

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>A</b>	<b>Preliminaries</b>	<b>5</b>
<b>2</b>	<b>From Statistics to Geostatistics</b>	<b>7</b>
	The mean: center of mass . . . . .	7
	Covariance . . . . .	10
	Linear regression . . . . .	12
	Variance-covariance matrix . . . . .	15
	Multiple linear regression . . . . .	16
	Simple kriging . . . . .	18
<b>B</b>	<b>Geostatistics</b>	<b>23</b>
<b>3</b>	<b>Regionalized Variable and Random Function</b>	<b>25</b>
	Multivariate time/space data . . . . .	25
	Regionalized variable . . . . .	26
	Random variable and regionalized value . . . . .	27
	Random function . . . . .	27
	Probability distributions . . . . .	28
	Strict stationarity . . . . .	29
<b>4</b>	<b>Variogram Cloud</b>	<b>30</b>
	Dissimilarity versus separation . . . . .	30
	Experimental variogram . . . . .	32
	Replacing the experimental by a theoretical variogram . . . . .	34
<b>5</b>	<b>Variogram and Covariance Function</b>	<b>35</b>
	Regional variogram . . . . .	35
	Theoretical variogram . . . . .	35
	Covariance function . . . . .	37
	Positive definite function . . . . .	37
	Conditionally negative definite function . . . . .	38

Fitting the variogram with a covariance function . . . . .	40
<b>6 Examples of Covariance Functions</b>	<b>41</b>
Nugget-effect model . . . . .	41
Exponential covariance function . . . . .	41
Spherical model . . . . .	42
Derivation of the spherical covariance . . . . .	43
<b>7 Anisotropy</b>	<b>46</b>
Geometric Anisotropy . . . . .	46
Rotating and dilating an ellipsoid . . . . .	46
Exploring 3D space for anisotropy . . . . .	48
Zonal anisotropy . . . . .	48
Nonlinear deformations of space . . . . .	49
<b>8 Extension and Dispersion Variance</b>	<b>50</b>
Support . . . . .	50
Extension variance . . . . .	51
Dispersion variance . . . . .	52
Krige's relation . . . . .	53
Change of support effect . . . . .	54
Application: acoustic data . . . . .	56
Comparison of sampling designs . . . . .	59
<b>9 Measures and Plots of Dispersion</b>	<b>62</b>
Tonnage, recovered quantity, investment and profit . . . . .	62
Selectivity . . . . .	64
Recovered quantity as a function of tonnage . . . . .	66
Time series in environmental monitoring . . . . .	67
<b>10 Kriging the Mean</b>	<b>69</b>
Mean value over a region . . . . .	69
No systematic bias . . . . .	70
Variance of the estimation error . . . . .	70
Minimal estimation variance . . . . .	71
Kriging equations . . . . .	71
Case of the nugget-effect model . . . . .	72
Local estimation of the mean . . . . .	73
<b>11 Ordinary Kriging</b>	<b>74</b>
Ordinary kriging problem . . . . .	74
Block kriging . . . . .	76
Simple kriging with an estimated mean . . . . .	77
Kriging the residual . . . . .	79
Cross validation . . . . .	80

<b>12 Kriging Weights</b>	<b>82</b>
Geometry . . . . .	82
Geometric anisotropy . . . . .	84
Relative position of samples . . . . .	84
Screen effect . . . . .	85
Factorizable covariance functions . . . . .	86
Negative kriging weights . . . . .	88
<b>13 Mapping with Kriging</b>	<b>89</b>
Kriging for spatial interpolation . . . . .	89
Neighborhood . . . . .	90
<b>14 Linear Model of Regionalization</b>	<b>94</b>
Spatial anomalies . . . . .	94
Nested variogram model . . . . .	95
Decomposition of the random function . . . . .	96
Second-order stationary regionalization . . . . .	97
Intrinsic regionalization . . . . .	98
Intrinsic regionalization with mostly stationary components . . . . .	98
Locally stationary regionalization . . . . .	99
<b>15 Kriging Spatial Components</b>	<b>100</b>
Kriging of the intrinsic component . . . . .	100
Kriging of a second-order stationary component . . . . .	101
Filtering . . . . .	103
Application: kriging spatial components of arsenic data . . . . .	104
<b>16 The Smoothness of Kriging</b>	<b>106</b>
Kriging with irregularly spaced data . . . . .	106
Sensitivity to choice of variogram model . . . . .	109
Application: kriging topographic data . . . . .	110
<b>C Multivariate Analysis</b>	<b>113</b>
<b>17 Principal Component Analysis</b>	<b>115</b>
Transformation into factors . . . . .	115
Maximization of the variance of a factor . . . . .	116
Interpretation of the factor variances . . . . .	117
Correlation of the variables with the factors . . . . .	118
<b>18 Canonical Analysis</b>	<b>123</b>
Factors in two groups of variables . . . . .	123
Intermezzo: singular value decomposition . . . . .	124
Maximization of the correlation . . . . .	124

<b>19 Correspondence Analysis</b>	<b>126</b>
Disjunctive table . . . . .	126
Contingency table . . . . .	126
Canonical analysis of disjunctive tables . . . . .	127
Coding of a quantitative variable . . . . .	127
Contingencies between two quantitative variables . . . . .	127
Continuous correspondence analysis . . . . .	128
<b>D Multivariate Geostatistics</b>	<b>129</b>
<b>20 Direct and Cross Covariances</b>	<b>131</b>
Cross covariance function . . . . .	131
Delay effect . . . . .	132
Cross variogram . . . . .	133
Pseudo cross variogram . . . . .	135
Difficult characterization of the cross covariance function . . . . .	136
<b>21 Covariance Function Matrices</b>	<b>137</b>
Covariance function matrix . . . . .	137
Cramer's theorem . . . . .	137
Spectral densities . . . . .	138
Phase shift . . . . .	139
<b>22 Intrinsic Multivariate Correlation</b>	<b>140</b>
Intrinsic correlation model . . . . .	140
Linear model . . . . .	141
Codispersion coefficients . . . . .	142
<b>23 Cokriging</b>	<b>144</b>
Isotopy and heterotopy . . . . .	144
Ordinary cokriging . . . . .	145
Simple cokriging . . . . .	147
Cokriging with isotopic data . . . . .	148
Autokrigieability . . . . .	149
Collocated cokriging . . . . .	151
<b>24 Multivariate Nested Variogram</b>	<b>152</b>
Linear model of coregionalization . . . . .	152
Bivariate fit of the experimental variograms . . . . .	154
Multivariate fit . . . . .	155
The need for an analysis of the coregionalization . . . . .	158

<b>25 Coregionalization Analysis</b>	<b>160</b>
Regionalized principal component analysis . . . . .	160
Generalizing the analysis . . . . .	161
Regionalized canonical and redundancy analysis . . . . .	162
Cokriging regionalized factors . . . . .	162
Regionalized multivariate analysis . . . . .	163
<b>26 Kriging a Complex Variable</b>	<b>166</b>
Coding directional data as a complex variable . . . . .	166
Complex covariance function . . . . .	166
Complex kriging . . . . .	167
Cokriging of the real and imaginary parts . . . . .	168
Complex kriging and cokriging versus a separate kriging . . . . .	169
Complex covariance function modeling . . . . .	170
<b>27 Bilinear Coregionalization Model</b>	<b>172</b>
Complex linear model of coregionalization . . . . .	172
Bilinear model of coregionalization . . . . .	173
<b>E Non-Stationary Geostatistics</b>	<b>175</b>
<b>28 Universal Kriging</b>	<b>177</b>
Second-order stationary residual . . . . .	177
Dual Kriging System . . . . .	178
Estimation of the drift . . . . .	180
Variogram of the estimated residuals . . . . .	181
A critical look at the universal kriging model . . . . .	184
<b>29 Translation Invariant Drift</b>	<b>185</b>
Exponential/polynomial basis functions . . . . .	185
Generalized covariance function . . . . .	186
Spatial and temporal drift . . . . .	188
Filtering temporal variation . . . . .	188
<b>30 External Drift</b>	<b>190</b>
Depth measured with drillholes and seismic . . . . .	190
Estimating with a shape function . . . . .	191
Kriging with external drift . . . . .	193
Cross validation with external drift . . . . .	197
Regularity of the external drift function . . . . .	200
<b>APPENDIX</b>	<b>201</b>
<b>Matrix Algebra</b>	<b>203</b>
