Volatility Weighting Methodology

Victory Capital, the Sub-Advisor of the ETF, combines fundamental criteria and volatility weighting in an effort to outperform traditional cap-weighted indexing strategies.

About the Index

- The universe² for the Victory US Large/Mid Cap Volatility Weighted BRI Index begins with the largest U.S. companies by market capitalization with positive earnings in the four most recent quarters.
- The Index eliminates the companies that do not satisfy the proprietary Biblically Responsible Investing ("BRI") filtering criteria.
- A volatility weighted index assigns percentage values to each security in the Index based on the volatility of that security in the market. More volatile stocks have a lower weighting, and less volatile stocks are assigned a higher weighting.
- Reconstitutes every April and October

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. The market price used to calculate the Closing Market Price is the last trade as of the time that the Fund's NAV is calculated. If you trade your shares at another time, your return may differ. Index performance is shown for illustrative purposes only. It is not possible to invest directly in an unmanaged index.

CAREFULLY CONSIDER THE INVESTMENT OBJECTIVES, RISKS, CHARGES, AND EXPENSES BEFORE INVESTING. A PROSPECTUS IS AVAILABLE FROM THE FUND BY CALLING 800.846.7526, VISITING ETF.TIMOTHYPLAN.COM, OR YOUR FINANCIAL PROFESSIONAL THAT CONTAINS THIS AND OTHER MORE COMPLETE, IMPORTANT INFORMATION. Investing involves risk, including the potential loss of principal. Strategies intended to hedge risk may be partly or wholly unsuccessful. The Fund has the same risks as the underlying securities traded on the exchange throughout the day. Redemptions are limited, and commissions are often charged on each trade. ETFs may trade at a premium or discount to their net asset value. The Fund is not actively managed and may be affected by a general decline in market segments related to the Index. The Fund invests in securities included in, or representative of securities included in, the Index, regardless of their investment merits. The performance of the Fund may diverge from that of the Index. Because the Index omits Excluded Securities, the Fund may be riskier than other funds that invest in a broader array of securities.

Fund holdings and sector allocations are subject to change, may differ from the Index, and should not be considered investment advice. Standard deviation is applied to the annual rate of return of an investment to measure the investment's volatility. Investors also use it as a gauge for the amount of expected volatility. R-squared values can range from 0.00 to 1.00, with the market index at 1.00. Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. Price-to-earnings ratio (P/E ratio) is the ratio for valuing a company that measures its current share price relative to its per-share earnings.

¹ **Victory US Large/Mid Cap Volatility Weighted BRI Total Return Index - SNVVBXT** (the "Index") eliminates companies from the corresponding non-BRI Index² that do not satisfy the proprietary Biblically Responsible Investing filtering criteria.
