Introduction	1
--------------------	---

Part I. Continuum Mechanics

1. Basic Kinematics	9
1.1 Notation	9
1.2 Basic Concepts, Motion	17
1.3 Deformation Gradient	23
1.3.1 Definition of the Deformation Gradient	23
1.3.2 Transformation of Surface and Volume Elements	24
1.4 Velocity, Acceleration and Velocity Gradient	25
1.5 Deformation	27
1.5.1 Polar Decomposition of the Deformation Gradient	27
1.5.2 Strain Measures	30
1.5.3 Eigenvalues, Invariants and CAYLEY–HAMILTON Theorem of Tensors of the Second Rank	31
1.5.4 Geometric Linearization	32
1.6 Exercises	34
1.7 Solutions	36
2. Balance Equations	51
2.1 General Balance Statements	51
2.1.1 Integral Form of the Balance Statements	51
2.1.2 CAUCHY Lemma	55
2.1.3 Synopsis of General Balance Statements	58
2.2 Local Balance Equation	59
2.2.1 REYNOLDS Transport Theorem	59
2.2.2 Local Balance Equations in the LAGRANGE Representation	61
2.2.3 Local Balance Equations in the EULER Representation	62
2.3 Special Balance Equations	63
2.3.1 Mass Balance	64

2.3.2	Momentum Balance	65
2.3.3	Angular Momentum Balance	69
2.3.4	Energy Balance	72
2.3.5	Entropy Balance	75
2.3.6	Second Law of Thermodynamics	76
2.4	Exercises	77
2.5	Solutions	81
3.	Jump Conditions	93
3.1	General Formulation of Jump Conditions	94
3.1.1	Jump Through a Surface	94
3.1.2	Modified Transport Theorem	98
3.1.3	General Balance Equations and Jump Conditions.....	101
3.2	Special Jump Conditions	103
3.3	Balance Statements and Jump Conditions	106
3.4	Exercises	110
3.5	Solutions	110
4.	Moving Reference Systems	115
4.1	Transformation of Position Vectors	115
4.2	Velocity and Acceleration.....	118
4.3	Transformation Properties of Balance Equations.....	121
4.3.1	Invariance and Indi erence of Equations.....	121
4.3.2	Important Transformation Properties	123
4.3.3	Invariance of Balance Equations	125
4.3.4	Invariance of Jump Conditions	126
4.4	Exercises	128
4.5	Solutions	131
5.	Material Equations	139
5.1	Formulation of the General Material Equations.....	140
5.1.1	Thermodynamic Processes.....	140
5.1.2	Non-Local Material Equations with Memory	142
5.1.3	Simple Body and Finite Memory	142
5.1.4	Examples of Simple Material Equations	145
5.2	Material Objectivity	148
5.2.1	Transformations of the Reference System	148
5.2.2	Transformation of Physical Quantities	148
5.2.3	Indi erence of the Material Equations.....	152
5.2.4	Observer-Invariant Material Equations.....	153
5.3	Material Symmetry	155
5.3.1	Change of the Reference Configuration	155
5.3.2	Symmetry Condition.....	158
5.3.3	Group of Unimodular Transformations	160
5.3.4	Classification of the Symmetry Properties	160

5.4	Material Equations for Isotropic Bodies	162
5.4.1	Isotropic Functions for a Symmetric Tensor, a Vector and a Scalar	163
5.4.2	Symmetric Tensor as an Isotropic Function of two Symmetric Tensors	166
5.4.3	Elastic or Barotropic Fluids	168
5.4.4	Viscous Fluids	168
5.4.5	Isotropic Elastic Solid	170
5.4.6	Isotropic Viscoelastic Solid	173
5.5	Anisotropic Solids	175
5.5.1	Linear Stress Strain Relation, Linear Heat Conduction	176
5.5.2	Symmetry Properties of the Coefficients	177
5.5.3	Symmetry Transformations for Anisotropic Bodies	181
5.5.4	Stokes Assumption	187
5.6	Internal Constraint Conditions	191
5.6.1	Density Preserving as a Constraint Condition	193
5.6.2	Other Constraint Conditions	194
5.7	Entropy Principle	195
5.7.1	Viscous Heat Conducting Compressible Fluid	195
5.7.2	Viscous, Heat Conducting and Density Preserving Fluids	202
5.7.3	Pressure and Extra Stress as Independent Variables	204
5.8	Entropy Principle of MÜLLER	207
5.8.1	Heat Conducting Compressible Fluid	208
5.8.2	Heat Conducting Density Preserving Fluid	215
5.9	Exercises	220
5.10	Solutions	223
6.	Phase transition in Viscous Heat Conducting Compressible Fluids	243
6.1	Jump Conditions on a Phase Change Surface	243
6.2	Phase Relations in Thermodynamic Equilibrium	247
6.2.1	Chemical Potential and Latent Heat	247
6.2.2	CLAUSIUS–CLAPEYRON Equation	248
6.3	Phase Change Surfaces in Non-Equilibrium	249
6.4	Density Preserving Fluids	250
6.5	Exercises	250
6.6	Solutions	251
7.	Theory of Mixtures	253
7.1	General Introduction	253
7.2	Balance Laws for the Constituents	256
7.3	Balance Laws for the Mixture as a Whole	263
7.4	Summary	269

7.5	Diffusion of Tracers in a Fluid	272
7.5.1	Basic Assumptions	272
7.5.2	Material Theory for Diffusion Processes	273
7.6	Saturated Mixture of Non-Polar Solid and Fluid Constituents	285
7.6.1	Motivation	285
7.6.2	Choice of the Material Class and Material Theory	289
7.6.3	Some Properties of Differential (PFAFFian) Forms	297
7.6.4	The Differential of the Entropy	299
7.6.5	Thermodynamic Equilibrium	306
7.6.6	Extension to Non-Equilibrium States	311
7.7	Exercises	314
7.8	Solutions	315

Part II. Dimensional Analysis

8.	Theoretical Foundation of Dimensional Analysis	339
8.1	Notation	340
8.2	Systems of Physical Units and Dimensions	342
8.3	Theory of Dimensional Equations	345
8.3.1	Dimensional Homogeneity	345
8.3.2	Theorem of BUCKINGHAM	348
8.3.3	Systematic Computation of Dimensionless Products	351
8.4	Algebraic Theory of Dimensional Analysis	358
8.4.1	Transformation of Basic Units	358
8.4.2	Exact Definition of Dimensional Homogeneity	360
8.4.3	Calculus of Dimensionless Products	363
8.5	BUCKINGHAM's Theorem	368
8.5.1	Proof of BUCKINGHAM's Theorem	368
8.5.2	Applications of the Theory and Π -theorem	371
8.6	Exercises	386
8.7	Solutions	388
9.	Similitude and Model Experiments	393
9.1	Motivation	393
9.2	Theory of Physical Models	395
9.3	Applications	401
9.4	Model Theory and Differential Equations	404
9.5	Exercises	414
9.6	Solutions	414

Part III. Turbulence

10. Fundamental Concepts of Turbulence	423
10.1 Notation	425
10.2 Early Concepts of Turbulence Theory	430
10.2.1 Experiments of Reynolds	430
10.2.2 Temporal Averaging	431
10.2.3 Eddy Spectrum and KOLMOGOROV Scales	433
10.3 Filters	437
10.3.1 Definition of Filters	437
10.3.2 Properties of Filters	438
10.3.3 Computation Rules	440
10.4 Correlations	441
10.4.1 Correlations for Homogeneous Isotropic Turbulence	441
10.4.2 EULERIAN Length and Time Scales	444
10.5 Equations of Motion	447
10.5.1 Material Equations	447
10.5.2 Balances of Mass and Momentum	448
10.5.3 Energy Balance	448
10.5.4 Mixtures	449
10.5.5 Summary of Field Equations	450
10.6 General Concept of Turbulence Modeling	452
10.7 REYNOLDS Stresses	453
10.7.1 Equations for the Averaged Fields	453
10.7.2 Transformation Properties of Turbulent Field Quantities	457
10.7.3 REYNOLDS Hypothesis	459
10.7.4 Eddy Viscosity and Diffusivity	461
10.8 General Definition of Turbulence Models	463
10.8.1 Turbulence Models of Various Orders	463
10.8.2 PRANDTL's Mixing Length	465
10.8.3 Turbulence Model of First Order	468
10.9 Exercises	469
10.10 Solutions	470
11. k-ϵ Model for Density Preserving and BOUSSINESQ Fluids	483
11.1 Model Equations	484
11.1.1 Definitions and Balance Laws	484
11.2 k - ϵ Model	487
11.2.1 Turbulent Kinetic Energy	487
11.2.2 Vorticity and Enstrophy	489
11.2.3 Turbulent Dissipation	491
11.3 Summary of the Underlying Assumptions	497
11.4 Determination of the Coefficients of the k - ϵ Model	500

11.5	Compressible Fluids	500
11.6	$k-\varepsilon$ Equations for a BOUSSINESQ Fluid	503
11.6.1	Heat Transport Equation	503
11.6.2	Thermal Equation of State	504
11.6.3	Changes in the Turbulence Equations	506
11.7	Summary of the $k-\varepsilon$ Model for Turbulence of a BOUSSINESQ Fluid	510
11.8	Exercises	514
11.9	Solutions	515
12.	Algebraic Reynolds Stress Models	523
12.1	Background	523
12.2	Basic Equations	526
12.3	Entropy Principle for Turbulent Processes	529
12.4	Closure Conditions in Explicit Form	534
12.5	Thermodynamic Compatibility	550
12.6	Critical Evaluation of Existing Models	555
12.6.1	The Algebraic REYNOLDS Stress Model of AHMADI et al.	555
12.6.2	Thermodynamic Consistency and Other Existing First Order Closure Models	556
12.7	Summary of Governing Equations	559
12.8	Exercises	561
12.9	Solutions	561
13.	Application of $k-\varepsilon$ Model	563
13.1	Introduction	563
13.1.1	Motivation	563
13.1.2	Water Circulation in a Lake	566
13.1.3	General Processes Arising in Lakes	570
13.2	Physical Processes	572
13.2.1	Solar Irradiation	572
13.2.2	Short Wave Radiative Input Into the Water	578
13.2.3	Long Wave Radiation	580
13.2.4	Latent and Sensible Heat Flux	582
13.2.5	Wind Shear	584
13.3	Material Behaviour of Water	586
13.3.1	Density	586
13.3.2	Molecular Viscosity	590
13.3.3	Specific Heat and Thermal Diffusivity	591
13.4	One-Dimensional Turbulence Models	592
13.4.1	Governing Equations and Parameterization of the Pressure Gradient	592
13.4.2	Example Computation for the One-Dimensional Model	595

13.5 Concluding Remarks	597
13.6 Exercises	598
13.7 Solutions	599
References	603
Name Index	615
Index	619
