Palaeomagnetic Database	x
Acknowledgements	xi
Introduction	1
1 Basic principles of rock and mineral magnetism	5
1.1 <i>Definition of magnetic behaviour, diamagnetism, paramagnetism and ferromagnetism</i>	5
1.2 <i>Types of ferromagnetism</i>	10
1.3 <i>Domain structure</i>	11
1.4 <i>The acquisition of magnetism by rocks</i>	15
1.5 <i>Total magnetisation and Koenigsberger ratio</i>	17
2 The magnetic minerals	19
2.1 <i>Introduction</i>	19
2.2 <i>The magnetite-ulvöspinel series</i>	22
2.3 <i>The hematite-ilmenite series</i>	25
2.4 <i>Maghemite</i>	27
2.5 <i>Goethite</i>	28
2.6 <i>Pyrrhotite</i>	29
2.7 <i>Other natural magnetic materials</i>	30
3 Outline theory of rock and mineral magnetism	31
3.1 <i>Introduction: the properties of superparamagnetic, single-domain and multi-domain particles</i>	31
3.2 <i>The demagnetising factor, magnetic forces and relaxation times</i>	35

3.3	<i>Single-domain behaviour: the theoretical approach</i>	37
3.4	<i>Coercivity</i>	39
3.5	<i>Temperature dependence of unblocking of magnetic remanence</i>	39
3.6	<i>Thermoremanent magnetisation</i>	40
3.7	<i>Chemical remanence</i>	43
3.8	<i>Susceptibility</i>	44
3.9	<i>Anisotropy of susceptibility</i>	46
3.10	<i>Magnetisation during slow heating and cooling</i>	49
4	The magnetisations in rocks	53
4.1	<i>Igneous rocks</i>	54
	<i>The volcanic and hypabyssal environments</i>	
	<i>Ophiolites and serpentinisation</i>	
	<i>The plutonic environment</i>	
4.2	<i>Sedimentary rocks</i>	58
	<i>The depositional environment: depositional remanent magnetisations and post-depositional detrital remanent magnetisations</i>	
	<i>The diagenetic and weathering environments: chemical remanent magnetisations</i>	
	<i>Red sediments</i>	
	<i>Limestones</i>	
	<i>Banded ironstone formations</i>	
4.3	<i>Metamorphic rocks</i>	72
5	Field and laboratory methods	75
5.1	<i>Objectives</i>	75
5.2	<i>Field sampling</i>	76
5.3	<i>Magnetometers</i>	77
	<i>Astatic and parastatic magnetometers</i>	
	<i>Spinner magnetometers</i>	
	<i>Cryogenic magnetometers</i>	
5.4	<i>Susceptibility meters</i>	82
5.5	<i>Demagnetisation techniques</i>	84
	<i>Alternating field (a.f.) demagnetisation</i>	
	<i>Thermal demagnetisation</i>	
	<i>Chemical demagnetisation</i>	
5.6	<i>Laboratory tests for magnetic minerals and domain structure</i>	90
	<i>Domain structure</i>	
	<i>Isothermal remanence tests</i>	
	<i>Curie point (thermomagnetic) determinations</i>	
	<i>Low temperature behaviour</i>	
	<i>The Lowrie-Fuller test</i>	

6	Palaeomagnetic directions, palaeomagnetic poles and apparent polar wander	99
6.1	<i>Palaeomagnetic directions and their presentation</i>	99
	<i>Spherical projections</i>	
	<i>Orthogonal projections</i>	
6.2	<i>Combining directions of magnetisation</i>	103
	<i>Fisher statistics</i>	
	<i>Comparison of mean directions</i>	
	<i>Site and group mean directions of magnetisation</i>	
	<i>Fisher and Bingham distributions</i>	
6.3	<i>Identification and separation of magnetic components</i>	110
	<i>Vector subtraction</i>	
	<i>Remagnetisation circles</i>	
	<i>Use of vector plots</i>	
	<i>Multicomponent analysis by the Hoffman-Day method and graphical techniques</i>	
	<i>Other methods</i>	
6.4	<i>Dating components of magnetisation</i>	120
	<i>Geochronological dating</i>	
	<i>The fold test</i>	
	<i>The conglomerate test</i>	
	<i>The contact test</i>	
	<i>The unconformity test</i>	
6.5	<i>The geomagnetic field and palaeomagnetic poles</i>	128
	<i>The dipole field and axial geocentric dipole model</i>	
	<i>The axial geocentric dipole — A valid assumption?</i>	
	<i>Reversals and excursions of the geomagnetic field</i>	
6.6	<i>Apparent polar wander (APW)</i>	135
	<i>Definition and presentation</i>	
	<i>Interpretation of APW: the rate of continental movement</i>	
	<i>Interpretation of APW: tectonic models</i>	
	<i>The palaeomagnetic data base</i>	
7	Archaean and Proterozoic palaeomagnetism	151
7.1	<i>Introduction</i>	151
7.2	<i>Archaean–early Proterozoic APW (2900–2200 Ma)</i>	154
7.3	<i>The 2200–2000 Ma APW path (Fig. 7.3)</i>	161
7.4	<i>The 2000–1750 Ma APW path (Fig. 7.4)</i>	165
7.5	<i>The 1750–1600 Ma APW path (Fig. 7.5)</i>	169
7.6	<i>The 1600–1350 Ma APW path (Fig. 7.6)</i>	172
7.7	<i>The 1350–1150 Ma APW path (Fig. 7.7)</i>	175
7.8	<i>The 1150–950 Ma APW path (Fig. 7.8)</i>	178
7.9	<i>Reversal asymmetry and APW</i>	185
7.10	<i>Tectonic implications</i>	187
7.11	<i>Precambrian APW and rates of continental movement</i>	189

8	Growth and consolidation of the continental crust in Archaean and Proterozoic times	193
8.1	<i>Introduction</i>	193
8.2	<i>Geochemical and isotopic signatures</i>	194
8.3	<i>The sedimentary record</i>	197
8.4	<i>Greenstone belts and straight belts</i>	198
8.5	<i>Mobile belts and accretionary orogenic belts</i>	203
8.6	<i>Proterozoic anorogenic magmatism and crustal consolidation</i>	209
8.7	<i>Mineralisation in the continental crust</i>	209
9	Late Proterozoic–Cambrian palaeomagnetism: breakup and dispersal of the continental crust	215
9.1	<i>Introduction</i>	215
9.2	<i>The 900–700 Ma APW path (Fig. 9.2)</i>	218
9.3	<i>The 700–570 Ma APW path (Fig. 9.3)</i>	221
9.4	<i>The Cambrian–Ordovician APW Paths (Fig. 9.4)</i>	226
	<i>Gondwanaland</i>	
	<i>Laurentia</i>	
	<i>Siberia</i>	
	<i>Baltica</i>	
9.5	<i>Palaeomagnetism of late Precambrian–early Palaeozoic microplates and accretionary terranes</i>	233
	<i>The Armorican microplate</i>	
	<i>The Bohemian microplate</i>	
	<i>The Anglo-Welsh microplate</i>	
9.6	<i>Geological implications</i>	239
	<i>The late Precambrian glaciations</i>	
	<i>Passive margins and the timing of breakup</i>	
	<i>The Vendian–Lower Cambrian alkaline province</i>	
	<i>Environmental changes and marine transgression</i>	
	<i>The isotopic and chemical signature</i>	
	<i>The palaeogeography of Vendian–Cambrian times</i>	
10	Palaeozoic palaeomagnetism and the formation of Pangaea	253
10.1	<i>Introduction</i>	253
10.2	<i>Gondwanaland</i>	254
10.3	<i>Palaeozoic palaeomagnetism of Western Europe</i>	259
	<i>The British region</i>	
	<i>Palaeomagnetism and the Caledonian orogeny</i>	
	<i>Palaeozoic palaeomagnetism of the remainder of Europe</i>	
	<i>Palaeomagnetism and the Hercynian orogeny</i>	
10.4	<i>Palaeozoic palaeomagnetism and the remagnetisation hypothesis</i>	276

10.5	<i>Palaeozoic palaeomagnetism of the remaining continental plates</i>	280
	<i>Laurentia</i>	
	<i>The European plate (USSR sector)</i>	
	<i>Siberia</i>	
	<i>Khazakhstan and the China plates</i>	
10.6	<i>Palaeomagnetism and the reconstruction of Pangaea</i>	289
10.7	<i>The palaeogeography of Palaeozoic times</i>	291
11	Mesozoic and Cenozoic palaeomagnetism and the breakup of Pangaea	299
11.1	<i>Introduction</i>	299
11.2	<i>Laurentia and Eurasia</i>	300
11.3	<i>Gondwanaland</i>	305
11.4	<i>Sub-plates, microplates and suspect terranes</i>	311
	<i>The Mediterranean region</i>	
	<i>The Japanese arc</i>	
	<i>North and South China, Kolyma, Sikote Alin and Korea</i>	
	<i>South East Asia</i>	
	<i>West Antarctica</i>	
	<i>The Andean margin of South America</i>	
	<i>Mexico</i>	
	<i>The Cordilleran margin of North America</i>	
12	The geomagnetic field, continental movements and configurations and mantle convection since Archaean times	329
12.1	<i>Introduction</i>	329
12.2	<i>The polarity time scale: Cenozoic and Mesozoic times</i>	
	<i>Palaeozoic magnetostratigraphy</i>	330
12.3	<i>The geomagnetic polarity history from the palaeomagnetic record</i>	339
12.4	<i>The polarity history of Precambrian times</i>	341
12.5	<i>The strength of the geomagnetic field</i>	343
12.6	<i>Palaeosecular variation</i>	345
12.7	<i>APW: continental drift or true polar wander?</i>	349
12.8	<i>Geomagnetic intervals, continental velocities and geological cycles</i>	353
12.9	<i>Palaeomagnetism and mantle convection</i>	360
12.10	<i>Supercontinents and the geoid</i>	363
12.11	<i>The palaeomagnetic signature of global behaviour in Archaean and Proterozoic times</i>	370
	<i>References</i>	375
	<i>Appendix</i>	420
