

Visit of CERN Programmers :

D. SAMYN / DD
L. TREMBLET / DD
W. REMMER / PS

to MOTOROLA, Munich on 25.5.1983

We met 5 people from MOTOROLA :

Rudi RICHTER RMS68K expert
Jutta KINDERMANN commerical contact } Munich
M. RUDYK one of the bosses

Dick VANDERLIN }
Roni WOOD } RMS68K experts, PHOENIX/USA

The main purpose of this visit was to collect information on the RMS68K System Generation Program, a still missing link in our RMS68K cross-software.

The meager result : some parts of the assembler listing were explained to us, but finally they refused to give us the listing for free (we could still buy it). The program is well documented. Dick thinks that eventually he could find an American client who has written already a portable version of this program. Dick will keep us informed.

Some other points :

- I saw an EXORmacs development system.
- MOTOROLA is developing a VME-crate based development system for about half the price of EXORmacs.
- Dick will look into the possibility of distributing RMS68K software on 9-track tapes.
- The newest version of RMS68K is 4.00; there comes an updated version of the user's manual (D5) with it.

W. Remmer
