<i>DAVID BROOKS: Foreword</i>	xxv
<i>JOHN BROCKMAN: Preface</i>	xxix
<b>MARTIN REES</b> “Deep Time” and the Far Future <i>Far more time lies ahead than has elapsed up until now.</i>	1
<b>MARCELO GLEISER</b> We Are Unique <i>Modern science, traditionally considered guilty of reducing our existence to a pointless accident in an indifferent universe, is actually saying the opposite.</i>	3
<b>P. Z. MYERS</b> The Mediocrity Principle <i>Everything that you as a human being consider cosmically important is an accident.</i>	6
<b>SEAN CARROLL</b> The Pointless Universe <i>Looking at the universe through our anthropocentric eyes, we can't help but view things in terms of causes, purposes, and natural ways of being.</i>	9
<b>SAMUEL ARBESMAN</b> The Copernican Principle <i>We are not anywhere special.</i>	11
<b>J. CRAIG VENTER</b> We Are Not Alone in the Universe <i>There is a humancentric, Earthcentric view of life that permeates most cultural and societal thinking.</i>	13
<b>STEWART BRAND</b> Microbes Run the World <i>This biotech century will be microbe-enhanced and maybe microbe-inspired.</i>	15
<b>RICHARD DAWKINS</b> The Double-Blind Control Experiment <i>Why do half of all Americans believe in ghosts, three-quarters believe in angels, a third believe in astrology, three-quarters believe in hell?</i>	17

<b>MAX TEGMARK</b>	19
Promoting a Scientific Lifestyle	
<i>Our global scientific community has been nothing short of a spectacular failure when it comes to educating the public.</i>	
<b>ROGER SCHANK</b>	23
Experimentation	
<i>Experimentation is something done by everyone all the time.</i>	
<b>TIMO HANNAY</b>	25
The Controlled Experiment	
<i>When required to make a decision, the instinctive response of most nonscientists is to introspect, or perhaps call a meeting.</i>	
<b>GINO SEGRE</b>	28
Gedankenexperiment	
<i>Consciously or unconsciously, we carry out gedankenexperiments of one sort or another in our everyday life.</i>	
<b>KATHRYN SCHULZ</b>	30
The Pessimistic Meta-Induction from the History of Science	
<i>One generation's verities . . . often become the next generation's falsehoods.</i>	
<b>SAMUEL BARONDES</b>	32
Each of Us Is Ordinary, Yet One of a Kind	
<i>This dual view of each of us, as both run-of-the-mill and special, has been so well established by biologists and behavioral scientists that it may now seem self-evident.</i>	
<b>JOHN TOOBY</b>	33
Nexus Causality, Moral Warfare, and Misattribution Arbitrage	
<i>Our self-evidently superior selves and in-groups are error-besotted.</i>	
<b>DAVID G. MYERS</b>	37
Self-Serving Bias	
<i>Compared with our average peer, most of us fancy ourselves as more intelligent, better-looking, less prejudiced, more ethical, healthier, and likely to live longer.</i>	
<b>GARY MARCUS</b>	39
Cognitive Humility	
<i>Computer memory is much better than human memory because early computer scientists discovered a trick that evolution never did.</i>	

- DOUGLAS RUSHKOFF** 41  
Technologies Have Biases  
*Our widespread inability to recognize or even acknowledge the biases of the technologies we use renders us incapable of gaining any real agency through them.*
- GERALD SMALLBERG** 43  
Bias Is the Nose for the Story  
*Our brains evolved having to make the right bet with limited information.*
- JONAH LEHRER** 46  
Control Your Spotlight  
*Too often, we assume that willpower is about having strong moral fiber. But that's wrong.*
- DANIEL KAHNEMAN** 49  
The Focusing Illusion  
*The mismatch in the allocation of attention between thinking about a life condition and actually living it is the cause of the focusing illusion.*
- CARLO ROVELLI** 51  
The Uselessness of Certainty  
*The very foundation of science is to keep the door open to doubt.*
- LAWRENCE KRAUSS** 53  
Uncertainty  
*In the public parlance, uncertainty is a bad thing, implying a lack of rigor and predictability.*
- AUBREY DE GREY** 55  
A Sense of Proportion About Fear of the Unknown  
*Fear of the unknown is not remotely irrational in principle . . . but it can be and generally is overdone.*
- NIGEL GOLDENFELD** 58  
Because  
*Complex systems, such as financial markets or the Earth's biosphere, do not seem to obey causality.*
- STUART FIRESTEIN** 62  
The Name Game  
*Even words that, like "gravity," seem well settled may lend more of an aura to an idea than it deserves.*

<b>SETH LLOYD</b>	65
Living Is Fatal	
<i>People are bad at probability on a deep, intuitive level.</i>	
<b>GARRETT LISI</b>	68
Uncalculated Risk	
<i>We are afraid of the wrong things, and we are making bad decisions.</i>	
<b>NEIL GERSHENFELD</b>	72
Truth Is a Model	
<i>Building models is . . . a never-ending process of discovery and refinement.</i>	
<b>JON KLEINBERG</b>	74
E Pluribus Unum	
<i>The challenge for a distributed system is to achieve this illusion of a single unified behavior in the face of so much underlying complexity.</i>	
<b>STEFANO BOERI</b>	78
A Proxemics of Urban Sexuality	
<i>Even the warmest and most cohesive community can rapidly dissolve in the absence of erotic tension.</i>	
<b>KEVIN KELLY</b>	79
Failure Liberates Success	
<i>Failure is not something to be avoided but something to be cultivated.</i>	
<b>NICHOLAS A. CHRISTAKIS</b>	81
Holism	
<i>Holism takes a while to acquire and appreciate. It is a grown-up disposition.</i>	
<b>ROBERT R. PROVINE</b>	84
TANSTAAFL	
<i>"There ain't no such thing as a free lunch" [is] a universal truth having broad and deep explanatory power in science and daily life.</i>	
<b>GERALD HOLTON</b>	85
Skeptical Empiricism	
<i>In politics and society at large, important decisions are all too often based on deeply held presuppositions.</i>	
<b>THOMAS A. BASS</b>	86
Open Systems	
<i>Now that the Web has frothed through twenty years of chaotic inventiveness, we have to push back against the forces that would close it down.</i>	

<b>GEORGE CHURCH</b>	88
Non-Inherent Inheritance	
<i>We are well into an unprecedented new phase of evolution, in which we must generalize beyond our DNA-centric worldview.</i>	
<b>PAUL KEDROSKY</b>	90
Shifting Baseline Syndrome	
<i>We don't have enough data to know what is normal, so we convince ourselves that this is normal.</i>	
<b>MARTIN SELIGMAN</b>	92
PERMA	
<i>The elements of well-being must be exclusive, measurable independently of one another, and—ideally—exhaustive.</i>	
<b>STEVEN PINKER</b>	94
Positive-Sum Games	
<i>In a positive-sum game, a rational, self-interested actor may benefit the other actor with the same choice that benefits himself or herself.</i>	
<b>ROGER HIGHFIELD</b>	98
The Snuggle for Existence	
<i>Competition does not tell the whole story of biology.</i>	
<b>DYLAN EVANS</b>	100
The Law of Comparative Advantage	
<i>At a time of growing protectionism, it is more important than ever to reassert the value of free trade.</i>	
<b>JASON ZWEIG</b>	101
Structured Serendipity	
<i>Creativity can be enhanced deliberately through environmental variation.</i>	
<b>RUDY RUCKER</b>	103
The World Is Unpredictable	
<i>Even if the world is as deterministic as a computer program, you still can't predict what you're going to do.</i>	
<b>CHARLES SEIFE</b>	105
Randomness	
<i>Without an understanding of randomness, we are stuck in a perfectly predictable universe that simply doesn't exist outside our heads.</i>	

- CLIFFORD PICKOVER** 109  
 The Kaleidoscopic Discovery Engine  
*We are reluctant to believe that great discoveries are part of a discovery kaleidoscope and are mirrored in numerous individuals at once.*
- REBECCA NEWBERGER GOLDSTEIN** 112  
 Inference to the Best Explanation  
*Not all explanations are created equal.*
- EMANUEL DERMAN** 115  
 Pragmamorphism  
*Being pragmamorphic sounds equivalent to taking a scientific attitude toward the world, but it easily evolves into dull scientism.*
- NICHOLAS CARR** 116  
 Cognitive Load  
*When our cognitive load exceeds the capacity of our working memory, our intellectual abilities take a hit.*
- HANS ULRICH OBRIST** 118  
 To Curate  
*In our phase of globalization . . . there is a danger of homogenization but at the same time a countermovement, the retreat into one's own culture.*
- RICHARD NISBETT** 120  
 "Graceful" SHAs  
*An assumption of educators for centuries has been that formal logic improves thinking skills. . . . But this belief may be mistaken.*
- ROB KURZBAN** 124  
 Externalities  
*The notion of externalities forces us to think about unintended (positive and negative) effects of actions, an issue that looms larger as the world gets smaller.*
- JAMES O'DONNELL** 127  
 Everything Is in Motion  
*Remembering that everything is in motion—feverish, ceaseless, unbelievably rapid motion—is always hard for us.*
- DOUGLAS T. KENRICK** 129  
 Subselves and the Modular Mind  
*The only way we manage to accomplish anything in life is to allow only one subself to take the conscious driver's seat at any given time.*

<b>ANDY CLARK</b>	132
Predictive Coding	
<i>The brain exploits prediction and anticipation in making sense of incoming signals and using them to guide perception, thought, and action.</i>	
<b>DONALD HOFFMAN</b>	135
Our Sensory Desktop	
<i>Our sensory experiences . . . can be thought of as sensory desktops that have evolved to guide adaptive behavior, not report objective truths.</i>	
<b>BARRY C. SMITH</b>	139
The Senses and the Multisensory	
<i>We now know that the senses do not operate in isolation but combine, both at early and late stages of processing, to produce our rich perceptual experiences of our surroundings.</i>	
<b>DAVID EAGLEMAN</b>	143
The Umwelt	
<i>Our brains are tuned to detect a shockingly small fraction of the surrounding reality.</i>	
<b>ALISON GOPNIK</b>	146
The Rational Unconscious	
<i>The idea of the rational unconscious has . . . transformed our scientific understanding of creatures whose rationality has traditionally been denied, such as young children and animals.</i>	
<b>ADAM ALTER</b>	150
We Are Blind to Much That Shapes Our Mental Life	
<i>Our brains are processing multitudes of information below the surface of conscious awareness.</i>	
<b>W. TECUMSEH FITCH</b>	154
An Instinct to Learn	
<i>The antidote to “nature versus nurture” thinking is to recognize the existence, and importance, of “instincts to learn.”</i>	
<b>MICHAEL SHERMER</b>	157
Think Bottom Up, Not Top Down	
<i>Almost everything important that happens in both nature and society happens from the bottom up, not the top down.</i>	

- IRENE PEPPERBERG** 160  
 Fixed-Action Patterns  
*The concept of a fixed-action pattern, despite its simplicity, may prove valuable as a metaphorical means to study and change human behavior.*
- TERRENCE SEJNOWSKI** 162  
 Powers of 10  
*Thinking in powers of 10 is such a basic skill that it ought to be taught along with integers in elementary school.*
- JUAN ENRIQUEZ** 165  
 Life Code  
*As we begin to rewrite existing life, strange things evolve.*
- STEPHEN M. KOSSLYN** 167  
 Constraint Satisfaction  
*When moving into a new house, my wife and I had to decide how to arrange the furniture in the bedroom.*
- DANIEL C. DENNETT** 170  
 Cycles  
*The secret ingredient of improvement is always the same: practice, practice, practice.*
- JENNIFER JACQUET** 174  
 Keystone Consumers  
*A relative few can . . . ruin a resource for the rest of us.*
- JARON LANIER** 177  
 Cumulative Error  
*Our brains have unrealistic expectations of information transformation.*
- DAN SPERBER** 180  
 Cultural Attractors  
*In spite of variations, an Irish stew is an Irish stew, Little Red Riding Hood is Little Red Riding Hood, and a samba is a samba.*
- GIULIO BOCCALETTI** 184  
 Scale Analysis  
*It is through scale analysis that we can often make sense of complex nonlinear phenomena in terms of simpler models.*

- FRANK WILCZEK** 188  
Hidden Layers  
*Hidden layers embody in a concrete physical form the fashionable but rather vague and abstract idea of emergence.*
- LISA RANDALL** 192  
"Science"  
*The theory that works might not be the ultimate truth, but it's as close an approximation to the truth as you need.*
- MARCEL KINSBOURNE** 194  
The Expanding In-Group  
*The in-group-vs.-out-group double standard . . . could in theory be eliminated if everyone alive were considered to be in everyone else's in-group.*
- JONATHAN HAIDT** 196  
Contingent Superorganisms  
*It is the most noble and the most terrifying human ability.*
- CLAY SHIRKY** 198  
The Pareto Principle  
*We are still failing to predict it, even though it is everywhere.*
- WILLIAM CALVIN** 201  
Find That Frame  
*What has been cropped out of the frame can lead the unwary to an incorrect inference.*
- JAY ROSEN** 203  
Wicked Problems  
*In the United States, rising health care costs are a classic case of a wicked problem. No "right" way to view it.*
- DANIEL GOLEMAN** 206  
Anthropocene Thinking  
*Beginning with cultivation and accelerating with the Industrial Revolution, our planet left the Holocene epoch and entered . . . the Anthropocene, in which human systems erode the natural systems that support life.*
- ALUN ANDERSON** 209  
*Homo dilatus*  
*Cancun follows Copenhagen follows Kyoto, but the more we dither and no extraordinary disaster follows, the more dithering seems just fine.*

- SAM HARRIS** 211  
 We Are Lost in Thought  
*Our relationship to our own thinking is strange to the point of paradox.*
- THOMAS METZINGER** 214  
 The Phenomenally Transparent Self-Model  
*A transparent self-model necessarily creates the realistic conscious experience of selfhood—of being directly and immediately in touch with oneself as a whole.*
- SUE BLACKMORE** 215  
 Correlation Is Not a Cause  
*Understanding that a correlation is not a cause could raise levels of debate over some of today's most pressing scientific issues.*
- DAVID DALRYMPLE** 218  
 Information Flow  
*Saying "A causes B" sounds precise but is actually very vague.*
- LEE SMOLIN** 221  
 Thinking in Time Versus Thinking Outside of Time  
*Thinking outside of time often implies the existence of an imagined realm, outside the universe, where the truth lies.*
- RICHARD FOREMAN** 225  
 Negative Capability Is a Profound Therapy  
*Mistakes, errors, false starts—accept them all.*
- TOR NØRRETRANDERS** 226  
 Depth  
*It is not what is there but what used to be there that matters.*
- HELEN FISHER** 229  
 Temperament Dimensions  
*Temperament is . . . the foundation of who you are.*
- GEOFFREY MILLER** 232  
 The Personality/Insanity Continuum  
*We are all more or less crazy in many ways.*
- JOEL GOLD** 235  
 ARISE  
*Sometimes it takes a genius to see that a fifth-grade science experiment is all that is needed to solve a problem.*

- MATTHEW RITCHIE** 237  
Systemic Equilibrium  
*Living on a single planet, we are all participants in a single physical system that has only one direction—toward systemic equilibrium.*
- LINDA STONE** 240  
Projective Thinking  
*When we cling rigidly to our constructs . . . we can be blinded to what's right in front of us.*
- V. S. RAMACHANDRAN** 242  
Anomalies and Paradigms  
*One can speak of reigning paradigms—what Kubn calls normal science and what I cynically refer to as a mutual-admiration club trapped in a cul-de-sac of specialization.*
- DAVID GELERNTER** 246  
Recursive Structure  
*It helps us understand the connections between art and technology, helps us see the aesthetic principles that guide the best engineers and technologists and the ideas of clarity and elegance that underlie every kind of successful design.*
- DON TAPSCOTT** 250  
Designing Your Mind  
*Want to strengthen your working memory and ability to multitask? Try reverse mentoring—learning with your teenager.*
- ANDRIAN KREYE** 254  
Free Jazz  
*The 1960 session that gave the genre its name . . . was a precursor to a form of communication that has left linear conventions and entered the realm of multiple parallel interactions.*
- MATT RIDLEY** 257  
Collective Intelligence  
*Human achievement is based on collective intelligence—the nodes in the human neural network are people themselves.*

- GERD GIGERENZER** 259  
 Risk Literacy  
*Unlike basic literacy, risk literacy requires emotional rewiring—rejecting comforting paternalism and illusions of certainty and learning to take responsibility and to live with uncertainty.*
- ROSS ANDERSON** 262  
 Science Versus Theater  
*Modern societies waste billions on protective measures whose real aim is to reassure rather than to reduce risk.*
- KEITH DEVLIN** 264  
 The Base Rate  
*In cases where [an] event is dramatic and scary, like a terrorist attack on an airplane, failure to take account of the base rate can result in wasting massive amounts of effort and money trying to prevent something that is very unlikely.*
- MARTI HEARST** 266  
 Index  
*Although some have written about information overload, data smog, and the like, my view has always been the more information online the better, as long as good search tools are available.*
- SUSAN FISKE** 267  
 An Assertion Is Often an Empirical Question,  
 Settled by Collecting Evidence  
*People's stories are stories, and fiction keeps us going.  
 But science should settle policy.*
- GREGORY PAUL** 268  
 Scientists Should Be Scientists  
*Folks are prone to getting pet opinions into their heads and thinking they're true to the point of obstinacy, even when they have little or no idea of what they're talking about in the first place.*
- JAMES CROAK** 271  
 Bricoleur  
*Currently, encompassing worldviews in philosophy have been shelved, and master art movements of style and conclusion folded alongside them; no more isms are being run up the flagpole, because no one is saluting.*

- MARK HENDERSON** 273  
Science's Methods Aren't Just for Science  
*Science as a method has great things to contribute to all sorts of pursuits beyond the laboratory.*
- NICK BOSTROM** 275  
The Game of Life—and Looking for Generators  
*It's a brilliant demonstration platform for several important concepts—a virtual "philosophy of science laboratory."*
- ROBERT SAPOLSKY** 278  
Anecdotalism  
*Every good journalist knows its power.*
- TOM STANDAGE** 281  
You Can Show That Something Is Definitely Dangerous  
but Not That It's Definitely Safe  
*A wider understanding of the fact that you can't prove a negative would, in my view, do a great deal to upgrade the public debate around science and technology.*
- CHRISTINE FINN** 282  
Absence and Evidence  
*Philosophically this is a challenging concept, but at an archaeological site all became clear in the painstaking tasks of digging, brushing, and troweling.*
- JOHN McWHORTER** 285  
Path Dependence  
*One may assume that cats cover their waste out of fastidiousness, when the same creature will happily consume its own vomit and then jump on your lap.*
- SCOTT D. SAMPSON** 289  
Interbeing  
*Each of us is far more akin to a whirlpool, a brief, ever-shifting concentration of energy in a vast river that has been flowing for billions of years.*

<b>DIMITAR SASSELOV</b>	292
The Other	
<i>Astronomy and space science are intensifying the search for life on other planets. . . . The chances of success may hinge on our understanding of the possible diversity of the chemical basis of life itself.</i>	
<b>BRIAN ENO</b>	294
Ecology	
<i>We now increasingly view life as a profoundly complex weblike system with information running in all directions.</i>	
<b>STEPHON H. ALEXANDER</b>	296
Dualities	
<i>A duality allows us to describe a physical phenomenon from two different perspectives.</i>	
<b>AMANDA GEFTER</b>	299
Dualities	
<i>Dualities are as counterintuitive a notion as they come, but physics is riddled with them.</i>	
<b>ANTHONY AGUIRRE</b>	301
The Paradox	
<i>Nature appears to contradict itself with the utmost rarity, and so a paradox can be an opportunity for us to lay bare our cherished assumptions.</i>	
<b>ERIC TOPOL</b>	303
Hunting for Root Cause: The Human "Black Box"	
<i>Each of us is gradually being morphed into an event-data recorder by virtue of our digital identity and presence on the Web.</i>	
<b>DAVID ROWAN</b>	305
Personal Data Mining	
<i>We need to [mine] our own output to extract patterns that turn our raw personal data stream into predictive, actionable information.</i>	
<b>SATYAJIT DAS</b>	307
Parallelism in Art and Commerce	
<i>[Damien] Hirst was the artist of choice for conspicuously consuming hedge-fund managers, who were getting very rich.</i>	

- LAURENCE C. SMITH** 310  
Innovation  
*In the world of science, innovation stretches the mind to find an explanation when the universe wants to hold on to its secrets just a little longer.*
- KEVIN HAND** 312  
The Gibbs Landscape  
*The systems we have designed and built are inefficient and incomplete in the utilization of energy to do the work of civilization's ecosystems.*
- VINOD KHOSLA** 315  
Black Swan Technologies  
*Who would be crazy enough to have forecast in 2000 that by 2010 almost twice as many people in India would have access to cell phones as to latrines?*
- GLORIA ORIGGI** 318  
Kakonomics  
*Kakonomics is the strange yet widespread preference for mediocre exchanges insofar as nobody complains about them.*
- ERIC WEINSTEIN** 321  
Kayfabe  
*It provides the most complete example of the process by which a wide class of important endeavors transition from failed reality to successful fakery.*
- KAI KRAUSE** 324  
Einstein's Blade in Ockham's Razor  
*And there it was, the dancing interplay between simplex and complex that has fascinated me in so many forms.*
- DAVE WINER** 328  
Heat-Seeking Missiles  
*Your weakness is attractive. Your space is up for grabs.*
- MARCO IACOBONI** 330  
Entanglement  
*Entanglement feels like magic. . . . Yet [it] is a real phenomenon, measurable and reproducible in the lab.*

<b>TIMOTHY TAYLOR</b>	333
Technology Paved the Way for Humanity <i>Thinking through things and with things, and manipulating virtual things in our minds, is an essential part of critical self-consciousness.</i>	
<b>PAUL SAFFO</b>	334
Time Span of Discretion <i>We all have a natural time horizon we are comfortable with.</i>	
<b>TANIA LOMBROZO</b>	336
Defeasibility <i>Between blind faith and radical skepticism is a vast but sparsely populated space where defeasibility finds its home.</i>	
<b>RICHARD THALER</b>	338
Aether <i>Aether variables are extremely common in my own field of economics.</i>	
<b>MARK PAGEL</b>	340
Knowledge as a Hypothesis <i>There will always be some element of doubt about anything we come to "know" from our observations of the world.</i>	
<b>EVGENY MOROZOV</b>	343
The Einstellung Effect <i>Familiar solutions may not be optimal.</i>	
<b>EDUARDO SALCEDO-ALBARÁN</b>	345
<i>Homo sensus sapiens: The Animal That Feels and Reasons</i> <i>We are the tension of the sensus and the sapiens.</i>	
<b>FIERY CUSHMAN</b>	349
Understanding Confabulation <i>Automatic behaviors can be remarkably organized and even goal-driven.</i>	
<b>DAVID M. BUSS</b>	353
Sexual Selection <i>Research on human mating strategies has exploded over the past decade, as the profound implications of sexual selection become more deeply understood.</i>	
<b>BART KOSKO</b>	355
QED Moments <i>We can really only prove tautologies.</i>	

<b>RICHARD SAUL WURMAN</b>	358
Objects of Understanding and Communication	
<i>I want help flying through my waking dreams connecting the threads of these epiphanies.</i>	
<b>CARL ZIMMER</b>	359
Life as a Side Effect	
<i>Everyone would do well to overcome that urge to see agents where there are none.</i>	
<b>GREGORY COCHRAN</b>	360
The Veeck Effect	
<i>It occurs whenever someone adjusts the standards of evidence in order to favor a preferred outcome.</i>	
<b>JOSHUA GREENE</b>	363
Supervenience!	
<i>A TOE won't tell you anything interesting about Macbeth or the Boxer Rebellion.</i>	
<b>HAZEL ROSE MARKUS AND ALANA CONNER</b>	367
The Culture Cycle	
<i>Just as there is no such thing as a culture without agents, there are no agents without culture.</i>	
<b>VICTORIA STODDEN</b>	371
Phase Transitions and Scale Transitions	
<i>Our intuition regularly seems to break down with scale.</i>	
<b>BRIAN KNUTSON</b>	373
Replicability	
<i>Replication should be celebrated rather than denigrated.</i>	
<b>XENI JARDIN</b>	376
Ambient Memory and the Myth of Neutral Observation	
<i>Facts are more fluid than in the days of our grandfathers.</i>	
<b>DIANE F. HALPERN</b>	378
A Statistically Significant Difference in Understanding the Scientific Process	
<i>"Statistically significant difference" is a core concept in research and statistics, but . . . it is not an intuitive idea.</i>	

<b>BEATRICE GOLOMB</b>	381
The Dece(i)bo Effect	
<i>Key presumptions regarding placebos and placebo effects are more typically wrong than not.</i>	
<b>ANDREW REVKIN</b>	386
Anthropophilia	
<i>More fully considering our nature . . . could help identify certain kinds of challenges that we know we'll tend to get wrong.</i>	
<b>MAHZARIN R. BANAJI</b>	389
A Solution for Collapsed Thinking: Signal Detection Theory	
<i>Signal-detection theory . . . provides a mathematically rigorous framework for understanding the nature of decision processes.</i>	
<b>DAVID PIZARRO</b>	394
Everyday Apophenia	
<i>The pattern-detection responsible for so much of our species' success can just as easily betray us.</i>	
<b>ERNST PÖPPEL</b>	395
A Cognitive Toolkit Full of Garbage	
<i>Because we are a victim of our biological past, and as a consequence a victim of ourselves, we end up with shabby SHAs, having left behind reality.</i>	
<i>Acknowledgments</i>	399
