Due to internal reorganization of the Saclay part of the PS184 collaboration it will not be possible for us to produce the amount of work required by the parasitic operation of PS184 on the PS183 target which was proposed by G.A. Smith and myself in our memo of August 28, 1984.

Our plans for 1985 will therefore be restricted to the continuation of the normal PS184 experimental program.

D. Garreta.
