Dear Colleagues,

As you probably know the Gargamelle Users Committee has been requested to present within three months to the Track Chamber Committee a list of possible experiments with Gargamelle and a Study Group has been set up to investigate the possible available beams.

We feel in the Gargamelle Users Committee that as many groups as possible, and not only the heavy liquid bubble chamber ones, should start thinking about possible experiments or at least about possible ideas for experiments with Gargamelle. We plan to have a first informal discussion at the meeting of the Gargamelle Users Committee to be held on January 17th, after the TCC, and to collect written reports before the end of February.

This letter is to invite all interested people to participate in the meetings of the Gargamelle Users Committee and to contribute proposals, suggestions and criticism as to the best use of Gargamelle at CERN.

Sincerely,

E. Fiorini
