## Articles

**1. GDP and the Economy: Second Estimates for the Third Quarter of 2013**

Real GDP rose 3.6 percent after rising 2.5 percent in the second quarter. Business investment and state and local government spending picked up, and imports slowed. Consumer spending slowed.

**11. Government Receipts and Expenditures: Third Quarter of 2013**

Net government saving decreased \$236.4 billion to -\$1,087.1 billion. Net federal government saving decreased \$201.1 billion to -\$854.2 billion. Net state and local government saving decreased \$35.2 billion to -\$232.8 billion.

**14. Comprehensive Revision of Local Area Personal Income: New Statistics for 2012 and Revised Statistics for 2001–2011**

In 2012, personal income grew more slowly in the nonmetropolitan portion of the United States (3.7 percent) than in the metropolitan portion (4.2 percent). Growth in most counties and metropolitan areas grew between 2.0 percent and 6.0 percent.

## **Director's Message**

Beginning with the February 2014 issue, the Bureau of Economic Analysis (BEA) will discontinue publishing paper copies of the SURVEY OF CURRENT BUSINESS. BEA will continue to publish the SURVEY as a free online publication on its Web site ([www.bea.gov](http://www.bea.gov)). In recent years, usage of the print publication has declined, and budgetary pressures have increased, resulting in the decision to maintain the online publication only.

Rest assured that the SURVEY will continue to publish high-quality articles in an online format.

In fact, the move to an online-only presentation will serve as the first step toward a publication that fully exploits the advantages of the Web. We intend to provide a publication that will serve customers with more relevant, more accessible, more useful information and statistics delivered in less cumbersome formats—all via a more cost-effective process.

We remain excited about the future of the SURVEY.

As always, we're interested in any ideas or comments from our customers about the content of the SURVEY as well as ideas for possible new features. Please contact James Kim, Editor in Chief, at [james.kim@bea.gov](mailto:james.kim@bea.gov). For subscription information, please contact Darlene Matthews at the U.S. Government Printing Office contact center at [dmatthews@gpo.gov](mailto:dmatthews@gpo.gov).

J. Steven Landefeld  
Director, Bureau of Economic Analysis

## Taking Account...

### New report details direct investment abroad data

Preliminary statistics gathered in the Bureau of Economic Analysis (BEA) 2011 annual survey of U.S. direct investment abroad on the financial structure and operations of U.S. multinational companies (MNCs) and their foreign affiliates are now available on the BEA Web site. These statistics supersede the advance statistics for 2011 published in the April 2013 press release.

The data in the publication provide a comprehensive look at the finances and operations of U.S. MNCs. Data items include balance sheet items such as assets and liabilities, employment and employee compensation, sales, capital expenditures, trade in goods, and expenditures for research and development (R&D). The data give a detailed picture of the levels and growth of U.S. direct investment abroad as well as its distribution by industry and by country.

The statistics provide comprehensive and reliable information needed to monitor, analyze, and guide policy on U.S. direct investment abroad. They can be used to evaluate the consequences to the economies of the United States and foreign host countries that stem from the actions of U.S. MNCs.

The data on the operations of U.S. MNCs cover the entire operations, both domestic and foreign, of U.S. MNCs.

The domestic operations are represented by the operations of

the U.S. parents, and the foreign operations are represented by the operations of the foreign affiliates. For comparison with the data on domestic operations, data for majority-owned foreign affiliates are often the preferred measure of foreign operations because these foreign affiliates are majority-owned, like the domestic operations covered by the U.S. parent data.

For selected statistics, including value added, employment, employee compensation, capital expenditures, and R&D expenditures, the data for U.S. parents are combined with data for majority-owned foreign affiliates to arrive at an aggregate total value for U.S. MNCs. In 2011, total MNC value added grew 8.3 percent, the combined result of 4.9 percent growth of parents and 16.3 percent growth of majority-owned foreign affiliates.

Summed totals can be used to examine the domestic and foreign split in the MNC worldwide operations.

While the value added of majority-owned affiliates grew faster in 2011 than that of U.S. parents, U.S. parents continued to account for roughly two-thirds or more of U.S. MNC combined value added (68.2 percent), capital expenditures (73.1 percent), R&D (83.0 percent), and employment (66.0 percent).

For other statistics, including sales and assets, an MNC-wide total cannot be calculated, be-

cause adding data for U.S. parents and foreign affiliates would result in duplication from transactions and positions within the MNC.

Comparisons by industry should be done using data on foreign affiliates by industry of U.S. parent so that the two data series are classified on a consistent basis.

Data on U.S. parents were reported by companies on the BE-11A survey form. The amount of data collected depended on the size of the parent company. Although the data were collected on a sample survey, the statistics cover the universe of U.S. parent companies and their foreign affiliates.

### SURVEY to go online only beginning February 2014

As noted in this month's *Director's Message*, BEA has announced that it will discontinue publishing paper copies of the SURVEY OF CURRENT BUSINESS. BEA will continue to publish the SURVEY as a free online monthly publication on its Web site at [www.bea.gov](http://www.bea.gov). In recent years, usage of the print publication has declined. In addition, budgetary pressures have increased, prompting the decision to maintain the online publication only.

### News release schedule for 2014 now available

BEA has posted its 2014 press release schedule at [www.bea.gov](http://www.bea.gov), along with a downloadable electronic calendar of releases dates.

# GDP and the Economy

## Second Estimates for the Third Quarter of 2013

REAL GROSS domestic product (GDP) increased 3.6 percent at an annual rate in the third quarter of 2013, according to the second estimates of the national income and product accounts (NIPAs) (chart 1 and table 1).<sup>1</sup> The estimate of real GDP growth was revised up 0.8 percentage point from the advance estimate of 2.8 percent; the upward revision primarily reflected upward revisions to inventory investment and to nonresidential fixed investment that were partly offset by an upward revision to imports and a downward revision to exports.<sup>2</sup>

The acceleration in real GDP in the third quarter primarily reflected an acceleration in inventory investment, a deceleration in imports, and an acceleration in state and local government spending that were partly offset by decelerations in exports, in consumer spending, and in nonresidential fixed investment.

- Prices of goods and services purchased by U.S. residents increased 1.8 percent in the third quarter after increasing 0.2 percent in the second quarter. Energy prices turned up sharply in the third quarter, and food prices accelerated slightly. Excluding food and energy, prices increased 1.5 percent in the third quarter after increasing 0.8 percent.
- Real disposable personal income (DPI) increased 2.9 percent in the third quarter, 0.4 percentage point more than in the advance estimate, after increasing 4.1 percent (revised) in the second quarter (see “Personal Income for the Second Quarter of 2013” on page 9). The deceleration in real DPI reflected an upturn in the implicit price deflator for consumer spending, which is used to deflate DPI. Current-dollar DPI increased 5.0 percent after increasing 4.0 percent (revised).
- The personal saving rate, personal saving as a percentage of current-dollar DPI, was 5.0 percent; in the second quarter, the rate was 4.7 percent (revised).
- Corporate profits from current production increased \$38.3 billion in the third quarter after increasing \$66.8 billion in the second quarter (see table 9).

1. “Real” estimates are in chained (2009) dollars, and price indexes are chain-type measures. Each GDP estimate for a quarter (advance, second, and third) incorporates increasingly comprehensive and improved source data; for more information, see “Revisions to GDP, GDI, and Their Major Components” in the July 2011 SURVEY OF CURRENT BUSINESS. Quarterly estimates are expressed at seasonally adjusted annual rates, which assumes that a rate of activity for a quarter is maintained for a year.

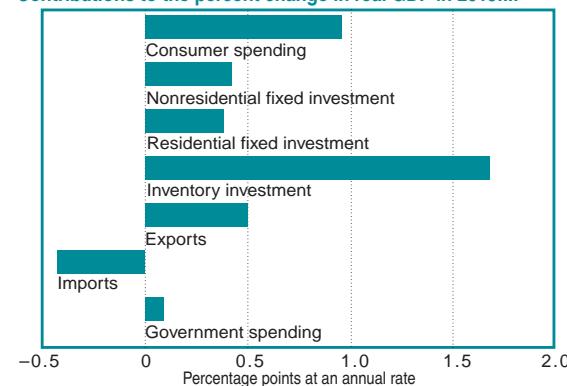

2. In this article, “consumer spending” refers to “personal consumption expenditures,” “inventory investment” refers to “change in private inventories,” and “government spending” refers to “government consumption expenditures and gross investment.”

**Chart 1. GDP, Prices, Disposable Personal Income (DPI)**

GDP excluding final sales of computers .....	99.6	0.0	1.1	2.4	3.7	-0.02	1.08	2.42	3.65			
Research and development (R&D)	2.5	0.4	-0.2	1.9	1.3	0.01	0.00	0.05	0.03			
GDP excluding R&D .....	97.5	0.1	1.2	2.5	3.7	0.13	1.15	2.43	3.57			
Gross domestic income (GDI) <sup>2</sup> .....	.....	4.9	2.4	3.2	1.4	.....	.....	.....	.....			

1. The estimates of GDP under the contribution columns are also percent changes.

2. GDI is deflated by the implicit price deflator for GDP. The second-quarter change in GDI reflects the incorporation of revised wage and salary estimates for the second quarter of 2013.

Note. Percent changes are from NIPA tables 1.1.1 and 1.2.1, contributions to percent change are from NIPA tables 1.1.2 and 1.2.2, and shares are from NIPA table 1.1.10, or they are calculated from table 1.2.5. For GDI, percent changes are from NIPA table 1.7.1.

Consumer spending slowed in the third quarter. Spending for services decelerated and was partly offset by a pickup in spending for goods.

Nonresidential fixed investment slowed, reflecting decelerations in equipment spending and in nonresidential structures that were partly offset by an upturn in intellectual property products (see page 4).

Inventory investment picked up, primarily reflecting a pickup in nonfarm inventory investment (see page 5). Farm inventory investment increased at about the same rate as in the second quarter.

Exports slowed; the slowdown reflected decelerations in both goods and services (see page 6).

Imports slowed; the slowdown primarily reflected a deceleration in goods, but services also slowed.

Government spending turned up, reflecting a pickup in state and local government spending and a slightly smaller decrease in federal government spending (see page 7).

Real final sales of domestic product, real GDP less inventory investment, increased 1.9 percent in the third quarter after increasing 2.1 percent in the second quarter.

Real gross domestic income, which measures the output of the economy as the incomes earned and costs incurred in production, increased 1.4 percent after increasing 3.2 percent (revised).

## Consumer Spending

**Table 2. Real Personal Consumption Expenditures (PCE)**

[Seasonally adjusted at annual rates]

	Share of current-dollar PCE (percent)	Change from preceding period (percent)				Contribution to percent change in real PCE (percentage points)

Less: Receipts from sales of goods and services by NPISHs <sup>4</sup> .....	8.2	-1.3	2.4	5.7	0.4	-0.10	0.19	0.45	0.03

1. The estimates under the contribution columns are also percent changes.

2. Gross operating expenses less primary sales to households.

3. Net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

4. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

Note. Percent changes are from NIPA table 2.3.1, contributions are from NIPA table 2.3.2, and shares are calculated from NIPA table 2.3.5.

NPISHs Nonprofit institutions serving households

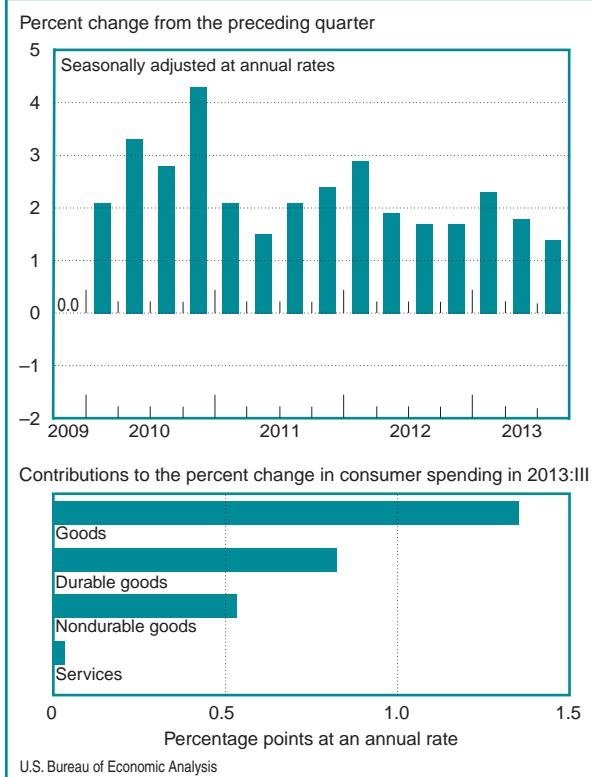

Consumer spending slowed in the third quarter, reflecting a deceleration in spending for services that was partly offset by a pickup in spending for goods.

The pickup in spending for goods was for both durable and nondurable goods.

The pickup in spending for durable goods was more than accounted for by an upturn in motor vehicles and parts.

The pickup in spending for nondurable goods primarily reflected an upturn in food and beverages purchased for off-premises consumption and an acceleration in "other" nondurable goods that were partly offset by a downturn in clothing and footwear.

The slowdown in spending for services primarily reflected a downturn in housing and utilities (largely due to a downturn in spending for natural gas) and slowdowns in health care and in financial services and insurance. These were partly offset by upturns in spending by nonprofit institutions serving households and in spending for "other" services.

1. The estimates under the contribution columns are also percent changes.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Excludes expenditures for software development, which are included in expenditures for software investment.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions and other ownership transfer costs.

NOTE. Percent changes are from NIPA table 5.3.1, contributions are from NIPA table 5.3.2, and shares are calculated from NIPA table 5.3.5.

Private fixed investment slowed in the third quarter, primarily reflecting a slowdown in nonresidential fixed investment.

The slowdown in nonresidential fixed investment reflected a deceleration in equipment and a slowdown in structures that were partly offset by an upturn in intellectual property products.

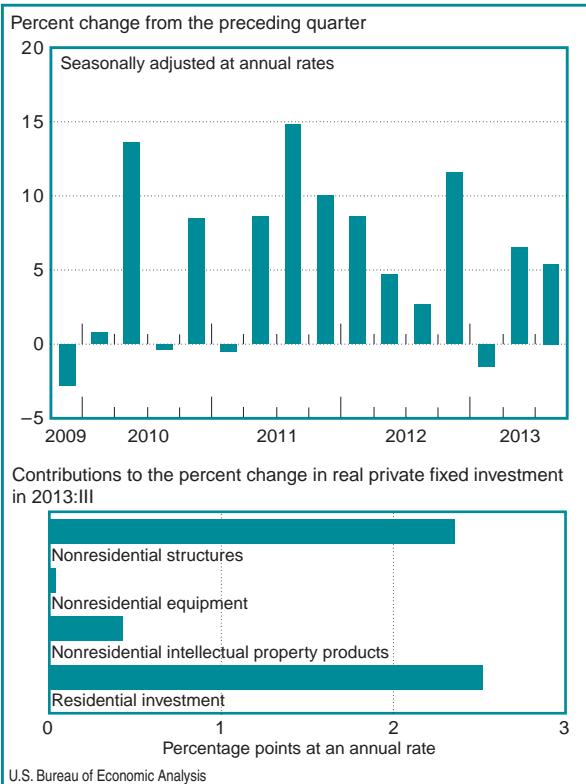

The slowdown in structures reflected slowdowns in power and communication, in mining exploration, shafts, and wells, and in "other" structures that were partly offset by upturns in manufacturing and in commercial and health care.

The deceleration in equipment primarily reflected a larger decrease in "other" equipment and a slowdown in information processing equipment (which was more than accounted for by imported communications equipment) that were partly offset by an upturn in industrial equipment.

The upturn in intellectual property products was more than accounted for by a upturn in software, primarily prepackaged software.

Residential fixed investment slowed slightly, reflecting slowdowns in single-family and multifamily structures that were partly offset by a pickup in "other" structures (mainly improvements and brokers' commissions).

Nonfarm inventories to final sales of goods and structures.....	3.87	3.81	3.82	3.80	3.79	.....	.....	.....	.....

1. The levels are from NIPA table 5.7.6B.

2. The residual is the difference between the first line and the sum of the most detailed lines.

3. The ratios are from NIPA table 5.8.6B.

NOTE. The chained-dollar series are calculated as the period-to-period change in end-of-period inventories. Quarterly changes are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, chained-dollar estimates are usually not additive.

Real inventory investment increased \$59.9 billion in the third quarter after increasing \$14.4 billion in the second quarter. The main contributors to the pickup were an upturn in wholesale trade and a pickup in retail trade.

Farm inventory investment increased \$2.9 billion after increasing \$3.5 billion.

Mining, utilities, and construction increased \$8.9 billion after increasing \$10.3 billion.

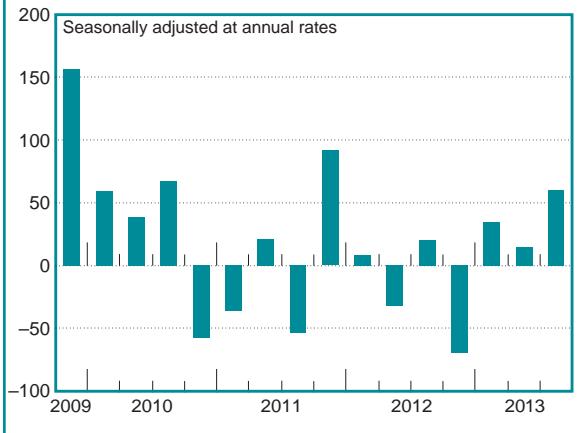

Manufacturing increased \$9.1 billion after increasing \$4.8 billion. The pickup in manufacturing industries was more than accounted for by a pickup in durable-goods industries.

The upturn in wholesale trade industries was primarily accounted for by an upturn in durable-goods industries; nondurable-goods industries also turned up.

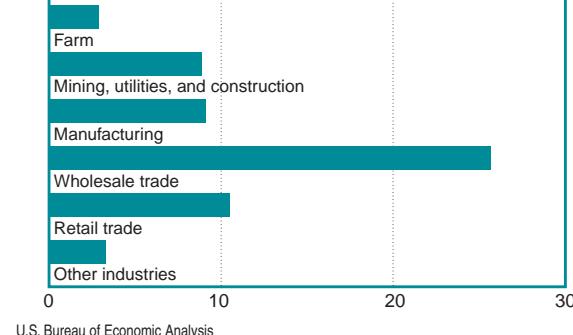

The pickup in retail trade industries was primarily due to upturns in “other” retail stores and in general merchandise stores.

## Chart 4. Real Private Inventory Investment

Change from the preceding quarter  
 Billions of chained (2009) dollars

Composition of change in inventory investment in 2013:III

U.S. Bureau of Economic Analysis

### Inventory Investment

The change in real private inventories, often called real private inventory investment, represents the change in the physical stock of goods held by businesses. It includes finished goods, goods at various stages of production, and raw materials.

The change in private inventories is a key component of gross domestic product (GDP), which aims to measure output derived from current production. To include the value of currently produced goods that are not yet sold and to exclude the value of goods produced in previous periods, the change in private inventories must be included in the GDP calculation.

Thus, GDP can also be seen as the sum of final sales of domestic product and the change in private inventories (table 2).

For most industries, the estimates of change in private inventories are prepared by revaluing book-value estimates of inventories from the Census Bureau to a replacement-cost basis and calculating the change over a quarter or a year. BEA provides estimates for incomplete industry data.

## Exports and Imports

**Table 5. Real Exports and Imports of Goods and Services**

[Seasonally adjusted at annual rates]

	Share of current-dollar exports and imports (percent)	Change from preceding period (percent)				Contribution to percent change in real exports and imports (percentage points)

<b>Imports of services<sup>2</sup></b> .....	<b>16.7</b>	<b>-1.0</b>	<b>5.0</b>	<b>4.0</b>	<b>2.5</b>	<b>-0.17</b>	<b>0.81</b>	<b>0.68</b>	<b>0.41</b>	
<b>Addenda:</b>										
Exports of agricultural goods <sup>3</sup> ....	6.2	-32.9	-0.6	-24.6	33.8	.....	.....	.....	.....	
Exports of nonagricultural goods .....	63.1	1.0	-3.1	13.5	3.0	.....	.....	.....	.....	
Imports of nonpetroleum goods ...	69.2	-1.9	2.2	9.9	3.9	.....	.....	.....	.....	

1. The estimates under the contribution columns are also percent changes.

2. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Note. Percent changes are from NIPA table 4.2.1, contributions are from NIPA table 4.2.2, and shares are calculated from NIPA table 4.2.5.

Exports of goods and services decelerated in the third quarter, reflecting slowdowns in exports of both goods and services.

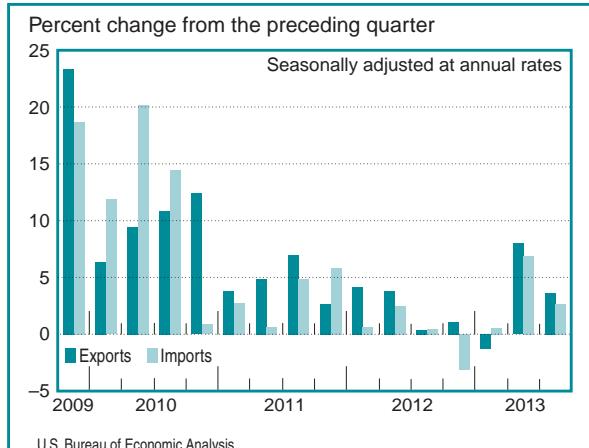

The slowdown in exports of goods primarily reflected downturns in nonautomotive consumer goods and in nonautomotive capital goods and a slowdown in automotive vehicles, engines, and parts that were partly offset by upturns in foods, feeds, and beverages and in "other" goods and a pickup in industrial supplies and materials.

The slowdown in exports of services primarily reflected a downturn in "other" private services and a slowdown in travel.

Imports of goods and services slowed, reflecting slowdowns in imports of both goods and services.

The slowdown in imports of goods primarily reflected downturns in "other" goods and in nonautomotive consumer goods and a slowdown in automotive vehicles, engines, and parts that were partly offset by an upturn in nonpetroleum industrial supplies and a pickup in nonautomotive capital goods.

The slowdown in imports of services mainly reflected slowdowns in travel and in "other" transportation.

Gross investment .....	10.7	-5.2	-7.5	0.4	7.5	-0.53	-0.80	0.05	0.77

1. The estimates under the contribution columns are also percent changes.

Note. Percent changes are from NIPA table 3.9.1, contributions are from NIPA table 3.9.2, and shares are calculated from NIPA table 3.9.5.

Government spending turned up in the third quarter, reflecting a pickup in state and local government spending and a slightly smaller decrease in federal government spending.

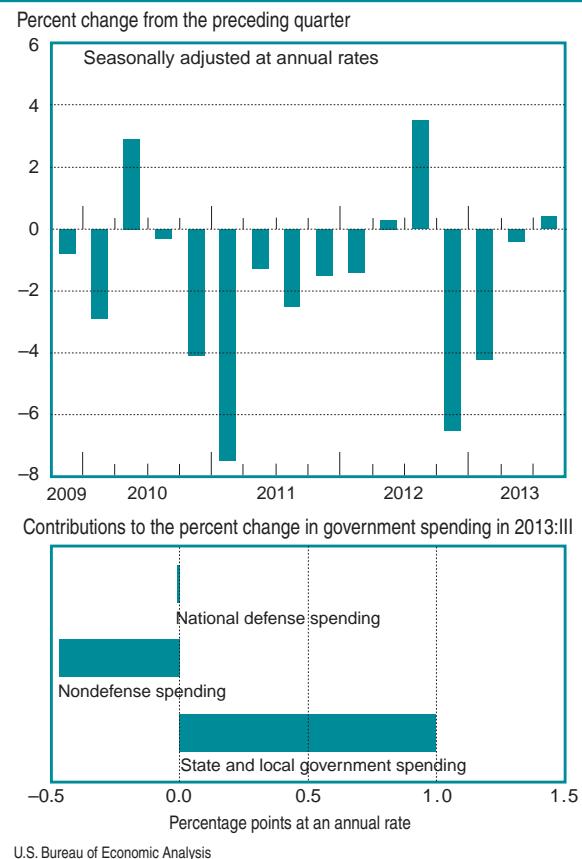

The smaller decrease in federal government spending was mostly accounted for by a smaller decrease in national defense spending.

The smaller decrease in national defense spending reflected a smaller decrease in consumption expenditures that was mostly offset by a slowdown in gross investment. In consumption expenditures, the larger decrease in compensation of civilian employees that resulted from the sequestration furloughs was more than offset by an upturn in spending for intermediate goods and services.

Nondefense spending decreased at about the same rate as in the second quarter, reflecting a larger decrease in consumption expenditures that was mostly offset by a smaller decrease in gross investment.

The pickup in state and local government spending mainly reflected an acceleration in gross investment as a result of an upturn in investment in structures.

**Chart 6. Real Government Consumption Expenditures and Gross Investment**

### Government Spending

"Government consumption expenditures and gross investment," or "government spending," consists of two components: (1) consumption expenditures by federal government and by state and local governments and (2) gross investment by government and government-owned enterprises.

Government consumption expenditures consists of the goods and services that are produced by general government (less any sales to other sectors and investment goods produced by government itself). Governments generally provide services to the general public without charge. The value of government production—that is, government's gross output—is measured as spending for labor and for intermediate goods and services and a charge for consumption of fixed capital (which represents a partial measure of the services provided by government-owned fixed capital).

Gross investment consists of new and used structures (such as highways and dams), of equipment, and of intellectual property products purchased or produced by government and government-owned enterprises.

Government consumption expenditures and gross investment excludes current transactions of government-owned enterprises, current transfer payments, interest payments, subsidies, and transactions in financial assets and nonproduced assets, such as land.

## Prices

**Table 7. Prices for Gross Domestic Purchases**

1. The estimates under the contribution columns are also percent changes.

Note. Most percent changes are from NIPA table 1.6.7; percent changes for PCE for food and energy goods and services and for PCE excluding food and energy are from NIPA table 2.3.7. Contributions are from NIPA table 1.6.8. GDP, export, and import prices are from NIPA table 1.1.7.

### Note on Prices

BEA's gross domestic purchases price index is the most comprehensive index of prices paid by U.S. residents for all goods and services, regardless of whether those goods and services were produced domestically or imported. It is derived from prices of consumer spending, private investment, and government spending.

The GDP price index measures the prices of goods and services produced in the United States, including the prices of goods and services produced for export.

The difference between the gross domestic purchases price index and the GDP price index reflects the differences between imports prices (included in the gross domestic purchases index) and exports prices (included in the GDP price index). For other measures that are affected by import and export prices, see the FAQ ["How do the effects of dollar depreciation show up in the GDP accounts?"](#) on BEA's Web site.

Prices of goods and services purchased by U.S. residents, as measured by the price index for gross domestic purchases, increased 1.8 percent in the third quarter after increasing 0.2 percent in the second quarter. The pickup primarily reflected an upturn in consumer prices.

The upturn in consumer prices reflected an upturn in goods prices and a pickup in services prices.

The upturn in goods prices was mostly accounted for by an upturn in the prices paid for gasoline and other energy goods.

Prices paid for nonresidential fixed investment slowed slightly, primarily reflecting a slowdown in prices paid for structures that was partly offset by an upturn in prices paid for equipment.

Prices paid for residential investment slowed, increasing 3.2 percent after increasing 5.1 percent.

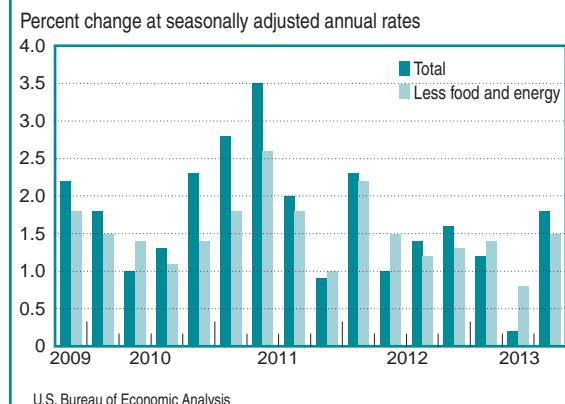

Prices paid by government picked up, primarily reflecting an upturn in prices paid by state and local governments.

The upturn in prices paid by state and local governments primarily reflected an upturn in the prices paid for petroleum products.

Consumer prices excluding food and energy, a measure of the "core" rate of inflation, accelerated, increasing 1.5 percent after increasing 0.6 percent.

The GDP price index increased 2.0 percent in the third quarter, 0.2 percentage point more than the increase in the price index for gross domestic purchases. Both export and import prices turned up. Export prices increased 1.2 percent in the third quarter after decreasing 3.2 percent in the second quarter. Import prices increased 0.3 percent after decreasing 5.0 percent.

### Personal Income for the Second Quarter of 2013

With the release of the second estimate of GDP, BEA also releases revised estimates of income-related measures for the previous quarter. This revision reflects the incorporation of second-quarter tabulations from the quarterly census of employment and wages from the Bureau of Labor Statistics.

Wages and salaries increased \$77.2 billion, an upward revision of \$22.6 billion. Personal current taxes increased \$39.8 billion, an upward revision of \$4.0 billion. Contributions for government social insurance, which is subtracted in calculating personal income, increased \$9.6 billion, an upward revision of \$3.0 billion.

As a result of these revisions,

- Personal income increased \$160.3 billion, an upward revision of \$21.2 billion.
- Disposable personal income increased \$120.5 billion, an upward revision of \$17.3 billion.
- Personal saving increased \$78.4 billion, an upward revision of \$17.2 billion.
- The personal saving rate was 4.7 percent, an upward revision of 0.2 percentage point.
- Real gross domestic income increased 3.2 percent, an upward revision of 0.6 percentage point.

The second estimate of the third-quarter increase in real GDP is 0.8 percentage point more than the advance estimate, primarily reflecting upward revisions to inventory investment and to nonresidential fixed investment that were partly offset by an upward revision to imports and a downward revision to exports.

The upward revision to nonresidential fixed investment primarily reflected an upward revision to equipment.

The upward revision to inventory investment primarily reflected upward revisions to wholesale trade, to retail trade, to mining, utilities, and construction, and to "other" industries.

The downward revision to exports was mainly due to widespread downward revisions to goods, and the largest contributors were nonautomotive capital goods and industrial supplies and materials.

The upward revision to imports was mainly due to widespread upward revisions to goods, and the largest contributors were nonautomotive capital goods and automotive vehicles, engines, and parts.

### Major Source Data for the Second Estimates

*Consumer spending:* retail sales for July–September (revised). Motor vehicle registrations data for September (new). Energy Information Administration data for retail electricity sales for September (new). Federal Reserve Board tabulations of commercial bank *Call Report* data for the third quarter (new).

*Nonresidential fixed investment:* construction spending (value put in place) for July and August (revised) and September (new). Manufacturers' shipments (M3) of machinery and equipment for August and September (revised). Exports and imports for July and August (revised) and September (new). Software company revenue reports for the third quarter (new). Motor vehicle registrations data for September (new).

*Residential fixed investment:* construction spending for July and August (revised) and September (new).

*Inventory investment:* manufacturers' inventories for July–September (revised) and trade inventories for July and August (revised) and September (new). Census Bureau Quarterly Financial Reports for the third quarter (new).

*Exports and imports:* international transactions accounts for July and August (revised) and September (new).

*Government spending:* state and local construction spending for July and August (revised) and September (new).

CCAdj .....	-161.1	0.3	14.4	-1.6	0.0	.....	.....	.....	.....

NOTE. Levels of these and other profits series are shown in NIPA tables 1.12, 1.14, 1.15, and 6.16D.  
 CCAdj Capital consumption adjustment  
 IVA Inventory valuation adjustment

Profits from current production (corporate profits with inventory valuation and capital consumption adjustments) increased \$38.3 billion, or 1.8 percent at a quarterly rate, in the third quarter after increasing \$66.8 billion, or 3.3 percent, in the second quarter.

Domestic profits of financial corporations increased \$8.6 billion, or 1.9 percent, after increasing \$24.5 billion, or 5.7 percent.

Domestic profits of nonfinancial corporations increased \$13.0 billion, or 1.1 percent, after increasing \$37.8 billion, or 3.2 percent.

Profits from the rest of the world increased \$16.7 billion, or 4.1 percent, after increasing \$4.6 billion, or 1.2 percent. In the third quarter, receipts increased \$9.1 billion, and payments decreased \$7.6 billion.

Taxes on corporate income decreased \$4.8 billion, or 1.1 percent, after increasing \$10.0 billion.

Profits after tax increased \$43.0 billion, or 2.6 percent, after increasing \$56.9 billion.

Net dividends decreased \$179.7 billion in the third quarter, or 17.3 percent, after increasing \$273.5 billion. The large decrease primarily reflected dividends paid by Fannie Mae to the federal government in the second quarter.

Undistributed profits increased \$222.8 billion after decreasing \$216.6 billion.

Net cash flow, a profits-related measure of internal funds available for investment, increased \$234.5 billion, or 11.4 percent, after decreasing \$205.3 billion.

### Measuring Corporate Profits

Corporate profits is a widely followed economic indicator used to gauge corporate health, assess investment conditions, and analyze the effect on corporations of economic policies and conditions. In addition, corporate profits is an important component in key measures of income.

BEA's measure of corporate profits aims to capture the income earned by corporations from current production in a manner that is fully consistent with the national income and product accounts (NIPAs). The measure is defined as receipts arising from current production less associated expenses. Receipts exclude income in the form of dividends and capital gains, and expenses exclude bad debts, natural resource depletion, and capital losses.

Because direct estimates of NIPA-consistent corporate profits are unavailable, BEA derives these estimates in three steps.

First, BEA measures profits before taxes to reflect corporate income regardless of any redistributions of income through taxes. Estimates for the current quarter are based on corporate earnings reports from sources including Cen-

sus Bureau Quarterly Financial Reports, Federal Deposit Insurance Corporation call reports, other regulatory reports, and tabulations from corporate financial reports. The estimates are benchmarked to Internal Revenue Service data when the data are available for two reasons: the data are based on well-specified accounting definitions, and they are comprehensive, covering all incorporated businesses—publicly traded and privately held—in all industries.

Second, to remove the effects of price changes on inventories valued at historical cost and of tax accounting for inventory withdrawals, BEA adds an inventory valuation adjustment that values inventories at current cost.

Third, to remove the effects of tax accounting on depreciation, BEA adds a capital consumption adjustment (CCAdj). CCAdj is defined as the difference between capital consumption allowances (tax return depreciation) and consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging).

# Government Receipts and Expenditures

## Third Quarter of 2013

NET GOVERNMENT saving, the difference between current receipts and current expenditures of the federal government and state and local governments, was  $-\$1,087.1$  billion in the third quarter of 2013, decreasing  $\$236.4$  billion from  $-\$850.7$  billion in the second quarter of 2013.

Net federal government saving was  $-\$854.2$  billion in the third quarter, decreasing  $\$201.1$  billion from  $-\$653.1$  in the second quarter (see page 12). Current receipts turned down, and current expenditures decelerated in the third quarter.

Net state and local government saving was  $-\$232.8$  billion in the third quarter, decreasing  $\$35.2$  billion from  $-\$197.6$  billion in the second quarter (see page 13). Current receipts turned down and current expenditures turned up in the third quarter.

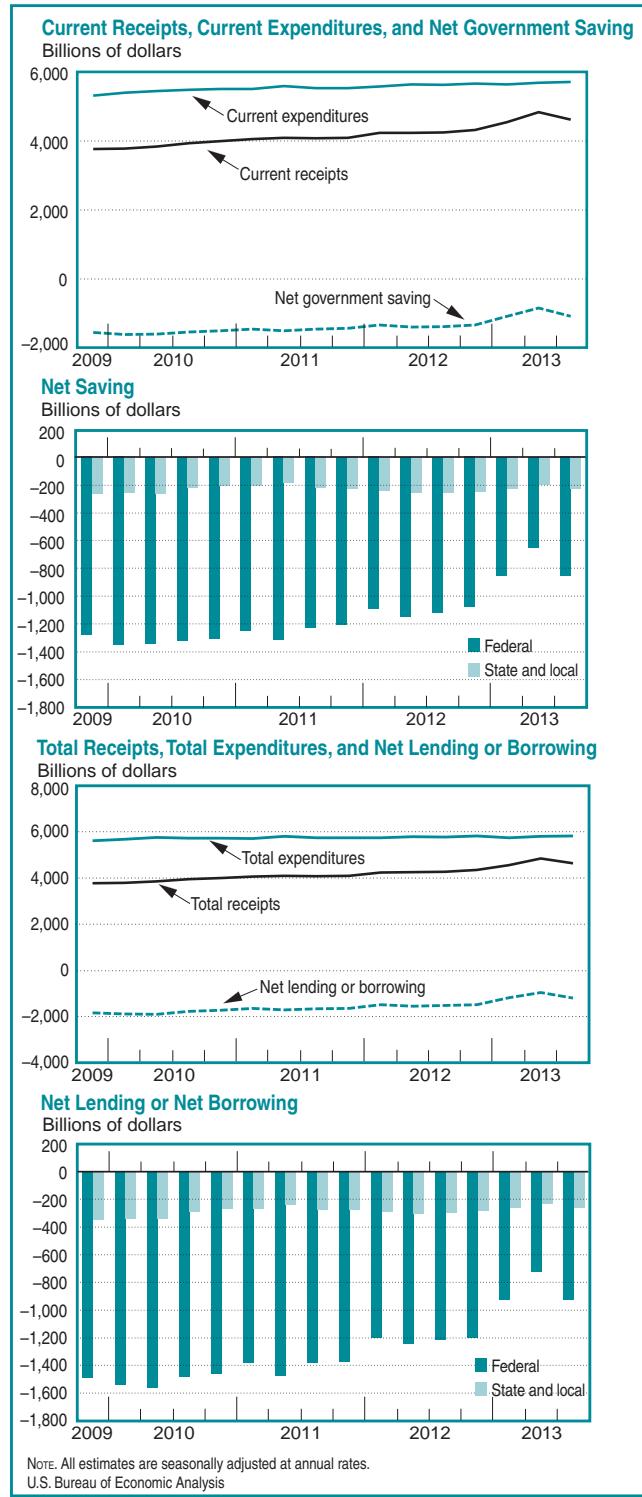

“Net lending or net borrowing (–)” is an alternative measure of the government fiscal position. Net borrowing is the financing requirement of the government sector, and it is derived as net government saving plus the consumption of fixed capital and net capital transfers received less gross investment and net purchases of nonproduced assets.

Net borrowing was  $\$1,189.4$  billion in the third quarter, increasing  $\$239.1$  billion from  $\$950.3$  billion in the second quarter. Federal government net borrowing was  $\$925.3$  billion in the third quarter, increasing  $\$204.8$  billion from  $\$720.5$  billion in the second quarter. State and local government net borrowing was  $\$264.0$  billion, increasing  $\$34.2$  billion from  $\$229.8$  billion in the second quarter.

### Federal Government Estimates

Estimates of federal government current receipts, current expenditures, and net federal government saving are based on data from the federal budget, from the *Monthly Treasury Statement* and other reports from the Department of the Treasury, and from other federal government agencies. Total receipts, total expenditures, and net lending or net borrowing, which are alternative measures of the federal fiscal position, are based on these same sources.

Quarterly and annual estimates are published monthly in NIPA table 3.2. Detailed annual estimates of these transactions by component are published annually in NIPA tables

3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available at [www.bea.gov](http://www.bea.gov); under “National” and Supplemental Estimates,” see “Underlying Detail Tables.”

Each year, BEA translates the information in the federal budget into a NIPA framework.<sup>1</sup> For a historical time series of these estimates, see NIPA table 3.18B, which was published in the October 2012 SURVEY.

1. See Mark S. Ludwick and Kyle Mulgrew, “[NIPA Translation of the Fiscal Year 2013 Federal Budget](#),” SURVEY OF CURRENT BUSINESS 92 (May 2013): 11–21.

### Estimates of State and Local Government Receipts and Expenditures

The estimates of state and local government current receipts and expenditures and total receipts and expenditures are mainly based on compilations of data for state and local government finances. The Census Bureau produces the primary source data: the census of governments that is conducted in years that end in a 2 or a 7 and the Government Finances series of surveys for the other years. In addition, other sources of Census Bureau data are from the *Quarterly Summary of State and Local Government Tax Revenue* and the monthly *Value of Construction Put in Place*. Data sources from the Bureau of Labor Statistics include the Quarterly Census of Employment and Wages and the Employment Cost Index.

Quarterly and annual estimates are available monthly in NIPA table 3.3. Detailed annual estimates of state and local government transactions by component are available

annually in NIPA tables 3.4–3.8, 3.12, and 3.13. Detailed quarterly estimates are available at [www.bea.gov](http://www.bea.gov); under “National” and Supplemental Estimates,” see “Underlying Detail Tables.” For a historical time series of reconciliations of the NIPA estimates with the Census Bureau data from Government Finances, see NIPA table 3.19.

BEA also prepares annual estimates of receipts and expenditures of state governments and of local governments.<sup>1</sup> These estimates are available annually in NIPA table 3.20 (state government receipts and expenditures) and in NIPA table 3.21 (local government receipts and expenditures); they were published in the October 2012 SURVEY.

1. Bruce E. Baker, “Receipts and Expenditures of State Governments and of Local Governments,” SURVEY 85 (October 2005): 5–10.

# Comprehensive Revision of Local Area Personal Income

## New Statistics for 2012 and Revised Statistics for 2001–2011

By David G. Lenze

**P**ERSONAL INCOME grew more slowly (3.7 percent) in the nonmetropolitan portion of the United States in 2012 than in the metropolitan portion (4.2 percent).<sup>1</sup> Growth ranged from -33.4 percent in Hamilton County, Kansas, to 52.3 percent in Williams County, North Dakota, but most counties and metropolitan statistical areas (MSAs) grew at rates between 2.0 percent and 6.0 percent (chart 1). Inflation, as measured by the national price index for personal consumption expenditures, was 1.8 percent in 2012.

The local area personal income estimates presented in this article continue the successively more detailed series of data releases from the Bureau of Economic Analysis (BEA) depicting the geographic distribution of the nation's production and income for 2012. National estimates of personal income and gross domestic product (GDP) for 2012 were released in January 2013, followed by state personal income estimates in March, state GDP estimates in June, and metropolitan

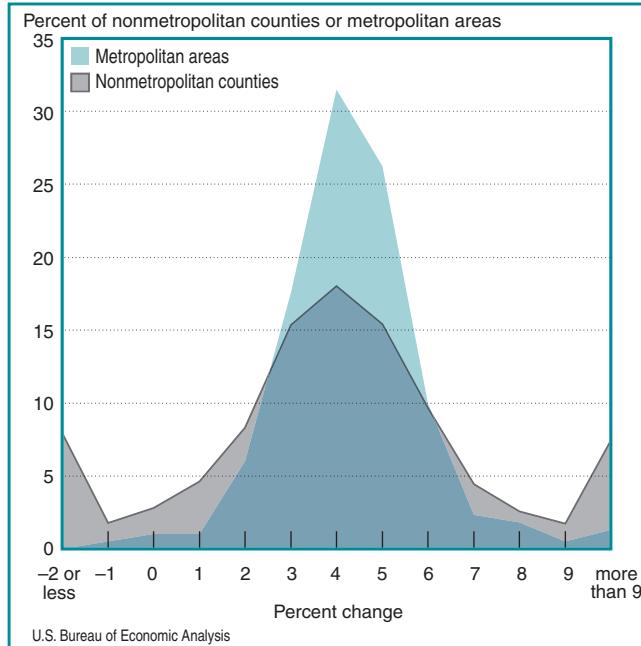

area GDP estimates in September. The local area personal income estimates provide the first glimpse of personal income and compensation by industry in nonmetropolitan counties for 2012 and a more detailed look at the industrial composition of economic activity within multicounty MSAs. The geographic picture of 2012 will be completed with the release of real personal income for states and metropolitan areas in April 2014.

The estimates discussed in this article are the result of the most recent comprehensive revision of the local area personal income accounts, which was released in November 2013. In comprehensive revisions, manifold improvements in concepts, definitions, classifications, and statistical methods are introduced into BEA's economic accounts to ensure that the accounts continue to accurately describe the evolving American economy. This comprehensive revision incorporated changes that were adopted as part of the comprehensive revisions of the national income and product accounts (NIPAs) and state personal income accounts, which were released in July and September 2013, respectively. It also introduced new and updated county-level source data as well as certain new data sources that have never been used before.

This article discusses the patterns and sources of income growth for 2012 in nonmetropolitan counties. It complements the discussion of the patterns and sources of production growth for 2012 in metropolitan areas in the October issue of the *SURVEY OF CURRENT BUSINESS*.<sup>2</sup> This article also highlights the fluctuating boundary between the metropolitan and nonmetropolitan portions of the United States by examining in detail the counties affected by the revised MSA definitions released by the Office of Management and Budget (OMB) earlier this year. In addition, the article provides details about the comprehensive revision of local area personal income statistics and summarizes the major data sources used to prepare the estimates. A box discusses alternative measures of county wages.

1. Personal income, which is measured in current dollars, is the sum of net earnings by place of residence, property income, and personal current transfer receipts.

**Chart 1. Distribution of Personal Income Growth Rates, 2012**

2. See Sharon D. Panek, Jacob R. Hinson, and Frank T. Baumgardner, "Gross Domestic Product by Metropolitan Area," *SURVEY* 93 (October 2013): 105–141.

## Growth in Nonmetropolitan Counties

For statistical purposes, nonmetropolitan counties are those counties that remain after MSAs have been delineated. As defined by OMB, an MSA has at least one urbanized area of 50,000 or more residents plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. MSAs are defined in terms of whole counties. By these criteria, there are 1,967 nonmetropolitan counties and 1,146 metropolitan counties in the United States.<sup>3</sup>

Not surprisingly, all nonmetropolitan counties are sparsely populated. They range from Loving County Texas, with a population of 71 and a population density of 0.1 persons per square mile, to Litchfield County Connecticut, with a population of 187,530 and density of 206 persons per square mile.<sup>4</sup> The converse is not true; that is, not all metropolitan counties are densely populated. For instance, there are 95 metropolitan counties with a population density below 100 persons per square mile and with less than 30,000 residents, none of whom live in an urbanized area. Evidently, these counties are metropolitan because by the OMB definition, there is a high degree of social and economic integration with the core of an MSA as measured by commuting ties. In other words, these counties are metropolitan because their residents commute to work in another metropolitan county, not because they have an urban character.

The nonmetropolitan portion of the country accounted for slightly less than 10 percent of the nation's

3. Personal income statistics are available for 3,113 of the 3,143 counties identified by Federal Information Processing Standards (FIPS) codes. BEA combines some small counties (mostly in Virginia but also in Hawaii) with larger nearby counties. For details see the appendix to the *Local Area Personal Income Methodology* available on the BEA Web site.

4. Population densities are from the Census Bureau's American Factfinder and refer to 2010; population refers to 2012. The Census Bureau uses two population density thresholds in the delineation of urban areas: 1,000 persons per square mile and 500 persons per square mile.

earnings in 2012, but reflecting the rural affinity of much mining and farming, the nonmetropolitan portion of the United States accounted for almost 37 percent of national earnings in natural resource industries (table A). The nonmetropolitan area also accounted for 14.7 percent of manufacturing earnings, 12.6 percent of transportation earnings, and 12.1 percent of government earnings. In contrast, relatively little—less than 4.0 percent—of earnings in the information, finance, and business services industries was generated in nonmetropolitan counties.

Not only did the nonmetropolitan portion grow more slowly than the metropolitan portion of the United States in 2012, its 3.7 percent personal income growth rate was a substantial slowdown from its 6.4 percent growth in 2011 (table B). Most of the slowdown was attributable to net earnings, which grew

**Table A. Industrial Structure of Metropolitan and Nonmetropolitan Portions of the United States for 2012**

	Earnings by place of work (billions of dollars)		Industry's share of area's total earnings (percent)		Nonmetropolitan share of national earnings (percent)

1. Earnings by place of work net of contributions for government social insurance and net of the residence adjustment.

only 3.9 percent in 2012, down from 7.5 percent in 2011. Property income (dividends, interest, and rent), which accounted for 18 percent of personal income, also grew substantially slower (5.7 percent) in 2012 than in 2011 (10.3 percent) in nonmetropolitan counties. Transfer receipts, which accounted for 24.5 percent of personal income, accelerated slightly to 2.0 percent growth in 2012 from 1.3 percent in 2011.

Earnings growth by industry provides additional insight into the reasons for these disparities in personal income growth rates (chart 2 and table C). Farm earnings for the United States fell 1.2 percent in 2012 after growing 38.9 percent in 2011. Like farming, government earnings growth was weak in 2012, growing 0.6 percent, but unlike farming, government earnings growth was also weak in 2011, growing 0.4 percent. In contrast to farming and the public sector, manufacturing earnings grew at a much higher, 4.3 percent rate in 2012, after growing 5.6 percent in 2011.

Per capita personal income (personal income divided by population) in nonmetropolitan counties in 2012 ranged from \$116,978 in Williams County, North Dakota, to \$17,922 in Telfair County, Georgia. Net earnings was the source of most of the income in Williams County and amounted to \$100,138 per person. Mining (which includes oil and gas extraction) accounted for 43 percent of earnings in Williams County. The high level of per capita personal income in Williams County is a recent phenomenon. As recently as 2007, per capita personal income in the county was slightly below the national average (chart 3). By 2012, it was more than twice as large.

## Chart 2. U.S. Earnings by Sector

In contrast, per capita personal income in Telfair County has stagnated and in 2012 was 2.4 percent below the level for 2001. Net earnings per person in Telfair County was only \$8,324. Transfer receipts were

## Chart 3. Per Capita Personal Income

Total .....	4.8	4.2	434,183	399,895

also an important source of personal income in 2012, amounting to \$6,862 per person. The low level of per capita personal income in Telfair County reflects a relatively large proportion of the population (20.6 percent) living in group quarters with little income, including the inmates of a state prison.

### Revised Metropolitan Statistical Area (MSA) Definitions

The OMB revised its definitions of metropolitan statistical areas in February 2013. In doing so, it designated 23 new MSAs, merged 5 separate MSAs with adjacent MSAs, and changed 3 MSAs to micropolitan status (the new MSAs are highlighted in chart 4).<sup>5</sup> The net result was to raise the number of MSAs to 381. In the process of redefining the MSAs, 101 counties converted from nonmetropolitan status to metropolitan, and 36 metropolitan counties reverted from metropol-

itan to nonmetropolitan status. This raised the metropolitan population of the United States 1.1 percent and reduced the nonmetropolitan population 5.7 percent.

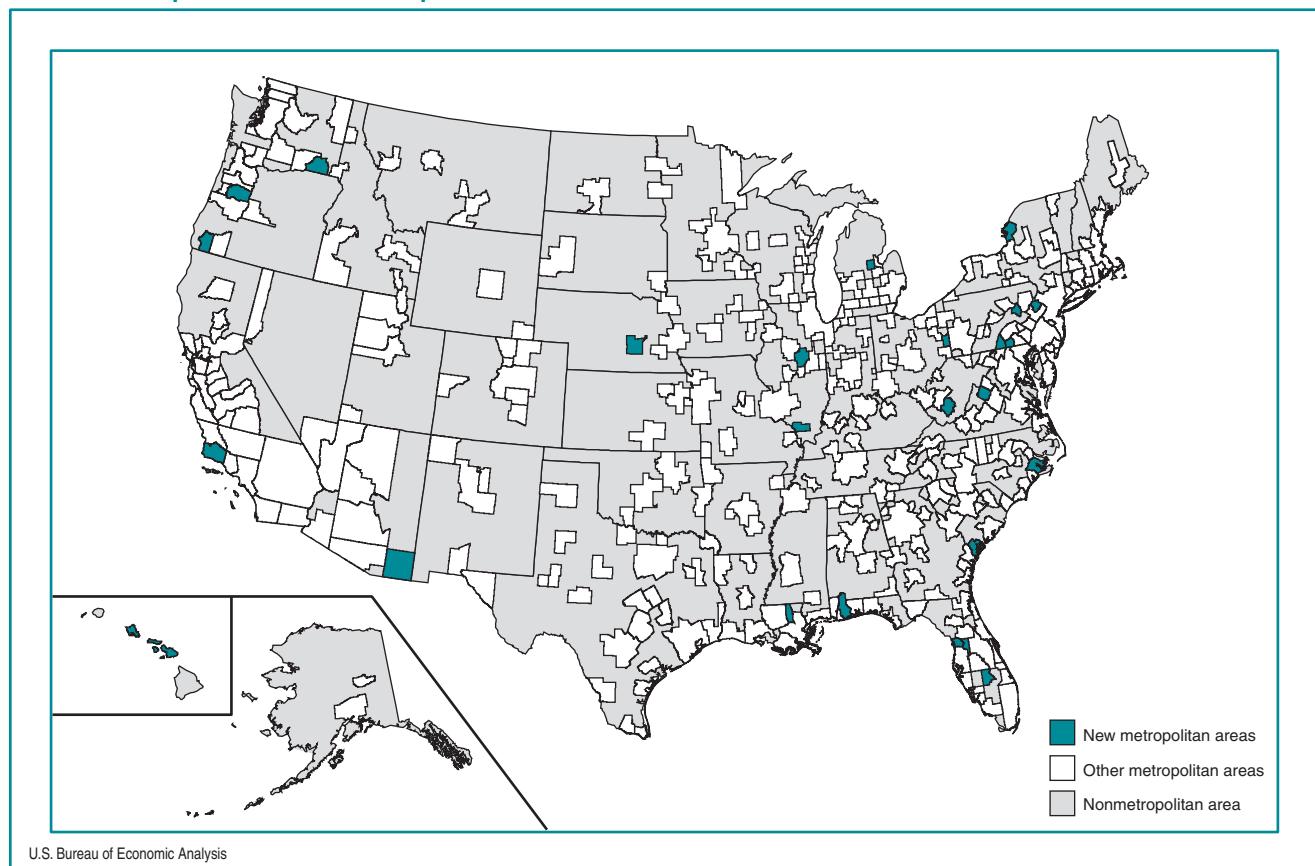

When OMB redefines its MSAs, BEA rebuilds the entire time series for the MSAs so that the local area data in the interactive tables on the BEA Web site use the same definition for every year in the time series. This is easily done because MSAs are defined in terms of counties. For example, when OMB first defined the Gainesville, FL MSA it consisted of the single county of Alachua. The current definition of the Gainesville, FL MSA consists of Alachua and Gilchrist counties. BEA's estimates of personal income for the Gainesville, FL MSA also consist of the same two counties for every year that data are available.

The populations of the new MSAs range from 63,399 residents to 193,882 residents. Evidently, they have crossed the demographic threshold required for metropolitan status, but in some respects their average incomes and industrial composition continue to resemble nonmetropolitan areas.

On average, per capita personal income in the new MSAs was \$37,165 in 2012, only 5.2 percent above the \$35,324 nonmetropolitan average and 17.8 percent below the \$45,188 metropolitan average. Seven of the new MSAs have per capita personal incomes below the

5. The three MSAs that changed to micropolitan statistical areas are (1) Danville, VA; (2) Holland-Grand Haven, MI; and (3) Sandusky, OH. The five MSAs that merged with other MSAs are (1) Palm Coast, FL, which is now part of the Deltona-Daytona Beach-Ormond Beach, FL MSA; (2) Pascagoula, MS, which is now part of the Gulfport-Biloxi-Pascagoula, MS MSA; (3) Poughkeepsie-Newburgh-Middletown, NY, which is now part of the New York-Newark-Jersey City, NY-NJ-PA MSA; (4) Anderson, IN, which is now part of the Indianapolis-Carmel-Anderson, IN MSA; and (5) Anderson, SC, which is now part of the Greenville-Anderson-Mauldin, SC MSA.

**Chart 4. Metropolitan and Nonmetropolitan Areas**

nonmetropolitan average, and two have per capita incomes above the metropolitan average.

As noted above, metropolitan areas tend to have relatively large professional services, finance, and information industries, compared with nonmetropolitan areas. However, among the new MSAs, only California, MD, had a professional services industry as large as the metropolitan average in 2012.<sup>6</sup> Professional services accounted for 26.4 percent of earnings in California, MD, compared with 10.6 percent for the metropolitan average. Only Hammond, LA, had a finance sector as

6. The magnitudes of the professional services industry in Hilton Head Island, SC, and in The Villages, FL, are unknown because of nondisclosure rules.

### Data Availability

All of the local area personal income data presented in this article, along with much additional detail, are available in interactive data tables on the BEA Web site. Data are available for counties, metropolitan statistical areas (MSAs) and other combinations of counties at [www.bea.gov](http://www.bea.gov).

The data for 2001–2012, the years covered by the North American Industrial Classification System (NAICS), have been revised to be consistent with the comprehensive revisions of the national income and product accounts and the state personal income accounts. Data for 1969–2000, the years covered by the Standard Industrial Classification (SIC), are scheduled to be revised in the spring of 2014. Unrevised data for 1969–2000 remain in the interactive tables as a convenience, but users are advised that these data are not comparable with the more recent estimates.

The impact of sequestration and reduced fiscal year 2013 funding levels for the Bureau of Economic Analysis (BEA) have required reductions in the Bureau's local area personal income (LAPI) program. Effective with this release, the following statistical detail will not be updated or made available: (1) local area employment by industry; (2) detailed statistics on personal current transfer receipts; (3) detailed statistics on farm income and expenses; and (4) statistics for BEA Economic Areas. In addition, industry detail on compensation and earnings has been reduced from 108 industries to 25 industries. The loss of statistical detail has a significant effect on the interactive data tables available to the public. For an explanation of the specific LAPI tables eliminated or modified by sequestration and reduced fiscal year 2013 funding levels, please see: [www.bea.gov/\\_pdf/sequestration\\_fact\\_sheet\\_with\\_appendix.pdf](http://www.bea.gov/_pdf/sequestration_fact_sheet_with_appendix.pdf).

For further information about the statistics, contact the Regional Income Division at 202–606–5360, or e-mail [reis@bea.gov](mailto:reis@bea.gov).

large as the metropolitan average. Finance accounted for 8.3 percent of earnings in Hammond, LA compared with 7.5 percent for the metropolitan average. And only Staunton, VA, had an information sector as large as the metropolitan average.<sup>7</sup> Information accounted for 4.0 percent of earnings in Staunton, VA, compared with 3.4 percent for the metropolitan average.

On the other hand, nonmetropolitan areas tend to have relatively large farming, manufacturing, and government sectors. Farming in Grand Island, NE (13.2 percent of earnings) and Walla Walla, WA (11.1 percent) exceeded the 6.0 percent average for nonmetropolitan counties in 2012. Manufacturing in Midland, MI (26.6 percent), Albany, OR (23.9 percent), Gettysburg, PA (19.4 percent), Chambersburg, PA (18.5 percent), Staunton, VA (18.0 percent), Grand Island, NE (17.0 percent), and East Stroudsburg, PA (15.0 percent) exceeded the 14.9 percent average for nonmetropolitan counties. Government earnings exceeded the nonmetropolitan average of 21.6 percent in 10 of the new MSAs.

### Comprehensive Revision

On November 21, 2013, BEA released the initial results of its latest comprehensive, or benchmark, revision of the local area personal income statistics; the results of the previous comprehensive revision were released in April 2010.<sup>8</sup>

The first installment of the 2013 revision, consists of new and revised statistics for the years covered by the North America Industry Classification System (NAICS); that is, from 2001 through 2012. Additional revisions, covering 1969–2000 for the years covered by the Standard Industrial Classification (SIC) are scheduled to be released in the spring of 2014.

Especially noteworthy in the 2013 comprehensive revision was the introduction of county-level data to improve the estimates of the Medicare benefits and Supplemental Nutritional Assistance Program benefits, two components of personal current transfer receipts.

The 2013 local area personal income comprehensive revision incorporated the changes that were adopted as part of the comprehensive revisions of the national income and product accounts (NIPAs), which was released in July 2013 and of the state personal income accounts which were released in September.<sup>9</sup>

7. The magnitude of the information industry in New Bern, NC, is unknown because of nondisclosure rules.

8. See David G. Lenze, "Comprehensive Revision of Local Area Personal Income," SURVEY 90 (May 2010): 22–30.

9. See Robert Kornfeld, "Initial Results of the 2013 Comprehensive Revision of the National Income and Product Accounts," SURVEY 93 (August 2013): 6–17 and David G. Lenze, "Regional Quarterly Report: Comprehensive Revision," SURVEY 93 (November 2013): 48–58.

The rest of this section will describe briefly the magnitude of the revisions and then describe the improvements in source data and statistical methods.

### Magnitude of revisions

For many counties, the picture of personal income shown by the revised estimates is similar to the picture shown by the previous estimates (table D). More than 80 percent of the revisions in every year were less than 5 percent in absolute value. For example, in 2001, 41 percent of the revisions to county personal income were less than 1 percent and 57 percent were between 1 percent and 5 percent. Only 56 of the 3,110 counties were revised 5 percent or more. For the most recent years, there were more large revisions—143 counties were revised 10 percent or more in 2011—but this of-

ten reflects the replacement of preliminary estimates of certain components of personal income based on simple extrapolations with estimates based on recently released source data.

### Medicare benefits

Previously, county estimates of Medicare benefits were extrapolated from a benchmark set of estimates based on reimbursements for hospital and medical expenses by county for 1995 from the Centers for Medicare and Medicaid Services (CMS). The 1995 estimates were extrapolated to the present by the change in Medicare enrollment (as of July of each year), also from CMS. As part of the comprehensive revision, the estimates of Medicare benefits are now based on fee-for-service per capita expenditure data by county from CMS. These data, which are available annually, are combined with annual Medicare enrollment by county to obtain an estimate of total Medicare benefits.

**Table D. Revisions to County Personal Income, 2001–2011**

Revision (absolute value)	Number of counties										
	2001	2002 <sup>1</sup>	2003	2004	2005	2006	2007	2008 <sup>2</sup>	2009 <sup>3</sup>	2010	2011
0.0–0.9 percent .....	1,289	1,361	1,158	894	794	741	937	1,346	635	883	662
1.0–4.9 percent .....	1,765	1,686	1,823	2,082	2,156	2,158	2,015	1,611	2,195	1,976	1,890
5.0–9.9 percent .....	50	55	121	127	147	191	140	126	245	218	418
10.0 percent or more	6	9	9	8	14	21	19	29	38	36	143
Total .....	3,110	3,111	3,111	3,111	3,111	3,111	3,111	3,112	3,113	3,113	3,113

1. For 2002 forward, the number of counties includes Broomfield County, CO.

2. For 2008 forward, the number of counties reflects the division of Skagway-Hoonah-Angoon Census Area into the Skagway Borough and the Hoonah-Angoon Census Area.

3. For 2009 forward, the number of counties reflects the division of the Wrangell-Petersburg Census Area into the Petersburg Census Area and the Wrangell City and Borough.

### Supplemental Nutritional Assistance Program (SNAP) benefits

The basic local area data source for SNAP benefits are payments data from various state departments of social services. Formerly, when payments data were not available, the county distribution of benefits was held constant. As part of the comprehensive revision, the number of benefit recipients by county from the U.S. Census Bureau were used in the allocation of the state total when county payments data were unavailable.

### Acknowledgments

The Regional Income Division of the Bureau of Economic Analysis (BEA), under the direction of Mauricio Ortiz, Chief, prepared the annual estimates of local area personal income. Joel D. Platt, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a division-wide effort.

The Compensation Branch, under the supervision of John A. Rusinko, Chief, prepared the estimates of non-farm wages and salaries, supplements to wages and salaries, and personal current tax receipts. Major responsibilities were assigned to Peter Battikha, Michael L. Berry, Elizabeth P. Cologer, John D. Laffman, David G. Lenze, Paul K. Medzerian, and Joseph L. Stauffer. Contributing staff members were Susan P. Den Herder, Terence J. Fallon, Michael W. Jadoo, Russell C. Lusher, Nathaniel R. Milhous, Michael A. Reid, and Ross A. Stepp.

The Regional Income Branch prepared the estimates of nonfarm proprietors' income, property income, personal current transfer receipts, contributions for government

social insurance, and the adjustment for residence. Major responsibilities were assigned to Brian J. Maisano, Lisa C. Ninomiya, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Suet M. Boudhraa, Andy K. Kim, Toan A. Ly, W. Timothy McKeel, Linda M. Morey, Anand N. Seoram, and Troy P. Watson.

The Farm Income and Employment Section, under the supervision of James M. Zavrel, Assistant to the Division Chief, prepared the estimates of farm wages and salaries, farm supplements to wages and salaries, and farm proprietors' income. Major responsibilities were assigned to Carrie L. Litkowski. Contributing staff members were Daniel R. Corrin and Michelle A. Harder.

The Data and Administrative Systems Group assembled the public use tabulations and data files and prepared the tables. Major responsibilities were assigned to Jeffrey L. Newman, Michael J. Paris, and Callan S. Swenson. Contributing staff members were Brooke N. Huotari, Monique B. Tyes, Melanie N. Vejdani, and Jonas D. Wilson.

## **Personal contributions for veterans life insurance**

Formerly, state estimates of personal contributions for veterans life insurance (a component of contributions for government social insurance) were allocated to counties in proportion to the veteran population from the Census of Population. The veteran population for 2000 was held constant for all subsequent years. As part of the comprehensive revision, state estimates of contributions for veterans' life insurance were allocated to counties using the 2006–2010 American Community Survey "5-year" estimates of the veteran population, centered on 2008, the midpoint of the estimation interval. This allocator will be held constant for subsequent years until new, nonoverlapping 5-year estimates are available.

## **Home Affordable Mortgage Program principal reduction**

This recently enacted federal program, a response to the subprime mortgage crisis, helps eligible home owners with loan modifications on their home mortgage debt. In lieu of direct data on benefits, the state estimates are allocated to counties on the basis of Federal Reserve Bank of New York data on the number of mortgage debtors, per debtor mortgage debt balance and percent of mortgage debt in delinquency.

## **Miscellaneous components of personal income**

Formerly, the state estimates of a number of small components of personal income for which no county-level source data are available (for example, temporary disability benefits, a component of personal current transfer receipts) were allocated to counties on the basis of civilian population. As part of the comprehensive revision, these components are now allocated to counties using household population, that is, total population excluding persons living in group quarters such as prisons. State estimates of the recently enacted Temporary High Risk Health Insurance premium reduction are also allocated to counties on the basis of household population.

## **Residence adjustment**

Estimates of wage and salary flows across the borders of the United States were substantially revised in 2011 as part of the annual revision of the international transactions accounts.<sup>10</sup> Because of the magnitude of the revisions and the number of years affected, the introduction of these revised national estimates into the regional personal income accounts was delayed until

the comprehensive revision. These wage flows are part of the residence adjustment in the local area personal income accounts. They account for wage and salary flows between Canada, Mexico, and the United States. In addition, they account for the inflows of wages and salaries earned by U.S. residents employed by certain international organizations (such as the United Nations, the International Monetary Fund, and the World Bank) and by foreign embassies and consulates located within the geographic borders of the United States.

## **Changes in statistical methods**

There were also several statistical improvements to the local area personal income accounts. Some of these improvements (such as for employer contributions for pensions and health insurance) involve state and national source data that are not available for individual counties. However, these improvements are implicitly incorporated into the county estimates, which must sum to the state and national estimates.

## **Source Data**

The primary 2012 county-level data used by BEA to prepare the estimates of local area personal income presented in this article were wage and salary data from the Bureau of Labor Statistics, benefits paid by the Social Security Administration, Medicare enrollment and fee-for-service expenditure data from the Centers for Medicare and Medicaid Services, and Medicaid payments from state departments of social services. In addition, tabulations of 2011 federal income tax returns from the Internal Revenue Service were used, primarily for dividends, interest, nonfarm proprietors' income, and the residence adjustment.<sup>11</sup>

Other 2012 county-level data used by BEA to prepare estimates of various components of local area personal income include the following:

- Farm cash receipts, government payments, crop production, and livestock inventories by county for 2012 from the U.S. Department of Agriculture were used in the estimation of local area farm income.
- The number of full-time military and coast guard personnel by county for 2012 from the Departments of Defense and Homeland Security was used in the estimation of military earnings.
- County-level data for 2012 from the Federal Assistance Award Data System were used to prepare estimates of some components of personal current transfer receipts.
- Household population by county for 2012 from the Census Bureau was used to allocate state estimates of a few small components of personal income.

10. See Mai-Chi Hoang and Erin M. Whitaker "Annual Revision of the U.S. International Transactions Accounts," SURVEY 91 (July 2011): 58.

11. For complete details about the estimation methodology and data sources, see *Local Area Personal Income Methodology* on BEA's Web site.

### Alternative Measures of County Employment and Wages

Three widely used measures of county employment and wages by place of work are (1) employment and payroll in the *County Business Patterns* (CBP) series from the Census Bureau, (2) employment and wages from the Quarterly Census of Employment and Wages (QCEW) program from the Bureau of Labor Statistics (BLS), and (3) wage and salary disbursements and employment from the Bureau of Economic Analysis (BEA). These measures differ in source data and coverage.

The CBP data are derived from Census Bureau business establishment surveys and federal administrative records. The QCEW data are tabulations of monthly employment and quarterly wages of workers who are covered by state unemployment insurance programs or by the unemployment insurance program for federal employees.<sup>1</sup> The BEA estimates of employment and wages are primarily derived from the BLS data; the estimates for industries that are either not covered or not fully covered in the QCEW are also based on supplemental data from other agencies, such as the Department of Defense, the U.S. Department of Agriculture, and the Railroad Retirement Board.

The coverage of the Census Bureau data differs from that of the BLS data primarily because the Census Bureau data exclude most government employees and because the BLS data cover civilian government employees.<sup>2</sup> The CBP data also exclude several private industries that are partly covered by the QCEW: crop and animal production; rail transportation; insurance and employee benefit funds; trusts, estates, and agency accounts; and private households. However, the CBP data cover the employees of educational institutions, membership organizations, and small nonprofit organizations in other industries more completely than the BLS data.<sup>3</sup> In addition, the Census Bureau reports employment only for the month of March; the BLS employment data are quarterly and annual averages of monthly data.

In 2001, both BLS and BEA began to include employees of Indian tribal councils in local government. These employees were previously included in the relevant private industries.<sup>4</sup> In the Census Bureau data, these employees are still classified in private industries.

BEA estimates of employment and wages differ from the BLS

data because BEA adjusts the estimates to account for employment and wages that are not covered or not fully covered by the unemployment insurance programs. BEA adds estimates of employment and wages to the BLS data to bridge small gaps in coverage for nonprofit organizations that do not participate in the unemployment insurance program (in several industries), for students and their spouses employed by colleges or universities, for elected officials and members of the judiciary, for interns employed by hospitals and by social service agencies, and for insurance agents classified as statutory employees. In addition, BEA uses supplemental source data to estimate most, or all, of the employment and wages for the following: farms, farm labor contractors and crew leaders, private households, private elementary and secondary schools, religious membership organizations, rail transportation, and military. BEA also adjusts for employment and wages subject to unemployment insurance but not reported by employers. Other adjustments to wages include estimates for unreported tips, judicial fees paid to jurors and witnesses, compensation of prison inmates, and marriage and license fees paid to justices of the peace.<sup>5</sup>

The Census Bureau released 2011 data for total employment and payrolls for counties on its Web site on April 2013. BLS released county data on total employment and average weekly pay for 2012 on its Web site on September 9, 2013. BEA released preliminary estimates for 2012 and revised estimates for 2010–2011 of total wage employment and total wage and salary disbursements for counties on its Web site on November 21, 2013.

5. For a detailed description of the sources and methods used to prepare the estimates, visit [www.bea.gov/regional/methods.cfm](http://www.bea.gov/regional/methods.cfm).

### National Totals of BEA County Estimates of Wages and Salaries and CBP Payrolls and QCEW Wages

[Billions of dollars]

	2010	2011	2012
Total CBP payrolls.....	4,941.0	5,164.9	n.a.
Plus: Differences in coverage:			
QCEW civilian government wages <sup>1</sup> .....	1,031.6	1,033.7	n.a.
Other differences, net <sup>2</sup> .....	3.1	18.7	n.a.
Equals: Total QCEW wages.....	5,975.7	6,217.3	6,490.6
Plus: BEA adjustments:			
For unreported wages and unreported tips on employment tax returns.....	69.7	78.1	80.8
For wages and salaries not covered or not fully covered by unemployment insurance:			
Private.....	194.6	205.4	217.5
Government.....	131.6	130.7	131.0
Other BEA adjustments <sup>3</sup> .....	-2.9	-3.2	-2.8
Equals: BEA estimates of wages and salaries <sup>4</sup> .....	6,368.6	6,628.3	6,917.2

n.a. Not available

1. Adjusted to remove the wages of Indian tribal councils that are included in the Census Bureau's total payroll data.

2. Includes differences of coverage in private education, membership organizations, and government.

3. Adjusted to remove wages and salaries of employees of U.S. companies stationed overseas and to reflect updates to QCEW data.

4. Consists of the earnings of persons who live in the United States and of foreign residents working in the United States. The regional total differs from the national estimate; see "Personal Income in the NIPAs and State Personal Income," SURVEY OF CURRENT BUSINESS 93 (November 2013): 57.

Note. Details may not equal totals due to rounding.

Michael Jadoo

1. The QCEW data account for 93 percent of BEA's wages and salaries.

2. The Census Bureau data cover only those government employees who work in government hospitals, federally chartered savings institutions and credit unions, liquor stores, and wholesale liquor establishments, and university publishers. The BLS data in most states exclude state and local elected officials, members of the judiciary, state national and air national guardsmen, temporary emergency employees, and employees in policy and advisory positions.

3. The BLS data do not cover certain religious elementary and secondary schools because a Supreme Court decision exempts some of these schools from unemployment compensation taxes. The BLS data also exclude college students (and their spouses) who are employed by the school in which they are enrolled and student nurses and interns who are employed by hospitals as part of their training. In half of the states, the BLS data only include nonprofit organizations with four or more employees during 20 weeks in a calendar year.

4. For example, employees of casinos owned by tribal councils were included in "Amusement, Gambling, and Recreation Industries."

### Alternative Measures of County Employment and Wages

Three widely used measures of county employment and wages by place of work are (1) employment and payroll in the *County Business Patterns* (CBP) series from the Census Bureau, (2) employment and wages from the Quarterly Census of Employment and Wages (QCEW) program from the Bureau of Labor Statistics (BLS), and (3) wage and salary disbursements and employment from the Bureau of Economic Analysis (BEA). These measures differ in source data and coverage.

The CBP data are derived from Census Bureau business establishment surveys and federal administrative records. The QCEW data are tabulations of monthly employment and quarterly wages of workers who are covered by state unemployment insurance programs or by the unemployment insurance program for federal employees.<sup>1</sup> The BEA estimates of employment and wages are primarily derived from the BLS data; the estimates for industries that are either not covered or not fully covered in the QCEW are also based on supplemental data from other agencies, such as the Department of Defense, the U.S. Department of Agriculture, and the Railroad Retirement Board.

The coverage of the Census Bureau data differs from that of the BLS data primarily because the Census Bureau data exclude most government employees and because the BLS data cover civilian government employees.<sup>2</sup> The CBP data also exclude several private industries that are partly covered by the QCEW: crop and animal production; rail transportation; insurance and employee benefit funds; trusts, estates, and agency accounts; and private households. However, the CBP data cover the employees of educational institutions, membership organizations, and small nonprofit organizations in other industries more completely than the BLS data.<sup>3</sup> In addition, the Census Bureau reports employment only for the month of March; the BLS employment data are quarterly and annual averages of monthly data.

In 2001, both BLS and BEA began to include employees of Indian tribal councils in local government. These employees were previously included in the relevant private industries.<sup>4</sup> In the Census Bureau data, these employees are still classified in private industries.

BEA estimates of employment and wages differ from the BLS

data because BEA adjusts the estimates to account for employment and wages that are not covered or not fully covered by the unemployment insurance programs. BEA adds estimates of employment and wages to the BLS data to bridge small gaps in coverage for nonprofit organizations that do not participate in the unemployment insurance program (in several industries), for students and their spouses employed by colleges or universities, for elected officials and members of the judiciary, for interns employed by hospitals and by social service agencies, and for insurance agents classified as statutory employees. In addition, BEA uses supplemental source data to estimate most, or all, of the employment and wages for the following: farms, farm labor contractors and crew leaders, private households, private elementary and secondary schools, religious membership organizations, rail transportation, and military. BEA also adjusts for employment and wages subject to unemployment insurance but not reported by employers. Other adjustments to wages include estimates for unreported tips, judicial fees paid to jurors and witnesses, compensation of prison inmates, and marriage and license fees paid to justices of the peace.<sup>5</sup>

The Census Bureau released 2011 data for total employment and payrolls for counties on its Web site on April 2013. BLS released county data on total employment and average weekly pay for 2012 on its Web site on September 9, 2013. BEA released preliminary estimates for 2012 and revised estimates for 2010–2011 of total wage employment and total wage and salary disbursements for counties on its Web site on November 21, 2013.

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change was calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of

source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget as of February 2013, for federal statistical purposes.

Table 2. Personal Income and Per Capita Personal Income by County, 2010–2012—Continues

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

3. Virginia combination areas consist of one or two independent cities with populations of less than 100,000 combined with an adjacent county. The county name appears first, followed by the city name(s). Separate estimates for the jurisdictions making up the combination areas are not available.

# Subject Guide

## VOLUME 93 JANUARY–DECEMBER 2013

This guide lists the major items that were published in the SURVEY OF CURRENT BUSINESS in the January–December 2013 issues. It gives the month of the issue and the beginning page number, and it includes selected boxes that are cited by title and page number.

### **BEA Briefings**

- Fines and Penalties in the U.S. International Transactions Accounts {July, 55}
- A First Look at Experimental Quarterly Gross Domestic Product by State {September, 294}
- A First Look at Experimental Statistics on Personal Consumption Expenditures by State {August, 105}
- A Guide to the Integrated Macroeconomic Accounts {April, 12}
- Modernizing and Enhancing BEA's International Economic Accounts: A Progress Report {May, 44}

### **Research Spotlights**

- Alternative Measures of Implicitly Priced Financial Services of Savings Institutions and Credit Unions {November, 27}
- Recent Research on Disease-Based Price Indexes: Where Do We Stand? {July, 9}
- State-Level R&D by Multinational Companies: Results From an Interagency Data Link Project {September, 286}

### **National**

- Fixed assets and consumer durable goods**  
For 2003–2012 {October, 10}
- Inventories, sales, and inventory-sales ratios for manufacturing and trade**  
Third Quarter 2012 {January, 61}  
Fourth Quarter 2012 {April, 9}  
First Quarter 2013 {July, 6}  
Second Quarter 2013 {October, 6}
- National income and product accounts (NIPAs)**  
2013 Comprehensive Revision  
Initial Results {August, 6}  
Improved Estimates {September, 14}
- NIPA Tables {September, 46}
- GDP and the Economy  
Advance Estimates  
Fourth Quarter 2012 {February, 1}  
Key Issues Affecting the NIPAs for the Fourth Quarter {February, 6}

- First Quarter 2013 {May, 1}  
Second Quarter 2013 {August, 1}  
Third Quarter 2013 {November, 1}

#### Second Estimates

- Fourth Quarter 2012 {March, 1}  
First Quarter 2013 {June, 1}  
Second Quarter 2013 {August, 1}  
Third Quarter 2013 {December, 1}

#### Third Estimates

- Third Quarter 2012 {January, 1}  
Fourth Quarter 2012 {April, 1}  
First Quarter 2013 {July, 1}  
Second Quarter 2013 {October, 1}

#### Government Receipts and Expenditures

- Fourth Quarter 2012 {April, 6}  
First Quarter 2013 {June, 11}  
Second Quarter 2013 {August, 11}  
Third Quarter 2013 {December, 11}

#### Returns for Domestic Nonfinancial Business

- {June, 14}  
Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods in the 2013 Comprehensive Revision {February, 8}

#### Preview of the 2013 Comprehensive NIPA Revision

- Changes in Definitions and Presentations {March, 13}

#### Statistical Changes

- {May, 6}  
Updated Summary of NIPA Methodologies {November, 6}

#### NIPA translation of the federal budget

- For Fiscal Year 2014 {May, 15}

### **Industry**

#### **Industry accounts**

- Annual Industry Accounts  
Advance Statistics on GDP by Industry for 2012 {May, 26}

#### **Industry economic accounts**

- A Preview of the 2013 Comprehensive Revision of the Industry Economic Accounts {June, 19}

#### **Travel and tourism satellite accounts**

- For 2008–2011 {June, 35}

**International****Direct investment positions**

Country and Industry Detail for 2012 {July, 26}  
 Detailed Historical-Cost Positions and Related Financial and Income Flows for 2009–2012 {September, 200}

**Foreign direct investment in the United States**

Operations of U.S. Affiliates of Foreign Companies in 2011 {August, 82}

**U.S. direct investment abroad**

Operations of U.S. Multinational Companies in 2011 {November, 37}

**U.S. international investment position**

## Quarter End Estimates

Fourth Quarter 2012 {April, 65}

First Quarter 2013 {July, 14}

Second Quarter 2013 {October, 102}

## Year End Estimates

For 2012 {April, 66}

For 2012 {July, 15}

**U.S. international services**

Cross-Border Trade in 2012 and Services Supplied Through Affiliates in 2011 {October, 25}

**U.S. international transactions**

Annual Revision {July, 43}

International Transactions and Positions in Financial Derivatives {July, 112}

How BEA Aligns and Augments Source Data From the U.S. Treasury Department for Inclusion in the International Transactions Accounts {July, 61}

An Ownership-Based Framework of the U.S. Current Account for 2000–2011 {January, 40}

Annual Estimates for 2012 {April, 36}

## Quarterly Estimates

Third Quarter 2012 {January, 6}

Fourth Quarter 2012 {April, 28}

**First Quarter 2013 {July, 64}****Second Quarter 2013 {October, 68}**

Reconciliation of the United States-Canadian Current Account, 2010 and 2011 {January, 45}

**Regional****Gross domestic product by state**

Advance Statistics for 2012 and Revised Statistics for 1999–2011 {July, 115}

**Gross domestic product by metropolitan area**

Advance Statistics for 2011 and Revised Statistics for 2001–2010 {March, 41}

Advance Statistics for 2012 and Revised Statistics for 2001–2011 {October, 105}

**Local area personal income**

Comprehensive Revision: New Statistics for 2012 and Revised Statistics for 2001–2011 {December, 14}  
 Alternative Measures of County Employment and Wages {December, 21}

**Regional price parities for states and metropolitan areas**

For 2007–2011 {August, 89}

**Regional quarterly reports**

Local Area Personal Income for 2011 {January, 69}

Alternative Measures of County Employment and Wages {January, 74}

## State Personal Income

Alternative Measures of Household Income {April, 74}

Annual Estimates for 2012 {April, 72}

Annual Estimates for 2012 {November, 51}

Preview of the Comprehensive Revision of the State Personal Income Statistics {July, 147}

## Quarterly Estimates

Third Quarter 2012 {January, 64}

Fourth Quarter 2012 {April, 68}

First Quarter 2013 {July, 143}

Second Quarter 2013 {November, 48}

## National Data

### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components, which were released on December 5, 2013. These estimates include the second estimates for the third quarter of 2013. Also included are revised estimates of wages and salaries and of affected income-side series for the second quarter of 2013.

The selected set presents quarterly estimates that are updated monthly. Annual estimates are presented in most of the tables. Estimates for all NIPA series for 1929 forward are on BEA's Web site at [www.bea.gov](http://www.bea.gov).

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to [www.bea.gov](http://www.bea.gov) and subscribe. The "Selected NIPA Tables" are available later that day.

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Percent changes for real estimates are calculated from corresponding quantity indexes presented in NIPA tables 1.1.3, 1.2.3, 1.4.3, and 1.7.3. Percent changes in price estimates are calculated from corresponding price indexes presented in NIPA tables 1.1.4, 1.6.4, and 2.3.4.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

1. Estimates for durable goods and nondurable goods for 1996 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. Some components of final sales of computers include computer parts.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital.

1. Equals gross domestic product excluding gross value added of households and institutions and of general government.

2. Equals gross domestic business value added excluding gross farm value added.

3. Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

4. Equals compensation of general government employees plus general government consumption of fixed capital.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded," or bundled, in computers and other equipment.

5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.  
2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).  
3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.  
4. Excludes software "embedded," or bundled, in computers and other equipment.  
5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Excludes software "embedded" or bundled, in computers and other equipment.

5. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 38.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

3. Net domestic income deflated by the implicit price deflator for net domestic product.

Note. Except as noted in footnotes 1, 2 and 3, chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Uses gross domestic purchases price index as deflator.

2. This measure is called "real gross domestic income" in the System of National Accounts, 2008.  
 3. This measure is called "real gross national income" in the System of National Accounts, 2008.  
 4. Uses net domestic purchases price index as deflator.  
 5. Ratio (multiplied by 100) of price index for gross domestic product to the price index for gross domestic purchases.  
 6. Ratio (multiplied by 100) of the price index for exports of goods and services to the price index for imports of goods and services.  
 7. Ratio (multiplied by 100) of the price index for goods exports to the price index for goods imports.  
 8. Ratio (multiplied by 100) of the price index for goods exports to the price index for nonpetroleum goods imports.

IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

1. Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100.

4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

IVA Inventory valuation adjustment

CCAdj Capital consumption adjustment

1. The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Note. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

Command-basis net national product <sup>1</sup> .....	13	1.9	2.9	3.4	-0.1	0.9	3.2	4.5
<b>After-tax income received by the personal sector:</b>								
Disposable personal income .....	14	2.4	2.0	-0.6	9.0	-7.9	4.1	2.9

1. In this table, the net measures are the corresponding gross measures excluding the depreciation of fixed assets as measured by the consumption of fixed capital.

2. Gross domestic purchases excluding change in private inventories.

3. The command-basis estimates (lines 10-13) measure the purchasing power of the income generated by the sale of goods and services produced; they reflect gains or losses in real income resulting from changes in the terms of trade for exports and imports. For more detail on the command-basis measures, see NIPA tables 1.8.3 and 1.8.6.

<b>Disposable personal income, chained (2009) dollars.....</b>	42	2.4	2.0	-0.6	9.0	-7.9	4.1	2.9

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas services.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Net expenses of NPISHs, defined as their gross operating expenses less primary sales to households.

2. Gross output is net of unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; excludes own-account investment (construction and software).

3. Excludes unrelated sales, secondary sales, and sales to business, to government, and to the rest of the world; includes membership dues and fees.

4. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

5. Consists of gasoline and other energy goods and of electricity and gas.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

6. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

NOTE. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

1. Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development in table 3.9.5.

5. Includes federal purchases of research and development produced by state and local general government.

Note: Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

1. National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction, software, and research and development).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures, software, and research and development.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

#### 4. Foreign Transactions

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets. Prior to 1982, reflects only capital grants paid to the U.S. territories and the Commonwealths of Puerto Rico and Northern Mariana Islands.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the federal government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer goods.

Private fixed investment in information processing equipment and software .....	31	4.1	4.3	-0.4	14.5	2.4	1.4	1.9

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

4. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

5. Excludes software "embedded," or bundled, in computers and other equipment.

6. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

7. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

8. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

9. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Private fixed investment in information processing equipment and software .....	32	557.7	581.6	575.5	595.3	598.9	600.9	603.8	

1. Includes petroleum and mineral exploration.

2. Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

3. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.1.

4. Includes communication equipment, nonmedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Excludes software "embedded," or bundled, in computers and other equipment.

7. Research and development investment excludes expenditures for software development. Software development expenditures are included in software investment on line 17.

8. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, brokers' commissions on the sale of residential structures and adjoining land, and other ownership transfer costs.

9. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

10. Excludes net purchases of used structures and brokers' commissions and other ownership transfer costs.

Note. Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2009) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures	29	4.26	4.21	4.24	4.19
					4.16

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

1. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and imputed rental of owner-occupied nonfarm housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2009) dollar inventory series are calculated to ensure that the chained (2009) dollar change in inventories for 2009 equals the current-dollar change in inventories for 2009 and that the average of the 2008 and 2009 end-of-year chain-weighted and fixed-weighted inventories are equal.

Sales of imported new autos <sup>3</sup> .....	46	91.7	100.0	96.2	102.8	100.6	102.8	105.6

1. Consists of used light trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of sales of imported new autos in personal consumption expenditures, in private fixed investment, and in gross government investment.

**NOTE.** Chained (2009) dollar series are calculated as the product of the chain-type quantity index and the 2009 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

CCAdj Capital consumption adjustment

IVA Inventory valuation adjustment

1. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

2. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

3. Consists of nonmortgage interest paid by households.

4. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

5. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

## C. Historical Measures

This table presents historical time series for several estimates presented in the “Selected NIPA Tables” that are published in this issue. The time series are also presented in the NIPA tables on BEA’s Web site, [www.bea.gov](http://www.bea.gov).

**Table C.1. GDP and Other Major NIPA Aggregates—Continues**

## D. Charts

All series are seasonally adjusted at annual rates. The percent changes in real gross domestic product are based on quarter-to-quarter changes. The shaded areas mark the beginning and end of recessions as determined by the Business Cycle Dating Committee of the National Bureau of Economic Research.

p Preliminary

r Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

p Preliminary

† Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

<sup>p</sup> Preliminary<sup>r</sup> Revised

(\*) Transactions are less than \$500,000 (+/-)

1. Details not shown separately; see totals in lines 56 and 63.

2. Details not shown separately are included in line 69.

3. Estimates of financial derivatives for Mexico are included in Latin America and Other Western Hemisphere; and for China and India, in Asia and Pacific. Estimates for the Middle East are combined with estimates for Asia and Pacific.

4. Calculated excluding financial derivatives, net (line 70).

<sup>p</sup> Preliminary<sup>r</sup> Revised

1. Royalties and license fees and "other private services" by detailed type of service include both affiliated and unaffiliated transactions.

2. Includes royalties, license fees, and other fees associated with intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.

3. Includes royalties, license fees, and other fees associated with copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intellectual property rights.

4. Other services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

5. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

p Preliminary

r Revised

1. The statistics for each quarter are the values as of the last day of the quarter; the first quarter ends on March 31; the second quarter ends on June 30; the third quarter ends on September 30; and the fourth quarter ends on December 31 of the year.

2. U.S. official gold stock is valued at market price.

3. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

4. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with third country's currency, or by delivery of materials or transfer of services.

5. Includes foreign-currency-denominated assets obtained through temporary reciprocal currency arrangements between the Federal Reserve System and foreign central banks. These assets are included in the investment position at the dollar value established at the time they were received, reflecting the valuation of these assets in the Federal Reserve System's balance sheet. Changes in exchange rates do not affect this valuation.

6. Includes U.S. government liabilities associated with military sales contracts and U.S. government reserve-related liabilities from allocations of special drawing rights (SDRs).

D Suppressed to avoid disclosure of data of individual companies.

Notes. The data in this table are from BEA's annual survey of the operations of U.S. affiliates of foreign companies; see "U.S. Affiliates of Foreign Companies: Operations in 2011" in the August 2013 SURVEY OF CURRENT BUSINESS.

The following ranges are given in employment cells that are suppressed: A—1 to 499; F—500 to 999; G—1,000 to 2,499; H—2,500 to 4,999; I—5,000 to 9,999; J—10,000 to 24,999; K—25,000 to 49,999; L—50,000 to 99,999; M—100,000 or more.

## H. Charts

### THE UNITED STATES IN THE INTERNATIONAL ECONOMY: QUARTERLY SERIES<sup>1</sup>

## Regional Data

### I. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross domestic product by state. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income and the estimates of gross domestic product by state are available online at [www.bea.gov](http://www.bea.gov). For information on state personal income, e-mail [reis@bea.gov](mailto:reis@bea.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross domestic product by state, e-mail [gdpbystate@bea.gov](mailto:gdpbystate@bea.gov); write to the Regional Product Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

<sup>p</sup> Preliminary<sup>r</sup> Revised

1. Percent change was calculated from unrounded data.

Note: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 in the "Regional Quarterly Report" in the November 2013 SURVEY OF CURRENT BUSINESS

**Table I.3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region**

Area	Disposable personal income							Per capita disposable personal income <sup>2</sup>

<sup>p</sup> Preliminary<sup>r</sup> Revised

1. Percent change was calculated from unrounded data.

Note: The personal income level shown for the United States is derived as the sum of the state estimates. It differs

from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 3 in the "Regional Quarterly Report" in the November 2013 SURVEY OF CURRENT BUSINESS

**Table I.4. Gross Domestic Product (GDP) by State for Industries, 2012**  
 [Millions of dollars]

Area	Rank of total GDP by state	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change was calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget as of February 2013, for federal statistical purposes.

Table J.2. Gross Domestic Product by Metropolitan Area for Industries, 2012—Continues

[Millions of dollars]

	Rank of total GDP by metropolitan area	Total	Natural resources and mining	Construction	Durable-goods manufacturing	Nondurable-goods manufacturing	Trade	Transportation and utilities	Information	Financial activities	Professional and business services	Education and health services	Leisure and hospitality	Other services	Government

### A. Additional Information About the NIPA Estimates

#### Statistical Conventions

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or “real” measures, and prices are expressed as index numbers with the reference year—at present, the year 2009—equal to 100.<sup>1</sup>

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2008–2009 uses prices for 2008 and 2009 as weights, and the annual percent change in the GDP price index uses quantities for 2008 and 2009 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are “chained” (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding “chain-type” price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated “chained (2009) dollar estimates.” For most series, these estimates are computed by multiplying the current-dollar value in 2009 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2009 and if real output for this component increased by 10 percent in 2010, then the chained (2009) dollar value of this component in 2010 would be \$110 ( $\$100 \times 1.10$ ). The percent changes calculated from the chained (2009) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a “residual” line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where  $r$  is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_0$  is the level of activity in the earlier period;  $m$  is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and  $n$  is the number of periods between the earlier periods and the later periods (that is,  $t - 0$ ).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. Consists of statistical revisions to the ITAs that have not yet been incorporated into the NIPAs.

ITAs International transactions accounts

NIPAs National income and product accounts

## B. Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. All of this information is available on BEA's Web site at [www.bea.gov](http://www.bea.gov).

### National accounts

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of fixed assets and consumer durable goods.

**National income and product accounts (NIPAs).** The chapters in *Concepts and Methods of the U.S. National Income and Product Accounts* document the conceptual framework of the NIPAs and the methodologies that are used to prepare the estimates. The chapters have been updated to reflect the 2012 annual NIPA revision.

- “Introductory Chapters 1–4: Concepts, Source Data, and Estimating Methods”
- “Chapter 5: Personal Consumption Expenditures”
- “Chapter 6: Private Fixed Investment”
- “Chapter 7: Change in Private Inventories”
- “Chapter 8: Net Exports of Goods and Services”
- “Chapter 9: Government Consumption Expenditures and Gross Investment”
- “Chapter 10: Compensation of Employees”
- “Chapter 13: Corporate Profits”

In addition, see *Measuring the Economy: A Primer on GDP and the National Income and Product Accounts* (2007).

The following SURVEY article describes the most recent comprehensive NIPA revision.

- “Initial Results of the 2013 Comprehensive Revision of the National Income and Product Accounts” (August 2013)
  - “Improved Estimates of the National Income and Product Accounts: Results of the 2013 Comprehensive Revision” (September 2013)
  - “Preview of the 2013 Comprehensive NIPA Revision”
  - “Changes in Definitions and Presentations” (March 2013)
  - “Statistical Changes” (May 2013)
- In addition, see the following articles.
- “Updated Summary of NIPA Methodologies”

(November 2013) describes the source data and methods that are used to prepare the estimates.

“Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes” (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

“Revisions to GDP, GDI, and Their Major Components” (July 2011) evaluates the principal NIPA estimates by examining the record of revisions to them.

**Fixed assets and consumer durable goods.** *Fixed Assets and Consumer Durable Goods in the United States, 1925–97* (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

“Fixed Assets and Consumer Durable Goods for 2003–2012: Results of the 2013 Comprehensive NIPA Revision” (October 2013) reflect the changes that were incorporated as part this revision.

**Satellite account.** This account extends the analytical capacity of the NIPAs by focusing on the effects of a particular aspect of economic activity on GDP.

- “Research and Development Satellite Account”
- For 1959–2002 (December 2006)
- For 1959–2004 (October 2007)
- For 1959–2007 (December 2010)

### Industry accounts

The industry accounts consist of the annual industry accounts (the input-output accounts and the gross domestic product by industry accounts), the benchmark input-output accounts, and two satellite accounts.

“Preview of the 2013 Comprehensive Revision of the Industry Economic Accounts” describes the changes in definitions and in classifications and statistical changes as part of this upcoming comprehensive revision (June 2013).

### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and its most recently updated strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at [www.bea.gov](http://www.bea.gov) under “About BEA.”

**Annual industry accounts.** *Measuring the Nation's Economy: An Industry Perspective* (2011) provides an overview of these accounts and how they can be used to examine industry activity in the U.S. economy and to track the flow of goods and services throughout the economy.

**Benchmark input-output accounts.** *Concepts and Methods of the U.S. Input-Output Accounts* (September 2006) describes the concepts and methods that underlie the preparation of these accounts.

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

“U.S. Travel and Tourism Satellite Accounts”  
 For 2005–2008 (June 2009)  
 For 2004–2009 (November 2010)  
 For 2007–2010 (June 2011)  
 For 2003–2011 (June 2012)  
 For 2009–2012 (June 2013)

## International accounts

The international accounts encompass the international transactions accounts and the international investment position accounts, direct investment, and international transactions in services.

**International transactions accounts and international investment position accounts.** “A Guide to the U.S. International Transactions Accounts and the U.S. International Investment Position Accounts” (February 2010) introduces these accounts.

*U.S. International Transactions Accounts: Concepts and Estimation Methods* (2011) describes the methodologies used to prepare the estimates. The methodology is usually updated and improved as part of the annual revisions of the international transactions accounts. The updated and improved methodology is described in a series of articles, the latest of which was published in the July 2013 SURVEY.

“Modernizing and Enhancing BEA’s International Economic Accounts: A Progress Report and Plans for Implementation” (May 2013) updates BEA’s plans to introduce the new international statistical standards from recently updated manuals and its plans for changes for the 2013 and 2014 annual revisions.

“An Analysis of the Revisions to BEA’s International Economic Accounts” (November 2012) examines the accuracy of the estimates by analyzing the size and pattern of revisions to the quarterly estimates.

**Direct investment.** Updated methodologies are available in *U.S. Direct Investment Abroad: Final Results From the 2009 Benchmark Survey* (2013) and in *Foreign Direct Investment in the United States: Final Results*

*From the 2007 Benchmark Survey* (2011).

Additional improvements are described in the following annual articles: “Direct Investment: Detailed Historical-Cost Positions and Related Financial and Income Flows” (September 2013), “Direct Investment Positions: Country and Industry Detail” (July 2013), “Operations of U.S. Multinational Companies” (November 2012), and “Operations of U.S. Affiliates of Foreign Companies” (August 2013).

**International services.** The methodology used to prepare the estimates is usually updated and improved in a series of articles, the latest of which was published in the October 2013 SURVEY.

“Selected Issues in the Measurement of U.S. International Services” (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services.

## Regional accounts

The regional accounts include estimates of personal income and gross domestic product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

*State Personal Income and Employment* (2012) describes the detailed methodology that is used to prepare the quarterly and annual estimates for the states, the District of Columbia, the eight BEA regions, and the United States.

“An Examination of Revisions to the Quarterly Estimates of State Personal Income” (August 2012) analyzes the pattern of revisions in the various stages of the estimation cycle.

*Local Area Personal Income and Employment* (2012) describes the detailed methodology that is used to prepare the estimates for counties, metropolitan areas, metropolitan divisions, micropolitan areas, combined statistical areas, and BEA economic areas and regions.

**Gross domestic product.** Estimates of gross domestic product (GDP) are prepared for states and metropolitan areas.

*Gross Domestic Product by State* (2006) describes the sources and the methods that are used to prepare the estimates.

“Gross Domestic Product by State” (December 2010) presents the results of the most recent comprehensive revision.

“Introducing New Measures of the Metropolitan Economy: Prototype Estimates of GDP by Metropolitan Area” (November 2007) describes the potential uses of the estimates.
