
Environmental Policies

In providing various Internet platform services, NAVER is committed to doing our best to protect the environment, create social values, practice sustainable business management based on a transparent structure of governance, and fulfill our social responsibilities.

In order to achieve this, we have established the following environmental policies that guide all activities and services delivered by NAVER.

Proactive Effort to Mitigate Climate Change Risks and to Protect Biodiversity

In order to preserve the environment and respond to the increasing risks associated with global climate change, we establish long-term goals and strategies and continuously carry out activities to reduce green-house gas emissions and increase the use of renewable energy. We also make efforts to share the information and values for the protection of biodiversity.

Environmentally Friendly Investments and Continuous Improvement of Environmental Performance

We constantly make environmentally friendly investment decisions to contribute to the expansion of the eco-friendly value chain by improving energy efficiency, minimizing green-house gas emissions, purchasing green products, promoting eco-friendly architecture, and more.

Fulfillment of Duties and Requirements & Encouraging Our Partners to do the Same

By running an environmental management system effectively, we fulfill global environmental regulations, laws, and various demands put forward by a range of interested parties and disclose our environmental management performances transparently.

We share the directions and goals of NAVER's environmental management policies with our partners in the Naver ecosystem and do our best to expand our eco-friendly ecosystem.
