

A problem has been detected and windows has been shut down to prevent damage to your computer.

The problem seems to be caused by the following file: SPCMDCON.SYS

PAGE_FAULT_IN_NONPAGED_AREA

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware or software manufacturer for any windows updates you might need.

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as caching or shadowing. If you need to use Safe Mode to remove or disable components, restart your computer, press F8 to select Advanced Startup Options, and then select Safe Mode.

Technical information:

*** STOP: 0x00000050 (0xFD3094C2,0x00000001,0xFBFE7617,0x00000000)

*** SPCMDCON.SYS - Address FBFE7617 base at FBFE5000, Datestamp 3d6dd67c

Revealing Errors

“Revealing errors that reveal technologies to learn how they shape and control our lives.”

Free Software Defined

The freedom to...

- ... use software for any purpose.
- ... study and modify.
- ... distribute copies to others.
- ... collaborate and share your changes.

Free Software is really about...

power

Free Software is really about...

control

Free Software is really about...

autonomy

A good tool is an invisible tool. By invisible, I mean that the tool does not intrude on your consciousness; you focus on the task, not the tool. Eyeglasses are a good tool -- you look at the world, not the eyeglasses....

DIEBOLD

Server Error in '/PNCBank' Application.

Object reference not set to an instance of an object.

Description: An unhandled exception occurred during the execution of the current web request. Please review the stack trace for more information about the error and where it originated in the code.

Exception Details: System.NullReferenceException: Object reference not set to an instance of an object.

Source Error:

The source code that generated this unhandled exception can only be shown when compiled in debug mode. To enable this, please follow one of the below steps, then request the URL:

1. Add a "Debug=true" directive at the top of the file that generated the error. Example:

```
<%@ Page Language="C#" Debug="true" %>
```

or:

- 2) Add the following section to the configuration file of your application:

```
<configuration>  
  <system.web>  
    <compilation debug="true"/>  
  </system.web>  
</configuration>
```

Note that this second technique will cause all files within a given application to be compiled in debug mode. The first technique will cause only that particular file to be compiled in debug mode.

Important: Running applications in debug mode does incur a memory/performance overhead. You should make sure that an application has debugging disabled before deploying into production.

```
$monitor = array( '42107457' => 1, '9359890' => 1);  
// Put baddies (hotties?) in here
```

```
/* Monitoring these people's profile viewage.
```

```
Stored in central db on profile_views.
```

```
Helpful for law enforcement to monitor stalkers and stalkees. */
```
