WELCOME TO CAL POLY

A Message from President Armstrong

At Cal Poly, we honor the past, celebrate the present, and prepare for the future. We honor the past by remaining firmly committed to our values and traditions, especially our Learn by Doing approach to education. We celebrate what is exceptional about the university today: transforming young adults into resourceful professionals and innovative leaders. We prepare for the future by graduating creative thinkers who have both depth of expertise and breadth of knowledge, and who will be able to help solve the increasingly complex challenges that confront California and the world.

Undergraduate Emphasis: As a predominantly undergraduate university, Cal Poly is known nationally for the quality of its baccalaureate degree programs in a variety of disciplines. We also offer outstanding master's degree programs.

Residential Campus: Cal Poly is a residential campus. Our students find that the campus environment gives them the time, resources and settings in which to explore and discover their values and interests – whether in the classroom, academic-related clubs, residence halls, or other extracurricular activities.

Polytechnic Mission: From its start, Cal Poly has given particular emphasis to instruction in polytechnic disciplines – science, technology, engineering, agriculture, and mathematics. At the same time, we recognize that the liberal arts provide an indispensable foundation for all academic disciplines. We are proud of the truly comprehensive education Cal Poly provides to its students, who graduate as professionals ready to be leaders in industry and society.

Information Technology to Support Teaching and Learning: Cal Poly has been, and continues to be, a leader in the use of information technology to enhance teaching and learning. Technology informs our classes, library, communication, laboratories and research, and more.

Educational Philosophy: Cal Poly is committed to excellence in teaching and learning. In all disciplines, we provide a student-centered, active-learning education, facilitated by a low student-teacher ratio in classes conducted primarily by full-time, regular faculty. The cornerstone of our educational philosophy is our commitment to Learn by Doing - classroom instruction complemented by practical, hands-on learning in the laboratory, the studio, and the world.

Diversity: As a campus, we welcome and nurture a rich array of different perspectives, experiences and cultures. We encourage international and multi-cultural education in order to prepare students for successful participation and competition in a diverse world and a global workforce. We believe that diversity of our students, faculty, and staff enlivens and enriches Cal Poly's educational environment.

We believe these values and our core educational philosophy will sustain us far into the future. But our greatest strength rests in the quality of the students, faculty, staff, alumni, and friends who are the University.

Jeffrey D. Armstrong
President

ABOUT THE CATALOG

The 2022-2026 Cal Poly Catalog

The *Cal Poly Academic Catalog* is published by the Office of the Registrar. The online catalog's home page as well as its page banners were designed by Creative Services at Cal Poly University Communications and Marketing (<https://ucm.calpoly.edu/>).

A Guide to Using the Catalog

Academic terminology and a university catalog can be confusing to someone first entering the University. This section explains some of the jargon you will quickly come to know and explains briefly how the catalog is organized.

Colleges and Departments

The faculty who supply instruction at Cal Poly hold positions in academic departments, which in turn are grouped into Colleges. All of the academic programs offered by the University are described in the catalog. A complete listing of academic programs at Cal Poly may be found on the Programs A-Z (<https://catalog.calpoly.edu/programsaz/>) page.

In the catalog, Colleges are listed in alphabetical order. Departments are also arranged alphabetically within their respective College.

Degrees

A **degree** is an academic rank which the University confers on a student who satisfactorily completes a designated curriculum, or program of study. Cal Poly grants undergraduate degrees – also called baccalaureate degrees – as well as master's degrees.

At the undergraduate level, Cal Poly grants the

- Bachelor of Arts (BA),
- Bachelor of Science (BS),
- Bachelor of Architecture (BArch),
- Bachelor of Fine Arts (BFA), and
- Bachelor of Landscape Architecture (BLA).

At the graduate level, Cal Poly grants the

- Master of Arts (MA),
- Master of Science (MS),
- Master of Agricultural Education (MAGEd),
- Master of Business Administration (MBA),
- Master of City and Regional Planning (MCRP),
- Master of Public Policy (MPP)
- Master of Professional Studies (MPS)

Majors

A **major** is a program of study that provides students with the knowledge, skills and experience necessary to pursue a specific career or advanced study and leads to an undergraduate degree in that subject. Each major is offered in an academic department or program.

Undergraduate applicants to Cal Poly select a major at the time they apply for admission.

General requirements for bachelor's degrees are outlined in General Requirements - Bachelor's Degree (p. 28) and for master's degrees in

Graduate Education (p. 431). The specific requirements for a particular major degree program are listed under the academic department or program that offers the major.

The curriculum display for each bachelor's degree program shows courses arranged by *Major, Support, General Education* and *Electives*. These curriculum displays are useful guides, but students should consult with their academic advisors.

Information regarding academic advising is available on the Academic Advising (p. 442) page.

Courses

Descriptions of Cal Poly courses are located in Courses A-Z (p. 511), arranged alphabetically by subject area with its corresponding course prefix (an abbreviation that represents the subject or offering department). The courses in a bachelor's degree curriculum are identified as *Major Courses, Support Courses, General Education, and Electives*.

Major Courses are designed to provide competence in the professional field in which a degree is earned. They are usually offered by the academic department in which the degree program is offered, but they may include courses from other departments.

Approved Electives are courses that students can choose from within the parameters set by their departments.

Support Courses provide background needed for major courses and are offered by departments other than the department in which the major is offered. For example, most majors in engineering and in the sciences require support courses in mathematics. Some degree programs do not include support courses.

General Education (GE) courses provide a common foundation of knowledge for all undergraduate programs. GE requirements are described in detail on the General Education (p. 28) page.

Free Electives are courses that students can choose simply to pursue their own interests.

Prerequisites are one or more courses that must be completed, or other knowledge, skills, or standards that must be demonstrated, before a student is permitted to take certain courses. Prerequisites (if any) for a course are listed in the course's description in the catalog.

Some prerequisites have their own prerequisites, forming a string of courses that must all be taken. The catalog course description shows the last course in the prerequisite string of courses. For example, ME 212 Engineering Dynamics has prerequisites of MATH 241; and ME 211 or ARCE 211. MATH 241 Calculus IV requires MATH 143, which requires MATH 142, which requires MATH 141. ME 211 Engineering Statics requires MATH 241; and PHYS 141. To enroll in ME 212 Engineering Dynamics, students must have successfully completed MATH 241, MATH 143, MATH 142, MATH 141 and ME 211 or ARCE 211 and PHYS 141.

Statements in the catalog course descriptions may also contain the words "**concurrent**" which means that two or more courses must be taken in the same term or "**corequisite**" which means that the course or courses may be taken prior to the course being described (prerequisite) or in the same term (concurrent).

If a student does not meet a requisite as outlined in a course's description, but can demonstrate to an instructor that they have the

necessary knowledge or skills through alternative means, then the instructor may grant the student permission to enroll in the course.

Crosslisted courses are shared by two or more academic units and have identical titles, descriptions, units, modes of instruction and prerequisites. They are interchangeable for degree requirements. They cannot be repeated for degree credit under separate prefixes. Example: HNRS 141 / MATH 141 Calculus I.

Selected Advanced Topics (470s) are generic courses that offer special topics on an "as needed basis." The specific topic appears in the Schedule of Classes and on the students' transcripts.

Topic courses are shown in the catalog with generic titles and are repeatable with different topics. Specific topic titles appear in the Schedule of Classes and on students' transcripts. Example: ENGL 439 Topics in British Literature, repeatable to 12 units with different topics (e.g., Jane Austen, Victorian Poets, Hardy).

Other statements in the course descriptions include, "**major credit limit**" (total number of units allowed toward the major) and "**total credit limit**" (total number of units students can take a course for credit).

Course Numbering System

Courses are generally numbered according to the plan shown below.

- 010–099 Pre-baccalaureate courses that are not for degree credit.
- 100–299 Courses primarily for freshman and sophomore students.
- 300–399 Courses primarily for advanced undergraduate students with prerequisite coursework.
- 400–499 Courses for advanced undergraduates. Certain 400-level courses can be used in graduate programs. See General Policies (p. 435) for Graduate Education.
- 500–599 Graduate courses.

Credit Hour

As of July 1, 2011 federal law (Title 34, Code of Federal Regulations, sections 600.2 and 600.4) requires all accredited institutions to comply with the federal definition of the credit hour. For all CSU degree programs and courses bearing academic credit, the "credit hour" is defined as "the amount of work represented in intended learning outcomes and verified by evidence of student achievement that is an institutionally established equivalency that reasonably approximates not less than:

1. One hour of classroom or direct faculty instruction and a minimum of two hours of out-of-class student work each week for approximately fifteen weeks for one semester or trimester hour of credit, or ten to twelve weeks for one quarter hour of credit, or the equivalent amount of work over a different amount of time; or
2. At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution, including laboratory work, internships, practice, studio work, and other academic work leading to the award of credit hours."

A credit hour is assumed to be a 50-minute period. In courses in which "seat time" does not apply, a credit hour may be measured by an equivalent amount of work, as demonstrated by student achievement.

Modes of Instruction

The mode of instruction is included in each course description; for supervision/independent study courses, no mode is indicated. Some courses have more than one mode of instruction.

Mode and number of hours classes meet each week

Activity: 2 hours per unit of credit.

Laboratory: 3 hours per unit of credit.

Lecture: 1 hour per unit of credit.

Seminar: 1 hour per unit of credit.

Supervision/Independent Study: Courses involve independent work done by students under the guidance of the faculty and do not meet regularly in a classroom. 3 hours of independent study per week per unit of credit.

Concentrations

A **concentration** is a group of courses designed to provide specialized knowledge within a bachelor's degree program. Completion of a concentration is noted on the student's transcript, but not shown on the diploma.

Specializations

A **specialization** is a similarly specialized group of courses in a master's degree program. Completion of a specialization is noted on the student's transcript and shown on the diploma.

Minors

A **minor** is an integrated, coherent group of courses designed to give a student knowledge in an academic area outside of the major field of study. The minor is completed along with the requirements for the bachelor's degree. For more information and a list including available minors at Cal Poly, see Programs A-Z (<https://catalog.calpoly.edu/programsaz/>). Completion of a minor is noted on the student's transcript, but not shown on the diploma.

Graduate Certificates

A **graduate certificate** is designed to provide a specialized area of study that meets the requirements for professional competence and to expand access to specialized knowledge. The subject matter is advanced and narrow in focus.

The programs are typically designed for working professionals who are seeking to advance their career opportunities by obtaining specialized knowledge in their field or in a new field. Completion of the graduate certificate program will be commemorated by a document bearing the University seal and signed by the program's college dean(s) and is noted on the student's transcript.

Quarters and Quarter Units

Cal Poly's academic calendar consists of four quarters – Fall, Winter, Spring and Summer (see Academic Calendar (p. 17)).

Cal Poly's **academic year** consists of Fall, Winter and Spring quarters.

The **university year** includes, and begins with, Summer quarter.

Each course offered by the University carries a value in **quarter units**, often referred to simply as units or credits.

To convert semester units to quarter units, multiply by 1.5. For example, 6 semester units X 1.5 = 9 quarter units.

Changes of Rules and Policies

Although every effort has been made to assure the accuracy of the information in this catalog, students and others who use this catalog should note that laws, rules, and policies change from time to time and that these changes may alter the information contained in this publication. Changes may come in the form of statutes enacted by the Legislature, rules and policies adopted by the Board of Trustees of the California State University, by the chancellor or designee of the California State University, or by the president or designee of the campus. It is not possible in a publication of this size to include all of the rules, policies and other information that pertain to students, the institution, and the California State University. More current or complete information may be obtained from the appropriate department, school, or administrative office.

Nothing in this catalog shall be construed as, operate as, or have the effect of an abridgment or a limitation of any rights, powers, or privileges of the Board of Trustees of the California State University, the chancellor of the California State University, or the president of the campus. The trustees, the chancellor, and the president are authorized by law to adopt, amend, or repeal rules and policies that apply to students. This catalog does not constitute a contract or the terms and conditions of a contract between the student and the campus or the California State University. The relationship of students to the campus and the California State University is one governed by statute, rules, and policy adopted by the legislature, the trustees, the chancellor, the presidents and their duly authorized designees.

UNIVERSITY LEARNING OBJECTIVES

A Cal Poly education is the result of experiences taking place in the major and in general education, as well as in the curriculum and co-curriculum. The University Learning Objectives (ULOs) allow these experiences to be aligned to a common set of academic expectations.

The ULOs state that all students who complete an undergraduate or graduate program at Cal Poly should be able to:

1. Think critically and creatively
2. Communicate effectively
3. Demonstrate expertise in a scholarly discipline and understand that discipline in relation to the larger world of the arts, sciences, and technology
4. Work productively as individuals and in groups
5. Use their knowledge and skills to make a positive contribution to society
6. Make reasoned decisions based on an understanding of ethics, a respect for diversity, and an awareness of issues related to sustainability
7. Engage in lifelong learning

Cal Poly shares some of these expectations with other universities (See ULO 1, 2 and 7). Others reflect Cal Poly's unique character as a comprehensive polytechnic that provides students with the breadth of a liberal education and the depth of a disciplinary or professional education (ULO 3-6).

ULO 6 states that all Cal Poly graduates should be able to make reasoned decisions based on a respect and appreciation for diversity and an awareness of issues related to sustainability. Because of the complexity of this objective, the Academic Senate adopted the Diversity Learning Objectives (DLOs) in 2008 and the Sustainability Learning Objectives (SLOs) in 2009, both as addenda to the ULOs.

Diversity Learning Objectives

The DLOs state that all Cal Poly graduates should be able to:

1. Recognize and understand the contributions to knowledge and civilization that have been made by members of diverse cultural and gender groups and other historically marginalized people in the United States and across the world
2. Understand the history of issues related to diversity, social and economic inequities, and political power in the United States and across the world
3. Analyze the current social, political, artistic, and/or economic lives of historically marginalized people in the United States and across the world
4. Analyze the various institutions and structures that create and maintain social, economic, and political inequality in the United States and across the world; and, identify those that offer redress for these issues
5. Define and describe the various issues related to diversity, equity, and inclusion in their respective disciplines

6. Critically examine their own personal beliefs, attitudes, and biases about historically marginalized people and cultures in the United States and across the world

Please see University Policies (p. 9) for the Statement on Diversity and Inclusivity and the Non-Discrimination Policy.

Sustainability Learning Objectives

Cal Poly defines sustainability as the ability of the natural and social systems to survive and thrive together to meet current and future needs. The SLOs state that all Cal Poly graduates should be able to:

1. Define and apply sustainability principles within their academic programs
2. Explain how natural, economic, and social systems interact to foster or prevent sustainability
3. Analyze and explain local, national, and global sustainability using a multidisciplinary approach
4. Consider sustainability principles while developing personal and professional values

Please see Sustainability Practices (p. 458) for more campus sustainability information and the Sustainability Catalog (SUSCAT) (<http://suscat.calpoly.edu/>) website for lists of sustainability courses.

Both the DLOs and SLOs should be understood as operating at a level below the institutional level of the ULOs.

Student Learning Assessment

To determine the effectiveness of various educational experiences, Cal Poly assesses student achievement of learning objectives/outcomes at the course, program, and university levels. This kind of evaluation may take the form of a direct assessment of student work (assignments, exams, projects, performances, etc.), perhaps using standardized rubrics, or an indirect assessment of perceptions via surveys administered to students, graduates, faculty, and employers. The results are intended to be used primarily for the improvement of curricula and pedagogy, although they may also be used for accountability purposes to demonstrate the educational effectiveness of courses, programs, and the institution as a whole. As a result, Cal Poly students should expect that their academic work may be used for assessment purposes.

UNIVERSITY POLICIES

Statement on Commitment to Community

The Cal Poly community values a broad and inclusive campus learning experience where its members embrace core values of mutual respect, academic excellence, open inquiry, free expression and respect for diversity. Membership in the Cal Poly community is consistent with the highest principles of shared governance, social and environmental responsibility, engagement and integrity.

As students, faculty and staff of Cal Poly, we choose to:

- Act with integrity and show respect for ourselves and one another
- Accept responsibility for our individual actions
- Support and promote collaboration in University life
- Practice academic honesty in the spirit of inquiry and discovery
- Contribute to the university community through service and volunteerism
- Demonstrate concern for the well-being of others
- Promote the benefits of diversity by practicing and advocating openness, respect and fairness

Individual commitment to these actions is essential to Cal Poly's dedication to an enriched learning experience for all its members.

Statement on Diversity and Inclusivity

The following excerpt is taken from the *Cal Poly Statement on Diversity and Inclusivity*, which has been endorsed by the Cal Poly Academic Senate Resolution AS-807-15 (<http://digitalcommons.calpoly.edu/cgi/viewcontent.cgi?article=1807&context=senateresolutions>):

At Cal Poly we believe that academic freedom, a cornerstone value, is exercised best when there is understanding and respect for our diversity of experiences, identities, and world views. Consequently, we create learning environments that allow for meaningful development of self-awareness, knowledge, and skills alongside attention to others who may have experiences, worldviews, and values that are different from our own. In so doing, we encourage our students, faculty, and staff to seek out opportunities to engage with others who are both similar and different from them, thereby increasing their capacity for knowledge, empathy, and conscious participation in local and global communities.

In the spirit of educational equity, and in acknowledgement of the significant ways in which a university is transformed by, and can transform the lives of individuals and communities, we strive to increase the diversity at Cal Poly. As an institution that serves the state of California within a global context, we support the recruitment, retention, and success of talented students, faculty, and staff from across all social identities, including people who are from historically and societally marginalized and underrepresented groups.

We are a culturally invested university whose members take personal responsibility for fostering excellence in our own and others' endeavors. To this end, we support an increased awareness and understanding of how one's own identity facets (such as race, ethnicity, gender, sexual orientation, religion, age, disability, social class, and nation of origin) and the combinations/intersections of these identities and experiences that may accompany them can affect our different worldviews.

- * The definition of diversity is specifically inclusive of, but not limited to, an individual's race/ethnicity, sex/gender, socioeconomic status, cultural heritage, disability, and sexual orientation.

Statement on Sustainability

In 1987, the United Nations' World Commission on Environment and Development defined sustainable development as, "development which meets the needs of current generations without compromising the ability of future generations to meet their own needs." In 2009, Cal Poly's Academic Senate adopted a more academically focused definition of sustainability with the passage of Sustainability Learning Objectives (p. 8):

"Cal Poly defines sustainability as the ability of the natural and social systems to survive and thrive together to meet current and future needs. Cal Poly students should be able to consider sustainability when making reasoned decisions. Students should be able to:

- Define and apply sustainability principles within their academic programs
- Explain how natural, economic, and social systems interact to foster or prevent sustainability
- Analyze and explain local, national, and global sustainability using a multidisciplinary approach
- Consider sustainability principles while developing personal and professional values"

As a comprehensive polytechnic university with a hands-on, Learn-by-Doing pedagogy, Cal Poly offers a wide breadth of academic programs in technical disciplines, the arts, and humanities. A Cal Poly education seeks to achieve two distinct but complementary goals – technical knowledge and proficiency in a chosen discipline to prepare for the workplace, and a transformative exposure to diverse cultures and critical thinking to create life-long learners and responsible global citizens.

By definition, sustainability seeks to balance three things - protection of the natural environment, healthy economy, and social justice and equity. As a framework in higher education, sustainability helps foster critical and systems thinking, development of personal and professional ethics, a commitment to environmental stewardship, and inspires students to make positive contributions to human society.

As a Charter Signatory to the Second Nature Climate Commitment, Cal Poly is committed to achieving carbon neutrality and climate resilience as soon as possible, and is infusing this work into curriculum, research, and student experience.

For more information on sustainability at Cal Poly see Sustainability Practices (p. 458).

Policies on the Rights of Individuals

Cal Poly is a community enriched by individual differences. The University is committed to respecting and protecting the rights of individuals. This section presents a summary of University non-discrimination policies and procedures for pursuing complaints under these policies. The Civil Rights and Compliance Office (<https://crco.calpoly.edu/>) has been designated to oversee and coordinate implementation of compliance with campus non-discrimination policies.

Except where otherwise indicated, procedures for reporting incidents of discrimination can be found in "Reporting Guidelines."

CSU Non-discrimination Policy and Procedure for Addressing

Protected Status: Age, Disability (physical or mental), Gender (or sex), Gender Identity (including nonbinary and transgender), Gender Expression, Genetic Information, Marital Status, Medical Condition, Nationality, Race or Ethnicity (including color, caste, or ancestry), Religion or Religious Creed, Sexual Orientation, and Veteran or Military Status.

The California State University is committed to maintaining an inclusive community that values diversity and fosters tolerance and mutual respect. The CSU embraces our community differences in Age, Disability (physical and mental), Gender (or sex), Gender Identity (including nonbinary and transgender), Gender Expression, Genetic Information, Marital Status, Medical Condition, Nationality, Race or Ethnicity (including color, caste, or ancestry), Religion (or religious creed), Sexual Orientation, Veteran or Military Status. All Students and Employees have the right to participate fully in CSU programs, activities (including admission and access), and employment free from Discrimination and/or Harassment based on any Protected Status (see above), Sexual Misconduct, Sexual Exploitation, Dating Violence, Domestic Violence, Stalking and Retaliation pursuant to the Interim CSU Policy Prohibiting Discrimination, Harassment, Sexual Misconduct, Sexual Exploitation, Dating Violence, Domestic Violence, Stalking, and Retaliation Revised December 24, 2021 (<https://calstate.policystat.com/policy/10926024/latest/>) (hereinafter "Interim CSU Policy") and any successor policy. State and federal laws, including the California Equity in Higher Education Act, Title IX of the Education Amendments of 1972, the Violence Against Women Reauthorization Act of 2013 which amends the Jeanne Clery Disclosure of Campus Security and Campus Crimes Statistics Act, commonly known as the Clery Act) (VAWA) under its Campus Sexual Violence Elimination Act provision (Campus SaVE Act), Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, and the Age Discrimination Act of 1975, among other applicable state and federal laws, prohibit such discrimination. Interim CSU Policy (and any successor policy) is the systemwide policy and procedure for addressing allegations of discrimination, harassment & retaliation *made by students, employees, and third parties* against the CSU, a CSU employee, other CSU students or a third-party.

The following person has been designated to handle inquiries regarding the non-discrimination policy and procedure for California Polytechnic State University, San Luis Obispo:

Maren Hufton
Assistant Vice President for the Civil Rights & Compliance Office & Title IX Coordinator
Civil Rights & Compliance Office
Building 33 (Fisher Science), Room 290
1 Grand Avenue, San Luis Obispo, CA 93407
E-mail: mhufton@calpoly.edu or crco@calpoly.edu
Phone: (805) 756-6770

If you are in the midst of an emergency, please call the police immediately by dialing 9-1-1.

Cal Poly University Police Department (when you are on-campus)
Emergency: 911

Non-emergency: 805-756-2281
Location: Building 36

Safety of the Campus Community

Alleged victims and witnesses should not be deterred from reporting any incidents of Sexual Misconduct, Sexual Exploitation, Dating Violence, Domestic Violence, or Stalking out of a concern that they might be disciplined for related violations of drug, alcohol, or other University policies. The University's primary concern is the safety of the Campus community; therefore, a person who participates as a Complainant or witness in investigations or proceedings involving Sexual Misconduct, Sexual Exploitation, Dating Violence, Domestic Violence, or Stalking shall not be subject to discipline for related violations of the Student Conduct Code at or near the time of the incident unless the University determines the violation was egregious, including but not limited to plagiarism, cheating, academic dishonesty, or conduct that places the health and safety of another person at risk.

Protection from Retaliation

It is critical that individuals not be deterred from reporting potential policy violations. Interim CSU Policy prohibits retaliation against individuals for exercising rights under the non-discrimination policy, opposing discrimination, or participating in any related investigation or proceeding.

Information Regarding Discipline

Employees and Students who are found to have violated University non-discrimination policy shall be subject to discipline commensurate to the violation. If employee discipline is warranted, it shall be administered in a manner consistent with applicable collective bargaining agreements, CSU policies, and legal requirements. Student discipline shall be administered in accordance with 5 Cal. Code Regs. § 41301 CSU Student Conduct Procedures, Executive Order 1098 Revised August 14, 2020 and any

successor policy (<https://calstate.policystat.com/policy/8453518/latest/>) (hereinafter "Executive Order 1098").

Further Questions

Individuals with inquiries regarding the non-discrimination policy at California Polytechnic State University, San Luis Obispo, or seeking to file a complaint, may contact:

Civil Rights & Compliance Office
Fisher Science (Bldg. 33), Room 290
1 Grand Avenue, San Luis Obispo, CA 93407
E-mail: crco@calpoly.edu
Phone: (805) 756-6770
<https://crco.calpoly.edu/>

Notice of Non-Discrimination on the Basis of Gender or Sex

The California State University does not discriminate on the basis of gender, which includes sex and gender identity or gender expression, or sexual orientation in its education programs or activities. Title IX of the Education Amendments of 1972, and certain other federal and state laws, prohibit discrimination on the basis of gender or sexual orientation in employment, as well as in all education programs and activities operated by the University (both on and off campus), including admissions. The protection against discrimination on the basis of gender or sexual orientation includes sexual harassment, sexual misconduct, sexual exploitation, dating and domestic violence and stalking.

Any person may report sex discrimination, including sexual harassment (whether or not the person reporting is the alleged to have experienced the conduct that could constitute sex discrimination or sexual harassment), in-person, by mail, by telephone, or by electronic mail, using the contact information listed below for the Title IX Coordinator, or by any other means that results in the Title IX Coordinator receiving the person's verbal or written report. Such a report may be made at any time (including during non-business hours) by using the telephone number or electronic mail address, or by mail to the office address listed for the Title IX Coordinator.

The following person has been designated to handle inquiries regarding the non-discrimination policy and procedure, including Title IX complaints, for Cal Poly, San Luis Obispo:

Maren Hufton
Assistant Vice President for the Civil Rights & Compliance Office & Title IX Coordinator
Civil Rights & Compliance Office
Building 33 (Fisher Science), Room 290
1 Grand Avenue, San Luis Obispo, CA 93407
E-mail: mhufton@calpoly.edu or crco@calpoly.edu
Phone: (805) 756-6770

Questions may also be addressed to:

Office of Civil Rights
San Francisco Office
U.S. Department of Education
50 United Nations Plaza
San Francisco, CA 94102
Telephone: (415) 486-5555
Facsimile: (415) 486-5570

E-Mail: OCR.SanFrancisco@ed.gov

Academic Freedom

Cal Poly recognizes and supports the principle of academic freedom, by which each instructional faculty member, researcher, librarian and counselor has the right to teach, to conduct research, and to publish material relevant to that faculty member's discipline, even when such material is controversial.

The University also guarantees to its faculty the same rights shared by all citizens, which include:

- the right to free expression,
- the right to assemble, and
- the right to criticize and seek revision of the institution's regulations.

At the same time, the faculty should recognize an equally binding obligation to perform their academic duties responsibly and to comply with the internal regulations of the University.

Each faculty member is expected to recognize the right of free expression of other members of the university community.

Faculty shall not claim to be representing the University unless authorized to do so.

Cal Poly endorses the nationally recognized definition of academic freedom from the American Association of University Professors (AAUP): The 1940 Statement of Principles on Academic Freedom and Tenure with 1970 Interpretative Notes, is as follows:

1. Teachers¹ are entitled to full freedom in research and in the publication of results, subject to the adequate performance of their other academic duties; but research, for pecuniary return, should be based upon an understanding with the authorities of the institution.
2. Teachers are entitled to freedom in the classroom in discussing their subject, but they should be careful not to introduce into their teaching controversial subject matter which has no relation to the subject.² Limitations of academic freedom because of religious or other aims of the institution should be clearly stated in writing at the time of appointment.
3. College and university teachers are citizens, members of a learned profession, and officers of an educational institution. When they speak or write as citizens, they should be free from institutional censorship or discipline, but their special position in the community imposes special obligations. As scholars and educational officers, they should remember that the public may judge their profession and institution by their utterances. Hence, they should at all times be accurate, should exercise appropriate restraints, should show respect for the opinions of others, and should make every effort to indicate they are not speaking for the institution.

¹ The footnote from the 1940 Statement states: "The word 'teacher' as used in this document is understood to include the investigator who is attached to an academic institution without teaching duties."

² The footnote from the 1970 Interpretative Notes on the AAUP Statement reads: "The intent of this statement is not to discourage what is 'controversial.' Controversy is at the heart of free academic inquiry which the entire statement is designed to foster. The passage serves to underscore the need for teachers to avoid persistently intruding material which has no relation to their subject." Reference: AAUP. The 1940 Statement of Principles on Academic Freedom and Tenure with 1970 Interpretative Notes, adopted by the Council of the American Association of University Professors in April 1970 and endorsed by the Fifty-sixth Annual Meeting as Association policy, www.aaup.org/AAUP/pubsres/policydocs/contents/1940statement.htm (<https://www.aaup.org/report/1940-statement-principles-academic-freedom-and-tenure/>).

Student Academic Rights & Responsibilities

The classroom (including laboratories, field trips, independent study, etc.) is the essential part of any university where freedom to learn should flourish. The instructor has the responsibility for the manner of instruction and the conduct of the classroom. The instructor should not act in any way that denies the rights of students as set forth below:

Students are free to take reasoned exception to the data or views offered in courses. It is the responsibility of the instructor to take every precaution to ensure that what is presented is factual. If the instructor's presentation is in the area of opinion, belief, or debatable fact, it is the instructor's responsibility to make this clear to the students. Students may be required to know thoroughly the particulars set forth by the instructor, but they are free to reserve personal judgment as to that which is presented in the classroom.

The student has the right to substantial presentations appropriate to the course. Unjustified failure of the instructor to meet or prepare for classes, which results in incompetent performance, is a legitimate ground for student complaints against the instructor.

The student has the right to a statement at the beginning of each quarter providing: instructor's name, office location, office telephone number, and office hours; texts and supplementary materials required for the course; purpose of the course; prerequisites; requirements for grading; frequency and types of tests; and other information to assure student's understanding of the nature and requirements of the course.

A **Fairness Board** has been established to hear grievances of students who believe their academic rights have been denied or violated. The legitimacy of the process and procedure of evaluation in the course shall be the sole criterion of the Fairness Board. Students may contact the Academic Senate at 805.756.1258, www.academicssenate.calpoly.edu/ (<http://academicssenate.calpoly.edu/>) for clarification of the description and procedures for the Fairness Board and the appeal process for grade disputes. Students should address grade disputes involving allegations of academic dishonesty to the Office of Student Rights & Responsibilities at 805.756.2794. Students may also contact the University Ombuds at 805.756.1380 for informal assistance with grade disputes.

Academic Responsibilities

Students enrolled in a class are responsible for meeting standards of performance and conduct established by the University and the instructor. Students are given full control over their enrollment transactions through the Student Information System within the limits of the academic policies and dates as published. Therefore, it is the

students' responsibility to ensure that all their enrollment transactions have been successfully processed in a timely manner. These transactions include, but are not limited to, adding, dropping, withdrawing, auditing, and choosing the desired grading basis when applicable. Students are also responsible to make sure that those enrollment transactions initiated after the add/drop period, during the course of the term, are successfully processed and appropriately reflected in their record before the end of the said term (e.g., course and/or term withdrawals).

Students are responsible for completing and submitting all class assignments, examinations, tests, projects, reports, etc., by scheduled due dates, or face penalties. If any problem arises regarding course work or attendance, the student is held responsible for initiating communication and contact with the instructor. In addition, students are held responsible for behavior and conduct adverse to the preservation of order as established by the University and the instructor. Students are responsible for meeting their degree requirements as provided in the university catalog.

Cheating and Plagiarism

Academic Dishonesty: Cheating and Plagiarism

The University does not condone academic cheating or plagiarism in any form. Faculty are expected to uphold and support the highest academic standards in this matter. Instructors should be diligent in reducing potential opportunities for academic cheating and plagiarism to occur. Students' rights shall be ensured through attention to due process, as detailed on the Office of Student Rights and Responsibilities' webpage for Academic Integrity (<https://osrr.calpoly.edu/academic-integrity/>).

Definition of Cheating

Cheating is defined as obtaining or attempting to obtain, or aiding another to obtain credit for work, or any improvement in evaluation of performance, by any dishonest or deceptive means. Cheating includes, but is not limited to: lying; copying from another's test or examination; discussion at any time of answers or questions on an examination or test, unless such discussion is specifically authorized by the instructor; taking or receiving copies of an exam without the permission of the instructor; using or displaying notes, "cheat sheets," or other information devices inappropriate to the prescribed test conditions; allowing someone other than the officially enrolled student to represent same.

Definition of Plagiarism

Plagiarism is defined as the act of using the ideas or work of another person or persons as if they were one's own without giving proper credit to the source. Such an act is not plagiarism if it is ascertained that the ideas were arrived at through independent reasoning or logic or where the thought or idea is common knowledge. Acknowledgement of an original author or source must be made through appropriate references; e.g., quotation marks, footnotes, or commentary. Examples of plagiarism include but are not limited to the following: the submission of a work, either in part or in whole completed by another; failure to give credit for ideas, statements, facts or conclusions which rightfully belong to another; failure to use quotation marks (or other means of setting apart, such as the use of indentation or a different font size) when quoting directly from another, whether it be a paragraph, a sentence, or even a part thereof; close and lengthy paraphrasing of another's writing without credit or originality; use of another's project or programs or part thereof without giving credit.

Students who have received a grade reduction as a result of academic dishonesty are NOT eligible to receive a CR/NC, or to withdraw from the course in which the grade for the course has been impacted by academic dishonesty. All CR/NC will revert to the letter grade issued by the instructor for the course. For the complete policy regarding Cheating and Plagiarism see Academic Programs and Planning (<https://academicprograms.calpoly.edu/content/academicpolicies/Cheating/>).

For more information, please visit the Academic Integrity webpage by the Office of Student Rights and Responsibilities (<https://osrr.calpoly.edu/academic-integrity/>).

Use and Release of Student Information

https://registrar.calpoly.edu/ferpa_summary (https://registrar.calpoly.edu/ferpa_summary/)

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. This federal law applies to all schools that receive funding under most programs administered by the Department of Education. The primary rights afforded each student are the right to inspect and review his/her education records, the right to seek to have the records amended, and the right to have some control over the disclosure of information from the records.

Responsible Use of Information Technology Resources

Information technology resources are provided to support the University's mission of education, research and service. To ensure these shared and finite resources are used effectively to further the University's mission, each user has the responsibility to:

- Use the resources appropriately and efficiently
- Respect the freedom and privacy of others
- Protect the stability and security of the resources
- Understand and fully abide by established University policies and applicable public laws

The Responsible Use Policy covers authorized use, data security, confidentiality and privacy, copyright infringement and more. All students, faculty and staff acknowledge the policy each time they change their my.calpoly.edu passwords. It can also be viewed by visiting: IT Responsible Use Policy (<https://policy.calpoly.edu/cap/1200/cap-1200/#cap-1203-1>)

E-Mail - an Official Means of Communication to Students

<https://tech.calpoly.edu/services/email-and-calendar-o365> (<https://tech.calpoly.edu/services/email-and-calendar-o365/>)

Campus email is an official method of campus communication to students, and may be used as the sole method of communication for some campus matters. Official university communications are sent to a student's university-assigned e-mail address (username@calpoly.edu). Students are responsible for receiving and reading official email communications in a timely manner and for taking necessary action when appropriate. This also applies when university emails are redirected to a non-university email account.

Campus policy permits colleges, departments, and faculty to use email to send official communications to students, for example, messages

pertaining to the conduct of university business for academic or administrative purposes. Using email for such purposes is at the discretion of the sender and in no way precludes the use of other communication methods.

For more information about the campus email policy and related standards and practices, including frequently asked questions, visit <https://tech.calpoly.edu/services/email-and-calendar-o365> (<https://tech.calpoly.edu/services/email-and-calendar-o365/>).

Accessibility of Cal Poly Electronic and Information Technology Resources

accessibility.calpoly.edu (<http://accessibility.calpoly.edu>)

The Americans with Disabilities Act (ADA) provides that no qualified individual with a disability be denied access to or participation in services, programs, and activities at Cal Poly. This act applies to virtually all aspects of campus activities, including employment, teaching and learning, and services provided to the campus community.

It is the policy of the California State University system to make information technology resources and services accessible to all CSU students, faculty, staff, and the general public regardless of disability status. Cal Poly is committed to ensuring university information and services delivered electronically are made accessible and the needs of individual students and employees with disabilities are accommodated. For more information regarding Cal Poly plans and policies and related standards and practices related to accessibility, visit accessibility.calpoly.edu (<http://accessibility.calpoly.edu>).

Copyright Infringement and File Sharing: What Students Need to Know

security.calpoly.edu/content/faq/dmca-faqs (<http://security.calpoly.edu/content/faq/dmca-faqs/>)

In recent years, copyright holders, like the Recording Industry Association of America (RIAA), have stepped up legal efforts to combat infringement, which includes targeting college students with an increased number of copyright infringement notices. Here's what you should know:

- Hundreds of Cal Poly students receive copyright Infringement notices each year.
- You can receive a notice for downloading or for allowing others to upload content from your computer. If you have file sharing software on your computer, you may be distributing copyrighted materials anytime your computer is on the network.
- If you receive a notice for inappropriate activity on the campus network, your network access will be temporarily disabled and you will be required to complete specific actions before access is reinstated.
- Repeat offenders will be referred to the Office of Student Rights and Responsibilities for further disciplinary action.

Please review these frequently asked questions to learn more about peer-to-peer file sharing and copyright infringement, the potential dangers and penalties you may incur from file sharing, and what you can do to protect yourself and your computer. security.calpoly.edu/content/faq/dmca-faqs (<http://security.calpoly.edu/content/faq/dmca-faqs/>).

Information Security Program

security.calpoly.edu (<http://security.calpoly.edu>)

Information security is everyone's responsibility. Only you can protect your personal devices and information. By following some basic security practices, you can help protect university data and devices you access, as well as your own; this includes using anti-virus and other technical safeguards (e.g., keeping software and operating systems up-to-date, using strong passwords, not responding to "phishing" emails, and avoiding unsecured network connections).

It is the collective responsibility of all users to ensure:

- Confidentiality of information which Cal Poly must protect from unauthorized access
- Integrity and availability of information stored on or processed by Cal Poly information systems
- Campus compliance with applicable laws, regulations, and policies governing information security and privacy protection.

Cal Poly's Information Security Office provides direction to the campus to accomplish the above while not inhibiting the sanctioned use of campus information assets as required to meet the university's core mission and academic and administrative goals. To help safeguard and secure campus information and information resources, all users and campus departments are expected to adhere to these policies and standards where applicable. Please report suspected violations and questions to security@calpoly.edu.

ACCREDITATION

The University is fully accredited by the WASC Senior College and University Commission (WSCUC). WSCUC is a regional accrediting agency that is recognized by the U.S. Department of Education as certifying institutional eligibility for federal funding, including student access to federal financial aid. WSCUC may be contacted at:

WASC Senior College and University Commission
985 Atlantic Avenue, Suite 100
Alameda, California 94501
Phone: 510.748.9001

During the process of reaffirming its accreditation, Cal Poly completes a self-study and then undergoes a review by a WSCUC visiting team representing institutional peers. After the last such process in Spring 2012, Cal Poly received a full ten-year extension of its accreditation, i.e., until 2022. The university has completed another self-study and subsequently underwent a site visit in April 2022. At the time of publication of this catalog, the results are pending. More information about this process may be found at wasc.calpoly.edu (<https://wasc.calpoly.edu>).

Notice to Students RE: Professional Licensure and Certification

California State University programs for professions that require licensure or certification are intended to prepare the student for California licensure and certification requirements. Admission into programs for professions that require licensure and certification does not guarantee that students will obtain a license or certificate. Licensure and certification requirements are set by agencies that are not controlled by or affiliated with the California State University and licensure and certification requirements can change at any time.

The California State University has not determined whether its programs meet other states' educational or professional requirements for licensure and certification. Students planning to pursue licensure or certification in other states are responsible for determining whether, if they complete a California State University program, they will meet their state's requirements for licensure or certification. This disclosure is made pursuant to 34 CFR §668.43(a)(5)(v)(C).

Program Accreditation. The School of Education offers teaching and service credentials which are fully accredited by the California Commission on Teacher Credentialing (CCTC). The credentials are described in catalog sections Teaching Credential Programs (p. 414) and Graduate Programs (p. 415) in the School of Education (p. 414) section of this Catalog.

In addition, Cal Poly has a number of accredited degree programs:

Program	Accrediting Agency
Accounting, MS	Association to Advance Collegiate Schools of Business (AACSB)
Agricultural Systems Management, BS	Engineering Technology Accreditation Commission of ABET ¹
Art and Design, BFA	National Association of Schools of Art and Design (NASAD)
Architecture, BArch	National Architectural Accrediting Board (NAAB)

Business Administration, BS, MBA	Association to Advance Collegiate Schools of Business (AACSB)
Business Analytics, MS	Association to Advance Collegiate Schools of Business (AACSB)

ACADEMIC CALENDAR 2022-2026

Please note: This is not intended to be construed as an employee work calendar.

APPROVED - JULY 19, 2021

Fall Term 2022

Date	Event
September 12, Monday	Beginning of fall term (faculty only)
September 19, Monday	Fall term classes begin
September 30, Friday	End of second week of instruction
October 7, Friday	End of third week of instruction – Census date
November 4, Friday	End of seventh week of instruction
November 11, Friday	Academic holiday – Veterans' Day observed
November 21 - 27, Monday-Sunday	Academic holiday – Thanksgiving
December 2, Friday	Last day of classes
December 3, Saturday	Common final exams (optional)
December 5 - 9, Monday-Friday	Final examination period
December 10, Saturday	Mid-Year Commencement
December 12, Monday	Evaluation Day (faculty workday, no classes)
TBD	Grades Due (faculty workday, no classes), End of fall term
December 13 - January 8, Tuesday-Sunday	Academic Holiday

Winter Term 2023

Date	Event
January 9, Monday	Beginning of winter term – classes begin
January 16, Monday	Academic holiday – Martin Luther King, Jr.'s Birthday observed
January 17, Tuesday	Classes follow a Monday schedule
January 23, Monday	End of second week of instruction
January 30, Monday	End of third week of instruction – Census date
February 20, Monday	Academic holiday – Washington's Birthday observed
February 27, Monday	End of seventh week of instruction
March 17, Friday	Last day of classes
March 18, Saturday	Common final exams (optional)
March 20 – 24, Monday-Friday	Final examination period
March 27, Monday	Evaluation Day (faculty workday, no classes), End of winter term
March 28 - April 2, Tuesday-Sunday	Academic holiday

Spring Term 2023

Date	Event
April 3, Monday	Beginning of spring term – classes begin
April 14, Friday	End of second week of instruction
April 21, Friday	End of third week of instruction – Census date
May 19, Friday	End of seventh week of instruction
May 29, Monday	Academic holiday – Memorial Day observed
June 9, Friday	Last day of classes
June 10, Saturday	Common final exams (optional)
June 12 – 16, Monday-Friday	Final examination period
June 17 – 18, Saturday-Sunday	Commencement; End of spring term; End of university year (faculty only)

For the most current information, see the 2022-23 calendar via the Academic Calendar website (<https://registrar.calpoly.edu/academic-calendar/>).

ADMISSIONS

Undergraduate

Office of Admissions
 Building (172H), 2nd Floor, Room 2-20
 Phone: 805.756.2311; Fax: 805.756.5911
 Tour Information Line: 805.756.5734
 Email: admissions@calpoly.edu
<https://admissions.calpoly.edu/>

Admissions

Cal Poly comprehensively reviews all applications, seeking students who have strong academic records and are active in and outside the classroom. Admission to Cal Poly is highly competitive. Beyond the basic California State University qualifications, Cal Poly considers other factors for admission deemed important to the campus and does so in an objective format. Review the selection criteria for undergraduate applicants by starting here: Cal Poly Admissions (<https://www.calpoly.edu/admissions/>).

Applicants are notified of a formal decision by April 1.

First-Year Factors

When a first-year application is reviewed, the following are considered:

- The applicant's intended program of study (the major to which application is made)
- The applicant's college preparatory courses in secondary school
- GPA earned in college preparatory courses
- The applicant's extra-curricular activities and work experience
- Non-cognitive variables deemed important to the campus

For a comprehensive look at Cal Poly's selection criteria for a first-year applicant, including deadlines, visit Cal Poly Admissions Selection Criteria (<https://www.calpoly.edu/admissions/first-year-student/selection-criteria/>).

The majors below have additional requirements:

- Art and Design – qualified first-year applicants will be requested to submit an electronic portfolio per specific instructions provided to the applicant
- Music – qualified first-year applicants will be requested to audition either in person or via specified media

New Transfer Factors

When an upper-division¹ transfer application is reviewed, the following are considered:

- The applicant's intended program of study (the major to which application is made)
- The number of units completed
- Completion of CSU and Cal Poly program required coursework with a grade of 'C' or better
- General Education (G.E. Breadth) or Intersegmental General Education Transfer Curriculum (IGETC) courses
- Academic performance in college courses (GPA)

- The applicant's extracurricular activities and work experience
- Non-cognitive variables deemed important to the campus

For a comprehensive look at Cal Poly's selection criteria for a new transfer applicant, including deadlines, visit <https://www.calpoly.edu/admissions/transfer-student/selection-criteria> (<https://www.calpoly.edu/admissions/transfer-student/selection-criteria/>).

The majors below have additional requirements:

- Art and Design – qualified new transfer applicants will be requested to submit an electronic portfolio per specific instructions provided to the applicant
- Music – qualified new transfer applicants will be requested to audition either in person or via specified media
- Architecture – qualified new transfer applicants will be requested to submit a portfolio per specific instructions provided to the applicant

¹ Cal Poly only considers new transfer applicants at the junior level (60 or more transferable semester units or 90 quarter units by the time of transfer [end of previous spring term for Fall admission]). Cal Poly *does not* accept applications for these categories:

- Lower-division new transfer applicants (less than 60 transferable semester units or 90 transferable quarter units upon transfer)
- Students seeking a second baccalaureate degree
- Students seeking professional growth or professional development

Appeals to Undergraduate Admission Decisions - First Year and New Transfers

Cal Poly does not set aside spaces for students who appeal admission decisions. Every denied application has been reviewed for maximum consideration. Therefore, for an appeal to have merit it must bring to light new academic information, as well as information pertaining to extenuating circumstances that was not present in the application information that clearly shows the student to be stronger than had been earlier evidenced. Neither grades received in the current academic year nor mistakes made by the applicant on the application are a basis for an appeal or the reversal of a decision.

Review the Cal Poly Admissions website for complete information and instructions regarding the process to submit an appeal here (<https://www.calpoly.edu/admissions/not-selected/>).

Application Procedures

For admission consideration, Cal Poly requires applicants to submit the online application (<https://www2.calstate.edu/apply> (<https://www2.calstate.edu/apply/>)) with the corresponding \$70.00 application fee, which is both non-refundable and non-transferable. The application and fee cannot be used to apply to another term.

Applicants should not submit additional information beyond the information submitted on the application unless requested to do so by the Admissions Office. Applicants are advised to submit complete and accurate information on the application for admission. Failure to file complete, accurate, and authentic application documentation may result in denial of admission, cancellation of academic credit, suspension, or expulsion (Section 41301 of Title V, California Code of Regulations).

View detailed online application information at <https://www.calpoly.edu/admissions> (<https://www.calpoly.edu/admissions/>).

Cal Poly Application Filing Periods

Cal Poly accepts undergraduate (first-year or new transfer) applications for the Fall term only.

First-Year Applicants apply through the online process. This process requires applicants to submit Cal Poly's online application with the corresponding fee during the application filing period of October 1 to November 30.

*Please note: Applicants will receive notification of their admission status by April 1. Those selected must accept or decline Cal Poly's offer of admission by May 1.

New Transfer Applicants apply through the online process. This process requires applicants to submit Cal Poly's online application with the corresponding fee during the application filing period of October 1 to November 30.

*Please note: Applicants will receive notification of their admission status by April 1. Those selected must accept or decline Cal Poly's offer of admission by May 1.

Offers of admission to Cal Poly are conditional pending satisfactory compliance with the "Terms and Conditions of Admission" found online at Terms and Conditions for First-Year Students (<https://www.calpoly.edu/admissions/first-year-student/accepted/admitted/checklist/terms-and-conditions/>) and Terms and Conditions for Transfer Students (<https://www.calpoly.edu/admissions/transfer-student/accepted/admitted/terms-and-conditions/>).

The California Promise Program

The California Promise Program enables a specific number of CSU campuses to establish pledge programs for entering first-time students who are both interested and able to complete baccalaureate degrees in four years. All campuses have established programs for students with Associate Degrees for Transfer from any California Community College to complete their baccalaureate degrees in two years. The program is limited to students who are residents of California.

Students who commit to enter either the four-year or two-year pledge will be given a priority registration appointment for each state-supported enrollment period and will be provided with routine and thorough academic advisement. In order to remain in the program, students must meet with their advisors as prescribed, develop an enrollment plan and complete 30 semester units or the quarter equivalent within each academic year, including summer. Participating campuses may stipulate other requirements as well. Interested students entering the CSU should contact campus offices or visit The California Promise Program (https://www2.calstate.edu/apply/freshman/getting_into_the_csu/Pages/the-california-promise-program.aspx) webpage.

The California Promise at Cal Poly

Cal Poly has established a pilot pledge program for students with Associate Degrees for Transfer to complete their baccalaureate degrees in two years. The Bachelor of Arts in English is the only major available at this time. Interested students should contact Cal Poly's Transfer Center (transfer (transfer@calpoly.edu)@calpoly.edu (transfer@calpoly.edu)), or visit Cal Poly's [The California Promise Program](https://academicprograms.calpoly.edu/california-promise-program-cal-poly/) (<https://academicprograms.calpoly.edu/california-promise-program-cal-poly/>) webpage.

Former/Returning Students

Former Students Returning in the Same Major

Students who were previously enrolled at Cal Poly and who wish to return to the university must follow the guidelines appropriate to their category.

Former undergraduate students who left Cal Poly in **good standing (2.0 or higher GPA)**, before completing their degree, and who wish to resume their former program (major) at Cal Poly, can essentially be reinstated after submitting a paper CSU undergraduate application and transcripts from any institutions attended after leaving Cal Poly. A returning student is one who has no enrollment record for three consecutive regular terms (fall, winter, spring). If you have missed 2 terms, you may enroll without completing a returning student application. Once you have missed 3 terms, you must complete a returning student application. An application and corresponding fee must be filed or postmarked before the application deadline date listed below for the appropriate term:

Term	Deadline
Fall Quarter	July 1st
Winter Quarter	October 1st
Spring Quarter	February 1st

Former students **who did not leave the university in good standing** (i.e., were academically disqualified), will have their application and transcripts sent to their department college for review before reinstatement can occur. Applicants in this category are advised to contact their major's academic department or advising center to begin dialogue about satisfying any requirements **before** submitting their application. For more details regarding applying as a returning student please visit the Returning Students website (<https://www.calpoly.edu/admissions/returning-students/>).

Former Students Returning in a New Major

Former Cal Poly students wishing to return to Cal Poly in a different major must file an online application with the corresponding fee by the same application deadline as new applicants. Applicants in this category will compete equally with new applicants for the available transfer openings in their declared major.

Other Information

Consistency with State Regulations

The philosophy of the Cal Poly Admissions Office is consonant with the mission of California Polytechnic State University and is in accordance with Title V, Chapter 1, Subchapter 3, of the California Code of Regulations, and specifically, the California Code of Regulations for the California State University System, Title V, Section 40600.

Graduate Admission Requirements

International Admissions

Cal Poly, as part of the California State University (CSU) system, assesses the academic preparation of international students using factors such as academic performance, verification of English proficiency, and financial resources (to meet federal regulations). For this purpose, international students include those who hold U.S. visas as students, exchange visitors, or those in other nonimmigrant classifications. The CSU uses separate requirements and application filing dates in the admission of international students.

Reference the International Admissions (<https://www.calpoly.edu/admissions/international-student/>) section on the Cal Poly Admissions website for detailed information.

Application Procedures

Cal Poly does not have a separate international application. International applicants submit the online application (<https://www2.calstate.edu/apply> (<https://www2.calstate.edu/apply/>)) appropriate to their level of entry with the corresponding \$70.00 application fee which is both non-refundable and non-transferable. The Cal Poly Admissions Office will contact each international applicant regarding additional requirements once the application has been received. View application information, deadlines and selection timelines by visiting <https://www.calpoly.edu/admissions/international-student/dates-and-deadlines> (<https://www.calpoly.edu/admissions/international-student/dates-and-deadlines/>).

For more information about international admission in addition to the application for admission requirements:

International First Year Applicants – visit <https://www.calpoly.edu/admissions/international-student/selection-criteria> (<https://www.calpoly.edu/admissions/international-student/selection-criteria/>).

International New Transfer Applicants – visit <https://www.calpoly.edu/admissions/international-student/selection-criteria> (<https://www.calpoly.edu/admissions/international-student/selection-criteria/>). Please note: Cal Poly does not accept applications for undergraduate transfer students with less than 60 transferable semester units (90 quarter units) or applications for second undergraduate degrees.

International Graduate Applicants – visit <https://www.calpoly.edu/admissions/international-student/selection-criteria> (<https://www.calpoly.edu/admissions/international-student/selection-criteria/>).

After all required documents have been received, the Admissions Office will determine eligibility for admission and will notify the applicant of the result. International applicants admitted to Cal Poly will complete a visa questionnaire and receive a Certificate of Eligibility for Nonimmigrant Student Status (I-20 form) which is necessary to obtain a student visa to enter the United States or for requesting permission from the U.S. Citizenship and Immigration Services (USCIS) for transfer to Cal Poly from another U.S. institution. Other requirements may be imposed by USCIS. Applicants should note the I-20 form is valid for enrollment only at Cal Poly for the term indicated and that it includes an expiration date.

Deadlines

Undergraduate Deadlines for International Students

Term	Application Filing Period	File Completion Deadline
Fall only	Oct 1- Nov 30	March 1

Graduate Deadlines for International Students

Term	Application Filing Period	File Completion Deadline
Fall	Oct 1 - program deadline or April 1st, whichever date is earlier	File Completion deadline is the same as the program deadline or April 1st, whichever date is earlier
Winter	June 1 - September 1	September 1
Spring	August 1 - December 1	December 1

For detailed information about deadlines, visit <https://www.calpoly.edu/admissions/international-student/dates-and-deadlines> (<https://www.calpoly.edu/admissions/international-student/dates-and-deadlines/>).

International students should also visit the Cal Poly International Center website at <https://international.calpoly.edu/> for additional international student information and services.

FINANCIAL INFORMATION

Fees and Expenses

<https://afd.calpoly.edu/fees/>

The CSU makes every effort to keep student costs to a minimum. Tuition and fees listed in published schedules or student accounts may need to be increased when public funding is inadequate. Therefore, CSU reserves the right, even after tuition or fees are initially charged or initial payments are made, to increase or modify any listed tuition or fees. All listed fees, other than mandatory systemwide tuition, are subject to change without notice, until the date when instruction for a particular semester or quarter has begun. All CSU listed tuition and fees should be regarded as **estimates** that are subject to change upon approval by the Board of Trustees, the Chancellor, or the Presidents, as appropriate. Changes in mandatory systemwide tuition will be made in accordance with the requirements of the Working Families Student Fee Transparency and Accountability Act (Sections 66028 - 66028.6 of the Education Code).

The following reflects applicable systemwide tuition and fees for quarter campuses that were authorized by the Board of Trustees at the March 2017 meeting. These rates are subject to change.

SCHEDULE OF TUITION AND FEES 2021/22

All Students

Application Fee (nonrefundable), payable online at the time of application via credit card, e-check or PayPal: \$70

2021/22 Basic Tuition

Units	Per Quarter
Undergraduate Tuition	
6.1 or more units	\$1,914
0 to 6.0 units	\$1,110
Credential Program Tuition	
6.1 or more units	\$2,220
0 to 6.0 units	\$1,288
Graduate/Post Baccalaureate Tuition	
6.1 or more units	\$2,392
0 to 6.0 units	\$1,388

2021/22 Graduate Professional Program Fee

	Quarter
Charge Per Unit	\$180

The graduate business professional fee is paid on a per unit basis in addition to basic tuition and campus fees for specific graduate business programs authorized to assess the fee:

- Master of Business Administration (M.B.A.)
- Master of Science (M.S.) programs in Accountancy
- Master of Science (M.S.) programs in Business Administration
- Master of Science (M.S.) programs in Business Analytics
- Master of Science (M.S.) programs in Business and Technology
- Master of Science (M.S.) programs in Entrepreneurship and Innovation

- Master of Science (M.S.) programs in Finance
- Master of Science (M.S.) programs in Health Care Management
- Master of Science (M.S.) programs in Health Services Administration
- Master of Science (M.S.) programs in Information Systems
- Master of Science (M.S.) programs in Information Technology
- Master of Science (M.S.) programs in Marketing
- Master of Science (M.S.) programs in Taxation

2021/22 Nonresident Students (U.S. and Foreign)

Nonresident Tuition (in addition to basic tuition and other systemwide fees charged all students) for all campuses:

	Quarter
Charge Per Unit	\$264

The total nonresident tuition paid per term will be determined by the number of units taken.

Mandatory systemwide tuition is waived for those individuals who qualify for such exemption under the provisions of the California Education Code (see section on fee waivers).

Students are charged campus fees in addition to tuition and systemwide fees. Information on campus fees can be found by contacting the individual campus(es).

Credit Cards:

Visa, MasterCard, American Express and Discover credit cards may be used for payment of student tuition and fees but may be subject to a non-refundable credit card processing fee.

SCHEDULE OF TUITION AND FEES 2022/23

2022/23 Basic Tuition

Units	Per Quarter
Undergraduate Tuition	
6.1 or more units	\$1,914
0 to 6.0 units	\$1,110
Credential Program Tuition	
6.1 or more units	\$2,220
0 to 6.0 units	\$1,288
Graduate/Post Baccalaureate Tuition	
6.1 or more units	\$2,392
0 to 6.0 units	\$1,388

2022/23 Graduate Professional Program Fee

	Quarter
Charge Per Unit	\$180

The graduate business professional fee is paid on a per unit basis in addition to basic tuition and campus fees for specific graduate business programs authorized to assess the fee:

- Master of Business Administration (M.B.A.)
- Master of Science (M.S.) programs in Accountancy
- Master of Science (M.S.) programs in Business Administration
- Master of Science (M.S.) programs in Business Analytics

- Master of Science (M.S.) programs in Business and Technology
- Master of Science (M.S.) programs in Entrepreneurship and Innovation
- Master of Science (M.S.) programs in Finance
- Master of Science (M.S.) programs in Health Care Management
- Master of Science (M.S.) programs in Health Services Administration
- Master of Science (M.S.) programs in Information Systems
- Master of Science (M.S.) programs in Information Technology
- Master of Science (M.S.) programs in Marketing
- Master of Science (M.S.) programs in Taxation

2022/23 Nonresident Students (U.S. and Foreign)

Nonresident Tuition (in addition to basic tuition and other systemwide fees charged all students) for all campuses:

	Quarter
Charge Per Unit	\$264

The total nonresident tuition paid per term will be determined by the number of units taken.

Mandatory systemwide tuition is waived for those individuals who qualify for such exemption under the provisions of the California Education Code (see section on fee waivers).

Students are charged campus fees in addition to tuition and systemwide fees. Information on campus fees can be found by contacting the individual campus(es).

Credit Cards:

Visa, MasterCard, American Express and Discover credit cards may be used for payment of student tuition and fees but may be subject to a non-refundable credit card processing fee.

Schedule of Fees

Please refer to <https://afd.calpoly.edu/fees/> (<https://www.afd.calpoly.edu/fees/>) for complete information on fees, including on-campus housing, meal costs, and parking fees.

All regularly enrolled students, both undergraduate and graduate, pay registration and tuition fees determined by the number of units per quarter. In addition to registration and basic tuition fees, nonresident and foreign students pay nonresident tuition fees. Mandatory system-wide tuition and other fees are waived for those individuals who qualify for such exemption under the provisions of the California Education Code (see Student Fee Waivers).

Registration and Tuition Fees Per Quarter

Registration and Tuition Fees are the sum of two types of fees:

1. Campus-Wide Fees that are payable irrespective of college, and
2. Campus Academic Fees, which vary by college/academic unit.
Campus-wide fees include: basic Tuition Fee, Associated Students Fee, Health Facilities Fee, Instructionally Related Activities Fee, Health Services Fee, University Union Fee, and Campus Services Card Fee. Nonresident and foreign students are also charged per unit the nonresident tuition fee and an annual Opportunity Fee.

Cal Poly registration and tuition fees are due at the time of registration, and all prior term balances must be paid in full in order to register. Fees

that are not paid by the seventh day following a student's registration become past due, and a registration hold is placed on the account that prevents adding or swapping classes. If registration and tuition fees are still past due as of the next published cancellation date, then the student may be canceled from all enrolled classes. Students who have accepted financial aid, have an approved third-party contract on file, or are receiving fee waivers are not subject to class cancellation or financial registration holds until the quarter's first financial aid disbursement date. Financial aid students whose awards are insufficient to pay fees in full are billed for the balance, and are unable to register for subsequent quarters until the balance has been paid.

Refund of Tuition and Mandatory Fees, Including Nonresident Tuition

Regulations governing the refund of tuition and mandatory fees, including nonresident tuition, for students enrolling at the California State University are included in §41802 of Title 5, California Code of Regulations. For purposes of the refund policy, mandatory fees are defined as those system-wide and campus fees that are required to be paid in order to enroll in state-supported academic programs at the CSU. Refunds of fees and tuition charges for self-support, special session, and extended education programs or courses at the CSU are governed by a separate policy established by the University available at <http://www.extended.calpoly.edu/faq/policies.html#>

In order to receive a full refund of tuition and mandatory fees, less an administrative charge established by the campus, including nonresident tuition, a student must cancel registration or drop all courses prior to the first day of instruction for the term. Information on procedures and deadlines for canceling registration and dropping classes is available online at <https://registrar.calpoly.edu/>.

For state-supported semesters, quarters, and non-standard terms or courses of four (4) weeks or more, a student who withdraws during the term in accordance with the University's established procedures or drops all courses prior to the campus-designated drop period will receive a refund of mandatory fees, including nonresident tuition, based on the portion of the term during which the student was enrolled. No student withdrawing after the 60 percent point in the term is entitled to a refund of any mandatory fees or nonresident tuition.

A student who, within the campus designated drop period and in accordance with the campus procedures, drops units resulting in a lower tuition and/or mandatory fee obligation shall be entitled to a refund of applicable tuition and mandatory fees less an administrative charge established by the campus.

For state-supported non-standard terms or courses of less than four (4) weeks, no refund of tuition and mandatory fees, including non-resident tuition, will be made unless a student cancels registration or drops all classes, in accordance with the university's established procedures and deadlines, prior to the first day of instruction for state-supported non-standard terms or courses or prior to the first meeting for courses of less than (4) weeks.

Students also receive a refund of tuition and mandatory fees, including nonresident tuition, under the following circumstances

- The tuition and fees were assessed or collected in error;
- The University canceled the course for which the tuition and fees were assessed or collected;

- The University makes a delayed decision that the student was not eligible to enroll in the term for which tuition and mandatory fees were assessed and collected and the delayed decision was not due to incomplete or inaccurate information provided by the student; or
- The student was activated for compulsory military service.

Students who are not entitled to a refund as described above may petition the University for a refund demonstrating exceptional circumstances and the chief financial officer of the University or designee may authorize a refund if he or she determines that the fees and tuition were not earned by the University. Information concerning any aspect of the refund of fees may be obtained from the Student Accounts Office in Building 1, Room 211. Contact information can be found at https://afd.calpoly.edu/student_accounts/ (https://www.afd.calpoly.edu/student_accounts/).

Fees and Debts Owed to the University

Should a student or former student fail to pay a fee or a debt owed to the institution, including tuition and student charges, the institution may "withhold permission to register, to use facilities for which a fee is authorized to be charged, to receive services, materials, food or merchandise, or any combination of the above from any person owing a debt" until the debt is paid (see Title 5, California Code of Regulations, Sections 42380 and 42381).

Prospective students who register for courses offered by the University are obligated for the payment of charges and fees associated with registration for those courses. Failure to cancel registration in any course for an academic term prior to the first day of the academic term gives rise to an obligation to pay student charges and fees including any tuition for the reservation of space in the course.

The institution may withhold permission to register or other services offered by the institution from anyone owing fees or another debt to the institution. The institution may also report the debt to a credit bureau, offset the amount due against any future state tax refunds due the student, refer the debt to an outside collection agency and/or charge the student actual and reasonable collection costs, including reasonable attorney fees if litigation is necessary, in collecting any amount not paid when due. If a person believes he or she does not owe all or part of an asserted unpaid obligation, that person may contact Student Account at (805) 756-1428.

The institution can still charge a fee for the issuance of the transcript pursuant to their published transcript processing fees.

Credit Cards

Visa, Master Card, Discover Card, and American Express may be used for payment of registration and tuition fees, nonresident tuition fees, housing, dining plans and certain other University fees using the web credit card system. The University also accepts electronic check payments, known as eCheck or ACH, using the web on-line payment systems. Details concerning the use of electronic checks and credit cards for fee payments may be obtained from the University website under https://afd.calpoly.edu/Student_Accounts/online_payments.asp (https://www.afd.calpoly.edu/student_accounts/online_payments.asp). Credit cards may be used for the purchase of theatre and sports events tickets from the Ticket Office or PolyTIX online ticketing website, Bookstore purchases, parking permits and payment of parking citations with University Police, and for Extended Education program fees. Contact the individual service center for specific credit card information.

Fee Waivers and Exemptions

The California Education Code provides for the waiver of mandatory systemwide tuition fees as summarized below:

Section 66025.3(a) –

Dependent eligible to receive assistance under Article 2 of Chapter 4 of Division 4 of the Military and Veterans Code; child of any veteran of the United States military who has a service-connected disability, has been killed in service, or has died of a service-connected disability, and meets specified income provisions; dependent, or surviving spouse who has not remarried of any member of the California National Guard who, in the line of duty, and while in the active service of the state, was killed, died of a disability resulting from an event that occurred while in the active service of the state, or is permanently disabled as a result of an event that occurred while in the active service of the state; and any undergraduate student who is a recipient of a Medal of Honor, or undergraduate student who is a child of a recipient of a Medal of Honor who is no more than 27 years old, who meets the income restriction and California residency requirement.

Section 68120.3 - Current or former foster youth who are 25 years of age or younger; has been in foster care for at least 12 consecutive months after reaching 10 years of age; meet one of the following: i) is under a current foster care placement order by the juvenile court, ii) was under a foster care placement order by the juvenile court upon reaching 18 years of age, iii) was adopted, or entered guardianship, from foster care; completes and submits the Free Application for Federal Student Aid (FAFSA); maintains a minimum grade point average and meets the conditions necessary to be in good standing at the campus; and meets the financial need requirements established for Cal Grant A awards under Chapter 1.7 of Part 42. The waiver of mandatory systemwide tuition and fees under this section applies only to a person who is determined to be a resident of California pursuant to Chapter 1 (commencing with Section 68000) of Part 41 of the California Education Code.

Section 66602 - A qualifying student from the California State University who is appointed by the Governor to serve as Trustee of the California State University for the duration of his or her term of office.

Section 68120 - Surviving spouse or child of a deceased California resident who was employed by a public agency, or was a contractor or an employee of a contractor, performing services for a public agency with principal duties consisted of active law enforcement service or active fire suppression and prevention, and was killed in the performance of active law enforcement or active fire suppression and prevention duties (referred to as Alan Pattee Scholarships).

Additionally, a person who qualifies for the waiver under this section as a surviving child of a contractor or of an employee of a contractor, who performed services for a public agency, must be enrolled as an undergraduate student at the California State University and meet the applicable income restriction requirement with supporting documentation (i.e. his/her income, including the value of parent support, does not exceed the maximum household income and asset level for an applicant for a Cal Grant B award).

Section 68120.3 - Surviving spouse (until January 1, 2033) or surviving child (until attaining the age of 30) of a deceased California resident who was a licensed physician or licensed nurse employed by or under contract with a health facility regulated and licensed by the State Department of Public Health to provide medical services, or a first responder employed to provide emergency services as described in Section 8562 of the

Government Code. The deceased person's principal duties consisted of providing medical services or emergency services during the COVID-19 pandemic state of emergency (started March 4, 2020, until the Governor lifts the state of emergency), and the deceased person died of COVID-19 during the COVID-19 pandemic state of emergency. The person who qualifies for this waiver must enroll as an undergraduate student at a campus of the California State University, was a resident of California during the COVID-19 pandemic state of emergency, and the annual income (including the value of parent's support) does not exceed the maximum household income and asset level for an applicant for a Cal Grant A award, as set forth in Section 69432.7.

Section 68121 – A qualifying student (until attaining the age of 30) enrolled in an undergraduate program who is the surviving dependent of any individual killed in the September 11, 2001, terrorist attacks on the World Trade Center in New York City, the Pentagon building in Washington, D.C., or the crash of United Airlines Flight 93 in southwestern Pennsylvania, if the student meets the financial need requirements set forth in Government Code Section 69432.7 for the Cal Grant A Program and either the surviving dependent or the individual killed in the attacks was a resident of California on September 11, 2001.

Section 69000 – A California resident who has been exonerated, as that term is defined in Section 3007.05(e) of the Penal Code; completes and submits the FAFSA; and meets the financial need requirements established for Cal Grant A awards. The student's mandatory systemwide tuition and fees waived pursuant to this subdivision shall not have in excess of the equivalent of six years of full-time attendance in an undergraduate program.

Students who may qualify for the above benefits should contact the Admissions/Registrar's Office for further information and/or an eligibility determination.

The California Education Code provides for the following nonresident tuition exemptions as summarized below:

Section 68075 - A student who is a member of the Armed Forces of the United States stationed in this state, except a member of the Armed Forces assigned for educational purposes to a state-supported institution of higher education, is entitled to resident classification only for the purpose of determining the amount of tuition and fees.

If that member of the Armed Forces of the United States who is in attendance at an institution is thereafter transferred on military orders to a place outside this state where the member continues to serve in the Armed Forces of the United States, the member shall not lose the member's resident classification so long as the member remains continuously enrolled at that institution.

Section 68075.7 – A nonresident student is exempt from paying nonresident tuition or any other fee that is exclusively applicable to nonresident students if the student (1) resides in California, (2) meets the definition of "covered individual" as defined in Section 3679(c)(2) of Title 38 of the United States Code, (3) is eligible for education benefits under the federal Montgomery GI Bill®-Active Duty program or the Post-9/11 GI Bill® program as each read on January 1, 2017.

Section 68122 – A student who is a victim of trafficking, domestic violence, and other serious crimes who has been granted a status under Section 1101(a)(15)(T)(i) or (ii), or Section 1101(a)(15)(U)(i) or (ii), of Title 8 of the United States Code shall be exempt from paying nonresident tuition to the same extent as individuals who are admitted to the United

States as refugees under Section 1157 of Title 8 of the United States Code.

Section 68130.5 – A student, other than a person excluded from the term "immigrant" for purposes of the federal Immigration and Nationality Act (8 U.S.C. Sec. 1101), pursuant to paragraph (15) of subsection (a) of Section 1101 of Title 8 of the United States Code, who is not a resident of California is exempt from paying nonresident tuition if the student meets the requirements of (1) through (4), below:

1. Satisfaction of the requirements of either subparagraph (A) or subparagraph (B):
 - a. A total attendance of, or attainment of credits earned while in California equivalent to, three or more years of full-time attendance or attainment of credits at any of the following:
 - i. California high schools.
 - ii. California high schools established by the State Board of Education.
 - iii. California adult schools established by a county office of education, a unified school district or high school district, or the Department of Corrections and Rehabilitation (subject to the class hours' requirement).
 - iv. Campuses of the California Community Colleges (subject to the credit requirements).
 - v. A combination of those schools set forth in clauses (i) to (iv), inclusive.
 - b. Three or more years of full-time high school coursework, and a total of three or more years of attendance in California elementary schools, California secondary schools, or a combination of California elementary and secondary schools.
2. Satisfaction of any of the following:
 - a. Graduation from a California high school or attainment of the equivalent thereof.
 - b. Attainment of an associate degree from a campus of the California Community Colleges.
 - c. Fulfillment of the minimum transfer requirements established for the California State University for students transferring from a campus of the California Community Colleges.
3. Registration as an entering student at, or current enrollment at, an accredited institution of higher education in California not earlier than the fall semester or quarter of the 2001–02 academic year.
4. In the case of a person without lawful immigration status, the filing of an affidavit with the institution of higher education stating that the student has filed an application to legalize his or her immigration status, or will file an application as soon as he or she is eligible to do so.

Procedure for the Establishment or Abolishment of Campus-Based Mandatory Fees

The law governing the California State University provides that specific campus fees defined as mandatory, such as a student association fee and a student center fee, may be established. A student association fee must be established upon a favorable vote of two-thirds of the students voting in an election held for this purpose (Education Code, Section 89300). The campus President may adjust the student association fee only after the fee adjustment has been approved by a majority of students voting in a referendum established for that purpose. The required fee shall be subject to referendum at any time upon the presentation of a petition to the campus President containing the signatures of 10 percent of the regularly enrolled students at the University. Student association fees support a variety of cultural and recreational programs, childcare centers, and special student support programs. A student center fee may be established only after a fee referendum is held which approves by a two-thirds favorable vote, the establishment of the fee (Education Code Section 89304). Once bonds are issued, authority to set and adjust student center fees is governed by provisions of the State University Revenue Bond Act of 1947, including, but not limited to, Education Code sections 90012, 90027, and 90068.

The process to establish and adjust other campus-based mandatory fees requires consideration by the campus fee advisory committee and a student referendum as established by Executive Order 1102 (<http://www.calstate.edu/Budget/student-fees/fee-policy/referendum-consultation.shtml>). The campus President may use alternate consultation mechanisms if he/she determines that a referendum is not the best mechanism to achieve appropriate and meaningful consultation. Results of the referendum and the fee committee review are advisory to the campus President. The President may adjust campus-based mandatory fees but must request the Chancellor establish a new mandatory fee. The President shall provide to the fee advisory committee a report of all campus-based mandatory fees. The campus shall report annually to the Chancellor a complete inventory of all campus-based mandatory fees.

For more information or questions, please contact the Budget Office in the CSU Chancellor's Office at 562.951.4560.

Financial Aid

Financial Aid Office
Administration Bldg. (01), Room 212
Phone: 805.756.2927; Fax: 805.756.7243
<https://www.calpoly.edu/financial-aid> (<https://www.calpoly.edu/financial-aid/>)

The University has a variety of scholarships, grants, part-time employment opportunities and loans designed to assist students financially. Additional current information may be obtained by accessing the Financial Aid Office website.

The application for financial aid is called the Free Application for Federal Student Aid (FAFSA). The FAFSA is available at studentaid.gov (<https://studentaid.gov/>). The priority filing period for Cal Poly is October 1st through March 2nd for the following fall. Students who submit a valid FAFSA during that time are given priority for limited grant and scholarship funds. All students are encouraged to file the FAFSA if they believe that they need financial assistance to pay for their educational expenses.

Typical Student Expenses

Each year the Financial Aid and Scholarship Office posts its anticipated student Cost of Attendance (COA) on their website at: <https://www.calpoly.edu/financial-aid/costs-and-affordability> (<https://www.calpoly.edu/financial-aid/costs-and-affordability/>)

Please refer to that website for the most up-to-date information.

Cancellation of Registration or Withdrawal from the Institution and Financial Aid

Students who find it necessary to cancel their registration or to withdraw from all classes after enrolling for any academic term *are required* to follow the University's official withdrawal procedures. Failure to follow formal University procedures may result in an obligation to pay fees, the assignment of failing grades in all courses and the need to apply for readmission before being permitted to enroll in another academic term. Information on canceling registration and withdrawal procedures is available from the Office of the Registrar, Administration Building, Room 222, 805.756.2531.

Students who receive financial aid funds *must consult* with the Financial Aid and Student Accounts Offices prior to withdrawing from the University regarding any refunds or repayments of grant or loan assistance received for that academic term or payment period. Students who have received financial aid and withdraw from the institution during the academic term or payment period may need to return or repay some or all of the funds received, which may result in a debt owed to the institution.

University Scholarships

General Information

Scholarships are awarded each spring for the following fall. Criteria include financial need, scholastic achievement, participation in school activities, community service, honors and organizational affiliations, and educational objectives. Some scholarships have additional requirements which relate to a concentration or field of study, geographic origin, class level, and project or design portfolios. Generally a student must have at least a 3.0 grade point average.

There are numerous scholarships available due to the generous support of individuals and corporations. Please refer to the Financial Aid web site for detailed information.

Annual Deadline Date to Apply: Incoming students are automatically considered for scholarships. Continuing students should check with their department for any departmental deadlines.

How to Apply

The Financial Aid Office website offers the latest information at <https://www.calpoly.edu/financial-aid> (<https://www.calpoly.edu/financial-aid/>). For need-based scholarships, completing the FAFSA is required.

Scholarship Notifications

Scholarships are normally awarded during the spring and summer for the following academic year. During that time award offer notices are emailed directing the student to the self-service portal to view financial aid awards which include scholarship amount, disbursement and donor information. Awardees must accept on-line scholarship offers acknowledging program responsibilities and requirements. Recipients must be in good academic standing and maintain full-time enrollment

while receiving a scholarship (continuing education and Open University units are excluded). Some scholarships require recipients to have earned at least one-half the value of the scholarship during the previous year.

Scholarships are awarded for an academic year and are typically disbursed in quarterly increments. Non-attendance results in cancellation or a prorated amount.

Athletic Program Grants-In-Aid

Cal Poly athletic grants-in-aid are offered to selected students participating in intercollegiate athletics. Grants are renewable on a quarterly basis, the requisites for renewal being at the discretion of the University.

The grant-in-aid is subject to the financial limitations imposed by the National Collegiate Athletic Association and any conference of which the University is a member. Financial aid, scholarships, specific outside resources and employment are considered in determining compliance with these limitations. Additional information can be provided by the Athletic Department.

Other Scholarships

In addition to University scholarships, awards from various private donors and organizations are available to assist students with University expenses. Interested students should make inquiries for such awards directly to sponsoring organizations. Currently, Cal Poly students are beneficiaries of several million dollars of outside scholarship assistance each year. Students should take advantage of FREE scholarship search services; many who charge are selling information that is readily available at no cost. Other sources of scholarship funding may be available from:

- community organizations
- employers
- professional, career and trade associations

For valuable links visit the scholarship website at <https://www.calpoly.edu/financial-aid/types-of-aid/scholarships/outside-scholarships> (<https://www.calpoly.edu/financial-aid/types-of-aid/scholarships/outside-scholarships/>).

Grants

Federal Pell Grants are designed to help undergraduates and teaching credential candidates pay for their education. The Pell Grant amount is determined by the Expected Family Contribution, the cost of education, full-time or part-time enrollment and terms of enrollment. To apply, complete the FAFSA for the upcoming year.

Federal TEACH Grants are available to students who commit to four years of teaching in a high need area (science, mathematics, special education, and, in California, agriculture) in a school serving low income families. The grant converts to a federal unsubsidized loan if the teaching commitment is not met. To apply, complete the FAFSA for the upcoming year and contact the financial aid office.

Federal Supplemental Educational Opportunity Grant (SEOG) is designed to assist undergraduate students who have substantial financial need. To apply, complete the FAFSA by **March 2** for the upcoming school year.

Cal Grants

The California Student Aid Commission (CSAC) awards entitlement and competitive Cal Grants. To qualify, students must be California residents or eligible under AB 540. If applying for a Cal Grant for the first time,

students must complete the FAFSA and a Cal Grant GPA verification form. Request the GPA Verification Form from your high school or college. To apply, complete the FAFSA and mail the GPA Verification Form to CSAC by **March 2**.

For the latest information on the Cal Grant program, visit the CSAC website at www.csac.ca.gov (<http://www.csac.ca.gov>).

Cal Grant A is awarded to middle- and low-income undergraduates. New awards are limited to students who are freshmen, sophomores or juniors. Cal Grant A covers a portion of student registration fees and eligibility is tied to a family's incoming and assets as reported on the FAFSA. Cal Grant A may be renewed until completion of four years of college attendance. Recipients must continue to meet eligibility standards. Students may be eligible for an additional year of Cal Grant A at Cal Poly if enrolled in a designated five-year program or the teaching credential program.

Cal Grant B is awarded to low-income undergraduate students. First year recipients receive stipend only. Cal Grant B renewal recipients receive stipend plus a portion of registration fees. Eligibility is tied to a family's incoming and assets as reported on the FAFSA. Cal Grant B may be renewed until completion of four years of college attendance and students must meet eligibility standards. Students may be eligible for an additional year of Cal Grant B at Cal Poly if enrolled in a designated five-year program or the teaching credential program.

State Educational Opportunity Program Grant (SEOP) assists undergraduate students who have been admitted to the University through the Educational Opportunity Program (EOP). To apply, complete the FAFSA by **March 2** for the upcoming school year.

State University Grant (SUG) covers a portion of student registration fees. SUG is available to undergraduate and graduate students who are California residents or eligible under AB 540 and show financial need. To apply, complete the FAFSA by **March 2** for the upcoming year. The SUG and the Cal Grant pay the same portion of registration fees. Students can receive only one or the other, not both.

Employment

Federal Work-Study (FWS) is a need-based program which provides part-time employment for students. Work-Study jobs assist students financially and may provide career related work experience. FWS positions are either on- or off-campus with approved departments/organizations. Pay rates vary depending on job requirements and student skills. To receive priority consideration, complete the FAFSA by **March 2** for the upcoming school year.

Loans

Loans are for educational purposes only, with specific provisions for repayment. There are three types: Federal Direct Student Loans (FDSL), Federal Parent Loans (PLUS), and on a very limited basis, Cal Poly Long-Term Educational Loans.

Federal Subsidized Direct Loans are available to students through the U.S. Department of Education. Annual amounts are based on the students' need as determined by the FAFSA and federal limits. The federal government pays the interest on the loan while the student is in school and there are deferment provisions. To apply, complete the FAFSA for the upcoming year.

Federal Unsubsidized Direct Loans are available for students who are ineligible for some or all of a subsidized Federal Direct Loan. With

the exception of demonstrated financial need, borrowers must meet all eligibility criteria under the Federal Direct Loan program. Interest payments begin immediately after the loan is disbursed or the borrower may elect to defer payment and add the interest to the amount owed. An additional amount of Unsubsidized Direct Loan, above the Federal Subsidized Direct limit, may be available to independent students and to dependent students whose parents are denied a PLUS Loan.

Federal Parent Loans (PLUS) enable borrowers to obtain low interest loans for educational costs through the U.S. Department of Education. PLUS loan repayment begins when the loan is disbursed. To apply, complete the FAFSA.

University Long-Term Educational Loans are available to students who demonstrate long-term financial need. Some require written application, recommendations and interviews. The interest rate is four percent on the unpaid balance during repayment. Typically, interest accrues after the specified due date, graduation or withdrawal from the University. A one percent service charge is deducted from each loan disbursement.

University Short-Term Emergency Loans are designed to help students cope with unanticipated, educationally-related financial emergencies. Registration fees, rent, or utility bills are expenses that students should plan and are not considered emergencies as defined under this program. Full-time enrollment and a minimum 2.0 GPA are required. Each application is reviewed on a case-by-case basis. For further information, visit the Financial Aid Office website at <https://www.calpoly.edu/financial-aid/types-of-aid/other-loans/emergency-loans> (<https://www.calpoly.edu/financial-aid/types-of-aid/other-loans/emergency-loans/>), or stop by the office.

GENERAL REQUIREMENTS – BACHELOR'S DEGREE

General Graduation Requirements

There are eight general requirements which all students must meet in order to earn the bachelor’s degree from Cal Poly and participate in commencement. The more students understand their progress toward meeting these requirements and relate them to the many programs available, the better the chance of creating an exciting educational experience and avoiding errors which may delay graduation.

Students must be formally admitted to the major in which they wish to graduate, and must matriculate, in order to earn a degree.

The specific requirements for each degree program are shown under the academic department offering the major and include a curriculum display with courses listed by Major, Support, Concentration (if applicable), General Education, and Free Electives. Each major has a degree flow chart, which shows the recommended sequence of courses leading to the degree; see the "Degree Flowcharts" link at the top of this page.

Students are responsible for meeting all requirements, and should embrace the responsibility. Advice is available from faculty advisors, college advising centers, the Office of the Registrar, and students’ online Degree Progress Reports. Students should plan their degree programs carefully and review them frequently with their advisors. Students are strongly encouraged to access their Degree Progress Report frequently, including after they register each quarter, to verify that courses in which they enrolled are fulfilling requirements as expected. They are also encouraged to address any unanticipated deficiencies in the information shown on their Degree Progress Report, while realizing that recently received substitutions, transfer credit, etc., may not yet be reflected in the Degree Progress Report. As they approach graduation, careful attention to the Degree Progress Report will help ensure that they complete degree requirements in a timely fashion.

Minimum Requirements for Graduation

1. Minimum Number of Units

Baccalaureate degree programs Minimum 180 units
 Individual baccalaureate degree programs may require more than 180 units. (Title 5, Sections 40500, 40501, 40505, 40507) A minimum of 60 units overall must be upper division (defined as any course completed by the student at the 300- or 400-level; this could include transfer work completed at the upper-division level at a four-year institution).

NOTE: A maximum of 16 units of internship and cooperative education coursework can be applied to the bachelor’s degree. A maximum of 105 units of coursework from community colleges can be applied to the total units required for the degree. See Evaluation of Transfer Credit (p. 50) for more details.

Degree	Minimum # of major units at 300-400 level
Bachelor of Arts (BA)	18
Bachelor of Science (BS)	27
Bachelor of Fine Arts (BFA)	27
Bachelor of Architecture (BArch)	41

Bachelor of Landscape Architecture (BLA) 41

2. Grade Point Average (GPA)

Students must earn at least a 2.000 GPA in all three of the following: 1) all Higher Education units earned (all college-level work), 2) Cal Poly cumulative units earned, and 3) the major (the courses used to meet Major Courses, see the curriculum sheet; support courses do not count toward major GPA). For a definition of GPA and grade points and units graded, please refer to the Grading section of this catalog.

3. U. S. Cultural Pluralism (USCP) Requirement

Students must complete the USCP requirement. See the separate section on USCP.

4. General Education (GE) Requirements

Students must complete the GE requirements as indicated in the degree program and shown in the GE section of this catalog. A CSU-mandated minimum of 72 units of GE overall must be completed.

5. Graduation Writing Requirement (GWR)

Students must demonstrate competency in writing skills (as described below).

6. Senior Project

A senior project is required for all Cal Poly students (as described below).

7. Academic Residence Requirements

The minimum requirements for units taken in residence at Cal Poly are:

- 50 quarter units
- 36 of the 50 units in residence must be upper division
- 18 of the 36 upper division units in residence must be in the major
- 12 units of General Education
- 28 units in residence of the last 40 units counted toward the degree

Extension credit or credit by examination may not be used to fulfill the residence requirements. However, a maximum of 36 quarter units of extension credit may be counted toward the bachelor’s degree.

8. Disciplinary Condition

When an allegation has been made that a student has violated the Interim CSU Policy Prohibiting Discrimination, Harassment, Sexual Misconduct, Sexual Exploitation, Dating Violence, Domestic Violence, Stalking, and Retaliation, Revised December 24, 2021, or any of the Standards for Student Conduct (Title 5, section 41301 of the California Code of Regulations), and the student is under inquiry and/or investigation or a sanction has been applied for a violation, degree conferral may be impacted. If a student is expelled from the University, regardless of academic progress, including when a student has completed all academic requirements at the time of the expulsion, the student will not receive a degree. Expulsion means permanent separation from the University and no degree will be conferred.

9. Graduation Application Process

When undergraduate students reach 72% or more of degree completion (78% for Architecture and Landscape Architecture majors) as indicated on their Academic Progress gauge on Poly Profile, the Office of the Registrar will assign an expected graduation term for them that is the greater of either: one year away or four years from their first admit term (five years for students in Architecture and Landscape Architecture). Transfer students will be given no less than

three years from their admit term. This process occurs each quarter except summer.

Students will receive an email from evaluations@calpoly.edu, informing them that their graduation term has been set for them, and that they are expected to graduate by that term.

The expected graduation term can be viewed in the Student Center and Poly Profile.

Students are not able to register beyond their expected graduation term.

However, there may be legitimate reasons why some students need to extend their graduation term beyond the one that is automatically set for them.

Students with such academically or personally justifiable reasons to extend their graduation term can fill out the [Request to Extend Expected Graduation Term—Undergraduate](#) form and see their advisor for possible approval of the request to extend. The form can be found at: https://registrar.calpoly.edu/registrar_forms (https://registrar.calpoly.edu/registrar_forms/).

The [Notification of Earlier Expected Graduation Term—Undergraduate](#) form should be used by students who wish to move their graduation term earlier than the one assigned for them by the university. Advisor approval is not needed to move to an earlier graduation term.

Once notified that their graduation term has been set, students should access their Degree Progress Report each time they register, to ensure that they are fulfilling the requirements for their degree.

Students are encouraged to submit any and all paperwork (substitutions, transcripts for requirements completed elsewhere, etc.) in a timely fashion in order to expedite conferral of degrees.

If a student breaks enrollment prior to completion of degree requirements, she or he may be required to re-enroll and may be held to catalog requirements in effect at that time.

Final Degree Conferral

When undergraduate students reach 72% or more of degree completion, as indicated on their Academic Progress Gauge on Poly Profile, the Office of the Registrar will assign an expected graduation term for them that is a full four years after their initial admit term, or one year away, whichever is greater. Transfer students will be given an expected graduation term that is three years after their initial admit term. Students will receive an email from the Evaluations Unit of the Office of the Registrar informing them that their expected grad term has been set. The expected graduation term can be viewed in the Student Center and Poly Profile.

Graduate (Master's) students must submit a [Graduate Application for Graduation](#) Form to the Graduate Education Office at least two quarters prior to the anticipated term of degree completion.

The actual date of graduation (degree conferral) is the end of the quarter in which all requirements have been met. This date may differ from the student's last quarter of enrollment (for example, a student who completes the Graduation Writing Requirement [GWR] or submits Senior Project for final grading after the last term of enrollment).

Graduating students receive one complimentary diploma. Additional diplomas may be ordered from the Office of the Registrar's Online

Diploma Service (<https://www.michaelsutter.com/calpoly/>). The diploma is not ordered until all degree requirements have been completed. The diploma is mailed to the student's mailing address by the Evaluations Unit in the Office of the Registrar approximately three to four weeks after the degree has been conferred. It is the student's responsibility to update their mailing address on the Cal Poly Portal (<https://myportal.calpoly.edu>) prior to the end of the final quarter of enrollment, to ensure the receipt of their diploma.

Concentrations and minors are not noted on the diploma; they are noted on the transcript. Latin honors are noted on both the diploma and the transcript; the Distinction notation for Master's students is noted on both the diploma and the transcript.

Once a degree has been awarded, subsequent revision or alteration of any transcript entry is permitted only for correction of proven error as certified by the appropriate academic dean and the Registrar. No changes are made to the academic record 60 days following the degree conferral date.

Commencement

The Commencement Office (<https://commencement.calpoly.edu/>) provides graduates and guests with a memorable and meaningful graduation experience that symbolizes the culmination of their academic achievements. Commencement ceremonies are coordinated in collaboration with the Office of the Vice President for Student Affairs and the university's Commencement Operations and Policy Committees, which are held twice annually in June and December.

To be eligible to participate in commencement ceremonies, students must satisfy at least one of the following:

- Completed all degree requirements and have not participated in a previous commencement ceremony;
- Be currently enrolled in classes that will complete all of that student's degree requirements; or,
- Be registered for classes for the following term that will allow the student to complete all of their degree requirements.

Students completing all degree requirements in the Winter, Spring or Summer terms are automatically eligible to participate in the Spring (June) Commencement. Students completing all degree requirements in the Fall term are eligible for Fall (December) Commencement. Graduate (Masters) students must submit a Request for Graduation Evaluation Form to the Graduate Education Office at least two quarters prior to the anticipated term of degree completion.

Students who wish to participate in a commencement ceremony other than the one for which they are scheduled and in which they are eligible to participate must complete a Commencement Request Form (<https://commencement.calpoly.edu/eligibility/>).

Graduation Writing Requirement (GWR)

The Graduation Writing Requirement (GWR) is a CSU Board of Trustees mandate designed to ensure that students demonstrate effective written communication skills at the upper division before they enter the professional workforce. All undergraduate students who are seeking a Cal Poly degree must fulfill the GWR before a diploma can be awarded.

Undergraduate students with 90 or more completed units should attempt to fulfill the requirement before their senior year. Upper-division transfer

students who completed the requirement at another CSU campus prior to enrollment at Cal Poly may transfer completion of the requirement.

Students should review the requirements of their major program of study to determine which of the following options is the appropriate pathway for GWR completion:

1. Pass a GWR-certified course (p.) with a grade of C or better (C- or below does not qualify). The course may be taken on a credit/no credit basis, but the student must earn a minimum grade of C in order to satisfy the GWR component of the class. Available sections of GWR-certified courses are searchable in the class schedule. For a full list of courses, please see the GWR Courses website (p.) in the Courses A-Z section of the Cal Poly Catalog.
2. Pass the GWR Portfolio (<https://writingandlearning.calpoly.edu/gwrportfolio/>) via UNIV 401.

Further information on pathways to meeting this degree requirement may be obtained from the Office of Writing and Learning Initiatives, Kennedy Library (35) Room 202A (805-756-2067), or on the GWR webpage, <https://writingandlearning.calpoly.edu/gwr> (<https://writingandlearning.calpoly.edu/gwr/>).

Senior Project

All Cal Poly undergraduate students shall complete a senior project as part of their baccalaureate degree program requirements.

Definition: A capstone experience is a high-impact educational practice in which students (a) integrate and evaluate the knowledge and skills gained in both the General Education (GE) and major curricula and (b) demonstrate career or postgraduate readiness.

As a bridge from college to career/postgraduate success, the senior project at Cal Poly is a capstone experience with achievable outcomes that culminates in a self-directed final production or product carried out under faculty direction. Senior projects analyze, evaluate, and synthesize a student's general and discipline-specific educational experiences; relate to a student's field of study, future employment, and/or postgraduate scholastic goals; and include an element of critical, self-reflectiveness to facilitate student development and promote the metacognitive awareness that leads to lifelong learning.

Expected Outcomes: While major programs of study are responsible for designing specific senior project learning outcomes, all senior projects at Cal Poly provide an opportunity for holistic, competency-based assessment that demonstrates a strong foundation in general and discipline-specific knowledge as well as an advanced proficiency in the core competencies of critical thinking, written and oral communication, information literacy, and quantitative reasoning.

Furthermore, senior projects broadly address program learning objectives, which align with one or more University Learning Objectives (p. 8).

Forms & Examples: Senior projects may be research-, project-, and/or portfolio-based; individually supervised or course-based; independently completed or team-based; discipline-specific and/or interdisciplinary. They may take forms including, but not limited to, the following:

- an experiment;
- a self-guided study;
- a student-generated research project;

- participation in a faculty-generated research project;
- engagement in an industry-driven project;
- a report based on a prior or concurrent co-op/internship or service learning experience;
- a design or construction project;
- a portfolio of work documenting the results of creative practices, and/or
- a public presentation or performance.

Requirements: Each academic department determines specific senior project requirements, yet all senior projects and senior project policies adhere to the following requirements.

Senior projects shall

- commence when, or after, a student has earned senior standing, though completion of preparatory courses and/or research may precede senior standing;
- serve as a bridge from the college experience to professional/postgraduate readiness;
- include clearly defined student learning outcomes that are aligned with program learning objectives;
- have faculty oversight with scheduled meetings for which specific timelines/outcomes are defined;
- include a formal proposal and/or statement of intent to be submitted to the faculty advisor;
- involve inquiry, analysis, evaluation, and creation;
- demonstrate core competencies in critical thinking, written and/or oral communication, information literacy, and quantitative and/or qualitative reasoning;
- require a process/production and culminate in a final product as defined at the program level;
- include an explicit element of self-reflection;
- adhere to discipline-specific norms of academic integrity and ethical practices;
- be individually and formally assessed;
- include a minimum count of 3 units, or 90 hours of work, with no maximum;
- take no more than three quarters to complete;
- be assigned grades consistent with Cal Poly's policy on grading (<https://academicprograms.calpoly.edu/content/academicpolicies/grading/>).

Note: Senior projects shall neither consist solely of a co-op/internship experience nor solely of a test/exam of any kind, and senior projects shall not be unsupervised.

Archiving: Each academic department determines a process for archiving senior projects, whether at the department or college level and/or in collaboration with Kennedy Library. Policies and procedures governing submissions to Kennedy Library's institutional repository are based on University policies pursuant to the Family Educational Rights and Privacy Act (FERPA), intellectual property rights, and CSU accessibility requirements. Senior projects submitted to Digital Commons, the institutional repository hosted by Kennedy Library, become part of university's scholarly record.

California State University (CSU) General Education Breadth Requirements (p. 31)
GE Program Learning Outcomes (p. 31)

GE Course Substitutions (p. 31)
 GE Study Abroad (p. 31)
 Transfer Credit (p. 31)
 GE Requirements (p. 31)
 Writing Component (p. 31)

 GE 2020 Standard and High-Unit Templates (p. 32)
 General Education Courses (p. 33)

General Education Mission Statement

Adopted by the General Education Governance Board on April 7, 2021.

The General Education (GE) program is one of the primary means for realizing Cal Poly's vision of a comprehensive polytechnic education. GE integrates all disciplines in a program of liberal education accessible to all Cal Poly students. GE complements the major and promotes an understanding and appreciation of the foundational disciplines that ground all intellectual inquiry. The program affords students the opportunity to contextualize the knowledge from their major programs by presenting relevant scientific, humanistic, artistic, and technological perspectives. Because Cal Poly students declare their major upon matriculation, their experience of GE develops side-by-side with the major. Through the university's distinctive commitment to Learn by Doing, GE imparts transferable skills, nurtures creativity, fosters critical thinking and ethical decision making, supports integrative learning, and prepares students for civic engagement and leadership. In GE, students work inclusively with peers from diverse intellectual, disciplinary, and social backgrounds. Cal Poly's GE program also provides an opportunity for students to develop intellectual humility, an interdisciplinary mindset, and lifelong habits of mind.

California State University (CSU) General Education Breadth Requirements

Consistent with the California State University (CSU) General Education Breadth Requirements, Cal Poly's General Education (GE) program has been designed to complement major courses and electives completed by each baccalaureate candidate. The GE program seeks to cultivate well-rounded and informed persons. GE requirements are designed to provide CSU students with the knowledge, skills, experiences, and perspectives that will enable them to expand their capacities to take part in a wide range of human interests and activities; confront personal, cultural, moral, and social problems that are an inevitable part of human life; and develop an enthusiasm for lifelong learning. Faculty are encouraged to assist students in making connections among disciplines to achieve coherence in the undergraduate educational experience.

GE Program Learning Outcomes

Adopted Spring 2014 by the General Education Governance Board

After completing Cal Poly's General Education Program, students will be able to:

1. Construct and critique arguments from a logical perspective.
2. Use appropriate rhetorical strategies to connect with diverse audiences through oral, written, and visual modes of communication.
3. Address real world problems by demonstrating broad disciplinary knowledge, skills, and values in arts, humanities, sciences, and technology.
4. Understand the value of a general education in relation to major course of study.

5. Collaborate with people of different backgrounds, values, and experience.
6. Evaluate global and local issues and their impact on society.
7. Use intention and reflection to develop and improve one's own learning.

GE Course Substitutions

Students are expected to complete the GE courses published for their degree program. Cal Poly GE courses **must** be selected from the approved GE list. Substitutions are not permitted except in extraordinary circumstances. Students requesting exceptions must follow petition procedures, outlined on the GE website <https://ge.calpoly.edu/students/petitions/>. This process may take several weeks.

GE Study Abroad

Students should first review the GE website for study abroad courses that have already been pre-approved for Cal Poly GE credit. If the course is not there, students are strongly encouraged to submit a GE study abroad petition (<https://ge.calpoly.edu/study-abroad/>) before going abroad in order to determine if the course will be granted GE credit. For assistance with GE study abroad petitions, contact the Cal Poly International Center at studyabroad@calpoly.edu.

Transfer Credit

Transfer credit for GE courses is accepted from California institutions, as approved by the Chancellor's Office. For more information, go to How to Use Assist (<https://registrar.calpoly.edu/how-use-assist/>) located on the Office of the Registrar's website. Some Cal Poly programs specify particular GE courses for major or support; these courses must be met with articulated equivalencies. Refer to <https://assist.org/> for California Community College both CSU GE lists and specific articulation agreements.

GE Requirements

- All Cal Poly students are required to take 72 quarter units of General Education.
- A minimum of 12 units is required in residence (i.e., Cal Poly enrollment).
- A minimum of 12 units is required at the upper-division level (8 units upper-division for ABET-accredited engineering programs)
- For students admitted in Fall 2016 or later, a grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).
- Double Counting: Some majors indicate specific GE courses to fulfill both GE and major requirements. (These are listed in the major's curriculum display.) Students should consult their academic advisors during freshman year for clarification.
- All GE courses are 4 units unless otherwise indicated.

Writing Component

All General Education courses must have an appropriate writing component. In achieving this objective, writing in most courses should be viewed primarily as a tool of learning (rather than a goal in itself as in a composition course), and faculty should determine the appropriate ways to integrate writing into coursework. The writing component may take different forms according to the subject matter and the purpose of a

course. Outside of the GE areas specified below, at least 10% of the grade in all GE courses must be based on appropriate written work (e.g., lab reports, math proofs, essay questions, word problems, exam questions).

Writing Intensive Policy

GE areas A2, A3, Upper-Division C, and Upper-Division D are designated as Writing Intensive. All courses in these areas must include a minimum of 3,000 words of writing and base 50% or more of a student's grade on written work. GE area C2 is also designated as Writing Intensive, but all courses in this area must include a minimum of 2,000 words of writing and base 50% or more of a student's grade on written work. All Writing Intensive courses must include process-oriented writing instruction in which faculty provide ongoing feedback to students to help them grasp the effectiveness of their writing in various disciplinary contexts. The kind and amount of writing must be a factor in determining class sizes.

Golden Four

The "Golden Four" classes are a set of foundational learning classes that set the stage for future learning within GE and within the major programs. As such, students are encouraged to complete these four courses within the first year. These courses are all three courses within Area A plus B4: Mathematics/Quantitative Reasoning. The three courses within Area A provide instruction and practice in writing, speaking, and critical thinking. Completion of one or more courses within this area is often a prerequisite for other GE courses. All Golden Four subareas require students to earn a grade of C- or better. (Other GE courses require a passing grade of D- or better.)

GE 2020 Standard and High-Unit Templates

Cal Poly's GE program includes two templates: the Standard Template and the High-Unit Template. A "high-unit" program, as it relates to GE, refers to undergraduate programs within the College of Engineering along with the other ABET-accredited programs of ARCE and BRAE. Only these programs are considered high-unit degree programs and, as such, only students within those degrees will follow the High-Unit Template.

Majors In Templates in Table Below

High-Unit: ARCE, BRAE, and College of Engineering majors

Standard: All other majors

X = non-unit requirement

	Standard	High-Unit
ENGLISH LANGUAGE COMMUNICATION AND CRITICAL THINKING (AREA A)		
Oral Communication (A1) ¹	4	4

United States Cultural Pluralism (USCP)

USCP courses must fulfill all of the following criteria; and, according to AS-836-17, they must also address the Diversity Learning Objectives (DLOs). USCP courses must:

1. Focus on one or more diverse groups (identified in the Cal Poly Statement on Diversity (<https://catalog.calpoly.edu/universitypolicies/#Statement%20on%20Diversity%20and%20Inclusivity>)) whose contributions to American society have been impeded by cultural, legal, economic, and political conflict or whose social, cultural, legal, economic, and political opportunities have been restricted in the United States;
2. Cover the historical and/or contemporary social issues resulting from conflict or restricted opportunities that include but are not limited to problems associated with discrimination based on age, ethnicity, gender, nationality, abilities, religion, sexual orientation, socioeconomic status, or race in the United States;
3. Address the diverse intellectual, philosophical, and cultural perspectives of historically marginalized people in the United States;
4. Emphasize the voices and contributions of historically marginalized groups in the United States such that the course content must prominently include sources written and/or produced by historically marginalized people;
5. Foster critical thinking skills by using intersectional frameworks of analyses that are necessary for adequately understanding and analyzing various social issues related to diversity and equity in the United States;
6. Require students to examine critically their own beliefs, attitudes, and potential biases related to historically marginalized people in the United States.

In addition to satisfying these criteria, USCP courses must also address the Diversity Learning Objectives (https://academicprograms.calpoly.edu/content/academicpolicies/diversity_lo/).

Students are required to complete *one* USCP course. This course also fulfills a requirement for Major, Support, General Education, or Free Elective category.

The following courses fulfill the United States Cultural Pluralism requirement.

ANT 415	Native American Cultures	4	ENGL 349	Gender in Twentieth and Twenty-First Century Literature (Upper-Division C) ¹	4

Choice of Catalog / Catalog Rights

Cal Poly typically issues a new catalog every one or two years, and the requirements for degree programs may change from one catalog to the next. Students have the right to choose the catalog they will use, as described in Section 40401 of Title 5 of the *California Code of Regulations*.

An undergraduate student remaining in attendance in regular sessions at any California State University campus, at any California Community College, or any combination of California community colleges and campuses of the California State University may, for purposes of meeting graduation requirements, elect to meet the catalog requirements in effect at the campus from which the student will graduate either:

1. at the term the student began such attendance, or
2. at the term of entrance to the campus granting the degree, or
3. at the term of graduation, or
4. as allowed by campus policy: Cal Poly also allows students to elect the requirements of any catalog in effect during their regular attendance.

Campus authorities may authorize or require substitutions for discontinued courses. A campus may require a student changing his or her major or any minor field of study to complete the major or minor requirements in effect at the time of the change.

For purposes of this section, "attendance" means attendance in at least one semester or two quarters each university year. Absence due to an approved leave of absence or for attendance at another accredited institution of higher learning shall not be considered an interruption in attendance, if the absence does not exceed two years.

Choice of Catalog Older than 10 years for Returning Students

Returning students may request to complete their degrees on a catalog older than 10 years only if all remaining degree requirements at the time they left Cal Poly do not exceed 16 units. The decision to approve or disapprove a student's request is based on: (1) her/his willingness to complete the remaining degree requirements within a specified timeframe, and (2) her/his ability to demonstrate, with written documentation, reasonable currency of knowledge and skills in her/his degree field to the satisfaction of the faculty in the applicable major, as certified by the department chair. Both the college dean and the Senior Vice Provost for Academic Programs must give approval.

Currency in the degree field may be demonstrated by additional coursework, in addition to the remaining degree requirements on the student's original catalog, and/or by relevant work experience, to be determined by the department chair. Because Cal Poly degrees are always granted for the term in which requirements are completed, additional requirements may vary, depending on the amount of time elapsed and on the major field, in order to reconcile the curriculum of an older catalog with current trends in the academic discipline.

The expiration of a catalog is determined by adding 10 years to the last term in which that catalog was in effect (e.g., the 2017-19 catalog will be "older than 10 years" after Spring Quarter 2029).

Students are not allowed to complete a degree that is no longer offered by the University.

Note: In addition to the remaining degree requirements on the student's catalog, s/he may also be required to complete the GWR. Check with the Evaluations Unit in the Office of the Registrar.

ACADEMIC STANDARDS AND POLICIES

Academic Placement

Placement Measures for First Year GE Written Communication and Mathematics/Quantitative Reasoning Courses

First year skills assessment and placement for General Education written communication and mathematics/quantitative reasoning courses shall be based on systemwide skills assessment standards that include the Early Assessment Program/Smarter Balanced Achievement Levels, high school coursework, high school GPA and math GPA.

Skills assessments are not a condition for admission to the CSU; they are a condition of enrollment. These skills assessments are designed to inform entering first year students of placement in appropriate baccalaureate-level courses based on their skills and needs.

First-time first year students identified as benefitting from additional support as determined by the skills assessment will be placed in supported instruction. Supported instruction is designed to assist students in credit bearing courses. Students may also be required to participate in the Early Start Program. The Early Start Program gives students the opportunity to earn college credit in written communication and/or mathematics/quantitative reasoning the summer before their first term.

Note: While the CSU has removed ACT/SAT standardized test requirements from its undergraduate admissions process, students are encouraged to submit test scores to help guide skills assessments, particularly for placement in the appropriate first-year mathematics/quantitative reasoning course.

Within the assessments and placement sections for written communication and mathematics/quantitative reasoning below, measures such as Smarter Balanced Assessment and/or ACT/SAT scores may be bypassed if no score has been submitted.

Assessments and Placement for GE Written Communications

Has fulfilled the GE Subarea A2 English Requirement

The student has met the requirement via completion of one of the following:

Advanced Placement (AP) Test

- 3 or above: AP Language and Composition
- 3 or above: AP Composition and Literature

College Transfer Coursework

- Completed approved college course that satisfies CSU GE Area A2 (written communication) with a grade of C- or better

Placement in a GE Subarea A2 English Course

The student has met examination standards and/or multiple measures-informed standards via one of the criteria below:

English CAASPP/EAP Test:

- Standard Exceeded
- Standard Met and completed 12th grade approved year-long English course (CSU ERWC, AP, Weighted Honors English) with grade of C- or better

*English New SAT Test, if score has been submitted:

- 550 or above
- 510 – 540 and completed 12th grade approved year-long English course (CSU ERWC, AP, Weighted Honors English) with grade of C- or better English

ACT Test, if score has been submitted:

- 22 or higher
- 19-21 and completed 12th grade approved year-long English course (CSU ERWC, AP, Weighted Honors English) with grade of C- or better

High School Courses and GPA:

- Weighted GPA 3.3 or above
- GPA 3.0 or above and completed approved 12 grade year-long English course (AP, CSU ERWC, Weighted Honors English)
- GPA 3.0 or above and completed Honors English
- GPA 3.0 or above and 5 or more years of high school English

Placement in a Supported GE Subarea A2 English Course

The student has met examination standards and/or multiple measures-informed standards via one of the criteria below:

*English New SAT Test, if score has been submitted:

- 510 – 540 and 4 or more years of high school English
- *SAT score conversion for scores prior to March 2016 (old SAT): <https://collegereadiness.collegeboard.org/sat-scoring-before-march-2016> (<https://collegereadiness.collegeboard.org/sat-scoring-before-march-2016/>)

ACT Test, if score has been submitted:

- 19-21 and 4 or more years of high school English

High School Courses and GPA:

- Weighted GPA 3.0 or above and 4 or more years of high school English

Placement in a Supported GE Subarea A2 English Course and Participation in the Early Start Program Required

Based on multiple measures evaluation, the student would benefit from additional academic support including participation in the Early Start English Program. Visit the CSU Early Start Program webpage (<https://www.csusm.edu/readiness/earlystart/>) to learn about the Early Start Program.

The goal of the Early Start English Program is to better prepare students in written communication before the fall term of their first year, improving students' chances of successful completion of a baccalaureate degree.

- If required to participate in Early Start English, as determined by multiple measures, students will begin in the summer before the start of the first year.

- For general information about the Early Start Program, including fees and course listings, visit the CSU Early Start Program webpage (<https://www.csusm.edu/readiness/earlystart/>). Students also are encouraged to visit the Cal Poly Early Start Program webpage (<https://earlystart.calpoly.edu/>) information once admitted.
- Eligible financial aid applicants with an Estimated Family Contribution (EFC) of \$6,000 or less will be eligible for waiver of the per unit ESP fee. For more information on assessments, placement, and the Early Start Program, please visit <http://www.csustudentsuccess.org/>.

Assessments and Placement for GE Mathematics/Quantitative Reasoning: Non-Math Intensive Majors (Algebra and Statistics Disciplines, Non-STEM and Undecided Majors)

Has fulfilled the GE Subarea B4 Math/Quantitative Reasoning Requirement

The student has met the requirement via completion of one of the following:

Advanced Placement (AP) Test:

- 3 or above: Calculus AB
- 3 or above on AP Calculus BC
- 3 or above on AP Statistics
- 3 or above on AP Computer Science Principles

International Baccalaureate (IB) Test:

- 4 or above on Math Higher Level (HL)

College Level Examination Program (CLEP):

- 50 or above on: Calculus, College Algebra, College Algebra-Trigonometry, Pre-Calculus or Trigonometry

College Transfer Coursework:

- Completed math/quantitative reasoning college course with a C- or better that satisfies CSU GE Area B4

Placement in a GE Subarea B4 Math/Quantitative Reasoning Requirement

The student has met examination standards and/or multiple measures-informed standards via one of the following criteria:

CAASPP/EAP Math Exam:

- Standard Exceeded
- Standard Met and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better
- Standard Met and 4 or more years of high school math or quantitative reasoning

***New SAT Math Test, if scores are submitted:**

- 570 or above
- 550 or above on Subject Test in Math Level 1 or 2
- 520 – 560 and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better

ACT Math Test, if scores are submitted:

- 23 or above
- 20-22 and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better

High School Courses and GPA:

- Weighted math GPA 3.0 or above and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better
- Weighted math GPA 3.0 or above and 5 or more years of high school math or quantitative reasoning
- Weighted high school GPA 3.7 or above
- Weighted high school GPA 3.5 or above and 4 or more years of high school math or quantitative reasoning

Placement in a Supported GE Subarea B4 Math/Quantitative Reasoning Requirement

The student has met examination standards and/or multiple measures-informed standards via one of the criteria below:

High School GPA:

- Weighted math GPA 3.3 or above
- Weighted high school GPA 3.0 or above

Placement in a Supported GE Subarea B4 Math/Quantitative Reasoning Requirement and Participation in the Early Start Program Required

Based on multiple measures evaluation, the student would benefit from additional academic support including participation in the Early Start Math Program. Visit the CSU Early Start Program webpage (<https://www.csusm.edu/readiness/earlystart/>) to learn about the Early Start Program.

The goal of the Early Start Math Program is to better prepare students in mathematics/quantitative reasoning before the fall term of their first year, improving students' chances of successful completion of a baccalaureate degree.

- If required to participate in Early Start Math, as determined by multiple measures, students will begin in the summer before the start of the first year.
- For general information about the Early Start Program, including fees and course listings, visit the CSU Early Start Program webpage (<https://www.csusm.edu/readiness/earlystart/>). Students also are encouraged to visit the Cal Poly Early Start Program webpage (<https://earlystart.calpoly.edu/>) information once admitted.
- Eligible financial aid applicants with an Estimated Family Contribution (EFC) of \$6,000 or less will be eligible for waiver of the per unit ESP fee. For more information on assessments, placement, and the Early Start Program, please visit <http://www.csustudentsuccess.org/>.

Assessments and Placement for GE Mathematics/Quantitative Reasoning: Pre-STEM/STEM and Other Math- Intensive Majors

Has fulfilled the GE Subarea B4 Math/Quantitative Reasoning Requirement

The student has met the requirement via completion of one of the following:

Advanced Placement (AP) Test:

- 3 or above on AP Calculus AB
- 3 or above on AP Calculus BC
- 3 or above on AP Statistics
- 3 or above on AP Computer Science Principles

International Baccalaureate (IB) Test:

- 4 or above on Math Higher Level (HL)

College Level Examination Program (CLEP):

- 50 or above on: Calculus, College Algebra, College Algebra-Trigonometry, Pre-Calculus or Trigonometry

College Transfer Coursework:

- Completed math/quantitative reasoning college course with a C- or better that satisfies CSU GE Area B4

Placement in a GE Subarea B4 Math/Quantitative Reasoning Requirement

The student has met examination standards and/or multiple measures-informed standards via one of the criteria below:

CAASPP/EAP Math Exam:

- Standard Exceeded
- Standard Met and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better

*New SAT Math Test, if scores are submitted:

- 570 or above
- 550 or above on Subject Test in Math Level 1 or 2
- 520 – 560 and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better

ACT Math Test, if scores are submitted:

- 23 or above
- 20-22 and completed 12th grade approved year-long math course beyond Algebra 2 with a C- or better

High School Courses and GPA:

- Weighted math GPA 3.5 or above and completed 12th grade approved year-long math course beyond Algebra 2 with a grade of C- or better
- Weighted math GPA 3.5 or above and 5 or more years of high school math or quantitative reasoning
- Weighted high school GPA 3.7 or above

Placement in a Supported GE Subarea B4 Math/Quantitative Reasoning Requirement

The student has met examination standards and/or multiple measures-informed standards via the criteria below:

High School Math GPA:

- Weighted math GPA 3.3 or above

Placement in a Supported GE Subarea B4 Math/Quantitative Reasoning Requirement and Participation in the Early Start Program Required

Based on multiple measures evaluation, the student would benefit from additional academic support including participation in the Early Start Math Program. Visit the CSU Early Start Program webpage (<https://www.csusm.edu/readiness/earlystart/>) to learn about the Early Start Program.

The goal of the Early Start Program (ESP) is to better prepare students in mathematics/quantitative reasoning before the fall term of their first year, improving students' chances of successful completion of a baccalaureate degree.

- If required to participate in ESP, as determined by multiple measures, students will begin in the summer before the start of the first year.
- For general information about ESP, including fees and course listings, visit the CSU Early Start Program webpage (<https://www.csusm.edu/readiness/earlystart/>). Students also are encouraged to visit the Cal Poly Early Start Program webpage (<https://earlystart.calpoly.edu/>) information once admitted.
- Eligible financial aid applicants with an Estimated Family Contribution (EFC) of \$6,000 or less will be eligible for waiver of the per unit ESP fee. For more information on assessments, placement and the Early Start Program, please visit <http://www.csustudentsuccess.org/>

Please visit the Cal Poly Mathematics Department for Mathematics Placement Exam (MAPE) Information (<https://math.calpoly.edu/mape/>).

Academic Standards

Academic Obligations

All students are expected to be diligent in the pursuit of their courses of study in order that both they and the State receive maximum benefit from the educational opportunities provided. Each student is responsible for his or her enrollments and timely adds, drops, and withdrawals following campus policy.

Students are expected to satisfy the academic demands required by their instructors in such ways as they may set forth, in order to satisfy the instructor that they are performing their assignments in a proper manner.

Instructors are expected to give first priority to meeting their scheduled classes and other assigned responsibilities, including keeping regular office hours for student conferences.

In classroom settings, instructors have the authority and responsibility to establish rules, maintain order, and to dismiss students from a class session for violation of the rules or misconduct. Violations or misconduct warranting more than a single dismissal from a class session should be referred by the instructor to the Office of Student Rights & Responsibilities at 805.756.2794 for disciplinary action.

Expected Academic Progress (EAP) Policy

Expected Academic Progress is defined as making appropriate degree progress each academic year by earning a certain percentage of degree applicable units that meet major, support, general education, concentration, and free elective (if applicable) requirements that are directly associated with the student's declared major.

Expected Academic Progress (EAP) is monitored for all undergraduate students each quarter. Students who fall behind in their EAP will be designated as having an **EAP deficiency** and may be required to meet

with their academic advisor. Although this designation will not be noted on their transcript, students will be expected to make up this deficiency.

Those students who are required to meet with their advisor are expected to review and discuss their academic progress, and to create a reasonable academic plan to help get the student back on track. Attending summer session, either at Cal Poly, a community college, or another regionally accredited institution, may be suggested. Should the student decide to attend another institution, he or she must confirm that the courses they decide to take at that institution will apply to their Cal Poly degree requirements upon transfer.

If the student continues to have an EAP deficiency, their department or college **may have a hold placed on their registration for the next term or place them on Administrative Academic Probation (see the section on Administrative Academic Probation).**

Those students who have a demonstrated need to attend Cal Poly on a part-time basis for at least three consecutive quarters may be considered exempt from the EAP policy. These students will be required to submit an EAP Exemption Request through their advisors in order to be evaluated for exemption.

In addition to the university's EAP policy, the College of Engineering has additional requirements. Please see the College of Engineering Advising Center for details.

I. Native EAP Policy (Students entering Cal Poly as first-time freshmen)

Every full-time undergraduate student is required to make reasonable academic progress toward completion of the bachelor's degree. EAP is monitored for all Cal Poly students in order to help them graduate in a timely manner.

Students entering Cal Poly as first-time freshmen and who are enrolled in four-year degree programs (e.g., BA, BS, BFA) are expected to graduate in twelve quarters. Normally, this will not include summer terms, as summer is considered an opportunity to make up for any lack of progress in prior quarters or to bank progress for future quarters.

To maintain Expected Academic Progress, the following standards should be met by the end of each respective year:

First year: Completion of at least **20%** of the total number of units required for the degree.

Second year: Completion of at least of **45%** of the total number of units required for the degree.

Third year: Completion of at least **75%** of the total number of units required for the degree.

Fourth year: Completion of at least **100%** of the total number units required for the degree.

Example: A student enrolled in a four-year degree program requiring 180 total units would need to complete no fewer than 36 units by the end of the first year, no fewer than 81 units by the end of the second year, no fewer than 135 by the end of the third year, and no fewer than 180 by the end of the fourth year.

To determine the standards for programs requiring more than 180 total units, multiply the total units required by .20, .45, .75, or 1.0 for each respective year. Students enrolled in a five-year degree (e.g., BArch, BLA) or blended programs must also demonstrate Expected Academic

Progress and should consult with their major department for specific requirements.

Benchmark Courses: In addition to monitoring the number of required units completed, some departments may identify specific benchmark courses that should be completed by the end of each respective year. Students should check with their advisor for such requirements.

Degree Applicable Units: Departments rely on data derived from each student's Degree Progress Report (DPR) to verify that the expected number of units completed constitute degree-applicable units (units that advance the student toward degree completion). In tallying these units for the purpose of monitoring EAP, degree-applicable credits earned from Advanced Placement (AP), International Baccalaureate (IB), and accredited baccalaureate-level transfer work will be included.

Concentrations: If the student's major requires a concentration, units taken for the concentration are included in assessing EAP. The concentration should be declared no later than reaching 90 units (junior standing).

Minors: Minors are optional at Cal Poly and are not a part of a student's EAP. Depending on the student's major, courses taken for the minor may or may not represent degree-applicable units (see "Maximum Units" below). Students who decide to pursue a minor should declare their minor no later than the end of their junior year. Minors must be completed within the EAP requirements identified (i.e., maximum number of units and quarters allowed for the degree). No minor will be awarded after the baccalaureate degree requirements have been met.

Maximum Units: Students graduating on time (this would be 12 quarters, excluding summers, for students enrolled in four-year degree programs) have no cap on the number of units they may complete at Cal Poly.

Students who do not graduate on time may complete no more than 24 Cal Poly units above the number required for the degree. Exceeding the allowable 24 units may result in a hold being placed on the student's registration or the student being placed on administrative academic probation. The student will be required to submit a **Degree Completion Plan** to the major department before he or she is allowed to continue their education at Cal Poly. The Degree Completion Plan may include only degree-applicable units, as the student will not be allowed to take non-degree-applicable classes during this period. In tallying the Maximum Units, *only Cal Poly units* will be included. Credit earned from AP, IB, and transfer work will not be used in the Maximum Units calculation.

Students contemplating a change of major or the addition of a second major should be aware that the maximum unit cap applies in these circumstances. As outlined in the Change of Major section elsewhere in the catalog, major changes should be undertaken only if the new major will not result in exceeding the maximum units cap of 24 Cal Poly units above the number required for the degree. The same holds true for a second major. In the case of a change of major, the cap would be 24 units above the number required for the new major. In the case of a second major, the cap would be 24 units above the minimum required for the primary major.

Failure to make reasonable academic progress as prescribed by this policy may result in a hold being placed on the student's registration or the student being placed on administrative-academic probation. Students will be notified via their Cal Poly email address if a hold has been placed on their record or if they are being placed on administrative-academic probation. Continued failure to meet EAP standards may result in disqualification from the University.

Exemptions: Students who have to comply with an externally imposed set of degree progress standards (e.g., athletes following NCAA regulations) may continue to follow those guidelines. Other students for whom the Expected Academic Progress policy represents undue hardship may appeal for exemption through their advisor. Such appeals should be supported with documentation as appropriate (e.g., a physician's note).

II. Transfer EAP Policy

Every full-time undergraduate student is required to make reasonable academic progress toward completion of their bachelor's degree. EAP is monitored for all Cal Poly students in order to help them graduate in a timely manner.

Ideally, those who enter Cal Poly as upper division transfer students and who are enrolled in four-year degree programs (BA, BS, BFA) are expected to graduate in two years (six quarters). However, EAP policy does allow students three years (nine quarters, *excluding summer quarters*) to complete their degree requirements at Cal Poly, should they still have remaining lower division requirements after they are admitted as junior transfers.

To maintain Expected Academic Progress, the following standards should be met by the end of the specified year of study at Cal Poly (note that these standards are based on the assumption that all upper division transfer students enter with at least 90 degree-applicable units and are General Education (GE) certified for lower division GE not specified by the major):

First year: Completion of at least **55%** of the total number of units required for the degree.

Second year: Completion of at least **80%** of the total number units required for the degree.

Third year: Completion of **100%** of the total number of units required for the degree.

Example: A transfer student enrolled in a four-year degree program requiring 180 total units would need to have completed no fewer than 99 degree-applicable units by the end of the first year, no fewer than 144 degree-applicable units by the end of the second year, and no fewer than 180 degree-applicable units by the end of the third year of study.

To determine the standards for programs requiring more than 180 total units, multiply the total units required by .55 or .80 or 1.0 for each respective year. Students enrolled in five-year degrees (e.g., BArch, BLA) or blended programs must also demonstrate Expected Academic Progress and should consult with their major department for specific requirements.

Benchmark Courses: In addition to monitoring the number of degree-applicable units completed, some departments may identify specific benchmark courses that should be completed by the end of each respective year. Students should check with their advisor for such requirements.

Degree Applicable Units: Departments rely on data derived from each student's Degree Progress Report (DPR) to verify that the minimum number of units completed constitute degree-applicable units (units that advance the student toward degree completion). In tallying these units for the purpose of monitoring satisfactory progress, degree-applicable credit earned from Advanced Placement (AP), International Baccalaureate (IB), and accredited baccalaureate level transfer work will be included.

Concentrations: If the student's major requires a concentration, units taken for the concentration are included in assessing the EAP. The concentration should be declared as soon as possible and no later than the end of the second quarter of study at Cal Poly.

Minors: Minors are optional at Cal Poly and are not a part of a student's Expected Academic Progress. Depending on the student's major, courses taken for the minor may or may not represent degree-applicable units (See "Maximum Units" below). Students electing a minor should declare the minor as soon as possible and no later than the end of the first year of study at Cal Poly. Minors must be completed within the EAP requirements identified (e.g., maximum number of units and quarters allowed for the major). No minor will be awarded after the baccalaureate degree requirements have been met.

Maximum Units: Transfer students graduating on time (in 9 quarters, excluding summers, for transfer students enrolled in four-year degree programs) have no cap on the number of units they may complete at Cal Poly. **Transfer students who are NOT on track to graduate on time may complete no more than 24 Cal Poly units above the number required for the degree.** Exceeding the allowable 24 units may result in a hold placed on the student's registration or the student being placed on administrative-academic probation. Students must submit a **Degree Completion Plan** to their major department before they will be allowed to continue their education at Cal Poly, and may enroll *only* in degree applicable units. In tallying the Maximum Units, *only Cal Poly units* will be included. Credit earned from AP, IB, and transfer work will not be used in the Maximum Units calculation.

Students contemplating a change of major or the addition of a second major should be aware that the maximum unit cap applies in these circumstances. As outlined in the Change of Major section elsewhere in the catalog, major changes should be undertaken only if the new major will not result in exceeding the maximum unit cap of 24 Cal Poly units above the number required for the degree. The same holds true for a second major. In the case of a change of major, the cap would be 24 units above the number required for the new major. In the case of a second major, the cap would be 24 units above the minimum required for the primary major.

Failure to make reasonable academic progress as prescribed by this policy may result in a hold being placed on the student's registration or the student being placed on administrative-academic probation. Students will be notified via their Cal Poly email address if a hold has been placed on their record or if they are being placed on administrative-academic probation. Continued failure to meet EAP standards may result in disqualification from the University.

Exemptions: Students complying with an externally imposed set of degree progress standards (e.g., athletes following NCAA regulations) may continue to follow those guidelines. Other students for whom the Expected Academic Progress policy represents undue hardship may appeal for exemption through their advisor. Such appeals should be supported with documentation as appropriate (e.g., a physician's note).

Undergraduate Academic Probation and Disqualification

Core Values/Guiding Principles

Every student admitted to Cal Poly should have the maximum opportunity to earn a Cal Poly degree. As a university, we should be providing assistance and guidance wherever possible to achieve this goal. When students find themselves in academic difficulty, we should be creating pathways for

success, preferably at Cal Poly. Our policies should reflect this premise as much as possible.

Definitions:

Academic Probation: The term grade point average (unadjusted for any subsequent grade forgiveness), Cal Poly cumulative grade point average, and/or higher education grade point average (GPA) drops below 2.000.

Academic Progress: The degree progress that students make by the end of each academic term by successfully completing units applicable to their declared major. Students' actual academic progress is displayed in the form of a "gauge" showing percent completed and is available on their student portal, in their Poly Profile under the Academic Progress section.

Academic Progress Level: At Cal Poly, students' academic degree progress is divided into four levels, denoting the progress that students are expected make by the end of each of the 4 years that it takes to complete their degree (5 year degree programs have five levels). For detailed information, please see the Academic Standards (p. 45) section of the Cal Poly Catalog.

Academic Progress Level GPA Limits: The minimum GPA that students must attain in order to remain eligible to enroll at Cal Poly. The Academic Progress Level GPA Limits correspond to the Academic Progress Levels as outlined in the policy under Section II. Academic Disqualification.

Academic Success Contract: A set of academic conditions that students who are either in academic probation or administrative-academic probation status, or academic disqualification or administrative-academic disqualification status have to meet in order to remain eligible to enroll at Cal Poly.

Term Grade Point Average (Term GPA): The grade point average based on all graded work for the term (quarter).

Cal Poly Cumulative Grade Point Average (CPSLO GPA): The grade point average based on all graded work completed only at Cal Poly.

Higher Education Cumulative Grade Point Average (Higher Ed GPA): Grade point average based on all graded work completed at all colleges and universities including Cal Poly.

Disqualification: Academic status that may lead to dismissal.

Dismissal: Administrative action that prevents students from enrolling at Cal Poly for any future quarters. Dismissal may result from academic disqualification or administrative-academic disqualification status, from a disciplinary proceeding. Dismissed students may or may not be allowed to return to Cal Poly, depending on the reason for the dismissal.

Reinstatement: Administrative action that restores students' eligibility to enroll at Cal Poly. Reinstatement may result from the approval of an appeal of disqualification or the removal of a disciplinary sanction.

Academic performance is considered in determining students' eligibility to remain enrolled. Uniform standards for academic probation/disqualification and for administrative-academic probation/disqualification are in effect at all campuses of the California State University. When they do not meet these standards, undergraduate students may be placed on academic probation status and later placed on academic disqualification status or be placed on administrative-academic probation status and later placed on administrative-academic disqualification status. Once placed on any disqualification status,

students will be dismissed if no action is taken on behalf of the student, or if an appeal for continued enrollment is not approved by the university.

Undergraduate students are placed on academic probation or on academic disqualification status under the conditions stated below. For minimum academic standards applicable to graduate and post-baccalaureate students, see the Graduate Programs section of the catalog.

I. Academic Probation

Undergraduate students are automatically placed on academic probation status when the current term grade point average (unadjusted for any subsequent grade forgiveness), Cal Poly cumulative grade point average, and/or higher education grade point average (GPA) drops below 2.000 (i.e., the equivalent of an average grade of C). Students are notified promptly via campus email by the Office of the Registrar if placed on academic probation status. Students are responsible for checking their campus email accounts regularly.

II. Academic Disqualification

Undergraduate students will be placed on academic disqualification status if their Cal Poly cumulative GPA (CPSLO GPA) or their higher education GPA (Higher Ed GPA) falls below the following academic progress level GPA limits based on the corresponding academic progress levels (degree applicable work completed):

Academic Progress Levels: Progress Level GPA Limits:	Academic
Academic Progress Level IV (75.1%-100%): Cumulative or Higher Ed GPA	1.950 Cal Poly
Academic Progress Level III (45.1%-75%): Cumulative or Higher Ed GPA	1.850 Cal Poly
Academic Progress Level II (20.1%-45%): Cumulative or Higher Ed GPA	1.700 Cal Poly
Academic Progress Level I (0%-20%): Cumulative or Higher Ed GPA	1.500 Cal Poly

New Student Success Clause: *To allow for an adjustment period, first-time freshmen and new transfer students will not be placed on academic disqualification status until the end of the first academic year even if their GPA falls below the designated academic progress level GPA limits.*

5-year programs: *Although the academic progress levels for the 5-year programs at Cal Poly differs from those of the 4-year programs, for the purposes of the academic disqualification policy, students in the 5-year programs are held to the same corresponding GPA levels as described above.*

III. Notice of Academic Disqualification

Students who fall into academic disqualification status will be notified via email from the Office of the Registrar before the beginning of the next quarter. Their academic status will also show on their student portal, in their Poly Profile. Failure to notify students does not create the right to continue enrollment.

Students will not be dismissed due to academic disqualification status at the end of the winter quarter. Those students who fall into academic disqualification status at the end of winter quarter will be placed on an academic success contract that, if successfully met, may result in permission to continue beyond spring quarter. However, students who are placed on an academic success contract at the end of fall quarter and

who fail to meet the conditions of their contract will be dismissed at the end of winter quarter.

IV. Appeal for Reinstatement

Students who are in academic disqualification status may appeal for reinstatement. If reinstated, students will be placed on an academic success contract. Students who do not appeal for reinstatement or whose appeal is not approved will be dismissed from the university.

V. Administrative-Academic Probation

Undergraduate students may be placed on administrative-academic probation status by action of the dean of the college in which the students' declared major resides for any of the following reasons:

1. Withdrawal from all or a substantial portion of courses in two successive terms or in any three terms. (Note: students who are on an approved leave of absence are not subject to administrative-academic probation status for such withdrawal.)
2. Repeated failure to make Expected Academic Progress (as defined in the Academic Standards (p. 45) section of the Cal Poly Catalog) toward the stated degree or program objective when such failure appears to be due to circumstances within the control of the student.
3. Failure to comply, after due notice, with an academic requirement or regulation which is routine for all students or a defined group of students (for example, failure to complete a required CSU or campus examination, failure to complete a required practicum, failure to comply with professional standards appropriate to the field of study, failure to complete a specified number of units as a condition for receiving student financial aid or making satisfactory progress in the academic program).

When such action is taken, students are notified via their Cal Poly email address and are provided with the conditions for removal from probation and the circumstances that would lead to disqualification, should probation not be removed.

VI. Administrative-Academic Disqualification

Undergraduate students who have been placed on administrative-academic probation status may be placed on disqualification status, by action of the dean of the college in which the students are enrolled, for any of the following reasons:

1. The conditions for removal of administrative-academic probation status are not met within the period specified.
2. The student goes on academic probation status while on administrative-academic probation status.
3. The student is placed on administrative-academic probation status more than once.

When such action is taken, the student is notified via their Cal Poly email address including an explanation of the basis for the action.

Academic Petitions

Academic petitions are handled through the Academic Affairs division of the University. Contact the appropriate office for specific academic petition procedures.

Petitions for course substitution, course and term withdrawal, course audits, and many others can be found at the Office of the Registrar Forms (https://registrar.calpoly.edu/registrar_forms/) page.

For Change of Major, reach out to the Mustang Success Center or to the advising center for the major to which you wish to change: Advising Centers (<https://advising.calpoly.edu/advising-centers/>).

For academic disqualification petition appeals, follow the steps as outlined in the email you received, or contact the advising center for your major/college: Advising Centers (<https://advising.calpoly.edu/advising-centers/>).

Issues of cheating, dishonesty, and plagiarism are addressed by the Office of Student Rights and Responsibilities (<https://osrr.calpoly.edu/>).

Academic Petition Appeals

Admission and re-admission appeals are reviewed in the Admissions Office, and the University's final decisions are made there. Information on the admissions appeal process may be found on the Admissions Decision Appeals (<https://www.calpoly.edu/admissions/not-selected/admission-decision-appeals/>) webpage.

Students wishing to appeal a grade may appeal to the Academic Senate Fairness Board (https://academicsenate.calpoly.edu/content/acadsen_comm/fairness/).

Other academic petition appeals are reviewed at the department or program level, the college level, or within the Office of the Registrar. Petitions that are refused must first be appealed at the level where the decision was made, and final appeals are made to the Academic Programs and Planning office. See the Academic Programs and Planning policy for more information on Academic Petition Appeals (<https://academicprograms.calpoly.edu/content/academic-petition-appeals/>).

Student Grievances

The University provides students with a variety of mechanisms to address student grievances or concerns. In all such matters, the University encourages students to attempt to resolve their grievances or concerns at the source of the issue (i.e., with the professor, department chair or administrator, or college associate dean). The Office of Student Rights & Responsibilities, at 805.756.2794, is available to any campus community member to assist with identifying and clarifying appropriate campus policies and procedures for addressing student grievances or concerns.

For general questions about grievances, contact the Office of Student Rights & Responsibilities, at 805.756.2794. The following list contains the offices or programs designated to address the more common student grievances at the University:

- **Grade Grievances** – The Fairness Board: Contact the Academic Senate Office, 805.756.1258 (See University Policies (p. 9) page for more detail on the functions of this Board)
- **Individual Student Misconduct** – Office of Student Rights and Responsibilities, 805.756.2794 (See Student Affairs (p. 453) page for more detail on the functions of this office)
- **Student Club Misconduct** – Office of Student Rights and Responsibilities, 805.756.2794 (See Student Affairs (p. 453) page for more detail on the functions of this office)

Eligibility for Intercollegiate Athletics

Eligibility for competition in intercollegiate athletics is regulated in general by the rules of the National Collegiate Athletic Association (NCAA), and specifically by current Conference and university regulations. The Director of Athletics is responsible for maintaining up-to-date intercollegiate athletics eligibility rules applicable to the University. The Faculty Athletic Representative has the responsibility for the interpretation of the NCAA, Conference, and university rules for determining student eligibility to represent the University in intercollegiate athletic events.

Eligibility for Student Activities

Students on either academic or disciplinary probation may not participate on intercollegiate teams nor may they hold positions of leadership in chartered student organizations or coded student government groups. Students on probation may participate in such student organizations and groups as members but they may not hold an office or represent the University or the Associated Students, Incorporated in any official capacity.

Student Conduct and Discipline

It is expected that all Cal Poly students are enrolled for serious educational pursuits and that they conduct themselves so as to preserve an appropriate atmosphere of learning. It is also expected that all students who enroll at Cal Poly are willing to assume the responsibilities of citizenship in the campus community. Association in such a community is voluntary, and students may withdraw from it at any time that they consider the obligations of membership disproportionate to the benefits. While enrolled, students are subject to campus authority that includes the prerogative of dismissing those whose conduct is inimical to the aims of an institution of higher education.

While enrolled, students are subject to the regulations governing discipline stated in *Education Code* Section 66017 and in Title 5 of the *California Code of Regulations*, Sections 41301–41302, and to such rules and regulations as have been approved and promulgated by authority of the President. Copies of Title 5 California Code of Regulations 41301 and 41302, which deal specifically with student disciplinary regulations, are available to all students in the "Appendix" of this catalog. Other applicable regulations are contained in this Catalog, in the *Campus Administrative Policies*, the Standards for Student Conduct, Student Rights & Responsibilities, and in other official University publications, including the Cal Poly website.

Evaluation of Transfer Credit

Transfer Credit

The Evaluations Unit in the Office of the Registrar will evaluate previous college work and test credit in relation to Cal Poly degree requirements. Newly admitted and matriculated transfer students will receive an email from Evaluations that their evaluation has been completed and that the results are available in their Degree Progress Report (<https://registrar.calpoly.edu/degreeprogressreport/>) via the Student Center on the Cal Poly Portal. New students cannot access their Degree Progress Report prior to matriculation, nor can Evaluations provide any specific information about credit prior to that time.

Every effort is made to provide a complete Degree Progress Report (DPR), with all transfer credit reflected, prior to the date of new transfer student registration in mid-August. The DPR serves as the basis for determining

remaining degree requirements and should be used frequently to track progress toward the degree. More information about the Degree Progress Report can be found here:

<https://registrar.calpoly.edu/degreeprogressreport> (<https://registrar.calpoly.edu/degreeprogressreport/>).

While every effort is made to complete the evaluation according to the timelines outlined above, it is important that new transfer students review their previous college work in relation to the degree requirements outlined in the catalog in order to make a tentative selection of courses for their first quarter of enrollment. Students should consult their college advising center or a faculty advisor in their major department for assistance in the selection of courses. They should also use the "By Major" agreements on www.assist.org (<http://www.assist.org/web-assist/welcome.html>) for assistance with work from California Community Colleges.

Sending transcripts as early as possible helps expedite the process of finalizing the transfer evaluation. A delay in receipt of final transcripts will postpone the finalization of the transfer evaluation.

Some major/support courses may need to be petitioned through the student's major department if articulation agreements are not in place in ASSIST, or if classes were taken at a private institution in California, a University of California campus, or an out-of-state school.

Note: Transfer students with Advanced Placement or International Baccalaureate credit must have their scores sent to Cal Poly directly from the College Board or IB; notation of AP or IB exams on a college transcript is not sufficient for Cal Poly to award credit. Students should do this as soon as possible, in order for the transfer evaluation to be complete and accurate, and in order to satisfy registration prerequisites.

Semester units transferred to Cal Poly are converted to quarter units by multiplying the semester units by 1.5; a 3-unit semester class will equate to 4.5 Cal Poly units. If the Cal Poly requirement is 4 units, the excess 0.5 unit will count toward free electives.

The evaluation remains valid provided that the student matriculates for the term they are admitted, remains in their declared major, and remains in continuous attendance.

While students may follow the specific major requirements for the catalog year on which their initial evaluation of transfer credit is based, they are responsible for complying with any and all changes in other regulations, policies, and procedures, which may appear in subsequent catalogs, or which are communicated to them via email from the Office of the Registrar. These include CSU-mandated changes and changes approved by Cal Poly's Academic Senate and/or administration.

Credit for Community College Courses

Course credit earned at regionally accredited community colleges inside and outside the state of California is evaluated by the Evaluations Unit in accordance with the following provisions:

- Community college credit is allowed up to a maximum of 105 quarter units (70 semester units) toward overall units for the degree. Credits earned above this allowable maximum may still be used to satisfy specific subject and grade point requirements, but may not be applied toward the total count of units required for graduation (Example: a student in a 180-unit program, who has 110 quarter units of community college credit, all of which satisfies subject requirements, must still complete 75 units of non-community college work [not 70 units]).

- Upper division credit is never granted for community college work.
- The 105-unit limit does not apply to work from four-year institutions; however, specific course requirements, as well as all Cal Poly residency requirements, must still be met regardless of the number of units transferred from four-year institutions (see "Academic Residence Requirements" under "Minimum Requirements for Graduation").

Cal Poly maintains articulation agreements at www.assist.org (<https://assist.org/>) with all California Community Colleges (CCC), the California State University (CSU) and University of California (UC) campuses. The CCC campuses publish the CSU General Education (GE), the Intersegmental General Education Transfer Core (IGETC) course lists, and the lists of CSU transferable courses on the ASSIST website.

Transfer credit for GE courses is accepted from California community colleges, as approved by the CSU Chancellor's office and listed on www.assist.org (<https://assist.org/>). For students on catalogs prior to the 2020-21 catalog, Cal Poly's GE Area letters and numbers can differ from other schools in Assist. For help in understanding these differences, please refer to <https://registrar.calpoly.edu/how-use-assist> (<https://registrar.calpoly.edu/how-use-assist/>). For GE coursework taken at a private institution in California, a University of California campus, or an out-of-state school, every effort is made to extend all appropriate credit, including honoring the GE pattern of the transfer institution whenever possible.

Note: GE certification, whereby transfer students can complete all lower-division GE at a CCC or CSU, does not exempt students from meeting the CSU requirement of 72 overall units of GE, nor from completing upper-division GE requirements. Many Cal Poly programs require specific GE courses in the Major and/or Support; these courses must be met with articulated equivalencies, regardless of the status of GE completion at the CCC. See the General Education (p. 30) page for General Education requirements.

Submitting a CSU GE certification form is not required; Evaluations will use assist.org and/or the catalog, to determine GE certification. Submitting an IGETC certification, if the student is IGETC certified, is highly encouraged. Note: if a CCC GE certification is incorrect, it will not be honored (i.e., if it applies AP credit or work from a previous institution in an inappropriate manner). As the institution granting the bachelor's degree, Cal Poly will make the final determination of GE certification.

Other Academic Credit

Advanced Placement (AP) Credit

Cal Poly grants credit for AP exams successfully completed through the College Board AP program. Official scores must be requested from College Board, using our AP school code of 4038. See the College Board site: <https://apscore.collegeboard.org/scores/score-reporting> (<https://apscore.collegeboard.org/scores/score-reporting/>) for details on Score Reporting Services. Admitted students should send their AP scores as soon as possible to ensure that credit is applied toward their fall schedule. Neither opened paper AP score reports nor Advanced Placement notation on high school transcripts are acceptable to determine credit awarded.

AP credit matrices, published annually in April, are available at: https://registrar.calpoly.edu/other_ac_credit (https://registrar.calpoly.edu/other_ac_credit/). Exams passed with a score of 3 or higher result in nine (9) quarter units of credit, except where otherwise noted on the credit matrix. All credit is given on a credit/no credit basis; AP units do

not calculate into the GPA. Credit may vary from year to year, as Cal Poly requirements and AP Exams change. Please refer to the credit matrix for the specific year the exam was taken; credit is always extended based on the year of the exam. To determine credit for combined exams, use the matrix for the year of the last exam taken.

International Baccalaureate (IB) Exam Credit

The International Baccalaureate Diploma shall be considered in lieu of a high school diploma for admission to the University.

The International Baccalaureate **transcript** is required to receive University credit; the diploma is not sufficient to receive credit. IB transcripts may be requested from IB North America by email: transcripts.ibna@ibo.org, or by phone: (212) 696-4464.

Credit is awarded for classes at the **Higher** level. No credit is extended for Standard level exams.

All credit is given on a credit/no credit basis; IB units do not calculate into the GPA.

For each Higher Level exam score of 5 or higher, a maximum of 8 units of credit is awarded.

IB credit matrices, published annually in April, are available at: https://registrar.calpoly.edu/other_ac_credit (https://registrar.calpoly.edu/other_ac_credit/). Please refer to the matrix for the **specific** year the exam was taken; credit is always extended based on the year of the exam.

Credit for Non-collegiate Instruction

Cal Poly grants undergraduate degree credit for successful completion of non-collegiate instruction, either military or civilian, appropriate to the baccalaureate degree, which has been recommended by the Commission on Educational Credit and Credentials of the American Council on Education. The number of units allowed are those recommended in the Guide to the Evaluation of Educational Experience in the Armed Services and the National Guide to Educational Credit for Training Programs.

Credit for Military Service

Nine quarter units of elective credit are allowed toward graduation to any student submitting evidence of satisfactory completion of basic training in the military service of the United States. 4 units satisfy GE Area E and 5 units are elective credit (Cal Poly requires the DD-214 form to extend credit). Credit is allowed in accordance with the recommendations by the Commission on Educational Credit and Credentials of the American Council on Education. The numbers of units allowed are those recommended in the *Guide to the Evaluation of Educational Experience in the Armed Services*. Credit is not given for college level General Educational Development Tests. Military Service credit does not calculate into the GPA. Military Service credit is not included in scholarship computations.

CLEP Exam Credit

As each campus in the CSU system determines how it will apply external examinations towards credit in the major, Cal Poly has established that the CLEP tests acceptable for credit are:

- College Algebra-Trigonometry with a passing score of 50;
- Pre-Calculus with a passing score of 50;
- General Chemistry with a passing score of 50;
- Calculus with Elementary Functions with a passing score of 51.

4.5 quarter units of credit may be earned with an assigned grade of credit (CR), which is not included in the GPA calculation.

Credit for CLEP and other externally developed examinations is *not* awarded if any of the following apply:

- equivalent degree credit or duplicate credit has already been granted;
- credit has been granted for previous coursework or for a previously completed more advanced or higher level examination.

Credit by Examination (Challenging Cal Poly Courses)

A student may challenge a course in which he or she is qualified through previous education by taking an examination developed at the campus. Credit shall be awarded to those who pass this examination successfully. A student may not petition for credit by examination if the student has ever been enrolled in the course. Credit shall not be awarded when credit has been granted at a level more advanced than that represented by the course being challenged.

The credit by examination option is only available to admitted Cal Poly students during a term in which they are officially enrolled. A fee is charged for each credit by exam petition.

The examination may include written, oral, or skills tests, or a combination of all three types, and is sufficiently comprehensive to determine that the student has essentially the same knowledge and skills as those students who successfully complete the course. The grade received is entered on the student's permanent record. The grade may not be Credit/No Credit (CR/NC), except for courses which have CR/NC grading only. The length of the examination is consistent with the unit value of the course.

Arrangements to obtain course credit by exam may be made with the head of the department in which the course is taught. The request for credit by exam must be approved by the instructor and head of the department. Not all Cal Poly courses are available or appropriate for credit by exam. Units of credit received through this procedure do not apply toward the residence requirements or the Cal Poly GPA for any of the degrees or credentials offered by the University. Detailed instruction for applying for credit by examination may be obtained from the Office of the Registrar.

Grading

A grade may be changed for the purpose of correcting clerical or administrative error, or to correct an error in the calculation or recording of a grade. A change of grade shall not occur as a result of additional work performed or reexamination beyond the established course requirements (Academic Senate Resolution AS-384-92).

Units Earned are all hours for which credit was earned (excludes grades of F, WU, and NC. F and WU grades affect the GPA; NC grades do not affect the GPA).

Units Graded carry grade point value (excludes grades of CR and NC, which have no effect on GPA).

Grade Points are awarded for each course unit and are determined by multiplying course unit(s) by the grade point value of the grade.

Grade Point Average (GPA) is determined by dividing Grade Points by Units Graded.

Higher Education GPA is the grade point average of all college level work, both Cal Poly and any transfer work.

Transcripts are the official record of academic history. Once a degree has been awarded, subsequent revision and alteration of any transcript entry is permitted only for correction of proven error as certified by the appropriate academic dean and the Registrar. No changes are made to the academic record after 60 days following the awarding of the degree.

Grading Symbols

Academic Grading Symbols Earned

Symbol	Definition	Grade Points Earned Per Unit
A	Superior Attainment of Course Objectives	4.0
A-	Superior Attainment of Course Objectives	3.7
B+	Good Attainment of Course Objectives	3.3
B	Good Attainment of Course Objectives	3.0
B-	Good Attainment of Course Objectives	2.7
C+	Acceptable Attainment of Course Objectives	2.3
C	Acceptable Attainment of Course Objectives	2.0
C*	Acceptable Attainment of Course Objectives	1.7
D+	Poor Attainment of Course Objectives	1.3
D	Poor Attainment of Course Objectives	1.0
D-	Poor Attainment of Course Objectives	0.7
F	Non-Attainment of Course Objectives	0.0
CR	Credit (No effect on GPA)	-
NC	No Credit (No effect on GPA)	-

* Certain sequenced courses may have a C– prerequisite for advancement.

Credit/No Credit Grading

Some courses, *as indicated in their catalog descriptions*, are offered on a Credit/No Credit grading basis only. The following conditions apply when a student *elects* to take for Credit/No Credit grading those courses that are *not* designated by the University as being graded on an exclusive Credit/No Credit basis.

1. Students desiring to elect a course on a Credit/No Credit grading basis must be currently enrolled in the course and must elect the Credit/No Credit grading option through the registration system. This request can be made through the 8th day of the quarter. Students may **not** change from one grading system to the other after the end of the 8th day of the term.
2. Undergraduate students are given a grade of CR for accomplishment equivalent to a grade of C– or better. No credit (NC) is given for D+ or lower grades. Graduate students receive a grade of CR that is based on an evaluated grade of B– or higher and NC for assigned grades of C+ or lower. Instructors submit conventional letter grades to the Registrar's Office where they are converted to Credit/No Credit grades. **NOTE: Some post-baccalaureate programs penalize students for a grade of CR; students should carefully consider the implications of selecting CR/NC grading.**

- The applicant for a Credit/No Credit grade must have at least a 2.0 grade point average in cumulative Cal Poly work. This requirement is waived for first-time students.
- No more than two courses may be selected for Credit/ No Credit grading in any term.
- Units earned in courses for which the grade was CR count toward satisfaction of all degree requirements, if the student is within the guidelines listed in Item 6.
- Undergraduate students may elect a maximum of 16 units of Credit/ No Credit grading. Up to 4 units of Credit/No Credit grading is allowed in major or support courses, if allowed by the student's major department (see the Degree Requirements and Curriculum for each major to determine if Credit/No Credit grading is allowed). Up to 4 units (or one course, if the course is a five-unit course, e.g., CHEM 111) of Credit/No Credit grading is allowed in General Education courses (those GE courses which are required for the bachelor's degree). The remainder can be taken as free electives. These unit maximums apply to the **selection** of credit/no credit grading basis, regardless whether a student earns a grade of CR or NC.
- Credit/No Credit grading is removed for courses not meeting the above guidelines; the grade is changed to the letter grade assigned by the instructor. Students are strongly encouraged to verify, before enrolling, whether they are allowed to select Credit/No Credit grading for a particular course or requirement.
- Non-matriculated students, including those in the Extension Program, Summer Session, and Workshops must meet the same requirements as matriculated students to elect courses on a Credit/No Credit grading basis. (The 2.0 GPA requirement is waived in the case of non-matriculated students having no previous coursework recorded at Cal Poly.)

An instructor is authorized to submit a change-of-grade form to change an AU to NC for students who audit a class but do not attend or do not meet agreed-upon criteria.

The student services fee and nonresident tuition fee are determined on the basis of the total units for which the student is enrolled including courses audited.

Incomplete (Authorized)

An Incomplete signifies that a portion of required coursework has not been completed and evaluated in the prescribed time period due to unforeseen but fully justified reasons and that there is still a possibility of earning credit. It is the student's responsibility to bring pertinent information to the instructor who determines the means by which the remaining course requirements are satisfied. A final grade is assigned when the work agreed upon has been completed and evaluated. The student is not permitted to re-enroll in the course to complete course requirements. If the student does re-enroll, the original grade of I is counted as an F (or NC) and the re-enrollment is processed as a repeated course.

The instructor designates terms of the contract and length of time allowed to complete work, not to exceed one year. Failure to complete the assigned work results in the I being counted as equivalent to an F (or NC) for grade point average computation. All remaining grades of I are changed to F (or NC) at the time the student's degree is awarded.

Withdrawal Unauthorized

The symbol "WU" indicates that an enrolled student did not withdraw from the course and also failed to complete course requirements. It is used when, in the opinion of the instructor, completed assignments or course activities or both were insufficient to make normal evaluation of academic performance possible. For purposes of grade point average and progress point computation, this symbol is equivalent to an "F".

Report In Progress

The "RP" symbol is used in connection with courses that extend beyond one academic term. It indicates that work is in progress but that assignment of a final grade must await completion of additional work. Work is to be completed within one year except for graduate degree theses, which have a seven-year time limit. Students should not re-enroll in the course to complete course requirements; they should instead work with the instructor to complete the additional work.

Re-enrollment is only permitted in instances of repeatable courses. Cumulative enrollment in units attempted may not exceed the total number applicable to the student's educational objective. Work is to be completed within a stipulated time period.

The RP symbol shall be replaced with the appropriate final grade within one year or the grade is converted to an F, except that grades of RP for graduate degree theses (courses numbered 539/596/598/599) convert to a grade of No Credit (NC) if a final grade has not been assigned within seven years. All remaining RP grade symbols are changed to F or NC at the time the student's degree is awarded.

Repeating a Course

Undergraduate students cannot repeat courses in which they have earned a C or better grade (C- can be repeated).

Administrative Grading Symbols

Symbol	Definition	Grade Points Earned Per Unit
AU	Audit	-
I	Incomplete (authorized)	-
RD	Report Delayed	-
RP	Report in Progress	-
W	Withdrawn	-
WU	Withdrawal Unauthorized	0

Audit

An auditor is a student who attends a course and receives no credit for the course. Enrollment as an auditor is subject to permission of the instructor. Enrollment in a course as an auditor shall be permitted only after students otherwise eligible to enroll on a credit basis have had an opportunity to do so.

Auditors are subject to the same fee structure as credit students, and regular class attendance is expected. Once enrolled as an auditor, a student may not change to credit status unless such a change is requested prior to the last day to add classes. Courses enrolled in with audit grades are not considered when determining enrollment status (for financial aid and other purposes).

Course Repeats with Grade Forgiveness

Undergraduate students may repeat a maximum of 16 units at Cal Poly for purposes of improving their GPA. Grades of C- or lower are eligible for grade forgiveness.

- If the second Cal Poly grade is equal to or higher than the first, then it replaces the first grade. The original grade is "forgiven" from the GPA computation, but both grades appear on the student's transcript.
- If a course that was originally taken for a letter grade is re-taken with *credit/no credit grading*, the original grade is not excluded from the GPA.
- Grade forgiveness does not apply if the second grade is lower than the first grade. In this case, both grades are averaged into the student's GPA.
- Effective Summer 2007, grade forgiveness can be applied to the same course only once. Any additional attempts will be averaged into the GPA.
- Courses subsequently repeated at another institution and transferred back to Cal Poly are not eligible for forgiveness.
- Grade forgiveness shall not be applicable to courses for which the original grade was the result of a finding of academic dishonesty.

With the exception of the reasons listed below, the repeat adjustment is made automatically at the end of the term in which the course is repeated. A Repeat Petition for Grade Forgiveness is required for the following reasons only:

- the course was originally taken at Cal Poly before Fall 1987
- the course was originally taken at another institution
- the course has changed prefix or number
- the courses are considered similar in content but are not identical (e.g., STAT 217/STAT 218)
- the same topic of a topics course is being repeated

Repeat Petitions for Grade Forgiveness for the situations listed above must be turned in to the Office of the Registrar by the end of the seventh week of the quarter in which the course is repeated.

Course Repeats with Grades Averaged

Students may repeat an additional 18 units in addition to the 16 units for which grade forgiveness is permitted. Once the 16 unit forgiveness limit is reached, the grade from the repeat attempt shall not replace the original grade; instead both grades shall be calculated into the overall GPA.

Once students accumulate 34 units (16 units with forgiveness + 18 units with averaging) of repeated courses, they will no longer be allowed to repeat any future courses.

Withdrawals / Renewal

The W grading symbol indicates that the student was permitted to withdraw from the course after the regular add/drop period with the approval of the appropriate campus officials. It carries no adverse connotation of quality of student performance and is not used in calculating grade point averages.

Between the end of the regular add/drop period and the end of the seventh week of instruction a student must request permission to withdraw from a course by processing a petition that is available at the Office of the Registrar. The petition is approved and withdrawal

authorized only if there are serious and compelling reasons for withdrawal in the judgment of the department head.

The withdrawal petition also requires the signature of the course instructor and the student's academic advisor.

Between the end of the 7th week of instruction and the last day of instruction, withdrawals are permitted only if the withdrawal is based on an emergency situation clearly beyond the control of the student. In such cases a final or incomplete grade may be assigned for courses in which sufficient work has been completed to permit an evaluation to be made. The student must request permission to withdraw as specified above, or request grade assignment, both of which are subject to approval by designated campus officials. Any student who fails to provide notification or who fails to obtain formal approval to withdraw is subject to failing grades (WU, F, or NC).

Undergraduate students may withdraw from no more than 28 quarter units.

Cancellation of Registration or Withdrawal from the Term

Students who find it necessary to cancel their registration or to withdraw from all classes after enrolling for any academic term are required to follow the University's official withdrawal procedures. Failure to follow formal University procedures may result in an obligation to pay fees as well as the assignment of failing grades in all courses and the need to apply for readmission before being permitted to enroll in another academic term.

Students may drop their classes on their Student Center all the way through the add/drop period, until the end of the 8th day of the term. Grades are not assigned for courses dropped during this period.

With the approval of campus officials, a student is permitted to withdraw from all classes for the quarter for serious and compelling reasons until the end of the 7th week of instruction. After the 7th week and through the last day of instruction, withdrawals for the term must be based on an emergency situation clearly beyond the control of the student, and approved by campus officials.

The student is required to initiate a request for a term withdrawal with the Registrar and to complete required exit procedures. If the student is unable to appear in person, he/she may write or call the Office of the Registrar, 805.756.2531, to request withdrawal. The request must specify reasons for leaving the institution and include the student's signature. The date of the withdrawal is established according to the guidelines contained in the institutional policies governing term withdrawals or as determined by the Registrar.

The student may be eligible for a full or partial refund of registration fees depending upon the time and circumstances of withdrawal. If eligible for a refund, the refund remains in the student's account on campus, unless the student files a written application for the refund to be sent to the student. Fee refund policy information is available at <https://afd.calpoly.edu/fees/>.

Students who receive financial aid funds must consult with the Financial Aid and Student Account Offices prior to withdrawing from the University regarding any refunds or repayments of grant or loan assistance received for that academic term. If a Title IV financial aid recipient withdraws from the University during a payment period, the grant or loan assistance received is subject to federal refund and repayment provisions.

Withdrawal from Previous Terms

A student may petition to have all grades retroactively changed to the administrative grade of "W" if he/she can demonstrate and document that there were serious and compelling reasons or circumstances that resulted in the unofficial withdrawal for the quarter in question. A student may not retroactively withdraw from selected courses during a particular quarter, but must petition to withdraw from the entire quarter. **The petition must be submitted within one year following the end of the term.** Refunds of registration fees are not available for withdrawals following the last day of instruction. For more information, contact the Office of the Registrar.

Academic Renewal

The Trustees of the California State University have established a program of Academic Renewal whereby students who are having difficulty meeting graduation requirements due to a grade point deficiency may petition to have up to two semesters or three quarters of previous undergraduate coursework discounted from all considerations associated with meeting requirements for the baccalaureate degree. None of the courses taken in such terms can be applied toward the degree.

Academic Renewal, as defined by campus policy, is processed only at the point of graduation. Academic Renewal is intended only to enable graduation from Cal Poly and is not available for individuals who already possess a baccalaureate degree or who meet graduation requirements without the approval of a petition for Academic Renewal.

Conditions: In order to qualify for Academic Renewal all of the following conditions established by the Trustees must be met:

1. Five years must have elapsed since the term or terms to be disregarded were completed. The terms to be disregarded may have been taken at any institution.
2. Since completion of the term(s) to be disregarded, the student must have completed coursework at Cal Poly of at least one of the following:
 - 22 units with a minimum GPA of 3.00,
 - 45 units with a minimum GPA of 2.50,
 - 67 units with a minimum GPA of 2.00
3. The student must present evidence that the coursework to be disregarded was substandard and not representative of the student's present scholastic ability and level of performance.

Final determination, that one or more terms shall be disregarded, shall be based on careful review of evidence by a committee appointed by the President, which shall include the designee of the chief academic officer and consist of at least three members (E.O. 1037).

For additional information about Academic Renewal, contact the Evaluations Unit of the Office of the Registrar.

Other Academic Policies

Academic Honors

The **Dean's Honors List** is compiled at the end of each quarter to honor undergraduate students who have completed 12 or more letter-graded units during the quarter with a 3.5 grade point average or better for that term. Units with a grade of CR do not count toward the 12-unit minimum, nor do units from Credit by Examination. **The President's Honors List** is compiled at the end of each university year to honor those

undergraduate students who have demonstrated consistent achievement, as represented by being named to the Dean's Honors List for any three of the four quarters of the university year. Note that the university year begins with summer quarter.

Candidates for bachelor's degrees with the following **Cal Poly cumulative grade point averages** are awarded honors at graduation. **Only courses taken at Cal Poly calculate into the Cal Poly grade point averages.** The GPA is officially calculated at the time the student has *completed* graduation requirements:

Summa cum laude – 3.850
 Magna cum laude – 3.700
 Cum laude – 3.500

These honors are noted on both the diploma and the transcript.

Academic Minors

A minor is an integrated, coherent group of courses (24 to 30 quarter units in most cases), which gives the student knowledge in an area that lies outside of the major field of study. Please see Programs A-Z (<https://catalog.calpoly.edu/programsaz/>) for the list of minors.

Requirements for the minor:

- At least half of the units must be from upper-division courses (300- or 400-level)
- At least half of the units must be taken at Cal Poly (in residence). For the French, German, Italian Studies, and Spanish minors, the requirement for students studying abroad is at least one third of the units must be taken at Cal Poly; this allowance is for study abroad programs only and does not apply to any domestic transfer credit.
- Not more than one-third of the courses in a minor can be graded with student-selected Credit/No Credit (CR/NC), except for courses that have mandatory CR/NC grading
- A minimum 2.0 GPA is required in all units counted for completion of the minor

The minor must be completed prior to, or at the same time as, the requirements for the bachelor's degree. A major and a minor may not be taken in the same degree program, and a minor is not required for a degree.

Students who wish to earn a minor should contact the department offering the academic minor as early as possible in the program and fill out the appropriate agreement form. Students may select a minor which has requirements from a catalog that is different from that of their major. The minor form must then be submitted to the Office of the Registrar. The completion of the minor is noted on the student's transcript, but is not shown on the diploma. In no case is a diploma awarded for the minor.

Blended BS+MS Programs

Blended programs can provide an accelerated route to a graduate professional degree, with simultaneous awarding of both bachelor's and master's degrees. See individual programs and the Graduate Education (p. 435) section for additional information.

Change of Major Policy Statement

Because of the impact of the campus and its programs, Cal Poly students must declare a major at the time of application. After making

this decision, some students may find that their interests and abilities lead them in a different direction. The university must then offer a transparent and timely process for students to change majors and successfully complete a degree program.

General Information

Entering students are encouraged to make careful and informed decisions about their majors. All majors at Cal Poly are impacted, and it may be difficult to change majors despite students' best efforts. If students decide to change majors, doing so early in their academic career will help students make degree progress in a timely manner. This is likely to be a greater challenge for upper-division students (more than 90 units completed), including transfer students, who have fewer remaining degree requirements. Furthermore, students need to be aware that not all departments can accommodate an upper-division change of major.

Policy Standards

I. Minimum Time at Cal Poly

Students must complete at least one quarter at Cal Poly before requesting a change of major. The major exploration process can begin in their first quarter, but no official change of major may be initiated at that time. To begin the exploration process, students should access the Change of Major portlet on the Academics tab of their Cal Poly Portal (see Requesting a Change of Major, below).

II. Basic Criteria

In determining standards for major changes, a department representative may consider the following criteria when considering students' requests:

- a. Eligibility for the proposed major at the time of admission.
- b. Academic record (e.g. GPA, coursework, etc.).
- c. Ability to complete degree requirements in the new major in a timely manner.

If students meet the basic criteria for the proposed major, an Individualized Change of Major Agreement (ICMA) may be initiated by a department representative of the proposed major.

III. One Request Per Major

Students who enter into a change of major agreement and do not complete the agreement's requirements, either by failing to complete the terms or by opting out due to a change of plan or interest, will *not* be eligible to request that same major again later in their career at Cal Poly.

IV. Academic Standing

A change of major agreement can be initiated while students are on Academic Probation (AP), if the department offering the intended major believes that the AP status is due to students being in a less suitable major and that the new major represents a viable path toward good academic standing. A change of major agreement will be void if the students are academically disqualified prior to the completion of the agreement.

V. Requesting a Change of Major

To begin the formal change of major process, students must log into the Change of Major portlet located on the Academics tab at my.calpoly.edu (<https://myportal.calpoly.edu/f/u1711s6/normal/render.uP>). More information is available at advising.calpoly.edu (<https://advising.calpoly.edu/>).

VI. Individualized Change of Major Agreement

a. The change of major may be approved immediately, completed within one quarter, or completed within a maximum of two quarters.

b. The ICMA includes the following conditions:

- i. Students cannot be required to take courses before the ICMA begins.
- ii. Students cannot be required to take courses that are outside of the ICMA.
- iii. Students cannot be required to enroll in more than three specified courses or 12 units in the new major curriculum during the ICMA process.
- iv. Students should balance their schedule with General Education (GE) or other courses that may apply to both majors.
- v. Students' GPA requirements may include minimum GPA in courses specified in the ICMA, Term GPA, Cal Poly SLO GPA, or Higher Ed GPA.
- vi. Students' GPA expectation(s) established by the department representative must be attainable.

Course Substitution

Although a curriculum is specified for each major, under certain conditions a student may be permitted some deviation from the established curriculum. See the major department for substitutions involving major or support courses.

All Cal Poly students are expected to complete the GE courses specified in their degree program. Cal Poly GE courses must be selected from the GE requirement list. Substitutions are not permitted except in extraordinary circumstances. Students requesting exceptions must follow petition procedures, outlined on the GE web site. This process may take several weeks.

Double Majors or Degrees

If a student has completed the requirements for two or more majors leading to the same baccalaureate degree (e.g., two BS degrees), those majors are acknowledged on a single diploma. The major which the student requests as her/his **primary** major will appear first on the diploma. If a student has completed the requirements for two or more majors leading to different baccalaureate degrees (e.g., a BS and a BA), those degrees and the completed major or majors leading to each degree are acknowledged on two separate diplomas. If a student has completed concurrently the requirements for two or more degrees, at least one of which is a graduate degree, Cal Poly issues a separate diploma for each degree earned.

A student who adds a second major to her/his degree objective is expected to fulfill all requirements for both majors, including General Education requirements. However, a student may be allowed to use one senior project to fulfill the requirements for two majors. The program in which the student seeks to replace the senior project must grant permission before the student begins the project. Permission must be obtained using a major/support substitution.

Students who have declared two majors will be awarded both degrees for the term in which all requirements are completed for both majors.

Final Examinations

Except in specific circumstances, final assessments are administered during the scheduled finals week. If the assessment is a final exam, faculty will include the date and time of the exam on the course syllabus and, whenever applicable, provide students with advance notice if the final exam date is not available at the start of the term or has been rescheduled with the written approval of the appropriate dean.

If a student has three or more final exams on the same day, faculty should make a reasonable effort to schedule an alternative final exam for that student during the finals week. It is the student's responsibility to notify an instructor to request to reschedule a final exam by the end of the seventh week of instruction.

Graduate Courses Taken by Undergraduates for Graduate Credit

Cal Poly undergraduates who have achieved senior standing may take courses in the 400 or 500 series for possible graduate credit while still undergraduates. If they subsequently enter a Cal Poly master's or credential program, they may petition to have up to 12 units of such course credit applied toward their master's degree or credential program, **if** the units were not used in any way for the baccalaureate degree. Such courses should be noted in the appropriate section of the Formal Study Plan.

Student Classification/Standing

Undergraduate students are assigned a classification level according to the number of quarter units earned:

Lower Division

Freshman fewer than 45 units
Sophomore..... 45 to 89 units

Upper Division

Junior 90 to 134 units
Senior..... 135 or more units

For the purposes of this calculation, earned units include transfer and Advanced Placement/International Baccalaureate credit, in addition to Cal Poly units. Note that Student Standing can differ from Academic Progress levels; the Academic Progress calculation takes into account only degree-applicable units, whereas Student Standing includes all earned units, whether they apply to the degree or not.

Registration

Students are required to enroll in courses through their Student Center. The courses selected should meet the requirements specified for each student's major course of study.

Credit for coursework completed is given only when the student is properly registered. A student is not properly registered until fee requirements have been met and enrollment in classes has been confirmed in their Student Center. **Students are strongly advised to print copies of their schedule for their records.** Individuals are not permitted to attend courses unless they are officially registered as regular students, as approved extension students, or as enrolled auditors (see Audit).

Information concerning registration for classes is available at <https://registrar.calpoly.edu/registration-overview> (<https://registrar.calpoly.edu/>

<https://afd.calpoly.edu/fees/>). Information concerning payment of fees is available at <https://afd.calpoly.edu/fees/>.

Enrollment Policy

State funding is allocated to the University based on student enrollment each term. Any attendance/participation in classes where the student is not officially enrolled during the term of participation (and where appropriate registration fees have not been paid) is against campus policy. This includes enrollment in Internship courses and acceptance of a position through the Cooperative Education program. All registration should be completed by the end of the Add Period, the 8th day of instruction for each term.

Official term enrollment requires the awarding of grades for classes attempted.

Class Attendance

Students are expected to attend class regularly to keep the quality and quantity of their work high. Absence from classes is regarded as serious. An excused absence can be allowed only by the instructor in charge of the class upon consideration of the evidence justifying the absence presented by the student. An excused absence merely gives the individual who missed the class an opportunity to make up the work and in no way excuses the student from the work required.

"Excusable" Reasons for Missing Class

It is strongly urged that instructors accept the following "excusable" reasons for allowing students to make up missed work:

- Illness with a doctor's statement
- Injury, illness, death, or any extenuating circumstances of close relatives (to include but not limited to natural, adopted, and/or in-law children, parents, legal guardians, siblings, grandparents, grandchildren as well as spouses or partners)
- Active participation in university events (an instructor may require a statement from the adviser involved certifying that the student was actively participating in a recognized university event)
- Field trips
- Religious holidays
- Selective service and military reasons
- NCAA athletic competitions
- Instructionally Related Activities (IRA)/competitions
- Jury duty or any other legally required court appearances
- Job or internship interviews

Any student seeking to make up missed work pursuant to the above listed "excusable" reasons must inform the instructor of their intent in a timely manner.

Holding of Records

Student records may be placed on a "Hold" status because of financial or other obligations to the University. The Hold authorizes the University to deny registration, prevent the release of transcripts (non-financial holds), and to withhold other services normally provided to the student. A student's records are held until the obligation is cleared to the satisfaction of the office or department placing the Hold.

Enrollment Status

Full-time undergraduate students are those enrolled in 12 or more units of coursework in any regular quarter. *Half-time undergraduate students* are those enrolled in 6 to 11 units, and part-time undergraduate students are those enrolled for 5 or less units. Verification of enrolled units is based on enrollment status at the time of the verification request. Full-time status for graduate students is defined in the "Graduate Studies" section of this catalog.

Maximum Unit Load

The maximum load for all students is 22 quarter units including audited courses. Exceptions may be made with the advance approval of the student's major department head or graduate advisor. Increase in maximum unit load is not available to students on academic probation. Maximum load requirements may be waived only on presentation of evidence of ability to carry successfully such a group of courses. A petition to carry an excess load is available from the Office of the Registrar.

Add/Drop

All changes to individual class registration or enrollments are the **responsibility of the student**. The add/drop period continues through initial registration cycles until the end of the 8th day of instruction of each term. During this period, the student has the opportunity to add or drop classes. See specific dates for completing these transactions at the Office of the Registrar Calendars and Deadlines webpage (https://registrar.calpoly.edu/acad_cal/). Students are responsible for knowing and adhering to these published timelines and for their enrollments.

Adding

Closed classes: If a class is full, students may use a permission number, issued by the instructor, during the first 8 days of instruction. See the Office of the Registrar Calendars and Deadlines webpage (https://registrar.calpoly.edu/acad_cal/) for details.

Time conflict: Students may not enroll in two classes that meet at the same time.

Eligibility: Students must meet prerequisite and Schedule of Classes footnote requirements and be in attendance at the first class meeting to remain enrolled in the class.

Late registration: Students registering late have until the end of the add/drop period to pay late registration fees and to register for classes through their Student Center with a permission number issued by the instructor of the class.

Dropping

Students have until the end of the 8th day of instruction to drop classes through their Student Center. No enrollment history appears on the academic record. At the end of the regular add/drop period the instructor must assume that any student who has not dropped voluntarily remains officially enrolled in the class. For information on withdrawing after the end of the regular add/drop period see Withdrawals from Courses.

First class meeting: An instructor **may** drop a student from a class if the student is not present at the end of the first class meeting.

Footnote requirement: An instructor **may** drop a student from a class if the footnote requirements, as stated in Schedule of Classes, are not met.

Prerequisite missing: An instructor **may** drop a student from a class if the prerequisite requirements, as stated in the catalog course description, have not been completed.

Canceled classes: If a class is canceled, students are automatically dropped and have no reporting responsibilities.

Leaves of Absence

Students are permitted to take a Leave of Absence with a written request and approval by campus officials. A student may not request a Leave of Absence their first term (their term of admission). Students may request up to 6 terms off for a leave of Absence (not including summer). There is an exception for U.S. Military.

ELIGIBILITY REQUIREMENTS:

To be eligible to apply for a leave of absence, students must:

- be eligible to enroll in the term the leave begins.
- have attended Cal Poly for at least one quarter for which they earned units or received 'W' grades.
- have dropped or withdrawn from all classes for the term the leave begins.

POLICIES

Students who meet the eligibility requirements:

- may apply for a leave of absence for up to three quarters, not including summer.
- may request one additional leave of absence, totaling a maximum of 6 quarters, not including summer. There is an exception for U.S. Military service.
- must have an initiated and approved leave of absence submitted before the leave begins. A leave of absence will not be granted retroactively.
- will be in continuous attendance with the purpose of returning to the same curriculum that was in effect when the leave began.
- must inform the Financial Aid Office, if applicable.
- will not be required to apply for readmission or pay an application fee provided that the student returns to the same major and within the time period agreed upon when the application was approved.

Any student on leave who fails to return and enroll within the time limits specified by the leave agreement will be required to reapply for admission, pay the reapplication fee, and may be held to any new curriculum requirements which may be in effect.

Returning Students

Matriculated students who have not enrolled in classes at Cal Poly for three consecutive quarters (excluding summer term) or have not been on an approved leave of absence will be discontinued and will be required to file an application for readmission. The application fee must accompany the application for readmission. See the Admission section for application deadlines for returning students.

IF YOU HAVE NOT ATTENDED ANY OF THESE CONSECUTIVE QUARTERS:	THEN THE NEXT QUARTER YOU HAVE TO ATTEND TO AVOID DISCONTINUATION IS:
Winter, Spring, Summer	Fall
Spring, Summer, Fall	Winter
Fall, Winter	Spring

Intersystem Enrollment Programs

Fully matriculated students enrolled at any CSU campus have access to courses at other CSU campuses on a space available basis unless those campuses/programs are impacted. This access is offered without students being required to be admitted formally to the host campus and sometimes without paying additional fees. Students should consult their home campus academic advisors to determine how such courses may apply to their specific degree programs before enrolling at the host campus.

Intersystem Cross Enrollment – matriculated CSU, UC, or community college students may enroll on a space available basis for one course per term at another CSU, UC, or community college and request that a transcript of record be sent to the home campus and recorded as transfer credit. Additional information available from the Office of the Registrar, Admin 222.

Health Screening

Immunization and Screening Requirements

The California State University (CSU) is committed to the protection of health and wellness of all students. To comply with this overarching goal, the CSU requires that students are current for the immunizations listed below. For details, please visit <https://chw.calpoly.edu/health/immunizations> (<https://chw.calpoly.edu/health/immunizations/>).

These requirements will have to be met by the first day of their first quarter; otherwise students will not be allowed to register for their second quarter until proof of full immunization has been provided to the campus.

CSU and Cal Poly students are REQUIRED to obtain the following vaccines and undergo screening/risk assessment for Tuberculosis:

Required Immunizations & Screenings	Required Dosage & Screening Information
Measles, Mumps and Rubella (MMR)	Two (2) doses with first dose on or after 1st birthday; OR positive titer (laboratory evidence of immunity to disease)
Varicella (Chickenpox)	Two (2) doses with first dose on or after 1st birthday; OR positive titer. History of contracting the disease does not meet compliance.
Tetanus, Diphtheria and Pertussis (Tdap)	One (1) dose after age 7
Meningococcal Conjugate (Serogroups A, C, Y, & W#135) New Row	One (1) dose between the age 16 and age 21 or younger.
Meningococcal B (Meningitis B)	Students age 16 to 23 after discussion with their healthcare provider.

Hepatitis B (Hep B)	Students age 18 and younger (CA Health & Safety Code, Sec. 120390.5)
Tuberculosis Risk Assessment	All incoming students must complete a Tuberculosis risk assessment. Incoming students who are at higher risk* for TB infection, as indicated by answering “yes” to any of the screening questions, should undergo either skin of blood testing for TB infection within 1 year of CSU entry. *Higher risk include travel to or living in South & Central America, Africa, Asia, Eastern Europe, and the Middle East; prior positive TB test; or exposure to someone with active TB disease.

CSU and Cal Poly students are STRONGLY ENCOURAGED to obtain the following immunizations (please discuss with your provider):

Recommended Immunizations	Recommended Groups
Hepatitis A (Hep A)	All students regardless of age
Hepatitis B (Hep B)	Students age 19 and older
Human papillomavirus (HPV)	For women and men through age 26
Influenza (Flu)	Annually; all students regardless of age
Meningococcal B (Meningitis B)	Students age 16 – 23 after discussion with their healthcare provider.
Meningococcal conjugate (Serogroups A, C, Y, & W#135)	Students between the age of 21 and up to age 23.
Pneumococcal	For students with certain medical conditions (e.g., severe asthma, diabetes, chronic liver or kidney disease)
Poliovirus (Polio)	Regardless of age, if the series was not completed as a child
Immunizations for international travel	Based on destination

Exemptions:

The California State University system allows for exemptions to immunization requirements based on a medical condition that may be a contraindication to vaccinations. Visit the CDPH website for explanation and requirements needed for medical exemptions: Vaccine Recommendations and Guidelines of the ACIP (<https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/contraindications.html>).

For more information, visit <https://chw.calpoly.edu/health/immunizations> (<https://chw.calpoly.edu/health/immunizations/>) or call Health Services at 805.756.1211.

The College of Agriculture, Food and Environmental Sciences (CAFES) offers programs reflecting the growing diversity of choices available and skills required in modern agriculture, food, life and environmental sciences, and related professions.

Mission Statement

The College of Agriculture, Food and Environmental Sciences fosters teaching, scholarship and service in a Learn by Doing environment where students, faculty and staff are partners in discovery.

Learning Outcomes

All students who complete a program in CAFES should be able to:

- Demonstrate expertise in and the use of technology in their respective discipline.
- Demonstrate effective oral and written communication skills.
- Make choices based on an understanding of personal and professional ethics and respect for diversity of people and ideas.
- Recognize leadership principles and skills.
- Evaluate and solve problems using critical thinking.
- Demonstrate an appreciation for sustainability and global perspectives.

Student Life

Students take courses in their major field beginning with their first quarter of enrollment. This early exposure to their major provides them with specific knowledge to supplement that gained in other coursework in basic sciences, mathematics and the liberal arts. Moreover, it allows students to evaluate whether or not the curriculum selected is appropriate to their interests and abilities. Taking courses in the major throughout the academic program fosters personal contact with faculty and other students having common interests but varied backgrounds.

The students' early involvement in their major field, combined with the faculty's close contacts with schools, private industry, governmental agencies, and nonprofit organizations provide excellent opportunities for student internships during their junior or senior years. Other opportunities which enhance education, provide financial assistance, and help prepare students for the job market include enterprise projects, scholarships, study abroad, and work-study jobs.

CAFES faculty are experts in their disciplines, and are dedicated to teaching. They are eager to help students learn, are readily available for consultation and are proud of their close relationship with students.

College Advising

Academic Advising is provided to all students through the CAFES Advising Center and their major department in the college. This includes: Professional Academic Advisors, Faculty Advisors, and Peer Advisors. Academic Advising is designed to help students reach their educational and career goals; it is a shared task between an advisor and a student.

Students are encouraged to meet with their advisors quarterly to plan their schedule, review curriculum information, discuss career opportunities, and receive information on internships, enterprise projects

and cooperative learning. The CAFES Advising Center provides guidance on university and college policies and procedures including course transfers, substitutions and other general information.

Peer Academic Mentoring

The Multicultural Agriculture Program (MAP) is available to provide academic and personal support to undergraduate students of all cultural backgrounds in the College of Agriculture, Food, and Environmental Sciences with a peer-based structure that cultivates student achievement and a sense of community.

College Clubs and Organizations

Student clubs are active in every department. The College's 52 clubs, many of which are affiliated with national professional organizations, provide an excellent forum for student and faculty interactions. Active club members may practice leadership skills, and attend national, state and local professional meetings, as well as participate in a variety of professional and social events.

Agricultural Lands and Outdoor Laboratories

Nearly 6,000 acres of on-campus agricultural production, processing and research land and facilities are available for student use at Cal Poly. These facilities provide students with unique opportunities for hands-on experiences which augment classroom instruction.

The campus farm includes a dairy, beef center, horse, sheep, swine and poultry units, horse training and show arenas, an animal nutrition center, meat processing center, veterinary clinic and rodeo facilities. Also available are irrigated and dryland fields for annual crops, orchards and vineyards, an irrigation demonstration field, erosion research facility, large-scale composting operation, hoop houses, arboretum, wholesale and retail nurseries, a wine lab, and greenhouses. Eleven acres of certified organic farmland support our organic farming program.

Other Labs and Special Facilities

Special facilities include several microcomputer laboratories, laboratories with modern equipment for soil-plant-water testing, engineering testing and manufacturing shops, complete food processing units for dairy products, meats, fruit and vegetables, and four biotechnology and embryology laboratories.

Santa Cruz County Properties

The 3,200 acre Swanton Pacific Ranch in Santa Cruz County was generously donated by Al Smith, alumnus of Cal Poly's former Crop Science Department. This property provides students with an opportunity to live and work on a commercial farm with forestry, watershed management, cattle and organic crop production activities. The lands also support a wide range of research topics for undergraduate and graduate students.

Enterprise Projects/Experiential Learning

Cal Poly students have the unique opportunity to gain hands-on experience in business enterprises or through work experience on campus. These experiences serve to strengthen students' academic studies, while at the same time providing the knowledge and skills that lead to a better understanding and appreciation for important production, managerial and marketing challenges employees face in the workplace. Students participating in enterprise projects earn units that are reflected on their Cal Poly transcript.

Enterprise projects are available in various departments in the college.

In some projects, profits from enterprises will be shared among participating students, with a percentage also going to the department coordinating the activity. If an enterprise loses money, the department conducting the project absorbs the loss. This financial, risk-free opportunity provides students with great learning opportunities.

Research Programs

The college sponsors a 10-week Summer Undergraduate Research Program (SURP) to provide students the opportunity to experience undergraduate research projects on topics related to their programs or in which they have interest. Students work closely with faculty research leads and receive a stipend. The program is open to all undergraduate students in the college.

Courses

The courses offered in each undergraduate curriculum may be grouped into four areas:

Major

The major courses include a required cluster of courses in which the student expects to graduate. These courses constitute the core of specific preparation for the student's major field.

General Education

Courses are selected from the physical and life sciences, mathematics, communications, arts and humanities, and social, political, and economic institutions. These courses furnish the student with background and support for their academic program as well as providing cultural background for the students' intelligent participation in a complex world society.

Support

The support courses draw from courses in agriculture, life sciences, and closely allied fields which support and supplement the block of courses constituting the student's major.

Free Electives

Course selection from electives is designed to provide freedom for students to pursue interests of their choosing in any university department.

Recommended Preparation

In addition to pursuing the CSU mandated and Cal Poly recommended entrance requirements, high school and community college students are encouraged to participate in co-curricular activities as part of their preparation for admission to majors in Cal Poly's College of Agriculture, Food and Environmental Sciences. These activities could include, but are not limited to, FFA, 4-H, leadership roles in school clubs, meaningful work experience and community organizations.

Graduate Programs

Agricultural Sciences Bldg. 11, Room 211

Phone: 805.756.2161

<https://cafes.calpoly.edu/contact-graduate-programs> (<https://cafes.calpoly.edu/contact-graduate-programs/>)

Associate Dean: James P. Prince

jprince@calpoly.edu

Admission

File an application for Graduate Admission via <https://calstate.edu/apply> (https://calstate.edu/apply/) by the deadlines specified at <https://admissions.calpoly.edu/applicants> (https://www.calpoly.edu/admissions/) or <https://grad.calpoly.edu/applicant/prospective-student.html>

- Submit Graduate Record Exam (GRE) General Test scores electronically to Institution Code: R4038
- Three Letters of Recommendation

Admission Requirements

For consideration as a graduate student, an applicant will have met the following requirements:

- Completed a four-year college course of study and hold an acceptable baccalaureate degree from an accredited college/university.
- Must have attained a minimum grade point average of 2.75 in the last 90-quarter units attempted.
- An applicant not meeting these academic standards, but who meets the basic university standard of a grade point average of 2.5 in the last 90 quarter units attempted may be considered for admission as a conditionally classified graduate student.

All applicants who do not speak and write English as their primary language are required to complete the Test of English as a Foreign Language (TOEFL), with a minimum score of 550, and the Test of Written English (TWE) with a minimum score of 4.5. Those opting to take the Computer Based TOEFL must present a score of 213 or above. <https://admissions.calpoly.edu/applicants/international/checklist.html>

Each program may list additional requirements for admission to the specific program.

Degree Requirements

- Submit **Working Formal Study Plan (WFSP) & Advancement to Candidacy Form** for the degree with the CAFES Graduate Coordinator no later than the end of the first quarter in the program.
- All candidates must meet the current Graduation Writing Requirement (<https://writingandlearning.calpoly.edu/content/gwr-information-postbaccalaureate-students/>) before submission of the WFSP
- Candidates must determine anticipated graduation date and culminating experience before submission of WFSP
- Submit the e-form, Application for Graduation one quarter prior to the quarter that you plan to graduate.
- Submit the **Final Formal Study Plan (FFSP)** during the first 3 weeks of the quarter in which you plan to graduate.
- Submit either a **Master's Thesis Approval Form** or a **Master's Exam Approval Form** once you have completed your culminating experience. This must be submitted by the last day of the quarter in which you intend to graduate.

Thesis

A copy of the thesis or project report must be received and reviewed by the Thesis Editor in the Graduate Programs Office. Upon completion of any required corrections, the student submits the electronic thesis/

project report to the DigitalCommons@CalPoly, a digital archive for the University. These steps must be completed before the degree is awarded.

Graduate Student Continuous Enrollment Policy

Effective Fall Quarter 2009, graduate students are required to maintain continuous enrollment from the time of first enrollment in a graduate program until completion of the degree. Continuous enrollment is defined as being enrolled during Fall, Winter, and Spring quarters each year. This requirement is not retroactive to terms prior to Fall 2009.

- All graduate students must be enrolled the quarter they graduate.
- A student may be required to enroll in the Summer quarter if Summer is the quarter of degree completion.
- The continuous enrollment requirement for graduate students applies to all graduate programs unless a program exemption has been approved.
- Students who fail to fulfill this continuous enrollment requirement will not be permitted to graduate, even if all degree requirements have been completed, until payment has been made for all quarters of non-enrollment.

Enroll

Students can maintain continuous enrollment by one of the following:

- Enrolling as a regular student
- Obtaining approval for an education or medical leave prior to the quarter when such a leave would begin
- Registering in a special course designated for this purpose, during quarters in which they are not regularly are enrolled.

Special Courses

- GS 597 is listed in the University catalog and is taken through Cal Poly Extended Education. GS 597 is a one-unit course offered credit/no credit; credits in GS 597 do not count toward meeting degree requirements
- As of Fall 2018, the GS 597 fee will be \$349 per unit. This new fee applies to students who matriculate as graduate students for the first time in Fall 2018 or later.
- Students who are matriculated in a graduate degree program prior to Fall 2018 will be charged \$289 per unit.

MS in Agricultural Education

Agricultural Education & Communication

Coordinator: Ann DeLay

Phone: 805.756.2803

Email: adelay@calpoly.edu

The Master of Agricultural Education program provides student with the opportunity to focus their graduate study in agricultural education, with an emphasis on preparing candidates for positions as teachers of agricultural education in public schools. The non-thesis degree has two tracks: (1) to provide practitioners with opportunities for professional development, requiring at least one year of successful high school or community college teaching for completion, (2) to provide agriculture credential candidates an opportunity to simultaneously complete the degree. Working with their advisor and graduate committee, students generally complete project for coursework in the program to enhance their employment settings or assist them to become compliant with statewide standards in agricultural education. All students in the Master

of Agricultural Education degree program are required to pass a written and oral comprehensive examination, scheduled during the final quarter of the program of study.

Degree Requirements and Curriculum (p. 84)

MS in Environmental Sciences and Management

Natural Resources Management and Environmental Sciences

Coordinator: Chris Surfleet

Phone: 805.756.6392

Email: csurflee@calpoly.edu

The Master of Science degree program in Environmental Sciences and Management (MSES) offers advanced study in a range of environmental science and management disciplines.

The purpose of the Master of Science in Environmental Sciences and Management program is to provide advanced education in management of the environment and natural resources. Advanced study in environmental science, management of the environment, quantitative and qualitative analysis, and communication is the core of the degree. The degree allows an emphasis in environmental policy, forest sciences, hydrology, soil science, and sustainability. Through the emphasis of study, students have flexibility in creating elective coursework to suit their professional goals. The culminating experience of the degree is a professional project or thesis that allows students to explore, seek solutions, or provide research on environmental challenges.

Additional Requirements:

- Students must have at least a 3.0 GPA in the final 90 quarter units of their undergraduate degree.
- Completion of 3 quarters or two semesters of any combination of chemistry, biology, ecology, physics, earth science, or atmospheric Science.
- Completes one quarter or one semester of Statistics and Calculus
- An applicant who lacks prerequisite coursework may be admitted as a conditionally classified student and must make up any deficiencies (12 unit limit) before advancement to classified graduate standing.
- Must have at least 3 letters of reference that can attest to the academic capabilities of the applicant.

Degree Requirements and Curriculum (p. 137)

MS in Food Science

Food Science and Nutrition

Coordinator: Amanda Lathrop

Phone: 805.756.2660

Email: lathrop@calpoly.edu

General Characteristics

The MS Food Science program is designed to prepare graduates for advancement, specialization, and leadership in food science careers. In addition, graduates will be prepared for further education in doctoral studies in food science and related fields. The MS Food Science program integrates the disciplines of chemistry, microbiology, product development and processing/engineering, to prepare qualified graduates for food-related careers in industry, government and academia.

Additional Requirements:

- Statement of purpose
- Curriculum Vitae
- Three letters of academic and/or professional recommendation

Degree Requirements and Curriculum (p. 112)

MS in Nutrition

Food Science and Nutrition

Coordinator: Scott Reaves

Phone: 805.756.2660

Email: sreaves@calpoly.edu

General Characteristics

The MS Nutrition program is designed to prepare graduates for advancement, specialization, and leadership in nutrition or healthcare careers. In addition, graduates will be prepared for further education in dietetic internships, professional schools, allied health professions, or doctoral studies in a number of academic areas including nutrition, public health, animal science, or other health science-based disciplines.

The interdisciplinary Graduate Group in Nutrition (GGN) allows students to work with faculty from several departments and to choose a research topic from a broad range of themes including human nutrition, animal nutrition, kinesiology, public health, or business.

Students may follow a suggested area of emphasis. Examples may include: Molecular Nutrition, Public Health Nutrition, or Health and Wellness. These would be compatible with the students interests and career goals. Students will complete coursework and a research-based thesis conducted under the supervision of a committee chair who must be a member of the GGN.

Additional Requirements

- Statement of purpose
- Three letters of academic and/or professional recommendation
- Introductory chemistry series (one year), organic chemistry (min one course), biochemistry and an introductory biology course
- FSN 328 Nutrient Metabolism I or FSN 331 Macronutrient Metabolism
- FSN 329 Nutrient Metabolism II or FSN 332 Micronutrient Metabolism and FSN 333 Nutrient Metabolism Lab

Degree Requirements and Curriculum (p. 112)

MS Agriculture, Specialization in Animal Science

Animal Science

Coordinator: Vincent Yeung

Phone: 805.756.6154

Email: ckyeung@calpoly.edu

The program provides students with an interdisciplinary, science-based program, where students develop basic scientific knowledge, apply that knowledge to a research project, then write and defend a thesis. Under the guidance of the advisor and thesis committee, an individual's coursework and research project is based upon the student interests and goals in Animal Science.

Additional Requirements:

Prospective students are required to:

- Submit a cover letter identifying interests, goals and experience relevant to the MS program, and
- Submit a resume.

MS Agriculture, Specialization in BioResource and Agricultural Systems

BioResource & Agricultural Engineering

Coordinator: Greg Schwartz

Phone: 805.756.2378

Email: gschwa01@calpoly.edu

Students have the opportunity to focus their MS program on the application of bioresource and agricultural systems. Graduates will be prepared to enter a career in a variety of areas including production agriculture, consulting, regulatory compliance, equipment sales and technical support, etc.

Topics under the **bioresource** area may include:

- Agricultural and Food Processing Waste Management
- Renewable Energy

Topics under the **agricultural systems** area may include:

- California Production Agriculture and Food Systems
- Precision Agriculture
- Automation and Mechanization in Agriculture

The multidisciplinary nature of these programs will allow students to select electives in departments throughout the university with adviser approval.

MS Agriculture, Specialization in Crop Science

Horticulture and Crop Science

Coordinator: Benjamin Hoover

Phone: 805.756.6358

Email: bkhoover@calpoly.edu

For students with undergraduate preparation in plant agriculture and/or plant science. Current research is focused primarily in applied fruit crop physiology, vegetable breeding and physiology, sustainable fruit and vegetable production, viticulture, plant pathology, integrated pest management, and postharvest technology, including sustainable packaging and packaging safety. Thesis required.

MS Agriculture, Specialization in Dairy Products Technology

Animal Science

Coordinator: Vincent Yeung

Phone: 805.756.6154

Email: ckyeung@calpoly.edu

A program for students who wish to use their academic preparation in food science and nutrition, dairy science, microbiology, chemistry, engineering, biochemistry and related fields to address research questions that impact the field of dairy food science and technology. The program requires the demonstration of strong analytical thinking, effective oral and written communication, and project management. Coursework and thesis experience are designed with flexibility to enhance and increase proficiency in scientific methods while enriching students' overall preparation to enter the workforce. Graduates enter research and development positions with major food companies, leadership positions in dairy food processing and other allied areas, or further graduate study for the Ph.D. degree. Students have the opportunity to work on funded research projects within the Dairy Innovation Institute, and interact with multidisciplinary teams of scientists throughout the world. International students are encouraged to apply.

Additional prerequisites: Prospective students are required to:

- submit a cover letter identifying interests, goals and experience relevant to the MS program, and
- submit a résumé.

MS Agriculture, Specialization in Environmental Horticulture Science

Horticulture and Crop Science

Coordinator: Benjamin Hoover

Phone: 805.756.6358

Email: bkhoover@calpoly.edu

For students with undergraduate preparation in horticulture and/or plant science. Current research is focused primarily in applied plant physiology, nursery and potted plant production, sustainable landscape development and maintenance, and integrated pest management. Thesis required.

MS Agriculture, Specialization in Irrigation

BioResource & Agricultural Engineering

Coordinator: Daniel Howes

Phone: 805.756.2378

Email: djhowes@calpoly.edu

The program requires the demonstration of strong analytical thinking, effective oral and written communication, and project management.

Additional prerequisites:

- B.S. in a technical field of agriculture or a B.A. with proficiency in basic chemistry, advanced algebra and trigonometry.
- Students must have successfully completed at least one undergraduate class in general irrigation, soil science, and crop science, plus be familiar with computer spreadsheet usage.
- Students may complete prerequisite courses at Cal Poly if necessary.

MS Agriculture, Specialization in Plant Protection Science

Horticulture and Crop Science

Coordinator: Benjamin Hoover

Phone: 805.756.6358

Email: bkhoover@calpoly.edu

For students with undergraduate preparation in plant agriculture, plant science, biological sciences, and/or ecology. Current research is focused on pest biology, tritrophic interactions, invasive species, integrated pest management, biological control and plant disease management. Projects provide the opportunity to conduct field and/or laboratory experiments with corporate stakeholders for career enhancement. Curriculum and research allows students to develop more diverse or specialized skill sets for post-graduate employment and/or opportunity to obtain required coursework for state licensing. Thesis required.

MS Agriculture, Specialization in Water Engineering

BioResource & Agricultural Engineering

Coordinator: Daniel Howes

Phone: 805.756.2378

Email: djhowes@calpoly.edu

The purpose of this degree is to prepare water engineers who can manage water resources with an interdisciplinary approach for agriculture, industry, and municipalities. The program focuses on water, water distribution, and water resources management. Students may elect to take elective courses to reinforce these areas or examine other areas such as water treatment, urban water planning, hydrology, etc.

Additional prerequisites:

- Students must have successfully completed at least one undergraduate class in general irrigation, soil science, surveying, and organic chemistry

Interdisciplinary Minors

Descriptions of minors listed below are interdisciplinary in nature involving more than one department and/or college. For additional details on minors not listed below click here (<https://catalog.calpoly.edu/programsaz/#minors>).

Agricultural Communication Minor

Brock Center for Agricultural Communication

Agriculture Bldg. 10, Room 235

Phone: 805.756.2892

Coordinator: Megan Silcott

Completion of this interdisciplinary minor enhances students' ability to be successful in dynamic professions associated with the agricultural industry, including print journalism, broadcast journalism and public relations.

The minor is a cooperative effort between the College of Agriculture, Food and Environmental Sciences (CAFES) and the College of Liberal Arts (CLA). Students are advised by faculty members assigned to the Brock Center for Agricultural Communication. Student participation in the Cal Poly chapter of the national Agricultural Communicators of Tomorrow (ACT) is encouraged.

Agricultural Leadership Minor

Agricultural Education and Communication

Bldg. 10, Room 10-244

Phone: 805.756.2803

Coordinator: Department Head for Agricultural Education and Communication

This minor provides students with an opportunity to develop as leaders and individuals. The minor is designed for any student to become a more effective communicator, increase teamwork and leadership ability, and increase self-awareness. Courses provide opportunities for students to apply their leadership abilities in a "learn by doing" environment. Core classes provide an overview of leadership theory, followership, communication, teamwork, diversity, inclusion, and practical experiences.

Students will enhance their leadership abilities by participating in a practicum/experiential course that will challenge students to apply their leadership skills. Several degree programs at Cal Poly complement this minor by providing courses that will enhance any student's leadership capabilities.

Environmental Studies Minor

Please see the College of Science and Mathematics (p. 360) for more information on this interdisciplinary minor.

Geographic Information Systems for Agriculture Minor

BioResource and Agricultural Engineering

Bldg. 08, Room 101

Phone: 805.756.2378

Coordinators: Samantha Gill and Tom Mastin

An interdisciplinary program sponsored by three departments in CAFES: BioResource and Agricultural Engineering, Natural Resources Management and Environmental Sciences, and Horticulture and Crop Science. New technologies of geographic information systems (GIS), global positioning systems (GPS), and orthophotography (uniform scale aerial photographs) are revolutionizing the management of resources. There are great employment opportunities for those who understand these technologies. Students interested in this minor may come from the following majors: forestry and natural resources, crop science, soil science, landscape architecture, agricultural systems management, bioresource and agricultural engineering, animal science or earth sciences. Students from any major are welcome to take this minor.

Indigenous Studies in Natural Resources and the Environment Minor

An interdisciplinary minor sponsored by the departments of Natural Resources Management and Environmental Sciences and Ethnic Studies. For more information, see the Natural Resources Management and Environmental Sciences (p. 117) section.

Land Rehabilitation and Restoration Ecology Minor

Natural Resources Management & Environmental Resources Department
Bldg. 180, Room 516

Phone: 805.756.2971

Coordinator: Yamina Pressler

Students completing the minor gain skills in recognizing, assessing, and treating disturbed lands for numerous purposes, including erosion and sediment control, water quality improvement, habitat restoration, and aesthetic enhancement. They develop proficiency in plant identification and selection, soil properties and processes, and ecological principles, and also learn to set criteria and judge the feasibility, prudence, efficiency, and effectiveness of rehabilitation efforts.

Rangeland Resources Minor

Animal Science
Bldg. 10, Room 141
Phone: 805.756.2419
Coordinator: Marc R. Horney

This interdisciplinary minor prepares students for careers in the science and management of semi-arid grasslands, shrublands, and savannas. This is an entry point into a wide range of careers in extensive agriculture (range and pasture-based livestock production), and environmental conservation - including wildlife and natural resource management. Students will learn purposes for and methods of assessing the health and productivity of rangeland ecosystems, and how to manage the herbivorous animals that depend on them. Coursework in the minor will give students an understanding of the interactions of plants, animals, water, soil and landscape features in these ecosystems. This minor will help prepare students for careers with land and wildlife management agencies at the state and federal level, and conservation organizations, as scientists, resource specialists, and managers. It can also strengthen a graduate's opportunities in the private sector as agricultural or environmental consultants, ecologists, wildlife biologists, wildland managers, ranch managers, and other natural resource management specialists. Completion of this minor meets the basic educational requirements for California Certified Rangeland Manager (CRM) licensing program (<http://casrm.rangelands.org/HTML/certified.html>).

Sustainable Agriculture Minor

Horticulture and Crop Science
Bldg. 11, Room 238
Phone: 805.756.2870
Coordinator: Ashraf Tubeileh

Students approach modern agricultural problems from a holistic perspective, emphasizing agricultural planning integrated with ecological principles. Through experience in sustainable agricultural practices, students learn about a farm/ranch in the context of an agro-ecosystem: a system whose processes and relationships can be manipulated to allow production with fewer adverse environmental impacts and external inputs. Students develop knowledge and skills involving holistic management, crop production, and adaptive decision-making in a hands-on environment. The minor is available to all Cal Poly students.

Water Science Minor

BioResource and Agricultural Engineering
Bldg. 08, Room 101
Phone: 805.756.2378
Irrigation Emphasis Coordinator: Franklin Gaudi

Natural Resources Management and Environmental Sciences
Bldg. 180, Room 518

Phone: 805.756.2743
Water Policy/Watershed Management Emphasis Coordinator: Christopher G. Surfleet

The minor emphasizes one of three areas of study: irrigation, water policy, or watershed management. In California, approximately 45% of available water is used for crop irrigation, 45% for environmental purposes, and 10% for urban use (CA Water Plan). Irrigation water use and management have tremendous impacts upon ground water quality, power usage, crop yields, surface water supplies and quality, drainage problems, and water availability for transfer to urban uses. For students interested in environmental assessment and protection of water resources, the watershed management and policy areas provide land use planning and management skills for meeting water regulations and law. For students wanting background in water resources the Water Science minor provides marketable skills.

MS Agriculture, Specialization in Animal Science

Program Learning Objectives

1. Demonstrate expertise in their respective discipline.
2. Develop, test or select the appropriate technology in their respective discipline.
3. Demonstrate effective communication skills.
4. Formulate decisions utilizing professional ethics.
5. Value the diversity of people and ideas.
6. Investigate problems using critical thinking and derive appropriate solutions.

Required Courses

AG 581	Graduate Seminar	2
AG 599	Thesis	9
ESCI 501	Research Planning	4

1. Demonstrate expertise in their respective discipline.
2. Develop, test or select the appropriate technology in their respective discipline.
3. Demonstrate effective communication skills.
4. Formulate decisions utilizing professional ethics.
5. Value the diversity of people and ideas.
6. Investigate problems using critical thinking and derive appropriate solutions.

Required Courses

AG 581	Graduate Seminar	2
ESCI 501	Research Planning	4
PLSC 575	Applied Systematics for Agriculture	4
PLSC 599	Thesis in Plant Protection Science	9
STAT 511	Statistical Methods	4
STAT 513	Applied Experimental Design and Regression Models	4

Select from the following: 8

PLSC 406	Advanced Weed Management	
PLSC 427	Disease and Pest Control Systems for Ornamental Plants	
PLSC 431	Insect Pest Management	
PLSC 441	Biological Control for Pest Management	

Approved Electives

Any 400 and 500 level courses approved by the graduate committee ¹	10
---	----

Total units	45
--------------------	-----------

¹ At least 60% of all units required by the committee as reflected on the formal study plan must be at the 500 level.

MS Agriculture, Specialization in Water Engineering

Program Learning Objectives

Graduates are prepared to:

1. Demonstrate expertise and the use of technology in their respective discipline.
2. Demonstrate effective oral and written communication skills.
3. Make choices based on an understanding of personal and professional ethics and respect for diversity of people and ideas.
4. Recognize leadership principles and skills.
5. Evaluate and solve problems using critical thinking.
6. Demonstrate an appreciation for sustainability and global perspectives.

Required Courses

ESCI 501	Research Planning	4
STAT 511	Statistical Methods	4
STAT 513	Applied Experimental Design and Regression Models	4

Select from the Following: 2-3

AG 581	Graduate Seminar	
CE 591 & CE 592	Graduate Seminar I and Graduate Seminar II	
BRAE 414	Irrigation Engineering	4
BRAE 532	Water Wells and Pumps	4
BRAE 533	Irrigation Project Design	4
CE 533	Advanced Water Resources Engineering	4
BRAE 599	Thesis in BioResource and Agricultural Engineering (2, 2, 5)	9

Approved Electives

Select from the following: ¹ 6

BRAE 435	Drainage	
BRAE 440	Agricultural Irrigation Systems	
CE 434	Groundwater Hydraulics and Hydrology	
CE 435	Engineering Hydrology	
CE 440	Hydraulic Systems Engineering	
CE 536	Computer Applications in Water Resources with Geographic Info Systems (GIS)	
ENVE 436	Introduction to Hazardous Waste Management	
ENVE 438	Water and Wastewater Treatment Design	
ENVE 535	Physico-Chemical Water and Wastewater Treatment	
ENVE 542	Sustainable Environmental Engineering	
ECON 410	Public Finance and Cost-Benefit Analysis	

ECON 435	Economics of Land and Water	
Total units		45-46

¹ At least 60% of all units required by the committee as reflected on the formal study plan must be at the 500 level.

Agricultural Communication Minor

Required Courses

AGC 205	Agricultural Communications	4
AGC 207	Software Applications for Agricultural Publications	2
AGC 225	Digital Communication in Agriculture and Science	4
AGC 301	New Media Communication Strategies in Agriculture	4
AGC 404	Foundations of Agricultural Leadership	3

Approved Electives

Select from one of the following lists, based upon major (at least 8 units must be at the 300-400 level):

Majors in the College of Agriculture, Food and Environmental Sciences (at least 2 courses must be selected from COMS, ENGL, or JOUR)

AGB 405	Agribusiness Marketing Research Methods	
AGC 314	California Fairgrounds and Expositions	
AGC 318	Fairgrounds and Facility Management	
AGC 339	Internship in Agricultural Communications	
AGC 407	Agricultural Publications	
AGC 425	Multimedia Storytelling in Agriculture and Science	
AGC 426	Presentation Methods in Agricultural Communication	
AGC 475	Crisis Communication in Food and Agriculture	
AGC 490	Agricultural Communications Enterprise Management	
COMS 213	Organizational Communication	
COMS 217	Small Group Communication	
COMS 312	Quantitative Research Methods in Communication Studies	
COMS 322	Persuasion	
COMS 385	Media Criticism	
COMS 390	Environmental Communication	
COMS 413	Advanced Organizational Communication	
ENGL 310	Corporate Communication	
ENGL 317	Technical Editing	
JOUR 203	News Reporting and Writing	
JOUR 219	Multicultural Society and the Mass Media	
JOUR 228	Media, Self and Society	

JOUR 285	Introduction to Multimedia Journalism
JOUR 303	Web Audio and Video
JOUR 304	Public Affairs Reporting
JOUR 312	Public Relations
JOUR 331	Contemporary Advertising
JOUR 333	Broadcast News
JOUR 342	Public Relations Writing and Editing
JOUR 345	Social Media for Strategic Communication
JOUR 346	Broadcast Announcing and Production
JOUR 352	Advanced News Reporting Practicum
JOUR 390	Visual Communication for the Mass Media
JOUR 407	Feature Writing
JOUR 413	Public Relations Campaigns
RPTA 320	Strategic Event Planning

Majors in a college other than the College of Agriculture, Food and Environmental Sciences

AG/PLSC 315	Principles of Organic Crop Production
AGB 202	Introduction to Sales
AGB 318	Global Agricultural Marketing and Trade
AGB 406	Agribusiness Marketing Planning
AGC 207	Software Applications for Agricultural Publications
AGC 339	Internship in Agricultural Communications
AGC 407	Agricultural Publications
AGC 426	Presentation Methods in Agricultural Communication
ASCI 112	Principles of Animal Science
ASCI 221	Introduction to Beef Production
ASCI 225	Introduction to Poultry Management
BRAE 340	Irrigation Water Management
BRAE 348	Energy for a Sustainable Society
DSCI 229	General Dairy Manufacturing
DSCI 230	General Dairy Husbandry
FSN 202	Introduction to Human Nutrition
FSN 230	Elements of Food Processing
FSN 275	Elements of Food Safety
GRC 201	Digital Publishing Systems
NR 141	Introduction to Forest Ecosystem Management
NR 142	Environmental Management
NR 306	Natural Resource Ecology and Habitat Management
NR/ES 308	Fire and Society
NR 321	Water Resources Technology and Society
NR 323	Human Dimensions in Natural Resources Management
NR/CRP 408	Water Resource Law and Policy

PLSC 150	Forage Crops
PLSC 203	Organic Enterprise Project
PLSC 230	Environmental Horticulture
SS 120	Introductory Soil Science
or SS 130	Soils in Environmental and Agricultural Systems
Total units	30

Agricultural Leadership Minor

Required Courses

AGC 254	Introduction to Agricultural Leadership	2
AGC 404	Foundations of Agricultural Leadership	3
AGC 454	Agricultural Leadership - Self Assessment & Reflection	2
COMS 211	Interpersonal Communication	4
or RPTA 255	Leadership and Diverse Groups	
MSL 103	Basic Leadership	1-2
or MSL 201	Foundations of Leadership I	
or MSL 202	Foundations of Leadership II	
or MSL 203	Foundations of Leadership III	
MSL/RPTA 275	Facilitation and Teambuilding	2

Experiential Courses

Select from the following:		2-3
AG 410	Advanced Agricultural Leadership Experience	
AG 412	Advanced Leadership Practice: Poly Royal Rodeo	
AG 413	Committee Management: Poly Royal Rodeo	
AGC 412	Advanced Agricultural Leadership Development Practicum	
ASCI 412	Advanced Livestock Event Planning	
ASCI 490	Advanced Animal Production and Management Enterprise	
MSL 401	Developmental Leadership I	
NR/RPTA 472	Leadership Practice	

Approved Electives

Select from the following:		8
AG 452	Issues Affecting California Agriculture	
AGC 314	California Fairgrounds and Expositions	
AGC 318	Fairgrounds and Facility Management	
AGC 426	Presentation Methods in Agricultural Communication	
AGC 452	Current Trends and Issues in Agricultural Communication	
AGED 303	Agricultural Youth Leadership Development	
COMS 301	Business and Professional Communication	
COMS 420	Nonverbal Communication	

ENGL 310	Corporate Communication
ENGL 311	Advanced Rhetorical Inquiry and Composing
ENGL 317	Technical Editing
PHIL 323	Ethics, Science and Technology
PSY 301	Psychology of Personal Development
PSY 302	Behavior in Organizations
PSY 305	Personality
PSY 350	Teamwork
PSY 352	Conflict Resolution: Violent and Nonviolent
RPTA 325	Leadership in Outdoor Experiences

Total units **24-25**

Geographic Information Systems for Agriculture Minor

Required Courses

BRAE 150	Design Graphics and CAD for Agricultural Engineering	2
BRAE 239	Engineering Surveying	4
BRAE 345	Aerial Photogrammetry and Remote Sensing	3-4
or GEOG 328	Applications in Remote Sensing and GIS	
NR/LA 218	Introduction to Geographic Information Systems (GIS)	3-4
or GEOG 218	Applications in GIS	
NR 418	Applied GIS	3-4
or GEOG 441	Advanced Applications in Geospatial Technologies	

Emphasis areas

Select one of the following emphasis areas: 12

Environmental Information Emphasis

BRAE/NR 355	Drone Assisted Surveying
BRAE 447	Advanced Surveying with GIS Applications
NR 304	Agroecology
or NR 305	Forest Ecology and Silvics
or NR 306	Natural Resource Ecology and Habitat Management
NR 416	Environmental Impact Analysis and Management
or CRP 336	Introduction to Environmental Planning
SS 431	Digital Soil Mapping

Precision Agriculture Emphasis

BRAE/PLSC 244	Precision Farming
Select two of the following:	
BRAE/NR 355	Drone Assisted Surveying
BRAE 447	Advanced Surveying with GIS Applications
PLSC 406	Advanced Weed Management
PLSC 410	Crop Physiology
PLSC 431	Insect Pest Management

PLSC 445 Cropping Systems

Total units 27-30

Land Rehabilitation and Restoration Ecology Minor

Before being admitted to the minor, students must have successfully completed the following courses: BOT 121 or BIO 114, SS 120, MATH 118 or MATH 161.

At least one-half of the units must be at the 300-400 level. Generally, courses required for the student's major degree cannot be counted toward the minor, except that courses selected in the required core may count in both the major and minor programs. This and other course exceptions must be approved by the minor coordinator. As a guideline, students should take at least 20 units from outside their major degree program.

Required Courses

Plant area:

PLSC 381	Native Plants for California Landscapes	4
or BOT 313	Taxonomy of Vascular Plants	

Soils area:

SS 321	Soil Morphology	4
SS 421	Wetlands	4
or SS 431	Digital Soil Mapping	
or SS 440	Forest and Range Soils	

Ecological Principles:

AG 360	Holistic Management	4
or BIO 327	Wildlife Ecology	
or BOT 326	Plant Ecology	
NR 306	Natural Resource Ecology and Habitat Management	4
or NR 304	Agroecology	
or NR 305	Forest Ecology and Silvics	

Approved Electives

Select from the following: 6-8

ASCI 239	Principles of Rangeland Management	
BOT 433	Field Botany: California Plant Diversity	
BRAE 340	Irrigation Water Management	
ERSC 223	Rocks and Minerals	
ERSC 303	Soil Erosion and Water Conservation	
PLSC 124	Plant Propagation	
PLSC 321	Weed Biology and Management	
PLSC 327	Vertebrate Pest Management	
NR/LA 218	Introduction to Geographic Information Systems (GIS)	
or GEOG 218	Applications in GIS	
NR 307	Fire Ecology	
NR 320	Watershed Processes and Management	
NR/CRP 404	Environmental Law	
NR/CRP 408	Water Resource Law and Policy	

NR 445 Systems Thinking in Environmental Management

SS 221 Soil Health and Plant Nutrition

SS 322 Soil Plant Relationships

Total units 26-28

Rangeland Resources Minor

Required Courses

Range Resource Area

ASCI 239	Principles of Rangeland Management	4
ASCI 370	Rangeland Improvements	3

Rangeland Animal Management Area

Select from the following:		4
ASCI 223	Systems of Small Ruminant Management	
ASCI 311	Advanced Beef Cattle System Management	
BIO 427	Wildlife Management	

Rangeland Plant Physiology Area

Select from the following:		4
BIO 435	Plant Physiology	
PLSC 410	Crop Physiology	

Rangeland Ecology Area

Select from the following:		4
BOT 326	Plant Ecology	
BOT 433	Field Botany: California Plant Diversity	
NR 306	Natural Resource Ecology and Habitat Management	
PLSC 321	Weed Biology and Management	

Rangeland Measurements Area

Select from the following:		4
ASCI 465	Applied Practices for Monitoring California Rangelands	
SS 321	Soil Morphology	
SS 440	Forest and Range Soils	

Rangeland Policy/Planning Area

Select from the following:		3-4
AG/ASCI 360	Holistic Management	
ASCI 372	California Rangeland & Ranch Resource Management	
ASCI 460	Rangeland Assessment and Planning	
CRP 342	Environmental Planning Methods	
GEOG 218	Applications in GIS	
NR/LA 218	Introduction to Geographic Information Systems (GIS)	
NR/CRP 404	Environmental Law	
NR/CRP 408	Water Resource Law and Policy	
NR 435	Environmental Policy Analysis	

Total units 26-27

Sustainable Agriculture Minor

Required Courses

AG/ASCI 360	Holistic Management	4
NR 304	Agroecology	4
or NR 310	Global Climate Change	
NR 324	Social Dimensions of Sustainable Food and Fiber Systems	4
PLSC 203	Organic Enterprise Project	2
PLSC/AG 315	Principles of Organic Crop Production	4
or PLSC 420	Organic Crop Production Systems	

Area Studies ¹

Select minimum of one course from three of the following Areas:	12
---	----

Agriculture and Society Area

AG 350	The Global Environment
AGB 312	Agricultural Policy
GEOG/ERSC 333	Human Impact on the Earth
NR 142	Environmental Management
POLS 332	World Food Systems
SOC 309	The World System and Its Problems
UNIV/PSC/HNRS 391	Appropriate Technology for the World's People: Development

Production Agriculture Area

AGB 212	Agricultural Economics
ASCI 221	Introduction to Beef Production
ASCI 223	Systems of Small Ruminant Management
ASCI 311	Advanced Beef Cattle System Management
BRAE 340	Irrigation Water Management
BUS 212	Financial Accounting for Nonbusiness Majors
PLSC 321	Weed Biology and Management
PLSC 323	Plant Pathology
PLSC 431	Insect Pest Management
PLSC 441	Biological Control for Pest Management
PLSC 445	Cropping Systems
SS 221	Soil Health and Plant Nutrition
or SS 322	Soil Plant Relationships

Agroecology Area

NR 306	Natural Resource Ecology and Habitat Management
NR 323	Human Dimensions in Natural Resources Management
SS 321	Soil Morphology
SS 440	Forest and Range Soils

Environmental Design Area

EDES 406	Sustainable Environments
LA 202	Design Fundamentals I
LA 221	California Plants and Plant Communities

PLSC 381	Native Plants for California Landscapes
UNIV/PSC/HNRS 392	Appropriate Technology for the World's People: Design

Total units **30**

¹ Minimum 4 units at 300-400 level.

Water Science Minor

Required Courses

BRAE 340	Irrigation Water Management	4
NR/CRP 408	Water Resource Law and Policy	4
SS 120	Introductory Soil Science	4

Emphasis Area

Select one emphasis area: 13-16

Irrigation Emphasis

Select 13 units from the following:

BRAE 237	Introduction to Engineering Surveying
or BRAE 239	Engineering Surveying
BRAE 337	Landscape Irrigation
BRAE/NR 349	Water for a Sustainable Society
BRAE 405	Chemigation
BRAE 435	Drainage
BRAE 438	Drip/Micro Irrigation
BRAE 440	Agricultural Irrigation Systems
BRAE 532	Water Wells and Pumps
BRAE 533	Irrigation Project Design

Water Policy Emphasis

Select 15 units from the following:

AGB 312	Agricultural Policy
AGB 412	Advanced Agricultural Policy
BIO/NR/SS 421	Wetlands
BRAE/NR 349	Water for a Sustainable Society
CRP/NR 404	Environmental Law
NR 320	Watershed Processes and Management
NR 435	Environmental Policy Analysis
POLS 332	World Food Systems
POLS 351	Public Policy and Administration

Watershed Management Emphasis

Select 16 units from the following:

BIO/NR/SS 421	Wetlands
ERSC 303	Soil Erosion and Water Conservation
ERSC 442	Applied Environmental Groundwater Hydrology
ERSC 443	Applied Environmental Contaminant Transport
NR 306	Natural Resource Ecology and Habitat Management
NR 320	Watershed Processes and Management
NR 420	Watershed Assessment and Protection

SS 440	Forest and Range Soils
Total units	25-28

Department Chair: Bryan Lohmar

Academic Programs

Program name	Program type
Agricultural Business	BS
Agribusiness	Minor

A Bachelor of Science in Agricultural Business prepares students for exciting and satisfying careers in the dynamic global food and fiber supply chain. The program provides a course of study that develops the requisite critical thinking, problems solving and business skills that are required to have a successful career in firms and organizations that span and support industries and organizations across the entire food and fiber supply chain.

Career opportunities for Cal Poly Agribusiness graduates range from food and fiber production, logistics and transportation, marketing and finance to agricultural support organizations and government agencies, providing a wide range of choices for any graduate.

Undergraduate Programs

BS Agricultural Business

The Agricultural Business curriculum has been developed to allow for a flexible course of study. Students can choose to emphasize their upper-division coursework a specific industry area such as Food Retail Management, Finance and Appraisal, Supply Chain Management, and Sales and Marketing or generalize their studies, all while being provided with an industry recognized, business-ready set of skills. Students are encouraged to get involved with academic clubs and teams, which provide additional opportunities for the Learn-by-Doing leadership experience.

Agribusiness Minor

In today's ever more complex, technology-driven world, it is necessary for any graduate in agriculture to have some exposure to marketing, personnel management, financial management, budgeting, and economics if they are to succeed. The minor is designed to give students in the College of Agriculture, Food and Environmental Sciences this opportunity. Interested students must apply for acceptance into the minor through the Agribusiness Department.

Agribusiness Minor

Note: One course in the minor may be graded credit/no credit.

Required Courses

AGB 212	Agricultural Economics	4
AGB 214	Agribusiness Financial Accounting	4
or BUS 212	Financial Accounting for Nonbusiness Majors	
AGB 301	Food and Fiber Marketing	4
AGB 308	Introduction to Agribusiness Finance	4
or AGB 310	Agribusiness Credit and Finance	

AGB 369	Agricultural Personnel Management	4
Approved Electives ¹		
Select from the following:		8
Any AGB course except AGB 101 (at least 2 units must be at the 300-400 level)		
Total units		28

¹ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

BS Agricultural Business

Program Learning Objectives

1. Exhibit critical thinking and complex problem-solving skills leading to lifelong learning.
2. Demonstrate strong interpersonal and teamwork skills, as well as the ability to work independently.
3. Develop technical competency while learning to think in a broader global context.
4. Act with professionalism, high ethical standards, and respect for diversity and sustainability.
5. Possess oral and written communication skills that are effective with diverse audiences (employers, employees, industry, and government).
6. Industry-ready with skills and knowledge that employers value.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: Up to 4 units of credit/no credit grading may be selected for Major or Support courses.

MAJOR COURSES

AGB 101	Introduction to Agribusiness	4
AGB 202	Introduction to Sales	4
AGB 212	Agricultural Economics	4
AGB 214	Agribusiness Financial Accounting	4
AGB 260	Agribusiness Data Literacy	4
AGB 301	Food and Fiber Marketing	4
AGB 308	Introduction to Agribusiness Finance	4
AGB 312	Agricultural Policy	4
AGB 313	Agriculture Economic Analysis	4
AGB 323	Decision Making with Agribusiness Accounting Information	4
AGB 327	Agribusiness Data Analysis	4
AGB 328	Decision Tools for Agribusiness	4
AGB 369	Agricultural Personnel Management	4
AGB 462	Senior Project - Applied Agribusiness Problems	4

or AGB 463	Senior Project - Agribusiness Consulting	
Agribusiness General Electives		
Select one 4 unit AGB course at the 400 level		4
Select from the following: ^{1,2}		16
Any AGB courses at the 300 or 400 levels		
AGC 314	California Fairgrounds and Expositions	
AGC 452	Current Trends and Issues in Agricultural Communication	
AGC 475	Crisis Communication in Food and Agriculture	
NR 326	Natural Resources Economics and Valuation	
NR 408	Water Resource Law and Policy	
NR 413	Agricultural Law	
WVIT 343	Branded Wine Marketing	
WVIT 423	Wine Law and Compliance	
WVIT 450	Wine Business Plan Development	
SUPPORT COURSES		
BUS 207	Legal Responsibilities of Business	4
ECON 222	Macroeconomics (D2) ³	4
MATH 221	Calculus for Business and Economics (B4) ^{3,4}	4
STAT 251	Statistical Inference for Management I (GE Electives) ³	4
Agricultural Electives		
Select from the following: ⁵		4
ASCI 112	Principles of Animal Science	
ASCI 211	Meat Science	
ASCI 215	Safe Handling of Animal-Based Foods for Consumers	
ASCI 239	Principles of Rangeland Management	
DSCI 229	General Dairy Manufacturing	
FSN 275	Elements of Food Safety	
PLSC 120	Principles of Horticulture and Crop Science	
PLSC 150	Forage Crops	
PLSC 230	Environmental Horticulture	
SS 120	Introductory Soil Science	
SS 130	Soils in Environmental and Agricultural Systems	
Select from the following CAFES prefixes: ⁵		12
AG, AGC, AGED, ASCI, BRAE, DSCI, ERSC, ESCI, FSN, NR, PLSC, RPTA, SS, or WVIT		
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		60
FREE ELECTIVES		
Free Electives ⁵		12
Total units		180

¹ At least 8 units must be from AGB courses

² Non-Agribusiness courses used here will not double count as Agricultural Electives

³ Required in Major or Support; also satisfies General Education (GE) requirement.

⁴ Prerequisite: Appropriate Math Placement Level; or MATH 117; or MATH 118.

⁵ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Support) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4

GE Electives in Areas B, C, and D

Select courses from two different areas; may be lower-division or upper-division courses.	
GE Electives (4 units in Support plus 4 units in GE) ¹	4
Total units	60

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Academic Programs

Program name	Program type
Agricultural Communication	BS, Minor
Agricultural Education	Master of, Minor
Agricultural Science	BS

The Cal Poly Agricultural Education and Communication Department's contribution to the agriculture industry is unparalleled in preparing passionate leaders to advance agricultural education and communication.

Graduates are prepared to effectively organize, communicate, and lead. Whether teaching the students of California about the application of science and management in the food fiber and natural resource systems — or sharing the compelling story and science of agriculture — our graduates help shape the public opinion of the multibillion dollar agricultural industry.

Students studying agricultural science are exposed to a wide variety of coursework in the various disciplines featured in the College of Agriculture, Food, and Environmental Sciences. The degree provides the flexibility to explore careers leading to teaching, animal and plant production, the food and fiber service industry, and various management and leadership positions in agriculture. Graduates leave Cal Poly with the technical and professional skills needed to lead in a variety of occupations and with a comprehensive understanding of how the various sectors contribute to overall industry success.

In addition to the department's long history of leadership and service to the state's agricultural education profession, it also boasts California's only agricultural communication major, widely considered one of the country's premier undergraduate programs. Through a partnership with the university's Brock Center for Agricultural Communication, plus unique Learn by Doing opportunities, students gain the necessary knowledge to be effective communicators who are fully equipped to promote agriculture and serve the needs of the industry.

Undergraduate Programs

BS Agricultural Communication

The BS Agricultural Communication program prepares students to become professional communicators in the agriculture industry and related fields. Graduates of the program are effective oral and written communicators with an applied knowledge of emerging new media. All students within the major take a common series of courses. The Brock Center for Agricultural Communication provides students the opportunity for industry linkages and professional preparation in this rapidly growing career area.

BS Agricultural Science

The BS Agricultural Science program is a flexible program in agriculture, allowing students multiple options and opportunities to select courses according to their areas of interest.

The major was developed to provide students with direction as they consider career options in the agricultural industry. Students complete coursework deemed broad and general to ensure a systems perspective in agriculture. Foundation courses are meant to help students identify an area of emphasis.

The six **emphasis areas** are:

- Agricultural Engineering Technology
- Agribusiness
- Animal Science
- Crop and Soil Science
- Forestry and Natural Resources
- Ornamental Horticulture

Many of the emphasis areas have courses embedded within them that lead to the completion of a minor. Students should consult with their academic advisor when considering a minor or minors.

Teaching Credential

Students can declare their candidacy for teaching while pursuing the undergraduate degree. The minor in Agricultural Education should be declared early during the student's academic career to ensure requirements for obtaining certification to teach are met. Early field experiences are a part of the minor and are required for entrance into the credential program.

Teacher candidates are required to enroll in post-baccalaureate work to obtain the Single Subject in Agriculture and Agricultural Specialist credentials. Candidates must complete a minimum of 45 units of post-baccalaureate coursework. The Single Subject Content Advisor in Agricultural Education can provide more information. It is to the advantage of the post-baccalaureate teaching candidates to be simultaneously enrolled in the Master of Agricultural Education degree program.

Agricultural Education Minor

The Agricultural Education minor addresses subject matter competency requirements for the Single Subject-Agriculture and the Agriculture Specialist teaching credentials. Students must obtain prior program approval from the Single Subject Content Advisor for Agriculture Education in selecting approved electives courses. This is based on the student's prior agricultural background and the completion of major-specific courses. Students are encouraged to express interest in this minor early in the academic program in order to get proper advisement relative to all requirements for teaching in the public schools.

Additional Minors

Agricultural Communication Minor

In association with the Brock Center for Agricultural Communication, selected interdisciplinary courses in Journalism, Graphic Communications, English, Communication Studies and Agriculture make up the Agricultural Communication minor. Career preparation includes a breadth and depth in agriculture along with a foundation in journalism,

and an industry internship. For more information about the minor, see College of Agriculture, Food and Environmental Sciences (p. 60).

Agricultural Leadership Minor

For more information about the minor, see College of Agriculture, Food and Environmental Sciences (p. 60).

Graduate Program Master of Agricultural Education

The Master of Agricultural Education program provides student with the opportunity to focus their graduate study in agricultural education, with an emphasis on preparing candidates for positions as teachers of agricultural education in public schools. The non-thesis degree has two tracks: (1) to provide practitioners with opportunities for professional development, requiring at least one year of successful high school or community college teaching for completion, (2) to provide agriculture credential candidates an opportunity to simultaneously complete the degree. Working with their advisor and graduate committee, students generally complete project for coursework in the program to enhance their employment settings or assist them to become compliant with statewide standards in agricultural education. All students in the Master of Agricultural Education degree program are required to pass a written and oral comprehensive examination, scheduled during the final quarter of the program of study.

BS Agricultural Communication

Program Learning Objectives

1. Demonstrate and apply excellent written, verbal, listening and visual communication skills through class and public presentations.
2. Demonstrate knowledge of both standard and modern communications practices, including effective writing, layout and design, photography, computer skills, and oral communication through collected portfolio work.
3. Demonstrate the ability to work in a professional communications setting through experiential-learning (i.e. internships, work experience, student organizations).
4. Analyze and communicate effectively about major issues in agriculture by developing and sharing educational scientific media and materials.
5. Understand the importance of effective communication in the agriculture industry by studying agriculture in the media.
6. Use and evaluate technologies that enhance the communication process through software training and media analytics.
7. Apply ethical journalism practices in daily work and recognize media and corporate roles and responsibilities in society by studying public relations, government regulation and sustainability.
8. Demonstrate awareness and sensitivity to cultural demographics of an increasingly global agriculture industry by studying agricultural trade.
9. Develop a high degree of agricultural literacy, a reservoir of skills and knowledge in agricultural subjects to meet the needs of the agricultural communication profession and the industry through capstone courses and experiences.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 2.0 GPA
- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major courses may be selected as credit/no credit.

MAJOR COURSES

AGC 102	Orientation to Agricultural Communication & Agricultural Science	2
AGC 205	Agricultural Communications	4
AGC 207	Software Applications for Agricultural Publications	2
AGC 225	Digital Communication in Agriculture and Science	4
AGC 301	New Media Communication Strategies in Agriculture	4
AGC 339	Internship in Agricultural Communications	4
or AG 339	Internship in Agriculture	
or AGED 339	Internship in Agricultural Education	
AGC 404	Foundations of Agricultural Leadership	3
AGC 407	Agricultural Publications	4
AGC 425	Multimedia Storytelling in Agriculture and Science	4
or JOUR 390	Visual Communication for the Mass Media	
AGC 426	Presentation Methods in Agricultural Communication	4
AGC 463	Senior Project	3
AGC 475	Crisis Communication in Food and Agriculture	4

PLSC 329	Plants, Biotechnology, and the Media	
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		40
FREE ELECTIVES		
Free Electives		7-8
Total units		180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² MATH 116 and MATH 117 substitute.

General Education (GE) Requirements

- 72 units required, 32 of which are specified in Major and/or Support.
- If any of the remaining 40 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written

Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A		English Language Communication and Critical Thinking
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B		Scientific Inquiry and Quantitative Reasoning
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C		Arts and Humanities
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D		Social Sciences - Select courses in Area D from at least two different prefixes
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Major) ¹	0
Upper-Division D (4 units in Major) ¹		0
Area E		Lifelong Learning and Self-Development
Lower-Division E		4
Area F		Ethnic Studies
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (8 units in Major) ¹		0
Total units		40

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Agricultural Science Program Learning Objectives

1. Achieve a high degree of agricultural literacy.
2. Lead and direct individuals and groups in thought and action.
3. Analyze and communicate effectively the major issues in agriculture.

4. Demonstrate cultural competencies in an increasingly global agricultural industry and society.
5. Demonstrate critical thinking and problem solving skills.
6. Seamlessly and professionally integrate technology into practices.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, student must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

GENERAL EDUCATION (GE)

(See GE program requirements below.) 48

FREE ELECTIVES

Free Electives³ 22

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² MATH 116 and MATH 117 substitute.

³ At least 29 units of Approved Electives and Free Electives must be at the 300-400 level. Students are encouraged to consult with the academic advisor in developing a plan for fulfilling degree requirements.

Guide to Approved Agricultural Electives - Emphasis Areas

Approved Agricultural Electives have been categorized by Emphasis Area to guide students. Advisor approval of Agricultural Electives is not required, but consultation with an advisor is recommended to ensure that the required number of upper-division units is met. Also, bear in mind that

selection may impact pursuit of post-baccalaureate studies and/or goals. It is imperative for students seeking a teaching credential to select one Emphasis Area and adhere to the approved list of courses.

Emphasis Areas

Select Emphasis Area of choice: 22-24

Agricultural Engineering Technology

BRAE 142	Agricultural Power and Machinery Management
BRAE 150	Design Graphics and CAD for Agricultural Engineering
BRAE 152	3-D Solids Modeling
BRAE 240	Agricultural Engineering Laboratory
BRAE 244	Precision Farming
BRAE 333	Aquacultural Engineering
BRAE 335	Internal Combustion Engines
BRAE 337	Landscape Irrigation
BRAE 348	Energy for a Sustainable Society

PLSC 124	Plant Propagation	
PLSC 341	Cut Flower Production	
PLSC 342	Potted Plant Production	
PLSC 343	Turfgrass Management	
PLSC 381	Native Plants for California Landscapes	
PLSC 424	Nursery Crop Production	
PLSC 432	Specialized Operations for Golf Courses and Athletic Fields	
PLSC 437	Park and Public Space Management	

D2	Lower-Division D	4
Upper-Division D (4 units in Major) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		48

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4

Agricultural Education Minor

Required Courses

AGED 303	Agricultural Youth Leadership Development	4
AGED 350	Early Field Experience in Agriculture Education	2
AGED 410	Computer Applications in Agricultural Education	2
BIO 111	General Biology	4
or BIO 114	Plant Diversity and Ecology	
or BIO 161	Introduction to Cell and Molecular Biology	
HLTH 250	Healthy Living ¹	4
or HLTH 443	Health Education for Teachers	

Approved Electives ^{1, 2}

Select from the following:			8
AG 360	Holistic Management		
or AG 452	Issues Affecting California Agriculture		
or AGC 452	Current Trends and Issues in Agricultural Communication		
or NR 308	Fire and Society		
AGB 214	Agribusiness Financial Accounting		
AGB 301	Food and Fiber Marketing		
AGC 314	California Fairgrounds and Expositions		
AGC 318	Fairgrounds and Facility Management		
ASCI 112	Principles of Animal Science		
ASCI 225	Introduction to Poultry Management		
BRAE 121	Agricultural Mechanics		
BRAE 141	Agricultural Machinery Safety		
BRAE 340	Irrigation Water Management		
or BRAE 348	Energy for a Sustainable Society		
BRAE 481	Advanced Agricultural Mechanics		
DSCI 230	General Dairy Husbandry		
DSCI 330	Artificial Insemination and Embryo Biotechnology		
IME 142	Manufacturing Processes: Materials Joining		

PLSC 120	Principles of Horticulture and Crop Science	
or PLSC 150	Forage Crops	
or PLSC 230	Environmental Horticulture	
PLSC 190	California Vegetable Production	
SS 120	Introductory Soil Science	
Total units		24

¹ If HLTH 250 is taken, at least 4 units of 300-400 level coursework must be taken in Approved Electives in order to meet the Upper-Division requirement for the minor.

² Consultation with advisor is recommended prior to selecting approved electives; keep in mind that course selections may impact pursuit of post-baccalaureate studies and/or goals.

¹ Students are required to complete or be enrolled in AGED 539 (or AGED 524 and AGED 540) to be eligible to complete the comprehensive written and oral examinations.

² Up to 8 units can be taken outside of Agriculture.

³ At least 60% of all units required by the committee as reflected on the formal study plan must be at the 500 level.

Master of Agricultural Education

Program Learning Objectives

1. Apply knowledge of philosophical and historical foundations of agricultural education to develop personal philosophy statements which guide components of the agricultural education programs.

2. Create relevant, challenging and integrative agricultural curriculum.

3. Adapt curriculum to meet curricular goals and objectives using a variety of educational theories and models.

4. Demonstrate effective teaching characteristics while utilizing a wide variety of teaching and learning strategies.

5. Select appropriate practices to teach essential agricultural concepts, problem solving, skills of inquiry, communication and collaboration.

6. Develop, administer and analyze formal, informal and performance assessment techniques to monitor and evaluate student learning and guide modification.

7. Develop as reflective practitioners by collecting feedback, evaluating learning segments, and supporting artifacts.

Required Courses

AGED 520	Program Development in Agricultural Education	3
AGED 522	Laboratory Pedagogy in Agricultural Technology	3
or AGED 523	Laboratory Organization and Management in Agricultural Education	
AGED 539	Graduate Internship in Agricultural Education and Communication ¹	6
or AGED 524 & AGED 540	Instructional Processes in Agricultural Education and Instructional Planning in Agriculture	

Approved Agricultural Electives ²

Any 400-500 level courses with the following prefixes: AGB, AGC, AGED, ASCI, BRAE, DSCI, ERSC, ESCI, FSN, NR, PLSC, SS, WVIT	33
--	----

At least 15 units must be taken at the 500 level. ³

Academic Programs

Program name	Program type
Animal Science	BS
Dairy Industries	Minor
Dairy Science	BS
Equine Science	Minor
Meat Science and Processing	Minor
Poultry Management	Minor
Rangeland Resources	Minor

Animal Science offers programs in both Animal and Dairy Sciences. Students have the opportunity to apply the principles of animal biology, husbandry and behavior, with molecular biology and other life sciences to a variety of species. Students can apply these principles to farm animals, exotic animals, laboratory animals, and to their own pets. The curriculum is very flexible, which allows students to work with their faculty advisor to plan an individual curriculum in line with their interests and career goals. This is a comprehensive “hands-on, learn-by-doing” program, so students work with animals of several species on a regular basis. Students learn the science and practical applications to be effective problem-solvers and leaders as they move on to professional and graduate schools, animal production and management, animal and dairy food processing, or numerous other career opportunities.

Students may select coursework in one of the following areas: pre-veterinary medicine, food animal production, dairy science, equine science, poultry management, agribusiness, biotechnology, comparative animal biology studies, rangeland resource management, dairy products technology and meat science.

The department offers a wide assortment of co-curricular activities including five different student clubs, competitive livestock and horse judging teams and intercollegiate dressage and equestrian teams. Students participate in organizing and conducting service meetings, seminars and field days sponsored by the department.

In addition, students are involved with faculty in research and development of new technologies related to animal health, production, and processing, using state-of-the-art equipment, facilities and technologies. Through extensive undergraduate research opportunities, students are prepared for careers in discovery, science and innovation.

Experiential Learning

The Animal Science Department has extensive modern animal facilities for hands-on experience. The department is supported by state-of-the-art biotechnology labs, a new beef center, beef cattle evaluation center, new animal nutrition center for animal food manufacturing, and an extensive equine center with breeding barn, labs, new stalls and training arenas. Additionally, students are able to use nearly 6,000 acres of rangeland, a swine center, sheep center, a state-of-the-art poultry center, an on-campus veterinary clinic for student learning and a new meat processing center. The modern dairy facility includes the Dairy Cattle Instructional Building, containing the milking parlor, meetings rooms and classrooms,

a nutrition and physiology lab, a microbiology lab, and a computer lab dedicated to dairy management and application software. The campus creamery is well-equipped with modern processing equipment. Students are employed on a part-time basis to work in both the production and processing areas.

The department maintains beef cattle, a dairy herd, horses, sheep, swine, and poultry. The dairy herd includes 110 each of milking-age registered Jerseys and Holsteins, located on a well-planned unit where feeding, milking, calf raising, artificial insemination, and management are carried out. Both herds are recognized for their high production and outstanding type. Animal operations are supported by an on-campus veterinary clinic, dairy processing and meat processing facilities, and an animal nutrition center. By actively participating in the management of the herds and flocks, students simulate the larger commercial operations of the industry. The enterprise system is another valuable experience for students, and industry internships are strongly encouraged.

Swanton-Pacific Ranch

The department has an active role in the management of the Swanton-Pacific Ranch and is developing environmentally sound resource management practices including intensive controlled grazing, multiple species grazing, and using the grazing animal as a tool to enhance the total environment of the ranch. Cal Poly's Animal Science major provides the knowledge and understanding to apply new technologies for the fast-changing, technology-driven world in which we live. The department's focus is to help students build a plan for personal and professional growth. Students develop the ability to apply and manage technology, and they also learn how to be team players, with the ability to solve problems utilizing leadership and professional communication skills. Most importantly, students are taught how to learn so they can adapt to the future.

Leprino Foods Dairy Innovation Institute

The Leprino Foods Dairy Innovation Institute houses the Cal Poly Creamery and the Dairy Products Technology Center (DPTC). The DPTC focuses on multidisciplinary dairy foods research and training activities designed to support the dairy industry and consumers of dairy products. Current research areas are: cheese chemistry and technology, bioseparation processes, and new product and process development. The Center has state-of-the-art research and development as well as technology transfer facilities. Students may conduct dairy foods related research projects under the guidance of Dairy Science faculty. Opportunities also exist to work on joint projects with other institutions.

Undergraduate Programs

BS Animal Science

Students in the Animal Science Department study a variety of disciplines including pre-veterinary medicine, animal biotechnology, animal welfare, food animal production in beef and dairy cattle, goats, sheep, and swine, comparative animal biology, equine science, poultry management, range resources management, and meat science.

Through the use of Cal Poly's extensive rangelands, irrigated pastures, housing and handling structures, as well as laboratory and research facilities, students learn the different areas of study in an experiential environment. This learn-by-doing approach gives students opportunities to work closely with animals and their professors. The animal science major incorporates an assortment of interests with a flexible curriculum that integrates well with students' career goals.

BS Dairy Science

The Bachelor of Science degree in Dairy Science is designed to prepare students for employment in the various phases of the dairy industry, as well as related fields. All students within the major take a common core of courses and select additional courses in an area of interest, which may include: dairy farm or plant management, processing technology, agriculture communication, management, preparation for graduate or veterinary school, and agriculture teaching.

Dairy Industries Minor

The purpose of this science-based minor is to help students from other disciplines gain a basic understanding of the terminology and practices used within the two segments of the dairy industry. Two specialization areas are available within the Dairy Industries minor: Dairy Husbandry and Dairy Foods. Students may choose to pursue either specialization. After completion of the minor, students should have a basic understanding of cattle, dairy nutrition, milk production and management or dairy food processing, food quality and regulatory control. Prospective students should understand that completion of a basic level of introductory biology, chemistry, and statistics is assumed for this minor. In addition, some upper division courses may also require microbiology, organic/biochemistry and/or anatomy and physiology.

Equine Science Minor

The Equine Science minor is designed for students interested in developing a knowledge of, and competency in, the areas of equine training, nutrition and reproduction. This science-based program exposes students to various aspects of the horse industry, including basic equine management, training, and breeding farm management. By completing this minor, students gain an understanding of the principles and practices used within the equine industry. Not open to Animal Science majors.

Meat Science and Processing Minor

The minor incorporates knowledge of general food science, basic meat science and the principles and practices of adding value to raw materials through livestock harvesting, carcass fabrication and the manufacture of further processed meat and poultry products. Opportunities for business and management training are available. The minor meets the requirements needed to become eligible for jobs with the government or commercial meat processing firms and other businesses associated with the production of food products containing meat or poultry. In addition to the required courses, selected courses address basic principles of microbiology, food science, food sanitation and safety, food chemistry and process control procedures, and other optional courses are offered in agribusiness. Not open to Animal Science majors.

Poultry Management Minor

The Poultry Management minor prepares students for a wide variety of positions in the commercial poultry industry and in many allied services related directly to the industry. Career opportunities are many and varied.

Students have an opportunity to conduct enterprise projects in the production of market eggs, hatching eggs, meat birds, replacement pullets, turkey, and game birds, which give them valuable experience

in production techniques as well as exposure to a number of business activities related to production. Advanced students may have opportunities to study special topics related to problems in management of commercial poultry flocks.

The program is supported by a state-of-the-art poultry production facility. Cal Poly's Poultry Unit is now considered one of the best in the Western United States; it accommodates commercial laying hen operation, egg processing facility, hatching, meat processing facility and battery and floor pen research facilities. These production facilities allow students to gain hands-on learning which complements their formal class work, and provides real-world experience.

Rangeland Resources Minor

The department participates in offering an interdisciplinary minor in Rangeland Resources. Please see College of Agriculture, Food and Environmental Sciences (p. 60) section for more information.

Graduate Programs

Cal Poly offers Master of Science degrees in Agriculture with specialization in Animal Science. Please refer to the MS Agriculture (p. 61) section of the College of Agriculture, Food and Environmental Sciences.

BS Animal Science

Program Learning Objectives

1. Demonstrate problem solving skills.
2. Demonstrate a proficiency in working as a leader and as a part of a team to achieve common goals.
3. Integrate and apply technical and conceptual knowledge.
4. Exhibit an understanding of their professional and ethical responsibilities as animal scientists, including a respect for diversity.
5. Communicate effectively in a professional manner.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

ASCI 101	Introduction to the Animal Sciences	2
ASCI 112	Principles of Animal Science	4
ASCI 211	Meat Science	4
ASCI 220	Introductory Animal Nutrition and Feeding	4
ASCI 229	Anatomy and Physiology of Farm Animals	4
ASCI 290	Animal Production and Management Enterprise	4

or ASCI 490	Advanced Animal Production and Management Enterprise	
ASCI 302	Animal Genetics	4
ASCI 304	Animal Genomics	3
ASCI 340	Animal Welfare and Ethics	4
ASCI 351	Reproductive Physiology	4
ASCI 363	Undergraduate Seminar	2
ASCI 477	Senior Project - Research Experience in Animal Science	3
or ASCI 478	Senior Project - Advanced Internship Experience in Animal Science	
or ASCI 479	Senior Project - Current Topics in Animal Science	

Production Courses

Select one from each of the three categories: 12

Ruminants

ASCI 221	Introduction to Beef Production	
or ASCI 223	Systems of Small Ruminant Management	
or DSCI 230	General Dairy Husbandry	

Nonruminants

ASCI 222	Systems of Swine Production	
or ASCI 225	Introduction to Poultry Management	

Companion Animals or Range Management

ASCI 224	Equine Science	
or ASCI 227	Companion Animal Science	
or ASCI 239	Principles of Rangeland Management	

Biochemistry/Chemistry

Select from the following: 4-5

ASCI 319	Physiological Chemistry of Animals (Upper-division B) ¹	
CHEM 314	Biochemistry: Fundamentals and Applications (Upper-division B) ¹	
CHEM 369	Biochemical Principles (Upper-division B) ¹	

Nutrition

Select from the following: 4

ASCI 346	Equine Nutrition	
ASCI 350	Nonruminant Nutrition	
ASCI 355	Ruminant Nutrition	
ASCI 419	Animal Metabolism and Nutrition	
DSCI 301	Dairy Cattle Nutrition	

Physiology

Select from the following: 4-5

ASCI 333	Equine Reproduction	
ASCI 366	Veterinary Pharmacology	
ASCI 405	Domestic Livestock Endocrinology	
ASCI 406	Applied Animal Embryology and Assisted Reproduction	
ASCI 438	Systemic Animal Physiology	
ASCI 440	Immunology and Diseases of Animals	
ASCI 455	Advanced Equine Reproductive Technologies	
DSCI 321	Lactation Physiology	

DSCI 330	Artificial Insemination and Embryo Biotechnology	
----------	--	--

Approved Electives ^{2,3}

Select 16 units of any course with an ASCI or DSCI prefix at the 300-500 level. 16

SUPPORT COURSES

BIO 111	General Biology (B2 & B3) ¹	4
or BIO 161	Introduction to Cell and Molecular Biology	
CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	4
CHEM 128	General Chemistry for Agriculture and Life Science II	4
CHEM 216	Organic Chemistry I ⁴	5
or CHEM 312	Organic Chemistry: Fundamentals and Applications	
MATH 118	Precalculus Algebra (B4) ^{1,5}	4
or MATH 161	Calculus for the Life Sciences I	
STAT 218	Applied Statistics for the Life Sciences (GE Electives) ¹	4

GENERAL EDUCATION (GE)

(see GE program requirements below.) 52

FREE ELECTIVES

Free Electives ⁶ 19-21

4 units of free electives must be at the 300-500 level to ensure completion of the required minimum of 60 units of upper-division courses.

Total units 180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² If a course is taken to meet a Major or Support requirement, it cannot be double-counted in the Approved Elective category.
- ³ The Approved Elective category may include a maximum of 6 units between ASCI 339 or ASCI 490.
- ⁴ CHEM 212 accepted in lieu of CHEM 312, but not for upper-division credit.
- ⁵ MATH 115 or MATH 116, and MATH 117 substitute for MATH 118.
- ⁶ Students should consult a faculty advisor before electing Credit/No Credit grading for any course. Courses elected for Credit/No Credit grading may not be recognized by post-graduate academic programs. If a 500-level course is used to satisfy their free elective requirements it cannot be used towards a graduate program.

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4

A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		52

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Dairy Science

Program Learning Objectives

1. Technical competency within the disciplines of Dairy Science (Dairy Husbandry and Dairy Products Technology), with particular emphasis on the science, industry and practice.
2. Effective communication skills and leadership.
3. An advanced level of critical thinking skills and problem solving capability.
4. The capability of maintaining consistent, professional behavior and performance in a rapidly changing work environment.

5. Strong awareness of society as a whole and of agriculture's place in society.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

ASCI 101	Introduction to the Animal Sciences	2
ASCI 220	Introductory Animal Nutrition and Feeding	4

Water Science	
GENERAL EDUCATION (GE)	
(See GE program requirements below.)	56
FREE ELECTIVES	
Free Electives	5
Total units	180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Students focusing on Dairy Foods should take BIO 161.
- ³ MATH 116 and MATH 117 substitute.
- ⁴ If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Approved Elective.
- ⁵ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		56

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Dairy Industries Minor

Required Courses

DSCI 229	General Dairy Manufacturing	4
DSCI 230	General Dairy Husbandry	4

Approved Electives

Select one of the following emphasis areas (at least 13 units must be at the 300-400 level):¹ 18

Dairy Husbandry Area

ASCI 220	Introductory Animal Nutrition and Feeding	
DSCI 102	Dairy Operations and Safety	
DSCI 202	Dairy Promotion and Marketing	
DSCI 241	Dairy Cattle Selection, Breeds, Fitting and Showing	
DSCI 270	Selected Topics	
DSCI 301	Dairy Cattle Nutrition	
DSCI 321	Lactation Physiology	
DSCI 330	Artificial Insemination and Embryo Biotechnology	
DSCI 333	Dairy Animal Health, Safety and Applied Technology	
DSCI 410	Advanced Dairy Nutrition	
DSCI 412	Dairy Farm Consultation	
DSCI 422	Breeding and Genetics of Dairy Cattle	
DSCI 432	Advanced Dairy Herd Management	
DSCI 470	Selected Advanced Topics	

Dairy Foods Area

CHEM 312	Organic Chemistry: Fundamentals and Applications	
CHEM 314	Biochemistry: Fundamentals and Applications	
DSCI 202	Dairy Promotion and Marketing	
DSCI 233	Milk Processing and Inspection	
DSCI 401	Physical and Chemical Properties of Dairy Products	

DSCI 402	Quality Assurance and Control of Dairy Products	
DSCI 444 or MCRO 421	Dairy Microbiology Food Microbiology	
FSN 275 or FSN 375	Elements of Food Safety Food Safety	
MCRO 221	Microbiology	
Total units		26

¹ As a science-based minor, it is assumed that students have completed college introductory courses in biology, chemistry and statistics. In addition, some upper division courses may require microbiology, organic chemistry and/or biochemistry.

Equine Science Minor

Required Courses

ASCI 220	Introductory Animal Nutrition and Feeding	4
ASCI 224	Equine Science	4
ASCI 315 or ASCI 347	Equine Biomechanics Equine Exercise Physiology	3-4
ASCI 333	Equine Reproduction	5
ASCI 346	Equine Nutrition	4
Select from the following:		7
(May not include courses taken as required courses)		
ASCI 214	Equine Management	
ASCI 228	Equine Evaluation	
ASCI 239	Principles of Rangeland Management	
ASCI 315	Equine Biomechanics	
ASCI 324	Advanced Equine Evaluation	
ASCI 339	Internship in Animal Science	
ASCI 344	Equine and Human Communication	
ASCI 345	Equine Behavior Modification	
ASCI 347	Equine Exercise Physiology	
ASCI 490	Advanced Animal Production and Management Enterprise	
Total units		27-28

Meat Science and Processing Minor

Prerequisite: One quarter of chemistry.

Required Courses

ASCI 211	Meat Science	4
ASCI 484 or ASCI 330	Processed Meat Products Poultry Meat Production and Processing	4
ASCI 415	HACCP for Meat and Poultry Operations	3
MCRO 221	Microbiology	4

Selected Courses

Select from the following:		12-15
7 units must be at upper-division level		
ASCI 112	Principles of Animal Science	
ASCI 226	Livestock Evaluation	

ASCI 290	Animal Production and Management Enterprise	
ASCI 339	Internship in Animal Science	
ASCI 450	Computer Applications in Animal Science: Spreadsheet Analysis	
ASCI 479	Senior Project - Current Topics in Animal Science	
ASCI 490	Advanced Animal Production and Management Enterprise	
AG/ASCI 360	Holistic Management	
DSCI 444	Dairy Microbiology	
FSN 125 or FSN 230	Introduction to Food Science Elements of Food Processing	
FSN 370	Food Plant Sanitation and Prerequisite Programs	
MCRO 421	Food Microbiology	
Any upper-division AGB course		
Total units		27-30

Poultry Management Minor

Required Courses

ASCI 225	Introduction to Poultry Management	4
ASCI 325	Egg Production, Processing and Distribution	4
ASCI 330	Poultry Meat Production and Processing	4
ASCI 342	Poultry Business Management	4
ASCI 350	Nonruminant Nutrition	4
ASCI 415	HACCP for Meat and Poultry Operations	3

Approved Electives

Select from the following:		4
AGB 310	Agribusiness Credit and Finance	
ASCI 290 or ASCI 490	Animal Production and Management Enterprise Advanced Animal Production and Management Enterprise	
ASCI 339	Internship in Animal Science	
BUS 212	Financial Accounting for Nonbusiness Majors	
BUS 346	Principles of Marketing	
ENGL 310	Corporate Communication	
FSN 275	Elements of Food Safety	
FSN 334	Food Packaging	
FSN 335	Food Quality Assurance	
FSN 370	Food Plant Sanitation and Prerequisite Programs	

Total units **27**

Department Head: Peter Livingston

Academic Programs

Program name	Program type
Agricultural Systems Management	BS
BioResource and Agricultural Engineering	BS

The department offers two programs leading to a Bachelor of Science degree: BioResource and Agricultural Engineering and Agricultural Systems Management.

The BioResource and Agricultural Engineering Department is an engineering-based educational organization consisting of professionals whose mission is the study, teaching, and practice of engineering and systems management support for agriculture. The department is nationally recognized as a leader in this field, and for balancing theory with application and principle with practice.

Department facilities include well-equipped laboratories for hydraulic systems, evaluation and testing of power units, fabrication of agricultural machinery, agricultural electrical systems, design and construction of agricultural structures, photogrammetry, microcomputers and controllers.

Outdoor facilities include a water resources center with multiple pumping systems and operational canals, a field for evaluation of various irrigation systems including an operating linear move and land for experience in the mechanical production of farm products and safe operation of agricultural machinery.

Students are encouraged to participate in the student clubs of the department. The Agricultural Engineering Society is involved in a broad range of activities and services including Open House displays. The student branch of the American Society of Agricultural and Biological Engineers offers professional and co-curricular activities.

Undergraduate Programs

BS Agricultural Systems Management

The mission of the Agricultural Systems Management (ASM) program is to provide a "learn by doing" undergraduate educational experience that prepares students for systems management practice in support of agriculture and related industries throughout the West. The ASM program is ABET accredited by the Engineering Technology Accreditation Commission.

Students receive broad agricultural training with a business and management emphasis in one of the following areas: project management, construction management, plant production, livestock production, food and fiber processing, environmental information management, water/irrigation, and processing and manufacturing. Students have the opportunity to develop management expertise through interdisciplinary experiences in agricultural technology and business-oriented coursework.

The objectives of the ASM program are to produce graduates who, in 3-5 years after graduation, are successful as one of the following:

- Individuals that are successful in technical, business, or management positions within agriculture or related industries
- Adapting to new challenges and opportunities through the application of acquire knowledge in agricultural systems management
- Actively pursuing professional development such as a degree in an advanced degree program, professional license, or technical certification

Agricultural Systems Management graduates demonstrate a knowledge and understanding of basic agricultural technologies and agribusiness principles necessary for technical operations and business management careers in agriculture and related industries; an understanding of modern science and practice within a specialized agricultural area of interest; and ability to apply quantitative, analytical processes for developing solutions to technological, business or management problems associated with production, processing, or the distribution of products and support services in agriculture and related industries; an understanding of the interconnected "systems" of agriculture; and ability to safely and properly handle the materials, machines, sensors, tools and techniques of modern agricultural or technical operations; and an ability to communicate and perform as effective agricultural systems management professionals in the solution of problems crossing discipline or cultural boundaries.

Career opportunities are available in the manufacturing, sales, service of agricultural equipment and machinery; construction management, management and production of animals and crops; processing of food and fiber; and management of water/irrigation facilities. The program is recognized by the American Society of Agricultural and Biological Engineers and is ABET accredited.

BS BioResource and Agricultural Engineering

The bioresource and agricultural engineering program develops one of the most versatile types of engineer, adept at utilizing electrical and mechanical energy sources, water resources, and designing structural units. The curriculum features a unique combination of engineering and applied science coursework, with a focus on preparing graduates for practice in professional engineering.

The mission of the BioResource and Agricultural Engineering program is to provide a "learn by doing" undergraduate educational experience that prepares students for engineering practice in support of agriculture and related industries throughout the West.

The objectives of the BioResource and Agricultural Engineering program are to produce graduates who, in 3-5 years after graduation, are successful as one of the following:

- Engineers in positions of professional responsibility and leadership in a modern multi-disciplinary, system-oriented environment that emphasizes problem solving
- Actively pursuing professional development such as a degree in an advanced degree program, professional license, or technical certification

- Applying unique engineering problem-solving skills and principles within a career outside traditional engineering environments, such as management, teaching, research, or other professional fields

BioResource and Agricultural Engineering graduates demonstrate a knowledge and understanding of the basic mathematics, physical and engineering sciences necessary for modern agricultural engineering practice; the ability to design components, systems or processes to meet specified objectives, including prudent use of resources; an understanding of their professional and ethical responsibilities as agricultural engineers, including the societal impact of engineering solutions and the need to engage in life-long learning; the ability to plan, design, execute and evaluate engineering solutions to problems/projects that are real, practical and of a complexity representative of projects encountered in beginning professional practice; and the ability to communicate and perform as effective engineering professionals in both individual and team-based project environments.

Cal Poly's "learn by doing" philosophy is emphasized by the numerous design-centered laboratories and the senior project. In the senior design project, which is completed in a three-quarter set of capstone courses, students demonstrate their understanding of engineering knowledge and their ability to apply that knowledge creatively to practical problems.

Consistent with program accreditation requirements regarding a graduate's ability to function on teams, the BioResource and Agricultural Engineering program has adopted an explicit graduation requirement in this area. This provides students an opportunity to practice team skills. Such experience is important for practicing engineers given the ever-increasing diversity of engineering science and applications. Methods to fulfill this requirement include items such as:

- Team design project
- CO-OP or internship employment
- Certain club activities
- Working with faculty on a sponsored project
- Project embedded in curriculum
- Taking certain technical electives
- Service learning project

Career opportunities exist in the design, evaluation and management of systems – water resources, irrigation, drainage, groundwater, pumps, soil conservation; agricultural power and machinery; food processing; energy; and agricultural environments. The program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

Minors

The department participates in offering interdisciplinary minors in Water Science and Geographic Information Systems. Please see College of Agriculture, Food and Environmental Sciences (p. 60) section for more information.

Graduate Program

Cal Poly offers the MS in Agriculture with specializations in BioResource and Agricultural Systems and in Irrigation, and Water Engineering. Please see College of Agriculture, Food and Environmental Sciences (p. 60) section for more information.

BS Agricultural Systems Management

Program Learning Objectives

1. An ability to apply knowledge, techniques, skills and modern tools of mathematics, science, engineering, and technology to solve broadly defined engineering problems appropriate to the discipline;
2. An ability to design systems, components, or processes meeting specified needs for broadly-defined engineering problems appropriate to the discipline;
3. An ability to apply written, oral, and graphical communication in broadly defined technical and non-technical environments; and an ability to identify and use appropriate technical literature;
4. An ability to conduct standard tests, measurements, and experiments and to analyze and interpret the results to improve processes; and
5. An ability to function effectively as a member or leader on a technical team.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

Total units		180-182

Approved Electives

Minimum of 9 units must be upper division

No more than 4 units of internship or enterprise may be used

Select from the following:		12
Any AGB course eligible for the Agribusiness minor		
AGC 102	Orientation to Agricultural Communication & Agricultural Science	
BRAE 200	Special Problems for Undergraduates (4 units maximum)	
BRAE 236	Principles of Irrigation	
BRAE 302	Servo Hydraulics	
BRAE 331	Irrigation Theory	

BRAE 333	Aquacultural Engineering
BRAE 335	Internal Combustion Engines
BRAE 337	Landscape Irrigation
BRAE 344	Fabrication Systems
BRAE 345	Aerial Photogrammetry and Remote Sensing
BRAE/NR 349	Water for a Sustainable Society
BRAE 400	Special Problems (4 units maximum)
BRAE 405	Chemigation
BRAE/EE 434	Automotive Engineering for a Sustainable Future
BRAE 435	Drainage
BRAE 436	Food and Agriculture Process Water Engineering
BRAE 438	Drip/Micro Irrigation
or BRAE 440	Agricultural Irrigation Systems
BRAE 447	Advanced Surveying with GIS Applications
BRAE 448	Bioconversion
BRAE 450	Solar Photovoltaic System Engineering
BRAE 532	Water Wells and Pumps
BRAE 533	Irrigation Project Design
CHEM 212	Introduction to Organic Chemistry
FSN 125	Introduction to Food Science
FSN 204	Food Processing Operations
FSN 230	Elements of Food Processing
FSN 275	Elements of Food Safety
FSN 330	Principles of Food Engineering
FSN 334	Food Packaging
FSN 340	Fermented Foods
FSN 354	Packaging Function in Food Processing
FSN 370	Food Plant Sanitation and Prerequisite Programs
FSN 375	Food Safety
FSN 444	Food Engineering
IME 141	Manufacturing Processes: Net Shape
IME 142	Manufacturing Processes: Materials Joining
IME 143	Manufacturing Processes: Material Removal
IME 144	Introduction to Design and Manufacturing
IME 319	Human Factors Engineering
IME 320	Human Factors and Technology
ITP 330	Packaging Fundamentals
ITP 341	Packaging Polymers and Processing
NR/LA 218	Introduction to Geographic Information Systems (GIS)
NR 306	Natural Resource Ecology and Habitat Management
NR/CRP 408	Water Resource Law and Policy

NR 416	Environmental Impact Analysis and Management
SS 221	Soil Health and Plant Nutrition
Animal or Plant Production Course	
Any ASCI, DSCI, PLSC course except for internship or enterprise courses	

Total units 12

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² If a course is taken to meet a Major requirement, it cannot be double-counted as an Approved Elective.
- ³ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking (4 units in Support) ¹	0
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		52

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS BioResource and Agricultural Engineering

Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

BRAE 128	Careers in Bioresource and Agricultural Engineering	2
BRAE 129	Laboratory Skills and Safety	1
BRAE 150	Design Graphics and CAD for Agricultural Engineering	2
BRAE 152	3-D Solids Modeling	1

Department Head: Joey Gray

ACADEMIC PROGRAMS

Program name	Program type
Event Planning and Experience Management	Minor
Recreation, Parks, & Tourism Administration	BS

The Experience Industry is a cornerstone of American culture and critical to both the United States and global economies. Globally, the experience industry sees approximately \$980 billion in spending; in the United States, international tourism generates approximately \$250 billion and the US is consistently ranked as one of the top tourism earners in the world. The experience industry includes (but is not limited to) event planning, sport management, travel, hospitality, tourism, destination management, leisure, and parks and recreation, providing structured and co-created experiences that contribute to quality of life, economic vitality, sustainability, and social equity. The industry offers numerous experience management employment opportunities, both in the United States and abroad.

Students are prepared for professional employment in destination management and marketing, corporate, mega, and social event planning, sport promotion and game-day operations, experiential marketing, hospitality management, tourism operations, park management, community recreation, employee experiences, outdoor recreation leadership, and convention and meeting management. Students select a concentration in event planning and experience management; tourism, hospitality, and destination management; and sport and recreation management.

To prepare students for their professional careers, the major includes a required 400-hour internship (one quarter) with an organization within the experience industry management umbrella. Students must also complete 1,000 hours of paid or volunteer experience prior to the internship.

Graduates employed nationally and internationally strategize, design, create, plan, organize, execute and evaluate experience industry programs and services for visitors, guests, customers, and clients in a variety of settings. Management, marketing, and planning skills, developed through coursework and through practical, hands-on applications, allow for career progress into executive management positions within the experience industry.

Students develop those competencies through a myriad of partnerships developed by the department with local, state, national, and international organizations. These partnerships allow students, both in and out of the classroom, to gain valuable Learn by Doing experiences that set them apart from other entry-level professionals in the global market.

Undergraduate Programs

BS Recreation, Parks, and Tourism Administration

The Experience Industry Management (EIM) department prepares students to be leaders in an industry that promotes healthy lifestyles,

protects memorable places, and facilitates life-enhancing experiences for individuals, communities, and the global society. The program is accredited by the Council on Accreditation of Parks, Recreation, Tourism and Related Professions (COAPRT).

In addition to major requirements, the curriculum provides a full range of general education and support courses. These courses are designed to fully educate and prepare students for culturally diverse and inclusive environments, community engagement, and international understanding in a global society.

Concentrations

Event Planning & Experience Management

Prepares students for a professional career in experience design, event planning, leadership, and management for a variety of structured and co-created experiences, including festivals, celebrations, conventions, meetings, and expositions, social life-cycle events, mega and hallmark events, sporting, international, and non-profit events. Courses focus on strategic event planning, marketing, structured experience and co-created experience design, implementation, and management.

Sport & Recreation Management

Prepares students for management positions with sport and recreation entities ranging from professional sport franchises to community nonprofit organizations to adventure recreation outlets and intercollegiate athletic programs. Career elective tracks include: Professional Sport and Intercollegiate Athletics, Adventure Sport and Outdoor Recreation, Coaching and Sports-Based Youth Development, and Community and Nonprofit Recreation. Areas of study include: sport marketing and promotions, sport and environmental ethics, leadership and facilitation, special event planning, sports-based youth development, community relations, grant funding and development, and coaching.

Tourism, Hospitality & Destination Management

Prepares students for a professional career with organizations that provide experience industry products or services for national and international tourists. Students may choose to emphasize in areas such as resort and lodging experience management, tourism planning and destination management, food and beverage experience management, tour operations, tourism, hospitality, and destination marketing, and entrepreneurship.

Event Planning & Experience Management Minor

This minor prepares students for a professional career in experience design, event planning, leadership, and management for a variety of event genres including corporate events, conventions, festivals, meetings, exhibitions, mega and hallmark events, sporting, international, and non-profit events. Principles of experience design, structured and co-created experiences will be explored. Courses focus on strategic event design, planning, implementation, and management. Not open to RPTA majors. See department head to apply.

BS Recreation, Parks, and Tourism Administration

Program Learning Objectives

At the completion of this degree program, EIM students will be able to:

1. Think critically and creatively.
2. Communicate effectively.
3. Demonstrate their expertise in the Experience Industry and its associated industries in relation to the larger world of arts, sciences, and technology.
4. Work productively as individuals and in groups.
5. Use their knowledge and skills to make a positive contribution to society.
6. Make reasoned decisions based on an understanding of ethics, a respect for diversity, and an awareness related to sustainability.
7. Engage in lifelong learning.
8. Demonstrate the following entry-level knowledge in the Experience Industry Management field: a) the nature and scope of the experience industry; b) techniques and processes used by professionals and workers in the experience industry; and c) the foundations of the profession in history, science, and philosophy (COAPRT Standard 7.01).
9. Demonstrate the ability to design, implement, and evaluate services that facilitate targeted human experiences and that embrace personal and cultural dimensions of diversity (COAPRT Standard 7.02).
10. Demonstrate entry-level knowledge about operations and strategic management/administration in the experience industry (COAPRT Standard 7.03).
11. Demonstrate, through a comprehensive internship of not less than 400 clock hours and no fewer than 10 weeks, the potential to succeed as professionals at supervisory or higher levels in the experience industry (COAPRT Standard 7.04).

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

RPTA 101	Introduction to the Experience Industry	4
RPTA 110	Orientation and College Success in Experience Industry Management	1
RPTA 121	Theories and Frameworks of Experience Design	4
RPTA 210	Experience Design	4
RPTA 255	Leadership and Diverse Groups (E) ¹	4
RPTA 313	Sustainability in the Experience Industry	4
or RPTA 413	Tourism and Protected Area Management	
RPTA 342	Risk Management for the Experience Industry	4
RPTA 360	Assessment and Evaluation of Experience Industry Management	4

RPTA 370	Experiential Marketing Strategies for Experience Industry Management	4
RPTA 405	Principles of Experience Industry Management	4
RPTA 416	Interpreting Experience Industry Data Analytics	4
RPTA 424	Financial Management in the Experience Industry	4
RPTA 460	Senior Project in Experience Industry Management	4
RPTA 463	Pre-Internship Seminar	1
RPTA 465	Internship	12
Concentration or Individualized Course of Study courses (see below)		24

SUPPORT COURSES

BUS 212	Financial Accounting for Nonbusiness Majors ²	4
or AGB 214	Agribusiness Financial Accounting	
BUS 215	Managerial Accounting	4
or AGB 323	Decision Making with Agribusiness Accounting Information	
BUS 346	Principles of Marketing	4

or STAT 251	Statistical Inference for Management I	

GENERAL EDUCATION (GE)

(See GE program requirements below.) 56

FREE ELECTIVES

Free Electives ⁴ 10

Total units 180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Choose either BUS or AGB route. BUS 212 is a prerequisite for BUS 215 and AGB 214 is a prerequisite for AGB 323.
- ³ MATH 116 and MATH 117 substitute.
- ⁴ If a General Education (GE) course is used to satisfy a Major, Support, or Concentration requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations (Select one)

- Event Planning and Experience Management (p. 100)
- Sport & Recreation Management (p. 101)
- Tourism, Hospitality and Destination Management (p. 102)

Individualized Course of Study

A minimum of 24 units of coursework, of which a minimum of 12 units must have a RPTA prefix, and a minimum of 4 units must be upper-division. Courses are selected by the student in consultation with the

student's academic advisor, and the Individualized Course of Study must be approved by the academic advisor. If choosing a minor, the Minor Agreement form must be completed and submitted, and the required 12 units of RPTA prefix coursework may be waived.

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Support) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Major) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		

GE Electives (4 units in Support plus 4 units in GE) ¹	4
Total units	56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Event Planning and Experience Management Concentration

RPTA 114	Introduction to Hospitality and Travel	4
RPTA 317	Hospitality, Convention and Meeting Management	4
RPTA 320	Strategic Event Planning	4
RPTA 420	Strategic Event Implementation	4
Approved Electives ^{1, 2}		
Select from the following, with a minimum of 4 units upper-division:		8
BUS 207	Legal Responsibilities of Business	
BUS 418	Listening to the Customer	
BUS 419	Strategic Marketing Measurement	
BUS 421	Marketing Analytics and Business Intelligence

Total units **24**

- ¹ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ² If any of these courses are taken to meet a support elective area requirement, they cannot be double-counted as an Approved Elective.
- ³ Students interested in any of the sport/community career elective areas will take RPTA 160, RPTA 260 and RPTA 323, and 12 units of Advisor Approved Electives. Students interested in any of the outdoor recreation career elective areas will take RPTA 112, RPTA 275 and RPTA 325, and 14 units of Advisor Approved Electives.
- ⁴ A maximum of 4 units of RPTA 330 may be applied to Approved Electives.

Tourism, Hospitality, and Destination Management Concentration

Food Science & Nutrition

Agricultural Sciences Bldg. (11), Room 244
Phone: 805.756.2660
<https://fsn.calpoly.edu>

Department Head: Stephanie Jung

Academic Programs

Program name	Program type
Food Science	BS, Minor, MS
Nutrition	BS, Minor, MS

The department offers two bachelor's degrees and two master's degrees. The bachelor's degrees are designed to prepare graduates for employment in the general areas of food science and human nutrition. The master's degree in Nutrition is designed to prepare graduates for advancement, specialization, and leadership in nutrition or healthcare careers. The master's degree in Food Science is designed to prepare graduates for pursuing a PhD and/or to enter the food industry at a higher level position. Students pursuing a bachelor's degree in Food Science may apply for the Blended 4+1 master's degree in Food Science program.

Graduates with a bachelor of science in Food Science enjoy rewarding careers in food processing and product development, sales, research, quality assurance and government regulation. Graduates with a bachelor of science in Nutrition enjoy rewarding careers in dietetics and clinical nutrition, healthcare (medicine, dentistry, nursing, physician assistant, and chiropractic), public health, food industry, food systems management and education. Opportunities for private consulting and entrepreneurship are available to graduates in both majors. The department also offers minors in Food Science and Nutrition.

Students are involved in a number of clubs and teams, including the Food Science Club and Nutrition Club. Club activities involve a wide range of social, professional and service projects. Clubs provide opportunity for leadership training and participation in professional societies and organizations. Our students compete on teams in regional and national scholastic competitions such as Food Product Development teams and Nutrition and Food Science or Nutrition Quiz Bowl teams.

Learn by Doing in Food Science and Nutrition

The department is equipped with a food processing pilot plant, and laboratories for food safety, food chemistry, nutritional science, metabolism, and culinary science. These facilities are designed for teaching courses in nutrition, foodservice management, sensory evaluation of foods, food chemistry, food product development, food processing and quality control. Students get hands-on experience with pilot scale commercial processing equipment.

Students can manufacture and market various food products, which are sold throughout the community. Projects are designed to simulate industry and business practices. Classroom learning in nutrition is complemented with opportunities for service, outreach and research in the community. Students are encouraged to gain valuable experience by working during the summer or by participating in internship programs.

Dietetic Internship

Cal Poly's post-baccalaureate dietetic internship is accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics. This competitive

program consists of at least 1,000 hours of supervised practice and at least 200 hours of class, seminars, and professional meetings. Upon completion, interns must pass a national examination administered by the Commission of Dietetic Registration to qualify as a Registered Dietitian (R.D.). Applications for fall quarter are due mid-February.

Undergraduate Programs

BS Food Science

The program is designed to prepare students for employment in the food industry, government and for graduate study. Principal areas of instruction are food engineering, food processing, food safety and sanitation, quality assurance, food microbiology, food chemistry and analysis, product development, and sensory evaluation. Employment opportunities are strong in each of these areas.

Concentrations

Advanced Food Science

The Advanced Food Science Concentration is BS Food Science is the curriculum approved by the Institute of Food Technologists (IFT.org (<http://www.ift.org/>)), the key international professional society for food scientists. Students are strongly advised to follow this concentration if they anticipate graduate study following completion of the BS. Students enrolled in this concentration are eligible for IFT scholarships.

Culinology

Culinology® is designed for students who want to blend culinary arts and food science principles in ingredient development, food product development, or in entrepreneurial pursuits. Successful completion of courses in this concentration fulfill the requirements for the Research Chefs Association Culinology® program.

BS Nutrition

The program offers a broad preparation in nutritional science. In addition to preparatory science courses such as chemistry and biology, the program offers coursework in nutrient metabolism, clinical nutrition, community nutrition, and lifecycle nutrition, foods and food system management.

Concentrations

Applied Nutrition

Applied Nutrition prepares students for careers in various areas of nutrition, including dietetics, food systems management, nutrition communications, and community nutrition. This concentration is a Didactic Program in Dietetics (DPD), accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND), of the Academy of Nutrition and Dietetics, 120 Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, (800) 877-1600 Ext. 5400. Students in this concentration who graduate with a minimum higher education overall GPA of 2.75 and receive a Verification Statement are eligible to apply for admission to an accredited dietetic internship, upon completion of which the graduate must pass a national examination administered by the Commission on Dietetic Registration to qualify as a registered dietitian (RD). Graduates also are prepared to pursue advanced degrees in foods and nutrition, public health, and food systems management.

Nutrition Science

Nutrition Science emphasizes a strong background in basic sciences and human nutrition for students planning further study in graduate school or a health-related profession such as medicine, dentistry, nursing,

pharmacy or physical therapy. Students need to check with their advisors for specific requirements for various health-related professions.

Minors

The department offers minors in either food science or nutrition to qualified students from across campus. Specific criteria apply to entering into the minor program and interested students should see either of the minor advisors.

Food Science Minor

The minor is principally designed for students majoring in related academic disciplines who desire employment in the food industry. Students acquire the fundamental technical skills necessary to understand basic issues and concepts in food science such as food processing, food safety, and quality assurance. See the department Food Science minor coordinator for criteria for admission into the Food Science minor.

Nutrition Minor

The minor is designed for students majoring in science disciplines (Chemistry, Biological Sciences, Kinesiology), Agribusiness or Agricultural Communications, and other interested majors such as Business or Psychology. Students can enhance career opportunities or qualification for admission into graduate programs or allied health fields. See the department Nutrition minor coordinator for criteria for admission into the Nutrition minor.

Interdisciplinary Minors

The department participates in offering interdisciplinary minors in Packaging (see Orfalea College of Business (p. 174) section).

Graduate Programs

MS Food Science

General Characteristics

The MS Food Science program is designed to prepare graduates for advancement, specialization, and leadership in food science careers. In addition, graduates will be prepared for further education in doctoral studies in food science and related fields. The MS Food Science program integrates the disciplines of chemistry, microbiology, product development and processing/engineering, to prepare qualified graduates for food-related careers in industry, government and academia.

Additional Requirements:

- Statement of purpose
- Curriculum Vitae
- Three letters of academic and/or professional recommendation

MS Nutrition

General Characteristics

The MS Nutrition program is designed to prepare graduates for advancement, specialization, and leadership in nutrition or healthcare careers. In addition, graduates will be prepared for further education in dietetic internships, professional schools, allied health professions, or

doctoral studies in a number of academic areas including nutrition, public health, animal science, or other health science-based disciplines.

The interdisciplinary Graduate Group in Nutrition (GGN) allows students to work with faculty from several departments and to choose a research topic from a broad range of themes including human nutrition, animal nutrition, kinesiology, public health, or business.

Students may follow a suggested area of emphasis. Examples may include: Molecular Nutrition, Public Health Nutrition, or Health and Wellness. These would be compatible with the students interests and career goals. Students will complete coursework and a research-based thesis conducted under the supervision of a committee chair who must be a member of the GGN.

Additional Requirements

- Statement of purpose
- Three letters of academic and/or professional recommendation
- Introductory chemistry series (one year), organic chemistry (min one course), biochemistry and an introductory biology course
- FSN 328 Nutrient Metabolism I or FSN 331 Macronutrient Metabolism
- FSN 329 Nutrient Metabolism II or FSN 332 Micronutrient Metabolism and FSN 333 Nutrient Metabolism Lab

Blended BS + MS Food Science Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Food Science.

Eligibility

Students majoring in BS Food Science with a concentration in Advanced Food Science are eligible for the blended program in MS Food Science.

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Food Science Graduate Program Coordinator in the Food Science and Nutrition department for any additional eligibility criteria.

BS Food Science

Program Learning Objectives

1. Graduates demonstrate critical thinking skills in addressing food science issues.
2. Graduates demonstrate the knowledge, ethics, and technical skills needed to succeed in food science fields and post-graduate studies.
3. Graduates demonstrate effective written and oral communication skills.
4. Graduates demonstrate the ability to work effectively as part of a problem-solving team.
5. Graduates demonstrate cultural competence with interacting diverse populations.

Program Educational Outcomes

- Food Science program graduates can integrate and apply principles of food chemistry, analysis, microbiology, processing, and engineering to assure food quality and safety.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

FSN 102	Orientation to the Food Science Major	1
FSN 125 or FSN 230	Introduction to Food Science Elements of Food Processing	4
FSN 202	Introduction to Human Nutrition	4
FSN 204	Food Processing Operations	4
FSN 250	Food and Nutrition: Culture and Customs (USCP) (E) ¹	4
FSN 311	Sensory Evaluation of Food	4
FSN 330	Principles of Food Engineering	4
FSN 334	Food Packaging	3
FSN 335	Food Quality Assurance	4
FSN 364	Food Chemistry	4
FSN 368	Food Analysis	4
FSN 370	Food Plant Sanitation and Prerequisite Programs	4
FSN 374	Food Laws and Regulations	4
FSN 375	Food Safety	4
FSN 407	Food Ingredient Functionality	3
FSN 408 & FSN 469	Food Product Development and Food Science Exit Exam	4
Concentration courses (see below)		23

SUPPORT COURSES

BIO 111	General Biology (B2 & B3) ¹	4
CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	4
CHEM 128	General Chemistry for Agriculture and Life Science II	4
CHEM 312	Organic Chemistry: Fundamentals and Applications	5
CHEM 314	Biochemistry: Fundamentals and Applications (Upper-Division B) ¹	5
MATH 161 or MATH 141	Calculus for the Life Sciences I (B4) ¹ Calculus I	4
MCRO 221	Microbiology	4
MCRO 421	Food Microbiology	4

PHYS 121	College Physics I	4
STAT 218	Applied Statistics for the Life Sciences (GE Electives) ¹	4
STAT 314	Statistical Methods for Food Science	4

GENERAL EDUCATION (GE)

(See GE program requirements below.) 48

FREE ELECTIVES

Free Electives 4

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Concentrations

- Advanced Food Science (p. 108)
- Culinology (p. 108)

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Major) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		48

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Advanced Food Science Concentration

FSN 444	Food Engineering	4
FSN 457	Food Science Senior Project - Scientific and Technical Writing Course	3
or FSN 458	Food Science Senior Project - Research	
or FSN 459	Food Science Senior Project - Internship	
FSN 474	Advanced Food Processing	4
MATH 162	Calculus for the Life Sciences II	4

Approved Electives

Select from the following:		8
AGB 212	Agricultural Economics	
ASCI 211	Meat Science	
ASCI 415	HACCP for Meat and Poultry Operations	
ASCI 484	Processed Meat Products	
BUS 207	Legal Responsibilities of Business	
BUS 384	Human Resources Management	
CHEM 129	General Chemistry for Agriculture and Life Science III	
CHEM 217	Organic Chemistry II	
CHEM 218	Organic Chemistry III	
DSCI 229	General Dairy Manufacturing	
DSCI 230	General Dairy Husbandry	
DSCI 401	Physical and Chemical Properties of Dairy Products	
DSCI 444	Dairy Microbiology	
FSN 121	Fundamentals of Food	
FSN 201	Enterprise Project	
FSN 244	Cereal and Bakery Science	
FSN 304	Advanced Culinary Principles and Practice	
FSN 321	Contemporary Issues in Food Choice and Preparation	

FSN 340	Fermented Foods	
FSN 342	Brewing Science	
FSN 343	Foodservice Operations I	
FSN 346	Brewing Methods

BS Nutrition

Program Learning Objectives

1. Graduates demonstrate critical thinking skills in addressing nutrition issues.
2. Graduates demonstrate the knowledge, ethics, and technical skills needed to succeed in nutrition-related fields and post-graduate studies.
3. Graduates demonstrate effective written and oral communication skills.
4. Graduates demonstrate the ability to work effectively as part of a problem-solving team.
5. Graduates demonstrate cultural competence interacting with diverse populations.

Program Educational Outcomes

- Graduates can apply the knowledge of nutrients and foods to meet the nutritional and health needs of individuals and groups throughout the life cycle.
- Graduates can apply the principles of social, physical and biological sciences to address human nutrition issues.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MS Food Science

Program Learning Objectives

Graduates of the MS Food Science will:

1. Demonstrate technical competency in the discipline of food science.
2. Design, analyze, interpret, and communicate food science research.
3. Formulate solutions to practical problems in food safety, production, development, sustainability and aspects of consumer health.
4. Communicate and work effectively and ethically with individuals and groups.

Required Courses

ESCI 501	Research Planning	4
FSN 505	Orientation to Graduate Studies	1
FSN 564	Chemistry of Food Systems	4
FSN 575	Advanced Food Safety	4
FSN 581	Graduate Seminar in Food Science and Nutrition	3
FSN 599	Thesis	9

Approved Electives

Any 400-500 level courses with the following prefixes: AG, AGB, AGC, AGED, ASCI, BIO, BMED, BRAE, CHEM, DSCI, ENVE, ESCI, FSN, ITP, MCRO, MATE, NR, PLSC, PSY, RPTA, STAT, WVIT

Total units 45

MS Nutrition

Program Learning Objectives

After successfully completing the Master of Science in Nutrition, students will be able to:

1. Apply fundamental principles of nutrition science in research and required coursework
2. Explain, analyze, and interpret fundamental scientific concepts in the specific area of thesis research
3. Apply the scientific method to nutrition research through the design, conduct, and defense of a thesis research project
4. Apply critical thinking skills to the analysis of published research literature and the design/interpretation of a thesis research project
5. Show independent and creative thinking skills in the formulation, design, conduct, and interpretation of nutrition research

6. Demonstrate strong written and oral communication skills
7. Work productively, respectfully, and professionally as part of a research team and in other group settings
8. Exhibit leadership, ethical conduct, and community values

Required Courses

FSN 516 or FSN 531	Population Health and Epidemiology Lipid Metabolism and Nutrition	3
FSN 528	Biochemical and Molecular Aspects of Human Macronutrient Metabolism	4
FSN 529	Metabolic and Molecular Aspects of Vitamins	2
FSN 530	Metabolic and Molecular Aspects of Minerals	2
FSN 582	Current Nutrition Research	3
FSN 599	Thesis	6

Programs

Program name	Program type
ROTC	Four-Year Program
Military Science	Minor

Four-Year Program

The Military Science Department conducts a dynamic four-year program of instruction which develops the mental and physical qualifications of graduates in preparation for positions of leadership within the military and civilian communities. Students may enroll at any time for full academic elective credit without incurring any military service obligation. However, the last two years of the program are oriented toward preparing the student for a military career.

The innovative and well-taught courses complement all major areas of study by broadening the student's basic education. The complete curriculum includes both military leadership and management courses; courses which provide an awareness of the heritage of the U.S. military; the Armed Forces' role in national defense strategy; professional military subjects; and military ethics.

Students desiring to attain a highly sought-after commission as a Second Lieutenant in the U.S. Army must meet eligibility requirements and complete the entire Military Science/ROTC (Reserve Officers' Training Corps) Advanced Course (25 units). To be eligible for participation in the Cal Poly ROTC Program, a student must be enrolled full time (12 units) at Cal Poly, have at least two years remaining as a university student to permit completion of the advanced course prior to reaching the 30th birthday, and be physically qualified.

Financial Assistance

Many opportunities for financial assistance are available to students. Three areas of opportunities are: ROTC cadets who sign a contract for Advanced Phase, students who earn an ROTC scholarship, and cadets who train with Reserve or National Guard units. All ROTC cadets sign a contract to participate in the Advanced Phase of ROTC and receive a \$300 - \$500 a month allowance. Criteria to participate in the Advanced Phase are stated later. Highly competitive two-, two and a half, three-, and four-year ROTC scholarships are available. The scholarship provides payment of either full tuition or room and board (student's choice), books, supplies, and the \$300 - 500 a month allowance for the duration of the scholarship. Students interested in ROTC scholarship should contact the Military Science Department. Reserve or National Guard training provides an additional two sources of financial assistance: approximately \$165 a month for one weekend drill and approximately \$190 a month tuition assistance from the National Guard/Army Reserve "New GI Bill@" benefits.

Equipment and Uniforms

All necessary equipment, uniforms and textbooks for participation in the Military Science/ROTC program are furnished to the student by the

United States Government free of charge. Title to this property, other than expendable items, remains with the government.

Phases of Four-Year Program

The four-year program elective military science curriculum is divided into two diverse phases. The basic phase is primarily for freshmen and sophomores, and the advanced phase is for junior and senior level students.

Basic Phase

The Basic Phase is a two-year challenging opportunity where students may, without obligation, investigate the ROTC Program and the military as a full- or part-time career. Students may enter and leave this phase during any quarter. The curriculum for the basic phase is listed below and offers many exciting opportunities for all students. To become an ROTC cadet during this phase requires the student be registered for a Military Science class, completion of an ROTC enrollment form (obtained at the Military Science Department, Dexter Building, Room 115), and an interview with the ROTC Enrollment Officer. Because this phase is for students to examine the ROTC Program without obligation, participation in ROTC activities is encouraged but not mandatory.

Entry to the challenging Advanced Phase is accomplished either by successfully completing the Basic Phase classes, completing ROTC Leader's Training Course or completing any military basic training program. Students have the option of contracting any time during their second year of the Basic Phase of study.

ROTC Leader's Training Course (Summer Session only)

One method to qualify for the Advanced Phase is to successfully complete the four-week challenging ROTC Leader's Training Course (LTC). Students normally attend LTC during the summer between their second and third academic years. Transfer students may complete the camp during the summer immediately prior to their matriculation at Cal Poly. It is important that potential transfer students who plan to participate in the two-year ROTC program make their intentions known directly to the Military Science Department no later than June 1 of the year they plan to register at the university even though this date may precede the date of their final acceptance by the university.

The government provides a transportation allowance to and from LTC and pay at the rate of one-half of a Second Lieutenant's basic pay. All equipment, uniforms, room, board and medical care are furnished free while at camp. A maximum of 7 units elective credit may be earned for attending LTC. No military obligation is incurred for attending this camp.

Basic Training

Outstanding students who have successfully served on active duty, regardless of the branch of service, are qualified to enter the Advanced Phase because they have completed basic training for their particular branch of service. Also, students who have been or are members of Reserve or National Guard units and have completed basic training are qualified for the Advanced Phase.

Advanced Phase

The Advanced Phase is a two-year period where ROTC cadets receive advanced leadership and management training. The cadets receive many hours of hands-on, practical leadership experiences to prepare them for a military career or a management position in the civilian sector. To become a cadet in the Advanced Phase a student must complete the

Basic Phase, ROTC Summer Leader’s Training Course (LTC) or Basic Training. The student must also make a commitment to attend all required training activities and sign a contract to accept a prestigious commission in the United States Army. In return for the student’s commitment, the Military Science Department provides \$450-500 a month (which is based on program year), classroom instruction, real leadership opportunities, and continuous professional development of their leadership skills.

After their first year of the Advanced Phase, cadets usually attend a four-week camp where their leadership skills are further developed and assessed. All equipment, uniforms, room, board, and medical care are furnished free while at this camp. The cadets also receive approximately \$800 during the five weeks. Upon successful completion of the Advanced Phase and graduation from the university, the cadet is commissioned as a Second Lieutenant in the United States Army.

Simultaneous Membership Program

Students can serve simultaneously in either the California National Guard or Army Reserve while they are cadets in ROTC and receive pay from both their unit and ROTC. Those who complete the ROTC Advanced Phase prior to graduation may continue serving in the Reserve or National Guard in the Simultaneous Membership Program. Since students can earn as much as \$4,000 each year, this program provides both substantial financial benefits and leadership experience.

Military Science Minor

The minor emphasizes the following personal and technical skills: time, personnel, and resource management under duress; knowledge of U.S. military heritage, customs, and courtesies; planning and briefing under time constraints; current national defense issues; equal opportunity, sexual harassment, and military ethics; military justice; physical fitness; map reading and orienteering; leadership, management, and counseling skills under duress; oral, visual, and written communication skills in accordance with Army norms; small unit tactics. It provides marketable skills to students interested in government service, personnel management, and law enforcement. The Military Science Minor is limited to contracted ROTC cadets only. A minimum GPA of 2.5 is required in all units counted for completion of the minor.

Basic Phase

Freshman

Academic Programs

Program name	Program type
Environmental Earth and Soil Sciences	BS
Environmental Management and Protection	BS
Environmental Soil Science	Minor
Environmental Sciences and Management	MS
Fire Ecology and Wildfire Hazard Planning	Minor
Forest and Fire Sciences	BS
Indigenous Studies in Natural Resources and the Environment	Minor
Land Rehabilitation and Restoration Ecology	Minor

The Natural Resources Management and Environmental Sciences department offers three undergraduate majors - Environmental Earth and Soil Sciences, Environmental Management and Projection, and Forest and Fire Sciences. Students have access to several thousand acres of agricultural, forest, and rangeland managed by the college. Students gain hands-on experience with equipment and techniques in common use by environmental scientists, environmental managers and planners, foresters, wildland fire fighters, natural resources managers, soil scientists, agricultural scientists, and geologists. The department is equipped for analysis of soil, plant, tree, rock, and water samples. Analytical methods available to students include gas chromatography for analysis of greenhouse gases, portable x-ray fluorescence spectroscopy, inductively coupled plasma - optical emission spectroscopy (ICP-OES), high temperature combustion analysis of carbon, nitrogen, and sulfur, petrographic microscopy with digital image analysis, as well as a suite of microbiological, geographic and geospatial analytical techniques and instrumentation.

The department maintains greenhouse research space and operates state-of-the-art weather monitoring equipment on Cal Poly rangelands, providing data for a wide variety of interdisciplinary research projects.

Experiential Learning

The Natural Resources Management and Environmental Sciences Department has a number of outdoor field sites where faculty and student learn-by-doing projects and research are conducted. Facilities sited at the Cal Poly campus include a Forestry Skills Center, computer labs, GIS laboratories, Coastal Resources Institute Research field lab, and several well-equipped greenhouses. Moreover, the department works closely with Cal Poly's School Forest at Swanton Pacific Ranch, near Santa Cruz, California to ensure our students have many opportunities to engage at this hands-on learning resource. This 3800-acre ranch includes redwood forests, salmonid-bearing streams, agricultural land, and many other ecosystems. The Swanton Pacific Ranch provides hands-on learning of active forest, ranch, agricultural, and watershed management activities. The management of these forest resources is internationally certified by the Forest Stewardship Council. Students make extensive use

of these facilities. Significant field work and laboratory activities occur in all undergraduate and graduate programs.

In addition to these campus-based learning experiences, the department places great importance on work experience before graduation. Work experience validates the student's career goals, confirms the relevance of their classroom education, while offering a pathway to employment. Students can earn course credit through internships, supervisory courses, and/or for volunteer or paid work positions related to their major.

Students are encouraged to reinforce their education, develop professional contacts, and strengthen their career potential by participating in any of the following activities: the Environmental Sciences Club; the Soil Judging Team; Association of Environmental Professionals Student Chapter (AEP); Society of American Foresters Student Chapter (SAF); Logging Team; Student Association of Fire Ecology; and/or Xi Sigma Pi Forestry Honorary Society; attending international and national conferences; and internships and cooperative education programs with government and industry. Each of these opportunities, combined with a friendly, helpful atmosphere, provide students a college experience that is highly personal as well as rewarding. Students also are encouraged to investigate opportunities for international education through Cal Poly's International Center (p. 443).

Undergraduate Programs

BS Environmental Earth and Soil Sciences

The BS in Environmental Earth and Soil Sciences provides an interdisciplinary foundation for understanding how land, water, and atmospheric resources contribute to sustainable natural resource management. The program emphasizes a wide range of disciplines in natural resources and in the cultures that use and modify them. The core of the Environmental Earth and Soil Sciences curriculum is composed of geology, soil science, and geography, and is strengthened by a diverse array of related specialties, which include: climate change studies, environmental policy and management, regenerative agriculture, soil health, sustainable forestry, urban forestry, land management, geospatial technology, and hydrology and water resources.

The Environmental Earth and Soil Sciences major provides detailed and thorough training in the natural and cultural processes that govern the relationship between humans and their environments. The program also furnishes students with the marketable expertise to assess, manage, repair, and improve this fragile relationship while acquiring a well-rounded education in the natural sciences. In addition, majors can meet the educational requirements for professional certification in a number of areas (e.g. Geologist in Training, erosion and sediment control, hydrology, soil conservation, soil science) and find their training ideal for graduate school preparation in a number of related disciplines.

Due to the multidisciplinary nature of the Environmental Earth and Soil Sciences major, students have access to diverse faculty and laboratories in several colleges on campus. California's Central Coast offers a diverse environmental and cultural setting for real-world training and experiences in environmental sciences.

Environmental Earth and Soil Sciences graduates are employed in careers in environmental consulting, carbon farming, natural resource inventory and assessment, environmental mitigation and clean-up, and environmental planning. Environmental Earth and Soil Sciences graduates possess an interdisciplinary understanding of how water, air,

and soil interact, as well as an ability to assess how the management of these critical natural resources impacts global environmental change.

In addition to the required major courses, students select courses from an expansive list of approved electives, or take a minor, or select one of the following concentrations.

Concentrations

Geology

Students learn the fundamentals of a broad variety of geologic subdisciplines, including mineralogy, petrology, seismology, stratigraphy, geochemistry, geomorphology and structural geology. Each of these fundamental subdisciplines are supported by curriculum that emphasizes methods of data collection, interpretation and professional communication of results. Upon completion of this concentration, students are able to critically evaluate geologic reports within the context of our evolving societal needs, and are prepared to pursue post graduate degrees in the geosciences and/or careers in the geotechnical industry. Completion of this concentration coupled with a BS degree in Environmental Earth and Soil Sciences qualifies a graduate to take the Geologist in Training examination (GIT) and become certified as a GIT, which can eventually lead to licensure as a Professional Geologist (PG).

Hydrology

Students learn the fundamentals of a broad variety of hydrologic subdisciplines including vadose zone hydrology, groundwater hydrology, soil erosion control, water quality, and watershed management. Each of these fundamental subdisciplines are supported by curriculum that emphasizes methods of data collection and interpretation, and professional communication of results. Upon completion of this concentration, students will be qualified to work in a water-related position for Federal and State agencies, private companies, and environmental consulting firms. Completion of the Hydrology Concentration meets the course requirements of the U.S. Office of Personnel Management (OPM) for employment as a Hydrologist (GS 1315)

BS Environmental Management and Protection

The BS in Environmental Management and Protection is an interdisciplinary course of study integrating the biophysical and social/economic/political sciences in sustainable natural resource management, protection, and conservation. The curriculum emphasizes an understanding of ecosystem structures and functions, sustainable management of natural systems, and the human and policy dimensions of global change. The major provides students with an integrated science and management background that enables systems-thinking, complex problem solving, and discovery of innovative solutions in a time of rapid environmental change.

Since environmental problems arise from human demands and stresses on the environment, solutions must focus on the human dimension of ecosystems. Thus, environmental management is the management of both people and resources to attain human goals while protecting environmental values in order to sustain natural systems. Knowledge of the social and political dimensions are balanced with study of economic and ecological theories applied to solving conflicts over environmental uses and impacts.

Graduates are prepared for a broad range of professional careers in land conservation and protection, environmental policy, environmental consulting, sustainability science and management, life cycle analysis,

environmental planning, environmental assessment and impact analysis, and natural resource management and stewardship.

The Environmental Management and Protection major is endorsed and supported by the California Association of Environmental Professionals (AEP), a professional association representing the full range of environmental professions in both private and public sectors.

In addition to the required major courses, students select courses from an expansive list of approved electives, or take a minor, or select one of the following concentrations.

Concentrations

Watershed Management and Hydrology

This concentration provides students a focused and encompassing program in watershed management, including a proficiency in watershed hydrology in forest ecosystems, Mediterranean ecosystems, rangeland hydrology, post-fire watershed evaluation, watershed and stream restoration, and urban/wildland hydrologic implications. Students pursuing this concentration can qualify as hydrologists under U.S. Government OPM guidelines (GS 1315).

Wildlife Biology Concentration

This specialized course of study prepares students for wildlife biology certification and employment in the fish and wildlife areas of law enforcement, management, and production.

BS Forest and Fire Sciences

The BS in Forest and Fire Sciences prepares students for exciting careers contributing to the betterment of society through the protection and sustainable management of our forests, including the role of fire as a management tool. Our forests have the greatest capacity of any ecosystem to store carbon and mitigate climate change if managed well. However, without proper management, forests are increasingly susceptible to disease and catastrophic fire events that are re-shaping the landscape and built environments. California and the world needs professionals trained to understand forest management and fire science in order to save lives and improve our environment. Cal Poly's Forest and Fire Sciences major meets this critical need.

Students in the Forest and Fire Sciences major may specialize in watershed management and hydrology, wildlife biology, or fire and fuels management. Optionally, students may select courses from approved electives that are categorized by career area from climate change science to environmental policy and management to geospatial technology to urban forestry.

Graduates qualify for such positions as: fire and fuels manager, forester, geospatial analyst, environmental planner and assessor, natural resource manager, urban forester, park administrator, watershed manager, hydrologist, consultant, and many other related environmental career areas. Cal Poly graduates are employed throughout the world by government, nonprofits, and industry through: managing and sustaining working forests; fire protection and stewardship of wildlands; implementing leading-edge strategies in forestry, land management, and conservation; and protecting and managing the wildland-urban interface.

The Forest and Fire Sciences major provides students with applied learning experiences at our Swanton Pacific Ranch. This 3,200 acre living and learning laboratory engages students in meaningful learn-by-doing opportunities to study the methods of resource conservation applied through sustainable management techniques in redwood forests, riverine

ecosystems, and expansive coastal grasslands overlooking the Monterey Bay National Marine Sanctuary.

The Society of American Foresters accredits the Forest and Fire Sciences major. Also, the U.S. Office of Personnel Management (OPM) recognizes that our graduates meet the classification of forester for federal employment.

In addition to the required major courses, students select courses from an expansive list of approved electives, or take a minor, or select one of the following concentrations.

Concentrations

Watershed Management and Hydrology

This concentration provides students a focused and encompassing program in watershed management, including a proficiency in watershed hydrology in forest ecosystems, Mediterranean ecosystems, rangeland hydrology, post-fire watershed evaluation, watershed and stream restoration, and urban/wildland hydrologic implications. Students pursuing this concentration can qualify as hydrologists under U.S. Government OPM guidelines (GS 1315). This concentration also meets the educational requirements for professional certification through the American Institute of Hydrology.

Wildlife Biology Concentration

This specialized course of study prepares students for wildlife biology certification and employment in the fish and wildlife areas of law enforcement, management, and production.

Wildland Fire and Fuels Management

Focused study on the management of fire and fuels on landscapes ranging from the wildlands to the urban interface. Emphasis on the technologies, issues and policies in managing fire, using fire as an ecosystem management tool and social and economic impacts of fire. Completion of this concentration meets the requirements of the Wildland Fire Practitioner Certification through the Association of Fire Ecology.

Environmental Soil Science Minor

Natural Resources Management & Environmental Sciences Department
Bldg. 180, Room 515
Phone: 805.756.1691
Email: cappel@calpoly.edu

Coordinator: Dr. Chip Appel

Students completing the minor gain skills in understanding and assessing the science and management of soils. Because soils are necessary for sustaining all living organisms, this minor is relevant to all students. Students will gain practical, meaningful, and hands-on experiences in both environmental and agricultural applications of the world's finite soil resources. This minor allows students the opportunity to relate their interests to the ecology, classification, mineralogy, chemistry, physics, and fertility/health parameters of soils.

Fire Ecology and Wildfire Hazard Planning Minor

Natural Resources Management & Environmental Sciences Department
Bldg. 180, Room 506

Phone: 805.756.5104
Email: cdicus@calpoly.edu

Coordinator: Dr. Chris Dicus

This minor prepares students for the diverse, multi-disciplinary expertise needed to address the growing wildfire threat that societies throughout the world are facing, with a particular focus on California as a model system. The career expertise required to address the increasing threat of catastrophic wildfire spans many disciplines. This minor represents a key entry point for many students to tailor their major program in a way that provides an option to apply their undergraduate training to the rapidly growing number of career opportunities around wildfire management and hazard planning. Core coursework will give students an understanding around how fuel, weather and environmental features influence fire behavior, and the contemporary techniques and technology to control wildfire, as well as an understanding of the role of fire in ecosystem management. Beyond these core courses, students will have an opportunity to select between either a wildfire ecology track, focused on hands on and practical knowledge around fire ecology and fuels management, or a hazard planning track, focused on key elements of hazard planning and mitigation in fire prone communities. The wildfire ecology track will help prepare students for work in fuels and ecosystem management to enhance fire resilience in city, county, state and federal forest, rangeland, shrubland and other open space, as well as prepare students to work in the private sector providing technological and capacity solutions to meet wildfire management needs of different agencies. The hazard planning track will help prepare students for a range of work in the public and private sector space, including the design of policies and government functions to address wildfire threat as well as around contemporary approaches to hazard planning and mitigation across different public sectors.

Minor Requirements (p. 135)

Indigenous Studies in Natural Resources and the Environment Minor

Natural Resources Management & Environmental Resources Department
Bldg. 180, Room 505
Phone: 805.756.2773
Email: pverma@calpoly.edu

Coordinator: Dr. Priya Verma

This interdisciplinary minor is sponsored by the Natural Resources Management and Environmental Sciences department in the College of Agriculture, Food and Environmental Sciences and the Ethnic Studies department in the College of Liberal Arts. The minor consists of innovative coursework and provides research opportunities that incorporate indigenous ecological knowledge in areas such as conservation biology, environmental biology, wildlife and fisheries sciences, forest resources management, environmental studies and environmental sciences: as well as agriculture, ethnic studies, geography, biology, and recreation, parks and tourism.

The Indigenous Studies in Natural Resources Management and the Environment minor aims to bring together principles of both Indigenous knowledge and Western science. Instruction in these two approaches will provide students with the necessary skills, practical research methods and critical thinking abilities for addressing complex environmental and health issues, and resource management problems facing both

Indigenous and non-Indigenous communities around the world. Contact the minor coordinator for more details.

Water Science

An interdisciplinary minor sponsored by the departments of BioResource and Agricultural Engineering, and Natural Resources Management and Environmental Sciences, that emphasizes one of three areas of study: irrigation, water policy, or watershed management. For more information, see the College of Agriculture, Food and Environmental Sciences (p. 60) section.

The department also participates in offering minors in Land Rehabilitation and Restoration Ecology, Rangeland Resources, Anthropology-Geography, and Geology. Please see College of Agriculture, Food and Environmental Sciences (p. 60), College of Liberal Arts (p. 268) or the Physics (p. 409) page for additional information.

Additional Minors

Geographic Information Systems for Agriculture

An interdisciplinary minor sponsored by the departments of BioResource and Agricultural Engineering, Natural Resources Management and Environmental Sciences, and Horticulture and Crop Science. For more information, see the College of Agriculture, Food and Environmental Sciences (p. 60) section.

Land Rehabilitation and Restoration Ecology

An interdisciplinary minor focusing on plant science, soil science, and ecology. It was created for students interested in rehabilitation and restoration of disturbed lands. For more information, see the College of Agriculture, Food and Environmental Sciences (p. 60) section.

Graduate Program

MS Environmental Sciences and Management

The Master of Science degree program in Environmental Sciences and Management (MSES) offers advanced study in a range of environmental science and management disciplines.

The purpose of the Master of Science in Environmental Sciences and Management program is to provide advanced education in management of the environment and natural resources. Advanced study in environmental science, management of the environment, quantitative and qualitative analysis, and communication is the core of the degree. The degree allows an emphasis in environmental policy, forest sciences, hydrology, soil science, and sustainability. Through the emphasis of study, students have flexibility in creating elective coursework to suit their professional goals. The culminating experience of the degree is a professional project or thesis that allows students to explore, seek solutions, or provide research on environmental challenges.

Additional Requirements:

- Students must have at least a 3.0 GPA in the final 90 quarter units of their undergraduate degree.
- Completion of 3 quarters or two semesters of any combination of chemistry, biology, ecology, physics, earth science, or atmospheric Science.
- Completes one quarter or one semester of Statistics and Calculus

- An applicant who lacks prerequisite coursework may be admitted as a conditionally classified student and must make up any deficiencies (12 unit limit) before advancement to classified graduate standing.
- Must have at least 3 letters of reference that can attest to the academic capabilities of the applicant.

BS Environmental Earth and Soil Sciences

Program Learning Objectives

1. Demonstrate critical thinking and problem solving skills.
2. Effectively communicate scientific and technical knowledge in a professional manner.
3. Demonstrate the ability to integrate and apply technical knowledge in the following key areas:
 - a. Geology & Climate – rock materials and processes of the lithosphere, plate tectonics; deformational histories, and past climates;
 - b. Soils & Water – morphology, ecology, chemistry, physics, and health;
 - c. Geography & Geospatial Technology – human cultural impacts, resource utilization trends and spatial patterns, geographic information systems and modeling;
 - d. Resource Management – effects of land management activities on, and restoration and rehabilitation of, soil and water resources.
4. Demonstrate proficiency in quantitative skills and information management specific to their discipline areas.
5. Exhibit an understanding of their professional and ethical responsibilities, including respect for diversity.
6. Promote life-long learning habits by exposing students to the discovery process of applied research and demonstration projects conducted by the faculty.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

NR 140	Careers in Natural Resources Management and Environmental Sciences	1
ERSC 144	Introduction to Earth Science	4
ERSC 223	Rocks and Minerals	4
ERSC 303	Soil Erosion and Water Conservation	4
ERSC/GEOG 333 or BRAE 345 or GEOG 325 or GEOG 350	Human Impact on the Earth ¹ Aerial Photogrammetry and Remote Sensing Climate and Humanity The Global Environment	3-4

or MATH 142	Calculus II

or STAT 217	Introduction to Statistical Concepts and Methods	
Concentration (32 units) or Approved Electives (20 units) in combination with Free Electives ^{6,7,8}		20-32
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		52
FREE ELECTIVES		
Free Electives		0-13
Total units		180-181

- ² Students in the Geology concentration must take ERSC 423 and GEOL 415 to meet requirements for this concentration.
- ³ Required in Major or Support; also satisfies General Education (GE) requirement.
- ⁴ Students in the Geology concentration need to take MATH 141 to meet prerequisites for courses in the concentration. Students interested in the Soil Geotechnical Studies Approved Electives area must take MATH 141 to meet prerequisites for courses in that area.
- ⁵ Students in the Geology concentration need to take PHYS 141 to meet prerequisites for courses in the concentration. Students interested in the Soil Geotechnical Studies Approved Electives area must take PHYS 141 to meet prerequisites for courses in that area.
- ⁶ Unless a concentration is declared, the default will be a combination of Approved Electives and Free Electives.
- ⁷ Students who do not declare a concentration are encouraged to use Approved Electives and Free Electives to earn a minor. See the below Approved Electives Guide for recommended minors.
- ⁸ If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Approved Elective.

Concentrations

- Geology (p. 124)
- Hydrology (p. 124)

Approved Electives Guide

Approved Electives are courses that support the below career areas. Refer to number(s) next to each course to identify which courses align with each of the career areas. Consultation with an advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

1. Climate Change Science
2. Environmental Mitigation Strategies
3. Environmental Policy and Management
4. Environmental Soil Science
5. Forest and Environmental Practices
6. Geospatial Technology
7. Soil Geotechnical Studies
8. Sustainable Agriculture
9. Urban Forestry

A student may earn one or more of the minors listed below through the appropriate selection of Approved Electives in combination with Free Electives (refer to advising materials for the minor). However, students in this major may not obtain minors in Environmental Soil Science or Geology as the subject areas in these minors are substantially covered in this major.

- Anthropology and Geography
- Biology
- Geographic Information Systems for Agriculture
- Indigenous Studies in Natural Resources and the Environment
- Sustainable Environments
- Water Science

Approved Electives

Select from the following:

¹ Students in the Geology concentration need to take MATH 142 to meet prerequisites for courses in the concentration. Students interested in the Soil Geotechnical Studies are encouraged to take MATH 142 to meet prerequisites for courses in that area. Students interested in taking NR 355 need to take BRAE 345 to meet prerequisites.

At least 8 units must be upper-division (300-400 level)

No more than 6 units of NR 339 may count towards the degree.

Courses used to meet a degree requirement cannot double count as an elective.

AG/PLSC 315	Principles of Organic Crop Production ⁸	BRAE/NR 247	Forest Surveying ⁵

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking ²	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	

Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C ³		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D ⁴	4
Upper-Division D ⁵		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Majors plus 4 units in GE) ¹		4
Total units		52

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Recommended course to satisfy GE Area A3: ENGL 147.
- ³ Recommended courses to satisfy GE Area Upper-division C: NR 360 or ENGL 316.
- ⁴ Recommended course to satisfy GE Area D2: GEOG 150.
- ⁵ Recommended courses to satisfy GE Area Upper-division D: BRAE 349, GEOG 308, or NR 323.

Geology Concentration

GEOL 301	Physical Models in the Geosciences	4
GEOL 303	Computation and Visualization in the Geosciences	3
GEOL 305	Seismology and Earth Structure	4
GEOL 309	Igneous Petrology	3
GEOL 311	Metamorphic Petrology	3
GEOL 330	Principles of Stratigraphy	4
GEOL/ERSC 416	Field-Geology Methods	4
GEOL/ERSC 417	Geologic Mapping	4
GEOL 420	Applied Geophysics	3
Total units		32

Hydrology Concentration

ERSC 442	Applied Environmental Groundwater Hydrology	4
or ERSC 443	Applied Environmental Contaminant Transport	

Select from the following:		4
MATH 142	Calculus II ¹	
MATH 162	Calculus for the Life Sciences II	
NR 320	Watershed Processes and Management	4
NR 420	Watershed Assessment and Protection	4
PHYS 122	College Physics II	4
or PHYS 142	General Physics II	
SS 431	Digital Soil Mapping	4
or SS 440	Forest and Range Soils	
Approved Electives ¹		
Select from the following:		8
BRAE 331	Irrigation Theory	
BRAE 340	Irrigation Water Management	
BRAE 345	Aerial Photogrammetry and Remote Sensing	
BRAE 435	Drainage	
BRAE 532	Water Wells and Pumps	
ERSC 423	Geomorphology	
ERSC 442	Applied Environmental Groundwater Hydrology	
ERSC 443	Applied Environmental Contaminant Transport	
NR 400	Special Problems for Advanced Undergraduates	
NR/CRP 408	Water Resource Law and Policy	
NR 422	Stream Measurements and Water Quality Monitoring	
NR/RPTA 472	Leadership Practice	
SS/BIO/NR 421	Wetlands	
SS 431	Digital Soil Mapping	
SS 440	Forest and Range Soils	
Total units		32

¹ If a course is taken to meet a Major requirement, it cannot be double-counted in the concentration.

BS Environmental Management and Protection

Program Learning Objectives

1. Demonstrate critical-thinking problem-solving skills.
2. Effectively communicate scientific and technical knowledge in a professional manner.
3. Demonstrate competency in scientific and technical knowledge related to environmental management in the following key areas:
 - a. Ecology and Biology – applied ecology to inform environmental impact analysis;
 - b. Measurement – identification of key ecosystem elements, indicators and range of variability; land and water quality indicators;
 - c. Management and Protection – developing alternatives and mitigation measures;

- d. Social, Economic, and Political – conflict management, CEQA (California Environmental Quality Act) and NEPA (National Environmental Policy Act) interpretation and analysis, i.e., environmental impact reports (EIR), environmental impact statements (EIS), and other environmental documents.
4. Demonstrate proficiency in quantitative skills and information management specific to their discipline areas.
 5. Exhibit an understanding of their professional and ethical responsibilities as sustainability managers, environmental managers, natural resources managers, forest managers, including respect for diversity.
 6. Promote life-long learning habits by exposing students to the discovery process of applied research and demonstration projects conducted by the faculty.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section for this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

NR 140	Careers in Natural Resources Management and Environmental Sciences	1
NR 142	Environmental Management	3
NR 208	Dendrology ^{1,2}	3-4

Concentration (41 units) or Approved Electives (29 units) in combination with Free Electives ^{6,7,8}		29-41
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		48
FREE ELECTIVES		
Free Electives		0-12
Total units		180-182

¹ Students in the Wildlife Biology concentration need to take BIO 161 and BIO 162 to meet prerequisites for courses in the concentration.

² Students in the Watershed Management and Hydrology concentration need to take GEOL 201 and NR 320 to meet prerequisites for courses in the concentration.

³ Required in Major or Support; also satisfies General Education (GE) requirement.

⁴ Students must choose to take either NR 425, NR 435, and NR 465 or NR 474 and NR 475.

⁵ Students in the Watershed Management and Hydrology concentration need to take MATH 161 to meet prerequisites for courses in the concentration.

⁶ Unless a concentration is declared, the default will be a combination of Approved Electives and Free Electives.

⁷ Students who do not declare a concentration are encouraged to use Approved Electives and Free Electives to earn one or more minors. See the below Approved Electives Guide for recommended minors.

⁸ If a course is taken to meet a Major or Support requirement, it cannot be double-counted in a concentration or as an approved elective.

Concentrations

- Watershed Management and Hydrology (p. 129)
- Wildlife Biology (p. 130)

Approved Electives Guide

Approved Electives are courses that support the below career areas. Refer to number(s) next to each course to identify which courses align with each of the career areas. Consultation with an advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

1. Climate Change Science
2. Environmental Mitigation Strategies
3. Environmental Policy and Management
4. Environmental Soil Science
5. Forest and Environmental Practices
6. Geology
7. Geospatial Technology
8. Sustainable Agriculture
9. Urban Forestry

Additionally, a student may earn one or more of the following minors through the appropriate selection of Approved Electives in combination with Free Electives (refer to advising materials for the minor):

- Agribusiness
- Anthropology and Geography
- Biology
- City and Regional Planning
- Entrepreneurship
- Environmental Soil Science
- Geographic Information Systems for Agriculture
- Geology
- Indigenous Studies in Natural Resources and the Environment
- Land Rehabilitation and Restoration Ecology
- Law and Society
- Political Science
- Spanish
- Sustainable Agriculture

- Sustainable Environments
- Water Science

Approved Electives

Select from the following:

At least 6 units must be upper-division (300-400 level). Additional units of upper-division coursework may be needed, depending on coursework taken in Major or Support.

If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Approved Elective.

AG/PLSC 315	Principles of Organic Crop Production ⁸
AG 339	Internship in Agriculture ⁸
AG/EDES/ENGR/ISLA/SCM/UNIV 350	The Global Environment ⁸

Any SCM course and any upper-division AG, ANT, BIO, BOT, BRAE, CHEM, CM, COMS, CRP, EDES, ERSC, GEOG, GEOL, JOUR, LA, MCRO, MSCI, NR, PHIL, PHYS, PLSC, POLS, PSY, SS, STAT, or UNIV courses

GE Electives (4 units in Major plus 4 units in GE) ²	4
Total units	48

- ¹ Recommended course to satisfy GE Area A3: ENGL 147.
- ² Required in Major or Support; also satisfies General Education (GE) requirement.
- ³ Recommended courses to satisfy GE Area Upper-division C: NR 360 or ENGL 316.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking ¹	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ²	0
B2	Life Science (4 units in Major) ²	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ²	0
Upper-Division B (4 units in Major) ²		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C ³		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D (4 units in Major) ²		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		

Watershed Management and Hydrology Concentration - Environmental Management and Protection

CHEM 128	General Chemistry for Agriculture and Life Science II	4
CHEM 312	Organic Chemistry: Fundamentals and Applications	5
ERSC 442	Applied Environmental Groundwater Hydrology	4
or ERSC 443	Applied Environmental Contaminant Transport	
MATH 162	Calculus for the Life Sciences II	4
NR 420	Watershed Assessment and Protection	4
PHYS 122	College Physics II	4
SS 321	Soil Morphology	4
SS 440	Forest and Range Soils	4
or SS 431	Digital Soil Mapping	
Approved Electives ^{1,2}		
Select from the following:		8
BRAE 340	Irrigation Water Management	
BRAE 345	Aerial Photogrammetry and Remote Sensing	
BRAE 532	Water Wells and Pumps	
ERSC 303	Soil Erosion and Water Conservation	
ERSC 423	Geomorphology	
ERSC 442	Applied Environmental Groundwater Hydrology	
ERSC 443	Applied Environmental Contaminant Transport	
GEOL 241	Physical Geology Laboratory	
NR 260	Forest Operations	
NR 315	Forest Mensuration	
NR 339	Internship in Forest and Natural Resources	
NR 400	Special Problems for Advanced Undergraduates	
NR/CRP 408	Water Resource Law and Policy	
NR 413	Agricultural Law	
NR 418	Applied GIS	
NR/BIO/SS 421	Wetlands	
NR 422	Stream Measurements and Water Quality Monitoring	

NR 472	Leadership Practice
NR 474	Forest Stewardship Practices
SS 431	Digital Soil Mapping
SS 440	Forest and Range Soils
STAT 313	Applied Experimental Design and Regression Models

Total units **41**

¹ If a course is taken to meet a Major requirement, it cannot be double-counted as an Approved Elective for the concentration.

² Consultation with an advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

Wildlife Biology Concentration - Environmental Management and Protection

ASCI 239	Principles of Rangeland Management	4
BIO 321	Mammalogy	4
BIO 323	Ornithology	4
BIO 327	Wildlife Ecology	4
BIO 363 or BIO 444	Principles of Conservation Biology Population Ecology	4
BIO 427	Wildlife Management	4
BOT 313	Taxonomy of Vascular Plants	4
BOT 433	Field Botany: California Plant Diversity	5

Approved Electives

Select from the following: **8**

BIO 150	Diversity and History of Life
BIO 263	Introductory Ecology and Evolution
BIO 322	Ichthyology
BIO 324	Herpetology
BIO 329	Vertebrate Field Zoology
BIO 330	Extended Field Biology Activity
BIO 335	General Entomology
BIO 336	Invertebrate Zoology
BIO 363	Principles of Conservation Biology
BIO 400	Special Problems for Advanced Undergraduates

BIO 427	Wildlife Management
BIO 429	Parasitology
BIO 434	Environmental Physiology
BIO 442	Behavioral Ecology
BIO 444	Population Ecology
BOT 326	Plant Ecology
NR 400	Special Problems for Advanced Undergraduates
PLSC 313	Agricultural Entomology

Total units **41**

BS Forest and Fire Sciences

Program Learning Objectives

- Demonstrate critical-thinking problem-solving skills.
- Effectively communicate scientific and technical knowledge in a professional manner.
- Demonstrate competency in scientific and technical knowledge related to forestry, fire and fuels management, and environmental management in the following key areas:
 - Forest Ecology and Biology – watershed, vegetation, and stand classification; analysis and prediction of stand dynamics; disturbance ecology;
 - Measurement of Forest Resources – forest sampling and inventory, biometrics, GPS, GIS, remote sensing;
 - Management of Forest Resources – develop vegetation, fuel, stand, landscape prescriptions and management plans; environmental impact analysis, profitability and valuation analysis;
 - Forest Resource Policy and Administration – present and defend management plans, work in interdisciplinary (i.e., ID) teams, apply forest policies and regulations to management decisions.
- Demonstrate proficiency in quantitative skills and information management specific to their discipline areas.
- Exhibit an understanding of their professional and ethical responsibilities as forest managers, natural resources managers, environmental managers, including respect for diversity.
- Promote life-long learning habits by exposing students to the discovery process of applied research and demonstration projects conducted by the faculty.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, student must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

NR 140	Careers in Natural Resources Management and Environmental Sciences	1
NR 141	Introduction to Forest Ecosystem Management	3
NR 204	Wildland Fire Control	3
NR 208	Dendrology	4
NR 215	Land and Resource Measurements	1
NR/LA 218	Introduction to Geographic Information Systems (GIS)	3
NR 260	Forest Operations	4
NR 305	Forest Ecology and Silvics	4
NR 307	Fire Ecology	3

NR 308	Fire and Society (Upper-Division D) ¹	4
NR 310	Global Climate Change (Upper-Division B) ¹	4
NR 315	Forest Mensuration	4
NR 320	Watershed Processes and Management	4
NR 326	Natural Resources Economics and Valuation	4
NR 335	Conflict Management in Natural Resources	4
NR 350	Urban Forestry	3
NR 365	Silviculture and Fuels Management	4
NR 402	Forest Health	4
NR 414	Sustainable Forest Management	4
Select from the following: ²		12
NR 416 & NR 435 & NR 465	Environmental Impact Analysis and Management and Environmental Policy Analysis and Senior Project - Ecosystem Management	
NR 474 & NR 475	Forest Stewardship Practices and Senior Project - Forest Stewardship	

Concentration (26-28 units) or Approved Electives (14 units) in combination with Free Electives ^{3,4} 14-28

SUPPORT COURSES

ASCI 239	Principles of Rangeland Management ⁵	4
or BIO 227	Wildlife Conservation Biology	
or BIO 363	Principles of Conservation Biology	
or BIO 427	Wildlife Management	
or PHYS 121	College Physics I	
BOT 121	General Botany (B2 & B3) ¹	4
BRAE 237	Introduction to Engineering Surveying	2-4
or BRAE 239	Engineering Surveying	
BRAE 345	Aerial Photogrammetry and Remote Sensing	3
CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	4
MATH 161	Calculus for the Life Sciences I (B4) ^{1,6}	4
or MATH 221	Calculus for Business and Economics	
SS 120	Introductory Soil Science	4
STAT 217	Introduction to Statistical Concepts and Methods (GE Electives) ¹	4
or STAT 218	Applied Statistics for the Life Sciences	

GENERAL EDUCATION (GE)

(See GE program requirements below.) 48

FREE ELECTIVES

Free Electives 0-12

Total units 180-184

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Students must choose to take either NR 416, NR 435, and NR 465 or NR 474 and NR 475.

³ Unless a concentration is declared, the default will be a combination of Approved Electives and Free Electives.

⁴ Students who do not declare a concentration are encouraged to use Approved Electives and Free Electives to earn a minor. See the below Approved Electives Guide for recommended minors.

⁵ Students in the Watershed Management and Hydrology concentration need to take PHYS 121 and students in the Wildlife Biology concentration need to take BIO 427 to meet prerequisites for courses in the concentration.

⁶ Students in the Watershed Management and Hydrology concentration need to take MATH 161 to meet prerequisites for courses in the concentration.

Concentrations

- Watershed Management and Hydrology (p. 134)
- Wildlife Biology (p. 134)
- Wildland Fire and Fuels Management (p. 135)

Approved Electives Guide

Approved Electives are courses that support the below career areas. Refer to number(s) next to each course to identify which courses align with each of the career areas. Consultation with an advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

1. Climate Change Science
2. Environmental Mitigation Strategies
3. Environmental Policy and Management
4. Environmental Soil Science
5. Forest and Environmental Practices
6. Geology
7. Geospatial Technology
8. Sustainable Agriculture
9. Urban Forestry

Additionally, a student may earn one or more of the following minors through the appropriate selection of Approved Electives in combination with Free Electives (refer to advising materials for minor):

- Anthropology and Geography
- Biology
- Geographic Information Systems for Agriculture
- Geology
- Indigenous Studies in Natural Resources and the Environment
- Sustainable Environments
- Water Science

Approved Electives

Select from the following:

If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Approved Elective.

AG/PLSC 315 Principles of Organic Crop Production ⁸

AG 339	Internship in Agriculture ⁸	CRP 336	Introduction to Environmental Planning ^{5,7}

Any SCM course and any upper-division AG, ANT, BIO, BOT, BRAE, CHEM, COMS, CRP, EDES, ERSC, GEOG, GEOL, JOUR, LA, MCRO, NR, PLSC, RPTA, SS or UNIV courses

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking ¹	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ²	0
B2	Life Science (4 units in Support) ²	0
B3	One lab taken with either a B1 or B2 course	

B4	Mathematics/Quantitative Reasoning (4 units in Support) ²	0
Upper-Division B (4 units in Major) ²		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C ³		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D (4 units in Major) ²		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ²		4
Total units		48

¹ Recommended course to satisfy GE Area A3: ENGL 147.

² Required in Major or Support; also satisfies General Education (GE) requirement.

³ Recommended course to satisfy GE Area Upper-division C: NR 360 or ENGL 316.

Watershed Management and Hydrology Concentration - Forest and Fire Sciences

CHEM 128	General Chemistry for Agriculture and Life Science II	4
MATH 162	Calculus for the Life Sciences II	4
NR 363	Undergraduate Seminar	2
NR 420	Watershed Assessment and Protection	4
PHYS 122	College Physics II	4
SS 321	Soil Morphology	4
Approved Electives ^{1,2}		
Select from the following:		4
BRAE 340	Irrigation Water Management	
BRAE 532	Water Wells and Pumps	

CHEM 312	Organic Chemistry: Fundamentals and Applications	
ERSC 303	Soil Erosion and Water Conservation

SS 440	Forest and Range Soils	
Any CSU-transferable course recognized by Cal Regional Fire Academy		
Any CSU-transferable fire technology course		
Any CSU-transferable emergency medical technician course		
Total units		27

¹ If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Approved Elective for the concentration.

² Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

Environmental Soil Science Minor

Required Courses

ERSC 303	Soil Erosion and Water Conservation	4
SS 120	Introductory Soil Science	4
SS 221	Soil Health and Plant Nutrition	4
or ERSC 223	Rocks and Minerals	
SS 321	Soil Morphology	4

Approved Electives

Select from the following:		11-14
BIO/NR/SS 421	Wetlands	
ERSC 423	Geomorphology	
ERSC 442	Applied Environmental Groundwater Hydrology	
ERSC 443	Applied Environmental Contaminant Transport	
SS 322	Soil Plant Relationships	
SS 422	Soil Ecology	
SS 423	Environmental Soil and Water Chemistry	
SS 424	Environmental Soil Physics - Senior Project	
SS 431	Digital Soil Mapping	
SS 440	Forest and Range Soils	
SS 444	Soil Judging	

Total units **27-30**

Fire Ecology and Wildfire Hazard Planning Minor

Required Courses

NR 204	Wildland Fire Control (Required) ¹	3
NR 218	Introduction to Geographic Information Systems (GIS)	3-4
or NR 317	The World of Spatial Data and Geographic Information Technology	
or CRP 457	GIS Applications in Planning	
or GEOG 218	Applications in GIS	
NR 308	Fire and Society	4
NR 312	Technology of Wildland Fire Management	4
NR 340	Wildland Fire Management	3-4
or ME 361	Fundamentals of Fire Protection Engineering	
Select the Fire Ecology Track or the Fire Protection Track ²		10-11

Fire Ecology Track

NR 307	Fire Ecology	
Select 7-8 units from the following:		
NR 305	Forest Ecology and Silvics	
NR 306	Natural Resource Ecology and Habitat Management	

NR 310	Global Climate Change
NR 402	Forest Health
NR 416	Environmental Impact Analysis and Management
SS 431	Digital Soil Mapping
SS 440	Forest and Range Soils
ASCI 239	Principles of Rangeland Management
ASCI 370	Rangeland Improvements
ASCI 372	California Rangeland & Ranch Resource Management
BIO 263	Introductory Ecology and Evolution
BIO 446	Ecosystem Ecology
BIO 447	Spatial Ecology
Fire Protection Track	
NR 455	Wildland-Urban Fire Protection
Select 6-7 units from the following: ³	
CRP 212	Introduction to Urban Planning
CRP 351	Introduction to Emergency Management in California
CRP 440	Climate Action Planning
CRP 458	Hazard Mitigation Planning & Resilient Design
NR 401	Disaster Recovery

Total units **27-30**

¹ CSU-transferable Firefighter 1 Academy by accredited Fire Protection Technology Associates degree programs or CSU-transferable Fire Academy may be substituted for NR 204.

² At least half of the units completed for the minor must be upper-division (300-400 level).

³ Up to 8 units of CSU-transferable Firefighter 1 Academy by accredited Fire Protection Technology Associates degree programs or CSU-transferable Fire Academy may substitute for the Fire Protection Track.

Indigenous Studies in Natural Resources and the Environment Minor

Required Courses

ES 253	Introduction to American Indian Studies	4
ES/NR 360	Ethnicity and the Land	4
NR 141	Introduction to Forest Ecosystem Management	3
or NR 142	Environmental Management	

Emphasis

Select from the following:		8
ERSC/GEOG 325	Climate and Humanity	
ES 321	Native Americans in Popular Culture	
ES/NR 406	Indigenous Peoples and International Law and Policy	
NR/ES 308	Fire and Society	

NR 323	Human Dimensions in Natural Resources Management
NR 335	Conflict Management in Natural Resources
PHIL 340	Environmental Ethics

Approved Electives¹
 At least 4 units must be upper-division (300-400 level).
 Select from the following: 8

Ethnic Studies	
ES/CRP 215	Planning for and with Multiple Publics
ES 255	Introduction to Latino/a/x Studies
ES 321	Native Americans in Popular Culture
ES/ARCH 326	Native American Architecture and Place
ES 380	Critical Race Theory
ES 381	The Social Construction of Whiteness
ES/NR 406	Indigenous Peoples and International Law and Policy

Natural Resource Management and Environmental Sciences	
ERSC/GEOG 250	Physical Geography
ERSC 303	Soil Erosion and Water Conservation
ERSC/GEOG 325	Climate and Humanity
ERSC/GEOG 333	Human Impact on the Earth
ERSC/GEOL 417	Geologic Mapping
NR 215	Land and Resource Measurements
NR/LA 218	Introduction to Geographic Information Systems (GIS)
NR 260	Forest Operations
NR 306	Natural Resource Ecology and Habitat Management
NR 307	Fire Ecology
NR/ES 308	Fire and Society
NR 312	Technology of Wildland Fire Management
NR 314	Environmental Life-Cycle Analysis
NR 320	Watershed Processes and Management
NR 321	Water Resources Technology and Society
NR 323	Human Dimensions in Natural Resources Management
NR 326	Natural Resources Economics and Valuation
NR 335	Conflict Management in Natural Resources
NR 340	Wildland Fire Management
NR/CRP 404	Environmental Law
NR 408	Water Resource Law and Policy
NR/BIO/SS 421	Wetlands
SS 120	Introductory Soil Science
SS 321	Soil Morphology

Additional Electives

AG 350	The Global Environment
AG 360	Holistic Management
ANT 201	Cultural Anthropology
ANT 312	Introduction to Cultural Resources Management
ANT 320	California's Native Past
ANT 330	Indigenous South Americans
ANT 415	Native American Cultures
BIO 114	Plant Diversity and Ecology
BIO 227	Wildlife Conservation Biology
BIO 327	Wildlife Ecology
BIO 363	Principles of Conservation Biology
BOT 311	Plants, People and Civilization
ENGL 346	Ethnic American Literature
ENGL 380	Literary Themes
FSN 250	Food and Nutrition: Culture and Customs
HIST 208	Survey of California History
ISLA 330	Cal Poly Land: Nature, Technology, and Society
LA 220	Landscape Ecology: Concepts, Issues, and Interrelationships
LA 330	Cultural Landscapes: People, Places and Ethical Decisions
PHIL 340	Environmental Ethics
POLS 325	Global Political Issues
RPTA 302	Environmental and Wilderness Education
RPTA 413	Tourism and Protected Area Management
SPAN 351	Chicano/Latino Writers in the United States
SOC 315	Global Race and Ethnic Relations
Total units	27

4. Communicate research or professional project outcomes effectively using oral, written and digital media communication appropriate for the discipline.
5. Synthesize and communicate core knowledge content contained within at least one environmental science sub-discipline.
6. Apply scientific knowledge to the management of environmental problems.
7. Demonstrate ethical reasoning and choose an appropriate course of action based on ethical standards in the research discipline and the research process in general, including publication and intellectual property.
8. Analyze, interpret and explain how environmental, economic, and social systems interact to promote the sustainable management of environmental and natural resources.

Research Skills

ESCI 501	Research Planning	4
ESCI 502	Research Methods and Data Analysis	4
ESCI 581	Graduate Seminar in Environmental Sciences	2

Select one of the following options: 11

ESCI 599 & ESCI 500	Thesis and Individual Study ¹	
OR		

ESCI 596 & ESCI 500	Environmental Sciences and Management Project and Individual Study ²	
---------------------	---	--

Environmental Sciences

ESCI 550	Advanced Environmental Science	4
----------	--------------------------------	---

Environmental Management

ESCI 590	Advanced Environmental Management	4
----------	-----------------------------------	---

Approved Electives

Electives ³		16
------------------------	--	----

Total units 45

¹ Consultation with the minor advisor is desirable and recommended in selecting classes. If any of these courses is taken to meet a Major or Support requirement in the degree, it cannot be double-counted as an Approved Elective.

¹ Students in the research thesis option take 9 units of ESCI 599 and 2 units of ESCI 500.

² Students in the professional project option take 6 units of ESCI 500.

³ Students in the research thesis option need to consult with their research supervisor for the selection of electives. Students in the professional project option need to consult with the graduate program coordinator for the selection of electives.

MS Environmental Sciences and Management

Program Learning Objectives

Graduates of the MS in Environmental Science and Management will be able to:

1. Apply appropriate research methods for data collection, analyses, and communication of environmental science and management problems.
2. Analyze a research problem or objective/hypothesis (knowledge gap) and develop a research plan to address the problem or objective/hypothesis.
3. Execute a research plan (research design, data collection, analyses, and communication) or professional project plan to completion.

Plant Sciences

Agricultural Sciences Bldg. (11), Room 230
Phone: 805.756.1237
<https://aepe.calpoly.edu/>

Department Head: Scott Steinmaus

Academic Programs

Program name	Program type
Plant Sciences	BS
Crop Science	Minor
Fruit Science	Minor
Landscape Horticulture	Minor
Plant Protection	Minor
Sustainable Agriculture	Minor

The department offers the Plant Sciences major leading to the Bachelor of Science degree. Within this major are three concentrations: Environmental Horticultural Science, Fruit and Crop Science, and Plant Protection Science. Each concentration is well-grounded in the sciences and designed to prepare students for many attractive career opportunities.

Experiential Learning Opportunities and Facilities

The Plant Sciences Department has well-equipped laboratories for instruction in plant biotechnology, insect and weed pest management, postharvest technology, plant production, and landscape horticulture, including CAD capabilities and plant materials.

Students have hands-on experiences in the production and marketing of landscape and ornamental plants using comprehensive facilities at the 16-acre Environmental Horticulture Unit. This unit includes 35,000 square feet of greenhouses, a 5,000 square-foot retractable roof greenhouse, 7,500 square feet of shade houses, an extensive field container growing area, and a five-acre arboretum. Additionally, there are six horticulture laboratories. The Leaning Pine Arboretum and Gardens is an outdoor teaching laboratory while the 200 acres of landscaped campus are planted with many interesting and unusual trees and shrubs from all over the world, as well as California natives.

The Crops Unit has 70 acres of productive citrus, avocados, grapes, deciduous fruit trees, and berries, with additional nonbearing acreage for instructional use. There are approximately 35 acres of annual vegetable and forage crops, of which eleven acres are certified for organic production. There is a modern building containing two teaching labs with prep rooms, two greenhouses, coolers, a hydroponic vegetable production facility and a state-of-the-art fruit and vegetable processing line.

The technological aspects of instruction are enhanced by an array of equipment required in crop and fruit production systems, postharvest handling, biotechnology, seed processing, pesticide application, nursery and greenhouse operation, and landscape construction. Field trips supplement instruction and are encouraged for many classes.

Students are encouraged to gain experience participating in the Enterprise project program or by working on the Department's production units. Enterprise projects are run under faculty supervision but are student operated. These projects provide students with a "no risk" glimpse of a commercial plant production. The Department offers Enterprise projects in the production of vegetables, citrus, avocados,

deciduous fruit and nut crops, floricultural crops, nursery plants, and forages. Available marketing outlets range from contract sales of vegetable seeds, wholesaling to area supermarkets, and direct marketing at local farmers' markets, garden centers, florist shops, and through campus outlets. Certified organic produce is marketed through weekly Farmers' Markets or is sold to local restaurants and retailers.

The Department supports co-curricular activities for its students, including two student clubs: the Crops Club and the Horticulture Club. Student teams in flower judging, floral design and the landscape industry continue to place or win at national championships.

Undergraduate Programs

BS Plant Sciences

The Plant Sciences Department at Cal Poly offers students an opportunity not just to learn, but to learn-by-doing. Our students benefit from a broad spectrum of opportunities ranging from hands-on experiences in our fields, groves, nurseries, and greenhouses to real world application through internships and other collaborations with our industry partners. We also excel in providing a foundational plant science background and instilling a passion for plants, as we produce the next generation of leaders in the agricultural and environmental plant sciences.

Students in this major begin with core courses that provide a thorough introduction to the various concentrations. Each concentration, in turn, has required courses, which may be shared by other concentrations. In their first year, students explore curricular and professional opportunities to enable them to choose a concentration. In consultation with professional and faculty advisors, students have the flexibility to select electives within the concentrations according to their career goals and interests.

Internships are readily available to students and are highly recommended. Interns are typically placed with private industry and public facilities all across the United States but may also take place in foreign countries.

Over \$100,000 in scholarships are available to students as are several undergraduate student assistantships which are sponsored by industry.

Program alumni are employed nationally and internationally and are often leaders in their industries. Graduates of the department are in great demand. Typically there are more internship and job opportunities than there are students to fill them.

Concentrations

Each concentration offers introductory, intermediate and advanced classes. The concentrations offer their own course of study (including required courses and electives) as well as opportunities for cross-training and multi-disciplinary learning.

Environmental Horticultural Science

This concentration offers students a comprehensive preparation for positions in the nursery, turf, greenhouse, landscape, and floriculture industries, including public horticulture. Graduates are employed as business owners, growers, managers, researchers, educators, arboreta and botanical garden directors, landscape contractors and designers, landscape management professionals, pest control advisors, and park, sports field and golf course superintendents. The curriculum stresses production and marketing of nursery plants, fresh flowers, and flowering and foliage plants, landscape contracting, design, installation

and management, turf installation and management, integrated pest management, and horticultural education, native plant restoration, green roofs and walls, and the public display of plants.

Fruit and Crop Science

The Fruit and Crop Science concentration provides students with detailed knowledge of the production of tree fruits and nuts, grapes, small fruits, vegetables and other row crops, and forages. The concentration details factors influencing the growth, development, and productivity of these crops (e.g., site selection, cultivar selection, field and plant establishment, pest management, harvesting, and postharvest handling). The concentration also focuses on ongoing and newly emerging specialty industries and concerns such as beekeeping, postharvest technology, plant breeding and biotechnology, integrated pest management, and precision agriculture.

Plant Protection Science

Approximately one-third of the world's food crops are destroyed each year by insects, rodents, diseases and other pests. Finding ways to reduce these losses is the challenge of the plant protection specialist. In this concentration, students learn a broad range of pest management subjects including entomology, plant pathology, weed control and integrated pest management. Students develop an understanding of crop production principles, ecology, biotechnology, pesticide toxicology and environmental science. As environmental regulations continue to increase, employment opportunities will grow for those holding professional licenses, and this concentration prepares students to take the California Pest Control Advisor (PCA) and Certified Crop Advisor (CCA) license exams.

Crop Science Minor

Designed for students majoring in related academic disciplines who desire careers in crop production or its associated industries. The minor offers a broad-based knowledge of the science and technology of agronomy and vegetable production, especially as practiced in California. Not open to Plant Sciences majors concentrating in Fruit and Crop Science or Plant Protection Science.

Fruit Science Minor

The minor is designed for students majoring in related academic disciplines who desire to seek careers in fruit production or its associated industries. The minor offers a broad-based knowledge of the science and technology of fruit and nut production. Not open to Plant Sciences majors concentrating in Fruit and Crop Science or Plant Protection Science.

Landscape Horticulture Minor

The minor provides students with an understanding of the landscape horticultural industry and provides basic skills to understand the design, installation, and maintenance of landscapes. Students develop a knowledge of landscape plants and plant care as well as the basics of landscape contracting, including construction processes and materials used in the landscape industry. Students may learn advanced skills and concepts in the areas of turfgrass for golf course/sports field applications, design/build, plant care and arboriculture. Not open to Plant Sciences majors concentrating in Environmental Horticultural Science.

Plant Protection Minor

This program emphasizes both plant protection and plant production. Within the plant protection field of study, the student is exposed to a broad range of pest management subjects including entomology, plant pathology, and weed control. Within the production area the student may emphasize fruit production, crop production, ornamental horticulture, or natural resource management. Not open to Plant Sciences majors.

Interdisciplinary Minors

The department participates in offering interdisciplinary minors in Geographic Information Systems for Agriculture, Land Rehabilitation, and Sustainable Agriculture. Please see College of Agriculture, Food and Environmental Sciences (p. 60) section for more information.

Graduate Programs

Cal Poly offers a Master of Science degree in Agriculture with specializations in Crop Science, Environmental Horticultural Science, and Plant Protection Science, among others. Please refer to the MS Agriculture (p. 61) section of the College of Agriculture, Food and Environmental Sciences.

BS Plant Sciences

Program Learning Objectives

1. Demonstrate technical competence in their concentration by identifying the majority of globally important food, and/or ornamental plants and demonstrating applications of theoretical sciences to their production, maintenance and post-harvest handling.
2. Effectively evaluate and adapt basic cultural practices, economic uses, and environmental interactions in the production of food, fiber, or ornamental plants.
3. Assess and implement appropriate sustainable growing and/or horticultural design practices based on region and microclimate, especially as they relate to water, soil and other natural resources.
4. Make informed and ethical decisions regarding environmental, social, and economic impacts of horticultural and agricultural activities and will contribute to their professions' continued relevancy by identifying, evaluating and responding to changing public perceptions, governmental regulations and industry challenges.
5. Practice a range of complex problem-solving exercises and excel in diagnosing and resolving plant health issues in outdoor and enclosed plant production systems.
6. Organize, synthesize, evaluate, and reconfigure information about complex, multivariate, living systems to gain new insights and communicate their findings to multiple stakeholder groups clearly, scientifically, and ethically.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation section of this catalog, including:

- 60 units upper-division
- GWR
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

PLSC 101	Orientation to Horticulture and Crop Science	1
PLSC 120	Principles of Horticulture and Crop Science	4
PLSC 124	Plant Propagation	4
PLSC 304	Introduction to Plant Breeding	4
PLSC 313	Agricultural Entomology	4
PLSC 321	Weed Biology and Management	4
PLSC/BOT 323	Plant Pathology	4
PLSC 350	Abiotic Plant Problems	4
PLSC 351	Experimental Techniques and Analysis	4
PLSC 410	Crop Physiology	4
PLSC 461	Senior Project I	2
PLSC 462	Senior Project II	2
BOT 121	General Botany (B2 & B3) ¹	4
SS 120	Introductory Soil Science	4

Concentration

(See list of Concentrations below) 46

SUPPORT COURSES

BRAE 340	Irrigation Water Management (Upper-Division B) ¹	4
CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	4

GENERAL EDUCATION (GE)

(See GE program requirements below.) 52

FREE ELECTIVES

Free Electives 5

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Concentrations (select one)

- Environmental Horticultural Science (p. 141)
- Fruit and Crop Science (p. 141)
- Plant Protection Science (p. 142)

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
	Upper-Division B (4 units in Support) ¹	0
Area C	Arts and Humanities	
	Lower-division courses in Area C must come from three different subject prefixes.	
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
	Lower-Division C Elective - Select a course from either C1 or C2	4
	Upper-Division C	4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
	Upper-Division D	4
Area E	Lifelong Learning and Self-Development	
	Lower-Division E	4
Area F	Ethnic Studies	
F	Ethnic Studies	4
	GE Electives in Areas B, C, and D	
	Select courses from two different areas; may be lower-division or upper-division courses.	
	GE Electives (4 units in Support plus 4 units in GE) ¹	4
Total units		52

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² A maximum of 2 units of PLSC 200 and/or a maximum of 2 units of PLSC 400 may count towards Approved Electives.

³ A maximum of 4 units of PLSC 339 may count towards Approved Electives.

Environmental Horticulture Science Concentration

PLSC 123	Landscape Installation and Maintenance	4
PLSC 127	Horticulture and Landscape Design	4
PLSC 233	Plant Materials I	4
PLSC 234	Plant Materials II	4
PLSC 245	Horticultural Production Techniques	4

Academic Programs

Program name	Program type
Wine and Viticulture	BS

Professional positions within the grape and wine industry are multi-dimensional, where winemakers and winegrape-growers work together with wine marketing and sales personnel. To develop successful strategies, management teams need to understand all aspects of wine.

The WVIT major provides a unique interdisciplinary learning experience, combining a solid foundation in winegrape production, winemaking, and wine business with a concentration in enology, viticulture or wine business. With a campus located in the heart of California's Central Coast wine country, Cal Poly students have the added benefit of gaining hands-on experience at one of more than 400 local vineyards and wineries. The WVIT major is based on fundamental and applied sciences, modern agribusiness principles, and appropriate social sciences. The curriculum encompasses winegrape cultivation, enology, sensory science, and wine business and fosters an academic alliance among production agriculture, food -science, and agricultural business interests to provide an academic understanding of the "vine to glass" philosophy.

Cal Poly has a 14-acre campus vineyard, a state-of-the-art facility, the JUSTIN & J. Lohr Center for Wine and Viticulture and a wine sales program that provide students the opportunity to practice our "learn-by-doing" method of education.

Undergraduate Program BS Wine and Viticulture

The major is based on fundamental and applied sciences, modern agribusiness principles, and appropriate social sciences. The curriculum encompasses winegrape cultivation, enology, and wine business and fosters an academic alliance among production agriculture, food science, and agricultural business interests to provide an academic understanding of the "vine to glass".

Concentrations

Enology

The science of winemaking and its creative and practical application. Students monitor and assess wines and winemaking choices using sensory, chemical and microbiological analyses. Graduates are able to make creative winemaking decisions, manage a winery and provide successful solutions to winemaking challenges.

Viticulture

Intensive training in all aspects of quality wine grape production. Students learn site evaluation and vine-yard development, disease and pest management, sustain-ability, and state-of-the-art cultural practices. Graduates typically become vineyard managers, pest control advisors, or vineyard owners.

Wine Business

Students learn financial management, principles of vineyard and winery operations, strategic planning, branded wine marketing, packaging, wine consumer behavior, and government compliance. Graduates are prepared for a variety of wine industry careers, with many planning to operate vineyards or wineries of their own.

Graduate Program

Cal Poly offers a Master of Science degree in Agriculture in which students can choose a thesis topic in enology, viticulture or wine business. Please refer to the MS Agriculture (p. 61) section of the College of Agriculture, Food and Environmental Sciences.

BS Wine and Viticulture Program Learning Objectives

1. An understanding of the fundamental principles of wine grape growing, winemaking, and wine business, both domestically and globally, with in-depth knowledge in a chosen sub-discipline (viticulture, enology, or wine business).
2. Development of the ability to think critically and creatively, analyze and interpret data, and make reasoned and informed decisions.
3. Development of effective leadership skills, and strong written and oral communication skills.
4. An understanding of legal and environmental issues, and sustainability principles, within the wine industry.
5. A high commitment and respect for cultural diversity.
6. Strong interpersonal skills and an ability to collaborate with other wine industry professionals.
7. Create the desire to engage in lifelong learning.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation section of this catalog, including:

- 60 units upper-division
- GWR
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

WVIT 102	Global Wine and Viticulture	4
WVIT 202	Fundamentals of Enology	4
WVIT 233	Basic Viticulture	4
WVIT 331	Advanced Viticulture - Fall	4
WVIT 339	Internship Wine and Viticulture	4
WVIT 343	Branded Wine Marketing	4
WVIT 423	Wine Law and Compliance	4
WVIT 442	Sensory Evaluation of Wine	4
WVIT 463	Issues, Trends and Careers in the Wine Industry	2
AGB 214	Agribusiness Financial Accounting	4
BOT 121	General Botany (B2 & B3) ¹	4

BRAE 340	Irrigation Water Management (Upper-Division B) ¹	4
CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	4
ECON 222	Macroeconomics (D2) ¹	4
MATH 161	Calculus for the Life Sciences I (B4) ¹	4
or MATH 141	Calculus I	
or MATH 221	Calculus for Business and Economics	
SS 120	Introductory Soil Science	4
STAT 218	Applied Statistics for the Life Sciences (GE Electives) ¹	4
Concentration courses (see below)		58-60
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		48
FREE ELECTIVES		
Free Electives		6-8
Total units		180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Concentrations (select one)

- Enology (p. 145)
- Viticulture (p. 146)
- Wine Business (p. 146)

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		

C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Major) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		48

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Enology Concentration

CHEM 128	General Chemistry for Agriculture and Life Science II	4
CHEM 129	General Chemistry for Agriculture and Life Science III	4
CHEM 312	Organic Chemistry: Fundamentals and Applications	5
CHEM 314	Biochemistry: Fundamentals and Applications	5

BUS 410	The Legal Environment of International Business		WVIT/MCRO 301	Wine Microbiology	
CHEM 128	General Chemistry for Agriculture and Life Science II		WVIT 332	Advanced Viticulture - Winter	
CHEM 312	Organic Chemistry: Fundamentals and Applications		WVIT 333	Advanced Viticulture - Spring	
CHEM 314	Biochemistry: Fundamentals and Applications		WVIT 339	Internship Wine and Viticulture (limited to 2 units)	
FSN 230	Elements of Food Processing		WVIT 346	Winery Digital Media Marketing and Data Analytics	
FSN 354	Packaging Function in Food Processing		WVIT 365	Wine Analysis and Amelioration	
FSN 374	Food Laws and Regulations		WVIT 400	Special Problems for Advanced Undergraduates	
JOUR 203	News Reporting and Writing		WVIT 404	Winemaking I	
JOUR 285	Introduction to Multimedia Journalism		WVIT 405	Winemaking II	
JOUR 312	Public Relations		WVIT 406	Winemaking III	
JOUR 331	Contemporary Advertising		WVIT/PLSC 414	Grape Pest Management	
JOUR 342	Public Relations Writing and Editing		WVIT 428	Winegrape Vineyard Management	
PLSC 421	Postharvest Technology of Horticultural Crops		WVIT 470	Selected Advanced Topics	
RPTA 114	Introduction to Hospitality and Travel		WVIT 471	Selected Advanced Laboratory	
RPTA 314	Sustainable Travel and Tourism Planning		Total units		60

¹ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

² Consultation with an advisor is recommended prior to enrollment depending on topic being offered.

³ A maximum of 8 units of foreign language may be counted toward Approved Electives.

College of Architecture and Environmental Design

Architecture and Environmental Design Bldg. (05), Room 212

Dean: Christine Theodoropoulos
Associate Dean: Mark Cabrinha
Associate Dean: James Mwangi

Academic Programs

Program name	Program type
Architectural Engineering	BS, Minor, MS
Architecture	BArch, Minor, MS
City and Regional Planning	BS, MCRP, Minor
Construction Management	BS, Minor
Cross Disciplinary Studies Minor in Heavy Civil	Minor
Landscape Architecture	BLA, Minor
Real Property Development	Minor
Specialization in Transportation Planning	Concurrent CE-MS/ MCRP
Sustainable Environments	Minor

The College of Architecture and Environmental Design (CAED) offers programs that prepare graduates to create meaningful, resilient places.

Experiential Learning

Under the guidance of expert faculty, students actively participate in hands-on project-based learning that promotes understanding of the built environment and develops the knowledge and skills needed to plan, design, construct and steward.

Interdisciplinary Learning

The college offers interdisciplinary minors, coursework and activities that explore shared areas of interest such as community resilience, real estate development, sustainable environments, earthquake-resistant design, project delivery methods, building technologies, computing technologies, and integrated design and construction.

Co-curricular Activities

Students participate in chapters of professional organizations related to all of the college's majors, and take part in college leadership through the CAED Student Council, the CAED Student Committee for Diversity and Inclusion and the CAED Ambassadors Leadership Program.

Off-campus Field trips and Programs

Cal Poly's location in Central California provides access to field trip destinations throughout the state where students study the built environment and interact with communities and experts.

Students have numerous opportunities to participate in national and international off-campus programs offered by the college ranging from field trips associated with courses to community volunteer work, to academic programs with durations ranging from one quarter to a full year. In addition to programs offered by the college, students attend study

abroad programs offered by the university, the California State University System and our international exchange partners across the globe.

Internships and Careers

Students are encouraged to gain professional experience through internships that prepare them for careers. The college hosts an annual career fair for all majors and career fairs in the fields of construction and engineering serve all CAED students. The college's departments and the Cal Poly Career Center assist students with internship preparation and placements.

Facilities

The college's learning environments include design studios, galleries, the Paul and Verla Neel Resource Center, instructional laboratories equipped for testing building materials and systems, computing laboratories equipped with industry-standard hardware and software, and instructional shops where students create images, models, and prototypes using a variety of media and methods including wood, metals, photography, printing, and digital fabrication. Students build experimental structures and host the annual Design Village Competition in the nine-acre construction site known as "Poly Canyon."

Accreditation

The Master of City and Regional Planning program and each of the college's five bachelor's programs are accredited by their respective national accrediting organizations.

Recommended Preparation

In addition to pursuing CSU entrance requirements, prospective students are encouraged to engage in activities that introduce them to the college's fields of study so that they can make an informed decision about program choice. These activities may include, but are not limited to, school clubs, professional mentoring programs such as ACE, professional organizations and relevant work, internship or volunteer experience.

Additional information

<http://caed.calpoly.edu>.

CAED Advising Center

Mitra Nafisi, Director, CAED Advising Center
Bldg. (05), Room 210
Phone: 805.756.1325
<http://www.caed.calpoly.edu/caed-advising> (<http://www.caed.calpoly.edu/caed-advising/>)

The college's Advising Center provides academic advising services to all students enrolled in CAED programs, in coordination with departmental faculty advisors. At the center students receive assistance related to course planning and program completion, transfer and evaluation credit and articulation, academic probation, change of major and course substitution procedures, tutoring, special academic programs, scholarships, and other campus resources.

Interdisciplinary Minors Real Property Development Minor

Construction Management Department (186), Room A100
Phone: 805.756.1323

Scott Kelting, Minor Advisor
skelting@calpoly.edu

This minor is designed for students who are interested in the built environment, and want to expand their knowledge of how projects get initiated, move through the development process, and then how they are managed after construction.

The program is designed to prepare students for entry-level employment with professionals engaged in real property development. Courses include aspects of practitioners' real world experiences and knowledge of state-of-the-art practices, techniques, and challenges.

Students learn about the economic, design, environmental, and regulatory factors that influence housing, office, industrial, and commercial projects. They gain a clearer understanding of how these factors impact green development, urban sprawl, place-making, and transit oriented development.

Sustainable Environments Minor

Landscape Architecture Department (34), Room 216
Phone: 805.756.2040

Joseph Ragsdale, Minor Advisor
jragsdal (jragsdal@calpoly.edu)@calpoly.edu (jragsdal@calpoly.edu)

This minor is designed for students who are interested in principles and applications of sustainable environmental design and want to expand their understanding of the global, regional and local perspectives and concepts that guide the creation of sustainable environments. It provides students with the knowledge and abilities needed to integrate ecology, social equity and economics within the context of human and natural resource systems and the built environment.

Real Property Development Minor

Required Courses

CRP 212	Introduction to Urban Planning	4
CM 232	Evaluation of Cost Alternatives ¹	3-4
or CRP 315	Fiscal and Project Feasibility	
CM 475	Real Property Development Principles	4

Approved Electives

Select from the following:		12-13
ARCH 445	Urban Design in Architecture	
ARCH 472	Housing Design Concepts	
BUS 342	Fundamentals of Corporate Finance	
BUS 409	Law of Real Property	
BUS 434	Real Estate Finance	
BUS 435	Real Estate Investment	
CM 102	Introduction to Construction Management ²	
CM 214	Residential Construction Management ²	
CM 313	Commercial Construction Management ²	
CM 317	Sustainability and the Built Environment	
CM 318	Housing and Communities	
CM 413	Jobsite Construction Management ²	

CM 420	Service / Experiential Learning
CM 421	Emerging Trends
CM 422	Professional Preparation
CM 423	Construction Materials / Assemblies
CM 424	Construction Technology
CM 425	Sustainability and Environment
CM 426	International Construction Studies
CM 450	Integrated Project, Design and Program Management ²
CRP 336	Introduction to Environmental Planning ³
CRP 412	Plan Implementation
CRP 420	Land Use Law ³
CRP 430	Professional Planning Practice
CRP 435	Transportation Theory
CRP 442	Housing and Planning
CRP 446	Development Review and Entitlement
CRP 448	Principles of Urban Design
CRP 452	Community Design Methods
CRP 458	Hazard Mitigation Planning & Resilient Design
CRP 470	Selected Advanced Topics
ECON 434	Urban Economics
ECON 435	Economics of Land and Water
LA 470	Selected Advanced Topics

Total units **24**

- ¹ If CM 232 is taken, then at least 8 units of approved electives at the 300-400 level must be completed to meet the minimum requirement of 12 units of upper-division coursework for the minor.
- ² CM 102, CM 214, CM 313, CM 413, CM 420, CM 421, CM 422, CM 423, CM 424, CM 425, CM 426, and CM 450 do not count for Construction Management majors.
- ³ CRP 336 and CRP 420 do not count for City and Regional Planning majors.

Sustainable Environments Minor

Required Courses

EDES 406	Sustainable Environments	4
EDES 408	Implementing Sustainable Principles	4

Approved Electives

Select from the following:		16
At least 4 units must be upper division (300-400 level)		
ANT 201	Cultural Anthropology ¹	
ANT 360	Human Cultural Adaptations ²	
ARCH 445	Urban Design in Architecture	
ARCH 472	Housing Design Concepts	
BIO 227	Wildlife Conservation Biology	
BRAE 348	Energy for a Sustainable Society	
CRP 211	Cities: Form, Culture and Evolution ⁴	
CRP 212	Introduction to Urban Planning ⁴	
CRP 214	Land Use and Transportation Studies ⁴	

CRP/ES 215	Planning for and with Multiple Publics
CRP 334	Cities in a Global World
CRP 336	Introduction to Environmental Planning ⁴
CRP 342	Environmental Planning Methods ⁴
ECON/HNRS 303	Economics of Poverty, Discrimination and Immigration
EDES 410	Advanced Implementation of Sustainable Principles
ENGL 380	Literary Themes (Eco-Lit)
ES/ARCH 326	Native American Architecture and Place
ES 360	Ethnicity and the Land
GEOG 150	Human Geography ¹
GEOG/ERSC 325	Climate and Humanity
GEOG/ERSC 333	Human Impact on the Earth
ISLA 303/ HNRS 304	Values and Technology
NR/LA 218	Introduction to Geographic Information Systems (GIS) ³
NR 306	Natural Resource Ecology and Habitat Management ³
NR 320	Watershed Processes and Management
NR 321	Water Resources Technology and Society
NR 323	Human Dimensions in Natural Resources Management
NR/ES 360	Ethnicity and the Land
NR/CRP 404	Environmental Law
NR 414	Sustainable Forest Management
NR 434	Wood Properties, Products and Sustainable Uses
NR 475	Senior Project - Forest Stewardship
PHIL 340	Environmental Ethics
PHYS 310	Physics of Energy
POLS 332	World Food Systems
PSC 320	Energy, Society and the Environment
PSY 311	Environmental Psychology
UNIV/AG/ISLA 330	Cal Poly Land: Nature, Technology, and Society
UNIV 350	The Global Environment
UNIV 391	Appropriate Technology for the World's People: Development
UNIV 392	Appropriate Technology for the World's People: Design
UNIV 492	Appropriate Technology for the World's People: Design

Total units **24**

¹ ANT 201 and GEOG 150 do not count for Sociology, Social Sciences, and Anthropology and Geography majors.

² ANT 360 does not count for Anthropology and Geography majors.

³ LA 218 / NR 218, and NR 306 do not count for Environmental Management and Protection majors.

⁴ CRP 211, CRP 212, CRP 214, CRP 336, and CRP 342 do not count for City and Regional Planning majors.

Architectural Engineering

Engineering West (21), Room 110

<https://arce.calpoly.edu>

Department Head: Allen C. Estes

Academic Programs

Program name	Program type
Architectural Engineering	BS, Minor, MS

The Architectural Engineering Department is an integral part of the College of Architecture and Environmental Design, and it shares and supports the mission of the College. The mission of the architectural engineering program is to educate students to be successful in the practice of structural engineering. The department has several overall program objectives, which are: to advance in the profession through a combination of continuing education, graduate studies, lifelong learning and professional society participation; obtain a PE license and be working toward an SE license; communicate effectively with colleagues, clients and the public; and display leadership, initiative, creativity, teamwork, ethical behavior, work ethic and technical expertise in the chosen profession while exhibiting confidence and humility.

To eventually attain these overall program objectives, the following student learning outcomes must be satisfied. At the time of graduation, we expect our graduates to be able to: identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics; apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors; communicate effectively with a range of audiences; recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts; function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives; develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions; and acquire and apply new knowledge as needed, using appropriate learning strategies. To attain these outcomes, the program provides a balance of theoretical (analytical) and experimental courses.

The Architectural Engineering program carefully addresses architectural design, constructability issues, life safety and economy of construction. In addition, course projects address realistic design criteria, such as economic implications and environmental, social, ethical and sustainability issues. Using integrated design projects, modern technological tools, and the latest design codes to address these goals, the department emphasizes the advantages of a close, interdisciplinary team-based approach to design and construction.

The use of interdisciplinary projects allows students to hone their communication, critical thinking, and project management skills by working in multi-disciplinary teams. As students learn more about building design, they become cognizant of the ethical implications of design, specifically of how political and societal issues affect the engineering of the built environment, both on a local scale and on a broader international scale. These larger societal issues motivate

students to engage in life-long learning, allowing them to use their skills in professional structural engineering practice.

The department's learn-by-doing philosophy is part of a pedagogy which emphasizes design-centered laboratories, integrating theory and design, culminating in a senior project capstone design experience.

The Architectural Engineering Program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

Undergraduate Programs

BS Architectural Engineering

Cal Poly's Department of Architectural Engineering's (ARCE) curriculum focuses on the structural engineering of buildings. By focusing on building design students are able to take many more structural engineering courses than is possible in a traditional civil engineering program. Beyond structural engineering courses, students take several architecture and construction management courses and studios, giving them an appreciation for these disciplines.

Laptop Requirement - The department has a requirement that all students have a laptop computer. Computing is an integral component in today's engineering environment. Many Architectural Engineering classes emphasize cooperative projects / assignments, and a laptop computer provides the required mobility to facilitate collaboration. Financial aid may be available to help cover the cost of the computer laptop (contact the Financial Aid Office (<http://financialaid.calpoly.edu>) for more information). Refer to department website for additional information.

Architectural Engineering Minor

The minor is designed for students wishing to pursue a more in-depth education in structures. The coursework exposes students to analytical, design, and construction issues relevant to the structural design process. Students select a sequence of courses that focus on either structural design or structural analysis. The program is tailored for students majoring in architecture and construction management. Contact the department for additional information.

Graduate Program

MS Architectural Engineering

The Master of Science in Architectural Engineering (MS Architectural Engineering) program is designed for students holding an accredited degree in architectural, civil or structural engineering. For students within the Cal Poly Architectural Engineering undergraduate program, a blended BS + MS option is available. The program is designed to prepare graduates to meet the demands for practice in the structural engineering profession. Core curriculum courses expose students to emerging topics in structures, advanced methodologies to predict and analyze structural behavior, and cutting edge design procedures. Additionally, related topics in architecture and building constructability are integrated into the curriculum to create a unique interdisciplinary masters level education. Elective courses also allow individuals to advance their knowledge in technical areas offered from graduate degree programs across the campus. Candidates should refer to the "General Policies Governing Graduate Studies (p. 435)" section for supplemental University requirements.

Blended BS Architectural Engineering + MS Architectural Engineering

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Architectural Engineering.

Eligibility

Students majoring in BS Architectural Engineering are eligible for the blended program in MS Architectural Engineering.

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Architectural Engineering department for any additional eligibility criteria.

BS Architectural Engineering

Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

All ARCE majors must obtain a grade of C- or better in ARCE courses that are prerequisites for other ARCE courses.

MAJOR COURSES

ARCE 106	Introduction to Building Systems	2
ARCE 211	Structures I	3
ARCE 212	Structures II	3
ARCE 223	Mechanics of Structural Members	3
ARCE 224	Mechanics of Structural Members Laboratory	1
ARCE 227	Structures III	2
ARCE 257	Structural CAD for Building Design	2
ARCE 302	Structural Analysis	3
ARCE 303	Steel Design I	3
ARCE 304	Timber Design	3
ARCE 305	Masonry Design	2
ARCE 306	Matrix Analysis of Structures	3
ARCE 352	Structural Computing Analysis	1
ARCE 353	Matrix Structural Computing Analysis	1
ARCE 354	Numerical Analysis Laboratory	1
ARCE 371	Structural Systems Laboratory	3
ARCE 372	Steel Structures Design Laboratory	3
ARCE 412	Dynamics of Framed Structures	3
ARCE 421	Soil Mechanics	3
ARCE 422	Foundation Design	3
ARCE 444	Reinforced Concrete Design	4
ARCE 451	Timber and Masonry Structures Design and Constructability Laboratory	3
ARCE 452	Concrete Structures Design and Constructability Laboratory	3
ARCE 476	Architectural Engineering Building Systems	3
ARCE 483	Seismic Analysis and Design	3
ME 212	Engineering Dynamics	3
Senior Project		
ARCE 415	Interdisciplinary Capstone Project	4
SUPPORT COURSES		
ARCH 131 & ARCH 132 & ARCH 133	Design and Visual Communication 1.1 and Design and Visual Communication 1.2 and Design and Visual Communication 1.3	12
ARCH 217	History of World Architecture: Prehistory - Middle Ages (C1) ¹	4
or ARCH 218	History of World Architecture: Middle Ages - 18th Century	
or ARCH 219	History of World Architecture: 18th Century - Present	
or ARCE 260	History of Structures	
BRAE 237	Introduction to Engineering Surveying	2
CHEM 124	General Chemistry for Physical Science and Engineering I (B1 & B3) ¹	4

CM 115	Fundamentals of Construction Management	6
CM 232 or IME 314	Evaluation of Cost Alternatives Engineering Economics	3
CSC 231	Programming for Engineering Students	2
EE 201	Electric Circuit Theory	3
GEOL 201	Physical Geology	3
MATH 141	Calculus I (B4) ¹	4
MATH 142	Calculus II (B4) ¹	4
MATH 143	Calculus III (Area B Electives) ¹	4
MATH 241	Calculus IV	4
MATH 244	Linear Analysis I	4
ME 302	Thermodynamics I	3
ME 341	Fluid Mechanics I	3
PHYS 141	General Physics I (Area B Electives) ¹	4
PHYS 142	General Physics II	4
PHYS 143	General Physics III	4
STAT 312 or STAT 321	Statistical Methods for Engineers (Upper-Division B) ¹ Probability and Statistics for Engineers and Scientists	4
GENERAL EDUCATION (GE) (See GE program requirements below.)		44
FREE ELECTIVES		
Free Electives		0
Total units		196

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

General Education (GE) Requirements

- 72 units required, 28 of which are specified in Major and/or Support.
- If any of the remaining 44 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	

B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater (4 units in Support) ¹	0
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		44

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Architectural Engineering Minor

Required Courses

ARCE 211 & ARCE 212	Structures I and Structures II	6
ARCE 223	Mechanics of Structural Members	3
ARCE 226	Introduction to Structural Systems	3
ARCE 315	Introduction to Structural Design	4
ARCE 316 or ARCE 421	Structural Integration in Architecture Soil Mechanics	3-4
Select either Analysis or Design Option:		8
Analysis Option		
ARCE 227	Structures III	
ARCE 302	Structural Analysis	
Select one of the following:		
ARCE 303	Steel Design I	
ARCE 304	Timber Design	
Design Option		
ARCE 303	Steel Design I	
ARCE 304	Timber Design	
ARCE 305	Masonry Design	
Total units		27-28

MS Architectural Engineering

Program Learning Objectives

- a. Formulate and solve advanced structural engineering problems.
- b. Analyze and model non-linear building response.
- c. Design a building system, component, or process to meet desired needs within realistic constraints such as regulatory, economic, environmental and constructability.
- d. Function in interdisciplinary teams for the design and construction of buildings.
- e. Communicate effectively.

Required Courses

ARCE 501	Advanced Structural Mechanics	3
ARCE 502	Nonlinear Structural Behavior I	3
ARCE 503	Nonlinear Structural Behavior II	3
ARCE 504	Finite Element Method for Building Structures	3
ARCE 511	Structural Systems Behavior	3
ARCH 551	Architectural Design (5, 5) ¹	10
Select from the following: ²		9
ARCE 598	Structural Engineering Design Project (3, 3, 3)	

or 9 units of approved elective courses in a student's Formal Study Plan and a comprehensive examination

Approved Electives ²

Electives	11
Total units	45

¹ 5 units of ARCH 551 may be replaced with 5 units of approved elective courses for students to collaborate with faculty on teaching-scholar research, to pursue electives focused on their masters project, or to broaden their masters coursework where appropriate.

² At least 7 units of Approved Elective courses must be at 500 level.

Academic Programs

Program name	Program type
Architecture	BArch, Minor, MSARCH, Blended BARCH+MSARCH

The objective of the five-year Bachelor of Architecture degree program is to develop design and related skills necessary for entry into the professional field of architecture. Preparation for architecture spans several disciplines and requires a range of aptitudes. As the architect has a responsibility for solving problems of the built environment involving people, an understanding and sensitivity to human needs is required. Therefore, programs in architecture are broad in nature. With careful selection of elective work, students may develop focus areas.

The Bachelor of Architecture degree is accredited by the National Architectural Accrediting Board.

Statement on NAAB Accredited Degrees

In the United States, most registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit professional degree programs in architecture offered by institutions with U.S. regional accreditation, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted an eight-year term with conditions or two-year term of continuing accreditation, or a three-year term of initial accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may require a non-accredited undergraduate degree in architecture for admission. However, the non-accredited degree is not, by itself, recognized as an accredited degree.

California Polytechnic State University, Architecture Department, offers the following NAAB-accredited degree program:

B.Arch. (225 undergraduate credits)

Next accreditation visit for the B.Arch. program: 2025

Transfer Students

Transfer applicants into Architecture are ranked by University Admissions in accordance to the formula outlined on the Admissions Web Site. The Architecture Department then invites the top ranked candidates to submit a portfolio of their work for final selection by the Architecture Department faculty.

Laptop Requirement

The department has a requirement that all freshmen or transfer students have a notebook computer when they enter the program. In

the profession of architecture, computing is an integral component, and developing the ability to critically integrate hand and digital tools is a fundamental aspect of architectural education. A notebook computer is the key to having computing capabilities available at all times and all locations. Financial aid may be available to cover the cost of the laptop computer (contact the Financial Aid Office (<http://financialaid.calpoly.edu/>) for more information).

Off-Campus Architecture Programs

Off-campus study opportunities for fourth year Architecture students are offered in a variety of formats and locations. Programs from one quarter to a full year are available abroad and in the United States. There is a third-year student general information session each fall quarter to present the department pre-approved programs offered for the following year. Applications from third year students for all programs are due in the winter quarter.

CSU International Programs and Direct International Exchanges

There are several CSU-sponsored study abroad programs for Architecture majors, including Copenhagen, Denmark; Florence, Italy; Biberach, Germany; Queretaro, Mexico; and, Santiago, Chile. The concept of the studio organization is similar to Cal Poly. Credit for major design courses, professional electives, general education courses and free electives are coordinated collectively through the CSU Office of International Programs (CSUIP), Cal Poly International Center and Architecture Department. In addition, there are several direct international exchange programs to choose from including the Ecole Nationale Supérieure d'Architecture Paris Val de Seine, Lucerne University of Applied Sciences, and Munich University of Applied Sciences and others.

San Francisco Urban Design / LA Metro Programs

Two Urban Design/Internship Programs offer fourth-year students the opportunity to live and study in San Francisco or Los Angeles for two quarters (winter and spring). Each class utilizes projects with the participation of talented, award-winning architectural offices and urban designers to introduce students to urban design and architectural practice.

Washington Alexandria Architecture Center (WAAC)

The WAAC, now offered to Cal Poly students through the National Student Exchange, is an extension of the Virginia Polytechnic Institute and State University (Virginia Tech) in the Washington DC Metropolitan Area. In addition to offering fourth-year students studio, major, and professional elective courses, internship opportunities exist in both the Alexandria, VA and Washington DC areas.

Other Architecture Off Campus Programs

The Architecture Department offers students a changing variety of off-campus programs throughout the world. In addition to opportunities listed above, there are campus partnerships with organizations such as the National Student Exchange (NSE), the Council for International Education Exchange (CIEE) and The Education Abroad Network (TEAN). Contact the Architecture Department and the Cal Poly International Center for the most current information.

Cooperative Education (Co-op)

In addition to traditional classroom study and instructor-led field trips, students have the opportunity to intern for professional architecture firms and receive professional elective credits and, in some cases, fourth-year studio credit. To find out more about cooperative education opportunities, visit the Architecture Department's webpage or Career

Services. Applications and opportunities for co-op credit are available year-round.

Undergraduate Programs

Bachelor of Architecture

The objective of the five-year Bachelor of Architecture degree program is to develop design and related skills necessary for entry into the professional field of architecture.

Architecture Minor

The Architecture Minor blends studies in aesthetics, culture, sciences, math, technologies and craft and their influences on the design and construction of buildings and spaces. Architectural constructs embody collective values and impact quality of life, affecting experiences at multiple scales, from the context of the individual to the expanse of cities, often over long periods of time. In this minor, students may choose courses in the categories of history and theory, architectural technology, architecture and society, or create a path around personal interests, but at least 50% of the courses selected must be upper division. The Architecture Minor welcomes students from all majors and is meant to provide an introduction to the discipline.

Graduate Program

Master of Science in Architecture

Graduate Coordinator: Thomas Fowler

The Master of Science in Architecture (MS ARCH (<https://architecture.calpoly.edu/prospective/masters/>)) program prepares graduates for research and consulting in the fields of architecture, environmental design and the built environment. The MS ARCH program provides opportunities for specialization and interdisciplinary collaboration through coursework and research. The program welcomes applications from candidates holding bachelor degrees including graduates with a Bachelor of Architecture seeking post-professional specialization and those with a degree outside of architecture.

The post-professional Master of Science in Architecture (MS ARCH) Degree is **not** a NAAB (<https://www.naab.org/>)-accredited professional degree in architecture. Read more about the differences between professional/non-professional degrees and requirements for licensure at NCARB (<https://www.ncarb.org/become-architect/study-architecture/accredited-programs/>).

Curriculum Overview

The MS ARCH involves a master's research project as the principal component. A research proposal is prepared by each student, based upon their scholarship interests formulated during the first year of the program. The first year of the curriculum immerses students in multi-disciplinary design teams on professionally-oriented projects. Students learn best practices of collaboration, and skills are developed through partnerships with students in other disciplines and with industry professionals. Students also have opportunities for coursework and engagement with the four other departments in the College of Architecture and Environmental Design (CAED) which includes City and Regional Planning, Architectural Engineering, Construction Management and Landscape Architecture. Forty-five (45) total units are required for completion of the degree.

Graduate Study Areas

The MS ARCH provides a wide range of areas of study. Graduate students are encouraged to build on the knowledge that they have gained from their previous academic studies and/or professional experiences, as they acquire and contribute new knowledge in their chosen research specialization within one of the following broadly defined research areas:

- *Innovative Materials Practice*: This specialization focuses on design integration through innovations in materials and material assemblies enabled by contemporary modes of traditional and digital fabrication and their impact on design and construction processes. Of particular interest are sustainable practices in fabrication from material economies and cradle-to-cradle methodologies to responsive envelopes. The Innovative Materials Practice research area promotes interdisciplinary work as essential to innovation in design and construction with connections to other disciplines.
- *Interdisciplinary Building Design*: The making of architecture is a complex process and involves multiple disciplines to be successful. Studying this collaborative model for design and understanding the range of work flow strategies, tools and coordination issues, design challenges and the implications for applying new approaches to a component of this building design / systems integration process should be the focus. Study and research areas include, but are not limited to: collaborative projects involving two or more disciplines, collaborative workflow strategies, advanced tools for collaboration, and small scaled design-build projects that model proof of concept multi-disciplinary examples.
- *Resilient, Sustainable and Circular Communities*: Given the increasing number, intensity and size of natural and social catastrophes in the world today, it is apparent that sustainability principles alone may not be explicit enough to ignite the kind of societal and economic transformations that are needed for the health of the planet and all its inhabitants. Study and research areas include, but are not limited to: adapting full circle principles involving theory and practice examples, design detailing for deconstruction, biomaterials development for construction, service-learning education opportunities with local schools and businesses, and construction waste reuse for industrial byproducts.
- *Urban Architecture and Design*: Urban architecture is extremely important today as it attempts to comprehend the impact architecture and infrastructure not only on city life, but on global and local society, culture, politics, and economics. Study and research areas include, but are not limited to: GIS mapping of defined range of urban architecture parameters (i.e., biological ecologies, material resources and energy allocation systems, social proximities and cultural iconographies), 3D city modeling with open source "dapps" in the urban design of buildings, and infrastructure.

Blended Bachelor of Architecture + MS Architecture

For motivated students, a blended master of science program, also referred to as a 5 + 1 program, is available. The blended program allows students to simultaneously complete both a BARCH and an MSARCH. The blended program offers promising individuals an opportunity to continue their studies in architecture in a collaborative multi-disciplinary learning environment.

Eligibility for the Blended Program

Acceptance into the blended program is contingent upon completion of the fourth year of the Architecture courses and 205 units. **Please note that all blended program applicants must have completed their**

Graduation Writing Requirement (GWR) prior to acceptance. The Architecture Graduate Committee reviews all applications and selects individuals with records that demonstrate success at the undergraduate level and potential to succeed at the graduate level. Candidates shall meet the University requirements, as a minimum, stated in "Blended BS +MS Programs" in the Graduate Education (p. 435) section, in addition to the requirements outlined in the "MS ARCH Program Supplemental Components" by the Architecture Department MSARCH Program (<https://architecture.calpoly.edu/prospective/masters/msarch-appl-process/>).

Students wishing to pursue the blended BARCH + MSARCH degree shall complete the Blended BARCH + MSARCH application. Applicants may contact the MSARCH coordinator, msarch@calpoly.edu, after their third year of the BARCH program for further information. Blended Applications (<https://architecture.calpoly.edu/draft-blended-msarch-program-application/>) Admission's Process Opens up on October 1st for the Following Fall Start.

Bachelor of Architecture

Program Learning Objectives

1. Think critically and creatively about architectural problems.
2. Use a diverse range of communication skills including writing, speaking, drawing, and modeling to think about and convey architectural ideas.
3. Understand and apply the technical aspects of architecture, while considering the environmental impact of design decisions.
4. Synthesize a wide range of variables that contribute to an integrated design solution.
5. Understand the professional practice of architecture.
6. Understand architecture in relation to the larger world of knowledge.
7. Work productively with diverse groups including design professionals, clients, and users.
8. Use architectural knowledge and skills to make a positive contribution to society.
9. Make reasoned decisions based on an architectural understanding of ethics, diversity, and sustainability.
10. Engage in lifelong learning as a professional.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

ARCH 101	Survey of Architectural Education and Practice (1, 1, 1) ¹	3
----------	---	---

PHYS 122	College Physics II (B1 & B3) ²	4

or PHYS 142	General Physics II	
Professional Electives		18
May include: Any EDES, ARCH, ARCE, CM, CRP, LA or ART course. Any course included in any College of Architecture and Environmental Design minor, or the ART minor.		
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		48
FREE ELECTIVES		
Free Electives ⁴		0
Total units		225

- ¹ Transfer students may take additional ARCH course(s) to substitute for ARCH 101. Contact the department for details.
- ² Required in Major or Support; also satisfies General Education (GE) requirement.
- ³ MATH 142 Calculus II substitutes for MATH 182.
- ⁴ If a General Education (GE) course is used to satisfy a Major or Support requirements, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater (4 units in Major) ¹	0
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4

Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Support) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (8 units in GE Electives fulfilled by 4 units in Major and 4 units in Support) ¹		0
Total units		48

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Architecture Minor

Required Courses

ARCH 217	History of World Architecture: Prehistory - Middle Ages	4
or ARCH 218	History of World Architecture: Middle Ages - 18th Century	
or ARCH 219	History of World Architecture: 18th Century - Present	
ARCH 320	Topics in Architectural History	4
EDES 123	Principles of Environmental Design	4

Approved Electives

Select from the following (at least 8 units must be at the 300-400 level):

History and Theory

ARCE 260	History of Structures	
ARCH 101	Survey of Architectural Education and Practice	
ARCH 217	History of World Architecture: Prehistory - Middle Ages	
ARCH 218	History of World Architecture: Middle Ages - 18th Century	
ARCH 219	History of World Architecture: 18th Century - Present	
ARCH 326	Native American Architecture and Place	
ARCH 420	Seminar in Architectural History, Theory and Criticism	
LA 212	History of Modern and Contemporary Landscape Architecture	

Architecture and Technology

ARCH 400	Special Problems for Advanced Undergraduates	
----------	--	--

ARCH 460	Computer Applications
ARCH 479	Design Build
CM 317	Sustainability and the Built Environment

Architecture and Society

ARCH 445	Urban Design in Architecture
ARCH 462	Topics in Architectural Practice
CRP 211	Cities: Form, Culture and Evolution
EDES 350	The Global Environment
EDES 406	Sustainable Environments

Additional Electives

ARCH 270	Selected Topics
ARCH 313	Advanced Delineation
ARCH 469	Topics in Design Methods
ARCH 470	Selected Advanced Topics
ARCH 480	Special Studies in Architecture
CRP 212	Introduction to Urban Planning
LA 320	Design Theory for Landscape Architects

Total units **24**

Master of Science in Architecture

Program Learning Objectives

- a. Formulate and solve advanced architecture problems
- b. Design a building system, component, or process to meet desired needs within realistic constraints such as regulatory, economic, environmental and constructability.
- c. Function in interdisciplinary teams for the design and proposed construction of buildings.

Required Courses

ARCH 551	Architectural Design (5, 5, 5)	15
ARCH 561	Advanced Design (3, 3, 3)	9
ARCH 598	Master's Design Project (3, 3, 3 or 3, 6)	9

Approved Electives

Advisor approved elective courses are included in a student's formal study plan.	12

Total units **45**

City and Regional Planning

Architecture & Environmental Design Bldg. (05), Room 313
Phone: 805.756.1315
<https://planning.calpoly.edu>

Department Head: Michael Boswell

Academic Programs

Program name	Program type
City and Regional Planning	BS, Minor, Master of
Specialization in Transportation Planning	Concurrent CE-MS/ MCRP

The profession of city and regional planning involves helping people and communities manage growth and change in their physical, social, and economic environments. The focus is on understanding how cities and towns (human settlements) function and how to make them better places for people to live, work and play. City planning has its roots in engineering, architecture, landscape architecture, law, social welfare and government reform. The practice of city and regional planning is both science and art. It involves technical competence, creativity, hard-headed pragmatism and the ability to develop a vision of the future and to build on that vision. Contemporary planners combine design, quantitative, and people skills to assist communities and society. Both the undergraduate (BSCRCP) and the graduate (MCRP) programs are accredited by the national Planning Accreditation Board.

The degree programs prepare students for professional careers in the design of human settlements in harmony with the natural environment and the needs of society. Practicing planners work in public agencies, non-profit organizations, and private consulting firms, preparing comprehensive plans for projects, neighborhoods, cities, and entire regions. The plans address the use of land, housing, transportation, public facilities, and open space. In addition, they are responsible for finding the means to make their plans become a reality by budgeting for public projects and programs and by reviewing and regulating private development.

The curriculum leading to the Bachelor of Science in City and Regional Planning provides a broad, interdisciplinary education as well as competency in physical planning with an emphasis on urban design and development. The Master of City and Regional Planning degree builds on a general undergraduate preparation in the humanities, architecture, landscape architecture, social sciences or natural sciences, and offers four areas of excellence in research and teaching: Urban Design, Environment and Sustainability, Transportation and, Housing, Economic, and Community Development.

Undergraduate Programs

BS City and Regional Planning

The BSCRCP program cultivates creativity and problem solving in the management of urban change. Technical design and analytic skills for professional practice are taught utilizing field-based experiences.

The BSCRCP program is one of the most studio/lab intensive, four-year undergraduate planning degree in the United States. Beginning in year two and continuing through year four, students must take at least seven studio courses. In addition, students take the foundation courses necessary to be able to fulfill the studio expectations and learn from the studio experience. These foundation courses include urban design,

computer skill, planning theory, plan implementation methods and land use law.

The BSCRCP degree curriculum is a total of 180 quarter units, composed of three parts:

1. Required CRP major courses
2. Required Support courses; and
3. Required General Education courses

The Support courses are designed to provide core knowledge in the areas of ecology, natural science, political science, and statistics. These skills provide the scientific, policy and analytical tools necessary for community planning.

All BSCRCP students are required to do an Internship. They must take an internship seminar course that contextualizes the practice experience and allow professional reflection.

In addition, all students prepare a "Senior Project" or they can meet this requirement by completing the Senior Project-Professional Practice studio.

City and Regional Planning Minor

The minor provides students with an interdisciplinary understanding of the science and the art of city planning and its relationship with other environmental design professionals. The student is provided with an understanding of how growth and change affect the physical, social and economic aspects of the city, including the relationships among land use, transportation, housing and the environment. Courses that build skills in the preparation of plan documents, land use studies and environmental studies are combined with laboratory courses providing opportunities for involvement in community building and plan-making projects.

The minor is excellent preparation for creating visions of the future, participation in government and community organizations. It enhances skills in disciplines that have linkages with cities and the built and natural environments. It provides the student with the knowledge, skills and values that help people build better communities and cities.

Additional Minors

The department also participates in offering interdisciplinary minors in Real Property Development, and Sustainable Environments. See the College of Architecture and Environmental Design (p. 148) page for further information.

Graduate Programs

Master of City and Regional Planning

General Characteristics

The Master of City and Regional Planning (MCRP) degree is an applied, comprehensive, and professionally-based program. It is open to students from any undergraduate major, with high standards of academic achievement who wish to pursue careers in city and regional planning. It is structured to prepare graduates to function in a general context of city planning. The core courses cover planning theory and history, methods, law, community-based studios, and formulation and implementation of plans and policies. In addition, skill building in all aspects of planning communications (visual, verbal, written) is stressed.

The program is six quarters (two years) in duration and consists of 72 approved units (not including courses necessary to compensate for deficiencies). Because of the sequencing of courses, students admitted to the program are generally expected to begin their studies in the fall quarter. Students with prerequisite coursework deficiencies and those with backgrounds allowing waivers of first-year core courses may be admitted in other quarters. The degree culminates in a thesis, professional project, or a community planning studio.

Students have an opportunity to develop a close working relationship with the planning faculty. Self-directed study, tailored to the student's interests and needs, is also encouraged.

Prerequisites

Students entering the MCRP program are required to have a basic working knowledge of word processing, spreadsheets and presentation software.

Applicants for admission to the Master of City and Regional Planning program are expected to:

1. Have earned a bachelor's degree from an accredited university or college.
2. Demonstrated academic excellence by earning at least a 3.0 (out of 4.0) grade point average in the last 90 quarter (60 semester) units of undergraduate work.
3. Show evidence of motivation, maturity, work ethic, academic excellence, and intellectual ability through references (3 letters required), work experience, and other life experiences.
4. Submit a representative example of a self-authored paper or project to demonstrate writing ability.
5. Demonstrate understanding of, and areas of interest in, city and regional planning from the perspective of their career and educational objectives, through the statement of purpose.

Applicants lacking prerequisites or other background requirements for classified standing requirements may be admitted on a conditionally classified basis, depending on the results of an individual analysis of their applications.

Specialization in Landscape and Urban Design

The Landscape and Urban Design specialization provides students with advanced study in design, analysis, and ecological and preservation planning of the environment. Students pursuing the specialization are prepared for professional positions in urban design and landscape and preservation planning at local and regional levels. The specialization includes urban design and landscape architecture theory and practice, analysis of cultural and natural landscapes, and interpretation and visualization of data.

Specialization in Transportation Planning

The Transportation Planning specialization provides students with advanced study in the design, engineering, analysis, planning, and implementation of transportation systems and policy. Students pursuing the specialization are prepared for professional positions in public transportation agencies, private transportation planning and engineering firms, and other organizations desiring specialized knowledge in

transportation. The specialization includes instruction on theory, land use integration, policy, engineering, and sustainability.

MCRP, Architecture or Landscape Architecture Pathway

This pathway is available only to students who are enrolled in either Cal Poly's Bachelor of Architecture (BArch) program or Bachelor of Landscape Architecture (BLA) program. Students may request permission to enroll in Master of City and Regional Planning (MCRP) graduate level courses during their fourth and fifth years of study. Upon completion of the BArch or BLA degree, students are eligible to formally apply for the MCRP program. Students who fulfill all the requirements first receive their bachelor's degree and then the MCRP. Contact the Graduate Coordinator, City and Regional Planning Department for additional information.

Joint Interdisciplinary Program Concurrent CE-MS/MCRP with Specialization in Transportation Planning

The Concurrent CE-MS/MCRP with Specialization in Transportation Planning (p. 429) is a joint interdisciplinary program between the Civil and Environmental Engineering Department in the College of Engineering and the City and Regional Planning Department in the College of Architecture and Environmental Design. Participation in the program requires enrollment in both Colleges. Participants successfully completing the program are awarded both the Master of Science in Civil and Environmental Engineering (CE-MS) and the Master of City and Regional Planning (MCRP) with a Specialization in Transportation Planning.

BS City and Regional Planning Program Learning Objectives

After successfully completing the BSCR program, students will be able to:

Foundational skills

1. Demonstrate an understanding of the historical, theoretical, legal, and methodological foundations of planning
2. Effectively represent and communicate planning and urban design information

Methodology

1. Gather, organize, analyze and present planning information
2. Transform data and information into knowledge for action

Integrative skills

1. Integrate and apply the necessary skills and knowledge to address complex planning problems
2. Implement a planning process
3. Work with a variety of audiences: multiple publics, officials, and decision-makers

Professional skills

1. Reflect upon, critique, and evolve the practice of planning
2. Address issues of sustainability, diversity, and environmental and social justice
3. Practice in accordance with the AICP Code of Ethics

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

(See GE program requirements below.) 64

FREE ELECTIVES

Free Electives⁴ 0

Total units 180

- 1 Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- 2 If any of these courses are taken to meet a Major or Support requirement in the degree, it cannot be double-counted as an Approved Elective.
- 3 Required in Major or Support; also satisfies General Education (GE) requirement.
- 4 If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 8 of which are specified in Major and/or Support.
- If any of the remaining 64 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4

A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		
Total units		64

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

City and Regional Planning Minor

Required Courses

CRP 212	Introduction to Urban Planning	4
Select from the following:		
CRP 211	Cities: Form, Culture and Evolution	
CRP 213	Population, Housing and Economic Applications	
CRP 214	Land Use and Transportation Studies	

Approved Electives

Select from the following:		
CRP 215	Planning for and with Multiple Publics	19-20
CRP 303	Digital Cities	

CRP 314	Planning Theory	
CRP 325	Reflections on Biking, Walking and the City	
CRP 334	Cities in a Global World	
CRP 336	Introduction to Environmental Planning	
CRP 402	Contemporary Urban Design	
CRP 404	Environmental Law	
CRP 408	Water Resource Law and Policy	
CRP 412	Plan Implementation	
CRP 420	Land Use Law	
CRP 426	Planning Healthy Communities	
CRP 428	International Planning and Development	
CRP 430	Professional Planning Practice	
CRP 435	Transportation Theory	
CRP 440	Climate Action Planning	
CRP 442	Housing and Planning	
CRP 445	Planning and Urban Ecology	
CRP 446	Development Review and Entitlement	
CRP 448	Principles of Urban Design	
CRP 452	Community Design Methods	
CRP 455	Transportation Policy and Planning	
CRP 456	Web Technologies for Planning	
CRP 458	Hazard Mitigation Planning & Resilient Design	
CRP 470	Selected Advanced Topics	
CRP 545	Principles of Environmental Planning	
Total units		27-28

Master of City and Regional Planning Program Learning Objectives

After successfully completing the MCRP program, students will be able to:

Foundational skills

1. Demonstrate an understanding of the historical, theoretical, legal, and methodological foundations of planning
2. Effectively represent and communicate planning information

Methodology

1. Gather, organize, analyze and present planning information
2. Transform data and information into knowledge for action
3. Critically assess and apply scientific research

Integrative skills

1. Integrate and apply the necessary skills and knowledge to address complex planning problems
2. Develop and manage a planning process
3. Work with a variety of audiences: multiple publics, officials, and decision-makers

Professional skills

1. Reflect upon, critique, and evolve the practice of planning
2. Address issues of sustainability, diversity, and environmental and social justice
3. Practice in accordance with the AICP Code of Ethics

Required Courses

First Year		
CRP 501	Foundations of Cities and Planning	4
CRP 504	Sustainable Communities	4
CRP 510	Planning Theory	4
CRP 512	Introduction to Visual Communication and GIS	4
CRP 513	Planning Research and Analysis	4
CRP 516	Demographic and Analytic Tools	4
CRP 525	Plan Implementation	4
CRP 553	Project Planning and Design Studio	4

Second Year		
CRP 518	Policy Development	4
CRP 530	Planning Agency Management	4
CRP 535	Land Use and Planning Law	4
CRP 552	Community and Regional Planning Studio I	4
CRP 554	Community and Regional Planning Studio II	4

Select one of the following options:		4-6
CRP 556	Community and Regional Planning Studio III (4)	
CRP 596	Professional Project (2, 2, 2)	
CRP 599	Thesis (2, 2, 2)	

Advisor Approved Electives	
Additional 400 and 500-level courses, to be selected with graduate advisor's approval.	14-16

Total units 72

Specialization in Landscape and Urban Design

Required Courses

First Year		
CRP 501	Foundations of Cities and Planning	4
CRP 504	Sustainable Communities	4
CRP 510	Planning Theory	4
CRP 512	Introduction to Visual Communication and GIS	4
CRP 513	Planning Research and Analysis	4
CRP 516	Demographic and Analytic Tools	4
CRP 525	Plan Implementation	4
CRP 553	Project Planning and Design Studio	4

Second Year		
CRP 518	Policy Development	4
CRP 530	Planning Agency Management	4
CRP 535	Land Use and Planning Law	4
CRP 552	Community and Regional Planning Studio I	4

CRP 554	Community and Regional Planning Studio II	4
---------	---	---

Select one of the following options: 4-6

CRP 556	Community and Regional Planning Studio III	
CRP 596	Professional Project	
CRP 599	Thesis	

Required Specialization Courses

CRP 448	Principles of Urban Design	4
LA 520	Design with Cultural Landscapes	4
or LA 521	Ecological Urban Design	
LA 531	Information Graphics for Landscape and Urban Studies	4
or LA 538	Advanced GIS Application to Projects	

Advisor Approved Electives	
Electives	2-4

Total units 72

Specialization in Transportation Planning

Program Learning Objectives

1. Identify and articulate the range of issues and problems associated with urban transportation.
2. Identify the primary analytic methods used in urban transportation planning.
3. Identify the ranges of solutions and policy options used to address the problems and issues associated with urban transportation.
4. Identify and articulate the key issues that drive transportation policy.
5. Understand driver behavior, traffic characteristics, traffic operations, highway capacity and level of service, and operational considerations for the design of traffic facilities.
6. Articulate the interdependency between transportation and land use.
7. Develop travel demand forecasts and analyze transportation models.
8. Estimate the impacts of changes in land use and transportation infrastructure in terms of various performance measures.
9. Formulate a plan to achieve sustainability goals through transportation system planning

Required Courses

First Year		
CRP 501	Foundations of Cities and Planning	4
CRP 504	Sustainable Communities	4
CRP 510	Planning Theory	4
CRP 512	Introduction to Visual Communication and GIS	4
CRP 513	Planning Research and Analysis	4
CRP 516	Demographic and Analytic Tools	4
CRP 525	Plan Implementation	4
CRP 553	Project Planning and Design Studio	4

Second Year		
CRP 518	Policy Development	4
CRP 530	Planning Agency Management	4
CRP 535	Land Use and Planning Law	4

CRP 552	Community and Regional Planning Studio I	4
CRP 554	Community and Regional Planning Studio II	4
Select one of the following options:		4-6
CRP 556	Community and Regional Planning Studio III (4)	
CRP 596	Professional Project (2, 2, 2)	
CRP 599	Thesis (2, 2, 2)	
Required Specialization Courses		
CRP 435	Transportation Theory	4
CE 527	Sustainable Mobility	4
CE 523	Transportation Systems Planning	4
or CE 421	Traffic Engineering	
Advisor Approved Electives		
Electives		2-4
Total units		72

Construction Management

Building 186, Room A100

Phone: 805.756.1323

Department Head: Jeong Woo

<https://construction.calpoly.edu>

Academic Programs

Program name	Program type
Construction Management	BS, Minor
Cross Disciplinary Studies Minor in Heavy Civil	Minor
Real Property Development	Minor

The professional constructor plays the central role in building and maintaining the infrastructure of this country and in markets around the world, making significant contributions throughout the planning, design, construction, and facilities management phases of major projects. The curriculum of the Construction Management program is specifically designed to prepare young men and women to fill this essential role. Building on a solid foundation in architecture, engineering, and business, the curriculum introduces students to construction methods and materials; to the techniques used to manage budgets, schedules, quality, and safety; to the varied contracting approaches used to deliver today's complex construction projects; and to the leadership and teamwork skills demanded by this profession. This curricular content is delivered in a unique, project-based environment that explores how these management principles are applied in each of the construction sectors, such as, commercial building, residential, heavy/civil, industrial, and specialty.

The vision of the department is "Building Leaders through Collaboration and Innovation." As stated in our mission, "The Cal Poly Construction Management program builds innovative leaders in the construction industry". Based on this mission, the department is proud to embody the values of this polytechnic university which "promotes the application of theory to practice". We are committed to, believe in, and are faithful to continuously improving construction education by these core values:

- Project Based Learning
- Collaboration
- Learn by Doing
- Environmental Responsibility
- Diversity and Inclusion
- Service to communities, organizations, and societies
- Professionalism and Leadership
- Technology Integration
- Undergraduate Research
- Ethical Integrity
- Life-Long Stewardship of the CM department

Due to the department's close association with practitioners in the industry, many professional development opportunities are provided for our students. Over 200 companies per year recruit for internships, co-ops, and permanent job placements directly through the department. Through our Professional Advancement for Construction Students (PACS) program, students are systematically introduced to and encouraged to participate with the major associations and societies representing this industry. These opportunities include participation in the Associated Students of Construction Management (ASCM), which serves as the umbrella organization for many student professional chapters and clubs including AGC, ABC, CMAA, DBIA, NAHB, MCAA, NECA, Women

in Construction, Building Information Modeling, Emerging Green Professionals, and Sigma Lambda Chi, the national honorary society for construction students. Extensive interaction with industry brings practicing professionals into the classroom and students out to the jobsites of projects throughout the region. Finally, student participation in regional and national project management competitions gives our students the opportunity to test their knowledge and management skills against teams of students from other universities.

For both first time Freshmen and transfer students from community colleges, the Construction Management faculty and staff are committed to providing the best education possible for the future generation of leaders in the construction profession. These future constructors are educated in modern, state-of-the-art facilities utilizing the technology typical of the companies for whom they will work. They benefit from a unique, interdisciplinary program that has been accredited by the American Council for Construction Education (ACCE) since 1978. The program at Cal Poly remains one of the largest and most respected Construction Management programs in the United States.

Transfer Students

Transfer students are welcome in the Construction Management program and should contact the department for advising help with efficiently scheduling their graduation requirements. Most lower division courses may be completed at most California Community Colleges. Full time students who have successfully completed these lower division courses prior to transferring into the department can usually anticipate graduating in six or seven quarters. Transfer students should work closely with their assigned advisors before registering for classes every quarter to ensure efficient progress to degree.

Laptop Requirement

The department has a requirement that all students have a laptop computer. Most Construction Management classes emphasize cooperative projects/assignments, and a laptop computer provides the required mobility to facilitate collaboration. Most construction management software packages are designed to operate on a PC platform, so it is highly recommended that student laptop computers are loaded with the Windows operating system regardless of the manufacturer of the computer. See <https://construction.calpoly.edu/content/prospective/laptop-requirements> (<https://construction.calpoly.edu/content/prospective/laptop-requirements/>) for the current departmental laptop recommendations. Financial aid may be available to help cover the cost of the laptop computer - contact the Financial Aid Office (<http://financialaid.calpoly.edu/>) for more information.

Undergraduate Programs

BS Construction Management

The Construction Management Department is the only one of its kind housed in a college that includes all of the other planning and design professions that define the built environment: Architecture, Architectural Engineering, Landscape Architecture, and City and Regional Planning.

Construction Management Minor

The Construction Management Minor provides students with an introduction to the body of knowledge expected of persons pursuing careers in the construction industry. This minor focuses on the materials, means and methods which encompass the construction process.

The Construction Management Minor will give students a competitive edge when applying for certain jobs in the built environment and is recommended for majors in architecture, architectural engineering, business, civil engineering, mechanical engineering, and electrical engineering. Contact the department for more information.

Cross Disciplinary Studies Minor in Heavy Civil

The Heavy Civil Minor is designed to prepare Construction Management and Civil Engineering students for careers in the heavy civil sector of the construction industry. Graduates in this field will have careers in the heavy civil sector of the construction industry, where they will help manage heavy civil projects such as highways, bridges, dams, water treatment facilities, power plants, and other large-scale infrastructure throughout the US and the world.

This minor is intended for students in the CM and CEENV Departments and acceptance to the minor is competitive. Contact the departmental offices of either major for more information about the application process. Application is normally made during a student's second year of study at Cal Poly. Coursework will be completed in both departments leading to common upper division courses, two courses specific for the heavy civil minor, and a heavy civil internship required in the summer of the student's second or third year.

Real Property Development Minor

The department offers a Real Property Development Minor. Please see the College of Architecture and Environmental Design (p. 148) for more information.

BS Construction Management Program Learning Outcomes

1. Create written communications appropriate to the construction discipline.
2. Create oral presentations appropriate to the construction discipline.
3. Create a construction project safety plan.
4. Create construction project cost estimates.
5. Create construction project schedules.
6. Analyze professional decisions based on ethical principles.
7. Analyze construction documents for planning and management of construction processes.
8. Analyze methods, materials, and equipment used to construct projects.
9. Apply construction management skills as a member of a multidisciplinary team.
10. Apply electronic-based technology to manage the construction process.
11. Apply basic surveying techniques for construction layout and control.
12. Understand different methods of project delivery and the roles and responsibilities of all constituencies involved in the design and construction process.
13. Understand construction risk management.
14. Understand construction accounting and cost control.
15. Understand construction quality assurance and control.
16. Understand construction project control processes.
17. Understand the legal implications of contract, common, and regulatory law to manage a construction project.
18. Understand the basic principles of sustainable construction.
19. Understand the basic principles of structural behavior.
20. Understand the basic principles of mechanical, electrical and piping systems.
21. Understand the role construction managers play in enhancing the needs of society.
22. Understand the importance of creating and planning for continuing education and lifelong learning.
23. Understand the key leadership characteristics that are successful in building and strengthening construction management teams.
24. Understand the importance of recognizing cultural differences and the role culture plays in influencing project success for a construction team.
25. Understand the benefits of respecting the unique and diverse backgrounds individuals bring to a construction team.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CM 102	Introduction to Construction Management	2
CM 113	Construction Materials and Assemblies	2
CM 114	Construction Materials and Assemblies Lab	2
CM 115	Fundamentals of Construction Management	6
CM 214	Residential Construction Management	5
CM 232	Evaluation of Cost Alternatives	3
CM 280	Building Information Modeling	2
CM 313	Commercial Construction Management	5
CM 314	Heavy Civil Construction Management	5
CM 317	Sustainability and the Built Environment (Upper-Division B) ¹	4
CM 318	Housing and Communities (Upper-Division D) ¹	4
CM 334	Construction Law	2
CM 335	Construction Accounting	2
CM 411	Specialty Contracting Construction Management	5
CM 413	Jobsite Construction Management	5

CM 443	Management of the Construction Firm	3
CM 450	Integrated Project, Design and Program Management	5
CM 460	Senior Project Methodology	2
CM 461	Senior Project I	1
CM 462	Senior Project II	1

Technical Electives

Select from the following:		8
CE 413	Advanced Civil Computer-Aided Site Design	
CE 429	Highway Pavement Designs	
CE 474	Environmental Compliance and Permitting	
CM 420	Service / Experiential Learning	
CM 421	Emerging Trends	
CM 422	Professional Preparation	
CM 423	Construction Materials / Assemblies	
CM 424	Construction Technology	
CM 425	Sustainability and Environment	
CM 426	International Construction Studies	
CM 475	Real Property Development Principles	
CM 485	Cooperative Education Experience (6 units maximum)	

SUPPORT COURSES

Select from the following:		6
ARCE 211 & ARCE 212	Structures I and Structures II (3, 3)	
ME 211 & CE 204	Engineering Statics and Mechanics of Materials I (3, 3)	
ARCE 226	Introduction to Structural Systems	3
ARCE 315	Introduction to Structural Design	4
ARCE 421	Soil Mechanics	3
BRAE 239 or CM 239	Engineering Surveying / Construction Surveying	4
BUS 207	Legal Responsibilities of Business	4
BUS 212 or BUS 214	Financial Accounting for Nonbusiness Majors / Financial Accounting	4
BUS 215	Managerial Accounting	4
ECON 201	Survey of Economics (D2) ¹	4
EDES 123	Principles of Environmental Design (E) ¹	4
ENGL 310	Corporate Communication (GWR)	4
GEOL 201	Physical Geology	3
MATH 141	Calculus I (B4) ¹	4
MATH 182	Calculus for Architecture and Construction Management (GE Electives) ^{1,2}	4
PHYS 141	General Physics I	4
Select from the following:		4
PHYS 142	General Physics II (B1 & B3) ¹	
CHEM 124	General Chemistry for Physical Science and Engineering I (B1 & B3) ¹	

CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	
STAT 251 or STAT 312	Statistical Inference for Management I / Statistical Methods for Engineers	4

Select any upper-division (300-400 level) BUS, ECON, ITP course 4

GENERAL EDUCATION (GE)		
(See GE program requirements below.)		44

FREE ELECTIVES		
Free Electives		0

Total units 189

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² MATH 142 Calculus II substitutes for MATH 182.

General Education (GE) Requirements

- 72 units required, 28 of which are specified in Major and/or Support.
- If any of the remaining 44 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Support) ¹	0
Upper-Division D (4 units in Major) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Support) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		44

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Construction Management Minor

Required Courses

CM 102	Introduction to Construction Management	2
CM 113	Construction Materials and Assemblies	2
CM 114	Construction Materials and Assemblies Lab	2
CM 115	Fundamentals of Construction Management ¹	4-6
or CM 371	Construction Management and Project Planning	
CM 310	Construction Means and Methods	4
Select from the following (at least 4 units must be at the 300-400 level): ²		10
CM 232	Evaluation of Cost Alternatives	
CM 280	Building Information Modeling	
CM 317	Sustainability and the Built Environment	
CM 334	Construction Law	
CM 335	Construction Accounting	
CM 420	Service / Experiential Learning ²	
CM 421	Emerging Trends ²	
CM 422	Professional Preparation ²	
CM 423	Construction Materials / Assemblies ²	
CM 424	Construction Technology ²	
CM 425	Sustainability and Environment ²	
CM 426	International Construction Studies ²	
CM 485	Cooperative Education Experience (3 units maximum)	
Total units		24-26

¹ Students who complete this requirement with CM 115 need to take at least 9 units of 300-400 level courses in electives.

² Course availability varies from quarter to quarter.

Cross Disciplinary Studies Minor in Heavy Civil

Select from the following: 4-6

CM 113 & CM 114	Construction Materials and Assemblies and Construction Materials and Assemblies Lab	
CE 259 & CM 310	Civil Engineering Materials and Construction Means and Methods	

Select from the following: 6

CM 115	Fundamentals of Construction Management	
CE/CM 371 & CE 113	Construction Management and Project Planning and Computer Aided Drafting in Civil Engineering	

BRAE 239 or CM 239 Engineering Surveying Construction Surveying 4

CE 222 Introductory Experiments in Transportation Engineering 1

CM 232 Evaluation of Cost Alternatives 3

CM 314 Heavy Civil Construction Management 5

CE 321 Fundamentals of Transportation Engineering 3

CE 413 Advanced Civil Computer-Aided Site Design 2

CE 429 Highway Pavement Designs 4

CE 474 Environmental Compliance and Permitting 2

CM 280 Building Information Modeling 2

CE/CM 436 Heavy Civil Temporary Structures and Shoring 4

CE/CM 437 Heavy Civil Projects and Equipment 4

CM 422 Professional Preparation or CM 485 Cooperative Education Experience 3

Total units 47-49

Landscape Architecture

Dexter Bldg.(34), Room 251
Phone: 805.756.1319
<https://landscape.calpoly.edu>

Department Head: Beverly Bass

Academic Program

Program name	Program type
Landscape Architecture	BLA, Minor

The profession of landscape architecture is primarily involved with the design, planning, and protection of the natural and developed environments. The five-year program in landscape architecture is accredited by the Landscape Architectural Accreditation Board and recognized by the Landscape Architects Technical Committee of the California Board of Architectural Examiners.

An emphasis is placed on a process oriented approach to design and planning while developing an awareness and sensitivity to community and human values as they relate to environmental conditions. Students majoring in landscape architecture acquire technical competencies and creative design skills through a range of projects which represent the breadth of the profession.

Graduates of the program are prepared for positions in private practice, consulting, governmental agencies at the national, state or local levels, industry and construction firms. Graduate study is encouraged for those students interested in pursuing advanced studies or academic positions.

Majors who are in their last two years of study and have at least a 3.2 grade point average may have the opportunity to join Theta Chapter of Sigma Lambda Alpha, the national scholastic honor society for landscape architecture.

Laptop Requirement

The department has a requirement that all freshmen or transfer students have a notebook computer when they enter the program. In the profession of landscape architecture, computing is an integral component, and developing the ability to critically integrate hand and digital tools is a fundamental aspect of landscape architecture education. A notebook computer is the key to having computing capabilities available at all times and all locations. Financial aid may be available to cover the cost of the notebook computer (contact the Financial Aid Office (<http://financialaid.calpoly.edu/>) for more information).

Undergraduate Program Bachelor of Landscape Architecture

The five-year program in landscape architecture is accredited by the Landscape Architectural Accreditation Board and recognized by the Landscape Architects Technical Committee of the California Board of Architectural Examiners. The program offers transfer students an accelerated curriculum to speed their time to graduation while fulfilling degree requirements. Contact the department for more information.

Landscape Architecture Minor

This minor is designed for students who want to expand their knowledge of the role landscape architecture plays in the planning,

conceptualization, and design of the natural and built environment. The program is structured to expose students to issues facing our society on global and local levels while reinforcing concepts of sustainability. From the perspective of landscape architecture, students will have the opportunity to either explore a variety of environmental issues or examine a specific topic area in greater depth. They will gain a clearer understanding of the interdisciplinary contributions, and leadership role that landscape architects take in addressing societal and environmental concerns.

Bachelor of Landscape Architecture Program Learning Objectives

1. Integrate natural and cultural systems in projects at multiple scales.
2. Incorporate sustainable practices throughout the design, planning and implementation process.
3. Comprehend and demonstrate the relationships among analysis, concept development, design development, and implementation.
4. Apply critical thinking and analytical problem solving throughout planning, design and implementation.
5. Demonstrate knowledge of theory, history and contemporary practices of landscape architecture.
6. Apply professional communication skills including written, oral, graphic and digital formats.
7. Identify the role of landscape architects in professional interdisciplinary settings.
8. Apply technical skills in site engineering, material explorations and detailing, construction documents, plant materials, and planting design.
9. Apply professional standards, ethics and practices in the field of landscape architecture.
10. Integrate diversity, equity, and inclusion into landscape architecture related projects.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

Select from the following:		4	or STAT 218	Applied Statistics for the Life Sciences	
LA 402	Design Theory and Exploration Focus Studio		Professional Electives ⁴		8
LA 403	Natural Environments Design Focus Studio		GENERAL EDUCATION (GE)		
LA 404	Cultural Environments Design Focus Studio		(See GE program requirements below.)		
LA 405	Project Design and Implementation Focus Studio		FREE ELECTIVES		
LA 406	Interdisciplinary Design Studio		Free Electives ⁶		
Integrated Learning Course (ILC) topics			Total units		
Select from the following: ²		20	219		
LA 431	CAD and Digital Media Communications (ILC)		¹ Required in Major or Support; also satisfies General Education (GE) requirement.		
LA 432	Landscape Ecology Applications (ILC)		² At least three (3) different Integrated Learning Courses must be chosen. (ILCs are repeatable to 12 units).		
LA 433	Cultural Environments (ILC)		³ At least 4 units must be either LA 350 or any LA 400-500 level course.		
LA 434	Project Design and Implementation (ILC)		⁴ May include any course in: College of Architecture and Environmental Design; Art and Design Department; TH 330; any minor in the College of Architecture and Environmental Design.		
LA 435	Professional Practice (ILC)		⁵ May substitute 4 units of any GE Lower-Division E course.		
LA 436	Traditional and Digital Media Communications (ILC)		⁶ If General Education (GE) courses is used to satisfy a Major or Support requirements, additional units of Free Electives may be needed to complete the total units required for the degree.		
LA 437	3D Digital Design Communications (ILC)				

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater (4 units in Major) ¹	0
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Support) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (8 units in GE Electives fulfilled by 4 units in Major and 4 units in Support) ¹		0
Total units		48

LA 330	Cultural Landscapes: People, Places and Ethical Decisions	4
Approved Electives ¹		
Select from the following:		12
ARCH 445	Urban Design in Architecture	
BRAE 337	Landscape Irrigation	
BRAE 345	Aerial Photogrammetry and Remote Sensing	
EDES 350	The Global Environment	
EDES 406	Sustainable Environments	
LA 320	Design Theory for Landscape Architects	
LA 370	Professional Practice	
LA 400	Special Problems for Advanced Undergraduates	
LA 432	Landscape Ecology Applications (ILC)	
LA 433	Cultural Environments (ILC)	
LA 435	Professional Practice (ILC)	
NR 306	Natural Resource Ecology and Habitat Management	
NR 323	Human Dimensions in Natural Resources Management	
NR/CRP 408	Water Resource Law and Policy	
PLSC 381	Native Plants for California Landscapes	
PLSC 437	Park and Public Space Management	
Total units		28

¹ Consultation with advisor is recommended prior to selecting approved electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Landscape Architecture Minor

Required Courses

LA 101	Introduction to Landscape Architecture	4
LA 212	History of Modern and Contemporary Landscape Architecture	4
LA 220	Landscape Ecology: Concepts, Issues, and Interrelationships	4

Orfalea College of Business

<https://www.cob.calpoly.edu/>

Dean: Damon Fleming
Interim Associate Dean: Stern Neill
Assistant Dean: Amy Carter
Assistant Dean, Advancement: Mary Kelting

Academic Programs

Program name	Program type
Accounting	Minor
Business Administration	BS, MBA
Business Analytics	MS
Economics	BS, Minor
Entrepreneurship	Minor
Industrial Technology	Minor
Industrial Technology and Packaging	BS
Packaging	Minor
Packaging Value Chain	MS
Quantitative Economics	MS
Sales	Minor
Taxation	MS

Mission Statement

We prepare career-ready, global business leaders through hands-on discovery and application.

The BS degree program and the graduate programs in Business Administration are accredited by the AACSB—The International Association to Advance Collegiate Schools of Business. The BS degree program in Industrial Technology and Packaging is accredited by the Association of Technology, Management, and Applied Engineering (ATMAE). The objective of accreditation is to foster high-quality educational programs.

The college's educational philosophy follows the Cal Poly tradition—that of enlisting maximum student involvement in the learning process through case analysis, special projects, internships, computer simulations and other learn by doing exercises. The college has state-of-the-art computer facilities which are available to students to meet their coursework needs. Educational programs are designed to challenge highly motivated students to become tomorrow's socially responsible business leaders through a learn-by-doing technology-oriented education. The curricula include general education requirements and specialized studies in the student's major field. Optional areas of concentration within each major enable the student to select the program most closely suited to the chosen career field.

The college is organized into six areas:

- Accounting and Business Law
- Economics
- Finance
- Industrial Technology and Packaging

- Marketing
- Management, Human Resources, and Information Systems

This organizational structure allows for programs of study that blend broad-based knowledge of the functional disciplines of Business and Economics with an in-depth study of particular discipline(s).

Accounting and Business Law

Business Bldg. (03), Room 403
Phone: 805.756.1543

Area Chair: Li Dang

Accounting provides information for making informed business decisions by decision makers both external and internal to the firm. The Accounting and Business Law Area works closely with the accounting profession to help ensure curriculum relevancy and technical competency.

Economics Area

Business Bldg. (03), Room 407
Phone: 805.756.2783

Area Chair: Aric Shafran

The mission of the economics program is to educate students in the models and problem-solving tools of economics. The Economics Area offers a bachelor of science degree, a master of science degree, and a minor in Economics.

Finance Area

Business Bldg. (03), Room 407
Phone: 805.756.1472

Area Chair: Ziemowit Bednarek

The Finance Area offers the Financial Management (FM) concentration which provides a rigorous, coherent, real-world-based, and up-to-date curriculum to prepare students for rewarding careers. The FM students gain in-depth knowledge of Fixed Income Securities (Bond Markets), Security Analysis and Portfolio Management (Equity and Derivative Markets), Corporate Finance (Mergers and Acquisitions and Initial Public Offerings), Alternative Investments (Foreign Exchange, Commodities and Real Estate), and Quantitative Methods.

Finance classes are taught in the **Financial Analysis Resource Center**, a special-purpose classroom with data terminals, and real time display of stock prices. The computers are equipped with financial data and software, which permits students to work on real-world problems - individually and in teams.

Finance students have outstanding internship and senior project opportunities, including the ability to pursue the Chartered Financial Analyst (CFA) designation; the ability to participate in the Student Managed Portfolio Project, where they assume an active role in investing Cal Poly Corporation endowment funds; and the opportunity to intern with major corporations, investment banks, and money management firms. Our graduates pursue careers in Financial Services, Corporate Finance, and as Financial Analysts, working for investment banks, brokerage firms, the asset management industry, the real estate industry, consulting firms, and other facets of business.

Industrial Technology and Packaging Area

Business Bldg. (03), Room 405

Phone: 805.756.2676

Area Chair: Javier de la Fuente

The Industrial Technology Area offers a bachelor of science degree in Industrial Technology and Packaging, with concentrations in Industrial Technology, and Packaging, and minors in Industrial Technology and in Packaging. IT is also the administrative home for the interdisciplinary Entrepreneurship concentration and minor, and the Consumer Packaging Solutions concentration.

Management, Human Resources, and Information Systems Area

Business Bldg. (03), Room 405
Phone: 805.756.2012

Area Chair: Leida Chen

The Management, Human Resources, and Information Systems Area's goals are fourfold:

1. to provide students with management theories, strategies, and practices essential for understanding how modern organizations operate and succeed in a complex and global environment,
2. to introduce students to the information technologies that enable the success of critical business processes and enhance worker creativity and productivity,
3. to engage students in learning about team dynamics and team leadership, and
4. to prepare our graduates, through a focus on experiential learning, for rewarding careers in a myriad of industries.

The Management, Human Resources, and Information Systems Area offers all business students coursework in organizational behavior, information systems, international management, and business strategy. We offer concentration specific courses in both of the concentrations that are housed in the Management, Human Resources, and Information Systems Area: (1) Management and Human Resources, and (2) Information Systems.

Marketing Area

Business Bldg. (03), Room 403
Phone: 805.756.1543

Area Chair: Jeff Hess

The Marketing Area offers the Marketing Management concentration which cultivates agile marketers, who integrate data analytics, critical thinking and creativity. The curriculum is a conscious balance among the technical rigors of data, the nuance of creative strategy, and the finesse of customer relationship management. Students engage in hands-on projects that provide experience and confidence. From market research to communications strategies, students have opportunities to provide data-driven guidance and creative solutions to local startups, Cal Poly organizations, and the community.

As a discipline with broad applications, the Marketing Management concentration offers flexible career paths and work styles. Graduates are in demand for positions in market research and analytics; business development and sales; and marketing communications, advertising, digital and product marketing.

Orfalea Student Services

Business Bldg. (03), Room 100

Phone: 805.756.2601

<https://newscully.cob.calpoly.edu/studentservices/>

Mission Statement

Orfalea Student Services empowers future global business leaders to forge their unique path to success. We cultivate a dynamic and inclusive environment that supports student needs through advising, mentoring, and connection to industry. We deliver comprehensive programming that encourages exploration, leadership, and exposure beyond the classroom, resulting in career ready graduates who add value to their communities and industry.

Services Provided

- Professional Advisors that provide advising and counseling addressing areas of personal, academic, and career success
- Peer Advisors that provide assistance with progress to degree, study abroad, change of major and other administrative issues
- Peer Tutors
- Peer, Young Alumni, and Executive Mentors
- Career readiness programs and initiatives, including career coaching, and connection with employers and industry
- BUS 100 (Student Orientation & College Success)
- Enrollment management
- Student scholarships and grants
- Orfalea OutREACH, a Faculty & Staff student referral system
- Diversity & Inclusivity initiatives, including the Multicultural Business Program
- Ambassadors, who provide prospective student and executive tours
- International student support
- Quarterly workshops, events and programs focused on student success

Transfer Students

Transfer students to the Orfalea College of Business should refer to the curricula listed for the appropriate major. Please note that all lower division courses may be completed at most California Community Colleges. Full time students who have successfully completed all lower division courses prior to transferring to the College of Business can usually anticipate graduating in six quarters. Admitted transfer students should seek immediate advising assistance from Orfalea Student Services.

BS Business Administration

The undergraduate business program provides students with the knowledge and the analytical skills essential for employment in all sectors of business, industry, governmental and non-profit organizations. Graduates of the business program will understand the fundamentals of how a successful enterprise operates, and will have sufficient depth in an area of study to begin a successful career by providing immediate value to an organization.

The Orfalea College of Business engages in a comprehensive assessment plan to ensure student achievement of these objectives.

The Business Administration degree program consists of five components: Major, Concentration, Support, General Education, and Electives.

Concentrations

Students may choose from the following concentrations:

- Accounting Concentration
- Consumer Packaging Concentration
- Entrepreneurship Concentration
- Financial Management Concentration
- Information Systems Concentration
- Management and Human Resources Concentration
- Marketing Management Concentration
- Real Estate Finance Concentration
- Quantitative Analysis Concentration

BS Economics

Economics is the study of how people choose to use resources.

Economics is a way of thinking, and students can apply this way of thinking to nearly any aspect of the world. The undergraduate curriculum in economics is designed to:

- provide a firm grounding in modern economic theory;
- instill the capacity for independent thought about economic policies and problems;
- develop the capacity for quantitative research, and
- provide basic descriptive knowledge about the US and the world economy.

An undergraduate major in economics opens many possibilities for employment. Many large firms, including banks, other financial institutions, and manufacturing companies, accept economists in substantial numbers. There are also many opportunities for employment in government at the state, federal, or international levels. In addition, a growing number of research and consulting firms employ large numbers of economists in such areas as forecasting, industry analysis, and litigation.

An undergraduate economics training also provides excellent preparation for business school, the study of law, or for pursuing doctoral studies in economics, business and public policy.

Concentrations

Students may elect to complete curriculum in General Economics or choose from the following concentrations:

- Accounting Concentration
- Consumer Packaging Concentration
- Entrepreneurship Concentration
- Financial Management Concentration
- Information Systems Concentration
- Management and Human Resources Concentration
- Marketing Management Concentration
- Real Estate Finance Concentration
- Quantitative Analysis Concentration

BS Industrial Technology and Packaging

The Industrial Technology and Packaging program incorporates a broad range of technical skills and business management to prepare individuals for positions in technology management or as entrepreneurs.

The curriculum is particularly suited for careers that involve working with people and technology. The collaborative, project-based classes/laboratories create well-rounded, problem solving graduates that would be successful and quickly functional in a variety of industries including manufacturing and packaging. Students develop a strong foundation in science, liberal arts, business and management disciplines; a technical core including industrial power systems, materials and processes, quality management, lean six sigma, safety management, packaging, and product development. The curriculum includes extensive hands-on coursework in two concentrations: Industrial Technology and Packaging Technology. The Industrial Technology concentration offers courses pertinent to general operations management, supply chain management and lean processes, while the Packaging Technology concentration offers specialized courses in design and testing of packaging products and systems.

Concentrations

- Industrial Technology Concentration
- Packaging Technology Concentration

Accounting Minor

The minor is designed to provide students from other majors a basic foundation in accounting. Upon successful completion of the minor, students will have coursework that can be applied towards the requirements for licensure as a Certified Public Accountant in California and most other states. Students wishing to pursue such licensure are encouraged to pursue a Master of Science in Accounting or a Master of Science in Taxation upon completion of their undergraduate education.

Students applying to the minor must be at sophomore level standing with a minimum GPA of 3.0. Acceptance into the Accounting minor is not guaranteed and capacity is limited. The Accounting Area will select only the most qualified applicants with an interest in pursuing licensure. Not open to Business and Economics majors.

Economics Minor

This minor is designed to give students from other majors a general competency in economics. Students are encouraged to meet with the advisor of the Economics Minor to develop a course of study that complements their major curriculum. For more information, contact the Economics Area office.

Entrepreneurship Minor

The goal of the Entrepreneurship minor is to empower students to create economic and social value in any discipline. Students in the Entrepreneurship minor will acquire the tools, develop the skills, and cultivate the mindset of an entrepreneur. This minor comprises a set of courses chosen to provide a balanced and interdisciplinary approach to entrepreneurship. While the Entrepreneurship minor is open to students from all colleges, it is not open to Business Administration or Economics majors, since those majors are able to choose an Entrepreneurship concentration. There is an application process and students must be in good standing in their majors.

Industrial Technology Minor

The Industrial Technology minor offers a choice of courses in technology, design, operations, quality, and supply chain for non-Industrial

Technology and Packaging majors. These courses provide supplemental knowledge and skills for non-technical majors who wish to obtain a position related to operations in a company.

Packaging Minor

The purpose of this interdisciplinary minor is to complement the non-Industrial Technology and Packaging majors with a planned curriculum in packaging. The program is designed to capitalize on theories and skills learned in other disciplines thereby uniquely preparing students for success as packaging professionals in positions ranging from highly technical research and development through purchasing, production, sales and management.

Students gain the skills needed for the design of package forms and graphics, the specifications of materials and machinery to be used, the evaluation of package systems, as well as the planning and coordinating of packaging requirements. These specialized skills result from an integration of knowledge gained through the packaging curriculum with that of the major discipline. A significant understanding of packaging issues and their impact on the industry is also gained.

Sales Minor

Through the Sales minor, students learn how to build and maintain business relationships, sell, manage, and lead. Students develop important career building connections through mentors, internships and a practicum to receive the knowledge and experience necessary to succeed in their career. The program is open to all Cal Poly undergraduate majors.

Graduate Programs

Master of Business Administration

Business Bldg. (03), Room 409
Phone: 805.756.2637
cobgmp@calpoly.edu
<https://gradbusiness.calpoly.edu/>

Program Director: Beena Khurana

Programs of Study/Specializations Available

MBA - General Management Specialization
MBA - Graphic Communication Document Systems Management Specialization

Architecture or Landscape Architecture Pathway

This pathway is only available to students who are enrolled in Cal Poly's Bachelor of Architecture (BArch) program or Bachelor of Landscape Architecture (BLA) program. Students may request permission to enroll in MBA courses during their fifth/final year of study. Upon completion of the BArch or BLA degree, students are eligible to formally apply for admission to the MBA program. Students who fulfill all the requirements first receive their bachelor's degree and then the MBA. Contact the Graduate Programs Office in the Orfalea College of Business for additional information.

Option to Simultaneously Pursue MBA & Another Master's Degree

The Orfalea College of Business permits students to develop an individualized program of study that incorporates the required elements

of two distinct Cal Poly graduate degree programs. This option offers graduate students the opportunity to simultaneously pursue an MBA degree in the Orfalea College of Business and a Master's Degree in any one of Cal Poly's other colleges.

To participate in this option, students must apply to, meet the qualifications for, and be accepted into each program independently. Students must first apply for formal admission to one specific Cal Poly graduate program such as the MBA program. After enrollment in a specific graduate program, the student must apply to, meet the qualifications for, and be accepted into the second program. The two degrees must be awarded in the same quarter.

General Characteristics

Cal Poly's MBA programs are designed to prepare students to enter successful management positions in industry, government, and not-for-profit organizations. The programs give graduates a broad management foundation. Cal Poly's MBA programs are 60 to 64 units in length, depending on specialization, and consist of core courses and elective courses.

Tuition and Fees

The MBA programs have separate professional fees associated with them. Please see Financial Aid (<https://www.calpoly.edu/financial-aid/costs-and-affordability/>) for more information.

Admission/Acceptance Requirements

Admission to the MBA programs is based upon:

- successful completion of an accredited undergraduate program of study
- prior academic performance
- Graduate Management Admission Test (GMAT) or Graduate Records Examination general test (GRE) scores, with particular emphasis on performance on the quantitative portion
- prior work experience (desirable).

Culminating Experience

In order to satisfy the culminating experience requirement, students must satisfactorily pass a comprehensive examination.

PROGRAMS OF STUDY

MBA – General Management Specialization

This program allows students to take electives of particular interest that fit their specific needs or career objectives. The program consists of 36-quarter-units of required courses with the remaining elective units selected from a focused group of advanced courses.

MBA - Graphic Communication Document Systems Management Specialization

This specialization is offered in conjunction with the Graphic Communication Department in the College of Liberal Arts, and is designed for those interested in graphic communication-related management careers. The program, focused on document systems management, contains a strong research component, including research assignments relevant to an individual company and the document

industry as a whole. Students participate in research and development projects for the Graphic Communication Institute at Cal Poly.

MS Business Analytics

Business Bldg. (03), Room 409
Phone: 805.756.2637
cobgmp@calpoly.edu
<https://gradbusiness.calpoly.edu/>

Program Director: Brennan Davis

General Characteristics

The MS in Business Analytics is a comprehensive interdisciplinary business degree program that encompasses economics, statistics, cloud computing, ethics, marketing, human resources, and information systems. The program offers a holistic approach to data analytics, combining qualitative reasoning with quantitative tools to identify key business problems and translate data analytics into decisions that improve business performance. Students will acquire broad training in all aspects of business analytics with particular emphasis on industry projects, statistical modeling, and communication. Students will work on collaborative industry projects to engage with real-world problems, and gain valuable experience working for a client in a team. Program may be offered in a classroom-based or hybrid format.

Tuition and Fees

The MS Business Analytics program is offered through Extended Education. As such, the program carries a separate tuition and fee schedule available in the Office of the Associate Dean, Orfalea College of Business.

Admission/Acceptance Requirements

To qualify for admission to a Master's program, you must meet the Cal Poly university admission requirements for graduate standing, which are described in the Graduate Education (p. 431) section of the Cal Poly Catalog, as well as professional, personal, scholastic, and other standards as prescribed by the program. The program-specific requirements for admission are as follows:

- Official transcripts of all course work
- Competitive GMAT or GRE score (valid for five years)
- Statement of purpose
- Two letters of recommendation
- Completion of GSB 512 Quantitative Analysis with a grade of B or better, or:
 - Completion of at least two undergraduate college-level courses in statistics
 - Completion of at least one undergraduate college-level course in calculus
- Applicants whose native language is not English must have taken TOEFL within the last two years with a minimum score of 550 (paper version) and 213 (computerized version) or 80 (internet based). The TOEFL requirement is waived for certain applicants; see https://admissions.calpoly.edu/applicants/international/toefl_ielts.html for details.

Culminating Experience

The culminating experience for the MSBA program takes the form of a collaborative industry project, in which students synthesize ideas and

techniques learned throughout the program, and apply these to a real business challenge. Each student's completed project is evaluated by a three-member faculty panel, in consultation with industry partners and program administration, to complete this requirement.

MS Packaging Value Chain

Business Bldg. (03), Room 409
Phone: 805.756.2637
cobgmp@calpoly.edu
<https://gradbusiness.calpoly.edu/>

Program Director: Jay Singh

General Characteristics

The MS in Packaging Value Chain program is a fully online, interdisciplinary degree program that encompasses packaging science, design, marketing, finance, supply chain, operations and statistics. The focus of the program is to present how the package can be used to create value addition and includes courses that build on each other towards a holistic understanding of the global packaging diaspora. The program develops competencies in essential packaging abilities and related business acumen, promotes transference of learning to the workplace for professionals, and provides opportunities for leadership roles.

Recent bachelor's degree graduates in packaging or related disciplines can also seek to significantly enhance their learning towards a high-order perspective of packaging's impact across the global value chains.

Tuition and Fees

The MS Packaging Value Chain program is offered through Extended Education. As such, the program carries a separate tuition and fee schedule available in the Office of the Associate Dean, Orfalea College of Business.

Admission/Acceptance Requirements

To qualify for admission to a Master's program, you must meet the Cal Poly university admission requirements for graduate standing, which are described in the Graduate Education (p. 431) section of the Cal Poly Catalog, as well as professional, personal, scholastic and other standards as prescribed by the program. The program specific requirements for admission to the MS Packaging Value Chain program must be submitted via the Cal Poly Graduate Education (<http://www.grad.calpoly.edu/>) website and are as follows:

- Completion of a bachelor's degree in packaging or a related field from an accredited college or university
- Official transcripts of all course work
- Statement of purpose
- Two letters of recommendation
- Completion of at least two college level courses in physics, chemistry (including organic chemistry), and statistics
- Completion of at least one college level course in calculus
- Applicants whose native language is not English must have taken TOEFL within the last two years with a minimum score of 550 (paper version) and 213 (computerized version) or 80 (internet based). The TOEFL requirement is waived for certain applicants; see https://admissions.calpoly.edu/applicants/international/toefl_ielts.html for details.

Culminating Experience

The Applied Industry Project course, completed during the last quarter of the program, will provide students with the opportunity to synthesize the ideas and methods they have learned over the duration of the MS Packaging Value Chain program, fulfilling the requirements for a culminating experience as specified in the California Code of Regulations.

MS Quantitative Economics

Business Bldg. (03), Room 409
Phone: 805.756.2637
cobgmp@calpoly.edu
<https://gradbusiness.calpoly.edu/>

Program Director: Steve Hamilton

General Characteristics

The master of science degree program in economics is a full-time, four-quarter program designed to provide advanced preparation in econometrics and applied microeconomics for individuals desiring careers as economists or data analysts in the business, financial, or government sectors. The program provides the technical skills required to engage in economic analyses that involve economic modeling, forecasting, numerical optimization, and data analysis.

Tuition and Fees

The MS Economics program is offered through Extended Education. As such, the program carries a separate tuition and fee schedule available in the Office of the Associate Dean, Orfalea College of Business.

Admission/Acceptance Requirements

For admission to the program with a classified or conditionally classified status, a student should hold a bachelor's degree from an accredited institution with a minimum grade point average of 2.5 in the last 90 quarter units (60 semester units) attempted and have completed coursework in intermediate microeconomics, intermediate macroeconomics, econometrics, calculus, and statistics. Applicants are required to submit scores for the General Test of the Graduate Record Examination. An applicant who meets these standards but lacks the prerequisite coursework may be admitted as a conditionally classified student and must make up any deficiencies before advancement to classified graduate standing.

Culminating Experience

Students are required to pass a written comprehensive exam in economics.

MS Taxation

Business Bldg. (03), Room 409
Phone: 805.756.2637
cobgmp@calpoly.edu
<https://gradbusiness.calpoly.edu/>

Program Director: Rodney P. Mock

General Characteristics

The Master of Science in Taxation at Cal Poly is recognized by the accounting firms as one of the elite programs in taxation. The program is a one-year, full-time comprehensive program, that covers a broad range

of specialized tax curriculum; such as, partnership taxation, corporate taxation, state and local taxation, international tax and tax research. The degree program provides students with the opportunity to learn from nationally recognized tax scholars, major industry players and seasoned tax practitioners. Students graduating from the masters are highly sought after by recruiters, and are promoted early in public accounting, government and industry as a result of their tax expertise. The program satisfies CPA accounting study requirements in the state of California.

Winter quarter requires an internship for class credit, where students engage in learn-by-doing at the accounting firms on sophisticated tax transactions.

Tuition and Fees

The MS Taxation program is offered through Extended Education. As such, the program carries a separate tuition and fee schedule available in the Office of the Associate Dean, Orfalea College of Business.

Admission/Acceptance Requirements

Acceptance to the program is based upon an applicant's:

- submission of an application for graduate admission via <https://calstate.edu/apply> (<https://calstate.edu/apply/>),
- successful completion of an accredited undergraduate program of study and (i) four (4) quarter units in federal taxation *and* (ii) eight (8) quarter units in accounting or two (2) years of equivalent experience in accounting,
- prior academic performance with particular emphasis placed on performance during the last 90 graded quarter units completed prior to application (or equivalent)

Culminating Experience

All students are required to pass a comprehensive examination, which is normally given during the final quarter of the program.

BS Business Administration Program Learning Objectives

Students graduating from our program will be able to:

- 1.1 Apply knowledge to identify opportunities and solve business problems.
- 2.1 Evaluate the social and ethical responsibilities of business organizations.
- 3.1 Exhibit the ability to work in a diverse environment.
- 3.2 Illustrate an understanding of business activities in a global environment.
- 4.1 Demonstrate effective written communication skills.
- 4.2 Demonstrate effective oral communication skills.
- 4.3 Demonstrate effective participation in teams.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA

- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

GENERAL EDUCATION (GE)

(See GE program requirements below.)		60
FREE ELECTIVES		
Free Electives ⁴		21
Total units		180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Students should follow the advising footnote under the SUPPORT section (p. 184) of the Economics major. "Students pursuing the Quantitative Analysis concentration should take MATH 141 and MATH 142 instead of MATH 221".
- ³ STAT 301 (4 units) and STAT 302 (4 units) may be used as a substitute for STAT 251 (4 units) and STAT 252 (5 units). All students must still complete GE Area B requirements. STAT 301 and STAT 302 are not GE courses.
- ⁴ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations

Students may elect to complete curriculum from the following concentrations:

- Accounting (p. 181)
- Consumer Packaging (p. 181)
- Entrepreneurship (p. 182)
- Financial Management (p. 182)
- Information Systems (p. 182)
- Management and Human Resources (p. 183)
- Marketing Management (p. 183)
- Quantitative Analysis (p. 185)
- Real Estate Finance (p. 184)

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	

B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ^{1,2}	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Support) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ^{1,3}		4
Total units		60

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Students should follow the advising footnote under the SUPPORT section (p. 184) of the Economics major. "Students pursuing the Quantitative Analysis concentration should take MATH 141 and MATH 142 instead of MATH 221".

³ STAT 301 (4 units) and STAT 302 (4 units) may be used as a substitute for STAT 251 (4 units) and STAT 252 (5 units). All students must still complete GE Area B requirements. STAT 301 and STAT 302 are not GE courses.

Accounting Concentration

The Accounting Concentration prepares students for careers in public accounting (tax and audit), private industry, government, and not-for-profit organizations.

BUS 319	Accounting Information Systems	4
BUS 320	Federal Income Taxation for Individuals	4
BUS 321	Intermediate Accounting I	4

BUS 322	Intermediate Accounting II	4
BUS 424	Accounting Ethics	4
BUS 425	Auditing	4

Accounting Elective

Select from the following:		4
BUS 323	Intermediate Accounting III	
BUS 412	Advanced Managerial Accounting	
BUS 417	Taxation of Corporations and Partnerships	
BUS 422	Accounting for Government and Not-For-Profit Entities	
BUS 474	Independent Study in Accounting	

Total units **28**

Consumer Packaging Concentration

Concentration Coordinator: Javier de la Fuente

This concentration provides business majors entry into a rapidly expanding and dynamic field, packaging, that has been fueled by the globalization of manufacturing and customer-supplier relationships. This trend has been enabled by new approaches to value chain management, product development, and packaging technology. This concentration will allow the students to:

1. Conceptualize packaging designs that meet customer needs
2. Validate designs with data and customer insight
3. Gain familiarity with packaging materials and related test equipment
4. Conduct qualitative and quantitative marketing analysis for products
5. Comprehend packaging costs, sustainability issues and industry trends and
6. Understand supply chain management and logistics related issues

Lessons are drawn from a range of established and emerging industries such as food, automotive, healthcare, and electronics.

BUS 396	Consumer Insights	4
BUS 418	Listening to the Customer	4
BUS 419	Strategic Marketing Measurement	4

Select from the following:		4
GRC 337	Consumer Packaging	
ITP 233	Product Modeling and Communication	
ITP 341	Packaging Polymers and Processing ¹	
ITP 408	Fiber-Based Packaging	
ITP 411	Packaging Sustainability	
ITP 414	Packaging Laws & Regulations	
ITP 415	Supply Chain and Logistics	
ITP 430	Healthcare Packaging	
ITP 485	Packaging Development	

Total units **28**

¹ If course is taken to meet a Major or Support requirement, it cannot be double-counted in the concentration.

Entrepreneurship Concentration

Concentration Coordinator: Lynn Metcalf

The goal of the Entrepreneurship concentration is to empower students to create economic and social value either for a startup or as part of a high-performing entrepreneurial team within an existing organization. Students in the Entrepreneurship concentration will acquire the tools, develop the skills, and cultivate the mindset of an entrepreneur. The Entrepreneurship concentration comprises a carefully-curated set of required and elective courses, leading to a hands-on, balanced and interdisciplinary approach to entrepreneurial leadership that is applicable in for-profit and non-profit contexts; local and global settings; and service-, product-, or technology- based companies.

Information Systems Concentration

Concentration Coordinator: Barry D. Floyd

The Information Systems (IS) Concentration prepares students to enter the exciting world of information technology in business. Students learn to integrate key IS concepts and technologies through coursework in database systems, application development, systems analysis and design, infrastructure and security management, project management, and business analytics. The IS faculty develop students for professional careers by focusing on teamwork, strong interpersonal skills, turning theory into practice, and employing state-of-the-art technologies in the classroom. IS graduates are in high demand by recruiters because

of their ability to apply an understanding of technology to problems while maintaining a focus on the business context. IS graduates enjoy exciting career opportunities as analytics specialists, social media and web application developers, business consultants, IT infrastructure designers, business analysts, project managers, and data and database administrators, among many others.

BUS 492	Technology-Supported Collaboration	
BUS 493	User Experience Analysis and Design	
BUS 495	Software Testing	
BUS 496	Electronic Commerce	
BUS 498	Directed Topics in Information Systems	
BUS 499	Data Communications and Networking	

Total units 28

Management and Human Resources Concentration

Concentration Coordinators: Benjamin Alexander and Allison M. Ellis

The Management and Human Resources (MHR) concentration prepares students for general leadership and management positions, and careers in more specific Human Resources (HR) positions. The HR portion of the curriculum prepares students to hit the ground running as an HR generalist and in specific HR functions such as recruitment, staffing, and training and development. The Management portion of the curriculum prepares students for entry-level leadership and management positions, such as management training programs in large corporations, management consulting, and managerial positions in family businesses and other small organizations. Students will develop management skills such as leadership, organizational design, development, and change, global management, and negotiation.

BUS 382	Leadership and Organizations	4

ITP 428	Commercialization of New Technologies	

Total units 28

¹ If a course is taken to meet a Major or Support requirement, it cannot be double-counted in the concentration.

Marketing Management Concentration

The Marketing Management concentration is a conscious balance between the technical rigors of data analysis, the nuances of creative strategy, and the subtleties of relationship management with clients and consumers.

Through hands-on student projects, graduates gain experience and confidence needed to lead in an ever-changing marketing environment. From market research to marketing strategies, students have an array of opportunities to provide data-driven guidance, critical thinking, and creativity for all kinds of situations and organizations.

As a discipline with broad applications, the Marketing Management concentration offers flexible career paths and work styles. Graduates are in demand for positions in market research and analytics; business development and sales; and marketing communications, advertising, digital and product marketing.

BUS 454	Marketing Projects	
Total units		28

Real Estate Finance Concentration

The Real Estate Finance concentration provides a program of study that focuses on emerging trends and issues in real estate markets. Students in the Real Estate Finance concentration learn to apply economic techniques to real estate markets, and to describe, explain, and predict patterns of real estate prices, building production, and real estate consumption. The program prepares real estate professionals for public sector and private industry jobs in real estate analysis, appraisal, corporate asset management, development, insurance, and investment.

Total units 28

¹ ECON 434 has a prerequisite of ECON 311.

² BUS majors cannot count BUS 342 as an elective in the Real Estate Concentration because it is a required course in the BUS major.

³ ECON majors cannot count ECON 311 as an elective in the Real Estate Concentration because it is a required course in the ECON major.

BS Economics

Program Learning Objectives

1. Apply economic reasoning to evaluate everyday problems.
2. Demonstrate correct use of economic analyses to evaluate specific business proposals, economic policy proposals and current events.
3. Recognize the role of assumptions about the structure of the economy as well as ethical assumptions in arguments made for and against economic policy issues.
4. Describe how to use empirical evidence to evaluate an economic argument.
5. Summarize statistical methodology and interpret statistical evidence.
6. Conduct appropriate statistical analysis of data, and explain the statistical problems involved.
7. Communicate effectively about specific economics issues.

8. Identify and examine diverse perspectives when evaluating business, economic and social policy reform.

Degree Requirements and Curriculum

In addition to the program requirements on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

ECON 221	Microeconomics	4
ECON 222	Macroeconomics (D2) ¹	4
ECON 311 & ECON 312	Intermediate Microeconomics I and Intermediate Microeconomics II	8
ECON 313	Intermediate Macroeconomics	4
ECON 339	Econometrics	4
ECON 460	Research Methodology in Applied Economics	4

Select from the following: 4

ECON 461 & ECON 462	Senior Project I and Senior Project II	
ECON 464	Applied Senior Project	
ECON electives (ECON 202 or a 300-400 level)		4

CSC 101	Fundamentals of Computer Science	
ECON 395	Programming for Economics and Analytics	

GENERAL EDUCATION (GE)

(See GE program requirements below.) 64

FREE ELECTIVES

Free Electives 4-8

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Economics majors may choose a concentration. Students who choose not to declare a concentration follow the General Curriculum in Economics: Complete at least 8 units of upper-division (300-400 level) ECON courses plus 20 units of any upper-division courses.

³ Students pursuing the Quantitative Analysis concentration should take MATH 141 and MATH 142, instead of just MATH 141.

General Curriculum in Economics, or Concentration

Students who choose to follow the General Curriculum in Economics must complete at least 8 units of upper-division (300-400 level) ECON courses plus 20 units of any upper-division courses.

Alternatively, students select from the following concentrations:

- Accounting (p. 181)
- Consumer Packaging
- Entrepreneurship
- Financial Management (p. 182)
- Information Systems (p. 182)
- Management and Human Resources
- Marketing Management
- Quantitative Analysis (p. 185)
- Real Estate Finance (p. 184)

General Education (GE) Requirements

- 72 units required, 8 of which are specified in Major and/or Support.
- If any of the remaining 64 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4

Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Major) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives		8
Total units		64

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Quantitative Analysis Concentration

Emphasizes the skills needed to analyze market data in fast-paced industries such as manufacturing, financial services, and advertising, and provides the technical training required to engage in consulting. There is also a continued need for quantitative analysis by lawyers, accountants, engineers, health service administrators, urban planners, and local, national, and international government agencies. The concentration prepares students for jobs that entail forecasting, data analysis and quantitative economics, and provides a solid foundation for graduate study in economics and business.

Total units **28**

¹ Consultation with an advisor is recommended prior to choosing Approved Electives. Courses in Analytics or in Statistics and Decision Analysis provide a focus in analytics. Courses in Statistics and Decision Analysis or in Mathematical Foundations are recommended for students pursuing post-baccalaureate studies.

² Economics majors cannot count ECON 339 toward electives in the Quantitative Analysis concentration.

³ Economics majors cannot count ECON 395 or BUS 392 or CSC 101 toward electives in the Quantitative Analysis concentration.

BS Industrial Technology and Packaging

Program Learning Objectives

1. Apply fundamental knowledge and skills to solve management, technology and applied engineering problems.
2. Evaluate the ethical responsibilities in a business or technology context.
3. Relate knowledge of sustainability to practices in industry.

4. Apply decision tools and methods and make recommendations based on their outcome.
5. Demonstrate effective participation and leadership in teams.
6. Demonstrate effective writing and speaking skills.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Industrial Technology Concentration

The Industrial Technology Concentration offers students a broad education in business and technology management that makes them versatile contributors in a wide variety of industries. Students develop knowledge and skills in operations, supply chain, quality assurance, planning, materials, automation, technology commercialization, and project management. In their selection of approved electives students can specialize or further broaden their education with courses in value chain management, facilities management, lean six sigma, packaging, accounting, business, new technology commercialization, and entrepreneurship.

ITP 404	Lean Six Sigma Green Belt Certification Project	
ITP 408	Fiber-Based Packaging	
ITP 412	Instrumental Analysis of Packaging Polymers	
ITP 413	Packaging Quality Assessment	
ITP 414	Packaging Laws & Regulations	
ITP 419	Cooperative Education/Internship	
ITP 430	Healthcare Packaging	
ITP 475	Distribution Packaging Dynamics	
ITP 485	Packaging Development	
Total units		40

¹ Consultation with an advisor is recommended prior to selecting Approved Electives; note your selections may impact pursuit of post-baccalaureate studies and/or goals.

Packaging Technology Concentration

Packaging continues to grow beyond being a logistical or materials issue to a strategic business function aimed at creating value. The Packaging Technology concentration emphasizes the entire packaging value chain and includes the disciplines of engineering, material science, design, and business. Students are encouraged to leverage their personal interests to focus on a multitude of industry sectors such as food, automotive, healthcare, and electronics. The highly sought out graduates are provided with opportunities to engage with a multitude of groups ranging from R&D through purchasing, production, sales, and management.

ITP 234	Packaging Design Fundamentals	4
ITP 408	Fiber-Based Packaging	4
ITP 412	Instrumental Analysis of Packaging Polymers	4
ITP 430	Healthcare Packaging	4
ITP 475	Distribution Packaging Dynamics	4
ITP 485	Packaging Development	4

Approved Electives

Select from the following: ¹		16
FSN 319	The Science of Food for the Consumer	
FSN 354	Packaging Function in Food Processing	
ITP 400	Special Problems for Advanced Undergraduates	
ITP 403	Lean and Quality Systems Management	
ITP 410	Operations Planning and Control	
ITP 413	Packaging Quality Assessment	
ITP 414	Packaging Laws & Regulations	
ITP 419	Cooperative Education/Internship	

ITP 428	Commercialization of New Technologies	
Total units		40

¹ Consultation with an advisor is recommended prior to selecting Approved Electives; note your selections may impact pursuit of post-baccalaureate studies and/or goals.

Accounting Minor

BUS 214	Financial Accounting ¹	4
BUS 215	Managerial Accounting ²	4
BUS 319	Accounting Information Systems	4
BUS 320	Federal Income Taxation for Individuals	4
BUS 321	Intermediate Accounting I	4
BUS 322	Intermediate Accounting II	4
Select from the following:		4
BUS 323	Intermediate Accounting III	
BUS 417	Taxation of Corporations and Partnerships	
BUS 425	Auditing	
BUS 424	Accounting Ethics	

Total units **28**

¹ Students may substitute AGB 214 Agribusiness Financial Accounting towards BUS 214 Financial Accounting.

² Students may substitute AGB 323 Agribusiness Managerial Accounting towards BUS 215 Managerial Accounting.

Economics Minor

Required Courses

ECON 221	Microeconomics	4
ECON 311	Intermediate Microeconomics I	4
ECON 312	Intermediate Microeconomics II	4

Select from one of the following sequences: 8

ECON 222 & ECON 313	Macroeconomics and Intermediate Macroeconomics	
---------------------	--	--

or

ECON 202 & ECON 339	Using Big Data to Solve Economic and Social Problems and Econometrics	
---------------------	---	--

Electives

400 level ECON courses: 8

Total units **28**

Entrepreneurship Minor

Required Courses

BUS 220	Business Basics for Entrepreneurs	4
BUS 310	Introduction to Entrepreneurship	4
ENGR/BUS 234	Introduction to Design Thinking	4

Approved Electives

Select from the following (at least 8 units must be 300 or 400 level courses) 12

AGB 304	Innovation and Entrepreneurship in Agriculture
BMED 401	Biomedical Entrepreneurship
BUS 311	Managing Technology in the International Legal Environment
BUS 313	Customer Development
BUS 330	Funding and Managing Startup Companies
BUS 389	Introduction to Business Negotiation for Entrepreneurs
BUS 408	Innovation and Entrepreneurship Through Disruptive Technologies
BUS/COMS 458	Solving Big World Challenges
BUS 487	Launching and Growing the Technology Start-Up
or ENGR 464 & ENGR 465	Interdisciplinary Entrepreneurial Senior Design Project II and Interdisciplinary Entrepreneurial Senior Design Project III
JOUR 385	Media Innovation and Entrepreneurship
PHIL 323	Ethics, Science and Technology
Total units	24

Industrial Technology Minor

Approved Technology Electives

Select from the following:	4
ITP 303	Lean Six Sigma Green Belt
ITP 326	Product Design and Development
ITP 371	Supply Chain Management in Manufacturing and Services

Approved Industrial Technology Electives

At least 4 units must be upper division.

A course taken from this list cannot be double counted for Approved Technology Electives.

Select from the following:	16
ITP 150	Industrial Power Systems
ITP 211	Industrial Safety and Quality Program Leadership
ITP 233	Product Modeling and Communication
ITP 275	Industrial Facility Systems and Equipment
ITP 302	Developing and Presenting New Enterprise Strategies
ITP 303	Lean Six Sigma Green Belt
ITP 326	Product Design and Development
ITP 371	Supply Chain Management in Manufacturing and Services
ITP 400	Special Problems for Advanced Undergraduates
ITP 403	Lean and Quality Systems Management
ITP 406	Professional Technical Selling

ITP 410	Operations Planning and Control
ITP 415	Supply Chain and Logistics
ITP 428	Commercialization of New Technologies
ITP 467	Applied Business and Production Management
Approved Organizational Electives	
Select from the following:	4
BUS 310	Introduction to Entrepreneurship
BUS 311	Managing Technology in the International Legal Environment
BUS 382	Leadership and Organizations
BUS 387	Organizational Behavior
PHIL 337	Business Ethics
PSY 350	Teamwork
Total units	24

Integrated Marketing Communications Minor

BUS 396	Consumer Insights	4
or BUS 418	Listening to the Customer	
BUS 453	Digital and New Media Marketing	4
BUS 459	Social Media's Role in Integrated Marketing Communications	4
or GRC 420	Graphic Communication in Integrated Marketing Communications	
or JOUR 415	Senior Project: Public Relations Practicum	
GRC 338	Web Development and Content Management	4
or GRC 377		
or JOUR 390	Visual Communication for the Mass Media	
JOUR 312	Public Relations	4
JOUR 331	Contemporary Advertising	4
JOUR 342	Public Relations Writing and Editing	4
Total units		28

MBA - General Management Specialization

Program Learning Objectives

The learning objectives of the MBA programs are for students to be able to:

- 1.1 Demonstrate competency in the following areas of business: management, quantitative methods, economics, accounting, finance, marketing, operations, and strategy.
- 1.2 Demonstrate strategic integration of the above areas.
- 1.3 Demonstrate the ability to apply analytics to decision making.
- 2.1 Recognize issues and create solutions using an approach that reflects ethical values.
- 3.1 Demonstrate knowledge of the issues involved in conducting business in a diverse, global environment.
- 4.1 Demonstrate professional written communications skills.

4.2 Demonstrate professional oral communication and presentation skills.

5.1 Recognize leadership skills and link to leadership theory.

5.2 Demonstrate effective team behaviors.

MBA Core Courses 36

GSB 511	Accounting for Managers
GSB 512	Quantitative Analysis
GSB 513	Organizational Behavior
GSB 523	Managerial Economics
GSB 524	Marketing Management
GSB 531	Managerial Finance
GSB 533	Aggregate Economics Analysis and Policy
GSB 534	Lean Operations Management
GSB 562	Seminar in General Management and Strategy

Approved Electives

Select from the following: 24

GSB 500	Independent Study
GSB 501	Individual Research
GSB 503	Collaborative Industry Project
GSB 510	Data Visualization and Communication in Business
GSB 514	The Legal and Regulatory Environment of Business
GSB 516	Strategic Marketing Analytics
GSB 520	Data Management for Business Analytics
GSB 522	Advanced Management Information Systems
GSB 529	Effective Communication Skills for Managers
GSB 530	Data Analytics and Mining for Business
GSB 536	Data Ethics for Business Analytics
GSB 539	Graduate Internship in Business
GSB 555	Negotiation
GSB 556	Entrepreneurship and New Venture Management
GSB 564	Entrepreneurial Finance
GSB 569	Managing Technology in the International Legal Environment
GSB 570	Selected Advanced Topics
GSB 583	Management of Human Resources
GSB 595	Managing Change
GSB 597	Seminar in Selected Economic Problems

Total units 60

MBA - Graphic Communication Documents Systems Management Specialization

Program Learning Objectives

1. Demonstrate competency in the following areas of business: management, quantitative methods, economics, accounting, finance, marketing, operations, and strategy.
2. Demonstrate strategic integration of the above areas.
3. Demonstrate the ability to apply analytics to decision making.
4. Recognize issues and create solutions using an approach that reflects ethical values.
5. Demonstrate knowledge of the issues involved in conducting business in a diverse, global environment.
6. Demonstrate professional written communications skills.
7. Demonstrate professional oral communication and presentation skills.
8. Recognize leadership skills and link to leadership theory.
9. Demonstrate effective team behaviors.

MBA Common Required Courses

Select from the following: 36

GSB 511	Accounting for Managers
GSB 512	Quantitative Analysis
GSB 513	Organizational Behavior
GSB 523	Managerial Economics
GSB 524	Marketing Management
GSB 531	Managerial Finance
GSB 533	Aggregate Economics Analysis and Policy
GSB 534	Lean Operations Management
GSB 562	Seminar in General Management and Strategy

Specialization Required Courses

Select from the following: 16

GRC 595	Cooperative Education Experience (8)
GRC 500	Special Problems in Graphic Communication for Graduate Students (8)

Advisor approved Business electives 12

Total units 64

MS Accounting

Program Learning Objectives

Graduates are prepared to:

- 1.1 Analyze financial statement data and conduct business valuations.
- 2.1 Research issues related to accounting standards including international financial reporting standards.
- 3.1 Demonstrate the ability to use databases and develop advanced spreadsheets to analyze financial and auditing information.
- 4.1 Demonstrate the ability to diagram data models and perform risk assessment of internal controls that apply to data/processes.

5.1 Recognize and apply ethical and fraud-related concepts in accounting and financial reporting.

6.1 Demonstrate effective writing communication skills.

6.2 Demonstrate effective oral communication skills.

GSA 540	Taxation of Corporations and Partnerships	4
GSA 541	Advanced Financial Reporting Issues I ¹	4
or GSB 510	Data Visualization and Communication in Business	
GSA 543	Advanced Financial Reporting Issues II	5
GSA 545	Applied Accounting Research and Communications	4
GSA 552	Fraud Auditing and Examination	4
GSA 554	Advanced Spreadsheet Modeling for Accounting	4
GSA 555	Database Modeling and Analysis for Accounting	4
GSA 556	Financial Accounting and Valuation	4
GSB 512	Quantitative Analysis	4
GSB 529	Effective Communication Skills for Managers	4
GSB 530	Data Analytics and Mining for Business ¹	4
or GSA 544	Advanced Enterprise Wide Business Processes for Accounting	
Comprehensive Examination		
Total units		45

¹ Students will choose between GSA 541 and GSB 510 in the fall quarter and between GSB 530 and GSA 544 in the spring quarter.

MS Business Analytics

Program Learning Objectives

1. Employ key aspects of data management - retrieval, integration, and enrichment
2. Apply high ethical standards toward the collection, storage, analysis, and reporting of data
3. Apply modeling tools to data of various types and sizes
4. Visualize data to infer and communicate insights
5. Use data to analyze, inform and solve fundamental business problems

Required Courses

GSB 503	Collaborative Industry Project ¹	4
GSB 518	Essential Statistics for Business Analytics	4
GSB 520	Data Management for Business Analytics	4
GSB 530	Data Analytics and Mining for Business	4
GSB 544	Computing and Machine Learning for Business Analytics	4
GSE 519	Econometrics and Data Analysis	4

Approved Electives

Select from the following: 21

GSB 501	Individual Research ²	
GSB 503	Collaborative Industry Project ³	
GSB 510	Data Visualization and Communication in Business	
GSB 516	Strategic Marketing Analytics	
GSB 517	Strategic People Analytics	
GSB 521	Cloud Services & Applications for Business Analytics	
GSB 536	Data Ethics for Business Analytics	
GSB 545	Advanced Machine Learning for Business Analytics	
GSB 550	Bayesian Econometrics	
GSB 551	Prescriptive Analytics	
GSB 570	Selected Advanced Topics ²	
GSB 575	Career Readiness in Data Analytics	

Total units 45

¹ GSB 503 satisfies the culminating experience requirement for the degree. To meet the requirement of this course, program advisor may require GSB 503 to be completed in a particular term.

² Not all topics will be taught online, depending on the proposal review process; requires advisor approval prior to enrolling

³ 1-4 additional units of GSB 503 may be taken as an elective beyond the core requirement to work on continuing or new client projects.

MS Packaging Value Chain Program Learning Objectives

1. Specify holistic, efficient and effective solutions in the realm of packaging and its impact across the global value chains.
2. Develop analytical and critical thinking skills towards assessing the value addition proposition of packaging.
3. Analyze and explain local, national, and global ethical issues related to the packaging value chains.
4. Infer the present and anticipated future packaging needs of the global society.
5. Effectively compose written and oral texts for a variety of scholarly, professional, and creative purposes.

Required Courses

GSP 530	Packaging Value Chain	2
GSP 532	Packaging Materials	4
GSP 533	Advanced Packaging Laws and Regulations	3
GSP 535	Packaging Value in Logistics and Supply Chain Management	3
GSP 536	Packaging Design	4
GSP 539	Marketing and Sales for Packaged Products	4
GSP 540	Quantitative Analysis for Packaging	4
GSP 591	Applied Industry Project I	5

Approved Electives

Select from the following: 16

GSB 520	Data Management for Business Analytics	
GSB 534	Lean Operations Management	
GSB 563	International Business Tour	
GSP 541	Corporate Finance for Packaging	
GSP 537	Distribution Packaging for Business Managers	
GSP 538	Quality Evaluation of Packaged Products	
Total units		45

MS Quantitative Economics Program Learning Objectives

Graduates are prepared to:

1. Exhibit sufficient knowledge of the main quantitative methods of economic analysis (both theoretical and empirical).
2. Are proficient at applying quantitative economics techniques in new and unfamiliar circumstances and will develop the ability to adapt and innovate to solve relevant economic problems.
3. Are able to effectively communicate the implications of their analyses to their relevant audience.

Required Courses

GSE 510	Essential Mathematics for Economic Analysis	4
GSE 511	Microeconomic Analysis	4
GSE 512	Dynamic Stochastic Modeling	4
GSE 518	Essential Statistics for Econometrics	4
GSE 520	Advanced Econometrics I	4
GSE 522	Advanced Econometrics II	4
GSE 524	Computing and Machine Learning for Economics	4
GSE 526	Microeconometrics	4
Approved Electives (400-500 level) ¹		13
Comprehensive Exam		
Total units		45

¹ To be selected with advisor's approval from economics or other courses in masters programs, such as: Master of Business Administration (GSB), Agribusiness (AGB), Master of City and Regional Planning (CRP), Engineering, Mathematics, Master of Public Policy. Maximum 12 units from 400 level courses. Maximum 12 units from courses other than GSE/ECON.

MS Taxation

Program Learning Objectives

Graduates Are Prepared To:

- 1.1 Demonstrate competency in tax research and identify potential solutions to tax issues.
- 1.2 Analyze and solve tax compliance issues through the application of analytic/critical thinking skills.
- 1.3 Apply substantive knowledge in a variety of tax preparation projects during a professional internship experience.

2.1 Recognize and apply ethical and professional responsibility requirements to tax practice.

3.1 Professionally communicate in writing.

3.2 Professionally communicate information through oral presentations.

BUS 417	Taxation of Corporations and Partnerships ¹	4
GSB 529	Effective Communication Skills for Managers	4
GSA 536	Taxation of Trusts, Estates, and Transfer Taxes	4
GSA 537	State and Local Taxation	4
GSA 538	Current Developments in Taxation	4
GSA 539	Clinical Tax Education Internship	9
GSA 546	Tax Research and Administrative Procedures	4
GSA 548	Advanced Individual Taxation and Tax Planning	4
GSA 549	Advanced Taxation of Flow-Through Entities	4
GSA 550	Advanced Corporate Taxation	4
GSA 551	International Taxation	4
Total units		45/49

¹ Students who, prior to admission to the program have not successfully completed BUS 417 at Cal Poly (or an identical course elsewhere) will be required to take BUS 417 as a part of this degree program.

Packaging Minor

Required Courses

CHEM 110	World of Chemistry	4
FSN 334	Food Packaging	3-4
or FSN 354	Packaging Function in Food Processing	
or GRC 337	Consumer Packaging	
or ITP 234	Packaging Design Fundamentals	
ITP 330	Packaging Fundamentals	4
PHYS 104	Introductory Physics	4
or PHYS 121	College Physics I	
or PSC 101	Matter and Energy	

Approved Electives

Select from the following:		11-12
FSN 354	Packaging Function in Food Processing ¹	
ITP 341	Packaging Polymers and Processing	
ITP 400	Special Problems for Advanced Undergraduates	
ITP 408	Fiber-Based Packaging	
ITP 409	Packaging Machinery and Processes	
ITP 411	Packaging Sustainability ²	
ITP 412	Instrumental Analysis of Packaging Polymers	
ITP 413	Packaging Quality Assessment	
ITP 414	Packaging Laws & Regulations	
ITP 430	Healthcare Packaging ²	

ITP 475	Distribution Packaging Dynamics ²	
ITP 485	Packaging Development	
Total units		26-28

¹ If a course is taken to meet a requirement in the minor, it cannot be double-counted as an approved elective.

² ITP 411, ITP 430, and ITP 475 do not count for Graphic Communication majors with a concentration in Graphics for Packaging.

Sales Minor

Required Courses

BUS 347	Professional Selling Skills	4
BUS 348	Technology-Based Professional Sales	4
BUS 466	Sales Practicum	4

Approved Electives

Select from the following (at least 2 units must be 300-400 level): 16

BUS 396	Consumer Insights	
BUS 489	Negotiation	
GRC 361	Marketing and Sales Management for Print and Digital Media	
IME 401	Sales Engineering	
ITP 406	Professional Technical Selling	
RPTA 114	Introduction to Hospitality and Travel	
RPTA 393	Hospitality Sales and Service	
WVIT 343	Branded Wine Marketing	
WVIT 344	Direct to Consumer Wine Sales	
WVIT 433	Wine Sales and E-Commerce	

Select no more than two courses from the following:

AGB 202	Introduction to Sales	
AGB 309	Advanced Sales Techniques	
AGB 404	Food Retail Management	
AGB 406	Agribusiness Marketing Planning	

Select no more than two courses from the following:

COMS 101	Public Speaking	
or COMS 102	Principles of Oral Communication	
COMS 211	Interpersonal Communication	
COMS 213	Organizational Communication	
COMS 217	Small Group Communication	
COMS 322	Persuasion	

Total units **28**

* Engineering programs accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org/>

** BS Computer Science program accredited by the Computing Accreditation Commission of ABET, <http://www.abet.org/>

Engineering and computer science programs at Cal Poly are strongly oriented toward preparing graduates for immediate entry into professional practice. Students declare their majors when they enter as

freshmen, and they generally take at least one course in that major each quarter. This early introduction better motivates and prepares students to master the foundational mathematics, basic science, and engineering science or computer science central to success in all the engineering disciplines.

The undergraduate bachelors of science engineering disciplines listed above provide the education needed for entry to the engineering profession and for continued academic work toward advanced degrees. Many of our graduates enter graduate programs at Cal Poly or other institutions. Cal Poly engineering and computer science graduates are highly desired by industry and find a variety of professional opportunities awaiting them, such as engineering design, computer hardware and software engineering, test and evaluation, systems analysis, modeling and simulation, manufacturing, applied research, development, sales and field engineering. Graduates pursue careers in a broad cross-section of industry, government agencies, public utilities, marketing groups, and educational institutions.

The College of Engineering is an internationally-recognized, premier undergraduate engineering college. Its mission is to provide an excellent Learn by Doing education and to graduate in-demand, Day One-ready professionals. The College vision is to transform students into world class, innovative and collaborative engineers to meet the challenges of the 21st century.

State-of-the-art facilities and laboratories form the core of Engineering's project-centered curriculum. Ranging from the Aircraft Design Lab to the Rotor Dynamics Laboratory, these facilities offer advanced technological systems that allow students to link theory with practice. College buildings also promote interdisciplinary project activities, including the Advanced Technology Laboratories, Bonderson Projects Center, and Engineering IV. With 19,000 square feet of space for individual and team-based projects, the Bonderson Center offers enriched opportunities for multidisciplinary projects and collaboration with industry. Engineering IV, a 104,000-square-foot building includes modern classrooms and laboratories for aerospace, mechanical, civil, environmental, industrial and manufacturing engineering programs.

Engineering Student Services

Engineering South (40), Room 115
Phone: 805.756.1461
Director: Kim Marsalek

Engineering Student Services provides an inclusive, respectful, encouraging environment that fosters the retention and graduation of all undergraduate engineering students. Through our Advising, Multicultural Engineering (MEP), and International Exchange Program (IEP) our staff provides comprehensive services to guide and empower students to achieve their goals.

Advising Center

Engineering South (40), Room 115
Phone: 805.756.1461
<https://eadvice.calpoly.edu>

Senior Academic Advisor: Dawn Sirois
Academic Advisor: Ashlee Burt
Academic Advisor: Greg Roldan
Academic Advisor: Jamey Stamets
Academic Advisor: Maria Zavala

As a division of Engineering Student Services, the Advising Program is dedicated to providing accurate and timely academic resources and guidance to undergraduate engineering students. Through a welcoming and inclusive environment, advising's services promote student success and development while assisting students in navigating the curricula and university policies to reach their goals.

Multicultural Engineering Program (MEP)

Engineering South (40), Room 115
Phone: 805.756.1433
<https://mep.calpoly.edu>

Coordinator: Meghan Schuler-Jones
MEP Advisor: Candy Janiam
Retention Advisor: Katie McGuire

As a division of Engineering Student Services the Multicultural Engineering Program (MEP) is an academic support program designed to retain and graduate students who continue to remain underrepresented in engineering. MEP leverages a strong support network to build a community and provide the necessary bridges for students academic, personal, and professional success.

International Exchange Program (IEP)

Engineering South (40), Room 115
Phone: 805.756.1461
<https://eadvise.calpoly.edu/International-Exchange-Program> (<https://eadvise.calpoly.edu/International-Exchange-Program/>)

IEP Advisor: Maria Zavala

As a division of Engineering Student Services, the International Exchange Program (IEP) partners with engineering universities around the world. IEP strives to expose engineering students to the increasing demands of our global economy while allowing students to make progress towards their engineering degree.

Women's Engineering Program (WEP)

Engineering South (13), Room 216
Phone: 805.756.2350
<http://wep.calpoly.edu>

Director: Helene Finger

The mission of the Women's Engineering Program (WEP) is to recruit and retain women engineering and computer science students by focusing on outreach, on-campus support and professional preparation objectives. To meet these objectives, WEP works closely with the Society of Women Engineers (SWE) Cal Poly student section, one of the top student sections in the nation, in supporting a variety of programs directed at pre-college, undergraduate and graduate students.

Outreach activities are directed at students from kindergarten through community college. These programs are designed to encourage pre-university women and girls to consider engineering as a career choice. Outreach recruitment activities include: Building an Engineer workshops, High School Shadow an Engineering Student day, Girl Scout Engineering Badge day, robotics competitions, elementary school workshops, and career fairs.

The Women's Engineering Program provides on-campus support to Cal Poly women engineering students through a variety of academic, leadership and social activities. These activities help students connect

to their peers while concurrently assisting them in achieving their educational goals.

On-campus support activities include: scholarships, academic counseling and referrals, pre-registration counseling, big sibling program, test files, SWE meetings, social events, and community service activities.

Professional preparation activities are designed to prepare students for a productive career by facilitating networking with professionals and corporations. Professional preparation activities include: Evening With Industry banquet, Team Tech national design competition, Industry Tours, Resume Book, bi-weekly industry presentations and corporate information sessions.

Graduate Programs

MS Fire Protection Engineering

General Characteristics

The profession of Fire Protection Engineering is directed toward the identification, analysis and mitigation of fire hazards and risks across a broad spectrum of applications, including buildings, consumer products, industrial processes, transportation vehicles, infrastructure facilities and the wildland-urban interface.

The Master of Science in Fire Protection Engineering prepares individuals to assess and reduce the potential for property and human loss from fire in these and other settings. Students learn to analyze how buildings are used, how fires start, how fires grow, and how fire and smoke affect people, buildings and property. Fire protection engineers use the latest engineering and construction technologies to:

1. Design systems that control fires, alert people to danger and provide means for escape;
2. Evaluate buildings to identify fire risks of and the means to prevent or mitigate them;
3. Conduct fire safety research on consumer products and construction materials; and
4. Investigate fires to discover how fires start, how they spread, why protective measures fail, and how those measures could be designed more effectively.

To meet these program goals, the fire protection engineering curriculum requires that students successfully complete a total of 45 units including a fire protection engineering project as the culminating experience (FPE 596). The culminating experience will be innovative and require independent thinking. Typically, the students will perform a detailed fire and life safety evaluation of a selected building, the preparation of a comprehensive report documenting the results of this evaluation and the presentation of their analysis and findings in an oral defense to a review committee. Other innovative culminating experiences of similar scope and complexity may be submitted for approval.

Program Goals

The Fire Protection Engineering program is designed to build on the skills, knowledge, and broad engineering principles students acquire in an undergraduate engineering program. The required and elective courses composing the Master of Science degree in Fire Protection Engineering address the specific body of knowledge required by the fire protection engineering profession. Students completing the program will possess the technical knowledge, skills and tools required to practice fire protection engineering in a variety of local, national and international settings. Upon completion of this program, students should possess

the necessary knowledge and skills to pursue professional certification and licensure in the fire protection engineering discipline. Furthermore, the program addresses unique fire challenges faced by California and other western states, including wildland-urban interface fires and post-earthquake fires.

Prerequisites

For admission as a classified graduate student, an applicant should hold a bachelor's degree in engineering or a closely related field from a regionally accredited institution, college, or university. An undergraduate grade point average of 3.0 is required. On occasion, where other credentials are exceptionally strong, a GPA in the 2.5-3.0 range may be accepted.

Tuition and Fees

As a special session program through Extended Education, the MS Fire Protection Engineering program is administratively and academically completely self-supporting. As such, the program carries a separate tuition and fee schedule. Please refer to <http://www.fpe.calpoly.edu/> for the current cost of the program.

Graduate Certificate Programs Fire Protection Engineering Applications

General Characteristics

The courses offered in the Fire Protection Engineering Applications graduate certificate program will prepare students for a specialized career in fire protection engineering. Students completing the certificate program will be prepared for careers in:

- Consulting/Design Engineering Firms
- Fire Equipment and Systems Manufacturers
- Hospitals and Health Care Facilities
- Insurance Industry
- Research and Testing Laboratories
- Fire Departments
- Government

The fire protection engineering applications curriculum requires that students successfully complete a total of 16 units.

Fire Protection Engineering Science

General Characteristics

The courses offered in the Fire Protection Engineering Science graduate certificate program will prepare students for a specialized career in fire protection engineering. Students completing the certificate program will be prepared for careers in:

- Forensic Investigations;
- Nuclear Fire Safety;
- Fire Science Research (R&D facility, Testing Lab, etc.)
- Government
- Fire Departments

The fire protection engineering science curriculum requires that students successfully complete a total of 16 units.

Fire Protection Engineering Science & Fire Protection Engineering Applications

Tuition and Fees

As a special session programs through Extended Education, the MS Fire Protection Engineering program and Fire Protection Engineering graduate certificate are administratively and academically completely self-supporting. As such, the programs carry a separate tuition and fee schedule. Please refer to <http://www.fpe.calpoly.edu/> for the current cost of the program.

MS Fire Protection Engineering Program Learning Objectives

1. Identify relevant fire safety codes, standards and regulations, comprehend the fire safety performance objectives and criteria associated with these documents, and apply these fire safety objectives and criteria to a broad range of applications.
2. Analyze the flammability characteristics of different materials, interpret the results of standard and non-standard fire test methods and evaluate the fire hazards associated with different materials in a range of anticipated settings.
3. Analyze the dynamics of fires in and around buildings and other structures through the application of fundamental principles and the use of state-of-the-art computer-based fire simulation models.
4. Understand how people interact with fire conditions in buildings and calculate evacuation times through the application of fundamental principles of people movement and the use of state-of-the-art computer-based evacuation models.
5. Design fire detection and alarm systems, fire suppression systems, smoke management systems, egress systems and structural fire protection to achieve specified performance objectives.
6. Perform comprehensive fire and life safety evaluations of buildings and other structures through application of the knowledge, skills and tools acquired in this program and effectively communicate the results and findings of such evaluations.

Required Courses

FPE 501	Fundamental Thermal Sciences	4
FPE 502	Fire Dynamics	4
FPE 503	Flammability Assessment Methods	4
FPE 504	Fire Modeling	4
FPE 521	Egress Analysis and Design	4
FPE 522	Fire Detection, Alarm and Communication Systems	4
FPE 523	Water-based Fire Suppression	4
FPE 524	Structural Fire Protection	4
FPE 596	Culminating Experience in Fire Protection Engineering ¹	5

Technical Electives

Select from the following:		8
FPE 551	Fire Safety Regulation and Management	
FPE 552	Smoke Management and Special Hazards	
FPE 554	Forensic Fire Analysis	
ME 541	Advanced Thermodynamics	

ME 554 Computational Heat Transfer

Total units 45

¹ FPE 599 Design Thesis can substitute for FPE 596 and one technical elective for a total of 9 units.

Fire Protection Engineering Applications Graduate Certificate

Program Learning Objectives

1. Identify relevant fire safety codes, standards and regulations, comprehend the fire safety performance objectives and criteria associated with these documents, and apply these fire safety objectives and criteria to a broad range of applications.
2. Understand how people interact with fire conditions in buildings and calculate evacuation times through the application of fundamental principles of people movement and the use of state-of-the-art computer-based evacuation models.
3. Design fire detection and alarm systems, fire suppression systems, structural fire protection systems, and egress systems to achieve specified performance objectives.

Prerequisites

For admission as a classified graduate student, an applicant should hold a bachelor's degree in engineering, fire science, fire protection and safety, or a closely related field from a regionally accredited institution, college, or university. An undergraduate grade point average of 3.0 is required. On occasion, where other credentials are exceptionally strong, a GPA in the 2.5-3.0 range may be accepted.

Core Courses

FPE 521	Egress Analysis and Design	4
FPE 522	Fire Detection, Alarm and Communication Systems	4
FPE 523	Water-based Fire Suppression	4
FPE 524	Structural Fire Protection	4
Total units		16

Academic Programs

Program name	Program type
Aerospace Engineering	BS, MS

The mission of the Aerospace Engineering Department is to collaborate with the Aerospace Industry to build partnerships which promote excellence and innovation to serve diverse communities. We work as a team to provide an excellent Learn-by-Doing, systems and design focused engineering education; graduating Day One-ready professionals.

We accomplish our mission using a laboratory-based, hands-on approach to education students. This approach, coupled with a systems view of engineering, is encouraged through coursework and a group-based capstone design experience. This educational philosophy yields engineers capable of working in positions of technical responsibility and leadership in a modern multidisciplinary, systems-based industry.

The Bachelor of Science degree in Aerospace Engineering prepares students for engineering work in the exciting aerospace industry. The problems faced by the aerospace industry offer an unusual engineering challenge. Much of the analysis and testing must be accomplished at the very frontiers of technology and performance. Nevertheless, complex aerospace systems must be designed and manufactured; thus, an exceptionally wide range of engineering and problem solving abilities is required. Aerospace Engineering graduates obtain employment in all areas of the aerospace industry with a strong focus on aircraft and spacecraft design.

Aerospace Engineering students can choose between an Aeronautics or Astronautics concentration. Within Aeronautics, students learn the fundamentals of aerodynamics, flight mechanics, materials, structures, propulsion, and stability and control. Within Astronautics, students learn the fundamentals of orbital mechanics, space environment, space structures, telecommunications, attitude dynamics and control, and rocket propulsion. Both concentrations culminate with a Senior Design capstone course where students put theory into practice using a disciplined systems engineering approach to either aircraft or spacecraft design.

The BS degree program in Aerospace Engineering is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org/>. It places emphasis on both analysis and design, with supplementary basic work in laboratory projects. Throughout the entire program there is constant interplay between theory and application. Opportunities are available for advanced elective work in the student's field of special interest.

The program maintains laboratory facilities for fabrication, air breathing and space propulsion, structures and composites,

aerodynamics, dynamics and control, flight simulation and flight test, aerothermodynamics, advanced computation, and design.

Aerospace students may participate in two student chapters of national professional societies—the American Institute of Aeronautics and Astronautics and the Society for the Advancement of Material and Process Engineering. There is also a student chapter of the national aerospace engineering honor society, Sigma Gamma Tau. In addition, students have the opportunity to work on CubeSats and Autonomous Flight Systems, through other club activities or faculty research.

Undergraduate Program BS Aerospace Engineering

The Bachelor of Science degree in Aerospace Engineering prepares students for engineering work in the exciting aerospace industry. The aerospace industry is known for designing and building complex systems which push the limits of technology. Therefore a strong emphasis is placed on turning theory into practice and problem solving using a disciplined systems engineering approach. The program's faculty have developed a number of educational objectives to support this mission. These objectives are:

- Be life-long learners who continue to pursue professional development;
- Participate and thrive in a multi-disciplinary, systems-oriented work environment;
- Contribute to the solution of complex technical problems that exist in the global aerospace industry; and
- Understand their ethical role as a professional engineer and strive to promote a practice of integrity and foster diversity, equity, and inclusion in the workplace.

Concentrations

Aeronautics
Astronautics

Graduate Program

MS Aerospace Engineering

Characteristics

Emphasizes engineering science and research activity. Graduates have an increased capability for complex research, development, and innovative design, and are prepared for further study in engineering, leading to the Doctor of Engineering or Ph.D. or advanced positions within industry.

Program of Study

A thesis is required as a culminating experience. Students work with their advisor and the Department Graduate Coordinator to develop a program of study which supports their thesis topic. A thesis topic would typically be in an area such as: dynamics and control, fluid dynamics and aerodynamics, multidisciplinary design and optimization, aerospace propulsion, aerospace structures, and systems engineering.

For the most recent, comprehensive list of courses offered by the department, please contact the Department Graduate Coordinator or see the listing at <https://aero.calpoly.edu> (<http://aero.calpoly.edu/>).

Blended BS + MS Aerospace Engineering Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Aerospace Engineering.

Eligibility

Students majoring in BS Aerospace Engineering are eligible for the blended program in MS Aerospace Engineering.

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Aerospace Engineering department for any additional eligibility criteria.

BS Aerospace Engineering Program Learning Outcomes

ABET-Defined Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA

- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

AERO 121	Aerospace Fundamentals	2
AERO 215	Introduction to Aerospace Design	2
AERO 220	Aerospace Systems Engineering and Integration	1
AERO 299	Aerospace Thermodynamics	4
AERO 300	Aerospace Engineering Analysis	5
AERO 302	Aerospace Fluid Mechanics	4
AERO 303	Aerospace Gas Dynamics and Heat Transfer	4
AERO 320	Fundamentals of Dynamics and Control	4
AERO 321	Experimental Sensors, Actuators and Control	1
AERO 331	Aerospace Structural Analysis I	4
AERO 350	Fundamentals of Systems Engineering	2
AERO 431	Aerospace Structural Analysis II	4
AERO 433	Experimental Stress Analysis	1
AERO 460	Aerospace Engineering Professional Preparation	1
AERO 465	Aerospace Systems Senior Laboratory	1
CE 204 & CE 207 or CE 208	Mechanics of Materials I and Mechanics of Materials II and Mechanics of Materials	5
EE 201 & EE 251	Electric Circuit Theory and Electric Circuits Laboratory	4
Concentration courses (see below)		40

SUPPORT COURSES

CHEM 124	General Chemistry for Physical Science and Engineering I (B1 & B3) ¹	4
IME 144	Introduction to Design and Manufacturing	4
MATE 210	Materials Engineering	3
MATH 141	Calculus I (B4) ¹	4
MATH 142	Calculus II (B4) ¹	4
MATH 143	Calculus III (Area B Electives) ¹	4
MATH 241	Calculus IV	4
MATH 244	Linear Analysis I	4
ME 211	Engineering Statics	3
ME 212	Engineering Dynamics	3
PHYS 141	General Physics I (Area B Electives) ¹	4
PHYS 142	General Physics II	4
PHYS 143	General Physics III	4
STAT 312	Statistical Methods for Engineers (Upper-Division B) ¹	4

GENERAL EDUCATION (GE)

(See GE program requirements below.) 48

FREE ELECTIVES

Free Electives	0
Total units	190

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Concentrations (select one)

- Aeronautics (p. 200)
- Astronautics (p. 201)

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4

Area F

F	Ethnic Studies	4
Total units		48

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Aeronautics Concentration

AERO 306	Aerodynamics and Flight Performance	4
AERO 307	Experimental Aerodynamics	2
AERO 401	Propulsion Systems	5
AERO 405	Supersonic and Hypersonic Aerodynamics	4

Total units		40

¹ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals. Only 4 units of 300-level coursework is allowed as an Approved Elective.

² May require a petition depending on the topic. Please consult with your advisor.

MS Aerospace Engineering

Program Learning Objectives

1. Competency in advanced mathematics, science, and aerospace engineering knowledge.
2. Ability to apply advanced mathematics, science, and aerospace engineering knowledge to a project that is conducted independently.
3. Make a specific contribution to a field that is relevant to aerospace professionals.
4. Ability to convey effectively engineering ideas and results both orally and in writing.
5. Awareness of professional and ethical responsibility.
6. Awareness of global, contemporary issues related to aerospace engineering and the society at large.
7. Awareness of rapid advancement of modern technology and ability for life-long learning.

Required Courses

MATH 501	Analytic Methods in Applied Mathematics	4

Biomedical Engineering	BS, MS

Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the principles and tools of traditional engineering fields, such as mechanical, materials, electrical, and chemical engineering, are applied to biomedical problems. Engineering plays an increasingly important role in medicine in projects that range from basic research in physiology to advances in biotechnology and the improvement of health care delivery. By its very nature, biomedical engineering is broad and requires a foundation in the engineering sciences as well as in physiology and other biological sciences.

The BS degree program in Biomedical Engineering is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org/>.

Undergraduate Program BS Biomedical Engineering

Program Mission and Goals

The mission of the Biomedical Engineering program is to maintain an effective learning environment that enables and empowers graduates for careers of service, leadership and distinction in engineering or other fields. Our approach is to use a participatory, learn-by-doing, "hands-on" laboratory, projects and design centered approach to achieve this end.

To succeed in this mission, the educational objectives of the program are to facilitate graduates to:

1. Utilize a knowledge base with a core foundation in engineering, physical and biological sciences, which will enable them to apply their skills to a variety of challenges in their chosen field. Our graduates will demonstrate innovation, creativity, adaptability and critical thinking to solve problems in disciplines related to biomedical engineering that are relevant to industry, academia, or medicine, and health related fields.
2. Demonstrate leadership in their chosen fields and make decisions that are socially and ethically responsible. Our graduates will function effectively in multidisciplinary team environments and communicate effectively to a variety of audiences.
3. Build and expand upon their undergraduate foundations by engaging in learning opportunities throughout their careers.

The program offers a four-year curriculum leading to a B.S. degree. The main educational objectives of the program are to prepare graduates who will excel in the biomedical engineering profession, understand that their education is a continuous enterprise, and seek graduate

degrees for increased flexibility and mobility. The curriculum provides a sound theoretical background, practical engineering knowledge and solid laboratory exposure. It highlights an immediate introduction to the major, strong personal interaction with faculty, strong partnerships with industrial participants and a signature laboratory emphasis.

The application of engineering to medicine and biology underpins a strong and growing segment of the industrial sector and continues to be an area of inherent interest to students. The need for well educated professionals in this interdisciplinary area has become more acute as the technology being applied has become more sophisticated. Evolution in computing, electronics, signal analysis and mechatronic systems have resulted in dramatic improvements in diagnostic efforts, therapeutic approaches and bioindustrial applications. Studies of biological materials, physiological mechanisms, biochemical kinetics and heat and mass transport in biological systems require engineering expertise. With the advent of research into artificial organs, prosthetic devices and tissue engineering, applied medical research and applied biological research has taken on a distinct engineering aspect.

Biomedical engineering combines engineering expertise with medical needs for the enhancement of health care. It is a branch of engineering in which knowledge and skills are developed and applied to define and solve problems in biology and medicine. Students choose the biomedical engineering field to be of service to people; for the excitement of working with living systems; and to apply advanced technology to the complex problems of medical care.

Some well established specialty areas exist within the field of biomedical engineering: *bioinstrumentation*, *biomechanics*, *biomaterials*, *systems physiology*, *tissue engineering*, *clinical engineering*, and *rehabilitation engineering*.

Bioinstrumentation is the application of electronics and measurement principles and techniques to develop devices used in diagnosis and treatment of disease. Computers are becoming increasingly important in bioinstrumentation, from the microprocessor used to do a variety of small tasks in a single purpose instrument to the extensive computing power needed to process the large amount of information in a medical imaging system. *Biomechanics* is mechanics applied to biological or medical problems. It includes the study of motion, of material deformation, of flow within the body and in devices, and transport of chemical constituents across biological and synthetic media and membranes. *Biomaterials* describes both living tissue and materials used for implantation. Understanding the properties of the living material is vital in the design of implant materials. *Systems physiology* is the term used to describe that aspect of biomedical engineering in which engineering strategies, techniques and tools are used to gain a comprehensive and integrated understanding of the function of living organisms ranging from bacteria to humans. *Tissue engineering* is a rapidly developing field that combines engineered materials with living cells to restore or replace lost organ function. *Clinical engineering* is the application of technology for health care in hospitals. The clinical engineer is a member of the health care team along with physicians, nurses and other hospital staff. *Rehabilitation engineering* is a new and growing specialty area of biomedical engineering. Rehabilitation engineers expand capabilities and improve the quality of life for individuals with physical impairments.

In addition to the objectives for all engineering programs, the goal of the BS program in Biomedical Engineering is the preparation of engineering professionals who have: (1) an understanding of biology and physiology; (2) an ability to apply advanced mathematics to problems at the interface of engineering and biology; (3) an ability to measure and interpret

data from living systems; and (4) an ability to address the problems associated with the interaction between living and nonliving systems.

Concentrations

Bioinstrumentation

The bioinstrumentation concentration prepares students for entry level jobs in the biomedical devices industry where a deeper understanding of electrical engineering skills are necessary.

Mechanical Design

The mechanical design concentration prepares students for employment in the product development, design, or manufacturing fields in the biomedical device industry.

General Curriculum in Biomedical Engineering

A General Curriculum in Biomedical Engineering is also an option. It is not a formal concentration. Students are encouraged to select from one of the concentrations listed above, but those who do not declare a concentration will default to the General Curriculum.

Graduate Programs

MS Biomedical Engineering

General Characteristics

The Master of Science degree program in Biomedical Engineering is well-suited for those individuals who desire depth in engineering application to living systems, with a strong pragmatic and rigorous, hands-on educational experience. Graduates will be well-equipped to make significant contributions to the biomedical field.

Prerequisites

For admission as a classified graduate student, an applicant must possess a bachelor's degree in engineering or a closely related physical science with a minimum grade point average of 3.0 in the last 90 quarter units (60 semester units) attempted. Applicants for graduate engineering programs are required to submit scores for the General Test of the Graduate Record Examination. Applicants are also required to submit 3 letters of reference in support of their application. A college level biology course, with laboratory, for biology majors is highly recommended. Applicants who meet these standards but lack prerequisite coursework may be admitted as conditionally classified students and must make up any deficiencies before advancement to candidacy. Applicants from other academic disciplines, such as biology or chemistry are encouraged to apply and may be admitted to the program conditionally in order to make up deficiencies in prerequisite coursework. Information regarding specific admission requirements and classification as a graduate student may be obtained from the Graduate Coordinator, Biomedical Engineering.

Program of Study

Graduate students must file formal study plans with their advisor, department, college, and university graduate studies office no later than the end of the first quarter in residence. The formal program of study must include a minimum of 45 units with:

1. At least 27 units of the 45 unit program at the 500 level.
2. A thesis or project as the required culminating experience.

MS Biomedical Engineering, Specialization in Regenerative Medicine Characteristics

Prepares students for careers in regenerative medicine and related fields. Specifically, our graduates are prepared for immediate employment in cell therapy, tissue engineering, biopharma, or medical technology companies, and as research specialists/laboratory managers at universities or research institutes. Program graduates are also well-prepared to matriculate into bioengineering doctoral programs or graduate programs in the health professions.

Culminating Experience

Students who obtain a degree in the Master of Science in Biomedical Engineering with a specialization in Regenerative Medicine are not required to complete a "thesis" through BMED 599. In place of the thesis as a culminating experience, students complete a Project during a 9-month internship at a company or research laboratory¹ (ASCI/ BIO/BMED 593). The Project Report is evaluated by their Cal Poly and Internship Mentor; their Project Presentation is evaluated by their Cal Poly and Internship Mentors, and Program Director.

¹Students will complete their internship at one of our partner institutions. An updated list of our current partners can be found on our program website - regenmed.calpoly.edu.

Blended BS + MS Biomedical Engineering Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Biomedical Engineering.

Eligibility

Majors that are eligible for the blended program in MS Biomedical Engineering are:

- BS Biomedical Engineering
- BS Chemistry
- BS Computer Engineering
- BS Electrical Engineering
- BS Mechanical Engineering
- BS Materials Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Biomedical Engineering department for any additional eligibility criteria.

BS Biomedical Engineering

Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objective
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Furthermore, our program prepares graduates with experience in:

- Applying principles of engineering, biology, human physiology, chemistry, calculus-based physics, mathematics (through differential equations) and statistics
- Solving bio/biomedical engineering problems, including those associated with the interaction between living and non-living systems
- Analyzing, modeling, designing, and realizing bio/biomedical engineering devices, systems, components, or processes
- Making measurements on and interpreting data from living systems

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

GENERAL EDUCATION (GE)

(See GE program requirements below.) 40

FREE ELECTIVES

Free Electives 0

Total units 191-196

¹ ENGR 459, ENGR 460, ENGR 461 and BMED 400 (8); or ENGR 463, ENGR 464, ENGR 465, and BMED 400 (8) may substitute for BMED 455 and BMED 456 (8).

² Required in Major or Support; also satisfies General Education (GE) requirement.

³ For students following the General Curriculum or Mechanical Design Concentration in BS Biomedical Engineering, CE 208 (5) may substitute for both CE 204 (3) and CE 207 (2).

General Curriculum in BS Biomedical Engineering or Concentrations

- General Curriculum (p. 207)
- Bioinstrumentation (p. 206)
- Mechanical Design (p. 206)

General Education (GE) Requirements

- 72 units required, 32 of which are specified in Major and/or Support.
- If any of the remaining 40 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking (4 units in Support) ¹	0
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4

Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		40

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Bioinstrumentation Concentration

BMED 355	Electrical Engineering Concepts for Biomedical Engineering	4
BMED 445	Biopotential Instrumentation	4
EE 228	Continuous-Time Signals and Systems	4
EE 251	Electric Circuits Laboratory	1
EE/CPE 328	Discrete Time Signals and Systems	3
EE/CPE 368	Signals and Systems Laboratory	1
IME 156	Basic Electronics Manufacturing	2
MATH 344	Linear Analysis II	4
Approved Technical Electives		
Select from the following:		3-5
BMED 434	Micro/Nano Fabrication	
BMED 515	Introduction to Biomedical Imaging	
BMED 555	Neural Systems Simulation and Modeling	
EE 302 & EE 342	Classical Control Systems and Classical Control Systems Laboratory	
EE 335 & EE 375	Electromagnetic Fields and Transmission and Electromagnetic Fields and Transmission Laboratory	
Approved Electives		
Select from the following:		3-5
BIO 232	Human Anatomy and Physiology II	
BIO 302	Human Genetics	
BIO 303	Survey of Genetics	
BIO/CHEM 441	Bioinformatics Applications	
CHEM 312	Organic Chemistry: Fundamentals and Applications	
CHEM 446	Surface Chemistry of Materials	
Total units		29-33

Mechanical Design Concentration

BMED 330 or ME 329	Intermediate Biomedical Design Mechanical Systems Design	4
CE 207	Mechanics of Materials II ¹	2
IME 141	Manufacturing Processes: Net Shape	1
MATH 344	Linear Analysis II	4
ME 228	Engineering Design Communication	2
ME 251	Introduction to Detailed Design with Solid Modeling	2
ME 328	Design for Strength and Stiffness	4
Approved Technical Electives		

Select from the following: 7-8

BMED/CE/ME 404	Applied Finite Element Analysis
BMED 525	Skeletal Tissue Mechanics
IME 418	Product-Process Design
IME 430	Quality Engineering
IME 435	Reliability for Design and Testing
IME 527	Design of Experiments
ME 318	Mechanical Vibrations
ME 326	Intermediate Dynamics
ME 401	Stress Analysis
ME 402	Orthopedic Biomechanics
ME 403	Access by Design: Introduction to Rehabilitation Engineering
ME 410	Experimental Methods in Mechanical Design I
ME 412	Composite Materials Analysis and Design

Approved Electives

Select from the following: 3-5

BIO 232	Human Anatomy and Physiology II
BIO 302	Human Genetics
BIO 303	Survey of Genetics
CHEM 312	Organic Chemistry: Fundamentals and Applications
CHEM/MATE 446	Surface Chemistry of Materials

Total units 29-32

¹ For students following the General Curriculum or Mechanical Design Concentration in BS Biomedical Engineering, CE 208 (5) may substitute for both CE 204 (3) and CE 207 (2).

General Curriculum in Biomedical Engineering

This is the default curriculum required for students who do not declare a concentration.

CE 207	Mechanics of Materials II ¹	2-3
or EE 321	Electronics	
ME 228	Engineering Design Communication	2
Approved Technical Electives		12
BMED 355	Electrical Engineering Concepts for Biomedical Engineering	
BMED/CE/ME 404	Applied Finite Element Analysis	
BMED 422	Medical Device Evaluation and the FDA Approval Process	
BMED 432	Micro/Nano System Design	
BMED 434/MATE 430	Micro/Nano Fabrication	
BMED 435	Microfabrication Laboratory	
BMED 436	Characterization of Micro/Nano Scale Structures	
BMED 445	Biopotential Instrumentation	

BMED 459	Senior Thesis
BMED 510	Principles of Tissue Engineering
BMED 515	Introduction to Biomedical Imaging
BMED 525	Skeletal Tissue Mechanics
BMED/MATE 530	Biomaterials
BMED 535	Bioseparations and Clinical Diagnostics
BMED 550	Current and Evolving Topics in Biomedical Engineering
IME 420	Simulation
IME 430	Quality Engineering
IME 435	Reliability for Design and Testing
IME 527	Design of Experiments
MATE 380	Thermodynamics and Physical Chemistry
MATE 401	Materials Characterization Techniques
MATE 410	Nanoscale Engineering
MATE 425	Corrosion Engineering
MATE/CHEM 446	Surface Chemistry of Materials

MATE 222	Materials Selection Life Cycle
MATH 344	Linear Analysis II
MCRO 224	General Microbiology I

Total units 28-29

¹ For students following the General Curriculum or Mechanical Design Concentration in BS Biomedical Engineering, CE 208 (5) may substitute for both CE 204 (3) and CE 207 (2).

MS Biomedical Engineering

Program Learning Objectives

1. Analyze contemporary challenges in biomedical engineering, discover knowledge gaps, and assess needs to formulate research and development opportunities.

- Demonstrate understanding of biomedical engineering practice in a regulated environment.
- Utilize modern techniques and technologies to generate data of significance to biomedical innovations/challenges.
- Apply advanced engineering methods – such as theoretical, computational, or manufacturing tools – to the design and/or evaluation of biomedical systems.
- Employ statistical approaches to design experiments, and analyze & interpret data to form data-driven conclusions.
- Communicate engineering, biological, and medical concepts in both written and oral forms.
- Demonstrate independence and initiative in acquiring the knowledge and skills necessary to complete biomedical engineering projects at the interface between biology, medicine, and engineering.

- Describe how research & development efforts are motivated by and impact physician & patient experiences.
- Design and execute independent research projects.

Required Courses

BMED 520 or BMED 530	Modeling of Biomedical Systems Biomaterials	4
BMED 505 or BMED 515	Biomedical Signal Transduction and Data Acquisition Introduction to Biomedical Imaging	4
BMED 563	Biomedical Engineering Graduate Seminar	2
STAT 513 or IME 527	Applied Experimental Design and Regression Models ¹ Design of Experiments	4
BMED 599 or BMED 593	Design Project (Thesis) ² Regenerative Medicine Internship	9
Approved Engineering, Science and Mathematics Electives Course selection requires advisor approval. ³		22
Total units		45

¹ Masters Students who have not had the pre-requisite statistics courses will be required to take either IME 503 or STAT 511 prior to enrolling in IME 527 or STAT 513, respectively. IME 503 or STAT 511 can count towards Approved Electives.

² Masters Students on the Project Track will be required to take BMED 591 (2), BMED 592 (2), and BMED 599 (5).

³ 60% or more of the total 45 units must be from approved 500 level courses, the balance being approved 400 level courses.

Required Courses

BMED 520 or BMED 530	Modeling of Biomedical Systems Biomaterials	4
BMED 505 or BMED 515	Biomedical Signal Transduction and Data Acquisition Introduction to Biomedical Imaging	4
STAT 513 or IME 527	Applied Experimental Design and Regression Models Design of Experiments	4
BMED 510	Principles of Tissue Engineering	4
BMED 560	Cell Transplantation and Biotherapeutics	2
BMED 561	Cell Transplantation and Biotherapeutics Laboratory	2
BIO/CHEM 475 or ASCI 403	Molecular Biology Laboratory Applied Biotechnology in Animal Science	3-5
BIO 534	Principles of Stem Cell Biology	2
ASCI 581	Graduate Seminar in Animal Science	1
BIO 590	Seminar in Biology	1
BMED 563	Biomedical Engineering Graduate Seminar	2
BIO 509	Communicating Biology to General Audiences	1
BIO/ASCI/BMED 583	Research Experience for Regenerative Medicine Students	2
ASCI/BIO/BMED 593	Regenerative Medicine Internship	9
Approved Electives ¹		4
Total units		45

¹ The range of elective units reflects differences in the Molecular Techniques Course options (BIO 475; ASCI 403) and inclusion of BMED 500, such that the total required units for the program are 45.

MS Biomedical Engineering, Specialization in Regenerative Medicine

Program Learning Objectives

- Perform fundamental laboratory skills involved in regenerative medicine research & development.
- Discuss and critically evaluate biomedical primary literature.
- Effectively communicate technical topics to both peer and lay audiences.
- Explain the process of biotechnology development & commercialization.

Academic Programs

Program name	Program type
Civil and Environmental Engineering	MS
Civil Engineering	BS
Cross Disciplinary Studies Minor in Heavy Civil	Minor
Environmental Engineering	BS
Specialization in Transportation Planning	Concurrent CE-MS/ MCRP

The Civil and Environmental Engineering Department at Cal Poly, San Luis Obispo offers a rigorous and engaging educational experience that fully embraces Cal Poly's "Learn by Doing" approach.

Undergraduate Programs

BS Civil Engineering

Graduates of a civil engineering program must have the engineering skills needed to plan, design, construct, and maintain infrastructure and industrial facilities. In addition, graduates must have the broad education necessary to communicate effectively with other engineers, architects, planners, administrators, government officials, and the general public. The faculty and staff of the Civil Engineering program at Cal Poly understand these needs and take pride in preparing their students for the challenges associated with engineering practice.

The Civil Engineering program at Cal Poly has quickly grown into one of the largest and most respected programs in California and the nation. The program consistently attracts top student candidates because of its modern, well-equipped laboratories, the close interaction that occurs between undergraduates and full-time faculty, and a strong reputation among employers in the civil engineering and construction industries. Scientific depth is included within the curriculum for those students who are interested in graduate study.

The Civil Engineering program recognizes the importance of student organizations and strongly supports the American Society of Civil Engineers (ASCE) Student Chapter, the Institute of Transportation Engineers (ITE), Engineers Without Borders (EWB), and Chi Epsilon (the national civil engineering honor society). These student groups, along with others, sponsor opportunities for professional development, community service, and social activities which help to complement the formal academic program. The ASCE, ITE, and EWB Student Chapters have been recognized and awarded nationally on multiple occasions for their outstanding work and efforts in leadership and scholarship.

The Civil Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. The program's mission is to prepare students for successful careers in civil engineering

by providing a high quality, practice-oriented education that emphasizes design project experiences, "hands-on" laboratory activities, and teamwork. The program's faculty, in consultation with civil engineering practitioners and alumni, have developed a number of educational objectives to support this mission. These objectives are:

1. Integrate principles of sustainability, resilience, and restoration into engineering solutions.
2. Communicate and collaborate with diverse stakeholders in an inclusive, effective, equitable, and professional manner.
3. Implement systems thinking in engineering designs and solutions that promote public health, safety, and welfare on a local and global scale.
4. Pursue life-long professional development through study, licensure, certification, leadership, and service.
5. Acknowledge, understand, and incorporate the needs of diverse and vulnerable populations in outreach and engineering practice.

The undergraduate curriculum in civil engineering is designed to support the educational objectives. Therefore, the curriculum includes broad coverage of mathematics, engineering and basic sciences, liberal arts, humanities, and social sciences. The program also includes a number of required engineering courses designed to ensure students become proficient in a breadth of civil engineering sub-disciplines: geotechnical, construction, structural, transportation, environmental, and water resources.

All CE majors must complete a quarter course in professional practice and a two quarter senior design capstone sequence that focuses on current civil engineering design procedures, standards and multiple realistic constraints. The professional practice course includes topics on interpersonal communication, teamwork, leadership, and ethics. Together, the three quarters promote an understanding of the issues and skills to become a successful design professional.

Flexibility within the curriculum allows students to select from a wide range of upper division civil engineering technical electives. Students use these technical electives to focus in one of the five areas of civil engineering noted above or to design a "general" curriculum that allows for a broad range of civil engineering interests. Students should consult with a faculty advisor prior to selecting and enrolling in upper division civil engineering technical electives.

BS Environmental Engineering

The BS program in Environmental Engineering is concerned with the interrelation of people, materials, and processes in a complex and changing environment. The broad field of environmental engineering includes control of air and water pollution, environmental health and safety, solid waste, hazardous waste management, and pollution prevention.

The program offers a sound background in the fundamentals of thermodynamics, fluid mechanics, mass transfer, water resources, and geotechnical engineering. The problem-oriented approach to instruction, in modern well-equipped laboratories, provides an excellent opportunity to gain understanding and experience of the discipline. The program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

The main focus of the program is to prepare graduates for practice in professional engineering. Thus, Cal Poly's "learn by doing" philosophy is emphasized by integrating design throughout the curriculum, especially

in the numerous design-centered laboratories. In the required senior design project, which is completed in a two-quarter set of capstone courses, students demonstrate their understanding of engineering knowledge and their ability to apply that knowledge creatively to practical problems.

The Environmental Engineering program educational objectives are that its graduates will:

1. Integrate principles of sustainability, resilience, and restoration into engineering solutions.
2. Communicate and collaborate with diverse stakeholders in an inclusive, effective, equitable, and professional manner.
3. Implement systems thinking in engineering designs and solutions that promote public health, safety, and welfare on a local and global scale.
4. Pursue life-long professional development through study, licensure, certification, leadership, and service.
5. Acknowledge, understand, and incorporate the needs of diverse and vulnerable populations in outreach and engineering practice.

An engineering approach to the subject enables graduates of the program to pursue careers in industry, consulting firms, and public agencies concerned with air and water pollution control, groundwater, potable water treatment, solid waste management, and hazardous waste management.

Various program constituencies, such as graduates and employers, are consulted periodically for input on the appropriateness as well as the attainment of the educational objectives. Other indicators such as student/alumni placement and success rates in the statewide fundamentals in engineering examination are also used to evaluate attainment.

The Society of Environmental Engineers offers technical programs and other activities, including field trips to study typical installations of systems. Student memberships also are available in the Air and Waste Management Association, the California Water Pollution Control Association, and the Water Environment Federation.

Cross Disciplinary Studies Minor in Heavy Civil

An interdisciplinary minor sponsored by the Civil and Environmental Engineering department and the Construction Management Department. For more information, see the Construction Management (p. 167) section of the catalog.

Graduate Programs MS Civil and Environmental Engineering General Characteristics

The Master of Science program in Civil and Environmental Engineering has the following objectives:

- Job-entry education for the more complex areas of engineering, such as research and development, innovative design, systems analysis and design, and managerial engineering;
- Updating opportunities for practicing engineers;

- Graduate preparation for further study in engineering, leading to the Doctor of Engineering or Ph.D. degree.

Prerequisites

For admission as a classified graduate student, an applicant must hold a bachelor's degree in engineering or a closely related physical science with a minimum GPA of 3.0 in the last 90 quarter units (60 semester) attempted. Applicants are required to submit satisfactory scores for the General (Aptitude) Test of the Graduate Record Examination. An applicant who meets these standards but lacks prerequisite coursework may be admitted as a conditionally classified student and must make-up any deficiencies before advancement to classified graduate standing.

Information pertaining to specific requirements for admission to graduate standing (classified or conditionally classified) may be obtained from the Graduate Program Coordinator of the MS in Civil and Environmental Engineering program.

Program of Study

Graduate students must file a formal study plan with their advisor, department, college and university graduate studies office by no later than the end of the quarter in which the 12th unit of approved courses is completed. The formal program of study must include a minimum of 45 units (at least 60% must be at the 500 level). With the graduate advisor's approval, students select their elective units in one of the following areas of study: geotechnical engineering, structural engineering, transportation and planning, or water resources and environmental engineering.

The broad curriculum requirements for the MS in Civil and Environmental Engineering are:

- 45 total units of 400 and 500 level courses;
- 2 units of Graduate Seminar (CE 591 and CE 592)
- a minimum of 20 units of advisor approved electives within the major;
- at least 60% of the 45 unit program at the 500 level;
- a comprehensive examination (non-thesis option) or a written thesis with an oral defense (thesis option).

Two program options are available:

Thesis option

36 units of advisor-approved coursework and 9 units of research/design resulting in a written thesis and oral defense examination administered by a panel of at least three faculty.

Non-thesis option

44 units of advisor-approved coursework and 1-unit comprehensive examination consisting of written and oral components administered by a panel of three faculty (maximum of two opportunities to pass this examination). Not an option for the blended BS+MS program.

Joint Interdisciplinary Program Concurrent CE-MS/MCRP with Specialization in Transportation Planning

The Concurrent CE-MS/MCRP with Specialization in Transportation Planning (p. 429) is a joint interdisciplinary program between the Civil and Environmental Engineering Department in the College of Engineering and the City and Regional Planning Department in the College of Architecture and Environmental Design. Participation in the

program requires enrollment in both Colleges. Participants successfully completing the program are awarded both the Master of Science in Civil and Environmental Engineering (CE-MS) and the Master of City and Regional Planning (MCRP) with a Specialization in Transportation Planning.

Blended BS + MS Civil and Environmental Engineering Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Civil and Environmental Engineering.

Eligibility

Majors that are eligible for the blended program are:

- BS Civil Engineering
- BS Environmental Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Civil and Environmental Engineering department for any additional eligibility criteria.

Program of Study

The blended program allows students to earn graduate credit for several of their senior electives (up to 9 units) effectively decreasing the summed unit requirements for both degrees. Students in the blended program are required to complete both a senior project (ENVE or CE) and a thesis. All other requirements stated above for the MS thesis-option are the same.

BS Civil Engineering

Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism

No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CE 111	Introduction to Civil Engineering	1
CE 112	Design Principles in Civil Engineering	2
CE 113	Computer Aided Drafting in Civil Engineering	2
Select one of the following two options: ¹		5
CE 204 & CE 207 or CE 208	Mechanics of Materials I and Mechanics of Materials II Mechanics of Materials	
CE 222	Introductory Experiments in Transportation Engineering	1
CE 251	Programming Applications in Engineering	2
CE 259	Civil Engineering Materials	2
CE 321 & CE 322	Fundamentals of Transportation Engineering and Fundamentals of Transportation Engineering Laboratory	4
CE 336 & CE 337	Water Resources Engineering and Hydraulics Laboratory	5
CE 352	Structural Engineering	4

GENERAL EDUCATION (GE)	
(See GE program requirements below.)	44
FREE ELECTIVES	
Free Electives	0
Total units	190-192

- Transfer students take CE 208 in the Fall Quarter.
- Consultation with advisor is recommended prior to selecting Technical or Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- Additional guidelines for Technical Electives:
 - More than 4 units of coursework outside CE/ENVE is only permitted in special/ unusual cases and requires written justification by the student, and approval by the Department Chair.
 - No more than 4 combined units of CE 400, CE 500 and ENVE 400, ENVE 500 can count towards the degree.
 - No more than 8 combined units of CE 470 / ENVE 470, CE 471 / ENVE 471, CE 570 / ENVE 570, CE 571 / ENVE 571 can be credited.
 - Co-op, graduate seminar, senior project/design, and thesis courses are not permitted.
 - Only one course can be credited for CE 459 / CE 556.
- Degree credit will only be given to one of the following courses: IME 314 or IME 315.
- Required in Major or Support; also satisfies General Education (GE) requirement.
- If a course is taken to meet the Approved Engineering Science Elective requirement, it cannot be double-counted as another Major or Support requirement.

General Education (GE) Requirements

- 72 units required, 28 of which are specified in Major and/or Support.
- If any of the remaining 44 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/ Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	

B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		44

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Environmental Engineering

Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factor.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CE 113	Computer Aided Drafting in Civil Engineering	2
Select one of the following two options: ¹		5
CE 204 & CE 207 or CE 208	Mechanics of Materials I and Mechanics of Materials II and Mechanics of Materials	
CE 251	Programming Applications in Engineering	2
CE 336	Water Resources Engineering	4
CE 337	Hydraulics Laboratory	1
CE 381	Geotechnical Engineering	4
CE 434	Groundwater Hydraulics and Hydrology	4
CE 465	Civil Engineering Professional Practice	1
ENVE 111	Introduction to the Environmental Engineering Profession	1
ENVE 264	Environmental Fluid Mechanics	4
ENVE 304	Process Thermodynamics	3
ENVE 309	Noise and Vibration Control	3
ENVE 325	Air Quality Engineering	4
ENVE 331	Fundamentals of Environmental Engineering	4
ENVE 421	Mass Transfer Operations	4
ENVE 426	Air Quality Measurements	3
ENVE 434	Water Chemistry and Water Quality Measurements	4
ENVE 438	Water and Wastewater Treatment Design	3
ENVE 450	Industrial Pollution Prevention	4
ENVE 466 & ENVE 467	Senior Project Design Laboratory I and Senior Project Design Laboratory II	4
Select from the following:		12
ENVE 411	Air Pollution Control	
ENVE 436	Introduction to Hazardous Waste Management	
ENVE 439	Sustainable Solid Waste Engineering	
ENVE 443	Bioremediation Engineering	
ENVE 455	Environmental Health and Safety	

ENVE 480	Environmental Engineering of Energy	
Technical Electives ^{2,3}		10
Select from the below Technical Electives list		
SUPPORT COURSES		
CHEM 124	General Chemistry for Physical Science and Engineering I (B1 & B3) ⁴	4
CHEM 125	General Chemistry for Physical Science and Engineering II	4
CHEM 126	General Chemistry for Physical Science and Engineering III	4
CHEM 312	Organic Chemistry: Fundamentals and Applications ⁵	5
MATH 141	Calculus I (B4) ⁴	4
MATH 142	Calculus II (B4) ⁴	4
MATH 143	Calculus III (Area B Electives) ⁴	4
MATH 241	Calculus IV	4
MATH 244	Linear Analysis I	4
MCRO 221	Microbiology (B2) ⁴	4-5
or MCRO 224	General Microbiology I	
ME 211	Engineering Statics	3
PHYS 141	General Physics I (Area B Electives) ⁴	4
PHYS 142	General Physics II	4
PHYS 143	General Physics III	4
STAT 312	Statistical Methods for Engineers (Upper-Division B) ⁴	4
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		44
FREE ELECTIVES		
Free Electives		0
Total units		190-191

¹ Transfer students take CE 208 in the Fall Quarter.

² To be selected in consultation with your academic advisor.

³ A student may petition to take a course not included in the list of electives and receive Technical Elective credit, but they must first obtain approval from a faculty advisor, before taking the course.

⁴ Required in Major or Support; also satisfies General Education (GE) requirement.

⁵ CHEM 212 substitutes, but will not be counted as upper-division units.

Technical Electives

Technical Electives may be chosen from any 300-500 level CE/ENVE courses not taken to satisfy other curriculum requirements, with the following exceptions: senior project, co-op, graduate seminar, comprehensive exam, and thesis; and ENVE 324, ENVE 323, ENVE 570, ENVE 571.

Technical Electives cannot be used to satisfy other Major or Support requirements. No double counting is allowed.

No more than 4 units in total from CE 400/ENVE 400, CE 500/ENVE 500, ENVE 405, ENVE 407, and ENVE 471 combined can be counted towards Technical Electives.

No more than 4 units of coursework other than CE/ENVE may be used to satisfy the Technical Electives degree requirement.

Air Quality and Climate

ERSC/GEOG 414	Global and Regional Climatology
PHYS 313	Introduction to Atmospheric Physics

Appropriate Technology

PSC/UNIV 492	Appropriate Technology for the World's People: Design
--------------	---

Biology/Biochemistry/Microbiology

BIO 363	Principles of Conservation Biology
ENGR/ENVE 581	Biochemical Engineering
MCRO 342	Public Health Microbiology

Computer Applications and Computations

LA/NR 317	The World of Spatial Data and Geographic Information Technology
STAT 313	Applied Experimental Design and Regression Models
STAT 323	Design and Analysis of Experiments I

Chemistry

CHEM 314	Biochemistry: Fundamentals and Applications
CHEM 341	Environmental Chemistry: Water Pollution

Energy

BRAE 448	Bioconversion
PHYS 310	Physics of Energy

Hydrology and Soils

BRAE 532	Water Wells and Pumps
----------	-----------------------

Law and Policy

CRP/NR 404	Environmental Law
CRP/NR 408	Water Resource Law and Policy
IME 314	Engineering Economics
or IME 315	Financial Decision Making for Engineers

General Education (GE) Requirements

- 72 units required, 28 of which are specified in Major and/or Support.
- If any of the remaining 44 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A English Language Communication and Critical Thinking

A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4

Area B Scientific Inquiry and Quantitative Reasoning

B1	Physical Science (4 units in Support)	0
----	---------------------------------------	---

B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		44

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

MS Civil and Environmental Engineering

Program Learning Objectives

1. Apply and synthesize technical knowledge to solve solutions to advanced Civil and Environmental Engineering problems in a chosen subject area of mastery (Environmental, Geotechnical, Structural, Water Resources, or Transportation Engineering).
2. Demonstrate the ability for lifelong learning necessary for the constantly evolving nature of engineering design and practice.
3. Effectively communicate technical information orally and in writing.
4. Demonstrate independent thinking and decision making skills.
5. Integrate ethical and professional components into the solutions of complex engineering problems.
6. Evaluate engineering systems for sustainable performance and create solutions to encompass a project's full lifecycle.

Required Courses

CE 591	Graduate Seminar I	1
CE 592	Graduate Seminar II	1
Select one of the following options:		9
CE/ENVE 599	Design Project (Thesis)	

Or 9 units of advisor approved analysis and design electives within the major (nonthesis option)	
Advisor approved analysis and design electives within Civil and Environmental Engineering ³	
Select from the following: ¹ 20-34	
CE 400	Special Problems ²
CE 407	Structural Dynamics
CE 421	Traffic Engineering
CE 422	Highway Geometrics and Design
CE 423	Intelligent Transportation Systems
CE 424	Public Transportation
CE 429	Highway Pavement Designs
CE 431	Coastal Hydraulics I
CE 432	Coastal Hydraulics II
CE 433	Open Channel Hydraulics
CE 434	Groundwater Hydraulics and Hydrology
CE 440	Hydraulic Systems Engineering
CE 454	Integrated Structural Design
CE 455	Design of Timber Structures
CE 457	Bridge Engineering
CE 459	FRP Strengthening of Reinforced Concrete Structures
CE 475	Civil Infrastructure and Building Systems
CE 481	Analysis and Design of Shallow Foundations
CE 486	Introduction to Geological Engineering
CE 488	Engineering Risk Analysis
CE 500	Individual Study ²
CE 501	Advanced Matrix Analysis of Structures
CE 504	Finite Element Analysis
CE 523	Transportation Systems Planning
CE 525	Airport Planning and Design
CE 527	Sustainable Mobility
CE 528	Transportation Economics and Analysis
CE 529	Modeling and Simulation in Transportation
CE 533	Advanced Water Resources Engineering
CE 537	Groundwater Contamination
CE 539	Environmental Hydraulics
CE 552	Analysis and Seismic Design of Reinforced Concrete
CE 553	Ductile Design of Steel Structures
CE 555	Advanced Civil Engineering Materials Laboratory
CE 557	Seismic Analysis and Design
CE 559	Prestressed Concrete Design
CE 571	Selected Advanced Laboratory
CE 572	Engineering Project Management

CE 581	Advanced Geotechnical Engineering
CE 583	Geotechnical Earthquake Engineering
CE 584	Lateral Support Systems
CE 585	Slope Stability Analysis
CE 586	Analysis and Design of Deep Foundations
CE 588	Ground Improvement
CE 589	Geosynthetics Engineering
ENVE 400	Special Problems ²
ENVE 411	Air Pollution Control
ENVE 421	Mass Transfer Operations
ENVE 434	Water Chemistry and Water Quality Measurements
ENVE 436	Introduction to Hazardous Waste Management
ENVE 438	Water and Wastewater Treatment Design
ENVE 439	Sustainable Solid Waste Engineering
ENVE 443	Bioremediation Engineering
ENVE 450	Industrial Pollution Prevention
ENVE 455	Environmental Health and Safety
ENVE 466	Senior Project Design Laboratory I
ENVE 467	Senior Project Design Laboratory II
ENVE 480	Environmental Engineering of Energy
ENVE 500	Individual Study ²
ENVE 535	Physico-Chemical Water and Wastewater Treatment
ENVE 536	Biological Wastewater Treatment Processes Engineering
ENVE 537	Decentralized Wastewater Management
ENVE 540	Advanced Membrane Technology and Applications
ENVE 542	Sustainable Environmental Engineering

Advisor approved electives outside of Civil and Environmental Engineering³

Non-CE/ENVE advisor approved electives ¹	0-14
---	------

Total units	45
--------------------	-----------

¹ To be selected after consultation with your academic advisor and the CE/ENVE graduate coordinator

² No more than 4 total units of technical elective credit from CE 400, CE 500 and ENVE 400, ENVE 500 combined.

³ In total, at least 27 units of advisor approved electives (both within and outside of Civil and Environmental Engineering) must be at the 500 level.

Academic Program

Program name	Program type
Computer Engineering	BS

The mission of the Computer Engineering Program (CPE) is to provide students with a well-rounded education encompassing the theory and practice of selected, balanced topics in electrical engineering and computer science, to enable students to contribute and continue their education in a wide range of computer-related engineering careers. The program seeks to emphasize “hands-on” experience, problem solving skills, the creative process and responsible action. Through professional development activities, faculty contribute to the advancement of the state-of-the-art, and strive to directly incorporate this experience in the classroom.

Four educational objectives inspire alumni of the Cal Poly Computer Engineering program to excel professionally:

1. Make positive contributions to society and the practice of computer engineering by applying foundational knowledge and the engineering process to solve engineering problems.
2. Work in an individual or team environment in a socially responsible manner.
3. Engage in lifelong learning through continued professional development or graduate studies.
4. Communicate effectively and demonstrate leadership.

The program prepares graduates for professional practice in industry, as well as continued study in graduate school. Cal Poly’s “learn by doing” philosophy is emphasized by integrating design throughout the curriculum, especially in the numerous design-centered laboratories. In the required senior capstone experience, which is a group-project based course completed over two quarters, students demonstrate their understanding of engineering knowledge and their ability to apply that knowledge creatively to practical problems.

This integrated approach allows students to work effectively in such diverse areas as digital systems simulation and digital control systems. Knowledge and laboratory experience in computer architecture and structures provide the understanding necessary to design and build computer systems, computer networks and digital communications systems. A thorough knowledge of modern microprocessors and microcontrollers enables the graduate to apply these technologies in applications such as robotics, medical and data acquisition. Twelve units of technical electives allow students the option to specialize in an area of special interest. Current areas of special interest include:

- robotics
- embedded systems
- computer architecture

- computer networks
- computer based controls
- software systems
- graphics and multimedia
- electronics implementation and VLSI

In addition to a sound theoretical background in computer engineering concepts, students experience practical design courses intended to build problem solving skills. Laboratory courses supplement the program to develop “hands on” skills in all areas of study. Students are exposed to a wide variety of computing equipment: microprocessor development systems, workstations and personal computers, and advanced network hardware and software.

Active student groups of interest to computer engineering majors include the Computer Engineering Society, the IEEE Student Branch, the Association for Computing Machinery, the Society of Women Engineers, Women Involved in Software and Hardware, and many other project-oriented student clubs and activities.

For more information about the CPE program, please visit <https://eadvice.calpoly.edu>.

Undergraduate Program BS Computer Engineering

The Bachelor of Science in Computer Engineering prepares students interested in the design and application of computers and computer-based systems. The program incorporates a firm foundation in both electrical engineering and computer science, with a focus on the integration of hardware and software systems.

Blended and Graduate Programs

Graduates of the Computer Engineering Program are qualified for admission to Cal Poly master’s degree programs in electrical engineering, computer science, general engineering, and biomedical engineering.

The opportunity also exists for advanced students to begin graduate study in these areas prior to completion of the BS degree, via a blended program. This provides a number of advantages to qualified students, and makes it possible for completion of both the BS and MS degrees in as little as five years. Computer engineering students participating in a blended program are permitted to fulfill the computer engineering senior project requirement with the master’s degree thesis. Students must be prepared for engineering practice via the curriculum which culminates in a major design experience based on the knowledge and skills acquired in earlier coursework and incorporating engineering standards and realistic constraints, as listed in the ABET Engineering Criteria. Further details are provided in the graduate study sections for each of these programs.

BS Computer Engineering Program Learning Outcomes

In addition to the general abilities expected of College of Engineering graduates, computer engineering students are expected to graduate with:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety,

and welfare, as well as global, cultural, social, environmental, and economic factors.

3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

In addition to the general abilities expected of College of Engineering graduates, computer engineering students are expected to graduate with:

- Knowledge of probability and statistics, including applications appropriate to CPE program objectives.
- Knowledge of mathematics through differential and integral calculus, basic sciences, and engineering sciences necessary to analyze and design complex electrical and electronic devices, software, and systems containing hardware and software components, as appropriate to CPE program objectives.
- Knowledge of advanced mathematics, typically including differential equations, linear algebra, complex variables, and discrete mathematics.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CPE 100	Computer Engineering Orientation	1
CPE/CSC 101	Fundamentals of Computer Science	4
CPE/CSC 123	Introduction to Computing ¹	4
CPE/EE 133	Digital Design	4
CPE/CSC 202	Data Structures	4
CPE/CSC 203	Project-Based Object-Oriented Programming and Design	4
CPE/EE 233	Computer Design and Assembly Language Programming	4

GENERAL EDUCATION (GE)		
(See GE program requirements below.)		40
FREE ELECTIVES		
Free Electives		0
Total units		191-192

- ¹ An additional 4 units of Technical Electives may be substituted, although new students are strongly encouraged to take CSC 123/CPE 123.
- ² ENGR 459, ENGR 460, ENGR 461, and CPE 400 (7) or ENGR 463, ENGR 464, ENGR 465, and CPE 400 (7) may substitute for CPE 350 and CPE 450 (7).
- ³ Consultation with an advisor is recommended prior to selecting Approved or Technical Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ⁴ Courses taken to meet the Technical Electives requirement cannot be double-counted to satisfy another Major or Support requirement.
- ⁵ The following courses may not be used to satisfy this requirement: COOP units; BUS 499; CSC 304, CSC 320, CSC 364, CSC 400, CSC 500; EE 321, EE 322, EE 361, EE 400, EE 460, EE 500, EE 563. A student with credit in CPE 327/CPE 367 cannot take EE 328/EE 368 for credit.
- ⁶ Required in Major or Support; also satisfies General Education (GE) requirement.

General Education (GE) Requirements

- 72 units required, 32 of which are specified in Major and/or Support.
- If any of the remaining 40 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0

Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Support) ¹	0
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C (4 units in Support) ¹		0
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		40

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Cross Disciplinary Studies Minor in Computing for Interactive Arts	Minor
Cross Disciplinary Studies Minor in Data Science	Minor
Software Engineering	BS

The Computer Science and Software Engineering Department educates students in the discipline of computer science and teaches them to apply their education to solve practical problems in a socially responsible way. To support the department's educational mission, faculty engage in research and professional development.

Department programs are designed to be flexible. Although freshmen choose their major when they apply for admission, students can easily switch among software engineering, computer engineering and computer science since the lower division curricula are similar.

In all of the department's programs, laboratory experiences ensure that students have both a theoretical and practical understanding of computer science. Individual and team projects, culminating in a capstone experience or a senior project, reinforce concepts and provide students the opportunity to apply and communicate their knowledge.

The department has active student chapters of the Association for Computing Machinery, IEEE Computer Society and Upsilon Pi Epsilon (the national computer honor society). Student teams compete in national competitions and student organizations sponsor industry/student events.

The department, with industry support, provides a modern computing environment that includes the most current software tools running on a variety of workstations and servers. Projects in advanced courses are supported by specialized laboratories for databases, computer architecture, operating systems, software engineering, computer networks, computer graphics, and human/computer interaction.

Undergraduate Programs

BS Computer Science

The BS Computer Science program provides in-depth study of computer science fundamentals and practice, including programming concepts and languages, software engineering, operating systems and computer architecture.

In addition, the major offers a wide choice of technical electives that allows students to focus on particular areas of computer science and their application. Typical areas of emphasis include databases, distributed computing, software engineering, programming languages, graphical user interfaces, operating systems, computer networks, computer graphics, computer security, game development, and artificial intelligence.

The curriculum is project-oriented and develops students' ability to solve problems using modern computing concepts. Students can expect to complete many projects in a variety of programming languages and on a variety of computer systems. During their last year of study, students complete a senior project, either individually or as members of a team, spanning two academic quarters.

Graduates of the computer science program are well prepared to become successful professionals and to pursue graduate study. They are sought by the computer industry for positions as software developers, quality assurance and test engineers, and other technical positions in computer-related industries.

The Computer Science program has four broad program educational objectives (PEOs) that graduates are expected to attain within five years of graduation:

- **Technical Competence.** Graduates have applied current technical knowledge and skills to develop effective computer solutions, using state-of-the art technologies.
- **Interpersonal Skills.** Graduates have communicated effectively and worked collaboratively in a team environment.
- **Professional Awareness.** Graduates have maintained a positive and ethical attitude concerning the computing profession and its impact on individuals, organizations and society.
- **Intellectual Growth.** Graduates have continued to grow intellectually and professionally in their chosen field, including successful pursuit of graduate study if such study was a desired goal.

The BS Computer Science program is accredited by the Computing Accreditation Commission of ABET, <http://www.ABET.org>.

General Curriculum in Computer Science or Concentrations

- General Curriculum in Computer Science
- Artificial Intelligence and Machine Learning
- Data Engineering
- Game Development
- Graphics
- Privacy and Security

BS Software Engineering

The BS in Software Engineering prepares students to become software professionals who develop software products on time, within budget, and that meet customer requirements. Building on the fundamentals of computer science, the program focuses on practical aspects of building and deploying software systems in a socially responsible way. The program's educational mission supports the faculty in research and professional development that keeps them current in their field and in touch with current industry practices and trends.

The hallmark of the program is “hands on” experience where students follow a curriculum that builds on traditional computer science but differs from the BS in Computer Science in the following ways:

1. Classes emphasize the team approach to building software and provide leadership opportunities for every student.
2. Classes place an emphasis on software processes and lifecycles.
3. Classes include significant learning in engineering and management areas such as quality assurance, testing, metrics, maintenance, configuration management and interpersonal management skills.
4. The curriculum has a stronger emphasis on mathematics and the use of engineering methods in software design.

The software engineering curriculum culminates in a year-long capstone sequence where the students work in teams to build a large software system.

The software industry increasingly requires both a software and an engineering background for their cutting edge projects. Graduates with a BS in Software Engineering can expect to find significant opportunities in software development and management, software engineering and marketing.

The Software Engineering program has four broad program educational objectives (PEOs) that graduates are expected to attain within five years of graduation:

- **Technical Competence.** Graduates have applied the software engineering body of knowledge and other technical skills to specify, design, and implement complex software systems, doing so with state-of-the art technologies.
- **Interpersonal Skills.** Graduates have communicated effectively and worked collaboratively in a multi-disciplinary team environment.
- **Professional Awareness.** Graduates have maintained a positive and ethical attitude concerning the computing profession and its impact on individuals, organizations and society.
- **Intellectual Growth.** Graduates have continued to grow intellectually and professionally in their chosen field, including successful pursuit of graduate study if such study was a desired goal.

The BS Software Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.ABET.org>.

Computer Science Minor

Nearly all disciplines use the capabilities of computers. The Computer Science minor consists of a core and upper-division courses selected in consultation with an advisor. The core provides common knowledge and skills needed by anyone who wishes to advance further in computer science. The remaining courses enable students to specialize in areas relevant to their goals.

Admission to the minor is limited and selection is based upon the applicant’s performance in:

CSC/CPE 101	Fundamentals of Computer Science	4
CSC/CPE 202	Data Structures	4
CSC/CPE 203	Project-Based Object-Oriented Programming and Design	4

Students who intend to minor in computer science should consult the College of Engineering Advising Center website for GPA and course grade requirements for admission to the minor. In addition, they should contact

the Advising Center for further information *before* planning to enter the minor.

Before formally applying, students must make an appointment at the College of Engineering Advising Center. The Computer Science minor is not open to CSC, CPE or SE major students, or to students in the Computing for Interactive Arts Minor or the Cross Disciplinary Studies Minor in Data Science. Questions concerning the minor should be directed to the Advising Center.

Cross Disciplinary Studies Minor in Bioinformatics

For information regarding the Cross Disciplinary Studies Minor in Bioinformatics, please see the Biological Sciences (p. 364) section of the catalog.

Cross Disciplinary Studies Minor in Computing for Interactive Arts

The minor in Computing for Interactive Arts (CIA) is a Cross Disciplinary Studies Minor jointly offered by the Department of Art and Design and the Computer Science Department. The CIA minor fosters a collaborative, cross-disciplinary environment in which Art and Design students integrate coding and algorithmic thinking in creative works and Computer Science students apply the principles and methodology of design thinking to visual applications. The minor enables students from different disciplines to collaborate on projects requiring both a technical and a creative perspective. The Computing for Interactive Arts minor is not open to students in the Computer Science minor or the Cross Disciplinary Studies Minor in Data Science.

Cross Disciplinary Studies Minor in Data Science

An interdisciplinary minor sponsored by the departments of Statistics and Computer Science. For more information, see the Statistics (p. 422) section. The Cross Disciplinary Studies Minor in Data Science is not open to students in the Computer Science minor or the Computing for Interactive Arts minor.

Graduate Program MS Computer Science

The MS program in Computer Science offers students the opportunity to prepare for careers in several areas of emphasis including software engineering, computer architecture, programming languages, theory of computing, operating systems, database systems, distributed computing, computer networks, artificial intelligence, computer graphics, and human computer interaction. The program is designed for maximum flexibility to allow students to concentrate in one or more areas of study.

Eligibility for admission to the program requires a baccalaureate degree from an accredited institution and good standing at the last college attended. Admission can be granted in either classified or conditionally classified status. Classified admission can be granted to domestic and overseas applicants who satisfy the following conditions: applicants with a bachelor’s degree in computer science, software engineering, or computer engineering are required to have a minimum 3.0 grade point average, including a minimum 3.0 grade point average in major

courses; applicants with a bachelor's degree in a different field must have completed the required preliminary coursework listed in the table below and have a minimum grade point average of 3.25 for all undergraduate coursework. Conditionally classified admission can be granted to domestic applicants who satisfy the following conditions: The applicant must hold a Computer Science minor obtained as part of their undergraduate study, or they must have successfully completed introductory and upper-division Computer Science coursework in the amount equivalent to the Computer Science minor (an equivalent of about 28-32 quarter units). Specifically, applicants are expected to have completed the equivalent of 24 units of coursework (6 courses) from the below list, prior to starting their MS in Computer Science study.

All applicants must satisfy the following. A satisfactory score on the General Graduate Record Exam (GRE) is required; applicants are expected to achieve the following minimum scores: 425 verbal, 650 quantitative, 4.0 analytical writing on the old GRE test, or their matching equivalents on the revised GRE test (currently standing at 148 verbal, 158 quantitative and 4.0 analytical writing). A satisfactory score on the TOEFL is required for applicants with degrees from institutions from countries where English is not a native language; expected minimum scores are: 80 for internet-based test with a minimum 20 on each portion; 213 for computer-based test; 550 for paper-based test, plus 4.5 on TWE. All applicants must provide three letters of recommendation. Women and underrepresented minorities are strongly encouraged to apply for admission.

Students admitted as conditionally classified must complete the necessary undergraduate coursework to advance to candidacy. While fulfilling the undergraduate requirements, conditionally classified students retain official status as graduate students in the university. Conditionally classified students may advance to candidacy by completing coursework selected by the graduate coordinator from the following list of courses:

CSC 300	Professional Responsibilities	4
CSC 307 or CSC 308	Introduction to Software Engineering Software Engineering I	4
CPE 315	Computer Architecture	4
CSC 349	Design and Analysis of Algorithms	4
CSC/CPE 357	Systems Programming	4
CSC 430	Programming Languages	4
CSC 445	Theory of Computation I	4
CSC/CPE 453	Introduction to Operating Systems	4

Each course must be completed with a grade of "B" or better. These courses do not count toward the graduate degree.

The department may offer several graduate teaching assistantships. Preference is given to continuing graduate students and experienced teachers. Other grant, fellowship, scholarship and loan information can be obtained from the Financial Aid office.

Degree Requirements

Students must file a Formal Study Plan with the Computer Science Department office no later than the end of the quarter in which they complete the twelfth unit of coursework to be counted toward the degree. The formal study plan identifies specific courses to be taken to fulfill requirements of the MS degree. The formal study plan may be amended with approval of the graduate coordinator.

Blended BS + MS Computer Science Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Computer Science.

Eligibility

Majors that are eligible for the blended program are:

- BS Computer Science
- BS Computer Engineering
- BS Software Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Computer Science and Software Engineering department for any additional eligibility criteria.

Program of Study

Senior project requirements for the eligible undergraduate majors are satisfied as follows:

- BS Computer Engineering students may complete either CPE 461 and CPE 462 or CSC 497 and CSC 498. Those that complete CPE 461 and CPE 462 to satisfy the senior project requirement must take CSC 596 and CSC 597 as prerequisites to CSC 599 to complete the MS degree requirements. Those that complete CSC 497 and CSC 498 to satisfy both the senior project requirement and the CSC 599 prerequisites must take an additional 500-level course to satisfy the MS degree requirements.
- BS Computer Science students may complete either CSC 491 and CSC 492 or CSC 497 and CSC 498 to satisfy the undergraduate senior project requirement. Those that complete CSC 491 and CSC 492 to satisfy the senior project requirement must take CSC 596 and CSC 597 as prerequisites to CSC 599 to complete the MS degree requirements. Those that complete CSC 497 and CSC 498 to satisfy both the senior project requirement and the CSC 599 prerequisites must take an additional 500-level course to satisfy the MS degree requirements.
- BS Software Engineering students must complete the senior project requirement as satisfied by the software engineering capstone sequence culminating in CSC 406. BS Software Engineering students must complete CSC 596 and CSC 597 to satisfy the MS degree requirements.

In all cases, the master's culminating experience (CSC 599) must be completed to satisfy the MS degree requirements.

BS Computer Science Program Learning Outcomes

Graduates of the program will have an ability to:

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Apply computer science theory and software development fundamentals to produce computing-based solutions.

CSC 445	Theory of Computation I	4
CSC/CPE 453	Introduction to Operating Systems	4
Select from the following: 4		
CSC 491 & CSC 492	Senior Project I and Senior Project II (2, 2)	
or		
CSC 497 & CSC 498	Research Senior Project I and Research Senior Project II (2, 2)	

SUPPORT COURSES

ES/WGQS 350	Gender, Race, Culture, Science & Technology	4
or ES 351	Gender, Race, Class, Nation in Global Engineering, Technology & International Development	
MATH 141	Calculus I (B4) ⁵	4
MATH 142	Calculus II (B4) ⁵	4
MATH 143	Calculus III (Area B Electives) ⁵	4
MATH 206 or MATH 244	Linear Algebra I Linear Analysis I	4
PHIL 230	Philosophical Classics: Knowledge and Reality (C2) ⁵	4
or PHIL 231	Philosophical Classics: Ethics and Political Philosophy	
STAT 312	Statistical Methods for Engineers (Upper-Division B) ⁵	4

Life Science Support Elective

Select from the following (B2): ⁵ 4		
BIO 111	General Biology	
BIO 161	Introduction to Cell and Molecular Biology	
BIO 213 & BMED 213	Life Science for Engineers and Bioengineering Fundamentals	
BOT 121	General Botany	
MCRO 221	Microbiology	

Physical Science Support Elective

Select one sequence from the following (B1 & B3): ⁵ 12		
CHEM 124 & CHEM 125 & CHEM 126	General Chemistry for Physical Science and Engineering I and General Chemistry for Physical Science and Engineering II and General Chemistry for Physical Science and Engineering III	
PHYS 141 & PHYS 142 & PHYS 143	General Physics I and General Physics II and General Physics III	

Additional Science Support Elective

Select from the following (Area B Electives): ^{5,6} 4		
BIO 111	General Biology	
BIO 161	Introduction to Cell and Molecular Biology	
BOT 121	General Botany	
CHEM 124	General Chemistry for Physical Science and Engineering I	
MCRO 221	Microbiology	
PHYS 141	General Physics I	

Concentration or General Curriculum in Computer Science

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CSC/CPE 101	Fundamentals of Computer Science	4
CSC/CPE 123	Introduction to Computing ¹	4
CSC/CPE 202	Data Structures	4
CSC/CPE 203	Project-Based Object-Oriented Programming and Design	4
CSC 225	Introduction to Computer Organization	4
CSC 248	Discrete Structures	4
CSC 300 or PHIL 323	Professional Responsibilities Ethics, Science and Technology	4
Select from the following: 4		
CSC 307	Introduction to Software Engineering	
or		
CSC 308 & CSC 309	Software Engineering I and Software Engineering II ²	
Select from the following: 4		
CSC 321 or CSC 323 or CSC 325	Introduction to Computer Security ³ Cryptography Engineering Introduction to Privacy: Policy and Technology	
CSC 349	Design and Analysis of Algorithms	4
CSC/CPE 357	Systems Programming	4
Select from the following: 4		
CSC 364	Introduction to Networked, Distributed, and Parallel Computing	
or		
CPE 464 & CPE 469	Introduction to Computer Networks and Distributed Systems ⁴	
CSC 365	Introduction to Database Systems	4
CSC 430	Programming Languages	4

(See list of Concentrations and General Curriculum in Computer Science below)	24
GENERAL EDUCATION (GE)	
(See list of GE program requirements below.)	40
FREE ELECTIVES	
Free Electives ⁷	0
Total units	180

- ¹ Although new students are strongly encouraged to take CSC/CPE 123, an additional 4 units of CPE/CSC Technical Electives within your selected concentration or, if not selected, the General Curriculum may substitute for CSC/CPE 123.
- ² CSC 309 counts as a Technical Elective. Students in the Artificial Intelligence and Machine Learning concentration or the Privacy and Security concentration are advised to take CSC 307 instead of CSC 308 and CSC 309.
- ³ Students in the Privacy and Security Concentration must take CSC 321.
- ⁴ CPE 469 counts as a Technical Elective for the General Curriculum, and the following concentrations: Graphics, Privacy and Security, and Data Engineering.
- ⁵ Required in Major or Support; also satisfies General Education (GE) requirement.
- ⁶ No double-counting is allowed between Additional Science Support Elective and Life Science Support Elective or Physical Science Support Elective.
- ⁷ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Curriculum in Computer Science or Concentrations (select one)

- General Curriculum in Computer Science
- Artificial Intelligence and Machine Learning
- Data Engineering
- Game Development
- Graphics
- Privacy and Security

General Education (GE) Requirements

- 72 units required, 32 of which are specified in Major and/or Support.
- If any of the remaining 40 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4

Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Support) ¹	0
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		40

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

General Curriculum in Computer Science

Technical Electives		
Select from the lists in Technical Electives Guidelines below ^{1,2}		20

MATH 451	Numerical Analysis I
MATH 453	Numerical Optimization

MATH 481	Abstract Algebra I	
Mathematics/Statistics Elective		
Select from the following:		4
MATH 241	Calculus IV	
MATH 248	Methods of Proof in Mathematics	
MATH 306	Linear Algebra II	
Total units		24

Students in this concentration must take CSC 321 as part of their major.

- ¹ Courses taken in this list cannot be double-counted in the concentration.
- ² An additional 4 units of CPE/CSC Technical Electives is needed if CPE/CSC 123 is not taken in the major.
- ³ Up to 4 units may be taken from CSC 400.

BS Software Engineering Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CSC/CPE 101	Fundamentals of Computer Science	4
CSC/CPE 202	Data Structures	4
CSC/CPE 123	Introduction to Computing ¹	4

CSC/CPE 203	Project-Based Object-Oriented Programming and Design	4
CSC 225	Introduction to Computer Organization	4
CSC 248	Discrete Structures	4
CSC 300	Professional Responsibilities	4
or PHIL 323	Ethics, Science and Technology	
CSC 305	Individual Software Design and Development	4
CSC 308	Software Engineering I	4
CSC 309	Software Engineering II	4
CSC 349	Design and Analysis of Algorithms	4
CSC/CPE 357	Systems Programming	4
CSC 365	Introduction to Database Systems	4
CSC 402	Software Requirements Engineering	4
CSC 405	Software Construction	4
CSC 406	Senior Project - Software Deployment	4
CSC 430	Programming Languages	4
CSC 484	User-Centered Interface Design and Development	4

Technical Electives

Select from the lists in Technical Electives Guidelines below ^{2,3} 16

SUPPORT COURSES

IME 314	Engineering Economics	3
or IME 315	Financial Decision Making for Engineers	
MATH 141	Calculus I (B4) ⁴	4
MATH 142	Calculus II (B4) ⁴	4
MATH 143	Calculus III (Area B Electives) ⁴	4
MATH 241	Calculus IV	4
MATH 244	Linear Analysis I	4
PHIL 230	Philosophical Classics: Knowledge and Reality (C2) ⁴	4
or PHIL 231	Philosophical Classics: Ethics and Political Philosophy	
PSY 201/202	General Psychology (E) ⁴	4
PSY 350	Teamwork	4
or COMS 217	Small Group Communication	
STAT 312	Statistical Methods for Engineers (Upper-Division B) ⁴	4

Life Science Support Elective

Select from the following (B2): ⁴		4-5
BIO 111	General Biology	
BIO 161	Introduction to Cell and Molecular Biology	
BIO 213 & BMED 213	Life Science for Engineers and Bioengineering Fundamentals	
BOT 121	General Botany	
MCRO 221	Microbiology	
MCRO 224	General Microbiology I	

Mathematics Support Elective

Select from the following:		4
MATH 248	Methods of Proof in Mathematics	
MATH 334	Combinatorial Math	

MATH 335	Graph Theory	
MATH 451	Numerical Analysis I	
Physical Science Support Electives		
Select one of the following series (B1 & B3; Area B Electives): ⁴		12
CHEM 124 & CHEM 125 & CHEM 126	General Chemistry for Physical Science and Engineering I and General Chemistry for Physical Science and Engineering II and General Chemistry for Physical Science and Engineering III	
PHYS 141 & PHYS 142 & PHYS 143	General Physics I and General Physics II and General Physics III	
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		36
FREE ELECTIVES		
Free Electives ⁵		0
Total units		183-184

¹ An additional 4 units of CPE/CSC technical electives may substitute for CSC/CPE 123, although new students are strongly encouraged to take CSC/CPE 123.

² Consultation with advisor is recommended prior to selecting Technical Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

³ An additional 4 units of CPE/CSC Technical Electives is needed if CSC/CPE 123 is not taken.

⁴ Required in Major or Support; also satisfies General Education (GE) requirement.

⁵ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Technical Electives Guidelines

Courses used to satisfy any other Major, Support, or General Education requirement are not allowed to count toward the Technical Electives requirement. Credit/No Credit grading is not allowed.

Contact the Computer Science and Software Engineering department for further information.

Select Technical Electives from the following:^{1,2}

CSC 313	Teaching Computing
CSC/CPE 321	Introduction to Computer Security
CSC 323	Cryptography Engineering
CSC 325	Introduction to Privacy: Policy and Technology

Total units	16

¹ A total of 16 Technical Elective units selected from upper-division and graduate CSC and CPE courses open to those in the major and not otherwise required by the major. An additional 4 units of CPE/CSC Technical Electives is needed if CSC/CPE 123 is not taken.

² Up to a combined 4 units may be taken from CSC 400, CPE 400, CSC 490, CSC 493, or CSC 496.

General Education (GE) Requirements

- 72 units required, 36 of which are specified in Major and/or Support.
- If any of the remaining 36 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written

Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A		English Language Communication and Critical Thinking	
A1	Oral Communication		4
A2	Written Communication		4
A3	Critical Thinking		4
Area B		Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹		0
B2	Life Science (4 units in Support) ¹		0
B3	One lab taken with either a B1 or B2 course		
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹		0
Upper-Division B (4 units in Support) ¹			0
Area B Electives (8 units in Support) ¹			0
Area C		Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.			
C1	Arts: Arts, Cinema, Dance, Music, Theater		4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Support) ¹		0
Lower-Division C Elective - Select a course from either C1 or C2.			4
Upper-Division C			4
Area D		Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)		4
Area D Elective - Select either a lower-division D2 or upper-division D course.			4
Area E		Lifelong Learning and Self-Development	
Lower-Division E (4 units in Support) ¹			0
Area F		Ethnic Studies	
F	Ethnic Studies		4
Total units			36

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Computer Science Minor

Required Courses

CSC/CPE 101	Fundamentals of Computer Science	4
CSC/CPE 202	Data Structures	4
CSC/CPE 203	Project-Based Object-Oriented Programming and Design	4

DATA 301	Introduction to Data Science	
Total units		24

¹ Choose from CSC/CPE upper-division courses open to CSC majors. Must be approved via the CSC minor form upon acceptance to the minor.

² Cannot take both CSC 320 and CSC 321 as Approved Electives.

³ Must be approved via the CSC minor form, signed by the minor advisor.

Cross Disciplinary Studies Minor in Computing for Interactive Arts

Required Courses

ART 182	Foundation in Digital Art I	4
ART 183	Foundation in Digital Art II	4
ART 384	Digital 3D Modeling and Design	4
Select from the following:		12
CSC/CPE 101	Fundamentals of Computer Science	
CSC 121	Computing for All I	
CSC 122	Computing for All II	
CSC/CPE 123	Introduction to Computing	
CSC/CPE 202	Data Structures	
CSC/ART 350	Computing for Interactive Arts Capstone I	2
CSC/ART 450	Computing for Interactive Arts Capstone II	2

Approved Electives

Select from the following (no more than 8 units with a CSC or CPE prefix): ¹		12
ART 302	Figure Drawing	
ART 334	Illustration I: Techniques and Tools	
ART 376	The Art of Mixed Reality	
ART 383	Digital Video I	
ART 388	Interaction Design II	
ART 434	Illustration II	
ART 439	Type in Motion	
ART 474	Collaborative Studio: Storyboarding, Modeling, Animation and Rendering	
CSC 313	Teaching Computing	
CSC 371	Game Design	
CSC 377	Introduction to Mixed Reality	
CSC 378	Interactive Entertainment Engineering	
CSC/CPE 471	Introduction to Computer Graphics	
CSC 473	Advanced Rendering Techniques	
CSC 474	Computer Animation	
CSC/CPE 476	Real-Time 3D Computer Graphics Software	
CSC 480	Artificial Intelligence	
CSC 484	User-Centered Interface Design and Development	

Total units **40**

¹ Art and Design students in the Studio Art concentration that take CSC 121 and CSC 122 to also satisfy General Education requirements must take an additional Approved Elective to maintain the required 12-unit minimum within the minor because ART 302 is required by the concentration.

MS Computer Science

Program Learning Objectives

1. Prepared for successful careers in a computing-related field, including careers that involve positions of technical leadership and advanced responsibility
2. Exposed to a broad range of computer-science subjects in coursework that emphasizes technical subject matter.
3. Able to perform, analyze, evaluate and synthesize computer science research, in particular, know how to present research findings in oral and written form.
4. Prepared for life-long learning in the discipline of computer science, including continued formal graduate education.
5. Aware of the impacts of computing technology on society and understand ethics and responsible professional conduct.

The MS degree requires at least 45 units beyond the undergraduate degree. Courses must be chosen according to the following requirements:

Select from the following:		20
CSC 508	Software Engineering I	
CSC 509	Software Engineering II	
CSC 513	Computing Education Research and Practice	
CSC 515	Computer Architecture	
CSC 521	Computer Security	
CSC 522	Advanced Network Security	
CSC 524	System Security	
CSC 530	Languages and Translators	
CSC 540	Theory of Computation II	
CSC 549	Advanced Algorithm Design and Analysis	
CSC 550	Operating Systems	
CSC 560	Database Systems	
CSC 564	Computer Networks: Research Topics	
CSC 566	Topics in Advanced Data Mining	
CSC 569	Distributed Computing	
CSC 570	Current Topics in Computer Science	
CSC 572	Computer Graphics	
CSC 580	Artificial Intelligence	
CSC 581	Computer Support for Knowledge Management	
CSC 582	Computational Linguistics	
CSC 587	Advanced Deep Learning	

Thesis/Project and Seminar

CSC 590	Thesis Seminar	1
Select from the following: ¹		4
CSC 596 & CSC 597	Research in Computer Science I and Research in Computer Science II (2, 2)	

or

an additional 500-level course (4) ²

CSC 599	Thesis	4
---------	--------	---

Electives

Selected with Graduate Coordinator approval ²	16
--	----

Total units	45
--------------------	-----------

¹ CSC 596 and CSC 597 must be taken before CSC 599.

² No more than 4-units total of CSC 500 allowed.

For further information or advisement students should communicate with the Graduate Coordinator of the Computer Science and Software Engineering Department.

Academic Programs

Program name	Program type
Electrical Engineering	BS, MS

The Electrical Engineering Department offers a Bachelor of Science degree and a Master of Science degree in Electrical Engineering. The undergraduate degree is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

The mission of the Electrical Engineering Department is to educate students to achieve excellence in the discipline of electrical engineering and to teach them to apply their education to solve practical problems in a socially responsible way. Students are prepared for careers of service, leadership, and distinction in a wide range of engineering and other related fields using a participatory, learn-by-doing, and "hands-on" laboratory, project, and design centered approach. Students are encouraged to participate in lifelong learning as essential in the presence of the ever-increasing pace of technological change.

Diversity in the students, faculty and staff is embraced and enhances the quality and creativity of the campus experience and environment.

The primary educational objectives of the Electrical Engineering program are to prepare graduates to:

1. Excel in the electrical engineering profession;
2. Embrace life-long learning as a necessary component to remain current in their profession; and
3. Pursue graduate degrees for enhanced skills and opportunities.

The Electrical Engineering degree programs prepare graduates for distinguished practice in professional engineering; equipping students for pursuing engineering solutions to urgent problems while being responsibly aware of all implications. To that end, the curriculum provides a sound theoretical background along with current, practical engineering knowledge. Cal Poly's "learn by doing" philosophy is emphasized by integrating design throughout the curriculum in numerous design-centered laboratories that provide students with hands-on experiences in design synthesis, analysis, characterization, and verification.

The student begins the major in the first quarter with an orientation class and laboratory; and generally has one or more major courses each quarter until graduation. The many laboratory courses provide practical experience and lead logically from demonstration of theory into design applications.

During their junior and senior years, students choose technical electives to gain additional expertise in one or more areas of specialization within electrical engineering. These courses deal with the development, design and application of circuits, electronic devices, computers, and systems for communication, controls, information processing and display, and

system instrumentation. Senior courses in this area provide specialized preparation in a selected area such as active and passive network synthesis, advanced communications systems, software and hardware aspects of computer system design, microelectronic circuit engineering, microprocessor systems applications, rf and microwave engineering, photonics, biomedical engineering, integrated circuits, and solid state devices.

Other courses deal with industrial process control systems, power electronics, and with generation, distribution, control and utilization of electric power. Senior elective courses in this area provide specialized preparation in a selected area such as advanced control systems, energy conversion, power system analysis, protection and stability, and solid state motor control.

Employers recognize that students who have completed such specialized technical courses are early contributors in the workforce. Students wishing to pursue graduate work may select appropriate senior courses in keeping with this goal.

In the required senior design project, students demonstrate their understanding of engineering knowledge and their ability to apply that knowledge creatively to solve practical problems.

Involvement in faculty research is possible for graduate students and outstanding undergraduate students. Research areas include computer-aided education, autonomous systems, signal and image processing, electric vehicles, computer architecture and software systems, photonics, polymer electronics, power systems, power electronics, radio frequency electronics, communication systems, biomedical electronics, renewable energy systems, and electric power microgrid systems.

Students are encouraged to participate in professional organizations and clubs such as: Institute of Electrical and Electronics Engineers (IEEE), IEEE Computer Society (IEEE-CS), IEEE Consumer Electronics Society (IEEE-CES), IEEE Power and Energy Society (IEEE-PES), Audio Engineering Society (AES), Cal Poly Robotics, Electric Vehicle Club, Renewable Energy Club, Society of Automotive Engineers (SAE) and the Formula Electric challenge, Society of Women Engineers (SWE), Women Involved in Software & Hardware (WISH), Eta Kappa Nu (HKN), Society of Photo-Optical Instrumentation Engineers (SPIE), Student Electrical Engineering Council (SEEC), and the Amateur Radio Club. The Electric Power Institute, sponsored by the university and underwritten by major utility companies and electrical equipment manufacturers, offers advanced seminars and lectures in the electrical power field and facilitates student and faculty interaction with industry.

Undergraduate Programs

BS Electrical Engineering

Students are prepared for careers of service, leadership, and distinction in engineering and other related fields using a participatory, learn-by-doing, and "hands-on" laboratory, project, and design centered approach. Students are encouraged to participate in lifelong learning in the presence of rapid technological change.

General Curriculum in Electrical Engineering or Concentrations

- General Curriculum in Electrical Engineering
- Power
- Radio Frequency - Microwaves - Photonics
- Systems

Graduate Program MS Electrical Engineering

General Characteristics

The Master of Science program in Electrical Engineering serves students and practicing engineers seeking:

- Job-entry education for the more complex areas of engineering, such as research and development, innovative design, systems analysis and design, and managerial engineering;
- Updating and upgrading opportunities for practicing engineers;
- Graduate preparation for further study in engineering, leading to the Doctor of Engineering or Ph.D. degree;
- A base which allows graduates to maintain currency in their fields.

Prerequisites

For admission as a classified graduate student, an applicant must hold a bachelor's degree in engineering or a closely related physical science with a minimum grade point average of 3.0 in the last 90 quarter units (60 semester units) attempted. Applicants for graduate engineering programs are required to submit satisfactory scores for the General (Aptitude) Test of the Graduate Record Examination. Foreign applicants must have satisfactory scores on the TOEFL and TWE exams. An applicant who meets these standards but lacks prerequisite coursework may be admitted as a conditionally classified student and must make up any deficiencies before advancement to classified graduate standing.

Information pertaining to specific requirements for admission to graduate standing (classified or conditionally classified) may be obtained from the Graduate Coordinator, Electrical Engineering Department.

Program of Study

Graduate students in this program must file a formal study plan with their advisor, department, college and university graduate studies office by no later than the end of the second quarter in the program. The formal program of study must include a minimum of 45 units (at least 28 of which must be at the 500 level and the remainder at the 400 level).

The broad curriculum requirements for the MS in Electrical Engineering are:

1. core of 16 units;
2. a minimum of 12 units of additional electrical engineering courses;
3. at least 17 units of approved electives;
4. at least 28 units of the 45 unit program at the 500 level.

Two program options are available for MS in Electrical Engineering students: a thesis program which requires coursework, a thesis and oral defense of thesis; or a nonthesis option which involves additional coursework and a comprehensive examination. The thesis option is strongly encouraged for all students.

Blended BS + MS Electrical Engineering Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to

graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Electrical Engineering.

Eligibility

Majors that are eligible for the blended program are:

- BS Computer Engineering
- BS Electrical Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Electrical Engineering department for any additional eligibility criteria.

BS Electrical Engineering Program Learning Outcomes

Electrical engineering students are expected to graduate with:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CPE/EE 133	Digital Design	4
CPE/EE 233	Computer Design and Assembly Language Programming	4

EE 111 & EE 151	Introduction to Electrical Engineering and Introduction to Electrical Engineering Laboratory	2
Select from the following:		
EE 113 & EE 143	Electric Circuit Analysis I and Electronics Manufacturing and Circuit Analysis Laboratory	4
or		
EE 112 & IME 156	Electric Circuit Analysis I and Basic Electronics Manufacturing	4
EE 211 & EE 241	Electric Circuit Analysis II and Electric Circuit Analysis Laboratory II	4
EE 212 & EE 242	Electric Circuit Analysis III and Electric Circuit Analysis Laboratory III	4
EE 228	Continuous-Time Signals and Systems	4
EE 255 & EE 295	Energy Conversion Electromagnetics and Energy Conversion Electromagnetics Laboratory	4
EE 302 & EE 342	Classical Control Systems and Classical Control Systems Laboratory	4
EE 306 & EE 346	Semiconductor Device Electronics and Semiconductor Device Electronics Laboratory	4
EE 307 & EE 347	Digital Electronics and Integrated Circuits and Digital Electronics and Integrated Circuits Laboratory	4
EE 308 & EE 348	Analog Electronics and Integrated Circuits and Analog Electronics and Integrated Circuits Laboratory	4
EE 314	Introduction to Communication Systems	3
EE 328 & EE 368	Discrete Time Signals and Systems and Signals and Systems Laboratory	4
EE/CPE 329	Microcontroller-Based Systems Design	4
or EE 336	Microprocessor System Design	
EE 335	Electromagnetic Fields and Transmission	4
EE 375	Electromagnetic Fields and Transmission Laboratory	1
EE 402	Electromagnetic Waves	4
EE 409 & EE 449	Electronic Design and Electronic Design Laboratory	4
EE 460	Senior Project Preparation ¹	2
Select from the following: ¹		
EE 461 & EE 462	Senior Project I and Senior Project II	4
or		
EE 463 & EE 464	Senior Project Design Laboratory I and Senior Project Design Laboratory II	

SUPPORT COURSES

BIO 213 & BMED 213	Life Science for Engineers and Bioengineering Fundamentals (B2) ²	4
CHEM 124	General Chemistry for Physical Science and Engineering I (B1 & B3) ²	4
CSC/CPE 101	Fundamentals of Computer Science	4
MATH 141	Calculus I (B4) ²	4
MATH 142	Calculus II (B4) ²	4
MATH 143	Calculus III (Area B Electives) ²	4
MATH 241	Calculus IV	4
MATH 244	Linear Analysis I	4

Concentration or General Curriculum in Electrical Engineering³

(See list of Concentrations and General Curriculum in Electrical Engineering below)	20
---	----

GENERAL EDUCATION (GE)

(See GE program requirements below.)	44
--------------------------------------	----

FREE ELECTIVES

Free Electives	0
Total units	192

¹ Either the ENGR 459, ENGR 460 and ENGR 461 (6) series or the ENGR 463, ENGR 464 and ENGR 465 (6) series may substitute for the EE 460, EE 461 and EE 462 (6) series or the EE 460, EE 463 and EE 464 (6) series.

² Required in Major or Support; also satisfies General Education (GE) requirement.

³ Unless a concentration is declared, the default will be General Curriculum in Electrical Engineering.

General Curriculum in Electrical Engineering or Concentrations (Select one)

- General Curriculum in Electrical Engineering (p. 241)
- Power (p. 243)
- Radio Frequency - Microwaves - Photonics (p. 244)
- Systems (p. 244)

General Education (GE) Requirements

- 72 units required, 28 of which are specified in Major and/or Support.
- If any of the remaining 44 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written

Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		44

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

MS Electrical Engineering Program Learning Objectives

Our goal is to create a graduate degree program and a learning environment that result in graduates who possess the following:

1. Technical competency in their chosen disciplines;
2. Effective communication skills;
3. Awareness of the impacts of technology on society and the environment;
4. Understanding of ethics and responsible professional conduct;
5. Strong interpersonal and teamwork skills;
6. Appreciation of the need for life-long learning;
7. Leadership/planning/decision-making skills;
8. Critical thinking/complex problem-solving skills.

Required Courses

EE 525	Stochastic Processes	4
or EE 513	Control Systems Theory	
EE 563	Graduate Seminar (1, 1, 1)	3
EE 599	Design Project (Thesis) (or 9 units of approved Technical Electives and a comprehensive written examination) ¹	9

Additional Electrical Engineering Graduate CoursesSelect from the following:² 12

General Engineering

The mission of the General Engineering Program is to provide students with the highest quality technical and professional engineering education, with a particular emphasis in new or evolving interdisciplinary areas, while allowing the student to participate in designing their own programs of study.

Undergraduate Program BS General Engineering

General Engineering is a comprehensive and unique interdisciplinary engineering program that cultivates problem solving with an emphasis on a hands-on approach (“Learn by Doing”). The General Engineering program provides students with the highest quality technical and professional engineering education, with a particular emphasis in new or evolving interdisciplinary areas while allowing students to participate in designing their own curricula. It brings together mathematics, the fundamental sciences, engineering sciences, engineering design, and the liberal arts in a rich, flexible, student-driven academic environment that allows each student to develop core competencies and a unique, individualized area of expertise. All practitioners of engineering must have a solid understanding of the physical sciences and mathematics as well as a firm grasp of engineering sciences. The General Engineering curriculum provides the framework for this matrix of understanding, upon which the practitioner may begin to develop a unique area of expertise.

The theoretically rigorous and laboratory-centered, practice-oriented, hands-on education that is the foundation of the General Engineering program allows graduates to immediately participate and to excel in professional environments. The BS degree in General Engineering is, therefore, a direct path to employment in a traditional engineering field or in an emerging technology area. It is also a natural step toward a professional or a graduate degree.

There are two concentrations in the General Engineering program: the General Curriculum in General Engineering, which provides a broad, but rigorous, undergraduate course of study, and the Individualized Course of Study in which students, in consultation with their faculty advisor, select advanced technical elective classes that allow the students to put their own mark on their degrees, ensuring a unique competency with a solid technical underpinning. In addition to the abilities expected of all engineering graduates (as articulated in the section of this catalog describing the College of Engineering), General Engineering graduates are

expected to leave the University with special capabilities pertinent to their own concentrations.

The *General Curriculum in General Engineering* is designed to provide the broad foundation of engineering competency in preparation for further graduate or professional studies, for engineering careers requiring a breadth of knowledge, or for non-engineering careers benefiting from a broad technical background (e.g., education, engineering entrepreneurship, or work in non-profit organizations with a technical focus). The *Individualized Course of Study* is for self-directed, highly motivated students who have clearly-defined career goals and want to pursue a customized engineering-based course of study that is not addressed by the curriculum of any other single engineering department.

The Individualized Course of Study concentration is designed to allow students the latitude in course selection required to educate themselves either in the classical study of engineering or in new and evolving interdisciplinary technologies. A sound foundation in the fundamental principles of engineering and engineering systems is built during the early years of study, and students customize the later years of their study plan with the help of a faculty advisor, allowing students the opportunity to focus their education while still at the undergraduate level. This is accomplished primarily by selecting advanced technical elective courses that are consistent with the student’s sharply defined career goal.

Examples of study plans created in the past have emphasized audio engineering, sustainable energy, bioengineering, chemical engineering, engineering physics, technology management, and engineering in unique environments.

General Engineering students demonstrate an ability to satisfy their personal needs for further education, as expressed in their matriculation to graduate or professional schools in many cases, and an interest in life-long learning. Both the General Curriculum and the Individualized Course of Study concentrations in General Engineering are excellent preparation for pursuing a master’s degree in interdisciplinary fields, including via the Blended BS+MS program described in the MS Engineering section of this catalog. This program recognizes that the entry-level expertise of engineers in many fields, particularly in new and evolving technological fields, often requires a master’s degree as a prerequisite for success. The Blended BS+MS program allows motivated students to reduce the time necessary to earn both degrees.

General Engineering graduates are also ready for immediate entry into the professional engineering field. They possess a solid engineering foundation that underpins a successful career. They can become leaders, based on solid fundamental engineering knowledge, strong communication skills, a capacity to form teams and perform at a high level in teams, and an understanding of the economic and social impact of their decisions. General Engineering graduates have used this program as a foundation for advanced studies and careers in engineering, project management, technical sales, law, entrepreneurship, medicine, education, and many other paths defined by their keen intellects and adventuresome spirits.

General Curriculum in General Engineering or Individualized Course of Study

General Curriculum

The General Engineering Curriculum in General Engineering is designed to meet the needs of students interested in a broad, but rigorous, undergraduate course of study. Students will primarily use this degree as preparation for further graduate/professional studies (e.g. engineering, law, business), engineering careers requiring breadth, and

non-engineering careers benefiting from a broad technical background (e.g. education, entrepreneurship, non-profit organizations).

BS General Engineering

Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

GENERAL EDUCATION		
(See GE program requirements below.)		48
FREE ELECTIVES		
Free Electives ⁴		0
Total units		186

- ¹ Students with an approved Individualized Course of Study may substitute CSC 231 (2 units) plus an additional 2 units of other advisor approved coursework for CSC/CPE 101 (4 units).
- ² The Individualized Course of Study consists of 40 units of technical electives with a minimum of 29 units at the 300-400 level.
- ³ Required in Major or Support; also satisfies General Education (GE) requirement.
- ⁴ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree
- ⁵ Students in the General Curriculum in General Engineering should choose a minimum of 3 units of 300-400 level Physical Science Electives in order to meet 60 units of upper-division required for the degree.

General Curriculum in BS General Engineering or Individualized Course of Study (Select one)

General Curriculum in General Engineering (p. 249)
Individualized Course of Study

This program is for self-directed, highly motivated students, allowing them to pursue a customized course of study that meets their individual needs and interests. The Individualized Course of Study consists of 40 units of technical electives with a minimum of 33 of these units at the 300-400 level. Courses are selected by the student with the advice and approval of the student's academic advisor.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	

Lower-division courses in Area C must come from three different subject prefixes.

C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		4
Upper-Division C		4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		48

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Academic Programs

Program name	Program type
Engineering Management	MS
Industrial Engineering	BS, MS
Manufacturing Engineering	BS

The mission of the Industrial Engineering and Manufacturing Engineering programs at Cal Poly is to inspire and educate students for successful careers as engineering professionals using a learn-by-doing approach that develops students' abilities to design and implement innovative, effective solutions for improving processes and systems in society, business, and industry.

The Department focuses on programs that integrate engineering with a real concern for people. Our students study topics that lead to satisfying and productive careers, and also provide strong preparation for graduate work in many fields. Programs reflect the traditional strengths of Cal Poly through close interaction between students and faculty in classroom, laboratory, and other activities. The programs use a project based learning approach where students work on multiple real life projects. Students often present results to industry representatives.

Department and university laboratories and computers are integrated into coursework to investigate, test, and apply theoretical principles learned in the classroom. The descriptions below provide details of the various programs.

Undergraduate Programs

BS Industrial Engineering

Industrial Engineering is the profession concerned with solving integrated engineering and management problems. According to the Institute of Industrial and Systems Engineers, "Industrial engineers figure out how to do things better. They engineer processes and systems that improve quality and productivity. They work to eliminate waste of time, money, materials, energy and other commodities. This is why many industrial engineers end up being promoted into management positions." Key objectives of industrial engineering are to improve the quality and productivity of creating and delivering goods and services and to act as the interface between technology and humans. Engineering methods and practical knowledge are used in formulating decision models for the optimum application of engineering and management principles.

The Bachelor of Science program in Industrial Engineering is accredited by the Engineering Accreditation Commission of ABET, <http://www.ABET.org>. Within three to five years of graduation, the alumni of the Industrial Engineering undergraduate program will:

1. Make immediate contributions towards the design and implementation of innovative, effective solutions for improving processes and systems in society, business, and industry.
2. Have successful careers as engineering professionals with increasing responsibility and impact in their careers.
3. Will communicate and function effectively in a collaborative and inclusive team, and will recognize the economic, societal, and ethical impacts of their decisions.
4. Effectively adapt to changes in technology and our global society over the course of their professional lives by continuously learning.

Our main focus is to prepare graduates for practice in professional engineering. Thus, our "learn by doing" philosophy is emphasized in the curriculum by the large number of design-centered laboratories, integrating design throughout the curriculum, and the senior design project experience. In the required senior design project, students demonstrate their understanding of engineering knowledge and their ability to apply that knowledge creatively to practical problems. Graduates can choose from a challenging range of career activities: operations research and analysis, production planning and scheduling, plant design, management, human factors engineering design, data processing and analytics, measurement, quality control and reliability assurance, technical economic planning, resource conservation, productivity measurement, increasing productivity using computer integrated manufacturing techniques, robotics, and, in general, systems analysis and design. The physical, engineering, and social sciences form the broad base for these endeavors.

The program is oriented to provide graduates with the capability of producing results with a minimum of additional training. Computer and hi-tech firms, health care and biomedical industries, aerospace/defense, entertainment, retail chains, agriculture, airlines, automotive, as well as government, service firms, traditional manufacturing industries, and consulting firms all employ graduates of this discipline. Graduates also are well prepared for successful graduate study.

BS Manufacturing Engineering

Manufacturing Engineering is the profession that applies engineering analysis and methods to the production of all manufactured goods and services. The manufacturing engineer plans, develops, and optimizes the processes of production including methods of manufacture, and designs of tools and equipment for manufacturing. The emphasis is on both development and sustained operation of manufacturing systems, including computer-aided methods, automation, design for manufacture, production tooling, and material handling, as well as the processes and ancillary support systems of modern manufacturing.

The Bachelor of Science program in Manufacturing Engineering is accredited by the Engineering Accreditation Commission of ABET, <http://www.ABET.org>. Within three to five years of graduation, the alumni of the Manufacturing Engineering undergraduate program will:

1. Make immediate contributions towards the design and implementation of innovative, effective solutions for improving processes and systems in society, business, and industry.
2. Have successful careers as engineering professionals with increasing responsibility and impact in their careers.
3. Will communicate and function effectively in a collaborative and inclusive team, and will recognize the economic, societal, and ethical impacts of their decisions.

- Effectively adapt to changes in technology and our global society over the course of their professional lives by continuously learning.

In the required senior design project, students demonstrate their understanding of engineering knowledge and their ability to apply that knowledge creatively to practical problems.

Graduates typically work more directly with the manufacturing processes than do industrial engineers.

Emphasis is placed upon application of the basic sciences and engineering fundamentals. Knowledge of basic processes, tool design, automation, and computer-aided manufacturing are applied directly to the problems of development and sustained operation of manufacturing systems.

Graduates are prepared for job-entry at the professional level in the areas of CAD/CAM, process engineering, automation, quality assurance, and production engineering. They also are well prepared for successful graduate study.

Graduate Programs

MS Engineering Management

The mission of the MS in Engineering Management program is to inspire and educate a new generation of technical leaders with analytical knowledge, business insight, advanced communication and project management skills to design and implement data-driven, innovative, and effective solutions for improving processes and systems in industry and society.

This program emphasizes learn-by-doing and a project-based engineering education approach. Students typically work closely with industry to solve real-world problems. The MS Engineering Management program helps students sharpen both technical skills and non-technical skills required for success in their careers.

The MS Engineering Management program requires 45 quarter credits of coursework in 400 or 500 level courses, including five quarter units of graduate project. At least 60% of the courses need to be at the 500-level.

MS Industrial Engineering

General Characteristics

The Master of Science in Industrial Engineering (MS IE) program is designed to prepare students for a successful career in industry as well as a further study in a Ph.D. program, building on its strength in learn-by-doing and project-based engineering education and focusing on applied research. Through the MS IE program, students will sharpen both technical skills and non-technical skills required for success in their careers.

<https://ime.calpoly.edu/academics/programs> (<http://www.ime.calpoly.edu/academics/programs/>)

Blended BS + MS Programs

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to

graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

Blended programs are available for the following Master's degrees offered by the Industrial and Manufacturing Engineering department:

MS Engineering Management
MS Industrial Engineering

Eligibility

Majors that are eligible for the blended program in MS Engineering Management are:

- BS Aerospace Engineering
- BS Biomedical Engineering
- BS Environmental Engineering
- BS Industrial Engineering
- BS Manufacturing Engineering
- BS Materials Engineering
- BS Mechanical Engineering
- BS Software Engineering

Majors that are eligible for the blended program in MS Industrial Engineering are:

- BS Industrial Engineering
- BS Materials Engineering
- BS Mechanical Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Industrial and Manufacturing Engineering department for any additional eligibility criteria.

BS Industrial Engineering

Program Learning Outcomes

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
- An ability to communicate effectively with a range of audiences.
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

GENERAL EDUCATION (GE)

(See GE program requirements below.) 36

FREE ELECTIVES	
Free Electives	0
Total units	190

- ¹ ENGR 459, ENGR 460 and ENGR 461 (6) may substitute for IME 481, IME 482 and IME 483 (6).
- ² ENGR 463, ENGR 464 and ENGR 465 (6) may substitute for IME 481, IME 482 and IME 483 (6).
- ³ If a course is taken to meet the Technical Electives requirement, it cannot be double-counted to satisfy another Major or Support requirement.
- ⁴ Consultation with an advisor is recommended prior to selecting Technical Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals. Upper-division courses not on this list may substitute as Technical Electives, if approved by an advisor and the Industrial and Manufacturing Engineering department chair.
- ⁵ IME 400 requires a Special Problems form and no more than 4 total units are allowed.
- ⁶ Required in Major or Support; also satisfies General Education (GE) requirement.
- ⁷ Excess unit from CPE/CSC 101 can count as Category B technical elective.

General Education (GE) Requirements

- 72 units required, 36 of which are specified in Major and/or Support.
- If any of the remaining 36 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking (4 units in Support) ¹	0
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area B Electives (8 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4

C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2.		
Upper-Division C		
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
Area D Elective - Select either a lower-division D2 or upper-division D course.		
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Support) ¹		
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		36

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Manufacturing Engineering Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirements (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

IME 101	Introduction to Industrial and Manufacturing Engineering	1

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

MS Engineering Management Program Learning Outcomes

1. Summarize, synthesize, and evaluate existing methods/solutions of engineering problems.
2. Solve complex technical and operational problems to meet both business and customer needs.
3. Analyze and interpret quantitative and qualitative data to make sound engineering and business decisions.
4. Lead multidisciplinary teams and projects; assess tools and techniques, resources, and organizational systems for the successful management of projects.
5. Estimate and control engineering cost.
6. Communicate engineering ideas/solutions effectively across the entire enterprise.

Student Learning Objectives

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to design experiments, collect data, analyze and interpret data, and draw conclusions to make sound engineering and business decisions.
3. An ability to function effectively as a leader of a team that establishes goals, plans tasks, meets deadlines, and creates a collaborative and inclusion environment.
4. An ability to communicate effectively with a range of audiences.

Required Courses

IME 503	Applied Statistical Methods in Engineering ¹	4
IME 507	Graduate Seminar	2
IME 520	Advanced Information Systems for Operations	4
IME 544	Advanced Topics in Engineering Economy	4
IME 556	Technological Project Management ²	4
IME 577	Engineering Entrepreneurship	4
IME 580	Manufacturing Systems ³	4
IME 596	Graduate Project/Internship	5

Approved Electives

Select from the following: ⁴ 14

IME 500	Individual Study
IME 510	Systems Engineering I
IME 527	Design of Experiments
IME 535	Change Management for Engineering Leaders
IME 541	Advanced Operations Research
IME 542	Applied Reliability Engineering
IME 543	Applied Human Factors
IME 549	Network Analysis and Optimization
IME 565	Predictive Data Analytics for Engineers
Total units	45

- ¹ Students with a B+ or better grade in IME 326 or IME 327 may substitute IME 503 with another statistics related course such as IME 527, STAT 416, STAT 418, STAT 419, STAT 530, or STAT 531 upon approval of the graduate coordinator.
- ² Students with a B+ or better grade in IME 303 may substitute IME 556 with another approved technical elective course.
- ³ Course cannot be taken by students who have already received credit for IME 410.
- ⁴ Students may take other 400 or 500 level courses after consultation with and approval by advisor and the graduate coordinator. At least 4 units must be at 500 level.

MS Industrial Engineering Program Learning Outcomes

After successfully completing the requirements of the Master of Science in Industrial Engineering, students will be able to:

1. Summarize and synthesize state-of-the art knowledge in a selected topic in the field of Industrial and Manufacturing Engineering.
2. Apply scientific methods to investigate industry-driven research projects (problem articulation; hypothesis formulation; data collection, management, and analysis; implementation and dissemination of results).
3. Make data-driven engineering decisions.
4. Communicate appropriate information in both written and oral format, based on the audience setting and audience's background.
5. Work productively, respectfully, and professionally as a member of a team; exhibit leadership, ethical conduct, and community values.

The MS IE program has flexible curriculum allowing the student a wide choice in course selection. The program requires a minimum 45 quarter credits of course work in the 400 or 500 level. Of the 45 units, 22 are technical electives. Student can choose technical elective courses from the Industrial and Manufacturing Engineering (IME) department as well as outside the IME department. Flexibility is emphasized so that the student and his/her advisor can structure a degree plan tailored to the individual needs of the student. Only those letter-graded courses count toward satisfying the total unit requirement for the degree. Courses on a credit/no credit basis are not allowed in the formal study plan. No audit credits are permitted.

The MS IE program requires a thesis; the student's thesis topic must be approved by his/her graduate committee, consisting of three committee members. Both an oral defense and a written thesis are required. The

thesis will be reviewed by the Graduate Education Office and published at the Digital Commons.

Required Courses

IME 503	Applied Statistical Methods in Engineering ¹	4
IME 507	Graduate Seminar	2
IME 556	Technological Project Management ²	4
IME 580	Manufacturing Systems ³	4

Academic Program

Program name	Program type
Materials Engineering	BS

Materials engineering is a field in which engineers use their knowledge of the relationship between a material's atomic or molecular structure and its properties to alter the material to get the performance needed. Materials engineers contribute their expertise in virtually all areas of technology: from the nano-sized materials found in biomedical and microelectronic applications to the large-scale composites found in aerospace applications.

Because engineered products are often limited by materials issues (such as performance and manufacturability), materials engineers play a vital role on engineering design teams, working closely with other engineers. As part of these teams, they apply their knowledge of science, engineering, and state-of-the-art analytical instruments.

The majority of our graduates find employment in the biomedical, electronic, aerospace and petroleum industries. Some work as consultants for large or small organizations. Others become executives. A significant number of materials engineers are involved in research and development. Some of our graduates are entrepreneurs who have started their own companies. Others are attorneys or physicians. Because of our broad-based, student focused curriculum, our graduates are able to excel in professions of their choosing.

Vision

To collaboratively address the grand challenges of our time, especially sustainability and transformative learning, through our materials engineering program.

Mission

To be a vibrant, creative and effectual learning community that cultivates the unique capabilities of each member of our community to thrive in a complex, interconnected, technological and ever-changing world.

Program Education Objectives

1. Holistically address complex challenges, drawing from materials engineering understanding and life experiences;
2. Live meaningful, socially-beneficial lives, enriched by their engineering education;
3. Exemplify proactive adaptive capacity throughout their lives; and
4. Communicate effectively in different contexts

Undergraduate Program BS Materials Engineering

The Materials Engineering curriculum has received national recognition for its innovative structure and will provide both breadth and depth in your understanding of science and engineering principles and practices. The curriculum in materials engineering emphasizes practical applications as well as principles. The laboratories are constantly evolving, and our students benefit from frequent exposure to a wide variety of materials testing and analysis equipment. The program is accredited by the Engineering Accreditation Commission ABET, <http://www.ABET.org>. Our students have a reputation for being immediately productive in industry, and they are also actively sought by graduate programs throughout the country.

BS Materials Engineering Program Learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies
8. An integrated understanding of scientific and engineering principles underlying the four major elements of the field: structure, properties, processing, and performance related to materials systems
9. An ability to apply and integrate knowledge from each of the above four elements of the field to solve materials selection and design problems

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

GENERAL EDUCATION			
(See GE program requirements below.)			48
FREE ELECTIVES			
Free Electives			0
Total units			184-186

- ¹ ENGR 459, ENGR 460 and ENGR 461 (6) may substitute for MATE 482, MATE 483 and MATE 484 (5) with the one excess unit counting towards Technical Electives.
- ² If a course is taken to meet this requirement, it cannot be double-counted to satisfy another Major or Support requirement.
- ³ Consultation with an advisor is recommended prior to selecting Technical or Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ⁴ 8 units maximum of MATE 400 and/or MATE 500 may count towards Technical Electives or Approved Electives/Technical Breadth Electives.
- ⁵ Required in Major or Support; also satisfies General Education (GE) requirement.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).

- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (8 units in Support) ¹	0
	Upper-Division B (4 units in Support) ¹	0
	Area B Electives (8 units in Support) ¹	0
Area C	Arts and Humanities	
	Lower-division courses in Area C must come from three different subject prefixes.	
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
	Lower-Division C Elective - Select a course from either C1 or C2.	4
	Upper-Division C	4
Area D	Social Sciences	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
	Area D Elective - Select either a lower-division D2 or upper-division D course.	4
Area E	Lifelong Learning and Self-Development	
	Lower-Division E	4
Area F	Ethnic Studies	
F	Ethnic Studies	4
Total units		48

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Academic Programs

Program name	Program type
Mechanical Engineering	BS, MS

Mission Statement

To impart knowledge in the art and science of mechanical engineering through a comprehensive curriculum true to the traditional Cal Poly learn-by-doing philosophy that produces mechanical engineers of high ethics and skill, fully prepared for entry into industry, government, graduate school and private enterprise.

Program Educational Objectives

A mechanical engineering alumnus will:

1. Research, design, develop, test, evaluate, or implement engineering solutions to problems that are of a complexity encountered in professional practice.
2. Communicate and perform as an effective engineering professional in both individual and team-based project environments.
3. Recognize and determine the ethical implications and societal impacts of engineering solutions.
4. Continuously improve through lifelong learning.

Program Description

The profession of mechanical engineering is directed toward the design, manufacture, and system integration of a very wide variety of equipment ranging from manufacturing machinery and power generation equipment to consumer goods. Of central concern to mechanical engineers is the sound application of basic principles of solid mechanics, fluid mechanics and thermal sciences in the design, manufacture, and application of this equipment. Mechanical Engineering graduates obtain employment primarily with manufacturers, energy companies, consultants, and government agencies. Types of work performed by graduates include product design, mechanical design, testing, engineering management, engineering sales, design of manufacturing systems, and development of maintenance procedures. Mechanical Engineering graduates also often enhance their careers through graduate study in engineering, and some students also study engineering to build a scientific and technical foundation as a prelude to enrollment in medical, law, and business schools.

The focus of the Cal Poly Mechanical Engineering program is on education based on our "learn by doing" educational philosophy. Thus, the curriculum includes a large number of hands-on laboratories, integration of design throughout, and a senior project requirement for all students. Students are enrolled in engineering laboratories in all years of the curriculum. The program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (<http://www.abet.org>).

The Mechanical Engineering Department is the home of the Donald E. Bently Center for Engineering Innovation. The center provides support for faculty, students, and visiting scholars for the advancement of research, education, and practice in mechanical engineering. A \$6 million endowment to fund three professorships supports the center.

Upper division students in the **General Curriculum** (Degree Requirements and Curriculum (p. 265)) can choose professional elective courses from such courses as turbomachinery, robotics, mechatronics, composite materials, rotor dynamics, advanced mechanics, solar systems, internal combustion engines, heat and mass transfer, and courses emphasizing the petroleum, air conditioning, ventilating, and refrigeration industries. Students in the **Mechatronics Concentration** (Degree Requirements and Curriculum (p. 267)) are prepared for professional practice in the design of "intelligent" products for use in factory automation, robotics, hybrid vehicles, alternative energy, and many other fields. The **HVAC&R Concentration** (Degree Requirements and Curriculum (p. 266)) prepares students for careers in the heating, ventilating, air-conditioning and refrigeration (HVAC&R) industry, with a focus on the design of mechanical systems for commercial and industrial buildings. **Manufacturing Concentration** (Degree Requirements and Curriculum (p. 266)) students focus on fabrication processes, preparing them for careers designing or manufacturing a wide variety of consumer and industrial products. The **Energy Resources Concentration** (Degree Requirements and Curriculum (p. 265)) prepares students for careers in renewable and nonrenewable energy companies producing electrical power, with the focus on the design, manufacture, and system integration of power and fuel plants.

There are several organized student clubs associated with the Mechanical Engineering Department, including national honor societies and student chapters of professional societies. Each of these clubs offers students active programs and leadership activities.

Undergraduate Program BS Mechanical Engineering

The profession of mechanical engineering is directed toward the design, manufacture, and system integration of a very wide variety of equipment ranging from manufacturing machinery and power generation equipment to consumer goods.

Concentrations

- General Curriculum
- Energy Resources Concentration
- Heating, Ventilating, Air-Conditioning and Refrigerating Concentration (HVAC&R)
- Mechatronics Concentration
- Manufacturing Concentration

Graduate Program MS Mechanical Engineering

The masters program of the Mechanical Engineering department at Cal Poly is designed to prepare its graduates with skill and knowledge to be able to work as an engineer in research and development, analysis, or design of products and systems, or to continue toward a PhD degree from other institutions. Due to the nature of the masters degree, students can select an area of emphasis based on their interest, or alternately, choose courses in a variety of different areas that gives them significant breadth of knowledge. At Cal Poly, masters degree candidates can select a thesis

option or a non-thesis option. The thesis option gives the candidates a more thorough knowledge in the area in which they do their research. The non-thesis option gives the candidates a more diverse knowledge from additional courses.

Prerequisites

For admission as a classified graduate student, in addition to the University requirements, an applicant should hold a BS degree in Mechanical Engineering with a grade point average of 3.0 or better. Other closely related majors may be accepted as conditionally classified graduate students if they have had an adequate number of prerequisite classes to successfully fulfill the requirements. Up to 12 units of remedial courses may be taken at Cal Poly. For additional information on University requirements, please refer to the Graduate Programs (p. 431) of this catalog.

Two program options are available:

Thesis option. 36 units of advisor-approved coursework, 9 units of thesis research/design, and an oral thesis defense examination.

Non-thesis option. 45 units of advisor-approved coursework and a written comprehensive examination.

Blended BS + MS Mechanical Engineering Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Up to 8 units of technical electives (400-level or higher) that were used in meeting the undergraduate degree requirements can also be used for credit toward meeting the graduate degree requirements.

Eligibility

Majors that are eligible for the blended program are:

- BS Aerospace Engineering
- BS Mechanical Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Mechanical Engineering department for any additional eligibility criteria.

BS Mechanical Engineering Program Learning Outcomes

In order to prepare our alumni for their career accomplishments expressed by the Program Educational Objectives, the students in the program will be proficient in the following skills upon graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science and mathematics.
 - a. The student will be able to apply basic math and science principles and associated analysis techniques.
 - b. The student will be able to evaluate components, systems, and processes and be able to develop appropriate models of engineering systems.
 - c. The student will be able to analyze their models, interpret their results, and formulate appropriate action.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
 - a. The student will be able to recognize a need, identify constraints, and develop appropriate design specifications.
 - b. Using the above specifications, the student will be able to synthesize conceptual solutions for a component, system, or process.
 - c. The student will be able to use analysis techniques to refine and select the design of a component, system, or process.
 - d. The student will be able to build a functional prototype and assess if it meets design specifications.
3. An ability to communicate effectively with a range of audiences.
 - a. The student will be able to write an effective memorandum, letter, abstract, and project report for a wide range of audiences.
 - b. The student will be able to give a coherent and effective oral presentation for a wide range of audiences.
 - c. The student will be able to critique writing samples and oral presentations and identify both strong points and weak points in grammar, clarity, and organization.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
 - a. The student will be able to interpret engineering professional codes of ethics and to identify situations with ethical concerns.
 - b. The student will be able to identify and mitigate health and safety concerns associated with their design.
 - c. The student will be able to assess the environmental, societal, and economic impact of their engineering solutions.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
 - a. The student will be able to manage a team project by establishing goals, planning tasks, and meeting objectives.
 - b. The student will be able to collaborate effectively on a team and contribute to an inclusive teamwork environment.
 - c. The student will be able to identify when problems occur due to poor interactions among team members and identify ways to improve team dynamics.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
 - a. The student will be able to select and operate appropriate instrumentation used in engineering measurement.
 - b. The student will be able to design and conduct an experiment and compare the results to those predicted by an analytical model.
 - c. The student will be able to interpret and draw conclusions from the results.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

- The student will be able to recognize the limitations of their knowledge and to acquire new knowledge using appropriate learning strategies.
- The student will be able to find and use appropriate technical resources.
- The student will be able to identify their need for additional learning.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

ME 128	Introduction to Mechanical Engineering I ¹	1

ME 437	Nuclear Energy Power Generation
ME 438	Nuclear Power Plant Design
ME 439	Nuclear Power Plant Operations
ME 443	Turbomachinery
ME 444	Combustion Engine Design
ME 450	Solar Thermal Power Systems
ME 454	Benchmarking and Assessment of Building Energy Performance
ME 488	Wind Energy Engineering
ME 541	Advanced Thermodynamics

Total units **25-26**

¹ ENGR 459, ENGR 460, and ENGR 461 (6) or ENGR 463, ENGR 464, and ENGR 465 (6) may substitute for ME 428, ME 429, and ME 430 (6).

² ME 400 and ME 500 are independent study classes and may be acceptable for technical elective credit. A course substitution form is required.

Heating, Ventilating, Air-Conditioning and Refrigerating Concentration (HVAC&R)

ME 418	Implementation of Mechanical Controls	4
or ME 419	Advanced Control Systems	
ME 456	HVAC Air and Water Distribution System Design	4
ME 459	HVAC Senior Design Project I	3
ME 460	HVAC Senior Design Project II	2
Select from the following: ¹		12
ME 359	Fundamentals of HVAC Systems	
ME 453	Trends and Opportunities in HVAC&R	
ME 454	Benchmarking and Assessment of Building Energy Performance	
ME 455	Introduction to Building Energy Modeling	
ME 457	Refrigeration Principles and Design	
ME 458	Building Heating and Cooling Loads	

Total units **25**

¹ ME 400 and ME 500 are independent study classes and may be acceptable for technical elective credit. A course substitution form is required.

Manufacturing Concentration

IME 327	Test Design and Analysis in Manufacturing Engineering	4
---------	---	---

ME 418	Implementation of Mechanical Controls	4
or ME 419	Advanced Control Systems	
ME 428	Senior Design Project I ¹	2
ME 429	Senior Design Project II ¹	2
ME 430	Senior Design Project III ¹	2

Take all of the courses in one of the following emphasis areas:

Mechanical Manufacturing Emphasis Area

IME 330	Fundamentals of Manufacturing Engineering
IME 450	Manufacturing Process and Tool Engineering

Electronics Manufacturing Emphasis Area

IME/MATE 458	Microelectronics and Electronics Packaging
MATE 430 & MATE 435	Micro/Nano Fabrication and Microfabrication Laboratory

Design and Manufacturing Elective

Select from the following: ² 3-5

IME 330	Fundamentals of Manufacturing Engineering ³
IME 335	Computer-Aided Manufacturing I
IME 356	Manufacturing Automation
IME 416	Automation of Industrial Systems
IME 418	Product-Process Design
IME 428	Engineering Metrology
IME 430	Quality Engineering
IME 432	Additive Manufacturing
IME 457	Advanced Electronic Manufacturing
IME/MATE 458	Microelectronics and Electronics Packaging ³
IME 527	Design of Experiments
IME 543	Applied Human Factors
MATE 430 & MATE 435	Micro/Nano Fabrication and Microfabrication Laboratory ³
MATE 440 & MATE 445	Welding Metallurgy and Joining of Advanced Materials and Joining of Advanced Materials Laboratory
ME 305	Introduction to Mechatronics
ME 412	Composite Materials Analysis and Design

Total units **25-27**

¹ ENGR 459, ENGR 460 and ENGR 461 (6) or ENGR 463, ENGR 464, and ENGR 465 (6) may substitute for ME 428, ME 429 and ME 430 (6).

² ME 400 and ME 500 are independent study classes and may be acceptable for technical elective credit. A course substitution form is required.

³ If a course is taken to meet an Emphasis Area requirement, it cannot be double-counted as a Design and Manufacturing Elective.

Mechatronics Concentration

ME 305	Introduction to Mechatronics	4
ME 326	Intermediate Dynamics	4
ME 405	Mechatronics	4
ME 419	Advanced Control Systems	4
ME 428	Senior Design Project I ¹	2
ME 429	Senior Design Project II ¹	2
ME 430	Senior Design Project III ¹	2
Select from the following: ^{2,3}		3-4
IME 356	Manufacturing Automation	
IME 416	Automation of Industrial Systems	
ME 423	Robotics: Fundamentals and Applications	
ME 506	System Dynamics	
ME 507	Mechanical Control System Design	
Total units		25-26

¹ ENGR 459, ENGR 460 and ENGR 461 (6) or ENGR 463, ENGR 464, and ENGR 465 (6) may substitute for ME 428, ME 429 and ME 430 (6).

² Elective based on interests of students.

³ ME 400 and ME 500 are independent study classes and may be acceptable for technical elective credit. A course substitution form is required.

MS Mechanical Engineering

Program Learning Outcomes

Upon completing the requirements of the Master of Science in Mechanical Engineering, students should be able to:

1. Devise a plan to research issues relevant to the problem at hand and to conduct experiments or develop a computer model.
2. Formulate solutions to advanced engineering problems.
3. Analyze the collected or generated data and draw conclusions from the results.
4. Analyze and synthesize advanced engineering solutions.

Required Courses

ME 599	Design Project (Thesis)	9
Or 9 units of approved Technical Electives and a Comprehensive Examination ¹		
Approved MATH/STAT/CSC Courses ²		8
Select from the following:		12
ME 501	Continuum Mechanics and Elasticity	
ME 503	Inelastic Stress Analysis	
ME 504	Finite Element Analysis	
ME 506	System Dynamics	
ME 507	Mechanical Control System Design	
ME 517	Advanced Vibrations	
ME 518	Machinery Vibration and Rotor Dynamics	
ME 540	Viscous Flow	
ME 541	Advanced Thermodynamics	

ME 542	Dynamics and Thermodynamics of Compressible Flow	
ME 552	Advanced Heat Transfer I	
ME 553	Advanced Heat Transfer II	
ME 554	Computational Heat Transfer	
ME 579	Fluid Power Control	
Approved Technical Electives		
400 or 500-level ME or non-ME courses; maximum of 12 units of 400-level courses allowed		16
Total units		45

¹ Must be at 500 level.

² 4 units required at 500 level.

The College of Liberal Arts (CLA) provides students the opportunity to study the record of imaginative, reflective, and cultural experience across multiple groups of people and to add to that record via a variety of Learn by Doing activities that emphasize active learning inside and outside of the classroom. The CLA is home to the foundational disciplines that form the scholarly bases for cultural awareness, knowledge and skills, making the college's commitment to diversity, equity, and inclusion central to the college's curriculum and identity. The college also seeks to relate itself to the technological disciplines in ways that help contribute to the solution of problems from global and multidisciplinary perspectives. Accordingly, a wide range of courses is offered to serve every student without regard to specialized professional interests.

Five broad areas of knowledge are represented: the fine and performing arts, communications, humanities, social sciences, and interdisciplinary studies. While the college has great breadth and diversity, unity is found in a study of the most engaging subject of all – human endeavor. Whatever the focus, the programs in the CLA share a settled purpose: to help students know themselves, understand individual and group values and potential within a cultural context, and understand our society and its institutions.

The CLA offers a wide selection of foundational courses that provide students with a strong grounding in critical thinking and written and oral communication. The disciplines of the liberal arts are explored at both introductory and advanced levels; students are encouraged to further pursue areas of interest through the college's many minors. A broad array of classes that fulfill Cal Poly's general education and USCP requirements are also offered.

The college also offers an interdisciplinary major through its Interdisciplinary Studies in the Liberal Arts (ISLA) Department. The department is also home to four minors that explore the intersection of science, technology and society. For more information, see the ISLA Department (<https://isla.calpoly.edu/>).

The Bachelor of Arts in Liberal Arts and Engineering Studies (LAES) is an interdisciplinary major offered jointly by the College of Liberal Arts and the College of Engineering. It allows students to combine coursework from both areas to explore cutting-edge technologies and their applications to areas such as media arts, technology policy, and technical writing and communications. The degree is offered jointly by both colleges. For more information, see Interdisciplinary Degree Programs (<http://catalog.calpoly.edu/collegesandprograms/interdisciplinaryprograms/>).

International issues are well represented in the college curriculum, and study abroad opportunities are also strongly supported. CLA faculty regularly offer classes in programs such as Cal Poly's Summer Study in London, Thailand Study Program, Valladolid (Spain) Program, and Australia Abroad Program. The college is also involved with the Peru Summer Study Program, which provides internships that complement the minor in Latin American Studies. These and other study abroad programs are administered by the Cal Poly International Center. In addition to current and emerging direct exchanges, the college is also building capacity in the areas of virtual exchange; connecting students and faculty with their peers around the globe through virtual collaboration. For further information, see Cal Poly International Center (<http://international.calpoly.edu>).

The College of Liberal Arts offers a wide range of learn-by-doing opportunities. Students from all majors can participate in the musical ensembles, theater productions, and dance performances. The college supports the Central Coast Center for Arts Education and the University Art Gallery. Students, especially those in the social and behavioral sciences, have access to research experiences and participate in a variety of internships at the local, state, and national government level, and with community, social services, and educational organizations, serving a number of populations. The CLA also partners with the Student Diversity and Belonging to offer training to facilitate Intergroup Dialogues sections. Students contribute to publications that showcase their accomplishments in the disciplines, such as *Byzantium* (English), *The Forum* (History), *Paideia* (Political Science), and *Sprinkle* (Women's and Gender Studies). These publications are often printed by the student-run University Graphic Systems. Students also participate in the award-winning student media organizations Mustang News, KCPR Radio, and MNTV, all part of the Mustang Media Group.

The college has a major responsibility for activities that promote equity and inclusion and enhance the cultural and intellectual life of the University and the community. In addition to the annual CLA Annual Social Justice Teach In, departments regularly host speakers and present films and other programming. The college sponsors the Spanos Theatre and Cal Poly Arts, offering a full range of cultural programs, including exhibits, concerts, literary presentations, and dramatic and other productions, while fostering artistic development and accomplishment across the campus.

College of Liberal Arts graduates will be able to:

1. Question assumptions through critical inquiry.
2. Be innovative; think creatively and constructively.
3. Communicate effectively orally and in writing.
4. Develop scholarly depth within their disciplines.
5. Understand the value of cross-disciplinary knowledge.
6. Collaborate productively in diverse settings and with those different from them.
7. Make reasoned, ethical, and socially and ecologically responsible decisions.
8. Understand the self as product of - and participant in - global traditions of art, ideas, and values.
9. Engage in life-long learning.

Interdisciplinary Minors Agricultural Communication Minor

An interdisciplinary minor sponsored by the College of Agriculture, Food and Environmental Sciences and the College of Liberal Arts. For more information, see the College of Agriculture, Food and Environmental Sciences (p. 65) section.

Indigenous Studies in Natural Resources and the Environment Minor

An interdisciplinary minor sponsored by the departments of Natural Resources Management and Environmental Sciences and Ethnic Studies. For more information, see the Natural Resources Management and Environmental Sciences (p. 117) section.

Western Intellectual Tradition Minor

Professor and Director: D. Kenneth Brown

This minor is designed to appeal not only to majors in the College of Liberal Arts and the College of Science and Mathematics, but to a cross-section of students in major programs throughout the university community. It focuses on the accomplishments of the Western intellectual tradition through courses that trace the development of literary expression, philosophical and scientific thought, and historical understanding from their beginnings to the modern world. Courses in the minor provide direct experience with significant works of the Western tradition, and also expose students to crucial ideas and themes that shaped Western thought and culture. Such exposure cultivates the intellectual skills of analysis and creative expression, and promotes an understanding of the inherent intellectual debate and diversity within the Western intellectual tradition.

Learning objectives for the minor:

1. Explain the development of literary expression, philosophical and scientific thought, or historical understanding from their beginnings to the modern world.
2. Explain crucial ideas and themes that shaped Western thought and culture.
3. Analyze crucial ideas and themes that shaped Western thought and culture.
4. Articulate the the inherent intellectual debate and diversity within the Western intellectual tradition.

Western Intellectual Tradition Minor

Group A

Select 12 units from at least two (2) of the following groupings: 12

Great Books — Literature:

ENGL 230 British Literature: Beginnings to 1789

ENGL 241 American Literature: Beginnings to 1865

ENGL 251 Introduction to Classical Literature

ENGL 252 Introduction to Medieval through Enlightenment Literature

ENGL 253	Introduction to Romantic through Modernist Literature
Great Books – Philosophy:	
PHIL 230	Philosophical Classics: Knowledge and Reality
PHIL 231	Philosophical Classics: Ethics and Political Philosophy
Science and Mathematics	
MATH 112	Nature of Modern Math
PHYS 104	Introductory Physics
PHYS 111	Contemporary Physics for Nonscientists
PHYS 121	College Physics I
PHYS 141	General Physics I
Political Science:	
POLS 230	Basic Concepts of Political Thought
Western Civilization:	
HIST 110	Western Civilization: Ancient to Renaissance
HIST 111	Western Civilization: Reformation to the Present
Group B	
Select 16 units from at least three (3) of the following groupings:	16
British and American Literature:	
ENGL 330	British Literature: Beginnings to 1485
ENGL 331	British Literature: 1485-1660
ENGL 332	British Literature: 1660-1798
ENGL 333	British Literature: 1798-1832
ENGL 334	British Literature: 1832-1914
ENGL 339	Introduction to Shakespeare
ENGL 340	American Literature: Beginnings-1865
ENGL 341	American Literature: 1865-1914
ENGL 354	The Bible as Literature and in Literature and the Arts
History:	
HIST 306	The Witch-Hunts in Europe, 1400-1800
HIST 307	European Thought 1800-2000
HIST 334	Modern Europe, 1789-1914
HIST 350	The Scientific Revolution, c. 1500-1800
HIST 452	Renaissance and Reformation Europe
HIST 453	Religious Wars and Absolutism
ISLA 316	London: From Roman Colony to World Capital
Language and Literature:	
FR 305	Significant Works in French
GER 305	Significant Works in German
SPAN 305	Significant Works in Spanish
SPAN 416	Don Quixote
Philosophy:	
PHIL 309	Early Greek Philosophy through Plato
PHIL 310	Aristotle and Hellenistic Philosophy

PHIL 312	Medieval Philosophy
PHIL 313	Early Modern Rationalism
PHIL 314	Early Modern Empiricism
PHIL 315	Kant and 19th Century European Philosophy
PHIL 332	History of Ethics
PHIL 429	Special Topics in the History of Philosophy
Political Thought:	
POLS 329	Ancient and Medieval Political Thought
POLS 330	Modern Political Thought
POLS 348	Early American Political Thought
POLS 349	Contemporary American Political Thought
Rhetoric:	
COMS 330	Classical Rhetorical Theory
COMS 331	Contemporary Rhetorical Theory
COMS 435	American Political Rhetoric
Science and Mathematics:	
BIO 414	Evolution
MATH 419	Introduction to the History of Mathematics
PHIL 421	Philosophy of Space, Time and Matter
PHYS 305	Classical Mechanics I

Academic Programs

Program name	Program type
Art and Design	BFA
Art History	Minor
Cross Disciplinary Studies Minor in Computing for Interactive Arts	Minor
Media Arts, Society and Technology	Minor
Photography and Video	Minor
Studio Art	Minor

The Department of Art and Design provides students with a diverse program of study, including courses in: art history, digital media, graphic and interaction design, photography, video, and visual art. Art and Design courses integrate hands-on creative work with critical thinking; visual and conceptual experimentation; interdisciplinary collaboration; and a commitment to diversity, equity, and inclusion.

Students are admitted into the Bachelor of Fine Arts (BFA) degree program through submission of a portfolio in their chosen concentration: Graphic Design, Photography and Video, or Studio Art. The Department offers minors in Art History, Photography, and Studio Art. We also offer two affiliate minors: Computing for Interactive Arts and the Media Arts, Society and Technology minor. There are a number of Art and Design Courses that fulfill general education requirements in the C1 and Upper-Division C areas.

The department is also home to the University Art Gallery that showcases nationally and internationally known artists, designers, and photographers, as well as creative work from students, alumni, and faculty.

Undergraduate Programs

BFA Art and Design

The Bachelor of Fine Arts degree (BFA) program in Art and Design offers a progressive and innovative major with concentrations in Graphic Design, Photography and Video, and Studio Art. The BFA in Art and Design is accredited by the National Association of Schools of Art and Design (<https://nasad.arts-accredit.org/>). We cultivate unbiased and diverse designers, photographers, filmmakers, artists, and creative professionals who become leaders in their professional, social, and cultural contexts.

Concentrations

All three concentrations support creative growth and require the development of technical skills, conceptual skills, and cultural competency as a foundation for advanced study and practice in the student's chosen area. The BFA is a pre-professional degree and students in each concentration prepare for either positions in the creative industry or competitive graduate school programs.

Graphic Design

As a discipline and a profession, graphic design is diverse and expanding. It encompasses: branding, package design, interaction

design, environmental graphic design, publication design, and motion design. Students in the graphic design concentration study a variety of subjects relevant to the field, including: typography, identity design, user experience design, user interface design, animation, illustration, book arts, and design history. Our curriculum emphasizes a human-centered approach; students research, analyze, prototype, and design creative concepts and solutions for businesses, social, and cultural contexts. Our program encourages students to think innovatively, ethically, and inclusively, and to engage in hands-on creative exploration and problem solving. Graduates in the graphic design area obtain competitive positions in design studios, creative agencies, in-house creative departments, and in the entertainment and tech industries.

The Graphic Design concentration in the Department of Art and Design is distinct from the Design Reproduction Technology (<http://www.grc.calpoly.edu/students/design-reproduction-technology-drt/>) concentration in the Graphic Communication Department (<http://www.grc.calpoly.edu/>), which focuses on the technical and electronic aspects of preparing design pieces for reproduction in print media. In contrast, the emphasis of the Graphic Design concentration is on the preparation of a professional portfolio that showcases one's creative and conceptual design abilities.

Photography and Video

The study and practice of the lens-based arts of photography and video. Emphasis is placed on concept development, photographic expression, and creative problem solving. Production skills with studio and location lighting are emphasized using digital image making, large format photography and video/cinematic production. This is a diversified, commercially oriented program stressing preparation for careers in advertising, illustration, video and cinema production, corporate and editorial photography, portraiture and digital image making for both online and print. The study of photographic history, cinema styles and contemporary practices is integral to the program. The program culminates in the creation of a professional portfolio in both still and motion that can allow the graduate to enter the professional workforce or apply for graduate study.

Studio Art

The studio art concentration is a program designed for students who are seeking a comprehensive study of visual art for their undergraduate education. This program is distinctive in its depth of required coursework across a range of contemporary art practices, from two-dimensional media in painting and drawing, to three- and four-dimensional media in sculpture and time-based art. The upper division curriculum allows students to specialize in a discipline pertinent to their career choice in the visual arts. Courses in portfolio preparation, professional practices, and a senior project prepare the student to enter the workplace or pursue advanced degrees.

Our concentration is small and rigorous. Students are able to work closely with their art professors and peers, while having access to the resources of a larger, nationally-ranked university. Students within the concentration are presented with an environment where imagination, intellectual rigor, self-expression, cultural competency, and skill development are expected and explored within a community dedicated to their success. The studio art concentration is committed to cultivating creative professionals with a worldview that is informed by issues of diversity, inequality, and power.

Art and Design Minors and Affiliate Minors

The Department offers minors in Art History, Photography, and Studio Art. We also offer two affiliate minors: Computing for Interactive Arts (CIA) and the Media Arts, Society and Technology (MAST) minor.

Art History Minor

Courses consist of a required core and approved electives. The courses include art and architectural history. Students, working with an advisor, select their area(s) of interest.

Advisor: Giancarlo Fiorenza or Allison Myers

Photography and Video Minor

Courses consist of a required core and approved electives. Students, working with an advisor, select their area(s) of interest. Admission to the minor is contingent upon a departmental review as specified on the minor curriculum sheet.

Advisor: Sky Bergman or Lana Caplan

Studio Art Minor

Coursework across a range of contemporary art practices, from two-dimensional media in painting and drawing, to three- and four-dimensional media in sculpture and time-based art. Students select their area(s) of interest after consultation with an advisor.

Advisor: Sara Frantz, Laura Krifka, or Elizabeth Folk

Cross Disciplinary Studies Minor in Computing for Interactive Arts

An interdisciplinary minor sponsored by the Art and Design department and the Computer Science department. For more information, see the Computer Science and Software Engineering (p. 220) section of the catalog.

Advisor: Enrica Lovaglio Costello

Media Arts, Society and Technology (MAST) Minor

An interdisciplinary minor sponsored by the Art and Design department and the Interdisciplinary Studies in the Liberal Arts department. For more information, the Interdisciplinary Studies in the Liberal Arts (p. 301) section of the catalog.

Advisor: James Werner

BFA Art and Design

Program Learning Objectives

1. Produce a strong body of work and/or professional portfolio.
2. Apply comparative reasoning in evaluating works of art and design.
3. Use verbal, visual, and technical vocabulary related to art and design that demonstrates cultural competency and a world view informed by issues of diversity, inequality, and power.

4. Effectively and professionally work in teams and participate in interdisciplinary, collaborative endeavors with people who have beliefs, attitudes, and behaviors that are different from their own.
5. Critically examine the role that visual language plays in global culture through research, innovative thinking, writing, and creative expression.
6. Demonstrate integrity and make ethical decisions in professional practice and/or creative expression.
7. Establish and maintain a rigorous creative practice that is productive and professional.
8. Demonstrate a commitment to learning, inquiry, and discovery.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: Up to 4 units of credit/no credit grading may be selected for courses in Major or Concentration.

MAJOR COURSES

ART 101	Fundamentals of Drawing (C1) ¹	4
ART 102	Art and Design Foundation Studies I	4

Concentration courses (see below)		52
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		64
FREE ELECTIVES		
Free Electives ²		0
Total units		184

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations (select one)

- Graphic Design (p. 274)
- Photography (p. 274) and Video (p. 274)
- Studio Art (p. 274)

General Education (GE) Requirements

- 72 units required, 8 of which are specified in Major and/or Support.
- If any of the remaining 64 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater (4 units in Major) ¹	0
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D (4 units in Major) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives		8
Total units		64

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

ART 371	Topics in Renaissance Art	
ART 373	New Media Art History	
ART/WGQS 375	Intersectional Feminist Art Histories (USCP)	

Concentration Electives

Select from the following: 12

At least 8 units must be upper-division.

Any ART courses not already used to meet Major or Concentration requirements (see course descriptions for repeatable units), OR

TH 225	Costume Construction I
TH 230	Stagecraft I
TH 330	Stagecraft II
MU 311	Introduction to Recording, Synthesis, and Production ¹
MU 312	Advanced Recording, Synthesis, and Production ¹
Total units	52

¹ Please check prerequisites. Your ability to select specific elective courses may vary depending upon the curriculum requirements for your major.

Art History Minor

Select one survey course in Art History: 4

ART 112	Western Art: A Thematic History
ART 211	Art Hist - Ancient to Renaissance
ART 212	Art History - Renaissance through Baroque Eras
ART 213	Art History- Modern Art, 1900-1945

Select one survey course in Architecture: 4

ARCH 217	History of World Architecture: Prehistory - Middle Ages
ARCH 218	History of World Architecture: Middle Ages - 18th Century
ARCH 219	History of World Architecture: 18th Century - Present

Select one 300-level Non-Western Course: 4

ARCH 320	Topics in Architectural History ¹
ART 317	Asian Art Survey
ART 318	Asian Art Topics: National, Religious, and Intellectual Movements ¹

Select one 300-level Western Course 4

ARCH 320	Topics in Architectural History ¹
ART 310	Art History - American Art
ART 311	Art History - Nineteenth Century Art
ART 315	Art History - Art Since 1945
ART 370	Michelangelo
ART 371	Topics in Renaissance Art ¹
ART/WGQS 375	Intersectional Feminist Art Histories

Approved Electives ²

Select from the following Western, non-Western, architecture or art history classes at the 300-400 level: 12

ARCH 320	Topics in Architectural History ¹
ARCH 420	Seminar in Architectural History, Theory and Criticism
ART 310	Art History - American Art
ART 311	Art History - Nineteenth Century Art
ART 315	Art History - Art Since 1945
ART 317	Asian Art Survey
ART 318	Asian Art Topics: National, Religious, and Intellectual Movements ¹
ART 370	Michelangelo
ART 371	Topics in Renaissance Art ¹

ART 373	New Media Art History
ART/WGQS 375	Intersectional Feminist Art Histories
Total units	28

¹ Repeatable course, taken twice with different topics, can be used to meet different Minor electives. Consult with adviser.

² If not used to meet Minor requirements, these courses meet Approved Electives.

Photography and Video Minor

ART 224	Introduction to Artificial Lighting for Photography	4
---------	---	---

Select from the following: 8

ART 122	Introduction to Digital Photography
ART 222	Black and White Photography
ART 227	Portrait Photography
ART 314	History of Photography ¹

Select from the following: 12

ART 314	History of Photography
ART 324	Photographic Expression
ART 325	Advanced Camera and Lighting Techniques
ART 329	Editorial Photography
ART 373	New Media Art History
ART 383	Digital Video I
ART 427	Advertising Photography
ART 483	Digital Video II
ART 484	Animation, Video, and Interactive Design

Total units 24

¹ If selected, course may not be selected again below.

Academic Programs

Program name	Program type
Communication Studies	BA, Minor

Understanding the process of communication is no less important in today's Information Age than it was during the Golden Age of Athens, when skill in oral communication determined one's success in life.

The study of the human capacity for speech as a means of influence, entertainment, and information was at the foundation of Western Civilization. A course of study in communication, always one that required knowledge of many cognate fields such as psychology and logic, remains interdisciplinary in nature. Faculty in Communication Studies teach aesthetic, historical, critical, and empirical methods for understanding communication.

The aims of the discipline are both conceptual and practical. In broad terms, students who enroll in a liberal arts curriculum do so to develop the ability to analyze and reason critically, write and speak effectively, and appreciate the influences of culture upon their lives. The first goal of the department is to advance these objectives.

The department offers fully articulated major and minor programs. Courses focus on the history, theory and practice of human communication across personal, professional, and civic contexts. Required courses introduce students to the importance of communication in several key areas: debate, interpersonal communication, media studies, organizational communication, performance of literature, rhetoric, and small group communication. Through the use of electives, the major can be shaped to assist students in preparing for their educational and career objectives.

Students use a Communication Studies major to prepare for careers in business, advertising, public relations, human relations, law, education, the mass media, non-profit work, theatre, and the clergy. In addition to providing students with an option to select from a broad range of internships and to participate in various Learn by Doing activities, the department houses an extensive program in competitive debate. It also offers individual and sequenced courses to develop practical skills in oral composition, critical thinking, and effective human communication.

Mission Statement

The Communication Studies program at Cal Poly offers a comprehensive curriculum, focusing broadly on the composition and influence of messages across the contexts of personal, professional, and civic life. Graduates of the program gain knowledge and skills to effectively engage in and change the world around them. Students learn foundational theories and study human communication from historical, critical, humanistic, and social scientific approaches to uncover how, why, and with what effects people communicate. Upon completing this program, students possess a robust facility for creating ethical, culturally aware, and inclusive communication as citizens of a dynamically mediated world.

Undergraduate Programs BA Communication Studies

The Bachelor of Arts in Communication Studies degree prepares students for careers in the various communication professions as well as a wide variety of occupations that place a premium on excellent communication skills. In addition, many Communication Studies graduates go on to earn advanced degrees in disciplines such as communication, psychology, sociology, and law. The Communication Studies curriculum draws from the traditions of both the humanities and the social sciences and includes a wide array of courses investigating the nature, processes and effects of human communication.

Communication Studies Minor

A 28-unit minor is available for students who desire documented competency in Communication Studies. Further information and application forms are available in the Communication Studies Department office.

BA Communication Studies Program Learning Objectives

1. Describe the foundational concepts, theories, and methods of critical, humanistic, and social scientific approaches to studying communication.
2. Analyze mediated and non-mediated communication practices, messages, and effects considering the culture and context in which they occur.
3. Practice self-reflexivity about one's own communication practices.
4. Develop a critical framework for making ethical and inclusive communication choices.
5. Select appropriate modalities and technologies to accomplish communication goals.
6. Apply communication concepts, theories, and methods to real-world events, issues, and problems.
7. Produce effective and ethical communication based on awareness of diverse perspectives, contexts, and social identities.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

COMS Electives (300-400 level) ^{3,4}		12
SUPPORT COURSES		
Modern language 103 (CHIN, FR, GER, ITAL, JPNS, SPAN, WLC) or demonstration of comparable level of proficiency		4
Select from the following:		4
STAT 217	Introduction to Statistical Concepts and Methods (B4) ¹	
STAT 218	Applied Statistics for the Life Sciences (B4) ¹	
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		56
FREE ELECTIVES		
Free Electives ⁵		32

8-12 units of free electives may need to be at the 300-400 level to ensure completion of the required minimum of 60 units of upper-division.

Total units 180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Students should consult with a faculty advisor to make a course plan for the focus area of their choice.
- ³ Only 4 units of supervised instruction, including COMS 400, COMS 450, and COMS 485, may be counted here.
- ⁴ Courses taken to meet the focus area cannot double count as a COMS Elective.
- ⁵ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater (4 units in Major) ¹	0
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4

D2	Lower-Division D	4
Upper-Division D (4 units in Major) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Major) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives		8
Total units		56

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Communication Studies Minor

Required Courses

COMS 206	Communication Theory	4
COMS 211	Interpersonal Communication	4
COMS 322	Persuasion	4
COMS 330	Classical Rhetorical Theory	4
or COMS 331	Contemporary Rhetorical Theory	

Approved Electives

12 units of Communication Studies courses, of which at least 8 units must be 300–400 level. ¹

COMS 201	Advanced Public Speaking	
COMS 208	Performance, Literature, and Culture	
COMS 213	Organizational Communication

Academic Programs

Program name	Program type
English	BA, Minor, MA
Linguistics	Minor
Technical and Professional Communication	Certificate
Teaching English to Speakers of Other Languages	Certificate

The English Department offers Bachelor of Arts and Master of Arts programs, minors in English and Linguistics, and certificates in Teaching English to Speakers of Other Languages and in Technical and Professional Communication. Additionally, in cooperation with the School of Education, the department prepares undergraduates and graduates for careers in secondary school teaching. Finally, the English Department provides a wide array of general education courses in composition, literature, film, and creative writing.

An English major or minor is valuable preparation for any career in which critical thinking, nuanced analysis, and clear communication are essential. Many of our majors pursue graduate study in English, education, creative writing, or law; the major provides an excellent foundation for all of these fields. First and foremost, however, students of English are humanists, deeply concerned about the welfare of others. Through imaginatively inhabiting the worlds writers create, English students gain empathy, respect, and perspective, habits of mind that will benefit them throughout their lives.

Certificate Programs

Teaching English to Speakers of Other Languages (TESOL)

The TESOL certificate program provides individuals with specialized training to teach successfully in a wide variety of ESL programs. Both undergraduate and graduate students currently enrolled in any degree program at Cal Poly may pursue this certificate.

The 30-unit TESOL program provides a solid background in theoretical and applied linguistics, cross-cultural communication, second language acquisition, and methods of TESOL. The program is designed for two career options:

1. The Post-Secondary/Adult option prepares individuals to teach in college level and adult education programs. Those wishing to teach at the college level are advised that an MA in English or a related field is the usual minimum requirement for full-time positions.
2. The K-12 option prepares individuals having a single or multiple subject credential to teach ESL in elementary and secondary schools.

Certificate Requirements (p. 282)

Technical and Professional Communication

Commercial, academic and governmental organizations employ technical and professional communicators as writers, editors, public relations experts, information designers, documentation and project

managers, and as mixed media creators. The technical and professional communicator is, first and foremost, an accomplished writer who produces clear, precise, timely, and effective prose. However, technical communicators also are adept at designing information layouts, integrating images with text, working in teams, translating technical concepts for diverse audiences, and engaging with users to ensure the usability of documents. Individuals interested in technical and professional communication enjoy the process of continually learning and sharing information with others.

Certificate Requirements (p. 283)

Undergraduate Programs

BA English

The curriculum for the Bachelor of Arts in English offers students both structure and freedom of choice. Students take introductory courses in several disciplines within English, including literary studies, linguistics, and composition/rhetoric/technical communication, as well as a seven-course sequence of American, British, and global Anglophone literature. Upper-division requirements include courses in literary and non-literary fields, which may include creative writing, film, linguistics, composition/rhetoric, and technical and professional communications. A Senior Project in the student's field of interest provides the capstone to the English major.

English majors must also demonstrate intermediate-level proficiency in a language other than English. Cal Poly offers intermediate-level instruction in several languages. We encourage majors to study abroad, and many students choose to complete their language requirement in another country.

English Minor

An English minor complements any major, adding richness and depth to students' educations. The curriculum boasts literature courses to help students cultivate empathy and insight; writing courses to help students practice essential communication skills; and linguistics courses to provide an understanding of the nature and power of language. Students interested in pursuing an English minor should meet with the minor advisor to review the requirements. The English minor is not open to Liberal Studies majors with a concentration in English.

Linguistics Minor

Cal Poly's English Department offers a range of linguistics and applied linguistics courses designed for the beginning linguist or the non-linguist. Linguistics, the science of language, studies our mental capacity to produce and comprehend language, the varied patterns that the world's languages use to express meaning, and the natural facts of diversity and change within and across languages. Applied linguistics in our Department includes teaching English to speakers of other languages, applications of linguistics in the K-12 language arts classroom, history of English, language and gender, and other varied topics.

Linguistics enriches the English major's understanding of and appreciation for English and other languages, not just by acquainting them with the structure of English, but also by exploding popular myths which often lead to ill-informed personal or policy judgments.

Study of linguistics can be useful as preparation for a variety of occupations: teaching language arts, English, or other languages;

working in journalism or editing and publishing; and a variety of applications in computer-mediated uses of language.

Master of Arts Degree in English

General Characteristics

Students in the Master of Arts in English explore and research texts and their contexts, in intimate cohorts and with award-winning, nationally- and internationally-recognized faculty. Designed to provide a comprehensive experience of the field of English Studies, the M.A. offers courses in American, British, and World Anglophone literatures; literatures in translation; composition and rhetoric; technical and professional writing; linguistics; and literary theory and criticism. Moreover, it is designed to foreground our discipline's exemplary commitment to diversity, equity, and inclusivity, in part by making historically underrepresented and/or disenfranchised texts, movements, and cultural contexts an integral part of our curriculum.

In their second year, students have the opportunity to apply to teach first-year writing courses, and all students complete a highly individualized research "portfolio" project as their capstone achievement. Students are encouraged to submit the work they complete for the portfolio to academic conferences, scholarly journals, and relevant job applications.

The M.A. in English equips its students with a broad appreciation for and deep mastery of the field of English Studies, which prepares them for:

- teaching English at the secondary and/or community college level;
- further graduate work at the doctoral level;
- careers in marketing/public relations, publishing, editing, the arts and culture sector, and other fields in which effective writing and communication skills are valued;
- careers in the emergent fields of technical and professional communication; and
- a life-long appreciation for literature, rhetoric, communication, and the humanistic values at the core of English Studies.

Prerequisites

Students admitted to the Master of Arts in English must have a Bachelor's degree from an accredited institution (or the equivalent, as determined by the English Graduate Committee) and have maintained a grade point average of 3.0 for the last 90 quarter units (60 semester units). Non-native speakers should also submit TOEFL scores (Test of English as a Foreign Language). At the discretion of the graduate coordinator, students without an degree in English or a closely related field may be admitted conditionally.

Program of Study

- 46 units of graduate work approved by the English Graduate Coordinator and the Graduate Committee, completed according to program requirements.
- These units break down to eleven four-unit graduate seminars (in certain circumstances, a select few 400-level seminars can be counted toward the degree) and the completion of the 2-unit research portfolio, ENGL 598.

Application

Those interested in applying to the M.A. in English will complete their application through the Cal State Apply website (<https://www2.calstate.edu/apply> (<https://www2.calstate.edu/apply/>)). Our

program's application process does not require that you submit GRE scores. However, you may submit your scores if you wish to do so.

Note that in addition to the materials that the Cal State Apply system requires, *you must also submit a personal statement, writing sample, and two letters of recommendation*. Applicants who do not include these materials cannot be considered for admission to the program.

Questions about the application process should be directed to Dr. Ryan Hatch at rahatch@calpoly.edu.

Blended BA + MA English Program

A blended program can provide an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

Eligibility

Students majoring in BA English are eligible for the blended program in MA English.

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education](#) (p. _____) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the English department for any additional eligibility criteria.

Program of Study

The typical student in the blended program will be able to complete the English BA and MA in five years. Students will complete the senior project by the conclusion of the 4th year and all of the BA degree requirements by the fall of the 5th year. The culminating experience for the English MA will be a supervised graduate project.

Teaching English to Speakers of Other Languages Certificate

A minimum 2.0 GPA is required in all units counted for completion of the certificate. A maximum of two non-core courses taken at other institutions may be substituted with approval.

In addition to the coursework for the certificate, students must satisfy the modern language requirement. One year of a modern language at the college level or completion of a course such as FR 103, GER 103, or SPAN 103 is required.

Core Courses

ENGL 497	Theories of Language Learning and Teaching	4
ENGL 498	Approaches to Teaching English to Speakers of Other Languages	4

BA English

Program Learning Objectives

Learning Outcomes

1. Explicate texts from a diverse range of traditions, including texts from historically underrepresented groups.
2. Analyze how power structures and cultural practices shape textual production and reception.
3. Critique and produce texts that account for the rhetorical relationships among audience, writer, text, genre, and discourse.
4. Write clearly and effectively in a variety of genres and media.
5. Successfully incorporate scholarly research into papers.
6. Identify and define an array of historical and critical literary, rhetorical, and linguistic terms and categories.

Learning Goals

1. Understand how texts reflect, critique, and produce culture and power structures.
2. Pursue deeper knowledge of particular authors and works, including those from underrepresented groups.
3. Explore the ways identities and affiliations shape texts and traditions.
4. Understand the structure of language and how language varies over time, across social situations and social groups.
5. Participate in face-to-face exchanges of ideas with faculty, fellow students, and authors in the classroom and other academic or social settings.
6. Participate in small seminars where ideas are tested and sharpened.
7. Cultivate relational thinking that encourages students to make connections between the arts and humanities and other fields of study.
8. Sustain a life-long engagement and involvement in aesthetic, cultural, and intellectual matters, including social and political issues.
9. Draw upon multiple literacies to interpret literary, visual, and cultural texts.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

ENGL 202	Introduction to Literary Studies	4
ENGL 203	Sequence I: Fifth Century to Fifteenth Century	4
ENGL 204	Sequence II: Sixteenth Century to Late Seventeenth Century	4
ENGL 205	Sequence III: Mid-Seventeenth to Late Eighteenth Century	4
ENGL 220	Introduction to Writing Studies	4

or ENGL 221	Introduction to Technical and Professional Communication	
ENGL/HNRS 251	Introduction to Classical Literature (C2) ¹	4
ENGL 290	Introduction to Linguistics	4
ENGL 303	Sequence IV: Late Eighteenth to Mid-Nineteenth Century	4
ENGL 304	Sequence V: Mid-Nineteenth Century to Late Nineteenth Century	4
ENGL 305	Sequence VI: Late Nineteenth to Mid-Twentieth Century	4
ENGL 306	Sequence VII: Mid-Twentieth Century to Present	4
Select from the following (Upper-Division C) (USCP): ¹		4
ENGL 345	Women Writers of the Twentieth and Twenty-First Centuries	
ENGL 346	Ethnic American Literature	
ENGL 347	African American Literature	
ENGL 348	Asian American Literature	
ENGL 349	Gender in Twentieth and Twenty-First Century Literature	
ENGL 381	Diversity in Twentieth and Twenty-First Century American Literature	
ENGL 382	LGBT Literature and Media	
ENGL 300-level Elective		4
ENGL 300-level Non-literature Elective, select from the following:		4
ENGL 310	Corporate Communication	
ENGL 311	Advanced Rhetorical Inquiry and Composing	
ENGL 312	Translingual Rhetorical Inquiry and Writing	
ENGL 317	Technical Editing	
ENGL 319	Information Design and Production	
ENGL 361	Reading Instruction for the Teaching of Young Adult Literature	
ENGL 368	Theory and Practice of Peer-to-Peer Writing Instruction	
ENGL 370	World Cinema	
ENGL 371	Film Styles and Genres	
ENGL 372	Film Directors	
ENGL 373	Topics on Gender Representations in Film	
ENGL 387	Fiction Writing	
ENGL 388	Poetry Writing	
ENGL 390	The Linguistic Structure of Modern English	
ENGL 391	Topics in Applied Linguistics	
ENGL 395	History of the English Language	
ENGL 400-level Diversity Elective, select from the following:		4
ENGL 439	Topics in British Literature (Topic: Gender in Medieval Literature)	
ENGL 439	Topics in British Literature (Topic: Jane Austen Fiction and Film)	
ENGL 449	Topics in American Literature (Topic: American Modernism in Black and White)	
ENGL 449	Topics in American Literature (Topic: Califia, Delany, & Pornography)	
ENGL 449	Topics in American Literature (Topic: Mixed-Race Subjects in the US Literary Imagination)	
ENGL 449	Topics in American Literature (Topic: Walt Whitman and James Baldwin)	
ENGL 449	Topics in American Literature (Topic: Women's Fiction, 1861-1914)	
ENGL 459	Topics in Transatlantic and/or World Literature (Topic: Trickster Literatures)	
ENGL 467	Topics in Rhetoric and Writing (Topic: Women's Rhetoric(s))	
ENGL 495	Topics in Applied Language Study (Topic: World Englishes)	
ENGL 400-level Electives (see Optional Creative Writing Emphasis, below) ²		20
ENGL 461	Senior Project	4
SUPPORT COURSES		
Foreign Language at the Intermediate Level		
Select from the following: ³		4
CHIN 201	Intermediate Mandarin Chinese I	
CHIN 202	Intermediate Mandarin Chinese II	
FR 201	Intermediate French I	
FR 202	Intermediate French II	
GER 201	Intermediate German I	
GER 202	Intermediate German II	
ITAL 201	Intermediate Italian I	
JPNS 201	Intermediate Japanese I	
SPAN 201	Intermediate Spanish I	
SPAN 202	Intermediate Spanish II	
Arts and Humanities Breadth:		
Upper-Division C (General Education) course not in ENGL (GE Electives) ¹		4
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		60
FREE ELECTIVES		
Free Electives		28
Total units		180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Minimum 12 units in literature (ENGL 439, ENGL 449, or ENGL 459).

³ Student can substitute for this requirement by demonstrating a comparable level of proficiency in a foreign language.

Optional Creative Writing Emphasis

Students interested in creative writing may use 16 of their upper-division ENGL units and their senior project to pursue a fiction- or poetry-writing emphasis. Examples are:

Fiction Writing Emphasis:

ENGL 387	Fiction Writing (4)	
ENGL 487	Advanced Creative Writing: Fiction (4, 4)	
400-level ENGL literature course in modern or contemporary fiction (4)		
ENGL 461	Senior Project (4)	

Poetry Writing Emphasis:

ENGL 388	Poetry Writing (4)	
ENGL 488	Advanced Creative Writing: Poetry (4, 4)	
400-level ENGL literature course in modern or contemporary poetry (4)		
ENGL 461	Senior Project (4)	

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Major) ¹	0
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C (4 units in Major) ¹		0
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4

Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		60

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

English Minor

Required Courses

Lower Division World Literature		
Select from the following:		4
ENGL 251	Introduction to Classical Literature	
ENGL 252	Introduction to Medieval through Enlightenment Literature	
ENGL 253	Introduction to Romantic through Modernist Literature	

British Literature

Select from the following:		4
ENGL 330	British Literature: Beginnings to 1485	
ENGL 331	British Literature: 1485-1660	
ENGL 332	British Literature: 1660-1798	
ENGL 333	British Literature: 1798-1832	
ENGL 334	British Literature: 1832-1914	
ENGL 335	British Literature: 1914-Present	
ENGL 339	Introduction to Shakespeare	

American Literature

Select from the following:		4
ENGL 340	American Literature: Beginnings-1865	
ENGL 341	American Literature: 1865-1914	
ENGL 342	American Literature: 1914-1956	
ENGL 343	American Literature: 1956-Present	
ENGL 346	Ethnic American Literature	
ENGL 347	African American Literature	
ENGL 348	Asian American Literature	

World Literature, Modern Literature and/or Film

Select from the following:		4
ENGL 345	Women Writers of the Twentieth and Twenty-First Centuries	
ENGL 349	Gender in Twentieth and Twenty-First Century Literature	
ENGL 350	The Modern Novel	
ENGL 351	Modern Poetry	
ENGL 352	Modern Drama	
ENGL 370	World Cinema	
ENGL 371	Film Styles and Genres	

ENGL 372	Film Directors	
ENGL 380	Literary Themes	
ENGL 381	Diversity in Twentieth and Twenty-First Century American Literature	
ENGL 382	LGBT Literature and Media	
Linguistics		
Select from the following:		4
ENGL 390	The Linguistic Structure of Modern English	
ENGL 395	History of the English Language	
Composition, Creative Writing, Technical Communications		
Select from the following:		4
ENGL 310	Corporate Communication	
ENGL 311	Advanced Rhetorical Inquiry and Composing	
ENGL 317	Technical Editing	
ENGL 319	Information Design and Production	
ENGL 386	Creative Nonfiction	
ENGL 387	Fiction Writing	
ENGL 388	Poetry Writing	
Elective		
One additional 4 unit course from the lists above		4
Total units		28

Linguistics Minor

Required Courses

ENGL 290	Introduction to Linguistics	4
ENGL 391	Topics in Applied Linguistics	4
ENGL 395	History of the English Language	4

Approved Electives ¹

May include (at least 6 units must be at the 300-400 level):		16
COMS 316	Intercultural Communication	
ENGL 390	The Linguistic Structure of Modern English	
ENGL 495	Topics in Applied Language Study	
ENGL 497	Theories of Language Learning and Teaching	
Total units		28

¹ Select approved electives in consultation with faculty advisor.

MA English

Program Learning Objectives

1. Understand how British and American literary traditions developed, becoming familiar with significant writers, their works, and the connections between them.
2. Understand the structure of language and its change over time and across social situations and groups.
3. Understand the movements and traditions of Composition and Rhetoric Studies.
4. Be able to think creatively and critically and to write effectively within all these areas of English Studies.

5. Know how to conduct original research and integrate criticism (secondary sources) into your own analyses.
6. Be prepared for lifelong learning.
7. Be ready and able to pursue a wide range of personal and professional goals or to undertake further graduate studies.

Required "Foundations" Courses

ENGL 501	Introduction to English Studies	4
ENGL 502	Seminar in Critical Analysis	4
ENGL 503	Graduate Introduction to Linguistics	4
ENGL 505	Composition Theory	4

Required Literature Courses

ENGL 511	Seminar in American Literature	4
ENGL 512	Seminar in British Literature	4

Capstone Research Portfolio

ENGL 598	Graduate Project	2
----------	------------------	---

Elective Courses ¹

Select from the following:		20
ENGL 506	Pedagogical Approaches to Composition ²	
ENGL 510	Seminar in Authors	
ENGL 511	Seminar in American Literature	
ENGL 512	Seminar in British Literature	
ENGL 513	Seminar in Special Topics	
ENGL 518	Graduate Technical Communication	
ENGL 519	Seminar in Rhetoric and Writing	
ENGL 570	Selected Advanced Topics	
Total units		46

¹ Students must complete at least one pre-1850 literature course and at least one post-1850 literature course.

² Students must be accepted to the Teaching Assistant program in order to enroll in ENGL 506.

Ethnic Studies

Department Chair: Jenell Navarro

Academic Programs

Program name	Program type
Comparative Ethnic Studies	BA
Ethnic Studies	Minor
Indigenous Studies in Natural Resources and the Environment	Minor

Ethnic Studies is an intellectual and political project that uses inter- and multidisciplinary approaches to understand and transform enactments of power, to which, in the modern era, productions of race and ethnicity have been central. The aim of Ethnic Studies is to provide students with an understanding of the historical processes (including slavery, capitalism, genocide, colonialism, nativism, war) that form the United States as a nation-state and as an imagined community, and their differential impact on diverse communities within local, national, and global contexts. The field of Ethnic Studies critically attends to research methodologies and frameworks of knowledge to examine how these legacies impact access to political power, allocate economic resources, and influence cultural expression. Ethnic Studies courses draw from and engage with a number of academic fields, including: post/decolonial studies, cultural studies, human rights studies, Indigenous studies, migration studies, legal studies, environmental studies, gender studies, sexuality and queer studies, and science and technology studies. Through a critical and comparative study of interlocking and intersecting systems of oppression embedded in the formation of the U.S. nation, students develop a greater understanding of the legacies of racism, discrimination, and inequity in the United States as well as of the movements for social justice. Students also learn about the diverse peoples of the Americas, specifically Indigenous and Latinx Peoples, and the African and Asian diasporas who have been historically displaced, disenfranchised, and silenced. Ethnic Studies seeks to provide a relevant education—one that has a deep commitment to justice, equity, and social and institutional transformation.

Housed in the College of Liberal Arts, the Ethnic Studies Department at Cal Poly encourages critical dialogue about race, ethnicity, and decolonization across the entire university curriculum. The department offers a number of courses that fulfill general education, Ethnic Studies, and United States Cultural Pluralism graduation requirements. A minor in Ethnic Studies is open to all majors and provides a useful complement to the differing types of inquiry used in the wide variety of disciplines throughout the University.

Undergraduate Programs

BA Comparative Ethnic Studies

It is expected that students who demonstrate the foregoing learning outcomes will be better prepared to understand the social, cultural, political, historical, and economic factors that have shaped their own social and occupational identities, as well as the social and occupational identities of others. This knowledge should better prepare students to

work, collaborate, and interact more responsibly and effectively in an increasingly diverse and globalized workplace and world.

Ethnic Studies Minor

An Ethnic Studies minor provides students with special competence in the histories and experiences of historically marginalized communities in the United States, and with the critical skills with which to understand their complex social issues. Students majoring in subjects across the university curriculum find Ethnic Studies useful, particularly when their interests require a deeper understanding of race, ethnicity, class, gender and sexuality in the United States and beyond. The minor prepares students for careers in education, government, and community organizations among other areas; and, prepares them for graduate and professional schools in areas such as the law, social work, health, and the arts and sciences.

Indigenous Studies in Natural Resources and the Environment Minor

An interdisciplinary minor sponsored by the departments of Natural Resources Management and Environmental Sciences and Ethnic Studies. For more information, see the Natural Resources Management and Environmental Sciences (p. 117) section.

BA Comparative Ethnic Studies

Program Learning Objectives

It is expected that students who demonstrate the foregoing learning outcomes will be better prepared to understand the social, cultural, political, historical, and economic factors that have shaped their own social and occupational identities, as well as the social and occupational identities of others. This knowledge should better prepare students to work, collaborate, and interact more responsibly and effectively in an increasingly diverse and globalized workplace and world.

1. Define and apply key concepts, contexts, and scholarship in Ethnic Studies.
2. Demonstrate understanding of the specificities of heterogeneous communities shaped by and shaping the U.S. nation-state in addition to broad ethnic studies concepts and contexts.
3. Apply inter- and multidisciplinary, comparative, and intersectional approaches to critically analyze discourses, practices, and institutions that maintain structural inequality.
4. Communicate in writing and in alternative media one's own arguments and the arguments of others within the field of ethnic studies and in at least one other discipline.
5. Design and implement research projects that account for the limits and potentials of humanities and social science methodologies and acknowledge competing frameworks of knowledge to understand US racial formations.
6. Apply acquired knowledge and skills toward academic, professional, personal, and community development.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Be aware that some courses on this list may have prerequisites and that these prerequisites may need to be taken as Free Electives.
- ³ Consultation with advisor is recommended prior to selecting electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ⁴ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- ⁵ Approved Electives can be selected from any unused ES course or from the Approved Electives list. Courses not on the Approved Electives list may still be selected, but are subject to department approval. A minimum of 8 units of Approved Electives must be at the 300-400 level.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4

A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement) (4 units in Major) ¹	0
D2	Lower-Division D	4
Upper-Division D (4 units in Major) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies (4 units in Major) ¹	0
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		48

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Academic Programs

Program name	Program type
Graphic Communication	BS, Minor

The Graphic Communication Department offers a curriculum leading to the Bachelor of Science degree, yet the discipline is both an art and a science. It appeals to students having an interest in creativity, science, technology, and management.

The Graphic Communication Department occupies approximately 33,000 square feet of laboratories in the Graphic Arts Building and in the adjacent specialty print and packaging prototyping building. Theory and practice are taught in modern classrooms incorporating the latest in teaching techniques. Fourteen well-equipped laboratories provide students with diverse experiences in the practical aspects of graphic media development and functional printing.

The Graphic Communication Department receives support from an advisory board comprised of industry leaders representing major graphic communication companies.

Undergraduate Programs

BS Graphic Communication

The field of graphic communication represents a large profession, one of the largest in the world. The profession embraces change, requiring those pursuing graphic communication careers to learn new and diverse skills. Graphic communication includes digital and conventional printing, publishing, packaging, digital imaging, computer graphics, digital design, digital photography, printable electronics, functional imaging, web and app development, user interface and user experience design, human-computer interaction design, and related areas. The discipline includes media and mass communication involving the creation, production, management, and distribution of advertising, marketing, websites, apps, books, magazines, newspapers, catalogs, packages, printed electronics, and other media in printed and digital form. Graduates are in high demand by leading national and international corporations in the graphic communication field.

The Bachelor of Science program in Graphic Communication is accredited by the Accreditation Council for Collegiate Graphic Communications, Inc. (ACCGC), an independent body dedicated to the improvement and recognition of collegiate level curricula in graphic communication.

Beyond acquiring a foundation in graphic communication, students select a specialization among the department's concentrations of design reproduction technology, user experience/user interface, graphic communication management, graphics for packaging, and individualized study in graphic communication.

Concentrations

BS Majors select one of the following concentrations based upon their interests and career goals.

Design Reproduction Technology¹

Emphasis on design and technology for print and web publishing. Coursework includes typography, branding, color theory, and design for packaging and for the publication of books, magazines, and web sites. The Graphic Communication Department's Design Reproduction Technology concentration focuses on the technical and electronic aspects of transforming design for reproduction in print and digital media. The concentration focuses on printing, web development, publishing, packaging, digital imaging, computer graphics, and related areas of mass media preparation and production.

Graphic Communication Management

A flexible program for students interested in management and administrative careers in the graphic communication industry. Concentration graduates enter careers focused on project management, marketing management, product development, account management, scheduling, estimating or other support roles. In addition to the major requirements in graphic communication, coursework includes multiple business management related disciplines.

Graphics for Packaging

Designed for students who desire a career in the growing field of package graphics and printing. This program provides students with the opportunity to learn all components of graphic preparation for packaging, print reproduction and conversion, while also providing aspects of structural design and food safety. Consumer and industrial print packaging is addressed.

User Experience/User Interface

Emphasis on the latest trends in interface development and the production and distribution of digital media. In addition to major requirements, coursework includes the study of user experience, visual design, and web and mobile interface design. The concentration leads to careers in user experience/user interface design, digital media production, product management, and opportunities with hardware and software manufacturers that service the graphic communication industry.

Individualized Course of Study

An opportunity to pursue a course of study that meets a student's individual needs and interests.

Graphic Communication Minor

A minor in Graphic Communication benefits students interested in pursuing careers in graphic communication or who anticipate using graphic communication skills in another career. Students in the minor have a competitive edge when applying for many jobs by understanding concepts, and gaining knowledge and skills in print and digital media. Additionally, students develop an understanding of the effective design and reproduction technologies, practical file preparation, and design requirements for various output processes including print and digital media. In addition, students will gain an understanding of typography, digital photography, and user experience. Information and application forms for this minor are available in the Graphic Communication Department office.

Graduate Program

MBA, Graphic Communication Document Systems Management Specialization

In cooperation with the Orfalea College of Business, a student can earn an MBA with a graphic communication emphasis in document systems management. This program is designed to prepare professionals having diverse backgrounds with a strong and advanced business orientation along with a grounding in graphic communication. For more information, see the Orfalea College of Business (p. 177) section.

BS Graphic Communication

Program Learning Objectives

1. Integrate effective design and functionality into graphic communication products, optimizing user experience and adoption.
2. Produce professional graphic media, demonstrating competence using current tools and methods.
3. Articulate and defend graphic communication strategies using effective oral, written, visual and/or demonstration means.
4. Apply appropriate production and workflow methods for various media.
5. Evaluate business principles related to starting and/or developing a graphic communication business.
6. Analyze current and future trends, market drivers, and continuous learning opportunities in graphic communication.
7. Evaluate diversity in the graphic communication profession and identify attitudes and behaviors that affect workforce and product development.
8. Demonstrate the use of sustainability practices in various print and screen-based applications.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

GRC 101	Introduction to Graphic Communication	3
GRC 102	Orientation to Graphic Communication	2

GRC 411	Strategic Trends and Profitability Issues in Print and Digital Media	4
GRC 422	Human Resource Management Issues for Print and Digital Media	4

Senior Project		
Select from the following:		3
GRC 461	Senior Project - Independent Study	
GRC 462	Senior Project	
GRC 463	Senior Project - Applied Practices	

Concentration Courses 29

SUPPORT COURSES

CHEM 110	World of Chemistry (B1 & B3) ¹	4
MATH 118	Precalculus Algebra (B4) ^{1,2}	4
PHYS 104	Introductory Physics (GE Electives) ¹	4
	or PHYS 121 College Physics I	
STAT 217	Introduction to Statistical Concepts and Methods	4

GENERAL EDUCATION (GE)

(See GE program requirements below.) 60

FREE ELECTIVES

Free Electives 0

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² MATH 116 and MATH 117 substitute.

Concentrations

- Design Reproduction Technology (p. 295)
- Graphic Communication Management (p. 295)
- Graphics for Packaging (p. 296)
- User Experience/User Interface (p. 296)

Individualized Course of Study

This concentration consists of 29 units; a minimum of 18 units must be upper-division and a minimum of 8 units must be Graphic Communication. The student selects the courses in consultation with the concentration coordinator and department head, and provide written justification for the courses and the way they constitute a cohesive, integrated program of study. The list of courses serves as a contract between the student and the Graphic Communication Department.

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities²	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	

F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		60

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Students in the User Experience/User Interface Concentration need to take a lower-division PHIL course in GE Area C.

Design Reproduction Technology Concentration

ART 102	Art and Design Foundation Studies I	4
GRC 322	Advanced Digital Typography	3
GRC 347	Packaging Graphics Technology and Design	3
GRC 429	Mobile User Experience	3
GRC 439	Book Design Technology	4
GRC 440	Magazine Design Technology	4
Select from the following:		8
ART 313	Design History	
GRC 220	Introduction to Applied Social Media in Graphic Communication	
GRC 339	Web Design and Production	
GRC 400	Special Problems for Advanced Undergraduates	
GRC 451	Management Topics in Graphic Communication	
GRC 452	Emerging Technologies in Graphic Communication	
GRC 453	Design Reproduction Topics in Graphic Communication	
Other courses as approved by faculty advisor		
Total units		29

Graphic Communication Management Concentration

BUS 207	Legal Responsibilities of Business	4
BUS 212	Financial Accounting for Nonbusiness Majors	4
BUS 418	Listening to the Customer	4
COMS 213	Organizational Communication	4
GRC 420	Graphic Communication in Integrated Marketing Communications	4
GRC 421	Production Management for Print and Digital Media	4
Select from the following:		5
BUS 303	Introduction to International Business	
BUS 310	Introduction to Entrepreneurship	

BUS 382	Leadership and Organizations	
ENGL 310	Corporate Communication	
GRC 220	Introduction to Applied Social Media in Graphic Communication	
GRC 357	Specialty Imaging and Graphics Technologies	
GRC 451	Management Topics in Graphic Communication	
GRC 452	Emerging Technologies in Graphic Communication	
Other courses as approved by academic advisor		
Total units		29

Graphics for Packaging Concentration

FSN 354	Packaging Function in Food Processing	3
GRC 357	Specialty Imaging and Graphics Technologies	3
GRC 421	Production Management for Print and Digital Media	4
ITP 330	Packaging Fundamentals	4
ITP 408	Fiber-Based Packaging	4
Approved Electives		
Select from the following:		11
GRC 329	Tangible Interactive Product Development	
GRC 347	Packaging Graphics Technology and Design	
GRC 437	Advanced Consumer Packaging	
GRC 452	Emerging Technologies in Graphic Communication	
ITP 341	Packaging Polymers and Processing	
ITP 411	Packaging Sustainability	
ITP 430	Healthcare Packaging	
ITP 475	Distribution Packaging Dynamics	
Other courses as approved by academic advisor		
Total units		29

User Experience/User Interface Concentration

CPE/CSC 123	Introduction to Computing ¹	4
GRC 339	Web Design and Production	4
GRC 429	Mobile User Experience	3
PHIL 323	Ethics, Science and Technology ²	4
Advisor Approved Electives		
Select from the following:		14
BUS 458	Solving Big World Challenges	
CSC courses (any, up to 8 units)		
ENGR 234	Introduction to Design Thinking	
GRC 220	Introduction to Applied Social Media in Graphic Communication	

GRC 322	Advanced Digital Typography	
GRC 329	Tangible Interactive Product Development	
GRC 340	Front-end Web Development	
GRC 347	Packaging Graphics Technology and Design	
GRC 400	Special Problems for Advanced Undergraduates	
GRC 433	User Experience Methods for Digital Innovation	
GRC 437	Advanced Consumer Packaging	
GRC 451	Management Topics in Graphic Communication	
GRC 452	Emerging Technologies in Graphic Communication	
GRC 453	Design Reproduction Topics in Graphic Communication	
Total units		29

- ¹ Only during Winter quarter may GRC students enroll in CPE/CSC 123.
² The prerequisite requires a lower-division PHIL course in GE Area C.

Graphic Communication Minor

Required Courses

GRC 101	Introduction to Graphic Communication	3
GRC 376	Web and Print Publishing	3-4
or GRC 201	Digital Publishing Systems	
GRC 211	Materials for Graphic Communication Applications	4
GRC 301	Digital Photography and Motion Graphics	4
GRC 318	Digital Typography	4
GRC 328	Digital and Offset Printing Methods	4
GRC 429	Mobile User Experience	3
or GRC 433	User Experience Methods for Digital Innovation	

Approved Electives

Select from the following:		2-4
GRC 372	Applied Graphic Communication Practices	
GRC 357	Specialty Imaging and Graphics Technologies	
GRC 420	Graphic Communication in Integrated Marketing Communications

Department Chair: Thomas Trice

Academic Programs

Program name	Program type
Asian Studies	Minor
History	BA, MA, Minor

Historians study the past in its variety and complexity. With such an analysis, students of history gain multiple perspectives on the present and an aptitude to plan intelligently for the future. Although the lessons to be learned from the past are rarely simple, solutions to present-day problems rest on comprehension of historical forces and events. History deepens our understanding of other peoples and cultures. All courses offered in the History Department seek to examine the issues of race, gender, class, and cultural diversity.

The study of history and its methods prepares students for a wide range of careers while also sensitizing them to the complexity and diversity of the past and present. History is an excellent foundation for a broadly based education in the liberal arts.

Undergraduate Programs

BA History

A degree in history is excellent preparation for students interested in a teaching career, the legal profession, or advanced work in the discipline. Students wishing to become business executives, administrators, and public servants profit immensely by gaining the methodological skills of the historian. Historians learn to gather, synthesize, analyze, and interpret evidence; they become skilled in presenting their conclusions to a general audience in a lucid and logical manner.

Asian Studies Minor

Provides interdisciplinary understanding of Asia – particularly its rich and varied histories, arts, languages, philosophies, religions and social patterns. Details and application forms are available from the History Department.

History Minor

Students choosing to add a strong historical dimension to their major field may enroll in the minor program in history. The curriculum stresses reading and writing skills as well as the ability to weigh evidence and think critically. Details and application forms are available from the History Department.

Master of Arts Degree in History

General Characteristics

The program in history emphasizes concentrated study in area specialties, with students gaining a thorough grounding in the latest historiography. In addition, the program maintains that historical study

must be predicated upon sustained research, engagement with historical problems, and written communication. The Cal Poly History MA Program:

- is tailored to students who want to pursue further graduate studies and careers in public history, education, museums and local or state government.
- takes students deep into particular cultures and eras and hones their command of historical research and analysis.
- develops students' critical thinking, written and oral communication, and their understanding of the rich diversity of human experience.
- allows students to work closely with faculty mentors in seminars and in a range of independent projects.

Program of Study

- Rigorous seminar work over a diverse range of historical topics and fields.
- Two tracks of study with unique culminating experiences.
- The Comprehensive Examinations option concludes with in-depth supervised study of two different general historical fields (48 units total).
- The MA Thesis option concludes with the writing of an original historical thesis over three academic quarters, supervised by three committee members (49 units total).

Foreign Language Study

Students are encouraged to learn and use foreign languages in the MA program. Students who plan further graduate study in history are particularly encouraged in this direction since proficiency in two foreign languages is usually required in doctoral programs.

Applications

Applications for admission are submitted through the Cal State Apply (<https://www2.calstate.edu/apply/>) website. Requests for further information should be directed to the Admissions Office or the Graduate Coordinator of the MA History program. All applications should include a writing sample (preferably an extended historical research paper), two recommendation letters, and undergraduate transcripts.

BA History

Program Learning Objectives

Upon completion of the BA in History, students should be able to:

1. Demonstrate a breadth and depth of historical knowledge of diverse regions of the world, and apply that knowledge toward a more critical and contextual understanding of the world today.
2. Recognize and understand the historical experiences and contributions of members of diverse groups of people throughout history, including those who have been historically marginalized and/or underrepresented in historical sources and historiography.
3. Identify and evaluate multiple perspectives and interpretations of the past, and grasp different approaches (e.g. political, social, cultural, intellectual, legal, economic) to historical research, both qualitative and quantitative.
4. Engage in and make constructive use of relevant theoretical concepts and historiographic debates.

- Locate, critically analyze, and interpret diverse types of primary sources used by historians, and synthesize information in primary and secondary sources in historical analysis.
- Effectively communicate historical knowledge and formulate convincing arguments, verbally and in analytical writing.
- Design, research, and produce original and sustained projects.
- Achieve Cal Poly's Diversity Learning Objectives (https://academicprograms.calpoly.edu/content/academicpolicies/diversity_lo/).
- Pursue diverse careers that require advanced skills in critical thinking, oral and written communication, synthesis-based research, intellectual innovation, and information literacy.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

² Excluding HIST 400, HIST 467, HIST 485, HIST 495.

³ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement) (4 units in Major) ¹	0
D2	Lower-Division D (4 units in Major) ¹	0
Upper-Division D (4 units in Support) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Asian Studies Minor

Required Courses

CHIN 103 or JPNS 103	Elementary Mandarin Chinese III Elementary Japanese III	4
HIST 310 or HIST 316 or HIST 319	East Asian Culture and Civilization Modern East Asia Modern South and Southeast Asia	4
PHIL 361 or PHIL 362 or RELS 301	Indian Philosophy Chinese and East Asian Philosophy Religions of Asia	4

Approved Electives

(At least 8 units must be upper-division) 16

Lower-Division:

ANT 201	Cultural Anthropology
CHIN 201	Intermediate Mandarin Chinese I
GEOG 150	Human Geography
HIST 221	World History, Beginnings to 1000 CE
HIST 222	World History, 1000-1800
HIST 223	World History, 1800 - Present
JPNS 201	Intermediate Japanese I
LA 211	History of Landscape Architecture: Ancient Civilizations through Colonial America
MU 121	Introduction to Non-Western Musics
POLS 225	Introduction to International Relations

Upper-Division:

ARCH 320	Topics in Architectural History
ART 317	Asian Art Survey
ART 318	Asian Art Topics: National, Religious, and Intellectual Movements
BUS 304	International Supply Chains (Topic: China)
ENGL 348	Asian American Literature
ES 322	Asian Americans in Popular Culture
ES 330	The Chinese American Experience
ES 335	The Filipina/o American Experience
HIST 409	Vietnam War at Home and Abroad
HIST 416	Modern Japan
HIST 417	20th Century China
HIST 418	Chinese Film and History
HIST 419	Modern Southeast Asia
HIST 421	The History of Prostitution
HIST 422	Japanese Postwar Film and History
HIST 423	The History of Vietnam
HIST 443	Topics and Issues in Asian History
MU 324	Music and Society (Topic: World Musics)
POLS 328	Politics of Developing Areas (Topic: East Asia)
POLS 337	U.S. and China in the Contemporary World

POLS 428	Issues and Topics in Comparative Politics (Topic: Chinese Politics)
RELS 306	Hinduism
RELS 307	Buddhism
WLC 310	Humanities in World Cultures (Topics: China, Japan, Thailand)

Total units 28

History Minor

Required Courses

HIST 303	Research and Writing Seminar in History	5
----------	---	---

Select from the following lower-division courses: 12

HIST 110	Western Civilization: Ancient to Renaissance
HIST 111	Western Civilization: Reformation to the Present
HIST 201	United States History to 1865
HIST 202	United States History Since 1865
HIST 206	United States Cultures
HIST 210	World History to 1800
HIST 213	Modern Political Economy
HIST 221	World History, Beginnings to 1000 CE
HIST 222	World History, 1000-1800
HIST 223	World History, 1800 - Present

History Electives

Select from 300-400 level HIST courses 12

Total units 29

MA History

Program Learning Objectives

1. Diversity: Construct a self-critical academic perspective on human diversity and social, cultural, political, economic and philosophical traditions.
2. Critical Thinking: Demonstrate skills of historical critical thinking and intellectual discipline: conceptualizing, applying, analyzing, synthesizing, and evaluating materials originating from historical observation, experience, reflection, and reasoning.
3. Knowledge: Demonstrate a breadth and depth of historical knowledge and an understanding of change over time.
4. Historiography: Demonstrate the ability to engage in, interpret, assess, critique, evaluate, and make constructive use of major historiographic debates in various historical fields.
5. Research: Demonstrate the research skills appropriate to a master's-level historian, analyzing and interpreting primary and secondary historical materials from different fields.
6. Communication: Demonstrate the ability to effectively communicate historical knowledge, interpretations, and arguments, in writing and in oral presentations.
7. Engagement: Participate in vibrant intellectual communities, seeking out and respecting others' ideas while working to construct one's own positions and approaches as a historian.

8. Perspective: Construct a broad perspective on the past that enables one to better understand and evaluate the complexities of history and its relevance to one's own time.

There are two options for the MA degree in History, Comprehensive Exam or Thesis.

Required Courses

HIST 504	Graduate Study in History	4
----------	---------------------------	---

History Seminars

Select from the following: 20

Each course is repeatable up to 12 units.

HIST 505	Graduate Seminar in United States History
HIST 506	Graduate Seminar in European History
HIST 507	Graduate Seminar in East Asian History
HIST 508	Graduate Seminar in Latin American History
HIST 509	Graduate Seminar in African History
HIST 510	Graduate Seminar in Comparative History
HIST 511	Graduate Seminar in Middle Eastern History

History Electives

HIST Electives (400-500 level) ¹ 16

Culminating Experience

Select from the following: 8-9

Comprehensive Exam Option (total 48 units)

HIST 512	Supervised Reading for Comprehensive Exams (2) (2)
HIST Electives (500 level) (4)	

Thesis Option (total 49 units)

HIST 599	Thesis (3) (3) (3)
----------	--------------------

Total units 48-49

¹ All courses must be taken after undergraduate degree has been awarded. Undergraduate courses or their equivalent may not be repeated.

Interdisciplinary Studies in the Liberal Arts

Faculty Office Building (Bldg. 47), Room 36L

Department Chair: David Kirby

Academic Programs

Program name	Program type
Ethics, Public Policy, Science and Technology	Minor
Gender, Race, Culture, Science and Technology	Minor
Interdisciplinary Studies	BA
Media Arts, Society and Technology	Minor
Science Communication	Minor

The Department offers interdisciplinary and international classes in a wide variety of subject areas, from applied practice in media arts and technologies; to the study of social, cultural, political, and ethical issues involved in science and technology; to courses that examine world cultures. Many ISLA classes satisfy University general education and breadth requirements.

In addition to the BA in Interdisciplinary Studies, ISLA also offers four interdisciplinary Science, Technology and Society (STS) minors: Ethics, Public Policy, Science and Technology; Gender, Race, Culture, Science and Technology; Media Arts, Society and Technology and Science Communication. These STS minors are available to students throughout the University, regardless of their technical backgrounds.

Undergraduate Programs BA Interdisciplinary Studies

The BA Interdisciplinary Studies degree provides a flexible, coherent and rigorous baccalaureate education designed around a central theme or guiding question and culminating in an interdisciplinary senior project that draws upon the perspectives or methodologies of at least two disciplines.

The degree reflects the university's commitment to empower students with a holistic, interdisciplinary experience that prepares them for success in the global economy. The core IS courses facilitate students' integration of the multidisciplinary perspectives and knowledges they gain through their other coursework. The culminating senior project draws upon the insights and methodologies gained through students' chosen course of study. This process of honing a guiding question or theme, identifying the methodologies and knowledges necessary to pursue it, and completing an original research or creative project in response to it, develops the habits of mind of a lifelong learner.

The program also reflects the university's commitment to learn by doing, most notably through the senior project, in which students will produce a piece of original interdisciplinary scholarship or a hands-on project that integrates the methods and perspectives of more than one discipline. Students' experiential learning will be further enhanced through the varied opportunities to participate in learn by doing that occurs in classes throughout the college's curriculum, including through internships and project-based coursework.

Ethics, Public Policy, Science and Technology Minor

The Ethics, Public Policy, Science and Technology (EPPST) minor enables students to understand the complexities of contemporary science and technology policies as they relate to the broader public, ethical theories and applications, and personal and societal values; appreciate the historical influences on existing policies and practices; evaluate current policies; and assess the potential outcomes of proposed policy changes. A broad range of elective courses provides students with the opportunity to customize the EPPST minor to their particular interests, allowing them to pursue further knowledge in a focused subject area—such as biotechnology, sustainability and the environment, genetic engineering, health, development, agriculture, and the technologies of war. Students completing the EPPST minor will gain important skills for creating, proposing, promoting, and evaluating policies that respond to the profound challenges and choices we face related to science and technology in the 21st century at local, national, and international levels. The EPPST minor is not open to students who have declared a minor in one of the other STS minors: Gender, Race, Culture, Science and Technology (GRCST); Media Arts, Society and Technology (MAST); and Science Communication (SC).

Gender, Race, Culture, Science and Technology Minor

The Gender, Race, Culture, Science and Technology (GRCST) minor provides students with the opportunity to explore and analyze the historical and contemporary relationships between gender, race, culture, science, technology, and medicine in local, national, and transnational contexts. Utilizing feminist and critical race approaches from the fields of gender and ethnic studies, the GRCST minor examines the role of cultural, ethical, social, political, and economic factors in determining the norms, values and meanings of scientific, technological, and medical practices, with an emphasis on the ways in which the production and applications of science, technology, and medicine shape and are shaped by knowledge and beliefs about gender, race, class, and sexuality. Students completing the GRCST minor will gain important intellectual and practical skills for creating, enacting, and evaluating efforts to create more socially just, equitable, and inclusive science, technology, and medicine in an increasingly diverse and globalized world. The GRCST minor is not open to students who have declared a minor in one of the other STS minors: Ethics, Public Policy, Science and Technology (EPPST); Media Arts, Society and Technology (MAST); and Science Communication (SC).

Media Arts, Society and Technology Minor

The Media Arts, Society and Technology (MAST) minor encourages students to explore the ways in which the media arts are enabled and shaped by progress in science and technology while also being uniquely situated to promote engagement with and critical reflection about the meanings of scientific, technical, and social progress. Throughout the MAST minor, students are provided with the opportunity to develop and refine their expertise in the creative, visual, communicative, and performing arts, such as film, video, still photography, sound design, stage and lighting design, computer graphics, and interactive entertainment. Through hands-on projects and explorations of media history and theory, students completing the MAST minor will develop and apply knowledge and skills in conceptual and critical thinking,

media literacy, teamwork, leadership, interdisciplinary collaboration, and project management, and will be prepared to function as both cultural commentators and creators positioned to address and respond to the profound challenges and choices we face in the 21st century. The MAST minor is not open to students who have declared a minor in one of the other STS minors: Ethics, Public Policy, Science and Technology (EPPST); Gender, Race, Culture, Science and Technology (GRCST); and Science Communication (SC).

Science Communication Minor

The Science Communication (SC) minor enables students to investigate how individuals and societies create, disseminate, maintain, and challenge perceptions of science, technology, and risk in multiple contexts. The minor focuses on key debates and controversies involving science and technology, public understandings and misunderstandings of scientific and technical expertise, industry-public relations, cultures of regulation and compliance, hazards, uncertainties, crisis management, and the politics of evidence. Through hands-on projects, SC students will develop and practice specific skills for communicating about science and technology to various audiences across multiple media formats. A broad range of elective courses allows students to customize the SC minor to their particular interests, enabling them to pursue knowledge in a focused subject area or further refine communication production skills. Students completing the SC minor will be prepared to understand, engage with, respond to, and communicate about the profound challenges and choices we face related to science and technology in the 21st century. The SC minor is not open to students who have declared a minor in one of the other STS minors: Ethics, Public Policy, Science and Technology (EPPST); Gender, Race, Culture, Science and Technology (GRCST); and Media Arts, Society and Technology (MAST).

BA Interdisciplinary Studies

Program Learning Objectives

1. Identify and think critically about the assumptions, strategies, and potential biases underlying discipline-based and interdisciplinary inquiries.
2. Conduct interdisciplinary research and/or engage in creative activities that incorporate and synthesize information, theory, and methodological approaches from more than one discipline in a culturally-competent way.
3. Apply interdisciplinary approaches to understand, contextualize, and propose solutions to complex issues or problems, especially those relating to students' emphasis areas.
4. Communicate effectively both in writing and orally.
5. Collaborate productively in pluralistic settings and with people of diverse experiences, identities, and worldviews.
6. Make reasoned, ethical, and socially responsible decisions.
7. Engage in self-motivated and self-directed learning, in order to become life-long learners.
8. Employ the intellectual and practical skills necessary to create and engage with a more inclusive, just and equitable world.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

Introductory-level Interdisciplinary Course

Select from the following: ¹		4
ES 112	Race, Culture, and Politics in the United States	
HIST 206	United States Cultures	
HIST 216	Comparative Social Movements	
ISLA 123	Introduction to Science, Technology & Society	
JOUR 219	Multicultural Society and the Mass Media	
JOUR 228	Media, Self and Society	
RELS 201	Religion, Dialogue, and Society	
WGQS 201	Gender and Sexuality in US Society and Politics	
WGQS 210	Gender and Sexuality in Visual and Popular Culture	
ISLA 201	Introduction to Interdisciplinary Studies	4
ISLA 255	Introduction to Interdisciplinary Theory and Methods	4

Basic Statistics Course

Select from the following: ^{1,2}		4
STAT 130	Introduction to Statistical Reasoning (B4)	
STAT 217	Introduction to Statistical Concepts and Methods (B4)	
STAT 218	Applied Statistics for the Life Sciences (B4)	

Communication Course

Select from the following: ^{1,3}		4
COMS 213	Organizational Communication	
COMS 322	Persuasion	
COMS 385	Media Criticism	
ENGL 311	Advanced Rhetorical Inquiry and Composing	
ENGL 312	Translingual Rhetorical Inquiry and Writing	
ENGL 317	Technical Editing	
ENGL 467	Topics in Rhetoric and Writing ⁴	
PSY 304	Intergroup Dialogues	

Upper-Division ISLA Electives

Select from the following: ^{1,3}		8
COMS/ISLA 395	Science Communication	
ISLA 303	Values and Technology	
ISLA 305	Topics in Public Engagements with STEM ⁴	

ISLA 320	Topics and Issues in Values, Media and Culture ⁴	
ISLA/WGQS 335	Feminist Studies of Popular Culture and Whiteness	
ISLA 340	Media Arts and Technologies: Storytelling	
ISLA 341	Media Arts and Technologies: Cinematic Process	
ISLA 350	The Global Environment	
ISLA 465	Internship	
ISLA 355	Interdisciplinary Research Methods	4
ISLA 440	Advanced Interdisciplinary Studies Seminar ^{4,5}	4
ISLA 461	Senior Project	4
Concentration		
See list of Interdisciplinary Studies concentrations below.		32
GENERAL EDUCATION (GE) (See GE program requirements below.)		68
FREE ELECTIVES		
Free Electives ⁶		40
8 units of free electives may need to be at the 300-400 level to ensure completion of the required minimum of 60 units of upper-division courses.		
Total units		180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Any GE Upper-Division STAT course may be substituted to fulfill this Major requirement. Non-GE courses teaching statistical or quantitative analysis methods may be substituted to satisfy this requirement but only with the consent of the ISLA Department Chair. A major support substitution should be initiated with the ISLA Department Chair for any upper-division STAT course. In those cases, students will then have to take an additional course to satisfy the GE requirement.
- ³ If course is taken to meet the Communication Course or Upper-Division Electives requirement, it cannot be double-counted in the Concentration. Please consult with academic advisor.
- ⁴ Topics courses may be used to satisfy a Major requirement and are repeatable in the Concentrations with a different topic. Total credit limited to 8 units.
- ⁵ ISLA 440 total credit limited to 8 units.
- ⁶ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations

Students may select one of the following concentrations:

- Ethics, Law and Social Justice (p. 304)
- Global Citizenship and Social Sustainability (p. 304)
- Health and Society (p. 305)
- Science, Technology and Society (p. 306)
- Visual Media and Cultural Studies (p. 307)

General Education (GE) Requirements

- 72 units required, 4 of which are specified in Major and/or Support.
- If any of the remaining 68 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives		8
Total units		68

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Ethics, Law and Social Justice Concentration

Ethics

Select from the following: 8

PHIL 328	Technologies and Ethics of Warfare
PHIL 331	Ethics
PHIL 332	History of Ethics
PHIL 343	Power, Alienation, and Political Life
PHIL 439	Selected Problems in Ethics and Political Philosophy
WGQS 336	Feminist Ethics, Gender, Sexuality and Society

Law

Select from the following: 8

ES 406	Indigenous Peoples and International Law and Policy
JOUR 302	Mass Media Law
JOUR 418	Copyright, Trademark, Patent and Commercial Speech in Digital Media
PHIL 334	Philosophy of Law
POLS 334	Jurisprudence
POLS 341	American Constitutional Law
POLS 342	Constitutional Theory
POLS 426	International Organizations and Law
POLS 445	Voting Rights and Representation
PSY 375	Forensic Psychology
SOC 402	Gender, Crime, and Violence
WGQS 417	Feminist Legal Theory

Social Justice

Select from the following: 8

ES 325	African American Gender & Sexuality
ES 380	Critical Race Theory
ES 381	The Social Construction of Whiteness
POLS 343	Civil Rights in America
POLS 344	Civil Liberties
POLS 419	Social Movements and Political Protest
POLS 459	The Politics of Poverty
SOC 406	Juvenile Justice and Delinquency
SOC 412	Contemporary Issues in Criminal Justice
WGQS 301	Contemporary Issues in Women's and Gender Studies (Topic Requires Department Approval)
WGQS 302	Contemporary Issues in Queer Studies (Topic Requires Department Approval)
WGQS 370	Religion, Gender, and Society
WGQS 457	U.S. Reproductive Politics

Ethics, Law & Social Justice Electives

Select from the following: 8

Any courses that were not taken to satisfy the core requirements above can count as electives.

ISLA 440	Advanced Interdisciplinary Studies Seminar
RELS 374	Religion and Violence
RELS 378	Religion and Contemporary Values

Total units 32

- ¹ To ensure an interdisciplinary course of study, courses chosen should be from at least two different disciplines (as indicated by distinct course prefixes) and no more than half of them can have the same course prefix.
- ² If a course is taken to fulfill a Major requirement, it cannot be double-counted in the Concentration. There are some exceptions for topic courses. Please consult with academic advisor.
- ³ The student is responsible for checking prerequisites for all courses.
- ⁴ ISLA 440 is required in the Major core and repeatable in the Concentration with a different topic as long as the topic has been approved. Total credit limited to 8 units.
- ⁵ Topic courses require department approval. Please contact department for a list of approved topics.

Global Citizenship and Social Sustainability Concentration

Sustainability and Global Environment

Select from the following: 4

BRAE 348	Energy for a Sustainable Society
GEOG 333	Human Impact on the Earth
GEOG 408	Geography of International Development
ISLA 330	Cal Poly Land: Nature, Technology, and Society
ISLA 350	The Global Environment
NR 323	Human Dimensions in Natural Resources Management
NR 324	Social Dimensions of Sustainable Food and Fiber Systems
PHIL 340	Environmental Ethics
PSC 320	Energy, Society and the Environment

Global and Cross-Cultural Communication

Select from the following: 4

COMS 316	Intercultural Communication
COMS 320	Intergroup Communication
COMS 390	Environmental Communication
JOUR 401	Global Communication
Any 300 or 400-level Language course	

Global Political Economy

Select from the following: 4

POLS 308	Political Violence and Conflict Resolution
POLS 310	The Politics of Race, Class, Gender and Sexuality
POLS 321	Comparative Political Culture
POLS 325	Global Political Issues

POLS 328	Politics of Developing Areas
POLS 332	World Food Systems
POLS 339	Authoritarian and Democratic Rule
POLS 452	Technology and International Development
POLS 459	The Politics of Poverty

Ethnicity and Culture

Select from the following: 4

ES 360	Ethnicity and the Land
HIST 309	Cultures of West Africa and the African Diaspora
HIST 313	Modern Middle East
HIST 316	Modern East Asia
HIST 319	Modern South and Southeast Asia
HIST 335	Modern Europe, 1914-Present
HIST 338	Modern Latin America
HIST 341	Modern Central America
SOC 309	The World System and Its Problems
SOC 315	Global Race and Ethnic Relations

Global Citizenship & Social Sustainability Electives

Select from the following: 16

Any courses that were not taken to satisfy the core requirements above can count as electives.	
CRP 334	Cities in a Global World
ES 351	Gender, Race, Class, Nation in Global Engineering, Technology & International Development
GEOG 308	Global Geography
HIST 310	East Asian Culture and Civilization
ISLA 440	Advanced Interdisciplinary Studies Seminar
PHIL 361	Indian Philosophy
PHIL 362	Chinese and East Asian Philosophy
PSY 311	Environmental Psychology
PSY 352	Conflict Resolution: Violent and Nonviolent
RELS 301	Religions of Asia
RELS 302	Abrahamic Religions: Judaism, Christianity, and Islam
RELS 380	Religion and Politics in the Israeli-Palestinian Conflict
SOC 301	Social Work and Social Welfare Institutions
SOC 305	Social Movements
SOC 323	Social Stratification
SOC 327	Social Change
WGQS 320	Women, Gender and Sexuality in Global Perspective
WLC 310	Humanities in World Cultures

Total units 32

¹ To ensure an interdisciplinary course of study, courses chosen should be from at least two different disciplines (as indicated by distinct course prefixes) and no more than half of them can have the same course prefix.

- ² If a course is taken to fulfill a Major requirement, it cannot be double-counted in the Concentration. There are some exceptions for topic courses. Please consult with academic advisor.
- ³ The student is responsible for checking prerequisites for all courses.
- ⁴ ISLA 440 is required in the Major core and repeatable in the Concentration with a different topic as long as the topic has been approved. Total credit limited to 8 units.

Health and Society Concentration

Environmental Health

Select from the following: 4

ES 360	Ethnicity and the Land
ISLA 330	Cal Poly Land: Nature, Technology, and Society
ISLA 350	The Global Environment
PHIL 340	Environmental Ethics
PSY 311	Environmental Psychology
SOC 308	Sociology of the Environment
WGQS 301	Contemporary Issues in Women's and Gender Studies (Topic Requires Department Approval)

Gender, Race, Culture, and Health

Select from the following: 4

ANT 460	Queer Anthropology
ISLA 320	Topics and Issues in Values, Media and Culture (Topic Requires Department Approval)
PSY 324	Psychology of Gender
PSY 372	Multicultural Psychology
PSY 475	The Social Psychology of Prejudice
WGQS 302	Contemporary Issues in Queer Studies (Topic Requires Department Approval)
WGQS 311	Sociology of Genders and Sexualities
WGQS 340	Sexuality Studies
WGQS 350	Gender, Race, Culture, Science & Technology
WGQS 450	Feminist Theory

Health Systems

Select from the following: 4

BIO 308	Genetic Engineering Technology
HLTH 305	Drugs in Society
POLS 332	World Food Systems
WGQS 457	U.S. Reproductive Politics

Medical Anthropology

Select from the following: 4

ANT 344	Sex, Death, and Human Nature
ANT 401	Culture and Health
ANT 402	Nutritional Anthropology
SOC 326	Sociology of the Life Cycle
SOC 470	Selected Advanced Topics (Topic Requires Department Approval)

Health & Society Electives

Select from the following: 16

Any courses that were not taken to satisfy the core requirements above can count as electives.

ANT 345	Human Behavioral Ecology
BIO 302	Human Genetics
BIO 305	Biology of Cancer
COMS 418	Health Communication
COMS 422	Rhetorics of Science, Technology, and Medicine
HLTH 320	Media and Technology in Health Promotion
ISLA 305	Topics in Public Engagements with STEM
ISLA 440	Advanced Interdisciplinary Studies Seminar ⁴
PHIL 339	Biomedical Ethics
PSY 306	Adolescence
PSY 310	Psychology of Death
PSY 318	Psychology of Aging
PSY 320	Health Psychology
PSY 344	Behavioral Genetics
PSY 465	Cross-Cultural International Psychology
PSY 480	Cognitive Neuroscience
RELS 372	Spiritual Extremism: Asceticism, Mysticism, and Madness
SOC 326	Sociology of the Life Cycle

Total units **32**

¹ To ensure an interdisciplinary course of study, courses chosen should be from at least two different disciplines (as indicated by distinct course prefixes) and no more than half of them can have the same course prefix.

² If a course is taken to fulfill a Major requirement, it cannot be double-counted in the Concentration. There are some exceptions for topics courses. Please consult with academic advisor.

³ The student is responsible for checking prerequisites for all courses.

⁴ ISLA 440 is required in the Major core and repeatable in the Concentration with a different topic as long as the topic has been approved. Total credit limited to 8 units.

⁵ Topic courses require department approval. Please contact department for a list of approved topics.

Science, Technology and Society Concentration

Science Communication

Select from the following: 4

AGC 475	Crisis Communication in Food and Agriculture
COMS 317	Technology and Human Communication
COMS 390	Environmental Communication
COMS 395	Science Communication
COMS 418	Health Communication

COMS 422	Rhetorics of Science, Technology, and Medicine
ISLA 305	Topics in Public Engagements with STEM

Philosophy of Science and Technology

Select from the following: 4

PHIL 321	Philosophy of Science
PHIL 322	Philosophy of Technology
PHIL 323	Ethics, Science and Technology
PHIL 327	Robot Ethics
PHIL 328	Technologies and Ethics of Warfare
PHIL 340	Environmental Ethics

Gender, Race, Culture, Science & Technology

Select from the following: 4

ANT 425	Meaning, Gender, and Identity in Anthropological Theory
ISLA 320	Topics and Issues in Values, Media and Culture (Topic Requires Department Approval)
LAES 411	Technology and Community Engagement
SOC 308	Sociology of the Environment
WGQS 301	Contemporary Issues in Women's and Gender Studies (Topic Requires Department Approval)
WGQS 302	Contemporary Issues in Queer Studies (Topic Requires Department Approval)
WGQS 350	Gender, Race, Culture, Science & Technology
WGQS 351	Gender, Race, Class, Nation in Global Engineering, Technology & International Development

Science, Technology, and Society Electives

Select from the following: 20

Any courses that were not taken to satisfy the core requirements above can count as electives.	
BRAE 348	Energy for a Sustainable Society
GEOG 325	Climate and Humanity
HIST 350	The Scientific Revolution, c. 1500-1800
HIST 355	History of Network and Information Technologies
HIST 407	Science and Society in Cold War America
HIST 432	United States Environmental History
ISLA 303	Values and Technology
ISLA 330	Cal Poly Land: Nature, Technology, and Society
ISLA 350	The Global Environment
ISLA 440	Advanced Interdisciplinary Studies Seminar ⁴
ISLA 456	Advanced Project-Based Learning in Science, Technology & Society
POLS 451	Technology and Public Policy

PSC 307	Nuclear Energy and Weapons in the Modern World
PSC 320	Energy, Society and the Environment
WLC 370	Language, Technology and Society
Total units	32

- ¹ To ensure an interdisciplinary course of study, courses chosen should be from at least two different disciplines (as indicated by distinct course prefixes) and no more than half of them can have the same course prefix.
- ² If a course is taken to fulfill a Major requirement, it cannot be double-counted in the Concentration. There are some exceptions for topics courses. Please consult with academic advisor.
- ³ The student is responsible for checking prerequisites for all courses.
- ⁴ ISLA 440 is required in the Major core and repeatable in the Concentration with a different topic as long as the topic has been approved. Total credit limited to 8 units.
- ⁵ Topic courses require department approval. Please contact department for a list of approved topics.

Visual Media and Cultural Studies Concentration

Art, Dance, Music, and Theatre

Select from the following:		4
ART 314	History of Photography	
ART 315	Art History - Art Since 1945	
ART 318	Asian Art Topics: National, Religious, and Intellectual Movements	
ART 375	Intersectional Feminist Art Histories	
DANC 321	Cultural Influence on Dance in America	
ENGL 411	New Media Arts I	
ENGL 412	New Media Arts II	
MU 324	Music and Society	
MU 325	America's Music	
MU 328	Women in Music	
TH 305	Topics in Diversity on the American Stage	
TH 390	Global Theatre and Performance	

Literature

Select from the following:		4
ENGL 345	Women Writers of the Twentieth and Twenty-First Centuries

- ¹ Please check prerequisites. Your ability to select specific courses may vary depending upon the curriculum requirements for your major.
- ² At least half of the units completed for the Science Communication Minor must be upper-division (300-400 level).
- ³ Science Communication Electives courses may also be selected from unused Science Communication Core.
- ⁴ Minor advisor approval required for this course to count as an Science Communication Elective. Approval is dependent on subtitle.

Journalism

Graphic Arts Bldg. (26), Room 228
Phone: 805.756.2508
<https://journalism.calpoly.edu>

Department Chair: Brady Teufel

Academic Program

Program name	Program type
Journalism	BS

The Journalism Department offers professional preparation leading to the Bachelor of Science degree in Journalism. The focus is on core media skills including information gathering, writing, visual and multimedia storytelling, editing, and strategic and critical thinking. We emphasize the core values of accuracy, ethical behavior, diversity and inclusion, and freedom of speech. All majors must complete the basic journalism core courses in addition to a sequence of courses selected from a concentration in either News, Public Relations, Media Innovation or an Individualized Course of Study (ICS).

All journalism majors are enrolled in courses that contribute to the department's award-winning student media organization, Mustang Media Group. Here, students gain hands-on experience working on digital, print and broadcast editions of Mustang News; the internal public relations firm; Cal Poly's radio station, KCPR-FM; and program operations of Cal Poly's TV station, MNTV. They also apply acquired skills and develop professional abilities in an approved media internship.

Undergraduate Program

BS Journalism

Journalism students learn the skills, values and competencies that lead to a successful career in a variety of media professions. All majors complete basic journalism core courses and select a concentration in News, Public Relations, Media Innovation or, in select circumstances, choose an Individualized Course of Study. Students are strongly encouraged to take a minor to satisfy their elective units.

Concentrations

News

Students will learn how to ethically report on events and trends, interview sources and produce accurate, timely news stories for digital, print and broadcast platforms while covering the campus and the local communities.

Public Relations

The focus of the Public Relations Concentration is on developing accurate and ethical communications that influence, engage and build relationships between an organization and its stakeholders. Students will learn how to analyze public opinion and attitudes, plan, implement and assess public relations campaigns and produce multimedia content while working with organizations in the greater San Luis Obispo community.

Media Innovation

This concentration lies at the intersection of journalism, technology and business. Its focus is on telling multimedia stories on multiple platforms (including emerging technologies), understanding audiences, making decisions with analytics, and solving problems responsibly and ethically.

Students in Media Innovation will learn how to analyze audience needs, develop new storytelling approaches, create media products, experiment with revenue models, foster inclusive civic participation and drive change within media organizations.

Individualized Course of Study

Concentration consists of a minimum of 20 units, 16 of which must be upper division units. The student selects the courses in consultation with the concentration coordinator and department head and provides written justification for the courses and the way they constitute a cohesive, integrated program of study. The list of courses serves as a contract between the student and the Department.

BS Journalism

Program Learning Objectives

Graduates with a BS in Journalism will:

1. Apply the principles and laws of freedom of speech and press, in a global context, and for the United States.
2. Demonstrate an understanding of the multicultural history and role of professionals and institutions in shaping communications.
3. Demonstrate communication that empowers those traditionally disenfranchised in society, especially as grounded in race, ethnicity, gender, sexual orientation, ability and socioeconomic status, domestically and globally, across communication and media contexts.
4. Present images and information effectively and creatively, using appropriate tools and technologies.
5. Write correctly and clearly in forms and styles appropriate for the communications professions, audiences and purposes they serve.
6. Demonstrate an understanding of professional ethical principles and work ethically in pursuit of truth, accuracy, fairness and equity.
7. Apply critical thinking skills in conducting research and evaluating information by methods appropriate to the communications professions in which they work.
8. Effectively and correctly apply basic numerical and statistical concepts.
9. Critically evaluate their own work and that of others for accuracy and fairness, clarity, appropriate style, grammatical correctness and equity-minded reporting.
10. Apply tools and technologies appropriate for the communications professions in which they work.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: Up to 4 units of credit/no credit grading may be selected for courses in Major or Support.

MAJOR COURSES

Journalism Core

JOUR 102	Introduction to Journalism	1
JOUR 203	News Reporting and Writing	4
JOUR 219	Multicultural Society and the Mass Media	4
or JOUR 401	Global Communication	
JOUR 228	Media, Self and Society (D2) ¹	4
JOUR 285	Introduction to Multimedia Journalism	4
JOUR 302	Mass Media Law	4
JOUR 303	Web Audio and Video	4
JOUR 312	Public Relations	4
JOUR 334	Editing	4
JOUR 390	Visual Communication for the Mass Media	4
JOUR 402	Journalism Ethics	4
JOUR 444	Media Internship	3

Concentration
(See list of Concentrations below) 20

Journalism Electives
Select from the following: ² 12

Any JOUR course, including those listed above, if not used to meet Major requirements, and:

JOUR 201	News Media and Democracy	
JOUR 220	Introduction to Radio Broadcasting	
JOUR 270	Selected Topics	
JOUR 320	Cal Poly Radio Laboratory	
JOUR 331	Contemporary Advertising	
JOUR 387	Sports Communication	
JOUR 400	Special Problems for Advanced Undergraduates	
JOUR 418	Copyright, Trademark, Patent and Commercial Speech in Digital Media	
JOUR 455	Media Management Laboratory	
JOUR 470	Selected Advanced Topics	
JOUR 471	Selected Advanced Laboratory	

Approved Electives
Students are encouraged to pursue minors or develop other areas of interest outside of Journalism through Approved Electives and with the following restrictions: 36

At least 24 units must be upper-division courses with a lecture or seminar component. This excludes activity-only, lab-only, or supervision courses such as internships.

SUPPORT COURSES
Select from the following (B4): ¹ 4

STAT 130	Introduction to Statistical Reasoning	
STAT 217	Introduction to Statistical Concepts and Methods	
STAT 218	Applied Statistics for the Life Sciences	
STAT 251	Statistical Inference for Management	

GENERAL EDUCATION (GE)
(See GE program requirements below.) 64

FREE ELECTIVES	
Free Electives ³	0
Total units	180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² If a course is taken to fulfill the Journalism Electives requirement, it cannot be double-counted in the ICS concentration.
- ³ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations (select one)

- Media Innovation (p. 314)
- News (p. 314)
- Public Relations (p. 314)
- Individualized Course of Study (p. 314)

General Education (GE) Requirements

- 72 units required, 8 of which are specified in Major and/or Support.
- If any of the remaining 64 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Major) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives		8
Total units		64

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Media Innovation Concentration

JOUR 350	Data Journalism	4
or BUS 310	Introduction to Entrepreneurship

Academic Programs

Program name	Program type
Music	BA, Minor

The Bachelor of Arts in Music introduces a student to the role of music in today's world, helps form personal goals, and provides the discipline, skills and knowledge to accomplish those goals. The program develops musical skills, encourages creativity, and cultivates vision for the future. The University's polytechnic emphasis also provides an excellent opportunity to explore music in conjunction with a wide range of other fields. Graduates are prepared to begin specialized study at the graduate level and to enter a wide variety of professional careers.

The Music Department is a valuable resource for the non-music major. Its courses and performing ensembles are open to all students who wish to enrich their lives through music. Qualified students may explore the subject in depth by minoring in music.

The Music Department also serves as a cultural center for both the university and the community through a program of public performances by student and faculty groups and through clinics, workshops, concerts, and lectures by outstanding individuals from outside the university.

Acceptance into the music major program requires a demonstrated ability on an instrument, in voice, or talent through other musical media, plus the ability to read music at a fundamental level.

Undergraduate Programs

BA Music

Designed for the student who wants a broad education in music, the Bachelor of Arts degree offers a balanced program of study in a wide range of subjects. In addition to the traditional emphasis on music theory, history, and performance, Cal Poly's program includes American music, music of non-Western cultures, and the application of sound design. The program provides a large number of elective courses which allows the student to concentrate in a particular area or combine music with other subjects.

Bachelor of Arts Degree Requirements

1. All new students will take placement examinations in piano skills, music theory, and musicianship. Students who audition in person for the major will take the placement exams at the time of their audition. Students who submit a recording with their application will be contacted by the Music Department to schedule the placement exams during the application period. Separate auditions are required for assignment to performing ensembles. Students who wish to take piano, theory, or musicianship courses beyond the beginning level must pass the appropriate placement test. Regardless of courses taken prior to coming to Cal Poly, students are required to remedy deficiencies before enrolling in advanced music theory or music history courses.

2. Each music major must be enrolled in at least 6 units of music courses each quarter, including a performance ensemble and lessons, until curricular requirements are met. (See the Department for details regarding appropriate ensembles and applied study policies.) Each student enrolled in private instruction must take an applied music jury at the end of Spring Quarter.
3. Each student is required to attend a minimum of 6 concerts per quarter.
4. At the end of the sixth quarter of enrollment a student must take a mid-point evaluation to verify progress and potential in music. External transfer students must take the theory and musicianship portions of the mid-point evaluation at the beginning of their first quarter of enrollment; they must take performance skills (jury) and piano proficiency exams by the end of their third quarter of enrollment. The testing timetable for internal transfers will be established on a case-by-case basis. The mid-point evaluation includes the following:
 - a. individual performance skills (should be at the MU 250 level; tested through a jury)
 - b. musicianship skills up through the level of Musicianship III
 - c. knowledge of music theory up through the level of Theory II
 - d. piano proficiency (see No. 5 below)
5. Each student must pass examinations in six areas of piano proficiency (repertoire, sightreading, transposition, harmonization of a melody, accompanying, score-reading) as part of the mid-point evaluation.
6. Use of Music Department instruments, scheduled practice rooms, electronic studio, or lockers requires a Music Use Fee. See the Music Department Office for details.
7. It is important that each student stay closely in touch with his/her advisor in order to progress through the music major program in the most efficient manner.
8. The Music Department is not able to offer the full complement of performing ensembles and private instruction during the Summer Quarter; it is important to take this into consideration when planning coursework for completion of the major.

A music major handbook giving complete details of the program, policies, and forms is available from the Music Department.

Music Minor

A minor is available to students who desire documented competency in music. An individualized curriculum (incorporating theory, history, and performance) based on the following guidelines is developed in consultation with a member of the music faculty. Students must complete one academic music lecture course at Cal Poly, such as MU 101 or MU 120, before applying for the minor. Information and application forms for the declaration of a Music minor are available in the Music Department Office, as well as online at music.calpoly.edu (<https://music.calpoly.edu/>).

BA Music

Program Learning Objectives

1. Understand the role of music in today's diverse world
2. Understand the applications of technology to musical activities
3. Form personal goals in the field of music and complete a capstone project related to those goals

4. Demonstrate understanding of music theory within a cultural context
5. Demonstrate understanding of music history within a cultural context
6. Demonstrate competence in musical performance within a cultural context
7. Demonstrate competence in musicianship skills
8. Communicate effectively

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

MU 103	Music Theory I: Diatonic Materials	4
MU 104	Musicianship I	2
MU 105	Music Theory II: Chromatic Materials	4
MU 106	Musicianship II	2
MU 108	Musicianship III	2
MU 121	Introduction to Non-Western Musics	4
MU 303	Music Theory III: Advanced Chromaticism	4
MU 305	Music Theory IV: Contemporary Practices	4
MU 311	Introduction to Recording, Synthesis, and Production	4
MU 320	Music Research and Writing	4

MU 470	Music History: Selected Advanced Topics

Major Ensemble 100-level

Select from the following:		6
MU 168	Piano Accompanying	
MU 170	University Jazz Band	
MU 171	Instrumental Ensembles	
MU 172	Wind Orchestra	
MU 173	Wind Ensemble	
MU 174	Symphony Orchestra	
MU 177	Chamber Winds	
MU 181	PolyPhonics	
MU 183	Vocal Ensemble	
MU 185	University Singers	
MU 186	Chamber Choir	
MU 188	Arab Music Ensemble	

Major Ensemble at 300-level

Select from the following:		3
MU 368	Piano Accompanying	
MU 370	University Jazz Band	
MU 371	Instrumental Ensemble	
MU 372	Wind Orchestra	
MU 373	Wind Ensemble	
MU 374	Symphony Orchestra	
MU 377	Chamber Winds	
MU 381	PolyPhonics	
MU 383	Vocal Ensemble	
MU 385	University Singers	
MU 386	Chamber Choir	
MU 388	Arab Music Ensemble	

Applied Study

Select from the following:		9
MU 150	Applied Music	
MU 250	Applied Music	
MU 350	Applied Music	
MU 450	Applied Music	

GENERAL EDUCATION (GE)

(See GE program requirements below.) 72

FREE ELECTIVES

Free Electives ²	21
Total units	180

¹ MU 325, MU 326, MU 336, MU 470 can satisfy this requirement if not previously used to satisfy another required music course.

² If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		

GE Electives	8
Total units	72

Music Minor

Required Courses

MU 154	Beginning Voice	
Class Piano		
MU 151	Beginning Class Piano	
MU 152	Elementary Class Piano	
MU 253	Advanced Class Piano	
Class Guitar		
MU 155	Beginning Guitar	
Any Lower-division Ensemble		
MU 168	Piano Accompanying	
MU 170	University Jazz Band	
MU 171	Instrumental Ensembles	
MU 172	Wind Orchestra	
MU 173	Wind Ensemble	

MU 174	Symphony Orchestra	
MU 176	Mustang Band	
MU 177	Chamber Winds	
MU 178	Field Show Marching Skills	
MU 181	PolyPhonics	
MU 183	Vocal Ensemble	
MU 185	University Singers	
MU 186	Chamber Choir	
MU 188	Arab Music Ensemble	
Upper-Division Electives		
Select upper-division MU courses	^{1,2,3,4}	12
Total units		24

¹ In the area of performance, there is a required minimum of 2 units, either lower or upper-division; the maximum number of performance units that can be applied to the minor is 8, with no more than 4 units at each level.

² No more than 4 units in the minor may be satisfied by the following upper-division performance courses: MU 368, MU 370, MU 371, MU 372, MU 373, MU 374, MU 376, MU 377, MU 378, MU 381, MU 383, MU 385, MU 386, MU 388, MU 389.

³ No more than 2 units in the minor may be satisfied by MU 400.

⁴ If NO lower-division units were in music history, then at least 4 units must be an upper-division music history course: MU 324, MU 325, MU 328.

Philosophy

Faculty Office Bldg. (47), Room 37
Phone: 805.756.2041
<https://philosophy.calpoly.edu>

Department Chair: Kenneth Brown

Academic Programs

Program name	Program type
Philosophy	BA, Minor
Religious Studies	Minor
Western Intellectual Tradition	Minor

The Philosophy Department at Cal Poly is one of the largest in the CSU system. It prides itself on excellence in teaching and the high standards met by its students. A degree in philosophy is one of the best preparations for graduate or professional school and the evidence for this is substantial. Nationally, philosophy majors outscore everyone but majors in mathematics and physics on the Law School Admissions Test (LSAT). Similar trends are also seen for scores in all sections of the Graduate Record Exam (GRE) and on the Graduate Management Admission Test (GMAT), the exam required by most MBA programs.

The reason for this is unsurprising. The study of philosophy requires the meticulous development of general analytical reasoning skills. Even students not planning to go on to graduate or professional school are well served by the analytical and verbal skills developed by the study of philosophy. The ability to communicate clearly and forcefully is increasingly rare and, as a result, increasingly sought after in the job market.

Undergraduate Programs

BA Philosophy

Students can pursue a curriculum leading to a Bachelor of Arts degree in Philosophy, including optional concentrations in Philosophy and Religion, Ethics of Science and Technology, and Ethics and Society. The department also offers a minor in Philosophy, courses and a minor in Religious Studies, and directs an interdisciplinary minor in The Western Intellectual Tradition. An unusually large number of courses is offered in the history of philosophy, as well as courses in specific areas of philosophy (logic, ethics, metaphysics, epistemology), courses that deal with the philosophical issues arising in other disciplines (e.g., philosophy of science, philosophy of literature, aesthetics), courses in eastern philosophy, and applied ethics courses especially in areas related to science and technology.

Concentrations

Students may choose to complete 20 units of 300-400 level philosophy courses *or* choose one of three concentrations.

Ethics and Society

Designed for students with an interest in pursuing professional careers in which they will need to address practical ethical issues, especially careers in business, medicine, politics and law.

Ethics of Science and Technology

Designed for students with an interest in careers involving science and technology, whether as makers or other roles (such as in business, law,

policy, advocacy, and government) to understand, evaluate, and influence the responsible development of new and emerging innovations.

Philosophy and Religion

Designed for students with an interest in religion, including those interested in pursuing careers in religious ministry or graduate work in Religious Studies or Philosophy of Religion.

Degree Requirements and Curriculum (p. 321)

Philosophy Minor

The minor program in Philosophy is designed for students who want to add to their education an understanding of the history of philosophy, of contemporary trends in philosophy, or of philosophical issues relevant to their major field of study. Interested students are invited to contact the Philosophy Department Office or website for more information and application forms.

Philosophy Minor Objectives:

1. Significant critical skill
2. Competence at philosophical writing
3. Good, general knowledge of the history of philosophy, or grasp of main currents in contemporary philosophy
4. Familiarity with methods of contemporary philosophical inquiry

Religious Studies Minor

The Religious Studies minor program is designed for students who want to enhance their understanding of the great religious traditions of the contemporary world and some of the social issues involving these religions. Interested students are invited to contact the Philosophy Department Office for more information and application forms.

Minor Program Learning Objectives:

1. Demonstrate general knowledge of how various disciplines approach religious phenomena and be able to apply a variety of methodological frameworks to data in the field of Religious Studies.
2. Develop basic religious literacy regarding the literary expressions, worldview, historical formations, ritual & practice, sacred texts, material world, and engagement with contemporary issues for several world religions representing diverse cultural backgrounds.
3. Analyze how a religion interacts with the culture to which it belongs, explaining how it shapes and is shaped by its surrounding society.
4. Demonstrate how religions inform, shape, and shed light upon contemporary issues, concerns, and debates.
5. Show how religious diversity contributes to overall diversity on the planet and specifically how Religious Studies advances student attainment of Cal Poly's Diversity Learning Objectives.
6. Understand how religions can both contribute to and detract from the productive harmony between groups (convivencia)

Western Intellectual Tradition Minor

For information regarding the Western Intellectual Tradition Minor, please see the College of Liberal Arts Interdisciplinary Minors (p. 269) section of the catalog.

BA Philosophy

Program Learning Objectives

1. Significant critical skill
2. Sound command of logic
3. Competence at philosophical writing
4. Good, general knowledge of the history of philosophy
5. Grasp of main currents in contemporary philosophy
6. Familiarity with methods of contemporary philosophical inquiry

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 28) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

PHIL 101	Introduction to Philosophy	4
PHIL 126	Logic and Argumentative Writing (A3) ¹	4

History of Philosophy Electives

Select from the following:		4
PHIL 309	Early Greek Philosophy through Plato	
PHIL 310	Aristotle and Hellenistic Philosophy	
PHIL 312	Medieval Philosophy	
Select from the following:		4
PHIL 313	Early Modern Rationalism	
PHIL 314	Early Modern Empiricism	
PHIL 315	Kant and 19th Century European Philosophy	
Select from the following:		4
PHIL 317	History of Analytic Philosophy	
PHIL 318	Phenomenology	
PHIL 319	Existentialism	

Select from History of Philosophy Electives listed above or PHIL 429	4
Choose PHIL Electives (20 units) at the 300-400 level, or declare a concentration (see below). ^{2,3}	20
Arts and Humanities Breadth	
Upper-Division C (General Education) course not in PHIL ⁴	4
GENERAL EDUCATION (GE)	
(See GE program requirements below.)	56
FREE ELECTIVES	
Free Electives	40
Total units	180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² At least 12 units must be 400-level if the PHIL Electives option is chosen rather than declaring a concentration.
- ³ If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Elective for the concentration.
- ⁴ If a Religious Studies (RELS) course is taken to meet the Arts and Humanities Breadth requirement, it cannot be double-counted in the Philosophy and Religion concentration.

Concentrations

- Ethics and Society (p. 322)
- Ethics of Science and Technology (p. 322)
- Philosophy and Religion (p. 322)

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking (4 units in Major) ¹	0
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		

C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Major) ¹	0
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C (4 units in Major) ¹		0
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Ethics and Society Concentration

Required		
PHIL 439	Selected Problems in Ethics and Political Philosophy	4
Ethics Electives		
Select from the following:		12
PHIL 332	History of Ethics	
PHIL 333	Political Philosophy	
PHIL 334	Philosophy of Law	
PHIL 335	Social Ethics (USCP)	
PHIL 336	Feminist Ethics, Gender, Sexuality and Society (USCP)	
PHIL 337	Business Ethics	
PHIL 341	Professional Ethics	
PHIL 343	Power, Alienation, and Political Life	
PHIL 385	Ethics Bowl ¹	
PHIL 439	Selected Problems in Ethics and Political Philosophy ²	
Technology Ethics Electives		
Select from the following or select 4 additional units of Ethics Electives:		4
PHIL 322	Philosophy of Technology	
PHIL 323	Ethics, Science and Technology	
PHIL 327	Robot Ethics	
PHIL 328	Technologies and Ethics of Warfare	

PHIL 339	Biomedical Ethics	
PHIL 340	Environmental Ethics	
Total units		20

¹ Maximum of 8 units may be applied toward concentration: PHIL 385.
² PHIL 439 may be repeated up to 16 units with different subtitles.

Ethics of Science and Technology Concentration

Required		
PHIL 323	Ethics, Science and Technology	4
Ethics and Philosophy of Science and Technology Electives		
Select from the following:		8
PHIL 322	Philosophy of Technology	
PHIL 327	Robot Ethics	
PHIL 328	Technologies and Ethics of Warfare	
PHIL 339	Biomedical Ethics	
PHIL 340	Environmental Ethics	
Senior Seminar Electives		
Select from the following:		4
PHIL 421	Philosophy of Space, Time and Matter	
PHIL 422	Philosophy of Mind	
PHIL 439	Selected Problems in Ethics and Political Philosophy	
Ethics Electives		
Select from the following or select 4 additional units of Ethics and Philosophy of Science and Technology Electives:		4
PHIL 332	History of Ethics	
PHIL 333	Political Philosophy	
PHIL 334	Philosophy of Law	
PHIL 335	Social Ethics	
PHIL 336	Feminist Ethics, Gender, Sexuality and Society	
PHIL 337	Business Ethics	
PHIL 341	Professional Ethics	
PHIL 343	Power, Alienation, and Political Life	
PHIL 385	Ethics Bowl ¹	
Total units		20

¹ Maximum of 4 units may be applied toward concentration: PHIL 385.

Philosophy and Religion Concentration

Required		
PHIL 342	Philosophy of Religion	4
Asian Philosophy and Religion Electives		
Select from the following: ¹		4
PHIL 361	Indian Philosophy	
PHIL 362	Chinese and East Asian Philosophy	

RELS 301	Religions of Asia	
RELS 306	Hinduism	
RELS 307	Buddhism	
Religion Electives		
Select from the following: ¹		8
RELS 302	Abrahamic Religions: Judaism, Christianity, and Islam	
RELS 304	Judaism	
RELS 310	Christianity	
RELS 311	Islam	
RELS 344	Approaches to Religion and Spirituality	
Or any unused Asian Philosophy and Religion Electives		
Senior Level Philosophy Electives		
Select from the following:		4
PHIL 421	Philosophy of Space, Time and Matter	
PHIL 422	Philosophy of Mind	
PHIL 423	Philosophy of Language	
PHIL 429	Special Topics in the History of Philosophy ²	
PHIL 439	Selected Problems in Ethics and Political Philosophy	
PHIL 449	Selected Topics in Recent Philosophy	
Total units		20

¹ If a Religious Studies (RELS) course is taken to meet the Arts and Humanities Breadth requirement, it cannot be double-counted in the Philosophy and Religion Concentration.

² If PHIL 429 was used to fulfill the History of Philosophy Electives in the major, the course may be taken with a different subtitle to fulfill the Senior Level Philosophy Electives.

Philosophy Minor

Required Course

PHIL 230	Philosophical Classics: Knowledge and Reality	4
or PHIL 231	Philosophical Classics: Ethics and Political Philosophy	

Approved Electives

Select from the following:		4
PHIL 411	Metaphysics	
PHIL 412	Epistemology	
PHIL 421	Philosophy of Space, Time and Matter	
PHIL 422	Philosophy of Mind	
PHIL 423	Philosophy of Language	
PHIL 429	Special Topics in the History of Philosophy	
PHIL 439	Selected Problems in Ethics and Political Philosophy	
PHIL 449	Selected Topics in Recent Philosophy	

PHIL Electives (at least 8 units 300-400 level)	16
Total units	24

Religious Studies Minor

Required Courses

Area A: History of World Religious Traditions		
Select from the following:		8
ENGL 354	The Bible as Literature and in Literature and the Arts	
HIST 452	Renaissance and Reformation Europe	
RELS 205	Jesus	
RELS 301	Religions of Asia	
RELS 302	Abrahamic Religions: Judaism, Christianity, and Islam	
RELS 304	Judaism	
RELS 306	Hinduism	
RELS 307	Buddhism	
RELS 310	Christianity	
RELS 311	Islam	
Area B: Method and Theory in the Study of Religion		
Select from the following:		4
PHIL 342	Philosophy of Religion	
PHIL 361	Indian Philosophy	
PHIL 362	Chinese and East Asian Philosophy

<https://politicalscience.calpoly.edu>

Department Chair: Anika Leithner

Academic Programs

Program name	Program type
Global Politics	Minor
Law and Society	Minor
Political Science	Minor, BA
Public Policy	MPP

The Political Science Department offers instruction leading to a Bachelor of Arts degree in Political Science and a Master of Public Policy degree. Through the required and elective courses, the department prepares students to become informed, active individuals. Undergraduate and graduate programs emphasize the comprehension of political thinking and the application of communication and analytical skills, and prepare students for careers in research and survey analysis, administration, teaching, business, graduate studies, or leadership positions in the public, private, and nonprofit sectors.

In addition to the undergraduate major and the graduate program, the department offers minors in Political Science, Global Politics and Law and Society. General Education courses in the department expose students to political thought, the fundamentals of U.S. politics, global issues, and the politics of foreign countries. The department supports internship opportunities in local, state, and federal agencies in federal agencies, applied public policy research, law, and non-profit agencies.

Undergraduate Programs

BA Political Science

The major provides students with insights into the behavior of countries, individuals, and groups as they pursue their political and economic interests. Students considering work in related fields such as law, education, administration, government, and business gain basic knowledge of principles and practices in those areas. Additionally, students who are planning graduate work can establish a sound foundation for advanced studies in political science, law, public administration, business administration, urban planning, and other related fields.

Concentrations

American Politics

Study of American governmental institutions, campaigns and elections, parties, public policy, and social movements. Provides students with a broad knowledge of the American political system that can prepare them for careers in government employment at the local, state, or national level, campaign advising, policy analysis, urban and regional planning, or leadership positions in advocacy groups.

Global Politics

Study of international and comparative politics, politics of developing areas, and U.S. foreign policy. Prepares students for careers in the diplomatic corps, foreign policy analysis, transnational nongovernmental organizations, intelligence analysis, or international business.

Pre-Law

Study of American constitutional law, civil liberties, civil rights, jurisprudence and judicial process. Prepares students for careers in law. Some students may apply to law school to continue their preparation for the legal profession. Others may seek careers in law-related professions such as law enforcement, judicial administration and legal assistance.

Individualized Course of Study

As an alternative option to one of the concentrations, students may pursue a course of study that meets their individual needs and interests.

Global Politics Minor

The minor consists of required coursework and approved electives. Details are available from the Political Science Department. Minor is not open to POLS majors in the Global Politics concentration.

Law and Society Minor

The minor consists of required coursework and approved electives. Details are available from the Political Science Department. Minor is not open to POLS majors in the Pre-Law concentration.

Political Science Minor

The minor consists of required coursework and approved electives. Details are available from the Political Science Department.

Master of Public Policy

General Characteristics

The Master of Public Policy degree program (MPP) is professionally oriented, and open to students who wish to pursue analytic careers in government, nonprofit organizations, consulting, advocacy and related policy occupations. The program is structured to prepare graduates with competence and creativity to excel in careers in the ever-changing world of public policy. The core courses cover public policy, public policy analysis, economic and regulatory policy, research design, quantitative methods, leadership, policy internships, and graduate seminar.

The MPP program is designed to meet the needs of those who have earned baccalaureate degrees in a variety of disciplines, including, but not limited to, economics, history, political science, social sciences, psychology, city and regional planning, business administration, education, environmental studies, and natural resource management.

The program is two years in duration for students taking 8 or more units per term. It consists of 50 approved units (not including courses necessary to compensate for deficiencies). Because of the sequencing of courses, students admitted to the program are expected to begin study in the fall quarter. In their second year, students undertake the development, presentation, and discussion of individual research projects in a two-term seminar (POLS 590). After the completion of POLS 590, students are required to pass a comprehensive exam. The program offers students opportunities to develop close working relationships with faculty. Self-directed study, tailored to student interest and needs, is encouraged.

Prerequisites

Students entering the program are expected to bring with them backgrounds in certain basic subject areas or to make up deficiencies in these areas after admission. These include the following Cal Poly

course or its equivalent: STAT 217 Introduction to Statistical Concepts and Methods.

Admission Requirements

1. Possession of a baccalaureate degree from an accredited college or university;
2. A grade point average of not less than 3.00 in all undergraduate coursework;
3. Related undergraduate coursework or work experience;
4. The quality of previous educational and professional experiences measured by:
 - a. Biographical and career data (resumes, examples of reports, letters of recommendation, etc.),
 - b. Professional training in fields such as budgeting, management, and supervision in the public, health, or nonprofit sectors, and
 - c. A personal statement describing a student's experience and reasons for applying to the program
 - d. GRE scores are recommended, but not required, for admission.
5. For applicants whose preparatory education is principally in a language other than English, a TOEFL score of 550 or higher (or 213 on the new conversation scale for the computer-based TOEFL exam).

Program of Study

Graduate students must file a formal study plan with their major professor, graduate committee, department, college and university graduate studies office no later than the end of the first quarter of study. The formal program of study must include a minimum of 50 units. All courses on the formal study plan must be taken on a graded basis unless specified in the course catalog as credit/no credit (CR/NC).

Blended BA Political Science + Master of Public Policy

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

Eligibility

Students majoring in BA Political Science are eligible for the blended program in Master of Public Policy.

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Political Science department for any additional eligibility criteria.

BA Political Science

Program Learning Objectives

1. **Subject Matter Expertise:** Through their curricular and co-curricular work, students will demonstrate expertise in political science and its subfields, as well as its relationship to the broader worlds of study and practice.

2. **Critical Thinking:** Students will demonstrate critical thinking through their coursework and/or co-curricular activities.
3. **Working Productively and Communicating Effectively:** Through their coursework and/or co-curricular activities, students will demonstrate their ability to work productively, both alone and in groups, their knowledge of the principles of effective communication, and their ability to communicate the results of their work effectively through a variety of tools and techniques.
4. **Ethics, Diversity and Sustainability:** In the context of coursework and/or co-curricular activities, students will demonstrate that they have the knowledge and skills necessary to make reasoned decisions, and that they can bring an understanding of the politics surrounding and the value of ethics, diversity and sustainability to bear on those decisions.
5. **Lifelong Learning and Positive Contribution:** Through their coursework and/or co-curricular activities, students will demonstrate that they have the knowledge and skills to engage in lifelong learning aimed at making a positive contribution to society.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

Master of Public Policy

Program Learning Objectives

1. MPP students will be able to think critically and creatively about public policy theory, analysis and application. In particular, students will develop knowledge and skills in quantitative and qualitative analysis, argumentation, and the process and practice of research in general and as applied to a substantive policy area.
2. MPP students will develop skills for the clear, concise, and effective communication of ideas. This includes the communication of evidence, analysis, and arguments via written, visual, and oral methods.
3. MPP students will demonstrate expertise in the field of public policy, including an appreciation of the connections between a particular substantive area and the social, political, economic, and technological context in which it exists.
4. MPP students will develop leadership capacities that will prepare them to work productively as individuals and in groups.
5. MPP students will develop tools that prepare them to participate constructively in the process of creating, implementing and evaluating public policy.
6. MPP students will learn to recognize and reconcile diverse perspectives, and the tradeoffs they entail, in pursuit of the public interest.
7. MPP students will utilize internship experiences and course knowledge to prepare them for dynamic and professional careers in the ever-changing field of public policy.

Required Courses

Psychology and Child Development

Faculty Office Bldg. (47), Room 24
Phone: 805.756.2033
<https://psyecd.calpoly.edu>

Department Chair: Jennifer Jipson

Academic Programs

Program name	Program type
Child Development	BS, Minor
Gerontology	Minor, Certificate
Psychology	BS, MS, Minor

The department consists of faculty with degrees in psychology, family studies, human development and education who direct programs leading to BS Child Development, BS Psychology, MS Psychology, and minors in Child Development, Psychology and Gerontology.

In addition, courses are offered which fulfill general education requirements, support other programs and serve as a personal development resource for all university students. These courses are designed to acquaint students with the facts, theories and contemporary trends in psychology and child development and how these principles can be incorporated into a more meaningful understanding of oneself and of one's interactions with others. The department supports the concept of international education and encourages students to investigate opportunities for overseas study. For further information, see the Study Abroad programs (p. 443).

Undergraduate Programs

BS Child Development

The Child Development major is designed for students who are interested in professions involving children and adolescents in a variety of settings. The major provides the scientific base for understanding development from birth through emerging adulthood. The program emphasizes the ecological contexts in which development occurs, including family, school, technology, community, and culture. Graduates often continue studies in graduate and credential programs, and pursue a range of careers in education, intervention programs, and human services.

The Child Development major is designed to enable students to develop a program of study suited to their individual needs and become part of a learning community of faculty and students. After completing core courses in child and adolescent development, they will develop a personal program of study by selecting electives, two internships, and a senior project. Each student graduates with a BS in Child Development.

Goals of the Child Development major are for students to:

- Learn about theories and research that have helped us to understand how children and adolescents develop physically, emotionally, socially, and intellectually.
- Study how children and youth affect and are affected by the formal and informal environments in which they grow.
- Gain experience working with children and youth of different ages and backgrounds in various settings.
- Develop expertise in the use of digital technologies to access, create, and disseminate information related to the learning and development of children and youth.

- Develop an understanding of multicultural and anti-discrimination issues and how to lead children and youth into an appreciation of diversity.
- Develop skills in research, leadership, effective communication, and community building.

BS Psychology

The Psychology major offers a broad preparation in the science of psychology. Theoretical approaches, research techniques, laboratory experiences and internships are hallmarks of the psychology program.

Graduates often pursue careers in mental health programs, social services agencies, public health settings, educational institutions, and personnel-related settings. Many majors go on to graduate work in such fields of psychology as: counseling, developmental, family, social, clinical or experimental.

Students may pursue a course of study which meets their individual needs and interests. Electives are selected by the student with the advice of the student's academic advisor.

Child Development Minor

The minor is designed to provide students a broad knowledge base in child and adolescent development. Biological, cognitive, social, and emotional development are examined in context (e.g., family, school, culture). The minor builds upon students' critical thinking skills by approaching child development as a scientific area of study. This minor complements a background in majors such as Liberal Studies, Psychology, Kinesiology, or Recreation, Parks, Tourism and Administration. An application form must be approved by a Child Development Minor advisor. The Child Development minor is not open to Liberal Studies majors with a concentration in Child Development.

Gerontology Minor and Certificate Program

The Gerontology minor/certificate program is an interdisciplinary set of courses that prepares students in various majors whose careers will be directly or indirectly related to gerontology. The certificate program also allows non-matriculated students to develop or upgrade their skills and knowledge for those interested or already working in the field of gerontology. Coursework includes the psychological, biological, and social aspects of aging; changing roles; stress-related problems; and an understanding of the impact of an aging population on social, economic, and political institutions. *Among the requirements for admission to the program is a minimum GPA of 3.00. All applicants are reviewed by the program coordinator.*

Psychology Minor

The minor provides students with a broad background in the principles of psychology in order to develop an appreciation of the human element in the world around them, complement their professional training, and enhance their personal development and interpersonal effectiveness.

An application form must be approved by a Psychology Minor advisor.

Graduate Program MS in Psychology General Characteristics

The Master of Science in Psychology is a 90-quarter unit professional degree program designed to train highly competent master-level clinicians who are academically prepared to obtain the marriage and family therapy (MFT) license in the State of California. The program places a heavy emphasis on clinical skill training and applied experience that begins early in the program and culminates with an intensive supervised traineeship in a community mental health setting.

Admission to the Program

In addition to the general requirements of the University, specific requirements for admission to classified graduate standing are:

- an acceptable baccalaureate degree from an institution accredited by a regional association;
- a minimum grade point average of 3.0 in the last 90 quarter units (60 semester units) attempted;
- satisfactory performance on the General Tests (Verbal, Quantitative, Analytical) of the Graduate Record Examination (GRE); the GRE Advanced Test in Psychology is not required;
- three letters of recommendation;
- autobiographical information;

Related work or volunteer experience is highly desirable as is having received professional counseling.

Prerequisites

Coursework in abnormal psychology, lifespan theories/developmental psychology, personality theory, introductory statistics, and research methods in psychology (or related discipline). Completion of these prerequisites is necessary for admission to the program.

Classified Standing

For admission as a classified graduate student, a student shall have a minimum grade point average of 3.0 in the last 90 quarter units (60 semester units) attempted and shall have earned an acceptable baccalaureate degree from an institution accredited by a regional association. Additionally, the student must have satisfactorily met the professional, personal, scholastic, and other standards for graduate study, including qualifying examinations, as the appropriate university authorities may prescribe. Only those applicants who show promise of success and fitness are admitted, and only those who continue to demonstrate a satisfactory level of scholastic competence and who possess appropriate personal qualities are eligible to continue in the program.

Conditionally Classified Standing

The student may enroll in a graduate degree curriculum if in the opinion of the M.S. Program Committee the student can remedy any deficiencies by additional preparation.

Advancement to Candidacy

Advancement to master's degree candidacy requires completion of a minimum of 30 quarter units of required courses in residence, specified in a formal program of study, with a minimum grade point average of 3.0, fulfillment of the Graduation Writing Requirement, and the formal recommendation of the M.S. Program Committee. Students must

maintain a minimum GPA of 3.0 in all coursework completed subsequent to admission to the program.

Program of Study

The student must maintain a grade point average of 3.0 (B) or better in all courses taken subsequent to program admission. Calculation of the grade point average includes all grades, though only the units in courses with grades of A, B, or C are counted to satisfy requirements for the degree. Required courses with a grade of D or F must be repeated.

All candidates must meet the current Graduation Writing Requirement.

Sixty-four quarter units must be completed in residence. Transfer credits are allowed if acceptable for master's degree credit at the offering institution and approved by the M.S. Program Committee.

The Master of Science degree in Psychology requires a culminating experience that includes either the completion of a thesis or passing a comprehensive exam. Each candidate must file a formal program of study by the end of the first quarter as a classified graduate student. The professional and personal growth of each graduate student is of major importance; consequently, candidates are encouraged to seek the experience of personal therapy. Students must be very aware of course prerequisites and check the catalog carefully to assure enrollment in required courses.

MFT Licensing

The Master of Science in Psychology is designed to meet the educational requirements for the Marriage and Family Therapist license (MFT) in the State of California. Students are advised to acquire and read the laws governing MFT licensure from the California Board of Behavioral Sciences, 1625 North Market Blvd., Suite S-200, Sacramento, CA 95834. State documents must be filed by the applicant within 30 days of program graduation. See the program coordinator for the procedure required for application for this license. State documents must be filed by the applicant within 30 days of program graduation.

Grades

If a candidate for University recommendation for MFT licensure has more than one grade of C or lower among the courses to be verified for the Board of Behavioral Sciences, that form will not be approved by the Chief Academic Officer Designee of Cal Poly.

Practicum and Traineeship

Practicum and traineeship courses represent the student's demonstration of the clinical skills basic to marriage, family and child counseling. A student who receives a grade of NC in practicum or traineeship is on probation regarding continuation in the program. A second grade of NC disqualifies the student from the program and University recommendation for the license. Also, candidates may be disqualified from this program for academic-related actions judged by the M.S. Program Committee to reflect unethical and/or unprofessional conduct.

BS Child Development

Program Learning Objectives

1. Students completing core courses should demonstrate breadth of knowledge in developmental science and application of research and theory to "real-world" problems relevant to children, youth, and families.

2. Students should be able to understand scientific principles, think critically, and interpret, design, and conduct developmental science research.
3. Students will develop intrapersonal knowledge and interpersonal skills to contribute to building a society responsive to multicultural and global concerns.
4. Students should demonstrate competence in writing and in oral and interpersonal communication skills.
5. Students will develop skills and experience to enable them to succeed personally and professionally.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

MAJOR COURSES

CD 102	Orientation to the Child Development Major	2
CD 131	Observing and Interacting with Children	4

Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives		8
Total units		56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Psychology

Program Learning Objectives

1. Students completing foundation courses should demonstrate breadth of knowledge and application of psychological ideas to "real-world" problems; Students completing a baccalaureate degree should show depth in their knowledge and application of psychological concepts and frameworks to complex problems. These include: a) understanding of how personality, culture, social context, and intergroup dynamics explain behavior; b) understanding cognitive and perceptual processes and their biological foundations and; c) knowledge of mental and physical health and illness.

2. Students should be able to understand scientific principles, think critically, and interpret, design, and conduct psychological research.
3. Students will develop *intrapersonal* knowledge and *interpersonal* skills to contribute to building a society responsive to multicultural and global concerns.
4. Students should demonstrate competence in writing and in oral and interpersonal communication skills.
5. Students will develop skills and experience to enable them to succeed personally and professionally.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

Total units 28

¹ One of these courses may be counted towards both the minor and a CD support course.
² If a course is taken to meet a minor requirement, it cannot be double-counted as an Approved Elective for the minor.

MS Psychology Program Learning Objectives

- Develop the *intrapersonal* and *interpersonal* knowledge and skills required for ethical, efficacious, and culturally responsive clinical practice.
- Demonstrate written, oral, and interpersonal communication skills conducive to empathic, respectful, and collaborative working relationships with diverse individuals, children, couples, families, and professionals.
- Demonstrate legal, ethical, and documentation knowledge of marriage and family therapy practice and how to apply these

standards to diverse populations and contexts, such as public agencies, schools, and private practice.

- Conduct evidence-based, culturally responsive core and advanced counseling and psychotherapy skills with diverse individuals, children, couples, and families.
- Conduct evidence-based, culturally responsive assessment and diagnostic procedures with diverse individuals, children, couples, and families.
- Conduct evidenced-based, culturally responsive treatment planning, progress notation, and discharge planning with diverse individuals, children, couples, and families.
- Demonstrate ability to access and utilize research as critical consumers to implement best practices strategies with diverse clients and issues.

Required Courses

PSY 504	Psychopharmacology	4
PSY 520	Marriage & Family Therapy: Professional Identity, Theory and Practice	4
PSY 535	Child and Adolescent Psychopathology	4
PSY 555	Counseling & Communication	4
PSY 556	Multicultural Counseling and Psychology	4
PSY 560	Individual Therapy: Theory and Application	4
PSY 564	Ethics and the Law: MF Therapy	4
PSY 565	Diagnosis and Treatment: Psychopathology	4
PSY 566	Group Therapy: Theory and Application	4
PSY 569	Counseling Clinic Practicum (3) (3)	6
PSY 571	Advanced Family Therapy: Theory and Application	4
PSY 572	Child and Adolescent Therapy: Theory and Application	4
PSY 574	Psychological Assessment	4
PSY 575	Gender and Couple Therapy	4
PSY 576	Traineeship: Marital and Family Therapy (4) (4) (4) (4)	16
PSY 577	Community Mental Health: Issues and Practices	4
PSY 585	Research Methods for Counseling Psychology	4
PSY 588	Assessment and Treatment of Substance Use Disorders	4

Select from the following: 4

PSY 599	Thesis ¹	
OR		
Written comprehensive exam and one of the following:		
PSY 568	Advanced Psychotherapies	

or an approved 400-level PSY course

Total units **90**

¹ Must register for thesis credit each quarter of advisement.

Social Sciences

Department Chair: Ryan Alaniz

Academic Programs

Program name	Program type
Anthropology and Geography	BS, Minor
Latin American Studies	Minor
Sociology	BA, Minor

The Social Sciences Department offers bachelor's degrees and minors in Anthropology-Geography and Sociology, as well as a minor in Latin American studies.

Within each major, students are required to choose a concentration relevant to their future career endeavors. The Anthropology-Geography major concentrations include environmental studies and sustainability, global studies and international development, and human ecology. Sociology majors can choose a concentration in criminal justice, organizations, or social services.

The strength of our department lies in its focus on practical training, critical thinking, and "Learn by Doing" experiences. Students are trained in applied technical skills including GIS, remote sensing, research design, social data collection, and qualitative/quantitative methodology.

Alongside these skills, students are encouraged to critically investigate contemporary issues, asking hard questions about society, behavior, and the environment in an increasingly diverse and global world. Finally, students are required to bridge classroom learning with the real world through hands-on practical experience such as internships, service learning, study abroad, and senior projects.

Undergraduate Programs

BS Anthropology and Geography

The Anthropology and Geography major provides students with the skills for understanding and examining patterns of human activity and resource utilization across space and time, as well as the interactions between humans and the natural environment. Interdisciplinary in nature, this program focuses on the applied areas of cross-cultural studies, international development, ecological research design and method, the evolution of humans, environmental assessment, and sustainability. Courses in Anthropology and Geography train students to examine human ecology from the ancient past to the modern present through courses in biological evolution, cultural adaptations, behavioral ecology, environmental impacts, and the ecology of human health and disease. In addition, students gain an understanding of the physical environment in which humans are placed, through courses in physical geography, resource management, biogeography, and climatology. Students are trained in relevant skills, including Geographic Information Systems, remote sensing, and quantitative methods.

Students interested in this major should be curious about the relationships between humans and the environment (including biology, behavior, climate and landscapes) from a broad hands-on perspective.

Our students typically have particular interest in study abroad and involvement in international opportunities.

The program offers a four-year curriculum leading to a BS degree that prepares students for careers in environmental and regional planning, cultural resources management, archaeology, international development, climatology, science education, international health research, and federal government work in behavioral analysis.

Internship or Study Abroad Requirement

As a means of promoting relevant job skills, hands-on learning, and field experience, majors are required to complete either an approved internship or study abroad program. Students who do an internship will receive a minimum of 3 units of credit (ANT 465 or GEOG 465). The department will assist students in identifying suitable internships. However, students are encouraged to explore options for themselves based on their interests. In place of an internship, students may choose to participate in a study abroad program. Four units of approved coursework taken while studying abroad will be substituted for the internship course.

Concentrations

Students may select one of the following concentrations or the individualized course of study.

Environmental Studies and Sustainability

Provides students with an understanding of human environmental relationships, resource utilization, and human impact on the Earth. Current environmental issues are explained and evaluated in a global and historical context. Students learn the importance of sustainable land use practices and techniques for their successful implementation. Applied and technical skills important to assessing the environment and promoting sustainability are emphasized.

Global Studies and International Development

Provides students with the theoretical knowledge and applied skills necessary for the study and practice of international development in cross-cultural settings. Students attain an in-depth knowledge of the social, political, economic, and ecological dimensions of international development and gain practical skills through research projects, international study, and applied internships. The concentration provides expertise and training for internationally focused careers, including public and private development institutions, the Peace Corps, the public health field, education, and numerous other careers where cross-cultural and international understanding are essential.

Human Ecology

Students learn about the natural environment, human behavioral and cultural systems, and the complex interrelationships between the three. Major concepts and practice emphasize broad spatial and temporal perspectives. Students acquire knowledge and skills related to global and regional climate and physical geography, human evolution, cultural ecology, behavioral ecology, prehistoric and recent environmental change, indigenous cultures of the New World, methods for analyzing climate change and related human responses in the past and present.

Other Concentration Options

With prior approval of the Social Sciences Department and the Political Science Department, students may select one of the following concentrations: Pre-Law, or Global Politics.

Individualized Course of Study

One of the two opportunities to pursue a course of study which meets a student's individual needs and interests. As their course of study,

students may pursue an academic minor or create a program, with faculty approval, based upon their interests and career goals. The coursework may be specifically tailored for a career in industry, education, government, or as preparation for graduate school.

BA Sociology

Sociology explores the nature and dynamics of human society and the interrelationship between individuals and their social groups. The goal of sociological study at Cal Poly is twofold. The first objective is to develop a sociological imagination that enables students to see their personal circumstances and problems in context of the broader, local, national, and global forces that shape their lives. The second objective is to prepare students for graduate studies and careers in such fields as criminal justice, law, social services, complex organizations, and teaching. Sociology also offers general education courses that provide an understanding of the complexity and diversity of the world's peoples and their problems. Some courses focus on American society, emphasizing issues of class, race, ethnicity and gender. Other courses have a global orientation dealing with both the past and present diversity of the world's societies, economies, politics and religions.

Internship Requirement

As a means of promoting relevant job skills, hands-on learning, and field experience, majors who select the criminal justice or social services concentrations are required to complete an approved internship. Majors who select the organizations concentration will be encouraged to complete an internship, but will not be required to do so. These internships in criminal justice or social services will be up to one year, but with a minimum of two quarters, and count for 8 to 12 units of credit (SOC 440). The department will assist students in identifying suitable internships. However, students are encouraged to explore options for themselves based upon their interests.

Concentrations

Students are required to take one of the following concentrations or the individualized course of study.

Criminal Justice

Prepares students for careers in law, law enforcement, corrections, detention, probation, parole and other criminal justice agencies.

Organizations

Students learn to apply the general principles of human behavior to the understanding of modern organizations. It prepares them for careers in business, government or non-governmental organizations.

Social Services

Provides the general principles of human social behavior and specialized professional courses to prepare for careers in the helping professions such as social work and counseling.

Other Concentration Options

With prior approval of the Social Sciences Department and the Political Science Department, students may select one of the following concentrations: Pre-Law, or Global Politics.

Individualized Course of Study

One of two opportunities to pursue a course of study which meets a student's individual needs and interests. As their course of study, students may pursue an academic minor or create a program, with faculty approval, based upon their interests and career goals. The course

of study may be specifically tailored for a career in industry, education, government, or as preparation for graduate school. When creating an individual program, it should consist of 28 units, with 16 of the 28 at the 300-400 level. Courses are selected by the student in consultation with an advising faculty member. The student must also provide a written justification for the courses and the way they constitute a cohesive, integrated course of study. The list of courses is a contract between the student and the Department.

Anthropology and Geography Minor

The minor develops broad spatial and cultural knowledge of our world. The program consists of foundation courses and directed electives that allow flexibility for students to tailor the program to meet their individual interests and goals. The objectives of the minor are to increase student awareness of the: (1) cultural and ecological diversity of the Earth's surface; (2) inter-relationships between peoples of varying cultures; (3) interactions of different cultures with their resource habitats and environmental alteration; and (4) methodologies and technologies used to evaluate cultures and environments. The goal is to instill a respect for cultural diversity and environmental sustainability. A minimum of 14 units must be upper division and taken at Cal Poly.

Latin American Studies Minor

Latin America is a region of critical importance to the United States. Students gain an interdisciplinary understanding of Latin America, as well as its cultural, political, and economic connections to California. This knowledge is increasingly important for a broad range of careers, including education, health, government, business, agriculture, tourism, and trade. The minor also promotes critical thinking skills and enhances the appreciation of diversity as students confront issues relevant to Latin America and US-Latin America relations.

Sociology Minor

The minor provides students with a broad understanding of contemporary society with a focus on the analysis of social change. The objectives of the program are to increase awareness of the: (1) nature of international social, economic and political structures and their consequences; (2) social results of emerging technology; (3) changes in family life, especially the role of women; and (4) changing ethnic mix in California and the United States and its implications. Coursework includes the study of the shifting demographic patterns in society, emerging life styles, the increase in the percentage of elderly in the population, and the nature of specific subculture influences.

BA Sociology

Program Learning Objectives

1. Achieve an international/global perspective of societies
2. Develop an understanding of the problems of the U.S. as a pluralistic society
3. Learn to apply a holistic/integrated approach to social problems
4. Develop data collection skills and techniques used by modern sociology
5. Be prepared to enter careers which use the skills and knowledge of sociology

- 6. Demonstrate critical thinking concerning global issues
- 7. Demonstrate the writing skills necessary to communicate effectively

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

SOC 110	Comparative Societies (D2) ¹	4
SOC 111	Social Problems	4
SOC 216	US Race and Ethnic Relations	4
SOC 218	International Political Economy (GE Electives) ¹	4
SOC 222	Classical Social Theory	4
SOC 305	Social Movements	4
or SOC 327	Social Change	
SOC 308	Sociology of the Environment	4
or SOC 435	Sociology of Health and Illness	
SOC/WGQS 311	Sociology of Genders and Sexualities	4
SOC 323	Social Stratification	4
SOC 354	Qualitative Research Methods	4
SOC 355	Quantitative Research Methods	4
SOC 461	Senior Project I	2
SOC 462	Senior Project II	2
SOC Electives (4 units must be at the 300-400 level)		12
STAT 217	Introduction to Statistical Concepts and Methods (B4) ¹	4
Select from the following:		4
ANT 201	Cultural Anthropology	
GEOG 150	Human Geography	
Lower-division Social Sciences Course ²		
ANT or GEOG Elective (300-400 level)		4
Concentration or Individualized Course of Study (see list below)		28
GENERAL EDUCATION (GE)		
(See the GE program requirements below.)		60
FREE ELECTIVES		
Free Electives ³		20
Total units		180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Courses from the following disciplines will be acceptable towards the lower-division Social Sciences course: Anthropology, Ethnic Studies, Geography, Sociology, Political Science, Psychology, or Women's, Gender, and Queer Studies.

³ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree. Free electives may need to be at the 300-400 level to ensure completion of the required minimum of 60 units of upper-division courses.

Concentration or Individualized Course of Study

Students are required to take one of the following Concentrations or the Individualized Course of Study.

- Criminal Justice (p. 342)
- Organizations (p. 342)
- Social Services (p. 342)

Individualized Course of Study

When creating an individual program, it should consist of 300-400 level courses selected in consultation with advising faculty. A written justification for the courses selected and the way they constitute a cohesive, integrated study is required. One-half of the units must be courses from the department.

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4

Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Major) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		60

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Criminal Justice Concentration

SOC 402	Gender, Crime, and Violence	4
SOC 406	Juvenile Justice and Delinquency	4
SOC 412	Contemporary Issues in Criminal Justice	4
SOC 440	Internship ¹	8
Applications and Issues Courses		
Select from the following: ²		
POLS 245	Judicial Process	
POLS 344	Civil Liberties	
PSY 352	Conflict Resolution: Violent and Nonviolent	
PSY 375	Forensic Psychology	
PSY 460	Child Abuse and Neglect	
SOC 301	Social Work and Social Welfare Institutions	
SOC 395	Sociology of Complex Organizations	
SOC 414	Theories of Social Work in Counseling Agencies	
SOC 440	Internship ¹	
SOC 444	Incarceration and Society: Perspectives on the Criminal Justice System	
Total units		28

¹ A maximum of 12 units of SOC 440 may be applied to the concentration.

² Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

Organizations Concentration

Select from the following: 20

At least 4 units must be SOC		
BUS 382	Leadership and Organizations	
BUS 384	Human Resources Management	
COMS 213	Organizational Communication	
COMS 320	Intergroup Communication	
POLS 351	Public Policy and Administration	
PSY 252	Social Psychology	
SOC 310	Self, Organizations and Society	
SOC 395	Sociology of Complex Organizations	
SOC 423	Gender and Work	
SOC 440	Internship (up to 8 units) ¹	

Approved Electives: ²

Select from the following: 8

BUS 207	Legal Responsibilities of Business	
BUS 476	Leading Social Innovation in Organizations	
BUS 477	Management Consulting and Change Management	
COMS 217	Small Group Communication	
COMS 413	Advanced Organizational Communication	
ES/WGQS 351	Gender, Race, Class, Nation in Global Engineering, Technology & International Development	
POLS 315	The American Presidency	
POLS 319	United States Congress	
PSY 304	Intergroup Dialogues	
SOC 412	Contemporary Issues in Criminal Justice	
SOC 440	Internship	

Total units 28

¹ A maximum of 8 units of SOC 440 may be applied to the concentration.

² Consultation with advisor is recommended prior to selecting Approved Electives, bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

Social Services Concentration

SOC 301	Social Work and Social Welfare Institutions	4
SOC 414	Theories of Social Work in Counseling Agencies	4
SOC 440	Internship	8

Approved Electives ¹

Select from the following: 12

ES 340	Cultural Production and Ethnicity	
ES/WGQS 350	Gender, Race, Culture, Science & Technology	
POLS 310	The Politics of Race, Class, Gender and Sexuality	

POLS 343	Civil Rights in America
POLS 419	Social Movements and Political Protest
POLS 459	The Politics of Poverty
POLS 471	Urban Politics
PSY/CD 306	Adolescence
PSY 310	Psychology of Death
PSY 318	Psychology of Aging
PSY 330	Behavioral Effects of Psychoactive Drugs
SOC 305	Social Movements
SOC 306	Sociology of the Family
SOC 309	The World System and Its Problems
SOC 310	Self, Organizations and Society
SOC 327	Social Change
SOC 402	Gender, Crime, and Violence
SOC 406	Juvenile Justice and Delinquency
SOC 412	Contemporary Issues in Criminal Justice
SOC 420	Practical Interviewing and Counseling Skills in Social Work
SOC 435	Sociology of Health and Illness
WGQS 301	Contemporary Issues in Women's and Gender Studies
WGQS/RELS 370	Religion, Gender, and Society
WGQS 401	Seminar in Women's and Gender Studies
WGQS 450	Feminist Theory

Total units **28**

¹ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

BS Anthropology and Geography Program Learning Objectives

1. Understand and appreciate the cultural and physical attributes of major world regions, key regional issues and linkages between regions, the processes that shape cultural change and interaction, and international development issues.
2. Demonstrate an in-depth knowledge of human ecology with specific emphasis on the ecological, demographic, genetic, developmental, and epidemiological dimensions of modern human adaptations and their evolutionary foundations over time and space.
3. Comprehend the historical place of humans around the globe and apply acquired skills for cultural resource management and conservation.
4. Analyze the processes that shape the earth's physical environment (e.g. climate, landforms, water, soils, biota, and ecosystems), the distributions of natural resources, and the ways in which humans utilize natural resources and impact the environment with an emphasis on sustainability.
5. Apply scientific research methodology and design, including the ability to collect, synthesize, and interpret qualitative and quantitative

cultural and ecological data using a variety of methods including the utilization of geospatial technologies (GIS, remote sensing, and GPS).

6. Critically analyze issues from multiple perspectives and communicate results effectively.
7. Synthesize information and utilize acquired skills locally and globally to improve the state of the environment and the human condition by applying cultural, ecological, and spatial knowledge, methods, and techniques.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

GENERAL EDUCATION (GE)	
(See GE program requirements below.)	48
FREE ELECTIVES	
Free Electives ³	24
Total units	180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Approved study abroad course may substitute.

³ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations

Students may select one of the following concentrations or the individualized course of study.

- Environmental Studies and Sustainability (p. 344)
- Global Studies and International Development (p. 345)
- Human Ecology (p. 345)

Individualized Course of Study

An Individualized Course of Study should consist of 28 units, with at least 16 units at the 300-400 level. Courses are selected by the student in consultation with an advising faculty member. The student must also provide a written justification for the courses and the way they constitute a cohesive, integrated course of study. The list of courses is a contract between the student and the Department.

General Education (GE) Requirements

- 72 units required, 24 of which are specified in Major and/or Support.
- If any of the remaining 48 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4

Area B	Scientific Inquiry and Quantitative Reasoning

Theatre & Dance

Davidson Music Center (45), Room 103

Phone: 805.756.1465

<https://theatredance.calpoly.edu>

Department Chair: Brian Healy

Academic Programs

Program name	Program type
Theatre Arts	BA, Minor
Dance	Minor

The courses offered by the Theatre and Dance Department provide students with well-balanced programs of study, integrating practical production work with classes that examine the principles, theoretical aspects, and historical development of theatre and dance.

A full range of studio dance courses are offered that include ballet, modern, jazz, and ballroom. Composition and dance production are available, as well as courses designed for future teachers of dance. The department also provides general education and breadth courses in the areas of dance history and dance appreciation.

The department acts as a cultural focus for the campus and community. An annual dance concert is presented under the auspices of the Orchesis Dance Company and every spring a student-directed dance concert is produced. Each quarter the department presents three main-stage theatre productions. Recent titles include: *Our Town*, *The Last Five Years*, *Lysistrata*, *Stop Kiss*, *The Tempest*, *Smash*, *Arabian Nights*, *Blood Wedding (Bodas de sangre)*, *Animal Farm*, *Falsettos*, *25th Annual Putnam County Spelling Bee*, and *Stupid F#@king Bird*. In addition, the department also produces original works; sponsors guest lecturers and specialized workshops; and manages a program of student-directed works, field trips, and internships.

Undergraduate Programs

BA Theatre Arts

Students who major in Theatre Arts experience how live theatre explores important ideas, portrays the vastness of human emotions, and promotes the vitality of storytelling. The BA Theatre Arts Program at Cal Poly provides students with a foundation in the theory and practice of theatre, allowing them to participate in a comprehensive, hands-on training program that delivers a balanced and enriched knowledge of theatre arts: history, dramatic literature, playwriting, performing, production, directing, design, and administrative practices. Participation in main-stage productions, as actors and members of the artistic/production crew, is a key component of each student's education. As a small program, the Theatre Arts B.A. allows for faculty to get to know students' abilities and needs as individuals; promoting the selection of special projects, electives, and interests that mesh with their career ambitions. The program is delivered within a Liberal Arts framework, intended to advance the value of collaboration at all levels of study; designed to not only produce theatre artists with strong written and verbal skills, but also globally-minded citizens, prepared to enter into a variety of fields. And, as Theatre majors, students participate as members of a community which promotes the benefits of diversity, equity and inclusion – practicing and advocating openness, respect and fairness.

Dance Minor

The Dance Minor consists of 24 units designed to provide the student with a well-balanced program in the art and education of dance. The curriculum integrates critical thinking; creative investigation; scientific foundations; and significant historical and philosophical constructs of dance training, performance and pedagogy. Admission to the minor is contingent upon prior dance experience, a departmental interview and review. Students must have more than a 2.0 Cal Poly GPA.

Theatre Minor

The Theatre Minor is designed to provide a foundation of 12 required units in three major aspects of theatre: introduction/appreciation, design/production, and diversity. On top of that, the inclusion of 16 additional elective units allows for a degree of specialization in an area of the student's choice. Students should discuss their interests with department faculty.

Admission to the minor is contingent upon a departmental interview and review. Students must have more than a 2.0 GPA.

BA Theatre Arts

Program Learning Outcomes

1. Students will develop a fundamental knowledge of theatrical history as well as dramatic literature;
2. Students will acquire skills necessary to do script/text analysis;
3. Students will demonstrate the theoretical precepts found in both production and performance;
4. Students will be exposed to a variety of theatrical skills and apply this knowledge in practical, Learn by Doing situations;
5. Students will practice values and ethics that foster an inclusive environment where theatrical activity can flourish;
6. Students will develop written proficiency in a wide variety of assignments.

Student Learning Objectives

- 1.1 - Investigate the conventions, innovations, principles and prominent practitioners of the primary periods of theatrical history, including western and non-western forms;
- 1.2 - Recognize and demonstrate knowledge of a significant number of plays that are representative of key theatrical periods;
- 1.3 - Articulate the basic principles of the major genres of dramatic literature;
- 1.4 - Explore the political, social, and aesthetic context in which theatre has occurred;
- 1.5 - Articulate historiographic considerations of the theatrical past;
- 2.1 - Analyze a play from a design perspective, creating an environment that captures the theme and spirit of a play;
- 2.2 - Analyze a play from a directorial point of view, being able to articulate the structure, construct a character analysis for each role, formulate movement, and craft interaction that illuminates the theme and spirit of a play;

2.3 - Analyze a play from a dramaturgical perspective, understanding the historical context and social conventions in which the play was written or is set;

3.1 - Apply scholarly research to the process of design, playwriting, directing, and creating a character;

3.2 - Create and communicate concepts using appropriate visual means and with vocal clarity;

3.3 - Develop investigative skills;

3.4 - Think critically;

3.5 - Integrate other-created and self-imagined solutions;

4.1 - Develop and apply the principles and process involved in creating a design;

4.2 - Synthesize and apply the principles and process in directing a play;

4.3 - Recognize and apply the principles and process in writing a play;

4.4 - Analyze and apply the principles and process in the creation and portrayal of a character;

4.5 - Develop vocal, physical, and imaginative skills in order to express their ideas and vision;

4.6 - Recognize and apply construction techniques used in building and painting scenery or construction costumes;

4.7 - Utilize scene or costume shop machinery in a safe and appropriate manner;

4.8 - Understand the role of the stage manager, publicist, producer, house manager and box office manager;

5.1 - Develop an understanding of diverse and non-traditional theatrical conventions and viewpoints;

5.2 - Practice discipline, develop strong time management skills, and display commitment to process;

5.3 - Work in a respectful, collaborative environment;

5.4 - Create a community that stands for the values of inclusion, participation, and compassion for everyone;

6.1 - Understand the research process and write research reports;

6.2 - Critically analyze theatre performance through written reviews;

6.3 - Write a one-act play;

6.4 - Write coherent, persuasive critical analysis essays in a variety of topics drawn from history, literature, and theory.

• Graduation Writing Requirement (GWR)

• U.S. Cultural Pluralism

Note: No Major or Support courses may be selected as credit/no credit.

SUPPORT COURSE		
ENGL 339	Introduction to Shakespeare (Upper-Division C) ¹	4

GENERAL EDUCATION (GE)		
(See GE program requirements below.)		60

FREE ELECTIVES		
Free Electives ⁶		28

At least 4 units of free electives must be at the 300-400 level to ensure completion of the required minimum of 60 units of upper-division courses. Consult college advisor for additional information.

Total units		180
--------------------	--	------------

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Repeatable courses can be taken twice with different topics to meet Major electives.
- ³ Repeatable course: if taken twice with different topics, can be used to meet Major electives as well as Major core requirements.
- ⁴ If a course is taken to meet a Major core requirement, it cannot be double-counted as a Major elective.
- ⁵ Maximum of 4 units may be applied to Major courses; additional units may be applied to Free Electives.
- ⁶ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4

B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4

Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		

C1	Arts: Arts, Cinema, Dance, Music, Theater (4 units in Major) ¹	0
----	---	---

C2	Humanities: Literature, Philosophy, Languages other than English	4
----	--	---

Lower-Division C Elective - Select a course from either C1 or C2		4
--	--	---

Upper-Division C (4 units in Support) ¹		0
--	--	---

Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
---------------	--	--

D1	American Institutions (Title 5, Section 40404 Requirement)	4

Area F	Ethnic Studies	
---------------	-----------------------	--

F	Ethnic Studies	4
---	----------------	---

GE Electives in Areas B, C, and D		
--	--	--

Select courses from two different areas; may be lower-division or upper-division courses.

GE Electives (4 units in Major plus 4 units in GE) ¹		4
---	--	---

Total units		60
--------------------	--	-----------

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Dance Minor

Program Learning Objectives

1. Students will demonstrate an integrated understanding of dance training principles and competency in a variety of dance techniques that support performance.
2. Students will demonstrate the ability to apply fundamental principles of dance composition to their own creative process. They will recognize various choreographic processes, aesthetic properties of style, and the relationship between form and content.
3. Students will develop a fundamental knowledge of body mechanics, anatomy, kinesiology, and somatic practices applicable to work in dance, physical activity and health.
4. Students will recognize crucial historical developments, significant artistic works and philosophical constructs within dance history.
5. Students will communicate ideas effectively through oral, written, choreographic and performance skills, including technologically mediated work.
6. Students will demonstrate critical thinking and creative problem solving skills in theoretical and practical applications.

7. Students will understand cultural, gender, age, and aesthetic diversity through the study of dance.

Select any TH courses not already used to meet Minor requirements. At least 12 units must be upper division. ¹

Total units **28**

¹ Repeatable course, if taken twice with different topics, can be used to meet Minor electives as well as Minor core requirement.

Required Courses

DANC 221	Dance Appreciation	4
DANC 231	Intermediate Ballet	2
DANC 232	Intermediate Modern Dance	2
DANC 233	Intermediate Jazz Dance	2
DANC 340	Dance Composition	4
DANC 341	Dance Concert Practicum ¹	2

Electives

Select from the following (at least 6 units must be 300-400 level): 8

Lower-Division Electives

DANC 130	Pilates and Conditioning Fundamentals	
DANC 131	Beginning Ballet	
DANC 132	Beginning Modern Dance	
DANC 133	Beginning Jazz Dance	
DANC 134	Beginning Ballroom Dance	
DANC 135	International Folk Dance	
DANC 210	Active Wellness	
DANC 234	Intermediate Ballroom Dance	
DANC/TH 280	Body Awareness and Expression	
TH 220 or TH 235	Acting I Acting II	

Upper-Division Electives

DANC 331	Advanced Ballet and Repertory	
DANC 332	Contemporary Dance Repertory	
DANC 345	Choreography/Workshop in Dance Concert Preparation	
DANC 346	Dance Production	
DANC 381	Dance Teaching Methods for Dance Minors	
DANC 400	Special Problems	
DANC 430	Advanced Selected Techniques	
DANC 470	Selected Advanced Topics	
DANC 471	Selected Advanced Laboratory	
TH 315	Physical Theatre	

Total units **24**

¹ DANC 341 can be substituted with an approved Dance Minor Project course DANC 400. Please see minor advisor.

Queer Studies	Minor
Women's and Gender Studies	Minor

Undergraduate Programs

Queer Studies Minor

The Queer Studies (QS) minor provides students with opportunities to explore how sexuality is central to human societies. The Queer Studies minor promotes intersectional, interdisciplinary scholarly inquiry, education and activism that emphasizes how constructions, experiences and expressions of sexuality (including the invention of homo/heterosexuality and ab/normality, intimacy, kinship networks and embodiment) change over time and are lived in relation to interlocking systems of race, ethnicity, religion, class, nation, age, dis/ability and gender. Students completing the minor will develop the intellectual and practical skills necessary to contribute to scholarship, activism, creative production and innovation in the interdisciplinary field of Queer Studies and to serve as leaders in the creation, enactment and evaluation of efforts to create a more inclusive, just and equitable world.

Program Learning Objectives:

1. Students will develop skills in critical thinking, creativity, lifelong learning and communication (including oral, written and visual) to multiple audiences.
2. Students will demonstrate substantial knowledge of foundational and contemporary research in the interdisciplinary field of Queer Studies, and substantial knowledge of the Queer Studies theoretical literature.
3. Students will gain an understanding of how the interdisciplinary field of Queer Studies creates new knowledge and draws upon and utilizes perspectives from multiple fields across the humanities, arts and social sciences.
4. Students will understand the ways in which constructions, experiences and expressions of sexuality shape and are shaped by social, political, ethical, institutional, economic, legal, cultural, scientific and technological factors in the past and present, with special attention paid to interlocking systems of race, ethnicity, religion, class, nation, age, dis/ability and gender in local, national and transnational contexts.
5. Students will understand the ways in which the dynamics of heterosexism and heteronormativity shape and are shaped by social, political, ethical, institutional, economic, legal, cultural, scientific and technological factors in the past and present, with special attention paid to interlocking systems of race, ethnicity, religion, class, nation, age, dis/ability and gender in local, national and transnational contexts.
6. Students will employ key concepts in Queer Studies to contribute to scholarship, creative production and innovation.

7. Students will develop the intellectual and practical skills necessary to engage with issues of social justice and serve as leaders in the creation, enactment, and evaluation of efforts to create a more inclusive, just and equitable world.

Women's and Gender Studies Minor

The Women's and Gender Studies (WGS) minor promotes scholarly inquiry, education, and activism that utilizes an integrative approach, exploring the intersections of gender, race, class, sexuality, ethnicity, religion, dis/abilities, citizenship status, and other social categories within local, regional, national, and transnational contexts. Areas of exploration include gender identities, social movements, reproductive justice, labor, media representations, and technologies, among other topics, considered via active student learning and emphasizing critical understandings of how genders and sexualities shape and are shaped by social, political, ethical, economic, legal, and cultural institutions, both historically and into the present day. The WGS minor thus empowers students to question and contribute to knowledge creation, community formation, activism, creative practice, and policymaking from interdisciplinary feminist perspectives.

Program Learning Objectives:

1. Students will develop skills in critical thinking, writing, and oral communication.
2. Students will demonstrate substantial knowledge of foundational and contemporary research and theoretical literature in the field of Women's & Gender Studies.
3. Students will gain an understanding of how the interdisciplinary field of Women's and Gender Studies creates new knowledge and draws upon and utilizes the perspective of multiple fields, such as the humanities, arts, and social and behavioral sciences.
4. Students will understand the ways in which genders and sexualities shape and are shaped by social, political, ethical, economic, legal, cultural, scientific and technological factors and institutions in historical and contemporary contexts, with special attention paid to the intersections of gender, race, and class, and sexuality in national and transnational contexts.
5. Students will employ key concepts in Women's & Gender Studies scholarship to conduct independent research and analyses on a variety of topics.
6. Students will develop skills that allow them to identify and engage with issues of social justice.

Queer Studies Minor

Required Courses ¹

WGQS 302	Contemporary Issues in Queer Studies ²	4
or ES 345	Queer Ethnic Studies	
WGQS 455	Queer Theory	4

Core Courses ³

Select from the following:		
ANT 460	Queer Anthropology

Academic Programs

Program name	Program type
Chinese	Minor
French	Minor
German	Minor
Italian Studies	Minor
Japanese	Minor
Spanish	BA, Minor

The World Languages and Cultures Department offers coursework in beginning, intermediate, and advanced French, German, and Spanish, as well as coursework in beginning and intermediate Mandarin Chinese, Italian, and Japanese. Instruction at all levels emphasizes communicative competence and the use of authentic media to prepare students for cultural, educational, literary and professional needs in California, throughout the United States, and abroad.

Students who wish to enroll in language courses for the first time at Cal Poly, numbered 101 through 203, must take the requisite Placement Examination prior to enrolling. Students who have never studied the desired language must begin at 101. Students should contact the World Languages and Cultures Department for test dates and procedures.

The department supports the concept of international education and encourages students to investigate opportunities for meaningful international study, internships, and educational experiences. The department works with Cal Poly's and the CSU's International Programs to ensure that courses taken in an experience abroad count toward either major, support, minor, general education and/or free electives, as appropriate. Students interested in studying abroad should consult with the Cal Poly International Center Office and their assigned academic advisor well in advance.

The department also supports such student clubs as the Cal Poly Spanish Language Club, the Chinese Cultural Club, and MEXA (Movimiento Estudiantil Xicano de Aztlán), as well as sponsoring a quarterly film series and other cultural events such as the Chinese New Year celebration and the German Winter Festival.

The World Languages Center (WLC) is the department's digital language laboratory and multimedia teaching facility. Students and faculty members use the Center for class activities and presentations, and for drop-in language practice and curriculum development.

Undergraduate Programs

BA Spanish

Students with majors and minors in World Languages and Cultures have been successful in careers in education, international business, non-profit agencies, the viticulture industry, software and Internet-related services, and government. Others have attended graduate and professional schools in various fields, including languages, literatures, and cultures,

applied linguistics, international security and nonproliferation, education, psychology, law, and medicine. Our graduates have also been selected to teach in secondary schools in Spain (North American Language and Culture Assistants) and France (Teaching Assistant Program in France). In collaboration with the Cal Poly School of Education, we also prepare students for the California single-subject World Languages Teaching Credential. Finally, we work closely with our students to integrate junior- or senior-level education abroad experiences, internships or service-learning experiences in the U.S. or another country, or equivalent professional-level hands-on experiences (with departmental approval) as part of their total capstone experience.

Chinese Minor

The Chinese minor incorporates aspects of Chinese language, combined with elective coursework in business, contemporary politics, history, philosophy, natural resources, agribusiness, or languages and cultures. Chinese language and culture are powerful tools for students from all fields of study. The Chinese minor offers opportunities for real world "Learn By Doing" experiences, via study abroad in Taiwan and China. The Chinese minor provides a solid foundation in Chinese language and culture, while at the same time enabling students from all fields of study to become more competitive in the contemporary job market.

French Minor

The French minor provides students the opportunity to become proficient in one of the world's most international languages which is widely spoken in the areas of business, diplomacy, advanced academic research, the arts, fashion, viticulture, and the culinary arts. French minors are strongly encouraged to study abroad, taking advantage of Cal Poly's diverse programs in France and other Francophone countries. French minor students will concentrate on building their language proficiency at the intermediate and advanced levels and will also have the opportunity to take courses in French and Francophone cultures and literatures. Students should begin their French studies during fall quarter of their first year in order to maximize the chances of achieving a useful level of proficiency during their college experience.

German Minor

The German minor at Cal Poly prepares students from all majors for a wide variety of international experiences, including our college- and major-specific exchanges with German universities, study and internships abroad, and lifelong membership in the community of those who have learned more than one language. Students develop creative and critical skills in our courses, which are focused on language as one of many important cultural phenomena, including literature, philosophy, music, visual arts, politics, and film. Students should begin their German studies during fall quarter of their first year in order to maximize the chances of achieving a useful level of proficiency during the college experience.

Italian Studies Minor

The Italian Studies minor provides students with opportunities to explore how the language and culture of Italy are central to the arts, humanities, and sciences in the Western tradition. In addition, students learn about the central role Italy plays on the world stage as one of the founders of Nato, of the European Union, and as one of the seven most industrialized nations (G7). Required coursework focuses on acquiring intermediate

proficiency in the language (Italian 102 through 201), together with a solid foundation in the humanities (WLC 310 Culture of Italy), while the upper-division electives come from a variety of complementary fields, including art, music, history, and political science.

Japanese Minor

The Japanese minor at Cal Poly prepares students from all majors for a variety of international experiences, which include our exchanges with Japanese universities, our study abroad programs and internships in Japan, and affords lifelong membership in the community of those who have learned more than one language. Japanese is spoken by more than 120 million people in Asia and by a large number of speakers in the U.S., our own local area having significant Japanese heritage and an active community. Students develop linguistic and critical-thinking skills in our required courses, which are focused on language as one of many important cultural phenomena. Elective courses emphasize an exploration of diverse cross-cultural issues, especially as they relate to technology and identity, giving students an opportunity to understand Japanese language and culture in wider disciplinary contexts. Students preparing for the minor should take JPNS 101 and JPNS 102, or equivalent to fulfill the prerequisites for the required courses in the minor.

Minor Requirements (p. 359)

Spanish Minor

The Spanish minor is a valuable complement to any Cal Poly major, from agriculture, engineering, and architecture to psychology, business, and political science. With an estimated 450 million Spanish speakers worldwide and growing Latinx populations in every state, advanced Spanish language skills and cultural competence are assets for employment and community involvement. This minor enhances students' career options and makes them highly competitive for admission to graduate and professional schools. The Spanish minor offers students a diverse array of exciting intercultural experiences and opportunities to work with under-served communities. The Spanish minor is not open to BS Liberal Studies majors with a concentration in Spanish.

BA Spanish

Program Learning Objectives

The Spanish major program provides students opportunities to:

1. Learn to communicate effectively in Spanish and other target languages through speaking, listening, reading, and writing in authentic situations.
2. Develop communicative and intercultural competency so that they can work productively both as individuals and in collaboration with others.
3. Gain perspective on cultural and historical achievements in the target-language cultures as well as on relevant issues of diversity.
4. Cultivate awareness of ethical and professional perspectives that reflect linguistic and cultural heritage.
5. Think critically and creatively using Spanish and other target languages and negotiate meaning between the target language(s) and English.
6. Develop the life-long ability to evaluate ways in which language and culture provide perspective on the larger world of the arts, sciences, and technology.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major or Support courses may be selected as credit/no credit.

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Students may not declare a Spanish minor.
- ³ Courses in a minor may not be used to satisfy Major requirements or Approved Electives in BA Spanish (no double counting of coursework).
- ⁴ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- ⁵ Courses from this list cannot be double-counted in the Major. However, repeatable courses taken with different subtopics are allowed.
- ⁶ May be counted multiple times if taken with different subtopics.

General Education (GE) Requirements

- 72 units required, 12 of which are specified in Major and/or Support.
- If any of the remaining 60 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning	4
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Major) ¹	0
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C (4 units in Major) ¹		0
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		60

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Chinese Minor

Required Courses

CHIN 201	Intermediate Mandarin Chinese I	4
CHIN 202	Intermediate Mandarin Chinese II	4
CHIN 203	Intermediate Mandarin Chinese III	4
WLC 310	Humanities in World Cultures (Culture of China)	4

Approved Electives

Select from the following:		8
AGB 318	Global Agricultural Marketing and Trade	
BUS 302	International and Cross Cultural Management	
BUS 304	International Supply Chains	
HIST 418	Chinese Film and History	
NR 323	Human Dimensions in Natural Resources Management	
NR 360	Ethnicity and the Land	
PHIL 362	Chinese and East Asian Philosophy	
POLS 337	U.S. and China in the Contemporary World	
WLC 370	Language, Technology and Society	
WLC 400	Special Problems for Advanced Undergraduates ¹	
WLC 470	Selected Advanced Topics ²	
Total units		24

¹ Enrollment in this individualized course requires approval of instructor and department chair.

² Applicable to minor with subtopic course content relevant to Chinese.

French Minor

Required Courses

FR 202	Intermediate French II	4
FR 203	Intermediate French III	4

FR 233	Critical Reading in French Literature	4
--------	---------------------------------------	---

Approved Electives

Select from the following:		12
FR 301	Advanced French Composition and Grammar	
FR 302	Advanced French Conversation and Grammar	
FR 305	Significant Works in French ¹	
FR 350	French Literature in English Translation ¹	
FR 470	Selected Advanced Topics ¹	
WLC 310	Humanities in World Cultures (Culture of France)	
WLC 370	Language, Technology and Society	
WLC 400	Special Problems for Advanced Undergraduates ¹	
WLC 470	Selected Advanced Topics ¹	
Total units		24

¹ Repeatable to 8 units.

German Minor

Required Courses

GER 201	Intermediate German I	4
GER 202	Intermediate German II	4
GER 233	Critical Readings in German Literature	4

Approved Electives

Select from the following:		12
GER 301	Advanced German Composition and Grammar	
GER 302	Advanced German Conversation and Grammar	
GER 305	Significant Works in German ¹	
GER 350	German Literature in English Translation ¹	
GER 470	Selected Advanced Topics ¹	
WLC 307	World Cultures through Film (German Cinema)	
WLC 310	Humanities in World Cultures (Culture of Germany)	
WLC 370	Language, Technology and Society	
WLC 400	Special Problems for Advanced Undergraduates ¹	
WLC 470	Selected Advanced Topics ¹	
Total units		24

¹ Repeatable to 8 units.

Italian Studies Minor

Required Courses

ITAL 102	Elementary Italian II	4
ITAL 103	Elementary Italian III	4
ITAL 201	Intermediate Italian I	4

WLC 310	Humanities in World Cultures (Topic: Culture of Italy)	4
---------	--	---

Approved 300-400 Level Electives

Select from the following:		8
ART 370	Michelangelo	
ART 371	Topics in Renaissance Art (Topics: Art and Politics in Renaissance Italy; Art of Love in the Renaissance)	
HIST 307	European Thought 1800-2000	
HIST 334	Modern Europe, 1789-1914	
HIST/HNRS 335	Modern Europe, 1914-Present	
HIST 452	Renaissance and Reformation Europe	
POLS 329	Ancient and Medieval Political Thought	
POLS 383	Politics of the European Union	
WLC 370	Language, Technology and Society	
WLC 400	Special Problems for Advanced Undergraduates	

Total units **24**

Japanese Minor

Required Courses

JPNS 103	Elementary Japanese III ¹	4
JPNS 201	Intermediate Japanese I	4
JPNS 202	Intermediate Japanese II	4
WLC 310	Humanities in World Cultures (Topic: Cultures of Japan)	4

Approved Electives

Select from the following:		8
ARCH 320	Topics in Architectural History ^{2,3}	
COMS 316	Intercultural Communication	
ES 322	Asian Americans in Popular Culture	
ES 340	Cultural Production and Ethnicity	
ES/WGQS 351	Gender, Race, Class, Nation in Global Engineering, Technology & International Development	
ES 380	Critical Race Theory	
PHIL 362	Chinese and East Asian Philosophy	
RELS 301	Religions of Asia	
RELS 307	Buddhism	
WLC 370	Language, Technology and Society	
WLC 400	Special Problems for Advanced Undergraduates ³	
WLC 470	Selected Advanced Topics ³	

Total units **24**

¹ JPNS 101 and JPNS 102 or equivalent are required prerequisites.

² Course requires additional prerequisites.

³ Repeatable to 8 units; variable topic courses subject to approval by minor advisor.

Spanish Minor

Required Courses

SPAN 202	Intermediate Spanish II	4
SPAN 203	Intermediate Spanish III	4
or SPAN 206	Spanish for Heritage Speakers	
SPAN 207	Introduction to Spanish Linguistics ¹	4
or SPAN 233	Introduction to Hispanic Readings	

Approved Electives

Select from the following:		12
SPAN 301	Advanced Composition in Spanish	
SPAN 302	Advanced Conversation and Composition in Spanish	
SPAN 303	Introduction to English-Spanish Translation	
SPAN 305	Significant Works in Spanish ²	
SPAN 307	Spanish and Latin American Film ²	
SPAN 340	Chicano/a Authors	
SPAN 350	Hispanic Literature in English Translation	
SPAN 351	Chicano/Latino Writers in the United States	
SPAN 390	Introduction to Creative Writing in Spanish	
SPAN 402	Advanced Topics in Spanish Linguistics	
SPAN 410	Advanced Literature in Spanish	
SPAN 416	Don Quixote	
SPAN 470	Selected Advanced Topics ²	
WLC 310	Humanities in World Cultures (Culture of Spain, Mexico or Latin America)	
WLC 312	Humanities in Chicano/a Culture	
WLC 370	Language, Technology and Society	
WLC 400	Special Problems for Advanced Undergraduates ²	
WLC 470	Selected Advanced Topics ²	

Total units **24**

¹ SPAN 207 does not serve as prerequisite for upper-division literature or film courses taught in Spanish.

² Repeatable to 8 units.

Mission

The mission of the College of Science and Mathematics is to facilitate learning, understanding, and appreciation of science and mathematics

as a basis for creative endeavors, intellectual pursuits, careers, and critical consideration of issues confronting society. The College has two equally important roles: (1) to provide specialized coursework for students enrolled in the College's undergraduate, graduate and minor programs, and (2) to provide support and breadth courses in science and mathematics for all students of the university. Cal Poly is a national leader in preparing college students for careers in science, technology, engineering, and mathematics (STEM) professions, including science and mathematics teaching careers.

The College of Science and Mathematics has a tradition and reputation for excellence in teaching and faculty mentored student research and is dedicated to both undergraduate and graduate instruction. The College provides a student-centered learning environment consistent with the University's "learn by doing" philosophy. In laboratories, students have access to modern instrumentation and computer technology. Classroom instruction is done in relatively small classes so that a personal approach by instructors is possible. Because of the College's large role in offering support courses to the rest of the university community, the number of faculty in each department is relatively large and favors student-faculty interaction, both inside and outside of the classroom.

Faculty Mentors

Faculty members are subject-matter experts in their field and take an active role in academic and career advising. It is especially valuable to consult with faculty about curriculum decisions within the major, extracurricular activities, involvement in research/internships, and career/professional opportunities. Students are encouraged to obtain both faculty and professional academic advising to choose appropriate coursework to complement their interests and career goals.

Applying to Graduate School

College of Science and Mathematics faculty have earned advanced degrees from a wide variety of universities and are excellent sources for information and advice about graduate programs, prerequisites and application procedures. Applications to graduate programs should be made in the fall for admission to the following fall term. The Graduate Record Exam (GRE) should be taken early in the application cycle. Generally, two or more letters of reference from faculty are required. Most Ph.D. granting institutions offer financial support in the form of teaching assistantships and research fellowships.

Advising Mission Statement

The College of Science and Mathematics Academic and Pre-Health Advisors strive to connect with each student to recognize and support their unique advising needs. Advisors collaborate with students in a

manner which empowers them to make informed, self-directed decisions in order to define and pursue their academic and professional aspirations.

Services Provided

Services include assistance with developing long-range academic plans, interpreting university and college policy and procedures, articulation agreements, scheduling classes, study abroad and informing students of their graduation requirements, as well as academic peer coaching for students experiencing academic difficulty.

The Advising Center provides pre-health career advising services and resources for Cal Poly students and alumni seeking a career in a health professions field. Students are encouraged to seek advice early and often throughout their time at Cal Poly. For more information, please refer to: pre-health career advising (p. 446).

School of Education

The School of Education prepares students to be effective, ethical and informed teachers, counselors and administrators, who have a particular expertise relative to current state and national needs in their respective fields through an inquiry-focused clinical approach. The School of Education offers a range of programs: multiple subject and single subject teaching credentials; agriculture specialist credential; integrated credential and M.S. in Special Education; integrated credential and M.A. Educational Leadership and Administration; M.A. in Curriculum and Instruction; and M.S. Higher Education Counseling and Student Affairs. Single subject credential programs are offered in Agriculture, English, Biology, Chemistry, Mathematics, Physics, Social Science and World Languages.

To prepare students in these fields, faculty from agriculture, science, mathematics, and the liberal arts work collaboratively with faculty in the School of Education to provide outstanding programs that maintain a balance of coursework in subject matter, foundations of education, and pedagogy, integrated with field experiences for applied practice. In the Liberal Studies Program, students can pursue a pre-professional program that leads to a B.S. degree and includes preparation toward a multiple subject credential to teach in elementary school. Cal Poly takes pride in producing school teachers and leaders through a balanced curriculum. More information on the programs offered can be found in the School of Education (p. 414) section of this catalog.

Interdisciplinary Minors

Actuarial Preparation Minor

Actuaries are professional risk managers that assess the likelihood and impact of future, uncertain events. They use their quantitative skills to prepare businesses for the financial impact of the risk to which they are exposed. Actuaries must meet rigorous standards for admission to professional societies. To be called an actuary in the United States, one must become an Associate or Fellow of the Society of Actuaries (SOA) or the Casualty Actuarial Society (CAS).

The Actuarial Preparation Minor provides education in probability, financial mathematics, and mathematical statistics. The coursework will help students satisfy the Validation by Educational Experience (VEE) requirements of the SOA and CAS, and will prepare them for the actuarial exams, which are also prerequisite to SOA or CAS membership. The minor offers VEE courses in the areas of accounting and finance (BUS 214, BUS 342), economics (ECON 221, ECON 222), and mathematical statistics (STAT 425, STAT 426).

The minor is open to any major, but it is especially suited to students majoring in statistics, mathematics, and business or economics (with a Quantitative Analysis concentration). Students should be aware that courses within the minor have MATH 142, a course in computer programming (BUS 392, CPE/CSC 101, CSC 232, CSC 235, ECON 395, or STAT 331), and certain introductory statistics courses (IME 326, STAT 252, STAT 302, STAT 312, or STAT 313) as prerequisites. Many of these courses are already required for the majors most closely aligned with the actuarial profession. Students should complete these prerequisites before applying to the minor. Those interested in the minor should consult the website <https://statistics.calpoly.edu/content/actuary/> (<https://statistics.calpoly.edu/content/actuary/>).

Additional information about the actuarial profession, societies, and exams, as well as additional suggested coursework, is available at the website above.

Biotechnology Minor

Biotechnology is one of the most important areas of growth in the biomedical sciences and has transformed medicine, chemical manufacturing, and agriculture over the last 20 years. Cal Poly's Biotechnology minor is designed to give undergraduate students a grounding in the sciences that underlie biotechnology; in addition, students engage in practical experience in biotechnology lab work.

Students completing the Biotechnology minor take a core of required courses and approved elective courses focusing on biotechnology. The Biotechnology Minor Form is available from the Dean's Office or the Advising Center in the College of Science and Mathematics. Final approval of the minor is by one of the Minor Coordinators in the College of Science and Mathematics.

The minor is open to any major except Biochemistry, Microbiology, and Biological Science General Curriculum or with concentrations in Anatomy and Physiology, and Molecular and Cellular Biology.

Biological Sciences students preparing for the minor must take CHEM 216, CHEM 217, and CHEM 369 to fulfill the organic chemistry and biochemistry (if applicable) requirements of their major.

Students interested in more information should contact the Biotechnology Minor Coordinators in the Chemistry and Biochemistry Department or the Biological Sciences Department.

Minor Requirements (p. 362)

Environmental Studies Minor

Students who complete a minor in Environmental Studies will be able to:

- Analyze, explain, and evaluate environmental issues from both scientific/technical and social/political/economic/ethical perspectives.
- Integrate and synthesize knowledge from multiple disciplines.
- Explain and apply the methodologies and approaches that different disciplines bring to bear on complex problems.
- Work productively and effectively with students from other disciplines and with other points of view.
- Confront and grapple with real issues of contemporary significance.
- Gain employment or pursue further study that emphasizes interdisciplinary knowledge and skills.

More information about the Environmental Studies Minor, including Subject Area Electives appropriate for students in each of the colleges, can be obtained from the College of Science and Math Advising Center in Building 53, Room 211.

Actuarial Preparation Minor

Required Courses

BUS 214	Financial Accounting	4
BUS 342	Fundamentals of Corporate Finance	4
ECON 221	Microeconomics	4
ECON 222	Macroeconomics	4
STAT 305	Introduction to Probability and Simulation	4
or STAT 321	Probability and Statistics for Engineers and Scientists	

Approved Electives **8**

Students majoring in STAT or MATH must select from the following courses:

BUS 431	Security Analysis and Portfolio Management
BUS 439	Fixed Income Securities Market
BUS 442	Introduction to Futures and Options
BUS 444	Financial Engineering and Risk Management

Students majoring in BUS or ECON must select from the following courses:

STAT 324	Applied Regression Analysis
or STAT 334	Applied Linear Models
STAT 416	Statistical Analysis of Time Series
or ECON 406	Applied Forecasting
STAT 417	Survival Analysis Methods
STAT 425	Probability Theory
STAT 426	Estimation and Sampling Theory
STAT 434	Statistical Learning: Methods and Applications

Students in other majors must select one course from each list.

Total units **28**

Biotechnology Minor

Required Courses

BIO/CHEM 202	Orientation to Biotechnology	2
Select from the following:		4-5
BIO 161	Introduction to Cell and Molecular Biology	
BOT 121	General Botany	
MCRO 221	Microbiology	
MCRO 224	General Microbiology I	

Select from the following: **3-5**

BIO 303	Survey of Genetics
BIO 351	Principles of Genetics
CHEM 373	Molecular Biology

Select from the following: **5**

CHEM 314	Biochemistry: Fundamentals and Applications	
CHEM 369	Biochemical Principles	
Laboratory elective-	select from the following:	3-5
ASCI 403	Applied Biotechnology in Animal Science	
BIO/CHEM 475	Molecular Biology Laboratory	
CHEM 474	Protein Techniques Laboratory	

Approved Electives

Select from the following: **6-11**

Animal Biotechnology

ASCI 403	Applied Biotechnology in Animal Science
ASCI 406	Applied Animal Embryology and Assisted Reproduction
ASCI 407	Assisted Reproduction Technologies of Gametes and Embryos Laboratory
ASCI 440	Immunology and Diseases of Animals

Academic Programs

Program name	Program type
Biological Sciences	BS, MS
Biology	Minor
Cross Disciplinary Studies Minor in Bioinformatics	Minor
Marine Sciences	BS
Microbiology	BS, Minor

The Biological Sciences Department offers undergraduate programs leading to Bachelor of Science degrees in Biological Sciences, Marine Sciences and Microbiology, and minors in Biology, Bioinformatics, and Microbiology. The graduate program leads to a Master of Science degree in Biology. In addition, courses are offered to satisfy life science requirements of academic majors across campus. The Biological Sciences Department is committed to serving the needs of a student population with diverse backgrounds and goals.

The Biological Sciences Department teaches courses with the following prefixes: BIO (Biology), BOT (Botany), MCRO (Microbiology), and MSCI (Marine Science).

The Biological Sciences Department encourages learning by doing in the classroom and through research, in the laboratory and the field. Most courses are accompanied by labs where students gain hands-on experience with biology. Cal Poly's geographical setting on the Central Coast of California offers unique opportunities for studying terrestrial, aquatic, and marine ecosystems. The Department offers a wide range of potential research experiences for our majors. Our faculty maintain active research laboratories where students can participate in the scientific process from start to finish, including presenting and publishing their work. Special opportunities are available through the Center for Applications in Biotechnology (CAB), which is developing biological tools to address environmental concerns through collaborative interdisciplinary research and education; the Center for Coastal Marine Science (CCMS), which promotes and facilitates basic and applied studies of coastal marine systems; and the Undergraduate Biotechnology Laboratory (UBL), which provides undergraduates with hands-on biotechnology experience. Additional resources for research and teaching include a 3000-ft pier at nearby Avila Bay, and natural history collections consisting of tens of thousands of insects, plants, birds, mammals, reptiles, amphibians, and fish.

Successful graduates enter careers in basic and applied research, public health, biotechnology, teaching, wildlife and natural areas conservation, consulting, and government agencies. Graduates are also well prepared to enter graduate or professional schools for advanced study of medicine, dentistry, veterinary science and other health sciences, as well as biodiversity, botany, climate change biology, conservation, ecology, evolution, genetics, genomics, marine sciences, microbiology, molecular biology, physiology, and zoology. The department offers courses required for pre-professional training in medicine and paramedical fields.

The department supports the concept of international education and encourages students to investigate opportunities for overseas study. For further information, see Cal Poly International Center (<https://international.calpoly.edu/>).

Undergraduate Programs BS Biological Sciences

The degree offers students a broad education in biology from molecules to ecosystems, with an emphasis on hands-on training in the laboratory and the field. Biology majors can gain preprofessional preparation in the biomedical fields, coursework toward a teaching credential, progress toward professional certification, and/or preparation for graduate training in a field of interest. In addition to the core coursework for the biology major, students may choose a concentration in order to gain a deep, focused understanding of a specific subfield within biology, or may follow the general curriculum in biology for broader exposure to a variety of topics. Students are encouraged to consult with a faculty advisor and the College of Science and Mathematics Advising Center to help them learn about their chosen degree program, concentration choices, career options, study skills, and departmental opportunities. Students interested in teaching may choose any concentration and should contact the single subject credential advisor for information about teaching opportunities and recommended coursework. Students may not double major in Biological Sciences and Microbiology. Students may not double major in Biological Sciences and Marine Science.

Concentrations

Anatomy and Physiology

Students in this concentration study biological sciences with an emphasis on the structure and function of humans and other animals. This concentration is ideal for students preparing for careers in the health professions.

Ecology, Evolution, Biodiversity, and Conservation

This concentration will prepare students to study the ecology and evolution of the earth's biodiversity and to participate in its conservation. The concentration will provide students with the skills necessary to participate in the conservation of wildlife, plants, and other wild species and their habitats. Professions in this arena include basic and applied research with state and federal resource management agencies, non-governmental organizations (N.G.O.s), and private consulting firms. These professions require a solid foundation in the identification of organisms, the principles of ecology and evolution, and the tools, policies and social context of conservation. This area of concentration is recommended for students seeking professional certification by off-campus entities such as The Wildlife Society and the Ecological Society of America; students interested in such certification programs should consult with their faculty advisor for specific programmatic guidance.

Molecular and Cellular Biology

Designed for students who are interested in how genes and their products work to create and maintain cells, tissues and organisms. This concentration augments the diverse biological sciences curriculum with laboratory courses in nucleic acid and protein techniques, along with cell biology, biochemistry, and electives such as bioinformatics, microbial biotechnology, immunology, developmental biology and virology. This concentration is ideal for students interested in biotechnology or biomedical research, and is also an excellent option for students planning future studies in the health professions.

General Curriculum in Biology

General Curriculum in Biology is not a concentration but can be used to fulfill the unit requirements of a concentration. The General Curriculum provides the greatest flexibility allowing students to take coursework across all areas of biology. This breadth of knowledge across the biological sciences may be especially beneficial for students considering teaching biology at the secondary level. Students who do not declare a concentration will default to the General Curriculum.

BS Marine Sciences

The degree is an integrative program designed to prepare students for advanced training or professional employment in public or private agencies concerned with marine-related issues. While this degree is based in Biological Sciences, the program includes faculty from other disciplines including chemistry, physics, mathematics, engineering, and computer science. The degree instills students with critical thinking and analytical skills in areas such as marine organism physiology, conservation, fisheries, oceanographic sampling and data networks. Through the use of experience-based learning including faculty-led research projects, students will develop essential knowledge as well as a solid foundation in community-oriented education in the interdisciplinary field of marine sciences. Students may not double major in Biological Science and Marine Science.

BS Microbiology

Microbiology is the study of bacteria, viruses, fungi, and protists. Microorganisms are ubiquitous in the environment as important contributors to nutrient cycling, and many have symbiotic relationships with other organisms. Species of medical importance impact human and animal health as pathogens associated with infectious diseases. Additionally, microorganisms are critical research tools in fields such as molecular biology and genetics, and are used for large-scale production of many foods, pharmaceuticals, and industrial chemicals. Cal Poly is one of the few public universities in California offering a laboratory-intensive Bachelor of Science degree in Microbiology.

In the junior and senior years, in addition to genetics, cell biology, and microbial physiology, majors can take specialized courses in medical microbiology, immunology, microbial ecology, virology, and molecular biology laboratory techniques. Students also choose elective courses related to student interests and career goals in close consultation with their faculty advisors. Such goals may include graduate school or professional studies with further training through Clinical Laboratory Scientist (CLS) or Public Health Microbiologist certification programs. Graduates may also pursue post-baccalaureate employment in applied areas such as industrial microbiology, food and dairy microbiology, biotechnology, public health, epidemiology, or medical laboratory technology. Students may not double major in Biological Science and Microbiology.

Biology Minor

The purpose of the minor is to help students from other disciplines acquire increased factual and conceptual knowledge in biology, an increased understanding of scientific methods and techniques used to study biology, and an increased ability to analyze biological topics in the news or in various jobs. Biological issues are important throughout modern life and particularly relevant in many careers, including

those in health-related businesses, agriculture, several engineering disciplines, city planning, teaching K-12 students, journalism, political science, psychology, and statistics. Students in more closely related majors such as biochemistry or kinesiology may also be interested in strengthening their biology background. In addition, an enhanced biology background helps students become better educated citizens regarding a variety of controversial issues in modern society (e.g., genetically-modified organisms in agriculture, human cloning, genetic discrimination, the pressures of population growth). The minor is open to any major except Biological Sciences, Marine Science, Microbiology, and Liberal Studies with a concentration in Biology.

Biotechnology Minor

For information regarding the Biotechnology Minor, please see College of Science and Mathematics (p. 360) section.

Cross Disciplinary Studies Minor in Bioinformatics

Through an inter-college collaboration, the Biology, Chemistry, Computer Science and Software Engineering, and Statistics Departments offer a Cross-Disciplinary Studies Minor (CDSM) in Bioinformatics. Bioinformatics lies at the intersection of computational sciences and biology. The CDSM in Bioinformatics creates a strong foundation in molecular biology as well as the design and applications of software and databases commonly used by computational biologists. The student will gain an understanding of how bioinformatic data are generated, organized, and used to gain insights into molecular life science.

The CDSM in Bioinformatics will provide the opportunity for biology, biochemistry, computer science and statistics students to identify solutions to biological questions using bioinformatics, to write and implement software on a bioinformatics project, to apply statistical analyses associated with bioinformatics, and to learn algorithms that can be useful for software development in the bioinformatics/computational biology field.

A student may not be awarded both the Cross Disciplinary Studies Minor in Bioinformatics and the Biotechnology minor.

Target majors: Biology, Biochemistry, Statistics, Computer Science and Software Engineering

Microbiology Minor

This minor is designed to give students, from majors in which microbiology may be an important component, increased exposure to factual information, concepts, and skills and to provide those students a more complete understanding of the roles of microorganisms as they pertain to their major. Students in the allied health and related fields may expand their breadth of knowledge in microbial diseases, transmission and prevention, and immunologic responses. Students in applied fields of study such as Food and Dairy Sciences and various aspects of agriculture can gain additional information in pertinent topics such as the presence and role of microorganisms in water and wastewater treatment, in recycling of nutrients and soil fertility, in food processing, spoilage, and production, and in disease transmission. The minor is open to any major except Biological Sciences.

Graduate Programs

Master of Science Degree in Biological Sciences

General Characteristics

This degree offers a strong background in the biological sciences. The program is designed to offer sufficient depth to strengthen the student's academic understanding and improve competence for:

1. many types of biological work that require advanced training beyond the bachelor's degree;
2. careers in industry and/or civil service;
3. teaching biological sciences at the elementary, secondary, and community college levels;
4. independent research in the field of specialization;
5. continued graduate work at other institutions.

Prerequisites

Admission to this program requires a minimum grade point average of 3.0 in the last 90 quarter units attempted and two letters of recommendation from persons knowing your academic potential.

Information pertaining to specific departmental requirements for admission, classified, or conditionally classified may be obtained from the Director of the Graduate and Research Committee (Graduate Coordinator) of the Biological Sciences Department.

Program of Study

The formal program of study for the degree must include 45 units of committee-approved graduate work, at least 30 units of which must be at the 500 level. Coursework must include 32 units taken within the Biological Sciences Department at Cal Poly. A grade point average of 3.0 or better is required from the combination of all courses included in the Formal Study Plan. A maximum of 12 units of BIO 590 Seminar in Biology, and a maximum of 3 units of BIO 500 Individual Study may be used as credit towards the degree. The culminating experience is a written and publicly presented independent and novel body of research, and nine units of BIO 599 Thesis.

MS Biological Sciences, Specialization in Regenerative Medicine

Characteristics. Prepares students for careers in regenerative medicine and related fields. Specifically, our graduates are prepared for immediate employment in regenerative medicine, biotechnology or medical technology companies, or as research specialists/laboratory managers at universities and research institutes. Program graduates are also well-prepared to matriculate into biological sciences doctoral programs or graduate programs in the health professions.

Culminating Experience. Students who obtain a degree in the Master of Science in Biological Sciences with a specialization in Regenerative Medicine are not required to complete a "thesis" through BIO 599. In place of the thesis as a culminating experience, students complete a Project during a 9-month internship at a company or academic research laboratory (BIO 593). The Project Report and Project Presentation are evaluated by the student's Cal Poly and Internship Mentors; in addition, the Presentation is evaluated by the Program Director.

BS Biological Sciences

Program Learning Objectives

1. Explain fundamental concepts of biology in the following areas: diversity & evolution; structure and function at multiple hierarchical levels; information flow; energy and matter transformations; interactions among and between organisms and the environment.
2. Demonstrate proficiency in the appropriate lab and field techniques in their area of specialization in biology.
3. Locate and critically evaluate the scientific literature.
4. Apply the process of science to design, conduct, analyze and interpret experiments in biology.
5. Integrate statistics, math, physical sciences and technology to answer biological questions.
6. Communicate biological principles and research findings effectively to diverse audiences.
7. Relate ethical, social justice or global perspectives to the study and practice of biology.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

BIO 150	Diversity and History of Life	4
BIO 161	Introduction to Cell and Molecular Biology (B2 & B3) ¹	4
BIO 162	Introduction to Organismal Form and Function	4
BIO 263	Introductory Ecology and Evolution	4
BIO 351	Principles of Genetics	5
BIO 413	Evolutionary Medicine	4
or BIO 414	Evolution	
BIO 461	Senior Project - Research Proposal	2
or BIO 462	Senior Project Research Experience	

Ecology³

Select from the following:		4
BIO 327	Wildlife Ecology	
BIO 363	Principles of Conservation Biology	
BIO 442	Behavioral Ecology	
BOT 326	Plant Ecology	
MCRO 436	Microbial Ecology	
MSCI 300	Marine Ecology	

Physiology^{2,3}

Select from the following:		4
BIO 361	Principles of Animal Physiology	

BIO 434	Environmental Physiology	
BIO 435	Plant Physiology	
Concentration or General Curriculum in Biology³		
(See list of Concentrations and General Curriculum in Biology below)		43
SUPPORT COURSES		
CHEM 127	General Chemistry for Agriculture and Life Science I (B1 & B3) ¹	4
CHEM 128	General Chemistry for Agriculture and Life Science II	4
CHEM 129	General Chemistry for Agriculture and Life Science III	4
CHEM 216 or CHEM 312	Organic Chemistry I ⁴ Organic Chemistry: Fundamentals and Applications	5
MATH 161	Calculus for the Life Sciences I (B4) ¹	4
MATH 162	Calculus for the Life Sciences II (GE Electives) ¹	4
PHYS 121	College Physics I	4
PHYS 122	College Physics II	4
PHYS 123	College Physics III	4
STAT 218	Applied Statistics for the Life Sciences	4
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		56
FREE ELECTIVES		
Free Electives ⁵		5
Total units		180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Students planning to take Anatomy and Physiology courses should take BIO 361 to fulfill this requirement.
- ³ Courses taken to meet a Major or Support requirement cannot be double-counted in a concentration or in the General Curriculum.
- ⁴ Students in the Molecular and Cellular Biology concentration should take CHEM 216 to fulfill this requirement.
- ⁵ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Curriculum in Biology or Concentrations (Select one)

- General Curriculum in Biology (p. 371)
- Anatomy and Physiology (p. 367)
- Ecology, Evolution, Biodiversity, and Conservation (p. 369)
- Molecular and Cellular Biology (p. 370)

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written

Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		56

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Anatomy and Physiology Concentration

BIO 452	Cell Biology	4
CHEM 369 or CHEM 314	Biochemical Principles Biochemistry: Fundamentals and Applications	5

Biodiversity Courses ^{1,2}

Select from the following: 4

BIO 321	Mammalogy
BIO 322	Ichthyology
BIO 323	Ornithology
BIO 324	Herpetology
BIO 329	Vertebrate Field Zoology
BIO 335	General Entomology
BIO 336	Invertebrate Zoology
BIO 415	Biogeography
BOT 313	Taxonomy of Vascular Plants
MCRO 224	General Microbiology I ³
MSCI 324	Marine Mammals, Birds and Reptiles
MSCI 437	Marine Botany
PLSC/BOT 323	Plant Pathology

Core Anatomy and Physiology Courses ^{1,2}

Select from the following: 16

BIO 406	Advanced Anatomy and Physiology: Neuroscience
BIO 407	Advanced Anatomy and Physiology: Endocrinology
or ASCI 405	Domestic Livestock Endocrinology
BIO 408	Advanced Anatomy and Physiology: Cardiorespiratory and Renal
BIO 409	Advanced Anatomy and Physiology: Muscle and Locomotion
BIO 410	Functional Histology
BIO 426	Immunology

Department Electives ^{1,2}

Select from the following: 3

BIO 321	Mammalogy
BIO 322	Ichthyology
BIO 323	Ornithology
BIO 324	Herpetology
BIO 329	Vertebrate Field Zoology
BIO 335	General Entomology
BIO 336	Invertebrate Zoology
BIO 405	Developmental Biology
BIO 406	Advanced Anatomy and Physiology: Neuroscience
BIO 407	Advanced Anatomy and Physiology: Endocrinology
or ASCI 405	Domestic Livestock Endocrinology
BIO 408	Advanced Anatomy and Physiology: Cardiorespiratory and Renal
BIO 409	Advanced Anatomy and Physiology: Muscle and Locomotion
BIO 410	Functional Histology
BIO 411	Advanced Human Gross Anatomy
BIO 415	Biogeography
BIO 426	Immunology
BIO 428	Hematology
BIO 429	Parasitology

BIO 434	Environmental Physiology
BIO 435	Plant Physiology
BIO 470	Selected Advanced Topics (for "Gastrointestinal Physiology & Microbiology" topic only)
BIO/CHEM 475	Molecular Biology Laboratory
MCRO 224	General Microbiology I ³
MCRO 225	General Microbiology II
MCRO 320	Emerging Infectious Diseases
MCRO 342	Public Health Microbiology
MCRO 402	General Virology
MCRO 423	Medical Microbiology
MCRO 424	Microbial Physiology

Approved Electives ¹

At least 4 units must be upper-division

Select from the following: 11

ANT 401	Culture and Health
ASCI 351	Reproductive Physiology
ASCI 406	Applied Animal Embryology and Assisted Reproduction
ASCI 407	Assisted Reproduction Technologies of Gametes and Embryos Laboratory
ASCI 438	Systemic Animal Physiology
BIO 231	Human Anatomy and Physiology I ⁴
or BIO 232	Human Anatomy and Physiology II
BIO 300	Research Experience for Undergraduates ⁵

PHIL 323	Ethics, Science and Technology
or PHIL 339	Biomedical Ethics
or PHIL 341	Professional Ethics
PLSC/BOT 323	Plant Pathology
PSY 320	Health Psychology
PSY 340	Biopsychology
STAT 313	Applied Experimental Design and Regression Models
WGQS/ES 350	Gender, Race, Culture, Science & Technology
Total units	43

¹ Consultation with advisor is recommended prior to selecting electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals. Choose electives carefully to ensure that you meet the required 60 units of 300-400 level courses.

² Excess units will be applied to Approved Electives.

³ Recommended for students interested in health sciences careers.

⁴ Only one of the following courses may count toward Approved Electives: BIO 231, BIO 232.

⁵ Maximum of 6 units may be applied toward Approved Electives: BIO 200, BIO 300, BIO 400, BIO 450, BIO 485, BIO 495, MSCI 401.

⁶ If BIO 461 or BIO 462 is used to meet the senior project requirement, it cannot be double-counted as an Approved Elective.

⁷ Maximum of 2 units may be applied toward Approved Electives from ENGR 322 /SCM 302.

Ecology, Evolution, Biodiversity, and Conservation Concentration

BIO 363	Principles of Conservation Biology	4
LA/NR 218	Introduction to Geographic Information Systems (GIS) ¹	3
or GEOG 218	Applications in GIS	

Biodiversity Courses^{1,2}

Select three from the following:		12
BIO 321	Mammalogy	
BIO 322	Ichthyology	
BIO 323	Ornithology	
BIO 324	Herpetology	
BIO 335	General Entomology	
BIO 336	Invertebrate Zoology	
BOT 313	Taxonomy of Vascular Plants	
BOT 433	Field Botany: California Plant Diversity	
MCRO 224	General Microbiology I	
MSCI 437	Marine Botany	

Ecology and Evolution Courses¹

Select one from the following:		4
BIO 415	Biogeography	
BIO 442	Behavioral Ecology	
BIO 444	Population Ecology	
BIO 445	Community Ecology	
BIO 446	Ecosystem Ecology	
BIO 447	Spatial Ecology	
BOT 326	Plant Ecology	
MCRO 436	Microbial Ecology	
MSCI 300	Marine Ecology	

Conservation Courses^{1,2}

Select one from the following:		4
BIO 427	Wildlife Management	
MSCI 428	Marine Conservation and Policy	
MSCI 439	Fisheries Science and Resource Management	
NR 416	Environmental Impact Analysis and Management	

Approved Electives:^{3,4}

Select from the following:		16
At least 8 units must be upper-division.		
ASCI 239	Principles of Rangeland Management	
BIO 300	Research Experience for Undergraduates ⁵	
BIO 321	Mammalogy	

BIO 322	Ichthyology
BIO 323	Ornithology
BIO 324	Herpetology
BIO 327	Wildlife Ecology
BIO 329	Vertebrate Field Zoology
BIO 330	Extended Field Biology Activity
BIO 335	General Entomology
BIO 336	Invertebrate Zoology
BIO 400	Special Problems for Advanced Undergraduates ⁵
BIO 415	Biogeography
BIO 427	Wildlife Management

BIO 462	Senior Project Research Experience ⁶
BIO 463	Honors Research
BOT 311	Plants, People and Civilization
BOT 323	Plant Pathology
BOT 326	Plant Ecology
GEOG 441	Advanced Applications in Geospatial Technologies
MCRO 224	General Microbiology I
MCRO 436	Microbial Ecology
MSCI 300	Marine Ecology
MSCI 324	Marine Mammals, Birds and Reptiles
MSCI 428	Marine Conservation and Policy
MSCI 437	Marine Botany
MSCI 439	Fisheries Science and Resource Management
NR 141	Introduction to Forest Ecosystem Management
NR 142	Environmental Management
NR 314	Environmental Life-Cycle Analysis
NR 404	Environmental Law
NR 416	Environmental Impact Analysis and Management
NR 418	Applied GIS
NR 425	Applied Resource Analysis and Assessment
NR 445	Systems Thinking in Environmental Management
SCM 302/ ENGR 322	The Learn By Doing Lab Teaching Practicum ⁷
STAT 313	Applied Experimental Design and Regression Models
STAT 324	Applied Regression Analysis

or STAT 334	Applied Linear Models
STAT 330	Statistical Computing with SAS
STAT 331	Statistical Computing with R
STAT 416	Statistical Analysis of Time Series
STAT 419	Applied Multivariate Statistics
STAT 421	Survey Sampling and Methodology

Total units **43**

- ¹ Excess units will be applied to subsequent concentration electives.
- ² Students seeking certification (e.g. as an Associate Wildlife Biologist from the Wildlife Society) should see their faculty advisor for guidance.
- ³ Consultation with advisor is recommended prior to selecting Approved Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ⁴ If a course is taken to meet a Major or Support requirement, it cannot be double-counted in the concentration.
- ⁵ Maximum of 6 units may be applied toward Approved Electives: BIO 200, BIO 300, BIO 400, BIO 450, BIO 485, BIO 495, MSCI 401.
- ⁶ If BIO 461 or BIO 462 is used to meet the senior project requirement, it cannot be double-counted as an Approved Elective.
- ⁷ Maximum of 2 units may be applied toward Approved Electives from SCM 302/ENGR 322.

Molecular and Cellular Biology Concentration

BIO 452	Cell Biology	4
BIO/CHEM 475	Molecular Biology Laboratory	3
CHEM 217	Organic Chemistry II	3
CHEM 220	Organic Chemistry Laboratory For Life Sciences II	1
CHEM 369	Biochemical Principles	5
MCRO 224	General Microbiology I	5

Advanced Cell and Molecular Applications^{1,2}

Select from the following:		10
ASCI 403	Applied Biotechnology in Animal Science	
BIO 405	Developmental Biology	
BIO 426	Immunology	
BIO 428	Hematology	
BIO/CHEM 441	Bioinformatics Applications	
BIO/CHEM 476	Gene Expression Laboratory	
CHEM 372	Metabolism	
CHEM 418	Neurochemistry	
CHEM 474	Protein Techniques Laboratory	
MCRO 402	General Virology	
MCRO 433	Microbial Biotechnology	

Approved Electives^{1,3,4,5}

Select from any 300-400 level BIO/BOT/MCRO/MSCI courses (including Advanced Cell and Molecular Applications from the list above) or select from the following:

At least 5 units must be upper-division

ASCI 403	Applied Biotechnology in Animal Science
ASCI 406	Applied Animal Embryology and Assisted Reproduction
ASCI 407	Assisted Reproduction Technologies of Gametes and Embryos Laboratory
BIO/CHEM 202	Orientation to Biotechnology
CHEM 218	Organic Chemistry III
CHEM 223	Organic Chemistry Laboratory for Life Sciences III
CHEM 331	Quantitative Analysis
CHEM 372	Metabolism
CHEM 377	Chemistry of Drugs and Poisons
CHEM 418	Neurochemistry
CHEM 428	Nutritional Biochemistry
CHEM 474	Protein Techniques Laboratory
CSC 101	Fundamentals of Computer Science
DATA 301	Introduction to Data Science
ENGR 322/ SCM 302	The Learn By Doing Lab Teaching Practicum ⁶
ES/WGQS 350	Gender, Race, Culture, Science & Technology
PHIL 323 or PHIL 339 or PHIL 341	Ethics, Science and Technology Biomedical Ethics Professional Ethics
STAT 313	Applied Experimental Design and Regression Models

Total units 43

- ¹ Consultation with advisor is recommended prior to selecting electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ² Excess units will be applied to Approved Electives.
- ³ Consult with your faculty advisor for approval to use other relevant upper-division coursework in other departments.
- ⁴ If a course is taken to meet a Major or Support requirement, it cannot be double-counted in the concentration.
- ⁵ Maximum of 6 units may be applied toward Approved Electives: BIO 200, BIO 300, BIO 400, BIO 450, BIO 485, BIO 495, MSCI 401.
- ⁶ Maximum of 2 units may be applied toward Approved Electives from ENGR 322/SCM 302.

General Curriculum in Biology

The General Curriculum in Biology is followed by default if no concentration is declared.

Biodiversity Courses^{1,2}

Select from the following: 4

BIO 321	Mammalogy
BIO 322	Ichthyology
BIO 323	Ornithology

Total units	43

¹ Consultation with advisor is recommended prior to selecting electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.

² Excess units will be applied to Approved Electives.

³ Recommended for students interested in health science careers.

⁴ Excess units will be applied to 300-400 level Electives.

⁵ If a course is taken to meet a Major or Support requirement, it cannot be double-counted in the concentration.

⁶ Taking a General Education (GE) course that double-counts as an elective may cause an upper-division unit shortage. Use care to ensure that you have taken enough 300-400 level courses to meet the required 60 units of upper-division courses.

⁷ If BIO 461 or BIO 462 is used to meet the senior project requirement, it cannot be double-counted as an elective.

⁸ Maximum of 6 units may be applied toward Approved Electives: BIO 200, BIO 300, BIO 400, BIO 450, BIO 485, BIO 495, MSCI 401.

⁹ Only one of the following courses may count toward Approved Electives: BIO 231, BIO 232.

¹⁰ Maximum of 2 units may be applied toward Approved Electives from ENGR 322/SCM 302.

BS Marine Sciences

Program Learning Objectives

Graduates of the BS Marine Sciences program will be able to:

1. Integrate and synthesize information from the various marine disciplines.
2. Recognize and value the diversity of marine life and ecosystems.
3. Apply the scientific method, by formulating hypotheses, making predictions, and assessing, analyzing, synthesizing, and interpreting data.
4. Communicate marine scientific principles and research findings effectively diverse audiences.
5. Demonstrate proficiency in lab and field techniques relevant to marine sciences.
6. Locate and utilize bibliographic resources and demonstrate the ability to evaluate scientific literature.
7. Relate ethical, social justice or global perspectives to the study and practice of marine science.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

BIO 150	Diversity and History of Life	4
BIO 161	Introduction to Cell and Molecular Biology (B2 & B3) ¹	4
BIO 162	Introduction to Organismal Form and Function	4
BIO 263	Introductory Ecology and Evolution	4
BIO 461	Senior Project - Research Proposal ²	2
or BIO 462	Senior Project Research Experience	
CHEM 302	Marine Chemistry	3
MSCI 100	Orientation to Marine Sciences	1
MSCI 300	Marine Ecology	4
MSCI 301	Biological Oceanography	3
MSCI 403	Ocean Sampling Techniques	4
PSC 201	Physical Oceanography	4

Marine Resources Conservation and Policy

Select from the following:³ 4

BIO 363	Principles of Conservation Biology
MSCI 428	Marine Conservation and Policy
MSCI 438	Aquaculture
MSCI 439	Fisheries Science and Resource Management

Marine Biodiversity

Select from the following:³ 4

BIO 322	Ichthyology
BIO 336	Invertebrate Zoology
MCRO 436	Microbial Ecology
MSCI 324	Marine Mammals, Birds and Reptiles
MSCI 437	Marine Botany

Communicating Science

Select from the following (excess units will be applied to Electives):³ 1

COMS 390	Environmental Communication
COMS 395	Science Communication
ENGR 322/ SCM 302	The Learn By Doing Lab Teaching Practicum
MSCI 401	Marine Science Outreach
MSCI 440	Communicating Ocean Sciences to Informal Audiences

Electives

Select additional courses from Marine Resources Conservation and Policy, Marine Biodiversity, or Communicating Science (above) or select from the following:³ 25

At least 18 units must be upper-division. Select courses carefully to ensure that you have taken enough 300-400 level courses to meet the required 60 units of upper-division courses for the degree.

GENERAL EDUCATION (GE)	
(See GE program requirements below.)	52
FREE ELECTIVES	
Free Electives ^{7,10}	8
Total units	180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² If BIO 461 or BIO 462 is used to meet the senior project requirement, it cannot be double-counted as an Elective.
- ³ If a course is taken to meet a Major or Support requirement, it cannot be double-counted as an Elective.
- ⁴ Maximum of 6 units may be applied toward Electives: BIO 200, BIO 300, BIO 330, BIO 400, BIO 450, BIO 485, BIO 495, CHEM 400, ENGR 400, MSCI 401, PHYS 400.
- ⁵ No more than 3 units from COMS 390, COMS 395, ENGR 322/SCM 302, MSCI 440.
- ⁶ Maximum of 2 units may be applied toward Electives from ENGR 322/SCM 302.
- ⁷ If CHEM 216 is taken, then some Free Electives may need to be 300-400 level to ensure completion of the required minimum of 60 units of upper-division.
- ⁸ Students emphasizing in Chemistry, Physics or Engineering should take MATH 141 and MATH 142 instead of MATH 161 and MATH 162. GE Area B4 will be met with any of the following: MATH 161, MATH 162, MATH 141, MATH 142.
- ⁹ Students emphasizing in Physics should take PHYS 141, PHYS 142 and PHYS 143 instead of PHYS 121, PHYS 122 and PHYS 123. GE Area B1 will be met with any of the following: PHYS 121, PHYS 122, PHYS 141 or PHYS 142.
- ¹⁰ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	

B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		52

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Microbiology

Program Learning Objectives

1. Explain fundamental concepts and principles in microbiology and general biology (atom to ecosystem).
2. Demonstrate proficiency in common lab and field techniques for microbiology.
3. Locate, critically evaluate, and integrate scientific literature findings into the practice of microbiology.
4. Assess and analyze experimental data with objectivity.
5. Integrate statistics, math, physical sciences and technology to answer microbiological questions.
6. Communicate microbiology principles and research findings effectively to diverse audiences.
7. Relate ethical, social justice or global perspectives to the study and practice of microbiology.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support, or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

BIO 150	Diversity and History of Life	4
BIO 161	Introduction to Cell and Molecular Biology (B2 & B3) ¹	4
BIO 263	Introductory Ecology and Evolution	4
BIO 351	Principles of Genetics	5
BIO 452	Cell Biology	4
MCRO 224	General Microbiology I	5
MCRO 225	General Microbiology II	5
MCRO 424	Microbial Physiology	5
BIO 461	Senior Project - Research Proposal	2
or BIO 462	Senior Project Research Experience	

Select three courses from the following:

11-13

BIO 426	Immunology	
BIO 475	Molecular Biology Laboratory	
MCRO 402	General Virology	
MCRO 423	Medical Microbiology	
MCRO 436	Microbial Ecology	

Electives

Select from the following:^{2,3,4}

19-21

Biotechnology

ASCI 403	Applied Biotechnology in Animal Science

BIO 400	Special Problems for Advanced Undergraduates ³		
BIO 434	Environmental Physiology		
BIO 450	Undergraduate Laboratory Assistantship ³		

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Consultation with an advisor is recommended before selecting Electives; bear in mind that selections may impact pursuit of post-baccalaureate studies and/or goals. At least 14-16 units must be upper-division (300-400 level) to ensure completion of the required minimum of 60 units of upper-division courses.

- ³ Maximum of 6 units may be applied toward Approved Electives: BIO 200, BIO 300, BIO 400, BIO 450, BIO 485, BIO 495, MSCI 401
- ⁴ Students planning to attend graduate or professional schools are strongly advised to meet with their advisors to ensure that they meet necessary prerequisites for entry into these programs. Additional courses in math and chemistry may be necessary.
- ⁵ If BIO 462 is used to meet the senior project requirement, it cannot also be counted as an Elective.
- ⁶ CHEM 369 suggested for students who plan to pursue graduate school or a health professions career.
- ⁷ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4

Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		52

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Biology Minor

Note: Up to 5 units in the minor may be taken credit/no-credit.

Introductory courses¹		
Select three courses from the following:		12-14
BIO 111	General Biology	
or BIO 161	Introduction to Cell and Molecular Biology	
BIO 114	Plant Diversity and Ecology	
or BOT 121	General Botany	
BIO 123	Biology of Sex	
BIO 150	Diversity and History of Life	
BIO 162	Introduction to Organismal Form and Function	
or BIO 211	Biology of Plants and Animals	
BIO 227	Wildlife Conservation Biology	
BIO 231	Human Anatomy and Physiology I	
BIO 232	Human Anatomy and Physiology II	
BIO 263	Introductory Ecology and Evolution	
MCRO 221	Microbiology	
or MCRO 224	General Microbiology I	
Upper-division electives (300-400 level)^{1, 2}		
Select at least 4 courses from the following:		16
BIO, BOT, MCRO, MSCI or ZOO, with the exception of BIO 450, BIO 485, BIO 495 and MSCI 401.		
A maximum of 1 unit of BIO 400 may be used in the minor.		
Total units		28-30

¹ Check prerequisites. Upper-division courses designed for Biological Sciences majors usually require some combination of BIO 150, BIO 161, BIO 162 and BIO 263 as prerequisites.

² Suggested combinations of courses in particular areas of biology are available in the department. Specific combinations of courses may not be allowed if the courses overlap too much in content. Students must obtain prior approval from one of the Biology Minor advisors.

Cross Disciplinary Studies Minor in Bioinformatics

Biology/Biochemistry

BIO 161	Introduction to Cell and Molecular Biology	4
BIO 302	Human Genetics ¹	3-5
or BIO 303	Survey of Genetics	
or BIO 351	Principles of Genetics	
or CHEM 373	Molecular Biology	

Depth in Biology/Biochemistry

Select 6-10 units from the following: ^{1,2} 6-10

BIO 305	Biology of Cancer	
BIO 308	Genetic Engineering Technology	
BIO 327	Wildlife Ecology	
BIO 361	Principles of Animal Physiology

Total units 41-47

¹ Courses in this minor may have additional prerequisites that will not count towards the minor.

² Please check prerequisites. Your ability to select specific elective courses may vary depending upon the curriculum requirements for your major.

Microbiology Minor

Required Courses

MCRO 221	Microbiology	4-5
or MCRO 224	General Microbiology I	
MCRO 225	General Microbiology II	5
Select from the following:		4-5
MCRO 402	General Virology	
MCRO 423	Medical Microbiology	
MCRO 424	Microbial Physiology	

Approved Electives

Select from the following:		11-13
BIO 426	Immunology	
BIO 428	Hematology	
BIO 429	Parasitology	
DSCI 444	Dairy Microbiology	
MCRO 301	Wine Microbiology	
MCRO 320	Emerging Infectious Diseases	
MCRO 342	Public Health Microbiology	
MCRO 402	General Virology	
MCRO 421	Food Microbiology	
MCRO 423	Medical Microbiology	
MCRO 424	Microbial Physiology	
MCRO 433	Microbial Biotechnology	
MCRO 436	Microbial Ecology	
SS 422	Soil Ecology	

Total units 26

MS Biological Sciences

Program Learning Objectives

1. Demonstrate a thorough understanding and competency in a subdiscipline of specialization within the biological sciences.
2. Communicate scientific ideas effectively in both oral and written formats.
3. Demonstrate an ability to think critically and evaluate, design, conduct, and quantitatively analyze or assess research in a biological discipline.
4. Demonstrate the skills and knowledge needed for employment or advanced graduate or professional study in discipline related areas.

Required Courses

Select from the following:		8
BIO 501	Molecular & Cellular Biology	
BIO 502	Biology of Organisms	
BIO 503	Population Biology	
BIO 560	Graduate Professional Seminar	2
BIO 561	Proposal Writing for Biological Research	3

BIO 590	Seminar in Biology	3
BIO 591	Biology Colloquium	2
BIO 599	Thesis	9
Select from the following:		4
STAT 419	Applied Multivariate Statistics	
STAT 513	Applied Experimental Design and Regression Models	
STAT 523	Design and Analysis of Experiments I	
STAT 524	Applied Regression Analysis	
Electives		
Additional units at the 400 or 500 level. ¹		14
Total units		45

¹ Electives must include 5 units taken within the Biological Sciences Department at Cal Poly in order to meet the program requirement of 32 units.

All 45 units must be acceptable for graduate credit and in accordance with Graduate Guidelines of the Biological Sciences Department. Coursework must include 32 units taken within the Biological Sciences Department at Cal Poly. For further information, students should communicate with the Chair of the Biological Sciences Department or with the Director of the Graduate and Research Committee.

MS Biological Sciences, Specialization in Regenerative Medicine

Program Learning Objectives

1. Perform fundamental laboratory skills involved in regenerative medicine research & development.
2. Discuss and critically evaluate biomedical primary literature.
3. Effectively communicate technical topics to both peer and lay audiences.
4. Explain the process of biotechnology development & commercialization.
5. Describe how research & development efforts are motivated by and impact physician & patient experiences.
6. Design and execute independent research projects.

Required Courses

BIO 501	Molecular & Cellular Biology	4
BIO 509	Communicating Biology to General Audiences	1
BIO 534	Principles of Stem Cell Biology	2
BIO/ASCI/BMED 583	Research Experience for Regenerative Medicine Students	2
BIO/ASCI/BMED 593	Regenerative Medicine Internship ¹	9
BMED 510	Principles of Tissue Engineering	4
BMED 515	Introduction to Biomedical Imaging	4
BMED 560	Cell Transplantation and Biotherapeutics	2
BMED 561	Cell Transplantation and Biotherapeutics Laboratory	2

STAT 513	Applied Experimental Design and Regression Models	4
or STAT 523	Design and Analysis of Experiments I	
or STAT 524	Applied Regression Analysis	

Seminars ²		
Select from the following:		6
ASCI 581	Graduate Seminar in Animal Science	
BIO 574	Teaching Strategies for College Biology Laboratories	
BIO 590	Seminar in Biology	
BIO 591	Biology Colloquium	
BMED 563	Biomedical Engineering Graduate Seminar	

Approved Electives		
Select from the following:		5
ASCI 406	Applied Animal Embryology and Assisted Reproduction	
ASCI 407	Assisted Reproduction Technologies of Gametes and Embryos Laboratory	
BIO 405	Developmental Biology	
BIO 406	Advanced Anatomy and Physiology: Neuroscience	
BIO 410	Functional Histology	
BIO 426	Immunology	
BIO 441	Bioinformatics Applications	
BIO 475	Molecular Biology Laboratory ³	
BIO 476	Gene Expression Laboratory	
BIO 500	Individual Study	
BIO 502	Biology of Organisms	
BIO 524	Developmental Biology Seminar	
CHEM 418	Neurochemistry	
CHEM 474	Protein Techniques Laboratory	

Total units		45
--------------------	--	-----------

- ¹ Students will complete their internship at one of our partner institutions. An updated list of our current partners can be found on our program website: regenmed.calpoly.edu (<https://regenmed.calpoly.edu>).
- ² Take at least one offering of ASCI 581, BIO 590, and BMED 563; the remaining units up to 6 may be from any combination of seminar courses, chosen in consultation with a faculty advisor.
- ³ Strongly recommended if not already taken an equivalent course.

Department Chair: Seth Bush

Academic Programs

Program name	Program type
Biochemistry	BS
Chemistry	BS
Cross Disciplinary Studies Minor in Bioinformatics	Minor
Polymers and Coatings Science	MS

The Chemistry and Biochemistry Department has two roles in the university: to provide professional education for students who are majors in chemistry and biochemistry and who plan careers in the natural sciences and related fields, and to provide instruction in the fundamentals of chemistry to students with majors in fields related to chemistry, especially in the life sciences, agriculture, and engineering.

The department offers a flexible chemical education degree option for students interested in a career in pre-college science education. Interested students should contact the single subject teaching credential advisor early in their academic career for more information.

Career opportunities for chemists are increasing. There are openings in traditional areas such as environmental analysis, the health professions, industrial research and production, pharmacology, toxicology, product quality control, and teaching at the secondary or university level. Newer opportunities lie in related areas such as library science, market research, patent law, and safety engineering

Undergraduate Programs

BS Biochemistry

The Chemistry and Biochemistry Department provides curricula leading to the Bachelor of Science in Biochemistry and the Bachelor of Science in Biochemistry with a concentration in Polymers and Coatings.

The baccalaureate curriculum in biochemistry includes required courses in general chemistry, analytical chemistry, inorganic chemistry, organic chemistry, biochemistry and physical chemistry. Advanced undergraduates choose electives from courses that cover a broad range of specialized topics, such as environmental chemistry, nutritional biochemistry, advanced organic and physical chemistry, pharmacology, and polymer chemistry. The curriculum emphasizes laboratory work, especially current techniques and the use of instrumentation in all fields of chemistry. The program provides opportunities for independent research under faculty guidance, including a requirement for a senior project. A senior project may consist of pure or applied research in biochemistry, or it may involve interdisciplinary work with another field such as art, biology, agriculture, civil or environmental engineering, psychology, or soil science. Under the department's cooperative education program, bachelor's degree candidates may work full-time in industry or government for one or two quarters, for pay and academic credit.

There are a number of career opportunities in the fields of biotechnology and polymers and coatings. Students completing a degree in biochemistry or a concentration in polymers and coatings are prepared

for direct entry into these careers, as well as for postgraduate education in a professional specialty.

Concentration

Polymers and Coatings Concentration

Students may select the Polymers and Coatings concentration instead of advanced approved biochemistry electives in Major Courses. The concentration includes the required courses in the biochemistry curriculum and electives in the area of polymers, coatings, surface chemistry and materials engineering. The concentration gives students the background and practical experience to move into a rewarding career in a wide range of fields including paints and coatings, resins, plastics, adhesives and sealants.

BS Chemistry

The Chemistry and Biochemistry Department provides curricula leading to the Bachelor of Science in Chemistry and the Bachelor of Science in Chemistry with a certified concentration in Polymers and Coatings. Both the BS in Chemistry and the concentration in Polymers and Coatings are certified by the American Chemical Society. An option in Chemical Education designed for aspiring teachers in secondary schools is also available.

The baccalaureate curriculum in chemistry includes required courses in general chemistry, analytical chemistry, inorganic chemistry, organic chemistry, biochemistry and physical chemistry. Advanced undergraduates choose electives from courses that cover a broad range of specialized topics, such as environmental chemistry, nutritional biochemistry, advanced organic and physical chemistry, pharmacology, and polymer chemistry. The curriculum emphasizes laboratory work, especially current techniques and the use of instrumentation in all fields of chemistry. The program provides opportunities for independent research under faculty guidance, including a requirement for a senior project. A senior project may consist of pure or applied research in chemistry, or it may involve interdisciplinary work with another field such as art, biology, agriculture, civil or environmental engineering, psychology, or soil science. Under the department's cooperative education program, bachelor's degree candidates may work full-time in industry or government for one or two quarters, for pay and academic credit.

Career opportunities for chemists lie in traditional areas such as environmental analysis, the health professions, industrial research and production, pharmacology, toxicology, product quality control, and teaching at the secondary or university level. Newer opportunities lie in related areas such as library science, market research, patent law, and safety engineering.

Concentration

Polymers and Coatings Concentration

Students may select the Polymers and Coatings concentration instead of advanced approved biochemistry electives in Major Courses. The concentration includes the required courses in the biochemistry curriculum and electives in the area of polymers, coatings, surface chemistry and materials engineering. The concentration gives students the background and practical experience to move into a rewarding career in a wide range of fields including paints and coatings, resins, plastics, adhesives and sealants.

Biotechnology Minor

For information regarding the Biotechnology minor, see the College of Science and Mathematics (p. 360) section of the catalog.

Cross Disciplinary Studies Minor in Bioinformatics

For information regarding the Cross Disciplinary Studies Minor in Bioinformatics, see the Biological Sciences (p. 364) section of the catalog.

Graduate Program Master of Science Degree in Polymers and Coatings Science General Characteristics

The MS degree in Polymers and Coatings Science offers a unique, focused program closely tied to industry. Students gain academic preparation in polymers and coatings science through lecture and laboratory courses, then undertake a rigorous industrial internship or thesis research. Through the internship or thesis research students specialize and develop advanced skills related to their internship work or research. The program is designed to prepare students for challenging careers in the polymers and coatings industry. The program also provides excellent background for doctoral studies in areas related to polymer and coatings science. This program is unique in California and relies on the close relationship between the department and the polymers and coatings industry for its success.

Prerequisites

Students entering the program must have a bachelor's degree from an accredited institution with a minimum grade point average of 2.5 in the last 90 quarter units attempted. Applicants with majors in chemistry, biochemistry, materials engineering, chemical engineering or related fields generally meet the prerequisites for courses in the program. Applicants with degrees in other areas may need to take supplemental courses in organic and physical chemistry and can be admitted conditionally. For information concerning additional departmental requirements, the student should contact the Graduate Advisor in the Chemistry and Biochemistry Department.

Advancement to candidacy requires completion of 12 units of an approved study plan with a minimum grade point average of 3.0.

Blended BS + MS Polymers and Coatings Science Program

A blended program provides an accelerated route to a graduate professional degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees, including senior project for the Bachelor's degree.

A blended program is available for MS Polymers and Coatings Science.

Eligibility

Majors that are eligible for the blended program are:

- BS Chemistry
- BS Materials Engineering

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Chemistry and Biochemistry department for any additional eligibility criteria.

Program of Study

Students may begin taking the required graduate courses in either their junior or senior year depending on their preparation. Students may not pursue both the Concentration in Polymers and Coatings and the MS in Polymers and Coatings Science. Students pursuing the concentration take the 400-level polymers and coatings courses while those pursuing the MS degree take the 500-level polymers and coatings courses. Students cannot receive credit for both 400 and 500-level courses in the same topic.

Students in the blended program are eligible to begin the Industrial Internship or Thesis Research upon completion of the required graduate-level chemistry courses.

BS Biochemistry Program Learning Objectives

1. Understand and apply the fundamental concepts of chemistry in the following areas: calculation and estimation, structure, and properties of atoms, ions and molecules, chemical bonding and chemical reactivity.
2. Use techniques and modern tools to conduct, design, analyze, and interpret experiments in chemistry and biochemistry.
3. Communicate effectively with the scientific community.
4. Apply concepts of math, physical and biological sciences to chemical problems.
5. Integrate the concepts, skills and attitudes from a general education with his/her major program to understand and explain the impact of chemistry, science and technology on issues in global, economic, environmental, and societal contexts.

Degree Requirements and Curriculum

In addition to the program requirements on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

CHEM 124	General Chemistry for Physical Science and Engineering I (B1 & B3) ¹	4
CHEM 125	General Chemistry for Physical Science and Engineering II	4

CHEM 126	General Chemistry for Physical Science and Engineering III	4
CHEM 203	Undergraduate Seminar I	1
CHEM 216	Organic Chemistry I	5

GENERAL EDUCATION (GE)

(See GE program requirements below.)

52

FREE ELECTIVES	
Free Electives ⁶	13-21
Total units	180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Students should take CHEM 331 as soon as possible after completing CHEM 126.
- ³ Consultation with advisor is recommended prior to selecting Approved Advanced Biochemistry Electives; bear in mind your selections may impact pursuit of post-baccalaureate studies and/or goals.
- ⁴ No more than 6 units may apply to Approved Advanced Biochemistry Electives.
- ⁵ No more than 2 units may apply toward Approved Advanced Biochemistry Electives.
- ⁶ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentration

Students may select the following concentration instead of Approved Advanced Biochemistry Electives in Major Courses:

- Polymers and Coatings (p. 383)

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4

C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		52

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Polymers and Coatings Concentration - BS Biochemistry

MS Polymers and Coatings Science Program Learning Objectives

1. Integrate knowledge of the diverse range of chemistry sub-disciplines as well as non-chemistry disciplines such as fluid flow, mechanics, and science of appearance, and apply it in their profession.
2. Use traditional and nontraditional thinking to define a problem, identify potential alternatives, gather appropriate knowledge and information to formulate and articulate a solution.

3. Think critically and be able to evaluate, design, and conduct research in the polymers and coatings field.

4. Effectively communicate as professionals in both individual and team-based environments.

5. Join polymer and coating related industries or advanced graduate programs and be immediately productive. Demonstrate dedication, loyalty and passion toward the chosen professional career.

Required Courses

CHEM 544	Polymer Physical Chemistry and Analysis	3
CHEM 545	Polymer Synthesis and Mechanisms	3
CHEM 547	Polymer Characterization and Analysis Laboratory	2
CHEM 548	Polymer Synthesis Laboratory	2
CHEM 550	Coatings Formulation Principles	3
CHEM 551	Coatings Formulation Laboratory	2
CHEM 590	Graduate Seminar in Polymers and Coatings (1, 1, 1)	3
Select from the following:		9
CHEM 598	Graduate Project (3, 3, 3)	
CHEM 599	Graduate Thesis (3, 3, 3)	

Approved Electives

18 units of advisor-approved electives (at least 3 units must be from 500 level). See department for list. 18

Total units 45

A complete project report or thesis must be submitted to the graduate committee. Guidelines on how to prepare report or thesis are available from the graduate coordinator.

Department Chair: Kris Jankovitz

Academic Programs

Program name	Program type
Exercise and Sport Studies	Minor
Kinesiology	BS
Public Health	BS

The Department of Kinesiology and Public Health offers undergraduate programs leading to the BS in Kinesiology, the BS in Public Health and the minor in Exercise and Sport Studies. The department also contributes to the education of all students by providing general education courses in health and wellbeing, sport sociology, psychology of injury, and elective courses in first aid/CRP/AED; physical activity, sport and fitness; and support courses for students intending to pursue careers in K-8 teaching. The programs are designed to meet the mission of preparing students to promote physical activity and health for all and to make an impact in the fields of exercise science, disease prevention and treatment, physical activity and sport, and public health.

The Department of Kinesiology and Public Health is home to the Center for Health Research. Initiated in 2007, the Center for Health Research is a university-wide, multidisciplinary, research center that provides students with unique opportunities to engage in research, community outreach and programs to improve health outcomes.

The Kinesiology and Recreation Center building complex provides laboratory, research and office space for the Department of Kinesiology and Public Health and provides access to quality physical activity and sport facilities for students, faculty and staff.

Undergraduate Programs

BS Kinesiology

The BS in Kinesiology provides training in the multiple sub-disciplines of kinesiology (biomechanics, exercise physiology, health promotion, motor behavior, and sport and exercise psychology/ sociology). The program offers a broad based curriculum incorporating the scientific and clinical knowledge of exercise science, health promotion, and sport science that is applicable to preventive and clinical exercise science, commercial fitness, sport instruction and educational settings. In addition to the core coursework for the kinesiology major, students choose a concentration to gain a deep and focused understanding of a specific subfield in kinesiology. The program provides students with the knowledge, skills and abilities they need to move into a variety of entry level positions in exercise and sport sciences, health promotion, or to pursue graduate education in kinesiology, or allied health professions. For students who are considering graduate programs in medicine or allied health professions (e.g., nursing, occupational therapy physical therapy, physician assistant, etc.) additional coursework beyond the bachelor's degree will be required.

Concentrations

Exercise Science

Exercise science professionals lead and demonstrate safe and effective methods of exercise to clients in a variety of settings. Students who complete the Exercise Science Concentration will be prepared to work in a wide range of enterprises that include clinical exercise physiology, cardiac rehabilitation, and commercial fitness facilities or pursue graduate education in Kinesiology or Exercise Science. Completion of this concentration could also prepare students for certification exams for Certified Health and Fitness Specialist (ACSM), Clinical Exercise Specialist (ACSM), Certified Strength and Conditioning Specialist (NSCA) and Exercise Physiologist-Certified (ASEP). For students who are considering graduate programs in allied health professions (e.g., nursing, physical therapy, physician assistant, etc.) additional coursework will be required.

Health Promotion

Students who complete the Health Promotion Concentration will be prepared for a variety of health promotion related careers in various public/private settings, college/university settings, non-profit health promotion agencies and to pursue graduate study in Health Promotion/Health Education/Public Health. Possible job titles include Health Promotion Program Coordinator, Physical Activity and Public Health Specialist, Fitness and Wellness Coordinator, Personal Trainer, Health & Fitness Specialist. For students considering graduate programs in allied health professions (e.g., nursing, physical therapy, physician assistant, etc.), additional coursework will be required.

Sport Science

Students who complete the BS in Kinesiology with the sport science concentration will be prepared for entry level leadership positions in competitive sport settings which include coaching at the youth, club/ interscholastic, college/university and international levels. They would also be prepared for advanced study in master's degree programs with an emphasis in coaching, or for employment as a personal trainer or group exercise instructor. Course content and learning experiences are focused on fundamentals of athletic and sport performance, psychological and sociological benefits of participating in sport and athletics and skill development in leadership and mentoring. Students who complete this concentration will also be well prepared to take the American College of Sports Medicine (ACSM) Certified Personal Trainer Exam and the ACSM Certified Group Instructor Exam. They will also be prepared to complete a wide variety of American Sport Education Program (ASEP) certification courses, request inclusion in the National Registry of Coaches (coordinated by ASEP) and pursue coaching certification from sport specific governing bodies (e.g., USA Track and Field, USA Swimming, USA Soccer, etc.).

BS Public Health

The BS in Public Health prepares students for professional positions in public health agencies, community-based organizations, health care, tribal health, international organizations, and/or for graduate study in public health or allied health professions. The curriculum aligns with the standards approved by the Association of Schools and Programs of Public Health and by the National Commission for Health Education Credentialing (NCHEC). Graduates of the program are eligible to take the national Certified Health Education Specialist (CHES) examination administered by NCHEC. Our program helps students to understand health at the individual, community, and population levels emphasizing critical thinking, problem solving and teamwork through hands-on

application, and project-based learning. Students have opportunities to participate in community outreach activities, internships, and undergraduate research. In addition to the core coursework for the public health major, students choose a concentration to gain a deep and focused understanding in a specific area of public health. For students who are considering graduate programs in medicine or allied health professions (e.g., nursing, occupational therapy, physical therapy, physician assistant, etc.) additional coursework beyond the bachelor's degree will be required.

Concentrations

Community and Public Health

Students who complete the Community and Public Health Concentration will be prepared for careers in local, state and federal public health departments; non-profit health agencies and coalitions; health insurance providers, hospital, clinical and research settings; and to pursue graduate study for the masters in public health and the MS in Health Care Administration, Community Health, Environmental Health, Health Education or Health Promotion. This concentration provides a foundation in concepts that are complementary for students who are planning to pursue graduate study in the allied health professions or medicine.

Culture and Society in Health

Students who complete the Culture and Society in Health Concentration will be prepared with a strong foundation in the social determinants of health. Graduates are prepared for careers in a variety of settings such as local, state and federal public health agencies, non-profit health agencies, hospital, clinical and research settings, and to pursue graduate study for the master's in public health. This concentration provides a foundation in concepts that are complementary for students who are planning to pursue graduate study in the allied health professions or medicine.

Physical Activity in Public Health

Students who complete the Physical Activity in Public Health Concentration will be prepared to work with organizations engaged in planning to promote physical activity and improve health outcomes. Graduates are prepared for careers in local, state, and federal public health agencies, non-profit health agencies and coalitions, local government agencies, corporate and commercial fitness settings. Students who pursue this concentration will also qualify for the ACSM/NPAS Physical Activity in Public Health Specialist (PAPHS) certification (ACSM.org). In addition, it prepares students to pursue graduate study for the master's in public health, the MS in Kinesiology, Health Promotion, or Health Education.

Worksite and University Health Promotion

Students who complete the Worksite and University Health Promotion Concentration are prepared for careers as health promotion/wellness specialists in various public/private worksites, college/university settings, non-profit health agencies, health insurance providers, and to pursue graduate study for the master's in public health, the MS in Community Health, Health Promotion, Health Education, or Occupational Health.

Exercise and Sport Studies Minor

Students who complete the minor in exercise and sport studies will be prepared for entry-level positions in coaching at the youth, club/ interscholastic or college/university levels. They will also be prepared to take the California Subject Examination (CSET) for physical education to enter a single subject credential program to teach physical education.

Students who complete this minor could also explore other career options related to exercise, physical activity, and sports and will be

better prepared to apply for graduate programs in sport psychology and potentially become a Certified Mental Performance Consultant (CMPC) through the Association for Applied Sport Psychology (AASP).

Students interested in the minor should check course descriptions to ensure they have met prerequisites. In particular, KINE 366 Applied Sport Psychology requires PSY 201, PSY 202 or KINE 266.

BS Kinesiology

Program Learning Objectives

1. Describe the relationship between physical activity participation, quality of life, acute and chronic disease prevention, diagnosis and treatment.
2. Evaluate the underlying scientific foundations of physical activity including human movement, physiology and metabolism.
3. Apply principles of quantitative and qualitative research to the study and practice of physical activity.
4. Explain the sociocultural dimensions of physical activity including diversity and inclusion in physical activity and health.
5. Apply principles of exercise prescription and the national physical activity guidelines to develop effective physical activity programs.
6. Demonstrate proficiency in critical thinking through written and oral communication.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: Up to 4 units of credit/no credit grading may be selected for courses in Major, Support, or Concentration.

MAJOR COURSES

KINE 180	Orientation to Kinesiology	2
HLTH 250	Healthy Living (E) ¹	4
or HLTH 255	Personal Health: A Multicultural Approach	
or HLTH 260	Women's Health Issues	
KINE 266	Sport and Exercise Psychology	4
KINE 301	Functional Anatomy	3
KINE 303	Physiology of Exercise	4
KINE 304	Pathophysiology and Exercise	3
KINE 307	Adapted Physical Activity	4
KINE 312	Motor Learning and Control	4
KINE 319	Introduction to Research Methods in Kinesiology	4
KINE 349	Exercise Testing and Prescription for Healthy Populations	4
KINE 401	Managing Exercise, Health, and Sport Programs	3

KINE 403	Biomechanics	4
KINE 412	Physical Activity and Public Health	3
KINE 451	Nutrition for Fitness and Sport	4
KINE 459	Personal and Group Fitness Instruction	3
KINE 460	Experiential Senior Project	1
or KINE 461	Senior Project Report	
or KINE 462	Research Honors Senior Project	
or KINE 463	Exercise Science and Health Promotion Fieldwork	
Approved Electives²

GENERAL EDUCATION (GE)
(See GE program requirements below.) 52

FREE ELECTIVES
Free Electives⁵ 9

Total units 180

- Required in Major or Support; also satisfies General Education (GE) requirement.
- If a course is taken to meet a Concentration requirement, it cannot be double-counted as an Approved Elective.
- Maximum of 4 units may be applied toward Approved Electives from: KINE 201, KINE 400.
- Students may have to complete additional coursework to satisfy admission requirements for graduate or professional degree programs in the allied health professions. Students interested in these programs should consult their academic advisor or visit the College of Science and Mathematics Advising Office for more information.
- If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations

Students may select one of the following concentrations.

- Exercise Science (p. 390)
- Health Promotion (p. 390)
- Sport Science (p. 391)

General Education (GE) Requirements

- 72 units required, 20 of which are specified in Major and/or Support.
- If any of the remaining 52 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English ²	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Major) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4

GE Electives in Areas B, C, and D

Select courses from two different areas; may be lower-division or upper-division courses.

GE Electives (4 units in Support plus 4 units in GE) ¹	4
Total units	52

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² It is recommended that students pursuing the Sport Science concentration take PHIL 230 or PHIL 231 to fulfill GE Area C2.

Exercise Science Concentration

KINE 408	Exercise and Health Gerontology	3
KINE 445	Electrocardiography	4
KINE 454	Exercise Metabolism	4
KINE 449	Exercise Prescription for Diseased and Special Populations	3
Select from the following: ¹		4
BMED/KINE/ME 409	Interdisciplinary Study in Biomechanics	
HLTH 405	Stress, Health and Chronic Illness	
HLTH 453	Obesity Prevention and Treatment	
KINE 406	Neuroanatomy	
KINE 446	Echocardiography	
PHIL 339	Biomedical Ethics	
PSY 318	Psychology of Aging	
PSY 320	Health Psychology	
PSY 330	Behavioral Effects of Psychoactive Drugs	
PSY 405	Abnormal Psychology	

Total units	18
--------------------	-----------

¹ Students seeking admission to graduate or professional degree programs in the allied health professions may need additional coursework to meet admission requirements. Please consult an advisor for assistance.

Health Promotion Concentration

HLTH 265	Introduction to Community and Public Health	3
HLTH 298	Introduction to Epidemiology	4
HLTH 334	Health Behavior Theory	3
Select from the following:		8
HLTH 305	Drugs in Society	
HLTH 320	Media and Technology in Health Promotion	
HLTH 405	Stress, Health and Chronic Illness	
HLTH 410	Global Health

Sport Science Concentration

KINE 278	Introduction to Perspectives in Physical Activity	4
KINE 308	Motor Development	3
KINE 324	Sports, Media and American Popular Culture	4
KINE 366	Applied Sport Psychology	3
RPTA 260	Community Relations and Sports-Based Youth Development	4
Total units		18

BS Public Health

Program Learning Objectives

1. Describe the history, philosophy, and core functions of public health in the U.S. and globally.
2. Analyze factors that affect human health and contribute to health disparities including socio-economic, behavioral, biological, environmental, and systemic factors.
3. Develop, implement, and evaluate public health programs that improve population health outcomes and promote health equity.
4. Apply epidemiological and public health research methods to assess community health needs, assets, and outcomes.
5. Communicate public health information in oral, written, and visual forms through a variety of media.
6. Describe the legal, ethical, structural, and economic dimensions of health care and policy, and the role of different governmental entities in public health.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: Up to 4 units of credit/no credit grading may be selected for courses in Major, Support, or Concentration.

PSY 330	Behavioral Effects of Psychoactive Drugs	³ Approved Electives have been organized by area of interest to guide students in their selections. Any course listed can be used as an Approved Elective; courses not listed can serve as an Approved Elective but require faculty advisor approval.		
PSY 340	Biopsychology			

- ⁴ If a course is taken to satisfy a Major, Support, or Concentration requirement, it cannot be double-counted as an Approved Elective.
- ⁵ Maximum of 4 units may be applied toward Approved Electives from: HLTH 201, HLTH 400.
- ⁶ Students need to complete MATH 118 to meet a course prerequisite for STAT 313.
- ⁷ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Concentrations

Students may select one of the following concentrations.

- Community and Public Health (p. 393)
- Culture and Society in Health (p. 393)
- Physical Activity in Public Health (p. 394)
- Worksite and University Health Promotion (p. 394)

General Education (GE) Requirements

- 72 units required, 28 of which are specified in Major and/or Support.
- If any of the remaining 44 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Support) ¹	0
B2	Life Science (4 units in Support) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Support) ¹	0
Upper-Division B (4 units in Support) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English ²	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	

D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D (4 units in Support) ¹	0
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Major) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Support plus 4 units in GE) ¹		4
Total units		44

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² It is recommended that students pursuing the Physical Activity in Public Health concentration take PHIL 230 or PHIL 231 to fulfill GE Area C2.

Community and Public Health Concentration

FSN 310	Maternal and Child Nutrition	4
or FSN 315	Nutrition in Aging

Liberal Studies, an Undergraduate Teacher Preparation Program

Faculty Offices East (Bldg. 25), Room 125B

Phone: 805.756.2935

<https://liberalstudies.calpoly.edu> (<https://liberalstudies.calpoly.edu/>)

Department Director: Lola Berber-Jimenez

Academic Program

Program name	Program type
Liberal Studies	BS

Liberal Studies is Cal Poly's pre-credential teacher preparation program. The mission of Liberal Studies is to ensure that students are prepared to teach competently and professionally each of the seven domains in the state-mandated curriculum (K-8). These include language arts, mathematics, science, history/social sciences, visual and performing arts, health/physical education, and human development. Liberal Studies provides the educational experience and preparation best suited for the prospective elementary teacher. Upon completion of this undergraduate degree, students are eligible to enter a multiple subject credential program.

Faculty from the following disciplines help to offer the required curriculum in the major: Biological Sciences, English, Ethnic Studies, History, Kinesiology and Public Health, Mathematics, Music, Philosophy, Political Science, Physics, Psychology and Child Development, Social Sciences, Statistics, Theatre, and Education.

Undergraduate Program BS Liberal Studies

The BS Liberal Studies degree directly addresses California's need to produce more and better-trained elementary school teachers. LS graduates will be especially well prepared in the "high-need" teaching areas of science, mathematics, and reading. Students have the opportunity to earn a BS in four years including education classes that are pre-requisites to entering Cal Poly's multiple subject credential program.

A depth of study is required to earn a BS at Cal Poly. Liberal Studies majors select one of the following concentrations or listed minors that count towards a concentration. Students may also choose an individualized course of study with prior approval from the department chair.

Liberal Studies students may take any minor at Cal Poly; however, only the minors listed below will count towards a concentration.

Concentrations

- English
- Environmental Education
- History/Social Sciences
- Human Development
- Mathematics
- Science
- Teaching English to Speakers of Other Languages

Minors that can be taken in place of a concentration

- Ethnic Studies
- Music
- Spanish

Students in the Liberal Studies major will complete pre-requisite courses for the Cal Poly Multiple Subject teaching credential program. A Multiple Subject teaching credential requires one additional year. Application to credential programs is done during the last two quarters of the BS Liberal Studies degree. For more information about Cal Poly's Multiple Subject teaching credential program: <https://soe.calpoly.edu/content/multiple-subject> (<https://soe.calpoly.edu/content/multiple-subject/>)

BS Liberal Studies

Program Learning Objectives

Upon graduating, Liberal Studies students will:

1. Examine the importance of the physical, social and cognitive development of children and their application to learning.
2. Demonstrate subject matter competency in the following domains: Reading, Language and Literacy, History and Social Science, Mathematics, Science, Visual and Performing Arts, Physical Education and Human Development.
3. Examine and reflect on how knowledge is developed and organized through best teaching and learning practices specific to each domain, with a focus on metacognition.
4. Demonstrate effective oral, written and interpersonal communication skills in a variety of contexts including the use of appropriate technology.
5. Integrate the content of one discipline into another through the development of projects across subject matter areas.
6. Synthesize information and integrate experiences that promote personal and professional growth in the field of education.
7. Demonstrate engagement as an agent for change in diversity and inclusion using principles of social justice, equity and ethical practice.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: Up to 4 units of credit/no credit grading may be selected for courses in Major, Support, or Concentration.

MAJOR COURSES

LS 201	Orientation to Liberal Studies	1
LS 211	Visual Arts in the Elementary Classroom	4
LS 214	Constitutional Issues in the History of U.S. and California Education	4

LS 230	Field Experience in the Elementary Classroom I	2
LS 250	Field Experience in the Elementary Classroom II	2
LS/ENGL 255	Children's Literature in a Diverse Society (Lower-Division C Elective) ¹	4
LS 301	Liberal Studies Career Preparation	1
LS 310	Storytelling: Modern Applications of Traditional Narrative	4
LS 370	Performing Arts in the Elementary Classroom	4
LS 411	Advanced History/Social Sciences Integration for the K-8 Classroom	4
or LS 412	Advanced Arts Integration for the K-8 Classroom	
or LS 413	Advanced Science/Engineering Integration for the K-8 Classroom	
LS 461	Senior Project Seminar	4
or LS 462	Senior Project Research	
ASTR 101	Introduction to the Solar System (B1) ¹	4
BIO 111	General Biology (B2 & B3) ¹	4
BIO 211	Biology of Plants and Animals	4
ENGL 391	Topics in Applied Linguistics	4
GEOG 308	Global Geography (Upper-Division D) ¹	4
HIST 201	United States History to 1865 (D1) ¹	4
HIST 208	Survey of California History (USCP)	4
HIST 210	World History to 1800 (D2) ^{1,2}	4
KINE 310	Concepts and Applications in Elementary Physical Education	3
HLTH 443	Health Education for Teachers	4
MATH 227	Mathematics for Elementary Teaching I (B4) ¹	4
MATH 328	Mathematics for Elementary Teaching II	4
MATH 329	Mathematics for Elementary Teaching III	4
MATH 330	Algebraic Thinking with Technology	4
PHIL 230	Philosophical Classics: Knowledge and Reality (C2)	4
or PHIL 231	Philosophical Classics: Ethics and Political Philosophy	
PSC 101	Matter and Energy (GE Electives) ¹	4
PSC 102	Atoms and Molecules	4
PSC 103	The Physical Environment: Earth	4
PSY 201	General Psychology (E) ¹	4
or PSY 202	General Psychology	
STAT 130	Introduction to Statistical Reasoning ³	4
or STAT 217	Introduction to Statistical Concepts and Methods	

Concentration, approved minor, or individualized course of study 18-22

SUPPORT COURSES

CD/EDUC 207	Children's Learning and Development in Educational Settings	4
-------------	---	---

EDUC 427	Theories, Methods, and Assessment of First and Second Language Acquisition in Schools ⁴	4
EDUC 428	Foundations of K-8 Literacy Teaching and Learning in Schools with Diverse Populations ⁴	4

GENERAL EDUCATION

(See GE program requirements below.) 32

FREE ELECTIVES

Free Electives⁵ 1-5

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Students in the History/Social Sciences concentration, may substitute with HIST 221.

³ Students considering a Child Development or Psychology minor should consider taking STAT 217.

⁴ Prerequisite for Multiple Subject Credential program at Cal Poly. For a credential program elsewhere, check the prerequisites for that institution.

⁵ If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

Students may select one of the following concentrations or listed minors to count toward a concentration.

Concentrations

- Human Development
- English
- Environmental Education
- History/Social Sciences
- Mathematics
- Science
- Teaching English to Speakers of Other Languages

Individualized Course of Study

With department chair approval, students may select one of the minors listed below or pursue a course of study which meets their individual needs and interests; this must be initiated early and all courses must be pre-approved. The individualized course of study consists of 18-20 units with at least one course at the 300-400 level. Courses are selected by the student in consultation with an advising faculty member. The list of courses is a contract between the student and the department.

Minors that can be taken to create an Individualized Course of Study

- Ethnic Studies
- Music
- Spanish

When selecting one of these minors to create an ICS, students should be advised the concentration will appear on their official transcript as Individualized Course of Study. The minor must be declared separately

with the minor department in order for it to appear on the official transcript.

General Education (GE) Requirements

- 72 units required, 40 of which are specified in Major and/or Support.
- If any of the remaining 32 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science (4 units in Major) ¹	0
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B		4
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English (4 units in Major) ¹	0
Lower-Division C Elective - Select a course from either C1 or C2 (4 units in Major)		0
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement) (4 units in Major) ¹	0
D2	Lower-Division D (4 units in Major plus 4 units in GE) ¹	0
Upper-Division D (4 units in Major) ¹		0
Area E	Lifelong Learning and Self-Development	
Lower-Division E (4 units in Major) ¹		0
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		

GE Electives (4 units in Major plus 4 units in GE) ¹	4
Total units	32

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² Recommended courses to satisfy GE Area C1: MU 101, DANC 221, or TH 210 for individuals planning to pursue a teaching credential.

Courses Needed for Multiple Subject Credential

EDUC 402	Learning to Teach K-8 Health and Physical Education with Diverse Populations	3
EDUC 429	Learning to Teach K-8 Literacy in Schools with Diverse Populations	4
EDUC 431	Learning to Teach K-8 Social Studies with Diverse Populations	4
EDUC 435	Learning to Teach K-8 Mathematics with Diverse Populations	4
EDUC 436	Learning to Teach K-8 Science with Diverse Populations	4
EDUC 438	Multiple Subject Clinical Practice I	4
EDUC 439	Multiple Subject Clinical Practice Seminar I	3
EDUC 440	Educating Individuals with Exceptional Needs	4
EDUC 450	Teaching Performance Assessment Seminar	1
EDUC 454	Multiple Subject Clinical Practice II	6
EDUC 455	Multiple Subject Clinical Practice Seminar II	3
EDUC 456	Multiple Subject Clinical Practice III	12
EDUC 457	Multiple Subject Clinical Practice Seminar III	3
Total units		55

English Concentration in BS Liberal Studies

The English language as a discipline is structured around concepts of rhetoric and grammar as they are used to express creative thought orally and in writing. Knowledge in these areas is generated by a study of current and historical rules of rhetoric, grammar and of current and historical works of literature. The term "creative thought" includes poetry, theater, narration and exposition in both oral and written form.

This concentration is aligned to a supplemental authorization in English that can be added to your future credential. See a concentration advisor for more information.

ENGL 311	Advanced Rhetorical Inquiry and Composing	4
or ENGL 312	Translingual Rhetorical Inquiry and Writing	
ENGL 361	Reading Instruction for the Teaching of Young Adult Literature	5
ENGL 368	Theory and Practice of Peer-to-Peer Writing Instruction	4 - 5

or ENGL 424	Teaching English in Secondary Schools	
Select from the following:		8
British Literature		
ENGL 330	British Literature: Beginnings to 1485	
ENGL 331	British Literature: 1485-1660	
ENGL 332	British Literature: 1660-1798	
ENGL 333	British Literature: 1798-1832	
ENGL 334	British Literature: 1832-1914	
ENGL 335	British Literature: 1914-Present	
ENGL 339	Introduction to Shakespeare	
American Literature		
ENGL 340	American Literature: Beginnings-1865	
ENGL 341	American Literature: 1865-1914	
ENGL 342	American Literature: 1914-1956	
ENGL 343	American Literature: 1956-Present	
ENGL 345	Women Writers of the Twentieth and Twenty-First Centuries (USCP)	
ENGL 346	Ethnic American Literature (USCP)	
ENGL 347	African American Literature (USCP)	
Modern English		
ENGL 350	The Modern Novel	
ENGL 351	Modern Poetry	
ENGL 352	Modern Drama	
Total units		21-22

Environmental Education Concentration

Environmental Education connects students to nature through a variety of experiences and helps to link social, political, and economic factors to help citizens make well-informed decisions about the environment and climate change. Courses in this concentration are interdisciplinary and structured to support the development of environmental literacy, address interrelated issues, and the impacts to society and the world at large.

Cultural Geography

Select from the following:		4
BOT 311	Plants, People and Civilization	
ES/NR 360	Ethnicity and the Land	
GEOG 150	Human Geography	
GEOG 370	Geography of Latin America	
GEOG 380	Geography of the Caribbean	

Ecological and Environment Foundations

Select from the following:		4
BIO 114	Plant Diversity and Ecology	
BIO 227	Wildlife Conservation Biology	
BOT 326	Plant Ecology	
ERSC/GEOG 250	Physical Geography	
NR 306	Natural Resource Ecology and Habitat Management	
NR 310	Global Climate Change	
PSC 201	Physical Oceanography	

Education and Communication

Select from the following:		2-4
----------------------------	--	-----

COMS 390	Environmental Communication	
LS 380	Education Apprenticeship ¹	
MSCI 440	Communicating Ocean Sciences to Informal Audiences	
NR/RPTA 328	Environmental Leadership and Community Engagement	
Social, Political, Economic and Ethical Issues		
Select from the following:		4
ERSC/GEOG 325	Climate and Humanity	
GEOG 350	The Global Environment	
HIST 311	Comparative World Environmental History & Sustainability Since 1492	
NR 323	Human Dimensions in Natural Resources Management	
PHIL 340	Environmental Ethics	
PSC 320	Energy, Society and the Environment	
Capstone		
Select from the following:		4
LS 413	Advanced Science/Engineering Integration for the K-8 Classroom ²	
SCM 360	Selected Environmental Issues of California's Central Coast	
Total units		18-20

¹ No more than 4 units from LS 380.

² Students need to take LS 411 or LS 412 to meet other major requirements.

History/Social Sciences Concentration

The discipline of Social Sciences is based on individual human beings as they interact with other human beings singly and with groups. Knowledge is acquired and generated by the study of anthropology, history, sociology and certain aspects of geography as they relate to the human condition.

This concentration is aligned to a supplemental authorization in Social Sciences that can be added to your future credential. See a concentration advisor for more information.

HIST 322	Modern America	4
Select from the following World History courses:		4
HIST 221	World History, Beginnings to 1000 CE ¹	
HIST 222	World History, 1000-1800	
HIST 223	World History, 1800 - Present	
Select from the following U.S. Government courses:		4
POLS 112	American and California Government	
POLS 315	The American Presidency	
POLS 319	United States Congress	
POLS 348	Early American Political Thought	
POLS 349	Contemporary American Political Thought	
Select from the following World Civilization or World Culture courses:		4
HIST 307	European Thought 1800-2000	

HIST 310	East Asian Culture and Civilization
HIST 313	Modern Middle East
HIST 316	Modern East Asia
HIST 319	Modern South and Southeast Asia
HIST 334	Modern Europe, 1789-1914
HIST 335	Modern Europe, 1914-Present
HIST 338	Modern Latin America
HIST 341	Modern Central America
Select from the following Social Systems courses: 4	
ES 381	The Social Construction of Whiteness
LS 350	Identity and Equity in American Schools ²
SOC 309	The World System and Its Problems
SOC 315	Global Race and Ethnic Relations

Total units 20

- ¹ If course is taken to meet a Major or Support requirement, it may not be double-counted in the concentration.
- ² This course may not count towards an Introductory Subject Matter Authorization in History/Social Sciences.

Human Development Concentration

The Human Development concentration provides students with a broad foundation covering a range of issues. Courses focus on psychological, sociological, and emotional development across the lifespan of humans. It also complements professional training and enhances personal development and interpersonal effectiveness. This concentration provides knowledge and skills that can be applied to real world settings such as families, schools, and work places.

Select from the following:¹ 20

Choose at least one course in each of the designated areas below. One course must be upper-division.

Human Development and Growth²

CD 256	Developmental Psychology
CD 304	Infant and Toddler Development
CD 305	Early and Middle Childhood Development
CD 306	Adolescence
PSY 318	Psychology of Aging
PSY 324	Psychology of Gender
PSY 340	Biopsychology

Applications to Education and Advocacy³

CD 350	Developmental Issues in Education
CD 351	Learning in Out-of-School Time
CD 356	Behavioral Disorders in Childhood
CD 460	Child Abuse and Neglect
PSY 320	Health Psychology
PSY 325	Introduction to Positive Psychology
PSY 350	Teamwork
PSY 357	Cognition
SPED 420	Understanding Special Education

Social Context and Relationships

CD 417	Interpersonal Relationships in Childhood and Adolescence
CD 424	Children's Development in Diverse Cultures
LS 350	Identity and Equity in American Schools
PSY 254	Family Psychology
PSY 305	Personality
PSY 340	Biopsychology
PSY 475	The Social Psychology of Prejudice

Total units 20

- ¹ Additional courses are required if pursuing a minor in Child Development or Psychology. If you plan to pursue a minor, meet with an advisor early in your degree.
- ² If pursuing a career in Early Childhood Education (ECE), students may transfer 16 units of ECE credit from a community college. These students must also take an upper-division course in the areas of "Human Development and Growth" or "Applications to Education and Advocacy."
- ³ If pursuing a career in Special Education, students must take SPED 420.

Mathematics Concentration

Mathematics as a discipline is structured around conceptual categories of numbers and quantity, algebra, functions, modeling, geometry and probability and statistics. Knowledge in this area is unified through context, coherence, and tasks that develop mathematical "habits of mind." Courses in this concentration are structured for higher mathematics practices and content to support college and career pathways.

This concentration is aligned to a supplemental authorization in Mathematics that can be added to your future credential. See a concentration advisor for more information.

MATH 141	Calculus I	4
MATH 142	Calculus II	4
MATH 143	Calculus III	4
MATH 248	Methods of Proof in Mathematics	4

Select from the following: 4

LS 305	Project Based Learning in STEM Education
MATH 300	Technology in Mathematics Education
MATH 334	Combinatorial Math
MATH 335	Graph Theory
MATH 341	Theory of Numbers
MATH 419	Introduction to the History of Mathematics
MATH 442	Euclidean Geometry
STAT 410	Statistics Education: Pedagogy, Content, Technology, and Assessment

Total units 20

Science Concentration

The discipline of science is based on laws governing the world around us. Knowledge in this area is generated by development of concepts in matter, motion, and energy in living systems and Earth and space while emphasizing evidence to support claims for its knowledge. This concentration expands on ideas of the branches of science with engagement in the practices to build proficiency and further develop appreciation of the strengths and limitations of science in the real world.

This concentration is aligned to a supplemental authorization in Science that can be added to your future credential. See a concentration advisor for more information.

Students must take at least one 4-unit course at the 300-400 level in the concentration; three courses in the same discipline are recommended.

Chemistry Requirement

Select from the following: 4

CHEM 110	World of Chemistry
CHEM 124	General Chemistry for Physical Science and Engineering I
CHEM 127	General Chemistry for Agriculture and Life Science I

Physics Requirement

Select from the following: 4

PHYS 111	Contemporary Physics for Nonscientists
PHYS 121	College Physics I
PHYS 141	General Physics I
PSC 320	Energy, Society and the Environment

Approved Concentration Electives¹

Select from the following: 12

ASTR 102	Introduction to Stars and Galaxies
ASTR 324	Longitude, Navigation, and Timekeeping
BIO 114	Plant Diversity and Ecology
BIO 231	Human Anatomy and Physiology I
BIO 232	Human Anatomy and Physiology II
BIO 302	Human Genetics
BIO 305	Biology of Cancer
BIO/CHEM 308	Genetic Engineering Technology
BOT 121	General Botany
BOT 311	Plants, People and Civilization
BOT 326	Plant Ecology
CHEM 125	General Chemistry for Physical Science and Engineering II
CHEM 126	General Chemistry for Physical Science and Engineering III
CHEM 128	General Chemistry for Agriculture and Life Science II
CHEM 129	General Chemistry for Agriculture and Life Science III
CHEM 312	Organic Chemistry: Fundamentals and Applications
CHEM 314	Biochemistry: Fundamentals and Applications

CHEM 349	Chemical and Biological Warfare
CHEM 377	Chemistry of Drugs and Poisons
ERSC 223	Rocks and Minerals
GEOL 102	Introduction to Geology
GEOL 203	The Geologic Record: Fossils and the History of Life
GEOL 206	Geologic Excursions
GEOL 305	Seismology and Earth Structure
LS 305	Project Based Learning in STEM Education ²
MCRO 221	Microbiology
MCRO 342	Public Health Microbiology
MCRO 421	Food Microbiology
MSCI 111	Survey of Marine Biology
MSCI 330	Technologies for Ocean Discovery
MSCI 440	Communicating Ocean Sciences to Informal Audiences
NR 306	Natural Resource Ecology and Habitat Management
PHYS 122	College Physics II
PHYS 123	College Physics III
PHYS 142	General Physics II
PHYS 143	General Physics III
PHYS 330	Teaching Physics
PSC 201	Physical Oceanography
SCM 302/ ENGR 322/ HNRS 302	The Learn By Doing Lab Teaching Practicum ²
SCM 360	Selected Environmental Issues of California's Central Coast
SCM 368	Theory and Practice of STEM Tutoring ³

Total units 20

¹ Courses in BIO/BOT/MCR/MSCI may count towards a minor in Biology. Please consult a minor advisor for more information.

² A maximum of 4 units total from LS 305 and SCM 302/ENGR 322/HNRS 302 may be used in the concentration.

³ This course may not count towards an Introductory Subject Matter Authorization in Science.

Teaching English to Speakers of Other Languages Concentration

The knowledge and ability to effectively teach a second language is dependent on Linguistics, the scientific study of a language. Coursework in this concentration covers theoretical, methodological and pedagogical issues in second language teaching and learning. A variety of concepts within both theoretical and applied linguistics are developed. Additional coursework is required for the certification and students are encouraged to begin taking courses early in their Junior year. Meet with the Teaching English to Speakers of Other Languages (TESOL) program advisor for more information.

COMS 316	Intercultural Communication	4
ENGL 290	Introduction to Linguistics ¹	4

or ENGL 390	The Linguistic Structure of Modern English	
ENGL 497	Theories of Language Learning and Teaching	4
ENGL 498	Approaches to Teaching English to Speakers of Other Languages	4
ENGL 499	Practicum in Teaching English to Speakers of Other Languages	2
Total units		18

¹ Both ENGL 290 and ENGL 390 are required for the TESOL certification.

Department Chair: Benjamin Richert

Academic Programs

Program name	Program type
Mathematics	BS, MS, Minor

The Mathematics Department offers a comprehensive undergraduate program of courses leading to a Bachelor of Science degree in mathematics. It also offers a program of courses for students who wish to minor in mathematics, as well as graduate courses for programs of study leading to a Master of Science degree. The mix of pure and applied mathematics in these courses increases both the usefulness of and the demand for graduates with a degree in mathematics. In addition, the Mathematics Department offers courses that serve all departments in the university.

The rich variety of courses in the Mathematics Department provides students with the opportunity to experience those fields and the techniques of mathematics that are most useful in the physical sciences, engineering, statistics and business. Examples include mathematical modeling, mathematical biology, data science, operations research, fluid dynamics, numerical analysis, financial mathematics and sustainability.

For mathematics placement (MAPE) information visit the Academic Standards and Policies (p. 43) section.

Undergraduate Programs

BS Mathematics

The undergraduate program for math majors contains a central core of courses. These courses give a solid basis for advanced work that is tailored to fit the needs and objectives of each individual student. Advanced coursework is chosen in close consultation with faculty advisors.

Concentrations

The General Curriculum in Mathematics is not a concentration, and is the default curriculum required for students who do not declare a concentration. The general curriculum and all of the concentrations provide a strong mathematical foundation for the student contemplating the pursuit of a graduate degree in mathematics.

Applied Mathematics

Provides a curriculum with an emphasis on applications to the physical sciences and engineering. This concentration benefits students who are interested in the use of mathematics in areas such as engineering, data science, physics, aeronautics, finance, actuarial science, biology, medicine, and the geosciences. Potential career paths include pursuit of advanced degrees in any of the above fields or in applied mathematics, as well as industry jobs in a broad range of areas in which physical processes are modeled or analyzed using the tools of mathematics.

Mathematics Teaching

Students wishing to prepare for a career teaching mathematics in middle or senior high school should choose the concentration in teaching. The courses in the concentration, coupled with the other required courses

in the major, fulfill the prerequisites for the California Commission on Teacher Credentialing.

Pure Mathematics

A broad and rigorous curriculum designed both for students who will pursue an advanced degree in mathematics as well as those who choose careers requiring significant mathematical training. Graduates of the program are well prepared to enter graduate programs in mathematics and capable of bringing a broad range of mathematical skills and expertise to a wide range of professional careers.

Mathematics Minor

Students may earn a minor in mathematics by completing a coordinated program of study. The program consists of a core of required courses, followed by four advanced courses coordinated with a student's career objectives. Interested students should contact the Mathematics Department for individual advisement.

Graduate Programs

Master of Science Degree in Mathematics

General Characteristics

The Master of Science program in mathematics prepares students to enter careers in industry, teaching at the community college level, or to prepare for entering a PhD program in pure or applied mathematics.

Prerequisites

General CSU minimum qualifications for students entering a master's degree program include a bachelor's degree from an accredited institution with a minimum grade point average of 2.5 in the last 90 quarter units attempted.

Generally, the Mathematics Department at Cal Poly expects incoming master's degree students to have a grade point average of 3.0 or higher, and preferably a major in mathematics. Applicants without a major in mathematics are still welcome to apply, but must have substantial exposure to upper-level mathematics courses. Such applicants may be subject to acceptance conditional upon completion of remaining standard undergraduate mathematics curricula.

Program of Study

The Master's program requires 45 units of coursework. Students take eleven specified 500 level courses, with an additional four units of electives at the 400 or 500 level. Two of these courses have prerequisite qualifying exams, each offered three times a year. The culminating experience is either a written and publicly presented thesis on a significant topic at the 500 level, or an oral exam in three of five subjects: applied analysis, discrete mathematics, topology, algebra, or measure theory.

Specialization in Applied Mathematics

This program prepares students to enter careers in industry or to enter a PhD program in applied mathematics. Students take ten specified 400 and 500 level courses, with an additional eight units at the 400 or 500 level. Students can take electives that fit their specific needs or career objectives, and the culminating experience is either a written and publicly presented thesis on a significant mathematical topic at the 500

level, or oral exams in three of five subjects: applied analysis, discrete mathematics, topology, algebra, or measure theory.

Degree Requirements and Curriculum (p. 408)

Blended BS+MS Mathematics

A blended program provides an accelerated route to a graduate degree, with simultaneous conferring of both Bachelor's and Master's degrees. Students in the blended program are provided with a seamless process whereby they can progress from undergraduate to graduate status. Students are required to complete all requirements for both degrees.

A blended program is available for MS Mathematics.

Eligibility

Students majoring in BS Mathematics are eligible for the blended program in MS Mathematics.

Participation in a blended program is based upon prior academic performance and other measures of professional promise. Refer to [Graduate Education \(p. _____\)](#) for more information and for the minimum criteria required to be eligible for a blended program at Cal Poly. Contact the Graduate Program Coordinator in the Mathematics department for any additional eligibility criteria.

BS Mathematics

Program Learning Objectives

1. Understand the nature of mathematical proof and be able to write clear and concise proofs.
2. Develop the ability to read, understand, and use basic definitions in linear and abstract algebra and real analysis, and be able to prove simple consequences of these definitions.
3. Be able to use standard mathematical techniques to solve elementary problems.
4. Be able to communicate effectively in oral and written form.
5. Be able to write simple computer programs to perform mathematical computations.
6. Gain experience exploring open-ended problems, learn to make conjectures, and gather evidence to support or refute these conjectures.
7. Develop the ability to read and to learn mathematics independently.
8. Learn about applications of mathematics in other fields and gain experience in mathematical modeling.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

MAJOR COURSES

MATH 141	Calculus I (B4) ¹	4
MATH 142	Calculus II (GE Electives) ¹	4
MATH 143	Calculus III	4
MATH 202	Orientation to Mathematics Major	1
MATH 206	Linear Algebra I	4
MATH 241	Calculus IV	4
MATH 242	Differential Equations I	4
MATH 248	Methods of Proof in Mathematics	4
MATH 306	Linear Algebra II	4
MATH 334	Combinatorial Math (Upper-Division B) ¹	4
MATH 412	Introduction to Analysis I	4
Select from the following: ²		4
MATH 459	Senior Project Seminar	
MATH 460	Senior Project Applied Seminar	
MATH 461 & MATH 462	Senior Project I and Senior Project II	
MATH 481	Abstract Algebra I	4
CSC/CPE 101	Fundamentals of Computer Science	4
PHYS 141	General Physics I	4
Select from the following: ¹		4
PHYS 142	General Physics II (B1 & B3)	
PHYS 143	General Physics III (B1 & B3)	
General Curriculum in BS Mathematics or Concentration ³		44/56/48/48
GENERAL EDUCATION (GE)		
(See GE program requirements below.)		56
FREE ELECTIVES		
Free Electives ^{3,4}		19/7/15/15
Total units		180

- ¹ Required in Major or Support; also satisfies General Education (GE) requirement.
- ² MATH 460 is recommended for students in the Applied Mathematics concentration.
- ³ General Curriculum/Applied Mathematics concentration/ Mathematics Teaching concentration/Pure Mathematics concentration.
- ⁴ 60 units must come from upper-division courses at the 300-400 level for the General Curriculum in BS Mathematics.

General Curriculum in BS Mathematics or Concentrations (select one)

- General Curriculum (p. 404)
- Applied Mathematics (p. 405)
- Mathematics Teaching (p. 406)
- Pure Mathematics (p. 407)

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.

- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

General Curriculum in Mathematics

This is the default curriculum required for students who do not declare a concentration.

STAT 301	Statistics I	4
or STAT 305	Introduction to Probability and Simulation	
Tracks		
Choose three tracks from the following list, with at least one track chosen from the first four tracks listed. A track consists of two paired courses representing depth of study with a particular focus. ¹		24

MATH 483	Abstract Algebra III	

Total units 28

MS Mathematics

Program Learning Objectives

1. Demonstrate a high level of overall mathematical knowledge in the traditional areas of advanced mathematics, such as algebra, analysis, topology, and discrete mathematics.
2. Apply mathematical knowledge in new settings.
3. Produce detailed, rigorous, and correct proofs.
4. Communicate effectively in oral and written forms.

Required Courses

MATH 505	Graduate Teaching Seminar	1
MATH 520	Applied Analysis I	4
MATH 521	Applied Analysis II	4

MATH 530	Discrete Mathematics with Applications I	4
MATH 531	Discrete Mathematics with Applications II	4
MATH 540	Topology I	4
MATH 541	Topology II	4
MATH 548	Transition to Graduate Mathematics	4
MATH 550	Real Analysis	4
MATH 560	Field Theory	4
MATH 561	Graduate Algebra	4
Electives		4

Select additional units at the 400 or 500 level as approved by the Graduate Committee.

Satisfactory completion of the comprehensive examinations.

Total units 45

MS Mathematics, Specialization in Applied Mathematics

Program Learning Objectives

1. Demonstrate a high level of overall mathematical knowledge in the traditional areas of advanced mathematics, such as algebra, analysis, topology, and discrete mathematics.
2. Apply mathematical knowledge in new settings.
3. Produce detailed, rigorous, and correct proofs.
4. Communicate effectively in oral and written forms.

Required Courses

MATH 476	Advanced Topics in Applied Mathematics	4
MATH 502	Numerical Methods in Applied Mathematics	4
MATH 505	Graduate Teaching Seminar	1
MATH 520	Applied Analysis I	4
MATH 521	Applied Analysis II	4
MATH 530	Discrete Mathematics with Applications I	4
MATH 531	Discrete Mathematics with Applications II	4
MATH 548	Transition to Graduate Mathematics ¹	4
MATH 550	Real Analysis	4
MATH 561	Graduate Algebra	4
Electives		8

Select additional units at the 400 or 500 level as approved by the Graduate Committee.

Satisfactory completion of the comprehensive examinations or thesis defense.

Total units 45

¹ Students that pass both the algebra and the real analysis qualifying exams before the fall of their first year of graduate school may choose to waive the requirement to take MATH 548. In that case, the number of electives would be 12 instead of 8.

Academic Programs

Program name	Program type
Physics	BA, BS, Minor
Astronomy	Minor
Geology	Minor

The department provides a solid grounding in fundamental physics through theoretical courses in Classical and Modern Physics, Quantum Mechanics, Electromagnetism, and Thermal Physics. These are supported by a comprehensive laboratory program in electronics and quantum physics. Required subjects are complemented by a wide range of elective courses including optics, particle and solid state physics, nonlinear dynamics, astronomy, and geophysics. Facilities include specialized laboratories in electrical measurements, optics, solid state physics, and nuclear and atomic physics. Majors are prepared to attend graduate school, work in technical fields, or pursue a teaching credential. Student activities include a chapter of the national Society of Physics Students and a chapter of the national physics honor society, Sigma Pi Sigma. All physics students are admitted under the BS Program. Beginning in the second quarter of enrollment students may elect to change to the BA program. Consult your academic advisor.

Undergraduate Programs

BA Physics

The BA in Physics provides the student with a solid foundation in physics. It is a more flexible major serving students with double majors, nontechnical minors, and students who intend to pursue pre-college teaching. The curriculum has fewer required courses than the BS, which allows students to choose from an extensive list of electives. Tailoring the curriculum to maximize student goals should be done in consultation with an academic advisor. Students considering a career in teaching should consult with their academic advisor early.

BS Physics

The BS in Physics is the appropriate choice for those students planning a career involving physics in industry or government laboratories, as well as those seeking a strong foundation in physics for graduate study.

Astronomy Minor

The Astronomy Minor provides students an opportunity to learn about and analyze astronomical phenomena and processes. A minor in astronomy provides a background for graduate-level studies in astronomy or work in related fields. Interested students should see an Astronomy Minor advisor.

Geology Minor

The Geology Minor is offered in conjunction with the Natural Resources Management and Environmental Sciences Department. It provides a background useful for careers in environmental consulting or geotechnical fields. Interested students should consult with a Geology Minor advisor. Students preparing for the geology minor should take SS 120 and CHEM 124 or CHEM 127, and have credit for MATH 119 or higher to fulfill the prerequisites for the required courses in the minor. Depending on chosen elective courses in the minor additional prerequisites may apply. This minor is not open to students in the Earth Sciences' Geology concentration. For more information about the Geology concentration, please see the Earth Sciences program in the Natural Resources Management and Environmental Sciences Department (p. 117).

Physics Minor

The Physics Minor provides students with the opportunity to build on their introductory physics courses with a coordinated set of electives based on interests and career objectives selected in consultation with a physics advisor.

Students may earn a minor in Physics by completing a course of study consisting of 24 units in physics and astronomy, of which 12 units must be upper division, and no more than 4 units may be from astronomy courses.

BA Physics

Program Learning Objectives

1. Demonstrate a good understanding of both the theoretical concepts and mathematical techniques of the major fields of physics: classical mechanics, electromagnetism, thermodynamics, and quantum physics.
2. Work safely with modern laboratory equipment to carry out measurements and analyze data.
3. Use computers to perform numerical computations, to simulate physical phenomena, and to collect and analyze data in the laboratory.
4. Communicate effectively, both orally and in writing.
5. Move successfully into graduate school or a career in teaching or industry.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major courses with a lab component may be selected as credit/no credit.¹

Note: Students intending to double major must consult the Physics department chair, preferably prior to sophomore year.

Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹		4
Total units		56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

BS Physics

Program Learning Objectives

1. Demonstrate a good understanding of both the theoretical concepts and mathematical techniques of the major fields of physics: classical mechanics, electromagnetism, thermodynamics, and quantum physics.
2. Work safely with modern laboratory equipment to carry out measurements and analyze data.
3. Use computers to perform numerical computations, to simulate physical phenomena, and to collect and analyze data in the laboratory.
4. Communicate effectively, both orally and in writing.
5. Move successfully into graduate school or industry.

Degree Requirements and Curriculum

In addition to the program requirements on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No Major course with a lab component may be selected as credit/no credit.¹

Note: Students intending to double major must consult the physics department chair, preferably prior to sophomore year.

MAJOR COURSES

Total units		56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Astronomy Minor

Lower-Division		
PHYS 142	General Physics II ¹	4
PHYS 143	General Physics III ¹	4
PHYS 211	Modern Physics I ¹	4
Upper-Division		12-13
Select the following four courses:		
ASTR 301	Planetary Systems ¹	
ASTR 302	Stars and Galaxies ¹	
ASTR 326	Cosmology	
ASTR 444	Observational Astronomy	
Or select three of the above ASTR courses and at least 3 units from the following electives:		
AERO 351	Introduction to Orbital Mechanics ¹	
ASTR 470	Selected Advanced Topics	
ASTR 471	Selected Advanced Laboratory	
GEOL 415	Structural Geology ¹	
PHYS 305	Classical Mechanics I ¹	
PHYS 313	Introduction to Atmospheric Physics ¹	
PHYS 318	Special Theory of Relativity	
PHYS 323	Optics ¹	
PHYS 410	Physics of Solid Earth ¹	
PHYS 418	Introduction to General Relativity	
Total units		24-25

¹ Requires additional prerequisites.

Geology Minor

Required Courses		
ERSC 223	Rocks and Minerals ¹	4
GEOL 201	Physical Geology ¹	3
GEOL 241	Physical Geology Laboratory ¹	1
GEOL 415	Structural Geology	4
Approved Electives		
Select from the following:		
ERSC 423	Geomorphology ¹	12
GEOL 305	Seismology and Earth Structure ¹	

GEOL 309	Igneous Petrology
GEOL 311	Metamorphic Petrology
GEOL 330	Principles of Stratigraphy
GEOL 400	Special Problems for Advanced Undergraduates ²
GEOL 404	Research Experience for Advanced Undergraduates ²
GEOL 416	Field-Geology Methods
GEOL 417	Geologic Mapping
GEOL 420	Applied Geophysics ¹

Total units **24**

¹ Course requires additional prerequisites.

² Total credit in GEOL 400 and GEOL 404 limited to 2 units.

Physics Minor

Required Courses

PHYS 143	General Physics III ¹	4
PHYS 211	Modern Physics I ¹	4

Physics/Astronomy Electives ^{2,3} **16**

Any upper division PHYS course (300-400 level)

ASTR 301	Planetary Systems ¹
ASTR 302	Stars and Galaxies ¹
ASTR 326	Cosmology ¹
ASTR 444	Observational Astronomy
PHYS 212	Modern Physics II
Must include at least one of the following courses:	
PHYS 301	Thermal Physics I
PHYS 305	Classical Mechanics I ¹
PHYS 323	Optics ¹
PHYS 405	Quantum Mechanics I ¹
PHYS 408	Electromagnetic Fields and Waves I ¹
PHYS 425	Solid State Physics ¹

Total units **24**

¹ Courses requires additional MATH and PHYS prerequisites.

² Total credit in PHYS 400 and PHYS 404 limited to 4 units.

³ Total credit in ASTR courses limited to 4 units.

Academic Programs

Program name	Program type
Curriculum and Instruction	MA
Educational Leadership and Administration	MA
Equity in Education	Minor
Higher Education Counseling and Student Affairs	MS
Special Education	MS

Vision, Mission and Programs

Vision: The School of Education programs support the development of qualified, competent, and caring education professionals who prepare a diverse student population to become active and thoughtful participants in a democratic society.

Mission: The School of Education leads the campus in an all-university approach to preparing education professionals. These professionals create, assess and modify environments, practices, and policies to foster the achievement of each and every learner; they strive for equity in schools and society; and they are committed to inquiry and professional growth for themselves and the advancement of P-20 education.

School of Education faculty model leadership in their teaching, scholarship, and service through a grounded, reflective *learn-by-doing* approach and through sustained collaborations with their education partners: P-12 schools, families, community colleges, universities, and local, state, and national agencies.

Learning Outcomes: All candidates who complete a credential or master's degree in the School of Education will:

- *Be Qualified, Competent, and Caring Professional Educators*
- *Integrate Principles and Practices of Professional Fields to Support Student Learning*
- *Engage in Cross-Disciplinary and Collaborative Practices*
- *Demonstrate Authentic Assessment Practices Designed for Student Success, Individual Growth, and Program Improvement*
- *Effect Sustainable Communities in a Multicultural Environment*
- *Engage in Professional Practices*

Programs: The School offers a wide variety of courses and programs leading to careers in education. Common to all programs is a commitment to excellence, to partnerships and collaboration, and to preparation for future educational challenges. As the state's population grows, enrollments in grades P–12 increase and with them the demand for well-prepared teachers, and for specialists in administration, special education, and higher education.

To meet the need for excellence in the field, the School seeks talented, creative students who are committed to a long-term career in education and to the improvement of educational processes and institutions.

The School offers programs that lead to a preliminary Educational Specialist credential in Multiple Subject or Single Subject teaching, in Administrative Services or as an Education Specialist or Agriculture Specialist. Supplementary and subject matter authorizations are available in a variety of subject areas.

The School offers four master's degrees; see the Graduate (p. 415) section for more information.

Stressing the "learn by doing" philosophy, the School provides opportunities for extensive on-site observation, tutoring, and fieldwork in educational settings. Cal Poly maintains cooperative relations with surrounding school districts and area educational agencies. Within our service area, teacher candidates and master's students can learn in cross-cultural, city and rural settings.

Undergraduate Program Equity in Education Minor

The Equity in Education Minor is an interdisciplinary course of study that introduces students to how cognition, social-emotional development, culture, and policy impact teaching and learning. The minor is meant to be flexible and allow students from all majors to deepen their knowledge about teaching and learning and the role of education for advancing social justice and equity. The minor is especially valuable for students who are interested in careers in education, including K-12 public schooling, higher education/student affairs, non-profit organizations, and educational leadership. Interested students should consult with an Equity in Education Minor advisor. The Equity in Education Minor is not open to Liberal Studies majors. Students preparing for the minor should take PSY 201 or 202 to fulfill the prerequisites for the required courses in the minor.

Minor Requirements (p. 418)

Teacher Education

Education Bldg. (02), Room 120
805.756.2126

The following credential programs are accredited by the California Commission on Teacher Credentialing (CTC) to prepare candidates and recommend for these credentials.

Teaching Credential Programs

- Agriculture Specialist
- Multiple Subject
- Single Subject: Agriculture
- Single Subject: Biological Science
- Single Subject: Chemistry
- Single Subject: English
- Single Subject: Geosciences
- Single Subject: Mathematics
- Single Subject: Physics
- Single Subject: Social Science
- Single Subject: World Languages – French
- Single Subject: World Languages – Spanish
- Bilingual Authorization: Spanish
- Education Specialist: Mild/Moderate Disabilities (see Graduate section in School of Education)

Credential programs consist of coursework and field experiences, including the clinical practice known as student teaching, that are required to obtain a preliminary teaching credential in California. Coursework in credential programs in the state of California is required to fit within one year of full-time study. In some instances, candidates are able to take prerequisite courses and enter a credential program prior to the completion of their undergraduate degree.

Application deadlines are established for each specific program. Detailed information about application deadlines and other requirements is available on the School of Education website at <https://soe.calpoly.edu>.

Multiple Subject Teaching

A multiple subject teaching credential permits someone to teach all subjects in a self-contained classroom up to the 8th grade, and Cal Poly's Multiple Subject Teacher Preparation (MSTEP) Program prepares students to earn this credential. Entry to MSTEP requires completion of an undergraduate degree, subject matter coursework and prerequisite coursework, which can be taken either as part of an undergraduate degree or at the post-baccalaureate level. Some prerequisite courses have specific requirements for enrollment (e.g. senior or graduate standing); hence, early advising is critical and interested individuals are encouraged to contact the School of Education Credential Office for this purpose.

Multiple subject candidates must demonstrate subject matter competency by completing an approved subject matter waiver program in elementary education or provide evidence of passing the Multiple Subject California Subject Examinations for Teachers (CSET). Demonstration of subject matter competency must be completed before candidates begin the credential program. During the MSTEP Program candidates take courses in methods of teaching specific subjects, and they engage in clinical practice (student teaching) in elementary school classrooms and participate in seminar courses designed to bridge university- and school-based learning experiences. Special attention is paid to learning how to teach young students whose first language is not English, so a credential earned from the MSTEP Program is designated as English learner authorized. Detailed information about steps to apply to the MSTEP Program and state requirements for a Multiple Subject Teaching Credential can be found on the School of Education website at <https://soe.calpoly.edu>.

Single Subject Teaching

The Single Subject Teaching Credential is for candidates who wish to teach a specific content area at the secondary level. Single subject candidates must demonstrate subject matter competency by completing an approved subject matter course work program in that subject matter area or provide evidence of passing the appropriate California Subject Examinations for Teachers (CSET) specialty area test(s). Demonstration of subject matter competency must be completed before candidates begin the credential program.

Candidates for the Single Subject teaching credential in Agriculture or the Agricultural Specialist credential complete their preparation program through the Agricultural Education and Communication Department at Cal Poly and should communicate with the department credential advisor for further information or advisement (Dr. Ben Swan, at 805-756-2401 or bswan@calpoly.edu).

NOTE: Credential requirements are subject to change. Please check with program advisors for up-to-date information.

Admission Requirements

Details concerning specific requirements are available from the appropriate advisor, the advisement handbook, or at <https://soe.calpoly.edu>.

The requirements for admission to Cal Poly to pursue a Multiple Subject credential differ slightly from those for the Single Subject credential. All applicants must first apply for admission to graduate studies in Education at Cal Poly by completing an application at <https://calstate.edu/apply> (<https://calstate.edu/apply/>).

Preliminary Credential

California has a two-tiered credentialing system. Initial credentialing to be a teacher requires earning a *preliminary* credential. Cal Poly programs provide a route to this credential, and it allows a person to be hired as a classroom teacher in public schools in California. Contact the School of Education Credential Office for program-specific admission requirements, which include obtaining a Certificate of Clearance.

To make successful progress through a credential program, teacher candidates must maintain a B average in all professional education courses (MSTEP Program) or each a B or better in all professional education courses (Single Subject Program). Candidates must also complete additional application steps at specified transition points. Check with the pertinent credential program advisor, handbook, and/or website (see <https://soe.calpoly.edu>) to determine all requirements to be completed for a specific credential program. A teacher candidate must provide evidence of completion of all state- and program-mandated requirements and have that verified by the SOE Credential Office in order to be recommended for a preliminary credential.

Clear Credential

The second tier of teacher credentialing in California is the *clear* credential. California Senate Bill 2042 transferred the recommending of a clear teaching credential to school districts via Induction Programs. Graduates obtaining their preliminary credential from Cal Poly should consult the school district employing them for information about Induction Programs and obtaining a clear credential.

Supplementary and Subject Matter Authorizations

A basic teaching credential can be enhanced by adding supplementary and/or subject matter authorizations. These authorizations allow teachers to teach additional subjects without completing a full professional preparation program for that credential and we encourage candidates to consider whether it is possible to add these as part of completing their preliminary credential. To earn an authorization, students must complete a specific number of course credits in the new content area. See www.ctc.ca.gov (<http://www.ctc.ca.gov>) for specific information on these authorizations and consult with your credential advisor to plan your coursework in order to meet the necessary requirements for any additional authorizations desired.

Graduate Programs Credential Programs

Credential programs are accredited by the California Commission on Teacher Credentialing (CTC) to prepare candidates and recommend for these credentials.

Admission

Details concerning specific requirements are available from the appropriate advisor, the advisement handbook, or at <https://soe.calpoly.edu>.

Admission into programs leading to licensure and credentialing does not guarantee that students will obtain a license or credential. Licensure and credentialing requirements are set by agencies that are not controlled by or affiliated with the CSU and requirements can change at any time. For example, licensure or credentialing requirements can include evidence of the right to work in the United States (e.g., social security number or taxpayer identification number) or successfully passing a criminal background check. Students are responsible for determining whether they can meet licensure or credentialing requirements. The CSU will not refund tuition, fees, or any associated costs, to students who determine after admission that they cannot meet licensure or credentialing requirements.

Administrative Services

- Preliminary
- Administrative Intern

The Educational Leadership and Administration Program offers the California Preliminary Administrative Services Credential for eligible candidates who hold a valid CLEAR California teaching or service credential and who have completed five (5) years of full-time teaching/service with this credential. The Administrative Internship Program is an option for those who are requested by their employing district to concurrently serve in an administrative position while completing the requirements for the California Preliminary Administrative Services Credential.

California Preliminary Administrative Services

This program emphasizes a comprehensive knowledge of K-12 school administration including applied theory, administration and leadership, schools in contemporary society, and effective management related to educational outcomes. As a basis for credential recommendation, the preliminary program emphasizes applied theory with actual experience in fieldwork assignments and an evaluation of administrative competence.

The credential program requires 58 quarter units, all of which are applicable to the MA in Educational Leadership and Administration. The Preliminary Administrative Services Credential authorizes service in any administrative position at any grade level (K-12) in California.

Administrative Intern

This program supports districts that have an immediate need for an administrator and are without suitable candidates. Candidates earn the Preliminary Administrative Services Credential as they serve in an administrative capacity within a one year time frame.

Education Specialist (Mild/Moderate Disabilities)

- Preliminary

This credential authorizes the holder to teach in the following settings: special day classes, special schools, home/hospital settings, correctional facilities, nonpublic schools and agencies, and resource rooms. Education Specialist candidates must demonstrate subject matter competency by completing an approved subject matter waiver program in elementary education or provide evidence of passing the Multiple Subject

California Subject Examinations for Teachers (CSET). Demonstration of subject matter competency must be completed before candidates begin the credential program.

The program is designed to prepare candidates to work with pupils with mild/moderate disabilities, which include specific learning disabilities; mild to moderate intellectual disabilities; attention deficit and attention deficit and hyperactivity disorders; and serious emotional disturbances, and authorizes serving individuals in K-12, and in classes organized for adults through age 22.

A full-time candidate may complete the requirements in one calendar year. The Education Specialist program is heavily field based and requires 62 quarter units, most of which are applicable to the MS Special Education.

A Multiple or Single Subject teaching credential is *not* required for admission. However, some coursework taken for the Single Subject or Multiple Subject Credential program may meet prerequisite course requirements for the Education Specialist Credential program.

MA Curriculum and Instruction

General Characteristics

A Master of Arts in Curriculum and Instruction offers the opportunity for PreK-16 educators to advance their knowledge and practice in working with ambitious curricula and complex instructional approaches to foster students' development of deep understanding and multiple literacies for the 21st century.

Candidates in the program will be required to have at least two years of teaching experience or a teaching credential so that they have developed the skills necessary to lead instruction and can build more advanced knowledge and skills. This program will be offered in a classroom-based or hybrid format, with all core classes being offered online to enable the working educator to manage full-time employment and coursework. Similarly, all courses are designed with practical readings and activities to enhance relevance to working classroom teachers.

Admission

Admissions for the MA Curriculum & Instruction degree minimally requires the following:

- 2 years of PreK-16 classroom teaching experience/or a teaching credential
- 2.5 cumulative GPA
- 3 Letters of recommendation
- Bachelor's degree from a regionally accredited college/university

Program of Study

Completion of the program will place candidates in a position to take on curriculum design, instructional leadership roles, and/or lead professional development opportunities in their programs, schools, or districts. In addition, it will lay the groundwork for graduate study at the doctoral level.

In the program, candidates will be part of a cohort and have collaborative learning opportunities to deepen their understanding of effective, evidence-based teaching practice with the ambitious standards in K-16 education today.

Advising

Students must meet with their advisor on a regular basis to ensure a smooth progression toward the completion of the degree.

Formal Study Plan

The candidate is required to file a Formal Study Plan prior to the completion of 12 units in the program. This plan is completed in consultation with the program advisor and helps the candidate to schedule courses in a sequence that results in timely completion of the program. A Formal Study Plan is required prior to Advancement to Candidacy.

Advancement to Candidacy

- Advancement to master's degree candidacy requires:
- Completing at least 24 units of program-required courses in residence
- Meeting the university Graduation Writing Requirement
- Receiving formal recommendation of the graduate faculty
- Earning a GPA of 3.0 in all coursework included on the formal program of study, and in all coursework completed subsequent to admission to post-baccalaureate standing; and
- Meeting all conditions of admission.

Culminating Experience

The culminating project involves the design and conduct of research in a classroom in response to an authentic question about teaching practice. Teachers engage in elements of this type of activity on a daily basis as they try out ideas to support the learning of students. In this program, such activity will be in a more formal and systematic way as an action research project, with the result that each candidate will be contributing to our knowledge base about what works in classrooms to support desired student development. Students must receive a minimum score of 80 percent to pass the project. If a student fails to receive a passing mark, s/he will be permitted to rewrite and/or revise the project one additional time.

MA Educational Leadership and Administration

General Characteristics

The Master of Arts in in Educational Leadership and Administration Program (ELAP) allows students to complete their Master's degree in 16 weekends (Friday evenings and all day Saturdays) and one summer session during an 11-month period. It is possible for qualified students to also complete the requirements for the Preliminary Administrative Services Credential.

Admission

- Admission to ELAP minimally requires the following:
- 2.5 cumulative GPA
- 3 Letters of recommendation
- Bachelor's degree from a regionally accredited college/university
- Autobiographical statement
- An in-person interview or video testimonial

Program of Study

The MA in Educational Leadership and Administration is a rigorous, practical program designed for those seeking leadership positions in K-12 schools, school districts, and educationally related organizations.

Students are admitted once each year in the fall, and they progress through the program as a cohort. The program emphasizes applied theories of educational leadership, mastery of practical skills required for effective school administration and competence in research methods necessary for understanding and assessing learning organizations.

Advising

The candidate must meet with their advisor on a regular basis. Continued consultation with the advisor assists a smooth progression toward completion of the degree.

Formal Study Plan

The candidate is required to file a Formal Study Plan prior to completion of 12 units in their program. This plan is completed in consultation with the program advisor and helps the candidate to schedule courses in a sequence that results in timely completion of the program. A Formal Study Plan is required prior to Advancement to Candidacy.

Advancement to Candidacy

- Advancement to master's degree candidacy requires:
- Completing at least 24 units of program-required courses in residence
- Meeting the university Graduation Writing Requirement
- Receiving formal recommendation of the graduate faculty
- Earning a GPA of 3.0 in all coursework included on the formal program of study, and in all coursework completed subsequent to admission to post-baccalaureate standing; and
- Meeting all conditions of admission.

Culminating Experience

The culminating experience is a Comprehensive Examination consisting of questions drawn from material presented in each ELAP course (fieldwork is excluded). Students must receive a minimum score of 80 percent to pass the exam. If a candidate fails to receive a passing mark, s/he will be permitted to retake the Exit Examination one additional time. Students will have three hours to complete the exam.

MS Higher Education Counseling and Student Affairs

General Characteristics

The Master of Science in Higher Education and Counseling and Student Affairs (HECSA) program prepares students for careers as student affairs professionals and counselors in higher education settings.

Admission

Admission to the MS in Higher Education Counseling and Student Affairs degree minimally requires the following:

- 2.5 cumulative GPA
- 3 Letters of recommendation
- Bachelor's degree from a regionally accredited college/university
- Auto-biographical statement
- An interview with program faculty

Program of Study

Students attending full-time complete the 72-unit program in two to three years. Major strengths of the program are its focus on social justice and its extensive fieldwork experience, which provides

students with professional work experience. Students come from a wide variety of educational and professional backgrounds with no specific undergraduate degree required. Although many students have backgrounds in Psychology and Social Sciences, others have come from Agriculture, Business, Mathematics, and the natural sciences.

Advising

The candidate must meet with their advisor on a regular basis. Continued consultation with the advisor assists a smooth progression toward completion of the degree.

Formal Study Plan

The student is required to file a Formal Study Plan prior to completion of 12 units in the program. This plan is completed in consultation with the program coordinator and helps the candidate to schedule courses in a sequence that results in timely completion of the program. A Formal Study Plan is required prior to advancement to candidacy.

Advancement to Candidacy

Advancement to master's degree candidacy requires:

- Completing at least 24 units of program-required courses in residence
- Meeting the university Graduation Writing Requirement
- Receiving formal recommendation of the graduate faculty
- Earning a GPA of 3.0 in all coursework included on the formal program of study, and in all coursework completed after admission to post baccalaureate standing, and
- Meeting all conditions of admission.

Culminating Experience

The culminating experience is a professional portfolio project conducted throughout the final year of the program and presented orally during the student's final quarter in the program as a deliverable within the EDUC 573 Fieldwork course. Students reflect on all past coursework and synthesize this into a professional development plan. The portfolio includes a current professional resume, a professional statement of practice/scholarship including their approach to diversity, equity, and inclusion, reflection statements and key assignment artifacts for each of the program learning outcomes, fieldwork feedback and reflection, and a professional cover letter.

MS Special Education

General Characteristics

The Master of Science in Special Education is designed to develop the knowledge and skills that will contribute to your success as a special day class teacher, resource specialist, inclusion specialist, autism specialist, or clinician. Approved units for the master's degree program directly apply towards the requirements for a Preliminary Education Specialist Credential (Special Education) Mild/Moderate Disabilities. It is possible for qualified students to complete the requirements for the Specialist Credential while pursuing the requirements for the master's degree.

Admission

Admission to the MS in Special Education degree minimally requires the following:

- 2.5 cumulative GPA
- 3 Letters of recommendation
- Bachelor's degree from a regionally accredited college/university

- Auto-biographical statement
- An interview with program faculty

Program of Study

The MS in Special Education (SPED) is a 45-unit, cohort-based program beginning each fall quarter. Cohorts are limited each year to 20 students. The MS in Special Education can be earned in three quarters of full-time enrollment, although there is an option to complete the program in two years. The MS SPED allows students to acquire depth in a "disability area," and understand how action research can improve and enhance a teacher's classroom performance.

Advising

The candidate must meet with their advisor on a regular basis. Continued consultation with the advisor assists a smooth progression toward completion of the degree.

Formal Study Plan

The candidate is required to file a Formal Study Plan prior to completion of 12 units in their program. This plan is completed in consultation with the program advisor and helps the candidate to schedule courses in a sequence that results in timely completion of the program. A Formal Study Plan is required prior to Advancement to Candidacy.

Advancement to Candidacy

Advancement to master's degree candidacy requires:

- Completing at least 24 units of program-required courses in residence
- Meeting the university Graduation Writing Requirement
- Receiving formal recommendation of the graduate faculty
- Earning a GPA of 3.0 in all coursework included on the formal program of study, and in all coursework completed after admission to post baccalaureate standing; and
- Meeting all conditions of admission.

Culminating Experience

The culminating experience is a project consisting of a year-long applied research study in a school placement and submission of a final research paper. Drawing from coursework content on applied behavior analysis and research and evidence-based practices in special education, students design, propose, implement, evaluate, and disseminate a research study intended to address a targeted area of need for a school-aged individual with a mild or moderate disability. Students are evaluated on a final research paper that they submit by the 8th week of the quarter in the spring.

Equity in Education Minor

Required Courses

EDUC/CD 207	Children's Learning and Development in Educational Settings	4
or PSY 256	Developmental Psychology	
EDUC 300	Historical, Philosophical, and Social Foundations of Public Education	3-4
or SCM 300	Early Field Experience	
ES/HNRS 112	Race, Culture, and Politics in the United States	4

Approved Electives

Select from the following (8-9 units must be at the 300-400 level):¹ 12-13

Lower-Division Courses	
ES 253	Introduction to American Indian Studies
ES 254	Introduction to African American Studies
ES 255	Introduction to Latino/a/x Studies
ES 256	Introduction to Asian American Studies
HLTH 250	Healthy Living
LS 214	Constitutional Issues in the History of U.S. and California Education
LS/ENGL 255	Children's Literature in a Diverse Society
SCM 220	Seminar for Science and Math Tutors ²
SCM 230	Seminar for Learning Assistants ²
SOC 111	Social Problems
Upper-Division Courses	
AGED 303	Agricultural Youth Leadership Development
AGED 410	Computer Applications in Agricultural Education
EDUC 403	Developing Teachers of Color
EDUC 405	Social, Historical and Cultural Influences on Latino/a Students in Education ²
EDUC 427	Theories, Methods, and Assessment of First and Second Language Acquisition in Schools
EDUC 428	Foundations of K-8 Literacy Teaching and Learning in Schools with Diverse Populations
ENGL 361	Reading Instruction for the Teaching of Young Adult Literature
ENGL 368	Theory and Practice of Peer-to-Peer Writing Instruction
ES 350/ HNRS 353/ WGQS 350	Gender, Race, Culture, Science & Technology
ES 380	Critical Race Theory
ES 381	The Social Construction of Whiteness
HLTH 443	Health Education for Teachers
KINE 310	Concepts and Applications in Elementary Physical Education
LS 350	Identity and Equity in American Schools
MU 360	Music for Classroom Teachers ²
PHYS 330	Teaching Physics ²
PSY 357	Cognition
SCM 302/ ENGR 322/ HNRS 302	The Learn By Doing Lab Teaching Practicum
SPED 420	Understanding Special Education

STAT 410	Statistics Education: Pedagogy, Content, Technology, and Assessment ²
TH 380	Theatre for Young Audiences ²
WLC 312	Humanities in Chicano/a Culture
WLC 370	Language, Technology and Society

Total units 24

¹ At least half of the units completed for the minor must be upper-division (300-400 level).

² Course requires additional prerequisites.

MA Curriculum and Instruction Program Learning Objectives

1. Action Research: Design and implement an action research project on a key issue in curriculum and instruction in an effort to bring change to their teaching practice and promote meaningful outcomes for students.
2. Advanced Practices & Content Knowledge: Understand and apply perspectives, principles, and practices for designing integrated curriculum and implementing advanced instructional strategies to foster conceptual development and disciplinary ways of knowing in diverse classrooms.
3. Multiple Literacies: Understand and analyze different language and literacy theories that promote multimodal instruction and apply theories through design and critique of appropriate evidence-based instructional practices and activities for students that are most appropriate for integrated instructional situations in diverse classrooms.
4. Social Justice Teaching: Understand and apply social justice theories, pedagogies, and strategies to provide an equitable education for a diverse student body by integrating principles of critical pedagogy and culturally responsive teaching in and out of the classroom.
5. Change Agent: Reflect critically on educational research and practice to identify ways to shape change through advancing pedagogical practices and principles of social justice at the school, community, and societal level.

Required Courses

EDUC 502	Advancing Pedagogical Practices with Technology	4
EDUC 522	Advanced Classroom Pedagogy	4
EDUC 523	Integrative Approaches to Curriculum	4
EDUC 531	Social Justice in Education: In & Out of the Classroom	4
EDUC 532	Advanced Field Experiences in Education	2
EDUC 586	Introduction to Inquiry in Education	4
EDUC 588	Education, Culture, and Learning	4
EDUC 589	Educational Research Methods	4
EDUC 598	Action Research Project in Education	3

Approved Electives

Select from the following: ¹		12
EDUC 412	Access to Learning in a Pluralistic Society	

EDUC 416	Literacy, Language, and Culture in Content Area Classrooms	
EDUC 429	Learning to Teach K-8 Literacy in Schools with Diverse Populations	
EDUC 435	Learning to Teach K-8 Mathematics with Diverse Populations	
EDUC 457	Multiple Subject Clinical Practice Seminar III	
EDUC 521	Literacy Across the Curriculum	
EDUC 528	Advanced Classroom Pedagogy in English Language Arts	
EDUC 535	Advanced Classroom Pedagogy in Mathematics Education	
EDUC 587	Educational Foundations and Current Issues	
Total units		45

¹ Other elective courses may be chosen in consultation with advisor from a program-generated list of acceptable courses in specific disciplines.

MA Educational Leadership and Administration

Program Learning Objectives

1. Development and Implementation of a Shared Vision: Education leaders facilitate the development and implementation of a shared vision of learning and growth of all students.
2. Instructional Leadership: Education leaders shape a collaborative culture of teaching and learning informed by professional standards and focused on student and professional growth.
3. Management and Learning Environment: Education leaders manage the organization to cultivate a safe and productive learning and working environment.
4. Family and Community Engagement: Education leaders collaborate with families and other stakeholders to address diverse student and community interests and mobilize community resources.
5. Ethics and Integrity: Education leaders make decisions, model, and behave in ways that demonstrate professionalism, ethics, integrity, justice, and equity and hold staff to the same standard.
6. External Context and Policy: Education leaders influence political, social, economic, legal and cultural contexts affecting education to improve education policies and practices.

EDUC 510	Education Finance and Resource Allocation	4
EDUC 511	Educational Law and Governance	4
EDUC 512	Education Organization and Management	4
EDUC 513	Education Planning and Decision Making	4
EDUC 515	Educational Program Management and Evaluation	4
EDUC 516	Educational Personnel Supervision and Evaluation	4
EDUC 517	Managing Action Research Communities	2

EDUC 519	Professional e-Portfolios for Educational Leaders	1
EDUC 542	Administration of Special Programs and Services	4
EDUC 586	Introduction to Inquiry in Education	4
EDUC 587	Educational Foundations and Current Issues	4
EDUC 588	Education, Culture, and Learning	4
EDUC 589	Educational Research Methods	4
EDUC 590	Research Application in Education	4
Total units		51

MS Higher Education Counseling and Student Affairs

Program Learning Objectives

1. Explain and evaluate foundational and emerging literature and theories.
2. Demonstrate cognitive complexity, embrace ambiguity, and apply problem solving skills.
3. Effectively integrate and apply appropriate theories, methods, and principles in professional practice.
4. Effectively engage in cross-disciplinary, campus, and community partnerships to effect change.
5. Continuously develop professional skills through ongoing assessment and reflection.
6. Demonstrate ethics, integrity, legality, and leadership.

EDUC 555	Introduction to the Counseling Profession	4
EDUC 556	Multicultural Counseling	4
EDUC 557	Career Counseling	4
EDUC 560	Counseling Theories	4
EDUC 561	Group Counseling	4
EDUC 562	Student Development - Higher Education	4
EDUC 564	Legal and Ethical Issues in Counseling	4
EDUC 565	Counseling Measurement and Assessment	4
EDUC 566	Leadership and Consultation in Counseling	4
EDUC 568	Individual Counseling Techniques	4
EDUC 573	Field Experience in Higher Education Counseling and Student Affairs	12
EDUC 586	Introduction to Inquiry in Education	4
EDUC 587	Educational Foundations and Current Issues	4
EDUC 588	Education, Culture, and Learning	4
EDUC 589	Educational Research Methods	4
EDUC 590	Research Application in Education	4
Total units		72

MS Special Education

Program Learning Objectives

1. Apply understandings of Learner Development, Learning Differences, and Knowledge of Students.
2. Create and maintain classroom routines and environments that promote learning, inclusivity, respect, and health/safety.
3. Demonstrate and apply curricular content knowledge to design and organize effective learning experiences.
4. Select and implement scientifically validated instructional approaches to meet individual learning needs.
5. Collect and analyze assessment data from multiple measures to make data-based decisions about student learning needs, service eligibility, and instructional modifications.
6. Demonstrate professionalism, ethics, legality, collaboration, and continuous growth and reflection.
7. Engage in educational research and inquiry to remain informed of best practices, current research, legislation and debate.

EDUC 532	Advanced Field Experiences in Education	2
EDUC 546	Reading and Language Arts Instruction in Special Education	5
EDUC 550	Assessment Strategies for Special Education	5
EDUC 552	Support and Transition Strategies in Special Education	5
EDUC 554	Behavior Disorders and Positive Behavior Support Strategies	5
EDUC 586	Introduction to Inquiry in Education	4
EDUC 589	Educational Research Methods	4
SPED 545	Mathematics Methods for Students with Disabilities	4
SPED 547	Science and Social Studies Methods for Students with Disabilities	4
SPED 587	Instructional Methods for Learners with Autism	4
SPED 588	Developing Compliant Individualized Education Plans	4
Total units		46

Department Chair: Andrew Schaffner

ACADEMIC PROGRAMS

Program name	Program type
Actuarial Preparation	Minor
Cross Disciplinary Studies Minor in Bioinformatics	Minor
Cross Disciplinary Studies Minor in Data Science	Minor
Statistics	BS, Minor

The Statistics Department offers a variety of introductory courses to students majoring in diverse disciplines across the University, in addition to providing a vibrant undergraduate degree program in Statistics for students who want to pursue careers in industry or graduate study in the discipline. The department also offers a minor in Statistics and contributes to a minor program in Actuarial Preparation and two cross-disciplinary studies minor programs: Data Science and Bioinformatics.

Data abound in everyday life, in most academic disciplines, and in many industries. Professionals in many fields need to design studies, collect data, analyze results, and draw sound conclusions. In addition, professional statisticians must apply mathematical underpinnings of the discipline to new problems, use computing skills to organize and manipulate data, and communicate effectively with clients as well as with peers.

Employment prospects for professionals with skills in statistics and data science are very bright. Recent graduates of Cal Poly's program in statistics are working for companies in fields as varied as banking, social media, retail, entertainment, insurance, education, and pharmaceutical development.

Undergraduate Programs BS Statistics

The statistics degree program requires students to develop a strong foundation in mathematics and computer science, as well as experience with a field of application. Coursework in the statistics program can be classified into four areas. Some courses provide mathematical background in probability and theoretical statistics. Others focus on computational thinking and coding skills with software packages. Most courses teach particular statistical methods for various types of data analysis such as regression, experimental design, categorical data analysis, time series techniques, multivariate methods, and survival analysis. Finally, some course specifically develop students' skills with oral and written communication and consulting with clients. Throughout the program students encounter the entire process of conducting statistical investigations, from asking questions and designing studies through drawing conclusions and communicating results. Statistics students repeatedly process and analyze real data from genuine studies and also acquire extensive experience coding, using statistical software, and writing technical reports of their analyses and findings for varied audiences.

Actuarial Preparation Minor

For information regarding the Actuarial Preparation Minor, please see College of Science and Mathematics (p. 360) section.

Cross Disciplinary Studies Minor in Bioinformatics

For information regarding the Cross Disciplinary Studies Minor in Bioinformatics, please see the Biological Sciences (p. 364) section of the catalog.

Cross Disciplinary Studies Minor in Data Science

Through an inter-college collaboration, the Computer Science and Statistics departments offer a cross-disciplinary minor in Data Science – a rapidly evolving discipline that uses elements of statistics and computer science to gather, organize, summarize, and communicate information from a variety of data sources and data types. Job opportunities for data scientists are growing as the availability of data becomes ever abundant via the internet, consumer transactions, sensor arrays, medical records, embedded biometrics, bioinformatics, etc.

The CDSM provides an opportunity for both statistics and computer science students to complement their major training with foundational skills for data science. Statistics majors will acquire essential programming, database, distributed computing, and data mining skills from the Computer Science Department while computer science majors will acquire essential probability, regression modelling, statistical programming, and multivariate analysis skills from the Statistics Department.

Statistics Minor

The statistics minor program allows students from across the University to acquire substantial statistical skills that can be applied in their own disciplines. Please consult the Statistics Department website or the Statistics Department Minor Advisor for admissions requirements for the minor.

BS Statistics

Program Learning Objectives

1. Have good working knowledge of the most commonly used statistical methods, including statistical modeling and omnipresent role of variability, efficient design of studies and construction of effective sampling plans, exploratory data analysis, and formal inference process.
2. Have background in probability, statistical theory, and mathematics, including especially calculus, linear algebra and symbolic and abstract thinking.
3. Be able to synthesize and apply knowledge of common inferential methods, understanding the limitations of procedures and appropriate conclusions.
4. Communicate effectively (written and oral) with skills in collaboration (within and between disciplines) and teamwork, and in organizing and managing projects.
5. Have a good mastery of several standard statistical software packages and facility with data management strategies.

6. Have a focused concentration in an area of application outside the discipline of statistics.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 30) section of this catalog, including:

- 60 units of upper-division courses
- Graduation Writing Requirement (GWR)
- 2.0 GPA
- U.S. Cultural Pluralism (USCP)

Note: No course with a STAT prefix may be selected as credit/no credit.

GENERAL EDUCATION (GE)

(See GE program requirements below.) 64

FREE ELECTIVES

Free Electives	8
----------------	---

Total units 180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² Consultation with faculty advisor is required of students, to select and obtain approval for these courses. Students are requested to consult their advisors before the start of their junior year.

General Education (GE) Requirements

- 72 units required, 8 of which are specified in Major and/or Support.
- If any of the remaining 64 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science	4
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	

B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B 4		
Area C Arts and Humanities		
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2 4		
Upper-Division C 4		
Area D Social Sciences - Select courses in Area D from at least two different prefixes		
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D 4		
Area E Lifelong Learning and Self-Development		
Lower-Division E 4		
Area F Ethnic Studies		
F	Ethnic Studies	4
GE Electives in Areas B, C, and D		
Select courses from two different areas; may be lower-division or upper-division courses.		
GE Electives (4 units in Major plus 4 units in GE) ¹ 4		
Total units 64		

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Interdisciplinary Degree Programs

A degree that is jointly offered by different colleges is known as an interdisciplinary program. Cal Poly offers the following interdisciplinary degree program.

- BS Liberal Arts and Engineering Studies
- Concurrent CE-MS/MCRP with Specialization in Transportation Planning

Liberal Arts and Engineering Studies

Academic Programs

Program name	Program type
Liberal Arts & Engineering Studies	BS

The Liberal Arts and Engineering Studies (LAES) degree is jointly offered by the colleges of Liberal Arts and Engineering. This program prepares students for a wide range of innovative careers in emerging professional fields that combine skills and interests in the arts, technology and culture, and also prepares them for further study in graduate school. This program, which only accepts students as internal transfers after the first year, is open to all students at Cal Poly. This program is not intended to be an ABET-accredited engineering program.

Undergraduate Program BS Liberal Arts and Engineering Studies

The curriculum allows Liberal Arts and Engineering Studies students, in collaboration with students from all other Cal Poly majors, to participate in development teams working on national and international technology and cultural projects. To further prepare students for work with diverse teams that include participants from across the globe, the program strongly encourages students to spend three to six months studying and/or working abroad.

The BS in Liberal Arts and Engineering Studies can lead to careers in fields such as:

- Animatronics
- Audio Engineering
- Digital Media Production and Management
- Digital Publishing
- Environmental Technology Education
- Film and Television Production
- Game Design
- Government Policy Making / Analysis
- International Technology Management
- STEM Education in School and Out-of-School Contexts

- Sustainable Community Development
- Technical Communications
- Technology Services and Management
- Web Design

Program Learning Objectives

Graduates of the Liberal Arts and Engineering Studies program receive a solid foundation in engineering and scientific principles, as well as a cultural appreciation that supports them in careers requiring significant levels of technical and cultural fluency. To support these goals, the primary learning objectives are to:

1. Think critically and creatively in the process of solving technological problems considering philosophical, aesthetic and expressive concerns.
2. Communicate effectively through a variety of media in diverse, multicultural perspectives and facilitate communication between technical and non-technical collaborators.
3. Use mathematics, science, and engineering principles to produce solutions to problems within the student's Liberal Arts and Engineering concentrations.
4. Function effectively as a member of interdisciplinary or international teams, formulating sustainable solutions to problems at the intersection of technology and society.
5. Demonstrate ethical and professional responsibilities associated with the creation, use and integration of technology.
6. Serve as informed and responsible citizens in a global culture and remain involved with learning and helping society improve.

Degree Requirements and Curriculum

In addition to the program requirements listed on this page, students must also satisfy requirements outlined in more detail in the Minimum Requirements for Graduation (p. 28) section of this catalog, including:

- 60 units of upper-division courses
- 2.0 GPA
- Graduation Writing Requirement (GWR)
- U.S. Cultural Pluralism (USCP)

Note: No Major, Support or Concentration courses may be selected as credit/no credit.

GENERAL EDUCATION (GE)		
(See GE program requirements below.)		56
FREE ELECTIVES		
Free Electives ²		0-2
Total units		180

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

² If a General Education (GE) course is used to satisfy a Major or Support requirement, additional units of Free Electives may be required to complete the total units required for the degree.

Concentrations

LAES students must select *one* concentration from Engineering and *one* from Liberal Arts. Students may choose to follow an individualized course of study in Engineering or/and in the Liberal Arts, constructed in consultation with LAES advisors.

Engineering (select one)

- Computer Graphics (p. 428)
- Electrical Engineering (Power) (p. 428)
- Industrial/Manufacturing Engineering - System Design (p. 428)
- Usability Studies (p. 428)

Individualized Course of Study in Engineering

Consists of 34 units of an advisor approved integrated course of study from courses offered in the College of Engineering designed to meet the LAES learning objectives, with at least 12 of the units at the upper-division level. Courses must be drawn from at least two engineering disciplines.

Liberal Arts (select one)

- Interactive Communication - Cinematic Focus (p. 428)
- Interactive Communication - Theatrical Focus (p. 429)
- Publishing Technology (p. 429)
- Technical Communication (p. 429)

Individualized Course of Study in the Liberal Arts

Consists of 24 units of an advisor approved integrated course of study from courses offered in the College of Liberal Arts designed to meet

the LAES learning objectives, with at least 12 of the units at the upper-division level.

Students may complete a minor program selected from pre-approved minors. These minors include any minor offered by the College of Liberal Arts, as well as interdisciplinary, cross-college minors in which students complete a minimum of half of the units in the College of Liberal Arts (e.g., Indigenous Studies in Natural Resources & the Environment; Sustainable Environments).

General Education (GE) Requirements

- 72 units required, 16 of which are specified in Major and/or Support.
- If any of the remaining 56 units is used to satisfy a Major or Support requirement, additional units of Free Electives may be needed to complete the total units required for the degree.
- See the complete GE course listing (p. 30).
- A grade of C- or better is required in one course in each of the following GE Areas: A1 (Oral Communication), A2 (Written Communication), A3 (Critical Thinking), and B4 (Mathematics/Quantitative Reasoning).

Area A	English Language Communication and Critical Thinking	
A1	Oral Communication	4
A2	Written Communication	4
A3	Critical Thinking	4
Area B	Scientific Inquiry and Quantitative Reasoning	
B1	Physical Science (4 units in Major) ¹	0
B2	Life Science	4
B3	One lab taken with either a B1 or B2 course	
B4	Mathematics/Quantitative Reasoning (4 units in Major) ¹	0
Upper-Division B (4 units in Major) ¹		0
Area C	Arts and Humanities	
Lower-division courses in Area C must come from three different subject prefixes.		
C1	Arts: Arts, Cinema, Dance, Music, Theater	4
C2	Humanities: Literature, Philosophy, Languages other than English	4
Lower-Division C Elective - Select a course from either C1 or C2		4
Upper-Division C		4
Area D	Social Sciences - Select courses in Area D from at least two different prefixes	
D1	American Institutions (Title 5, Section 40404 Requirement)	4
D2	Lower-Division D	4
Upper-Division D		4
Area E	Lifelong Learning and Self-Development	
Lower-Division E		4
Area F	Ethnic Studies	
F	Ethnic Studies	4

GE Electives in Areas B, C, and D

Select courses from two different areas; may be lower-division or upper-division courses.

GE Electives (4 units in Major plus 4 units in GE) ¹ 4

Total units 56

¹ Required in Major or Support; also satisfies General Education (GE) requirement.

Concurrent CE-MS/MCRP with Specialization in Transportation Planning

City and Regional Planning
 Architecture & Environmental Design Bldg. (05), Room 313
 Phone: 805.756.1315
<https://planning.calpoly.edu>

Civil & Environmental Engineering
 Engineering Bldg. (13), Room 266
 Phone: 805.756.2947
<https://ceenve.calpoly.edu>

Program name	Program type
Specialization in Transportation Planning	Concurrent CE-MS/MCRP

The Concurrent CE-MS/MCRP with Specialization in Transportation Planning is a joint interdisciplinary program between the Civil and Environmental Engineering Department in the College of Engineering and the City and Regional Planning Department in the College of Architecture and Environmental Design. Participation in the program requires enrollment in both Colleges. Participants successfully completing the program are awarded both the Master of Science in Civil and Environmental Engineering (CE-MS) and the Master of City and Regional Planning (MCRP) with a Specialization in Transportation Planning.

Program Learning Objectives

After successfully completing the Concurrent CE-MS/MCRP with Specialization in Transportation Planning program, students will be able to:

Foundational skills

1. Demonstrate an understanding of the historical, theoretical, legal, and methodological foundations of planning and engineering
2. Effectively represent and communicate technical and policy information

Methodology

1. Gather, organize, analyze and present planning and engineering information
2. Transform data and information into knowledge for action
3. Critically assess and apply scientific research

Integrative skills

1. Integrate and apply the necessary skills and knowledge to address complex planning and engineering problems
2. Develop and manage a design and planning process
3. Work with a variety of audiences: multiple publics, officials, and decision-makers

Professional skills

1. Reflect upon, critique, and evolve the practice of planning and engineering
2. Address issues of sustainability, diversity, and environmental and social justice
3. Practice in accordance with the AICP Code of Ethics and the NSPE Code of Ethics for Engineers
4. Apply best practices and develop novel approaches to solving transportation planning and engineering problems

Degree Requirements and Curriculum

Total for Concurrent Degree: 90 units minimum

Total CRP units: 52
Total CE units: 30
 (not including thesis/project)

Double Counting of Units

This concurrent degree will allow for 27 units to be double-counted for students earning both CE-MS + MCRP (90 units total for both degrees) as a concurrent program.

Required Courses

First Year Core		
CRP 501	Foundations of Cities and Planning	4
CRP 504	Sustainable Communities	4
CRP 510	Planning Theory	4
CRP 513	Planning Research and Analysis	4
CRP 516	Demographic and Analytic Tools	4
CRP 525	Plan Implementation	4
CRP 553	Project Planning and Design Studio	4
Second Year		
CRP 518	Policy Development	4
CRP 530	Planning Agency Management	4
CRP 535	Land Use and Planning Law	4
CRP 552	Community and Regional Planning Studio I	4
CRP 554	Community and Regional Planning Studio II	4
Select one of the following options:		4-9

CRP 556	Community and Regional Planning Studio III (4)	
CRP 596	Professional Project (2, 2, 2)	
CRP 599	Thesis (2, 2, 2)	
CE/ENVE 599	Design Project (Thesis) (6-9)	
Specialization: Transportation Planning & Engineering		
CE 523 or CE 421	Transportation Systems Planning Traffic Engineering	4
CE 527	Sustainable Mobility	4
CRP 435	Transportation Theory	4
Concurrent CE-MS		
CE 422	Highway Geometrics and Design	4
CE 526	Transportation Safety	4
CE 591	Graduate Seminar I	1
CE 592	Graduate Seminar II	1
Select from the following (no double counting):		12-16
CE 423	Intelligent Transportation Systems	
CE 424	Public Transportation	
CE 429	Highway Pavement Designs	
CE 525	Airport Planning and Design	
CE 528	Transportation Economics and Analysis	
CE 529	Modeling and Simulation in Transportation	
CRP 470	Selected Advanced Topics	
ENVE 411	Air Pollution Control	
Total units		90

GRADUATE EDUCATION

Graduate Education
Science Bldg. (52), Room D27A
Phone: 805.756.2328; Email: grad@calpoly.edu

Prospective Graduate Students

Cal Poly offers over 35 Master's degree programs covering all of our six colleges:

- College of Agriculture, Food and Environmental Sciences (CAFES)
- College of Architecture and Environmental Design (CAED)
- Orfalea College of Business (OCOB)
- College of Engineering (CENG)
- College of Liberal Arts (CLA)
- College of Science and Mathematics (CSM) and School of Education (SOE)

A complete listing of our graduate programs can be found on the Cal Poly Graduate Education (<https://grad.calpoly.edu/>) site.

Application for Admission

An application for admission to a Master's program is available at Cal State Apply (<https://www2.calstate.edu/apply/>). The Cal State Apply system allows students to browse through general information about CSU's twenty-three campuses, view multimedia campus presentations, send and receive electronic responses to specific questions, and apply for admission and financial aid.

All graduate and post-baccalaureate applicants (e.g., Master's degree applicants, those seeking educational credentials, or graduate certificates) must file a complete graduate application as described in the graduate and post-baccalaureate admission materials at Cal Poly Admissions (<https://www.calpoly.edu/admissions/>). Applicants who completed undergraduate degree requirements on a CSU campus and graduated the preceding term are also required to complete and submit an application and pay the \$70 nonrefundable application fee.

The CSU advises prospective students to supply complete and accurate information on the application for admission, residence questionnaire, and financial aid forms. Further, applicants must submit Official Transcripts from their bachelor-granting institution directly from the issuing institution to the Cal Poly Admissions Office. Failure to complete, accurate, and authentic application documents may result in denial of admission, cancellation of academic credit, suspension, or expulsion (Section 41301, Article 1.1, Title 5, *California Code of Regulations*).

Applicants for graduate programs should refer to the Cal Poly Admissions Office (<https://www.calpoly.edu/admissions/graduate-student/>) website for program specific deadlines. Some Cal Poly graduate programs require applicants to complete the GRE or GMAT; please check with the Cal Poly Admissions website for requirements for each program at Admissions Dates and Deadlines (<https://www.calpoly.edu/admissions/graduate-student/dates-and-deadlines/>).

Applicants who earned a Cal Poly bachelor's degree may be granted an exemption from the GRE requirement; however, specific programs may waive this exemption and still require the GRE for all applicants. Please keep in mind that any applicant (external or Cal Poly undergraduate) with an undergraduate GPA of 2.5 or lower will be required to take the GRE and

demonstrate results that are at the 50-percentile or higher (Quantitative, Verbal and Writing) to be considered for admission.

Graduate and Post-Baccalaureate Admission Requirements

Graduate and post-baccalaureate applicants may apply for a degree objective, a credential or graduate certificate objective. Depending on the objective, the CSU considers an application for admission as follows:

- **General Requirements** – The minimum requirements for admission to graduate and post-baccalaureate studies at a California State University campus are in accordance with university regulations as well as Title 5, chapter 1, sub-chapter 3 of the *California Code of Regulations*.
- Specifically, a student shall at the time of enrollment:
 1. have completed a four-year college course of study and hold an acceptable baccalaureate degree from an institution accredited by a regional accrediting association, or shall have completed equivalent academic preparation as determined by appropriate campus authorities;
 2. be in good standing at the last college or university attended;
 3. have attained a grade point average of at least 2.5 (A = 4.0) in an acceptable earned baccalaureate degree; any applicant with an undergraduate GPA of 2.5 or lower will be required to take the GRE and demonstrate results that are at the 50th percentile or higher to be considered for admission; and
 4. satisfactorily meet the professional, personal, scholastic, and other standards for graduate study, including qualifying examinations, as appropriate campus authorities may prescribe. In unusual circumstances, a campus may make exceptions to these criteria.
- A student who meets the minimum requirements for graduate and post-baccalaureate studies may be considered for admission in one of the four following categories:
 - **Graduate Classified** – To pursue a graduate degree, applicants are required to fulfill all of the professional, personal, scholastic, and other standards, including qualifying examinations, prescribed by the campus.
 - **Graduate Conditionally Classified** – Applicants may be admitted to a graduate degree program in this category if, in the opinion of appropriate campus authority, deficiencies can be remedied by additional preparation.
 - **Post-Baccalaureate Classified** – e.g., *admission to an education credential program* – Persons wishing to enroll in a credential or certificate program, will be required to satisfy additional professional, personal, scholastic, and other standards, including qualifying examinations, prescribed by the campus.
 - **Post-Baccalaureate Unclassified** – To enroll in undergraduate courses as preparation for advanced degree programs or to enroll in graduate courses for professional or personal growth, applicants must be admitted as post-baccalaureate unclassified students. By meeting the minimum requirements, applicants are eligible for admission as post-baccalaureate unclassified students. Admission in this status does not constitute admission to, or assurance of consideration for admission to, any graduate degree or credential program. (Most CSU campuses do not offer admission to unclassified post-baccalaureate students).

Residency Status Determination

The campus Admissions Office determines the residency status of all new and returning students for nonresident tuition purposes. Responses to the application for admission and, if necessary, other evidence furnished by the student are used in making this determination. A student who fails to submit adequate information to establish a right to classification as a California resident is classified as a nonresident. For detailed explanation please refer to Cal Poly Admissions Residency for Tuition Purposes (<https://www.calpoly.edu/admissions/residency-for-tuition-purposes/>).

International (Foreign) Student Admission Requirements

The CSU must assess the academic preparation of foreign students. For this purpose, "foreign students" include those who hold U.S. temporary visas as students, exchange visitors, or in other non-immigrant classifications. The CSU uses separate requirements and application filing dates in the admission of "foreign students". All graduate and post-baccalaureate applicants, regardless of citizenship, whose native language is not English and whose preparatory education was principally in a language other than English must demonstrate competence in English. Those who do not possess a bachelor's degree from a post-secondary institution where English is the principal language of instruction must take either the Test of English as a Foreign Language (TOEFL), the International English Language Testing system (IELTS) exam, or another exam as indicated and approved by Cal Poly Admissions.

The Office of Admissions completes an initial portfolio review that includes verification of an equivalent B.A./B.S. degree, a determination of the appropriate level of study and an evaluation of all work completed. The Office of Admissions notifies all applicants of the documents needed to complete their portfolios. Graduate coordinators may require additional documentation to assist them in determining an applicant's suitability for the program of study.

The process for filing an international application can be found at Cal Poly Admissions International Student (<https://www.calpoly.edu/admissions/international-student/>).

Master's Degrees

In graduate courses, students cope with more complex ideas, problems, techniques and materials than in undergraduate courses. Graduate study requires searching and exhaustive analysis, identification and investigation of theories and principles; application of theory to new ideas, problems, and materials; extensive use of bibliographic and other resource materials, with emphasis on primary sources for data; and demonstration of competence in scholarly presentation of the results of independent study.

Regulations governing fees, grading, and financial aid are located elsewhere in the catalog. This section of the catalog reviews university policy and minimum requirements governing graduate studies. It is not, however, all inclusive.

Within these general requirements there are specific departmental requirements for each degree. These are found in the descriptions of master's degree programs within each school's description. It is important that graduate students, in consultation with their advisors, familiarize themselves with these requirements. Failure to do so may result in a substantial delay in progress towards the degree and graduation. It is the responsibility of the

student to ascertain and comply with all university, college and departmental procedures and requirements.

- All available master's degree programs, graduate certificates and professional certificates can be found on the Cal Poly Graduate Education (<https://grad.calpoly.edu/>) website.

¹ Blended Bachelor's + Master's program is available. See individual program for information.

Graduate Certificate Programs

An academic graduate certificate program provides an opportunity for a student to satisfactorily complete a sequence of advanced academic courses that provide instruction in a stand-alone, coherent body of specialized knowledge. It is designed to meet requirements for professional competence, expand access to specialized knowledge, or meet occupational needs for advanced interdisciplinary work.

Specific Requirements:

- Admission to a graduate certificate program requires a Bachelor's degree from an accredited institution with a major in a relevant field of study. The applicant must have attained a minimum GPA of at least 2.5 in the last degree completed. Work experience may substitute (at the discretion of the program) for the relevancy of the Bachelor's degree and for the minimum GPA requirements.
- Courses taken to satisfy the requirements of a graduate certificate program may be applied to the requirements of a graduate degree program; however, students must apply separately for admission into a graduate degree program. No course-work for the certificate may be below the 400 level. One 4-unit course in transfer credit, from a regionally accredited institution, may be allowed as determined by the graduate certificate program advisor.
- A minimum GPA of 3.0 is required for successful completion of a graduate certificate program. Students may not elect to take courses required for the certificate as credit/no credit. A graduate certificate program must be completed within three years.
- Students who are enrolled only in a graduate certificate program are exempt from the continuous enrollment requirement for graduate students.

Graduate Certificate Programs:

- Fire Protection Engineering Applications (p. 197)
- Fire Protection Engineering Science (p. 197)

Academic Requirements Graduate Student Continuous Enrollment Policy

Effective Fall Quarter 2009, graduate students are required to maintain continuous enrollment from the time of first enrollment in a graduate program until completion of the degree (AS-692-09). Continuous enrollment is defined as being enrolled during Fall, Winter, and Spring quarters each year. All graduate students must be enrolled during the quarter in which they graduate. Therefore, a student graduating Summer quarter must be enrolled during the summer. Students can maintain continuous enrollment by being enrolled as regular students; obtaining approval for an education or medical leave prior to the quarter when such a leave would begin; or registering in a special course designated for this purpose during quarters in which they are not regularly enrolled. The special course, GS 597, is listed in the University catalog and is taken through Cal Poly Extended Education. GS 597 is a one-unit course, offered credit/no credit; credits in GS 597 do not count toward meeting degree requirements. Students who fail to fulfill this continuous enrollment

requirement will not be permitted to graduate—even if all degree requirements have been completed—until payment has been made for all quarters of non-enrollment. This requirement is not retroactive to terms prior to Fall 2009.

For further information and a registration form, visit the Extended Education (<https://extended.calpoly.edu/>) website.

Degree Requirements

The following conditions and academic requirements are common to all Master's degrees:

- All students must attempt to satisfy the **Graduation Writing Requirement** (EO 665.11.0) during the first quarter of enrollment. Master's students matriculated prior to Fall 2023 must successfully pass this requirement before their degree can be awarded. Master's students who matriculate in Fall 2023 or later are not required to satisfy the GWR requirement before their master's degree can be awarded. Blended students must satisfy the GWR requirement as part of their undergraduate degree requirements.
- A student must file an approved Working Formal Study Plan with a minimum of **45 quarter units** (Title 5, Article 7, 40510 b.2.) before the twelfth unit of graduate study is completed.
- A student must maintain an overall **grade point average of 3.0** (grade of B on a scale where A = 4.0), or better, based on all courses listed in the Formal Study Plan. A course in which a 'CR' is assigned shall not be used in computing the grade point average. (Title 5, Article 7, 40510 b.4.)
 - Only individual graded courses with C- or higher can be used on the Formal Study Plan. See the grade section for more details.
- A student must maintain **satisfactory scholarship and professional standards**. Only those graduate students who continue to demonstrate a satisfactory level of scholastic competence and fitness, as determined by the appropriate university authorities, shall be eligible to continue in such curricula. Students whose performance is judged to be unsatisfactory by the authorities of the University may be required to withdraw from all graduate degree curricula offered by the University.
- A student must successfully complete a **culminating experience** (thesis, project, and/or comprehensive examination). (Title 5, Article 7, 40510 b.3.)
- A student must complete all of the graduate degree requirements, including those to satisfy conditional admittance, within **seven years** (Title 5, Article 7, 40510 b.2.) of being matriculated, even conditionally, into *that* Master's degree-seeking program.
- A student may elect to meet the **catalog** graduation requirements in effect at the time the student was admitted to graduate standing (conditional or classified) provided that continuous enrollment was maintained (AS-692-09), or at the time of graduation. The student may be required to make substitutions for discontinued courses by submitting a new Formal Study Plan.
- Graduate level courses (**500-level**) should make up no fewer than **60%** of the units required for the degree (Academic Senate Resolution AS-825-17 (https://content-calpoly-edu.s3.amazonaws.com/academicssenate/1/images/AS-825-17_0.pdf); Students matriculated prior to Fall 2019 are required to have 50% of their courses required for the degree at the 500-level (Title 5, Article 7, 40510 b.2.B.).
- The majority of the Formal Study Plan coursework should be taken while matriculated as a Cal Poly graduate student (Title 5, Article 7,

40510.A). Cal Poly requires that at least 33 units of a 45-unit program must be completed while in residence at Cal Poly; a limit of 12 units out of residence can be taken. In programs with more than 45 units an equivalent proportion (33/45 or 73%) of units must be taken in residence at Cal Poly.

- In Residence
 - Cal Poly undergraduate courses
 - Cal Poly special session ('S') courses (EO 1099 9.1 and 10.2)¹
 - Only up to 12 units of Cal Poly Open University ('P') courses¹
- Out of Residence (max 12/45 units or 27%)
 - Extended Education ('E') courses (EO 1099 9.2)¹
 - Credit by exam units
 - Transfer units²
- The majority of Formal Study Plan coursework should be taken *after* having been matriculated at Cal Poly as a Graduate Classified or Graduate Conditionally Classified (both seeking a master's degree), or Post-baccalaureate Classified (credential or academic graduate certificate) student. Therefore, Cal Poly limits units taken outside of the Post-baccalaureate or Graduate Classified standing; only **12 unclassified** AND only **12 Cal Poly undergraduate** units can be used on the Formal Study Plan.
 - Post-baccalaureate or Graduate Classified
 - Courses taken (here or in transfer²) *after* having been matriculated into a Cal Poly Master's, credential, or academic graduate certificate program
 - Not Post-bacc/Grad Classified – (max 24 units total)
 - Unclassified (max 12 units)
 - All transfer² and Cal Poly post-baccalaureate enrollment (including professional certificate enrollment) *before* being matriculated into a Cal Poly's Master's, credential, or academic graduate certificate program
 - Cal Poly Undergraduate enrollment (max 12 units)
 - Coursework taken as a Cal Poly undergraduate student, but not needed to meet any baccalaureate degree requirement
- No more than 24 quarter units of approved Cal Poly **Extended Education** [a combination of Special Session (S), Open University (P), or Special Session (E) courses] courses shall be accepted for the Master's degree. (EO 1099 10.1.2)
- No more than nine quarter units shall be in **student teaching**.
- No more than nine quarter units shall be allowed for a **thesis or project** (Title 5, Article 7, b.2.C.).
 - Enrollment in these units must be as a Master's matriculated student, and therefore a student cannot be enrolled through Extended Education.
- Note: Some programs/departments set independent study limits on courses, found in the course description. Typically there is a 12-unit combined maximum of independent study units allowed.

¹ No more than 24 quarter units of approved Cal Poly Extended Education [a combination of Summer Session (S), Open University (P), or Special Session (E) courses] courses shall be accepted for the Master's degree. (EO 1099 10.1.2)

² Transfer units must come from a regionally accredited institution.

meet conditional admittance, is seven years (Title 5, Article 7, 40510 b.2.) from the time the student is matriculated, even conditionally, into that Master's degree-seeking program.

The University, at its option, and in exceptional cases, may extend the time frame. Students who wish to extend the seven-year limit must submit a Graduate Petition for Special Consideration to Graduate Education. The petition must include:

- An explanation of the reasons why the extension is necessary.
- Evidence to support the student's currency in the field of study.
- A copy of the student's Final Formal Study Plan that indicates any additional coursework that needs to be completed as part of this petition and which of those courses will be over seven years old at the proposed time of completion.
 - If the extension is necessary for completion of the culminating experience, list the specific experience being used (thesis, project, or comprehensive exam).
- Indicate the current progress made on the culminating experience and when final degree requirement completion is expected.
- The seven-year rule cannot be extended indefinitely; the student must specify in the petition what quarter and year they will be completing all degree requirements, thus indicating precisely how far the seven-year rule will be extended.

Graduation Writing Requirement (GWR)

The Graduation Writing Requirement (GWR) is a CSU Board of Trustees mandate designed to ensure that students demonstrate effective written communication skills at the upper division before they enter the professional workforce. All undergraduate students who are seeking a Cal Poly degree must fulfill the GWR before a diploma can be awarded.

Undergraduate students with 90 or more completed units should attempt to fulfill the requirement before their senior year. Upper-division transfer students who completed the requirement at another CSU campus prior to enrollment at Cal Poly may transfer completion of the requirement.

Students should review the requirements of their major program of study to determine which of the following options is the appropriate pathway for GWR completion:

1. Pass a GWR-certified course (p.) with a grade of C or better (C- or below does not qualify). The course may be taken on a credit/no credit basis, but the student must earn a minimum grade of C in order to satisfy the GWR component of the class. Available sections of GWR-certified courses are searchable in the class schedule. For a full list of courses, please see the GWR Courses website (p.) in the Courses A-Z section of the Cal Poly Catalog.
2. Pass the GWR Portfolio (<https://writingandlearning.calpoly.edu/gwrportfolio/>) via UNIV 401.

Further information on pathways to meeting this degree requirement may be obtained from the Office of Writing and Learning Initiatives, Kennedy Library (35) Room 202A (805-756-2067), or on the GWR webpage, <https://writingandlearning.calpoly.edu/gwr> (<https://writingandlearning.calpoly.edu/gwr/>).

Time Limit for Degree

The time allowed to successfully complete all Master's requirements, including the Master's culminating experience and any requirements to

General Policies Advisement

Master's students should make an appointment with their graduate advisor during their first quarter of being enrolled in that program to develop a Working Formal Study Plan which serves as an agreement between the student and the university on the specific coursework to be completed in order to fulfill the requirements for the Master's degree (minimum 45 units). A Working Formal Study Plan and Advancement to Candidacy form must be submitted to the Graduate Education Office for review by the end of the 1st quarter of starting that program at Cal Poly. It is understood that changes may occur to this plan as students make progress with their studies; changes in the Working Formal Study Plan and Advancement to Candidacy form do not need to be submitted to the Graduate Education Office. However, students must submit a Final Formal Study Plan within the first 3 weeks of the quarter in which they expect to graduate. This Final Formal Study Plan must accurately reflect the courses that have been completed to satisfy their program requirements. The Working Formal Study Plan and Advancement to Candidacy and Final Formal Study Plan forms are routed for signatures and submitted electronically via AdobeSign at the Graduate Forms (<https://grad.calpoly.edu/checklist-forms/forms.html>) webpage.

Each Master's degree program has specific prerequisites, both in courses and in grade-point average. Deficiencies in prerequisites must be defined by the graduate coordinator as part of conditional acceptance offer, and the graduate coordinator is responsible for verifying prerequisite compliance prior to the submission of the Working Formal Study Plan and Advancement to Candidacy form. Courses taken for this purpose normally do not count toward fulfillment of the unit requirement for the degree.

Departmental advisors and graduate coordinators share the responsibility for advising Master's degree students throughout their work toward a degree. Students are urged to maintain a personal file of transcripts and other records of all undergraduate and graduate work undertaken, and to make this file available whenever they seek advising.

Post-Baccalaureate Change of Objective

If students wish to change their post-baccalaureate objective, they must formally file this intention by completing a Post-baccalaureate Change of Objective (PBCO) form, available at Graduate Forms (<https://grad.calpoly.edu/checklist-forms/forms.html>). Students applying to blended Bachelor's/Master's programs need to follow the guidelines under that section. A student must enroll and start courses in the program to which they were admitted before filing a Postbaccalaureate Change of Objective.

Formal Study Plan

The student should make an appointment with their Graduate Program Coordinator during their first quarter of graduate study to develop a Working Formal Study Plan and Advancement to Candidacy form. All forms are routed for signatures and submitted electronically via AdobeSign at the Graduated Forms (<https://grad.calpoly.edu/checklist-forms/forms.html>) website. A Formal Study Plan is an agreement between the student and the college on the specific coursework to be completed in order to fulfill the course requirements for the Master's degree. The student should always consult with their advisor to ensure that only approved courses are selected, since departmental requirements vary, and some courses are excluded. A copy of the Formal

Study Plan must be submitted to Graduate Education for review and final approval.

Courses below the 400-level may not constitute any part of the approved units on the Formal Study Plan (AS-313-89). However, in those programs where specific courses below the 400-level may be essential for a student's success, the student may be conditionally admitted to the program contingent upon completing those courses. Do not list any prerequisite courses on the Formal Study Plan.

Graduate Courses Taken by Undergraduates for Graduate Credit

Cal Poly undergraduates may take courses in the 400 or 500 series for graduate credit while still matriculated as undergraduates. If they subsequently enter a Cal Poly Master's, credential, or academic certificate program, they may have such course credit applied toward that program only if the units were not used for the baccalaureate degree. No more than 12 units of Cal Poly undergraduate work is allowed on either Formal Study Plan.

Cal Poly's Office of the Registrar will validate if Cal Poly undergraduate courses listed on the Formal Study Plan were not needed to meet any undergraduate degree requirement. However, students who want to use undergraduate courses from another institution must provide Cal Poly's Office of the Registrar with an official letter from the other regionally accredited institution indicating that the coursework was not needed to meet any undergraduate degree requirement.

Advancement to Candidacy

Advancement to Candidacy (Title 5, Article 7, 40510a and 41011) recognizes that the student has, so far, sufficiently demonstrated the ability to operate at and sustain a level of scholarly competence that is satisfactory for successful completion of the degree requirements. The student is then cleared for the final stages of the program, which include the thesis, project, and/or comprehensive examination, in addition to any remaining coursework.

As the Advancement to Candidacy form has been combined with the Working Formal Study Plan, it must be submitted to the Graduate Education Office by the end of the first quarter of enrollment. A student's signature on the form signifies understanding of the 3.0 GPA requirement for Formal Study Plan courses and compliance with the Continuous Enrollment Policy. The form will be processed only when:

- An anticipated graduation date has been declared.
- The Graduate Writing Requirement (GWR) has been satisfied.
- The culminating experience has been identified as either a thesis, a project, and/or an exam.

Culminating Experience/Research

The student must successfully complete the culminating experience required by the specific program (thesis, project, and/or comprehensive examination) to be granted a graduate degree (Title 5, Article 7, 40510 b.3.). The quality of work accomplished, including the quality of the writing, is the major consideration in judging the acceptability of the thesis, project, and/or comprehensive examination. Note: The degree award date is based on the submission of the Master's Thesis Approval Form, Master's Project Approval Form, and/or Master's Exam Approval Form to the Graduate Education Office (52-27D). These forms are routed for signatures and submitted electronically via Adobe Sign at the

Graduate Forms (<https://grad.calpoly.edu/checklist-forms/forms.html>) website.

Thesis

"A thesis is the written product of a systematic study of a significant problem. It identifies the problem, states the major assumptions, explains the significance of the undertaking, sets forth the sources for and methods of gathering information, analyzes the data, and offers a conclusion or recommendation. The finished product evidences originality, critical and independent thinking, appropriate organization and format, and thorough documentation. Normally, an oral defense of the thesis is required." (Title 5, Article 7, 40510 b.3.A.)

The following are requirements for a thesis committee: 1) that the graduate student have a thesis advisor who is a permanent full-time faculty member from the student's program; 2) that the thesis advisor and the student recommend, for approval by the graduate coordinator and/or department head, a thesis committee comprising of at least three faculty members; 3) that two of these members, one of which is the committee chair, be from the student's program. Exceptions to the thesis committee composition must be approved by the College Dean.

If a thesis report is required in a Master's degree program, a committee-approved copy must be completed in accordance with University specifications. Guidelines to be followed in preparing a final copy for filing with the University can be obtained from Graduate Education, or online at Cal Poly Graduate Education Master's Thesis (<https://grad.calpoly.edu/masters-thesis/masters-thesis.html>) website.

All Master's theses must go through Graduate Education's Thesis Formatting Review Process wherein an Editor reviews and provides the student with needed corrections. Upon completion of any corrections required by the Editor or thesis committee, the student contacts the Graduate Education Office (grad@calpoly.edu) to submit the electronic thesis report to the DigitalCommons@CalPoly, a digital archive for the University. The thesis formatting review process does not impact a student's degree completion.

Project

"A project is a significant undertaking appropriate to the fine and applied arts or to professional fields. It evidences originality and independent thinking, appropriate form and organization, and a rationale. It is described and summarized in a written report that includes the project's significance, objectives, methodology, and a conclusion or recommendation. An oral defense of the project may be required." (Title 5, Article 7, 40510 b.3.B.)

Projects require an advisor who is a permanent full-time faculty member from the student's program. A project may also include a committee that must be approved by the graduate coordinator and/or department head. Project reports are not submitted to Graduate Education and typically are not uploaded to the DigitalCommons@CalPoly.

Comprehensive Examination

A comprehensive examination is one of the possible culminating experiences for the Master's degree and assesses "the student's ability to integrate knowledge of the area, show critical and independent thinking, and demonstrate mastery of the subject matter. The results of the examination should provide evidence of these abilities and achievement. A record of the examination questions and responses shall be maintained..." (Title 5, Article 7, 40510 b.3.C.).

Research Involving Special Conditions

Research that involves the use of human subjects, vertebrate animals, hazardous materials, or information and materials subject to export-control regulations requires special campus review before the study begins. If your research involves any of these special conditions, check with your Graduate Coordinator and Graduate Education for procedures.

Grades/Repeats

Report In Progress (RP) Grades

The grade of RP is used in connection with courses that extend beyond one academic term. It indicates that work is in progress and has been evaluated and found to be satisfactory to date, but that assignment of a grade must await completion of additional work. Work is to be completed within a time period stipulated by the instructor. The RP symbol shall be replaced with the appropriate final grade within one year for all courses or will convert to an F for graded courses or NC for CR/NC-only courses.

There is an exception for graduate degree thesis or project courses (539/596/598/599) for which the time may be up to seven years, but may not exceed the overall time limit for completion of all Master's degree requirements (AS-647-06). Failure to complete the assigned culminating experience work will result in the RP, only in these courses, being converted to an NC (AS-443-95).

Earned D+ or Lower

If a student earns a D+ or lower, the course can be retaken with the permission of the student's program and both grades will be averaged into the Formal Study Plan. Alternately, if the course is not required, it can be removed from the Formal Study Plan and replaced with a suitable alternative.

Repeating a Course

Students may enroll in a course for credit more than once only if the catalog course description states that the course may be repeated for credit. An exception to this policy allows the repeating of a course in cases where a grade of D or F was received. Unlike for undergraduates at Cal Poly, a graduate student repeating a course cannot qualify for the removal of a lower letter grade from the overall GPA calculation on the student's transcript. See the [Earned D+ or Lower](#) section above for more information.

Credit/No Credit Grading

Courses which are offered only on a credit/no credit basis also satisfy the unit requirement if a credit grade is earned. The equivalent of an A or a B (including a B-) is required to earn credit in such courses (AS-8-76). Graduate students may elect to take courses that are not part of their Formal Study Plan on a credit/no credit basis.

Registration

The schedule and instructions for registration and payment of fees are available through the registration and enrollment tab at the MyCalPoly web portal. Detailed descriptions of courses can be found here (p. 511).

Enrollment/Prerequisites

To enroll in a 500-level graduate course a student must have postbaccalaureate/graduate standing or the permission of the instructor. Please note that prerequisites are not waived for 400-level courses; a graduate student may need to get a permission number from the instructor teaching that course to enroll in a 400-level course.

Credit by Exam for Coursework

See Evaluation of Transfer Credit (p. 50).

Status

Full-Time Status

A full-time graduate student is defined as one taking 8 or more units in a quarter. Students receiving financial aid may need to meet different requirements to be considered full-time and should consult with the Financial Aid Office. Graduate students are not permitted to enroll in more than 22 units each quarter.

Leaves of Absence

Educational, medical and military leaves are permitted if students meet the eligibility requirements and submit a Leave of Absence form with the required signatures and documentation to the Office of the Registrar. The maximum duration for any single Leave of Absence is 6 academic quarters (not including summer).

See undergraduate section (p. 57).

Discontinuation

Matriculated students who have not registered for three consecutive quarters and have not been on an approved Leave of Absence will be discontinued and will not be allowed to enroll. Graduate students who are discontinued will contact the Graduate Education Office (grad@calpoly.edu) to begin the process to re-matriculate and complete their degree in coordination with the Admissions Office. To enroll again, students must apply for readmission before the deadline dates listed on the Admissions Office (<https://www.calpoly.edu/admissions/returning-students/>) website for each quarter. An application fee must accompany the application for readmission.

A graduate student who has been discontinued but has completed all degree requirements except for their culminating experience (thesis, project, and/or exam) may be able to return to Cal Poly to receive their Master's degree without reapplying to their Master's program. Please note that if there are units remaining to complete the thesis, project, or exam, then the student will need to submit a returning student application (596, 597, 598, and 599 units cannot be taken through Open University). Matriculated students who have not registered for one quarter or two consecutive quarters will maintain their registration priority without applying for readmission.

Graduation

A student planning to graduate must file an Application for Graduation with the Graduate Education Office by the listed deadline in the quarter before the student intends to participate in the appropriate commencement ceremony (either in December or June). This form notifies the Evaluations Office that a graduate student intends to graduate and participate in a commencement ceremony. The student should only submit the form after the Working Formal Study Plan and Advancement to Candidacy form has been approved. A student cannot graduate without this application, available at the Graduate Forms (<https://grad.calpoly.edu/checklist-forms/forms.html>) website. **It is the student's responsibility to ensure that all of their necessary forms have been signed and approved.**

Students can confirm that they will appear on the bookstore list (which allows them to purchase a cap and gown) and the Commencement Bulletin by checking their status on Poly Profile only after all of their paperwork has been received and processed by the Office of the

Registrar. On the Poly Profile, under the Career Program Plan section and the Postbaccalaureate Graduate career, students will see an "Expected graduation is..." notation once the paperwork has been processed. Corresponding deadlines for these items are communicated to students via email from Graduate Education.

Note that, despite participation in commencement ceremonies, students are not official Cal Poly graduates until they have completed ALL degree requirements satisfactorily and have received a 'Congratulations' email from the Office of the Registrar, Evaluations Unit.

Academic Excellence

Master's degree candidates who are academically in the top 10 percent of their program and are nominated by their Graduate Coordinator are eligible to be recognized for Academic Excellence. Nominations must be approved by the appropriate College Dean. If approved, the student will be permitted to wear "*honor cords*" at Commencement. Students can contact their Graduate Coordinator for details.

Note that Latin honors (summa, magna, cum laude) are only for undergraduate degrees.

Distinction

Graduation with Distinction will be determined by the Office of the Registrar only at the time of degree posting. ***It will NOT be noted or awarded at the Commencement Ceremonies.*** Instead, the designation will appear on a student's final transcript and diploma. The criterion for graduation with distinction is a Final Formal Study Plan grade point average of 3.75 or better.

June Only Commencement Awards

Faculty in each Master's program should make recommendations for ***Outstanding Graduate Students*** to the appropriate Graduate Coordinator by the date set by Graduate Education. For a program having more than 50 students, two nominations per award can be made. Graduate Education awards one Outstanding Graduate Student per college and the School of Education. Finalists for the awards may be asked to supply additional information or material to a review committee appointed by the Dean of Graduate Education. The students selected for these awards will be recognized only at the Spring Commencement ceremony.

Conduct/Probation/Disqualification/Dismissal

Student Conduct and Discipline

It is expected that all Cal Poly students are enrolled for serious educational pursuits and that they conduct themselves so as to preserve an appropriate atmosphere of learning. It is also expected that all students who enroll at Cal Poly are willing to assume the responsibilities of membership in the campus community. Association in such a community is voluntary, and students may withdraw from their graduate programs any time they consider the obligations of membership disproportionate to the benefits. While enrolled, students are subject to campus authority that includes the prerogative of dismissing those whose conduct is inimical to the aims of an institution of higher education. While enrolled, students are subject to the regulations governing discipline stated in Education Code Section 66017 and in Title 5 of the California Code of Regulations, Sections 41301–41302, and to such rules and regulations as have been approved and promulgated by authority of the University President. Students are subject to other applicable regulations contained in this Catalog, in the Campus Administrative Policies, the Standards for Student Conduct, Rights and

Responsibilities, and in other official university publications, including the Cal Poly website.

Academic Probation

A student who is enrolled in a graduate degree program in conditionally classified or classified standing may be placed on academic probation for failure to maintain a cumulative grade point average of at least 3.0 (grade of B on a scale where A = 4.0) in all courses in the Formal Study Plan for the degree.

A student who has been admitted as postbaccalaureate classified in order to pursue a credential program shall be subject to academic probation for failure to maintain a cumulative grade point average of at least 3.0 in all units taken in the credential program.

A postbaccalaureate unclassified student (one who has not been admitted to either a credential or graduate degree program) shall be subject to academic probation for failure to maintain a cumulative grade point average of at least 2.5 in all units attempted subsequent to admission to postbaccalaureate standing.

Academic Disqualification

A graduate or postbaccalaureate student who has been placed on academic probation may be disqualified from further attendance in a program by action of the Dean of the College (or the Dean's designate) in which the student is enrolled and in consultation with the Dean of Graduate Education for any of the following reasons:

1. The conditions for removal of academic probation are not met within the period specified.
2. The student goes on administrative probation while on academic probation.
3. The student is subject to administrative probation for the same or similar reason for which the student has been placed on academic probation previously, although not currently in such status.

When such action is taken, the student is notified via email from the Dean of Graduate Education that includes an explanation of the basis for the action. Disqualification may be either from further registration in the program or from further enrollment at the University as determined by the Dean of Graduate Education.

Administrative Probation

A graduate student may be placed on administrative-academic probation by action of the Dean of the College (or the Dean's designate) in which the student is enrolled for any of the following reasons:

1. Withdrawal from all or a substantial portion of a program of study in two successive quarters or in any three quarters. (Note: a student who is on an approved Leave of Absence is not subject to administrative-academic probation for such withdrawal.)
2. Repeated failure to make progress toward the stated degree or program objective when such failure appears to be due to circumstances within the control of the student.
3. Failure to comply, after due notice, with an academic requirement or regulation which is routine for all students or a defined group of students (for example, failure to complete a required campus or program examination, failure to complete a required practicum, failure to complete a required internship, failure to comply with professional standards appropriate to the field of study, failure to make satisfactory progress in the academic program, etc.).

When such action is taken, students are notified via email and are provided with the conditions for removal from probation and the circumstances that would lead to disqualification, should probation not be removed.

Administrative Disqualification

A graduate student who has been placed on administrative probation may be disqualified from further attendance in a program by action of the Dean of the College (or the Dean's designate) in which the student is enrolled and in consultation with the Dean of Graduate Education for any of the following reasons:

1. The conditions for removal of administrative probation are not met within the period specified.
2. The student goes on academic probation while on administrative probation.
3. The student is subject to administrative probation for the same or similar reason for which the student has been placed on academic probation previously, although not currently in such status.

When such action is taken, the student is notified via email from the Dean of Graduate Education that includes an explanation of the basis for the action. Disqualification may be either from further registration in the program or from further enrollment at the University as determined by the Dean of Graduate Education.

Dismissal from University

This is an administrative action that prevents students from enrolling at Cal Poly for any future quarters. Dismissal may result from academic disqualification, administrative disqualification, or from a disciplinary action.

Blended Bachelor's + Master's Programs Overview

Blended programs may provide an accelerated route to a graduate professional degree with simultaneous conferring of both Bachelor's and Master's degrees. Some Blended programs with undergraduate degrees that exceed the 180-unit requirement may allow for the possibility of students' earning graduate credit for several of their senior electives, effectively decreasing the summed unit requirements for both degrees. In addition, Blended programs may provide an opportunity for students to integrate their senior project more seamlessly with their graduate thesis/project. Students must still complete all undergraduate requirements and must have a minimum total of 225 discrete units between the two degrees.

Blended program students can progress from undergraduate to graduate status with a Blended Programs Application Approval Form, a Postbaccalaureate Change of Objective (both forms available through the Graduate Education website), and a verification of successful completion of the GWR; Blended program students do not need to apply through the Admissions Office. This eliminates the need to pay the application fee.

Students who are interested in pursuing Blended programs should first visit the Graduate Education website for more information. Students should then submit a request to the appropriate Department Head or Graduate Coordinator for all required paperwork. The Department Head/Graduate Coordinator, with assistance from the Graduate Education Office, determines whether each student meets the eligibility criteria detailed below. Graduate Education performs a final review of the Postbaccalaureate Change of Objective before forwarding the

information on to the Office of the Registrar. After the form is processed, students can see their change in status on their Poly Profile.

Eligibility

1. The following are minimum eligibility criteria; *individual departments may have more stringent requirements.*
2. Students must successfully complete a minimum of 91% of Expected Academic Progress. Degree-applicable units are those counted towards the undergraduate degree and are determined using Expected Academic Progress criteria.
3. Students must have a minimum 2.5 GPA in the last 90 quarter units attempted. (*Note that students, once admitted to graduate standing, must maintain a 3.0 GPA or better in courses counting toward the graduate degree.*)
4. Students must have completed the Graduation Writing Requirement (GWR) or demonstrate that this requirement was satisfied during their undergraduate program.

Process to Graduate with Both Degrees

1. Students must be matriculated at graduate standing for a minimum of two quarters prior to graduation.
2. Students must submit all required graduate paperwork to the Graduate Education Office and maintain a minimum 3.0 GPA for courses counting toward the completion of the Master's degree.
3. When all requirements are met for both the undergraduate program and the graduate program, both degrees will be awarded at the same time and graduation ceremony.
4. If a student fails to complete the Master's program requirements, the Bachelor's degree may be granted when all requirements for that degree are met. A new Postbaccalaureate Change of Objective is required to transition back to baccalaureate standing before the Bachelor's degree can be conferred.

Second Master's Degree

A student can earn only one Master's degree in any one of the programs offered at Cal Poly. A student who wishes to complete a second Master's degree in another discipline, or two Master's degrees simultaneously, must complete all requirements for both degrees. For students admitted Fall 2017 and after, there will be no double-counting of any units for students who are pursuing a second Master's degree¹. Units taken toward a degree that was never earned either at Cal Poly or elsewhere will not be considered double-counting. Cal Poly's Office of the Registrar will validate if Cal Poly postbaccalaureate/graduate enrollments listed on the Formal Study Plan were not needed to meet any previously awarded Master's degree. However, students who want to use postbaccalaureate/graduate enrollment from another institution must provide Cal Poly's Office of the Registrar with an official letter from a regionally accredited institution indicating that the coursework was not needed to meet any Master's requirements.

To add a second Cal Poly's Master's degree, a student must complete a Postbaccalaureate Change of Objective form, secure all signatures, and submit the completed form to the Graduate Education office.

¹ This limit does not apply to any programs that have Chancellor's Office preapproved unit reductions such as the Engineering Management (EMP) degree.

EXTENDED EDUCATION

Science Bldg. (52), Room E34
Phone: 805.756.2053
extended@calpoly.edu
<https://extended.calpoly.edu/>

Interim Dean of Extended Education: J. Kevin Taylor

Cal Poly Extended Education is a self-support unit that works closely with its university, business, community, and international partners to provide access to Cal Poly's unique academic programs and educational resources. We offer a diverse range of degree programs, professional certificates, online courses, and international education programs. Our primary international education program for incoming short-term students is VISIT, visit.calpoly.edu (<https://visit.calpoly.edu/>).

Information on programs and current courses is listed on our website at Extended Education (<https://extended.calpoly.edu/>) where online registration is available.

For details about Cal Poly's continuous enrollment requirements for graduate students, see the Graduate Education Continuous Enrollment webpage (<https://grad.calpoly.edu/policies/continuous-enrollment.html>).

Academic Credit

These programs are offered on a self-support, special session basis in cooperation with colleges on campus.

Graduate Degrees

Program name	Program type
Business Analytics	MS
Fire Protection Engineering	MS
Packaging Value Chain	MS
Quantitative Economics	MS
Taxation	MS

Graduate Certificates

Program name	Program type
Fire Protection Engineering Applications	Graduate Certificate
Fire Protection Engineering Science	Graduate Certificate

Fire Protection Engineering – Graduate Certificates

The College of Engineering offers graduate certificate programs in Fire Protection Engineering Science and Fire Protection Engineering Applications through Extended Education. Both graduate certificates provide students with the knowledge, skills and tools needed to solve FPE problems and develop fire safety design solutions in a variety of professional settings. The **FPE Science certificate** highlights the science and engineering principles of fire protection engineering. Alternatively, the **FPE Applications certificate** emphasizes the fire service aspect of the industry, including courses that identify fire safety codes and regulations, understanding evacuation models, and information about fire detection and alarm systems.

Open University

Open University allows access to Cal Poly's quality Learn by Doing instruction without formally enrolling in the university as part of a

degree granting program. Open University is not available to students matriculated in state-supported programs at Cal Poly. Enrollment in courses is based on a space available basis.

A maximum of 36 units of Open University credit and other extension credit may be applied towards a Cal Poly bachelor's degree. If approved by the Graduate Coordinator, graduate students may apply a maximum of 12 non-matriculated units toward the completion of their Cal Poly Master's degree. All units taken outside of matriculation in a Cal Poly Master's program—including Open University units, Special Session units, and units taken at another institution—count toward this maximum. For more details on this policy, please visit the **Courses Taken Through Cal Poly Open University** on Office of the Registrar's website.

Enrollment forms, guidelines, deadlines, and other information about Open University is available online at Open University (<https://openuniversity.calpoly.edu/>). Enrollment in Open University is available year round.

Summer Term

Cal Poly Extended Education manages a self-support Summer Term which provides over 400 academic classes to matriculated Cal Poly students and community members. Summer Term is typically scheduled in four sessions: 5-week (2), 8-week, and 10-week.

Quarter Plus

The Quarter Plus is an intensive academic program for incoming Cal Poly first-year students that allows incoming students to take courses and experience the campus before the beginning of fall quarter. More information is available on the Quarter Plus website (<https://quarterplus.calpoly.edu/>).

Professional Advancement

For those desiring to upgrade their skills or knowledge, Extended Education offers a wide range of educational opportunities ranging from professional certificate programs to one-day seminars. These courses may offer academic credit, continuing education units (CEUs), or be offered on a non-credit basis.

Current Professional Certificates

Program name	Program type
Agricultural Specialist Certificate Program	Professional Certificate
Business Analytics	Professional Certificate

Packaging for Logistics and Supply Chain	Professional Certificate
Packaging for Marketability	Professional Certificate
Packaging Value Chain	Professional Certificate

Other noncredit courses and programs for professional upskilling and reskilling are detailed at the Extended Education (<https://extended.calpoly.edu/programs/professional/>) website.

Corporate and Organizational Training

Extended Education will customize training to meet the specific needs of a business, corporation, or organization. This process starts with a needs assessment and continues through design, implementation and evaluation. Past clients include PG&E, the State of California, and the U.S. Forest Service.

Academic Advising

Our Vision and Mission

Cal Poly strives to provide effective academic advising in an encouraging and welcoming atmosphere to support students as they navigate their undergraduate academic experience and learn to value their education, in order to foster individual academic success.

Academic Advising at Cal Poly is an on-going, intentional, educational partnership dedicated to student success. Cal Poly is committed to building collaborative relationships and a structure that guides students to discover and pursue life goals, support diverse and equitable educational experiences, advance students' intellectual and cultural development, and teach students to become engaged, self-directed learners and competent decision makers.

Which Academic Advisor You Should See

Faculty Advisor

- Advising for major and support courses
- Concentration and elective selection
- Interpretation of courses
- Senior project
- Mentorship
- Internship Opportunities
- Career/graduate school selection

Mustang Success Center Advisor

- Academic advising for first time, first year students
- Change of major information
- Understanding online advising/registration tools/block scheduling
- Selecting General Education (GE) courses
- Transfer credit including AP/IB and courses taken at other colleges
- Connecting with appropriate campus resources

College Primary Role Advisor

- Academic advising for transfer students and continuing students
- Overall degree requirements/creating a degree plan
- Students on academic probation and other specific student populations with specific needs
- Referral to appropriate support services

How to Maximize Your Advising Experience

- Think through what questions you have and contact the appropriate advisor.
- Take the initiative to meet with your academic advisor regularly and follow through with recommendations.

- When you email faculty or staff members, use your Cal Poly email account (@calpoly.edu) and be sure to sign your name. Be professional. Be sure to clearly explain questions or requests.
- Check your Cal Poly email daily, and reply in a timely manner to all correspondence methods (both email and phone calls).
- Silence your cell phone prior to advising appointments.

What We Expect of You, the Student

Students share responsibility for a successful university experience and are expected to contribute to effective advising experiences by doing the following:

- Be an active learner by fully engaging in the advising process.
- Attend and be on time to advising appointments and programs, and cancel or reschedule if necessary.
- Be prepared to discuss your goals and educational plans during meetings with advisors.
- Be open and willing to consider advice from advisors, faculty, and other mentors.
- Inform an advisor of any concerns, special needs, or barriers that might affect academic success.
- Know that you are responsible for fulfilling all the requirements of the curriculum which you are enrolled.
- Keep and organize personal copies of all important documents relevant to your academic career and progress to degree.
- Become knowledgeable of the university catalog, campus-/college-/major-specific academic policies and procedures, academic calendar deadlines and degree or program requirements.
- Review your Degree Progress Report (DPR) each quarter and seek assistance to resolve any errors or questions in a timely manner.
- Accept responsibility for your decisions and your actions (or inactions) that affect your educational progress and goals.

What You Can Expect of Your Advisors

Advisors share responsibility for a successful university experience and are expected to contribute to effective advising experiences by doing the following:

- Provide a respectful and confidential environment where you can comfortably discuss academic, career, and personal goals and freely express your concerns.
- Understand and effectively communicate the curriculum, degree/college requirements, graduation requirements, and university policies and procedures.
- Assist you in defining your academic, career, and personal goals, and empower you to create an educational plan that is consistent with those goals.
- Actively listen to your concerns, respect your individual values and choices, and empower you to make informed decisions.
- Serve as an advocate and mentor to promote your success.
- Encourage and support you as you gain the skills and knowledge necessary for success.
- Respond to your questions through meetings, phone calls, or email in a timely manner during regular business hours.
- Collaborate with and refer you to campus resources to enhance your success.
- Maintain confidentiality of your student records and interactions.

- Keep regular office hours and be available to meet with you.
- Participate in evaluating and assessing advising programs and services to better serve you.

Cal Poly International Center

Cari Vanderkar, Assistant Vice Provost for International Programs

Bldg (52), Room E-32
 Phone: 805.756.1477
international@calpoly.edu
<https://international.calpoly.edu/>

The primary mission of the Cal Poly International Center is to provide leadership and coordination for international activities and programs and to serve as a catalyst for internationalization efforts at Cal Poly. The IC maintains administrative authority and university-wide oversight of international engagement and initiatives supported by the campus. We are committed to providing equity and access to services and programs for the populations we serve, including for students studying abroad and international students and scholars at Cal Poly. We provide support to campus efforts in internationalizing the curriculum and in creating global partnerships.

Cal Poly's vision for internationalization is to provide foundational experiential learning, teaching, service and scholarship opportunities at home and abroad that will best equip graduates and the campus

community at large to solve complex global challenges sustainably, ethically and inclusively. Learn by Doing in a global context drives students, faculty and staff to critically evaluate themselves, their own cultures and cultural identities, their values and place in the world. It promotes growth in character, ability to handle ambiguity, reflexive and relative thinking, and ultimately, greater personal fulfillment. It fuels informed global systems thinkers and doers, and activates Cal Poly students to be positive forces in the world.

International Students and Scholars

intlservices@calpoly.edu
<https://intladvicing.calpoly.edu/>

The International Students and Scholars unit of the International Center provides services and programs aimed at meeting the unique needs of international students and scholars throughout their academic careers at Cal Poly. International Center staff provide immigration advising and visa documents, pre-arrival information, orientation programs and cross-cultural programming for all international students, which include degree-seeking students and non-degree students (those attending Cal Poly through our Cal Poly International Exchange Programs, CSU International Programs, and the VISIT Cal Poly Program).

Programming offered by the International Students and Scholars unit includes the International Welcome Ambassador Program which pairs incoming international students with continuing Cal Poly students to share their cultures and to develop friendships. International Welcome Ambassadors also provide a support system to assist new international students with adjusting to Cal Poly and the "SLO Life." The Poly Hosts Program (pairing Cal Poly employees with international students) and the English Conversation Program are some of the other programs provided by the International Students and Scholars unit to assist students with cultural adjustment and connecting with the community.

The International Students and Scholars unit is also the first point of contact for campus community members who want to invite visiting scholars such as faculty, staff, and researchers from abroad to come to Cal Poly to help foster collaboration, joint research, and cross-cultural exchange.

Study Abroad Programs

studyabroad@calpoly.edu
<https://abroad.calpoly.edu/>
<https://studyabroad.calpoly.edu/>

Students interested in studying abroad should begin by visiting the Cal Poly Abroad website, registering for and participating in a Study Abroad 101 Workshop, and planning ahead to meet their academic, financial and personal goals. Peer Advisors and Study Abroad Advisors are available to provide guidance. Please check Cal Poly Abroad for drop-in advising hours, appointment hours, workshop and info sessions, and study abroad planning resources.

Study Abroad and Exchange Eligibility Requirements

Students must be in good academic and disciplinary standing at Cal Poly to be eligible to participate in study abroad or exchange programs. In addition, students must meet the eligibility requirements of their chosen programs. Academic eligibility standards vary by program, and most require a minimum 2.5 GPA and at least one letter of recommendation. Participants may not study abroad during their first quarter at Cal Poly. Students who are on Academic Probation at the time of application, or the term prior to studying abroad, are ineligible to participate. Students

must be off Disciplinary Probation by the time of their programs start abroad and have completed other sanctions by the time of application to the programs abroad. Students are strongly encouraged to seek pre-approval for courses prior to departing for their terms abroad. If a program is located in a country where there is a U.S. Department of State Travel Advisory of Levels 3 or 4, Cal Poly may not provide the approval to participate in the program or pre-approve the transfer of credits.

Cal Poly Global Programs

Cal Poly Global Programs are study abroad programs that offer students opportunities to study with Cal Poly faculty in multiple locations worldwide. Ranging from one week to a full term in length, these programs present a highly flexible model responding to specific curricular goals. Planned with a focus on general education courses and/or courses applicable to one or more Cal Poly major(s) or minor(s), Cal Poly Global Programs may be open to students in all majors or to students in targeted fields of study only. Check our website for the current program offerings.

Cal Poly International Exchange Programs

Cal Poly colleges have exchange agreements with a variety of universities around the world. Through these exchanges, students have an opportunity for cost effective, easily arranged study abroad experiences within their own academic disciplines. Students who qualify for one of these exchanges pay Cal Poly tuition fees and applicable fees. Students can spend up to one academic year at overseas universities as regularly enrolled students. For further information about international exchange programs, students should check with the Cal Poly Abroad website.

California State University International Programs

California State University (CSU) International Programs are CSU systemwide programs that allow participants to earn resident academic credit at their home CSU campuses while they pursue full-time study at host universities or study centers abroad for a semester or academic year. The CSU International Programs suite of options serves the needs of students in over 100 designated academic majors. Affiliated with more than 50 recognized universities and institutions of higher education in 18 countries, CSU International Programs also offers a wide selection of study abroad destinations and learning environments.

Cal Poly Partner Programs

Cal Poly has formal partnership relationships with several non-profit and/or consortium program providers that allow Cal Poly students to study as guests of affiliated universities or at specialized study centers. Each partner provider offers thematic study options at a variety of locations throughout the world. For further information about partner programs, students should check with the Cal Poly Abroad website, visit partner websites, or schedule appointments with an advisor in the International Center.

National Student Exchange (NSE) Consortium

Undergraduate students are able to spend up to one calendar year at another NSE member college or university in the U.S., Canada, or the U.S. Territories (of Puerto Rico, Guam, and U.S. Virgin Islands). Since its founding in 1968, more than 118,000 students from all majors nationwide have had the opportunity to study away through the National Student Exchange (NSE). Because students have the option to pay in-state tuition and can use applicable financial aid funding, it can be an affordable study away program option.

International Travel

polytravel@calpoly.edu (Individual faculty and staff travel requests)
<https://abroad.calpoly.edu/> (International Travel for students & groups)

All faculty, staff, and students traveling outside of the U.S. on university business are required to obtain approval and will be enrolled in the foreign travel insurance program (FTIP) through Cal Poly. All documentation must be submitted by the stated deadlines prior to travel and approvals received before travel expenses are incurred. Travel abroad may include activities such as attending or presenting at conferences, participating in tours, conducting funded research, student internships, club activities, or taking students on non-credit international field trips. Please check to see if your destination is deemed high hazard. In general, independent student travel to countries listed as high hazard will not be approved unless the student is accompanied by a Cal Poly faculty or staff member. Students must remain in good academic and disciplinary standing to participate. For deadlines and information on how to complete a travel packet, faculty and staff traveling without students are to go to University Travel - Cal Poly. Students and faculty and staff traveling with students are to go to International Center - Cal Poly Abroad and select *International Travel*. Please note, researching or applying for a Study Abroad program is a separate process under *Study Abroad*.

Cal Poly Scholars

Bldg. 52, Room E-25
 Phone: 805.756.7164
<https://scholars.calpoly.edu/>

The Cal Poly Scholars Program seeks to support and retain high-achieving, low-income students from California schools by providing financial, academic, and community resources and support. As a university-wide program, the Cal Poly Scholars program brings together a network of services including the Office of Financial Aid & Scholarships, Mustang Success Center, all six academic colleges advising centers, Career Services, University Housing, Student Academic Services, and other campus collaborators. The Scholars are enrolled across all six academic colleges and are actively pursuing degrees from 50+ majors.

Intercollegiate Athletics

Mott Athletics Center Bldg. (42), Room 207
 Phone: 805.756.2924
 Athletic Advising: 805.756.7043, 805.756.7041 or 805.756.6495

Eligibility for competition in intercollegiate athletics is regulated, in general, by the rules of the National Collegiate Athletic Association (NCAA), as well as the University and applicable conference. The Director of Athletics is responsible for adherence to all eligibility rules. The Faculty Athletic Representative has the responsibility for the interpretation of the NCAA, conference, and university rules for determining student-athlete eligibility to represent the university in intercollegiate athletic events.

All 21 teams compete at the NCAA Division I level.

Cal Poly is committed to providing equal opportunities to men and women students in all campus programs, including intercollegiate athletics.

Library Services

Adriana Popescu, Dean of Library Services

Robert E. Kennedy Library (Bldg 35)

Phone: 805.756-5760

<https://lib.calpoly.edu/>

Kennedy Library supports Cal Poly's mission by promoting open and informed inquiry in an inclusive and welcoming environment, fostering collaboration and innovation, supporting the unique needs of every student and scholar at Cal Poly, and contributing to the cultural life of San Luis Obispo.

Kennedy Library selects and delivers information in all formats, provides active learning environments, promotes the skills that are needed for student success, and collects and preserves unique collections.

Services

The library offers consultative and instructional services delivered by expert library faculty serving each of Cal Poly's colleges as well as in areas that serve the entire academic community, such as digital scholarship and special collections. In addition, the library provides students with print and electronic access to selected course materials through its course reserves service; and rapid access to books and articles held by other regional libraries through its interlibrary borrowing service. Reference and research help is provided at service desks and via 24/7 live chat. The 24-hour study space, Hub24, is located on the first floor of the library and is open 24 hours every day throughout the year.

Instruction

Librarians partner with faculty to help students develop research skills relevant to all disciplines. They work with students to ensure they acquire and practice the skills they need to succeed in a complex information environment. This includes finding quality information and using it to communicate skillfully through a variety of media. The librarians and a team of peer-to-peer student assistants teach more than 400 workshops each year and provide web-based resources to supplement in-class instruction.

Technology

In partnership with Information Technology Services, the library offers students, faculty, and staff many services including access to the campus high-speed wireless network, technology rentals, and 300 computers with instructional related software applications. Oversized and specialty (CAD) printing services are also available from the campus print and copy service located in the library. Student technicians are on staff to help.

Assistive Technology

Kennedy Library provides general-use assistive technology/collaboration stations throughout the building, featuring a range of assistive hardware and software applications including screen readers, dual displays and height adjustable tables. Sensus Access software is also provided for a self-service, alternate media solution to automatically convert files into a range of alternate media including audio books, e-books, and digital Braille.

Electronic and Print Resources

Kennedy Library provides access to more than 60,000 electronic scholarly journal titles, as well as to major online indexes and full text databases. These electronic resources are available to Cal Poly students, faculty and staff anytime and anywhere. The library also has over 600,000 eBooks, a physical collection of 300,000 print volumes, and a significant number of

other items, including maps, government documents, senior projects and master's theses.

Special Collections and Archives

Established in 1969, Special Collections and Archives makes primary source collections available for public research and customized instruction sessions. Each year, thousands of items are digitized for easy online access, from organizational records and architectural drawings to oral histories and photographs. Collecting strengths include California architecture, limited edition artists' books, the graphic arts, and regional history. Examples include the Central Coast Farm Labor Organizing Collection, the Julia Morgan Papers, the Louis Family Papers, the Moore Underground Comix Collection, the Re/Collecting Project Archive, and the San Luis Obispo Environmental Archives, and the Women's Zine Collection.

The University Archives documents the history, growth and development of Cal Poly, dating from the founding of the university in 1901 to the present. The archives include presidents' papers, campus and student publications, the LGBTQIA Oral History Project, and web content such as the Mustang News website and the Cal Poly YouTube channel.

DigitalCommons@CalPoly

One of the first and largest institutional repositories in the California State University system, DigitalCommons@CalPoly promotes discovery, research and cross-disciplinary collaboration by collecting, preserving and providing online access to scholarly work created at Cal Poly. DigitalCommons@CalPoly archives faculty research and student scholarship including theses, senior projects, and graduate internship reports. Since its inception in 2008, more than 23 million scholarly items have been downloaded worldwide. Members of the Cal Poly academic community are invited to contribute completed scholarship for long-term preservation and worldwide access through DigitalCommons@CalPoly.

Digital Projects Lab

Digital Project Lab provides specialized guidance in learning complex data analysis and data visualization tools. With dedicated computers, large screen monitors, and GIS and statistics tutors on-site, Digital Project Lab provides an ideal environment for students to learn, experiment and develop their skills in analyzing and visualizing data.

Facilities

Kennedy Library offers a variety of seating and study spaces on five floors, with ample natural light and views of the surrounding hills. The library offers 40 study and collaboration spaces, including large collaboration rooms, group study rooms and two dedicated graduate student study rooms; all are equipped with large screen monitors and whiteboards. There are two additional collaboration rooms, the Video Studio and Virtual Meeting Room, which support student presentation preparation and virtual conferencing. The library offers a secure and expanded 24-hour study space on the first floor. The library offers more than 2000 seats for study and collaboration, specialty printing and copying services and a café. The library's atrium features a landscaped patio and shaded seating on four upper balconies. Kennedy Library is visited more than 1.5 million times a year and has been regularly voted "Best Study Spot" by students.

Events and Exhibits

Kennedy Library offers ongoing events and exhibits including: Faculty Exhibit Program; Conversations with Cal Poly Authors, which celebrates books published by Cal Poly faculty; and Data & GIS Workshops, a series of talks and events related to data resources and visualization tools.

Exhibits are curated in partnership with Cal Poly students and faculty, as well as members of the Cal Poly community, and often feature faculty and student creative works and unique holdings of Special Collections and Archives.

Partners

Kennedy Library is proud to partner with programs that support student learning. Among the partners located in the library are Academic Programs and Planning; Academic Skills Center; the Center for Teaching, Learning and Technology; the Writing and Learning Initiatives, ITS Service Desk and Tech Rental; Student Ombuds Services; Cal Poly Print and Copy; and the University Honors Program.

Office of Student Research

Research, Economic Development & Graduate Education (R-EDGE), Bldg. 38, Room 101

Phone: 805.756.6442

<https://studentresearch.calpoly.edu>

studentresearch@calpoly.edu; [@calpolystudentresearch](#) (Instagram)

Director: Dr. Jane Lehr

The aim of the Office of Student Research is to increase Learn by Doing research opportunities for students at Cal Poly. The Office of Student Research also coordinates Cal Poly's participation in the annual CSU Research Competition, the UNIV 421 Summer Undergraduate Research Experience course, and —with the CSU LSAMP Program — serves as a primary contact for students participating in the California Forum for Diversity in Graduate Education.

The goals of the Office of Student Research are to:

1. Increase transparency of access for student research opportunities in all disciplines
2. Support the professional development of mentors and mentees — including a focus on diversity, equity, inclusion and justice in student research contexts — via individual advising, consultations, workshops, and other collaborations
3. Work with colleges, Graduate Education, and other campus entities to enhance their existing student research programs and build capacity in new areas
4. Increase the funding available to support student research
5. Develop and integrate meaningful metrics that allow us to measure outcomes and impact of research participation for students and mentors

The Office of Student Research aims to support all interested Cal Poly students to find and thrive in student research opportunities.

Office of Writing and Learning Initiatives

Academic Skills Center (p. 446)

Writing and Learning Center (p. 446)

Dawn Janke, Executive Director

Kennedy Library, Room 202A

Phone: 805.756.2066

<https://writingandlearning.calpoly.edu>

The Office of Writing and Learning Initiatives supports student learning and achievement by coordinating a variety of programs and services, including the CSU Early Assessment Program, academic preparation and placement in English, the Graduation Writing Requirement, the Academic Skills Center, and the Writing and Learning Center.

Academic Skills Center

Kennedy Library (35), Room 112

Phone: 805.756.1256

<https://asc.calpoly.edu/>

The Academic Skills Center (ASC) offers academic enrichment resources and programs, including an online study strategies library, Supplemental Workshops in Math and Science, and Study Session groups. The goal of Supplemental Workshops and Study Session groups is to provide a peer-to-peer collaborative learning environment whereby students engage in activities designed to foster deep knowledge and understanding in foundational courses. The ASC is committed to empowering students to take an active approach to their learning and attain their academic goals. For more information on learning services available through the ASC, visit their website at <https://asc.calpoly.edu>.

Writing and Learning Center

Kennedy Library (35), Room 111C

Phone: 805.756.6032

<https://writingandlearning.calpoly.edu/center> (<https://writingandlearning.calpoly.edu/center/>)

The Writing and Learning Center supports academic achievement by offering peer-to-peer tutoring in a welcoming environment. Undergraduate and graduate tutors are available for one-to-one or small-group consultations on any activity, assignment, or exam for courses and subjects across all six colleges; drop-in learning support is also available through subject-specific Help Hubs. The Center's free, collaborative tutoring sessions are student-driven, which means that the learning experience is propelled by the specific questions and individual needs the student brings to the session. As a result, the center provides a unique space on campus dedicated to student-centered learning. More information on the Writing and Learning Center's services is available at <https://writingandlearning.calpoly.edu/center> (<https://writingandlearning.calpoly.edu/center/>).

Pre-Health Career Advising

College of Science and Mathematics Student Services

Bldg. 53, Room 211

Phone: 805.756.2615

prehealth@calpoly.edu

<http://prehealth.calpoly.edu> (<http://prehealth.calpoly.edu/>)

Cal Poly State University offers excellent advising and resources for all university students and alumni who are interested in preparing for a career within a health professions field. The College of Science and Mathematics Student Services is dedicated to mentoring students throughout their college career, helping them to prepare for post-baccalaureate studies in the health professions. Due to the competitive nature of these programs, it is strongly recommended that students plan to seek advice early in their college career to gain an understanding of the components needed to build a competitive applicant profile.

Pre-Health Career Advising

Pre-health career advising is designed to help students explore the health professions as a possible career and enhance a student's competitiveness for admission into a graduate and/or post-baccalaureate program in the health professions. Students should meet with a Pre-Health peer advisor to learn about health career options, required coursework, gaining experience in health care, and other aspects of becoming a competitive candidate. Professional staff provide specific, detailed application advising for students in their application year including personal statement development, interview preparation and more, all targeted at developing the most competitive, well rounded applicants.

Pre-Health Related Courses

Cal Poly offers health-related courses to assist students who are interested in exploring a health professions career. Please see course descriptions below.

SCM 101 Introduction to Health Profession Careers

SCM 301 Professional School Preparation for Health Profession Careers

SCM 363 Public Health Fieldwork

BIO 253 Health Professions Shadowing

BIO 301 Service Learning in the Health Professions

Student Academic Services

Student Academic Services

Building 52, Room E7
Phone: 805.756.2301
<https://sas.calpoly.edu/>

Student Academic Services (SAS) offers comprehensive programs that directly support academic excellence. Students can utilize a network of academic services, advisors, and activities designed to assist them in acclimating and excelling at Cal Poly. Services include admissions and transition support, new first-year student seminars, supplemental workshops and study group assistance. Advising services are focused on students from traditionally underrepresented backgrounds in the California State University System. Counselors provide assistance to students with class scheduling, assessment of academic skills, graduation planning, career clarification and related learning and study skills. The goal of SAS is to ensure that all students have equal opportunity to achieve academic success, feel a sense of belonging and graduate. Student Academic Services incorporates the following programs:

Center for Military-Connected Students

Building 52, Room E4
(805) 756-6838
military@calpoly.edu

The Center for Military-Connected Students provides assistance and support to student veterans and military dependents to navigate available Veterans Affairs and community resources.

Educational Opportunity Program (EOP)

Building 52, Room E7
Phone: 805.756.2301
<https://sas.calpoly.edu/>

EOP provides admissions, academic and personal support programs for low-income, historically disadvantaged students. EOP offers counseling, study sessions, academic orientation courses, career and post-graduate advising, and referrals to campus and community resources.

Educational Talent Search

Building 58, Room 109
Phone: 805.756.2301
<https://sas.calpoly.edu/>

Cal Poly Educational Talent Search (ETS) is a federally funded TRIO program that serves low-income and/or potential first-generation students in grades 7 through 12 in local targeted area schools. The goal of ETS is to assist students in graduating from high school and to encourage them to enter college. ETS offers interactive school site workshops and informational sessions led by program staff, University field trips, parent information workshops and pre-college advising focused on college entrance requirements and financial aid.

TRiO Achievers

Student Services Bldg (124), Room 119
Phone: 805.756.1395
<https://sas.calpoly.edu/>

TRiO Achievers is a federally funded TRIO program of the U.S. Department of Education. It is designed to assist low-income, first-generation students, as well as students with disabilities, by enhancing their academic skills, increasing their retention and graduation rates, and promoting graduate and professional school programs.

Summer Institute

Building 52, Room E7
Phone: 805.756.2301
<https://sas.calpoly.edu/>

Summer Institute (SI) is a residential summer academic orientation program held annually for newly-admitted EOP first-year and transfer students. The program provides a mini-quarter of academic and social activities, including six units of courses, opportunities to become familiar with the campus and its services, connections with academic advisors, faculty, and students in the same field of study, and study skills which help students realign current study habits to meet college level demands.

Upward Bound

Building 58, Room E7
Phone: 805.756.2301
<https://sas.calpoly.edu/>

Upward Bound (UB) is a federally funded TRIO college preparatory program for low-income and/or potential first-generation college students. This program motivates and academically prepares students in local target area high schools. The academic program and residential summer school session at Cal Poly offer tutoring, career advising and supplemental instruction, as well as cultural and recreational activities.

Transfer Center

Bldg (52), Room E-30
 Phone: 805.756.7778
transfer@calpoly.edu
<https://transfercenter.calpoly.edu/>

The Cal Poly Transfer Center is committed to serving the particular needs of our diverse transfer student population while advancing institutional support for transfer students. Resources, community, and advocacy are the three main goals of the Transfer Center. The Transfer Center offers support and tools to assist students in achieving their desired personal, community, academic, and professional goals as they progress through their educational journey. The Transfer Center is a resource for all current transfer students as they navigate the academic and cultural landscapes of transitioning to and graduating from Cal Poly.

University Advising-Retention

Building (52) Room, D-28
Retention@calpoly.edu (retention@calpoly.edu)

Our Vision and Mission

We envision a student-centered and compassionate campus community where the path to graduation for all Cal Poly students is free of institutional barriers, guided by equitable policies, and bolstered by proactive advising.

Our mission is to put students and equity first in Cal Poly's efforts to increase persistence and graduation rates. The University Advising-Retention team prioritizes proactive advising strategies, provides timely and supportive outreach to students, and serves as a guide for navigating campus systems. We amplify student voices, leverage data, and nurture campus relationships in our efforts to remove institutional barriers and cultivate a culture of care.

Provide guidance for those needing time off from Cal Poly

Retention specialists assist undergraduate students in navigating Informal Time Off, Leave of Absence and University Departure. This includes help preventing unexpected financial and academic costs related to time off, making individual referrals to supportive campus professionals and providing support to ensure a smooth reentry following time off.

Strengthen academic support systems

In partnership with campus academic advising centers, University Advising-Retention applies insight gathered from data and student voices to inform advising priorities. The retention staff develops systems to reach students at pivotal points in their academic journeys (e.g., while students are on leave, quarterly registration periods, just before graduation) to provide an additional level of advising support when action is time-sensitive.

Address barriers to academic progress and graduation

Retention partners with campus colleagues to implement more student-centric policies and practices. This includes increasing accessibility to and simplifying processes for taking time off, ensuring student change of major inquiries receive timely responses from academic departments and that requirements meet

university guidelines, and improving access to necessary student support resources.

University Honors Program

Jasna Jovanovic, Director
 Robert E. Kennedy Library, Bldg. 35, Room 510
 Phone: 805.756.7029
<https://honors.calpoly.edu/>

Cal Poly founded its University Honors Program in 1999. The mission of the program is to offer an academically enriched learning experience for Cal Poly's most outstanding and highly motivated students. Serving the entire university, the program provides a supportive and inclusive community for aspiring scholars seeking to challenge themselves, participate in experiential and interdisciplinary learning, serve others, and expand the boundaries of their academic potential.

In support of this mission, the Honors Program provides curricular and co-curricular programming designed to foster intellectual engagement, knowledge discovery, interdisciplinary collaboration, and the mutual exchange of ideas. Courses, seminars, leadership opportunities, research projects, mentoring experiences, service projects, study abroad programs, dedicated meeting/study space, and a learning community in campus housing provide Honors students with opportunities to expand and enrich their academic experiences in the company of similarly motivated peers. Following Cal Poly's hands-on approach to education, students may participate in community projects and co-curricular activities to enhance their coursework, develop leadership skills, gain global perspectives, and build relationships across academic disciplines.

The Honors Program currently supports hundreds of Cal Poly students demonstrating a wide variety of backgrounds, interests, and talents. These students represent nearly 60 different majors in all six colleges on campus. Graduates of the Honors Program leave Cal Poly with a broad and enriched education. In addition, they earn "with Honors" distinction on their diploma and special recognition during commencement.

Students interested in joining the Honors Program should contact the Honors Office in Kennedy Library, Room 510 (Ph: 805-756-7029; E-mail: honors@calpoly.edu) regarding the application procedure and minimum qualifications. Applications are accepted from first-time freshmen, community college transfers, and continuing Cal Poly students who have completed less than five quarters in residence.

Academic Standards

To maintain membership in the Honors Program, students must perform well academically, complete their Honors course requirements in a timely manner, communicate regularly with the program, and maintain good character. The Honors Program reviews each student's academic performance and progress quarterly. A student's Cal Poly (CPSLO) cumulative GPA is used as the primary measure of academic performance. Minimum CPSLO cumulative GPA requirements are as follows:

- 3.3 by the end of the student's first year;
- 3.4 by the end of the student's second year;
- 3.5 by the end of the student's third year; and
- 3.5 by the end of the student's fourth year and at the time of graduation.

Program Learning Objectives

The following Program Learning Objectives (PLOs) define what Honors students will know and be able to do by the time they graduate from Cal Poly and the University Honors Program:

1. Demonstrate attitudes supportive of the Honors Program community;
2. Mentor peers effectively;
3. Communicate effectively with others;
4. Apply leadership principles to organize and direct the efforts of a group
5. Make reasoned decisions based on an understanding of diversity, sustainability, global perspectives, technology, and ethics;
6. Function effectively as a member of an interdisciplinary group or team;
7. Integrate knowledge and skills from different disciplines to solve problems;
8. Plan, carry out, document, and defend a capstone project;
9. Demonstrate skills in information literacy and the ability to self-direct one's learning;
10. Demonstrate a strengthened sense of community, civic responsibility, and philanthropy.

Program Requirements and Curriculum

In addition to the academic standards listed on this page, Honors students must satisfy the program course requirements, complete a senior project or capstone experience within their major, document a campus or community leadership experience, and document a mentor (or learning assistant) experience. Honors students must file leadership and mentor experience documentation prior to their final quarter on campus.

Program course requirements are noted below. Honors students declare a research, study abroad, or community service track during their second year in the program. Students enroll in HNRS 361 to complete their "Honors Track" requirement. Guidelines, conditions, and requirements associated with these tracks are available through the Honors Program office.

REQUIRED COURSES

Select from the following: 2-6

HNRS 100	Introduction to the Honors Community ¹	
HNRS 161 & HNRS 162 & HNRS 163	Creating Sustainable Communities I and Creating Sustainable Communities II and Creating Sustainable Communities III	
HNRS 261	Leadership: Self Evaluation	1
HNRS 361	Honors Track - Research, International, and Community Service Experience ²	1
HNRS 461	Honors Capstone Seminar	1

APPROVED ELECTIVES

Select at least five additional HNRS or HNRC courses¹ 14-18

Total units **23**

¹ Students who take HNRS 100 will need to take an additional 4 units of Approved Electives HNRS courses.

² Complete one of the following Honors Tracks: a research project, a study abroad or international experience, or community service.

University Studies

Academic Programs and Planning
Kennedy Library (35), Room 319
Phone: 805.756.2246
<https://academicprograms.calpoly.edu/>

University Studies (UNIV) courses provide an opportunity for interdisciplinary study, addressing university-wide learning objectives (such as diversity and sustainability). UNIV courses are offered across college boundaries, typically carrying GE credit. The offerings are subject to available funding.

Office of University Diversity and Inclusion

Bldg. 01, Room 209
Phone: 805.756.2250
<https://diversity.calpoly.edu/>

Established in 2010, the Office of University Diversity and Inclusion (OUDI) leads university efforts to build and support diversity, equity, and inclusion into all aspects of campus life, both academic and co-curricular. OUDI connects with partners and aligns university-wide efforts in order to achieve inclusive excellence, attract and respond to a diverse campus community, and nurture an equitable and inclusive campus climate. OUDI is a primary stakeholder at university decision making tables and is committed to ensuring that Cal Poly is a place where respect and sense of belonging are present for all. OUDI also leads the BEACoN Mentors Program, the President's Diversity Awards, and a number of other initiatives across campus.

Student Resources

Campus Health and Wellbeing

Student Health Center (Bldg. 27)

<https://chw.calpoly.edu/>

Campus Health and Wellbeing supports student success through quality, holistic care and the promotion of lasting wellness. A variety of services are offered for students, including primary medical care and walk-in medical services, laboratory testing, onsite X-rays, prescription medications, over-the-counter medications, mental health crisis intervention, individual, couples and group mental health counseling, mental health trainings/workshops, health education programs, and wellbeing services. Campus Health and Wellbeing assists students by minimizing class time lost due to illness, injury, or personal concerns. The Health Services Fee covers most of these services. An After-Hours Nurse Advice Line and a Psychological Crisis Line are available at no cost when the Student Health Center is closed. Students may reach the After-Hours Nurse Advice Line by calling the regular Health Center's phone number (805.756.1211). The Psychological Crisis Line may be accessed by calling the regular Counseling Services phone number (805.756.2511).

Health Services: Phone: 805.756.1211 (24/7 Advice Nurse Line)
Counseling Services Phone: 805.756.2511 (24/7 Psychological Crisis Line)

Wellbeing Services Phone: 805.756.6181
 Safer (Sexual Assault Advocacy): 805.756.2282

Health Services offers primary medical care, walk-in medical services, symptomatic COVID-19 testing, nursing services, sexual health care, gender-affirming care, and routine laboratory testing and X-ray procedures. Services are provided year-round, Monday through Friday, 8:00 a.m. to 4:30 p.m. (Wednesdays, 9:00 a.m. to 4:30 p.m.) All of these services are included in the Health Services Fee.

Low-cost additional medical services include prescription medication, over-the-counter items, outside laboratory tests, immunizations, orthopedic supplies, and specialized services as available.

Wellbeing Services offers evidenced-based prevention education and programming to support the holistic well-being of students. Led by a team of professional staff, the wellbeing team trains students to be certified peer health educators in the PULSE Program (Peers Understanding Listening Supporting Educating) and offers professional services, including advocacy and recovery support to provide a safe and inclusive community for students.

- **Safer advocacy** provides individual crisis advocacy for students experiencing sexual violence, dating violence, intimate partner violence and stalking. Services are provided by state-certified advocates.
- **Individual Health Education consultations** can be scheduled with a Health Educator or certified peer health educator to discuss various health topics, resources and strategies to manage stress, alcohol and drug use, physical health and emotional health.
- **Recovery support** programming is available for students with a history of addiction. Students can join the Mustangs for Recovery program to build their community of support. Allies are welcome!
- **Prevention, Education & Outreach** programming, including workshops, wellness fairs and alternative programs, are a great way for students to learn healthy habits and build their community.
- The **Cal Poly Food Pantry** is a no-cost service and is a part of the Hunger Program. It is available to students in need of healthy, nutritious food.
- The **Massage Chair** is available for students to schedule 30-minute massages.

All of these services are included in the Health Services Fee.

Counseling Services promotes the development of holistic emotional health. As mental health professionals, the department serves the campus community through advocacy and the provision of confidential, accessible services. Counseling Services helps students develop and maintain the skills integral to mental health through hands-on workshops; individual, couples and group therapy; crisis intervention; consultations with parents, faculty, and staff; and, mental health trainings. All of these services are included in the Health Services Fee. For more details, visit Counseling Services (<https://hcs.calpoly.edu/content/counseling/counseling-home/>).

Career Services

Student Services (Bldg. 124)
 Phone: 805.756.2501
<https://careerservices.calpoly.edu/>

Career Services empowers students to achieve a lifetime of meaningful career success and supports them throughout their academic journey at Cal Poly.

Career Counseling and Exploration

Career Counselors assist students with discovering their strengths, interests and personality characteristics, creating dynamic career plans, and building their professional network. Students considering a change of major are encouraged to utilize Career Services so that they become better informed about career options. Students will learn how to explore the link between academic majors, their areas of interest and internship, co-op, fellowship, job, and graduate school choices. Through advising, workshops, and interactive experiences, students will develop the skills and strategies needed to achieve their professional goals.

Internship and Job Search

Students are guided through the search process, which includes identifying and researching employers, developing resume/cover letters, preparing for interviews, and meeting with employers through career fairs, campus interviews, networking events, information sessions and other career-related events.

Various opportunities, on-campus employer interviews, career fairs, and networking events are listed through the MustangJOBS online platform. Employers enthusiastically recruit our students for local part-time jobs (on-campus and off-campus), co-ops, internships, summer jobs, fellowships, and career positions (state, regional, and national). Students may also schedule career counseling appointments through MustangJOBS with a Freshman Focus Team member or specific College Specialist.

Graduate School Exploration

Career Counselors can assist students with the graduate school admission process, which includes identifying and researching potential graduate programs. As part of this service, students learn about the process of applying to graduate school, preparing personal statements and completing the necessary requirements for admissions.

The Center for Bystander Intervention and Cal Poly (WITH US)

Administration Building (01) Room 206
<https://www.withus.org/>

WITH US: The Center for Bystander Intervention at Cal Poly is a national research center aiming to create safe campus communities where all students can thrive. The mission is to empower peer-led movements of proactive bystander intervention. The Center is dedicated to the study of college student bystander behavior and expanding the application of bystander intervention theory and research to prevent harm and lives lost in situations where bystander intervention could have been a mitigating factor.

Specific focus areas of prevention and harm reduction include: (1) sexual assault, sexual harassment, and intimate partner violence, (2) bias, exclusion, and discrimination (3) hazing, (4) unhealthy alcohol and other drug misuse, and (5) mental health concerns.

WITH US is led by a team of expert social psychology and public health faculty researchers, multidisciplinary prevention practitioners, and experienced higher education administrators. Our work is dedicated to combating bystander apathy and empowering communities of proactive

bystanders (Upstanders) to improve the health, safety, and success of college students.

The organization is centered on four commitments:

- **Research:** committed to conducting and supporting quality research on college student bystander intervention behavior, attitudes, motivators and barriers to helping.
- **Resources:** committed to developing and curating evidence-based resources to support students and educators in their campus prevention and health promotion efforts.
- **Outreach:** committed to fostering national movements of bystander intervention alongside the National Network for Peer Accountability, a national prevention coalition.
- **Education:** committed to providing research-based education programs and awareness campaigns that cultivate communities of skilled prosocial bystanders

CSU-LSAMP Program

California State University (CSU) Louis Stokes Alliance for Minority Student Participation (LSAMP) in STEM Program

Center for Engineering, Science & Mathematics Education (CESAME), Bldg. 25, Room 129
Phone: 805.756.2875
lsamp@calpoly.edu
<https://lsamp.calpoly.edu/>

Faculty Director at Cal Poly: Dr. Jane Lehr
Staff Coordinator: Erica M. Garcia

The CSU-LSAMP Program is designed to support undergraduate students who face or have faced social, educational and/or economic barriers to careers in science, technology, engineering, and mathematics (STEM) fields. The goal of the CSU-LSAMP Program is to increase the persistence and graduation rates of students from underrepresented groups who major in STEM disciplines. To accomplish this goal, the CSU-LSAMP Program at Cal Poly provides advising, community-building activities, professional development opportunities, and financial assistance to support successful transitions to Cal Poly and to careers in STEM fields. The CSU-LSAMP program emphasizes activities designed to enhance graduate school and career preparedness, including undergraduate research experiences, support for community college transfer students in STEM, and opportunities for student participation in academic conferences and international activities. CSU-LSAMP is supported by the National Science Foundation (NSF) under Grant No. HRD-1826490 and the CSU Chancellor's Office.

To be eligible for financial assistance, students must face or have faced social, educational and/or economic barriers to careers in STEM; be a U.S. citizen or permanent resident; and be enrolled at Cal Poly in an eligible STEM major. Examples of social, educational, and/or economic barriers include: a first generation college student; California community college transfer student; low income (as represented by Pell Grant, EOP, or SSS eligibility or via eligibility for need-based financial aid); a U.S. military veteran; disability-eligible based on documentation from the Disability Resource Center; a graduate of a Cal Poly Partner High School; and being a member of a racial-ethnic group that is recognized by the National Science Foundation as "historically underrepresented in STEM: African American, Hispanic American, American Indians, Alaska Natives, Native Hawaiians, and Native Pacific Islanders." Please see for

more information and to apply online at CSU-LSAMP at Cal Poly (<https://lsamp.calpoly.edu/>).

Disability Resource Center

Student Services Building (124), Room 119
Phone: 805.756.1395
www.drc.calpoly.edu (<http://www.drc.calpoly.edu>)

The Disability Resource Center's mission is to cultivate an accessible and inclusive community where students with permanent and temporary disabilities have an equal opportunity to participate in all aspects of campus life. It facilitates student learning and access through partnerships with students, faculty, and staff.

Students wishing to use disability-related services and accommodations meet with an access specialist to review eligibility. Advance planning is strongly encouraged.

Office of the Dean of Students

Hillcrest Building 81
Phone: 805.756.0327
deanofstudents@calpoly.edu
deanofstudents.calpoly.edu (<https://deanofstudents.calpoly.edu/>)

The Office of the Dean of Students creates opportunities that increase access, allow for exploration of advocacy and privilege, and promote a welcoming campus climate. We foster individual strengths, self-exploration, community building and collaboration; encourage personal and academic success through self-advocacy, leadership and accountability; and equip the Cal Poly community with tools to become lifelong learners and global citizens.

Programs and services housed within the Office of the Dean of Students support student learning and service through:

- Helping students manage academic and nonacademic situations;
- Consulting extensively with faculty and staff on behalf of student concerns;
- Interpreting and assisting with understanding campus policies and procedures;
- Providing student centers, clubs and organizations to foster a healthy student life;
- Cultivating a caring, supportive campus and community environment;
- Engaging supporters meaningfully to enhance the student's experience, and;
- Creating space for the celebration of great achievements and unity, culminating with commencement.

Student Rights and Responsibilities

Student Rights and Responsibilities (<https://osrr.calpoly.edu/>) administers the California State University Standards for Student Conduct. This ensures a fair and impartial administration of the disciplinary process while educating students about their responsibilities and protecting the rights of all members of the university community.

Student Support, Success and Retention

Student Support, Success and Retention (<https://deanofstudents.calpoly.edu/sssr/>) is responsible for ensuring students' success by providing support, advocacy and follow-up services in collaboration with other university departments, individuals and

stakeholders. It provides support to academic colleges by working directly with students, faculty and administration to reduce barriers to student success, collaborating with the colleges to establish meaningful campus support services, and by providing direct, early intervention in problem-solving to ensure retention and graduation.

Students with Dependents

The Students with Dependents program provides care and support to Cal Poly students who are parents, guardians, and caregivers at the undergraduate and graduate level. The program is committed to helping students succeed, both as parents and scholars by offering programs and advocacy that enrich and support parenting student's academic, personal, and professional goals.

Former Foster Youth (FFY)

The Former Foster Youth initiative provides support to students formerly in the foster care system. This initiative aims to create a support system that enhances the academic success and personal well-being of former foster youth attending Cal Poly.

Student Diversity and Belonging

Administration Bldg. 01, Room 206
805.756.1521

<https://studentaffairs.calpoly.edu/diversity> (<https://studentaffairs.calpoly.edu/diversity/>)

We believe every person has the right to feel welcomed, respected and valued at Cal Poly. Together with our campus partners, Student Affairs aims to create campus communities that reflect the diverse population of our state, and provide equity, access and opportunities for all students, faculty and staff. As a division, we acknowledge that history includes examples of both formal and informal structures, policies, and practices that have limited or excluded opportunities for individuals or groups of people. While efforts have been made to address these inequities, the impact of these structures continues to exist.

<https://culture.calpoly.edu/home> (<https://culture.calpoly.edu/home/>)

Student Diversity & Belonging is a collective of campus resource programs and centers that support and empower students experiencing marginalization, through intersectional advocacy and cultural connections to build a more just and equitable Cal Poly community.

Campus Programs and Centers:

Black Academic Excellence Center

Bldg. 52, Room E23
Phone: 805.756.6774
<https://baec.calpoly.edu/>

The Black Academic Excellence Center (BAEC) is committed to supporting the advancement and excellence of Black students and Black student groups within the Cal Poly community. By fostering an inclusive environment, providing academic support, and promoting a Black excellence, our goal is to empower Black students to take full advantage of all the opportunities presented at Cal Poly while actively engaging with Black history and culture.

Dream Center

Bldg. 52, Room E11
Phone: 805.756.6362

<https://dreamcenter.calpoly.edu/>

The Dream Center offers a safe, inclusive space for all undocumented students, those from mixed-status families, and their allies. The Center maintains the confidentiality of individual students while fostering a welcoming community environment that aligns with the university's commitment to diversity and inclusion. The Dream Center offers a range of programs and services to educate the campus community and support undocumented students' access, persistence, graduation, and post-graduate pursuits.

Gender Equity Center

Bldg. 65, Room 217
<https://gec.calpoly.edu/>

As a part of Student Diversity and Belonging, the Gender Equity Center (GEC) welcomes and supports people of all genders and experiences to cultivate a brave space where they can learn and grow together. Through social justice-based education, programming, and community-building, our work centers students of marginalized genders, including those who are womxn, feminine-of-center, trans, and/or nonbinary.

Men & Masculinities Program

Bldg. 65, Room 209
<https://masculinities.calpoly.edu/>

As a part of Student Diversity and Belonging the Men & Masculinities Program engages the Cal Poly Community with the purpose of creating spaces to critically evaluate expressions of masculinities, their intersections, and men's health and wellbeing. The Men & Masculinities Program is also home to the Men of Color Success initiative which aims to increase retention and graduation rates for men of color through identity exploration, holistic development through cultural affirmation, and "brave space" communities.

Multicultural Center

Bldg. 65, Room 111F
<https://multicultural.calpoly.edu/>

As a part of Student Diversity and Belonging, the MultiCultural Center (MCC) is dedicated to the retention and success of historically underserved students. It is a communal space that is committed to serving the holistic development of our campus' student body, by providing programs and services that: engage students in their identity exploration and development through critical self-reflection and dialogue, center and celebrate the voices and experiences of underrepresented students, and cultivate a sense of belonging through community building, mentorship, and intersectional learning.

Pride Center

Bldg. 65, Room 209
<https://pride.calpoly.edu/>

As a part of Student Diversity and Belonging, the Pride Center supports and empowers students of all sexualities, gender identities, and expressions (SOGIE) to strengthen and unite our Cal Poly community. Within our mission we support and advocate for the unique academic and developmental needs of lesbian, gay, bisexual, transgender, queer or questioning, intersex, asexual/aromantic, pansexual, non-binary and non-conforming students to promote personal growth and success. The Pride Center designs programs that emphasize holistic identity development,

promote individual and community health and wellbeing, and education through an intersectional lens.

LatinX Initiatives

Bldg. 52, Room E22

<https://culture.calpol> (<https://culture.calpoly.edu/home/>)
(<https://culture.calpoly.edu/home/>)

The Latinx Center aims to create an environment that fosters belonging, empowers Latinx students to thrive, and provides them holistic support. In turn, the center will offer Latinx students the opportunity to gather and build community while exploring their cultures, histories, and traditions.

The Latinx Center also host Heritage month programs, including the *State of Latinx* each fall, as well as dialogue, panel, and speaker series throughout the year that are rooted in the diverse needs and experiences of Latinx students. Educational experiences like these will provide everyone in the Cal Poly community opportunities to learn about the Latinx student experience.

Native Center

Bldg. 172

<https://culture.calpol> (<https://culture.calpoly.edu/home/>)
(<https://culture.calpoly.edu/home/>)

The Native American and Indigenous Cultural Center (NAICC) provides a community gathering space featuring mentorship opportunities, academic support, beading and basket weaving workshops, and an Indigenous Peoples' Day celebration. The center will also host Native and Indigenous Heritage Month programs, a speaker series, decolonial healing workshops, dialogues and book circles, art and dance presentations, a film series and commencement ceremony. NAICC will be an intertribal space that will foster partnerships with Cal Poly's American Indian Student Association (AISA), American Indian Science and Engineering Society (AISES), American Indian and Indigenous Faculty and Staff Association, University Housing and Academic Affairs, as well as the yak tit#u tit#u yak ti#ini Northern Chumash Tribe and other local and statewide tribes.

Student Ombuds Services

Patricia Ponce, Student Ombuds

Robert E. Kennedy Library (35), Room 113

Phone: 805.756.1380

<http://ombuds.calpoly.edu>

The Office of Student Ombuds Services provides students with a safe place to seek confidential guidance on university related concerns and complaints. All communications are confidential, informal, and neutral, and will not be disclosed to anyone unless given permission to do so except when required by federal or state law, when there appears to be imminent risk of serious harm to self or others and issues around sexual misconduct. The Ombuds is committed to hearing about students' experiences, assisting them in understanding applicable university policies and procedures, and - as appropriate - helping them to resolve informally any university-related issue. The Ombuds adheres to the Code of Ethics and Standards of Practice of the International Ombudsman Association.

Technology Services at Cal Poly

Bill Britton, Vice President for Information Technology and Chief Information Officer, Information Technology Services (ITS)

Hub24, Kennedy Library

Phone: 805.756.7000

Email: servicedesk@calpoly.edu

<https://tech.calpoly.edu/>

Cal Poly's Information Technology Services (ITS) offers a wide range of technology services and resources (<https://tech.calpoly.edu/services/>) in support of student success. Upon acceptance into the university, each student receives credentials (<https://tech.calpoly.edu/services/calpoly-account/>) from ITS that allow them to log in to their Cal Poly email account (<https://tech.calpoly.edu/services/email-and-calendar-o365/>), connect to campus Wi-Fi (<https://tech.calpoly.edu/wifi-connect-cal-poly-networks/>) and access the My Cal Poly Portal (<https://tech.calpoly.edu/services/my-cal-poly-portal/>) (my.calpoly.edu). The Portal is the online hub where many official university transactions are handled, like planning quarterly schedules, registering for classes and paying tuition. As a Cal Poly student, a number of software titles are available for little or no cost. A list can be found at: Software Downloads (<https://tech.calpoly.edu/services/software-downloads/>).

Whether you are in search of services or need urgent tech help, the ITS Service Desk offers friendly concierge support by phone, email and walk-in from their location in the Hub24 Computer Lab in Kennedy Library (<https://tech.calpoly.edu/contact/>). Service Desk staff offer assistance with account passwords (<https://calpoly.atlassian.net/wiki/spaces/CPKB/pages/2424940/Password+Help/>), PolyCard (<https://tech.calpoly.edu/services/polycard/>), connecting devices to Wi-Fi, and other campus technology needs.

Student Affairs

Office of the Vice President for Student Affairs

Administration Building (01) Room 206

805.756.1521

<https://studentaffairs.calpoly.edu/>

Student Affairs delivers innovative co-curricular learning experiences that directly impact student recruitment, retention, and graduation from Cal Poly. The division is committed to the active engagement, wellbeing, inclusion, and success of all students as they progress to graduation and accomplish lifelong aspirations. Student Affairs drives graduation initiatives set forth by the California State University (CSU) and is intrinsically involved in the university's commitment to create a comprehensive, integrated strategy that improves graduation rates and closes the achievement gap for various student populations.

The Office of the Vice President for Student Affairs oversees departments that promote success throughout the Cal Poly experience by providing Learn by Doing opportunities, delivering innovative, student-centered programs, encouraging personal growth, and empowering our students within a safe, healthy, inclusive and supportive environment.

Vision

The vision of Student Affairs is to inspire all students to embrace their unlimited possibilities.

Values

Champion the student

Student Affairs provides comprehensive support, guidance and advocacy to create the environment for all students to reach their full potential.

Create visionary programs and services

Student Affairs serves as a leader in delivering innovative and extraordinary co-curricular learning experiences that directly impact student recruitment, retention and graduation.

Sustain meaningful partnerships and collaboration

Student Affairs partners throughout the campus and local community, building strong relationships through active communication to foster an inclusive environment for student success.

Cultivate continuous learning

Student Affairs matches the quality of Cal Poly's in-class experiences with out-of-class experiences that enhance Learn by Doing.

Promote ethics, integrity and respect

Student Affairs values and celebrates all students, staff, faculty, parents and the extended community with a commitment to employ honest and ethical decision-making practices in all that the division does.

Student Success-Focused Programs and Services

The Office of the Vice President for Student Affairs provides divisional leadership, support and oversight of the following units and departments: Associated Students, Inc. (student government, facilities operations, programs and services), Intercollegiate Athletics, access and equity programs (New Student and Transition Programs, Educational Opportunity Program, Cal Poly Scholars, Academic Skills Center, Disability Resource Center, Center for Military-Connected Students), Campus Health and Wellbeing (medical services, counseling services, health education, wellbeing, Safer), Career Services, Commencement, Leadership and Service (Clubs and Organizations, Fraternity and Sorority Life, Center for Leadership, Center for Service in Action), Office of the Dean of Students (Cal Poly Cares, Office of Student Rights and Responsibilities, student crisis management), Student Diversity and Belonging (Black Academic Excellence Center, Dream Center, Gender Equity Center, Men and Masculinities Program, Multicultural Center, Native American and Indigenous Cultural Center, Pride Center), Parent and Family Programs, and University Housing. In addition, the office oversees divisional strategic planning, assessment and research, marketing, fund development, dining programming, and advocates to the community, policy-makers, and the Chancellor's Office for all student engagement and programming outside of the classroom.

Campus Life

Associated Students, Inc.

Location: Julian A. McPhee University Union, Building 65, Room 212
Phone: 805-756-1281
Email: asi@calpoly.edu
www.asi.calpoly.edu (<http://www.asi.calpoly.edu>)

Mission Statement

Our mission is to enhance the quality of student life and complement the educational mission of Cal Poly through meaningful social, cultural, recreational, and educational programs. We provide valuable experiences through student advocacy, shared governance, student employment, and leadership opportunities.

Vision Statement

Connecting students to their ultimate college experience.

ASI Tagline

Experience life outside of the classroom.

About ASI

Associated Students, Inc. (ASI) is an inclusive, empowering, student-driven organization committed to providing programs, services, and facilities that enhance and develop the student learning experience. Cal Poly students are stakeholders in ASI and have access to leadership positions through Student Government and on-campus employment. All of these opportunities are designed to complement Cal Poly's educational mission, support a balanced education, and give students ownership and pride in their college experience.

History

Cal Poly's Associated Students organization was established in 1940 and officially incorporated in 1964. ASI operates in the form of shared student governance representing the collective student voice of Cal Poly. We are one corporate, legal entity responsible for the administration and oversight of all ASI programs and services.

ASI continues to relish in its heritage of serving students. It is fully invested in student success and here to provide state-of-the-art, well-managed facilities, programs, and resources to help students reach their full potential.

Funding

The primary funding for ASI comes from student fees comprised of two major components: the ASI fee and the University Union fee. These fees are collected when Cal Poly students enroll in classes and provide base funding for all ASI operations.

Fees are intended to serve students through ASI programs and services, as well as the maintenance and operation of ASI-managed facilities, including the Julian A. McPhee University Union, Cal Poly Recreation Center, Cal Poly Sports Complex, Orfalea Family and ASI Children's Center, and Doerr Family Field.

ASI Student Government

University Union (65), Room 202
Phone: 805-756-1291

ASI Student Government is comprised of elected and volunteer student leaders who act as the collective voice of the student body. Student leaders work together to practice shared governance, student advocacy, and collaboration with campus and community entities to ensure student interests are represented at every level.

There are three branches of Student Government:

ASI Executive Cabinet: Members are appointed by the ASI president and chief of staff and work to carry out the president's goals. Elected in the spring, the ASI president serves for the academic year and is responsible for providing input regarding corporate operations and student advocacy.

ASI Board of Directors: The official voice of Cal Poly students. The board is comprised of representatives from each academic college who establish policies and parameters for the affairs, properties, personnel, and operations of ASI.

University Union Advisory Board (UUAB): Works to maintain the integrity of the University Union student body fee, which students pay quarterly as part of their tuition. Makes policy recommendations regarding ASI-managed facilities.

ASI Children's Programs

The Orfalea Family & ASI Children's Center is one of the most sought-after learning facilities on the Central Coast.

Cal Poly students have first priority to enroll their children at the center, which provides quality early care and education services to children from four months of age through kindergarten. Cal Poly faculty and staff receive second priority for enrollment, followed by Cal Poly alumni and community members.

The center provides a learning environment where children are encouraged to explore ideas and interests through detailed project work that is focused on the children's interests, ideas, and discoveries.

The center serves 125 children and currently maintains a waitlist to enroll new children. Adding a child's name to this list is the first step toward enrollment.

Cal Poly Rose Float

Building 50L
Phone: 805-756-1268

Students of Cal Poly Universities in San Luis Obispo and Pomona work together each year to create the only student-built float in the annual Rose Parade. Cal Poly has been invited to participate in the parade for over 70 years. The university's Learn by Doing motto is exemplified in all facets of the program as students get hands-on experience turning their concepts into creations.

The Cal Poly Universities have been recognized for their float designs over 10 straight years, earning the Viewers' Choice Award, Bob Hope Humor Trophy, Fantasy Trophy, and the Lathrop K. Leishman Trophy for the most beautiful non-commercial float.

All majors and skill levels are welcome to contribute to any stage of the creative process, including designing, welding, metal shaping, woodworking, painting, and flower harvesting.

ASI Business Office

University Union (65), Room 212
Phone: 805-756-1281

The ASI Business Office is located within the University Union and is the operational location for numerous internal services, including Human Resources, Information Technology, general corporate administration, and Accounting. This is the hub that supports all programs and services of ASI.

ASI employment and job recruitment is managed through the ASI Business Office. The organization employs more than 75 full-time and part-time career employees. ASI also employs over 500 students, who act as the driving force behind the organization's ability to create quality programs and services for all students. On-campus employment through ASI provides valuable work experiences and leadership opportunities. Students are equipped with the tools to develop their skills in a professional setting with an organization that prioritizes academics above all else.

Students can work in a variety of positions, including childcare, graphic design, fitness instruction, lifeguarding, photography, event planning, facility management, and more. Students interested in employment opportunities with ASI can visit the ASI Jobs website to apply.

ASI PROGRAMS

ASI Club Services

University Union (65), Room 203
Phone: 805-756-5807

ASI Club Services connects students to more than 350 clubs at Cal Poly, working as a partner with the university to administer day-to-day club operations. ASI Club Services also works with ASI Student Government for the allocation of club funding, which the ASI Board of Directors provides to student organizations on an annual basis to support their club, club event, or club insurance needs.

ASI Events

University Union (65), Room 203
Phone: 805-756-1112

ASI Events offers a variety of fun activities and social events for Cal Poly students to enjoy at little-to-no cost. From comedians and trivia to movie nights and concerts, ASI Events provides a variety of opportunities throughout the year for students to build connections and experience college life outside of the classroom.

ASI Craft Center

University Union (65), Room 111
Phone: 805-756-1266

Create, design, relax, and restore in the ASI Craft Center with a variety of class offerings and studios for all skill levels to explore. Student instructors lead creative classes that all students and Cal Poly community members can experience at low costs, including ceramics, baseball-bat making, frameworking, skateboard making, and surfboard shaping.

ASI Poly Escapes

Cal Poly Recreation Center (43)
Phone: 805-756-1287

Limitless adventure awaits with ASI Poly Escapes, a premier outdoor adventure program with more than 60 outstanding yearly excursions and guided trips throughout San Luis Obispo County and California. Trips are led by student leaders who receive 12 to 18 months of training and take students to destinations including Big Sur, Yosemite National Park, and Death Valley National Park.

ASI Poly Escapes boasts an outdoor climbing park at the Cal Poly Recreation Center that is available to all skill levels. A rental shop featuring a variety of camping, hiking, paddling, and climbing gear is also available to help students and community members gear up for their next adventure.

ASI Recreational Sports Programs

With ASI Recreational Sports, students have access to numerous activities and programs that allow them to go above and beyond their recreational ambitions. Programs and services are housed at the Cal Poly Recreation Center and include the following:

ASI Intramural Sports: With more than 3,000 participants per quarter, ASI Intramural Sports are a popular activity among Cal Poly students. A variety of indoor and outdoor team sports, leagues, and tournaments are available at low costs to keep participants in the game all quarter long.

Students can create their own teams or register as free agents for basketball, soccer, flag football, softball, futsal, volleyball, dodgeball, racquetball, and more.

Wellness: A healthy lifestyle starts with you, and our wellness program is here to help you reach your goals. We bring world-class experts in nutrition, diet, and exercise to the Cal Poly Recreation Center for interactive classes and workshops that all members of the Cal Poly community can experience.

Fitness & Personal Training: More than 80 group exercise classes are available per week for students and Cal Poly Recreation Center members. Complimentary classes represent discipline areas of mind and body, cardio, strength and tone, and cross training including yoga, Pilates, indoor cycling, and more.

Additional fee-based classes, such as TRX and Krav Maga, provide an opportunity to experience unique classes that will challenge the body and mind for a well-rounded fitness experience.

Nationally certified personal trainers are available to individuals or small groups to provide specialized fitness programs and training. A complimentary personal training session is available to all Recreation Center members. This orientation session includes an introduction to facility equipment and a customized workout designed to help the member reach their fitness goals.

Aquatics: Students and Cal Poly Recreation Center members can choose from a variety of classes and activities in the Olympic-size lap and leisure pools. Swim instruction, group exercise, safety certifications, scuba certification, and pool deck relaxation are all available through the aquatics program.

The Pro Shop: Located in the main lobby of the Cal Poly Recreation Center, The Pro Shop provides members easy accessibility to workout gear, class reservations, lost and found items, and towel service. The Pro Shop provides a wide selection of items available for checkout, rental, or purchase for members to use during their workout or recreational activity.

ASI-MANAGED FACILITIES

Julian A. McPhee University Union (UU)

The Julian A. McPhee University Union is the gathering place for the Cal Poly community. Commonly referred to as the UU and its surrounding outdoor area as the UU Plaza, it acts as the center for campus activities. The UU is home to the majority of ASI programs, including ASI Events, ASI Club Services, the ASI Craft Center, ASI Student Government, and ASI Business Services, in addition to Chumash Auditorium, Chandler Lounge, numerous university organizations, and dining establishments. It is fashioned with a variety of seating areas, computer kiosks, charging stations, Wi-Fi, sound, hydration stations, and digital TV displays for advertising and up-to-the-minute news or sports coverage. Conference rooms, Chumash Auditorium, and the UU Plaza are available for reservation to hold meetings, conferences, or events.

Cal Poly Recreation Center

Cal Poly Recreation Center (43)
Phone: 805-756-1366 Main

The Cal Poly Recreation Center is the premier destination for fitness, recreation, relaxation, and wellness on campus. This cutting-edge facility offers state-of-the-art equipment, a variety of complimentary group fitness classes, multiple exercise rooms, an indoor track, six gymnasium courts, six racquetball courts, equipment checkout at The Pro Shop, personal training, an Olympic-size lap pool, leisure pool, sand volleyball courts, recreation areas, relaxation zones, wellness workshops, and the ASI Poly Escapes Climbing Park and Rental Center. Faculty, staff, alumni, and emeritus staff are welcome to purchase memberships and utilize the facility.

Orfalea Family and ASI Children's Center

Orfalea Family and ASI Children's Center (133)
Phone: 805-756-1267

The Orfalea Family and ASI Children's Center features seven classrooms and an outdoor area for play and discovery. Two full-time teachers and several Cal Poly student employees are present in every classroom to ensure each child receives individual care and attention. The center serves approximately 120 children from four months of age through kindergarten. Student parents have the first priority for enrollment, followed by Cal Poly faculty and staff, alumni, and community members. The center provides a learning environment where children are encouraged to explore their ideas and interests through detailed project work. The center is licensed and monitored by Community Care Licensing, is a demonstration site for the Outdoor Classroom Project, and has achieved all standards for national accreditation.

Cal Poly Sports Complex

The Cal Poly Sports Complex refers to the more than 40 acres of outdoor, lighted playing fields primarily used for student recreational sports programs, intercollegiate athletics, and outdoor club activities. These spaces include five basketball courts, four soccer fields, three softball fields, and three artificial turf fields. Lower fields include a NCAA regulation baseball stadium and softball stadium.

Doerr Family Field

Doerr Family Field is a synthetic turf field lined for flag football, NCAA football, and soccer. The field is open to the Cal Poly community for Frisbee, football, soccer, or fitness conditioning and used for student recreational sports programs, intercollegiate athletics, and special events.

Cal Poly Corporation

Corporation Administration Bldg. (15)
Phone: 805.756.1131

The Cal Poly Corporation is a separate non-profit §501(c)(3) organization serving the university across several key support functions:

- Commercial Operations – Campus Dining, University Store, Cal Poly Downtown, Cal Poly Print & Copy, Conference and Event Planning, Commercial Licensure, and Alcohol Licensure
- Financial & Support Services – Post-award sponsored projects, centers and institutes, Aid-to-Instruction Programs, Swanton Pacific Ranch, Technology Park, ASI, Performing Arts Center, Cal Poly Arts, Bella Montana faculty-staff housing, administration of gifts, holding, usage and liquidation of real property & gifts-in-kind, administration

of special activity accounts, and funding advances or guarantees for projects

A Board of Directors comprising of students, faculty, community leaders and university administrators oversees Cal Poly Corporation operations.

Leadership and Service

Center for Leadership

The Center for Leadership (<https://leadership.calpoly.edu/>) fosters socially responsible leadership development through high-impact practices, programs and events that are innovative, inclusive and educational. Its events and services combine theories of leadership with action-based approaches that aim to help students serve their communities and society as a whole. Students are encouraged in their leadership skill development, leadership competency, assumption of leadership and service roles, and the continuation of service to one's community after graduation.

Center for Service in Action

The Center for Service in Action (<https://serviceinaction.calpoly.edu/>) connects students with meaningful community service opportunities that complement their educational experience, strengthen their understanding of diversity and social responsibility, and develop skills to become ethical and knowledgeable leaders who contribute to a global society. The center cultivates reciprocal service and learning partnerships between the university and community partners. It also serves community-based organizations and governmental institutions seeking university support to address unmet community needs.

Clubs and Organizations

The mission of the Clubs and Organizations (<https://clubs.calpoly.edu/>) Cal Poly is to develop a safe, fun, and competitive environment, experience recreational and competitive athletic events, and represent Cal Poly at competitions across the nation. Cal Poly Club Sports promotes the positive values of physical activity, learned skills, team development, and sportsmanship acquired through participation in competitions and organized activities.

Club Sports

The Club Sports (<https://clubs.calpoly.edu/>) program provides a form of athletic and educational activity, which is an integral part of collegiate life. It provides a common theme for a diversified student body, faculty, staff, and alumni to operate as partners both inside and outside the community. The program promotes positive values of physical activity, learned skills, team development, and sportsmanship acquired through participation in competitions and organized activities.

Fraternity and Sorority Life

The Fraternity and Sorority Life (<https://greeklife.calpoly.edu/>) office fosters the learning and development of students who affiliate with the social fraternities and sororities, and provides opportunities and support for our community to be a relevant and contributing part of fulfilling the mission of both the Office of the Dean of Students and Cal Poly. The office supports Greek members to become ethical leaders and to fulfill the mission of their organizations. It also works to resolve sensitive issues relating to Greek students; recommend training programs for leaders and advisers; assist in prevention and resolution of conflicts between organizations, the campus and community; and serve as the campus representative to national Greek organizations.

New Student & Transition Programs

Science Bldg. (52), Rooms E8-10

805.756.2400

orientation@calpoly.edu

[orientation.calpoly.edu \(https://orientation.calpoly.edu/\)](https://orientation.calpoly.edu/)

The first step for newly-admitted students and their families begins at orientation with a campus visit to preview the campus during the Spring quarter. Summer orientation provides the next steps with an introduction to the Cal Poly community, academic programs, extensive services, and rich traditions.

New Student and Transition Programs offers several program sessions throughout the summer and at the start of the academic year to support new students as they enter and transition into Cal Poly:

- Student Life Orientation (SLO) Days – a Summer Orientation Session for all incoming first-year and transfer students
- Parent & Supporter Orientation – for the parents and family members of new students
- Week of Welcome – a Fall Quarter program for advising and enrollment support

Cal Poly Open House

Cal Poly Open House is an annual, three-day event that showcases the campus to admitted and current students, their supporters, alumni, and the San Luis Obispo community. Stemming from Poly Royal, Open House began in 1994 and has since featured programs such as the university and college welcomes, Friday Nite Invite, Poly Royal Campus Showcase, Poly Royal Rodeo, the tractor pull, and many more fun activities. This event takes place in April each year. Cal Poly's Admitted Students' Preview Day (during Open House weekend) is when admitted students and their supporters have an opportunity to preview the campus and connect with its leaders. Preview Day features presentations, tours and event opportunities to meet college deans, faculty, and current students, and hear from President Jeffrey D. Armstrong about the many resources and programs available to Cal Poly students.

Student Life Orientation (SLO) Days

Student Life Orientation (SLO) Days is a summer orientation program for all incoming students and their supporters. This summer orientation introduces students and supporters to the university through campus tours, information sessions from our many campus offices, student and parent panels, and presentations from Cal Poly's administrators. "The Mustang Way" and "Learn by Doing" mottos are integrated throughout the student and supporter sessions to provide a true Cal Poly experience.

Week of Welcome (WOW)

Week of Welcome (WOW), recognized as one of the nation's largest university orientation programs, integrates thousands of new students to life at Cal Poly during their first week before classes begin in the fall. More than 900 student WOW Leaders volunteer their time to educate new students about campus and community life, educational resources, and valuable services and programs that will help them have successful and fulfilling experiences at Cal Poly.

Student participation in both SLO Days and WOW is mandatory for incoming freshmen.

Parent and Family Programs

Administration Building (01) Room 206
 Parent Helpline: 805.756.6700
 Email: calpolyparent@calpoly.edu
<https://parent.calpoly.edu/>

Parent and Family Programs provides support, resources and exciting programming for the proud parents, family members and supporters of Cal Poly students. The office strives to facilitate communication between and among parents and the university, support student success by increasing parent awareness of university resources and help parents develop strategies to meet the unique challenges of parenting students through the college years.

Parent and Family Programs hosts events throughout the year, including orientation sessions, move-in receptions and Mustang Family Weekend. The office also oversees the Parent Advisory Council, a group of parents and supporters who collectively provide feedback and support to Parent and Family Programs and give input to university leadership on matters involving student development and success.

Public Safety

Building 36
 Administration: 805.756.6652
 Dispatch: 805.756.2281
<https://afd.calpoly.edu/police/>

Cal Poly Public Safety consists of three departments that comprise the Police Department, Department of Emergency Management, and Transportation and Parking Services.

The Cal Poly Police Department (CPPD) is a full service police agency certified by the California Department of Justice. It has the same responsibilities and authorities as any other law enforcement agency in the State of California and has state-wide authority. The CPPD embraces a community policing approach and works collaboratively with the community to address crime and quality of life to create a safe living, learning, and working environment. It includes a 9-1-1 emergency dispatch center that is responsible for all phones, radio communications, emergency medical dispatch, alarm monitoring and dispatch, and all communications for events.

Transportation and Parking Services, includes the management of over 7,300 parking spaces, four parking structures, parking and event planning and traffic flow. Special Events management staff is responsible for the traffic and parking coordination of over 500 campus events a year which brings approximately 700,000 visitors to campus. Commuter and Access Services provide resources for alternative transportation in partnership with local transit, regional RideShare, and bicycle organizations. The Escort Van Service provides free transportation for students, faculty and staff on campus during evening hours.

The Cal Poly Department of Emergency Management (DEM) is the lead coordinating department for all campus-wide emergency management preparedness, response, recovery, and mitigation operations. DEM is responsible for the development, maintenance, and sustainability of a campus-wide comprehensive all-hazard, risk-based emergency management program that engages the whole community. DEM consists of three full time and two part time employees.

Sustainability Practices

Sustainability Practices

"This is an exciting time in campus history as we envision the facilities needed to ensure future generations of students will get the most from Cal Poly's hands-on Learn by Doing education. Our student-created Climate Action Plan to achieve carbon neutrality and climate resilience is a tremendous example of Campus as Living Lab, and will help guide campus development to ensure these new facilities are not only beautiful and functional, but achieve high performance and sustainability through innovation and integrated design." – Jeffrey D. Armstrong President Cal Poly San Luis Obispo, California

Operations

Climate Action Planning

Created over the 2015–2016 academic year in collaboration between Facilities Management and Development and Cal Poly's City and Regional Planning Department, Cal Poly's Climate Action Plan (PolyCAP) was written by a team of 27 senior and graduate students in the CRP 410/411 studio. Many of the proposed strategies are already underway or have been completed ahead of schedule, such as Cal Poly's 4.5 MW solar farm. Data show the university has already reduced greenhouse gas emissions from the built environment (Scopes 1 & 2) to pre-1990 levels, five years ahead of the state mandate, in spite of 100 percent growth in building square footage and on-campus housing since that time. Please download the full report and supporting documents here (<https://afd.calpoly.edu/sustainability/campus-action/climate-resilience/>).

Renewable Energy and Energy Conservation

Cal Poly continues to make progress on its goal of carbon neutrality by 2050. In 2019, greenhouse gas emissions from the campus' built environment (Scopes 1 & 2) were 19 percent below the 2015 baseline year, and 28 percent below 1990 levels. Energy conservation efforts have reduced campus energy use intensity 22% from 2002 levels. Accelerated installation of renewable energy generation across the state from solar, wind, and other renewable energy, have resulted in over 80% percent of Cal Poly's electricity purchase coming from carbon-free sources—up from 59 percent in 2015. Additionally, with the completion of the 4.5 MW Gold Tree Solar Farm in May of 2018, 22 percent of Cal Poly's total electricity needs are now being met by on-site solar generation, with more solar projects in development. Read more about ways Cal Poly is working to reduce GHG from energy (<https://afd.calpoly.edu/sustainability/campus-action/energy/>).

Water Conservation

Being good stewards of water resources and eliminating waste rank among Cal Poly's most important sustainability efforts. Throughout the years, Cal Poly has been an excellent steward of its water resources, having implemented hundreds of water conservation measures. Since 2003, total campus water usage has remained nearly flat despite a 60% growth in building square footage and 100% growth of on-campus residency over the same period. Cal Poly is in the process of increasing water system sustainability and resilience through the development of an on-campus recycled water facility. This facility will treat campus waste water into up to 400 acre-feet per year of recycled water, enough to meet the needs of Cal Poly's campus farm, sports complex, and future landscape. Read more about water conservation at Cal Poly here (<https://afd.calpoly.edu/sustainability/campus-action/water/>).

Waste Reduction

The 2014 CSU sustainability policy set a goal of reducing per-capita landfill disposal 80 percent by the year 2020, then continue toward zero waste. In 2018 Cal Poly achieved 37 percent reduction and in 2019 and 55 percent reduction in per capita disposal over our 2006 base year. Campus recycling efforts include collection of cardboard, paper, bottles and cans, construction and demolition debris, scrap metal, and collection of food scraps, yard waste, and animal manure for composting. But in order to move toward Zero Waste, we need to move up the waste hierarchy and focus on waste prevention, waste reduction and reuse, which are better for the environment than recycling. To that end, Cal Poly has increased reuse of materials through campus surplus and collection of food, clothing and household goods during student Move-Out. Campus Dining is working with Copia to capture edible food for donation rather than compost. In order to further our campus Zero Waste efforts, we are looking at redesigning products and processes in order to eliminate waste before it happens, including reducing single-use packaging, reducing paper use by implementing electronic processes, and encouraging the use of Canvas to deliver all class materials electronically. Want to learn more about how Cal Poly is working towards zero waste, click here (<https://afd.calpoly.edu/sustainability/campus-action/zero-waste/>).

Sustainable Transportation

The greatest challenge Cal Poly faces on its path to carbon neutrality is transforming the way commuters get to campus, as commuting accounts for nearly half of total campus carbon emissions. When commuter and other transportation related emissions (Scope 3) are considered, Cal Poly has reduced total emissions 5% below 1990 levels and only 2% below the 2015 baseline. Transportation and Parking Services implemented numerous initiatives to reduce emissions from commuting, including prohibition of cars for freshmen living on campus, addition of bike racks, expansion of ZipCar and vanpool programs, limiting sale of parking permits, and a pilot to assign parking areas for permit holders to reduce circling. To learn how you can commute to campus more sustainably click here (<https://afd.calpoly.edu/parking/commutingtocampus/>).

Sustainable Food and Dining

As one of the largest commercial services at Cal Poly, Campus Dining strives to lessen the university's environmental impact with programs, products and services that reduce the campus's overall ecological "foodprint." Our sustainability efforts are focused around four key areas; food, waste, water and energy, and green buildings and transportation.

Campus Dining received a Best Practice Award for its food sustainability program in the 2017 Energy Efficiency and Sustainability Best Practice Awards Competition. The program was recognized for increasing food sustainability through procurement, production and waste practices, building partnerships across the campus and employing community outreach and education to promote food sustainability. Read more about Campus Dining sustainability efforts here (<https://www.calpolydining.com/sustainability/>).

Curriculum and Research Infusion

SusCat

As Cal Poly educates future leaders, the university recognizes the benefits teaching sustainability in the classroom. To fulfill sustainability goals set forth by the 2014 CSU Sustainability Policy, Second Nature Climate Commitment, and AASHE STARS a catalog of sustainability focused and related courses and programs was developed, often referred to as SusCat or the Sustainability Catalog. The purpose of the SusCat digital resource is threefold; to help student find courses and

programs that focus on sustainability, to allow faculty to highlight the courses they teach in sustainability, and to track and grow the list of sustainability offerings in Cal Poly academics. Students wishing to focus their studies on sustainability should use this website as a tool to guide selections of major and minor programs and use the site quarterly to determine course choices. To learn more visit suscat.calpoly.edu (<https://suscat.calpoly.edu/>). For a full list of courses, please see the Sustainability Courses website (p.) in the Courses A-Z section of the Cal Poly Catalog.

University Honors Program

In 2018, Cal Poly's University Honors Program won a UC/CSU/CCC Best Practice Award in the Sustainability in Academics category for a three-quarter, first-year learning experience in which students investigated environmental, social, economic and political elements of sustainable communities using both a historical and contemporary lens. The interdisciplinary experience satisfies a general education course requirement and incorporates a number of high-impact educational practices, including collaborative projects, service learning, research, diversity learning and e-portfolios. Learn more here (<https://honors.calpoly.edu/>).

CAFES Center for Sustainability

In 2010, the University formally recognized the CAFES Center for Sustainability, which started as a student-led program in 2000. The Center helped establish the Cal Poly Organic Farm, numerous professional development programs in sustainable pest management, composting, artisan foods and, most recently, the FEED (Farmer Experiential Education and Development) program for veterans entering agriculture. The Center has hosted many of the leaders of the sustainable agriculture movement at Cal Poly and has offered scores of public education programs on organic gardening, permaculture, holistic management, fair trade, bee keeping, carbon farming, and more. The Center also facilitates campus-community collaborations, which have resulted in regional food system initiatives, buy local campaigns, and young farmer coalitions. Visit the Center for Sustainability here (<https://cfs.calpoly.edu/>).

Sustainable Environments Minor

In 2015, the College of Architecture and Environmental Design's 25+ year-old interdisciplinary Sustainable Environments Minor program, completed by approximately 80 students/year from every college on the campus, won a UC/CSU/CCC Energy Efficiency and Sustainability Best Practice Award for Sustainability in Academics. This same program received the top national American Institute of Architects award in 2005 for "Ecological Literacy in Architectural Education." Learn more about the program here (<http://www.catalog.calpoly.edu/collegesandprograms/collegeofarchitectureandenvironmentaldesign/sustainableenvironmentsminor/>).

Campus and Community Engagement

AASHE-STARs Certification

The AASHE (Association for the Advancement of Sustainability in Higher Education) STARs (Sustainability Tracking, Assessment, and Rating System) offers a framework to implement, measure, and improve sustainable practices across the entire university. AASHE STARs uses a detailed data collection and certification process to foster sustainability across the entire campus. Cal Poly began working on AASHE STARs in 2016, earning a silver rating in February 2017, and a gold rating in September, 2019. The full report appears online here (<https://reports.aashe.org/institutions/california-polytechnic-state-university-ca/report/2019-09-19/>).

Green Campus

The Green Campus team works from a student led model with oversight from the Energy, Utilities, and Sustainability department in Facilities. Having the CSU policy goals to work from, the Green Campus team implements conservation projects, expands educational outreach and marketing, infuses sustainability into curriculum, and empower student leaders and clubs to be more impactful. Every year Green Campus team members are trained directly by Sustainability staff on strategies and tactics to engage their peers. Green Campus team members are responsible for targeting all students at the university to become sustainability experts. Green Campus conducts peer to peer outreach by hosting a variety of events ranging from film screenings, festivals and fairs, art installations, panels, and workshops. Team members are also responsible for conducting training for all incoming freshmen during all orientation events and tabling on a weekly basis. In the 2018/19 academic year, Green Campus employed 8 team members who each worked on average 10 hours per week for 30 week of the school year resulting in 2400 hours of peer to peer outreach planning and execution. Interested in joining the team, learn more here (<https://afd.calpoly.edu/sustainability/student/green-campus/>).

Eco Reps

Eco Reps are a group of students committed to creating a culture of environmental stewardship on campus at Cal Poly. Managed by the Green Campus Team within Facilities, Eco-Reps exemplify the "learn by doing" motto and play a direct role in Cal Poly's advancement to a fully sustainable future. Every year Eco Reps collect Green Living Certifications from students who live on and off campus. Through the Green Room and Green Office programs, Eco Reps provide sustainable consultations to students, staff, and faculty to educate and empower the Cal Poly community to live more consciously and in turn reducing Cal Polys energy, water, and waste. The goal of the Green Room Certifications is threefold: to serve as a mechanism to continue increasing sustainability awareness, to bring together already sustainable minded students, and to bring new students into the community. In the 2018/19 academic year, we trained 25 Eco Reps who each worked on average 5 hours per week for 30 week of the school year resulting in 3750 hours of peer to peer outreach planning and execution. Click here to learn more or get involved (<https://afd.calpoly.edu/sustainability/student/eco-reps-greenroom/>).

Zero Waste Ambassadors

Student Zero Waste Ambassadors educate event attendees about waste sorting and ensure that event waste streams result in high waste diversion. In 2018/19, with nearly 150 volunteers, the program reached more than 14,200 attendees at 25 events over seven months and diverted over 3 tons of waste from the landfill. The 150 volunteers worked on average 3 hours, resulting in 450 volunteer peer to peer outreach hours. As of February 2020, Zero Waste Ambassadors had funding to hire 8 student assistants to support events and manage volunteers. To learn more about the program click here (<https://afd.calpoly.edu/sustainability/student/zero-waste-ambassadors/>).

Central Coast Climate Collaborative

The Central Coast Climate Collaborative (4C) is a membership organization fostering a network of local and regional community leaders throughout six Central Coast counties to address climate change mitigation and adaptation. The Collaborative involves representatives from local and regional government, business and agriculture, academia, and diverse community groups to share information and best practices, leverage efforts and resources and identify critical issues and needs. The Collaborative engages all communities throughout the region to help ensure a resilient and low-carbon Central Coast prepared for the impacts of climate change. 4C engages with other collaborative

throughout the state. The Energy, Utilities and Sustainability Department committed funding for student time to support the faculty lead for the 4C, and campus leadership covers 8 units of release time for the Cal Poly Faculty lead to manage the collaborative. To learn more about 4C visit the homepage (<https://www.centralcoastclimate.org/>).

SLO Climate Coalition

In 2017, a group of San Luis Obispo County community leaders formed the SLO Climate coalition to address a growing need for local leadership on Climate Change in order to create a vibrant, just, and climate-resilient Central Coast. The SLO Climate Coalition brings together community expertise, creativity, and resources to champion high impact regional climate solutions that inspire other communities to do the same. The SLO Climate Coalition works in partnership with the City of San Luis Obispo and other local and regional partners. The university partners in this effort by providing technical support from the Energy Utilities and Sustainability department Director and Program Analyst. Read more about the SLO Climate Coalition here (<https://carbonfreeslo.org/>).

Poly Canyon Ventures

Poly Canyon Ventures is a 501(c)(3) non-profit founded by Cal Poly students and managed by Cal Poly Alumni. PCV provides high-impact Cal Poly student-led startups with funding, consulting, and other resources to help them grow and thrive. PCV is accelerating cleantech innovation and entrepreneurship at Cal Poly through the Climate Changer's Fund in partnership with the city of San Luis Obispo Mayor's office (?) and the Cal Poly Department of Energy, Utilities, and Sustainability. The Energy Utilities and Sustainability department has committed \$10K per year for up to 5 years. To learn more about PCV visit their site (<https://polycanyonventures.org/>).

University Housing

Building 31
Phone: 805.756.1226
<http://www.housing.calpoly.edu/>

University Housing provides an inclusive living experience for more than 8,000 Cal Poly students. Engaging programs, led by professional staff and peer leaders in diverse Residential Learning Communities, provide a foundational experience that supports Learn by Doing, encourages excellence, and promotes student success.

Because students who live on campus have greater success in college, Cal Poly requires all first-year students to live on campus.* A second year housing requirement is currently being phased in; please see our website for more information. All campus residents have access to academic, social, wellness and awareness events and enjoy opportunities to build life-long friendships.

**First-year students who do not intend to live on campus may request an exemption. Exemptions from the residential requirement are considered based upon the first-year On-Campus Living Exemption Policy.*

Residential Learning Communities (RLC)

Every resident is part of a Residential Learning Community. RLCs are intentionally designed to respond to the specific academic and social needs of resident students. Students benefit from established learning outcomes and initiatives that support and expand upon their academic experience. Different RLCs are offered to meet the unique needs of first-year, transfer and continuing students. Students can choose RLCs based on their academic college, co-curricular interests, culture and identity or

gender-inclusive preferences. View the complete list of RLCs here (http://www.housing.calpoly.edu/content/res_life/learning-communities/).

Residential Student Experience Staff

RLC programs and activities are administered by Coordinators of Student Development (CSDs)—full-time, live-in professionals who assist residents with getting involved on campus, general referrals, upholding community standards and building a community environment where students live. The CSDs also oversee the Resident Advisors (RAs). Resident Advisors (RAs) are the face and voice of University Housing for students living on campus.

RAs live with and develop positive relationships with every resident in their community. RAs role model the Mustang Way, promote a safe and comfortable living environment, develop community among their residents and staff, and are committed to every student's personal and academic success.

Student Leadership

Student representatives are elected in fall term to serve on community councils (governing boards) in each of the halls and apartments. Participants contribute to their hall's community by planning social, recreational, and educational events, and voicing student-related concerns. The Inter Housing Council is the umbrella student government organization for all the Community Councils.

Residential Technology

Residents have access to technology amenities that support student success in the residential communities. All campus rooms have 24/7 access to the Cal Poly Network and wireless Internet services, including support for academic success and personal connectivity, with a focus on delivering the latest network standards. Additional services include common room media centers, digital signage, TV/streaming media services, and access to a comprehensive Housing Portal to manage your residential service offerings. A current listing of technology services available to residents, including FAQs, can be found here <https://sat.calpoly.edu/restech> (<https://sat.calpoly.edu/restech/>).

Securing Campus Housing

New students

Only students who accept Cal Poly's offer of admission are able to apply for campus housing. To secure a space for first-year or transfer student housing, students must: 1) accept the offer of admission from Cal Poly; and, 2) complete the online housing application, electronically sign the license agreement, and make the initial payment.

Continuing students

To secure a space for continuing student housing, students must complete the online housing application, electronically sign the license agreement, and make the initial payment.

University Housing offers double, triple and quad rooms in our residence halls. Campus apartments feature single and double shared rooms in 4-, 5-, and 6-person apartments. Housing preferences are granted via a lottery system. For complete application information, visit the University Housing website (<http://www.housing.calpoly.edu/student-housing/>).

Fees

The initial payment, required to secure housing, is the first step in the payment process. A non-refundable initial payment may be required for continuing and transfer student applications. The balance of fees for the academic year may be paid via one-time payment, monthly or quarterly payment plan or by quarterly financial aid disbursements. Automatic housing grants are provided to cover a portion

of campus housing fees for students with the greatest financial need. View the current housing fees here:

First-year fees (<http://www.housing.calpoly.edu/student-housing/freshman-housing/freshman-student-housing-fees/>)
Transfer/grad fees (<http://www.housing.calpoly.edu/student-housing/transfer-graduate-student-housing/>)
Continuing student fees (<http://www.housing.calpoly.edu/student-housing/continuing-housing/continuing-student-housing-fees/>)

Off-Campus Housing Resources

University Housing offers off-campus resources for students interested in living in the community including an Educated Renters' Certificate Program to help student renters live successfully in the local community

FACULTY AND STAFF

Office of the President

Title	Name
President	Jeffrey D. Armstrong
Chief of Staff	Jessica Darin
Executive Director of Operations	Kelly Sebastian
Executive Assistant to the President	Barbara Rische
Executive Assistant to the Chief of Staff	Amy Miller
Principal Coordinator for Presidential Events & Protocol	Dana Matteson Seawell
Chief Communications Officer	Chris Murphy
University Legal Counsel	Robin Webb
Ombuds	Patricia Ponce

Academic Affairs

Title	Name
Provost and Executive Vice President for Academic Affairs	Cynthia Jackson-Elmoore
Executive Assistant to the Provost	Delores Lencioni
Associate Vice Provost, Academic Programs and Planning	Bruno Giberti
Interim Dean of Extended Education	J. Kevin Taylor
Assistant Vice Provost for International Programs	Cari Vanderkar
Dean of Library Services	Adriana Popescu
Assistant Vice Provost for University Advising	Beth Merritt Miller
Chair, Academic Senate	Thomas Gutierrez
Interim Dean, Graduate Education	Elizabeth Lowham
Vice President for University Personnel and Chief Human Resources Officer	Al Liddicoat
Associate Vice Provost for Academic Personnel	Kathryn Rummell
Assistant Vice President for AP/Employee & Labor Relations	Adrienne Ratner
CRCO and Clery Director, Title IX Coordinator	Maren Hufton

Colleges

Title	Name
College of Agriculture, Food and Environmental Sciences, Dean	Andy Thulin
College of Architecture and Environmental Design, Dean	Christine Theodoropoulos
Orfalea College of Business, Dean	Damon Fleming
College of Engineering, Dean	Amy Fleischer
College of Liberal Arts, Dean	Philip Williams
College of Science and Mathematics, Dean	Dean Wendt

Administration and Finance

Title	Name
Senior Vice President for Administration & Finance, CFO	Cynthia Vizcaíno Villa
Executive Director, Internal Audit	Dan DiPaola
Assistant Vice President, Divisional Operations	Jennifer Haft
Associate Vice President, Facilities Management and Development	Mike McCormick
Assistant Vice President, Public Safety/Chief of Police	George Hughes
Associate Vice President, Financial Services	Angela Kraetsch
Managing Director, Performing Arts Center	Chris Miller
Assistant Vice President, Strategic Business Services	Dru Zachmeyer

Strategic Enrollment Management

Title	Name
Vice President for Strategic Enrollment Management	Terrance Harris
Director of Admissions and Recruitment	Melissa Furlong
Executive Director of Financial Aid and Scholarships	Gerrie Hatten
University Registrar	Cem Sunata
Executive Director of Institutional Research	Mauricio Saavedra
Interim Director, Enrollment Planning & Management	Joseph Borzellino

Student Affairs

Title	Name
Vice President for Student Affairs	Keith B. Humphrey
Interim Executive Director, Associated Students, Inc.	Michelle Crawford
Director of Cal Poly Athletics	Don Oberhelman
Assistant Vice President for Student Affairs, Health & Wellbeing	Tina Hadaway-Mellis
Interim Executive Director, Career Services	Amie Hammond
Dean of Students	Joy Pedersen
Associate Vice President for Student Affairs, Disability Resource Center	Debi Hill
Director, Leadership and Service	Jason Mockford
Director, New Student and Transition Programs	Andrene Kaiwi
Assistant Vice President for Student Affairs, Diversity and Inclusion	Jamie Patton
Assistant Vice President for Student Affairs, Administration and Divisional Operations	Yukie Murphy

Associate Vice President for Student Affairs and Executive Director of University Housing	Jo Campbell
---	-------------

Office of University Diversity and Inclusion

Title	Name
Interim Vice President for Diversity & Inclusion and Chief Diversity Officer	Denise Isom
Interim Associate Vice President for Academic Affairs	Jennifer Teramoto Pedrotti
Director of Student Engagement & Inclusion Strategies	Beya Makekau
Staff Fellow	Sarah Macdonald
BEACoN Research Mentoring Program Faculty Fellow	Kelly Bennion
Executive Administrative Assistant	Megan Rivoire

Information Technology Services

Title	Name
Vice President & Chief Information Officer	Bill Britton
Associate Vice President & Deputy Chief Information Officer for Operations	Alison Robinson
Senior Financial Officer	Brett Holman
Director, New Programs	Paul Jurasin
Information Security Officer	Doug Lomsdalen

University Development & Alumni Engagement

Title	Name
Vice President of University Development and Alumni Engagement	Zachary Smith
Associate Vice President, Principal Gifts & Gift Planning	Stacy Cannon
Executive Director, Development Finance & Gift Administration	Lisa Rockwell-Harpster
Associate Vice President, University Development & Alumni Engagement	Grant Kirkpatrick
Director of Administrative Services & Foundation Board Operations	Ericka Horn

Auxiliary Organizations Associated Students, Inc.

Title	Name
Interim Executive Director	Michelle Crawford

Cal Poly Corporation

Title	Name
Chief Executive Officer	Cody VanDorn
Associate Executive Director	Andrea Burns

Cal Poly Chief Executive Officers

Cal Poly has been guided by the following chief executive officers.

Name	Year
Leroy Anderson	1902 to 1908
Leroy Burns Smith	1908 to 1914
Robert W. Ryder	1914 to 1921
Nicholas Ricciardi	1921 to 1924
Margaret Chase (acting)	1924
Benjamin Ray Crandall	1924 to 1933
Julian A. McPhee	1933 to 1966
Dale W. Andrews (acting)	1966 to 1967
Robert E. Kennedy	1967 to 1979
Dale W. Andrews (acting)	1979
Warren J. Baker	1979 to 2010
Robert B. Glidden (Interim)	2010 to 2011
Jeffrey D. Armstrong	2011 to Present

The faculty and staff, who have served at least fifteen years of full-time meritorious service at Cal Poly, are awarded emeritus status. A complete list of faculty emeriti is available at: <https://academic-personnel.calpoly.edu/content/quicklinks> (<https://academic-personnel.calpoly.edu/content/quicklinks/>). Contact Human Resources for information regarding staff emeriti. The University appreciates its emeriti members' contributions to the Cal Poly community.

Distinguished Teaching Award Recipients

In 1963 the University instituted a program of recognizing outstanding teaching efforts through the Distinguished Teaching Awards. Selections for this honor are based upon recommendations of the Academic Senate committee which follows the procedure of soliciting nominations from students and alumni. Evaluations and recommendations of the nominees are based upon an in-depth review by the committee, including classroom visitations. Recipients of the Distinguished Teaching Awards and their departments are listed below.

1963–64	Robert E. Holmquist, Physics John L. Merriam, Agricultural Engineering
1964–65	Joy O. Richardson, Mechanical Engineering Milo E. Whitson, Mathematics
1965–66	A. Norman Cruikshanks, Social Sciences Richard F. Johnson, Animal Husbandry George R. Mach, Mathematics
1966–67	Robert W. Adamson, Mechanical Engineering Kenneth G. Fuller, Mathematics William D. Curtis, Psychology
1967–68	Rodney G. Keif, Environmental Engineering David M. Grant, English Wesley S. Ward, Architecture

- 1968–69 Robert M. Johnson, Mechanical Engineering
Bruce Kennelly, Chemistry
Alice E. Roberts, Education
- 1969–70 Donald W. Hensel, History
David H. Montgomery, Biological Sciences
Philip H. Overmeyer, Business Administration
Willard M. Pederson, English
Omer K. Whipple, Chemistry
- 1970–71 Robert L. Cleath, Speech
Kenneth E. Schwartz, Architecture
Hewitt G. Wight, Chemistry
- 1971–72 Stuart E. Larsen, Aeronautical Engineering
Barton C. Olsen, History
Ronald L. Ritschard, Biological Sciences
Joseph N. Weatherby, Political Science (Social Sciences)
- 1972–73 Lyle G. McNeal, Animal Science
Charles W. Quinlan, Architecture
James E. Simmons, English
- 1973–74 William J. Phaklides, Engineering Technology
Louis D. Pippin, Education
Duane O. Seaberg, Agricultural Management
- 1974–75 Peter Jankay, Biological Sciences
Josephine S. Stearns, Child Development
George J. Suchand, Social Sciences
- 1975–76 James Hayes, Journalism
William V. Johnson, Music
Erna Knapp, Art
- 1976–77 Harry L. Fierstine, Biological Sciences
Grant D. Venerable II, Chemistry
Ralph M. Warten, Mathematics
- 1977–78 Timothy M. Barnes, History
Donald P. Grant, Architecture and Environmental Design
John C. Syer, Political Science
- 1978–79 Pat Pendse, Biological Sciences
Dane Jones, Chemistry
Adelaide Harmon-Elliott, Mathematics
- 1979–80 David J. Keil, Biological Sciences
Thomas Ruehr, Soil Science
Stephen Weinstein, Mathematics
Michael D. Zohns, Ornamental Horticulture
- 1980–81 Sarah E. Burroughs, Food Science and Nutrition (Child Development and Home Economics)
Christina Orr-Cahall, Art
Kendrick W. Walker, Philosophy
- 1981–82 Christina A. Bailey, Chemistry
Kenneth E. Ozawa, Physics
Thomas L. Richards, Biological Sciences
- 1982–83 James Bermann, Agricultural Engineering
Donald J. Koberg, Architecture
Jack D. Wilson, Aeronautical and Mechanical Engineering
- 1983–84 Euel W. Kennedy, Mathematics
- William L. Preston, Social Sciences
Michael J. Wenzl, English
- 1984–85 Robert S. Cichowski, Chemistry
Harvey C. Greenwald, Mathematics
Max E. Riedlsperger, History
- 1985–86 Edward H. Baker, Mechanical Engineering
Sue McBride, Education
Phillip K. Ruggles, Graphic Communication
- 1986–87 Boyd W. Johnson, Mathematics
Craig H. Russell, Music
Calvin H. Wilvert, Social Sciences
- 1987–88 James R. Mueller, Mathematics
Ronald S. Mullisen, Mechanical Engineering
Robert G. Reynolds, Art and Design
- 1988–89 Stephen W. Ball, Philosophy
George Cotkin, History
Abraham B. Shani, Management
- 1989–90 Lloyd N. Beecher, History
Talmage E. Scriven, Philosophy
Jan W. Simek, Chemistry
- 1990–91 Jay L. Devore, Statistics
Linda H. Halisky, English
Ann Morgan, Psychology
James L. Webb, Physical Education & Recreation Admin.
- 1991–92 Mary E. Pedersen, Food Science and Nutrition
John Snetsinger, History
W. Fred Stultz, Psychology and Human Dev.
- 1992–93 Susan Duffy, Speech Communication
Donald K. Maas, University Center for Teacher Education
Charles M. Slem, Psychology and Human Development
- 1993-94 William T. Little, Foreign Languages and Literatures
Steven R. Marx, English
Raymond M. Nakamura, Physical Education & Kinesiology
- 1994-95 Ronald F. Brown, Physics
Lee B. Burgunder, Business Administration
Nancy Lucas, English
- 1995-96 David Keeling, Chemistry and Biochemistry
John Russell, Music
Richard Simon, English
- 1996-97 Leonard Davidman, University Center for Teacher Education
Al Landwehr, English
Robert Thompson, Agribusiness
- 1997-98 John Culver, Political Science
Jay S. DeNatale, Civil and Environmental Engineering
David R. Henry, Speech Communication
- 1998-99 Colette Frayne, Global Strategy and Law
Carol MacCurdy, English
Leonard Myers, Computer Science
- 1999-00 J. Michael Geringer, Global Strategy and Law
Brent G. Hallock, Soil Science

Clinton A. Staley, Computer Science

2000-01 Sky Bergman, Art and Design
Phillip M. Doub, Agribusiness
William Martinez, Jr., Modern Languages and Literatures

2001-02 Kevin Clark, English
Alyson McLamore, Music
Mark Zohns, BioResource and Agricultural Engineering

2002-03 Alvin De Jong, Biological Sciences
Bernard Duffy, Speech Communication
Linda Vanasupa, Materials Engineering

2003-04 Matthew Moelter, Physics
Robert Smidt, Statistics
Nanine A. Van Draanen, Physics

2004-05 Fred DePiero, Electrical Engineering
John Hampsey, English
David Headrick, Horticulture and Crop Science

2005-06 Mary Armstrong, English
Michael B. Miller, Art and Design
Yarrow Nelson, Civil and Environmental Engineering

2006-07 William Fitzhenry, English
Elena Keeling, Biological Sciences
Donald H. Ryujin, Psychology and Child Development

2007-08 Michael Fahs, Communications Studies
Michael Lucas, Architecture
Charles "Tad" Miller, Accounting

2008-09 Derek Gragson, Chemistry and Biochemistry
Josh T. Machamer, Theatre and Dance

2009-10 Eric J. Kantorowski, Chemistry and Biochemistry
J. Kevin Taylor, Kinesiology

2010-11 Thomas H. Davies, Music
Thomas L. di Santo, Architecture

2011-12 Emily N. Taylor, Biological Sciences
Umot Toker, City and Regional Planning
Matthew K Ritter, Biological Sciences

2012-13 Seth Bush, Chemistry & Biochemistry
Jaymie Noland, Animal Science
Dylan Retsek, Mathematics

2013-14 Pat Fidopiastis, Biological Sciences
Matthew Moore, Political Science
Camille O'Bryant, Kinesiology

2014-15 Todd Grundmeier, Mathematics
Sandra Stannard, Architecture
Dustin Stegner, English

2015-16 Robert D. Clark, Kinesology
Karen Muñoz-Christian, Modern Languages and Literatures
Soma Roy, Statistics

2016-17 Brian Kennelly, World Languages and Literatures
Elizabeth Lowham, Political Science
Anthony Mendes, Mathematics

2017-18 Thomas Fowler, Architecture, CAED
Edward Himelblau, Biological Sciences, CSM
Francis Villablanca, Biological Sciences, CSM

2018-19 John Chen, Mechanical Engineering
Dale Clifford, Architecture

2020-21 Aaron Keen, Computer Science and Software Engineering
Matthew Hopper, History
Brad Campbell, English
Francisco Fernflores, Philosophy
Jenn Yost, Biological Sciences

Distinguished Scholarship Award

Prior to 2003-2004, the award was known as the Research, Creative Activities and Professional Development Award but was renamed the Distinguished Scholarship Award. The award was created to recognize faculty member's achievement in scholarship and creative activity across the entire range of disciplines represented at Cal Poly. Nominations are solicited from faculty, students, and alumni, and the Academic Senate's Distinguished Scholarship Awards Committee selects the recipients. The recipients of the award and their departments are listed below:

2003-04 Charles Burt, BioResource and Agricultural Engineering
Joanne Ruggles, Art and Design

2004-05 Estelle Basor, Mathematics
Rami Shani, Management

2005-06 Daniel Bieзад, Aerospace Engineering
Andrew Morris, History

2006-07 Mark A. Moline, Biological Sciences
Craig H. Russell, Music

2007-08 Terry Jones, Social Sciences
Michael Marlow, Economics

2008-09 Patrice L. Engle, Psychology and Child Development
Dean E. Wendt, Biological Sciences

2009-10 George Cotkin, History Department
Rafael Jimenez, Dairy Science

2010-11 Michael Geringer, Management
Jordi Puig-Suari, Aerospace Engineering

2011-12 Christopher Kitts, Biological Sciences
William Hendricks, Recreation, Parks, and Tourism

2012-13 Lanny Griffin, Biomedical & General Engineering
Bernard Duffy, Communication Studies

2013-14 Steven Klisch, Mechanical Engineering
David Marshall, Aerospace Engineering

2014-15 Wyatt Brown, Horticulture & Crop Science
Philip J. Costanza, Chemistry & Biochemistry
Lars Tomanek, Biological Sciences

2015-16 Ronald Den Otter, Political Science
Peggy Papatkakis, Food Science and Nutrition
William Siembieda, City and Regional Planning

2016-17 Patrick Lin, Philosophy
Suzanne Phelan, Kinesiology

- Jay Singh, Industrial Technology and Packaging
- 2017-18 Todd Pierce, English, CLA
 Mohammad Taufik, Electrical Engineering, CENG
 Zoe Wood, Computer Science and Software Engineering, CENG
- 2018-19 John Bellardo, Computer Science and Software Engineering
 Beth Chance, Statistics
 Marni Goldenberg, Experience Industry Management
- 2019-20 Foaad Khosmood, Computer Science and Software Engineering
 Diana Stanton, Theatre and Dance
 Scott Hazelwood, Biomedical Engineering
- 2020-21 Federico Casassa, Wine and Viticulture
 Stephen F. Hamilton, Economics
 Briana Ronan, School of Education

Learn by Doing Scholar Award

The Learn by Doing Faculty Scholar Award recognizes outstanding faculty scholarship on Cal Poly's signature pedagogy. Given for the first time in spring 2015, the award fosters, encourages, shares, and acknowledges Learn by Doing scholarship conducted by Cal Poly faculty.

- 2014-15 Steffen Peuker, Mechanical Engineering
 J. Kevin Taylor, Kinesiology
- 2015-16 Gregory Scott and Alan Kiste, Chemistry and Biochemistry
 Brian Self and James Widmann, Mechanical Engineering
- 2016-17 Lynn Metcalf, Entrepreneurship
 Catherine Waitinas, English
- 2017-18 Soma Roy, Statistics
 Julie Rodgers, Psychology and Child Development
 Graham Doig, Aerospace Engineering
- 2018-19 Katherine Watts, Chemistry and Biochemistry
 Javin Oza, Chemistry and Biochemistry
 Mary LaPorte, Art and Design
 Sara Bartlett, Psychology and Child Development
- 2019-20 Irene Carbonell, Industrial Technology and Packaging
 Javier de la Fuente, Industrial Technology and Packaging
 Robert Arens, Architecture
 Carmen Trudell, Architecture
 Brian Osborn, Landscape Architecture

Outstanding Faculty Advisor Award

In 2001-02 the University instituted a program of recognizing outstanding achievement by a faculty member in the area of student advising. Nominations are solicited from the faculty and staff and students. Recipients' names will be displayed on a perpetual plaque. The recipients of the Outstanding Faculty Advisor Award and their departments are listed as follows:

- 2001-02 Kathryn Rummell, English
- 2002-03 Jack Robison, Accounting
- 2003-04 William Preston, Social Sciences
- 2004-05 Lorraine Donegan, Graphic Communication
- 2005-06 Nfn Taufik, Electrical Engineering
- 2006-07 Abraham Lynn, Architectural Engineering
- 2007-08 Cynthia Moyer, Recreation, Parks and Tourism Administration
- 2008-09 Curtis Illingworth, Architecture

- 2009-10 Philip Costanzo, Chemistry and Biochemistry
- 2010-11 Ron Den Otter, Political Science
- 2011-12 Andrew Davol, Mechanical Engineering
- 2012-13 Leanne Berning, Dairy Science
- 2013-14 John Oliver, Electrical Engineering
- 2014-15 Kristen Cardinal, Biomedical and General Engineering
- 2015-16 Jenell Navarro, Ethnic Studies
- 2016-17 Elena Keeling, Biological Sciences
- 2017-18 Kim Sprayberry, Animal Science
- 2018-19 Lauren Kolodziejski, Communication Studies
- 2019-20 Nishi Rajakaruna, Biological Sciences
- 2020-21 Silvia Marijuan, World Languages and Culture

Provost's Leadership Award for Partnership in Philanthropy

This award was established in 2006 to recognize current or former faculty member's superior achievement in fundraising.

- 2006 Allan J. Hauck, Construction Management
 James A. Rodger, Construction Management
- 2007 Andrew J. Thulin, Animal Sciences
- 2008 Harvey Robert Levenson, Graphic Communication
- 2009 Charles M. Burt, BioResource and Agricultural Engineering
- 2010 Philip S. Bailey, College of Science and Mathematics
- 2011 Bruce L. Golden, Dairy Science Department
- 2011 Phillip S. Tong, Dairy Science Department
- 2012 Allen Estes, Architectural Engineering Department
- 2013 Ignatios Vakalis, Computer Science
 David Wehner, College of Agriculture, Food and Environmental Sciences
- 2014 Jesse Maddren, Mechanical Engineering
- 2015 Jonathan York, Cal Poly Center for Innovation & Entrepreneurship
- 2016 Dennis J. Derickson, Electrical Engineering
- 2017 Raymond H. Fernando, Chemistry and Biochemistry
- 2018 Benoit Lecat, Wine and Viticulture
- 2019 Brian Granger, Physics

President's Diversity Award

This award recognizes campus units that exhibit a commitment to the value of cultural diversity.

- 1997 Staff Council Cultural Awareness Committee
- 1998 Staff Council Cultural Awareness Committee
- 1999 Black Faculty & Staff Association
- 2000 26 Hours of Science & Technology in Agriculture
- 2001 Industrial and Manufacturing Engineering
- 2002 Housing and Residential Life
- 2003 Minority International Research Access Program
 Connections for Academic Success
- 2004 Summer Institute
- 2005 College of Science and Mathematics
 Career Services
- 2006 PolyCultural Committee

Social Sciences Department

- 2007 Counseling Services
Student Life and Leadership
- 2008 Department of Psychology & Child Development
Omega Xi Delta Fraternity
- 2009 Multicultural Engineering Program
Delta Lambda Phi
- 2010 Cal Poly Society of Women Engineers
Ethnic Studies Department
- 2011 Cal Poly Lion Dance Team
Modern Languages and Literatures Department
- 2012 Cultural Inclusion Committee University Housing
Driven Towards Sisterhood
- 2014 Latinos in Agriculture
Louis Stokes Alliance for Minority and Underrepresented Student
Participation in STEM (LSAMP)

1990-91 Barbara Ciesielski
Harriet Clendenen
Harriet Ross

Outstanding Staff Employee Award

The 1972-73 academic year saw the inception of the Outstanding Staff Employee Award. This honor is bestowed upon permanent, full-time employees of the University, Corporation, or Associated Students, Inc. who are in at least their fourth year of employment at Cal Poly. In order to be considered for this award, an employee should be truly dedicated and loyal; exhibit expertise in job performance; demonstrate a willingness to assist others enthusiastically; take initiative in making his or her department more efficient and productive; maintain an excellent relationship with co-workers, faculty, and students; and make contributions to both the University and the community. Nominations are solicited from staff employees, faculty members, and department or division heads. Selection of the awardees is made by a committee

1991–92	Wanda Bolt Pam Parsons Joe Risser		Marcy Maloney
1992–93	Rosemary Bowker Deborah L. Brothwell Andy McMeans	2012-13	Nancy Cochran David Harris Mark Rapoport
1993–94	Connie Davis Jim McLaughlin Richard Tibbetts	2013-14	Jean DeCosta Tammy Martin Craig Stubler
1994–95	Francesca Fairbrother Joyce Kalicicki Lorraine Ridgeway	2014-15	Maria Arvizu-Rodriguez Donald Popham Donetta Rosson
1995–96	George Enriquez Cynthia Jelinek Carol Montgomery	2015-16	Launnie Gin Ray Kisch Alexandra Kohler
1996–97	Kristina Pena Don Shemenske Judy Swanson	2016-17	Josh D'Acquisto Monica Cantu Ray Ward
1997–98	Richard Equinoa Pat Harris Nettie Steels	2017-18	Danielle Borrelli Douglas Brewster Thomas Moylan
1998–99	Darrell Blankenship Delores Estrada Rosemary Wagner	2018-19	Marilyn Allison-Bullock Susan Olivas Brenda Trobaugh
1999–00	Bonnie Krupp Druci Reese Ellen Stier	2019-20	Christina Wolfe-Chandler Kari Roose Jessica Hunter

2011-12	Helen Bailey Shannon Stephens		

Faculty and Staff Emeriti

The faculty and staff, who have served at least ten years of full-time meritorious service at Cal Poly, are awarded emeritus status. A complete list of faculty emeriti is available at Academic Personnel (<https://academic-personnel.calpoly.edu/content/quicklinks/>). Contact Human Resources for information regarding staff emeriti. The University appreciates its emeriti members' contributions to the Cal Poly community.

Faculty Directory

NAME	POSITION	EDUCATION
Abercromby, Kira J. (2008) Aerospace Engineering	Professor	B.S., University of California, Los Angeles, 1994; M.S., University of Colorado, Boulder, 1998; Ph.D., 2000.
Abo Ismail, Mohammed (2019) Animal Science	Assistant Professor	B.S., Alexandria University Damanhour, 2000; M.S., Alexandria University; Ph.D., University of Guelph, 2012
Adams, Nikki L. (2002) Biological Sciences	Professor	B.A., University of California, Santa Barbara, 1988; M.S., University of Maine, 1995; Ph.D., 2000.
Adams, Aubrie S. (2017) Communication Studies	Assistant Professor	B.A., Sonoma State University, 2005; M.A., Sacramento State University, 2013; Ph.D. University of California at Santa Barbara, 2017.
Adan, Elizabeth (2007) Women's, Gender and Queer Studies, Interdisciplinary Studies in the Liberal Arts	Professor and WGQS Department Chair	B.A., University of California, Davis, 1993; M.F.A., University of California, Santa Barbara, 1997; M.A., University of California, Berkeley, 2000; Ph.D., University of California, Santa Barbara, 2006.
Agarwal, Puneet (2021) Industrial and Manufacturing Engineering	Assistant Professor	B.S., Jadavpur University, Kolkata, 2016; M.S., University of Buffalo, New York, 2019; Ph.D., University of Buffalo, Buffalo, New York.
Agbo, Samuel O. (1991) Electrical Engineering	Professor	B.Sc., University of Nigeria, 1975; M.S.E., University of Michigan, 1978; Ph.D., University of Houston, 1984.
Ahlgren, William L. (1999) Electrical Engineering	Associate Professor	S.B., Massachusetts Institute of Technology, 1975; M.S., University of Arizona, 1977; Ph.D., University of Southern California, 1981.
Aivazpour, Zahra (2020) Management, HR, and Information Systems	Assistant Professor	Ph.D., University of Texas @ San Antonio, 2020
Al-Nakib, Farah (2018) History	Associate Professor	B.A., George Washington University, 2001; M.A., University of London, 2006; University of London, 2011, Ph.D.
Alaniz, Ryan C. (2011) Social Sciences	Professor and Department Chair	B.A., California Polytechnic State University, San Luis Obispo, 2000; M.A., University of California, Santa Barbara, 2004; Ph.D., University of Minnesota, 2012.
Alber, Julia M. (2017) Kinesiology	Associate Professor	B.S., University of Illinois, Champaign-Urbana, 2010; MPH, University of North Carolina, Greensboro, 2012; Ph.D., University of Florida, 2015.
Alexander, Benjamin (2015) Management, HR, and Information Systems	Associate Professor	B.S., Tufts University, 2005; M.A., George Mason University, 2009; Ph.D., Tulane University.
Allen, Regulus L. (2006) English	Associate Professor	B.A., University of California, Los Angeles, 1994; M.A., 2000; Ph.D., 2006.
Almeida, Daniel J. (2016) School of Education	Associate Professor	B.A., Dartmouth College, 2002; M.A., Boston College, 2005; Ph.D., University of Southern California, 2016.
Alzraiee, Hani (2018) Civil and Environmental Engineering	Assistant Professor	B.S., Birla Institute of Technology, 2001; M.S., Islamic University of Gaza, 2007; Ph.D., Concordia University, 2013.
Amin, Samir (2015) Food Science and Nutrition	Associate Professor	A.O.S. in Occupational Sciences Culinary Institute of America, 1988; B.S. University of Nevada Las Vegas, 1992; M.S. Michigan State University, 1999; Ph.D. Michigan State University, 2008.
Amos, Dave (2020) City and Regional Planning	Assistant Professor	B.S., Urban and Regional Studies, Cornell University; M.Arch, University of Oregon; MCRP, University of Oregon; Ph.D. City and Regional Planning, University of California, Berkeley
Anderson, Bing (2004) Finance	Associate Professor	B.Engr., University of Science and Technology of China, 1993; M.A., University of Chicago, 1996; M.S., Stanford University, 2000; Ph.D., 2002.
Anderson, Bradford P. (2006) Accounting	Associate Professor	B.A., Purdue University, 1984; J.D., State University of New York, 1987.
Anderson, Christian (2012) World Languages and Cultures	Associate Professor	B.A., University of Maryland, College Park, 1995; M.A., University of California, Davis, 2005; Ph.D., 2010.
Anderson, Paul E. (2019) Computer Science	Assistant Professor	B.S., Wright State University, 2004; M.S., 2006; Ph.D. 2010.

Anderson, Lisa (2021) Accounting	Assistant Professor	Ph.D., University of Arkansas 2021, M.A. of Science in Accounting, Southern Methodist University 2012, B.A. of Science in Accounting, Clemson University 2010
Appel, Christopher S. (2002) Natural Resources Management and Environmental Sciences	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1995; M.S., 1998; Ph.D., University of Florida, 2001.
Arakaki, Dean Y. (2001) Electrical Engineering	Associate Professor	B.S., California State Polytechnic University, Pomona, 1984; M.B.A., California State University, Long Beach, 1989; M.S., 1992; Ph.D., Penn State University, 2000.
Arceneaux, Craig (2001) Political Science	Professor	B.A., California State University, Fullerton, 1989; M.A., Ohio State University, 1991; Ph.D., University of California, Riverside, 1997.
Archer, Graham C. (2002) Architectural Engineering	Professor	B.A.Sc., University of Waterloo, Canada, 1985; M.A.Sc., 1986; Ph.D., University of California, Berkeley, 1996. Professional Engineer, Ontario.
Arens, Robert M. (2005) Architecture	Professor and Associate Department Head	B.S., University of Michigan, 1981; M.Arch., 1984. Registered Architect, Michigan.
Arrington, Nancy (2018) Political Science	Assistant Professor	B.A., University of Texas, Austin, 2010; MIP University of Georgia, 2012; Ph.D. Emory University, Georgia, 2018.
Arrivee, David A. (2004) Music	Professor	B.A., Princeton University, 1993; M.Mu., Boston University, 1995; D.M.A., Northwestern University, 2004.
Askay, David A. (2013) Communication Studies	Associate Professor	B.S., University of California at San Diego, 2004; M.A. University of North Carolina at Charlotte, 2011; Ph.D. 2013.
Awwad, Mohamed (2019) Industrial and Manufacturing Engineering	Assistant Professor	B.S., Cairo University, Egypt, 2009, M.S. Cairo University, Egypt, 2013, M.S. University of Central Florida, 2014, Ph.D. University of Central Florida, 2015
Ayash, Brian (2014) Finance	Associate Professor	B.S., Clarkson University; MBA, University of Rochester; M.S. University of California, Berkeley; Ph.D. University of California, Berkeley.
Babin, Nicholas (2018) Natural Resources Management and Environmental Sciences	Assistant Professor	B.A., UC Santa Cruz, 2004; M.A., UC Santa Cruz, 2008; Ph.D., UC Santa Cruz, 2012.
Baltimore, Craig V. (2001) Architectural Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1986; M.S., Duke University, 1996; Ph.D., 1998. Registered Structural Engineer and Professional Engineer, California.
Barata, Antonio G. (1985) Music	Professor Emeritus (FERP)	B.A., Towson State University, 1977; M.M., Northwestern University, 1979; D.M.A., University of Illinois, 1985.
Barlow, Philip L. (2006) Construction Management	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1987; M.B.A., Golden Gate University, 1993; Ph.D., University of Florida, 2015; Licensed General Contractor, Licensed Broker, Certified Professional Constructor (CPC), Certified Cost Consultant (CCC), Designated Design-Build Professional (DBIA), LEED Accredited Professional (LEED AP).
Bass, Beverly J. (2008) Landscape Architecture	Professor and Department Head	B.F.A., East Carolina University, 1982; M.L.A., University of Arizona, 2003. LEED Accredited Professional. Certified Arborist, Registered Landscape Architecture, California.
Bates, G.W. (2018) BioResource and Agricultural Engineering	Assistant Professor	B.S., California Polytechnic State University, San Luis Obispo, 2003; M.S. University of Washington, Seattle, 2011; Ph.D., Texas Tech University, Lubbock, 2017. Registered Civil Engineer, CA.
Battenburg, John (1989) English	Professor	B.A., Andrews University, 1982; M.A., Ohio University, 1984; Ph.D., Purdue University, 1989.
Battle, Martin (2015) Political Science	Associate Professor	B.A., University of Sheffield, 1997; M.A., University of Wisconsin, Milwaukee, 2000; Ph.D., Washington University, St. Louis, 2006.
Bean, Timothy W. (2019) Biological Sciences	Associate Professor	B.A., Columbia University, 2004; Ph.D., University of California, Berkeley, 2012.
Beaton, Brian (2015) History	Associate Professor	B.A., Emory University, 2000; M.A., New York University, 2002; University of Toronto, Ph.D., 2012.
Bednarek, Ziemowit K. (2012) Finance	Professor and Area Chair	Ph.D., University of California, Berkeley, 2010.
Beekman, Matthew (2016) Physics	Associate Professor	B.S., University of South Florida, 2003; M.S., 2006; Ph.D., 2009.

Behrouzi, Anahid (2016) Architectural Engineering	Associate Professor	B.S., North Carolina State University, Raleigh, 2011; M.S., University of Illinois, Urbana-Champaign, 2013; Ph.D., University of Illinois, Urbana-Champaign, 2016.
Belanger, Jacques (2017) Mechanical Engineering	Assistant Professor	B.S., Laval University, Quebec City, Canada, 1985; M.S., Laval University, 1987; Ph.D., California Institute of Technology, 1993.
Bellardo, John M. (2006) Computer Science, Computer Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1999; M.S., University of California, San Diego, 2001; Ph.D., 2006.
Bencharit, Lucy (2019) Psychology and Child Development	Assistant Professor	B.A., New York College, College of Arts and Sciences, 2007. M.A., New York College, Graduate School of Arts and Sciences, 2010. Ph.D., Stanford University, 2018.
Bennert, Vardha N. (2011) Physics	Professor	B.S., Ruhr-University of Bochum, Germany, 1999; M.S., 2002; Ph.D., 2005.
Bennett, Darin C. (2014) Animal Science	Associate Professor	B.Sc., University of Guelph, 1986; M.Sc., University of British Columbia, 1993; Ph.D., University of British Columbia, 2002.
Bennion, Kelly Ann (2016) Psychology and Child Development	Associate Professor	B.A., Middlebury College, 2010; Ed.M., Harvard Graduate School of Education, 2011; Ph.D., Boston College, 2016.
Bensky, Thomas J. (2001) Physics	Professor	B.S., California State University, Northridge, 1992; Ph.D., University of Virginia, 1998.
Benson, Bridget G. (2011) Computer Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 2005; M.S., University of California Santa Barbara, 2007; Ph.D., University of California, San Diego, 2010
Berber-Jimenez, Lola (1995) Liberal Studies	Professor and Department Chair	B.S., Universidad LaSalle, 1983; Ph.D., University of California, Davis, 1990. K-5 Teaching Credential.
Bergman, Sky (1995) Art and Design	Professor	B.S., University of South Florida, 1987; M.F.A., University of California, Santa Barbara, 1991.
Bernard, Thomas J. (2008) Theatre and Dance	Professor	B.A., University of Minnesota, 1991; M.F.A., Northern Illinois University, 1995.
Berning, Leanne M. (1990) Animal Science	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1982; M.S., University of Wisconsin, 1985; Ph.D., University of Maryland, 1990.
Bettergarcia, Jay (2017) Psychology and Child Development	Associate Professor	B.S., California Polytechnic State University, San Luis Obispo, 2009; M.A., San Francisco State University, 2011; Ph.D., University of California, Santa Barbara, 2016.
Beyramali Kivy, Mohsen (2019) Materials Engineering	Assistant Professor	B.S., Chemical Engineering, University of Tehran, 2009; Ph.D. Materials Science and Engineering, Missouri University of Science and Technology, 2017
Birdsong, Charlene B. (2003) Mechanical Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1991; M.S., Michigan State University, 1996; Ph.D., 1999.
Black, Michael W. (2001) Biological Sciences	Professor	B.S., Southwest Missouri State, 1993; Ph.D., Stanford University, 1999.
Blank, Jason M. (2009) Biological Sciences	Associate Professor	B.S., Duke University, 1996; Ph.D., Stanford University, 2006.
Blau, Jnan A. (2008) Communication Studies	Associate Professor	B.S., Arizona State University West, 1999; M.S., Southern Illinois University, 2002; Ph.D., 2007.
Bockmon, Emily (2017) Chemistry and Biochemistry	Assistant Professor	B.A., Pomona College, 2008; Ph.D., Scripps Institution of Oceanography, UC San Diego, 2014.
Bodwin, Kelly N. (2017) Statistics	Assistant Professor	B.A., Harvard University, 2011; Ph.D., University of North Carolina, 2017.
Bohr, Gregory S. (2005) Social Sciences	Associate Professor	B.A., University of California, Berkeley, 1993; M.A., San Diego State University, 1997; Ph.D., Louisiana State University, 2004.
Bonini, Vincent (2008) Mathematics	Professor	B.A., University of California, Santa Cruz, 2000; M.A., 2001; Ph.D., 2006.
Bordeman, Adam (2015) Accounting	Assistant Professor	B.S., Marquette University, 2006; M.S., Marquette University, 2007; Ph.D., University of Colorado at Boulder, 2015.
Borzellino, Joseph E. (2001) Mathematics	Professor	B.S., University of California, Irvine, 1987; M.A., University of California, Los Angeles, 1989; Ph.D., 1992.

Boswell, Michael R. (1998) City and Regional Planning	Professor and Department Head	B.A., University of Central Florida, 1989; M.S.P., Florida State University, Tallahassee, 1991; Ph.D., 2000.
Brady, Pamalee (1998) Architectural Engineering	Professor Emeritus (FERP)	B.S., California Polytechnic State University, San Luis Obispo, 1979; M.S., University of California, Berkeley, 1980; Ph.D., University of Illinois, Urbana-Champaign, 2004. Registered Civil Engineer, California.
Brammeier, Meredith (2001) Music	Professor	B.A., Princeton University, 1992; M.M., Eastman School of Music, 1995; D.M.A., University of Southern California, 2000.
Bridger, Sarah (2011) History	Associate Professor	B.A., Brown University, 2000; M.A., Columbia University, 2005; M.Phil, 2006; Ph.D., 2011.
Brown, D. Kenneth (2007) Philosophy	Associate Professor and Department Chair	B.A., University of California, Irvine, 1992; M.A., Claremont Graduate University, 1998; Ph.D., University of California, Irvine, 2006.
Brown, J. Wyatt (1990) Horticulture and Crop Science	Professor Emeritus (FERP)	B.S., Louisiana State University, 1978; M.S., 1985; Ph.D., Cornell University, 1990.
Brussel, Eric S. (2012) Mathematics	Professor	B.A., University of California, Santa Cruz 1982; Ph.D., University of California, Los Angeles, 1993.
Burd, Matthew A. (2003) Animal Science	Professor	B.S., University of Wisconsin–Madison, 1987; M.S., San Jose State University, 1991; D.V.M., University of California, Davis, 1996.
Burgunder, Lee B. (1983) Accounting	Professor Emeritus (FERP)	B.A., Dartmouth College, 1977; M.B.A., Stanford University, 1981; J.D., 1981.
Burke, Ellen (2014) Landscape Architecture	Associate Professor	B.A., Vassar College, 1997; M.L.A., Harvard University Graduate School of Design, 2005.
Burleson, James (2014) Management, HR, and Information Systems	Assistant Professor	B.B.A., Baylor University; M.B.A., Auburn University.
Burn, Shawn Meghan (1990) Psychology and Child Development	Professor Emeritus	B.S., Virginia Commonwealth University, 1982; M.A., The Claremont Graduate University, 1984; Ph.D., 1988.
Bush, Seth (2005) Chemistry and Biochemistry	Professor and Department Chair	B.S., Reed College, 1994; Ph.D., University of California, Berkeley, 1999.
Byrne, Andrew M. (2017) School of Education	Associate Professor	B.A., Grove City College, 1996; M.S., East Carolina University, 2005; M.S., East Carolina University, 2005; Ph.D., East Carolina University, 2013.
Cabrinha, Mark (2003) Architecture	Professor and Associate Dean	B.Arch., California Polytechnic State University, San Luis Obispo, 1995; M.Arch., University of Illinois, 2001; Ph.D., Rensselaer Polytechnic Institute, 2010. Registered Architect, Illinois.
Cacciamani, Laura (2016) Psychology and Child Development	Associate Professor	B.S., Carnegie Mellon University, 2009; M.A., The University of Arizona, 2010; Ph.D., 2014.
Cai, Xiaowei (2008) Agribusiness	Professor	B.S., M.S., Nanjing Agricultural University, 2001; M.S., Ph.D., University of Wisconsin, 2009.
Call, Lewis W. (1996) History	Professor	B.A., University of California, San Diego, 1990; M.A., University of California, Irvine, 1992; Ph.D., 1996.
Callenes-Sloan, Joseph (2017) Computer Engineering	Assistant Professor	B.S., Iowa State University of Science and Technology, Ames, 2007; M.S., University of Illinois at Urbana-Champaign, 2011; Ph.D., University of Illinois at Urbana-Champaign, 2013
Camp, Charles D. (2007) Mathematics	Professor	B.A., University of California, San Diego; 1989; Ph.D., California Institute of Technology, 2004.
Campbell, Brad (2007) English	Associate Professor	B.A., St. Mary's College of California, 1997; M.A., University of Illinois at Urbana-Champaign, 1999; Ph.D., 2007.
Campbell, Tammy (2015) Chemistry and Biochemistry	Associate Professor	B.S. University of California, Los Angeles 2001; M.S. San Francisco State University, 2004; Ph.D. California Institute of Technology, 2010
Campos Chillon, Fernando (2011) Animal Science	Professor	B.S., California State Polytechnic University, Pomona, 1997; M.S., 2000; DVM, Colorado State University, 2004; Ph.D., 2009; Diplomate American College of Theriogenologists, 2009.
Cannon, Karen J. (2018) Agricultural Education and Communication	Assistant Professor	B.A., Colorado State University, Fort Collins, 2000; M.S., 2003; Ph.D., University of Florida, 2011.
Caplan, Lana Z (2016) Art and Design	Associate Professor	B.A., Boston University, 1994; M.F.A., Massachusetts College of Art and Design, 2006.

Cardinal, Kristen O'Halloran (2007) Biomedical Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 2003; Ph.D., University of Arizona, 2007.
Cardinal, Trevor (2007) Biomedical Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 2003; Ph.D., University of Arizona, 2007.
Carlton, Matthew A. (1999) Statistics	Professor	B.A., University of California, Berkeley, 1994; M.A., University of California, Los Angeles, 1996; Ph.D., 1999.
Carr, Chris A. (1998) Accounting	Professor	B.A., University of Nebraska, 1987; M.A., University of California, Los Angeles, 1998; J.D., Santa Clara University, 1990.
Carrigan, Coleen M. (2014) Social Sciences	Associate Professor	B.A., College of the Holy Cross, 1996; M.A., University of Washington, 2009; Ph.D., University of Washington, 2013.
Carroll, Jennifer (2006) Chemistry and Biochemistry	Professor	B.S., Sonoma State University, 1996; Ph.D., University of California, Santa Cruz, 2001.
Carter, Amy (2007) Orfalea College of Business	Assistant Dean	B.A., Chico State University, 2000. M.A., California Polytechnic State University, San Luis Obispo, 2007.
Casassa, Luis Federico (2015) Wine and Viticulture	Associate Professor	B.S., Cuyo National University, Mendoza, Argentina, 2004; M.S., 2007; Ph.D. Washington State University, 2013.
Castro, Luis (2015) Food Science and Nutrition	Associate Professor	B.S., University of Costa Rica, 2004; Licentiate, University of Costa Rica, 2006; M.S., Washington State University, 2009; Ph.D., Washington State University, 2013.
Cerf, Douglas C. (1990) Accounting	Professor Emeritus (FERP)	B.S., University of California, Berkeley, 1978; M.A., University of California, Davis, 1987; Ph.D., 1991.
Chadwell, Charles (2003) College of Engineering, Civil and Environmental Engineering	Associate Dean and Professor	B.S., University of California, Berkeley, 1997; M.S., University of Berkeley, 1998; Ph.D., University of California, Berkeley, 2003. Registered Professional Engineer, California.
Chamberlain, David (2017) Accounting	Assistant Professor	J.D., University of Columbia, 1992, LL.M University of New York, 1993
Champney, Danielle (2013) Mathematics	Associate Professor	B.S., Bowling Green State University, 2007; M.A., University of California, Berkeley, 2010; Ph.D., 2013.
Chance, Beth L. (1999) Statistics	Professor	B.S., Harvey Mudd College, 1990; M.S., Ph.D., Cornell University, 1994.
Charalampidis, Stathis (2019) Mathematics	Assistant Professor	B.S., Aristotle University of Thessaloniki, 2007; M.S., 2009; Ph.D., 2013.
Chen, Sophia (2010) World Languages and Cultures	Professor	Ph.D., Florida State University, 2007.
Chen, John (2008) Mechanical Engineering	Professor	B.S., University of Virginia, 1984; M.S., Stanford University, 1987; Ph.D., 1991.
Chen, Leida (2014) Management, HR, and Information Systems	Professor and Area Chair	M.B.A., University of Central Arkansas, 1996; Ph.D., University of Memphis, 2000.
Cheuk, Tina (2019) School of Education	Assistant Professor	B.S., University of Chicago, 1999; M.A., University, 2007; Ph.D., Stanford University, 2019.
Chiu, Yi-wen (2014) Natural Resources Management and Environmental Sciences	Associate Professor	B.S., National Taiwan University, 1996; M.S., University of Minnesota, 2006; Ph.D., University of Minnesota, 2010.
Choboter, Paul F. (2005) Mathematics	Professor	B.Sc., Simon Fraser University, 1995; M.Sc., McGill University, 1997; Ph.D., University of Alberta, 2002.
Choudhury, Gour (2011) Food Science and Nutrition	Professor Emeritus (FERP)	B.S., University of Gauhati, India, 1972; M.S., University of Mysore, India, 1977; Ph.D., University of Alberta, Canada, 1987.
Christiansen, Jodi (2006) Physics	Professor	B.A., Harvey Mudd College, 1985; M.S., University of Wisconsin, Madison, 1988; Ph.D., 1993.
Clague, David (2007) Biomedical Engineering	Professor	B.S., University of California, Santa Barbara, 1987; M.S., University of California, Davis, 1993; Ph.D., 1997.
Clark, Robert D. (1998) Kinesiology	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1992; M.S., Louisiana State University, 1996; Ph.D., 1998.
Clay, Gary R. (1995) Landscape Architecture	Professor Emeritus (FERP)	B.L.A., Utah State University, 1974; M.L.A., University of Illinois, 1986; Ph.D., University of Arizona, 1996.

Cleary, Joseph (2018) Construction Management	Assistant Professor	B.S. Illinois State University, 1999; M.S. Illinois State University, 2010
Clement, Sandra L. (2011) Biological Sciences	Associate Professor	B.S., Doane College, 1995; Ph.D., Michigan State University, 2004.
Clements, John (2005) Computer Science	Professor	B.A., Princeton University, 1996; M.S., Rice University, 2001; Ph.D., Northeastern University, 2005.
Clifford, Dale T. (2014) Architecture	Associate Professor	B.Arch., Pratt Institute, 1993; M.S. Architectural Studies, Massachusetts Institute of Technology, 1999. Registered Architect, Arizona.
Cobb, Richard (2017) Natural Resources Management and Environmental Sciences	Associate Professor	B.S., Northern Arizona University, 1996; M.S., University of Maine, 2000; Ph.D., University of California Davis, 2010.
Cole, Matthew (2015) Economics	Associate Professor	B.S., University of Northern Iowa, 2001; M.S., University of Northern Iowa, 2003; Ph.D., University of Oregon, 2009.
Conway-Silva, Bethany A. (2015) Communication Studies	Associate Professor	B.A., University of New Mexico, 2007; M.A., University of Arizona, 2011; Ph.D., 2015.
Costanzo, Philip (2007) Chemistry and Biochemistry	Professor	B.S., Carnegie Mellon University, 2001; Ph.D., University of California, Davis, 2005.
Costello, Enrica Lovaglio (2002) Art and Design	Professor	M.A., University of California, Santa Barbara, 2001; M.F.A. equivalent, University of Studies of Genova, Italy, 1996.
Costello, Michael J. (1999) Wine and Viticulture	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1981; Ph.D., University of California, Berkeley, 1992. Pest Control Advisor. Pest Control Advisor.
Cravens, R.G. (2019) Political Science	Assistant Professor	B.A., Sewanee: The University of the South, 2010; M.A., University of Tennessee, 2014; Ph.D., University of Tennessee, 2017
Crockett, Robert (2000) Biomedical Engineering	Professor	B.S., University of California, Berkeley, 1989; M.B.A., Pepperdine University, 1992; Ph.D., University of Arizona, 1997.
Crutchfield, Stephen A. (2015) School of Education	Associate Professor	B.S., Missouri State University; 2005; M. Ed., The University of Kansas, 2010; Ph.D., The University of Kansas, 2014.
D'Avignon, India (2007) Music	Professor and Department Chair	B.M.E., Wittenberg University, 1974; M.A., The Ohio State University, 1980.
da Silva, Bruno (2017) Computer Science	Assistant Professor	B.S., Ruy Barbosa College, Brazil, 2005; M.S., Federal University of Rio Grande do Sul, Brazil, 2009; Ph.D., Federal University of Bahia, Brazil, 2015.
Dandekar, Hemalata (2009) City and Regional Planning	Professor Emeritus (FERP)	B.Arch., University of Bombay, India, 1967; M.Arch, University of Michigan, 1969; Ph.D., University of California, Los Angeles, 1978. Registered Architect, California.
Dang, Li (2007) Accounting	Professor and Area Chair	Ph.D., Drexel University, 2004.
Daniels, Denise H. (2003) Psychology and Child Development	Professor	B.A., University of California, Santa Barbara, 1982; M.A., Pacific Oaks College, 1983; Ph.D., University of California, Los Angeles, 1992.
Danowitz, Andrew R. (2014) Computer Engineering	Associate Professor	B.S., Harvey Mudd College, Claremont, 2008; M.S., Stanford University, 2010; Ph.D., Stanford University, 2014.
Dao, Linh (2020) Art and Design	Assistant Professor	B.F.A., Truman State University, Kirksville, Missouri, 2013; M.F.A., University of Texas at Arlington, 2017.
Davidson, Jean M. (2018) Biological Sciences	Assistant Professor	B.S., University of California, Davis, 2005; Ph.D., University of North Carolina, Chapel Hill, 2012.
Davis, Steven C. (1987) Kinesiology	Professor	B.S., University of California, Davis, 1979; M.S., San Diego State University, 1983; Ph.D., Pennsylvania State University, 1986.
Davis, Brennan (2014) Marketing	Professor	B.S. University of California, Los Angeles, 1992; M.B.A. University of Pennsylvania, 2003; Ph.D. University of California, Irvine, 2008.
Davol, Andrew I. (1999) Mechanical Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1987; M.S., University of California, San Diego, 1993; Ph.D., 1998. Registered Professional Engineer, California.
Day, Miran (2015) Landscape Architecture	Associate Professor	B.S.L.A., Chonnam National University, South Korea, 1994; M.L.A., University of Illinois, 2011. Registered Landscape Architect, Florida and South Korea.
de la Fuente, Javier (2013) Industrial Technology and Packaging	Associate Professor and Area Chair	B.S., University of Buenos Aires, Argentina, 1998; M.S., Michigan State University, 2006; Ph.D., Michigan State University, 2013.

De Lay, Ann M. (2008) Agricultural Education and Communication	Professor	B.S., California State University, Fresno, 1997; M.S., California Polytechnic State University, San Luis Obispo, 2002; Ph.D., University of Florida, 2008.
DeBruhl, Bruce E. (2015) Computer Science, Computer Engineering	Associate Professor	B.S. Kettering University, 2009; M.S. Carnegie Mellon University, 2013; Ph.D. 2015.
Decock, Charlotte L.M. (2017) Natural Resources Management and Environmental Sciences, Horticulture and Crop Science	Assistant Professor	B.S., UGENT, 2005; M.S., Ghent University, 2007; Ph.D., University of California Davis, 2012.
Deffo, Arnold (2018) Aerospace Engineering	Assistant Professor	B.S. Wichita State, 2013; M.S., California Institute of Technology, 2014; Ph.D., California Institute of Technology 2018
Deif, Ahmed (2014) Industrial Technology and Packaging	Associate Professor	B.S., American University, Cairo, 1999; M.A.Sc, University of Windsor, Canada, 2003; Ph.D., University of Windsor, Canada, 2006.
Deigert, Michael (2017) Architectural Engineering	Assistant Professor	B.S., California Polytechnic State University, San Luis Obispo, 1992; M.S., San Jose State University, 1995. Registered Civil Structural Engineer, California, Arizona. Registered Civil Engineer, Colorado.
Dekhtyar, Alexander (2007) Computer Science	Professor	Ph.D., University of Maryland College Park, 2000.
Del Rio Nascimento, Vicente (2001) City and Regional Planning	Professor Emeritus (FERP)	B.Arch., Federal University of Rio de Janeiro, 1978; Graduate Diploma in Urban and Regional Planning, State University of Rio de Janeiro, 1979; M.A., Oxford Polytechnic, 1981; Ph.D., University of São Paulo, 1991. Registered Architect, Brazil.
Delbridge, Timothy A. (2015) Agribusiness	Associate Professor	B.A., University of Wisconsin, 2003; M.S. University of Minnesota, 2011; Ph.D., 2015.
Den Hartog, Christopher (2006) Political Science	Professor	B.A., University of California, San Diego, 1996; Ph.D., 2004.
Den Otter, Ronald (2005) Political Science	Professor	B.A., University of California, Davis, 1989; J.D., University of Pennsylvania, 1992; Ph.D., University of California, Los Angeles, 2003.
Denbow, Jennifer (2015) Political Science	Associate Professor	B.S., University of Michigan, 2003; J.D., University of California, Berkeley, 2007; Ph.D., University of California, Berkeley, 2010.
DePiero, Fred (1996) Computer Engineering	Professor	B.S., Michigan State University, 1985; M.S., Michigan State University, 1987; Ph.D., University of Tennessee, 1996
Derelian, Doris (2004) Food Science and Nutrition	Professor Emeritus (FERP)	B.S., California State University, Fresno, 1968; M.S., University of California, Davis, 1975; Ph.D., University of California, Los Angeles, 1994; J.D., University of California, Davis, 2001. Registered Dietitian.
Derickson, Dennis (2005) Electrical Engineering	Professor	B.S., South Dakota State University, 1981; M.S., University of Wisconsin–Madison, 1988; Ph.D., University of California, Santa Barbara, 1992.
DeTurris, Dianne J. (1998) Aerospace Engineering	Professor	B.S., Georgia Institute of Technology, 1984; M.S., Pennsylvania State University, 1986; Ph.D., Virginia Polytechnic Institute and State University, 1992.
Dhillon, Anuraj (2018) Communication Studies	Assistant Professor	B.C.A., GND University, 2004; M.B.A., ICFAI University, 2006; Ph.D., University of Connecticut, 2018.
Dicus, Christopher A. (2001) Natural Resources Management and Environmental Sciences	Professor	B.S., Louisiana Tech University, 1992; M.S., Utah State University, 1995; Ph.D., Louisiana State University, 2000. Registered Professional Forester, California. Certified Senior Fire Ecologist.
Dimitrova, Elena (2019) Mathematics	Associate Professor	B.A., American University in Bulgaria, 2001; Ph.D. Virginia Tech, 2006.
Ding, Shunping (2018) Wine and Viticulture, Horticulture and Crop Science	Assistant Professor	B.S., Henan University, China, 2010; M.S. The University of Hong Kong, 2013; Ph.D., University of Wisconsin-Madison, 2018.
Disanto, Thomas L. (2003) Architecture	Professor	M.Arch., California State Polytechnic University, Pomona, 1989; B.Arch, 1997; Ecole D'Architecture De Paris, La Defense, 1999. Registered Architect, California.
Djassemi, Manocher (2003) Industrial Technology and Packaging	Professor Emeritus (FERP)	B.S., University of Science and Technology, Tehran, 1977; M.S., University of Wisconsin–Milwaukee, 1990; Ph.D., 1994.
Dobson, John (1990) Finance	Professor	B.A., University of Lancaster, England, 1979; M.A., University of South Carolina, 1981; Ph.D., 1988.

Dodson Peterson, Jean (2014) Wine and Viticulture	Associate Professor	B.S., University of California, Davis, 2009; M.S., 2012; Ph.D., 2014.
Doi, Jimmy A. (2003) Statistics	Professor	B.A., California State University, Northridge, 1995; M.S., North Carolina State University, 1998; Ph.D., 2003.
Dolan, Dale S. L. (2009) Electrical Engineering	Professor and Assistant Department Chair	B.S., University of Toronto, Ontario, Canada, 2003; M.S., 2005; Ph.D., 2008.
Donegan, Lorraine D. (2002) Graphic Communication	Professor Emeritus (FERP)	B.S., California Polytechnic State University, San Luis Obispo, 1997; M.A., 2001.
Dong, Kevin J. (2001) Architectural Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1986; M.S., University of California, Berkeley, 1988. Registered Structural Engineer and Professional Engineer, California.
Donig, Deb (2019) English	Assistant Professor	B.A., University of California, Davis, 2005; M.A., University of Massachusetts, Amherst, 2010; Ph.D., University of California, Los Angeles, 2017.
Doremus, Jaqueline (2015) Economics	Associate Professor	B.S., Stanford University, 2004; M.A., University of Michigan, 2010; Ph.D., University of Michigan 2015.
Drake, Aaron (2014) Aerospace Engineering	Professor	B.S., San Jose State; M.S., Stanford; Ph.D., Washington State University.
Duffy, Bernard K. (1988) Communication Studies	Professor Emeritus (FERP)	B.A., San Jose State College, 1970; M.A., 1971; Ph.D., University of Pittsburgh, 1976.
Durham, Garland B. (2014) Finance	Associate Professor	B.S., University of Kentucky, 1983; M.S., University of Illinois, 1985; Ph.D., University of North Carolina, 2001.
Eagon, Scott C. (2014) Chemistry and Biochemistry	Associate Professor	B.A., Whitman College, 2005; Ph.D., University of California Santa Cruz, 2010.
Easton, Robert W. (2011) Mathematics	Associate Professor	B.S., University of Michigan, 2002; Ph.D., Stanford University, 2007.
Echols, Robert (1999) Physics	Professor	B.S., University of California, Davis, 1992; M.S., 1994; M.S., University of California, Santa Cruz, 1996; Ph.D., 1999.
Eckhardt, Christian (2017) Computer Science	Assistant Professor	Ph. D., Vienna University of Technology, Austria, 2011.
Edwards, Mark S. (2007) Animal Science	Professor	B.A., Miami University, 1987; Ph.D., Michigan State University, 1995.
Edwards, Louise O.V. (2016) Physics	Associate Professor	B.S., University of Victoria, Canada, 2001; M.S., Saint Mary's University, Canada, 2003; Ph.D., Université Laval, Canada, 2007.
Eisty, Nasir (2020) Computer Science	Assistant Professor	B.S. Rajshahi University of Engineering and Technology, Rajshahi, Bangladesh, 2014; M.S., University of Alabama, Tuscaloosa, AL, USA, 2018; Ph. D., University of Alabama, Tuscaloosa, AL, USA, 2020
El Badawy, Amr (2018) Civil and Environmental Engineering	Assistant Professor	B.S., Mansoura University, 2001; M.S., 2005; Ph.D., University of Cincinnati, 2011.
Elghandour, Elthary (2000) Mechanical Engineering	Professor	B.S., Helwan University, Cairo, Egypt 1983; M.S. 1989; Ph.D., 1995.
Eller, Dan (2006) Journalism	Professor Emeritus (FERP)	B.S. California State University, Northridge, 1984; M.P.H., 1987; Ed.D., University of California, Santa Barbara, 2010.
Ellis, Allison M. (2016) Management, HR, and Information Systems	Associate Professor	B.A., University of California, Irvine, 2009; M.S., Portland State University, 2012; Ph.D., Portland State University, 2015.
Emberley, Richard (2017) Mechanical Engineering	Associate Professor	B.S., Worcester Polytechnic Institute, 2011; M.S., 2013; Ph.D., University of Queensland, Brisbane, Australia, 2017.
Emyan, Mariam (2007) College of Architecture and Environmental Design	Assistant Dean	B.S., Armenian Agrarian University, Armenia, 1997; M.A., Public Administration Academy, Armenia, 1999; M.B.A., California Polytechnic State University, San Luis Obispo, 2006.
Espinoza-Wade, Eric (2019) Mechanical Engineering	Assistant Professor	B.S. Massachusetts Institute of Technology, 2000; M.S., Massachusetts Institute of Technology, 2004; PhD, Massachusetts Institute of Technology, 2007
Esquivel, Ramon (2020) Theatre and Dance	Assistant Professor	B.A. Yale University 1999; M.A. Educational Theatre, New York University 2006; M.F.A. Creative Writing, University of British Columbia 2017.

Estes, Allen C. (2007) Architectural Engineering	Professor and Department Head	B.S., United States Military Academy, 1978; M.S., Stanford University, 1987; M.B.A., Long Island University, 1989; Ph.D., University of Colorado, 1997. Registered Civil Engineer, Virginia.
Estrada, Aaron R. (2012) Psychology and Child Development	Associate Professor	B.A., University of California, Santa Cruz, 2001; M.S., San Francisco State University, 2006; M.A., University of California, Santa Barbara, 2008; Ph.D., 2011.
Fagan, Kevin (2001) World Languages and Cultures	Professor Emeritus (FERP)	B.A., Gregorian University, Rome, 1972; M.A., 1977; M.A., Texas Tech University, 2000; Ph.D., University of Dallas, 1998; Ph.D. Texas Tech University, 2003.
Fang, Dongfeng (2019) Computer Science, Computer Engineering	Associate Professor	B.S., Harbin Institute of Technology, China, 2009; M.S., Shanghai University, China, 2014; Ph.D., University of Nebraska, 2019.
Faruque, Omar (1989) Landscape Architecture	Professor Emeritus (FERP)	B.S.L.A., Texas A M University, 1971; M. Arch., 1972. Registered Architect, Texas, and Landscape Architect, Texas and Indiana.
Faure, Pauline (2018) Aerospace Engineering	Assistant Professor	B.S., Institut National Polytechnique de Lorraine, 2008; M.S., Kyushu Institute of Technology; Ph.D., Kyushu Institute of Technology 2017
Feng, Yiming (2021) Food Science and Nutrition	Assistant Professor	B.S., University of Illinois, Urbana-Champaign, 2013; PhD, University of Illinois, Urbana-Champaign, 2018
Fernando, Raymond (2002) Chemistry and Biochemistry	Professor	B.S., University of Sri Jayewardenepura, Sri Lanka; Ph.D., North Dakota State University, Fargo, 1986.
Fernflores, Francisco (2000) Philosophy	Professor	B.Sc., University of Toronto, 1992; M.A., University of Western Ontario, 1993; Ph.D., 1998.
Fernflores, Rachel (2006) Philosophy	Professor	B.A., University of Regina, 1993; M.A., University of Saskatchewan, 1995; Ph.D., Queens University, 2006.
Fernsler, Jonathan (2006) Physics	Professor	B.S., College of William and Mary, 1996; M.S., University of Colorado, Boulder, 1999; Ph.D., 2004.
Fidopiastis, Pantelis M. (2006) Biological Sciences	Professor	B.A., California State University, Fullerton, 1992; M.A., 1995; Ph.D., University of Hawaii, Manoa, 2001.
Fiegel, Gregg L. (1995) Civil and Environmental Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1990; M.S., University of California, Davis, 1992; Ph.D., 1995. Registered Professional Engineer and Geotechnical Engineer, California.
Fiorenza, Giancarlo (2008) Art and Design	Professor	B.A., University of California, Santa Cruz, 1991; M.A., Johns Hopkins University, 1993; Ph.D., 2001.
Firpo, Christina E. (2006) History	Professor	B.A., The George Washington University, 2000; M.A., University of California, Los Angeles, 2002; Ph.D., 2007.
Fisher, Eric (2007) Economics	Professor Emeritus (FERP)	M.A., John Hopkins School of Advanced International Studies, 1979; Ph.D., University of California, Berkeley, 1985.
Fitzhenry, William (1997) English	Professor	B.A., State University of New York at Buffalo, 1984; M.A., University of Colorado, 1991; Ph.D., Duke University, 1997.
Fleischer, Amy S. (2018) College of Engineering	Dean	B.S.M.E., Villanova University, 1991; M.S.M.E., 1996; Ph.D., University of Minnesota, 2000
Flores, Carlos A. (2013) Economics	Professor	B.A., Monterey Institute of Technology, Mexico, 1998; M.A., UC Berkeley, 2003; Ph.D., UC Berkeley, 2005.
Floyd, Barry (1990) Management, HR, and Information Systems	Professor Emeritus (FERP)	B.S., Michigan State University, 1973; M.S., 1974; M.B.A., University of Michigan, 1983; Ph.D., 1985.
Flushman, Tanya R. (2012) School of Education	Professor	B.A., University of California, Santa Cruz, 1998; M.S., State University of New York, College at Buffalo, 2006; Ph.D., Vanderbilt University, 2012.
Fogle, Emily (2007) Chemistry and Biochemistry	Professor	B.A., Sonoma State University, 2000; Ph.D., University of California, Davis, 2005.
Folk, Elizabeth (2017) Art and Design	Assistant Professor	B.F.A., University of Colorado, Boulder, 2007; M.F.A., University of California, Santa Barbara, 2009.
Forster, Sophia (2008) English	Professor	B.A., York University, 1998; M.A., University of Victoria, 2001; Ph.D., State University of New York at Buffalo, 2008.
Fowler, Thomas , IV, FAIA (1995) Architecture	Professor	B.Arch., New York Institute of Technology/Old Westbury, 1984; M.Arch., Cornell University, 1994. Registered Architect, New York.

Foxen, Anya P. (2018) Philosophy, Women's, Gender and Queer Studies	Assistant Professor	B.A., Rutgers, 2008; M.A., UCSB; 2011 PhD, UCSB, 2015
Frame, Samuel (2007) Statistics	Professor	B.S., California Polytechnic State University, San Luis Obispo, 2001; M.S., University of California, Santa Barbara, 2004; Ph.D., 2007.
Francis, Clinton D. (2013) Biological Sciences	Associate Professor	B.S., Pacific University, 2002; M.A., University of Colorado 2007; Ph.D., 2010.
Frantz, Sara J. (2014) Art and Design	Associate Professor	B.S., University of Wisconsin-Madison, 2003; M.F.A., University of Texas, 2007.
Frantz, Derik K. (2014) Chemistry and Biochemistry	Associate Professor	B.S. 2005 Juniata College, 2005; M.Sc. University of Zurich, Switzerland, 2008; Dr. sc. nat. University of Zurich, Switzerland, 2012.
Freberg, Laura A. (1987) Psychology and Child Development	Professor	B.A., University of California, Los Angeles, 1974; M.A., 1975; Ph.D., 1979.
Freed, Tali (2001) Industrial and Manufacturing Engineering	Professor	B.Sc., Technion-Israel Institute of Technology, Israel, 1983; M.Sc., 1988; Ph.D., University of California, Berkeley, 1995. Registered Professional Engineer, California.
Fricker, Geoffrey Andrew (2018) Social Sciences		BS (Physical Geography, UCSB -2005), MA (Geography UCLA - 2009), PhD (Geography UCLA -2015)
Frye, Amanda (2020) Liberal Studies	Assistant Professor	B.A., Harvard University, 1991; Ed.M, Harvard University, 1994 2012; Ph.D., Stanford University, 2018.
Funston-Timms, Benjamin F. (2007) Social Sciences	Professor	B.A., University of New Mexico, 1997; M.A., Indiana University, 1999; Ph.D., 2007.
Galanti, Tera (2008) Art and Design	Associate Professor	B.F.A., California State University, Long Beach, 1986; M.F.A., 1995.
Galos, Joel (2022) Materials Engineering	Assistant Professor	B.S., Aerospace Engineering Mathematics, University of South Wales, Australia, 2012; M.A. Composite Materials, Imperial College, UK, 2013; Ph.D., Engineering, University of Cambridge, UK, 2017
Galvan-Mandujano, Martha Carolina (2018) World Languages and Cultures	Assistant Professor	B.A., Texas A M University, 2000; M.A., Texas A M University, 2007; Ph.D, University of Oklahoma, 2015.
Garcia, Antonio F. (2001) Physics	Professor	B.A., University of California, Los Angeles, 1988; B.S., San Jose State University, 1994; M.S., The University of New Mexico, 1996; Ph.D., University of California, Santa Barbara, 2001 .
Garcia, Julie A. (2007) Psychology and Child Development	Professor	B.A., California State University, San Bernardino, 1996; Ph.D., University of Michigan, Ann Arbor, 2005.
Garner, Lauren C. (2005) Horticulture and Crop Science	Professor	B.S., The College of William and Mary, 1992; M.S., Cornell University, 1996; Ph.D., University of California, Riverside, 2004.
Gaudi, Franklin (2019) BioResource and Agricultural Engineering	Assistant Professor	B.S., California Polytechnic State University, San Luis Obispo, 2002; M.S., California Polytechnic State University, 2003; D. Ed. University of Phoenix, 2014.
Gearhart, Richard O. (2006) Journalism	Associate Professor	B.S., California Polytechnic State University, San Luis Obispo, 1991; M.S., California Polytechnic State University, San Luis Obispo, 2009.
Gharibyan, Hasmik (2000) Computer Science	Professor	M.S., Yerevan State University, Republic of Armenia, USSR, 1981; Ph.D., 1991.
Ghoddsi, Hamed (2020) Finance	Assistant Professor	Ph.D., Vienna Graduate School of Finance 2011, Post Doc, MIT, 2013
Giberti, Bruno (1994) Architecture, Academic Programs and Planning	Professor and Associate Vice Provost	B.S. Arch., California Polytechnic State University, San Luis Obispo, 1980; M.Arch., University of California, Berkeley, 1989; Ph.D., 1994; Registered Architect, California.
Gill, Samantha J. (1997) Natural Resources Management and Environmental Sciences, BioResource and Agricultural Engineering	Professor	B.S., Humboldt State University, 1991; M.S., 1993; Ph.D., University of California, Berkeley, 1997. Registered Professional Forester, California.
Gillen, Glen D. (2006) Physics	Professor	B.S., Denison University, 1994; M.S., Miami University, 1996; M.A.T., 1997; M.S., The Ohio State University, 2001; Ph.D., 2002.

Gillen, Katharina (2006) Physics	Professor	Vordiplom, Rheinische Friedrich-Wilhelms Universität Bonn, 1998; M.S., The Ohio State University, 2000; Ph.D., 2005.
Gillette, David (2001) English, Liberal Arts and Engineering Studies	Professor and LAES Co-Director	B.A., University of Iowa, 1985; M.A., University of New Mexico, 1992; Ph.D., 1995.
Glanz, Hunter S. (2014) Statistics	Associate Professor	B.S., California Polytechnic State University, San Luis Obispo, 2009; M.A., Boston University, 2012; Ph.D., 2013.
Glick, Mary M. (2012) Journalism	Associate Professor	B.A., State University of New York at Oswego, 1972; M.A., California State University, Fullerton, 1982.
Glysson, Scott (2017) Music	Associate Professor	B.M., George Mason University, 2007; M.M., University of Arizona, Tucson, 2012; D.M.A., University of Arizona, Tucson, 2014.
Goel, Rakesh K. (1997) College of Engineering, Civil and Environmental Engineering	Executive Associate Dean and Professor	B.Tech, Indian Institute of Technology, New Delhi, 1982; M.S., University of California, Berkeley, 1985; Ph.D., 1990. Registered Professional Engineer, California.
Goldenberg, Marni (2003) Experience Industry Management	Professor	B.S., California State University, Sacramento, 1995; M.S., Purdue University, 1997; Ph.D., University of Minnesota, 2002.
Goodman, Anya (2005) Chemistry and Biochemistry	Professor	B.S., Florida Atlanta University, 1996; Ph.D., Massachusetts Institute of Technology, 2003.
Gopalan, Giri (2020) Statistics	Assistant Professor	B.S., California Institute of Technology, 2010; A.M. Harvard University, 2014; Ph.D., University of Iceland, 2019.
Gorman, Larry R. (1997) Finance	Professor	B.S., Washington State University, 1985; M.B.A., Western Washington University, 1988; Ph.D., Northwestern University, 1998.
Gragson, Derek E. (1999) College of Science and Mathematics, Chemistry and Biochemistry	Associate Dean and Professor	B.S., California State University, Hayward 1991; M.S., 1995; Ph.D., University of Oregon, 1997.
Granger, Brian E. (2008) Physics	Professor	B.S., Westmont College, 1994; Ph.D., University of Colorado at Boulder, 2001.
Gray, Joey (2021) Experience Industry Management	Professor and Department Head	B.S., Averett University, Virginia 1996, M.P.R.T.M., Parks, Rec. and Tourism Mgmt.: Sport Management, N. Carolina State Univ., N. Carolina, 2000, Ph.D., Leisure Behavior: Sport Mgmt., Indiana Univ., Indiana, 2006
Greenbaum, Bruce (2015) Management, HR, and Information Systems	Associate Professor	B.S., University of Virginia, 1991; M.B.A., University of Michigan, 1996; Ph.D., University of Texas, 2013.
Greenwood, Jerusha B. (2006) Experience Industry Management	Professor	B.S., University of Utah, 1998; M.S., 2002; Ph.D., North Carolina State University, 2006.
Greenwood, P. Brian (2006) Experience Industry Management	Professor	B.A., University of North Carolina at Chapel Hill, 1996. M.S., North Carolina State University, 2001; Ph.D., 2007.
Greever, Cory J. (2016) Kinesiology	Associate Professor	B.S., Virginia Commonwealth University, 2010; M.S., James Madison University, 2012; Ph.D. University of Massachusetts, Amherst, 2016.
Greve, Adrienne I. (2006) City and Regional Planning	Professor	B.S., Cornell University, 1996; M.S., Colorado State University, Ft. Collins, 1999; Ph.D., University of Washington, Seattle, 2007.
Griffin, Lanny (1997) Biomedical Engineering	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1992; Ph.D., University of California, Davis, 1996.
Grossenbacher, Dena L. (2017) Biological Sciences	Assistant Professor	B.S., University of Washington, 1999; Ph.D., University of California, Davis, 2013.
Grundmeier, Todd A. (2004) Mathematics	Professor	B.S., University of New Hampshire, 1997; M.S., 2000; Ph.D., 2003.
Gu, Caixing (1998) Mathematics	Professor	B.S., Zhejiang University, 1982; M.S., China Textile University, 1986; Ph.D., Indiana University, 1994.
Guise, Megan (2009) School of Education	Professor	B.S., Millersville University, 2002; M.Ed., 2004; Ph.D., University of Pittsburgh, 2009.
Gutierrez, Thomas D. (2006) Physics	Professor	B.S., San José State University, 1991; M.S., 1994; Ph.D., University of California, Davis, 2000.
Haberland, Matthew D. (2018) BioResource and Agricultural Engineering	Assistant Professor	B.S., Cornell University, 2007; M.S. Mechanical Engineering, Cornell University, 2007; Ph.D., Massachusetts Institute of Technology, 2014.

Habib, Kenneth (2006) Music	Professor	B.A., University of California, Los Angeles, 1983; M.A., University of California, Santa Barbara, 1995; Ph.D., 2005.
Hackman, Christine L. (2015) Kinesiology	Associate Professor	B.S., Rowan University, 2010; M.A., University of Alabama, 2012; Ph.D., University of Alabama, 2015.
Hagen, John (2001) Chemistry and Biochemistry	Professor	B.S., University of Nevada, Las Vegas, 1992; Ph.D., Stanford University, 1996.
Hagobian, Todd A. (2009) Kinesiology	Professor	B.A., University of Southern California, 1991; M.A., San Francisco State University, 2002; Ph.D., University of Massachusetts at Amherst, 2007.
Hajrasouliha, Amir (2015) City and Regional Planning	Associate Professor	B.Arch., Shahid Beheshti University, 2004; M.Urbanism, University of Tehran, 2007; M. Urban Design, University of Michigan, 2011; Ph.D. Metropolitan Planning, Policy, and Design, University of Utah, 2015
Hall, Garrett J. (2002) Civil and Environmental Engineering	Professor	B.S., Worcester Polytechnic Institute, 1992; M.S., University of Washington, 1993; Ph.D., University of California, Berkeley, 2001. Registered Professional Engineer, California.
Hall, Kellie Green (1990) College of Science and Mathematics, Kinesiology	Associate Dean and Professor	B.S., Rocky Mountain College, 1977; M.S., Eastern Washington University, 1977; Ph.D., Louisiana State University, 1990.
Hamachi, Leslie (2020) Chemistry and Biochemistry	Assistant Professor	B.S., University of California, Berkeley; Ph.D., Columbia University, 2018.
Hamilton, Lynn (1996) Agribusiness	Professor	B.S., Ohio State University, 1988; M.S., University of Minnesota, 1995; Ph.D., 1996.
Hamilton, Margaret E. (2012) Mathematics	Professor	B.S., University of Chicago, 1989; M.A., University of California, Los Angeles, 1991; Ph.D., 1995.
Hamilton, Stephen (2004) Economics	Professor	B.A., University of California, Santa Barbara, 1991; M.S., University of California, Berkeley, 1994; Ph.D., 1996.
Hampsey, John C. (1992) English	Professor	B.A., Holy Cross College, 1976; Ph.D., Boston College, 1982.
Hanson, James L. (2005) Civil and Environmental Engineering	Professor	B.S., University of Wisconsin, Madison, 1990; M.S., University of Minnesota, Minneapolis, 1992; Ph.D., University of Wisconsin, Madison, 1996. Registered Professional Engineer, California and Wisconsin.
Harding, Trevor S. (2006) Materials Engineering	Professor and Department Chair	B.S., University of Michigan, 1995; M.S., 1997; Ph.D., 2000.
Hardy, Kristin (2011) Biological Sciences	Professor	B.S., Tulane University, 2003; Ph.D., University of North Carolina Wilmington, 2009.
Harsh, Matthew (2018) Interdisciplinary Studies in the Liberal Arts	Professor	B.S., Northwestern University; M.S., University of Edinburgh; Ph.D., University of Edinburgh
Hatch, Ryan (2014) English	Associate Professor	B.A., Kalamazoo College, 2004; M.A., State University of New York, 2008; Ph.D., State University of New York, 2013.
Hauck, Allan (2002) Construction Management	Professor Emeritus (FERP)	B.A., Kalamazoo College, 1973; M.Ed., Bowling Green State University, 1979; Ph.D., University of Maryland, 1990. Certified Professional Constructor (CPC).
Haungs, Michael L. (2003) Computer Science; Liberal Arts and Engineering Studies	Professor and LAES Co-Director	B.S., University of California, Berkeley, 1992; M.S., Clemson University, 1998; Ph.D., University of Davis, 2002.
Hawkins, Benjamin George (2012) Biomedical Engineering, Electrical Engineering	Associate Professor	B.S., California State University, Fresno, 2005; Ph.D., Cornell University, Ithaca, 2010.
Haynes, M. Taylor (2015) Chemistry and Biochemistry	Associate Professor	B.S., University of California, Irvine; M.S. University of Michigan; Ph.D. University of Michigan.
Hazelwood, Scott (2007) Biomedical Engineering	Professor	B.S., Harvey Mudd College, 1985; M.E., 1986; M.S., University of California, Davis, 1992; Ph.D., 1998.
Headrick, David H. (1998) Horticulture and Crop Science	Professor	B.S., California State Polytechnic University, Pomona, 1986; M.S., University of California, Riverside, 1988; Ph.D., 1992. Pest Control Advisor, California.
Healy, Brian P. (2017) Theatre and Dance	Associate Professor and Department Chair	B.A., Truman State University, 1996; M.F.A., University of Washington, 2007.

Heiss, Cindy (2020) Food Science and Nutrition	Associate Professor	B.S., Texas Christian University; M.S., Colorado State University; Ph.D., Texas Women's University
Helmbrecht, Brenda (2004) English	Professor	B.A., Truman State University, 1997; M.A., Miami University, 1999; Ph.D., 2004. Director of Writing.
Helms, Eleanor D. (2011) Philosophy	Professor	B.A., Wheaton College, 2002; M.A., Fordham University, 2007; Ph.D., 2011.
Hendricks-Bolen, Karin A. (2018) Theatre and Dance	Assistant Professor	B.A. University of Arizona, 2004; M.F.A., University of California, Irvine, 2009.
Hess, Jeffrey (2007) Marketing	Associate Professor and Area Chair	B.A., Biola University, 1986; M.B.A., Pepperdine, 1988; Ph.D., University of Colorado-Boulder, 1998.
Hewavitharana, Shashika (2019) Horticulture and Crop Science	Assistant Professor	B.S., University of Colombo, Sri Lanka, 2009; M.S., Washington State University, 2013; Ph.D., Washington State University, 2017.
Heying, Michael D. (2009) Chemistry and Biochemistry	Associate Professor	B.S. Alma College, Michigan 1999; M.S. Purdue University, 2002; Ph.D., Purdue University, 2005
Heylman, Christopher M. (2017) Biomedical Engineering	Assistant Professor	B.S., California Polytechnic State University, San Luis Obispo, 2007; Ph.D., Case Western Reserve University, 2013.
Hickman, Emily (2019) Accounting	Assistant Professor	B.S., University of Idaho, 2011; M.S., Gonzaga University, 2013; Ph.D., Washington State University, 2017.
Hill, Margarita M. (2005) Landscape Architecture	Professor Emeritus (FERP)	B.S.L.A., University of California, Davis, 1986; M.S.C.D., 1989.
Hill, Alessandro (2018) Industrial and Manufacturing Engineering	Assistant Professor	B.S. and M.S., University of Augsburg, Germany, 2006; Ph.D., University of Hamburg, Germany, 2016.
Hillers, Kenneth J. (2004) Biological Sciences	Professor and Department Chair	B.S., Western Washington University, 1990; Ph.D., University of Oregon, 1998.
Himelblau, Edward T. (2005) Biological Sciences	Professor	B.S., University of California San Diego, 1992; Ph.D., University of Wisconsin, 2000.
Hiremath, Nandeesh (2021) Aerospace Engineering	Assistant Professor	B.S Mechanical Engineer from India, M.S. 2015 and Ph.D. in Aerospace Engineering Georgia Institute of Technology 2018
Hoellwarth, Chance (1997) Physics	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1991; M.S., University of California, Davis, 1994; Ph.D., 1997.
Holladay, Bret (2020) Statistics	Assistant Professor	B.S., California State University, Northridge, 2011; M.S., 2014; Ph.D., University of California, Santa Barbara, 2019.
Holtzapple, Robert (2008) Physics	Professor	B.A., University of California, Berkeley, 1988; M.S., Stanford University, 1991; Ph.D., 1996.
Hoover, Benjamin K. (2013) Horticulture and Crop Science	Associate Professor	B.S., Temple University, 2005; M.S., The Pennsylvania State University, 2007; Ph.D., 2012
Hopper, Matthew S. (2006) History	Professor	B.A., Pepperdine University, 1996; M.A., Temple University, 1998; M.A., University of California, Los Angeles, 2000; Ph.D., 2006.
Horney, Marc R. (2009) Animal Science	Professor	B.S., California Polytechnic State University, San Luis Obispo, 1990; M.S., Oregon State University, 1992; Ph.D., University of Nebraska-Lincoln, 1999.
Howe, Patrick C. (2011) Journalism	Associate Professor	B.A., University of Minnesota, 1993; M.A., University of Missouri-Columbia, 2011.
Howes, Daniel J. (2011) BioResource and Agricultural Engineering	Professor	B.S., University of California, Davis, 1997; M.S., California Polytechnic State University, San Luis Obispo, 2001; Ph.D., University of California, Irvine, 2010. Registered Professional Engineer, California..
Hurley, Sean P. (2002) Agribusiness	Professor	B.A., University of San Francisco, 1994; Ph.D., Iowa State University, 2000.
Hurt, Shelley L. (2008) Political Science	Associate Professor	B.A., University of California, Berkeley, 1995; M.A., New School for Social Research, New York, 2001; Ph.D., 2010.
Huzzey, Juliana M. (2014) Animal Science	Associate Professor	B.S., University of British Columbia, 2003; M.S., University of British Columbia, 2007; Ph.D., Cornell University, 2012.
Hydock, Chris (2019) Marketing	Assistant Professor	B.A., University of Colorado, 2006; Ph.D., George Washington University, 2012.
Immoos, Chad E. (2004) Chemistry and Biochemistry	Professor	A.B., Occidental College, 1996; Ph.D., University of California, Irvine, 2002.

Iscold, Paulo (2018) Aerospace Engineering	Associate Professor	B.S., Universidade Federal de Minas Gerais, 1999; M.S., Universidade Federal de Minas Gerais 2001; Ph.D., Universidade Federal de Minas Gerais 2004
Isom, Denise A. (2008) Ethnic Studies	Professor and Department Chair	B.S., B.A., University of California, Davis, 1989; M.A., 1992; Ph.D., Loyola University, Chicago, 2003.
Jackson, Douglas (2008) Architecture	Professor	B.Arch., Virginia Polytechnic Institute and State University, 1993; M.Arch, Princeton University, 2000. Registered Architect, California.
Jackson, Lorraine D. (1992) Communication Studies	Associate Professor	B.A., University of Western Ontario, 1987; M.A., Pennsylvania State University, 1989; Ph.D., 1992.
Jackson, Thanayi (2019) History	Assistant Professor	B.A., University of California Santa Cruz, 2000, M.A., University of Maryland-College Park, 2002, Ph.D., University of Maryland, 2016
Jaggia, Sanjiv (2007) Economics	Professor	B.A., Panjab University, India, 1981; Ph.D., Indiana University, Bloomington, 1990.
James, Jonathan (2013) Economics	Associate Professor	B.A., UCLA, 2003; M.A., Duke University, 2007; Ph.D., Duke University, 2011.
James, Jeremy (2020) Natural Resources Management and Environmental Sciences	Professor and Department Head	B.S., California Polytechnic State University, San Luis Obispo, 1998; Ph.D., University of California, Davis, 2004.
Jankovitz, Kristine Z. (1996) Kinesiology	Professor and Department Chair	B.S., California Polytechnic State University, San Luis Obispo, 1984; M.S., 1989; Ph.D., University of Nebraska-Lincoln, 1995. Department Chair.
Jansen, Daniel (2003) Civil and Environmental Engineering	Professor	B.S., University of California, San Diego, 1988; Ph.D., Northwestern University, 1996. Registered Professional Engineer, California.
Janzen, David S. (2006) Computer Science	Professor	B.A., Tabor College, 1990; M.S., University of Kansas, 1993; Ph.D., 2006.
Jasbinsek, John J. (2008) Physics	Professor	B.S., California State Polytechnic University, Pomona, 1992; M.A., University of California, Santa Barbara, 1994; Ph.D., University of Wyoming, 2008.
Jeffery, Elizabeth (2017) Physics	Assistant Professor	B.S., Brigham Young University, 2003; M.S. University of Texas at Austin, 2005; Ph.D., University of Texas at Austin, 2009.
Jenkins, Ryan (2015) Philosophy	Associate Professor	B.A., Florida State University, 2009; Ph.D., University of Colorado, 2014.
Jensen, Jessica L. (2017) School of Education	Assistant Professor	B.A., University of Iowa, 2008; M.A., Viterbo University, La Crosse, 2010; Ph.D., University of Iowa, 2017.
Jin, Xiaomin (2004) Electrical Engineering	Professor	B.S., Tsinghua University, Beijing, China, 1992; M.S., 1996; Ph.D., University of Illinois at Urbana-Champaign, 2001.
Jipson, Jennifer (2005) Psychology and Child Development	Professor and Department Chair	B.A., Smith College, 1993; M.S., University of California, Santa Cruz, 1996; Ph.D., 2000.
Johnston, Scott C. (2008) Physics	Professor	B.S., Stanford University, 1999; M.S., 2000; Ph.D., University of California, Santa Barbara, 2006.
Johnston, Liz B. (2010) Social Sciences	Associate Professor	B.S., Winthrop College, SC, 1978; M.S.W., Smith College, 1984; Ph.D., Smith College, 2013.
Jones, Dane R. (1976) Chemistry and Biochemistry	Professor	B.A., University of Utah, 1969; Ph.D., Stanford University, 1974.
Jones, Eric (2012) Chemistry and Biochemistry	Associate Professor	B.S., Case Western Reserve University, Cleveland, 2000; Ph.D., 2006
Jones, R. Thomas (2003) Architecture	Professor Emeritus	B.Arch., Cornell University, 1969. AIA, Registered Architect, California.
Jones, Terry L. (1998) Social Sciences	Professor	B.A., University of California, Santa Cruz, 1978; M.A., Sonoma State University, 1982; M.A., University of California, Davis, 1989; Ph.D., 1995.
Jones, Barry (2001) Construction Management	Professor Emeritus (FERP)	M.Sc., University of Aston, U.K., 1980; Ph.D., University of Southampton, U.K., 1999. Chartered Builder; Fellow The Chartered Institute of Building (F.CIOB); Fellow American Society of Civil Engineers (F.ASCE), Senior Fulbright Scholar.
Jovanovic, Jasna (2005) Psychology and Child Development	Professor and Director of University Honors Program	B.S., University of Illinois, 1985; M.S., Pennsylvania State University, 1987; Ph.D. 1991.

Jung, Stephanie (2014) Food Science and Nutrition	Professor and Department Head	B.S., University of Sciences, Metz, France, 1995; M.S., National Polytechnic Institute of Lorraine, Nancy, France, 1996; Ph.D., National School for Engineers in Agricultural and Food Science, Nantes, France, 2000.
Karakka, Lilli (2021) Natural Resources Management and Environmental Sciences	Assistant Professor	B.S., University of Helsinki, 2011; M.Sc. University of Helsinki and Swedish University of Agricultural Sciences-dual degree 2012-13, D.Sc., University of Helsinki, 2018.
Kachlakev, Damian I. (2000) Civil and Environmental Engineering	Professor	B.S., University of Architecture, Civil Engineering and Geodesy, Sofia, Bulgaria, 1986 and 1988; M.S., 1988; Ph.D., Oregon State University, Corvallis, 1997. Registered Professional Engineer, Bulgaria.
Kaczorowski, Jessica (2017) Psychology and Child Development	Associate Professor	B.A., University of California, San Diego, 2005; M.A., University of North Carolina at Greensboro, 2008; Ph.D., 2012.
Kane, Steven (1994) School of Education	Professor Emeritus (FERP)	B.A., California State Polytechnic University, Pomona, 1985; M.A., University of California, Los Angeles, 1989; Ph.D., 1993. Licensed Psychologist, California.
