

#### **Applications of Accelerators**

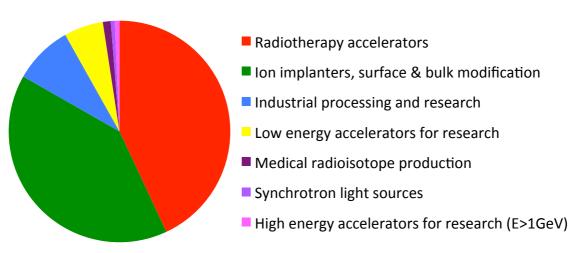

CERN Introductory Accelerator School Budapest, 2016.

#### Dr. Suzie Sheehy

John Adams Institute for Accelerator Science
University of Oxford

"A beam of particles is a very useful tool..."

There are roughly 35,000 accelerators in the world (Above 1 MeV...)

#### **Outline**

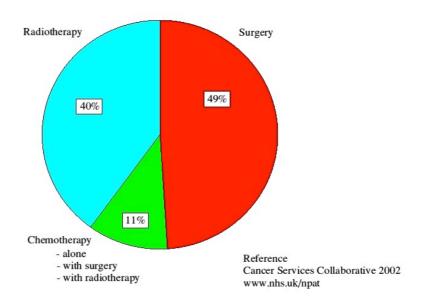

- 1. Medical imaging and treatment
- 2. Industrial uses of accelerators
- 3. Synchrotron light sources
- 4. Neutron sources
- 5. Energy and security applications
- 6. Historical & cultural applications

3

## 1. Medical Applications

- Around 1/3 of people in the will die from cancer...
- But diagnosis is no longer a death sentence!

Patients cured by the major cancer treatment modalities

5

# X-ray radiotherapy

Linac

Foil to produce x-rays-

Collimation system

## **Charged Particle Therapy**

- · Greater dose where needed
- Less morbidity for healthy tissue
- Less damage to vital organs

#### Energy loss in materials

The relativistic version of the formula reads:

$$-\frac{dE}{dx} = \frac{4\pi}{m_ec^2} \cdot \frac{nz^2}{-\frac{dE}{dx}} \cdot \left( \begin{array}{c} e^2 \end{array} \right)^2 \cdot \left[ \ln \left( \frac{2m_ec^2\beta^2}{4\pi\varepsilon_0} \right) - \beta^2 \right] \cdot \left[ \ln \left( \frac{e^2}{4\pi\varepsilon_0} \right)^2 \cdot \left[ \ln \left( \frac{2m_ev^2}{I} \right) \right] \cdot \left[ \ln \left( \frac{$$

High speed -> small energy loss

Low speed -> high energy loss

 $\beta = v/c$ 

v velocity of the particle

E energy of the particle

x distance travelled by the particle

c speed of light

z e particle charge

e charge of the electron

m<sub>e</sub> rest mass of the electron

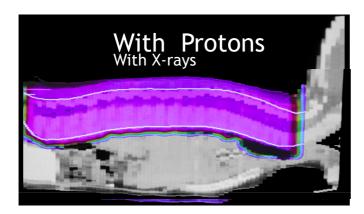

n electron density of the target

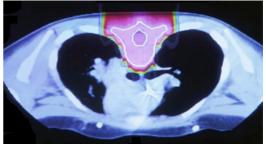

I mean excitation potential of the target

 $\varepsilon_0$  vacuum permittivity

#### Proton therapy

- "Hadron therapy" = Protons and light ions
- Used to treat localised cancers
- · Less morbidity for healthy tissue
- · Less damage to vital organs
- Particularly for childhood cancers

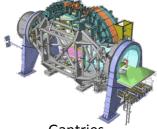

#### A few developments

**Spot Scanning** 

**Proton Radiography** 

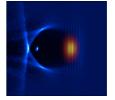

Gantries

**FFAG Accelerators** 

Dielectric Wall Accelerators

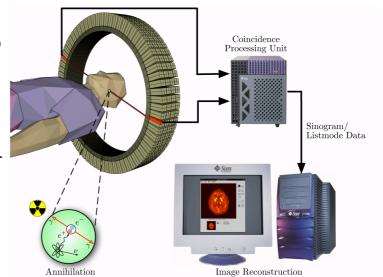

Laser Plasma Accelerators

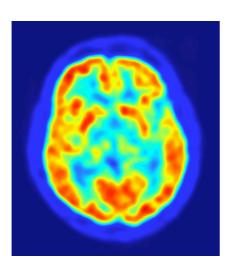

HEP community can contribute accelerators AND other expertise!

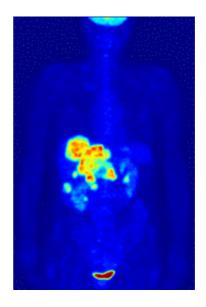

#### Radioisotope production

- Accelerators (compact cyclotrons or linacs) are used to produce radio-isotopes for medical imaging.
- 7-11MeV protons for shortlived isotopes for imaging
- 70-100MeV or higher for longer lived isotopes

• Positron emission tomography (PET) uses Fluorine-18, half life of ~110 min

- Fluorodeoxyglucose or FDG carries the F18 to areas of high metabolic activity
- 90% of PET scans are in clinical oncology

13

## Radiopharmaceuticals

#### p, d, 3He, 4He beams

Isotopes used for PET, SPECT and Brachytherapy etc...

TABLE 2.1. THE RADIOISOTOPES THAT HAVE BEEN USED AS TRACERS IN THE PHYSICAL AND BIOLOGICAL SCIENCES

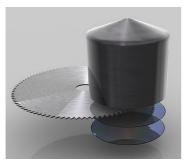

| Isotope      | Isotope      | Isotope        |
|--------------|--------------|----------------|
| Actinium-225 | Fluorine-18  | Oxygen-15      |
| Arsenic-73   | Gallium-67   | Palladium-103  |
| Arsenic-74   | Germanium-68 | Sodium-22      |
| Astatine-211 | Indium-110   | Strontium-82   |
| Beryllium-7  | Indium-111   | Technetium-94m |
| Bismuth-213  | Indium-114m  | Thallium-201   |
| Bromine-75   | Iodine-120g  | Tungsten-178   |
| Bromine-76   | Iodine-121   | Vanadium-48    |
| Bromine-77   | Iodine-123   | Xenon-122      |
| Cadmium-109  | Iodine-124   | Xenon-127      |
| Carbon-11    | Iron-52      | Yttrium-86     |
| Chlorine-34m | Iron-55      | Yttrium-88     |
| Cobalt-55    | Krypton-81m  | Zinc-62        |
| Cobalt-57    | Lead-201     | Zinc-63        |
| Copper-61    | Lead-203     | Zirconium-89   |
| Copper-64    | Mercury-195m |                |
| Copper-67    | Nitrogen-13  |                |

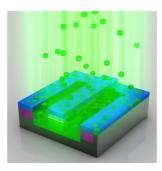

14

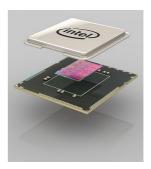

#### 2. Industrial accelerators

15

## Ion implantation

Images courtesy of Intel

 Electrostatic accelerators are used to deposit ions in semiconductors.

#### Electron beam processing

In the US, potential markets for industrial electron beams total \$50 billion per year.

33% Wire cable tubing 32% Ink curing 17% shrink film 7% service

5% tires 6% other

When polymers are cross-linked, can become:

- stable against heat,
- increased tensile strength, resistance to cracking
- · heat shrinking properties etc

17

#### **Equipment sterilisation**

Manufacturers of medical disposables have to kill every germ on syringes, bandages, surgical tools and other gear, without altering the material itself.

E-beam sterlisation works best on simple, low density products.

Advantages: takes only a few seconds (gamma irradiation can take hours)

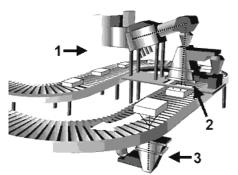

Disadvantages: limited penetration depth, works best on simple, low density products (syringes)

The IBA rhodotron – a commercial accelerator used for e-beam sterilisation

#### Food irradiation

'Cold pasteurisation' or 'electronic pasteurisation'

Uses electrons (from an accelerator) or X-rays produced using an accelerator.

The words 'irradiated' or 'treated with ionising radiation' must appear on the label packaging.

Foods authorised for irradiation in the EU:

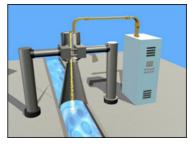

Higher dose

19

#### Other uses in industry...

- Hardening surfaces of artificial joints
- Removal of NO<sub>x</sub> and SO<sub>x</sub> from flue gas emissions
- Scratch resistant furniture

Treating waste water or sewage Purifying drinking water (Without additional chemicals...)

Irradiating topaz and other gems with electron beams to change the colour

http://www.nrc.gov/reading-rm/doc-collections/fact-sheets/irradiated-gemstones.html http://www.symmetrymagazine.org/article/october-2009/cleaner-living-through-electrons

## 3. Synchrotron Light Sources

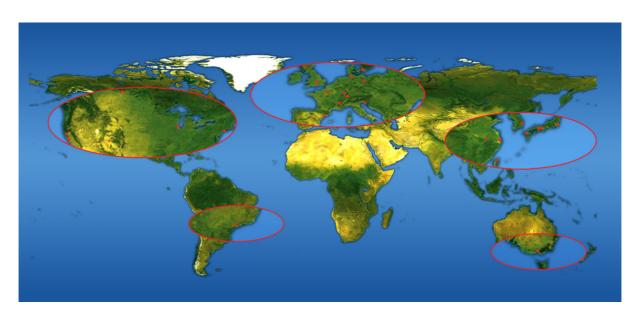

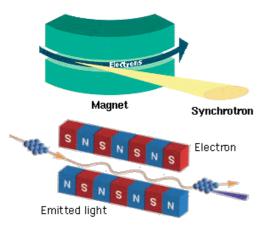

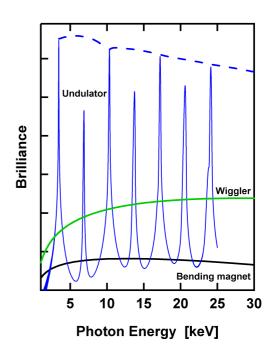

Image courtesy of ESRF

Synchrotron radiation is emitted by charged particles when accelerated radially

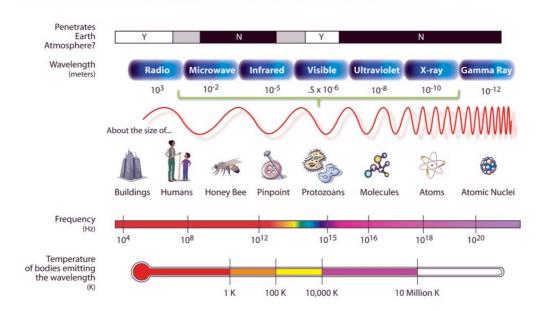

Produced in synchrotron radiation sources using bending magnets, undulators and wigglers

#### THE ELECTROMAGNETIC SPECTRUM

Synchrotron radiation: microwaves to hard x-rays (user can select)

High flux = quick experiments!

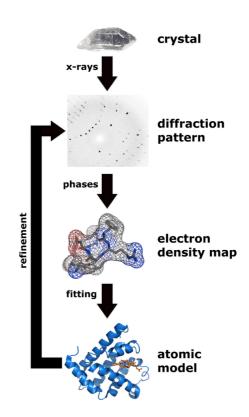

Pulsed structure = resolution of processes down to picoseconds

#### X-Ray crystallography

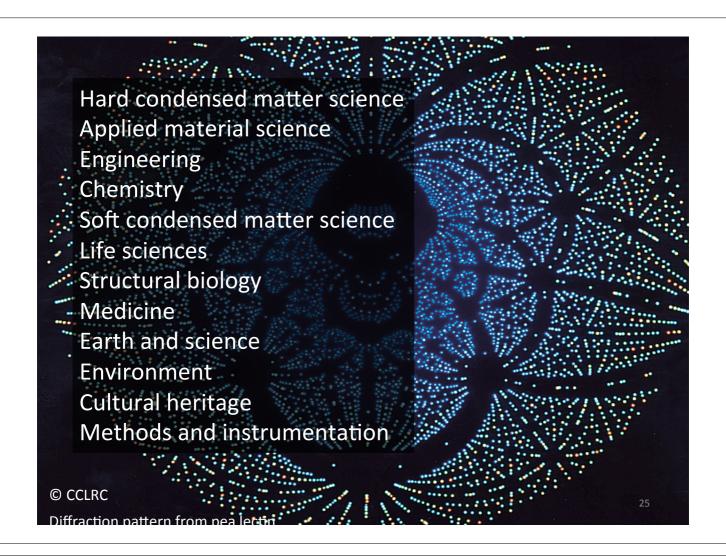

2014 was the International Year of Crystallography

Protein crystallography is a standard technique at synchrotron light sources (Diamond light source has 5 beamlines devoted to it)

The hardest part is forming the crystal...

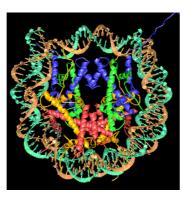

For some great overview videos of crystallography, see: http://www.richannel.org/collections/2013/crystallography

#### Synchrotron Radiation Science

#### **Biology**

Reconstruction of the 3D structure of a nucleosome (DNA packaging) with a resolution of 0.2 nm

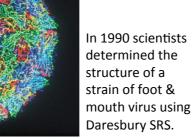

#### **Archeology/Heritage**

A synchrotron X-ray beam at the SSRL facility illuminated an obscured work erased, written over and even painted over of the ancient mathematical genius Archimedes, born 287 B.C. in Sicily.

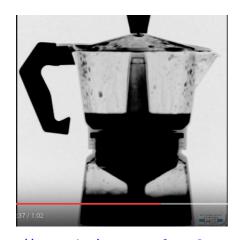

Using X-Ray induced fluorescence

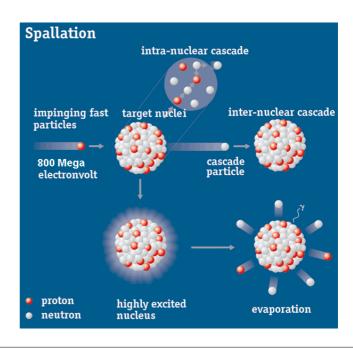

## 4. Neutron Spallation Sources

https://youtu.be/VESMU7JfVHU?t=21

'Neutrons tell you where atoms *are* and what atoms *do*'

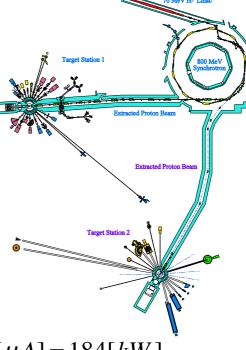

#### ISIS Accelerators and Targets

- H- ion source (17 kV)
- 665 kV H- RFQ
- 70 MeV H-linac
- 800 MeV proton synchrotron
- Extracted proton beam lines
- Targets
- Moderators

Pulsed beam of 800 MeV (84% speed of light) protons at 50 Hz Average beam current is 230 muA (2.9× 10<sup>13</sup> ppp)

TS-1 at 40 pps, 36 kW to TS-2 at 10 pps).

184 kW on target (148 kW to

29

 $P = 800[MV] \times 230[\mu A] = 184[kW]$ 

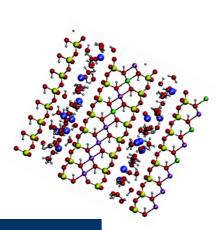

## Calculating beam power

- $P = \frac{W}{T}$ Power = Work/time
- Work = force x distance W = Fd
- Force on particle in an electric field F = qE
- We know the electric field is (voltage/distance) and the protons (charge +1) have gained 800 MeV, so V=800MV.
- Also know current = charge/time  $P = 800[MV] \times 230[\mu A] = 184[kW]$

#### Unblocking oil pipes

- Asphaltenes are a complex mixture of molecules that can sometimes block oil pipes
- •Research to more easily **predict** and **prepare** for the formation of asphaltene deposits
- Result in fewer blockages and big savings for the oil industry.

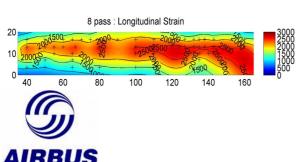

"ISIS allowed us to understand more clearly how asphaltenes aggregate, an important observation from a flow assurance point of view and should allow more efficient extraction of hydrocarbons in the future."

-Edo Boek, Schlumberger Cambridge
-Edo Boek, Schlumberger Cambridge
Research, Senior Research Scientist

Schlumberger

#### Stresses in Airbus A380 Wing

- Aircraft manufacturer Airbus has used ISIS since 2006
- Research into aluminium alloy weld integrity for aircraft programmes
- •Residual stresses from welding cause weaknesses and the possibility of cracks
- ISIS neutrons look deep inside engineering components to measure stress fields

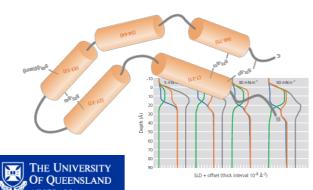

"Residual stress measurement at ISIS has been invaluable in researching and developing existing and novel material manufacturing and processing techniques . – Richard Burguete, Airbus

Experimental Mechanics Specialist

#### Understanding infant lung structure

- · Natural lung surfactant allows oxygen into the bloodstream
- · Absence in **premature babies** causes breathing difficulties
- ·ISIS mimicked change in lung capacity to discover how proteins and phospholipids act together
- · Helping to develop synthetic lung surfactants which can be more precisely targeted at clinical needs to help save babies' lives

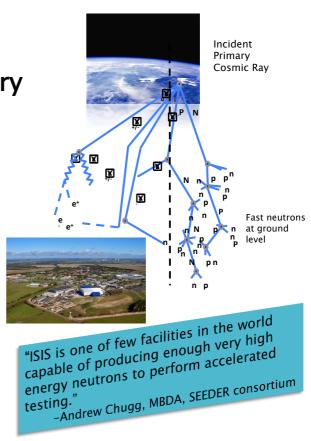

"ISIS is the premier place in the world to work with neutrons and liquid surfaces. In collaboration with the University of Queensland we were able to discover how proteins and phospholipids act together to enable lung function." - Dr Stephen Holt, ISIS neutron scientist

# Fast neutron testing for the semiconductor industry

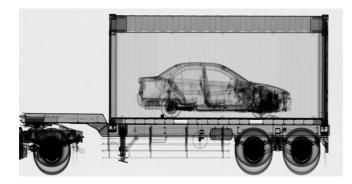

- Atmospheric neutrons collide with microchips and upset microelectronic devices every few seconds
- •300 x greater effect at high altitude
- •ISIS enables manufacturers to mitigate against the problem of cosmic radiation
- •Increased confidence in the quality and safety of aerospace electronic systems

# 5. Energy and Security Applications

#### Cargo scanning

Cargo containers scanned at ports and border crossings

Accelerator-based sources of X-Rays can be far more penetrating (6MV) than Co-60 sources.

Container must be scanned in 30 seconds.

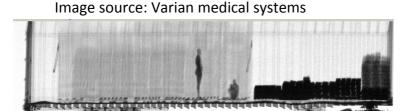

Image: dutch.euro

37

#### Materials testing for fusion

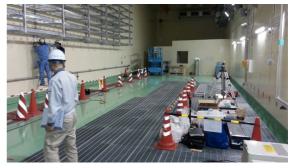

Source: IFMIF.org

"deuterium-tritium nuclear fusion reactions will generate neutron fluxes in the order of  $10^{18}$  m<sup>-2</sup>s<sup>-1</sup> with an energy of 14.1 MeV that will collide with the first wall of the reactor vessel"

International Fusion Material Irradiation Facility (IFMIF)

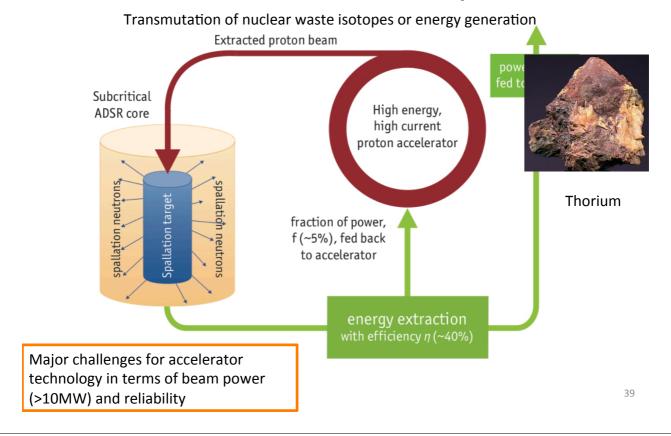

40 MeV
2 x 125mA linacs
CW deuterons, 5MW each
Beams will overlap onto a liquid Li jet
To create conditions similar to in a fusion reactor

To de-risk IFMIF, first a test accelerator 'LIPAc' is being built

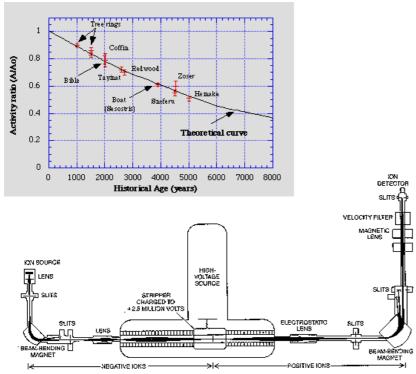

Installation of 'LIPAc' test accelerator has started in Japan

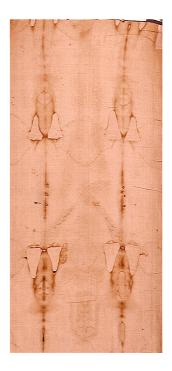

#### **Accelerator Driven Systems**

#### 6. Historical and cultural applications

#### **Radiocarbon Dating**

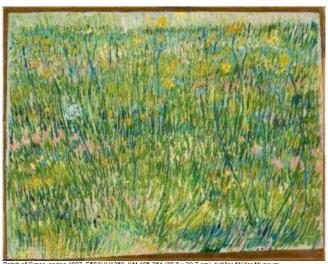

For more accuracy, isolate C-14 from other isotopes "AMS" = Accelerator Mass Spectrometry

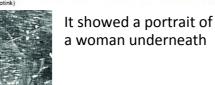

41

## Accelerators can study art

This painting "Patch of grass" by Vincent van Gogh was the first one analysed by a particle accelerator

Used X-ray fluorescence technique Distribution of Hg and Sb pigment allowed a reconstruction of underlying image

http://www.javno.com/en-bestseller/van-gogh-first-victim-of-particle-bombarding\_185316

#### Accelerators can help spot art forgeries

Ion Beam Analysis shows us the chemical composition of pigments used in paint

This allows art historians to compare them with paints available to artists like Leonardo da Vinci

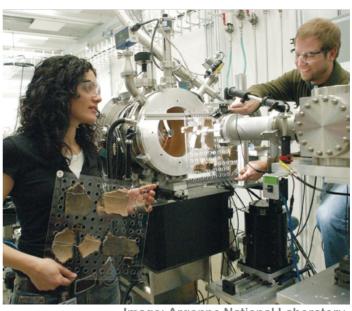

## Accelerators in archaeology

The interior of samples can be studied using accelerators without destroying them

Pottery from Armenia, dating back to 1300 BC, is set up for a synchrotron experiment

**Image: Argonne National Laboratory** 

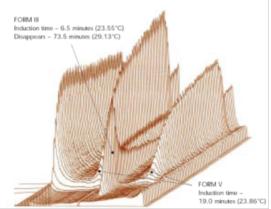

#### Accelerators can make food taste better

## NEW INSIGHTS INTO CHOCOLATE

Of the six possible crystal forms, the fifth (form V) produces the best quality chocolate

Cadbury used X-rays from a particle accelerator to study how cocoa crystallises

#### Finally, just one more application...

#### **Detecting wine fraud**

Use ion beam to test the bottle of "antique" wine – chemical composition of the bottle compared to a real one.

"In a recent and spectacular case, American collector William Koch sued a German wine dealer, claiming four bottles – allegedly belonging to former U.S. president Thomas Jefferson – purchased for 500,000 dollars, were fake. The case has yet to be settled."

- http://www.cosmosmagazine.com

#### Next time someone asks you what accelerators are for...

"A beam of the right particles with the right energy at the right intensity can shrink a tumor, produce cleaner energy, spot suspicious cargo, make a better radial tire, clean up dirty drinking water, map a protein, study a nuclear explosion, design a new drug, make a heat-resistant automotive cable, diagnose a disease, reduce nuclear waste, detect an art forgery, implant ions in a semiconductor, prospect for oil, date an archaeological find, package a Thanksgiving turkey or...

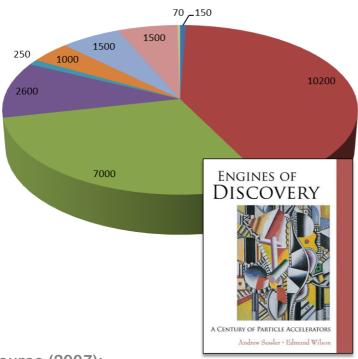

BOFFINS 'WON'T PESTROY WORLD

...discover the secrets of the universe."

-Accelerators for Americas Future Report, pp. 4, DoE, USA, 2011

47

#### Accelerators in the world >24000

- High Energy Accelerators of more than 1 GeV
- Ion implantation
- Electron cutting and welding
- Electron beam and X-ray irradiators (sterilization)
- Ion Beam analysis (including AMS)
- Radioisotope production (including PET)
- Non destructive testing (including security)
- Neutron generators (including sealed tubes)
- Synchrotron radiation

Engines of Discovery.
A Century of Particle Accelerators.
