

What food would you recommend to enhance my REM sleep?

To improve REM sleep duration, there are several nutrients that can be beneficial. Based on the provided list of food ingredients, I recommend incorporating the following food into your diet:

1. Salmon: This fish is rich in **omega-3 fatty acids, specifically EPA and DHA, which have been linked to improved sleep quality, including longer duration of REM sleep.**

Aim to consume fatty fish like salmon at least twice a week to reap the benefits. To enhance the effectiveness of this recommendation, I suggest combining it with a balanced diet and a healthy lifestyle.
