Preface	xi
Falsifiable Predictions of the Burst Packet Theory of Attention and Consciousness	xv
<b>1 Introduction: The Mind–Body Problem Will Be Solved by Neuroscience</b>	<b>1</b>
<b>2 Overview of the Arguments</b>	<b>11</b>
<b>3 A Criterial Neuronal Code Underlies Downward Mental Causation and Free Will</b>	<b>19</b>
What Is Will?	20
What Is Criterial Causation?	22
<b>4 Neurons Impose Physical and Informational Criteria for Firing on Their Inputs</b>	<b>31</b>
How Can Neurons Realize Informational Criteria?	31
The Bottom-Up Information-Processing Hierarchy for Visual Recognition	36
Decision Making and Action	43
Attention and Top-Down Modulation of Bottom-Up Processing	44
Basic Issues in Neuronal Information Processing: Balancing Excitation and Inhibition	50
Tonic versus Phasic Firing	53
The Sweet Spot of Neural Criticality	57
Synchrony among Inhibitory Interneurons	58
Attentional Binding and Gamma Oscillations	60
Attentional Binding by Neuronal Bursting	64
Neural Epiconnectivity and Rapid Synaptic Resetting	67
Amplifying Microscopic Randomness to Spike Timing Variability	72
<b>5 NMDA Receptors and a Neuronal Code Based on Bursting</b>	<b>79</b>
Spiny and Nonspiny Neurons	79
The NMDA Receptor	81

Long-Term Potentiation Is Not the Mechanism of Rapid Synaptic Plasticity	83
Spike Timing-Dependent Plasticity	87
The Role of Back-Propagating Action Potentials in Rapid Synaptic Plasticity and Bursting	89
A Neuronal Burst Code	98
Attentional Binding by Bursting: The Role of Cholinergic Feedback	103
Attentional Binding by Bursting: The Role of Noncholinergic Feedback	108
Conclusion	114
<b>6 Mental Causation as an Instance of Criterial Causation</b>	<b>115</b>
Criterial Causation and the Detection of Patterns in Input	115
Criterial Causation: Multiple Realizability Is Not Enough	119
Addressing Kim's Challenge	123
There Is No Backward Causation in Criterial Causation	127
Criterial Causation Is a Causation of Pattern-Released Activity	129
<b>7 Criterial Causation Offers a Neural Basis for Free Will</b>	<b>133</b>
Strong Free Will	133
Criterial Causation Escapes the Basic Argument against Free Will	135
James and Incompatibilist Physicalist Libertarianism	144
Decision Making and Choice	146
Conclusion	148
<b>8 Implications of Criterial Causality for Mental Representation</b>	<b>151</b>
The Neural Code Is Not Algorithmic	151
Criterialism, Descriptivism, and Reference	153
Countering Kripke's Attack	156
Wittgenstein and Criteria	159
Propositions and Vectorial Encodings	162
Mental Operations versus Mental Representations	164
Beyond Functionalism	165
<b>9 Barking Up the Wrong Tree: Readiness Potentials and the Role of Conscious Willing</b>	<b>169</b>
Libet's Experiments Do Not Disprove the Possibility of Free Will	169
Is Conscious Willing Causal?	173
Illusions of Volitional Efficacy	177
<b>10 The Roles of Attention and Consciousness in Criterial Causation</b>	<b>183</b>
Why Are There Qualia?	185
Iconic versus Working Memory	189
Stage 1 Qualia as Precompiled Informational Outputs of Preconscious Operations	192

Qualia as a Shared Format for Endogenous Attentional Operations	196
Experience Is for Endogenously Attending, Doing, and Planning	198
Volitional Attentional Tracking Requires Consciousness	200
If an Animal Can Attentionally Track, Is It Conscious?	209
Volitional Attention Can Alter Qualia	212
Qualia and Chunking: Types of Qualia	217
Qualia and the Frontoparietal Network	225
The Superpositionality of Qualia	233
Zombies Are Impossible	236
Tying It All Together	237
Appendix 1: Physical Evidence for Ontological Indeterminism	241
Appendix 2: Ontological Indeterminism Undermines Kim's Argument against the Logical Possibility of Mental Causation	247
Appendix 3: Why There Are No Necessary <i>A posteriori</i> Propositions	257
Notes	261
Glossary	289
