

Alvaro DIEZ GONZALEZ-PARDO

Alvaro Diez Gonzalez-Pardo is Spanish and he is finishing now his bachelor in Physics at the University of Cantabria.

During his internship at CERN he is working in the Physics Department in DT-SSD and his project is about developing a fast transit current simulator for irradiated silicon detectors with free parameters that can be fitted to measurements.

Alvaro is going to finish his bachelor in October and he is going to start his masters in physics afterwards. For now his main goal is to work in physics research but he could also imagine working for a private company or even teaching physics.
