

Freja THORESEN

Freja has a Bachelor's Degree in Physics and IT at Niels Bohr Institute in Copenhagen. Currently, she is studying a Master of Physics with specialization in Computational Physics at Niels Bohr Institute in Copenhagen. She did also half a year of Theoretical Physics at University College Dublin, before coming to CERN.

During her summer at CERN, Freja has been working in the Engineering Department in the Liaison with Experiments Section. Her project has focused on the simulation of the H8 beam line at the north area using the G4beamline software.

When she finishes her studies in 2016 Freja would like to do a PhD and continue working with computational particle physics.
