Institute for National Strategic Studies

National Defense University

The Institute for National Strategic Studies (INSS) is National Defense University's (NDU's) dedicated research arm. INSS includes the Center for Strategic Research, Center for Complex Operations, Center for the Study of Chinese Military Affairs, Center for Technology and National Security Policy, and Conflict Records Research Center. The military and civilian analysts and staff who comprise INSS and its subcomponents execute their mission by conducting research and analysis, publishing, and participating in conferences, policy support, and outreach.

The mission of INSS is to conduct strategic studies for the Secretary of Defense, Chairman of the Joint Chiefs of Staff, and the unified combatant commands in support of the academic programs at NDU and to perform outreach to other U.S. Government agencies and the broader national security community.

Executive Summary

Military assistance to Bosnian forces was part of a complex plan to resolve what one former Secretary of State called “the problem from hell.” When Yugoslavia began to disintegrate in the early 1990s following the Soviet Union’s demise, it released a mix of nationalist and ethnic movements that led to civil war. Ill-disciplined combinations of regular and irregular forces struggled to control territory and protect civilians, sometimes herding them toward ethnically homogenous enclaves in a process widely referred to as “ethnic cleansing.” The intentional displacement of civilian populations, often encouraged by atrocities including mass murder and rape, was a tragic and complex foreign policy problem that defied simple and easy solutions.

The program to train and equip the Bosnian Federation Army after the signing of the Dayton peace agreement in 1995 was a key element of the U.S. strategy to bring a stable peace to Bosnia. Highly controversial at the time but obscure today, this program was implemented by a small interagency task force widely referred to as the “Train and Equip Program.” The small task force achieved all of its operational goals. It forged a rough military parity between previously warring parties, rid Bosnia of foreign extremists, and strengthened Bosnian Federation institutions and their pro-Western orientation. The program was simultaneously criticized for being too small and too much, which underscores how contentious it was and the inherent difficulties in assessing any military balance. The fact that the weight of the criticism shifted from the first half of 1996 when the program was more often criticized as anemic to the spring of 1997 when it was commonly criticized as being too robust underscored how fast the program made progress once it got going.

In less than 2 years the task force rectified the military imbalance between Bosnian Serb and Federation forces using only about half of the total resources originally estimated to be necessary. The program reassured the Federation, eliminated any misconceptions the Serbs might have had about the merits of renewing hostilities, and inclined all the former warring parties to treat one another as equals. Contrary to the concerns of the Central Intelligence Agency and other observers, the program did not embolden the Federation to initiate hostilities. Federation military leaders came to realize Train and Equip was not going to provide them with major advantages over the Bosnian Serbs. Both objectively in terms of actual military capability and subjectively in terms of perceived relative capabilities, the program did not overshoot its mark as so many worried it would. On the contrary, it diminished the influence of extremists and foreign meddling in Bosnian politics and moved the political mainstream to favor greater integration.

In short, the Train and Equip task force stands out as an unusually successful interagency small group effort that was able to accomplish its objectives while overcoming difficult technical, bureaucratic, and political impediments. It did so with a much recommended but seldom exercised multidimensional approach to complex security problems, integrating diplomacy, development, and defense capabilities. The United States managed the peace process the same way it helped bring the fighting to an end—by using an integrated military and diplomatic approach that stood in stark contrast to the Europeans' ineffectual, one-dimensional reliance on arms control. The Train and Equip Program accomplished exactly what senior U.S. officials hoped, strengthening U.S. credibility and providing incentives for all parties to secure the peace and move Bosnia toward greater integration with the West.

Despite the Train and Equip Task Force's record of success, the creative techniques it employed, and its high level of accountability, it has never been studied by the government or anyone else for its organizational lessons. Instead, the task force experience has been ignored and forgotten for the same reasons the United States quickly abandoned the innovative Civil Operations and Revolutionary Development Support organization it fashioned in Vietnam. In both cases, after creating flexible, agile, and productive interagency organizations that could solve complex national security problems, the United States abandoned and forgot the innovative models it fielded rather than institutionalizing them. It would be easier for the United States to meet the demands of the current and emerging security environment if the U.S. national security system had a systematic means to understand and recall what worked well in the past and why.

This case study is intended to be a helpful contribution in that regard. It provides an authoritative history of the task force's activities and accomplishments, and then an explanation for its performance based on 10 variables extracted from organization and management literature. Investigating and explaining the interagency group's performance with these performance variables, and weighing the importance of each in light of the group's historical experience, yields a compelling explanation for its outstanding performance. The results contribute to a better understanding of interagency teams and also demonstrate why a small, high-performing team can sometimes implement a security assistance program better than the larger national security bureaucracy does through established programs and procedures.

Training and Equipping the Bosnian Federation Army: A Lesson in Interagency Integration of Hard and Soft Power

We do not seek an offensive force [through the Train and Equip Program], but in the future if somebody wants a fight it will be more than fair. This war had an aggressor, and it had a victim. The program [seeks] to ensure that there will be no future victims and no easy prey for partisans of war.¹

—Ambassador James Pardew, Jr.

Washington's program to train and equip the Bosnian Federation Army after the 1995 Dayton peace agreement was an indispensable part of the U.S plan to bring a stable peace to Bosnia. Highly controversial at the time but obscure today, this program was implemented by a small interagency task force widely referred to as the "Train and Equip Program." The task force executed a complex priority national mission well and quickly in difficult circumstances. It achieved all of its operational goals, forging a rough military parity between previously warring parties, ridding Bosnia of foreign extremists, and strengthening Bosnian Federation institutions and their pro-Western orientation. The small group's performance is of historic importance not only because it played a major role in resolving what one former Secretary of State called "the problem from hell,"² but because it stands in stark contrast to the results achieved by most interagency groups tackling lesser problems. The task force's experience deserves serious study, beginning with a description of the program's context and rationale.

Context and Rationale

On the 15th day of Dayton a decision was also reached on the most controversial and criticized aspect of our policy: whether we should train and arm the Federation, or try to reduce the overall level of armaments in Bosnia. This was one of our greatest dilemmas.³

—Richard Holbrooke

Chief Negotiator, Dayton Peace Agreement

The war in Bosnia was a shock to those who thought, or hoped, that Europe was no longer capable of barbarism. When Yugoslavia disintegrated in the wake of the Soviet Union's demise, it released a mix of nationalist and ethnic movements that fought one another with few constraints. Ill-disciplined combinations of regular and irregular forces struggled to control territory and protect or herd civilians toward or away from their locations in attempts to produce ethnically

homogenous populations, a process widely referred to as “ethnic cleansing.” The intentional displacement of civilian populations, often encouraged by atrocities including mass murder and rape, was a tragic foreign policy problem for which there was no apparent consensus solution.

Slovenia and Croatia, led by strong nationalistic leaders, successfully fought off the Yugoslav People’s Army and seceded from Yugoslavia in 1991 and 1992, respectively. Bosnia and Herzegovina (Bosnia for short) faced the same choice: remain in the Serb-dominated Yugoslavia or break off into an independent state with the high likelihood of armed conflict. For Bosnia, the stakes were particularly high since it was the most ethnically diverse region in Yugoslavia: 44 percent Bosniak (i.e., Bosnian Muslims), 31 percent Serb, 17 percent Croat, and 8 percent Yugoslav or other groups.⁴ Despite the risks, Bosnia officially declared independence on April 5, 1992, and was recognized the following day by the European Union (EU). The stage was set for years of painful internecine struggle as the Bosnians (mostly Muslims but also non-Muslims committed to a multi-ethnic Bosnia), Serbs (Eastern Orthodox Christians), and Croats (Roman Catholics) fought for territory.

The Bosnian Serbs had declared a “Serb Republic” within Bosnia in January 1992 and were intent on removing non-Serbs from the areas they claimed. The Bosnian Serbs had created the Army of the Republika Srpska (VRS), but also paramilitaries that were active even before Bosnia officially declared independence. Most of the weaponry and commanders from the former Yugoslav People’s Army in Bosnia, which was dominated by Serbian officers, reordered into the VRS. The Bosnian Serbs were supported by Serbia and Montenegro, which had joined to form the Federal Republic of Yugoslavia with Slobodan Milosevic as its leader.

The Croats had already organized their own military force as well, the Croatian Defense Council (HVO), which was supported by neighboring Croatia. Croatian leader Franjo Tudjman was widely viewed as accepting partition of Bosnia so areas populated with predominantly ethnic Croats could merge with Croatia proper. Some HVO elements cooperated with the Bosnian forces while others concentrated on securing control over the self-proclaimed independent Republic of Herzog-Bosnia within Bosnia’s borders.⁵ The Bosnians created the Army of the Republic of Bosnia Herzegovina (ARBiH) to safeguard their citizens and the concept of a multiethnic representative government, and to preserve their historic borders. Initially it was about one-third non-Bosniak, but over the course of the war it became predominantly Muslim.⁶

Assigning culpability for all the atrocities that accompanied the disintegration of Yugoslavia remains contentious. However, by late 1992 it was clear to the Western world that Serb forces were actively conducting a campaign of ethnic cleansing in eastern Bosnia.⁷ Serb forces rounded up thousands of Bosniaks, placing many men in concentration camps and thousands

of women in “rape camps.” Serb soldiers and irregular forces also destroyed non-Serb cultural and religious sites.⁸ Non-Serb, mostly Bosniak houses were ransacked and burned. People were randomly detained and arrested and sent to detention camps. Better equipped and trained than the Bosnian and Croat forces, and backed by former Yugoslav military units, the regular and irregular Serb forces easily captured 70 percent of the country and laid siege to Sarajevo using artillery, tanks, mortars, rocket-propelled grenades and machine guns as well as Yugoslav-built fighter-bombers.⁹

Inter-ethnic alliances in Bosnia were fickle. In many places HVO and ARBiH forces fought alongside one another to stem the Serb tide, and Croats served in Bosnian units and Muslims in HVO units. However, relations between the two ethnic groups deteriorated when the HVO, with Croatian support, launched its own offensive along the Dalmatian Coast in Herzegovina (southern Bosnia), culminating in the siege of Mostar in May 1993. HVO and ARBiH forces had collaborated to force the Serbs out of the city in 1992, but only a year later HVO forces surrounded the city and forced the Bosniaks and ARBiH across the Neretva River into the eastern side of the city. Although apparently on a lesser scale than the Serbs, the HVO and irregular Croat forces were guilty of detaining, executing, and raping thousands of Bosniaks,¹⁰ and the ARBiH in turn was accused of “large-scale atrocities against Croat civilians in Central Bosnia.” Yet in Tuzla and northeastern Bosnia, the HVO, which at the start of the war formed part of the Armed Forces of Bosnia and Herzegovina, continued to fight the Serbs alongside the ARBiH.¹¹

Pressure built for outside intervention in Bosnia as the fighting spread. The United Nations Security Council formed the United Nations Protection Force (UNPROFOR) in February 1992 with the mission to facilitate a cease-fire in Croatia and secure conditions for peace talks. In June, the Security Council extended the UNPROFOR mission to cover the Sarajevo airport and later to provide protection of humanitarian aid delivery in all of Bosnia and Herzegovina. By February 1993, 9,000 UNPROFOR troops were protecting the delivery of humanitarian aid and six specifically-designated Bosnian “safe areas” or security zones: Sarajevo, Srebrenica, Goražde, Bihać, Žepa, and Tuzla. UNPROFOR, with North Atlantic Treaty Organization (NATO) assurances of air support,¹² was authorized to use force if necessary to protect these enclaves.¹³ Meanwhile, European diplomats struggled to find a political solution that would end the fighting.

Early on, European leaders made clear their intention to manage the crisis without U.S. help.¹⁴ The Bush administration, with its hands full managing Saddam Hussein, German reunification, and other major changes set in motion by the passing of the Soviet Union, was all too happy to have Europe take the lead for managing a crisis in its own back yard. But after two primarily European diplomatic initiatives (the Carrington-Cutileiro and Vance-Owen plans)

failed to quell the fighting or stop atrocities against civilians, pressure built in the United States for intervention. Early on, the United Nations Security Council had imposed an arms embargo on all the former republics of Yugoslavia.¹⁵ The embargo grew increasingly unpopular in the United States. It froze Serb advantages in place and made it more difficult for Bosniaks and Bosnian Croats to defend themselves.¹⁶ Important members of the Senate condemned it, in particular Robert Dole (R-KS) and Joseph Lieberman (D-CT). An unusual combination of left and right-leaning political commentators and politicians began speaking out in favor of lifting the embargo or actually intervening with U.S. forces. Many moderate “realists,” on the other hand, were deeply skeptical of such involvement.¹⁷

During the Presidential campaign of 1992, Bill Clinton promised to commit his administration to resolving the situation in Bosnia by bombing the Serbs if necessary.¹⁸ Shortly after taking office in early 1993, President Clinton commissioned a high level review of the Bosnia policy and then chose a “lift and strike policy”—lifting the arms embargo and employing limited air strikes against Serb targets. Staunch opposition from European allies effectively reversed that decision a month later.¹⁹ Congressional skepticism about military interventions also constrained the administration. In October 1993 President Clinton suffered a major foreign policy reversal as the humanitarian intervention in Somalia degenerated into large-scale fighting with significant American casualties. Shortly thereafter, the United States suffered another embarrassment in Haiti when anti-democratic forces forced a U.S. vessel carrying civic action teams to withdraw from the country. These events reinforced reluctance to intervene in a situation as complex as Bosnia. With congressional support weak and European opposition strong, the United States and NATO settled for targeted, minor airstrikes against Serb positions in November 1994.

The Clinton administration also explored diplomatic options for conflict resolution and scored a success by brokering an agreement to end the Muslim-Croat conflict and create a Muslim-Croat Federation (see figure 1). In March 1994 the Washington Agreement formally brought the two warring ethnic factions together as a single political and geographic entity, divided into 10 cantons under the auspices of UNPROFOR.²⁰ All government posts were to be split evenly between Croats and Bosniaks. A year later, however, President Clinton’s chief negotiator for Bosnia, Ambassador Richard Holbrooke, observed that the Federation “existed only on paper” and that “friction between the Croats and the Muslims was enormous.”²¹

The conflict dragged on into the spring of 1995, at which point it had already claimed 100,000 lives and produced more than a million refugees.²² On both ends of the U.S. political spectrum, concerns about the future of NATO as a strategic alliance and outrage over gross

human rights abuses began to soften resistance to intervention. Foreign policy leaders such as Holbrooke believed “America’s post-World War II security role in Europe was at stake,”²³ and news magazines with pictures of emaciated prisoners recalling Nazi concentration camps began to swing public sentiment in favor of some kind of intervention. In March the *New York Times* reported that a CIA report had concluded that “90 percent of the acts of ethnic cleansing were carried out by Serbs and that leading Serbian politicians almost certainly played a role in the crimes.”²⁴ Over time U.S. Balkans policy was influenced less by the impression that all sides bore some responsibility and more by the view that Slobodan Milosevic was a “new Hitler”²⁵ promoting nationalist aggression. He appeared determined to form a greater Serbia by using

his superior military forces to annex territory in Bosnia and Croatia where Serbs lived and by “expelling or killing all inhabitants who were not Serbs, most egregiously [Bosniaks].”²⁶ Increasing numbers of U.S. Government officials, members of Congress, and prominent newspaper editorialists called for action to help the persecuted Bosniak population.²⁷

Assistant Secretary of State for European Affairs Richard Holbrooke and an interagency team conducted shuttle diplomacy in the Balkans to find a way forward toward a negotiated settlement, but Serb military advantages diminished incentives for compromises.²⁸ One event in particular convinced Holbrooke and other Americans that more military force would be required to bring the Serbs to the negotiating table. In May 1995 NATO responded to Serb attacks on UN safe zones with “pinprick” air strikes as it did the previous year. This time, however, the Serbs took 350 UN peacekeepers hostage in response. Holbrooke encouraged the Clinton administration to increase the bombing, but the Europeans, particularly those countries whose soldiers were taken hostage, were opposed to using more airpower. The Clinton administration settled on a policy of containment and humanitarian relief while it worked other options quietly, including ways to shift the military balance among the three warring factions.

While formally abiding by the UN arms embargo, which Clinton believed “unfairly and unintentionally penalized the victims in this conflict,”²⁹ the United States tacitly allowed arms to flow to the Bosnians, mostly from majority-Muslim countries in the Middle East.³⁰ U.S. diplomats made no effort to stop Croatia from allowing military supplies to reach Bosnia through Croatian territory, including transit of arms from Iran to Bosnian Muslim forces, thus circumventing the UN embargo and making an exception to the U.S. policy of isolating Iran.³¹ In addition the United States supported Croatia’s efforts to build up its military forces. The Department of State quietly approved nonlethal assistance to the Croatian Ministry of Defense through U.S. private sector military advisors. The U.S. company, Military Professional Resources, Inc. (MPRI), which was led by such notables as former U.S. Army Chief of Staff Carl Vuono, assisted the Croatian Ministry of Defense.

During this period the United States lobbied its European allies for more forceful intervention, arguing that diplomacy would have to be supported by military force. Since Holbrooke’s mission took place against a backdrop of continuing violence, the United States could increasingly emphasize the moral case for intervention. Notorious mass killings of Bosniak civilians, including a mortar attack against the Markale marketplace in August 1995, increased support for intervention.³² The unquestionable tipping point, however, was the appalling massacre of more than 8,000 Bosniak men sheltered in the UN “safe zone” of Srebrenica in July 1995. Amidst widespread outrage over the horrific event, U.S. policymakers argued that such merciless disregard for human life

and contempt for international peacekeeping forces called the continuing relevance of NATO into question and jeopardized transatlantic security relations.

With European support for more forceful action growing, two August 1995 military developments finally pushed the Serbs to the negotiating table. First, with acquiescence from the United States and other allies, Croatia launched punishing offensives against the Serbs. The Croatian Army evicted Serb forces from the self-declared Republic of Serbian Krajina, producing a large number of Serb civilian casualties and refugee flows in the process. Then, operating in concert with Bosnian Army units around Bihac, Croatian forces routed the Serbs who were occupying other parts of Croatia and Bosnia. American leaders attempted to constrain Croatia, fearing the Croats, flush with success, would go too far and ignite a larger conflict.³³ But both Holbrooke and Clinton would write in their memoirs that Serb military reverses were essential for bringing the Serbs to the negotiating table.³⁴ In addition to the successful Croatian and Bosniak ground initiatives, NATO launched air strikes against the Republika Srpska and Serb targets on August 30 in Operation *Deliberate Force*. The Serbs stopped their attacks against Sarajevo after 11 days of air strikes.

Two months later, the United States hosted a peace conference at Wright-Patterson Air Force base in Dayton, Ohio. Having intervened to stop the conflict and putting the reputation of the NATO Alliance on the line, the United States and NATO had little choice but to actively engage with peacekeeping and reconstruction. President Clinton emphasized the high stakes to the public, noting, “The Balkans lies at the heart of Europe, next door to several of our key NATO Allies and to some of the new, fragile European democracies. If the war there reignites, it could spread and spark a much larger conflict, the kind of conflict that has drawn Americans into two European wars in this century.”³⁵ The negotiations were dominated by American and European actors shuttling among various Balkan factions involved in the conflict. Promising security and aid, and working through innumerable contentious details, the diplomats successfully negotiated the “General Framework Agreement for Peace in Bosnia and Herzegovina.” The agreement, typically referred to simply as the Dayton Accords, was signed by Bosnian, Croat, and Serb leaders Alija Izetbegovic, Franjo Tudjman, and Slobodan Milosevic in Paris on December 14, 1995.

From this historical overview of the U.S. intervention in the Balkans, it is possible to identify several factors that helped set the stage for the Train and Equip Program and the context in which it would be administered. The U.S. intervention took place reluctantly, under increasing pressure, and with high stakes for the Clinton administration; it thus had the sustained attention of the highest U.S. officials. The implementation of the Dayton peace agreement, and by

extension the Train and Equip Program, benefited from this priority support rendered by the upper echelons of the national security establishment.

It also is noteworthy that the United States brought an end to the conflict with a mix of diplomacy and military force. U.S. leaders had learned the futility of negotiating without forceful options for rectifying the Serb military advantages. The mix of advisory support to the Croats and then diplomacy to restrain their advancing forces, and the active use of military power to pressure the Serbs to the negotiating table, signaled U.S. intent to establish a balance of power among the protagonists rather than allowing any faction to have a significant advantage. Incorporating the Train and Equip Program into the peace process was a natural extension of this politico-military approach to conflict resolution based on a foundational balance of power.

Outrage over massacres of Bosniak civilians in “protected” enclaves inclined many in the United States to believe that providing the Bosniaks the means for self-defense was the *right* thing to do as well as a pragmatic means of promoting stability; i.e., a moral obligation.³⁶ This sense of propriety later translated into a deep commitment to success among the members of the Train and Equip Task Force. In contrast, America’s European allies were much less inclined to support any military measures, arguing that military force of any kind would only exacerbate the conflict. These divergent attitudes complicated the execution of the Train and Equip Program as the Europeans, particularly the British, tried to subvert the program.

Another notable aspect of the run-up to Dayton that shaped the Train and Equip Program was the U.S. investment in the Federation of the Croats and Bosniaks, not only as a counterbalance to the Serbs but as the first critical step in national reconciliation. U.S. leaders were determined to continue and reinforce their commitment to the Federation by insisting the Train and Equip Program be executed through that mechanism even though virtually all European experts, as well as most within the U.S. national security bureaucracy, considered the Federation impractical and doomed to failure. In this respect, as well as others involving the Dayton Accords, senior U.S. leaders were on a decidedly different course than the Europeans and the rank and file in their own national security bureaucracy.

Finally, the interagency team Holbrooke used for his Balkans peace initiative produced a knowledgeable and experienced leader to run the Train and Equip Program. Holbrooke notes in his memoirs that he and Secretary of State Warren Christopher chose “the best possible person to head [Train and Equip]—one of its authors, Jim Pardew.”³⁷ Pardew was an expert on the Balkans, having served as the Vice Director for Intelligence on the Joint Staff from 1992 to 1994 and heading the Pentagon’s Balkan Task Force. He also knew and had met with

all the major Balkan personalities when travelling with Holbrooke's interagency team as the senior Department of Defense (DOD) representative. Most importantly, Pardew was trusted by senior U.S. leaders in the Clinton administration, who choose him to lead a program they knew he advocated.

The Origin, Purpose, and Resistance

*Nothing the United States is doing in Bosnia today is so clearly destabilizing or unlikely to foster an enduring peace as this [Train and Equip] program.*³⁸

—General Charles Boyd, USAF (Ret.)

Former Deputy Commander, U.S. European Command

A military assistance program for the Bosnians had supporters inside the Clinton administration well before the summer of 1995. For example, as early as July 1994 a Department of State paper circulated arguing such an effort could be used to help heal the deep-seated suspicions between the Federation's two hostile armies.³⁹ However, it took congressional interest in lifting the arms embargo to elevate prospects for military assistance to the Bosnians. Members of Congress who believed the 1992–95 arms embargo disproportionately hurt the Bosniaks were supportive of Train and Equip.⁴⁰ During the war Congress specified that U.S. Government funds could not be used to enforce the arms embargo against the Bosnian government⁴¹ and in the summer of 1995 voted to unilaterally lift the embargo if UN forces withdrew from Bosnia.

Fending off legislation mandating a unilateral lifting of the arms embargo was a major preoccupation of the Clinton administration,⁴² and President Clinton vetoed the bill Congress passed in August requiring this development. The administration worried that lifting the embargo would make the United States responsible for the conflict and eventually require an intervention by U.S. troops. As the National Security Council's policy review of Bosnia in early 1995 noted, withdrawing UN forces and lifting the embargo "would commit us to arming and training the Bosnians for an indefinite period."⁴³ Even so, the bipartisan effort led by Senators Dole, Lieberman, and Biden in support of arming the Muslims made an impact. Senator Dole in particular kept pressing the issue. His request that the administration consider a training program for the Bosnians stimulated some of the first analysis inside the executive branch on the size, shape, and advisability of a Train and Equip Program.⁴⁴ Dole and other Senators wanted the United States to lead rather than support such a Program.⁴⁵ Eventually, "Facing a defeat in Congress on this issue, President Clinton pledged that in the event of a peace agreement, the

United States would lead an effort to equip and train the Federation in order to ‘level the playing field’ so that it could defend itself.”⁴⁶ The President wrote to Senator Dole on December 10 assuring him that the United States would “coordinate an international effort” and then again on December 12 reassuring Dole the United States would lead the effort—expeditiously.⁴⁷

The Train and Equip Program also calmed the concerns of some Congressmen about committing U.S. troops to peacekeeping duty in Bosnia. Creating a stable and functioning Federation Army that could deter Serb aggression had the prospect of allowing NATO and U.S. troops to withdraw from Bosnia within the original 12-month mandate, which the administration assured Congress was all it would take to stabilize the country.⁴⁸ Thus the program was “linked in the minds of many in Congress to the Administration’s ‘exit strategy.’”⁴⁹ Senator Dole, for example, argued on national television that “the president has got a way to get the troops into the area; we need a way to get them out . . . unless we arm and train the Bosnians, we are not going to be able to leave. . . .”⁵⁰ For these and other reasons, including support for the Bosnian right to self-defense, Congress gave the President \$100 million in drawdown authority to transfer U.S. military stocks to Bosnia in the FY96 Foreign Aid Appropriations bill. The legislation required the President to certify that the military aid “would assist that nation in self-defense and promote the security and stability of the region.”⁵¹

In addition to these domestic considerations, there was a major external catalyst for creating the program. Bosnian President Izetbegovic refused to sign the Dayton peace agreement without a U.S. commitment to train and equip his forces. President Clinton assured Izetbegovic that the United States would provide training and equipment, but only through the Federation and only if “foreign fighters”—considered extremists by the United States—left Bosnia and returned to their homelands, a message reinforced by Richard Holbrooke.⁵²

Contrary to what many believed, however, the Train and Equip Program was not just a sop to Congress or the Bosniaks.⁵³ Congress and Izetbegovic provided powerful incentives to launch the program but many senior leaders in the administration also came to view it as an integral part of the Dayton peace implementation process. It is true that senior leaders initially preferred to support rather than lead the effort, and that they wanted a modest and low-profile program (hoping weapons would be purchased from non-U.S. sources and that training would be conducted by a third party). However, after the fall of the Srebrenica and Zepa enclaves and the resultant large-scale mass murders, attitudes hardened to the point where officials considered letting the UN peacekeeping effort “collapse” so the United States could “help the Bosnians obtain the military capabilities needed to level the playing field.”⁵⁴ The belief that “we can exercise control over the types of weapons provided to the Federation and limit the involvement

of Iran and other radical states” convinced administration leaders that U.S. leadership of the program would be necessary.⁵⁵ By the time the Dayton peace accords were finished, Secretary of Defense Perry was quite comfortable explaining that “to achieve a lasting peace in the Balkans, it will be essential to achieve stable and balanced force levels within Bosnia-Herzegovina and among the states of the former Yugoslavia.”⁵⁶

Perry’s post-Dayton statement put a public face on the argument Madeleine Albright made to other senior Clinton officials in August, 1995, which was that “the one truth of this sad story” was that “our only successes have come when the Bosnian Serbs faced a credible threat of military force.”⁵⁷ Consequently, she advocated immediately lifting the arms embargo and training the Bosnians until they could defend themselves and drive the Serbs to the negotiating table. Serious planning for a U.S.-led Train and Equip Program by the Pentagon picked up steam after her intervention,⁵⁸ with the explicit goal of “ensur[ing] that there is a rough balance of power between the Federation and the Bosnian Serbs by the end of the 1-year peace implementation period.”⁵⁹

After the Dayton agreement was signed, U.S. leaders remained cognizant of the need for incentives for compliance. The leaders of the Former Republic of Yugoslavia, Bosnia, and Croatia had agreed to recognize each other’s existence, address conflicts peacefully, and contribute to reconstruction and implementation of transitional justice, including the prosecution of war criminals.⁶⁰ They also had agreed to continue the October 5 cease-fire and to withdraw more of their forces to specially designated zones. Yet these agreements were widely judged to be fragile. One or more parties could have used the respite from war to regroup and prepare for a renewal of hostilities. The Train and Equip Program was one of several mechanisms intended to dissuade such a course of action, particularly by the Serbs.

Another prominent means of dissuading a renewal of hostilities was the Dayton agreement’s provision in Annex 1-A for a multinational military Implementation Force (IFOR) under the command of NATO with UN authority to help enforce the military aspects of the agreement “with force if necessary.”⁶¹ Annex 1-B provided other stabilizing measures. It stipulated that under the auspices of the Organization for Security and Cooperation in Europe, the warring countries were to restrict arms imports and agree on rates for reducing arms stockpiles. The intent of the annex was to prevent an arms race and create a rough military balance between the formerly warring factions. When hostilities ended, the Bosnian Serbs had a major advantage in heavy weapons, so a balance could be achieved by some combination of arms reductions, arms control, and importation of weapons to the Bosnian Federation. U.S. leaders viewed Train and Equip as one key means to establish an enduring military balance that would facilitate stability

and reconciliation. In that regard the informal name of the program—Train and Equip—communicated its content accurately, but the formal name better communicated its purpose: Task Force for Military Stabilization in the Balkans.

Most observers were skeptical about the chances for peace at the time. The initial 1-year duration for IFOR—strongly preferred by the U.S. military⁶² but considered a “waffle of the first order” by most other observers⁶³—was considered impractical because it was a glaring signal that the U.S. commitment was limited. It was widely assumed the warring parties would renew fighting if NATO forces left. Even if they did not leave, no one could predict NATO’s willingness to enforce the peace if fighting broke out. Bosnian Serb hostility and IFOR passivity were demonstrated early in the peace implementation effort when Bosnian Serbs had to submit to the unification of Sarajevo under Federation control by March 18, 1996. IFOR stood by while Serbs burned abandoned homes and apartments and Serbian thugs terrorized any Serbs who wanted to stay in a multiethnic city. Such developments bode poorly for the peace process. In fact, many experts in the Intelligence Community expected the process to fall apart quickly after Holbrooke’s February 1996 departure from government and the loss of his unique access and knowledge of the parties, particularly in Belgrade.⁶⁴

The precarious peace and short 1-year IFOR tenure underscored the sensitivity and urgency attached to the Train and Equip Program. The primary objective of the program was to create a military balance of power in Bosnia by offsetting Serbs advantages. The formal objective for the program approved by U.S. leaders was the following: “In one year, equip and train a Federation military force capable of deterring ground attacks on Federation territory by Srpska and successfully defending Federation territory from a revived Bosnian Serb Army, with no more than modest material support from Belgrade, should deterrence fail.”⁶⁵ If IFOR was only going to stay a year, it was imperative that the program begin immediately and be executed rapidly.

Secondarily, the United States intended to use the Train and Equip Program to strengthen the Bosniak-Croat Federation, so the program would be executed through the Federation with the intent to build and cement an integrated, NATO-backed, Bosniak-Croat Federation armed forces structure. A key assumption was that cooperation between the Bosnian Croats and Bosniaks on security matters would facilitate progress in other sectors. Certainly it was difficult to imagine much political progress in the Federation without agreement on security structures and processes. The sooner the Federation Ministry of Defense was integrated and working smoothly, the more likely it was that other aspects of postwar reconstruction would gather momentum.

The third objective of the program was to orient Bosnia towards the West, first by eradicating the growing influence of radical Iranian-sponsored mujahideen, and second by instilling

Western civil-military norms and NATO military standards. Congress made the availability of military and economic assistance to the Bosnian government contingent upon Iranian-supported foreign forces being expelled from Bosnia. U.S. leaders would not permit the program to deliver training or weapons until the President determined that the Bosnian government had arranged the departure of foreign fighters.⁶⁶ Rapidly establishing the Train and Equip Program was meant to give the Bosniaks an incentive to take the politically painful step of dismissing their co-religionists who had flocked to Bosnia to fight with fanatical commitment. Another objective, implicit in the previous three, was “to provide incentives for all sides to comply with the Dayton Agreement and ensure that a secure environment exists upon SFOR’s departure.”⁶⁷

Explaining the origins and purpose of Train and Equip from a select U.S. senior leadership point of view⁶⁸ fails to communicate how controversial the program was at the time. Many (but not all) officials in the U.S. Government and most Europeans saw it as inconsistent with and an impediment to the international peacekeeping mission. Uniformed military leadership in particular feared the program would undermine the impartial peacekeeping image they needed to execute the IFOR mission successfully. How, they asked, can American soldiers serve as neutral peacekeepers while their country is supplying weapons and training to some of the previously warring factions? Military leaders worried the Serbs would view the program as blatant favoritism for the Bosnian Croats and Bosniaks and thus resent and attack U.S. peacekeeping troops. In Washington DOD simply insisted that the program be run out of the Department of State instead of itself. In Bosnia senior U.S. military leaders more openly distanced themselves from the program and sometimes seemed to impede its execution.

The Europeans shared the U.S. military view that Train and Equip was a threat to peacekeeping forces. They refused to participate and opposed the program “indirectly.”⁶⁹ Pardew would find the Europeans “feckless” and “useless” in helping Bosnia attain military stability.⁷⁰ As Bosnian expert Susan Woodward argued, European opposition to Train and Equip represented a profound difference of opinion about “what was necessary to bring the conflict to an end and the method of obtaining peace and the goal of intervention.”⁷¹ For Europeans, introducing more arms into the region while trying to fulfill Dayton arms reduction provisions seemed contradictory. If a military balance was necessary, European diplomats thought it should be established through arms reduction and control.⁷²

The European preference for arms control in lieu of Train and Equip was shared by many American diplomats. The Foreign Service Officer in charge of political-military matters for the European Bureau explained the Bureau’s skepticism about the Train and Equip effort when it was first forming in December 1995. In candid terms, he noted that no one in the

Bureau believed in the elusive concept of “a military balance” or that any efforts to achieve one would contribute to stability. He said the common view in State was that the program was tolerated because it had been a necessary inducement to get the Bosnians to sign the Dayton Accords.⁷³ He thought that arming and training the Federation would undermine the process of arms control and exacerbate tensions with Europeans participating in the implementation of the Dayton agreement.⁷⁴

Most State Department officials, like DOD leaders, did not actively resist the program, which they knew had high-level support. On the contrary, they did their best to explain the program in terms of its contribution to stability and democratic processes.⁷⁵ However, they often tried to use the program as leverage for what they considered more important objectives. From State’s viewpoint, the program was not important for any contributions it made to a military balance, but it was useful for keeping the process moving forward in other sectors. They frequently wanted to threaten to suspend Train and Equip if the Bosnian Croats or Bosniaks proved recalcitrant on unrelated peace implementation issues.

Another objection to Train and Equip was that it would overcorrect the military balance in favor of the Bosniak-Croat Federation. Some NATO Allies harbored this concern (particularly the British),⁷⁶ as did the Central Intelligence Agency (CIA) and some members of Congress.⁷⁷ Even some officials in DOD and on the National Security Council⁷⁸ disagreed with the introduction of heavy weaponry under Train and Equip. As the program got under way, the CIA became increasingly vocal in its assertion that a military balance already existed in Bosnia. Their military analysts argued that the Bosniaks had a manpower advantage and the Serbs had an equipment advantage, but in the end both sides were about equal. Therefore, they argued that arming the Federation would have the exact opposite of its intended effect, destabilizing the balance of power in favor of the Federation and leading to a renewal of hostilities. Others believed the same. A *Washington Post* reporter wrote that he drove 4 hours through a snowstorm to watch Train and Equip heavy weapons being offloaded at the Croatian port of Ploce because “when the next war in the Balkans erupts, I want to be able to say that I was there where it all began.”⁷⁹ A few months later a *New York Times* reporter quoted a European commander as saying “the question no longer is if the Muslims will attack the Bosnian Serbs, but when.”⁸⁰

Finally, a fair number of Balkan experts, journalists, and scholars thought the Train and Equip Program was misguided because the tenuous Bosniak-Croat Federation would be overcome with nationalist ambitions and crumble. Political scholars John Mearsheimer and Stephen Evera, typifying this perspective, wrote that the main problem with Dayton that would haunt the program was the “untenable” Croatian-Muslim Federation: “Like Bosnian Serbs, the

Bosnian Croats want out of Bosnia. They accepted the Muslim-Croat Federation as an expedient . . . but they will surely move to destroy it someday soon.”⁸¹ Similarly, the U.S. Interagency Intelligence Task Force that tracked events in Bosnia, and the Department of State’s Bureau of Intelligence and Research, both believed the Federation was an “artificial construct” that would not last.⁸² The widespread view was that Federation leaders were so hostile to one another they would never cooperate. Europeans regarded the Federation as a “crazy idea.”⁸³

The Serbs, of course, agreed that the Federation was not viable and that Train and Equip was destabilizing. They promoted the narrative that Bosniak forces were Muslim extremists who wanted to see the establishment of an Islamic state in Bosnia, and stoked the fear that the United States would end up arming and training an Islamic fundamentalist state. As the program progressed, Bosnian Serb leader Biljana Plavic complained, “There is obvious discrimination, particularly in an area [equipment] that is so very delicate,”⁸⁴ and another Serb commentator warned that arming “Alija [Izetbegovich]’s mujahedeens in the middle of the peace process in former Bosnia-Herzegovina can only trigger a new war.”⁸⁵ The Serbs were not alone in asserting that Washington was being duped by wily Muslims. Looking back on the events that led to Dayton and the Train and Equip Program, one former senior State Department and UN official would conclude the Muslims “bamboozled the world” and played the United States “like a fiddle.”⁸⁶

In sum, other than the U.S. President, a handful of his top national security officials, some strong supporters in Congress who cared to follow the issue, and those directly involved in the Train and Equip Program, most informed opinion in the U.S. Government and European circles seemed to agree that Train and Equip was destabilizing and counterproductive. Nevertheless, the task force was ultimately able to sidestep or overcome such resistance and execute its program with the help of supporters inside and outside the U.S. Government. It did so in some interesting and creative ways that merit close inspection.

Train and Equip Team Performance, 1995–1997

*Train and equip could start an arms race. It is inflaming a situation which is already inflammatory. That’s not what it was originally designed to do.*⁸⁷

—Former UN High Representative to Bosnia Carl Bildt, 1997

After the Train and Equip Program was in effect for a year or more, many observers considered it a juggernaut propelling the region toward renewed hostilities. Yet when the program began operations in December 1995, it seemed anything but a runaway success. Pardew started with no

staff, no budget, no clear military requirements, and no committed international support. Armed only with a mandate and drawdown authority from Congress, Pardew went to work immediately after the Dayton peace agreement. Reflecting his sense of urgency, he told his small task force “every day is a work day”⁸⁸ and proved it by working nonstop through the holiday period, an extended government furlough, and the early-January blizzard that shut down the Federal Government for a week by dumping two feet of snow on Washington, DC.⁸⁹ Over the next 2 years Pardew and his interagency team, along with those they partnered with, maintained this level of intensity by traveling extensively, overcoming major setbacks, and beating back bureaucratic resistance to secure international donor funds and create a web of private and government sector entities that could implement the program. The first step was assembling the core team.

Forming the Team

Shortly after the Dayton agreement, Jim Pardew was made U.S. Special Representative for Military Stabilization in the Balkans, given temporary ambassadorial status (which was later confirmed by the Senate), and housed in the Department of State’s main building. He began assembling a group to implement the Train and Equip Program. Pardew’s first recruit was Mark Sawoski, who had worked with Pardew on the DOD Bosnia Task Force and accompanied him to the Dayton negotiations. Pardew asked Sawoski to work on Train and Equip as a senior advisor.⁹⁰ When Sawoski had to return to his position in academia during the summer of 1996 Pardew secured the services of Chuck Franklin, a former Navy public affairs officer, who concentrated on task force public relations.

Pardew, a former U.S. Army intelligence officer, also quickly arranged for someone to support the task force’s intelligence needs. The CIA loaned him someone to provide intelligence support but rescinded the action after a few weeks. Pardew requested a replacement who was knowledgeable about the Balkans and was given Guillermo Christensen, a CIA analyst then working in the DCI’s Interagency Balkan Task Force.⁹¹ When Christensen departed after a few months for his onward assignment, the CIA provided another replacement who stayed with the task force for the next several years.

Pardew also approached the Under Secretary of Defense for Policy, Walt Slocombe, to ask for a senior executive to serve as one of his two deputies, with responsibility for working the details of the military training program and equipment deliveries. Slocombe made Chris Lamb available. Pardew also wanted someone from the Defense Security Cooperation Agency to manage the congressionally mandated \$100 million drawdown of U.S. military equipment. That agency made Major Stuart McFarren, a former Special Forces officer, available to Pardew,

believing it would be a short-term job.⁹² McFarren was originally assigned to Pardew for 2 weeks but ended up staying with the program almost 8 years, longer than any other member. In order to maintain the U.S. military's posture as an unbiased international peacekeeping force that was not "taking sides," McFarren had to quickly retire from the Army and begin working for Pardew as a contractor to stay with the Train and Equip team.⁹³

The Department of State supplied Pardew's other deputy, Ambassador Darryl Johnson, to help work the international diplomatic agenda in support of Train and Equip. Johnson served as Pardew's deputy from January through March 1996.⁹⁴ He was supported by Angel Rabasa, a Foreign Service Officer who had worked Serbian sanctions on another interagency task force before joining Train and Equip during a normal department rotation.⁹⁵ When Johnson was temporarily assigned to head the Embassy in Sarajevo for a few weeks before moving on to his assignment in Taiwan, Pardew had to find a replacement. After several months he recruited Ambassador Jon Glassman from the Industrial College of the Armed Forces at National Defense University. The Department of State also provided secretarial support and, in the summer of 1996, another senior political officer to assist the task force, John Klekas, a Foreign Service officer Pardew knew from working on the Balkan Task Force at DOD.

So after several substitutions about 6 months into the program, the basic structure and the work regimen of the team remained stable over the first few years. The team met each morning in Pardew's office to talk strategy and priorities, and then dispersed. An early priority for Pardew was securing his group's authority to take action within the U.S. national security establishment. He needed a mandate that would answer the question of how much training and equipping would be necessary. A study was already under way for that very purpose.

Establishing Requirements, Getting a Mandate, and Beginning Operations

By August 1995 there was interagency agreement that a Train and Equip Program should be "modest" and concentrate on "defensive capabilities,"⁹⁶ but the exact size and shape of the program was disputed. Both the CIA and Pentagon had made preliminary estimates of Train and Equip Program requirements for planning purposes. They agreed on some of the Bosniak force shortcomings, but disagreed about how capable Bosniak forces were and what it would take to create an effective military balance (with the Joint Staff being "more pessimistic about Muslim capabilities").⁹⁷ After the decision to train and equip the Bosnians was made, senior administration officials wanted a more detailed and deliberate assessment. So the Institute for Defense Analysis (IDA) was asked to travel to Bosnia and make a complete assessment of the military balance in order "to identify priorities for training and equipment improvements; and

to develop alternative equip and train packages.”⁹⁸ The IDA assessment team had drafts of its work ready in December but did not complete its assessment until February 5, 1996.

The team recommended the creation of a unified Bosniak-Croat joint military staff and an integrated peacetime force of 55,000 active-duty troops composed of 14 brigades (10 Bosniak and 4 Bosnian Croat). The team found minimal cooperation between the Bosniak and Croat forces and widespread mutual animosity. The IDA report noted that the Croat HVO “behaves more as an extension of the Croatian Army than as a Federation partner of the predominantly Muslim Army of Bosnia and Herzegovina” and also remarked on the “ethnic bigotry among most HVO officers that we did not find in the ARBiH.” The IDA study group did not find “enthusiasm for resuming the war,” but did note the smoldering resentment in some quarters, especially among Croats, was a formidable obstacle to executing Train and Equip. Both sides were pleased to have U.S. support for the Federation Army, however. The ARBiH commander, General Rasim Delic, summed up the general sentiment when he told IDA researchers, “We survived before by courage and resourcefulness, but we paid a high price in lives and territory and we need America’s help to prevent that from ever happening again.”⁹⁹

The IDA study team found the HVO and ARBiH armies in dire need of training and basic equipment. Both armies were comprised mostly of young, battle-hardened troops who suffered from a lack of formal training at all levels. Young commanders were under-trained and overwhelmed by their responsibilities: “At brigade and battalion level, many commanders have risen so fast that they are not yet adequately trained in staff operations or the coordination of maneuver and support.” Furthermore, neither army had noncommissioned officers above squad level, which meant junior officers were left to “plan, lead, supervise, coordinate, and requisition all forms of support in battle . . . leaders so overwhelmed with tasks cannot be fully attentive to any task, thereby degrading the quality of what they do. . . .”¹⁰⁰

In taking stock of the HVO and ARBiH equipment, the report found that most of the weaponry in both armies was decades old and of “Soviet, Yugoslav or other communist block manufacture,”¹⁰¹ and that much of it had been worn out from “prolonged combat use.” The IDA team identified the major equipment shortfalls, and noted that, “If pooled, the combined military industrial capacity and logistical infrastructure of the ARBiH and HVO could significantly reduce the cost of defending the country, more readily standardize units, and reduce the cost of an externally-supported Train and Equip Program.” The IDA study was briefed to senior DOD leaders, who generally accepted the findings (table 1).¹⁰²

With the draft¹⁰³ IDA assessment in hand, Pardew arranged to have the Train and Equip Program considered in a Deputies Committee meeting, i.e., a National Security Council staff

Table 1. IDA Study Recommended Train and Equip Elements		
Element	Description	Estimated Cost (in millions)
Training	Unit training—company lane training and company combat training centers (CTCs), 2nd company CTCs and battalion CTCs Individual training—NCO and junior officer courses, officer and battle staff training	\$45
Artillery	Towed medium artillery (144 tubes), counter battery radars (12), computers, trucks (2550)	\$120–150
Infantry equipment	Anti-tank weapons (318), heavy mortars (130), light weapons; engineer equipment, individual equipment	\$195–210
Communications	Tactical VHF and HF radios, radio-relay system and tactical telephone equipment	\$65
Air defense	Man-portable SAMs, early warning radars, radar SAMs	\$155–190
Tanks and AVCs	Tanks (45) and armored combat vehicles (80) for reaction brigade	\$70–110
Helicopters	Utility helicopters (20)	\$90–110
Approximate Cumulative Value: \$740–860 Million		

meeting attended by the second highest officials from all the major departments and agencies. The Deputies approved Pardew’s five-page paper laying out policy, goals, leadership, objectives, concept, and next steps for the Train and Equip Program on December 28, 1995, codifying the purpose and attributes of the program that had been debated and clarified in preceding months.¹⁰⁴ The Deputies Committee stipulated that actual training and equipping could not begin until two conditions were fulfilled. Bosniak and Croat leaders had to prove their commitment to the Federation, and the Bosniak leaders had to sever ties with Iran and the mujahideen fighters in Bosnia. Pardew did not contest these stipulations but rather insisted upon

them. He “knew the consequences of being a pawn”¹⁰⁵ for other Balkan agendas and wanted the leverage to put the program on a proper foundation. The paper also addressed Bosnian Serb participation. It noted that having separate military forces in Bosnia was “incompatible with the long-term goal of a peaceful, unitary Bosnian state,” so it explained that he would explore opportunities for greater integration with the Bosnian Serbs after appropriate conditions were met, including giving up indicted war criminals. It would be quite some time before the Bosnian Serbs were ready to accept such conditions. Meanwhile, Pardew used this Deputies Committee mandate to overcome resistance to the program within the U.S. national security bureaucracy and from U.S. military leaders in Bosnia.

Soliciting Support and Operating Funds

The immediate next step that Pardew had requested and received Deputies approval for was an “orientation trip” to the Balkans. He and his deputies, along with IDA’s chief analyst in charge of the requirements report, flew to the region the first week of January, 1996. In Zagreb, the Croatians were cautiously supportive on the condition that the program would be administered through the Federation. In Sarajevo the Bosniaks welcomed the team and readily agreed on the broad outlines of the program. In Belgrade Milosevic was cordial but adopted the European stance toward the program: no weapons should be introduced to Bosnia. Instead, a balance should be achieved through reductions alone.¹⁰⁶ Whether meeting with Bosniaks, Croats, or Serbs, Pardew’s message was the same: the program would be implemented, it would be transparent, and it would be kept fully consistent with all other aspects of the Dayton Accords.

Pardew wanted to introduce his deputies, both of whom were new to the Balkans, to the key players in the region, but he also give them a chance to see the impact of the war up close. After arriving at Sarajevo’s bullet-ridden airport on the only flight they could find—an old Russian transport¹⁰⁷ delivering frozen food—Pardew had his team tour the heavily damaged remains of Sarajevo, including the famous central library that had been gutted by fire.¹⁰⁸ The orientation trip also established a pattern of regular travel for team members, who on average traveled 1 week in 4, usually to Bosnia to do business with the Federation Ministry of Defense and the U.S. contractor responsible for program execution in the field, but also in search of resources and weapons for the program. The main purpose of this first trip, however, was to put the region on notice that the Train and Equip was real, solicit support, and underscore the transparent nature of the program.

Once back in Washington, Pardew put Lamb, his Department of Defense deputy, to work on developing a training contract and determining what defense stocks could be drawn

down for the Federation military forces. Most of the congressionally mandated \$100 million in drawdown authority for Train and Equip would come from Army stocks, including rifles, machine guns, radios, tactical telephones, tanks, heavy artillery, armored personnel carriers, light antitank weapons, and utility helicopters. Other than this significant donation, the U.S. Congress was promised that no taxpayer funds would be used for the program execution. Thus Pardew had to look to other countries for cash and in-kind donations to finance the remaining \$700 million of the estimated \$800 million program,¹⁰⁹ and he assigned Ambassador Johnson the lead on that effort.

A common means of soliciting international financial support is to hold a donor conference, but U.S. leaders worried that it would focus too much attention on the program.¹¹⁰ After Saudi Ambassador to the United States Prince Bandar bin Sultan suggested the program pursue this course of action, the idea received renewed attention. Normally such events are convened after preliminary diplomatic work secures some hard pledges of support. However, Train and Equip was dependent on cash donations to pay for its training component and Pardew's sense of urgency was growing. He wrote a memo to all the major national security

Deputy Secretary of State Strobe Talbott, Ambassador Pardew, and other attendees at the “disastrous” Ankara donor conference

leaders in the U.S. Government in mid-February, reporting that Train and Equip so far had “no money, no equipment, and no training.” He noted the effort was “on the verge of criticism because we have not moved faster.”¹¹¹ After some internal debate, the task force went to work on organizing a donor conference despite the absence of preliminary pledges. Turkey, “shrugging off” complaints from the European Union,¹¹² agreed to host the event in Ankara on March 15, 1996. The task force assumption was that raising money from sympathetic majority-Muslim countries would be easy, but that turned out not to be the case.

In late February Johnson traveled to Southeast Asia with “tin cup in hand.”¹¹³ He went to Brunei, Malaysia, and Indonesia,¹¹⁴ preparing their governments for the conference in Ankara.¹¹⁵ At every stop Johnson was asked, “Why are you Americans here asking us? Why aren’t the Bosnians?”¹¹⁶ Implicit in the question was the possibility that the Bosniaks preferred to receive aid directly rather than sharing resources with the Bosnian Croats. It soon became clear that this was the donors’ perspective. Muslim countries were leery of contributing to an American program that included Bosnian Croats who had fought against Muslims.¹¹⁷ The Turks had similar sentiments but were more willing to sponsor the conference, cooperate with the program, and see how matters progressed.

Warning signs notwithstanding, the actual conference was a shock. It started well. Some 32 nations and 5 international organizations attended, including the United States, which was represented by Deputy Secretary of State Strobe Talbott. Despite the notable absence of Russia and some other key European countries, the wide representation seemed promising. But the conference fizzled. The Europeans extolled the importance of arms control while Muslim countries asserted the right to self-defense. U.S. representatives made eloquent arguments about the fragility of peace and the need to support the victims of Serb aggression by helping build a deterrent force. In the end, concrete pledges of cash support did not materialize. Only the Turks pledged an unspecified training package they valued at \$2 million. Pardew apologized to the Deputy Secretary, but Talbott reassured him that they would make the best they could out of the circumstances. The task force departed from Turkey dejected and empty handed, stopping in Istanbul to “lick its wounds.” In Pardew’s words, “The Ankara conference was a complete disaster.”¹¹⁸

Many of the potential Muslim donors feared that “most of the equipment provided would be diverted to Croatia or at least to the Bosnian-Croat portion of the Federation.”¹¹⁹ Pardew discovered that the Organization of the Islamic Conference had decided in a meeting in Islamabad earlier in the same week as the Ankara conference that “the Islamic world will support Bosnian Muslims on a bilateral basis rather than through the U.S. program which

supports the Federation of Muslims and Croats.”¹²⁰ There were also suggestions that countries like Saudi Arabia, which had provided \$100 million for Bosnian relief during the war, were upset about the lack of Bosnian accountability for those funds. They had no idea where their money went and were leery of making more donations. For their part, Bosniak leaders played up both American and Muslim strategic ties by encouraging the Organization of the Islamic Conference to “retain bilateral relationships while supporting the U.S.” Following the Ankara conference, Bosnian UN Ambassador Mohammad Sacirbey added insult to injury by calling the Train and Equip Program “cheap and inadequate.”¹²¹

Left with nothing to show from the Ankara conference, with time ticking and criticism of the program splattered across newspapers as he had predicted,¹²² Pardew turned to the White House. He reminded all concerned that the program was a personal commitment from President Clinton. White House officials agreed that the President would make a personal appeal and dispatch his lifelong friend and counselor, Thomas “Mack” McLarty, to the Gulf to convey his request for assistance. McLarty, however, would not board the plane waiting at Andrews Air Force base until the task force obtained an ironclad assurance that the President’s personal request would be received favorably. The task force launched a frantic search for longtime Saudi Ambassador to the United States Prince Bandar, finally locating him through his American security detail. Bandar promised Saudi cooperation, so McLarty, Pardew, and regional experts departed for Saudi Arabia, the United Arab Emirates, and Kuwait between April 14 and 15 to make the President’s appeal to the highest levels of government, netting \$115 million in cash.¹²³

With funding from the Gulf priming the pump, a second trip was made by Pardew and Glassman to Malaysia and Brunei that increased the cash pledges to \$152 million. During these fund-raising trips, Pardew’s team stressed the moral dimension of their mission and was met with similar sentiments. The Emir of Kuwait, who initially agreed to give \$30 million, told Pardew that “helping Bosnia is a duty . . . not because they are Muslims, but because they are wronged people.”¹²⁴ In Brunei, Ambassador Glassman recalled that conversations on the “shocking and harrowing tale of slaughter” of Muslim innocents at Srebrenica strengthened resolve that such horrors could not be allowed to happen again. Although the \$147 million was a far cry from IDA’s estimated program needs, the Train and Equip team doggedly pursued in-kind donations over the next 2 years, securing pledges from 14 countries valued at another \$129 million. In addition to the \$100 million in U.S. military assistance, the total value of the program was over \$400 million in cash, equipment, training, and technical support (see table 2).¹²⁵

Table 2. Train and Equip Program Donated Resources as of January 1997		
Country	Funds (in millions)	Equipment (in millions)
Brunei	\$27	
Egypt		\$3.8 worth of equipment <ul style="list-style-type: none"> • 16 130mm field guns • 12 122mm howitzers and 18 23mm antiaircraft guns
Kuwait	\$50	
Malaysia	\$10	
Qatar		\$13 worth of equipment <ul style="list-style-type: none"> • 25 Armored personnel carriers
Saudi Arabia	\$50	
Turkey		\$2 worth of equipment <ul style="list-style-type: none"> • 10 T-55 tanks
United Arab Emirates	\$15	\$120 worth of equipment <ul style="list-style-type: none"> • 36 105mm howitzers • 50 AMX30 tanks and 31 ML90 armored vehicles • 8 transport vehicles
United States		\$109 worth of equipment and services <ul style="list-style-type: none"> • 45 M60A3 tanks, 80 M113A2 armored personnel carriers, 240 heavy trucks • 15 UH-1H helicopters • 116 155mm field howitzers and 840 AT-4 light antitank weapons • 1,000 M-60 machine guns and 46,100 M-16 rifles • JANUS and BBS Command and Staff simulation software • 2,342 radios, 4,100 tactical telephones, binoculars
Total Value: \$399.8 Million		

Establishing the Legal Regime for Managing Funds

The McLarty trip secured enough cash to launch Train and Equip but simultaneously presented an unforeseen and pressing legal matter: how to legally spend other countries' money for an American-led foreign military program. Team members were acutely conscious of the need for a legally sanctioned method for administering donor funds. The team turned to Department of State lawyers. The Department had a major conundrum. Constitutionally, the Executive is

not permitted to spend money without congressional approval, but McLarty had already come home with financial commitments. It took a unique legal construct and a joint State, Treasury, and Justice Department effort to allow those funds to be used consistent with U.S. law and the policy objectives of the Train and Equip Program.¹²⁶

A winning formula was found after a number of false starts. Legal advisors reasoned that because the funds had been given to the United States for a specific purpose, the Department of State could create a common law trust for them. Setting up such a trust allowed the U.S. Government to administer the money but did not give it ownership rights or direct control over how the funds were to be used.¹²⁷ Washington would hold the funds in the U.S. Treasury with an affirmative duty to protect the property on behalf of the donors, which meant ensuring the funds were allocated consistent with donor intent.¹²⁸ Obtaining support from the Departments of Justice and Treasury ensured broad government support for the funding mechanism.¹²⁹ After securing inter-agency and donor agreement for this novel approach, the Bosnian Defense Fund was established on April 22, 1996.¹³⁰ Supporting arrangements for administering the funds then had to be created, including the documentation necessary to establish Ministry of Defense needs and donor intent, and whether the fund would be interest bearing and, if so, how that would be managed.¹³¹

When the Federation needed to pay a contract for either weapons or training services, they would submit a written request—prepared for them by the Train and Equip team and signed by both Bosniak and Croat Ministers of Defense—to the donors.¹³² This request from the Federation Ministry of Defense was forwarded through the team to the donors in the form of a diplomatic note, another of the innovative procedures developed for the program.¹³³ Diplomatic notes, which had to be reported to Congress, allowed the whole process to stay transparent and on the record. The Train and Equip team would forward the Ministry's request to a particular donor country that would then decide whether it would allow its donation, sitting in the trust fund, to be used for that request.¹³⁴ To fulfill its fiduciary responsibilities as trustee, the team had to demonstrate that bids from vendors were good deals for the donors.¹³⁵ Infrequently, donors would deny a request, preferring that their donations be used for other purposes, in which case Train and Equip members would pursue another donor.¹³⁶ Upon donor approval, the State Department would then withdraw funds from the Treasury account and pay the contractor or supplier directly.¹³⁷ In this manner the donor funds never passed through Bosnian hands, but always went directly for training and equipment that the Bosnian defense leadership agreed was necessary.

Exchanging diplomatic notes and other paperwork was “somewhat cumbersome”¹³⁸ and frustrated Bosnian military leaders, particularly the Bosnian Croat Minister of Defense,¹³⁹ who

thought Bosnians should manage the funds more directly. However, the process allowed donor countries to know where their funds went and allowed Washington to ensure that every cent of the funds was spent legitimately. Moreover, it left the Train and Equip team in the middle of all transactions with an “appropriate level of leverage over the disbursement of funds.”¹⁴⁰ Later, the team would reinforce accountability by having the Federation employ the services of a U.S. DOD auditor stationed in Sarajevo to monitor contracts and their implementation.¹⁴¹ Getting the Bosnian Federation Ministry of Defense and a donor to agree that funds should be spent to pay for a U.S. auditing function took some persuasion but added another layer of transparency and accountability.

It was a “creative and ingenious”¹⁴² system of checks and balances that reassured Pardew. The Bosnians soon realized that no graft or corruption would taint the program,¹⁴³ a conviction Pardew reinforced with key policy decisions. For example, after delivering rifles to the Federation, Pardew made it mandatory for every soldier issued a weapon to sign for it by serial number.¹⁴⁴ Pardew also refused to support the use of donor funds for Federation military salaries, which he saw as a “bottomless pit” for the program’s meager resources and an unhealthy opportunity for funds to be “raked off at every level.”¹⁴⁵ His position was that the Federation would provide the soldiers and his program would train and equip them.

Finding Trainers

Even before funding was secured, the Train and Equip team had worked hard to put a contract in place for training Federation forces. Since DOD wanted to distance itself from the program, private contractors had to be engaged. Train and Equip staff used the IDA training assessment to develop requirements. The task force then invited private sector firms to submit bids. Three U.S. contractors responded, and the Train and Equip staff arranged for the Bosnians to hear their proposals in person.

During the first Train and Equip visit to Sarajevo, the Bosnians had said they wanted the program to cooperate with their U.S. advisors,¹⁴⁶ notably Richard Perle, a former Assistant Secretary of Defense and member of the Pentagon’s Defense Policy Board; former Under Secretary of Defense Fred Iklé; former Deputy Assistant Secretary of Defense for Negotiations and Policy Doug Feith; Clarrisse Feldman; and others. This message was later reinforced by the Bosnian Embassy in Washington, DC.¹⁴⁷ These advisors, particularly Perle and Feith, provided a great deal of pro bono assistance to the Bosnians. Later they formed the Acquisition Support Institute (ASI) headed by Mike McNamara¹⁴⁸ to monitor Bosnian interests in Train and Equip on an ongoing basis. The Train and Equip team worked cautiously with ASI but soon learned their

hard-nosed approach to saving the Bosnians money could benefit the program. ASI played a major role in negotiating the training contract. Later it conducted periodic in-country reviews of training and equipment use and reviewed all the training company's vouchers before recommending payment by the Federation Ministry of Defense. ASI also pushed DOD to designate materials as Excess Defense Articles (EDAs) so they could be given to the Federation at no charge, further cutting costs.¹⁴⁹ In essence, ASI provided another layer of accountability, particularly with respect to the administration of the training contract.

As it turned out, the Federation decision to award the contract to Military Resources Professionals, Inc. (MPRI), of Alexandria, Virginia, had unanimous support. Pardew and others felt that the company, comprised of former U.S. military personnel, was committed to the mission and also took pride in facilitating the execution of U.S. foreign policy. MPRI had an Army ethos and mission-minded mentality,¹⁵⁰ experience working in the region, and understood the conflict as well as some of the challenges they would be facing. Finally, and of particular importance to ASI, which supported the choice of MPRI, they were the least expensive option. They offered a lean alternative compared to the other companies and had a great deal of credibility with the Bosnians and particularly the Croats. MPRI's relationship with the Croatian army was perceived as playing an important role in the "blitzkrieg offensives" the Croatian forces used to recapture land from Serbs in late 1995. MPRI was also perceived by the Bosnians, ASI, and the Train and Equip team as eager to establish its reputation by securing and successfully implementing the training portion of the program.

The decision to negotiate the contract with MPRI still left much to be done. Train and Equip personnel cajoled assistance from DOD contract specialists to create a draft contract that covered the range of envisioned activities, including individual soldier training, infantry unit training and integration, development of a noncommissioned officer corps, light and heavy weapons training, and training and integration of Federation Ministry of Defense and Joint High Command staff. The Train and Equip staff cut the turgid government-style draft from over 200 pages to around 70. Then ASI, or more specifically Doug Feith's law firm, weighed in and further simplified the contract, reducing it to about 30 pages of essential terms and conditions.

Contract negotiations progressed slowly as every change had to be reviewed and endorsed by multiple parties. MPRI and the task force had to agree on what needed to be done, and the Bosnians would not approve the contract without ASI's concurrence as well. When arrangements for funding the contract were finally established, the pressure to close the deal on contract provisions spiked. Lamb and McNamara worked all night at a borrowed office in the U.S. Embassy in Sarajevo to hammer out final details. On some changes McNamara conferred with

Mike Poliner, the lawyer Feith had assigned to work on the contract. Poliner was in the firm's Haifa, Israel, office at the time. Poliner, in turn, would confirm some language changes with the task force's contract specialist, Gary Blasser. By then Poliner had such a close working relationship with Blasser that he felt free to wake him at 3 a.m. in the Washington suburbs to confirm that a wording change was helpful. By dawn ASI concerns were satisfied, and the task force explained the final product to MPRI, which found the modifications acceptable. The contract was ready on May 29. MPRI could move quickly once the Bosnians met U.S. Government requirements for initiating the Train and Equip Program.

Obtaining Weapons

As soon as the program was established, the Train and Equip staff began negotiating with the Department of the Army on what material could be drawn down from Army stocks. Ultimately Pardew and his team would secure a wide range of light lethal and nonlethal assistance through the drawdown authority Congress granted, including 45,100 M-16 rifles, 1,000 M-60 machine guns, an assortment of field radios and telephones, and other key gear such as maps, binoculars, generators, and computers with simulation software. The heavy equipment included 45 upgraded Vietnam-era M60A3 main battle tanks, 80 M113A2 armored personnel carriers, 840 AT-4 light antitank weapons, and 15 UH-1H (Huey) utility helicopters.¹⁵¹ Other items such as ammunition and fuses for the weapons, batteries, smoke grenades, spare magazines, aviator helmets, artillery simulators, and military doctrinal publications also were provided. The drawdown authority provided the bulk of the U.S. equipment, but Train and Equip secured additional items by obtaining excess defense articles, most notably 116 155mm towed howitzers the task force had refurbished at the Army's Rock Island Arsenal using Army drawdown funding. Ammunition and fuses for these and other weapons were also obtained through the excess defense articles program.

In addition, team members went on "shopping trips"¹⁵² throughout Europe and the Middle East hunting for the best equipment at the best price. Lamb knew the Army's National Ground Intelligence Center had expertise on foreign weapons systems and secured some of their experts to help Ambassador Glassman assess attractive buying options. These experts provided critical insights on the quality and reliability of alternative acquisition choices. Glassman was given free rein to cajole donations from friendly countries and negotiate attractive deals, and he made the most of the opportunity. One weapons expert accompanying Glassman as an adviser marveled at his negotiating skills. During a final session with the Romanians, he was surprised to see their subject matter expert resort to his calculator to see

if all the concessions that had been agreed upon would allow Glassman to meet all his costs, deliver the weapons, and still make a profit.¹⁵³ Later he advised Glassman to sell used cars when he retired.¹⁵⁴

When possible and cost-effective, the task force looked to stimulate indigenous Bosnian defense industry. It let a contract for the production of Kevlar helmets and small caliber ammunition after ensuring the Bosnians could match a competitive price and obtained approval to buy Bosnian-produced 122mm towed howitzers.¹⁵⁵ Most weapons had to be purchased elsewhere, however, either because Bosnia did not make the needed product or the relevant industry was destroyed in the war. Western European countries were opposed to the program, so it was more difficult to purchase equipment from their private sectors, and their disapproval also influenced some Eastern European countries. The Poles rejected overtures to provide tanks,¹⁵⁶ and the Czechs, newly admitted to the European Union, would not even sell the Train and Equip Program a special stand needed to test the helmets produced by the Bosnians because they were concerned about the EU arms embargo against Bosnia.¹⁵⁷ When Glassman found a trucking company in Holland with good prices and a willingness to sell, the Dutch government threw up barriers to exporting the trucks. After multiple task force members spent considerable time on site working directly with the Dutch seller, the truck order was completed and the trucks were delivered to Bosnia.

Former Soviet or East European countries proved to be much easier bargaining partners. Ukraine, Romania, Slovakia,¹⁵⁸ and others were eager to offload some of their equipment for cash. Although there were insinuations that NATO membership would be withheld if they cooperated with the Train and Equip Program,¹⁵⁹ these countries calculated that their interests were better served by selling to the program. In addition Egypt, which was initially assessed as an unlikely partner, seized the opportunity to be both a cooperative American ally and a provider to a largely Muslim army.

Getting the equipment to Bosnia proved to be a major challenge. The program decided to make an initial symbolic shipment of U.S. arms to Sarajevo by air. The consignment, consisting of rifles, machine guns, and radios,¹⁶⁰ precipitated the first active international resistance. It was blocked by a NATO general from the United Kingdom who refused to approve the landing even though it met all Dayton provisions and subsequent requirements imposed by the international community.¹⁶¹ Such harassment would become routine over time, absorbing much time and attention. The task force fought the decision and secured approval for the delivery. The material was airlifted to Bosnia and arrived August 29, 1996, with as much fanfare as Pardew's team could muster.

The rest of the program's weapons were delivered far more economically by ship and rail. That required support from Croatian officials in Zagreb to use the Croatian port of Ploce, which controlled the most efficient means of entry for heavy articles. Croatian officials agreed early on that Ploce could serve as an entry point for Train and Equip weapons so long as they were managed in an integrated Federation military structure. Nonetheless, heavy weapons for the Bosniaks made them nervous.¹⁶² Securing logistical cooperation at Ploce, including sufficient security for the delivery of the controversial weapons, required a constant Train and Equip team member presence at the port for several months. Infuriating roadblocks and delays for unfathomable bureaucratic reasons had to be overcome, and then the U.S. ship delivering the weapons was held up off shore while Pardew negotiated final concessions from authorities in Sarajevo. Eventually U.S. equipment flowed through the port, and other donated material soon did as well.

The first non-U.S. donation to Train and Equip arrived at Ploce in December 1996: 36 105mm howitzers with ammunition and spare parts from the United Arab Emirates (UAE) and 12 130mm field guns, 12 122mm howitzers, and 18 23mm anti-aircraft guns with spare parts from Egypt. Shortly thereafter the UAE delivered 44 M190 armored personnel carriers and 42 French-built AMX30 tanks, and in October 1997, the United States delivered 116 refurbished 155mm field howitzers. As arms flowed through Ploce, West European diplomats and military leaders repeated their argument that Train and Equip was a “recipe for more war,” and that “one day American-made tanks will be rolling across Bosnia’s plains.”¹⁶³ They also asserted the program was undermining the arms control negotiations mandated by the Dayton agreement.¹⁶⁴

The reverse was a concern to members of the Train and Equip Task Force, who worried that arms control would impinge on their program. In internal State Department deliberations the task force argued against limits established from a false baseline for current holdings (i.e., that took declared levels at face value) and against any baseline that required deep cuts in Federation holdings, which would freeze Serb advantages in place and contradict the stated purpose of the Train and Equip Program.¹⁶⁵ Federation negotiators made similar arguments in actual negotiations. When the Dayton Peace Accord follow-on agreement on arms limitations was signed in Florence, Italy, on June 14, 1996, it satisfied Train and Equip concerns.

Thus, as one independent and detailed review concluded, the equipment delivered under Train and Equip did not violate arms control agreements, or for that matter, reverse Bosnian Serb equipment quantitative advantages:

*[The Train and Equip] equipment is well below the arms control ceilings established at Florence, although it is far better than the equipment held by the Federation at the end of the war and is superior in quality and condition to most of the Bosnian Serb arsenal. In only one category, artillery, was the Federation obliged to destroy stock to stay under the Florence limits, whereas Republika Srpska had substantial “destruction liabilities” in tanks, armored personnel carriers and aircraft. This suggests that Republika Srpska will maintain numerical superiority in most categories of weaponry.*¹⁶⁶

Pardew and his public affairs spokesman frequently reminded the press that all arms shipments were well within agreed ceilings,¹⁶⁷ whereas the Bosnian Serbs were viewed as slow to comply and more guilty than the Federation of hiding weapons¹⁶⁸ (see figure 2¹⁶⁹).

Table 3. Major Train and Equip Program Training Contributions		
Provider	Training Event/ Program	Important Milestones
Bangladesh	Technical training	No data available as of January 1998
Egypt	Officer training	Provided as of January 1998
Germany		Completed in June 1998
Indonesia	Medical and engineer	32 trainers sent to Bosnia by January 1998
Jordan	Armored Personnel Carriers operation and maintenance training	18 trainers in Bosnia as of January 1998
Malaysia	Professional military courses for officers	Provided as of December 1997
MPRI	Leadership training for ministers and generals	Five senior leadership seminars conducted by November 1997, 225 senior leaders trained
	Individual training for soldiers, noncommissioned officers (NCOs) and officers	<ul style="list-style-type: none"> • Federation Army School (FAS) opens October 1996 to instruct commanders, company commanders, and NCOs • 300 through FAS Command and Staff course by September 1997 • 400 through FAS Company Commander course by September 1997 • “RAPIDTRAIN” for 2,520 NCOs at FAS by September 1997
	Unit training for brigades and battalions	<ul style="list-style-type: none"> • Local unit training begins in October 1996, 11 brigades complete training by January 1998 • Combat Simulation Center (CSC) opens January 1997 to provide computerized training scenarios to units • 14 brigades, 36 battalions, Federation Reaction Force, and artillery units that support each corps trained in CSC by September 1998 • Combat Training Center (CTC) at Livno opens July 1998 to provide realistic combat and Multiple Integrated Laser Engagement System equipment training • 703 soldiers trained at CTC as of June 1998
	Staff training for corps, divisions, brigades, and battalions	<ul style="list-style-type: none"> • CSC opens January 1997 to provide leadership and battle staff training for armed forces, Ministry of Defense, and Joint Command • Seven brigade staffs, 12 battalion staffs, and 400 other Federation personnel trained by September 1997 • Four corps’ staff received training by September 1998

Morocco	Unspecified training	No data available as of January 1998
Pakistan	Technical training	No data available as of January 1998
Qatar	Technical training	No data available as of January 1998
Turkey	Tank and artillery training	500 trained on tanks and artillery by August 1997
United Arab Emirates	Artillery training	No data available as of January 1998
United States	International education for senior- and junior-level officers	32 Federation officers trained in the International Military Education and Training program as of December 1998

Working with MPRI

The moment the Train and Equip team secured U.S. Government approval to begin training, MPRI moved to execute its contract, which “included provisions for integrating the Federation Ministry of Defense and organizational structure of the Federation Army, establishing training schools, and training the army on equipment that would be provided by the United States.”¹⁷⁰ Among the top priorities for MPRI was Rapidtrain, a program to “provide a rapid operational capability during the first year of the Military Stabilization Program until the Individual (Institution) Training Programs [were] fully operational.”¹⁷¹ This task required

MPRI to prepare a defensive force within 90 days of the contract's effective date.¹⁷² MPRI took a "train the trainers" approach¹⁷³ and over the following year conducted small unit infantry training for most Federation Army units and unit training for three Federation brigades, opened the Federation Army school for officers and noncommissioned officers, and conducted regular seminars for senior leaders.

By any standards, MPRI faced a tough task. MPRI personnel had to augment their technical competence with deft diplomacy to keep meetings and training sessions on track. Initially, meetings were fraught with ethnic tension and occasional threats of violence. During the first high-level strategy meeting chaired by MPRI, representatives from the two sides of the Federation almost came to blows. The MPRI representative interposed himself, chastised the generals, and threatened to leave until they could work in a professional manner. The Bosnians requested that he stay, which he did after imposing a gag order so no one could speak without his approval.¹⁷⁴ The tension diminished in the months to follow. Personal animosity was replaced by bureaucratic struggles and even mundane points of friction such as obtaining appropriate office furniture,¹⁷⁵ all of which MPRI was expected to adjudicate daily. Eventually bantering and joking between the two sides became common, but not without a lot of MPRI coaching and after-hours socializing.

MPRI also had to prove itself in more substantive ways. Their Bosnian counterparts were not convinced they needed training and were not well prepared to receive it. The few Bosnians who had military experience in the former Yugoslav army had been indoctrinated in a Soviet- military style with little focus on coordinated movement and firepower,¹⁷⁶ no non-commissioned officers, and in general little emphasis on training. MPRI stressed that, in line with the American policy outlined at Dayton, its aim was to build a "NATO-type" military. This meant not only the use of NATO standard weapons, but tactics and doctrines standard in advanced Western militaries.¹⁷⁷ The trainees were in favor of moving toward NATO standards but had no idea what that entailed or why they needed the detailed training MPRI was contracted to provide.

In addition to lingering enmity between Croats and Bosnians and general skepticism about the value of the training, MPRI faced enormous technical hurdles. It had to integrate the diverse used equipment donations the program provided, which arrived at different intervals, and ensure they were maintained. In addition the Train and Equip Task Force emphasized, in person and also through contract stipulations, that MPRI had to hit the ground running, starting the training program immediately. In particular, the Federation had to have its quick response force ready to respond to aggression by the time the IFOR mandate expired.

Thus MPRI was given aggressive benchmarks for progress and could not “wait 6 months to try [out the] first platoon.”¹⁷⁸

The logistical challenges of setting up quickly in an austere postconflict environment with a tight budget were daunting, particularly with the pressure to meet the demands posed by the Train and Equip Task Force. Just finding houses and offices in the war-torn country was difficult, as was basic navigation. As if to underscore how complex the environment was, early on two MPRI employees out for their morning run accidentally crossed into Serb territory and were arrested. After some false starts and weeding out ineffective personnel on all sides, MPRI put together a comprehensive training program.

Within 7 months of hitting the ground, an integrated Federation Army School and Computer Simulation Center for both soldiers and officers opened, and brigade and battalion-level training began in earnest.¹⁷⁹ By the end of the program’s second year, 5,000 soldiers had concluded unit training and 2,500 had gone through the school and simulation center. Beyond their immediate functional purpose, the training centers helped promote cooperation and build trust between Bosniaks and Croats. Bosnian and American trainers agreed that Federation military personnel at lower levels often got along better than politicians at higher levels of government.¹⁸⁰ MPRI also taught small unit tactics, conducted battle management training with U.S. computer systems at a combat simulation center near Sarajevo, and established live-fire tank and artillery training at ranges in western Bosnia and Turkey.¹⁸¹

MPRI provided the backbone for the entire Train and Equip effort, but some training conducted under the auspices of the program was performed by other sources (see table 3). Some Bosnian personnel travelled to Turkey for individual training as early as June 1996¹⁸² and later to other donor countries as well. The train and Equip staff also secured German agreement to provide flight and maintenance training for the pilots of the 15 U.S.-supplied utility helicopters and maintenance training for the M113 armored personnel carriers.¹⁸³ Even though the German government maintained that its training assistance was separate and distinct from the U.S. initiative,¹⁸⁴ their participation was a major political coup¹⁸⁵ that went against the tide of Western European hostility toward Train and Equip. The Germans went “out of their way” to help the Bosnians pilots feel comfortable in Germany and trained the pilots for another 3 months beyond the agreement.¹⁸⁶ Train and Equip also augmented the MPRI training with U.S. International Military Education and Training Program (IMET) positions. By the end of 1998, 32 Federation military officers either had or were scheduled to train at various U.S. military schools under the IMET program.¹⁸⁷

Overcoming Problems: 1995–1997

*The Train and Equip Program is like wrestling an alligator. We may have control, but we're afraid of turning it loose.*¹⁸⁸

—Ambassador Pardew's
personal journal

There were major obstacles as well as small impediments to implementing the Train and Equip Program. During its first year of operation, the program was attempting to reconcile former enemies, convince them of the value of a joint training program based on standards and concepts they had no knowledge of, and secure and integrate equipment from diverse sources with less than half the estimated resources necessary. Beyond the numerous administrative and technical challenges involved in such a complex enterprise, there were also major political and bureaucratic impediments to overcome, beginning with Bosniak and Bosnian-Croat relations.

Politics in the Federation

There were inducements for the Bosniaks and Bosnian-Croats to work together within the Federation. “For the Bosniaks, the Federation provides vital links to the outside world. For the Croats, it is a lifeline to their populations scattered throughout central Bosnia.”¹⁸⁹ The U.S. special envoy and coordinator for the Bosnian Federation from 1994 to 1996, Daniel Serwer, labored hard to secure cross-ethnic cooperation. He succeeded more in some areas than others. Military integration was particularly challenging.¹⁹⁰ Bosniaks were just interested in integration on the federal level, and the Bosnian Croats were skeptical about any integration at all. Just getting the Bosnian Croat Minister of Defense, Vladimir Soljic,¹⁹¹ and the Bosniak Deputy Minister of Defense, Hasan Cengic, in the same room was a challenge. The “fundamental problem,” Serwer noted, “was that the Croats were not prepared to give up a separate military force while the Muslims wanted a single army under Izetbegovic’s control.” These issues, he observed, were only resolved later by the Train and Equip Program.¹⁹²

Yet progress was tough under Train and Equip as well. In the “marriage of convenience” between Bosniaks and Croats, political tension—at times described as “poisonous”¹⁹³—was a constant challenge. Both factions were “suspicious of American commitment,” wondering if the United States was “in this for the long haul.”¹⁹⁴ During an early meeting when anger escalated over minor Bosniak and Bosnian Croat language differences, the Bosnian Croat general drew

his pistol and placed it on the table as a point of emphasis. Pardew departed, saying there would be no negotiations with guns on the table. The Bosnians chased him down and asked him to return.¹⁹⁵ However, the incident underlined the reality that, “Initially, neither Bosniaks nor Bosnian Croats seemed to have much enthusiasm for unification. They simply wanted to receive the weapons, divide them up, and learn to use them.”¹⁹⁶

For the first year of the program, much of Pardew’s energy went into forging a working relationship between the two previously warring groups and stating there would be no training or equipping without unified Federation institutions. He made this stipulation clear to MPRI as well. MPRI acknowledged that training would not commence without unified military structures but emphasized the leverage inherent in equipment deliveries. The MPRI program manager wrote to Pardew, “We must carefully orchestrate/control ALL equipment donations to the Federation” and “not allow follow-on contributions past the U.S. contribution . . . until we are convinced both sides fully intend to federate. This may be our only control mechanism.”¹⁹⁷ Over the course of the program, Pardew repeatedly used the training and equipment as leverage to secure cooperation and forge deeper military integration for the Federation.

A primary objective was convincing Bosnian political leaders to pass legislation so there would be a legal basis for the new Federation command structure. Getting the new Defense Law passed became a prerequisite for the approval and implementation of the program. Despite the Bosnian desire to begin the program, securing passage of the Defense Law proved to be the most difficult program prerequisite to satisfy. The issue of civilian and military command over forces was sensitive and was complicated by ethnic distrust and rivalry. American advisors brought in by Train and Equip to help write the law discovered the two entities’ ministers of defense and army commanders wanted to meet with them separately.¹⁹⁸ Even after resources were secured and MPRI was selected as the primary training supplier, the program remained on hold into the summer of 1996 pending passage of the new Defense Law.

U.S. officials considered the Bosnian Croats to be the major impediment to passing the Defense Law and appealed to authorities in Zagreb to encourage their cooperation.¹⁹⁹ Yet they also thought the Bosniaks had to be more helpful. In a June 1996 meeting, Pardew told Bosniak President Izetbegovic that he was “deeply disappointed the Defense Law was not passed,” that commitment to the Federation was “not a matter of words, but a matter of will,” and that the law’s passage was a “fundamental test of a desire for a security relationship with the United States.”²⁰⁰ Weeks later, Secretary of Defense William Perry met with top Bosnian government officials to reemphasize the need for speed and that the Train and Equip Program would not be administered without a common defense structure.²⁰¹ With Train and Equip hanging in the

balance and pressure being applied in Zagreb and Sarajevo, the political process swung into line. The new Federation Defense Law was passed on July 9. President Clinton announced the start of the Train and Equip Program the same day, and a week later Federation officials signed the contract with MPRI.

Innumerable small political issues continued to arise. Both sides leaned hard on the Americans to curry favor and protect their perceived interests. For example, Bosnian Croats were suspicious of any Bosniak security relations with Muslim countries outside the Train and Equip Program. They complained that the Bosniaks were working unilaterally with Pakistan. Pardew decided that such relations were inconsistent with the spirit of the new Defense Law and with the program. On March 26, 1997, he wrote a private letter to the Bosniak Commander of Federation forces, Rasim Delic, indicating that a recent “bilateral” training agreement between the Bosniaks and Pakistan was unacceptable. He suggested Delic should “personally decide” whether he was “committed to be a full partner in development of the Federation military or if [he wanted] to retain a separate identity.” The letter made clear that a decision for full partnership would ensure continued American support.

Pardew also used the media to exert pressure on the two presidents and the Minister and Deputy Minister of Defense. In one such case Bosnian media outlets reported in October 1996 that Pardew expressed frustration about the lagging development of a Joint Command, as had been outlined in the defense law.²⁰² Public pressure could make it easier for politicians to cooperate but also risked a popular backlash. Some Bosnian media outlets, for example, reacted negatively to the pressure, contending the United States was bluffing and could not stop support for Train and Equip since it was a cornerstone of U.S. policy in Bosnia.²⁰³ Yet after much deliberation and sidestepping of the issue, Izetbegovic and Bosnian-Croat co-President Kresimir Zubak signed the Agreement on Force Structure for the Federation Army in January 1997,²⁰⁴ and Pardew’s Joint Command became a reality that October.

The presumption that the United States could not afford to suspend the Train and Equip Program proved wrong. Washington suspended the program twice and halted IMET funding once²⁰⁵ to extract concessions from the Bosnians. In a June 1, 1998 letter, Pardew informed the Federation Minister and Deputy Minister of Defense that the U.S. Government was suspending the contract with MPRI because of the continued use of “old Republic and national flags” and bluntly stated “We are at a point in the development of the Federation military where we must have concrete evidence that leadership is committed to the future and not the past.” He insisted, “The Train and Equip Program will not go forward without this concrete symbol of Federation military unity being implemented.” In addition to outlining the requirements for reinstatement

of the training program, he insinuated that sanctions would “progress well beyond the [cessation of the] Train and Equip Program.”²⁰⁶

Pardew won this contest and the Federation adopted common flags and insignia. He also won similar struggles over greater integration, forcing an agreement on the division of staff positions between Croats and Muslims in the Ministry of Defense and Joint Command.²⁰⁷ He put a stop to harassment of civilian motorists, including those commuting to jobs in the new Ministry of Defense, by securing an agreement by both parties to prevent interference with civilian movement by military forces.²⁰⁸ The Train and Equip Program was desired by both the Bosniaks and the Bosnian Croats; certainly neither side wanted to be left out. However, there were limits to what either side would support, and Pardew had to exercise his leverage deftly, which required a sound feel for what local political conditions would permit at any point in time.

If Bosnians could be too skeptical about U.S. willingness to suspend the program, it is also true that U.S. officials could be too confident of their ability to extract any concession by threatening suspension of the program. It seemed to Pardew that State in particular was too quick to resort to such threats. As he once wrote to State leadership, stopping the MPRI contract was “very powerful pressure” but it “should be reserved for vital issues.”²⁰⁹ On another occasion he sent a terse cable admonishing the Department not to use the program as leverage to make more demands on Izetbegovic. His subject line was “Don’t move the goalposts!”

Firing Hasan Cengic and Forcing the Departure of Jihadis

Pardew considered one issue—the removal of the Bosniak Deputy Defense Minister Hasan Cengic—important enough to risk his entire program. Cengic, a former imam,²¹⁰ was one of several figures, including future President Izetbegovic, sentenced to prison by communist Yugoslav courts in 1983 for various Muslim nationalist activities. During the war he travelled to foreign countries to arrange arms shipments to Bosniak forces, including Iran. Cengic and his father were responsible for Bosnian Army maintenance, supply, traffic control, transportation, and medical and veterinary services (the army relied heavily on horses).²¹¹ Their lucrative positions gave them great influence, which they exercised vigorously. Cengic favored the “buttoned-up collarless shirt familiar as the uniform of Iranians” and had a reputation for toughness. Once, when two Muslims were reported detained by Bosnian Croat forces, he had several Croats seized and threatened to dispatch them if the Muslims were not released unharmed. It turned out the Bosnian Croats had crossed into Serb territory by accident and were arrested.²¹²

As a Muslim hardliner²¹³ Cengic was perceived as close to but ultimately out of step with the more moderate Izetbegovic. His Iranian ties were well known; intelligence sources

showed he was “clearly an agent of Iran.”²¹⁴ During the war the United States had overlooked Iranian arms shipments,²¹⁵ but in the postwar environment removing radical Iranian fighters and persons of influence was a nonnegotiable, congressionally and presidentially mandated prerequisite for the Train and Equip Program to begin.²¹⁶ In 1995 there were hundreds of individual mujahideen from all over the Muslim world who came to Bosnia-Herzegovina to fight. Their military value was disputed, but many fought as “part of the 4th, 7th and 8th Muslimski brigade,”²¹⁷ considered one of the Bosniak’s best units. In addition an estimated 1,500 Iranian Revolutionary Guard fighters and advisors supported the Bosniak defenders during the conflict. The Iranians maintained a large embassy in Sarajevo with a “top notch ambassador,”²¹⁸ provided direct financial support to the government, and had an active security assistance program including weapons and training in Iran for Bosnian soldiers.²¹⁹ The media, who were critics of Train and Equip, and even NATO at times raised concerns about whether the United States was being duped into providing arms and training to Muslim extremists. Pardew and the rest of his team were aware that the credibility of their program hinged on purging Iranian influence from Bosnia.

Cengic, for his part, was unapologetic about Bosnian connections to Iran and blunt in his criticisms of the United States. As Train and Equip progressed and occasionally stalled, Bosniaks sympathetic to Iran, including Cengic, compared the program unfavorably to more “reliable” Iranian support. The Croatian media reported that Cengic had launched an anti-American campaign, including the complaint that the weapons being delivered under Train and Equip were out of date.²²⁰ After a meeting with Iranian diplomat Seyyed Mohsen Rasidouleslami, the Sarajevo newspaper *Ljiljan* reported that Iran was waiting to train and equip the Bosniak forces if the United States failed to.²²¹ If Cengic meant to urge the United States to greater efforts with these public remonstrations, he overplayed his hand.

By June 1996, while trying to push the Defense Law through a lethargic political process, Pardew decided Cengic was a major liability to the program and a representative for Iranian influence. He informed Izetbegovic that keeping people like Cengic around “was not a strategy for security” but a “road to isolation and partition.”²²² He also insisted that Izetbegovic ask all “mujahedeen oriented Iranians” to leave the country, telling him “If they lie to you and we find them, it will be a disaster for you. If they lie about their departure, I’m sure you will take harsh measures against their presence here.”²²³ At one point Pardew tasked Sawoski, who was already in Sarajevo on another matter, to meet with Izetbegovic to obtain his personal assurance that one foreign fighter of particular concern to the United States would depart Bosnia.²²⁴

With mounting pressure from journalists covering Iranian influence in Bosnia, and aware that the program could not proceed without the credible assertion that foreign fighters had departed, Pardew concluded Cengic also had to go. By June 26, he was able to make the case that the Bosnians had expelled Iranian and other foreign forces except for fewer than 70²²⁵ who had married locals. President Clinton agreed to their remaining and certified to Congress that with that exception and the few official Iranian Embassy personnel and representatives at the Islamic center in Sarajevo, the Iranians had departed Bosnia.²²⁶ Getting rid of Cengic, however, was more difficult.

The situation came to a head in October 1996 as the United States prepared to deliver over forty tons of weapons to Bosnia through the Croatian port of Ploce. Pardew insisted that a letter signed by Secretary of State Warren Christopher and Secretary of Defense William Perry be sent to Izetbegovic demanding that he remove Cengic as Minister of Defense.²²⁷ Pardew arranged a conference call involving Assistant Secretary of State for European and Canadian Affairs and then-Special Envoy to the Balkans John Kornblum, Deputy Secretary of State Strobe Talbott, and Under Secretary of State for Political Affairs Peter Tarnoff to explain the situation. They agreed to support the move to oust Cengic,²²⁸ but the task force worried that senior State officials would demur rather than take action. In general, the idea went against State proclivities. Removing ministers in other governments seemed extraordinary, inappropriate, and fraught with political risks. No immediate decision from Secretary Christopher was forthcoming, and Pardew needed quick action.

The task force learned one day that Secretary of Defense William Perry was in the main State building for a ceremony on the seventh floor (State's highest level, inhabited by Secretary Christopher and other top officials). Accompanied by his political counselor from State, John Klekas, Pardew rushed upstairs to "crash" the event. He managed to buttonhole Secretary Perry, who asked him if everything was going well. After Pardew explained his problem, Perry responded, "Let's go see Warren." They went to the Secretary's suite and walked past the astonished secretariat without a word and on into Christopher's office, closing the door behind them. Christopher was indeed hesitant to demand Cengic's removal, but with Secretary Perry's encouragement he agreed and added his signature to the letter to President Izetbegovic.²²⁹

With the letter in hand, Pardew went to Sarajevo and delivered the ultimatum to Izetbegovic on September 22. The insistence on Cengic's removal began a tense period of high political drama involving numerous senior leaders in the U.S., Bosnian, and Croatian governments. While Izetbegovic considered the implications of the ultimatum, the Train and Equip Program was put on hold, which meant the large U.S. merchant ship approaching the Croatian port

of Ploce with U.S. weapons idled in the Adriatic from October 24 on, burning fuel and program dollars. For the task force, wasting drawdown dollars in such a fashion was agonizing, but Pardew knew that “once weapons arrive, we lose all leverage.”²³⁰ In subsequent weeks Pardew orchestrated support from U.S. leaders who, whenever they met with Izetbegovic or those close to him, encouraged the Bosnians to sever ties with Cengic.

Izetbegovic was reluctant to break with his longtime associate. He tried to let Cengic down gently, saying they were both “soldiers” and would do what they had to do. It was reported that Izetbegovic would appoint Cengic to a new, more powerful post.²³¹ However, as a man of considerable influence, Cengic did not make it easy for Izetbegovic. He fought back by publically accusing the United States of trying to dictate who could serve the country and implicitly raising questions about Izetbegovic’s character.²³² His views were picked up by the Bosnian newspapers, which pushed aside diplomatic obfuscation and reported, “Washington had demanded [Cengic’s] resignation.”²³³

After considerable delay, Izetbegovic agreed to let Cengic go on the condition that Bosnian Croat Deputy Minister of Defense Soljic was also dismissed. Pardew accepted and then took the condition to Bosnian Croat co-President Zubak, who attempted to extract leverage from the situation,²³⁴ precipitating another round of high-level meetings and pressure on the Croats both in Bosnia and Zagreb. Eventually the Croats agreed and Soljic resigned on November 18.²³⁵ Several days later, when weather conditions permitted, the U.S. ship offloaded the American weapons at Ploce. Afterwards, Izetbegovic lamented, “America is like my wife. I love her dearly, and can’t live without her, but sometimes she makes me furious.”²³⁶ For the Train and Equip team, the firing of Cengic and Soljic had been a high-stakes gamble, but one that paid off. It sent a signal to Federation officials: no more games and no more playing both sides.²³⁷

Cengic was replaced by Sakib Mahmuljin, a moderate Bosniak who was more loyal to Izetbegovic. Cengic did not disappear from the scene, however. He was later put in charge of managing Bosniak refugee returns and conducted his duties with an eye to their positioning in case war broke out again.²³⁸ In August 1997 it came to light that ten T-55 tanks from Egypt were scheduled to arrive without the task force’s knowledge or approval. The delivery of the tanks, purchased by Cengic at the end of the war, revealed he was still collaborating with some Bosniaks, perhaps even in the Ministry of Defense, but again he overplayed his hand. The task force intervened and prevented the ship from docking and unloading the tanks. The news media heard about the tanks and stoked fears of secret arms shipments and Iranian interference, but the task force used the incident to demonstrate how the United States controlled the flow of arms to Bosnia and the vulnerability that Cengic represented for Bosniaks.

Izetbegovic's administration cooperated with the task force to limit the damage from the T-55 imbroglio by distancing itself from Cengic and tying itself closer to the Train and Equip Program. An advisor to Izetbegovic assured the media that, "A needle can't get in here without NATO knowing about it," adding that "Anyone who believes that stuff can be smuggled in here is a fool." He also noted that "as far as training goes there is no military training of Bosnians in Iran or other countries. All training is done under Equip and Train."²³⁹ Pardew asserted to U.S. officials that the program's ability to "stop the delivery starkly demonstrates control over the flow of weapons to Bosnia." To Presidents Izetbegovic and Zubak, Pardew cautioned that the incident "illustrates the vulnerability of the Cengic connection."²⁴⁰ Cengic did not cause any further problems for the program, and the incident reconfirmed that the only Train and Equip Program in town was being run by the United States and its international partners.

Minister of Defense Soljic was replaced by Ante Jelavic, a hardliner from Herzegovina, the Bosnian Croat nationalist heartland near the border with Croatia. Believing the Train and Equip Program, the Federation, and even the Dayton process would fail, Bosnian Croats from Herzegovina initially did not participate much in Federation political processes. Instead Bosnian Croats from Central Bosnia, considered more moderate and more inclined to take orders from Zagreb than their ethnic compatriots farther south,²⁴¹ represented the Bosnian Croats.²⁴² For example, President Zubak and Soljic were both from central Bosnia. Jelavic, who would challenge Zubak for their party's presidency in 1998,²⁴³ managed to secure the position as Soljic's replacement. Jelavic's appointment was a mixed blessing. It suggested the Bosnian Croats from Herzegovina were taking the Train and Equip Program and perhaps the Federation more seriously, but it also meant the program would have to deal with another hardliner in a key leadership position.

Livno: Coping with the British Military

Many West Europeans officials in international organizations and military positions opposed Train and Equip, but the British were by far the boldest and most adept at subverting it. They considered the program akin to "pouring gasoline on a fire,"²⁴⁴ and their opposition was apparent from the beginning.²⁴⁵ They could not overtly oppose an effort agreed upon at Dayton, but they tried to hamstring it at every opportunity.²⁴⁶ As Pardew was trying to get the program off the ground one British general in particular made a practice of thwarting him. He harassed MPRI, restricting their ability to get set up; disrupted meetings arranged with Bosnian Croat leaders; refused to meet with the U.S. Ambassador

to NATO to discuss cooperation; and delayed the first delivery of arms by air. A U.S. official had to forcibly remove a British injunction to allow shipping through Ploce, an incident that precipitated a heated conversation between Pardew and the British general about their respective authorities.²⁴⁷

Other British flag officers expressed their dislike of the program in tangible ways. The British peacekeeping force commander barred Pardew from attending a meeting with other U.S. officials assigned Dayton implementation duties, a snub Pardew called “another outrage from SFOR and an affront to U.S. policy.”²⁴⁸ Later, peacekeeping forces confiscated 474 tank rounds destined for the Federation.²⁴⁹ The seizure was apparently made in error. Rather than admitting it, the British Brigadier who made the decision asked MPRI to falsify a document stating that the Train and Equip shipment was 474 rounds over the official notification. He said that would “prevent embarrassment to the Malaysians,” who seized the shipment on his orders.²⁵⁰ British military and diplomatic personnel worked in lockstep to prevent the Train and Equip Program from getting necessary permits and approvals.²⁵¹ They were particularly successful in delaying combined live-fire training at the new Combat Training Center outside of Livno, located in the sector of Bosnia controlled by British peacekeeping forces (see figure 3).²⁵²

The Livno training center was large, instrumented for simulated combat, and capable of brigade level training events including live fire exercises. Sparsely populated before the war, it was an ideal site for a state-of-the-art training center. Units rotating through the center would leave at the peak of unit readiness. It was intended to be the crown jewel in the Train and Equip Program. While such unit training is not unusual in Western militaries, the Livno center was to be spacious by crowded European standards and potentially an attractive venue for European militaries if Bosnia made it into the EU or NATO. The center was scheduled to open in early 1997, but the British seemed intent on halting construction. They had a powerful ally in the U.S. Principal Deputy High Representative for Bosnia and Herzegovina, who in October 1997 halted construction on the recommendation of the British.²⁵³

A variety of reasons were advanced for delaying construction. International officials worried the training center would have Federation soldiers firing into Serb areas, potentially sparking more conflict. Ignoring previously agreed upon conditions for beginning construction, they imposed other requirements such as requiring a Bosnian Serb liaison at the facility.²⁵⁴ Some objected that the firing range was going to be built on land that had belonged to Serb families, which could exacerbate tensions, and that furthermore, those families should receive compensation.²⁵⁵ So at one point they stopped construction of the Livno training center on humanitar-

Figure 3. Map of UK Sector, Livno, and Ploce

ian grounds after a handful of Bosnian Serbs were found who claimed residence in the training area. Given the Serb record on humanitarian concerns, this ploy struck the Train and Equip team as “the height of cynicism.”²⁵⁶

Pardew was not above publically upbraiding specific British flag officers when their interference got out of hand or privately complaining that the behavior of the Principal Deputy High Representative was “an embarrassment” to the United States.²⁵⁷ These criticisms made London and the Department of State’s European Bureau uncomfortable but temporarily produced better behavior. Senior officials such as the Principal Deputy High Representative and the British flag officers in the international peacekeeping forces wielded enormous authority with great autonomy. They were able to postpone full operating capability at the center for more than a year and a half, a significant delay given the tight timelines of the program. MPRI

found ways to conduct some unit training early on, but not the large, combined arms or live-fire exercises the Livno Training Center was designed to support.

Finally, after a complicated series of communications that involved Pardew, the U.S. Embassy, the Federation's Minister and Deputy Minister of Defense, the Office of the High Representative, and international peacekeeping forces, approval was obtained for continuing construction. The Federation Defense Ministers agreed to compensation for displaced persons and the establishment of a commission to review related issues, but also demanded the right to prepare for self-defense:

Our efforts to create that [self-defense] capability have been the subject of constant obstruction and often unjustified petty harassment by some international military forces and agencies in Bosnia who came here to assist in the implementation of the Dayton Peace Plan. These actions by the international community seriously disrupt the fundamental military training required to meet our minimum security needs. . . . Without the CTF (Federation Central Training Facility), our soldiers will not have the equipment proficiency and other training required for independent Federation self-defense should NATO depart.²⁵⁸

These appeals finally had their intended effects, and international authorities dropped their legal objections to the Combat Training Center at Livno.²⁵⁹ Construction was completed in summer 1998 and the first comprehensive live-fire brigade training exercises began that fall.²⁶⁰

Revalidating the Program

The view that the Train and Equip Program was upsetting the military balance gained credence in and out of government as it ramped up. The press repeated the charge, leading Pardew to lament that the program “provide[d] endless and irresistible press fodder for Balkan conspiracy theories spun by unnamed sources serving their own interests.”²⁶¹ Inside the U.S. Government, resistance was also increasing. In February, over Pardew's objections, an interagency decision was made to pay the Bosnian Serbs, but not the Federation, to stimulate compliance with their arms control obligations. In early March an interagency Bosnia policy review paper circulated that argued for further accommodation of the recalcitrant Bosnian Serbs. It recommended cutting Train and Equip weapon deliveries in exchange for more arms control compliance from the Serbs. In response Pardew fired off

memos to senior officials encouraging them to hold the line of full implementation of Dayton provisions, including Train and Equip.²⁶² Pressure in favor of backsliding continued to mount, however.

The following month Pardew noted in his journal that “the interagency environment is becoming more problematic,” adding “the CIA is writing paper after paper about hostile Muslim intentions and weak Serbs,” with the Department of Defense “making a run at Train and Equip to stop the equipment element.”²⁶³ “The military,” he wrote, “sees an opportunity as it is trying to shift emphasis from Dayton implementation to regional stability,” and in that context it wanted to “cut Train and Equip to training only.” Worse, the NSC staff appeared to be shifting their support to the DOD position. On top of that, two of Pardew’s key supporters, Defense Secretary Perry and Deputy Secretary John White, were leaving the administration.²⁶⁴

After one critical CIA assessment in April 1997, a Deputies Committee was convened to reconsider the Train and Equip Program. Pardew’s view was that the United States would have to stay the course and insist on full implementation of all Dayton’s provisions. Trying to mollify the Serbs would exacerbate rather than ameliorate the situation. He defended the Train and Equip Program as a key component of U.S. policy in the region,²⁶⁵ and the Deputies declined the opportunity to revise the program or its goals. Even so, the hitherto reliable NSC staff was beginning to waver, looking for a strategy that preferably “lets us out in June 98.”²⁶⁶ NSC staff thought compromises to Dayton that facilitated this goal might be worth considering, and there were worrisome signs that this view, along with the CIA argument that Train and Equip was altering the military balance in favor of the Federation, was beginning to affect President Clinton’s perspective as well.²⁶⁷ The issue was elevated to the Principals Committee where Pardew again was persuasive and victorious. The Principals reaffirmed the commitment to Dayton and safeguarded Train and Equip for the time being.

While critics who thought the program was too large grew more numerous and vociferous, supporters had long complained about its slow start. The program was criticized for being underfunded, and Pardew had to admit in February 1996 that “no government—including ours—wants to be the first to step forward on the Train and Equip Program.”²⁶⁸ Six months later Senate Majority Leader and Republican nominee for the 1996 Presidential election Bob Dole wrote to the President to complain that “the program of arming and training of the Bosnian Federation is late and far short of what it should be.” He concluded, “Putting the arm and train program back on track is . . . critical.”²⁶⁹ The fact that the program was simultaneously criticized for being too much and too little underscored how contentious it was and the inherent difficulties in assessing any military balance. The fact that the weight of the

criticism shifted from the first half of 1996 when the program was seen as anemic, to spring 1997 when it was commonly criticized as too robust, underscored how fast the program made progress once it got going (see figure 4).

Program Transition: 1998 to the Present

The Train and Equip Program began to wind down after more than 2 years of frenetic activity. The last shipment of U.S. weapons, the 155mm howitzers, was delivered in October 1997,²⁷⁰ and the final MILES equipment (lasers for simulated combat) shipment for use at the Livno training center arrived the following month.²⁷¹ Other military stabilization components of the Dayton Agreement had also been implemented with 6,780 (mostly Serb) heavy weapons destroyed as part of the arms reduction agreement between the Federation and the Republika Srpska.²⁷² The large wartime armies had also downsized. Initially the apprehensive Bosnian populace did not support reductions in security forces. By June 1997 only 12,000 soldiers had

been dismissed. However, by February 1998 over 200,000 Federation soldiers had been demobilized to re-enter civilian life²⁷³ and the remaining 45,000 active duty troops were trained and organized based on NATO standards.²⁷⁴

By the end of 1998 donor funds were beginning to run out.²⁷⁵ MPRI staff in country had fallen from a high of 223 in 1996 to 112 in 1998.²⁷⁶ Pardew, wanting to sustain this progress and U.S. influence in Bosnia, tried to secure support for another \$100 million drawdown authority from Congress,²⁷⁷ and when that failed, for a \$10 million follow-on support package for maintaining donated equipment. There was no political support for either initiative, and additional resources never materialized.²⁷⁸ The program conducted an “international program review” in April 1998 to demonstrate to U.S. partners that it had been well managed and successful and to solicit additional contributions.²⁷⁹ The event was attended by 20 current and potential donor countries and an air of satisfaction prevailed. However, like the United States, potential donors were preoccupied with other challenges in the Balkans and not at all inclined to put more resources into the Train and Equip Program.

The absence of any major outbreak of violence during the year following the Dayton Accords made it easier to extend the mandate for international forces to remain in Bosnia. After IFOR's 1-year mandate expired in December 1996, international forces were relabeled stabilization forces (SFOR) and settled in for a long mission, which reduced the pressure on the Train and Equip Program to produce Federation forces capable of defending Bosnia. Meanwhile, U.S. attention was turning to other Balkan hot spots such as Macedonia and Kosovo, where Pardew was asked to assist with crisis management.

With no further equipment deliveries scheduled and limited funds to obligate, team members began to return to their parent agencies and move on to other assignments. Four members left in the summer and fall of 1998 and only one was replaced.²⁸⁰ Not long after, Pardew was assigned as Deputy Special Advisor to the President and Secretary of State for the Balkans during the Kosovo conflict. He officially left the Train and Equip Program in 1999, taking a senior advisor with him.²⁸¹ McFarren continued to shepherd the details of the dwindling program, providing continuity and accountability. As Train and Equip wound down, the United States transitioned to normal bilateral military cooperation with Bosnia, emphasizing IMET training and organizational support for the Federation government (see figure 4, which depicts the MPRI drawdown of personnel, increases in IMET, and the arrests of war criminals over time²⁸²). Department of State teams, with support from MPRI staff, were in the country to support continuing political-military reforms, most notably the integration of the Serbs into the Bosnian military.

Defense reform benchmarks such as full democratic control of the armed forces and transparency in defense spending were prerequisites for entry into NATO's Partnership for Peace program and further EU integration.²⁸³ Acceptance into these Western institutions was a major goal for most Balkan countries,²⁸⁴ but it was not until May 2001 that the Bosnian presidents could agree to declare their intent to join the Partnership for Peace.²⁸⁵ By then the Republika Srpska had begun to consider the value of merging its military with the Federation's. That same year, the U.S. Senate lifted restrictions preventing Serb officers from participating in IMET and Serb forces from receiving U.S military sales.²⁸⁶

Two scandals convinced international authorities the Bosnian Serb military required more immediate reforms. Revelations of secret Bosnian Serb arms sales to Iraq became public knowledge in November 2002, and in early 2003 allegations of Bosnian Serb military intelligence spying on NATO and international officials arose. Both incidents suggested to the international community a pressing need for greater civilian control of the Serb military as well as national control of all military forces²⁸⁷ and accelerated a political push to integrate the Bosnian Serb and Federation militaries under a unified, national-level Bosnian Ministry of Defense. High Representative Paddy Ashdown established the Defense Reform Commission of Bosnia and Herzegovina in May 2003 for that purpose. The commission was tasked with drafting the legal and constitutional changes necessary to make Bosnia and Herzegovina a credible Partnership for Peace candidate, which included introduction of a state-level, civilian-led command and control structure for the Ministry of Defense; democratic parliamentary control and oversight of the armed forces; transparency in defense plans and budgets; development of a Bosnian security policy; and common doctrine, training, and equipment standards.²⁸⁸

James R. Locher III, a renowned U.S. expert on military reform who had been brought in under the Train and Equip effort to counsel Federation Ministry of Defense leaders on civil-military relations in 1996,²⁸⁹ returned in 2003 to head up the first Defense Reform Commission. On his second day in Sarajevo in a meeting with the ambassadors from EU members, each of them told him the task would be impossible. SFOR officers, Organization for Security and Cooperation in Europe (OSCE) officials, and others in the international community shared this dismal assessment. As Locher later noted:

Defense reform was a highly emotional issue. Each ethnic faction was clinging to its army for protection should fighting break out. Bosnian members of the Defense Reform Commission were warned that they would be viewed as traitors if they failed to preserve their ethnic army. Beyond these explosive

*politics, on the substance of reforms, Bosnian leaders, coming from the old Socialist system, really didn't have a good grasp on democratic politics, Western processes or self-initiative.*²⁹⁰

Indeed, the structure the Federation and the Republika Srpska inherited from their communist forbears “included highly politicized command elements, weak civilian control below the head of state, almost no connectivity or communication between the Defense Ministries and general staffs, lack of transparency in budgeting and administration, and weak parliamentary oversight.”²⁹¹

The Defense Reform Commission endured a grueling process but yielded a remarkable success. In addition to five internationals, the commission was made up of two Croats, two Bosniaks, and three Serbs who “were all former communists [asked] to make courageous decisions” to build trust and take ownership of “their” process. The Peace Implementation Council had given the commission 4 months to reach agreement, which had to be unanimous given the ability of any faction to block an initiative. The commission met this deadline with sweeping proposals that would amend the Federation’s and Republika Srpska’s constitutions, prescribe a new Defense Law and another new law, and amend five existing laws.²⁹² The Defense Law of 2003, authored by the commission, created a single unified Ministry of Defense and Joint Command among all three ethnic entities, and prepared the way for consolidation of the Federation Army and the Army of the Republika Srpska into a single entity called the Armed Forces of Bosnia and Herzegovina. Such dramatic reforms were not popular at first. The Serbs on the commission “actually disobeyed instructions from their National Assembly in agreeing to the initial compromises.”²⁹³

Within 18 months of the commission’s creation, 40 percent of active forces were reduced, the reserve forces were scaled back, half of the conscripts were released, and the defense budget was cut by 20 percent.²⁹⁴ The reforms were “comprehensive, deep, demanding and successful, chang[ing] the reality of [Bosnia’s] security and constitutional organization.”²⁹⁵ The first tangible and symbolic success for military integration of the Armed Forces of Bosnia and Herzegovina came with the formation of a Ceremonial Honor Guard at the end of 2004.²⁹⁶ That same year the Train and Equip Program officially closed. By then it was running on fumes and had little to do except ensure a close accounting of all funds expended. The donor countries were thanked for their support and the small sum left over was transferred to a bilateral cooperation account for foreign military sales in Bosnia.²⁹⁷

But military reform in Bosnia continued. In 2005 Raffi Gregorian succeeded Locher as the international cochairman of the second Defense Reform Commission. Gregorian had moved

up in State from his position as Pardew's executive assistant, taking responsibility for the Bosnia office and oversight of the military stabilization effort in 2001.²⁹⁸ He also later served as the Principal Deputy High Representative and Brčko District Supervisor in Bosnia, where he was "very mindful of how Pardew and [his team] did Train and Equip."²⁹⁹ He used his authority, as Train and Equip had, to improve integration, strengthen ties to the West, and get rid of extremists, only this time the extremists were Serbian nationalists protecting General Mladic.³⁰⁰ Leading the second Defense Reform Commission, Gregorian negotiated the replacement of the entity armies with a smaller unified Bosnian Army. A symbolic success occurred in 2005 when a 37-man unit consisting of Serbs, Bosniaks, and Croats was deployed to Iraq on a mine-clearing mission.³⁰¹ Shortly thereafter, in March 2006, the second Law on Defense of Bosnia and Herzegovina was passed and ratified. It dissolved the entity-level armies and transferred the rights of the Federation and the Republika Srpska to the state level.³⁰²

As the Bosnian Serbs decided to integrate their forces as part of the unified Bosnian military and work more closely with NATO, cooperation with apprehending war criminals increased (see figure 4). One prerequisite for entrance into NATO's Partnership for Peace program was full cooperation with the International Criminal Tribunal for the former Yugoslavia (ICTY), which meant assisting in locating and arresting war criminals. In 2004 and 2005, the EU and NATO pressured Bosnia to be more cooperative in arresting war criminals by barring access to Western economic and defense programs. This resulted in an increase in arrests and transfers of indicted people to The Hague. Many of those newly arrested came from Serbia and the Republika Srpska, which had the "greatest number of suspects and the weakest cumulative record of cooperation with ICTY."³⁰³ This was a marked turnaround from 1997 when 66 of the 74 people "publicly indicted by the war crimes tribunal remained at large, some openly serving in official positions and/or retaining their political power."³⁰⁴ By the end of 2007 the tribunal had completed proceedings for 111 of 161 indicted suspects.³⁰⁵ In 2008 and 2011 respectively top wartime Bosnian Serb leaders Radovan Karadzic and General Ratko Mladic were captured in Serbia and turned in. Finally in 2011, almost 16 years after the Dayton peace agreement was signed, the last Yugoslav war fugitive was arrested.³⁰⁶ In another sign of reconciliation progress, by 2010 the Bosnian armed forces had chaplains of all faiths who were visiting with one another,³⁰⁷ a development that "was impossible to think of even a few years ago." Yet another sign of reconciliation is that public opinion polls indicate that the unified Bosnian Army is the most popular public institution.³⁰⁸

Currently, the Bosnian Armed Forces constitute an 8,000 light infantry force,³⁰⁹ a significant decrease from the heyday of the Train and Equip Program when 1st Corps alone had

Figure 5. Downsizing the Armed Forces

16,000 troops³¹⁰ (see figure 5³¹¹). Most of the equipment provided under the program in the mid-1990s was discarded over the following decade and a half. In a move that upset donors, some of the heavy equipment was sold to other countries, including a deal that sent armored vehicles to Francophone countries in Africa.³¹² By one assessment, “90% of the equipment received is no good today; it can’t be used because it is too old or the maintenance was too difficult.”³¹³ As of 2010, no armored personnel carriers or helicopters still worked,³¹⁴ and many U.S. donations were eliminated from the Army’s inventory, including almost 30,000 rifles and the 155mm howitzers.³¹⁵

America’s military presence in Bosnia declined as its interventions in Afghanistan and Iraq escalated. The last U.S. peacekeeping troops left Bosnia in 2004 and SFOR was replaced by “EUROFOR Althea” later that year.³¹⁶ After Bosnia’s leaders came to a preliminary agreement on police reforms, the EU opened Stabilization and Association Agreement (SAA) negotiations for economic development in the region in late 2005.³¹⁷ Although NATO granted Bosnia-Herzegovina entrance to the Partnership for Peace Program in late 2006, bringing it closer to

full NATO and EU membership, it has yet to gain access to either. Recently the United States has decided to let the Europeans take the lead on further reform and reconstruction in Bosnia.

Many Bosnians are apprehensive about the departure of U.S. leadership. Former Bosnian military leaders interviewed for this research agree that Europeans are not trustworthy partners for continuing the reconciliation process.³¹⁸ The reasons most cited are the failed European peace negotiations during the war and the European resistance to the Train and Equip Program. A common observation was that only Americans have the muscle and willingness to use it in pursuit of cooperation. Without strong U.S. leadership many Bosnians worry there will be major backsliding on reforms.³¹⁹ They often assert the United States should not abandon the region until Bosnia-Herzegovina becomes a NATO member³²⁰ and express surprise at Washington's willingness to give up its considerable influence in Bosnia-Herzegovina.³²¹

As things stand, progress in Bosnia remains slow and uneven. The long-term prognosis for the country is at best uncertain, which discourages investment³²² in what was already a poor economy. Worse, there has been political "backsliding" on integration in recent years.³²³ Yet concern about Bosnia's future should not cloud an evaluation of the past. The Train and Equip Task Force achieved its operational goals from 1995 through 1998. It rectified the military imbalance between Bosnian Serb and Federation forces, reassuring the Federation and sobering the Serbs. It made the Federation military a match for the Bosnian Serbs by providing basic training and equipment, and by forging a degree of unity in the Federation that would enable its forces to act in concert. In the following section we explain the factors that allowed the task force to achieve these difficult objectives.

Analysis of Variables Explaining Performance

The task force accomplished its assigned mission with a handful of people, overcoming formidable political and bureaucratic opposition with creative methods not typical of small interagency groups. To better explain how the task force succeeded, we examined its inner workings and attributes using 10 variables (see table 4) extracted from a review of organizational and management research on small crossfunctional teams. Each variable is identified in the research literature as a significant determinant of performance by small crossfunctional teams, which is what interagency teams are.³²⁴ Although the Train and Equip Program continued for the better part of a decade, here we focus on the first few years when it was doing its most innovative and challenging work. We conducted in-depth interviews with the team leader, his two deputies, and all primary team members during the first 2 years of the

Table 4. Postulated Determinants of Effectiveness		
Level	Variable	Defined
Organization	Purpose	The broad, long-term mandate given to the team by its management as well as the alignment of short-term objectives with the strategic vision and agreement on common approaches within the team.
	Empowerment	Access to sufficient high-quality personnel, funds, and materials, and an appropriate amount of authority, to allow for confident, decisive action.
	Support	The set of organizational processes that connect a team to other teams at multiple levels within the organization, other organizations, and a wide variety of resources the team needs to accomplish its mission.
Team	Structure	The “mechanics” of teams—design, mental models and networks—that affect team productivity.
	Decisionmaking	The mechanisms that are employed to make sense of and solve a variety of complex problems faced by a cross-functional team.
	Culture	The shared values, norms and beliefs of the team, manifested in behavioral expectations, level of commitment and degree of trust among team members.
	Learning	An ongoing process of reflection and action through which teams acquire, share, combine, and apply knowledge.
Individual	Composition	The mixture of characteristics that individual members bring to the group in terms of skill, ability, and disposition.
	Rewards	Material incentives and psychological rewards to direct team members towards the accomplishment of the team’s mission.
	Leadership	The collection of strategic actions that are taken to accomplish team objectives, to ensure a reasonable level of efficiency, and to avoid team catastrophes.

program with one exception,³²⁵ as well as others who worked or were associated with the program. We also benefited from access to extensive documentation, including Pardew’s journals and the author’s spiral notepads containing notes from daily meetings when he served as one of the deputy directors of the task force.³²⁶

The 10 performance variables can be grouped by their scope. The first three are organizational-level variables: purpose, empowerment, and support. Some higher authority in the larger

organization usually determines what the team should accomplish (its purpose), what resources and authority (empowerment) the team will be provided, and how the team will be sustained by the larger organizational context in which it operates (support). These variables explain why any crossfunctional team's effectiveness is, in part, attributable to organizational factors beyond its immediate control. Teams typically have more control over the four team-level variables: their structure, decisionmaking, culture, and learning. These characteristics regulate day-to-day group operations. Finally, three individual-level variables—composition, rewards, and leadership—capture individual team member attributes that may or may not be representative of the team as a whole but nonetheless affect its performance. We consider each of these 10 variables in turn.

Organizational-Level Variables

Purpose

All Train and Equip Task Force members agree the group benefited from a “strong sense of purpose”³²⁷ instilled by official decisions and informal guidance. As one member noted, “We had a very clear mandate . . . there was never any doubt in any of our minds about what we were trying to accomplish. We were trying to train and equip the Bosnian Federation forces so that if, God forbid, war broke out again they could defend themselves.”³²⁸ All members of the task force understood this basic mission when they accepted their positions, and in that sense there was a consensus on the task force about what it was trying to achieve.

From the beginning the task force interpreted its mission to provide a defense capability to the Bosnian Federation as requiring what some call “end-to-end” mission management. The task force did not believe it was established just to make policy on what constituted a Bosnian military balance, or simply to plan the activities required to achieve a military balance, or merely to monitor progress toward a military balance. Instead it believed it was responsible for all these needs. It would assess the security environment and its evolution; develop policy, strategy, and accompanying plans for creating a military balance; execute or oversee execution of every aspect of the program; and then monitor results and adjust accordingly. The purpose of the task force was to actually *create* a military balance, and it set about doing so immediately. Within days of its creation, it was collecting information on the operating environment, drafting policy and strategy documents, investigating training contract options, and preparing for program development and execution.

The task force consensus on its basic purpose was reinforced and deepened by common agreement on major mission parameters, all of which were codified early on in task force policy

and strategy documents. The most important corollary of the President's commitment to train and equip Bosnian forces was that it would be done in a manner that created a military balance³²⁹ and helped stabilize Bosnia. Among other things, this meant the program would be both transparent and defensive so as not to unduly alarm the Serbs.

Pardew regularly spoke to the domestic and international press about the program and all its major developments. He informed the Serbs directly when circumstances permitted, and Serb leaders in Pale and Belgrade had his cell-phone number. "It drives everyone who opposes it mad," he wrote in his journal in 1997, "because everything we do is above board."³³⁰ Pardew believed it was harder to criticize the program as a Bosniak manipulation or any other nefarious plot if it was completely transparent and conducted out in the open. The program was also configured as an international effort, which reinforced its transparency and legitimacy. The task force made every effort to solicit and use support from other nations, particularly non-Muslim nations, to broaden its appeal.

The emphasis on stability also meant Train and Equip would focus on "deterrence and defense" rather than offensive capabilities.³³¹ A cynical quip has it that a weapon is offensive or defensive depending on which end of the barrel one is standing at, but some distinctions in military plans and programs can be made based on offensive or defensive purposes. During its execution, the task force took pains to underscore the program's defensive nature. That was a tough sell to America's NATO Allies,³³² but those implementing the program were still enjoined to respect the defensive orientation and did. MPRI took a "deter and defend" approach to all its training, from "strategy to rifle squads."³³³ Thus, inasmuch as it is possible to distinguish offensive from defensive military programs and capabilities, the Federation force structure, military plans, equipment purchases, and training programs were designed to provide the Federation with the ability to defend itself and not to project military power into neighboring entities.

These program characteristics were codified in a "founding document" that provided even more detail on the program objectives and conditions. Pardew's briefing to the Deputies Committee in December 1995 laid out the program goals, the broad training and equipping objectives the task force would try to achieve, and the conditions the Bosnians had to meet before the program would be executed including the need to create Federation military institutions and eliminate extremist elements.³³⁴ As Pardew noted, the Deputies' approval of his briefing became "our charter."³³⁵ All task force members understood the charter and often referred to it as their mandate, a justification for their activities, and a means to encourage cooperation from departments and agencies.³³⁶

The team's commitment to its charter went beyond organizational license and the normal desire to succeed at an assigned task. The strong sense of purpose was reinforced by the conviction that providing self-defense capabilities to the victims of Serb atrocities was a moral imperative. Ambassador Glassman, for example, noted that task force members believed "We were doing something right . . . we were arming the underdogs, we were on the right side . . . we were benefiting the victims."³³⁷ Group members were "disgusted by others who made *realpolitik* arguments against the task force in the aftermath of Serb massacres. The sense that the task force was combating "evil" fueled a sense of commitment that went far beyond any bureaucratic norms.³³⁸ As another member noted, "We did not see ourselves as neutral."³³⁹ The team had a strategic consensus that it was involved in a "moral cause."³⁴⁰

Moreover, "there was a sense of urgency about the mission."³⁴¹ The planning horizon was the initial IFOR mandate of 1 year. Even though most observers thought this timeframe was realistic, it had been enshrined in interagency planning at the request of the Joint Staff and codified by senior leader decisions.³⁴² The task force believed "it had to make enough progress so that in the event international forces left Bosnia, these people could defend themselves."³⁴³ The urgency was also reinforced by the belief that if the program was quickly implemented and Federation forces had the means to defend themselves, there would be no incentive for the Serbs to initiate hostilities again.

In summary, the task force never lost sight of its original clear and simple purpose, which was to provide self-defense capabilities to the Bosnian Federation up to the point that a Bosnian military balance was achieved. It never abandoned the understanding that this purpose made the task force responsible for end-to-end management of the desired outcome, or that the program had to be stabilizing, transparent, international, and defensive. It managed to forge a *de facto* strategic concept for program execution with the Deputies Committee early on that defined the scope and content of the program and helped the task force explain its objectives to other parties. Task force members were deeply committed to achieving this purpose on an urgent basis, which focused and energized their efforts.

Moreover, the most important organizations cooperating with program implementation, most notably ASI and MPRI, understood and also supported the program's purpose; for them "the sense of mission was important."³⁴⁴ Other partners were less committed or even skeptical but either supported the task force because it was their duty or because they came to believe the effort was justified. For example, contract specialist Gary Blasser pointed to the top priority placed on the program by the Clinton administration as the reason for his initial commitment; eventually, however, he became committed to seeing his job through due to the Train and Equip team's own urgency and his belief that lives were at stake.³⁴⁵

Empowerment (Authority, Resources, and Confidence)

Looking back, Pardew believes the amount of authority he received was unusual, even “unbelievable.” He kept the Deputies Committee informed³⁴⁶ but did not report to anyone on a day-to-day basis, and the team members were not responsible for reporting to their home organizations. Glassman agrees, noting “we were an empowered group.”³⁴⁷ Klekas, in retrospect, does not “recall a time the U.S. Government ever defied anything the task force wanted to do. They sometimes moved too slowly for us, but we were clearly seen as the authorized entity in charge of the program.”³⁴⁸ As the history of the task force makes clear, there were many challenges to operations, but in short order Pardew and his task force were well established as the single U.S. authority for all matters relating to Train and Equip.

The task force was empowered by external authorities in several respects. Pardew’s one condition³⁴⁹ for accepting the top position was that he be given ambassadorial rank and a suitable title, which was done. He believed the team would not be taken seriously overseas or within the U.S. Government unless it was headed by someone with the institutional rank to work quasi-independently of the U.S. Government and directly with foreign officials. In addition to his title and position, Pardew obtained a formal mandate from the Deputies Committee meeting in December 1995 that defined the scope and conditions for program implementation.

De jure authority conferred upon Pardew by his superiors did not guarantee de facto control of the program, however; particularly not with so many senior officials and elements of the bureaucracy involved in implementing the peace agreement in Bosnia. Pardew had to coordinate his activities with other senior officials who were also assigned responsibilities for implementing the Dayton Accords and who controlled resources required by the Train and Equip Program. In addition, a few parent organizations that supplied personnel tried to share responsibility for program execution. Members were not sent to the task force with specific instructions; the general mission was well understood and the specifics were too uncertain for that.³⁵⁰ However, DOD Assistant Secretary-level officials did try to maintain influence on the task force, and on one rare occasion Lamb received direct guidance from a senior defense official while working a sensitive issue at the port of Ploce. Yet it soon became evident that it was impossible for those physically removed from the task force to keep pace with its activities. The team was working around the clock and moving too fast for DOD to keep well informed, much less to try to control any day-to-day decisions.³⁵¹ After a few months attempts to exercise “shared” oversight within the government stopped, and Pardew’s singular authority for defining and implementing the Train and Equip Program was well in place.

Beyond his formal position, title, rank, and mandate, Pardew exploited a number of advantages that reinforced the authority of the task force, beginning with unambiguous senior leader endorsement of the program. The program had a Presidential seal of approval. Clinton made a commitment to Congress and to President Izetbegovic at Dayton to implement Train and Equip. When the program ran into roadblocks team members evoked Clinton's commitment to Izetbegovic to give the program presumptive legitimacy,³⁵² leaving team members free to concentrate on the details of implementation. More generally, everyone knew that Bosnia was a major preoccupation of the administration. As one DOD participant noted, it was hard to say no when the task force argued, "[Bosnia] is the highest foreign policy initiative from the Clinton administration, and you are not going to help?"³⁵³

The task force was also empowered by the law. Section 38(c) of the Arms Export Control Act gives the government broad authority "to provide foreign policy guidance to persons of the United States involved in the export and import of such articles and services." This authority includes approving licenses for export of defense articles and services, and stiff penalties for violation of approved services. Thus the Department of State, and by extension the task force, could suspend MPRI's license at any time, which made the task force voice *primus inter pares* in contract performance. The task force had de facto contract approval authority, so MPRI and ASI had to partner with it on contract details.

The fact that the task force also had its own pot of resources further reinforced Pardew's authority. As U.S. Envoy to the Federation Daniel Serwer later noted, "There was no way I could compete with Pardew, who had several hundred million dollars of the arms and training that the Muslims and the Croats wanted."³⁵⁴ He returned to Washington and took another job. The Train and Equip team's \$100 million drawdown authority was a huge advantage compared to most other interagency teams, which must appeal to parent organizations for resources. The funds were an immediate and concrete asset for the task force, ensuring it would be taken seriously in Sarajevo and in the U.S. Government. The resources signaled the support of Congress. Some members had qualms, but as a whole Congress had already voted to provide a substantial drawdown authority, so program adversaries in the bureaucracy knew there was little point in challenging Train and Equip on Capitol Hill.³⁵⁵

The \$100 million was not sufficient for meeting the program needs estimated by the Institute for Defense Analyses. Thus the task force was "always fighting to get a small percentage of the resources going into the Balkans"³⁵⁶ and looking for ways to increase or stretch available resources. Pardew recalls that resources were his biggest challenge and a continuous worry. Privately and publicly, he often expressed frustration to upper government echelons that the

program was underfunded.³⁵⁷ The White House did intervene to obtain cash donations from Muslim allies when it appeared the program was floundering but otherwise left the task force to fend for itself.

Many observers were unconcerned by the limited resources because they believed the program was robust enough to accomplish its purposes. In part this was because the task force engineered some major advantages for resource management. The team was able to influence what the cash donations were used for and keep funds away from illegitimate or manipulative hands. The task force “controlled the resources that nobody else could touch—couldn’t understand—much less touch.”³⁵⁸ As a result, the resources could be used to the benefit of the program and not towards other political priorities unrelated to program objectives such as soldier salaries or inefficient domestic defense industries. In addition the accountability controls instituted by the task force as part of this regime were so tight there was no leakage. Not a dime went missing.³⁵⁹

Moreover, the task force had the flexibility and creativity to do a lot with a little. Glassman notes, “for the resources we had there were huge returns” and argues that the ability to purchase equipment anywhere in the world at the most favorable prices was a great help. Lamb agrees, noting the resources available were leveraged to the maximum extent as the team found ways to augment and combine them with other programs such as Excess Defense Articles and IMET training funds. For example, the task force obtained 155mm howitzers from Excess Defense Article stocks but refurbished them with operations and maintenance funding from its draw-down authority. In addition ASI squeezed MPRI so hard for efficiencies³⁶⁰ that the contractor was rumored to have not made a profit its first year on the job. ASI also pressured the task force to work an agreement with Treasury so donated funds held in trust would accrue interest, which generated more than \$4 million in additional resources.³⁶¹

With a powerful mandate, a leader with ambassadorial stature, legal authority to approve MPRI’s overseas training activities, and its own resources, the task force could aggressively pursue its objectives. This level of empowerment, combined with initial success, contributed to what organizational theorists refer to as psychological empowerment, which occurs as team members come to believe the team is capable of accomplishing its mission and act accordingly.

In the case of the Train and Equip Task Force, confidence varied by member but in general grew over time. Sawoski was attracted to the effort because it had senior leader support, something that he knew from personal experience improved chances of success.³⁶² For others, conviction preceded confidence. Klekas recalls members were proud of their mission and confident of the abilities of their colleagues, and he personally was cautiously optimistic the task force would succeed “despite opposition from our own bureaucracy.”³⁶³ Rabasa remembers

believing from the beginning of his tenure that it was a special program and would work.³⁶⁴ Pardew was keenly aware the President had given his word to Izetbegovic and believed the credibility of the United States was on the line.³⁶⁵ That fueled his determination to succeed, but he did not realize how difficult it would be.³⁶⁶ Franklin, who worked in close proximity to Pardew, notes there were times “when Jim was so disillusioned that I thought we’d never go much further. However, he always seemed to pull out of it and push on forward. I grew to believe and be very confident in his personal abilities to accomplish [the mission].”³⁶⁷

The confidence of all members grew as success reinforced itself. Progress in one area encouraged the team to push harder in other areas. Klekas observes that as Federation leaders came to appreciate the value and credibility of the program, Pardew was able to secure their cooperation on broader measures that enhanced Federation unity, such as a integrated joint staff and training program.³⁶⁸ Lamb agrees, noting that the combination of Presidential support and initial successes generated a sense of momentum and encouraged members to pursue their tasks aggressively.

The way Klekas managed the clearance process on Pardew’s cables exemplifies the pushy approach adopted by task force members who felt empowered. Normally a Department of State communication is coordinated with all interested offices, but that risked watering down Pardew’s positions. Klekas felt, “if he had taken that typical Foreign Service Officer approach and solicited a bunch of clearances then they would have nibbled us to death; Jim was not interested in that crap.”³⁶⁹ Instead he pushed out cables with minimum clearances, only bothering to solicit clearance from those he thought appropriate for an Under Secretary-level communication. “Nobody’s cleared on this!” someone in State once complained after viewing the paucity of coordinating offices on a typical Pardew cable. Klekas shot back that “it wasn’t his job to worry about that” and pressed on. Similarly Lamb recalls the task force built such a muscular position for itself that he thought it could intervene on any issue related to program execution. When one partner organization chafed under his heavy-handed approach and complained the task force needed to “stay in its lane,” his rejoinder was that the team “owned all the lanes in the road” for the Train and Equip Program. McFarren is even more emphatic: “We felt Teflon-coated. We were empowered. I felt invulnerable.”³⁷⁰

The sense of empowerment was resented by some but accepted by those who shared its goals. MPRI leaders, for example, appreciated the fact that Pardew’s authority was so well established that MPRI did not have to deal with multiple competing authorities, which was both invaluable and rare in the firm’s experience.³⁷¹ The contract and artillery specialists engaged by the task force for their expertise were both impressed that task force members believed they would succeed.³⁷²

However, some Train and Equip partners resented the aggressiveness of the small team, which could border on arrogance. Lamb, for example, believes his aggressive manner and belief that all U.S. Government entities ought to support the task force complicated relations with the Defense Security Cooperation Agency and Army Material Command. These two organizations did not fully support the program or agree on how it should be achieved.³⁷³ They were not alone, an issue taken up in the following section.

Organizational Support

Individual views on the controversial Train and Equip Program varied in the U.S. Government, but in general it received strong support from the most senior officials and much less support from lower levels of the national security establishment. The President's general support was recognized and he occasionally intervened to assist in raising funds and shoring up international support for implementation.³⁷⁴ His deputy national security advisor Sandy Berger monitored and supported the task force³⁷⁵ as did Secretary Perry and Deputy Secretary White.

President Clinton receives briefing in Situation Room from Ambassador Richard Holbrooke, Joint Chiefs of Staff Chairman General John Shalikashvili, Secretary of Defense William Perry, Vice President Al Gore, and others, February 20, 1996 (William J. Clinton Library)

Strobe Talbott, Deputy Secretary of State, helped support the Ankara conference, and later Secretary of State Madeleine Albright (who early on had advocated for a Train and Equip Program) publically praised the effort.³⁷⁶ In addition there were individual leaders in the Department of State, particularly some serving in or close to the Balkans, who were quite supportive. Ambassador Peter Galbraith in Zagreb, Croatia, backed the task force's activities, as did John Menzies, the U.S. Ambassador in Sarajevo when the program began. Nick Burns, the spokesman of the Department of State, helped Pardew get settled in and participate in State's daily public affairs activities.³⁷⁷ The task force also benefited from the political endorsement of such ASI leaders as former Under Secretary of Defense Paul Wolfowitz and former Assistant Secretary of Defense Richard Perle, who had influence with Republicans on Capitol Hill.

While acknowledging that the President and other senior national security leaders approved the Train and Equip Program, task force members also believed Pardew's personal connections with many of those senior officials and adroit management of his relations with them reinforced the task force's authority.³⁷⁸ Team members believed Pardew was well regarded by senior leaders. As McFarren observes, in addition to bolstering confidence and collegiality on the task force, this belief "gave us the sense that we had top cover for whatever we did."³⁷⁹ Glassman agrees that "we were an empowered group"³⁸⁰ but also thought support was more tenuous than most members appreciated. Still, he observes that Pardew made the most of his authority. Pardew thought he was backed by the White House and acted like it.³⁸¹ In interacting with other senior officials, if push came to shove, Pardew would simply say "I report to the [Deputies Committee]."³⁸²

Lower-ranking officials in the bureaucracy were aware that the program enjoyed congressional, Presidential, and other senior support.³⁸³ Nonetheless, organizations do not like giving up personnel to perform novel tasks. Not surprisingly, those that contributed people to the task force were quick to ask for them back. In some cases they succeeded. For example the CIA pulled Christensen back after several months, which Pardew was "not happy about" but could not reverse.³⁸⁴ DOD officials tried to recall Lamb periodically and to terminate Defense funding for the contractor positions.³⁸⁵ Pardew was able to fend off such initiatives, at least for the first couple of years when task force activity was at a peak. Even those offices that had bent over backwards to support the team on a temporary basis suffered "donor fatigue" over time. For example, the office that had permitted its contracting officer to help the task force grew disillusioned the longer he remained at State working on task force issues.³⁸⁶

Beyond the reluctance to give up people and other resources, the mid-level bureaucracy was skeptical about the team and its mandate. As the task force intelligence representative not-

ed, “Train and Equip was fighting against the tide.”³⁸⁷ A lot of people thought the effort “would fail from the outset” and “there was a general skepticism about the task force.”³⁸⁸ Most believed Bosnia would fall apart again after a year or so, a view that was strong in DOD.³⁸⁹ Defense, and especially the uniformed side of the Department, also worried that Train and Equip would compromise the reputation of U.S. forces as neutral peacekeepers and make them “targets.”³⁹⁰ Army leaders in particular were opposed³⁹¹ and treated MPRI personnel—almost all of whom were former U.S. military—as pariahs, refusing to talk with or respond to them.³⁹² The Army very much wanted a clear distinction between the private contractors training Federation forces and their uniformed personnel who were there to impartially enforce the Dayton Accords.³⁹³ They realized that from the Serb point of view, the distinction between U.S. uniformed soldiers and former soldiers working for a private company might not seem compelling and thus were bothered by the program. In light of senior leader decisions, DOD could only distance itself from the task force as much as possible, insisting that it be housed in the Department of State, where it was officially ensconced in the European bureau.

CIA supported the task force well with briefings and materials,³⁹⁴ and State backed it logistically. It helped that the team was a Presidential directive, but that did not guarantee cooperation. State’s Bureau of Intelligence and Research, for example, dragged its feet on allowing the team access to information resources and spaces. Initially the CIA member traveled each day to CIA headquarters to assemble Pardew’s morning briefing, “even though the Bureau of Intelligence and Research (INR) had access to the same resources in their shop.”³⁹⁵ However, State’s European Bureau provided Pardew and his staff with office space,³⁹⁶ an experienced secretary,³⁹⁷ coveted parking passes,³⁹⁸ and extensive travel funds, which were critical given the heavy travel schedule the task force maintained.³⁹⁹ Sustaining this support required effort. Franklin recalls that there was always a reluctance to give the team travel money and other resources, but it usually got what it needed “after a lot of jawboning and arm-twisting, most of the time by Jim [Pardew].”⁴⁰⁰

Otherwise the State offices involved were focused on the civilian side of Bosnia reconciliation and reconstruction⁴⁰¹ and thus inclined to ignore Train and Equip. On occasion some offices in State would try to “insinuate themselves into the process by demanding the prerogative to grant or refuse clearances on our outgoing cables or briefing papers for senior officials.” As Klekas recalls, “We ignored them when we could, and acceded to such demands when we had to. Because we were not formally and fully integrated into State’s regular channels we were often able to ‘get away’ with more. It also helped that [Train and Equip] was inherently more technical and operational than standard State Department activities.”⁴⁰² Klekas believed the autonomy of

the task force was in part its own choice and in part a lack of interest on State's part. State was "not helpful" but also not inclined to interfere as long as the task force remained "out of sight, out of mind."⁴⁰³ In other words, because there were many other political and economic efforts under way, and Train and Equip did not threaten those programs, it could be largely ignored.

When the program did come up in diplomatic discourse, personnel in the European Bureau expressed the European view that it would be destabilizing rather than the reverse.⁴⁰⁴ State's Bureau of Political-Military Affairs, which might have seemed like a potential ally, was skeptical about the program's merits. One of its members infuriated Klekas by telling him Pardew was not "a real ambassador" and warning he was being too pushy and "getting ahead of himself."⁴⁰⁵ Rabasa, another Foreign Service Officer serving on the task force, also noted that the common view in State was that the task force was "only creating problems" and "jeopardizing negotiations."⁴⁰⁶ State personnel made it clear they considered the program a political necessity to be endured but not embraced.⁴⁰⁷ As one party in State who ended up cooperating concluded, "The Department of State does not like you guys."⁴⁰⁸

As time passed and the program picked up momentum, bureaucratic resistance increased and became more of a problem. For example, the Central Intelligence Agency became insistent that Train and Equip was upsetting the military balance.⁴⁰⁹ CIA analysts thought that because the Bosniaks had a manpower advantage providing them with weapons and training would by definition upset the equilibrium. Occasionally they issued reports with satellite photos of Train and Equip weapons en route to Bosnia and the tag line that the delivery "tips the balance in favor of the Federation."⁴¹⁰ Task force personnel working feverishly to get the basic program in place considered these intelligence assessments ludicrous, not least because the program was transparent and the team would have provided close up photographs if asked. After a few futile attempts to convince young agency analysts that their assessments needed more balance, the task force shrugged off the CIA reports and just referred to the Institute for Defense Analyses assessment as the authoritative document on the topic. Nevertheless, the team had to work hard to convince senior leaders that the program was making progress but not so much that it threatened the peace.⁴¹¹

State also paid unwanted attention to the program as it picked up steam. The Department began to suggest with increasing frequency that Train and Equip should be used as leverage to extract compliance whenever the Bosniaks or Bosnian Croats were being recalcitrant on other matters. Sometimes these interventions developed into real threats to the program. Pardew would counter that the initiative was already heavily leveraged and its influence was needed to obtain progress on really significant issues such as removing Cengic and getting Muslim extremists out of Bosnia. The Train and Equip members knew the Bosnians were unhappy with

the size and sophistication of the program and were only slowly coming to realize the training they were receiving was more valuable than the equipment. In other words, the perceived value of the program to the Bosnians was not as great as some believed; thus it was not an inexhaustible source of leverage.⁴¹²

The Department of Defense also complicated execution of the program. In the field SFOR interference was a persistent irritant. Not long after the program began, Pardew recorded his frustration with his former uniformed brethren in a personal journal entry: “US military resists at every turn over this fictitious issue of a threat to evenhandedness.”⁴¹³ The task force complained about such obstructionism, providing catalogues of objectionable behaviors and incidents to DOD leaders and directly to SFOR leaders as well. The subject of SFOR interference with Train and Equip generated tense meetings and frosty communications. A September 15, 1997 task force information paper entitled “SFOR Interference with the Train and Equip Program” catalogued a series of SFOR actions to impede the program. It prompted a strong response from the SFOR commander, who also sent a copy of his rebuttal to Deputy Secretary of Defense White.⁴¹⁴ A month later Pardew notified State Department officials that SFOR had just approved a multicorps exercise by the Bosnian Serbs even though one of the Serb corps was in violation of SFOR demining requirements. Pardew noted that, in contrast, “SFOR stops even routine, low-level Federations exercises for the most minor infractions.” In a summary comment about SFOR “obstructionism,” he closed with a clear warning: “No one should expect me to certify that the Federation can defend itself as justification for NATO departure under these conditions.”⁴¹⁵

Pardew also wrote to the Department of Defense task force director responsible for Bosnia to complain about SFOR and the Department’s attitude more generally, which he characterized as “one of low level foot-dragging and obstructionism.” He cited DOD reneging on its decision to approve transfer of 426 trucks as Excess Defense Articles as “an outrage and an embarrassment” and requested help in changing the Department’s attitude from “‘can’t do’ and ‘don’t want to’ to ‘can do.’”⁴¹⁶ The Army, which had to absorb the vast brunt of Train and Equip demands for assistance, was a problem in particular. Initially the Service cooperated with the program (and the law) by providing lists of materials that could be offered up under Train and Equip’s drawdown authority. The Army was willing to pass along items it no longer had use for, but did not like parting with operations and maintenance dollars that were fungible and more useful—for example, to pay for transporting materials to Bosnia. Lamb recalls that Army resistance increased as the task force became more creative about ways to use its drawdown authority, forcing major bureaucratic battles to get even small things accomplished, such as finding Army experts to debug the old simulation software donated to the Bosnians.⁴¹⁷

McFarren, the team expert on security assistance, recalls how his work required burning bridges with friends and contacts in the security assistance community. When he arranged for Army pilots to fly task force helicopters from the port of Ploce, Croatia, to Sarajevo for safety reasons,⁴¹⁸ he engineered one of the last major drawdown equipment deliveries but also destroyed his relations with old Army friends who were furious that uniformed personnel had been cajoled into active participation in the Train and Equip Program.⁴¹⁹ His contacts in the Defense Security Assistance Agency, Army staff, and other offices with responsibilities for security assistance were all ultimately alienated.⁴²⁰

America's European allies replicated the U.S. bureaucracy's distaste for the program. Initially Pardew spent time in European capitals on the way to and from Bosnia trying to raise support, but it was soon apparent that such efforts were futile. As Pardew lamented in his journal after a visit to The Hague, not even the Dutch, "who should feel guilty after Srebrenica," offered assistance.⁴²¹ European diplomats were so negative that task force members came to suspect that aversion went beyond substantive policy differences and was fueled in part by anti-Muslim prejudice.⁴²² In Bosnia the European allies kept their distance and ignored the program. The exception was the British, who were active in their opposition and turned out to be the most formidable adversary. They slowed the program by raising artificial barriers, denying IFOR/SFOR permissions, and poisoning the well with unhelpful comments to the press.

Looking back at the travails with the bureaucracy and allies, Pardew notes the Train and Equip Program was "beaten down by constant criticism. . . . There was never any buy-in institutionally." The program was only implemented through "sheer stubbornness" on the part of the task force.⁴²³ To determine why members would make such a commitment and doggedly pursue their objectives, it helps to look more closely at "team-level" variables, beginning with structure.

Team-Level Variables

Structure (Location, Size, Tenure, Task)

The small size of the task force, collocation, and full-time work status of the members all facilitated communication, collaboration, and focus on team tasks. The entire group was located in the main building of the Department of State. Office space in Main State was quite limited, so locating the entire group there was a major advantage. Pardew and his State deputy and public affairs person had adjoining offices. State members with lower rank fended for themselves, staying in the offices they had before joining the task force. Non-State members Lamb

MPRI trainer supervises after action review for Federation exercise using sand table model of operating area

and McFarren were assigned a windowless room on a lower floor. Given the accommodations, they referred to themselves as the blue-collar element of the task force and took pride in their “get-’er-done” approach to program administration. The separate locations in the building did not impede teamwork and may have contributed to the decentralized activities of the task force.

Team structure concerns more than the size, location, and tenure of the group. It covers the “mechanics” of teams including how they organize for their task and the special expertise they develop or get access to by partnering with external parties. The basic design of the Train and Equip Task Force was established early on, but the work patterns and relationships with external entities took longer to develop. Pardew assigned tasks, but there was some natural division of labor based on member backgrounds. The CIA representative supplied intelligence; the former public affairs officer handled public affairs; the DOD representatives worked the training contract, drawdown authorities, and administration of equipment purchases and deliveries (except for Sawoski, who worked primarily on passage of the Defense Law);⁴²⁴ the senior State representative solicited international donations and negotiated arms procurement deals; and the other State representatives worked internal Department of State coordination issues. Johnson supervised Rabasa during his

short tenure on the task force⁴²⁵ and Lamb supervised McFarren, although the two partnered on almost all their activities.⁴²⁶ Later Rabasa and Ambassador Glassman also worked closely together. Otherwise all members reported directly to Pardew.

Pardew's daily meetings provided the venue for receiving direction and also made it possible for all the members to understand what problems were being solved by whom and how on a day-to-day basis. Team objectives were clear, but how to accomplish them was not. The team knew it needed donations but not how to get them. It knew it needed a draft contract for training, but the contents of the contract had to be worked out. It needed to work Federation political processes to get a defense law passed, but how to do that was not evident. As different individuals on the team worked these issues, sharing progress and reverses daily, they developed expertise on the problems they were solving and shared the broad outlines of their solutions with the entire team. Pardew reinforced shared understanding by having the team travel together even when it was not necessary. Both deputies accompanied Pardew on the first trip to Balkan capitals to explain the program and its principles, the entire team went to the Ankara conference, and Pardew made sure everyone went to Sarajevo occasionally if not regularly.

Over time the small team developed a common understanding of how it was accomplishing its objectives. Those working the political issues in Bosnia and the interagency did not know the details of training contract and donor fund management, but all members knew resource commitments had to follow a precise set of steps. Similarly, those developing the contract and pursuing agreement on its clauses did not always know the latest political developments affecting passage of the Federation defense law, but all the members understood the contract could not be implemented without a law establishing joint military institutions. The knowledge team members built up on the details of the Train and Equip Program was shared as necessary with entities the task force partnered with to achieve objectives.

Train and Equip partners constituted a useful, and in some cases indispensable, extended structure for the program. Much of the task force's energy went into cultivating and protecting these relationships. Most immediately, the group worked to secure support in the embassies that controlled the team's ability to get in and out of countries,⁴²⁷ particularly the U.S. Embassies in Zagreb and Sarajevo. It made a point of keeping the embassies well informed, and never entered their countries without paying courtesy calls on the senior embassy official available. The team needed local embassy support to engage the military and political leaders in Bosnia, who were the key partners in executing the program. In Zagreb, Pardew used his established relationship with the Croatian Minister of Defense to ensure support, including pressure on Bosnian Croats to cooperate. Pardew, Lamb, McFarren, and others spent an average of a week

a month in Bosnia to conduct program business and meet with the Bosniak and Croat leaders, which allowed Pardew to assess their commitment to the program and work with them to resolve problems. He was able to encourage the ascension of Bosnian leaders willing to look to the future rather than the past, and in the case of Deputy Minister Cengic, concluded it would be necessary to take the extraordinary step of engineering his removal.

The single most salient and critical partnership was with MPRI. Its leaders were confident in their ability to deliver what they promised,⁴²⁸ but the company was in a delicate position. It had to generate both customer satisfaction and confidence in MPRI. At the same time it could not operate without U.S. Government approval. The Department of State could revoke its license to provide security assistance services at any time. One of its senior leaders noted, “We knew we worked for Pardew but our customer was the Federation.”⁴²⁹ The train and equip team decided early on that it liked MPRI’s military mindset and no-nonsense mission focus. After a few months, task force members were working closely with MPRI representatives at all levels. Generally MPRI wanted to be seen as supporting U.S. policy for good purposes and cooperated accordingly,⁴³⁰ and the task force came to trust and rely on it.

For their part, MPRI leaders appreciated the close working relationship they had with Pardew, who always let them know the state of play in the U.S. Government and when he was going to Bosnia and what he would be looking to accomplish. The company reciprocated with an equal degree of trust and transparency, authorizing its in-country representatives to give Pardew the unvarnished truth (i.e. “no BS briefings”).⁴³¹ MPRI’s Program Manager did not have to clear his message or briefing slides with headquarters, but rather could “give chapter and verse where it has not worked.”⁴³² Company leaders believed their relationship with Pardew and his task force was based on integrity and good communications that engendered trust and that it “wouldn’t have worked” otherwise. They felt Pardew listened and comprehended what they told him and that he had “a capable team.” Occasionally they found Pardew and his people “stubborn,” but respected the fact that Train and Equip was clear about its goals and understood MPRI’s issues.⁴³³ Moreover, the team treated MPRI “like Americans.”⁴³⁴ In an environment where Train and Equip was not supported by the uniformed military, the respect the team accorded MPRI went a long way toward establishing a mutually beneficial partnership.

ASI was another important partner. Its basic role was to stretch donation dollars. ASI played an early and critical role in crafting the final contract with MPRI, monitored MPRI’s performance, and also assessed the task force’s performance. The contract negotiations were a bit bruising, but all parties figured out they could not bypass any of the others. Although initially skeptical, the team concluded that ASI could be quite useful. Its leadership lobbied

for support of the program on Capitol Hill and provided helpful “pressure on the administration to follow through on its commitments.”⁴³⁵ Pardew was savvy enough to call Richard Perle, the only ASI leader to remain engaged over time, and keep him informed on task force developments.⁴³⁶

At the working level, the group also discovered that ASI provided added value. Mike McNamara, the officer manager, was a knowledgeable former Army colonel and “attention-to-detail” guy. He respected the ex-military personnel who made up MPRI. As a matter of course he deemed them honorable and trustworthy and found them to be so.⁴³⁷ However, it was his job to verify performance and recommend areas for improvement and cost savings.⁴³⁸ Given the nature of ASI’s job, its relationship with MPRI relations was prone to conflict. When MPRI and ASI could not agree, the task force was in a strong position to arbitrate or make final rulings. Over time the group concluded that having a competent group like ASI checking on the details of MPRI’s work reduced the burden on the team and transferred some of the inescapable friction involved in such oversight to the MPRI-ASI relationship. As long as ASI did not squeeze MPRI or vendors supplying equipment so hard it created an incentive for poor performance, the task force believed ASI could be helpful. Lamb forged a close relationship with McNamara and they freely shared information.

The task force maintained a wide range of supporting relationships within the U.S. Government beginning with the senior leaders who created and empowered the Train and Equip Program. Pardew kept himself and the principal supporters of the program informed with personal briefings and telephone calls. He gathered information from his contacts both to receive up-to-date information and obtain different perspectives from players in positions of influence. For example, he kept in contact with Bosnian Ambassador Mohammed Sacirbey in order to better understand what President Izetbegovic was thinking.⁴³⁹ He also monitored the agendas in the hierarchy of National Security Council staff meetings, from the principals to the deputies to lower-level interagency meetings. All this outreach took time, but it was essential that the task force remain cognizant of how evolving policy positions might affect Train and Equip.⁴⁴⁰

Pardew’s subordinates worked hard to develop other useful relationships. Lamb reached out to contacts in the Institute for Defense Analyses for help on identifying Federation military requirements and training contract particulars. The Institute recommended one of their adjuncts, Lieutenant General Frederic J. Brown, who was reputed to be the Army’s best mind on training systems, particularly rapid training. Brown interrupted his holiday schedule in December 1995 to educate Lamb and later received McNamara for the same purpose.⁴⁴¹ Lamb also reached out to DOD contract specialists for help, convinced the Defense Contract Management Command⁴⁴² to

station an overseer in Sarajevo to ensure accountability, and tapped expertise from the Army's National Ground Intelligence Center, perhaps the Nation's best repository of knowledge on foreign military hardware. While maintaining a low profile, National Ground Intelligence Center personnel traveled with the task force to assess the quality of weapons systems being considered for purchase. Similarly, McFarren used his extensive contacts in the security assistance community to get drawdown authorities executed and Excess Defense Articles for the program.

Franklin tried to generate positive press coverage about task force activities, which was easy in Bosnia where Pardew was "a rock star," but almost impossible anywhere else where skepticism about the program reigned, particularly in Europe. The task force was only slightly more successful with the U.S. press. Franklin's efforts were almost always an exercise in limiting damage from doubting foreign policy experts and a generally negative press, and making sure the bureaucracy was not surprised by any program developments.⁴⁴³ To keep ahead of the curve and tamp down negative reports, he worked with the public affairs offices in Defense and State and maintained close contact with U.S., Bosnian, and international media organizations and representatives. He also partnered with the head of public affairs for the Federation Army, the Embassy Sarajevo political-military officer, a U.S. Information Agency representative in Sarajevo, and Rick Kiernan, who handled the same duties for MPRI.⁴⁴⁴ Kiernan recalls keeping in touch with Franklin on a daily basis, and Franklin notes that he learned a lot from Kiernan about how a private company works and manages its public relations.⁴⁴⁵

Perhaps the most difficult and rewarding partnership was with the Department of State legal advisors assigned to work on Train and Equip issues. Initially State representatives on the task force approached Department lawyers to secure agreement on how the funds from donors would be managed. Glassman had in mind a system similar to the Saudi foreign military sales account, whereby they pump money into the account and draw from it as needed. State legal advisors saw problems with that model, and for whatever reasons relations quickly soured, with both sides concluding they could not work with the other.⁴⁴⁶ However, the task force had to have some legal basis for managing its funds. It considered appealing to higher authorities in State to induce more cooperation from the lawyers, but that was considered difficult and messy. Instead, Lamb was dispatched to reason with them. He recalls "spending a lot of time in [the legal] office, having moral, philosophical, and historically-informed discussions on what might happen if IFOR pulled out after a year. We tried to impart the moral sense of obligation that those of us on the task force felt."⁴⁴⁷ Ultimately this relationship proved fruitful, and what began as an absolute roadblock to program execution evolved into

the program's most important example of creativity and accountability: the legal regime for managing donor funds.

Team Decisionmaking

By definition cross-functional (i.e. interagency) teams combine diverse expertise and often equally diverse perspectives, which can be a source of strength if the conflict they engender is resolved productively. In the case of the Train and Equip Program, the variance in member views was subdued by several factors. The task force participants shared a common commitment to program goals and the principles codified in its charter approved by the Deputies Committee. They did not have many preconceived notions about how to achieve task force objectives. As Senator Dole's legislative aide pointedly observed when the team visited early in the program, none of its members had personal experience training and equipping a foreign army. The effort to train and equip the fragile Federation was a "voyage of discovery."

There was never any question but that Pardew was the key and final decisionmaker, but there were some task force decisionmaking characteristics that contributed to debate and more productive decisionmaking. The team was small and its decisionmaking process was informal. McFarren, the junior ranking member by grade, observes that team members "knew who the [senior executives] were" but also that Pardew's style was free flowing without a lot of emphasis on structure. Everybody was on a first name basis.⁴⁴⁸ Pardew had the team meet daily and solicited advice from all members on all subjects.⁴⁴⁹

The entire team convened in his small office each morning. By then he had digested the daily intelligence and sometimes had news for the group. "Pardew was very open, sharing what had happened and what he had heard, so we felt like part of the team."⁴⁵⁰ He would raise key issues for group discussion that were on his mind and invite others to do likewise. He made it clear he was not interested in minutiae. He wanted to discuss strategy issues: "It took me a while to get the message, but what he wanted in his morning meetings was strategic thinking, what next steps were important, what minefields to watch out for, the pros and cons of any course of action."⁴⁵¹

Team members recall great discussions in Pardew's office.⁴⁵² One member notes they were "some of the longest staff meetings I've been in and some of the most interesting."⁴⁵³ Pardew acknowledged his role as the final decisionmaker but thought "the team needs to be a team." He believed talking frequently about the project and where it was going "helps unify the team" and "makes you feel like you've all reached a corporate decision."⁴⁵⁴

Thus everyone on the task force was invited to discuss major strategy issues as well as program execution issues. Pardew encouraged open discussion by all members, regard-

less of who was primarily responsible for the topic at hand, so the team debated a wide range of issues, e.g., the best choice among the three companies bidding for the training contract; how to manage partners like ASI; whether the Ankara donor conference should be convened without advance pledges of support; how to pressure the Bosnian Croats to support new defense institutions; how to establish donor accounts and avoid “leakage” of funds; who might be approached for in-kind donations if not cash; how to beat back efforts to undermine the program objectives by various elements of the bureaucracy; what to buy; and how to get into Bosnia.

There were occasional differences about how to pursue an objective or solve a problem, but they were resolved amicably. For example, members disagreed on whether there was any chance Egypt would contribute. Some task force members thought there was no point in even engaging Egypt, but another member argued the alternative. Pardew listened, and decided to make a run at Egypt, which paid off. Another example was the value of buying helmets. One view was that the Bosnians had got along without helmets so far and buying them now would be a waste of scarce resources. The countervailing view was that they had an important symbolic value as protective equipment for the individual soldier and contributed to a common professional appearance. In addition, after the task force determined that the helmets could be produced in Bosnia, it was understood that their purchase would stimulate domestic production. Pardew handled all such intra-team debate without questioning anyone’s motives, undermining their credibility, or encouraging internecine competition.

Even though team members knew Pardew would make all the major decisions, they voiced their opinions and made their cases for alternative courses of action. They spoke openly for several reasons. Some believed being attached to the task force and unsupervised by parent organizations encouraged free discourse.⁴⁵⁵ Glassman points out that all participants were responsible for bringing their own perspectives and abilities to the mission and were focused on that mission rather than institutional agendas. Rabasa agrees and adds that the temporary nature of the enterprise empowered individuals. Because members could always pack it in and leave, they felt free to voice their opinions honestly.⁴⁵⁶

Even more importantly, Pardew listened and weighed member arguments, which made it worthwhile expressing them. Pardew “always listened to what others said,” and as he hoped, the members “felt invested in the decisions.”⁴⁵⁷ That was even true for those who had sporadic contact with the task force. George Norris, an expert on howitzers who traveled with and advised the team on donations and possible purchases, recalls that he was asked his opinion. “Sometimes the task force took it and sometimes not.” However, he observed that people often ask for

your thoughts and you know they are just going through the motion and intend to do what they want. “Not Pardew; he was really open and listened to you.”⁴⁵⁸

Yet another reason team members contributed to the decision process was that they knew once major decisions were made, Pardew would delegate the details of implementation to them. He “had total confidence in the team”⁴⁵⁹ and believed they did not need extensive supervision. Normally he enumerated objectives and let the team members find a way to accomplish the task. Glassman notes Pardew allowed individual members “a lot of freedom in our sphere”⁴⁶⁰ and believed he had total freedom of action once Pardew tasked him. He used that freedom to seek out competitive bids from diverse sources, leverage the competition, and obtain better deals for the task force.⁴⁶¹ For example, Glassman obtained a prospective agreement for surface-to-air missiles from Ukraine that were expensive, and reliability was an issue. He used experts within the U.S. Government to better assess reliability, but also negotiated a stipulation that four out of the 300 purchased would be tested by a live-fire demonstration to determine reliability. Ultimately the deal did not go through because of concerns the purloined missiles might be misused.⁴⁶² However, Glassman made the most of the flexibility to negotiate the best deal.⁴⁶³

Rabasa also believed he had a lot of latitude to solve problems with international partners and that there was no micromanagement.⁴⁶⁴ Similarly, Lamb and McFarren emphasize the latitude Pardew gave them to achieve results in developing procedures for money management, contracting, and partnering with supportive organizations.

*[Pardew] asked you what we needed to do and that let you figure out how to do it. . . . We had a lot of interaction and head-butting sessions with ASI and even MPRI . . . about the way we were going to do things and they came to understand that we did speak for Pardew. They could call him and try to get us reined in but he would not do that, except on rare occasions. He would talk to us about it, hear why we did what we did, and back us up. This was very empowering and people learned to take us seriously.*⁴⁶⁵

McFarren adds that Pardew “was very willing to trust in our judgment and our professionalism. . . . Once Pardew decided to give you a task he would trust you with the decision-making process . . . he kept his eye on the big picture.” On occasion, that meant Pardew would make a strategic decision to compromise on an issue while his team was still pursuing some agreed course of action. Lamb and McFarren, for example, might be fighting hard for some objective only to be told by ASI or MPRI that Pardew had reached an out-of-court settlement with their superiors. They would verify the in-

formation with Pardew, ask him to “let us know when our position has been overrun,” and go back to work. Pardew’s subordinates tended to follow his example in decisionmaking when partnering with other organizations. For example, Gary Blasser, the contract expert from Defense who worked for months on the MPRI and MILES contracts, recalls that Lamb acted as a program manager “keeping everyone coordinated, but gave guys like me great autonomy.”⁴⁶⁶

Pardew’s delegated authority came with an unspoken guarantee that he would back up his subordinates—or at least not reprimand them—for taking initiative even if the results were less than optimal or required adjustment. For example, a Dutch vendor in Holland selling trucks to the program offered to throw in a lot of German “Mungo” vehicles at a nominal price if the program acted quickly. Lamb discussed the opportunity with an MPRI contact and the Bosnian representative on the scene. They decided the vehicles would be easy to maintain and useful for the Livno training center where more mobility assets were needed. Later some criticized the decision saying the vehicles weren’t that useful and added to the sustainment woes of Federation forces, but Pardew never chided Lamb for seizing the opportunity. Similarly, Pardew backed up his subordinates when they cut corners in State’s laborious coordination process to move Pardew’s communications quickly or otherwise ensure that the task force was not bogged down by State’s processes.

The sense of unified purpose, respect for Pardew, and appreciation for his inclusive decision style all ensured that Pardew’s decisions were aggressively implemented by the whole team once he decided on a course of action. After everyone had a say on key issues in the morning meeting, the team members would disperse and work on their tasks, using their own judgment on how to solve problems. Typically the group would not reconvene as a whole until the next day, although individual members pursuing a task could drop by Pardew’s office during the day to obtain supplementary guidance. Thus, unlike some small interagency groups, differences of opinion among members never complicated decision implementation on the Train and Equip Task Force. The decision process was inclusive and decentralized and yet authoritatively in Pardew’s hands.

Team Culture

The task force had several salient behavioral norms that members agree reflected Pardew’s character and professional habits.⁴⁶⁷ Perhaps the most commonly cited norm was its work ethic. One member recalls Pardew was “almost relentless about moving forward on initiatives, even when things were not going the right way.”⁴⁶⁸ Even by Pentagon standards where 12-hour days and weekend work are not unusual, the pace Pardew set was zealous. His view was that the clock was ticking on IFOR’s commitment and Train and Equip was already behind schedule. The team worked long hours 7 days a week. It traveled frequently, particularly in the beginning. As major

milestones in program execution were achieved, the pace fell off a bit and the team often only worked a short Saturday and took off on Sunday.⁴⁶⁹ Others partnering with the task force often commented on its work ethic, noting it “couldn’t have been more dedicated,”⁴⁷⁰ was “driven,”⁴⁷¹ and went to work immediately upon arriving in Sarajevo after an all-night flight. A member recalls, “On all the trips I went on with Pardew you worked from the moment you started until the end.”⁴⁷²

The task force also was action and results-oriented. Christensen recalls the team was a “good group of very mission-focused people.”⁴⁷³ Glassman agrees the group had “an operational-action mentality.” It was “an operational entity. . . . We were not policy-formulating.”⁴⁷⁴ The fact that the team was implementing a program rather than making policy and that the program had on-the-ground elements and consequences inclined the group to think in concrete terms about its objectives. McFarren also remarked on the task force’s focus on action, saying that what struck him most about Train and Equip “was that it was ‘real time.’” Pardew gave his subordinates license “to go out and break the China. We moved fast, we saw results.”⁴⁷⁵

Following dismissal of Bosniak Minister of Defense, Ambassador Pardew announces arrival of U.S. equipment at Port of Ploce, Croatia

Pardew reinforced the action orientation in several ways. He let members know failure was not an option. Rabasa noted Pardew's attitude reinforced a pronounced "can-do spirit."⁴⁷⁶ That determination to persevere set the tone for the team.⁴⁷⁷ McFarren recalls Pardew good-naturedly referring to the DOD personnel fighting his bureaucratic battles as his "attack dogs," encouraging them to pursue their tasks.⁴⁷⁸ One reason Pardew made an effort to get all team members into country frequently was because he wanted everyone to see that their work had real world consequences.⁴⁷⁹

Those who partnered with the task force were impressed by its determination to drive results. The Defense contract specialist noted the group was singularly focused on its objectives "to the exclusion of everything else" and they "didn't take no for an answer."⁴⁸⁰ The artillery specialist who advised the Train and Equip Program was also impressed with the task force's mission focus, and it affected his own attitude. When the Bosnians were late in showing up for a test demonstration of Romanian rockets, Glassman pushed him out front and said "you're it." Suddenly he was pressed into duty as the one to select the launcher and rockets to be tested and render a verdict on behalf of the Bosnian Ministry of Defense as to whether they were acceptable.⁴⁸¹ It was "make things work . . . no matter what."⁴⁸² For program leaders, delays were unacceptable.

Those working on or with the team considered this aggressive pursuit of concrete results exemplary, "the way government ought to work." However, others noted that the task force "get-it-done" ethos clashed with some cultural norms in the Department of State. In State, process and ambiguity are valued because they can generate opportunities, but in DOD concrete ends and details are valued. Holbrooke foresaw problems in that regard. When he offered Pardew the job of leading Train and Equip in State he warned him, "They'll drive you crazy over there."⁴⁸³ The reverse was equally true. State had trouble understanding the task force's aggressive can-do mentality. Klekas once phoned State's Operations Center to ascertain whether a Pardew cable had been distributed. The officer on duty replied that it was held up by the chief watch officer, who was shocked by the strident tone. It did not look like a State Department telegram and he wondered whether there was some mistake. Klekas "corrected his misapprehension with un-State Department-like fury."⁴⁸⁴

The decision to demand removal of Hasan Cengic as the Bosniaks' senior representative in the Ministry of Defense is an even more telling example of how the task force violated State norms. After Pardew and Perry barged into Secretary Christopher's office to convince him to sign the letter demanding Cengic's removal, Klekas, waiting outside for the verdict, had the riot act read to him by Christopher's irate guardians, who were outraged by the end-run around staff.⁴⁸⁵ Klekas observes, "our proclivity was to press ahead to do what was necessary without seeking permission

unless we perceived it was absolutely necessary.” Because “delay was potentially fatal for the program,” the task force asked permission as seldom as possible and coordinated with “as few offices as possible.”⁴⁸⁶ Such high-handedness carried risks, and Klekas acknowledges that sometimes he “would get caught” and reprimanded by senior State officials intent on preserving the Department’s normal processes.

The team’s action orientation and bureaucratic autonomy reinforced cohesion. Members knew their mission was not popular with regional analysts at the CIA, Pentagon, and State. The relative isolation reinforced morale and encouraged a bit of an “us against the world” attitude. Team “relationships were formed in the middle of battle,” said McFarren, and strengthened by shared experiences like working through a record snowstorm in the opening days of the task force, or bonding at a restaurant on the Bosphorus after the disappointing Ankara conference.⁴⁸⁷ Some members noted that the team also enjoyed a common sense of humor, a droll perspective that “took the bite out of air.”⁴⁸⁸ The slightly black humor no doubt reflected the sense that all the members were in the same boat, and a leaky one at that.

Isolation did not stop the task force from searching for partners. When it found people in the larger bureaucracy willing to support its activities, it enrolled them as *ex officio* members of the cause. The task force could not have accomplished its objectives without help, and supporters were genuinely appreciated.⁴⁸⁹ That was true for MPRI and ASI, which had their own reasons for supporting the effort, but especially for those like Blasser and Norris who partnered with the task force when they were not obliged to.

Mutual respect and trust also strengthened cohesion, as did the stable tenure of the core team once it was established. As members saw one another demonstrate their ability to solve problems their confidence in and respect for one another increased.⁴⁹⁰ Mutual trust was a concomitant fact reflecting cohesion, especially after the core membership gelled. Everyone working on the team believed other members worked toward the same goals and that they could speak freely. If the members did not develop the intense trust indicative of some high-performing small teams, it was because they worked separate agenda items and their personal fates were not as intertwined with one another’s results. Those members who worked most closely together on a sustained basis—Glassman and Rabasa, and Lamb and McFarren—developed the strongest intra-team trust relationships.

Members quickly transferred their loyalty to the task force. As Pardew notes, “The people on the team were not playing the institutional game.” Instead they focused on the mission and not pressing for their particular institution’s agenda.⁴⁹¹ Agreeing with this assessment, another member noted that the CIA participant represented the task force and its interests to the agency,

and that was true for all members who interacted with their parent organizations. He believed the mark of any successful interagency team is that the members all turn and represent the team to the parent organizations “rather than the other way around.”⁴⁹²

In summary, some task force cultural norms like a strong work ethic, action orientation, and a penchant for independence reflected the leader’s own behavior. The team also developed a proclivity for taking the initiative, being entrepreneurial, and partnering with sympathetic parties who could help them solve problems. All of these behaviors, along with a commitment to the mission, reinforced cohesion and performance. Some of these team norms, particularly the focus on results and willingness to partner, were linked to another key team variable that explains high team performance: learning.

Team Learning

High performing teams learn quickly, obtaining new knowledge from experience and outside sources and sharing and applying them within the team. They can exploit existing knowledge from formal knowledge programs, experiment with alternative ways to solve problems, and explore knowledge networks and cross-organizational alliances. As Glassman notes, there was no formal learning process for Train and Equip⁴⁹³—no training for team members or established repository of knowledge to guide the task force. The mission was being conducted under unique and difficult circumstances, and the right way for everything from soliciting foreign funding to forging cooperation among Bosnians had to be figured out.

Members learned from one another. For example, the State representatives helped other members less familiar with State to navigate the institution,⁴⁹⁴ and Franklin coached Pardew on how to interact with the media and even arranged formal training for television appearances.⁴⁹⁵ For the most part, however, the members had to learn on the job and share their insights. Pardew’s daily meetings and management style facilitated such information exchange, as did the small size of the task force and the general willingness of members to assist one another. Even though the team worked long hours, everyone made time for one another when the need arose.⁴⁹⁶

Task force circumstances encouraged risk-taking and creativity. The program was under-resourced, which encouraged an “entrepreneurial” spirit,⁴⁹⁷ and opposed by many in the bureaucracy, which encouraged outreach to nontraditional partners. The team thus had incentives to experiment and explore.⁴⁹⁸ As the program progressed, the task force would take risks (like the Ankara conference), investigate possibilities, try alternatives, improvise when something went wrong, and repeat what it learned from experience would work.

Most immediately, the mission required unconventional partnerships with the private sector and foreign authorities. The task force began working on those partnerships as soon as it was created. Within the first month of operation, the State representatives were searching for donors, and the Defense representatives reached out for help on building a training contract. The group needed insights from subject matter experts and cooperation from a range of partners. Having U.S. Government officials work with the private sector encouraged entrepreneurship,⁴⁹⁹ and partnering with others encouraged learning.

Pardew and his subordinates learned from their countless working group meetings, dinners, and visits.⁵⁰⁰ Sometimes the hard work on outreach led to useful partnerships.⁵⁰¹ Other times it just provided useful information. For example, the task force visited Rock Island arsenal in Illinois to see how the program's 155mm howitzers were being refurbished. The workers seldom received attention from officials in Washington and were happy to be supporting the program, a sentiment reinforced by the visit. The Rock Island professionals presumably would have done a fine a job without the visit, but it was still educational. Team members learned more about the quality of the weapons and the timetable for their delivery and confirmed that those in DOD who were skeptical about Train and Equip were not trying to delay or sidetrack the refurbishment of the howitzers.

The mission encouraged partnership, but the problems it tackled also required considerable improvisation.⁵⁰² Some problems were solved through sheer hard work, persistence, and political pressure, such as the passage of the new defense law in Bosnia and finding a U.S. supplier of Kevlar (and related approvals) for helmet production in Bosnia. But other problems the team confronted required solutions that were creative if not unprecedented for the U.S. Government, such as the task force's new legal regime to manage donor money; use of intelligence experts to assess the commercial market for weapons; combining government and private sector contracting expertise; cooperation with ASI and the Defense Contract Audit Agency to ensure accountability; use of drawdown services to refurbish Excess Defense Articles; exploitation of outdated Army simulation software and computer equipment for Federation training and education in NATO symbols, standards, and tactics; and promises to consider commercial purchases to leverage in-kind donations.

Once the task force learned how to accomplish something, it often repeated the model.⁵⁰³ For example, bringing in a contract expert for the MPRI agreement helped, so the team did it again for the MILES contract. Bringing in weapons experts for advice on arms purchases worked well, so the task force repeated that in subsequent purchases. ASI proved beneficial for evaluating activity and ensuring accountability for the training program as a whole, so the

group arranged for a representative from the Defense Contract Audit Agency to ensure that all train and equip accounts and contracts were in order. Despite hostility from “middle management” and career officials in the Washington bureaucracy, the task force learned many individuals at the working level would back it and used these relationships.

In summary, the train and equip approach to learning was a classic case of “on-the-job training.”⁵⁰⁴ With the exception of the media training for Pardew, there was no formal training for anyone. Neither was there any effort in the national security system or on the task force to record and share lessons from their experience. The members explored different ways to accomplish their tasks, and when they completed their mission they moved on to other jobs. In the more than 20 years since, this is the first formal attempt to learn from the experience.

Individual-Level Variables

Composition

Several performance variables at the individual level of analysis cover the ways individuals are motivated and able to contribute to team performance. One is team composition, or “what individual members bring to the group in terms of skill, ability, and disposition.”⁵⁰⁵ It covers characteristics that research indicates affect team performance including attitudinal, demographic, and functional diversity,⁵⁰⁶ along with selection criteria and socialization of team members, and the propensity of individuals to contribute to team performance. For example, researchers believe individuals who are agreeable, extroverted, emotionally stable, and open to experience contribute better to teams.

All the members brought what they learned from previous experience, but some skill sets were more pertinent than others. Pardew’s time with Holbrooke’s team was directly relevant to managing Train and Equip and was partly why he was chosen as leader. Holbrooke told Pardew to do it and he agreed. He considered his time on Holbrooke’s small team that negotiated peace in Bosnia between August and December of 1995 a “crash-course in diplomacy” that introduced him to the major protagonists in the region. The experience convinced him that a small team could tackle a tough problem if the entire group was committed and pursued an interactive decisionmaking process.⁵⁰⁷ Before that, he was a senior executive running the Pentagon’s Balkan Task Force, where he worked with Sawoski and Klekas.

Sawoski was an academic on a leave of absence from Roger Williams University. He was an international relations theorist and Russian specialist, but also had experience in the Department of State where he served as staff assistant to Department spokesman Hodding Carter III

during the hostage crisis with Iran. Because he had accompanied Pardew to Dayton, he was intimately familiar with U.S. Bosnia policy and regional personalities. Klekas had left the Pentagon's Balkan Task Force before Dayton to take a year-long assignment at State as Special Assistant for Europe for the Under Secretary for Policy. He knew how Defense and State worked at high levels and had substantive knowledge about the delicate situation in Bosnia. Rabasa also served a tour in the Pentagon and knew the DOD culture. He had also worked Serbian sanctions on an interagency task force at State.⁵⁰⁸

Other members also used their skills sets directly to the benefit of the task force. The CIA representative handled all the intelligence needs, and Franklin, the former Navy public affairs officer, managed public relations. Similarly, McFarren was borrowed and then stolen from the Defense Security Cooperation Agency and appropriately handled security assistance matters. Glassman and Lamb, however, had only generally relevant and senior executive management experience. Glassman was an experienced diplomat and Lamb came from the Pentagon office responsible for oversight of special operation and low-intensity conflict.

Yet in terms of selection, no one other than Pardew—and by extension Sawoski—was really hand-picked to ensure the task force would succeed. Pardew asked Sawoski, his colleague on the Pentagon's Bosnia Task Force, to join the group shortly after finding out he would be tapped to lead the program. Sawoski believed it was important and would be rewarding since the administration gave it a high priority.⁵⁰⁹

The CIA assigned a representative to the task force after Pardew told them he would keep them informed of his activities if they furnished someone to provide intelligence support.⁵¹⁰ When that representative was promoted away from the position after a short stint, Pardew asked for someone more knowledgeable about the Balkans and was given Guillermo Christensen. Christensen interviewed with Pardew “very briefly.”⁵¹¹ Pardew liked the fact that he had experience in the Balkans and only seemed hesitant about Christensen's lack of exposure to military issues until their initial face-to-face meeting.⁵¹² Christensen convinced him he was familiar with military terminology and concepts from CIA paramilitary training and Pardew accepted him on the team.⁵¹³ Yet he too stayed only briefly before being replaced by someone who did not have experience in the Balkans but who was available to work with the task force for an extended period.

Darryl Johnson joined by happenstance. Holbrooke bumped into Johnson in a hallway at State. Holbrooke could be quite persuasive, and Johnson was “on his good guy's list.”⁵¹⁴ Holbrooke discovered Johnson was waiting for his position in Taiwan to open up in a few months, so he asked Johnson to serve as Pardew's deputy during the interim. Three months later Holbrooke told

Johnson to relieve Ambassador Menzies in Sarajevo for a few weeks and the team was left without a senior State representative.⁵¹⁵ The task force recruited Glassman a few months later. Rabasa was a friend of Glassman's and he recommended him to Pardew.⁵¹⁶ Glassman had served as the last U.S. Ambassador to Afghanistan before the Embassy closed as Soviet forces left the country in 1989.⁵¹⁷ He was no stranger to irregular conflict, having also worked on Central American issues during the Reagan administration (where he met Rabasa), but he had fallen out of favor with the Clinton administration. Rabasa wanted to help him get back into action.⁵¹⁸ Glassman was quickly accepted after a brief interview.⁵¹⁹

Defense allowed Pardew to select a deputy but made recommendations. Pardew asked Walter Slocombe, then Under Secretary of Defense for Policy, for candidates. Slocombe recommended Lamb, so Pardew interviewed him. After 5 years in his office director position, Lamb was ready for a different challenge and wanted the job. Lamb recalls the interview was brief and chiefly consisted of one question apparently designed to determine whether he was on the right side of the policy debate: Do you agree the United States should intervene to bring peace to Bosnia? McFarren's interview with Pardew was also concise. Pardew asked him one question about his ability to perform the task and took him on board. McFarren notes there was luck involved. He was relatively junior—a major—and believes if more senior officers had known the job was located in State instead of the Army staff and might be more than a 2-week stint to familiarize the task force with security assistance options he would never have gotten it.⁵²⁰ Pardew just asked, "Can you wear a suit?" He didn't want anyone in a military uniform working for the program and would not allow McFarren to travel to Sarajevo while on active duty.⁵²¹

Some individuals came to the task force by their own initiative. Klekas and Franklin approached Pardew⁵²² and were quickly accepted. What Franklin recalls most about the interview was its brevity.⁵²³ When he departed the task force in late 1998, Pardew's hiring interviews and process remained cursory. Raffi Gregorian, who replaced Franklin (albeit with a broader portfolio), saw the job advertisement when the McFarren and Franklin slots were being renewed as contractor positions. He called Lamb, whom he knew, and inquired about opportunities. Franklin was not going to continue with the task force so Lamb checked with Pardew and told Gregorian to "come today."⁵²⁴ Pardew told Gregorian, "Chris says you're a good guy" and asked if he wanted the job. It was a 5-minute interview, so brief that Gregorian reversed the process and queried Pardew to determine if the position was really one he would want to leave a good job to take.⁵²⁵

In retrospect, Pardew seemed to appreciate the importance of capable team members more. He told a colleague when starting his task force for Kosovo that the important thing was to "pick the right people and everything else will fall in place."⁵²⁶ Much later, when interviewed

for this research, he said he had “really capable people” on his Train and Equip Task Force and that he was a “big believer in small organizations of very capable people.”⁵²⁷ Perhaps the appreciation for able team members was a lesson learned from the Train and Equip experience. In any case, all the evidence indicates that at the time Pardew was content to take the individuals who made themselves available as long as they believed in the mission. Events then validated a modest team member’s assessment that “we may not have been the cream of the crop [but] we were all savvy people who knew how to make things happen and get the job done.”⁵²⁸

In truth, it is hard to find anything exceptional about the careers of most task force members⁵²⁹ that would explain their performance with one exception. Most of those attracted to the team were bureaucratic risk takers. Rabasa, Klekas, and Lamb were all Foreign Service Officers who chose to work in the Department of Defense because they found the opportunity interesting, even though it would most likely retard rather than help their careers. Lamb liked the results-oriented culture in Defense better and stayed there, while Rabasa and Klekas returned to their nontraditional career paths at State. McFarren was a Special Forces officer used to international exposure and unconventional problem solving who was happy to leave the military to work on an exciting special project like Train and Equip. Some others who partnered brilliantly with the task force were not on the fast track to promotion in their offices but were willing to buck the system to help out.

In addition to placing job satisfaction over advancement, some personalities had an iconoclastic bent. One member recalls Klekas was a “bit of a bomb thrower; very creative, an out of the box guy.”⁵³⁰ Klekas agrees that he was no ordinary State careerist. It was more important to him to work on interesting subjects than to advance. He also notes that both he and Glassman were motorcycle riders, not the norm in the staid Department of State.⁵³¹ People with unconventional mindsets seemed disproportionately attracted to the task force. They were independent thinkers who did not fit easily in the State mold. That proved true for most members and certainly for the team as a whole.

Rewards

Organizations often use material and psychological incentives to improve crossfunctional team performance. The rewards can be used to attract individuals to join teams and to encourage performance. Sometimes the team experience itself becomes a form of psychological reward that deepens the emotional commitment of members and extends their period of high performance on the team. Train and Equip members agree there were no formal incentives to draw them to the team or encourage their performance, but there were psychological rewards.

Ultimately there was also formal recognition for some task force performance but it played little role in motivating members.

“Attractive rewards” are incentives sometimes used to encourage qualified people to move from comfortable and often safer organizational positions onto teams that are riskier career choices. That happened for those who served on the task force briefly after it stood up. Christensen recalled that his supervisor at CIA gave him an informal assurance that his career path would not be penalized by taking on a rotation outside the organization, which he was happy to do.⁵³² Holbrooke made Johnson an offer he could not refuse, but the association with a dangerous and high-profile issue area like the Balkans was useful later in Johnson’s career. In neither case was the task force allowed to disrupt the individual’s normal career progression for long. After the early temporary participants departed, the team solidified around its core members (see figure 6), all of whom were drawn by a desire for a new assignment within the Federal Government, a personal commitment to the mission, or both. With a couple of possible exceptions, expectations of career enhancement played no role in decisions to join the team. On the contrary, most believed the experience would retard their career prospects.

Sawoski was on leave from academia where he was a tenured professor. He was happy to take the job but did not believe it would be career-enhancing.⁵³³ Glassman and Lamb were both in career holding patterns and ready for new challenges but did not believe Train and Equip would help them advance. McFarren thought his military career had stabilized and notes it was not a hard decision to leave the military and join the task force as a civilian contractor. Pardew encouraged this decision, telling him he would have fun and it would “change his life.”⁵³⁴ Franklin was retiring from the Navy and looking for a position in the DC area. At the time he was the Bosnia desk officer in Defense public affairs. When the massacre at Srebrenica happened, he recalls radio reports from Dutch peacekeepers and was horrified, determined that if he could “ever do anything to help those people” he would. At that point he knew nothing about the Train and Equip Program, but later when the Deputy Assistant Secretary of Defense (Public Affairs) told him about the opportunity with Pardew, Franklin jumped at the chance to “help the Muslims” defend themselves. He contacted Pardew and was interviewed and offered the position.⁵³⁵

All core members agreed with the task force mission, but those with more experience in the Balkans joined out of deep conviction. Like Franklin, Rabasa notes that helping victims of aggression had an impact on his desire to serve on the team.⁵³⁶ Klekas felt even more strongly that it was a question of preserving honor. He had participated in high-level meetings on the DOD Balkans Task Force in the Department of Defense and heard senior Europeans fight against lifting the arms embargo. They argued it would only “add fuel to the fire” and the Bosnians would be “defeated

anyway.” After 3 years of hearing that kind of cynicism and seeing the Bosnians still holding out, it felt increasingly dishonorable to him not to protest or intervene. Serving on the task force was his chance to personally contribute to what he believed should have been done earlier.⁵³⁷ When the team started up, Klekas was ending a year-long tour as special assistant to the Under Secretary of State for Policy. He appealed to Pardew to bring him on board so he could pursue “a mission I strongly believed in.”⁵³⁸ Similarly, Raffi Gregorian had just returned from a voluntary active duty tour with SFOR when he joined the task force, and he believed in the Train and Equip mission. He was willing to leave a solid job in the private sector. Pardew himself had the greatest amount of personal experience with Bosnia and the strongest commitment to rectifying the military imbalance there.

“Active incentives” refer to means to motivate members once they are on the team. In government such incentives typically include evaluations of individual performance and the

possibility of recognition for a job well done. For several reasons, no one on the team had high expectations for such rewards. Parent agencies that were generally hostile to the task force were not expected to reward those who worked on it,⁵³⁹ and any glowing personal evaluations written by Pardew would likely be discounted. This was particularly true for State people. Rabasa notes that because of institutional prejudices, Pardew with his Defense background would have little influence on a State career.⁵⁴⁰ Klekas summarized the thoughts of many members: “As for me, I simply assumed the mission would be its own reward. I did not expect participation in the program would be ‘career enhancing’ because it was unconventional and outside of the State Department’s organizational structure.”⁵⁴¹

Lamb recalls the same feeling, and it was not long before he received reminders that the task force’s work was outside DOD’s purview and interests. He began receiving periodic calls from the Department’s policy offices reminding him he needed to “come home.” The messages were mixed, congratulating him for doing well but also warning that he had been away too long and would soon be forgotten and out of the running for a career-enhancing job.⁵⁴²

Another reason expectations for rewards were low was that Pardew did not put much emphasis on such matters. He had developed a dislike for producing the standard inflated government evaluation after a career full of such responsibilities and typically let members draft their own evaluations.⁵⁴³ He was not personally impressed by recognition awards and not inclined to work to obtain them for others. Neither was he sentimental about task force relationships. Much later, after most of the original team members left, an award was presented to McFarren. After a few minutes of congratulations, a bemused Pardew told McFarren to “get back to work.”⁵⁴⁴ When asked about rewards on the team, Pardew said there were “no big rewards” in his own case, and when it was time to move on he moved on.⁵⁴⁵ Pardew’s parsimonious praise subtly reinforced the results orientation of the task force. There were no “attaboys” for working late, long activity lists, or expressions of loyalty. Only results elicited approval, an approach that kept the focus on team progress rather than individual achievement and reinforced the sense of professionalism.

Members thus agree they were far more motivated by personal satisfaction than formal evaluations and awards. The common observation from members was their reward was the satisfaction of doing the job well and seeing clear results.⁵⁴⁶ Elaborating, some cited the opportunity to travel, learn, solve problems, and see a worthy cause progress, all amplified by proving the skeptics wrong.

Some ardent supporters had doubts about whether those chosen to execute it were up to the task. News trickled back to the task force that Richard Perle told Perry that “Pardew is not up to the job”⁵⁴⁷ and ASI in general “did not believe Pardew would go to the mat for the

program.”⁵⁴⁸ These sentiments reinforced his determination to succeed.⁵⁴⁹ Similarly, Senator Dole’s acerbic legislative aide questioned the competence of each member of the task force when they met. Pardew took it in stride, but the episode fueled the determination of others to succeed.⁵⁵⁰ Operating under bureaucratic criticism seemed to reinforce the “rebel with a cause” esprit de corps the team felt, but being criticized personally really accentuated the satisfaction members felt when the program overcame opposition and other impediments.

However, the task force took a different approach to rewards for those who partnered with it. Lamb and McFarren made a habit of sending letters of appreciation to offices that worked with them, which Pardew signed and forwarded. They made a point of being particularly effusive about supervisors, emphasizing that the program was a Presidential priority and detailing the contributions their personnel made.⁵⁵¹ Blasser’s experience is a case in point. Initially he and a colleague, Sue Hildner, helped the task force with contracting, but there was no way to justify the absence of both from a four-person office. Thus only Blasser stayed on for an extended period, but he called on Hildner when work demanded her particular expertise, like an analysis of source selection methods. After months of their support, the task force sent a carefully crafted letter to the Under Secretary of Defense for Acquisition, which he read and sent down the chain to Blasser with an accompanying note of praise.⁵⁵² As Blasser pointed out, the political appointees at the head of his organization were delighted to see such a letter documenting their support for a Presidential initiative they knew little about. However, his immediate superior, a career official responsible for day-to-day output, was far less enthusiastic. “You’re a no show,” she told Blasser, emphasizing how much Blasser’s absence cost their little office. Even so, the letter encouraged the senior people Blasser worked under to be cooperative and allowed him to continue to support the task force.⁵⁵³

Despite expectations to the contrary, the bureaucracy was more generous in recognizing performance than many expected. Klekas received a Superior Honor Award for his work on the team and State promoted him a grade to FS-01 at end of his assignment.⁵⁵⁴ Lamb received an award from his parent organization, and a year after returning to Defense, an award from State as well. McFarren finally received an award 5 years into his 8-year tenure. Pardew was awarded follow-on assignments in the region. He led another small task force in a successful effort to prevent conflict in Macedonia and was later appointed Ambassador to Bulgaria.

Long before it became clear that anyone on the task force would receive recognition, members had already decided the experience was deeply satisfying on a personal level. They still feel that way more than 20 years later, concluding it was one of or the best experiences of their careers. Sawoski said his time on the task force was “very positive” and Rabasa considered it “on

the high side of his government experience.”⁵⁵⁵ Glassman recalls, “Those days were among the happiest of my life . . . it was a thrill to do it.” To him, the team “didn’t need rewards” because the biggest reward was “personal satisfaction.”⁵⁵⁶ McFarren said “It was the most enjoyable [working] experience in or out of government I’ve ever had. . . . I enjoyed going to work. . . . There’s nothing I’ve ever done in government that’s been anything like it; that fast, and that comprehensive.”⁵⁵⁷ Lamb also considered it his “single best experience in government” and noted that seeing the results of the task force’s work materialize in the field was invigorating: “The reward was job satisfaction.”⁵⁵⁸

Those who partnered with the task force for short periods also considered the experience rewarding. The first CIA representative concluded, “For me, personally, it was a very good experience. . . . I saw a small team come together, saw Pardew build it in face of adversity, and I learned and applied this later on.”⁵⁵⁹ Another partner with the task force on a temporary basis said, “It was for me an incredible experience, educationally, professionally, and personally. . . . In my period of government service, it was a highlight.”⁵⁶⁰ He also added, as did many others, that it “was rewarding to work for Pardew” because of his extraordinary leadership qualities.⁵⁶¹

Leadership

Leadership is sometimes emphasized to the point of excluding other factors that affect group performance. In the case of Train and Equip, however, task force members believe Pardew’s leadership was critical to success. “Jim was an inspirational person to work for,” one recalls.⁵⁶² Others note, “Pardew was a great leader . . . superb,”⁵⁶³ and he was “the one indispensable member of the team.”⁵⁶⁴ Another member concludes, “While it definitely took a team of people committed to the cause, without him we would not have succeeded.”⁵⁶⁵ Yet another summarized the entire experience as “the story of how one imaginative and indefatigable individual, Jim Pardew, was able to assemble a small team that operated quasi-independently from the conventional bureaucracy, preserving our nation’s honor in the face of relentless opposition at home and abroad.”⁵⁶⁶ Often those not on the team but who partnered closely with it also saw its leader as the key element: “Pardew was for me the most impressive and important part of the thing.”⁵⁶⁷ MPRI leaders doubted “you could have found a better guy.”⁵⁶⁸

Pardew’s leadership style was traditional; top-down and directive, but with a lot of collegiality. While all members agree that Pardew made all the major decisions and directed task force activities, they also agree he did it collaboratively. For example, Johnson notes that although Pardew would make his own decisions and not always follow advice, “he wanted to hear everyone’s viewpoints; his

style was not 'dominating' but very 'collegial.'⁵⁶⁹ McFarren agrees Pardew was "collaborative"; "He had a good idea of what he wanted to do but took so much feedback."⁵⁷⁰

Some members believe Pardew exercised a "coaching style" of leadership because he was so open to hearing member views and encouraging initiative ("He didn't micromanage," says Rabasa⁵⁷¹). Franklin concluded, "Jim was more of a coaching leader"; he was an "inspirational person to work for and, while he listened carefully to everything we had to say, he always made the decision as to which way we would go on any given issue."⁵⁷² Another periodic observer also concludes the leader had "kind of a coaching style. . . . Pardew and Glassman would explain the context and how I could help and I would work within that. It was not top-down directive, nor 'team' decision making; you could influence things but once Pardew decided, that was it; it was done."⁵⁷³ Sawoski concurs, noting Pardew delegated well but also "listened well" and "was willing to change his mind."⁵⁷⁴ For these reasons Pardew's traditional leadership seemed collaborative to his subordinates.

In further explaining what made Pardew such an effective traditional leader, task force members and Train and Equip partners identify several attributes that were critical to success. Sawoski considered Pardew "one of the smartest and most politically astute people I ever met."⁵⁷⁵ He also was well connected with senior leaders at the time. As McFarren notes, "he had the juice,"⁵⁷⁶ and the other members appreciated the value of Pardew's connections. Klekas had seen him interact with Secretary of Defense Perry and knew the Secretary was "our most important champion [and] had enormous respect for Pardew."⁵⁷⁷ Pardew's connections to the upper echelons of the Clinton administration were also well understood by MPRI and the Bosnians. Bosniak Deputy Minister of Defense Sakib Mahmuljin's memory of Pardew was that "he had good intentions" but also "real force." He adds that Minister of Defense Ante Jelavic "thought the United States was behind him."⁵⁷⁸ It was clear to all concerned that Pardew was in control and representing the Clinton administration on Train and Equip.

Pardew was well regarded by Perry and other leaders in part because of his strategic vision. Lamb notes that before he ever met Pardew he was acquainted with his reputation as a keen strategic observer of complex security problems. Pardew's missives back to his superiors in the Pentagon while traveling in the Balkans with Holbrooke were widely admired for their succinct and trenchant analysis of the current situation. He continued the habit of supplying leaders with exceptionally clear, forceful reports from the field while managing the Train and Equip Program. His penetrating assessments of political developments in Bosnia and the Balkans more broadly, and his reports following meetings with Bosnian, Croat, and Serb leaders were pithy, opinionated, persuasive, and written in earthy and easily comprehended prose.

President Clinton holds impromptu meeting with Bosnia negotiating team after memorial service for three U.S. negotiators who died while traveling to Sarajevo. Ambassador Pardew in upper right corner next to Madeline Albright, August 21, 1995 (William J. Clinton Presidential Library)

Klekas accompanied Pardew on his trips to Bosnia and Croatia, where one of his main duties was drafting cables conveying Pardew's views to Washington. He recalls that the first draft he did for Pardew was based on the normal Department of State format: a summary, followed by the detailed body, and a concluding comment. "As I handed it to Jim he recoiled. 'What's this?' he asked. I explained the format. He replied, 'John, the summary *is* the cable.'"⁵⁷⁹ Pardew's communications reflected his thinking: clear, concise, and always aimed at the heart of the matter. They were interesting to read and influential in the upper echelons of the Clinton administration.⁵⁸⁰

Lamb sees a connection between Pardew's clear-eyed strategic assessments and his penchant for delegating details. Pardew "did not seem to care how you got things done as long as you got them done," but he "really excelled at thinking strategically about the program. . . . I grew to respect him greatly for the fact that he kept his eye on the big picture."⁵⁸¹ As a result, Pardew always "had a really good sense of what he wanted to do."⁵⁸² He also had a solid sense of what could be done and how. His incisive strategic assessments were routinely on display in his leadership of Train and Equip. He made difficult decisions, such as refusing to pay military salaries, look simple in retrospect, but at the time he was under pressure from knowledgeable

experts to give in, which he refused to do. Other decisions, such as firing Cengic, were inherently high risk, but Pardew always emerged from them with his choices validated.

Klekas notes, for example, that Pardew made several “strategic decisions” where he “put the very survival of the [Train and Equip] program at stake. . . . He was willing to risk everything by threatening to terminate [the program] in order to foster true unity within the Bosniak-Croat Federation and to preserve the integrity and effectiveness of the program over the long term.”⁵⁸³ Lamb agrees, saying he always kept his eye on his goals and the key factors affecting his ability to achieve them. Even in the intra-task force debates, his views were proven correct repeatedly. Some decisions did not work out well. For example, the Ankara conference was a bust and Pardew chastises himself for not asking certain countries for more funds, believing after the fact that they likely would have given more.⁵⁸⁴ But as Franklin notes, whether he agreed or disagreed with his colleagues, “Almost always, he was right.”⁵⁸⁵

Another attribute was toughness. Pardew was both tough-minded and forceful in his behavior. Lamb found him “unsentimental,” which he thought “helped him see things clearly” and make tough calls correctly. In daily meetings Pardew was relaxed, informal, and low-key with his subordinates, but if he was concerned about something he could issue instructions that left no room for misinterpretation.⁵⁸⁶ He could be equally hard-edged with others, always giving priority to program success. One of many examples was his treatment of the Bosnian military attaché to the United States, Selmo Cikotic. When Cikotic was smeared with allegations of war crimes, Pardew cut him off completely, refusing to take his calls protesting his innocence, and agreed to his removal from the Army Command and General Staff College at Fort Leavenworth. Even though Pardew was quite fond of Cikotic, and found the allegations hard to believe, he immediately gave priority to protecting the program’s reputation.⁵⁸⁷ Pardew knew he would only tarnish the program if he tried to interfere with the war crimes process. Train and Equip was promoting a new generation of Bosnian military leaders, and it could not afford to have it alleged that extremists or war criminals from any ethnic group were associated with the program.

Another example of toughness was Pardew’s reaction to Cengic’s last-ditch charm offensive in hopes of forestalling the demand that he be replaced. Pardew listened as Cengic was exceptionally cordial and cooperative and then, after telling a subordinate to handle the rest of the meeting, got up and walked out as if Cengic were a leper. The cold message to everyone was clear. Later Izetbegovic agreed to remove Cengic but only if the Bosnian Croat Minister of Defense Vladimir Soljic was also removed. Izetbegovic wanted it to appear as if both failed in their duties rather than singling out the Bosniak. Pardew, receiving the call in the Holiday Inn

lobby, immediately acceded. Hanging up, he said, “Two for the price of one. I love it when a plan comes together.”⁵⁸⁸ He did not hesitate or ask for guidance. He knew the removal of Soljic served the purpose of eliminating Cengic and also sending the signal that the United States wanted more dedicated, forward-looking leaders in place.

Pardew was “all business” when focused on a program objective, particularly when dealing with those outside the task force. Because his “wrath” rained down on both parties of the Federation in a nondiscriminatory manner, it seemed to have the effect of drawing them closer together. His pressure on the two ethnic groups to cooperate became a subject of public commentary (see cartoon) and even humor. On one trip, task force members heard from MPRI that Bosniak and Croat generals were making jokes about Pardew’s torrential wrath during his monthly visits.⁵⁸⁹ The earthy humor was consistent with the general ambiance in post-war Sarajevo, which was infused by the lack of illusions among those who had risen to the top of their demanding profession during a prolonged and gruesome war.

Pardew fit that environment. His “down-to-earth personality worked well.”⁵⁹⁰ He was unpretentious and quick to laugh while also projecting a “no nonsense” demeanor. On rare occasions, when it was clear he was being given a sales pitch rather than honest information, he abruptly left meetings with Federation military leaders. A task force member recalls he “spoke his mind” and “had tremendous credibility.” He “managed difficult people” in Bosnia well. As Rabasa concludes, “A Department of State guy, being nonconfrontational, would not have worked well in that context. Pardew’s tirades in Bosnia were effective.”⁵⁹¹ He was equally tough on anyone standing in the way of the program. He publicly identified problems and even problematic people including British generals who were zealously interfering with the program. “The way he fought with SFOR” to protect the program impressed Train and Equip supporters. “He was steadfast. . . . It was impressive; much more than I ever expected to see out of a government employee.”⁵⁹²

Pardew was as demanding on himself as he was with others. He took full responsibility for the program. He never blamed subordinates when something went wrong: “I don’t ever remember him coming to us and saying you did that wrong; I’m unhappy.”⁵⁹³ Pardew believed, “If a person takes on a job like Train and Equip, they should take responsibility for its success.”⁵⁹⁴ Glassman notes that after 30 years in State and another 10 in the private sector, he had little presumption of leadership left, “but Jim Pardew still thought he was a leader!”⁵⁹⁵ Lamb agrees: Pardew was a “no excuses” leader. When Klekas first arrived on the task force and discussed bureaucratic resistance to the program in State and Defense, Pardew said, “If they didn’t want us to succeed they shouldn’t have put me in charge of the program.” Guillermo Christensen

notes that Pardew “knew from the beginning that he was facing some serious odds . . . but that did not translate into thinking he couldn’t get things done.”⁵⁹⁶ Pardew didn’t like to fail,⁵⁹⁷ and his conviction that he could succeed was “an attitude he pushed down to the rest of the team.”⁵⁹⁸

Thinking back on the Train and Equip experience, Pardew downplays his leadership. He said the task force had capable people, a clear vision, and adequate resources. He thought with all that, “you would have to be a pretty poor leader” to fail.⁵⁹⁹ Everyone else on the team disagreed. They believed Pardew’s leadership was critical. With regard to Pardew’s impact on Federation unity, Franklin cited “intense resistance and distrust. . . . Jim had to cajole, threaten, entice, encourage, push them forward and sometimes pull them back. His keen

insight, resourcefulness, and commitment to the cause were single-handedly responsible for much of the success of this.”⁶⁰⁰ Other members felt Pardew’s leadership was just as critical for other task force achievements. He was, Glassman noted, “a great, talented leader; the U.S. Government needs him. . . .”⁶⁰¹

Performance Assessment

*The Bosnian military today is considered a leading influence in the country’s unification and push toward NATO membership. That’s a remarkable journey.*⁶⁰²

—Derek Chollet, 2013

With the benefit of the task force’s history and a detailed assessment of its primary performance factors, we can now assess the operational and strategic significance of its performance and provide a net explanation for that. First, however, it is necessary to establish performance criteria. Unlike many small interagency groups, the Train and Equip Task Force was expected to do much more than just share information or facilitate cooperation among departments and agencies. As Glassman notes, the task force was not just a policymaking body; it was expected to achieve real results in the field.⁶⁰³ In this respect its performance can be assessed on the basis of output—or whether it achieved desired outcomes.

Output and Outcomes

In terms of output, the history of the task force demonstrates it was highly productive. Space constraints preclude enumerating all its administrative, technical, and political achievements, but for every major milestone covered in its history, such as obtaining interest for donor funds and securing \$27 million from the Sultan of Brunei, the task force racked up many smaller successes. For example, it arranged for duty-free shipping through Croatia; secured agreement on symbols to unify Federation forces (not just rank, insignia, and flags, but language, license plates, and uniforms); obtained office space and housing for Bosnian Croats so they could work in Sarajevo; acquired liability insurance for Bosnian helicopter training in Germany; provided technical assistance to set up a Chaplains Corps for the Bosnian Federation military; secured multiple SFOR clearances for delivery but also storage of equipment shipments; countered spurious disinformation and sensationalized reporting on alleged improprieties; received certification that MPRI was not violating Dayton provisions for exclusion of “foreign forces;” arranged licensing of MILES equipment to the Bosnians; etc. Some of these achievements were unremarkable, but many were considered unlikely and exceptional at the time. The Train and

Equip Program output was also notable for its transparency and accountability. No money or equipment was ever diverted away, and the program never violated other provisions of the Dayton Accords. If there had been any major flare-ups between Bosnian Croats and Bosniaks or scandals to sully the program, the effort could have been sidetracked or even collapsed. Instead, it rapidly picked up momentum (see figure 7).

Task force output did not guarantee desired outcomes. From the team's point of view, the minimally successful outcome for its effort was fulfilling the President's promise to provide enough training and equipment that Bosnian Federation forces could defend themselves from Serbian attacks.⁶⁰⁴ By this criterion the program could only be considered a success if it achieved its most immediate operational goal of creating a rough military balance in Bosnia. Additional goals were ridding the country of foreign extremists, strengthening the Federation, and orienting formerly communist Bosnia toward the West.

The most immediate goal of securing a military balance so the Bosnian Federation could defend itself was widely assessed as a success and, as noted earlier, almost too successful. It is also important to recall that the program was supposed to provide a rough balance between the Federation and the Republika Srpska, not between the Federation and the Former Republic of Yugoslavia. Observers, particularly in the press, sometimes missed this point.⁶⁰⁵ NATO forces would deter conflict among regional powers. The point of the Train and Equip Program was local military stability in Bosnia, which reduced demands on the program and also meant it was unlikely to precipitate a regional conflict because it was not a threat to Croatia, Serbia proper, or other regional powers. It was intended to deter the Bosnian Serbs, and since the Serbs never attacked, there is a plausible *prima facie* case to be made that the program was a successful deterrent.

The major counterpoint to this view is that the presence of international forces in the country constrained the Bosnian Serbs (and Bosniaks for that matter) and would have done that without the program. Perceptions of the deterrence value of Train and Equip and international peacekeeping forces, respectively, shifted over time. As years of peace went by, the value of Train and Equip seemed to diminish and the deterrence value ascribed to peacekeeping forces grew. For example, 5 years after the Dayton Accords a Center for Defense Information assessment noted, "On one level, Train and Equip was a success" inasmuch as "Bosniak troops have not been challenged by any of the other armed factions in the republic." But it continues, "This is mostly due to the deterrent effect of IFOR/SFOR forces in the area."⁶⁰⁶

Five years earlier, however, the perceived deterrence value of Train and Equip and international peacekeeping forces was judged much differently. To begin with, no one had much

confidence that peacekeeping forces would easily deter another round of fighting. On the contrary, virtually no one assumed the presence of international peacekeeping forces guaranteed peace. The fear of renewed hostilities was so great it limited the initial IFOR mandate to 1 year and also led the Pentagon to refuse any clause in the draft peace accords that had IFOR playing an enforcement role for arms control or other military limitations.⁶⁰⁷ If the peace had been secure rather than fragile, the program could have been overlooked as a minor irritant needed to reassure understandably nervous Bosniaks. Instead, it was “the most controversial of all programs for Bosnia”⁶⁰⁸ precisely because the situation was considered volatile despite the presence of international peacekeeping forces.

Because peacekeepers stayed and the Serbs never attacked and tested Federation defenses, the practical military impact of the program remains speculative. However, the broad consensus is that it made Federation forces capable of defending themselves. Even the outside observers who were most critical of the program for being underfunded and anemic ultimately

agreed that it made the Federation military forces “prickly,”⁶⁰⁹ i.e., sufficiently strong to deter the Republika Srpska. Inside Bosnia both Bosnian Croats and Bosniaks believe the program compensated for Serbian military advantages.

Military leaders such as Vahid Karavelic, one of the most respected Bosniak generals and one of the Bosniaks’ few former Yugoslav army officers, believe the Federation’s army was “quite improved compared to Republika Srpska” as a consequence of Train and Equip.⁶¹⁰ Esad Pelko, another former military leader who participated in the program, agreed, asserting that by the mid-2000s the small Federation Army was one of the best in the region: “We exercised with the new equipment, and it was clear that we were ready.”⁶¹¹ When SFOR held competitions, the Federation military would take the honors. In fact, many Bosnians believe the Federation Army of 1997 was more capable and ready than the current Bosnian military, in part because it was better trained.

Bosnian Serb behavior supports the assessment that Train and Equip strengthened Federation military capabilities sufficiently to deter the Bosnian Serbs. They fought the program through arms control venues, making political arguments about the state of the military “balance,”⁶¹² but from 1997 on they began to realize their forces were losing ground as Train and Equip matured.⁶¹³ Ironically, some speculate that sensational media reports on Train and Equip delivery of heavy weapons,⁶¹⁴ but especially about unit training at Livno that had to be monitored by SFOR because of its scale and sophistication, intimidated the Serbs.⁶¹⁵ So did growing cooperation between Bosniaks and Bosnian Croats, which was increasingly perceived as the Federation’s “advantage in integration.”⁶¹⁶

Like many other observers, the Serbs initially did not believe the two sides of the Federation could forge a working relationship. The Serbs were well informed on political progress inside the Federation military, however, and surprised when they saw Federation unity improving and Federation forces growing stronger as a result. As the program picked up momentum, they had to reassess its significance and recognize that it gave them greater incentives to avoid hostilities. A Federation military leader who participated in the joint military commission that monitored implementation of the Dayton agreement under IFOR supervision says the Republika Srpska representatives expressed real fear of MPRI and the improving Federation Army. He believes fear of the Federation Army was a primary motivation for the Republika Srpska to join the unified Bosnian military.⁶¹⁷ Locher’s assessment is more reserved. He notes that in 2003 the Serbs “saw themselves as being roughly equal to the Federation Army” but “were somewhat envious of the training and equipment the Federation had received.”⁶¹⁸ It has also been argued that the actual military capability delivered under the program was not

as influential in changing Bosnian Serb attitudes as the psychological impact of a major U.S. program being implemented with alacrity, which encouraged the Serbs to participate in a unified military structure rather than watching their advantages continue to erode.⁶¹⁹

Opinions differ on how difficult it was to get the Serbs to the negotiating table for further defense reforms. Despite reasons for integrating, they clearly deplored the thought of merging their forces with those of former enemies. Some insist they were conflicted and the United States “had to show its teeth” to get them to budge.⁶²⁰ Others note that the Bosnian Serbs had multiple reasons for joining the unified Bosnian military.⁶²¹ They saw that international troops were going to stay, integration was a path to better training and access to the world’s best military,⁶²² maintaining a large army was expensive, and they could offset the erosion of their comparative military advantages if they focused more on their police forces.⁶²³ Integrating their forces reduced political pressure, gave the Serbs a voice in downsizing the increasingly powerful Federation military forces, and allowed them to pursue security competition by strengthening their police forces, which were less monitored and subject to international controls.⁶²⁴ Whatever the precise Serb calculations, it is clear that the program was a strong incentive for the Bosnian Serbs to reassess their options.

Thus it became clear to most international and local observers that the Train and Equip Program achieved its operational objective of a rough Bosnian military balance. The question for many then shifted from whether the program would deter the Serbs to whether it would embolden the Bosniaks to the point they would attack after the peacekeepers left. The CIA was particularly worried that the program was overshooting the mark. While the intentions of the Bosniaks cannot be determined with certainty, there were several good reasons why the program was unlikely to stimulate them to strike.

The Federation Army was “by no means capable of mounting ‘combined operations’ at the battalion level,”⁶²⁵ which would be needed to conduct a successful offensive against the Serbs. They were not projected to have that capability for years.⁶²⁶ Another constraint was the fact that the program stored heavy weapons on Bosniak territory and ammunition in Croat areas, and the Bosniaks knew they had an unreliable partner in the Bosnian Croats. More importantly, and in some measure because of Train and Equip, Izetbegovic had linked the security of Bosnia firmly to the United States and Europe. He could not afford to alienate those parties by reinitiating hostilities. One reason the Bosniaks were so beholden to larger parties for their security was that the Train and Equip Program ramped down as quickly as it ramped up.

Both the equipment and training the program provided were designed to make a quick impact on the military balance but ultimately were of ephemeral value. Federation military leaders

initially focused intently on the equipment and its import.⁶²⁷ They were convinced they only needed equipment to rectify Serb advantages.⁶²⁸ The common view was that they had fought bravely and there was not much that training could do for them, which, some mused in retrospect, demonstrated how little they actually knew about military operations at the time.⁶²⁹ Reflecting these attitudes, General Delic famously opined early on that he only wanted the equipment and didn't need the training.⁶³⁰ Indeed, the Bosnians in general were dismissive of the training program, which they considered a "jobs program" for U.S. citizens.⁶³¹ Yet within a year he admitted he was mistaken,⁶³² and soon most of the Bosnian generals agreed. Within 2 years the view that only the equipment mattered disappeared and was largely replaced by its polar opposite for two reasons: Federation leaders came to realize the equipment would not be as valuable as originally expected and the training would be of far greater value than previously believed.

Federation military leaders were disappointed with the equipment they received. Some began with unrealistic expectations of being outfitted across the board to U.S. (or NATO) military standards, and others simply expected a larger program (\$800–\$900 million).⁶³³ The first air shipment of rifles still in their original packing and other equipment was impressive, but as the Bosnians began to see the refurbished equipment that followed and understand the limits of donor funds, they were disillusioned. Some "began to doubt the sincerity of the United States, which undermined the U.S. reputation."⁶³⁴ The equipment was "not at the level of a NATO country" said one general.⁶³⁵ "To be honest," said another, "the equipment wasn't that great; the tanks and armored personnel carriers were not so good."⁶³⁶ The tanks and personnel carriers were particularly disappointing because they were "too old and too heavy"⁶³⁷ and could not navigate Bosnian roads and bridges well.⁶³⁸

Expectations dropped as it became clear the program was too small to fully outfit the forces with state-of-the-art equipment. Disappointment followed and was eventually replaced with a sober assessment of relative value. The Bosnians realized that although much of the equipment was not new, it was "of a higher quality" than the Serbs possessed. If fighting had resumed soon after the Dayton Accords, the equipping portion of the program "would have been more important."⁶³⁹ But as training got under way, the value of the equipment and training merged "like hand and glove," with each enhancing the other as soldiers trained with the new equipment.⁶⁴⁰ As one participant notes in retrospect, "We did need equipment since ours was old and outdated," but "the training was better" because it made the equipment more valuable.⁶⁴¹ Thus in the early years of the program when the equipment was new (or newly refurbished), operational, and integrated into Federation forces with supporting maintenance and training (with the help of MPRI), it was a potent contribution to Federation military capability and rectified the

imbalance between the two forces in heavy weapons.⁶⁴² However, as more time passed, it also became apparent that it would be difficult to maintain the older, diverse equipment provided. When no follow-on packages for sustainment and modernization were authorized (admittedly in part because the CIA and others argued so vehemently that the program was upsetting the military balance),⁶⁴³ the readiness of the equipment declined significantly. Today, almost all the gear provided under the program is gone, abandoned, or unusable.

Consequently, General Delic and most other Federation military leaders, both Bosnian Croat and Bosniak and increasingly the Serbs and other Balkan military leaders, came to realize that the MPRI training provided by the program was more important for net military capability than the equipment. Looking back, Federation military leaders candidly admit they desperately needed expertise and professionalism, adding “We didn’t have many professionals in the field.”⁶⁴⁴ Some thought the training at the lowest levels was the most useful⁶⁴⁵ and training at the Ministry of Defense and Joint Staff level could have been better,⁶⁴⁶ while others argued that the training at the higher level had the “biggest political impact.”⁶⁴⁷ But almost all agree the training was more important than the equipment⁶⁴⁸ and the Federation needed and wanted “to get the most out of it.”⁶⁴⁹ This view took time to settle in, but as Federation forces “really grew in professionalism and took pride in it,”⁶⁵⁰ they came to value the training.

While Federation military leaders grew to appreciate the training, they also realized over time that, like the equipment, its impact would be ephemeral. Federation forces had difficulty absorbing the training quickly because it was alien to their previous experience and doctrine.⁶⁵¹ Moreover, the skills taught were perishable and had to be sustained, but limited funding following the height of the Train and Equip Program saw a large withdrawal of MPRI trainers. Finally, many of those who were trained by MPRI left the force as it was gradually reduced. That was not only true for the rank and file, but for many of the leaders with wartime experience who were destined for retirement (and even for most of those who went for IMET training as well⁶⁵²). As one participant ruefully noted, the program “trained people at the end of their careers, which didn’t make sense.”⁶⁵³

Pardew agrees: “We spent a lot of money up front but [the recipients] didn’t have the capacity to utilize or exploit it.” In other words, a large portion of the program’s scarce resources was paid for comprehensive MPRI training in the first year or so, even though Federation forces could not usefully absorb the training and many who received it would be demobilized.⁶⁵⁴ By one assessment, of 22,000 Federation Army personnel trained, only about 5,000 remain in the army today.⁶⁵⁵ General Budimir, the senior Bosnian Croat officer and current president of the Federation, now believes it was “clear from the beginning that only a small number of soldiers

would remain and we should focus on them.”⁶⁵⁶ In the abstract it would have been more economical to ramp up training slowly, not only so it could have been better absorbed, but to concentrate the bulk of it on those remaining after demobilization. The program then could have made a more efficient contribution to transforming Federation forces from a large volunteer army into a smaller, professional force.

This critique benefits too much from hindsight, however. No one could guarantee the peace would hold at the time. Renewed fighting around flashpoints such as Brcko was a constant concern in the immediate aftermath of Dayton, when IFOR’s initial 1-year mandate compelled Train and Equip to produce quick results. Early planning asserted the need for the Federation to have “enhanced its capability to defend its territory against Bosnian Serb aggression by 31 December 1996.”⁶⁵⁷ Even after the mandate for NATO forces was extended, it was not clear how long it would last. In March 1997, a couple of months after his confirmation, Secretary of Defense William Cohen said en route to Bosnia that U.S. forces would be leaving the following year. He asked rhetorically, “Are they going to go back to slaughtering each other? That’s going to be up to them.”⁶⁵⁸ In May 1997, NATO forces had to intervene to prevent Bosnian Serb police controlled by hardliner Radovan Karadzic from killing the more moderate and democratically elected Bosnian Serb President Biljana Plavsic. Such events and the uncertainty of the U.S. commitment underscored the fragility of the peace and the need for a Train and Equip Program frontloaded for quick results. Gross inefficiency was one of the major disadvantages associated with the urgency to achieve fast results.

In addition to the uncertain security environment, there were political reasons for frontloading the training. A rapid and large training effort had more immediate deterrent effects and assisted Federation politicians with downsizing their wartime forces. Reducing the size of Bosnian defense forces was a sensitive political issue in the immediate aftermath of the war. International and domestic representatives alike knew large wartime forces were unaffordable and unsustainable if peace held.⁶⁵⁹ However, civilians traumatized by atrocities wanted security at any price, so reductions in military forces were unpopular.⁶⁶⁰ Veterans were also reluctant to return to a civilian economy where job prospects were bleak. They wanted severance packages the economically crippled government could not meet. Political leaders thus worried about popular resentment as well as the possibility of rioting veterans if they made quick and large reductions.⁶⁶¹

In the face of these political difficulties, the Train and Equip Program made downsizing the Federation military more palatable. Bosnian military leaders believe the program enabled a dramatic reduction in forces in multiple ways. As one leader noted, the Federation needed a “visible” U.S. engagement because the situation was so fragile. Equipment from the United

States, which was considered “the only relevant player,” reinforced the perception of a political link to the “powerful, determined, and committed”⁶⁶² United States. The view that Washington “would not let this program fail” had a “big psychological impact.”⁶⁶³ Train and Equip gave the Federation population confidence their security was safeguarded, which made it easier to resist neonationalism as well as politicians who wanted war by other means.⁶⁶⁴

Other Bosnian sources note the practical value of the program for demobilization. It provided “a rational way” to downsize a Ministry of Defense budget that was more than four times larger than all others.⁶⁶⁵ Still others note that the step-by-step process of downsizing the military under Train and Equip defused the anger and made the sensitive process of force reductions possible.⁶⁶⁶ Along with the reassuring presence of international peacekeeping forces, the psychological, political, and military impact of Train and Equip allowed Federation politicians to reassure their constituents while agreeing to a more than 75 percent reduction in forces from a wartime high of over 200,000 to fewer than 45,000 within 2 years of the program’s implementation.⁶⁶⁷

The program also gave the Bosniaks and Bosnian Croats positive reasons for agreeing to more unity, beginning with the equipment, which held out the prospect of greater military capability for both Federation parties. As one participant said in retrospect, the new equipment helped stimulate cooperation within the Federation. It was an immediate concern of the generals, who focused on it much like children do toys: “We played with it and came together—it occupied us.”⁶⁶⁸ Similarly, MPRI’s training also facilitated Federation cooperation. Its diplomacy defused early tensions and its personnel exuded the professionalism associated with American military norms the Bosnians wanted to emulate.⁶⁶⁹ MPRI personnel modeled a baseline of professional comportment and promoted “ethnicity neutral” training standards that facilitated cooperation across Federation forces.⁶⁷⁰ The company translated over 150 unclassified NATO (and when those were not available, U.S.⁶⁷¹) manuals and doctrinal publications at all levels of instruction.⁶⁷² These training standards were seen as a possible gateway to entry into the Alliance. As Bosnians, who were former communists, studied these materials, they were socialized to Western norms for a professional military and proper civil-military relations. Both Bosniaks and Bosnian Croats wanted a highly capable Western-style military, valued the prospect of greater integration in European institutions, and saw their future tied to the West.⁶⁷³ As both sides came to value the MPRI training, tensions subsided and Federation military personnel began concentrating on getting what they could out of the program while it lasted. Two years into the effort, Pardew would write in an internal assessment that “MPRI is the real instrument of progress on integration. They started with very little, but have made great strides at the lower tactical levels.”⁶⁷⁴

With MPRI doing the hard day-to-day work on the ground, Pardew constantly pushed the Federation military parties toward greater cooperation and insisted on common symbols, closer proximity, and tighter working relationships. This was not accomplished easily. Just getting the basic Defense Law in place took 9 painful months. Also, Bosnian Croats commuted through Bosniak roadblocks to the Ministry of Defense in Sarajevo until Pardew obtained housing for them in Sarajevo. He likewise secured license plates so cars could travel freely between the enclaves along with common insignia and other symbolic and substantial changes that allowed the former antagonists to work together in the same buildings on the same issues with some degree of rapport if not rapprochement. There were many succeeding challenges, but cooperation slowly picked up momentum, particularly among the younger military personnel. Pardew never allowed the Bosnians to settle into a new norm once some painful element of cooperation was achieved. After a period of adjustment, he always insisted on taking the next step.

How deep the reconciliation in the Federation went is debatable. Train and Equip Task Force members believe the program achieved the least success in this area. Pardew's sober assessment in spring 1998 was that "military integration in the Federation is a slow and painful process and is far from complete, although it is significantly better than the situation 2 years ago."⁶⁷⁵ Some Bosnians appreciated the program's contributions to Federation unity while it was underway.⁶⁷⁶ Looking back they are even more charitable. Military leaders now emphasize its political and psychological value. It restored the Federation military and population's confidence they would "survive"⁶⁷⁷ and provided the "crucial" impetus for cooperation by the two sides, which were "forced together" under pressure from Train and Equip.⁶⁷⁸

The Bosnians came to realize the program provided a vehicle to explore and work on the future of the Federation. As one Bosnian military leader notes, there was no plan for the future of the Federation after the war, especially since there were no financial resources to sustain the army.⁶⁷⁹ It was "very motivating" and "a good feeling to know someone wanted to equip and train us to provide a military balance."⁶⁸⁰ It was an even better feeling when it became evident the program was facilitating reconciliation.⁶⁸¹ The "best" thing about the program "was that it brought two sides together" and led to a "tremendous improvement in trust and cooperation."⁶⁸² Another Bosnian participant gives the program a score of "4.5 out of 5" precisely because it drove down ethnic tension between the two militaries, which he believes ceased being a major problem after a couple of years.⁶⁸³ Yet another called the reconciliation between Bosniak and Bosnian Croats "very good, but not perfect"⁶⁸⁴ because it succeeded on

a personal level but led to relatively modest constitutional reforms.⁶⁸⁵ MPRI leaders on the ground who stayed on as advisors for more than a decade saw reconciliation take root within the military but agree more progress was made among military members than politicians.⁶⁸⁶

Another Train and Equip objective was to help orient Bosnia toward the West. Narrowly construed, that meant expelling foreign forces and detaching the Bosniaks from their relationship with Iran. That largely happened. The Train and Equip Program reduced foreign influence in the Federation, which helped remove impediments to reconciliation and integration in Bosnia. Croatia and Serbia, seeing Washington's determination to support Train and Equip, became more inclined to support Bosnian military integration.⁶⁸⁷ Pardew repeatedly prevailed upon Croatia to stop supporting the Bosnian Croats so they would be more willing to work out their future in the Federation, and over time he succeeded. Croatia cut back on its financial support to the Bosnian Croats and pressured them to cooperate with the program,⁶⁸⁸ which was satisfying to the Bosniaks.⁶⁸⁹

Similarly, Pardew was emphatic that the Bosniaks must sever their ties with Islamic radicals, and he forced the dismissal of Cengic to accelerate that process. Train and Equip ended bilateral military assistance programs from friendly Muslim countries to the Bosniaks unless they were extended to both sides of the Federation and acceptable to the Bosnian Croats. As a condition for starting the program, hundreds of Iranian Revolutionary Guards and mujahideen forces were expelled from Bosnia. In later years the Bosnian government continued to cooperate with the United States in identifying and expelling extremists. In October 2001 six Algerians were arrested by the Bosnian police and sent to Guantánamo Bay. In 2007 the government revoked the citizenship of over 420 individuals connected to "foreign forces."⁶⁹⁰ Despite extremist attempts to gain a foothold in the Balkans, Bosnia has not been associated with terrorist attacks on the United States or other civilian targets in Europe and Asia. Close observers have argued that Washington has largely succeeded in thwarting al Qaeda influence in Iraq.⁶⁹¹

Broadly construed, orienting Bosnia toward the West meant imparting Western norms on civil-military relations and forging ties with Western leaders and institutions, which most would conclude is still a work in progress. Some participants in Train and Equip believe this happened, asserting the program proved the Federation could integrate its militaries and professionalize them, which inclined military leaders to be increasingly apolitical.⁶⁹² An International Crisis Group report in December 1997 supported this assessment, observing there was more evidence of cooperation in the Federation Ministry of Defense than in other sectors, and that the program provided transparency for Federation military developments. Because Train and Equip helped Westernize postwar Bosnia, the report concluded it "would be foolish to scrap this asset."⁶⁹³

More ambitious political reforms followed the Train and Equip Program (see figure 8).⁶⁹⁴ Locher, Gregorian, and others who engineered these subsequent reforms deserve great credit, as do the Bosnians themselves. Without detracting from the difficulty and independent effort required to secure each reform advance, it is important to note that Bosnian participants in Train and Equip are virtually unanimous in their belief that the program was a necessary precondition for these later developments.⁶⁹⁵ They believe Train and Equip “served as a role model of where to go” for subsequent defense reform efforts, which in turn helped generate “a new mindset” that facilitated “reconstruction of civil, political, academic and economic society.”⁶⁹⁶

In this respect the political value of the program helped compensate for its shortcomings in size and scope⁶⁹⁷ and the inefficient way it managed its scarce resources.⁶⁹⁸ It was, as one participant noted, “crucial to success even if it wasn’t totally satisfactory to anyone.”⁶⁹⁹ Federation forces needed time to imbibe the new ideas and concepts that bore fruit over the succeeding decade.⁷⁰⁰ Initially Train and Equip “gave us greater negotiating leverage over the Republika Srpska.”⁷⁰¹ Later, it “set the stage”⁷⁰² and was the “foundation”⁷⁰³ for larger defense reform that led to military integration with the Bosnian Serbs: “Like a house, as soon as you have the foundation, the rest will be easier to build.”⁷⁰⁴ Gregorian agrees that one major reason integration worked at the national level was because “it was the Train and Equip model one level up.”⁷⁰⁵ Some even note that the inclusion of the Bosnian Serbs was easier than the original integration of the Bosniaks and Bosnian Croats.⁷⁰⁶ Federation integration demonstrated to the Serbs that it could be done⁷⁰⁷ provided there were common standards and doctrine⁷⁰⁸ and gave them incentives to join the unified Ministry of Defense.⁷⁰⁹ The Bosnian Serbs were not allowed to fully integrate without making concessions including more cooperation on the arrest of war criminals, which further eroded ties with extremists and ultranationalists.

It is beyond the scope of this research to assess the longer-term political significance of the Train and Equip Program fully or attempt to weigh and assess its particular contribution to subsequent progress on reconciliation. The more modest assessment that the program was a necessary first step suffices for our purposes. To demonstrate how true this is we can conduct a “thought experiment” by asking what would have happened if the U.S. Government had abandoned the Train and Equip Program after the Ankara conference, claiming there was no international support. Bosniaks who participated make it clear they would have felt betrayed and would have reinforced their relations with Iran,⁷¹⁰ just as the HVO would have strengthened its ties to Croatia. The public would have felt less secure, and those exerting foreign influence and undermining reconciliation would have been more influential. Wartime competition would have been carried on by other means. The Federation would have been ignored,

Figure 8. Program Transition and Defense Reform

or it would have collapsed, as many predicted would happen even with the program. Without progress in the Federation, the Serbs would have had little incentive for integration. Violence over contested territory such as Brcko would have been more likely. If fighting had resumed, peacekeepers would have had to impose martial law, freezing in place the injustices wrought by ethnic cleansing during the war. Progress toward a unified Bosnia would have stalled and likely been reversed.

Even if we leave the merits of Train and Equip's strategic impact to later historians and other experts on Bosnian politics and culture, there is no doubt the program was successful in achieving its operational goals. In less than 2 years, the task force rectified the military imbalance between Bosnian Serb and Federation forces, using only about half of the total resources originally envisioned. The program reassured the Federation and eliminated any misconceptions the Serbs might have had about the merits of renewing hostilities as well as inclining the former warring parties to treat one another as equals. Just as importantly, the

program did not embolden the Federation to initiate hostilities. Federation military leaders (with help from MPRI⁷¹¹) came to realize Train and Equip was not going to provide them with major advantages over the Bosnian Serbs. If Federation leaders ever harbored illusions about renewing hostilities, those ambitions diminished as the program's limited scope and duration became clear. Thus both objectively in terms of actual military capability and subjectively in terms of perceived relative capability, the program did not overshoot its mark as so many worried. On the contrary, it diminished the influence of extremists and foreign meddling in Bosnian politics and moved the political mainstream to favor greater integration.

The task force can be criticized for only obtaining about half of the estimated resources necessary to implement the program and for underestimating how much the United States could have asked for and obtained from countries that eventually provided cash donations. But considering the program accomplished its objectives, the fact that it was underfunded actually serves as a testimony to the efficiency and creativity of the task force. In short the team stands out as an unusually successful interagency small group effort that was able to accomplish its goals while overcoming difficult technical, bureaucratic, and political impediments.

Task Force Performance Explanation

Given task force productivity, we need to identify the factors that explain how a group of seven individuals from multiple departments and agencies performed so well. Three of the ten performance variables examined previously for their ability to explain the behavior and success of the Train and Equip Task Force stand out: purpose, empowerment, and leadership. In explaining the success of the team, Pardew emphasizes the importance of its empowerment while the other members emphasize his leadership. The team's strong sense of purpose is agreed upon but largely taken for granted. The argument here is that all three factors, like the legs on a three-legged stool, are mutually supporting and critical.

If there is a first among equals, Pardew is probably correct in emphasizing the empowerment of the task force. The group had presumptive authority to pursue its mission, which was approved by senior authorities in the U.S. Government including the President and Congress. For the first year at least, no one directly challenged the task force's mandate. Although the team encountered bureaucratic resistance, and some only cooperated because it was seen as acting on Presidentially delegated authority, essential cooperation was forthcoming. State cooperated on donor fund management and Defense supported the team's execution of drawdown authority well enough to conduct the program. Without the presumption of Presidentially delegated authority to pursue the mission, Pardew's team would

not have been allowed to roam freely throughout the Balkans and elsewhere negotiating deals for weapons and their delivery.

In addition the provision of resources by Congress and the intervention by the White House to secure donations empowered the task force. Many small interagency groups run aground when their parent organizations try not to get stuck with the tab to pay for their activities, but the Train and Equip team had funding set aside, which greatly facilitated its credibility and freedom. It did not have to get the approval of parent government organizations to spend resources, and that allowed quick and creative resource management.

Pardew argues that any leader blessed with such empowerment should be able to succeed. All of his members disagree and consider his leadership exceptional and essential. The truth probably lies in between. Anyone assigned the task probably would have executed a portion of the program in some form, but it is difficult to imagine another leader approaching the level of success Pardew engineered. In fact, under different management, the program could have been sidetracked on any number of issues. It could have ground to a halt after Ankara, over intransigence on the Defense Law by politicians, as a result of stubborn resistance from Bosnian military leaders, by State abusing the program for leverage on minor issues, through frittering away resources on lesser military capabilities, by poor resource management, through lack of accountability, or because of a scandal involving foreign forces. Navigating these minefields required someone who thoroughly knew the Balkans, the U.S. Government, and military matters, possessed a clear strategic mindset and great political acumen, and was willing to risk a lot if not everything at the right moments.

Among those with experience at a high level in the U.S. national security system, only a few knew the Balkans like Pardew. For years he had monitored its leaders, the respective military forces, and their history, and he knew the Bosnian conflict at the tactical and strategic level as well as all the major U.S. players directly involved in making and executing U.S. policy for Bosnia in the Clinton administration. Among the few who might lay claim to something close to Pardew's level of expertise, it is doubtful that any had his combination of political acumen, tough-mindedness, management drive, and will to succeed. In short there were good reasons why he was hand picked for the mission, and he proved that his superiors were wise in their choice. He made the absolute most of the empowerment he was given, milking everything possible from his relatively modest funds and evoking his independent authority freely. He may have been considered an "out-of-control" renegade by a few U.S. officials who were assigned other Dayton tasks, but the highest authorities in the administration almost always backed him up when he was challenged.⁷¹²

The third variable, purpose, is noted by task force members, but its significance is perhaps underappreciated. Pardew notes that it was important to have “a strong team unified around a central goal.” Certainly the lack of ambiguity about what was supposed to be achieved helped focus the team’s energy, making it more productive. Equally important, the group interpreted its clear mandate in a sweeping manner, assuming responsibility to make policy, strategy, and plans and then execute them and monitor the results. Taking responsibility for end-to-end management of the entire program and holding itself accountable for achieving preferred outcomes inclined the task force to take action. Here its sense of purpose intersects with Pardew’s leadership and the way the group was empowered. Having been granted unusual authority and resources to accomplish a clearly defined goal, the members simply assumed they would be held accountable for carrying out their mission. That was particularly the case for Pardew. His leadership style was to take total responsibility for achieving results. Whenever political and bureaucratic difficulties emerged, he made clear his intention to solve the problems. If it were beyond the power of the task force to resolve a particular issue, Pardew would take it upon himself to solicit and secure the necessary support. The rest of the team soon adopted that demeanor, taking personal responsibility for achieving results in their assigned tasks.

Other members also note that their unified purpose contributed to harmonious relations. They believed their mission made sense both for pragmatic and moral reasons. They believed order would be strengthened by a military balance so the Bosnians could defend themselves if the peace broke down. Most members were passionate about the right to self-defense, which might seem theatrical after 20 years of relative calm but was heartfelt then (see textbox on Americans and ethnic conflict). In one iconic conversation, members wondered whether the results they were achieving reduced ethnic tensions. They consoled themselves with the observation that, “At least Train and Equip ensured the Bosnians would not have to stand by while fellow citizens were marched off to the woods to be shot.”⁷¹³ The clear mission and deep commitment allowed the group to expend more time and energy finding solutions and getting things done than debating what should be done.

The importance of a strong sense of purpose and commitment to achieving task force objectives can be underscored with another thought experiment. We might consider what the group would have been like if its members had not transferred their loyalty to their mission but instead had seen their primary responsibility as representing their parent organizations’ views on Train and Equip. If that had been the case, the skeptical views of many influential career officials in the CIA, Department of Defense, and Department of State would have been represented within the task force. They thought a military balance either existed or was not important—or

Americans, Ethnic Conflict, and the Federation

The United States has not experienced anything like the internecine violence in Bosnia since the American Civil War, so it was difficult for Americans to understand how fellow citizens could turn on one another in such a vicious way. Public opinion polarized about whether the United States could or should do anything about it. Those supporting U.S. intervention were hopeful about reconciliation in a reunified Bosnia, while those arguing against intervention were pessimistic that a multi-ethnic Bosnia would ever work. U.S. policy chose a middle road between these two positions, insisting intervention was necessary but would be complex and difficult. The most controversial portion of the solution pushed by American policy was the Train and Equip program: “To many people . . . to build up the strength of the Federation [and] to build down the overall military forces in the country seemed contradictory.”¹ Many more were astounded that American policy assumed different ethnic groups could ever coexist in the same army. The iconic cartoon *Blondie* gently poked fun at this notion.

While reconciliation looked unlikely in the immediate aftermath of a civil war, one only has to consult a historical atlas to realize that most countries undergo periods of integration into multiethnic states or disintegration into separate ethnic and national entities. Many forces influence whether states integrate or disintegrate, but it is clear both outcomes are possibilities. Most would agree that any semblance of reconciliation must begin by finding common ground and shared values.² In Bosnia U.S. policy was based on pushing the Federation’s ethnic entities to find greater common ground, and the Train and Equip Program was a major tool for pursuing that objective by promoting cooperation based on the shared desire for greater security.

Only time will tell whether U.S. policy was unrealistic. Twenty years after Dayton, it is clear that reconciliation has not gone nearly far enough. Yet it is equally evident that it has

gone much better than anyone expected at the time. In January 1995 the Federation “existed only on paper, and the friction between the Croats and the Muslims was enormous.”³ Reconciliation was fraught with peril when MPRI began its difficult training mission, which forced both sides into the same rooms together.⁴ In February 1997 Pardew still considered the “poisonous atmosphere”⁵ between the sides to be apparent. Yet over time there was a lessening of tensions and some semblance of cooperation.

The improvement began with forced proximity and then communication. A Bosnian Croat would say many years later his best memories of the program were the loud debates and agreements the two sides reached with MPRI as the moderator; “a healthy process” for all involved.⁶ After a few months, MPRI reported that the generals who had been prepared to draw guns in their first meeting were now drinking and laughing together during seminars on the Dalmatian coast.⁷ By 1998 the special ID cards signed and issued by both Ministers of Defense for different ethnic members to travel in pursuit of the Train and Equip Program were no longer needed. Movement between the enclaves was easy by then.⁸

Eventually the Bosnian Serbs were also integrated into a working relationship on defense and security as well. One Bosniak recalls an experience with integration. After he lectured on the Bosnian military in Germany, a Bosnian Serb army major stood and flatly announced, “We’ll never accept integration.” The Bosniak replied, “One day, we will be one.” Five years later the officers crossed paths again. The Bosnian Serb had risen in the ranks and accepted a position in the newly integrated Bosnian Ministry of Defense where he was the Bosniak’s immediate supervisor.⁹

Bosniaks tend to be more appreciative of the “spirit of togetherness”¹⁰ forged by Train and Equip and subsequent reforms and hopeful that Bosnian unity will continue to strengthen. They point to instances of spontaneous reconciliation and surprising generosity, such as the decision by retired soldiers from the Federation to donate part of their pensions to poverty-stricken Serb counterparts whose own pensions have gone unpaid.¹¹ “High praise to those people,” a Bosnian Serb said. “The wounds [from war] are healing and we have to look forward.”¹² Others remain pessimistic about the long-term prospects for unity. For some, the fighting may be over, but “the Cold War still rages here.”¹³ Bosnian integration is not assured, but neither has it been proven to be an unrealistic hope, as 20 years without war attest.

worse, that trying to establish one would increase the likelihood of conflict. There would have been a lot more pressure on Pardew to accommodate these views, compromise with them, or cut deals to secure cooperation to achieve lesser effects. Instead of keeping a sharp focus on strategic matters, Pardew would have had to wrestle with his own team to get even small matters resolved. He would have been left alone to swim against the tide. Instead the task force was united in purpose and pursued its mission with single-minded determination.

In summary, the task force’s single, coherent, and well-understood purpose was almost as critical to team performance as empowerment and Pardew’s exceptional leadership. All three were mutually reinforcing and often shaped the other seven performance factors. For example, the authority and resources the team commanded facilitated partnerships, as well as making collocation possible. Similarly, the team’s decisionmaking, culture, and penchant for learning from experience were very much a reflection of Pardew’s leadership style and habits.

Two other factors stand out for lesser contributions to task force performance. The support the force received from senior leaders in the Clinton administration and on Capitol Hill was a

critical enabler, but was mostly passive and usually elicited by Pardew. When he engaged senior leaders, they made their support clear, which allowed the team to pursue its purpose. Otherwise they rarely intervened to make task force work easier. The other notable factor is the composition of the group and the members' backgrounds. Most had experience in unconventional political-military affairs, which arguably prepared them to understand their work better. Many also had an iconoclastic bent with a demonstrated penchant for taking risks and working across departmental boundaries in their careers. Pardew generally accepted whoever was made available to the team and no doubt could have succeeded with different members. However, much of the panache and verve for which the team was known might have been lost with personnel who were more wedded to normal career paths.

Conclusion

*If these rather generalized lessons seem like restating the obvious, one need only recall how little we actually practiced them.*⁷¹⁴

—Ambassador Robert Komer,
commenting on organizational lessons from Vietnam

There is a lot to learn from the Train and Equip experience both substantively and organizationally. National security experts routinely advise multidimensional approaches to complex security problems that integrate diplomacy, development, defense, and other elements of national power. In practice Washington finds such integration difficult. It is often criticized for over-reliance on military force and for poorly coordinated and executed foreign interventions. Bosnia is an exception. There the United States combined diverse elements of power, managing the peace process the same way it helped bring the fighting to an end: with an integrated military and diplomatic approach.⁷¹⁵ It was complicated, but effective.⁷¹⁶ In contrast the Europeans adopted one-dimensional approaches that were ineffectual, first relying on diplomacy without military force and later promoting arms control without security assistance.

The Train and Equip Task Force facilitated the integrated approach the United States pursued in Bosnia, proving remarkably adept at implementing its controversial security assistance program. Despite dire predictions to the contrary from European allies and others, the team accomplished what senior U.S. officials hoped for: strengthening U.S. credibility and providing incentives for all parties to preserve the peace and move toward greater integration with the West. Private contracting for military assistance often receives poor reviews,⁷¹⁷ but the unarmed and experienced MPRI personnel in Bosnia performed superbly and were most

responsive to U.S. policy guidance as administered by the Train and Equip Task Force. With MPRI's assistance, a small interagency team and its diverse partners were able to implement an effective security assistance program in challenging circumstances better than would have been possible or advisable through established programs and procedures.

It might seem surprising that there has not been a concerted effort to mine the Train and Equip experience for policy, strategy, and technical insights applicable to the interventions in Afghanistan and Iraq over the past decade.⁷¹⁸ In all these cases the United States wanted to quickly train and equip multiethnic armies despite formidable technical, political, and bureaucratic impediments. Yet there is always the question of how much one situation resembles another and whether solutions that worked well in one case will work again. Leaders want to avoid being trapped by past experience and often believe they need a fresh look at new and emerging problems.

More puzzling is the failure to extract enduring organizational lessons from the task force experience. The team was a low-cost, high-proficiency organization capable of managing a complex and dynamic security problem, which is just what so many of our national security leaders say the country needs. Then-Under Secretary of Defense for Policy Michele Flournoy's 2010 comment on the national security bureaucracy is a case in point:

*We're trying to face 21st century threats with national security processes and tools that were designed for the Cold War, and with a bureaucracy that sometimes seems to have been designed for the Byzantine Empire, which, you will recall, didn't end well. We're still too often rigid when we need to be flexible, clumsy when we need to be agile, slow when we need to be fast, focused on individual agency equities when we need to be focused on the broader whole of government mission.*⁷¹⁹

The Train and Equip Task Force exhibited precisely the attributes Flournoy says are most needed. It was flexible, agile, fast, and focused on the interagency mission it was assigned rather than individual agency equities. Despite its success and high level of accountability, it has not been studied previously by the government or any other entity for its organizational lessons.

This penchant for ignoring notable interagency organizational successes has been explained previously. In his classic analysis of the American experience in Vietnam, Robert Komer attributes poor performance to slow adaptation. The Ambassador built and led a unique hybrid civil-military structure in Vietnam and used it to great effect, albeit too late

to make a decisive difference. He blamed the failure to adapt on “institutional inertia,” the “built-in reluctance of organizations to change preferred ways of functioning,” and a “shocking lack of institutional memory.” He also cited the “notable dearth of systematic analysis of performance, again because of the inherent reluctance of organizations to indulge in self-examination.”⁷²⁰

Twenty years later, Pardew built and led the Task Force for Military Stabilization in the Balkans, which made a major contribution to stabilizing Bosnia. But as proved true following Vietnam, the system jettisoned memory of this successful interagency experience. After creating flexible, agile, proficient interagency organizations, the United States abandoned and forgot the innovative models it fielded rather than institutionalizing them. Perhaps this type of collective amnesia explains the element of truth in Churchill’s famous quip that, “You can always count on Americans to do the right thing—after they’ve tried everything else.”

It would be easier to do the right thing the right way and right away instead of too late to make a difference if the national security system had a systematic means to understand and recall what worked well in the past and why. But as others have noted, knowledge management is a critical deficiency in the U.S. national security system. Some individual departments and agencies have well-established learning systems, but there is no advocate for interagency learning other than the National Security Council staff. To date that staff has been too busy with day-to-day issue management to assume responsibility for improving institutional memory or tackling other broad system management challenges.⁷²¹ As long as that remains the case, interagency successes such as the Train and Equip Program are likely to be as rare in the future as they have been in the past.

⁵⁰ Federal News Service, Senator Majority Leader Bob Dole on CBS-TV Face the Nation, December 3, 1995.

⁵¹ Senator Dennis DeConcini (acting for himself and Senator Joseph Lieberman) introduced a bill on February 10, 1994, recognizing the Bosnian right to self-defense and authorizing the President to transfer \$50 million in defense articles to the government of Bosnia and Herzegovina. The measure passed, and the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1995, provided the \$50 million in drawdown authority with the proviso that the President certified its use would assist the nation in self-defense and that allies would join the military assistance effort. The following year, Congress provided \$100 million in drawdown assistance to Bosnia in the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1996, passed January 4, 1995 for fiscal year 1996. It did not require the participation of allies; only the certification by the President that the military aid "would assist that nation in self-defense and thereby promote the security and stability of the region." Congress extended the drawdown authority in Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1997, so the Train and Equip Program could continue to be executed in fiscal year 1997. For the 1995 legislation, see H.R. 3540 Foreign Operations, Export Financing and Related Programs Appropriations Act, 1997, available at <<http://thomas.loc.gov/cgi-bin/bdquery/z?d104:HR03540:@@D&summ2=m&>>.

⁵² Holbrooke, 320.

⁵³ Train and Equip Task Force members were frequently told this by officials in the Department of State, and to a lesser extent the Department of Defense. Other sources make the same point. General Boyd concludes the Train and Equip Program was "born of political expediency, not military necessity," and Chollet reports that Holbrooke considered the program necessary to woo the Bosnians and appease pressure from Congress to "level the playing field" problematic. Charles G. Boyd, "Making Bosnia Work," *Foreign Affairs* 77, no. 1 (January/February 1998), 48–49; Chollet, 164.

¹⁰³ The final product came out almost a month later.

¹⁰⁴ The paper stated that it was U.S. policy to achieve military stabilization with a combination of arms limitations and provision of training and equipment to Federation forces; argued the United States had to lead the train and equip effort to properly control it; noted the two major goals were to achieve a stable military balance and eliminate radical fundamentalist influence in Bosnia; emphasized that a deterrence and defense capability "must be in place to

the extent possible over the coming year”; established the IDA assessment as the basis for the program’s requirements; and emphasized the program would be executed in an overt fashion. See NSC Memorandum, “Summary of Conclusions for meeting of the NSC Deputies Committee,” Declassified Document C05962614, dated December 28, 1995, Bosnia, Intelligence, and the Clinton Presidency.

¹⁸⁵ According to the U.S. envoy to the Federation, Daniel Serwer, Germany had a longstanding interest in the Federation and was not as skeptical about it as most other West Europeans. He worked closely with German diplomat Michael Steiner, whose “instincts were more American than European—he truly believed a multiethnic Bosnia could be created despite the war.” This alone might explain German willingness to provide the military training. Another observer notes, however, that Holbrooke may have helped secure the German cooperation. After stepping down from his Assistant Secretary of State position, he continued to serve as a senior advisor and Presidential envoy. In this capacity he tried to persuade Europeans, especially the Germans, to support the Federation. See Daniel Serwer, “A Bosnian Federation Memoir,” *Herding Cats: Multiparty Mediation in a Complex World*, ed. Chester A. Crocker, Fen Osler Hampson, and Pamela R. Aall, 550, 585 (Washington, DC: United States Institute of Peace, 1999); Interviewee 35.

¹⁸⁶ McFarren. With task force encouragement, Secretary of State Madeleine Albright sent a cable to Germany’s Minister of Defense, Volker Ruehe, personally thanking him for the assistance once the training was complete. UNCLAS STATE Cable 144714, Subject: Thank you letter to Defense Minister Ruehe, August 7, 1998, in the author’s possession.

³⁴⁵ Blasser.

³⁴⁶ He would periodically call or visit them individually, particularly the Deputy Secretaries of State and Defense, and only appeal to them collectively in a formal meeting when absolutely necessary.

³⁴⁷ Glassman.

³⁴⁸ Lamb, interview.

³⁴⁹ Interviewee 2.

³⁵⁰ Sawoski notes he was sent to do a good job and not protect Department of Defense equities. The other members agreed that was the case. Sawoski.

³⁵¹ Lamb, interview.

³⁵² Glassman.

³⁵³ Blasser.

³⁵⁴ Daniel Serwer, “A Bosnian Federation Memoir,” 583.

³⁵⁵ Lamb, interview.

³⁵⁶ Christensen.

³⁵⁷ Interviewee 2; Pardew journal, February 11, 1996.

³⁵⁸ Interviewee 2.

³⁵⁹ McFarren took pride in keeping his spreadsheets on task force expenditures balanced down to the penny. When a “four cent” discrepancy went unexplained for a while, he worked tirelessly to resolve it. When he finally succeeded, he confessed the error to the Department of State financial officer handling the Train and Equip accounts. The financial officer laughed, saying, “Get me security.” McFarren.

³⁶⁰ ASI, and particularly Richard Perle, sometimes pushed MPRI so hard that the task force considered it counterproductive. There is no doubt, however, that under Mike McNamara’s sustained attention ASI achieved major efficiencies. By ASI’s own assessment it generated more than \$18 million for the program. For a catalogue of ASI efficiency initiatives, see “ASI Financial/Contract Management Cost Savings,” September 13, 2000, and “Acquisition Support Institute: Past and Present,” both in the author’s possession.

³⁶¹ Befitting the prudence of a trustee, the funds were held in secure low-interest bearing accounts. However, by March 3, 1998, they had accumulated \$4,770,117 in interest. Train and Equip Task Force, "Train and Equip Funds Available (as of April 24, 1998)," task force document in the possession of the authors.

³⁶² Sawoski.

³⁶³ John Klekas, interviewed March 21, 2012.

³⁶⁴ Rabasa.

³⁶⁵ Interviewee 2 felt that because it was well known in the Balkans that President Clinton had made the commitment to Izetbegovic, American credibility was on the line.

³⁶⁶ Interviewee 2.

³⁶⁷ Charles Franklin, Commander, USN (Ret.), interviewed September 6, 2012.

³⁶⁸ Klekas.

³⁶⁹ Ibid.

³⁷⁰ McFarren.

³⁷¹ Vuono.

³⁷² Blasser; Norris.

³⁷³ From Lamb's point of view, they needed to get in line with a program that was a Presidential priority; from their point of view, they had many customers to please, and particularly the Army, which was providing almost all the Train and Equip drawdown items.

³⁷⁴ Some of the declassified documents on Bosnia from the Clinton administration suggest the President was more comfortable with achieving stability through arms control, but he actively engaged to keep his commitment to Congress to train and equip the Bosnians. In addition to sending McLarty to the Gulf States to raise funds, President Clinton sent letters and made calls encouraging support from donor countries. He also intervened to encourage passage of the Federation Defense law. Pardew Memorandum to Assistant Secretary Kornblum, March 18, 1997, Subject: Bosnia Policy Review; President Clinton, letter to Friends of Bosnia, April 24, 1998, in the author's possession. A June 21, 1996, letter from Clinton apparently encouraging passage of the Federation Defense law is referenced in a letter from President Izetbegovic. Translation of Alija Izetbegovic letter to President Clinton, undated, in the author's possession.

³⁷⁵ Samuel R. Berger note to Bill Perry, John "Shali," Richard Holbrooke, December 6, 1995, in the author's possession.

³⁷⁶ For Albright's argument for a Train and Equip Program, see Memorandum for The National Security Advisor from Ambassador Albright, dated August 3, 1995, from Bosnia, Intelligence, and the Clinton Presidency; for her praise of the program, see Secretary of State Madeleine K. Albright, Comments prepared for delivery, Annual Fleet Week Gala, New York, NY, May 22, 1997.

³⁷⁷ Interviewee 2.

³⁷⁸ Lamb, interview.

³⁷⁹ McFarren.

³⁸⁰ Glassman.

³⁸¹ Ibid.

³⁸² Interviewee 2. It is noteworthy that recently declassified documents indicate the Deputies several times asked the Principals to reconsider the program because of "the difficulties of equipping

and training Federation forces in the context of peace implementation” but they refused. The Principals simply ordered that the program be modest and low-profile and use contractors rather than uniformed U.S. personnel. NSC Memorandum, “Summary of Conclusions for meeting of the NSC Deputies Committee,” Declassified Document C05962531, dated November 1, 1995; NSC Memorandum, “Summary of Conclusions for meeting of the NSC Deputies Committee,” Declassified Document C05740379, dated November 13, 1995; NSC Memorandum, “Summary of Conclusions for meeting of the NSC Deputies Committee,” Declassified Document C05962535, dated November 14, 1995; and NSC Memorandum, “Summary of Conclusions for meeting of the NSC Principals Committee,” Declassified Document C05962542, dated November 16, 1995, all from CIA Web site, Bosnia, Intelligence, and the Clinton Presidency.

³⁸³ Johnson agrees that the decision to intervene in the Balkans was quite controversial but does not recall the debate over Train and Equip being “rancorous.” The Department of State reaction to Train and Equip initially was muted by senior leader support for the program. Johnson.

³⁸⁴ Christensen.

³⁸⁵ Pardew appealed to Under Secretary Slocombe for help in retaining McFarren’s services as a contractor and even turned down requests for Lamb to attend his Department of Defense parent organization’s brief offsite conference. AMB Pardew memorandum to Slocombe, May 15, 1996, and AMB Pardew memorandum to Assistant Secretary Holmes, May 30, 1996, Subject: Christopher J. Lamb; both in the author’s possession.

³⁸⁶ Blasser.

³⁸⁷ Christensen.

³⁸⁸ Ibid.

³⁸⁹ Ibid.

³⁹⁰ Sawoski.

³⁹¹ Interviewee 2. The Army’s reluctance to entertain visits by Federation military personnel to its combat training centers was considered particularly obstinate and inconsistent with U.S. Government policies. Letter from Ambassador James W. Pardew to LTG Claude M. Kicklighter, Deputy Under Secretary of the Army (international Affairs), July 15, 1998, in the author’s possession.

³⁹² “Military Personnel Replacing the Iranians” was one derogatory SFOR reference to MPRI, according to a former SFOR staff member. In the author’s experience, uniformed personnel typically consider former colleagues who retire and work for private industry suspect. On the general Army attitude toward MPRI, see Vuono.

³⁹³ Lamb, interview.

³⁹⁴ Interview with an intelligence professional familiar with the Balkans.

³⁹⁵ Ibid.

³⁹⁶ Office space in Main State was quite limited. State is also rather status conscious when it comes to assigning office space. Pardew received a small office with a window and adjoining offices for his deputy from State and public affairs person. Lamb and McFarren were relegated to a windowless room on a lower floor. State members without ambassadorial status fended for themselves, usually staying in the small offices they had before joining the task force.

³⁹⁷ McFarren. Pardew’s secretary knew State well and was a great source of advice.

³⁹⁸ Sawoski.

³⁹⁹ On occasion Pardew had to fight to retain a sufficient travel budget, but the Bureau always relented.

⁴⁰⁰ Franklin.

⁴⁰² Klekas.

⁴⁰³ Ibid.

⁴⁰⁴ Lamb, interview.

⁴⁰⁵ Klekas.

⁴⁰⁶ Rabasa.

⁴⁰⁷ Klekas.

⁴⁰⁸ McFarren.

⁴⁰⁹ Lamb, interview. Even though the CIA always preferred a modest program, early on it saw some advantages to a Train and Equip effort. For example, it noted that, “the absence of such a program could diminish U.S. leverage among the Bosniaks, increase Bosniak susceptibility to radical Islamic influence—mainly from Iran—and further reduce prospects for a unified Federation military structure.” Over time the CIA view that the program was upsetting the military balance hardened. See “Prospects for Bosnia and Herzegovina Over the Next 18 Months,” National Intelligence Estimate, May 1996; President’s Summary, Declassified document CO5922077; and Declassified Memorandum for Director of Central Intelligence from Chief, DCI Interagency Balkan Task Force C05951838, Subject: Some Reason for Optimism About Bosnia, dated October 27, 1996, both from Bosnia, Intelligence, and the Clinton Presidency.

⁴¹⁰ Interviewee 14.

⁵²³ Franklin.

⁵²⁴ Gregorian, interview.

⁵²⁵ Ibid. Later the Department of Defense cut the two contractor positions, which were then picked up by the Department of State.

⁵²⁶ Raffi Gregorian, email to author, February 24, 2013.

⁵²⁷ Interviewee 2.

⁵²⁸ Franklin.

⁵²⁹ This is not to suggest task force members did not go on to complete successful careers in government or private industry. Christensen, who observed the team in its initial operations observes, “No one on the team was there because no one wanted them.” Later in his career he found that this was often the case with interagency groups and that it paid to be careful about who you accepted on an interagency ad hoc group. But, he said, that was not the case with Train and Equip. Christensen.

⁵³⁰ Rabasa.

⁵³¹ Klekas.

⁵³² Christensen.

⁵³³ Sawoski, interview, notes that practical experience in government does not count for much at most universities.

⁵³⁴ In retrospect he believes both promises came true. Mcfarren.

⁵³⁵ Franklin.

⁵⁷⁸ Mahmulin, interview.

⁵⁷⁹ Interviewee 31.

⁵⁸⁰ A survey of Pardew's many succinct strategic assessments reveals they were delivered to a wide range of senior officials, and from the responding notes they elicited that they were appreciated and influential.

⁵⁸¹ Lamb, interview.

⁵⁸² Norris.

⁵⁸³ Klekas.

⁵⁸⁴ Interviewee 2.

⁵⁸⁵ Franklin.

⁵⁸⁶ Lamb, interview. Although Pardew delegated a lot and almost never reproached subordinates, Lamb remembers that on one occasion Pardew gave him the sharpest corrective guidance he ever received. Not only was Pardew right, but it was the most helpful feedback Lamb ever received, and he thought better of Pardew for it. Similarly, Franklin recalls that those who went on trips to solicit funds or weapons sometimes were given quite explicit guidelines when Pardew thought they might be inclined to go beyond certain task force limits.

⁵⁸⁷ McFarren. Selmo was exonerated and became Bosnian Minister of Defense.

⁶³⁹ Karavelic.

⁶⁴⁰ Ibid.

⁶⁴¹ Jozinovic.

⁶⁴² One source notes that even early on it was clear that maintenance would be a major challenge. He asserts that some of the American tanks were missing parts when they arrived at Ploce. Karavelic.

⁶⁴³ Admittedly, this was not initially part of the plan or clear to all task force members. Lamb and McFarren sometimes speculated that if all the program objectives were achieved and continued, the Federation might build up a considerable military advantage. They referred to this possibility as the "Hagia Sophia" scenario because they first discussed the possibility at that famous site on their way through Istanbul following the disastrous Ankara conference.

⁶⁴⁴ Many former Bosnian military leaders now acknowledge how little they and their colleagues knew of the military profession at the time. Becirbasic; Siljeg; Sajinovic.

⁶⁴⁵ Siljeg.

⁶⁴⁶ Budimir, interview, September 16, 2010.

⁶⁴⁷ Siljeg.

⁶⁴⁸ For example, Mahmuljin, interview; Zeko; Jozinovic.

⁶⁴⁹ Zeko.

⁶⁵⁰ Ibid.

⁶⁵¹ Former Yugoslavian Army veterans had a hard time adopting NATO standards. Becirbasic.

⁶⁵² Returning IMET graduates were initially used as liaisons and interpreters rather than placed in positions where they could use the skills they learned in the United States, and a large percentage soon departed the Federation military rather than advancing to positions of responsibility, which was a concern for U.S. authorities. Some observers saw in this trend a “hidden agenda,” presumably the influence of politicians who wanted to slow the inculcation of Western norms in their military forces. Major Jack Wallace, Security Assistance Officer, U.S. Embassy Sarajevo, “Two Year Training Plan for Bosnia-Herzegovina, FY 99 and 00,” unclassified; from the author’s files; Obradovic.

⁶⁵³ Zeko.

⁶⁵⁴ Some participants who benefited from MPRI training and believe they were “personally enriched” by it wanted to stay in the military. They were disappointed, if not disillusioned, about the way the decisions were made on who stayed and who left. Budimir, interview, September 16, 2010.

⁶⁵⁵ Foric.

⁶⁵⁶ Budimir, interview, September 16, 2010.

⁶⁵⁷ “Equipping and Training the Federation, Tab C, 29 September 1995 Deputies Committee Meeting, Declassified Document C05961572, dated September 21, 1995, Bosnia, Intelligence, and the Clinton Presidency.

⁶⁵⁸ Cited in George A. Joulwan and Christopher C. Shoemaker, *Civilian-military Cooperation in the Prevention of Deadly Conflict: Implementing Agreements in Bosnia and Beyond* (New York: Carnegie, 1998), 52.

⁶⁵⁹ From the beginning of the program, Bosnian leaders agreed that a higher quality and smaller force was preferable. James Pardew Memorandum to AMB Holbrooke and AMB Kornblum, Subject: E&T Meetings in Sarajevo.

⁶⁶⁰ Becirbasic.

⁶⁶¹ Sajinovic.

⁶⁶² Ibid.

⁶⁶³ Ibid.

⁶⁶⁴ Becirbasic. Selmo Cikotic, who went on to become Bosnia’s Minister of Defense, also notes the psychological impact of Train and Equip, and that many Bosnian politicians at the time of Dayton were looking for ways to continue the struggle through political venues (inverting the old axiom so that “politics was just an extension of war by other means”). Cikotic.

⁶⁶⁵ Lucic.

⁶⁶⁶ Ibid.

⁶⁶⁷ Some consider the estimate of 200,000-plus Federation soldiers inflated and believe a more realistic figure is 90,000 Bosniak and 35,000 Croat soldiers. Still in a population estimated at 2 million, these are large standing forces. Downsizing to 50,000 in less than 2 years was politically difficult both because the population did not feel secure and there were few jobs for veterans returning to civilian life. Ibid.

⁶⁶⁸ Zeko.

⁶⁶⁹ Pelko.

⁶⁷⁰ Siljeg.

⁶⁷¹ In MPRI's experience, if there was any difference between U.S. and other NATO standards (e.g., the Belgian vs. the U.S. model for noncommissioned officers), the Balkan militaries wanted to emulate the United States. Vuono.

⁶⁷² Pelko.

⁶⁷³ Mahmuljin, interview.

⁶⁷⁴ Pardew note to Bob Gelbard, May 14, 1998, Subject: The Train and Equip Effort in Bosnia—Status and Future.

⁶⁷⁵ Pardew note to Bob Gelbard, May 14, 1998, Subject: The Train and Equip Effort in Bosnia—Status and Future, in the author's possession.

⁶⁷⁶ Bosnian Ambassador to the United Nations Mohammed Sacirby commented that there likely would have been no cooperation or reconciliation between the Croats and Bosniaks. F. Cardzic, interview with Muhamed Sacirbegovic, counselor of the presidency, President of the Republic of Bosnia-Herzegovina, and Bosnian Ambassador to the United Nations, "The United States Thinks There Can Be No Peace Without the Federation," from *Dnevni Avaz* in Serbo-Croatian, April 26, 1996.

⁶⁸⁴ Karavelic.

⁶⁸⁵ Ibid.

⁶⁸⁶ Zeko.

⁶⁸⁷ Becirbasic.

⁶⁸⁸ The funds were substantial, by one account as much as \$700 million in 1997, which dwarfed the entire Federation government budget of \$450 Million. The money from Croatia did not stop flowing entirely until Croat Minister of Defense Susak left in 1999. When the funds stopped, it was a major incentive for Bosnian Croats to support integration. Jozinovic.

⁶⁸⁹ Former Bosniak Defense Minister Sakib Mahmuljin recalls how AMB Pardew told Croatia it would have to stop interfering with Bosnia in this regard. Mahmuljin, interview.

⁶⁹⁰ Nicholas Wood, "Bosnia Plans to Expel Arabs Who Fought in Its War," *The New York Times*, August 2, 2007, available at <www.nytimes.com/2007/08/02/world/europe/02bosnia.html?_r=1&pagewanted=all>.

⁶⁹¹ Dick Clarke surveys extremist influence in Bosnia and concludes Bosnia was largely a failure for al Qaeda and a success for the United States. Richard A Clarke. *Against All Enemies: Inside America's War on Terror* (New York: Free Press, 2004), 136–140. For another informed discussion that finds little evidence of any remaining threat of Muslim extremists in Bosnia, see “Bin Laden in the Balkans? The Bosnian Army and the Mujahedin,” an appendix in Hoare, 131ff.

⁶⁹² Najetovic, interview.

⁶⁹³ International Crisis Group, “A Peace or just a Cease-Fire?”

⁶⁹⁴ Cikotic; Pelko; Karavelic; Mahmuljin, interview; Lucic.

⁶⁹⁵ Budimir, interview, September 16, 2010. Budimir had one of the more negative assessments of the program's military value but believed the progress toward reconciliation of the HVO and ARBiH was valuable.

⁶⁹⁶ Cikotic.

⁶⁹⁷ Everyone interviewed thought the program was useful, but assessments varied. One observer thought “the equipment wasn't that great and the training wasn't that sophisticated” but the program still accomplished a lot by way of restoring a balance and encouraging reconciliation. Siljeg.

⁶⁹⁸ General Vahid Karavelic, for example, believed too much was spent on equipment. Karavelic.

⁶⁹⁹ Cikotic.

⁷⁰⁰ Karavelic.

⁷⁰¹ Pelko.

⁷⁰² Becirbasic.

⁷⁰³ Sajinovic.

⁷⁰⁴ Jozinovic.

⁷⁰⁵ Gregorian, interview.

⁷⁰⁶ Cikotic.

⁷⁰⁷ Mahmuljin, interview.

⁷⁰⁸ Klekas.

⁷⁰⁹ The commission was chaired by James R. Locher III, who also had advised Federation Ministry of Defense leaders in 1996 under the Train and Equip Program.

⁷¹⁰ Holbrooke relates what a sensitive subject the removal of foreign forces was for Izetbegovic. He only agreed to their removal “if there is peace.” Holbrooke, 320.

⁷¹¹ MPRI had no illusions about the impediments to creating a world-class fighting force in Bosnia. Their leaders avoided any misleading hyperbole and just used the term “capable” to describe the forces they were training. MPRI was well aware of program limitations given the failure to secure follow-on funding from donors and Federation politics. Vuono; MPRI, “History of MPRI in Bosnia 1996–2003,” Draft Report, August 2009, 10–11.

⁷¹² On occasion senior leaders did not support the team. For example, they agreed to suspend training at one point over task force objections, and they did not approve funding a follow-on sustainment package for the program.

⁷¹³ A conversation between Pardew and Lamb. Lamb, interview.

⁷¹⁴ R.W. Komer, *Bureaucracy Does Its Thing: Institutional Constraints on U.S. -GVN Performance in Vietnam* (Santa Monica, CA: Rand, 1972).

⁷¹⁵ Chollet attributes the breakthrough in peace negotiations to a combination of successful military operations and diplomatic breakthroughs, rendered in part by Holbrooke's "talented shuttle team," which was an interagency construct. The point here is that the same combination ensured that the peace held. Chollet, 186. For a description of the interagency negotiating team, see 75–76.

⁷¹⁶ In response to National Security Council staff desires for an early exit from Bosnia in 1997, Pardew commented that "They want a simple solution. There isn't one." He was right; there was no simple solution for such a complex problem.

⁷¹⁷ For a recent example of the large literature on this topic, see Molly Dunigan, *Victory for Hire: Private Security Companies' Impact on Military Effectiveness* (Stanford, CA: Stanford Security Studies, 2011), 91–100. Dunigan dwells on the small MPRI presence and brief experience in Croatia leading up to "Operation Storm" and pays scant attention to MPRI's much larger, longer, and more prominent role in Bosnia.

⁷¹⁸ However, Mike McNamara of ASI did a two-page paper for policy officials in the Department of Defense outlining the Train and Equip effort and its possible relevance for U.S. operations in Afghanistan and Iraq. Provided to author, courtesy of Mike McNamara.

⁷¹⁹ Jim Garamone, "Flournoy Calls for Better Interagency Cooperation," American Forces Press Service, June 11, 2010, available at <www.defense.gov/news/newsarticle.aspx?id=59601>.

About the Authors

Dr. Christopher J. Lamb is a Distinguished Research Fellow in the Center for Strategic Research, Institute for National Strategic Studies, at the National Defense University. He conducts research on national security strategy, policy, and organizational reform, and on defense strategy, requirements, plans, and programs. In 2008, Dr. Lamb was assigned to lead the Project for National Security Reform study of the national security system, which led to the 2008 report, *Forging a New Shield*. Prior to joining INSS in 2004, Dr. Lamb served as the Deputy Assistant Secretary of Defense for Resources and Plans where he had oversight of war plans, requirements, acquisition, and resource allocation matters for the Under Secretary of Defense (Policy). Previously, he served as Deputy Director for Military Development on the State Department's Interagency Task Force for Military Stabilization in the Balkans; Director of Policy Planning in the Office of the Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict; and from 1985 to 1992 a Foreign Service Officer in Haiti and Ivory Coast. He received his doctorate in International Relations from Georgetown University in 1986. Dr. Lamb has received the Chairman of the Joint Chiefs of Staff Joint Distinguished Civilian Service Award, the Presidential Rank Award for Meritorious Senior Executive Service, the Superior Honor award from the Department of State, and Meritorious Civilian Service awards from the Department of Defense.

Ms. Sarah Arkin worked with Dr. Lamb from January to August 2010. She is now working as a Senior Legislative Assistant on Capitol Hill. She has a Master's degree in Conflict Resolution from Georgetown University.

Ms. Sally Scudder worked at the Institute for National Strategic Studies from July of 2011 to December of 2012 and is currently working for the U.S. Marine Corps. She earned a Bachelor of Arts from Wellesley College in 2011.
