

GEOMETRICAL IMAGE TRANSFORMATIONS AS A MEANS
TO IMPROVE THE QUALITY OF HIGH-ENERGY PICTURES

H. Drevermann and W. Krischer

Presented by: H. Drevermann

ABSTRACT

The human perception of high-energy pictures may be considerably facilitated if one enhances the interesting features of the image by modifying its geometry. Several examples for such an improvement are shown for pictures from bubble chambers, for a drawing of a fixed target experiment and for a simulated image from a collider experiment.
