

<sup>3</sup>. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.<sup>4</sup>. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.<sup>5</sup>. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary

† Revised

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

p Preliminary

r Revised

\* Less than \$500,000 (+/-)

.... Not applicable

5. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

6. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects repatriation through open market purchases. These demonetizations/monetizations are not included in international transactions financial flows.

7. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

8. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

9. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. The movement of exchange rates does not affect this valuation.

10. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

1. Represents gains or losses on foreign-currency-denominated assets and liabilities due to their revaluation at current exchange rates.

2. Includes changes in coverage due to year-to-year changes in the composition of reporting panels, primarily for bank and nonbank estimates, and to the incorporation of survey results. Also includes capital gains and losses of direct investment affiliates and changes in positions that cannot be allocated to financial flows, price changes, or exchange-rate changes.

3. Financial flows and valuation adjustments for financial derivatives are available only on a net basis, which is shown on line 2; they are not separately available for gross positive fair values and gross negative fair values of financial derivatives. Consequently, columns (a) through (d) on lines 4, 5, and 24, 25 are not available.

4. Data are not separately available for the three types of valuation adjustments; therefore, the sum of all three types is shown in column (d).

1. The direct investment position, financial outflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository institutions from direct investment to other investment accounts.

NOTE. The data in this table are from tables 14 and 15 in "U.S. Direct Investment Abroad Tables" in the September 2010 SURVEY OF CURRENT BUSINESS.

**Table G.3. Selected Financial and Operating Statistics of Nonbank Foreign Affiliates of U.S. Companies by Country and by Industry of Affiliate, 2008**

	All nonbank foreign affiliates						Majority-owned nonbank foreign affiliates

D Suppressed to avoid disclosure of data of individual companies.

Note. The direct investment position, financial inflows, and income reflect a discontinuity between 2006 and 2007 because of the reclassification of permanent debt and associated interest, a component of income, between affiliated depository

institutions from direct investment to other investment accounts.

Note. The data in this table are from tables 14 and 15 in "Foreign Direct Investment in the United States Tables" in the September 2010 SURVEY OF CURRENT BUSINESS.

D Suppressed to avoid disclosure of data of individual companies.

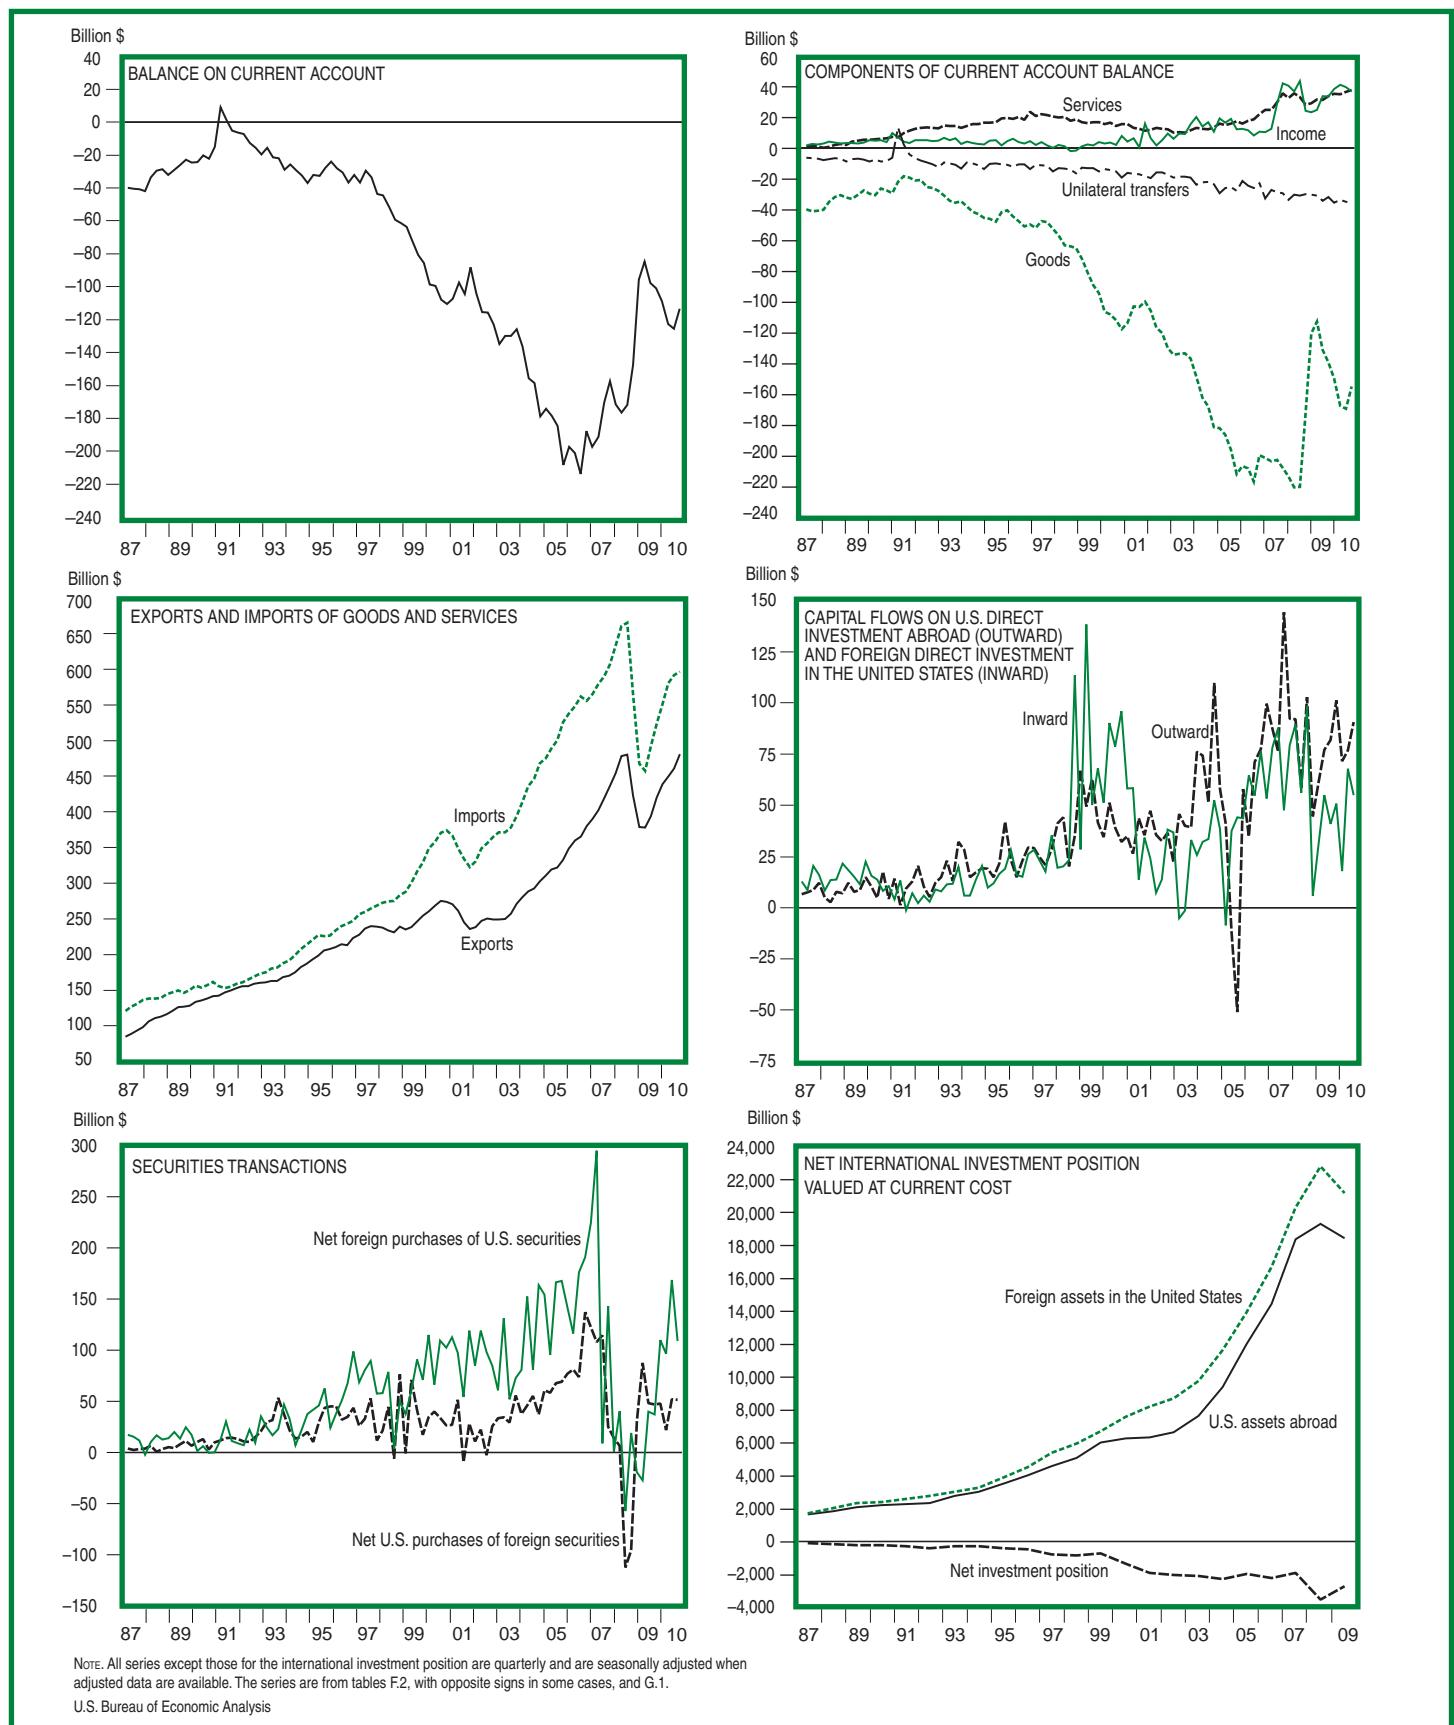

L—50,000 to 99,999; M—100,000 or more.

Notes. Size ranges are given in employment cells that are suppressed. The size ranges are: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999;

The data in this table are from BEA's annual survey of the operations of U.S. affiliates of foreign companies; see "U.S. Affiliates of Foreign Companies: Operations in 2008" in the November 2010 SURVEY OF CURRENT BUSINESS.

## H. Charts

### THE U.S. IN THE INTERNATIONAL ECONOMY

## Regional Data

### I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at [www.bea.gov](http://www.bea.gov). For information on state personal income, e-mail [reis@bea.gov](mailto:reis@bea.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail [gdpbystate@bea.gov](mailto:gdpbystate@bea.gov); write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

<sup>p</sup> Preliminary<sup>r</sup> Revised

2. Percent change was calculated from unrounded data.

NOTE. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 in the "Regional Quarterly Report" in the April 2011 SURVEY OF CURRENT BUSINESS.

1. Per capita disposable personal income (PCDPI) estimates for 2010 were calculated using the April 1, 2010 decennial census population counts that were released by the Census Bureau in December 2010. Revised estimates of PCDPI for 2001–2009 are not published because intercensal state population estimates consistent with the 2000 and 2010 decennial census counts are not currently available.

Note. Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GDP by state excludes and national GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except office equipment. Also, GDP by state and national GDP have different revision schedules.

Source: This table reflects the GDP by state estimates for 2009 that were updated on February 23, 2011. Detailed estimates are available on BEA's Web site at [www.bea.gov](http://www.bea.gov).

## J. Local Area Table

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.

Source: Table 1 "Personal Income and Per Capita Personal Income by Metropolitan Area, 2007–2009" in the May 2011 SURVEY OF CURRENT BUSINESS.

### A. Additional Information About the NIPA Estimates

#### Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2005—equal to 100.<sup>1</sup>

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2006–2007 uses prices for 2006 and 2007 as weights, and the 2006–2007 annual percent change in the GDP price index uses quantities for 2006 and 2007 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2005) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased by 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 ( $\$100 \times 1.10$ ). The percent changes calculated from the chained (2005) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where  $r$  is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_0$  is the level of activity in the earlier period;  $m$  is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and  $n$  is the number of periods between the earlier periods and the later periods (that is,  $t - 0$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.

ITAs International transactions accounts

NIPAs National income and product accounts

## B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. Most of this information is available on BEA's Web site at [www.bea.gov](http://www.bea.gov).

### National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

**National income and product accounts (NIPAs).** This series of papers documents the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates.

*Concepts and Methods of the U.S. National Income and Product Accounts*

- “Introductory Chapters 1–4” (2009)
- “Chapter 5: Personal Consumption Expenditures” (2009)
- “Chapter 6: Private Fixed Investment” (2010)
- “Chapter 7: Change in Private Inventories” (2010)

*Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends* (2002)

*An Introduction to National Income and Product Accounts* (2007)

*Measuring the Economy: A Primer on GDP and the National Income and Product Accounts* (2007)

The following SURVEY articles describe the 2009 comprehensive revision of the NIPAs.

“Initial Results of the 2009 Comprehensive NIPA Revision” (August 2009)

“Improved Estimates of the National Income and Product Accounts: Results of the 2009 Comprehensive Revision” (September 2009)

Preview of the 2009 Comprehensive NIPA Revision Changes in Definitions and Presentations (March 2009)

New Classifications for Personal Consumption Expenditures (May 2008)

Statistical Changes (May 2009)

“Preview of the Revised NIPA Estimates for 2002: Effects of Incorporating the 2002 Benchmark I-O Accounts and Proposed Definition and Statistical Changes” (March 2008)

In addition, see the following articles.

“Annual Revision of the National Income and Product Accounts” (August 2010) presents revisions and describes any changes in the data and the methods used to prepare the estimates.

“Updated Summary of NIPA Methodologies” (November 2010) describes the source data and methods that are used to prepare the estimates.

“Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes” (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

“The Reliability of the GDP and GDI Estimates of U.S. Economic Activity” (February 2008) evaluates the principal NIPA estimates by examining the record of revisions to them.

“Gross Domestic Product: Revisions and Source Data” (February 2006) describes the categories of data that are used for the advance, preliminary (now called second), and final (now called third) quarterly estimates of GDP.

**Fixed assets and consumer durable goods.** *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

“Fixed Assets and Consumer Durable Goods for 1999–2008” (November 2009) describes the improvements that were incorporated into these estimates as part of the 2009 comprehensive NIPA revision.

**Satellite account.** This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

“Research and Development Satellite Account”

For 1959–2002 (December 2006)

For 1959–2004 (October 2007)

For 1959–2007 (December 2010)

### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at [www.bea.gov](http://www.bea.gov) under “About BEA.”

## Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

**Annual industry accounts.** “Preview of the Comprehensive Revision of the Annual Industry Accounts” (March 2010) provides the details about the upcoming comprehensive revision.

“Annual Industry Accounts” (June 2010) presents the comprehensive revision of these accounts and summarizes the source data and any changes in the methods that are used to prepare the estimates.

**Benchmark input-output accounts.** *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Travel and Tourism Satellite Accounts”

For 1998–2006 (June 2007)

For 2004–2007 (June 2008)

For 2005–2008 (June 2009)

For 2004–2009 (November 2010)

## International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

**International transactions accounts and international investment position accounts.** “A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts” (February 2010) introduces these accounts.

*The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures* (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2010 SURVEY.

“Modernizing and Enhancing BEA’s International Economic Accounts: A Progress Report” (May 2011) updates BEA’s plans to introduce the new international statistical standards from recently updated manuals and its plans for changes that will be included in the June 2011 annual revision.

**Direct investment.** Updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 2004 Benchmark Survey* (2008) and in *Foreign Direct Investment in the United States: Final Results From the 2002 Benchmark Survey* (2006).

Additional improvements are described in the following annual articles: “Direct Investment Positions: Country and Industry Detail” (September) and Operations of U.S. Multinational Companies (August) and of U.S. Affiliates of Foreign Companies (November).

**International services.** The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2010 SURVEY.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

## Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

*State Personal Income* (2009) describes the improvements in the methodology that is used to prepare the quarterly and annual estimates. This methodology has been updated in “Regional Quarterly Report: Comprehensive Revision” (November 2009).

*Local Area Personal Income* (2009) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan divisions and areas, micropolitan areas, and BEA economic areas and regions. This methodology has been updated in “Comprehensive Revision of Local Area Personal Income” (May 2010).

**Gross domestic product.** Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

*Gross Domestic Product by State* (2006) describes the sources and the methods that are used to prepare the estimates.

“Gross Domestic Product by State” (December 2010) presents the results of the most recent comprehensive revision.

“Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area” (November 2007) describes the potential uses of the estimates.
