

Contents

1	Scope of Resampling Methods for Dependent Data	1
1.1	The Bootstrap Principle	1
1.2	Examples	7
1.3	Concluding Remarks	12
1.4	Notation	13
2	Bootstrap Methods	17
2.1	Introduction	17
2.2	IID Bootstrap	17
2.3	Inadequacy of IID Bootstrap for Dependent Data	21
2.4	Bootstrap Based on IID Innovations	23
2.5	Moving Block Bootstrap	25
2.6	Nonoverlapping Block Bootstrap	30
2.7	Generalized Block Bootstrap	31
	2.7.1 Circular Block Bootstrap	33
	2.7.2 Stationary Block Bootstrap	34
2.8	Subsampling	37
2.9	Transformation-Based Bootstrap	40
2.10	Sieve Bootstrap	41
3	Properties of Block Bootstrap Methods for the Sample Mean	45
3.1	Introduction	45
3.2	Consistency of MBB, NBB, CBB: Sample Mean	47

3.2.1	Consistency of Bootstrap Variance Estimators . . .	48
3.2.2	Consistency of Distribution Function Estimators . .	54
3.3	Consistency of the SB: Sample Mean	57
3.3.1	Consistency of SB Variance Estimators	57
3.3.2	Consistency of SB Distribution Function Estimators	63
4	Extensions and Examples	73
4.1	Introduction	73
4.2	Smooth Functions of Means	73
4.3	M-Estimators	81
4.4	Differentiable Functionals	90
4.4.1	Bootstrapping the Empirical Process	92
4.4.2	Consistency of the MBB for Differentiable Statistical Functionals	94
4.5	Examples	99
5	Comparison of Block Bootstrap Methods	115
5.1	Introduction	115
5.2	Empirical Comparisons	116
5.3	The Theoretical Framework	118
5.4	Expansions for the MSEs	120
5.5	Theoretical Comparisons	123
5.5.1	Asymptotic Efficiency	123
5.5.2	Comparison at Optimal Block Lengths	124
5.6	Concluding Remarks	126
5.7	Proofs	127
5.7.1	Proofs of Theorems 5.1-5.2 for the MBB, the NBB, and the CBB	128
5.7.2	Proofs of Theorems 5.1-5.2 for the SB	135
6	Second-Order Properties	145
6.1	Introduction	145
6.2	Edgeworth Expansions for the Mean Under Independence .	147
6.3	Edgeworth Expansions for the Mean Under Dependence . .	154
6.4	Expansions for Functions of Sample Means	160
6.4.1	Expansions Under the Smooth Function Model Under Independence	160
6.4.2	Expansions for Normalized and Studentized Statistics Under Independence	163
6.4.3	Expansions for Normalized Statistics Under Dependence	164
6.4.4	Expansions for Studentized Statistics Under Dependence	166
6.5	Second-Order Properties of Block Bootstrap Methods . . .	168

7	Empirical Choice of the Block Size	175
7.1	Introduction	175
7.2	Theoretical Optimal Block Lengths	175
7.2.1	Optimal Block Lengths for Bias and Variance Estimation	177
7.2.2	Optimal Block Lengths for Distribution Function Estimation	179
7.3	A Method Based on Subsampling	182
7.4	A Nonparametric Plug-in Method	186
7.4.1	Motivation	187
7.4.2	The Bias Estimator	188
7.4.3	The JAB Variance Estimator	189
7.4.4	The Optimal Block Length Estimator	193
8	Model-Based Bootstrap	199
8.1	Introduction	199
8.2	Bootstrapping Stationary Autoregressive Processes	200
8.3	Bootstrapping Explosive Autoregressive Processes	205
8.4	Bootstrapping Unstable Autoregressive Processes	209
8.5	Bootstrapping a Stationary ARMA Process	214
9	Frequency Domain Bootstrap	221
9.1	Introduction	221
9.2	Bootstrapping Ratio Statistics	222
9.2.1	Spectral Means and Ratio Statistics	222
9.2.2	Frequency Domain Bootstrap for Ratio Statistics	224
9.2.3	Second-Order Correctness of the FDB	226
9.3	Bootstrapping Spectral Density Estimators	228
9.3.1	Frequency Domain Bootstrap for Spectral Density Estimation	229
9.3.2	Consistency of the FDB Distribution Function Estimator	231
9.3.3	Bandwidth Selection	233
9.4	A Modified FDB	235
9.4.1	Motivation	236
9.4.2	The Autoregressive-Aided FDB	237
10	Long-Range Dependence	241
10.1	Introduction	241
10.2	A Class of Long-Range Dependent Processes	242
10.3	Properties of the MBB Method	244
10.3.1	Main Results	244
10.3.2	Proofs	246
10.4	Properties of the Subsampling Method	251
10.4.1	Results on the Normalized Sample Mean	252

10.4.2	Results on the Studentized Sample Mean	253
10.4.3	Proofs	255
10.5	Numerical Results	257
11	Bootstrapping Heavy-Tailed Data and Extremes	261
11.1	Introduction	261
11.2	Heavy-Tailed Distributions	262
11.3	Consistency of the MBB	265
11.4	Invalidity of the MBB	268
11.5	Extremes of Stationary Random Variables	271
11.6	Results on Bootstrapping Extremes	274
11.7	Bootstrapping Extremes With Estimated Constants	277
12	Resampling Methods for Spatial Data	281
12.1	Introduction	281
12.2	Spatial Asymptotic Frameworks	282
12.3	Block Bootstrap for Spatial Data on a Regular Grid	283
12.3.1	Description of the Block Bootstrap Method	284
12.3.2	Numerical Examples	288
12.3.3	Consistency of Bootstrap Variance Estimators	292
12.3.4	Results on the Empirical Distribution Function	301
12.3.5	Differentiable Functionals	304
12.4	Estimation of Spatial Covariance Parameters	307
12.4.1	The Variogram	307
12.4.2	Least Squares Variogram Estimation	308
12.4.3	The RGLS Method	310
12.4.4	Properties of the RGLS Estimators	312
12.4.5	Numerical Examples	315
12.5	Bootstrap for Irregularly Spaced Spatial Data	319
12.5.1	A Class of Spatial Stochastic Designs	319
12.5.2	Asymptotic Distribution of M-Estimators	320
12.5.3	A Spatial Block Bootstrap Method	323
12.5.4	Properties of the Spatial Bootstrap Method	325
12.6	Resampling Methods for Spatial Prediction	328
12.6.1	Prediction of Integrals	328
12.6.2	Prediction of Point Values	335
A		339
B		345
