

M E M O R A N D U M

To: The Chairman of the PSCC
From: D. GARRETA (Spokesman of PSCC/P35)
Subject: Further specifications on the proposal P35

- a) As a consequence of the withdrawal of the polarization measurements (see CERN/PSCC/81-36/P35 Add. 1) the time request for the second period of data acquisition (see CERN/PSCC/80-140/P35) is reduced from two weeks to one week.
- b) In order to vary the effect of the strong absorption of \bar{p} by nuclei, elastic and inelastic scattering will be performed at two or three different incident \bar{p} momenta (depending on the way LEAR will be operated) down to 300 MeV/c. Consequently the number of target nuclei to be studied will be reduced in order not to exceed the time request of the proposal.
