	Glossary	xxiii
	G.1 Abbreviations of mineral names used in the text	xxiii
	G.2 Other abbreviations and symbols used in the text	xxiv
Chapter 1	Geochemical data	1
1.1	Introduction	1
1.2	Geological processes and their geochemical signatures	3
1.2.1	Processes which control the chemical composition of igneous rocks	3
1.2.2	Processes which control the chemical composition of sedimentary rocks	5
1.2.3	Processes which control the chemical composition of metamorphic rocks	7
1.3	Geological controls on geochemical data	9
1.4	Analytical methods in geochemistry	9
1.4.1	X-ray fluorescence (XRF)	10
1.4.2	Neutron activation analysis (INAA and RNAA)	13
1.4.3	Inductively coupled plasma emission spectrometry (ICP)	13
1.4.4	Atomic absorption spectrophotometry (AAS)	14
1.4.5	Mass spectrometry	14
	Isotope dilution mass spectrometry (IDMS)	15
	Inductively coupled plasma emission mass spectrometry (ICP-MS)	15
	Spark source mass spectrometry (SSMS)	15
1.4.6	Electron microprobe analysis	15
1.4.7	The ion microprobe	16
1.5	Selecting an appropriate analytical technique	16
1.6	Sources of error in geochemical analysis	17
1.6.1	Contamination	17
1.6.2	Calibration	18
1.6.3	Peak overlap	18
1.6.4	Detecting errors in geochemical data	18
Chapter 2	Analysing geochemical data	19
2.1	Introduction	19

2.2	Averages	21
2.3	Correlation	22
2.3.1	The correlation coefficient	23
2.3.2	The significance of the correlation coefficient (r)	23
2.3.3	Assumptions in the calculation of the product-moment coefficient of correlation	24
2.3.4	Spearman rank correlation	25
2.3.5	Correlation matrices	26
2.3.6	Correlation coefficient patterns	27
2.4	Regression	28
2.4.1	Ordinary least squares regression	29
2.4.2	Reduced major axis regression	31
2.4.3	Weighted least squares regression	31
2.4.4	Robust regression	32
2.4.5	Some problems with traditional approaches to correlation and regression	32
2.5	Ratio correlation	33
2.5.1	An example of the improper use of ratio correlation — Pearce element ratio diagrams	34
2.5.2	Application to trace element diagrams	36
2.5.3	Ratio correlation in isotope geology	36
2.6	The constant sum problem	37
2.6.1	The consequences of closure	38
	Correlating compositional data	38
	The means of compositional data-sets	38
	Invalid escape routes	38
2.6.2	Aitchison's solution to the constant sum effect	38
	An example — basalts from Kilauea Iki lava lake, Hawaii	41
	The interpretation of log-ratios	41
2.7	The interpretation of trends on triangular diagrams	42
2.8	Principal component analysis	42
2.9	Discriminant analysis	44
2.9.1	An example from igneous petrology	44
2.9.2	Other applications of discriminant analysis	45
2.10	Whither geochemical data analysis?	46
Chapter 3	Using major element data	48
3.1	Introduction	48
3.2	Rock classification	48
3.2.1	Classifying igneous rocks using oxide-oxide plots	49
	The total alkalis-silica diagram (TAS)	49
	(a) Using TAS with volcanic rocks	50
	(b) A TAS diagram for plutonic rocks	50
	(c) Discrimination between the alkaline and subalkaline rock series using TAS	51
	The K_2O vs SiO_2 diagram for the subdivision of the subalkaline series	51

3.2.2	Classifying igneous rocks using the norm	52
	Cation norms	57
	Norm calculations and the oxidation state of iron	57
	Basalt classification using the Ne–Di–Ol–Hy–Q diagram of Thompson (1984)	57
	Granite classification using the Ab–An–Or diagram of O'Connor (1965)	58
	The Q*(F*)–ANOR diagram of Streckeisen and Le Maitre (1979)	60
3.2.3	Classifying igneous rocks using cations	61
	The R1–R2 diagram of de la Roche <i>et al.</i> (1980)	61
	The Jensen cation plot (Jensen, 1976)	63
3.2.4	The chemical classification of sedimentary rocks	64
	Arenite/wacke	64
	Mudrocks	65
3.2.5	Discussion	66
3.3	Variation diagrams	66
3.3.1	Recognizing geochemical processes on a major element variation diagram	66
	Fractional crystallization	67
	Assimilation and fractional crystallization	69
	Partial melting	69
	Mixing lines in sedimentary rocks	69
	The identification of former weathering conditions from sedimentary rocks	70
	Mixing in metamorphic rocks	71
	Element mobility	71
	Artificial trends	73
3.3.2	Selecting a variation diagram	73
	Bivariate plots	73
	(a) Harker diagrams — bivariate plots using SiO ₂ along the x-axis	73
	(b) Bivariate plots which use MgO on the x-axis	74
	(c) Bivariate plots using cations	74
	(d) Bivariate plots using the magnesium number	74
	Triangular variation diagrams	74
	(a) The AFM diagram	75
	(b) Problems in the use of the AFM diagram	76
3.3.3	Interpreting trends on variation diagrams	78
	Extract calculations	78
	Addition–subtraction diagrams	79
	Trends showing an inflection	79
	Scattered trends	79
	A computer-based approach to mixing calculations	81
3.3.4	Modelling major element processes in igneous rocks	82
3.3.5	Discussion	84
3.4	Diagrams on which rock chemistry can be plotted together with experimentally determined phase boundaries	84

3.4.1	The normative albite–orthoclase–quartz diagram — the ‘granite system’	86
	Water-undersaturated equilibria	88
	The presence of anorthite	88
3.4.2	The silica-undersaturated portion of the normative nepheline–kalsilite–silica diagram — the ‘nepheline syenite system’	88
3.4.3	Basaltic experimental systems	89
	CMAS diagrams	90
	(a) Projecting rock compositions into CMAS	91
	(b) Interpreting CMAS diagrams	93
	Diagrams based upon the Yoder–Tilley (1962) CIPW normative tetrahedron	94
	(a) Projections in the tholeiite basalt tetrahedron OI–PI–Di–Q	94
	(b) The normative Ne–Di–OI–Hy–Q diagram	96
	(c) The low-pressure tholeiitic basalt phase diagram (Cox <i>et al.</i> , 1979)	97
	(d) Problems with CIPW normative projections	99
3.4.4	Experimental systems for calc–alkaline rocks	99
	The olivine–clinopyroxene–silica projection of Grove <i>et al.</i> (1982)	99
	The projections of Baker and Egger (1983, 1987)	99
3.4.5	Discussion	100
 Chapter 4 Using trace element data		102
4.1	Introduction	102
4.1.1	Classification of trace elements according to their geochemical behaviour	102
	Trace element groupings in the periodic table	102
	Trace element behaviour in magmatic systems	103
4.2	Controls on trace element distribution	104
4.2.1	Partition coefficients	106
	Measuring partition coefficients	106
	Physical controls on the value of partition coefficients in mineral–melt systems	107
	(a) Composition	107
	(b) Temperature	107
	(c) Pressure	111
	(d) Oxygen activity	113
	(e) Crystal chemistry	113
	(f) Water content of the melt	115
	(g) Selecting a partition coefficient	115
	Partition coefficients in basalts and basaltic andesites	116
	Partition coefficients in andesites	117
	Partition coefficients in dacites and rhyolites	117

4.2.2	Geological controls on the distribution of trace elements	119
	Element mobility	120
	Partial melting	121
	(a) Batch melting	121
	(b) Fractional melting	122
	Crystal fractionation	124
	(a) Equilibrium crystallization	124
	(b) Fractional crystallization/Rayleigh fractionation	124
	(c) <i>In situ</i> crystallization	127
	Contamination	127
	(a) AFC processes	127
	(b) Zone refining	130
	Dynamic models	130
	(a) Dynamic melting	130
	(b) The RTF magma chamber	131
	Sedimentary processes	132
4.3	Rare earth elements (REE)	133
4.3.1	The chemistry of the REE	134
4.3.2	Presenting REE data	135
	(a) Difficulties with chondrite normalization	136
	(b) Choosing a set of normalizing values	136
	REE ratio diagrams	137
	NASC normalization for sediments	137
	Rock normalization	137
4.3.3	Interpreting REE patterns	137
	REE patterns in igneous rocks	138
	REE patterns in sea and river water	140
	REE patterns in sediments	140
	(a) Clastic sediments	140
	(b) Chemical sediments	141
4.4	Normalized multi-element diagrams or incompatible element diagrams (spider diagrams)	142
4.4.1	Multi-element diagrams for igneous rocks	142
	Primordial (primitive) mantle-normalized spider diagrams	142
	Chondrite-normalized spider diagrams	143
	MORB-normalized spider diagrams	145
	Which spider diagrams do we use?	147
	Interpreting multi-element diagrams for igneous rocks	148
4.4.2	Multi-element diagrams for sediments	148
	Interpreting multi-element diagrams for sediments	149
4.5	Platinum metal group element (PGE) plots	150
4.5.1	Presenting PGE data	151
	Chondrite normalization	151
	Primitive mantle normalization	152
4.5.2	Interpreting PGE patterns	153
4.6	Transition metal plots	154
4.7	Bivariate trace element plots	156

4.7.1	The selection of trace elements in igneous rocks for plotting on bivariate graphs	156
	Incompatible element plots	157
	(a) Identification of igneous source characteristics from incompatible element plots	157
	(b) Identification of igneous source characteristics from incompatible element ratio–ratio plots	157
	(c) Calculation of partition coefficients from reciprocal concentration trace element plots	158
	Compatible element plots	158
4.7.2	Bivariate plots in sedimentary rocks	159
4.8	Enrichment–depletion diagrams	159
4.9	Modelling trace element processes in igneous rocks	160
4.9.1	Vector diagrams	161
4.9.2	Modelling on multivariate diagrams	162
4.9.3	Petrogenetic modelling — examples	166
	Partial melting	166
	Crystal fractionation	166
	Crustal contamination and AFC processes	166
	Open system processes	167
	Magma and source mixing	168
	Demonstrating element mobility	168
4.9.4	Inversion techniques using trace elements	168
	Constraining fractional crystallization using an inversion method	169
	Constraining partial melting using an inversion method	170
4.9.5	A final comment on geochemical modelling	170
Chapter 5	Discriminating between tectonic environments using geochemical data	171
5.1	Introduction	171
5.1.1	Discriminant analysis	171
5.1.2	Immobile trace elements	172
5.1.3	Tectonic environments	172
5.1.4	Using discrimination diagrams	173
5.2	Discrimination diagrams for rocks of basaltic to andesitic composition	174
5.2.1	Trace element discrimination diagrams	174
	The Ti–Zr, Ti–Zr–Y and Ti–Zr–Sr diagrams (Pearce and Cann, 1973)	174
	(a) The Ti–Zr–Y diagram	174
	(b) The Ti–Zr diagram	176
	(c) The Ti–Zr–Sr diagram	178
	(d) Discussion	179
	Other discrimination diagrams using Ti–Zr–Y–Nb variations	180

(a) The Zr/Y–Zr diagram for basalts (Pearce and Norry, 1979)	180
(b) The Ti/Y–Nb/Y diagram (Pearce, 1982)	180
(c) The Zr–Nb–Y diagram (Meschede, 1986)	180
(d) The causes of Ti–Zr–Y–Nb variations in basalts from different tectonic settings	182
The Th–Hf–Ta diagram of Wood (1980)	182
The Ti–V diagram of Shervais (1982)	184
The La–Y–Nb diagram of Cabanis and Lecolle (1989)	184
Diagrams which preferentially select volcanic-arc basalts	186
(a) The Cr–Y diagram (Pearce, 1982)	186
(b) The Cr–Ce/Sr diagram	187
Distinguishing between different types of volcanic-arc basalt	188
The $K_2O/Yb-Ta/Yb$ diagram	189
Diagrams which distinguish between different types of volcanic-arc andesite (Bailey, 1981)	190
Diagrams which discriminate between the alkali basalt and tholeiitic magma series	190
(a) The TiO_2-Y/Nb diagram (Floyd and Winchester, 1975)	190
(b) The P_2O_5-Zr diagram (Floyd and Winchester, 1975)	191
(c) The TiO_2-Zr/P_2O_5 diagram (Floyd and Winchester, 1975)	192
(d) The $Nb/Y-Zr/P_2O_5$ diagram (Floyd and Winchester, 1975)	192
(e) Discussion	193
5.2.2 Discrimination diagrams for basalts based upon major elements	193
The F1–F2–F3 diagrams of J.A. Pearce (1976)	194
The $MgO-FeO-Al_2O_3$ diagram of T.H. Pearce <i>et al.</i> (1977)	196
5.2.3 Discrimination diagrams for basalts based upon minor elements	196
The $TiO_2-K_2O-P_2O_5$ diagram of T.H. Pearce <i>et al.</i> (1975)	196
The $MnO-TiO_2-P_2O_5$ diagram of Mullen (1983)	198
The K_2O-H_2O diagram of Muenow <i>et al.</i> (1990)	199
5.2.4 Discrimination diagrams for basalts based upon clinopyroxene composition	200
5.3 Discrimination diagrams for rocks of granitic composition	201
5.3.1 Discrimination diagrams for granites based upon Rb–Y–Nb and Rb–Yb–Ta variations (Pearce <i>et al.</i> , 1984)	202
The Nb–Y and Ta–Yb discrimination diagrams	204
The Rb–(Y + Nb) and Rb–(Yb + Ta) discrimination diagrams	204
5.3.2 Discrimination diagrams for granites based upon Hf–Rb–Ta variations	205
5.3.3 A measure of arc maturity for volcanic-arc granites	205
5.3.4 Discussion	206
5.4 Discrimination diagrams for clastic sediments	206
5.4.1 Discrimination diagrams for clastic sediments using major elements	207
The sandstone discriminant function diagram (Bhatia, 1983)	207
Bivariate plots as sandstone discrimination diagrams (Bhatia, 1983)	208

	The K_2O/Na_2O vs SiO_2 sandstone–mudstone discrimination diagram (Roser and Korsch, 1986)	208
	Provenance signatures of sandstone–mudstone suites using major elements (Roser and Korsch, 1988)	208
5.4.2	Discrimination diagrams for clastic sediments using trace elements	209
	Greywackes	209
	Spider diagrams as discriminants of tectonic setting for shales (Winchester and Max, 1989)	209
	Provenance studies (Cullers <i>et al.</i> , 1988)	210
5.4.3	Discussion	211
5.5	Tectonic controls on magmatic and sedimentary geochemistry	212
5.5.1	An expert system for identifying the tectonic environment of ancient volcanic rocks (Pearce, 1987)	213
5.5.2	Do tectonic discrimination diagrams still have a function?	213
Chapter 6	Using radiogenic isotope data	215
6.1	Introduction	215
6.2	Radiogenic isotopes in geochronology	215
6.2.1	Isochron calculations	216
	Pb isotope isochrons	218
	Fitting an isochron	218
	Errorchrons	219
	The geochron	219
6.2.2	Model ages	220
	T–CHUR model ages	221
	T–depleted mantle (DM) model ages	221
	Assumptions made in the calculation of model ages	221
6.2.3	Interpreting geochronological data	224
	Blocking temperatures	224
	Concepts of geological age	225
	(a) Cooling age	226
	(b) Crystallization age	226
	(c) Metamorphic age	226
	(d) Crust formation age	226
	(e) Crust residence age	226
	The interpretation of whole-rock ages	226
	(a) The Rb–Sr system	226
	(b) Pb isotopes	227
	(c) The Sm–Nd system	227
	The interpretation of mineral ages	226
	(a) Rb–Sr mineral ages	228
	(b) Argon methods	228
	(c) Sm–Nd mineral ages	229

	(d) U–Pb dating of zircon	229
	The interpretation of model ages	229
6.3	Radiogenic isotopes in petrogenesis	231
6.3.1	The role of different isotopic systems in identifying reservoirs and processes	232
6.3.2	Recognizing isotopic reservoirs	234
	Oceanic mantle sources	237
	(a) Depleted mantle (DM)	237
	(b) HIMU mantle	237
	(c) Enriched mantle	237
	(d) PREMA	241
	(e) Bulk Earth (Bulk Silicate Earth – BSE)	241
	(f) The origin of oceanic basalts	241
	(g) Trace elements and mantle end-member compositions	241
	Continental crustal sources	241
	(a) Upper continental crust	242
	(b) Middle continental crust	242
	(c) Lower continental crust	242
	(d) Subcontinental lithosphere	242
	Seawater	243
6.3.3	The evolution of mantle reservoirs with time — mantle evolution diagrams	244
	The evolution of Sr isotopes with time	244
	The evolution of Nd isotopes with time	247
	The evolution of Pb isotopes with time	248
6.3.4	The epsilon notation	249
	Calculating epsilon values	249
	(a) Epsilon values calculated for an isochron	250
	(b) Epsilon values for individual rocks at the time of their formation	251
	(c) Epsilon values for individual rocks at the present day	253
	Epsilon values for Sr isotopes	253
	Calculating the uncertainties in epsilon values when they are determined for isochron diagrams	254
	The meaning of epsilon values	254
	The fractionation factor $f^{\text{Sm/Nd}}$	255
	Epsilon–Nd time plots	255
6.3.5	Isotope correlation diagrams	256
	Using isotope correlation diagrams and epsilon plots to recognize mixing processes	257
	(a) Mixing between sources	257
	(b) Mixing in a magma chamber	258
	Applications to contamination	259
	(a) Contamination of magmas by the continental crust	259
	(b) Crustal contamination and AFC processes	260
	(c) Contamination with seawater	260
	Isotope vs trace (and major) element plots	261
6.3.6	Mantle–crust geodynamics	263
	Plumbotectonics	263
	Geodynamics	263

Chapter 7	Using stable isotope data	266
7.1	Introduction	266
7.1.1	Notation	266
7.1.2	Isotope fractionation	267
7.1.3	Physical and chemical controls on stable isotope fractionation	268
7.2	Using oxygen isotopes	270
7.2.1	Variations of $\delta^{18}\text{O}$ in nature	270
7.2.2	Oxygen isotope thermometry	271
	Calibration of oxygen isotope thermometers	272
	Tests of isotopic equilibrium	274
	Applications	276
	(a) Low-temperature thermometry	276
	(b) High-temperature thermometry	277
7.2.3	Oxygen isotope–radiogenic isotope correlation diagrams	278
	Recognizing crust and mantle reservoirs	278
	Recognizing crustal contamination in igneous rocks	279
	Recognizing simple crystal fractionation in igneous rocks	281
7.3	Fingerprinting hydrothermal solutions using oxygen and hydrogen isotopes — water–rock interaction	282
7.3.1	Hydrogen isotopes	283
7.3.2	Calculating the isotopic composition of water from mineral compositions	285
7.3.3	The isotopic composition of natural waters	285
	(a) Meteoric water	285
	(b) Ocean water	287
	(c) Geothermal water	288
	(d) Formation water	288
	(e) Metamorphic water	289
	(f) Magmatic water	289
7.3.4	Quantifying water/rock ratios	289
7.3.5	Examples of water–rock interaction	291
	(a) Interaction between igneous intrusions and groundwater	292
	(b) Interaction between ocean-floor basalt and seawater	292
	(c) Water–rock interaction in metamorphic rocks	292
	(d) Water–rock interaction during the formation of hydrothermal ore deposits	294
	(e) Diagenesis of clastic sediments	294
7.4	Using carbon isotopes	294
7.4.1	The distribution of carbon isotopes in nature	295
	Controls on the fractionation of carbon isotopes	295
7.4.2	Combined oxygen and carbon isotope studies of carbonates — $\delta^{18}\text{O}$ vs $\delta^{13}\text{C}$ plots	296
	Limestone diagenesis	297
	Hydrothermal calcite	300
7.4.3	The $\delta^{13}\text{C}$ composition of seawater	300
7.4.4	Biogeochemical evolution	300

7.4.5	Carbon isotopes in CO ₂	301
	CO ₂ dissolved in igneous melts	301
	CO ₂ in metamorphic fluids	301
	(a) Granulites	301
	(b) The origin of metamorphic graphite	301
	CO ₂ in gold-mineralizing fluids	302
	CO ₂ fluid–rock interaction	302
7.4.6	Carbon isotope thermometry	302
	The calcite–graphite δ ¹³ C thermometer	302
	The CO ₂ –graphite thermometer	303
7.5	Using sulphur isotopes	303
7.5.1	The distribution of sulphur isotopes in nature	304
7.5.2	Controls on the fractionation of sulphur isotopes	306
	Sulphur isotope fractionation in igneous rocks	306
	Sulphur isotope fractionation in sedimentary rocks	306
	(a) The bacterial reduction of sulphate to sulphide	306
	(b) The bacterial oxidation of sulphide to sulphate	307
	(c) The crystallization of sedimentary sulphate from seawater — evaporite formation	307
	(d) The non-bacterial reduction of sulphate to sulphide	307
	Sulphur isotope fractionation in hydrothermal systems	308
	Sulphur isotope fractionation between sulphide and sulphate phases — sulphur isotope thermometry	308
7.5.3	Using sulphur isotopes in igneous petrogenesis	311
	(a) Outgassing of SO ₂	311
	(b) Contamination	312
	(c) Crystal fractionation	312
7.5.4	Using sulphur isotopes to understand the genesis of hydrothermal ore deposits	312
	<i>Modern hydrothermal mineralization at mid-ocean ridges</i>	312
	Ancient hydrothermal mineralization	313
	(a) High-temperature inorganic reduction of seawater sulphate	314
	(b) Low-temperature organic reduction of sulphate	314
	(c) Low-temperature bacteriological reduction of sulphate	315
	(d) Sulphur of magmatic origin	315
