

Table of Contents

<i>Introduction</i>	1
Preliminaries. <i>Almost Periodic Locally Compact Groups</i>	5
References and Comments	16
Chapter I. <i>Harmonic Analysis of Almost Periodic Locally Compact Groups</i>	17
1.1 Measures on a Locally Compact Space	17
1.2 Convolution of Measures on a Locally Compact Group	30
1.3 Fourier Transforms of Bounded Measures	45
1.4 The Theorems of Lévy and Bochner	54
1.5 Convolution Semigroups and Negative-Definite Forms	62
References and Comments	77
Chapter II. <i>Convergence of Convolution Sequences of Probability Measures</i>	87
2.1 Convolution Powers on a Compact Group	88
2.2 Equivalence of Types of Convergence	95
2.3 The Normed Convergence Property	104
2.4 Convergence in Variance	117
2.5 Asymptotic Equidistribution	130
2.6 Shifting Iterated Convolutions	141
References and Comments	153
Chapter III. <i>Embedding of Infinitely Divisible Probability Measures</i>	163
3.1 Root Compact Groups	164
3.2 Poisson Measures and Their Characterizations	181
3.3 Submonogeneous Embedding of Infinitely Divisible Measures	194
3.4 Existence of One-Parameter Semigroups	205
3.5 The General Continuous Embedding	218
3.6 Injective Submonogeneous Embeddings	225
References and Comments	239

Chapter IV. <i>Canonical Representations of Convolution Semigroups</i>	249
4.1 Positive Semigroups and Their Generating Functionals	250
4.2 Hunt's Representation Theorem	259
4.3 The Lévy-Khintchine Formula for Almost Periodic Groups	269
4.4 The Canonical Representation of Almost Positive Functionals	283
4.5 The Lévy-Khintchine Formula for General Locally Compact Groups	300
4.6 Convolution Hemigroups. Generation and Representation	308
References and Comments	325
Chapter V. <i>The Central Limit Problem in the Abelian Case</i>	336
5.1 Convergence of Infinitesimal Systems	336
5.2 Gauss Measures in the Sense of Parthasarathy	349
5.3 Gauss Measures in the Sense of Bernstein	362
5.4 Convergence to Gauss Measures	368
5.5 Symmetric Gauss Semigroups	372
5.6 Additive Processes and Their Decomposition	379
References and Comments	400
Chapter VI. <i>The Central Limit Problem in the General Case</i>	408
6.1 Poisson Embedding and Approximation	409
6.2 Gauss Measures and Their Characterizations	427
6.3 Absolute Continuity and Diffusion of Gauss Semigroups	446
6.4 Central Gauss Semigroups	461
6.5 Convergence of Triangular Systems of Probability Measures	471
6.6 Central Limit Theorems for Totally Disconnected Groups	482
References and Comments	493
<i>Bibliography</i>	504
<i>List of Symbols</i>	523
<i>Subject Index</i>	527
