

Contents

CHAPTER 1	
Introduction	1
References	7
CHAPTER 2	
The Use of Regression Analysis	8
2.1. Introduction	8
2.2. The General Theory of Least Squares	8
2.3. Linear Transformations of Independent Variables; Orthogonal Independent Variables	13
2.4. Case of Correlation	18
2.5. Prediction	20
2.6. Asymptotic Theory	23
References	27
Problems	27
CHAPTER 3	
Trends and Smoothing	30
3.1. Introduction	30
3.2. Polynomial Trends	31
3.3. Smoothing	46
3.4. The Variate Difference Method	60
3.5. Nonlinear Trends	79
3.6. Discussion	81
References	82
Problems	82

CHAPTER 4

Cyclical Trends	92
4.1. Introduction	92
4.2. Transformations and Representations	93
4.3. Statistical Inference When the Periods of the Trend Are Integral Divisors of the Series Length	102
4.4. Statistical Inference When the Periods of the Trend Are Not Integral Divisors of the Series Length	136
4.5. Discussion	158
References	159
Problems	159

CHAPTER 5

Linear Stochastic Models with Finite Numbers of Parameters	164
5.1. Introduction	164
5.2. Autoregressive Processes	166
5.3. Reduction of a General Scalar Equation to a First-Order Vector Equation	177
5.4. Maximum Likelihood Estimates in the Case of the Normal Distribution	183
5.5. The Asymptotic Distribution of the Maximum Likelihood Estimates	188
5.6. Statistical Inference about Autoregressive Models Based on Large-Sample Theory	211
5.7. The Moving Average Model	223
5.8. Autoregressive Processes with Moving Average Residuals	235
5.9. Some Examples	242
5.10. Discussion	247
References	248
Problems	248

CHAPTER 6

Serial Correlation	254
6.1. Introduction	254
6.2. Types of Models	256
6.3. Uniformly Most Powerful Tests of a Given Order	260
6.4. Choice of the Order of Dependence as a Multiple-Decision Problem	270
6.5. Models: Systems of Quadratic Forms	276

6.6. Cases of Unknown Means	294
6.7. Distributions of Serial Correlation Coefficients	302
6.8. Approximate Distributions of Serial Correlation Coefficients	338
6.9. Joint and Conditional Distributions of Serial Correlation Coefficients	348
6.10. Distributions When the Observations Are Not Independent	351
6.11. Some Maximum Likelihood Estimates	353
6.12. Discussion	357
References	358
Problems	358

CHAPTER 7

Stationary Stochastic Processes 371

7.1. Introduction	371
7.2. Definitions and Discussion of Stationary Stochastic Processes	372
7.3. The Spectral Distribution Function and the Spectral Density	380
7.4. The Spectral Representation of a Stationary Stochastic Process	392
7.5. Linear Operations on Stationary Processes	398
7.6. Hilbert Space and Prediction Theory	414
7.7. Some Limit Theorems	424
References	432
Problems	432

CHAPTER 8

The Sample Mean, Covariances, and Spectral Density 438

8.1. Introduction	438
8.2. Definitions of the Sample Mean, Covariances, and Spectral Density, and their Moments	439
8.3. Asymptotic Means and Covariances of the Sample Mean, Covariances, and Spectral Density	459
8.4. Asymptotic Distributions of the Sample Mean, Covariances, and Spectral Density	477
8.5. Examples	495
8.6. Discussion	495
References	496
Problems	496

CHAPTER 9	
Estimation of the Spectral Density	501
9.1. Introduction	501
9.2. Estimates Based on Sample Covariances	502
9.3. Asymptotic Means and Covariances of Spectral Estimates	519
9.4. Asymptotic Normality of Spectral Estimates	534
9.5. Examples	546
9.6. Discussion	549
References	551
Problems	551
CHAPTER 10	
Linear Trends with Stationary Random Terms	559
10.1. Introduction	559
10.2. Efficient Estimation of Trend Functions	560
10.3. Estimation of the Covariances and Spectral Density Based on Residuals from Trends	587
10.4. Testing Independence	603
References	617
Problems	617
APPENDIX A	
Some Data and Statistics	622
A.1. The Beveridge Wheat Price Index	622
A.2. Three Second-Order Autoregressive Processes Generated by Random Numbers	640
A.3. Sunspot Numbers	659
APPENDIX B	
Solutions to Selected Problems	663
Bibliography	
Books	680
Papers	683
Index	689
