# Contents

**Preface** ix

**Introduction** 3

Chapter 1. **The Model Operators** 11

1. Differential Operators and Their Models 11
2. Estimates for the Model Operator 16

Chapter 2. **Inverting the Model Operator** 23

3. Operators, Symbols, Composition and Invariance 23
4. Inverting $P_\lambda$ in Normal Form: Symbols 29
5. Inverting $P_\lambda$ in Normal Form: Kernels 38
6. Inverting $P_\lambda$ in Skew-Symmetric Form: Symbols 50
7. Inverting $P_\lambda$ in Skew-Symmetric Form: Kernels 61
8. Solution of the Model Operator in General Form 65

Chapter 3. **Pseudodifferential Operators on Heisenberg Manifolds** 80

9. Standard Pseudodifferential Operators 80
10. $\mathcal{V}$-Pseudodifferential Operators 90
11. Group Structures on $\mathbf{R}^{d+1}$ 100
12. Composition of $y$-Invariant Operators 105
13. The #-Composition of Homogeneous Symbols 116
14. The Composition of $\mathcal{V}$-Operators 119
15. Kernels of $\mathcal{V}$-Operators 128
16. The Proof of the Invariance Theorem (Theorem 10.67) 135
17. Adjoints of $\mathcal{V}$-Operators 138
18. Hypoellipticity and Parametrices for Second Order Differential Operators 140
19. $\mathcal{V}$-Operators on Compact Manifolds – Hilbert Space Theory 146

Chapter 4. **Applications to the $\overline{\partial}_b$-Complex** 151
20. The $\overline{\partial}_b$-Complex and $\Box_b$ 151
21. Hypoellipticity of $\Box_b$. Condition $Y(q)$ 156
22. Parametrix for $\Box_{b,q}$ 161
23. Partial Inverses and Projections in Case of a Non-degenerate Levi Form 165
24. $\Box_b$ on a Compact Manifold 168
25. The Partial Inverse and Associated Projections for $\Box_{b,q}$ 173

**Bibliography** 181

**Index of Terminology** 189

**List of Notation** 192
