

Hey, please suggest me a food that could help enhance my REM sleep.

Based on your personal nutrition effects, I would recommend incorporating a food that is high in **Vitamin E**, as it has a positive effect on your REM Sleep Duration.

One food that is rich in **Vitamin E** is almonds. Almonds contain a significant amount of **Vitamin E**, with 1 ounce (28 grams) providing about 7.3 mg of **Vitamin E**. This means that consuming almonds can potentially contribute to an increase in your REM Sleep Duration.
