# Claris FileMaker 2024 Release

Power of custom meets efficiency of low code

Develop custom, robust operational apps with the efficiency of low code.

The 2024 release of Claris FileMaker allows you to build apps with more speed and flexibility than ever before.

With the latest version of FileMaker, protect the apps your team relies on with updated security protocols and take your apps to the next level with an expanded toolset.

Claris FileMaker

What's new

- **Open SSL 3.0.11** - Thwart potential security threats related to previous OpenSSL vulnerabilities to keep your applications running smoothly.

- **Limit Access** - Greater control over Manage Database access for script runtime means non-admin users can no longer modify schema directly through scripts or indirectly through database schema changes.

- **Custom OAuth Support** - Allow easier authentification and authorization of users with streamlined integration of Google Workspace and other services into Custom OAuth and support for additional query parameters.

- **Apple Sign in** - Integrate AppleID and Sign in into applications for quick and secure access and leverage Admin API to set service ID and client secret and enable/disable external server account access.

- **Let's Encrypt** - Configure secure hosting as a FileMaker Server Admin to quickly spin up preconfigured server settings that natively support Let's Encrypt SSL.

Technical specifications

FileMaker Pro
- macOS Sonoma 14.0
- macOS Ventura 13.0
- Windows 11 Enterprise and Pro Editions (23H2, 64-bit only)
- Windows 10 Enterprise and Pro Editions (22H2, 64-bit only)
