1 Introduction 1

2 Background of the permafrost study 5
2.1 Evolution of the Qinghai-Tibetan Plateau and permafrost 5
2.1.1 The uplift of the Qinghai-Tibetan Plateau and associated climate 5
2.1.2 Permafrost 6
2.2 Current climate warming and permafrost degradation 7
2.2.1 Climate change 7
2.2.2 Permafrost degradation and associated environmental challenges 8
2.3 Investigations at the study sites 9
2.3.1 Chumaer and Qumahe 9
2.3.2 Zuimatan 13
2.3.3 Tianshuihai 16
2.4 Instrumentation and data evaluation 18
2.4.1 Measurements at the soil-weather monitoring stations 19
2.4.2 Data evaluation 19
2.4.3 Data quality discussion 25
2.5 Summary 29

3 Characteristics of the weather-permafrost interaction at the study sites 31
3.1 Introduction 31
3.2 Chumaer 31
3.2.1 Interaction between atmosphere and ground surface 31
3.2.2 Seasonal hydraulic and thermal dynamics of the active layer 36
3.3 Qumahe 39
3.3.1 Interaction between atmosphere and ground surface 39
3.3.2 Seasonal hydraulic and thermal dynamics of the active layer 43
3.4 Zuimatan 45
3.4.1 Interaction between atmosphere and ground surface 45
3.4.2 Seasonal thermal dynamics of the active layer 48
3.5 Tianshuihai 50
3.5.1 Interaction between atmosphere and ground surface 50
3.5.2 Seasonal hydraulic and thermal dynamics of the active layer 53
3.6 Comparison of the observational data at the study sites 55

3.6.1 Meteorological characteristics 55
3.6.2 Variability of the relation between air and surface temperatures 56
3.6.3 Hydraulic-thermal patterns of the active layers 57
3.7 Summary 59

4 Characterization of thermal regimes of the active layers at the study sites 61
4.1 Introduction 61
4.2 Characterization of the ground heat flux 62
4.2.1 Introduction 62
4.2.2 Material and methods 63
4.2.3 Applications and discussions 66
4.3 Characterization of the thermal regime of the active layers 75
4.3.1 Introduction 75
4.3.2 Methods 76
4.3.3 Results and discussions 80
4.4 Summary 85

5 Monitoring field-scale soil water dynamics with multi-channel GPR 87
5.1 Introduction 87
5.2 Theoretical background of multi-channel GPR 88
5.2.1 Principles of electromagnetic wave propagation 88
5.2.2 Relationship between soil water content and permittivity 89
5.2.3 The multi-channel GPR method 90
5.3 Optimization of multi-channel GPR to measure spatial variation of soil permittivity 90
5.3.1 The algorithm of multi-channel GPR evaluation 90
5.3.2 Monte Carlo uncertainty analysis of multi-channel GPR method 91
5.3.3 Accuracy assessment of multi-channel GPR: synthetic example 92
5.4 Application to field data 95
5.4.1 Materials and methods 95
5.4.2 Results 96
5.5 Discussion and conclusions 99

6 Thermal characterization of active layers at the study sites 101
6.1 Introduction 101
6.2 Characterization of heat transfer in various active layers 102
6.2.1 Method 103
6.2.2 Results 104
6.2.3 Discussion 110
6.3 Field-scale parameterization of soil thermal conductivity with multi-channel GPR 116
6.3.1 Method 116
6.3.2 Inverse parameterizations at the study sites 119
6.3.3 Discussion 122
6.4 Conclusions 124

7 Summary and conclusions 127

Bibliography 131

I Appendix 141

A Installation at the study sites 143
A.1 Temperature sensors 143
A.2 TDR & CS616 sensors 144

B Topography of the study regions 145
B.1 Chumaer & Qumahe 145
B.2 Zuimatan 146
B.3 Tianshuihai 147
