

CONTENTS

Preface	page xi		
Abbreviations and units	xiii		
1 The tropical environment and climate	1		
1.1 The tropics	2		
1.2 Tropical and temperate environments	3		
1.3 Tropical climates	4		
1.4 Global climate change	12		
1.5 Biogeographical regions	18		
Summary	24		
2 Dry, hot deserts and environmental factors	26		
2.1 Tropical deserts	27		
2.2 The Sahara Desert and arid zones of northern Africa	27		
2.3 The Namib Desert	31		
2.4 Australian deserts	35		
2.5 Environmental factors	39		
2.6 Water	39		
2.7 Limiting factors and Liebig's law	42		
2.8 Temperature	45		
2.9 Salinity	46		
2.10 Soils and nutrients	47		
2.11 Environmental factors and plant and animal distributions	51		
2.12 Desertification or land degradation?	55		
Summary	56		
3 Grasslands and primary production	59		
3.1 Grass structure and biology	60		
3.2 Neotropical grasslands	61		
3.3 Light as an energy source	64		
3.4 Carbon dioxide uptake by plants	65		
3.5 Photosynthesis	66		
3.6 Photorespiration	67		
3.7 Photosynthetic strategies	67		
3.8 Respiration	70		
3.9 Environmental factors and photosynthesis	70		
3.10 Primary production	73		
3.11 Assessment of grassland primary production	74		
3.12 Effects of rainfall, grazing and fire on grass growth	75		
3.13 Primary production rates in terrestrial biomes	78		
Summary	79		
4 Savanna and population dynamics	81		
4.1 Fire and savanna vegetation	82		
4.2 Savannas of the world	82		
4.3 The Serengeti	87		
4.4 Savanna plants and heterogeneity	89		
4.5 Animal population dynamics in the Serengeti	91		
4.6 Herbivores and herbivory	93		
4.7 Principles of population growth	96		
4.8 Factors determining population density	101		
4.9 Density-dependent mortality factors	104		
4.10 Competition theory and the competitive exclusion principle	109		
4.11 Predation	111		
4.12 Density-independent mortality factors	121		
4.13 Reproductive strategies and population growth	121		
4.14 Population age structure and life tables	125		
4.15 Key factor analysis	132		
4.16 Conservation of African wildlife	132		

4.17	Ecosystem dynamics and ecological models	135	7.4	Swamp forests	249
	Summary	139	7.5	Wetland succession	251
5	Lakes, energy flow and biogeochemical cycling	142	7.6	Ecological succession	253
5.1	Thermal stratification	143	7.7	Community development and assembly	254
5.2	Pelagic zone production	161	7.8	Wetland loss and conservation	255
5.3	Littoral zone producers and primary production	166		Summary	257
5.4	The catchment area concept	168	8	Tropical rain forests and biodiversity	259
5.5	Aquatic consumers	170	8.1	How many species exist?	260
5.6	The biota of tropical and temperate lakes: a comparison	172	8.2	Biogeography of rain forests	260
5.7	Food chains and energy flow	174	8.3	Vegetation structure of tropical rain forests	267
5.8	Food chain energetics	175	8.4	Phenology and reproduction of tropical forest trees	270
5.9	Trophic levels	176	8.5	Life-form concept of plants	273
5.10	Limited length of food chains	178	8.6	Rain-forest animals	273
5.11	Food chain efficiencies	181	8.7	Convergent evolution	276
5.12	Food web dynamics and trophic cascades	182	8.8	Plant-animal interactions	277
5.13	Biogeochemical cycles	184	8.9	Co-evolution	281
5.14	Quantitative aspects of nutrient supply and cycling	190	8.10	Productivity and nutrient cycling in forests	281
5.15	Eutrophication	193	8.11	Micro-climates and resource acquisition	283
5.16	Aquatic resource management	199	8.12	Biological diversity	285
	Summary	201	8.13	Why are rain forests so diverse?	288
6	Rivers, floodplains and estuaries: the river continuum and flood-pulse concepts	204	8.14	Latitudinal gradients and species diversity	289
6.1	Nile River	205	8.15	Gap theory	293
6.2	Purari River	211	8.16	Processes maintaining local diversity	296
6.3	Amazon River	216	8.17	Tropical deciduous forests and ecotones	300
6.4	Ecological concepts	226	8.18	Low-diversity tropical rain forests	300
6.5	Estuaries	235	8.19	Deforestation	301
	Summary	239	8.20	Rain-forest conservation and restoration	304
7	Wetlands and succession	241	8.21	Biodiversity conservation	309
7.1	Sudd communities of Lake Naivasha	243		Summary	312
7.2	Rooted emergent swamps of Lake Chilwa	244	9	Mountains, zonation and community gradients	315
7.3	Freshwater herbaceous wetlands: structure and function	245	9.1	Environmental factors and altitude	316
			9.2	Zonation on tropical mountains	316
			9.3	Vegetation zonation on Mount Wilhelm, Papua New Guinea	317
			9.4	Zonation in the Andes	322

9.5	Plant and animal ecophysiology: examples from Mount Kenya	325	11.9	Coral reef management and conservation	386
9.6	Mountain zonation	330		Summary	393
9.7	Variation in plant and animal communities	330			
	Summary	332			
10	Mangroves, seagrasses and decomposition	334	12	Islands, archipelagos, biogeography and evolutionary ecology	395
10.1	Mangrove biogeography	335	12.1	Krakatau	396
10.2	Mangroves of New Guinea	337	12.2	Dispersal	397
10.3	Ecological adaptations of mangroves	339	12.3	Colonisation and community assembly	401
10.4	Mangrove animals	342	12.4	Island biogeography	402
10.5	Mangrove productivity	345	12.5	Natural selection and evolution	410
10.6	Seagrasses	346	12.6	The Galápagos Archipelago	411
10.7	Coastal vegetation and organic matter export	347	12.7	Speciation	414
10.8	Decomposition	349	12.8	The Hawaiian Archipelago	420
10.9	Decomposition rates and environmental factors	352	12.9	Extinction	421
10.10	Detritus food chains	353	12.10	Exotic species on islands	422
10.11	Decomposition in other tropical systems	353	12.11	Community ecology and evolution	423
10.12	Coastal zone management	354		Summary	425
	Summary	355	13	Cities and human ecology	427
11	Coral reefs and community ecology	358	13.1	Tropical cities	428
11.1	Coral reef communities	359	13.2	Evolution of human societies	429
11.2	Coral biology	361	13.3	World population growth	431
11.3	Coral reefs	369	13.4	Food production	435
11.4	Coral reef algae	371	13.5	Industrialisation, natural resource use and pollution	444
11.5	Coral reef animals	372	13.6	Human population growth: consequences and solutions	446
11.6	Coral reef biogeography and biodiversity	375	13.7	Sustainable development	449
11.7	Community ecology	380	13.8	Conclusions	450
11.8	Coral reef communities and phase shifts	385		Summary	450
				Glossary	452
				References	471
				Index	501
