

WG1: introduction

LHCHWG general meeting, 29th November 2022

Bernhard Mistlberger, Alexander Karlberg (TH),
Roberto Di Nardo (ATLAS), Julie Malclès (CMS)

WG1 overview

- WG1 focuses on:
 - SM Higgs cross-sections and branching ratios,
 - Modelling of main backgrounds for SM cross-section measurements.
- One subgroup per main four production modes,
- A subgroup dedicated to off-shell cross-section and interference with continuum background
- Additional point-of-contact to update Higgs branching fractions, generally less active due to sufficiently high-precision. Ongoing activity on BRs within MSSM WG3 with WG1 BR tools.
- Cross-talk with other WGs: STXS, (SM)EFT, BSM Higgs, ...

WG1 notes

- **Off-shell group:**

<https://cds.cern.ch/record/2801789>

Discussion on the potential impact of off-shell Higgs measurements on searches for BSM physics carried out in the EFT framework or as benchmark model studies. Off-shell potential to resolve flat directions in parameter space for on-shell measurements.

- **ttH group:**

<https://cds.cern.ch/record/2812088>

MC generator comparisons at particle level to compare the modelling of important backgrounds and associated uncertainties in ATLAS and CMS.

Few comments still to be addressed
