

Table of Contents

Preface	ix
CHAPTER I Magnus Embeddings and Free Differential Calculus	1
1. Some faithful 2×2 matrix representations	1
2. Free differential calculus	7
3. The fundamental theorem of free group rings	11
4. The Poincaré-Birkhoff-Witt Theorem	19
CHAPTER II Applications of Magnus Embedding	23
1. Some properties of F/R'	23
2. Some algorithmic problems in F/R'	32
3. Faithfulness of relation modules	39
4. Residual nilpotence of F/R'	43
CHAPTER III Fox Subgroups of Free Groups	46
1. A faithful matrix representation of $F/F(n,R)$	46
2. Identification of $F(2,R)$	48
3. Identification of $F(n,R)$ (F/R finite)	49
4. A filtration of the lower central series of F	51
5. A solution of the Fox problem	53
6. Structure of Fox modules	58
7. The centre of $F/F(n,R)$, $n \geq 2$	61
CHAPTER IV Dimension Subgroups	64
1. Sjogren's theorem	64
2. A counter-example due to rips	76
3. Some preliminary results on dimension subgroups	80
4. Dimension subgroups of metabelian groups	87
5. Structure of the fourth dimension subgroup	94
6. Dimension subgroups of metabelian p -groups	98
CHAPTER V Generalized Magnus Embeddings	104
1. A faithful matrix representation of $\mathbb{Z}F/\underline{h}_x$ ($x \leq \frac{1}{2}$)	104
2. A faithful matrix representation of $\mathbb{Z}F/\underline{h}_1 \dots \underline{h}_n$	107

TABLE OF CONTENTS

3. Residual nilpotence of $F/F^n(1+\lambda_1 \dots \lambda_n)$	109
4. Identification of $F^n(1+\lambda_1 \dots \lambda_n)$ for small n	113
5. Some applications of the generalized embeddings	116
6. The problem section	118
