

- |  |  |
|--|--|
| 1 ion binding  | 19 enzyme binding                                |
| 2 DNA binding  | 20 transcription factor binding                  |
| 3 oxidoreductase activity                            | 21 lyase activity                                |
| 4 transmembrane transporter activity                 | 22 transferase activity                          |
| 5 RNA binding  | 23 helicase activity                             |
| 6 peptidase activity                                 | 24 protein binding transcription factor activity |
| 7 kinase activity                                    | 25 isomerase activity                            |
| 8 nucleic acid binding transcription factor activity |  |
| 9 ATPase activity                                    | 26 methyltransferase activity                    |
| 10 enzyme regulator activity                         | 27 unfolded protein binding                      |
| 11 signal transducer activity                        | 28 hydrolase activity                            |
| 12 structural molecule activity                      | 29 hydrolase activity                            |
| 13 ligase activity                                   | 30 nucleotidyltransferase activity               |
| 14 cytoskeletal protein binding                      | 31 nuclease activity                             |
| 15 lipid binding                                     | 32 transferase activity                          |
| 16 phosphatase activity                              | 33 protein transporter activity                  |
| 17 transferase activity                              | 34 protein binding                               |
| 18 GTPase activity                                   | 35 histone binding                               |
