# Continuous Integration and Jenkins

Petr Jirout jirout.petr1@gmail.com

#### **Outline**

• What is Continuous Integration?

• What is Jenkins?

What can we do with both in CERN?

#### Outline

• What is Continuous Integration?

• What is Jenkins?

What can we do with both in CERN?

• ... and Czech accent.

• Find a bug (broken code) as soon as possible.

Automating as much as possible.

Establish proper test suite.

Monitoring and reporting.

• Set up Continuous Integration service.

Commit changes frequently.

Verify every change.

Take appropriate action.

• Take appropriate action.

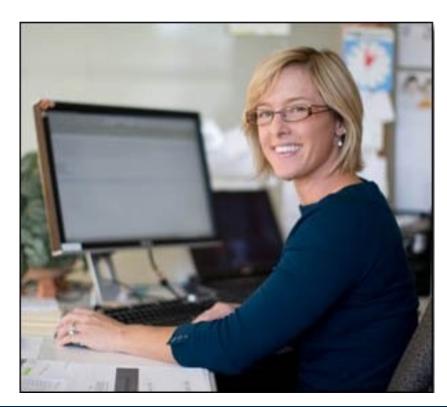

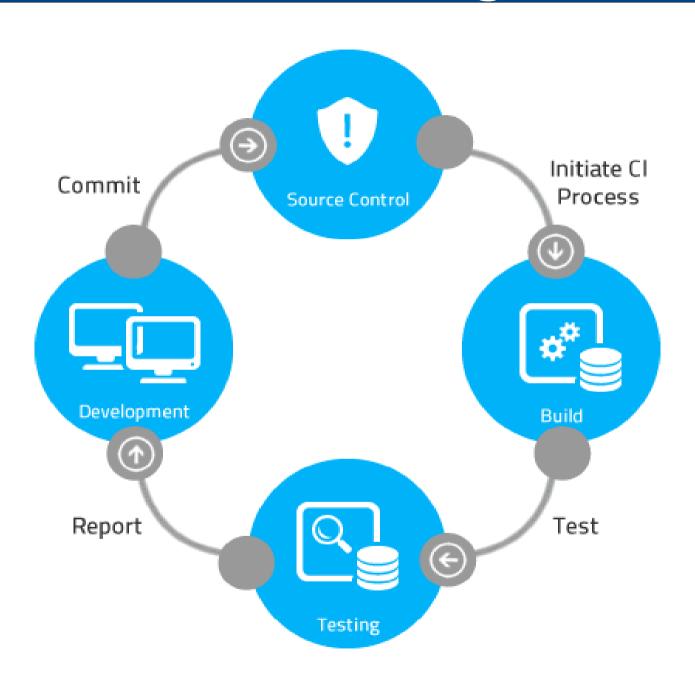

Set up Continuous Integration service.

Commit changes frequently.

Verify every change.

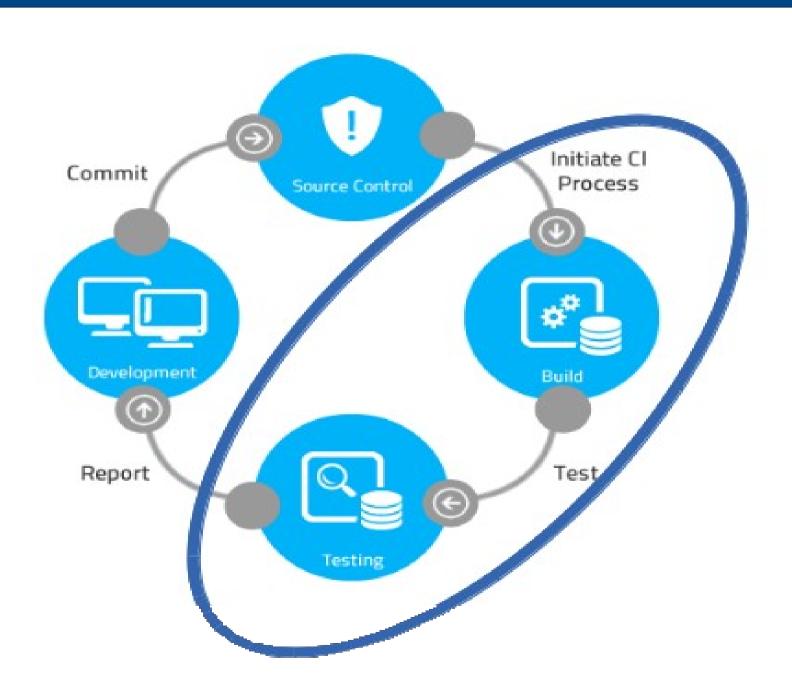

Take appropriate action.

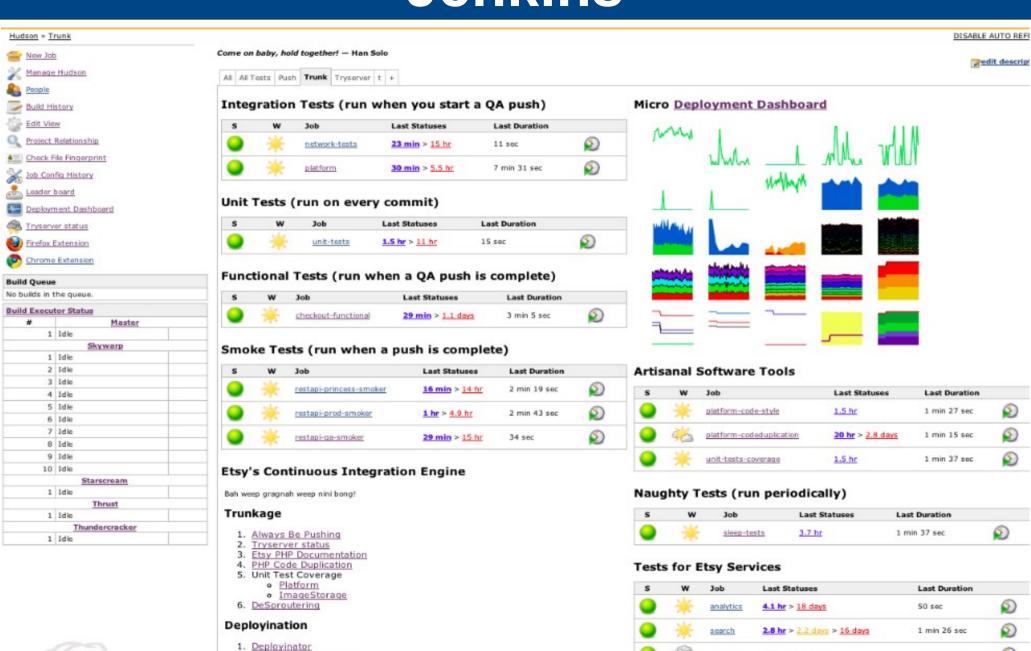

- Open source tool written in Java.
- Extensible via plugins.
- Easier to maintain regular builds with history.
- Easier to run basically same build with different configuration.

- Open source tool written in Java.
- Extensible via plugins.
- Easier to maintain regular builds with history.
- Easier to run basically same build with different configuration.
- But in the end it is just a smart scheduler.

1. deploys per day

2. time from commit to deploy

3. SuperGrep - production logs in realtime

Deployment Dashboard - realtime production Web stats

1 min 55 sec

2 min 51 sec

22 hr > 1.9 days

23 hr > 12 days

# Continuous Integration in CERN

• Where?

## Continuous Integration in CERN

• Where?

• In every software project.

## Continuous Integration in CERN

• Where?

• In every software project.

• Like ROOT, Geant4, CernVM, CernVM-FS ...

Geant 4

## Example – LCG externals

• Different compilers: gcc, icc

• Different architectures: x86, x86\_64

• Different branches: Experimental, Release, Preview

# Example – LCG externals

• Different compilers: gcc, icc

• Different architectures: x86, x86\_64

• Different branches: Experimental, Release, Preview

How to build all these possibilities?

# Dealing with many configurations

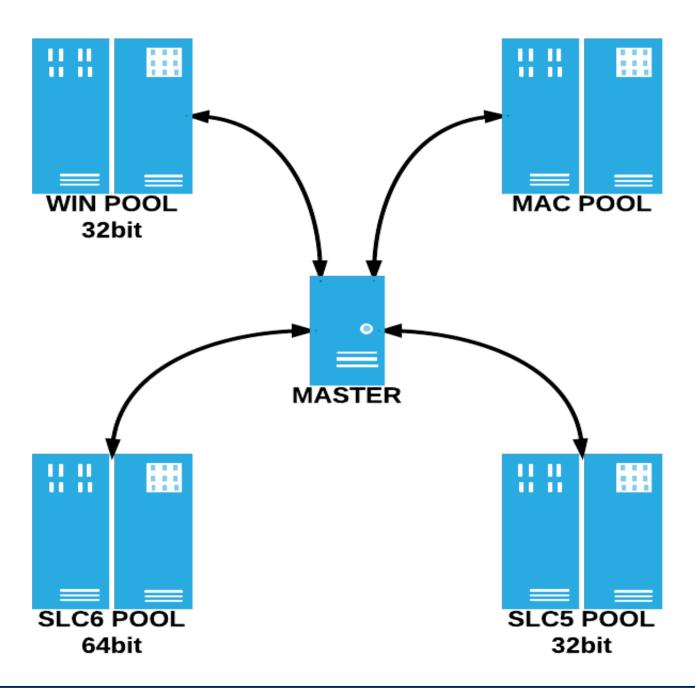

By computing power and smart configuration!

- Having pools of build machines.
  - Pets vs Cattle

 Braining up your configuration scripts.

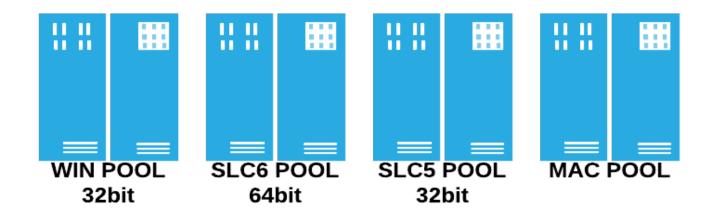

#### **Build infrastructure**

## Bring these ideas to Jenkins

Create pools.

- Separate the environment from building process.
  - Put environment settings to one place (script).

## Bring these ideas to Jenkins

- Identify the 'real variables'.
  - You have to specify them manually.
- Put these variables to configuration axes.
  - Exclude unwanted combinations.

Let Jenkins do its job!

Gather results.

<b>Configuration Matrix</b>	linux.rh.5	linux.rh.6
gcc-3.4.6		
gcc-4.5.3		
gcc-4.6.3		

#### Summary

- Continuous Integration
  - Generally good principle, but comes with a price.
  - Not only building, but also testing.

- Jenkins
  - Helps with menial tasks.
  - Does not solve your CI within single click.

#### What to do next

• Study!
