

CONTENTS

Introduction: The Biological Framework	1
1. Neurophysiology, Neural Models, and Language	15
2. Distributed Neural Computers and Feature Detectors	36
3. Automatization and Syntax	57
4. Syntax, Words, and Meaning	79
5. Respiration, Speech, and Meaning	98
6. Elephant Ears, Frogs, and Human Speech	123
7. Speech Is Special	138
8. Linguistic Distinctions and Auditory Processes	169
9. The Man on the Flying Trapeze: The Acquisition of Speech	194
10. Apes and Children	226
11. The Evolution of Human Speech: Comparative Studies	256
12. The Evolution of Human Speech: The Fossil Record	287
Conclusion: On the Nature and Evolution of the Biological Bases of Language	330
References	337
Notes	364
Index	371
