

Wait... I'm not interested in the food you suggested just now.  
Give me another option.

Certainly! Another food that you can incorporate into your diet to potentially improve your REM sleep duration is bananas. Bananas are rich in several nutrients that can positively impact sleep, including Vitamin B6, potassium, and magnesium. While the specific effects of these nutrients on REM sleep duration are not provided in your personal nutrition effects, they are known to have a beneficial influence on overall sleep quality.
