

# Development of a beam telescope based on a hybrid-less micro-strip sensor

Freytrag, R. Dietrich (SLAC) *et al*

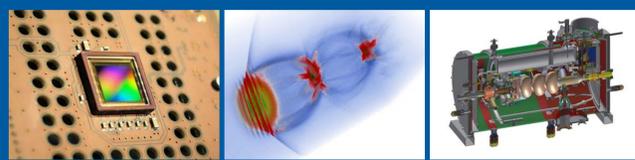

05 March 2019

The AIDA-2020 Advanced European Infrastructures for Detectors at Accelerators project has received funding from the European Union's Horizon 2020 Research and Innovation programme under Grant Agreement no. 654168.

This work is part of AIDA-2020 Work Package 15: **Upgrade of beam and irradiation test infrastructure.**

The electronic version of this AIDA-2020 Publication is available via the AIDA-2020 web site <http://aida2020.web.cern.ch> or on the CERN Document Server at the following URL: <http://cds.cern.ch/search?p=AIDA-2020-POSTER-2019-004>

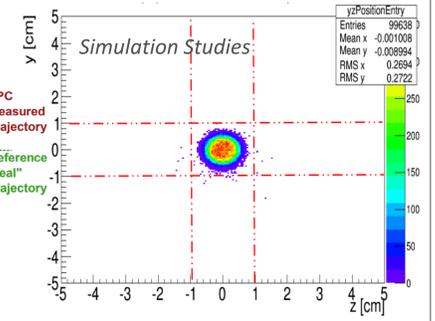

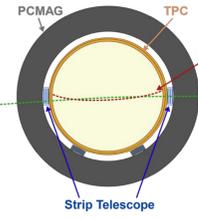

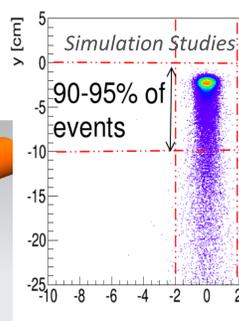

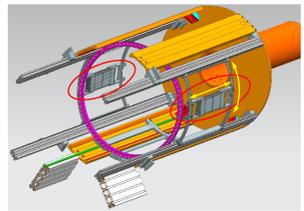

### Introduction

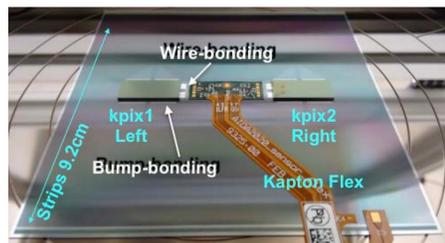

The DESY II test beam facility provides  $e^+e^-$  beams with energies 1-6 GeV. A new beam telescope is being built to address many user demands for momentum measurements in a 1T solenoid.

#### Requirements

- **Large coverage area:**  $Y \geq 10$  cm long;
- **Compact:**  $x \leq 3.5$  cm thick;
- **Precise:** Spatial point resolution
  - $\sigma_y \leq 10 \mu\text{m}$
  - $\sigma_z \leq 1$  mm

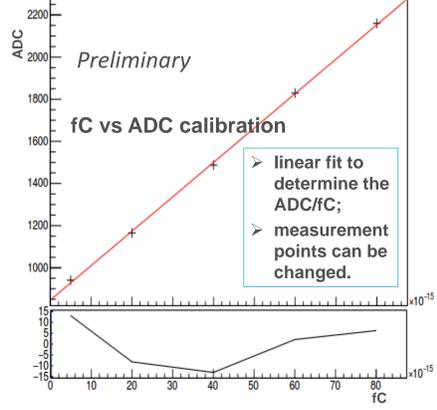

### SiD Hybrid-less Micro-strip Sensor

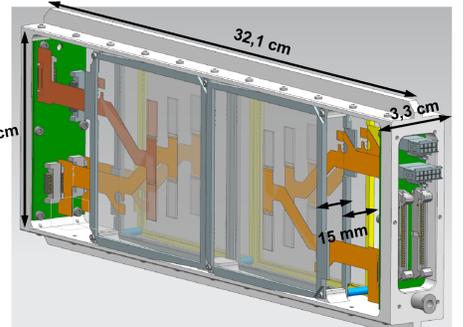

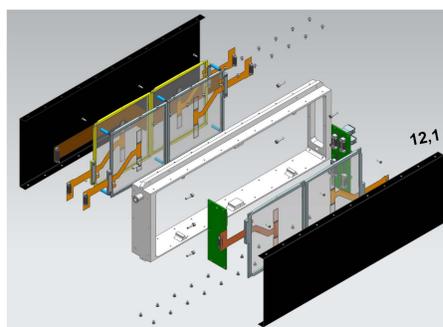

- **Large active area:**  $\sim 10 \times 10$  cm<sup>2</sup>
- **Fine pitch:** 25/50  $\mu\text{m}$  sense/readout pitch  $\rightarrow$  spatial resolution of  $\sim 7 \mu\text{m}$ ;
- **Less readout channels:** floating strips;
- **Low material budget:** 320  $\mu\text{m}$  thick (0.3%  $X_0$ );
- **Hybrid-less:** Signal routing through a 2<sup>nd</sup> metallization layer;
- **Good electric properties:** low leakage current, depletes  $\sim 50$  V.

#### KPiX Readout ASIC

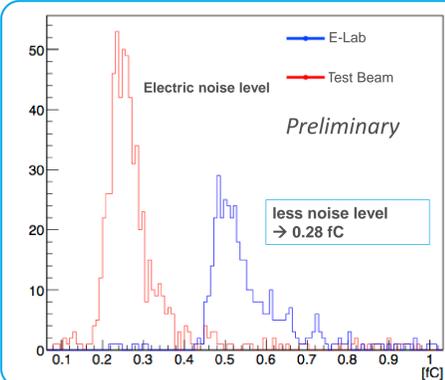

- 13-bit ADC per readout channel;
- Two Trigger modes:
  - Self-trigger or External Trigger;
  - Configurable Power cycled;
  - Fast Integration.

### The LYCORIS Telescope

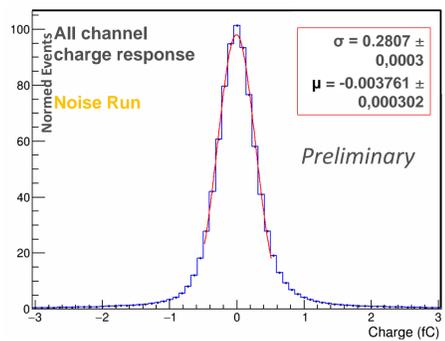

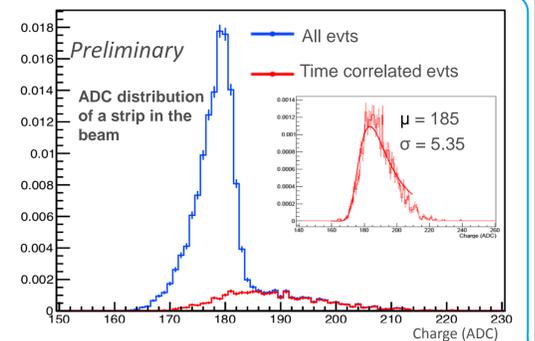

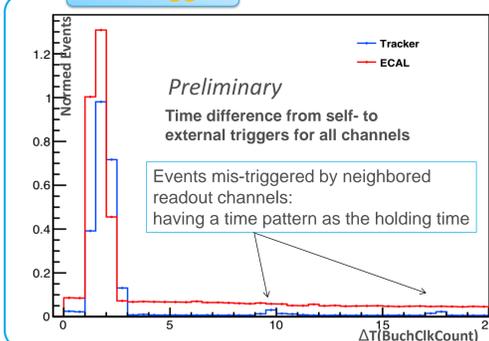

### Commissioning Results and Discussion

#### Noise Level

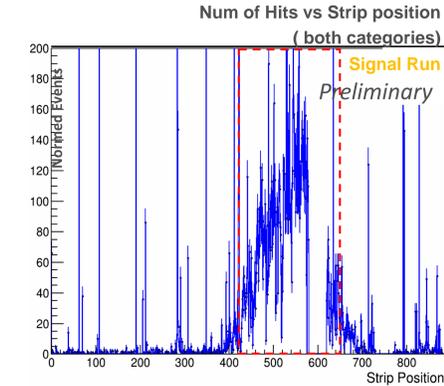

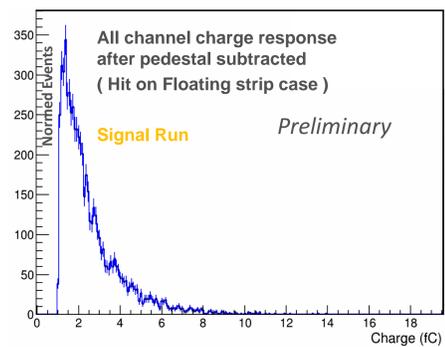

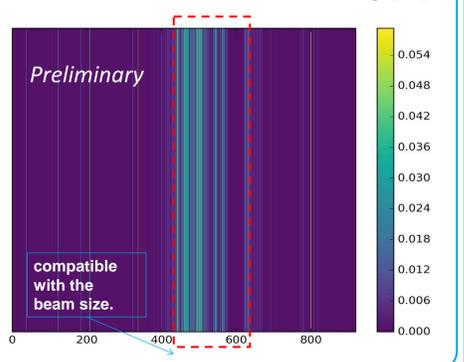

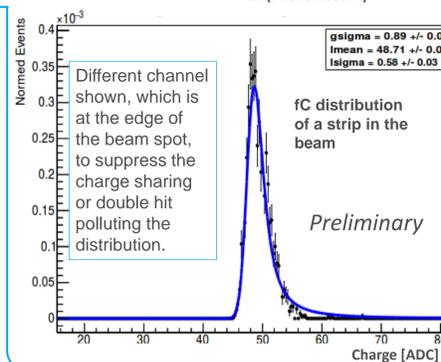

- Forced random triggers;
- Convert ADC to fC by channel;
- Expect a Gaussian charge distribution of per channel;
- **Noise level per channel:** RMS of the Gaus;
- **Full sensor noise level:** median of the noise distribution over all the channels.

#### Self Trigger

#### External Trigger -- Full Coincidence

- Pedestal Subtraction;
- Common noise observed and considered in subtraction algorithm;
- **Signal Response:**
  - Hit profile into 2 categories: hit on floating or readout strip.

### Summary

First application of the SiD hybrid-less micro-strip sensor

- Sensor with its readout characterized;
- Promising S/N ratio  $\sim 10$ ;
- Signal response verified in terms of beam spot location and Landau shape.

### Outlook

- News from 2019 Feb TestBeam with telescope prototype:
- Tracks found: time and spatial correlation among sensors.
- First performance measurement with a Mimosa telescope;
- Work ongoing for clustering, alignment, and tracking.
