

89 NORTH®

PhotoFluor® LM-75

The world's first direct-mounted metal halide light source.

89 North's PhotoFluor LM-75 is designed for extended use with minimal down time and maximum benefits.

Direct mounting eliminates need for unreliable liquid light guides

As much or more **stable power** at the sample than a 200W metal halide light source

Broad spectrum with strong UV is **compatible with any filter set**

Pre-aligned, **user-exchangeable lamp** with a long lifetime

Extremely quiet operation with **minimal heat** production in rooms with multiple microscopes

Built-in DC ballast eliminates need for external control box, **reducing needed bench space**

Low up-front cost and lower overall cost of ownership than other fluorescence light sources

Contact 89 North for your ideal light source for *fluorescence in situ hybridization*.

CHROMA®

ET FISH Filter Sets

High-performance filter sets for fluorescence in situ hybridization.

Chroma's ET FISH filter sets provide brighter signals and excellent color separation for accurate scoring.

Eliminate bleedthrough of Gold and Aqua from Green signals to reliably discriminate between Aqua/Green/Gold/Red

Dual Band Sets with **balanced Green/Orange and Green/Red** signals for different light sources

Zero-pixel-shift sets for **perfect image registration**

Special Red and Orange filter sets to **separate Orange from Red signals** (advanced expertise required)

Less eye fatigue thanks to brighter fluorescent signals

No need for filter replacement – **lifetime warranty**

Contact Chroma for assistance in choosing filters for your fluorescent genetic testing application.

Cell Sciences recombinant proteins are:

- Carrier-Free
- Biologically Active
- Low Endotoxin
- Highly Pure
- Suitable for Cell Culture and Animal Studies

These products are for laboratory research purposes only, not for any human or animal diagnostic or therapeutic use.

Cell Sciences offers thousands of biologically relevant recombinant proteins and corresponding affinity-purified antibodies. Our proteins are low endotoxin, carrier-free, highly pure, biologically active and suitable for cell culture and animal studies.

DISCOVER THE ADVANTAGES OF VIRAL VECTORS

Safely and efficiently deliver genetic material into
hard-to-transfect cell lines and model organisms

Choose AAV for...
tissue specificity
low immunogenicity

Choose lentivirus for...
host genome integration
stable transgene expression

Choose adenovirus for...
high transduction efficiency
large packaging capacity

Download our Viral Delivery Guide to find out which viral vector
will work best for your experiments: vigenebio.com/viral-guide

AAV packaging • Lentivirus packaging • Adenovirus packaging

Featured products: Control viruses | Biosensors | Human cDNA clones | shRNA | miRNA
