

Gain agility and efficiency with Wireless Business Internet from Verizon.

For professional, scientific and technical services firms.

From computer system designers and architects to researchers and scientific consultants, the professional, technical and scientific services industry is as diverse and specialized as the customers it serves. But all of these types of firms have at least one thing in common: the need for reliable, secure internet connectivity at the main office and in remote work sites, like home or temporary offices.

A solid foundation for business success

Cloud-based CRM, ERP, HR, project management, and financial software applications have become critical to a consultancy's ability to operate more efficiently and effectively, as seen in the growth and popularity of integrated Professional Services Automation (PSA) platforms. As these online tools become even more central to your firm's daily operations, it's vital that your team of professionals and consultants can reliably connect to the internet, to their customers, and to each other.

When your firm has business-grade network connectivity designed to reduce IT and administrative complexity -- and when that connectivity can be deployed in a home office or a temporary work site in days rather than weeks -- you can achieve a whole new level of business agility. For example, when new business opportunities arise, or when seasonal demand for certain services grows, your success could hinge on being able to quickly establish and connect a short-term branch office closer to the customer.

Wireless Business Internet from Verizon makes it possible.

Connectivity made easy

Connecting centralized, remote and temporary work sites to affordable, business-grade internet used to pose significant challenges:

- Limited choice of providers
- Complex and time-consuming installations
- Inconsistent or unreliable service
- Excessive IT and vendor management burdens

But Verizon has made it radically simple to bring business-grade connectivity to almost anywhere your firm needs to be to delight its customers. With wireless business internet from Verizon, your firm gets one provider, one bill and consistent, affordable nationwide pricing for reliable 4G LTE virtually anywhere.

Wireless business internet

- Nationwide 4G LTE Business Internet or 5G Business Internet in select areas
- Packages, speeds and plans to fit your business needs

Router

- Simple plug and play activation
- Choice of routers and speed tier options

Built-in network security

- Data encryption and network-level authentication
- Threat protection and security monitoring

Installation

- Onsite or self-service provisioning
- Optimize router placement

Support

- 24/7 Tech Support
- Remote management on select routers

The business benefits of reliable, easy-to-manage connectivity

Professional, scientific and technical services firms thrive when they consistently delight clients and relentlessly manage their resources to maximize profitability and favorable results. Wireless business internet from Verizon can help your firm to compete more effectively and efficiently by enabling:

Operations optimization:

Stay connected to the online tools and professional platforms that make your data-driven decision-making possible, and yield maximum ROI for your firm and its clients. Reliable connectivity to these online systems can help your firm more effectively track project progress and provide customers with more visibility into the status of each engagement.

Business agility:

Quickly and easily stand up temporary or seasonal work sites to win more engagements and drive revenue growth.

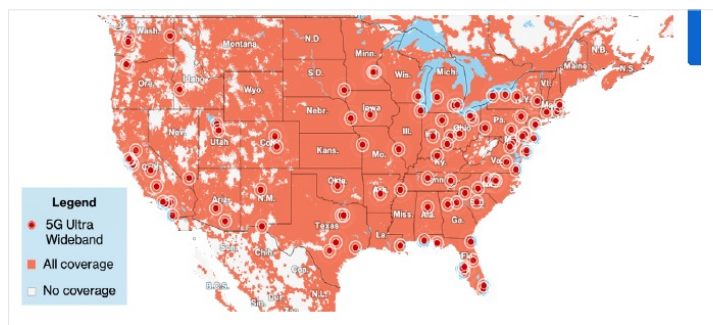

Talent acquisition:

Hire the best talent for your team – and empower their productivity, no matter where they work from. Verizon offers a suite of Remote Work Solutions, built on the foundation of our award-winning wireless business internet service.

Project collaboration:

Distant customers and your decentralized team of expert service providers can stay more engaged and collaborative when they have reliable internet connectivity for high-quality video conferencing, file-sharing and group chat services.
