CONTENTS

Preface xi

1. Introduction 1

I. Rationale for a New Chemical Stratigraphy 1
II. The Model of Isotope Chronostratigraphy 5
III. The Format of This Synthesis 9

2. Principles of Interpretation 11

I. An Empirical Approach for Establishing Interwell Correlations and Zonations 11
II. Integration of Isotope Chronostratigraphy and Biostratigraphy 19
III. Effects of Diagenesis on Isotope Records 23
IV. Species Effects 25

3. Methodology 29

I. Generation of the Stable Isotope Data 29
II. Preparation of Well Samples for Isotopic Analyses 30
A. Foraminifera or Calcareous Nannofossil Analyses 30
B. Analyses of Unspecific Carbonate Phases from Whole Rock (Bulk) Carbonate 35
C. Effects of Sample Handling on δ Values 35
III. Cost Analysis and Turnaround Time 36
IV. New Technological Developments 39

4. The Tertiary Oxygen Isotope Record 41

I. Development of the Tertiary Isotope Record 41
II. Global $\delta^{18}O$ Isotopic Changes in Tertiary Marine Carbonates 43
III. Comparisons between the Nannofossil and Foraminiferal $\delta^{18}O$ Records 45
IV. Whole Rock (Bulk Sediment) Analyses and the Tertiary $\delta^{18}O$ Record 46

5. The Tertiary Carbon Isotope Record 51

I. The Foraminiferal $\delta^{13}C$ Record 51
II. Comparison of the Foraminiferal Nannofossil and Bulk Sediment $\delta^{13}C$ Records 52

6. Detailed Studies of the Tertiary $\delta^{18}O$ and $\delta^{13}C$ Records by Epoch 55

I. Pleistocene $\delta^{18}O$ Records 55
A. The Late Pleistocene $\delta^{18}O$ Record (0–1.0 MYBP) 55
B. Extension of $\delta^{18}O$ Stratigraphy into the Pliocene 60
C. Specific Application to the Gulf of Mexico 63
D. Summary 65
II. Pliocene Isotope Records 69
Pliocene Carbon Isotope Records 78
III. Miocene Isotope Records 80
Miocene Carbon Isotope Records 88
IV. Eocene and Oligocene Oxygen and Carbon Isotope Records 93
A. Eocene–Oligocene Boundary Event 95
B. Results from the Gulf of Mexico 99
V. Isotope Records for the Paleocene and the Cretaceous–Tertiary Boundary 101

7. Stable Isotopic Evidence for and against Sea Level Changes during the Cenozoic 107

I. Introduction 107
II. Oxygen Isotopic Model for Cenozoic Sea Levels 110
A. Timing of Global $\delta^{18}O$ Events 110
B. Magnitude of $\delta^{18}O$ Inferred Sea Level Events 111
C. Rates of $\delta^{18}O$ and Sea Level Change 112
III. $\delta^{18}O$ Chronostratigraphy, Gulf Coast Regional Unconformities, and Eustatic Sea Levels of the Plio-Pleistocene of Offshore Gulf of Mexico 114
IV. Conclusions and Recommendations 117

8. Prospects for Applying Isotope Chronostratigraphy to Exploration Wells 119

I. Neogene Examples 119
A. The Gulf of Mexico 119
B. Offshore California—The Miocene Monterey Formation 123
II. Paleogene Examples 126
A. Offshore California 126
B. The Gulf of Mexico 128
III. Mesozoic and Paleozoic Examples 129
A. Cretaceous $\delta^{13}C$ Events and Black Shales 129
B. Correlation of Basinal Clastics in Permian Strata, Delaware Basin, West Texas 130
C. Summary 134

9. Paleobathymetric Models Using the $\delta^{18}O$ of Foraminifera 135

I. Basis of the Models 135
II. Distinguishing Eustatic from Tectonic Changes in Paleodepth 139
III. Distinguishing Uplift, Subsidence, and Progradation Changes in Paleodepth 141
IV. Summary 141

10. General Overview of the Empirical Approaches to Isotope Chronostratigraphy 145

11. Quantitative Methods of Analysis: Theoretical Considerations 147

12. Semblance Methods 151

13. Filter and Deconvolution Techniques 155

I. Least Squares Noise Minimization 156
II. The Common Signal Minimization Problem 157
III. The Location-Dependent Common Signal Problem 158
IV. The Magnitude of the Signal Problem 159
V. Maximum Likelihood 159
VI. Prediction Filters 160
A. The Fourier Transform of a Positive Function 161
B. Extrapolating the Fourier Transform 163
C. A Numerical Example 165
D. Relation to Maximum Entropy 166
VII. Relative Rates of Sedimentation 167
VIII. Matched Filters 171

14. Frequency Domain Methods 173

I. Noise Frequency Spectra 174
II. Autocorrelation and Cross-Correlation Spectral Methods 178
A. Autocorrelation Power Spectra 178
B. Cross-Correlation Power Spectra 179
C. Multiple Cross-Correlation Power Spectra 181
III. Spectral Ratio Methods 184
IV. Homomorphic Deconvolution 185
A. Mathematical Framework 186
B. Intrinsic Isotopic Signal Extraction Methods 189
V. Phase Sensitive Detection of Isotopic Signals 195
A. Basic Arguments 195
B. Data Analysis Algorithms 199
C. Discrete Time Model and Analysis 206

15. Maximum Entropy and Q - Model Methods 209

I. Unbiased MEM 210
II. Biased MEM 213
III. End Members and Linear Unmixing 217
IV. Q- Model Types of Analysis 218
A. QMODEL Family of Algorithms 219
B. Nonconstant Sum 233
V. Summary 234

16. Numerical Examples and Case Histories 237

17. Filter and Deconvolution Methods 245

I. A Filter Response 245
II. Mapping Function Deconvolution, Noise, and Nonlinearity 247

18. Frequency Domain Methods 257

I. Linear Interpolation and Power Spectra 257
II. Autocorrelation and Cross-Correlation in Time 260
III. Window Effects on Power Spectra 262
IV. Homomorphic Deconvolution 264
V. Multispectral Wiener Filtering 266
VI. Phase Sensitive Detection—Noise Analysis 268
VII. Predictive Wiener Filtering 270

19. Maximum Entropy Methods 273

I. Unbiased MEM 273
II. Biased MEM 274
III. QMODEL, EXTENDED QMODEL, and FUZZY QMODEL Unmixing 275
IV. End-Member Behaviors for EXTENDED and FUZZY QMODELS 277

20. An Integrated Application of Multiple Techniques 287

I. Signal Processing Strategy 288
II. Brief Explanation of Data Processing Methods 290
Depth–Time Conversions and Interpolative Filters 290
III. Formulation of a TYPE Pleistocene $\delta^{18}O$ Record with Time 291
IV. Comparison of the TYPE Record with Other Pleistocene $\delta^{18}O$ Records 300
A. Autocorrelation and Cross-Correlation 303
B. Semblance Methods 303
C. Power Spectra, Cross-Spectra, and Spectral Coherency 307
V. Summary 315

21. Summary 317
