The town of Naxos was walled by C6 (Andriskos (FGrHist 500) fr. 1.1; Hdt. 5.34), in the 470s (Thuc. 1.98.4, 137.2; Ar. *Vesp.* 355) and in 376 (Diod. 15.34.4). (At Aen. Tact. 22.20 ἐν Νάξῳ is an unconvincing conjecture.) Remains of an undated city wall were seen by Dugit (1867) 35–37, but are no longer visible. To judge from preserved tombs and other remains, the walled town seems to have covered an area of 20+ ha. Traces of occupation from the Geometric period have been discovered toward the northern end of the present town (ArchDelt 39 Chron. 292–95 and 29 Chron. 867–70). There was a Delion just outside the city walls in C6 (Andriskos (FGrHist 500) fr. 1.1); for confirmation of the date, see BCH 96 (1972) 772, *re* Geometric sherds from the site), which was probably at the site of the temple of Apollo Delios begun by Lygdamis c.530 that still dominates the harbour (Welter (1924); Gruben and Koenigs (1968), (1970); briefly Gruben (1986) 344–47; Koenigs (1972)). A *prytaneion* and a theatre (restored) are attested in C3 (IG XII.5 35 with S. G. Miller (1978) 200–1 nos. 368–69), but a seat from the *koilon* of, probably, the theatre has been recovered, and Gruben (1982a) 165–66 reports the discovery under the heading “Archaische Bauten”. Pindar mentions a public cult of Hieros and Ephialtas (Pyth. 4.88; cf. IG XII.5 56); a *horos* of Zeus Melosios of C4 (IG XII.5 48) and two of Apollo from C6e–C5s (Psarras (1999)) and C4–C3 (IG XII.5 42) indicate the existence of sanctuaries. Excavation has recovered a sanctuary dating from c.570 at Yria (Lambrinoudakis and Gruben (1987–88); Lambrinoudakis (1992); Gruben (1993) 99–105); this has recently been assigned to Dionysos and identified as the chief sanctuary of the island (Gruben (1997) 300); the unfinished statue at Apollona, now seen as Dionysos, may have been intended to stand by this temple like the colossus of Apollo on Delos dedicated by the Naxians (*ibid.* 293–300). There is an Archaic sanctuary for Demeter at Sangri (Kontoleon (1954); Lambri-noudakis *et al.* (1977) 382–86; Gruben (1993) 106–9), and another nearby at Gyroulos (*Ergon* (1977) 156–61, (1979) 24–25; *Prakt* (1977) 382–86), which may be dedicated to Apollo (SEG 31 744). A sanctuary of Athena was located in the vicinity of modern Sangri (IG XII.5 40 (C6–C5) with test. 1421); Athena Poliouchos’ sanctuary was situated north-east of the town at Engares (IG XII.5 41 with test. 1421). The sanctuary of Zeus Melosios was on the east side of Mt. Drios (the modern Ozia) (cf. Diod. 5.51.4), near Philoti (IG XII.5 48 with the map at IG XII.5 fasc. 2 p. xxxiii). The grotto of the Nymphai Mychieis lay north-east of the town (IG XII.5 53).

Finally, the sanctuary of Otos and Ephialtas was at Melanes (*IG XII.5* 56).

Many communal dedications of the Naxians are attested from several sanctuaries. The Naxian Leonidas, honoured in Olympia by the Arkadian *polis* of Psophis (no. 294) (Paus. 6.16.5; *IvO* 294), dedicated out of his own funds a Leonideion in 330–320 (Paus. 5.15.2; *IvO* 651; Mallwitz (1972) 246–54). On Delos, the Naxians dedicated a palm (Ath. 502B with Bruneau (1990) 568–71) and the famous colossus of Apollo dating to 590–580 (*I.Délos* 4 and 49; Bruneau and Ducat (1983) 125–28; Bruneau (1988) 577–82; Gruben (1997) 267–87). Excavation and identification of the *oikos* of the Naxians known from C4 texts (*I.Délos* 104–25.5, etc.) have shown that the building began in C7s (Courbin (1980); Bruneau and Ducat (1983) 119–23; Gruben (1997) 301–50). The Propylaia I and II of C5 have recently been claimed as Naxian work (Gruben (1997) 350–72). The Naxians dedicated a stoa in C6l (Hellmann and Fraisse (1979) 85–124; Bruneau and Ducat (1983) 146–47). The famous lions, one of the original sixteen now gracing St. Mark's Square in Venice, were given in C7l (Gallet de Santerre (1959) 21–36; Bruneau and Ducat (1983) 171–74). A less spectacular dedication is the gold *φιάλη καρνωτή*, attested by an inscription of 365/3 and, as has recently been shown, by Athenaios (*I.Délos* 104.34–35 with Bruneau (1990) 568–71; for the gold, see *IG XI.2* 161.B.31). At Delphi, the Naxians dedicated the famous Sphinx, for which they had received *promanteia* (*Syll.*³ 292 with 17a (from 332); Amandry (1953); a base reinscribed in C4 suggests another dedication, but may be related to the Sphinx; see Jacquemin (1999) 69, and contributed funds to rebuilding the sanctuary after the earthquake of 373 (*CID II* 4.1.16–17 for the *polis* as a whole, 20–27 for individual Naxians). The Naxians also participated in the communal dedications at Delphi and Olympia after Plataia (ML 27.8; Paus. 5.23.2; cf. Hdt. 9.81).

The Naxians may well have controlled some of the smaller islands to the south-east, although there is no direct evidence. These would include the archipelago of the Phakous(s)ai (Steph. Byz. 655.3–4; late inscriptions: *IG XII.7* 507–8), Herakleia (*IG XII.7* 509 with L. Robert (1949)) and Nikasia (*Suda N* 377; Plin. *HN* 4.68).

The Naxians minted coins from c.600, first silver staters and trihemibols on the Aiginetan standard. Types: *obv.* kantharos with or without a crown; *rev.* incuse square. The coins with kantharos and crown were apparently replaced c.500 by coins with the plain kantharos, which had begun production a few years earlier. The Naxians continued to strike these types until their defection from the Delian

League in c.475–470 (Nicolet-Pierre (1997)). In C4 they struck silver drachms and obols on the Rhodian standard as well as bronze coins. Types: *obv.* Dionysos; *rev.* kantharos; legend: *ΝΑΞΙΩΝ* or *ΝΑ* (Head, *HN*² 488; *SNG Cop. Aegean Islands* 702–9). A Naxian tetradrachm appears in the Delian accounts starting in 364/3 (*I.Délos* 104.66–67). For possible attribution of some half-staters on the Milesian/Phoenician standard to Naxos instead of Anaphe (no. 474), see Erxleben (1970) 69–70, 73.

Naxian participation in the colonisation of Naxos (no. 41) on Sicily is suggested by Hellan. fr. 82; it has sometimes been doubted, but now seems confirmed by an inscription (Guarducci (1985); for a good summary, see Costa (1997) 87–102). Naxian claims of colonisation on Amorgos (Steph. Byz. 86.14; schol. Dionys. Per. 525) may be Hellenistic inventions designed to justify the occupation of Aigiale (no. 471) and Minoa (no. 473) (Nigdelis (1990) 23).

508. Nisyros (Nisyrios) Map 61. Lat. 36.35, long. 27.10. Size of territory: 2 (37 km², 49 km² including the islets, see *infra*). Type: A. The toponym is *Νίσυρος*, ἡ (Hom. *Il.* 2.676; Theophr. *De lap.* 21; Diod. 5.54.3), denoting both the island (Ps.-Skylax 99) and the town (Strabo 10.5.17). The city-ethnic is *Νισύριος* (Hdt. 7.99.2; *IG I*³ 270.1.9) or *Νισούριος* (*CID II* 4.111.61 (360/59), 5.1.51–60 (359/8)). Nisyros is attested as a *polis* in the political sense at Hdt. 7.99.2–3. The collective use of the city-ethnic is attested internally on C4 coins (*infra*) and in C3 inscriptions (*IG XII.3* 88.6), and externally in inscriptions and literary sources (Hdt. 7.99.2). The individual and external use is attested in the accounts of the Delphic *Naopoioi* (*CID II* 4.111.61 (360/59), 5.1.51–60 (359/8)).

Ps.-Skylax 99 places Nisyros in Karia, but Steph. Byz. 477.7 among the Kyklades. The small islands off Nisyros (Strabo 10.5.16) were part of its territory. The island was supposed to have been created when Poseidon ripped off part of Kos and threw it into the sea (Paus. 1.2.4; Strabo 10.5.16; Apollod. *Bibl.* 1.6.2.4), a foundation myth reflected in the trident on the C4 coins (*infra*). Nisyros is said to have been colonised by Epidauros (no. 348) (Hdt. 7.99.2–3). Kos (no. 497) may have controlled the island of Nisyros c.500 (Hdt. 7.99 with Hicks in Paton and Hicks (1891) p. xii); but if so, Nisyros was independent by c.478 (see *infra*). Two ships from Nisyros fought under Artemisia's command at Salamis (Hdt. 7.99.2).

Nisyros was a member of the Delian League. It belonged to the Ionian district (*IG I*³ 269.1.8), but in 429/8 to the Island district (*IG I*³ 282.111.20) and is recorded in the tribute lists from 452/1 (*IG I*³ 261.IV.4) to 428/7 (*IG I*³ 283.II.30) a total of

nine times, twice completely restored, paying a *phoros* of 1 tal. 3,000 dr. (*IG* I³ 261.IV.4), reduced to 1 tal. in or before 442/1 (*IG* I³ 270.I.9). After the end of the Peloponnesian War Nisyros fell under Spartan authority, for in 394 Diodorus mentions the island among the states brought by Pharnabazos and Konon to revolt (14.83.3). Throughout C4 Nisyros was independent (see Papachristodoulou (1989) 47).

The protective deity, appropriately for a volcanic island (see Buchholz and Althaus (1982) 17–18, 21–22), was probably Poseidon (see the coins; Ashton (1999a) 23 with (1999b) for the Knidian *comparanda*); in a Hellenistic inscription he bears the epithet Argeios (*IG* XII.3 103.13 = *Syll.*³ 673). Strabo mentions a sanctuary of Poseidon (Strabo 10.5.16).

A remarkable law of C4s, inscribed on the outside of the city wall, declares that land lying 5 feet from the wall is public land (*δαμόσιον χωρίον*) (*IG* XII.3 86 = *Syll.*³ 936 = Maier (1959–61) no. 47). The remains of the wall date at the earliest from after the earthquake of 413 (Buchholtz and Althaus (1982) 15–16; see Bean and Cook (1957) 118–19); it has been suggested to have been put up as part of Mausolos' strategy of fortifying sites under his control (Bean and Cook (1957) 142; Hornblower (1982) 331–32; Sherwin-White (1978) 70 n. 212 is sceptical). The wall enclosed an area of 10 ha (Hoepfner (1999) 134–35). A harbour is attested at Ps.-Skylax 99.

In C4 Nisyros struck coins in silver and bronze. (1) Silver drachms (only one genuine example known), which should probably be dated to C4m/e (Ashton (1999a) 23; (1999c)). Types: *obv.* head of Aphrodite; *rev.* Poseidon seated with trident; legend: *ΝΙΣΥΡΙΟΝ*. (2) Bronze. Types: *obv.* head of Helios, or Aphrodite, or unidentified female head; *rev.* Aphrodite with rose, or dolphin, or grapes, or eagle, or cow or bull, or dolphin and trident; legend: *ΝΙ* or *ΝΙΣΥ* (Head, *HN*² 635; *SNG Cop. Caria* 706–8, but 709 is not of Nisyros; see Ashton (1999a) 15–16).

509. Paros (Parios) Map 61. Lat. 37.05, long. 25.10. Size of territory: 3 (196 km²). Type: A. The toponym is *Πάρος*, ἦ (Archil. fr. 89.22; *Hymn. Hom. Ap.* 44; Aesch. *Pers.* 884), denoting both the island (Hdt. 5.31.2) and the town (Ps.-Skylax 58). The city-ethnic is *Πάριος* (*IG* XII.5 216 (C6l); Thuc. 4.104.4; Pl. *Ap.* 20A–B). Paros is called a *polis* both in the urban sense (Hdt. 6.134.2; Isoc. 19.19; Ephor. fr. 63; Matthaïou and Kouragios (1992–98) 438–40 (C4s)) and in the political sense (*IG* XII.5 110.6, 111.6 (both C4e); Matthaïou (1992–98b) 430–31 no.3 (both C4m); Archil. fr. 13.2). The territorial sense is possibly attested in Archil. fr.

204. The collective use of the city-ethnic is attested internally in inscriptions (*IG* XII.5 110.6, 111.6 (both C4e)) and in abbreviated form on coins (*infra*), and externally in inscriptions (*SEG* 27 249 (C6l/C5e); *IG* I³ 263.IV.24; *LDélos* 98B.5 (377/6)) and in literary sources (Hdt. 6.133.1–2; Pl. *Menex.* 245B). For the individual and external use, see Hdt. 1.12.2: *Ἀρχιλόχος ὁ Πάριος*; Lazzarini (1976) no. 304 (C6m); *Syll.*³ 16; Arist. *Pol.* 1258^b40. *Patris* is found in Hdt. 6.135.2.

Strabo, citing Artemidoros, places Paros among the *Kyklades* (Strabo 10.5.3). Apart from the urban centre, Paros had many habitation sites in the Geometric and Archaic periods, and it remains unclear what relation they had to the main town centre of Archaic and later periods and to the formation of Paros as a unified polity. These settlements include (1) a fortified habitation site at Naoussa in the north-east quadrant of the island (Rubensohn (1901) 163–70, (1949) 1791; cf. also *BCH* 114 (1990) 818, not in *Barr.*); (2) an Archaic fortified site with a building identified by the excavator as a “temple” at Oikonomos (Schilardi (1973), (1975b) 93); (3) the Archaic “acropolis” at Koukounaries (Berranger (1992) 121; Reger (1997) 460), which has recently been claimed as a full-blown *polis* with Athena as its tutelary deity (Schilardi (1996)); (4) *Υρή* (perhaps to be located at Marmara; Berranger (1992) 126; Rubensohn (1949) 1791, misprinted as Hydria in *Barr.*); (5) Myrsineai (*IG* XII.5 244) was perhaps a civic subdivision of the Archaic period (*infra*) and seems well fixed by modern Piskopiana (Rubensohn (1901) 175–76; Berranger (1992) 132); (6) at Dryos, recorded in *Barr.* conventionally as a settlement, perhaps of the Classical period, have been reported a tower and harbour fittings (Rubensohn (1901) 173–74, (1949) 1791). (7)–(8) We have from later periods names for a number of settlements on Paros; most of these are located only with some uncertainty, and none seems associated clearly with any of the settlements known archaeologically. They include *Μάρπησσα* (Steph. Byz. 434.6; Rubensohn (1901) 158), and *Τεμένιον* (*IG* XII.5 116 (C4)), both unlocated.

Paros was said to have been colonised by Arkadia, with Paros as the oecist (Heracl. Lemb. fr. 25, from the Aristotelian *Constitution of the Parians*). The Athenians call the Parians their *apoikoi* in 373/2 (*SEG* 31 67.6).

From a study of the fragments of the poetry of Archilochos, Lanzillotta has concluded that Paros was ruled by an aristocracy controlled by a few families in the Archaic period (Lanzillotta (1987) 58–61; see also Berranger (1992) 328–31). It may be doubted that Paros was actually under the control of Naxos (no. 507) in 499 (as at Hdt. 5.31.2; cf. Lanzillotta (1987) 105–6). During the Archaic period the

Parians and the Naxians fought a series of wars which imply naval and land forces (cf. Berranger (1992) 205–7). It is in this context that a Milesian ambassador is said to have been rescued from a shipwreck by a dolphin (IG XII.5 445.10–19). C.655–650 the Parians participated in arbitrating a dispute between Chalkis (no. 365) and Andros (no. 475) over Akanthos (no. 559) (Plut. *Mor.* 298A–B; Piccirilli (1973) 7–11 no. 2). C.525 the Milesians (no. 854) requested Parian “state-reformers” (καταρτιστῆρες) to settle an internal dispute (Hdt. 5.28–29). Paros was subdued by Persia during the reign of Dareios (Aesch. *Pers.* 882). The Parians sent a trireme to Marathon with the Persian expedition in 490 (Hdt. 6.133.1). In 489 Miltiades launched an expedition against the Parians, which failed (Hdt. 6.132–36; for a different tradition, see Ephor. fr. 63). The Parians remained loyal to the Persians for the next decade (cf. Hdt. 8.67.1 with Lanzillotta (1987) 113 and Berranger-Auserve (2000) 88). After the battle of Salamis, Themistokles led another Athenian expedition against the Parians, who deterred him with a bribe (Hdt. 8.112). Soon thereafter they joined the Delian League (ATL iii. 190, 198). Paros belonged to the Island district and is recorded in the tribute lists from 450/49 (IG I³ 263.IV.24) to 416/15 (IG I³ 289.I.24) a total of eleven times, four times completely restored, paying a *phoros* of 16 tal., 1,200 dr. in 450/49 (IG I³ 263.IV.24), raised to 18 tal. in 446/5 (IG I³ 266.IV.25). It was assessed for tribute in 425/4 (IG I³ 71.I.62) (30 tal.). The nature of the regime for most of C5 is unknown (Berranger-Auserve (2000) 93), though there was an oligarchy in the *polis* in 410/9 abolished by Theramenes when, supporting the *demos*, he restored democracy and imposed heavy fines on the oligarchs (Diod. 13.47.8). Probably soon after 407 the Parians helped effect a reconciliation between the Thasians (no. 526) and the Neapolitans (no. 634) (IG XII.5 109 with Pouilloux (1954) 178–92; Piccirilli (1973) 144–49 no. 33; Berranger-Auserve (2000) 94–95); a bas-relief found at Delphi depicts the reconciliation (Moretti (1953)). In C4e Paros came under the control of one Pasinos (Isoc. 19.18), and for a few years Paros was probably a tyranny or a narrow oligarchy (Gehrke, *Stasis* 125); but democracy was soon reintroduced: Plato (*Menex.* 245B) speaks of the Athenians fighting “on behalf of the Parians” after the reconstruction of the long walls, probably c.393; and shortly afterwards the Parians borrowed money from Apollo of Delos under the amphiktyony created by the Athenians (e.g. *I.Délos* 97.13 = IG II² 1634 (391/0)). That the Parians thereafter had a democratic government along Athenian lines is suggested most recently by the discovery of part of a *kleroterion* of Athenian style on the island, though

the machine cannot be dated more closely than C4–C2 (Müller (1998)). The Parians joined the Second Athenian Naval League in 377/6 (IG II² 43.A.89). An important inscription of 373/2, a rare example of a decision of the *synedrion* of the League, has recently been interpreted as an effort by the League, through the appointment of *diallagai*, to resolve bitter internal political factionalism among the Parians (SEG 31 67 with now Dreher (1995) 109–54; cf. also Matthaïou (1992–98b) 435 n. 24). A Parian-Thasian *sympoliteia* should not be inferred, as some have, from the singular of *demos* in the phrase [περ]ι τὸν δῆμο[ν] τὸ[μ] II[a]ρῶων καὶ Θασίων in an inscription of roughly 350–330 (IG XII.5 114.10–12 with p. 308 and IG XII suppl. p. 105; L. Robert (1935) 313, (1960b) 525 n. 3; *contra* Berranger (1992) 311–12; on IG XII suppl. 412 = CEG I 416 (C6), see now Pouilloux (1989) and N. Ehrhardt (1987), *non vidē*; the objections of Juri Vinogradov, *BE* (1990) 499, have much less force after the work of the Polis Centre). The Parians awarded the Athenian *boule* a crown in 348/7 (IG II² 1441.5–7). The Parians received 10,000 *medimnoi* of grain from Kyrene (no. 1028) c.330 (SEG 9 2.29 = Tod 196; cf. Marasco (1992)).

The Aristotelian collection of *politeiai* included a Constitution of the Parians (Heracl. Lemb. 25). In C4 decrees were passed by the *boule* and the *demos*. They were published by the *prytaneis* (IG XII.5 110.10) or the *grammateus* (IG XII.5 118.5) at the expense of a *tamias* (Matthaïou (1992–98b) 430–31 no. 3.10, 24). The eponymous official was the archon (IG XII.5 112.6–7 = Migeotte (1984) 213–15 no. 61 (C4)) from no later than the lifetime of Archilochos (IG XII.5 445.8–9). Other attested officials are *theoroi* and a *neokoros* (IG XII.5 108 = LSCG 205–6 no. 111 (C5)), *theopropoi* (Hdt. 6.135.2) and a *hypostrategos* (IG XII.5 1019A (C4–C3?)), although we must wait till C3 to hear of the *stratego*i themselves, here of course a political, not military, office (IG XII.5 220). Archilochos does mention, however, a military *strategos* in C7 (Archil. fr. 114.1; cf. 95.1). Parian envoys to Athens (no. 361) are mentioned in the Naval Synedrion’s decree of 372 (SEG 31 67.13–14). Paros granted *proxenia* to citizens of Chios (no. 840) (IG XII.5 110–11 (C4e)) and Athens (IG XII.5 114 + p. 308; SEG 48 1135 (all C4m)), and Parians received *proxenia* from Anaphe (no. 474) (IG XII.5 251.15–17 (C4?)).

Several Parian public enactments are preserved on inscriptions. They include a law of 475–450 forbidding throwing rubbish in a public road (IG XII.5 107 = LSCG 202–3 no. 108; Koerner (1993) 215–17 no. 57 and SEG 45 1142 for the date), a law of C5 forbidding cutting something, perhaps sacred trees (IG XII.5 108 = LSCG 205–6 no. 111;

Koerner (1993) 217–19 no. 58), a C5 *horos* of (Zeus?) Hypatos forbidding access(?) to the uninitiated and to women (*IG XII.5 183* = *LSCG 203* no. 109 (C5), with, however, the reservations of Berranger (1992) 327), and what may be a law of c.450 forbidding foreigners from participating in a cult (*IG XII.5 225* = *LSCG 204–5* no. 110, with the differing interpretations of Berranger (1992) 93–95 and Butz (1996) 82–86). The Parian state owned public land (*IG XII.5 115* (C5)).

The civic organisation of Paros into demes has been inferred from the appearance of *Ἀρχιλόχος Μυρναῖος* on a vase in the Bosco Reale treasure (Rubensohn (1949) 1807). In an inscription of the Roman period *Μυρσίβειαι* is attested as the name of a village on Paros (*IG XII.5 244*; cf. *SEG 28 709*), and combining the two sources, it has been inferred that Myrrhineai must be the name of a Parian civic subdivision, possibly a deme (Berranger (1989–90)). Patrai are attested in a C4 dedication by the Dordopes to their Archegetes (*SEG 33 687*; *pace* Lanzillotta (1987) 191–94). Only one month of the Parian calendar, Anthesterion, is attested before 300 (*IG XII.5 112.7* = Migeotte (1984) no. 61 (C4)); for the four months attested later and a possible reconstruction, see Trümpy, *Monat.* 65–72.

The protective deity was Athena Poliouchos (*IG XII.5 134.17* (C4–C3)); the restoration of her epithet at 1029.5 is very likely because of the *stoichedon* arrangement, but cf. Berranger (1992) 72–73, 187), who helped the Parians in C7 in battle (Archil. fr. 94). Temple A (c.530–520) on the Parian acropolis, where cult is attested from C7, may be hers (Gruben (1982*b*) 221, 229 with Rubensohn (1949) 1842; reservations: Berranger (1992) 71–73). Athena is also Kynthie (*IG XII.5 210*; cf. Berranger (1992) 266–67 no. 4, with a date of 525–500) and Pontie (*SEG 28 707* (C4)). Demeter was worshipped from C7 on Paros (*Hymn. Hom. Dem.* 491; see also Archil. fr. 169 and 322) and her Thesmophorion, still unlocated (Berranger (1992) 85–90), played an important role in a story in Herodotos (6.134.2); her priests seem to have been called *Κάβαρροι* (Hsch. *K*8, but see Hemberg (1950) 171–72). Zeus is attested under multiple epithets: Aigiochos (*IG XII.5 215.6* (C5e); Berranger (1992) 267–69 no. 6), Elasteros (*IG XII.5 1027* (c.500), as restored by Berranger (1992) 278–80 no. 13; *IG XII suppl.* 208; *BE* (1963) 199; Matthaïou (1992–98*b*) 424–26 no. 1 (an altar with inscription dated to C6l) and 426–30 nos. 2–3 (which may be *horoi* of his sanctuary, see also Matthaïou (1999)), Eleutherios (*SEG 26 978* (C5)), once probably also as Patroios (*IG XII suppl.* 208 (C4), following Berranger (1992) 186). There is also a *horos* of Hypatos of C5 which may be an epithet of Zeus (*IG XII.5 183* = *LSCG 203* no. 109, with Berranger (1992)

185). This inscription comes from Mt. Kounados, where Zeus had a sanctuary that may be quite ancient. Apollo's cult was widespread with multiple epithets: Hekebolos (*IG XII.5 148* (C5?); the deity is restored on the basis of the epithet); Delios (*Hymn. Hom. Ap.* 44; *IG XII.5 214* (C4), a *horos*; five further examples in *BE* (1964) 341), and with Artemis and Leto as the Delian triad in C5l (Matthaïou and Kouragios (1992–98) 438 no. 2), Pythios (*IG XII.5 134.8* + add. p. 309), whose Pythion was the archive for public documents (*IG XII.5 110.9–11* (C4)); it is uncertain whether the Pythion is to be identified with the temple, surely Apollo's, located outside the city walls on a terrace above the Asklepieion and in use from C7 but reconstructed in C4f (Schuller (1982*b*) 245–46, 262–64; Berranger (1992) 97–103 for the doubts). Artemis appears without epithet and as Delios (*IG XII.5 216* (C5), 211 (C4)), and there is evidence for the cult of Hermes (*Ἀμαξείτης*, *Ergon* (1960) 184). Aphrodite (Matthaïou and Kouragios (1992–98) 437–38 no. 1 (C4f)), and Ge, although her cult may have been private rather than official (Despinis (1979) 228–29) (C4m)). Worship of the Charites, attested in C2 (*IG XII suppl.* 206), would seem to go back much earlier (Apollod. *Bibl.* 3.15.7.7). Herakles, who had important mythological connections with Paros (Apollod. *Bibl.* 2.5.9.3–6), is mentioned as Kallinikos by Archilochos (fr. 324.1). Dionysos appears in a catalogue (*IG XII.5 134.9*). Asklepios (*IG XII.5 119* (C4), name not wholly clear) had a sanctuary outside the city, probably begun around C4s (Berranger (1992) 104–5; Semeria (1986) 953). Hestia's cult, attested by an inscription of c.525–500 (*IG XII.5 238* with Gruben (1982*a*) 673), was practised in a building that has been identified as a *prytaneion* (Gruben (1982*a*) 673).

The Parians consulted oracles as a community with some frequency throughout their history; instances relating to Apollo at Delphi before 323 are recounted in a Hellenistic account of the founding of Thasos (*SEG 15 517.II.43–47*, 50–52 with *Anth. Pal.* 14.113 and Berranger (1992) 178–80), in Herodotos (6.135.2–3) and in Diodorus (15.13.4, before founding the colony at Pharos, after 385; cf. Fontenrose (1978) 248–49 H14).

The *polis* centre was walled from perhaps as early as C7, but certainly in C6; the wall encompassed the hill that served as the Parian acropolis, and much of its course has now been traced. It enclosed an area of c.50 ha (Berranger (1992) 62–65; Schilardi (1975*a*) 197–203 with 198 fig. 1). More sections continue to be discovered (see Zapheïropoulou (1987) 490–91, (1990) 403, (1992) 541). Some additional archaeological finds in the *polis* centre are discussed in Kouragios

(1996). The wall is mentioned in literary sources (Hdt. 6.133.2 (rC6l); Ephor. fr. 63 (r489)). A C4s *horos* inscribed ὄρος πόλεως was presumably set up to mark the line between the town (*polis*) and its hinterland (Hansen (1996) 37 with nn. 148 and 149) and/or between the town and its harbour (Gauthier in *BE* (1999) 420); for a different interpretation, see Matthaiou (1992–98b) 441–47). Paros had two harbours, one of which is described as closed (κλειστός, Ps.-Skylax 58). For remains of the harbour, see Berranger (1992) 57–58.

A *prytaneion*, mentioned in 207/6 (*I.Magnesia* 50.67–68), may have existed as early as C5 and was rebuilt in C4s (Gruben (1982a) 676–83; see *IG XII.5.281.3* (undated)). Probable remains of a *bouleuterion* of C4 have been identified (Berranger-Auserve (2000) 101). Sanctuaries and cult sites include perhaps one of Poseidon up by Kargadousa (Rubensohn (1949) 1854; Schilardi (1975b) 95 (C5 or C4); Berranger (1992) 123), sites of Eileithyaia, Zeus Hypatos, and perhaps Aphrodite (C6–C4) (Berranger (1992) 82–85), which may be identical with the sanctuary reported on Kounados hill (Rubensohn (1901) 181, 215) of C6m or earlier date (Ohnesorg (1994); Hübner (1994)); Kore had a sanctuary in C5 (*IG XII.5* 225 = *LSCG* 205 no. 110, with Berranger (1992) 93–95), but whether this should be identified with Temple B on the Parian acropolis (as Gruben (1982a) 174–79) is uncertain (Berranger (1992) 241); Apollo Delios was worshipped at the famous Delion a few kilometres north of town on a hill called Kynthos (Rubensohn (1962); cf. Schuller (1982a); Berranger (1992) 81–82; for a *horos*, see *IG XII.5* 214 (C4)), which included a temple of Artemis (Schuller (1991)); a sanctuary of Apollo (possibly the Pythion, but see Berranger (1992) 97–103) and an Asklepieion were located on a hill east of town that may also house the Thesmophorion (Berranger (1992) 90–105), which was in any case outside the city walls (Hdt. 6.134.2), and another sanctuary for Demeter Karpophoros based on a dedication (Schilardi (1977) 376–77). Finally, there was the famous sanctuary of Archilochos, the Archilocheion, built about 350, where his poetry and a biography were inscribed and whose location is still a matter for uncertainty (though it is probably at Elitas, as often suggested: Ohnesorg (1982); cf. Berranger (1992) 108–12). Further from the central *polis*, a temple of Athena has been discovered at Koukounaries dating from c.700 into C4 (Schilardi (1996) 42–53). Evidence of several temples of Archaic or Classical date has come to light near the bay of Marmara; that at least one sanctuary existed there is proved by an inscription of Classical date (*IG XII.5* 256; cf. Schnieringer (1982) and Berranger (1992) 125–29).

Paros struck silver coins on the Aiginetan standard from c.525. The earliest are staters. Types: *obv.* kneeling goat facing left accompanied by a fish/dolphin, or goat looking right, or goat within circle of pearls, or goat turning left, or leaping goat; *rev.* incuse square sometimes with star. These continued into C5e, with the addition of two goats butting heads to the reverse types. c.510–480, drachms were struck. Types: *obv.* goat looking right, with or without a circlet of pearls; legend on some: ΠΑ or ΠΑΠΙ; *rev.* incuse square, or goat looking back (Berranger (1992) 283–89). An epigram of Simonides (C6s–C5f) refers to a statue of Artemis costing 200 Parian dr. (Simon. fr. 114, Diehl, from Diog. Laert. 4.45). Coinage was resumed in 357 on the Rhodian standard (after 338 according to Berranger-Auserve (2000) 109–10). Denominations: tetradrachms, didrachms, drachms. Silver types: *obv.* goat; legend on some: ΠΑΠ; *rev.* ear of grain, or wreaths of grain; legend: ΠΑ or ΠΑΠΙ or ΠΑΠΙΩΝ. Bronze types: *obv.* goat facing right or left, or female head (possibly Demeter); *rev.* ear of grain, or goat (Head, *HN*² 489; *SNG Cop. Aegean Islands* 715–20; Berranger (1992) 283–89; Sheedy (1996)).

The Parians colonised Parion (no. 756) in Asia Minor c.708 with the Milesians (no. 854) and the Erythrians (no. 845) (Strabo 13.1.14; Euseb. *Chron.* 2, 18th Olymp. 1; Berranger (1992) 168–69), and Thasos (no. 526) c.710–680 under the oecist Telesikles, the poet Archilochos' father (Thuc. 4.104.4; Strabo 10.5.7 (487); Steph. Byz. 306.20–307.2; Berranger (1992) 170–84, esp. 176–78 on the date of 680 inferred from *IG XII.5* 444.48–49 (*FGrHist* 239); for Herakles' mythological role, see Apollod. *Bibl.* 2.5.9.13). One thousand men are said to have been dispatched (*IG XII.5* 445.IV.22, quoting Archil. fr. 97). Continued close political relations between Paros and its colony Thasos are attested in an epigram of C6l in which a certain Akeratos boasts that he (alone) had held high office in both *poleis* (*IG XII* suppl. 412; *CEG I* 416; see Graham (1983) 74–76). It is possible that the Parians were involved in C6e or C5s in Eion (no. 630) (Lazaridis (1976); Berranger (1992) 169–70). At some time, but possibly later (the date remains very uncertain), Paros may have tried to found a colony at Anchiale in the Adriatic (Steph. Byz. 24.13; Berranger (1992) 162–64). Pharos (no. 84), originally called Paros (so Strabo 7.5.5), followed in 385/4 (Steph. Byz. 659.7, from Ephor. fr. 89; Diod. 15.4; Parke and Wormell (1956) 2.76 no. 177, 164, no. 429; L. Robert (1935); see also (1960b)).

Oliaros (Ὠλίαρος: Ps.-Skylax 48; Strabo 10.5.3) and Prepesinthos (Πρεπέσινθος: Strabo 10.5.3), the two small islands west of Paros (Map 60, inset), have been suggested,

reasonably, as dependencies of Paros (Lanzillotta (1987) 190; Sherk (1990) 278). Steph. Byz. 708.9–12 reports that Oliaros was a colony (*apoikia*) of the Sidonians. *IG XII.5* 471 is from Siphnos, not Oliaros (cf. *IG XII* suppl. p. 111; *SEG* 33 680).

PEPARETHOS (PEPARETHIOS) Map 55. Lat. 39.05, long. 23.45. Size of territory: 2 (97 km²). The toponym is *Πεπάρηθος*, ἡ (*Hymn. Hom. Ap.* 32; Dem. 18.70), denoting both the island (Soph. *Phil.* 548–49) and one of the towns (Dem. 35.35; Steph. Byz. 516.23–24). The city-ethnic is *Πεπαρήθιος* (*IG I³* 270.III.10; Anaximenes (*FGrHist* 72) fr. 41 = Dem. 12.12). In the so-called Charter of the Second Athenian Naval League, Peparethos is listed under the heading *polis* (*IG II²* 43.A.78 and 85). Peparethos is called a *polis* in the urban sense by Dem. 35.35 and in Ps.-Skylax 58, where the island is described as *τρίπολις καὶ λιμὴν* (cf. Flensted-Jensen and Hansen (1996) 156). The principal *polis* was Peparethos; the names of the other two *poleis* were Panormos (Diod. 15.95.2; Polyae. *Strat.* 6.2) and Seleinous (*IG XII.8* 661.3). The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in inscriptions (*CEG I* 325.2 = *F. Delphes III.4* 179 (480/79)) and in literary sources (Pl. *Alc.* 116D). For the individual and external use, see the Athenian naval list of C51 (*IG I³* 1033.85–86).

Peparethos is listed among the Kyklades by Ps.-Skylax (58) and Diodorus (15.30.5, 95.1), whereas the island is described by Strabo at 9.5.16 as one of the islands off Magnesia, and at 2.5.21 it is classed with the islands lying off Greece as far as Makedonia and Thrace. According to Ps.-Skymnos 580 and 586, Peparethos was colonised by the Chalkidians from Euboa.

Fighting on the Greek side in the Persian War, the Peparethians captured two Karian ships at Salamis and dedicated one tenth of the booty to Apollo at Delphi (*CEG I* 325 = *F. Delphes III.4* 179). The Peparethians were members of the Delian League. They belonged to the Thracian district (*IG I³* 269.III.10) and are recorded in the tribute lists from 454/3 (*IG I³* 259.II.18) to 415/14 (*IG I³* 290.III.7) a total of seventeen times, once completely restored, paying a *phoros* of 3 tal. (*IG I³* 261.III.5). They were assessed for tribute in 425/4 (*IG I³* 71.III.169). Under Spartan hegemony from the end of the Peloponnesian War until Chabrias' expedition in the Aegean in 377/6 (Diod. 15.30.5), the Peparethians joined the Second Athenian Naval League in the 370s (*IG II²* 43.A.85). In 362/1 (Hansen (1975) 95) the island was attacked by forces of Alexander of Pherai, which besieged Peparethos town. The Athenians dispatched assistance, trapped Alexander's forces in Panormos and laid siege to the town; he extracted

them after a successful sea battle in which one Peparethian and five Athenian triremes were captured (Diod. 15.95.1–2; Polyae. *Strat.* 6.2.1; Dreher (1995) 29–30). C.342 the Peparethians conquered Halonnesos, which by then was garrisoned by the Makedonians, but Philip of Makedon deprived them soon after of the possession of this island, and in 340 he attacked and ravaged Peparethos (Dem. 12.12–15, 18.70 with schol. no. 128, Dilts). In, probably, 338 Peparethos was made subject to Makedonia (Strabo 9.5.16).

The only piece of evidence we have about the political institutions is a casual remark in Plato that one may advise the Peparethians, probably in their assembly (*Alc.* 116D).

We hear of two communal dedications at Delphi: one of booty from Salamis in 480 (*supra* = Jacquemin (1999) 346 no. 387), the other a gold crown of laurels recorded probably by Theopomp. fr. 248 and so C4 or earlier.

Hagnon Peparethios was Olympic victor in 568 (*Olympionikai* 97).

The Peparethians struck mostly anepigraphic silver coins on the Euboic standard c.520–480. Denominations: tetradrachms, didrachms, tetrobols. Types: *obv.* single and triple grape clusters, or grape cluster with four dolphins; *rev.* incuse square with a winged running figure (“Agon” or “Boreas”, Balcer (1967) 29), or head of Herakles, or crested Corinthian helmet, or rosette, or dolphin rider in incuse square, or Dionysos or Staphylos. The last bears on the *obv.* the legend *ΠΕ*. A new series, all bronze, starts after c.350. Types: *obv.* Dionysos, or Athena; *rev.* kantharos, or thyrsos, or grapes; legend: *ΠΕ* or *ΠΕΠΙΑ* (Head, *HN²* 312–13; Balcer (1967), (1975); Kraay (1976) 119–20; Wartenberg (1998) 368–69; *SNG Cop. Thessaly* 359–60).

510. Panormos Map 55. Lat. 39.05, long. 23.40. Size of territory: 1. Type: A. The toponym is *Πανορμός*, ὁ (Diod. 15.95.2). Panormos is implicitly referred to as a *polis* in the urban sense by the term *τρίπολις* at Ps.-Skylax 58. It is the second *polis* of the island, known best from Diodorus' narrative of a siege by Alexander of Pherai in 361/0 (Diod. 15.95.1–2; Polyae. 6.2.1). The site was fortified in C4m (see Diod. 15.95.2; Fredrich (1906b) 117–21, but see Scranton (1941) 170). Panormos is best regarded as a dependent *polis* of Peparethos.

511. Peparethos Map 55. Lat. 39.05, long. 23.45. Size of territory: 2. Type: A. The toponym is *Πεπάρηθος*, ἡ (Dem. 18.70); The city-ethnic is *Πεπαρήθιος* (*IG I³* 270.III.10). The urban centre of Peparethos was walled by 426 and had a *prytaneion* (Thuc. 3.89.4; S. G. Miller (1978) nos. 384–86). A sanctuary of C4l/C3e dedicated to Asklepios lay about 1 km east of the modern town (Liagkouras (1962)). Six other

possible sanctuary sites have been identified, including two—above the main town and at Panaghia Polemistria (Fredrich (1906*b*) 115–16, 117)—that may have belonged to Athena Polias, who served as the protective deity (Herbst (1937) 556). Another of these sites, which includes a terrace with polygonal blocks, may date to C5 (Fredrich (1906*b*) 127).

512. Seleinous Map 55. Lat. 39.10, long 23.40. Size of territory: 1. Type: A. No toponym is attested. The city-ethnic is *Σελεινούσιος* (IG VII.8 661 (Roman Imperial)). Seleinous is implicitly referred to as a *polis* in the urban sense by the term *τριπολις* at Ps.-Skylax 58. The only explicit testimony for Seleinous as a *polis* is an inscription of Roman imperial date, at which time the island was under Athenian control (IG XII.8 661.3). It has been identified as a *polis* from C4 mainly because Ps.-Skylax says that Peparethos was tripolate, and it is the only other known candidate. But city walls are preserved at Seleinous that have been dated to C4, and a temple has been reported (Fredrich (1906*b*) 122–23; but see Scranton (1941) 168 on the walls). Seleinous is best regarded as a dependent *polis* of Peparethos.

513. Pholegandros (Pholegandrios) Map 60 (inset). Lat. 36.40, long. 24.55. Size of territory: 2 (32 km²). Type: B. The toponym is *Φολέγανδρος*, ἡ (IG I³ 71.1.87; Strabo 10.5.1) or *Φελέγανδρος* (F.Delphes III.1 497.15 (C4/C3e)). The city-ethnic is *Φολεγάνδριος* (IG XII.5 9 (C4)); Solon fr. 2.1; Hsch. F 761). Pholegandros is not called a *polis* in any source, but deserves inclusion as being probably a *polis* because (1) Solon (fr. 2) mentions the possibility that, changing his *patris*, he might become a Pholegandrios or a Sikinites instead of an Athenaios; (2) because the island was a paying member of the Delian League (*infra*); and (3) because we possess a C4 proxeny decree passed by the Pholegandrians; for the date, see Brun (1996) 299. The collective form of the city-ethnic appears internally in the proxeny decree (IG XII.5 9.15) and externally in the Solonian poem (fr. 2).

Steph. Byz. 669.17 assigns the island to the Sporades. Pholegandros was a member of the Delian League. It belonged to the Island district, but is absent from the full panel of 441/0 (IG I³ 271.1–11.88–101). It was assessed for tribute in 425/4 (IG I³ 71.1.87) for 2,000 dr. and is recorded in the tribute lists in 417/16 (IG I³ 288.1.7) and 416/15 (IG I³ 289.1.25) paying a *phoros* of 1,000 dr. In the assessment decree it is recorded by toponym. In the tribute lists the city-ethnic is restored by the editors, but the toponym is an equally possible restoration.

What we know about the political institutions comes from a C4 proxeny decree for a citizen of Ios (no. 484), to be

set up in the sanctuary of Apollo Pythios on Ios where the stone was found. The decree was passed by the *boule* and the *demos* of the Pholegandrians (IG XII.5 9).

514. Rheneia (Rhenaieus, Rheneus) Map 61. Lat. 37.25, long. 25.15. Size of territory: 1 (14 km²). Type: A. *Ῥήνεια*, ἡ (Thuc. 3.104.2; Hyp. fr. 74, Sauppe; IG I³ 402.11, 1460.20) or *Ῥήναια*, ἡ (Hymn. Hom. Ap. 44; Hdt. 6.97.1; Strabo 10.5.5) or *Ῥήνη*, ἡ (Ps.-Skylax 58; Steph. Byz. 544.17). The toponym denotes both the island (Thuc. 3.194.2) and the city (Hyp. fr. 74). The city-ethnic is *Ῥηναίεύς* (IG I³ 1636.A.4 (C4m)) or *Ῥηνεύς* (Hyp. fr. 74). In Hypereides' Delian speech Rheneia is called a *polis* both in the urban and in the political sense (Hyp. fr. 74). The collective form of the city-ethnic is attested externally in the Athenian tribute lists (IG I³ 262.1.22) and in Hypereides' Delian speech (fr. 74). The individual and external form is attested in inscriptions (I.Délös 104–3A.4 (C4f); IG I³ 1636A.4 (C4m)).

Rheneia is listed among the Cyclades in Ps.-Skylax 58, but Strabo does not mention it in his list (10.5.3). In C6s Rheneia was conquered by Polykrates of Samos, who dedicated the island to Apollo (Thuc. 1.13.6, 3.104.2). Rheneia was a member of the Delian League. It belonged to the Island district and is recorded in the tribute lists from 451/0 (IG I³ 262.1.22) to 416/15 (IG I³ 289.1.14) a total of eleven times, three times completely restored, paying a *phoros* of 1,000 dr. in 451/0, reduced to 300 dr. in 450/49 (IG I³ 263.1v.29), but raised to 500 dr. in or before 416/15 (IG I³ 289.1.14). It was assessed for tribute in 425/4 (IG I³ 71.1.82) for 1,000 dr.

The preserved fragments of Hypereides' speech entitled *Deliakos logos* (fr. xii, Sauppe) testify to a lawsuit c.344/3 (Dem. 18.134) between the Rheneians and the Delians (no. 478) over responsibility for the death of Aiolian visitors to Delos whose bodies were found on Rheneia. It appears from the fragments that Rheneia did not even possess a harbour (*limen*) and that the distance from the landing-place facing Delos to the urban centre was 30 stadia (fr. 74). Much of the southern half of the island was under Delian control, whether as cemeteries for Delos or as estates belonging to Apollo (see *supra* 740). When Delos was purified in 426/5, all remains from the tombs were removed, presumably to Rheneia (Thuc. 3.104.2). Excavations at the urban centre of Rheneia, located on the west coast of the northern half of the island, revealed the remains of an undated temple of Herakles (Charre and Couilloud-Le Dinahet (1999) 135 n. 3).

515. Samothrake (Samothrax) Map 57. Lat. 40.30, long. 25.35. Size of territory: 3 (178 km²). Type: A. The toponym is *Σαμοθράκη*, ἡ (Ar. Pax 277; Xen. Hell. 5.1.7), in the Ionian

dialect *Σαμοθρόκη* (Hdt. 2.51.3), denoting both the island (Hdt. 2.51.3) and the town (Ps.-Skylax 67, Klausen). An alternative, allegedly earlier toponym is *Λευκανία*, ἡ (Arist. fr. 596–97). The city-ethnic is *Σαμοθράξ* (IG I³ 259.III.13; Herzog (1899) 17–21 no. 6.1 (C3); *I.Lindos* II 93b.5 (C3s)). Samothrake is called a *polis* in the political sense in an inscription of C4m or 350–325 (Fraser (1960) 21 no. 1.3–4), and is implicitly called a *polis* in the urban sense by Ps.-Skylax 67. The MS has *Σαμοθράκη κατατ καὶ λιμὴν*. Klausen restores *Σαμοθράκη κατὰ ταύτας καὶ λιμὴν*, which seems to be a much more convincing restoration than *κατὰ ταῦτα Σαμοθράκη νῆσος καὶ λιμὴν* preferred in GGM by Müller following Voss (for *καὶ λιμὴν*, see Flensted-Jensen and Hansen (1996) 142). The collective use of the city-ethnic is attested internally in the C4 proxeny decree (Fraser (1960) 21 no. 1.3–4, convincingly restored) and on coins of C5f (*infra*), and externally in the Athenian tribute lists (IG I³ 263.III.25) and in literature (Hdt. 2.51.2–3; *PCG*, *Adespota* fr. 1063.15). For the individual and external use, see the Athenian naval list of C5l (IG I³ 1032.VI.84, as restored in IG II² 1951).

Ps.-Skylax 67 places Samothrake in Thrace, and Strabo classes Samothrake with the islands lying off Greece as far as Makedonia and Thrace (2.5.21). Accounts of the colonisation of the island found in Classical sources derive from a combination of the toponyms Samos and Thrake, whether because Samothrake was settled by exiles from Samos (no. 864) and was near Thrace (Ant. fr. 1.1, Gernet; Paus. 7.4.3; Strabo 10.2.17 commenting on Hom. *Il.* 13.13) or because the island was settled first by Thracians and then by Samians (Heracl. Lemb. 49; schol. Hom. *Il.* 24.78, both derived from Aristotle; Diod. 5.48.1); these Samians are said to have been expelled by a tyrant (Heracl. Lemb. 49, derived from Aristotle; *Suda* Σ79 citing Antiphon); for a collection of all sources, see Graham (2002) 232–39. Herodotos reports that the Pelasgians who fled Athens settled there (2.51). A recent review of all the evidence places the arrival of Greeks from Samos in C6f (Graham (2002)); for a date of 700 from the archaeological record, see Lazarides (1971) 18).

The Samothrakians came under Persian domination in C5e, and at least one Samothrakian ship participated in the battle of Salamis on the Persian side (Hdt. 8.90.2). Samothrake was a member of the Delian League. It belonged to the Thracian district (IG I³ 272.II.63) and is recorded in the tribute lists from 454/3 (IG I³ 259.III.13) to 429/8 (IG I³ 282.II.31) a total of twenty-one times, three times completely restored, paying a *phoros* of 6 tal. (IG I³ 259.III.13), reduced to 2 tal. in 430/29 (IG I³ 281.II.16). It was

presumably assessed for tribute in 425/4 (IG I³ 71.III.158 (15 tal.), completely restored). Antiphon delivered a speech *On the Tribute of the Samothrakians* (fr. 1, Gernet), which should be associated either with the reduction in tribute in 430/29 (see Lazaridis (1971) 20) or with the new assessment of 425/4 (Gernet's preface 161). In 404/3 the island fell under the control of the Spartans (anecdote in Plut. *Mor.* 229D), but in 389/8 the Athenians recovered the island (Xen. *Hell.* 5.1.7), and in the 370s the Samothrakians joined the Second Athenian Naval League (IG II² 43.B.8). By C5e at the latest, Samothrake controlled a *peraiā* on the Thracian mainland opposite (Hdt. 7.59.2, 108.2) comprising the *poleis* of Drys (no. 644) (Ps.-Skylax 67), Masambrie (no. 647) (Hdt. 7.108.2), Sale (no. 649) (Hdt. 7.59.2) and Zone (no. 651) (Hdt. 7.59.2; Ps.-Skylax 67) and a fortification called Charakoma (Strabo 7 fr. 47, *infra* 871). They lost their *peraiā* by 422/1; it was recovered after the end of the Peloponnesian War, then lost again in C4m (Gschnitzer (1958) 32–34; IG XII.8 p. 40).

The Aristotelian collection of *politeiai* included a Constitution of the Samothrakians (fr. 596–97; Heracl. Lemb. 49). But almost all the information we have about political institutions is Hellenistic or later. The only preserved public enactment of the Classical period is a grant of *proxenia* to a citizen of an unknown *polis* (Fraser (1960) 21 no. 1.6 (c.350–325)), and in 345/4 the Samothrakians offered a series of crowns to Athens (no. 361) (IG II² 1443.II.108–14). Diod. 5.48.1 reports a system of five *phylai*; the reference is to primordial times, but the myth may be aetiological (Jones, *POAG* 186).

The protective deity appears to have been Athena (see Lehmann-Hartleben (1939) 144), whose sanctuary served as the civic archive, at least in the Hellenistic period (IG XII.8 153.10–11 (C3)). But Samothrake was most famous for its great sanctuary of the Kabeiroi; earliest cult activity at the site has been dated to C7 or earlier, and building began in C6, with considerable elaboration in C4 (Hdt. 2.51.2–3; cf. Strabo 10.3.19–21; Hemberg (1950) 49–131; Lehmann (1969) 2.51–70; Lehmann and Spittle (1982) 269; Cole (1984) 10–20; for a collection of literary sources, see N. Lewis (1958) 63–112; for a synoptic overview of what we know of the cult, which included mysteries, see Burkert (1993)). The round building on Samothrake in the sanctuary, dated to 289–281 and sometimes regarded as a *bouleuterion*, is actually a cult structure (Gneisz (1990) 350–51 no. 58). Aphrodite and Pothos were worshipped within the sanctuary of the Great Gods (Lehmann and Spittle (1982) i.277–89). A sanctuary to Artemis is reported to have been founded before the arrival of the Greek colonists (*BCH* 118 (1994) 779).

The urban centre was walled from C7–C6 (Scranton (1941) 31–33, 154; Lazaridis (1971) 19). The preserved walls of, probably, C6, with later repairs, enclose an area of c.20 ha (H. Ehrhardt (1985) 25–30). Otherwise very little seems to have been published about the urban centre, as archaeological work has concentrated on the sanctuary. A harbour is recorded at Ps.-Skylax 67.

The Samothrakians struck largely anepigraphic silver coins c.500–465 in two series. Denominations: staters, triobols and smaller fractions. Types: *obv.* Sphinx, or Athena; *rev.* incuse square, sometimes with lion's head, sometimes with bearded head with Corinthian helmet. A few examples bear legends: ΣΑΜΟ or ΣΑ (Schwabacher (1938), (1952); IGCH no. 696; Erxleben (1970) 117; Schönert Geiss (1996) 271–72; SNG Cop. Thrace 991). No coins are known after c.465; the next series begins about 280 (Head, *HN*² 263).

516. *Saros (Sarios) Map 60 (inset). Lat. 35.55, long. 27.15. Size of territory: 1 (23 km²). Type: B. No toponym is attested (Susini (1963–64) 245) but one is inferred from the ethnic Σάριος (IG I³ 283.III.21, 290.I.4). The Sarioi were members of the Delian League and are recorded twice in the tribute lists, in 428/7 paying a *phoros* of 300 dr. (IG I³ 283.III.21) and in 415/14 paying a *phoros* of 200 dr. (IG I³ 290.I.4). The Sarioi are absent from the full panel of 441/0 (IG I³ 271.I–II.64–86). Mattingly ((1996) 77 n. 27) has suggested that Saros may have been brought under Athenian control by Lysikles in 426.

A private dedication “to all gods”, is known from C4e (IG XII.1 1040; Susini (1963–64) 246 for date). It has been suggested that a village on Saros called τὸ Ἄργος must have had a Classical origin (Susini (1963–64) 244; cf. Hiller von Gaertringen (1892) 309; *I.Lindos* p. 1013), but no ancient remains have been found there (Hope Simpson and Lazenby (1962) 168).

It has sometimes been argued that Saros was one of the entities included under Karpathos (Papachristodoulou (1989) 45), but this seems unlikely. Karpathos had three *poleis* according to Ps.-Skylax, and all are accounted for by written and archaeological evidence placing them on the island. Strabo alone (10.5.17) attributes four *poleis* to the island of Karpathos, but to accept his view as attesting to Saros as a fourth *polis* requires identifying his Nisyros as Saros (so Dawkins (1902–3) 204, followed by Büchner (1919) 2003), or supposing that Saros had two *poleis* (as pointed out by Susini (1963–64) 245; see also Fraser and Bean (1954) 141–42). This is convoluted, and it is easier and better simply to see Strabo's four as an error (Reger (1997) 453 and *supra* 745). It is just possible that Saros could have been part

of Brykous (no. 487), for the two are never listed together in *ATL*. If so, they will have been separated later, when Karpathos and Saros were incorporated into the Rhodian state, for both Σάριος and Βρυκούντιος appear as demotics (IG XII.1 1010–1011, 220–23, etc.). However, the evidence of the tribute lists is fragmentary and inconclusive. While certainty in this matter is perhaps impossible, it seems simplest to suppose that Saros was in fact a separate entity in C5 and C4.

517. Seriphos (Seriphios) Map 60 (inset). Lat. 37.10, long. 24.30. Size of territory: 2 (75 km²). Type: A. The toponym is Σέριφος, ἦ (Cratinus, *PCG* fr. 225; Isoc. 19.9; *SEG* 36 331.A.11 (323/2)), denoting both the island (Pind. *Pyth.* 12.12) and the town (Ps.-Skylax 58). The city-ethnic is Σεριφίσιος (IG I³ 262.I.20; Pl. *Resp.* 329E–330A). Seriphos is called a *polis* both in the urban sense (Ps.-Skylax 58) and in the political sense (Isoc. 19.9), and in the accounts of the Delian *amphiktyones* the Seriphians are recorded under the heading αἰθε τῶν πόλεων (*I.Delos* 98A.12 = IG II² 1635 (377/6–375/4)). The collective use of the city-ethnic is attested internally in abbreviated form on C3 coins (Head, *HN*² 490) and externally in the Athenian tribute lists (IG I³ 262.I.20) and as the title of a comedy by Cratinus (Cratinus, *PCG* fr. 218–32). For the individual and external use, see the Karthaian C4m list of *proxenoi*, of whom at least one is a citizen of Seriphos (IG XII.5 542.48), and Plato's report of the exchange of words between Themistokles and an unnamed Seriphian (Pl. *Resp.* 329E; Plut. *Them.* 18.3).

Stephanos assigns the island to the Sporades, whereas Strabo 10.5.3, quoting Artemidoros, assigns it to the Kyklades. Seriphos was considered a small *polis*, and its almost proverbial insignificance is reflected in several sources (Pl. *Resp.* 329E–330A; Isoc. 19.9; Stob. *Flor.* 3.39.29); for the ancient (and modern) insignificance of Seriphos, see Brun (1993a).

Seriphos was allegedly colonised by Ionians from Athens (Hdt. 8.48). In 490 the Seriphians refused the Persian demand to surrender, and Seriphos fought on the Greek side in the Persian War, contributing one ship (Hdt. 8.46.4, 48). Seriphos was a member of the Delian League and probably among the original members (*ATL* iii. 198). It belonged to the Island district and is recorded in the tribute lists from 451/0 (IG I³ 262.I.20) to 416/15 (IG I³ 289.I.11) a total of fourteen times, twice completely restored, paying a *phoros* of 2 tal. in 451/0 (IG I³ 262.I.20) but 1 tal. in all subsequent years (IG I³ 264.IV.2). It was assessed for tribute in 425/4 (IG I³ 71.1.76) for 2 tal. Seriphos may have been a member of the

Second Athenian Naval League (*I.Délos* 98A.12; Cargill (1981) 37; but see Dreher (1995) 24.1, 245–47). In C4s Seriphos had a *theorodokos* to host *theoroi* from Nemea (*SEG* 36 331.A.11–13 (331/0–313)).

There are virtually no remains of the ancient town of Seriphos, which lay beneath modern Seriphos (cf. *BCH* 119 (1995) 998). The *temenos* of Perseus and altars of Diktys and Klymene which Pausanias says were erected by the Athenians (2.18.1) perhaps belong to C5.

Seriphos apparently minted staters in C6 on the Aiginetan standard with a frog on the obverse; see *IGCH* no. 4 and Erxleben (1970) 73.

518. Sikinos (Sikinetes) Map 60 (inset). Lat. 36.40, long. 25.05. Size of territory: 2 (43 km²). Type: A. The toponym is *Σίκινος*, ἡ (*IG XII* suppl. 177.6 (C4l); Strabo 10.5.1; Steph. Byz. 568.17), denoting both the island (Ap. Rhod. 1.624) and the town (Ps.-Skylax 48). The city-ethnic is *Σικινῆτης* (Solon fr. 2.1; *IG I³* 71.1.90). Sikinos is called a *polis* both in the urban sense (Ps.-Skylax 48) and in the political sense (*IG XII.5* 24.5; for the date, see Rhodes, *DGS* 289). Solon refers to it by implication as a *patris* (fr. 2.2). The collective use of the city-ethnic appears internally on C3 coins (Head, *HN²* 491) and in a proxeny decree of C4l (*IG XII* suppl. 177.2, 5) and externally in inscriptions (*IG I³* 287.1.16; *IG II²* 43.B.31) and in literature (Solon fr. 2.1).

Sikinos is usually placed among the *Kyklades* (Lauffer (1989) 614), but Steph. Byz. 568.17, citing Strabo (10.5.1), calls it “an island by Krete”. Apart from the urban centre at modern Ag. Marina, no other settlements are known.

Sikinos was a member of the Delian League. It belonged to the Island district and is recorded in the tribute lists in 418/17 (*IG I³* 287.1.16), 417/16 (*IG I³* 288.1.6) and 416/15 (*IG I³* 289.1.17) paying a *phoros* of 500 dr. It is absent from the full panel of 441/0 (*IG I³* 271.1–11.89–101). It was assessed for tribute in 425/4 (*IG I³* 71.1.90) for 1,000 dr. Sikinos joined the Second Athenian Naval League in the 370s (*IG II²* 43.B.31).

Sikinos awarded *proxenia* and other benefits to a citizen of Athens (no. 361) (*IG XII* suppl. 177 (C4l)) and to one of Paros (no. 509) (*IG XII.5* 24 (C4l/C3e)). Our only source for the political institutions is the proxeny decree for the Parian (*IG XII.5* 24). Decrees were passed by the *boule* and the *demos* (ll. 2–3; cf. ll. 12–13); they were published by a board of *archontes* (ll. 19–20) and set up in the sanctuary of Apollo Pythios (l. 18) at the expense of a board of *praktors* (l. 21).

For the urban centre, walls and an agora are mentioned (Lauffer (1989) 614–15), but the remains have not been studied carefully.

519. Siphnos (Siphnios) Map 60 (inset). Lat. 37.00, long. 24.45. Size of territory: 2 (74 km²). Type: A. The toponym is *Σίφνος*, ἡ (Hdt. 3.58.1; Isoc. 19.7), denoting both the island (Theophr. *Lap.* 42) and the town (Hdt. 3.57.4; Ps.-Skylax 58). The city-ethnic is *Σίφνιος* (Hdt. 3.57.2; *IG IV* 839.6 (C4)). Siphnos is called a *polis* both in the urban sense (Hdt. 3.58.1; Isoc. 19.19, 38–39) and in the political sense (Isoc. 19.10; *IG IV* 839.5–6 (C4)). The Siphnians are listed as one of the *poleis* providing ships for the Greek fleet at Salamis (Hdt. 8.42.1, 46.4, 48, 49.1). The territorial sense may be a connotation at Isoc. 19.20. In Siphnos was found a copy of the Athenian Coinage Decree (*IG XII.5* 480 = *IG I³* 1453E), to be set up in the agora of all the *poleis* of the Delian League (ll. 4–5). Siphnos is called an *asty* at Hdt. 3.58.4. The collective use of the city-ethnic appears internally in abbreviated form on coins (*infra*) and externally in inscriptions (*IG I³* 263.IV.20; *I.Délos* 98A.12 (377/6); *Agora XVI* 50.10 (365–355)) and in literary sources (Hdt. 3.57.2, 8.46; Dem. 13.34). For the individual and external use, see *IG XII.5* 611.2 = *CEG I* 410 (C6l); *IG I³* 1032.163 (405). *Patris* is found in Isoc. 19.7 and 23.

Strabo, quoting Artemidoros, lists Siphnos among the *Kyklades* (10.5.3; cf. Steph. Byz. 454.6). The Siphnian countryside is littered with towers (N. G. Ashton (1991)); the famous mines, which began to be exploited in C6, have been well studied (Wagner and Weisgerber (1985)). The Siphnians distributed the income from these mines each year among themselves (Hdt. 3.57.2). Late sources report settlements called *Ἀπολλωνία* (Steph. Byz. 106.11) and *Μινώα* (Steph. Byz. 454.6), both undated and unlocated. We do not know the name of the large settlement at Ag. Andreas occupied from the Geometric through the Hellenistic period; it is possible that this settlement rivalled the main one at modern Kastro for a while before Siphnos was consolidated as a single *polis* (Philippaki (1973); cf. Reger (1997) 459–60).

Siphnos was allegedly colonised by Ionians from Athens (Hdt. 8.48). Herodotos extols Siphnian wealth in C6l, famous enough to tempt Samians who needed money in their fight against Polykrates; after destroying the Siphnians' countryside, defeating them in battle, and besieging the *asty*, the Samians exacted 100 tal. (Hdt. 3.57–58). In 490 the Siphnians refused the Persian demand to surrender (Hdt. 8.46.4). Siphnos fought on the Greek side in the Persian War, contributing one ship (Hdt. 8.46.4, 48) and is recorded on the Serpent Column in Delphi (ML 27.10).

Siphnos was a member of the Delian League and probably among the original members (*ATL* iii. 198). It belonged to the Island district and is recorded in the tribute lists from 450/49 (*IG I³* 263.IV.20) to 416/15 (*IG I³* 289.1.26) a total of

eleven times, four times completely restored, paying a *phoros* of 3 tal. in all years (IG I³ 263.iv.20). It was assessed for tribute in 425/4 (IG I³ 71.1.66) for 9 tal. Siphnos joined the Second Athenian Naval League in the 370s (IG II² 43.B.30), and in 370/69 the Siphnians dedicated a crown to Athena in Athens (IG II² 1425.125). A treaty between the Siphnians and the Athenians (no. 361) regulated capital crimes, among other matters (Agora xvi 50 (c.360–350)). To the same period belongs a treaty between Siphnos and Kalaureia (no. 360) (IG IV 839). During the initial phases of Alexander's war against the Persian Empire, Datames held the island, which was used as a forward naval base (Arr. *Anab.* 2.2.4, 13.4).

In C5 the Siphnian constitution was democratic; but in, probably, 405/4 an oligarchic (Isoc. 19.13, 38) government was set up supported by a Lakedaimonian(?) garrison. The oligarchs were in turn expelled by the democratic exiles, probably in 394/3 (Isoc. 19.19–20). Supported by some mercenaries, the oligarchic exiles ventured an attack on the island, but they were defeated in a battle fought outside the town (Isoc. 19.38–39), and the constitution was still democratic in C4m (Agora xvi 50.9–10 = SEG 17 19 (365–355)). For the reconstruction of this *stasis*, see Blass (1892) ii 235–36; Gehrke, *Stasis* 151).

Our only source for Siphnian political institutions in the Classical period is Isokrates' Aiginetan speech in which we hear of Siphnian *nomoi* on adoption and inheritance (13, 15), a system of liturgies incumbent on the wealthy (36), and the office of *basileus* (36). An embassy to Siphnos, sent by Samian exiles in the 520s, is mentioned at Hdt. 3.58.1. The existence of a *prytaneion* (*infra*) implies *prytaneis*.

Communal cults include one for the Nymphs (IG XII.5 483), who had a cult site. The Siphnians consulted the oracle at Delphi c.520 (Hdt. 3.57.3–58.1; Paus. 10.11.2; *Suda* Σ511; Fontenrose (1978) 307 Q 115) and built the famous Siphnian Treasury with a tenth of the income from their mines (Hdt. 3.57.2; Daux and Hansen (1987); Jacquemin (1999) 352 no. 441; Neer (2001)).

The *polis* site was on the east coast of the island and was presumably walled by c.500 (Brock and Macworth Young (1949) 2). By c.525 the Siphnians had a *prytaneion* built of Parian marble (Hdt. 3.57.4) and an agora (Hdt. 3.57.4) where probably the Athenian Coinage Decree was set up (*supra*).

The Siphnians struck silver coins on the Aiginetan standard starting in C6. (1) Staters and hemidrachms, C6. Types: *obv.* eagle flying; *rev.* incuse square. (2) Silver staters and fractions on the Aiginetan standard, some drachms on the Attic standard, C5. Types: *obv.* head of Apollo; *rev.* eagle

flying in incuse square accompanied by barley; legend: ΣΙΦ reversed and with three-bar *sigma*. (3) In C4 the Siphnians coined in both silver and bronze. Types: *obv.* Apollo (silver); Artemis (bronze); *rev.* eagle flying with serpent in beak; legend: ΣΙΦ (Head, HN² 491; Erxleben (1970) 73–74; SNG Cop. *Aegean Islands* 744–50).

520. Skiathos (Skiathios) Map 55. Lat. 39.10, long. 23.27. Size of territory: 2 (50 km²). Type: A. The toponym is Σκιάθος, ἦ (Simonides fr. 1; Hdt. 7.179; IG II² 1623Aa35 (333/2)). The city-ethnic is Σκιάθιος (IG I³ 266.11.5; CID I 13.1 (C4f); Theopomp. fr. 375). In the so-called Charter of the Second Athenian Naval League, Skiathos is listed under the heading *polis* (IG II² 43.A.78, 86). For *polis* used in the urban sense, see Ps.-Skylax 58, where Skiathos is described as *δίπολις καὶ λιμὴν* (cf. Flensted-Jensen and Hansen (1996) 156–57). One of these towns was the Palaiskiathos whose citizen *Οἰνιάδης ὁ Παλαισκιιάθιος* was honoured by the Athenians in 408/7 (IG I³ 109). That the territory of this town and the island were coterminous may be inferred from the language of the Athenian decree, which praises him for treating well Athenians who arrived “into Skiathos” (IG I³ 110.7–8, 10–12). But there was clearly confusion in Athens between Skiathians and Palaiskiathians, because the decree includes an amendment to the effect that Oiniades be named *Παλαισκιιάθιος* instead of *Σκιάθιος* (IG I³ 110 26–31). The collective use of the ethnic is attested internally on coins of C4s (*infra*) and externally in the Athenian tribute lists (IG I³ 266.11 5). For the individual and external use, see the Athenian C51 proxy decree (IG I³ 110.29).

Skiathos is listed among the Kyklades by Ps.-Skylax 58 and Diod. 15.30.5, whereas the island is described in Strabo 9.5.16 as one of the islands off Magnesia. According to Ps.-Skymnos 580 and 586, Skiathos was colonised by the Chalkidians from Euboa.

In 480 the Greeks stationed three ships by Skiathos to watch over the Persian fleet; signal fires lit on the island communicated information back to the Greeks at Artemision (Hdt. 7.179–83). The Skiathians were members of the Delian League. They belonged to the Thracian district (IG I³ 269.11.30) and are recorded in the tribute lists from 450/49 (IG I³ 263.III.40) to 415/14 (IG I³ 290.III.14) a total of fourteen times, once completely restored, paying a *phoros* of 1,000 dr. (IG I³ 266.11.5). By 408/7 there was an Athenian archon on Skiathos charged in the Athenian decree mentioned above with seeing to it that the Palaiskiathians not be mistreated (IG I² 110.19–20). Under Spartan hegemony from the end of the Peloponnesian War until Chabrias'

expedition in the Aegean in 377/6 (Diod. 15.30.5), the Skiathians joined the Second Athenian Naval League in the 370s (IG II² 43.A.86). In 351 Demosthenes praised Skiathos and other nearby islands for the logistical support they offered the Athenian fleet (4.32); in 345/4 an Athenian garrison stationed on Skiathos offered the Athenian *demos* a crown (IG II² 1443.II.106–8; Dreher (1995) 291 n. 55), and ships were sent to Skiathos commanded by a *strategos* (IG II² 1623.35–49). Inscriptions from Delphi include a treaty between the Delphians (no. 177) and Skiathians about consultation of the oracle (CID I 13 = *Staatsverträge* 295). The treaty opens with a reference to the Skiathian *demos* and colonists (*apoikoi*).

The town of Skiathos was probably located at modern Skiathos town (cf. Fredrich (1906*b*) 103; see also Reger (1997) 483 n. 25). There are no remains of any other settlement on the island. A Samian funerary inscription of C5 has been found on Skiathos (Johnston (1998)).

The Skiathians seem to have begun to strike bronze coins in C4m. Types: *obv.* head of Apollo or Hermes, or Gorgon head facing; *rev.* caduceus; legend: ΣΚΙΑΘΙ or ΣΚ (Head, HN² 313; SNG Cop. *Thessaly* 366–67).

521. Skyros (Skyrios) Map 55. Lat. 38.55, long. 24.35. Size of territory 4 (223 km²). Type: A. The toponym is Σκῦρος, ἦ (Soph. *Phil.* 240; IG XII.8 668.5 (C4)), denoting both the island and the town (Ps.-Skylax 58). The city-ethnic is Σκύριος (Hdt. 7.183.3; Stephanis (1988) no. 1797 (C4)). Skyros is called a *polis* both in the urban sense (Ps.-Skylax 58) and in the political sense (Xen. *Hell.* 5.1.31). Two lost tragedies both entitled Σκύριοι testify to the collective and external use of the city-ethnic (Soph. fr. 507–10 and Eur. fr. 683–86, Nauck), which is also known from inscriptions (IG I³ 285.IV.107–10). The individual and external use of the city-ethnic is attested in Hdt. 7.183.3; the internal in an undated sepulchral inscription (IG XII.8 676).

Skyros was originally inhabited by Pelasgians (IG XII.8 p. 175). The island was seized by the Athenians under Kimon (Diod. 11.60.2; Ephor. fr. 191; Plut. *Cim.* 8.3–7) in, probably, 476/5 (Plut. *Thes.* 36.1). The inhabitants were subjected to *andrapodismos*, and Skyros was resettled with Athenians (Thuc. 1.98.2), apparently described as klerouchs by Ephor. fr. 191 = Diod. 11.60.2: *κατεκληροδόχησε*, see also Graham (1983) 184–85; Cargill (1995) 6). By contrast with the Lemnians and Imbrians, the Skyrians are never mentioned as members of the Delian League, and so, probably, remained Athenian citizens. For the view that Skyros may

have been a colony, see Figueira (1991) 217, 221; Salomon (1997) 68 takes no position on Skyros.

Athens had to surrender Skyros in the Peace of 404 (Andoc. 3.12; Aeschin. 2.76–77), but by 392, after a short period of independence (Andoc. 3.12, 14), the Athenians had regained control of the island (Xen. *Hell.* 4.8.15), and Athenian possession was confirmed by the King's Peace of 386 (Xen. *Hell.* 5.1.31). The grain law of 374/3 shows that Skyros was still an Athenian possession (*Hesperia* suppl. 29 5.6–8), in spite of the decision of 378/7 to renounce the klerouchies (Diod. 15.29.8). Philip II must have recognised Skyros as an Athenian possession in 338 (Paus. 1.25.3), for Skyros was still Athenian in the 320s (Arist. *Ath. Pol.* 62.2), and remained Athenian by the Peace of 322 (Diod. 18.18.4; see Cargill (1995) 42–58).

The only preserved C4 decree passed by the Skyrian klerouchs (IG XII.8 668) indicates that the C4 population of Skyros was divided into Athenians and inhabitants (ll. 4–5: τὸν δῆ[μον τὸν Ἀθηναίων] καὶ τοὺς κατοικοῦντας ἐν Σκύρωι with καὶ to be restored in l. 2), who seem to have had the same status as Athenian metics (Dem. 52.3, 9). Such civic subdivisions as are attested belong to the Athenians (IG XII.8 669; Cargill (1995) 389 no. 1124; Jones, *POAG* 188). The only important river was called the Kephissos, an obvious echo of Attika (Strabo 9.3.16). Considerable remains of the main city fortification walls are preserved; they have been dated, exclusively on style, to C4s; the walls enclosed an area of 4.5 ha, including a separately fortified acropolis of 0.5 ha (Fredrich (1906*c*) 262–71). The reference at Diod. 11.60.2 to a siege of Skyros indicates that the city was fortified in C5e. Remains of a small temple have been reported (Fredrich (1906*c*) 275–76). A C4 *horos* inscription has been found (Finley (1985) no. 111: *πρᾶσις ἐπὶ λύσει*). Plutarch notes a settlement named Κρήσιον (*Cim.* 8.3), which has been identified with extensive ruins on the south-west coast (Fredrich (1906*c*) 274). A scholiast to Diodorus repeats this name and adds another: Smyros: ἔχουσα Ἀχιλλεῖον καὶ Κρήσιον (schol. Diod. T326). Achilleion has been taken as the name of the main anchorage on the north-east side of the island, south of the main settlement, and not as a settlement, because of the absence of ancient remains there (Fredrich (1906*c*) 273–74). No coins appear to be known (Erleben (1970) 120).

522. Syme (Symaios) Map 61. Lat. 36.35, long. 27.50. Size of territory: 2 (58 km²). Type: [A]. The toponym is Σύμη, ἦ (Hom. *Il.* 2.671; Hdt. 1.174.3; Thuc. 8.41.4; IG I³ 278.VI.28), in the Doric dialect Σύμα (IG XII.3 suppl. 1269.7 (C2)), denoting both the island and the town (Steph. Byz. 591.17–18). The

city-ethnic is *Συμῆαιος* (*IG* 1³ 282.11.45). In the Athenian tribute lists Syme is recorded under the heading *πόλεις ἡὰς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν* (*IG* 1³ 278.vi.18–21, 28). The collective use of the city-ethnic is found in the tribute lists (*IG* 1³ 282.11.45).

According to Diodorus (5.53.1–4), Syme was settled by Lakedaimonians and Argives, later joined by Knidians and Rhodians. Syme was a member of the Delian League. It belonged to the Karian district (*IG* 1³ 71.11.148) and is recorded in the tribute lists either by toponym (*IG* 1³ 278.vi.28) or by city-ethnic (*IG* 1³ 282.11.45) from 434/3 (*IG* 1³ 278.vi.28) to 429/8 (*IG* 1³ 282.11.45) a total of five times, three times completely restored, paying a *phoros* of 1,800 dr. (*IG* 1³ 278.vi.28). The first four payments are recorded among those by *poleis* that private persons had inscribed (*IG* 1³ 278.vi.18–21); the fifth payment is assessed by the *boule* and the *dikasterion* (*IG* 1³ 282.11.43–44). Syme was assessed for tribute in 425/4 (*IG* 1³ 71.11.148) for 3,000 dr. Two fragments of the Athenian Coinage Decree were found on Syme (*IG* 1³ 1453A, D). In 412/11 the Peloponnesians defeated the Athenians in a naval battle fought off Syme (Thuc. 8.41–43).

The town in the north-eastern part of the island had a walled acropolis with a sanctuary of Athena. There are traces of two circuits in polygonal masonry with interval towers, probably of the Hellenistic period (Zschietzschmann (1931) 1098; Hope Simpson and Lazenby (1962) 168–69, (1970) 63–64). The lower wall enclosed an area of c.0.3 ha. The only inscription antedating the Hellenistic period seems to be a C4 tombstone set over a soldier killed in battle (*IG* XII.3 9 = *CEG* II 694).

Coins sometimes assigned to Syme (see Erxleben (1970) 93) can now be assigned rather to Syangela (no. 931) in Karia on the basis of new finds (Yarkin (1975), (1977)).

523. Syros (Syrios) Map 60 (inset). Lat. 37.26, long. 24.56. Size of territory: 3 (85 km²). Type: A. The toponym is *Σύρος*, *ἡ* (*SEG* 19 204A.3 (c.375); *I. Délos* 104–11A2.1 = *IG* 11² 1638.A.21 (359/8); Theopomp. fr. 111; Strabo 10.5.3, 8; Steph. Byz. 230.1), denoting both the island (Strabo 10.5.3) and the town (Ps.-Skylax 58). The city-ethnic is *Σύριος* (*IG* 1³ 261.iv.31; Arist. *Hist. an.* 557^a3). In Ps.-Skylax 58, where *polis* is used in the urban sense, Syros is one of the toponyms listed after the heading *πόλεις αἰῶδε*; Syros is called a *polis* in the political sense at Theopomp. fr. 111 (rC4f according to Jacoby's commentary), and in the accounts of the Delian *amphiktyones*, where *polis* is used in the political sense, the Syrians are recorded under the heading *αἰδε τῶν πόλεων* (*I. Délos* 97.13 (C4f)). The collective use of the city-ethnic

appears internally on its Hellenistic coins (Head, *HN*² 492) and externally in the Athenian tribute lists (*IG* 1³ 261.iv.31) and in the accounts of the Delian *amphiktyones* (*IG* 11² 1635.1–2 (377–373)). The individual and external use of the ethnic appears in Aristotle (*Hist. an.* 557^a3), referring to the C6 poet Pherekydes of Syros, and in Theopomp. fr. 111.

Strabo, citing Artemidoros, lists Syros among the Kyklades (10.5.3). Homeric *Syrie* (*Συρία* in *Od.* 15.403) is erroneously identified with Syros by both Zschietzschmann (1932b) 1790 and Meyer (1975).

Syros was a member of the Delian League. It belonged to the Island district and is recorded in the tribute lists from 452/1 (*IG* 1³ 261.iv.31) to 416/15 (*IG* 1³ 289.i.30) a total of twelve times, four times completely restored, paying a *phoros* of 1,500 dr. in 452/1, reduced to 1,000 dr. (*IG* 1³ 270.v.33) in or before 448/7 (*IG* 1³ 264.11.17), but raised again to 1,500 dr. in or before 433/2 (*IG* 1³ 279.i.80). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.80) (1 tal.). Syros may have joined the Second Athenian Naval League in the 370s (*I. Délos* 98A.11–12, B3 = *IG* 11² 1635A.11–12, 113 (377–375); *SEG* 19 204 (375); cf. Dreher (1995) 201 n. 22), but is not recorded among the members listed in *IG* 11² 43. In the thirteenth book of his *Philippika* Theopompos reports that a Syrian citizen, Kallikon, betrayed Syros to the Samians (fr. 111). Jacoby *ad loc.* dates the incident to C4f. The C4m list of *proxenoi* of Karthaia (no. 492) included at least two from Syros (*IG* XII.5 542.46).

The principal civic divisions were three tribes (*IG* XII.5 654 (undated), with Jones, *POAG* 211), the names of two of which are known: the Naxiatai (*IG* XII.5 652 (C2), with Gauthier (1996) 35–43) and the Galessioi (*I. Délos* 98B.18 (C4)). Galessa, which must have been the centre of the tribe of the same name, was located on the western side of the island; this suggests that the Syrian tribes were territorially based. Delian Apollo owned some property on the island (*I. Délos* 104–11A21).

The chief gods were very likely the Kabeiroi, although the inscription that supposedly attests to a sanctuary remains enigmatic (*IG* XII.5 673 with commentary there by Hiller von Gaertringen (undated); see also Nicolet-Pierre and Amandry (1992) 305–6 n. 32, for a late coin referring to this cult; Head, *HN*² 492; Hemberg (1950) 182–84). Archaeological material from the Geometric to Roman periods that might be associated with such a sanctuary has been reported (Manthos (1979)). The ancient *polis* lies beneath the modern city of Ermoupolis and is therefore unexplored (Leekley and Noyes (1975) 51).

Syrian drachmas (*Σύριαι δραχμαί*) are recorded in Delian accounts of C4m (*I. Délos* 104.105 (364/3)); in consequence,

Head's date of c.300 for the start of Syrian coinage is too late by at least 65 years (Head, *HN*² 492). But the known coins attributed to the pre-Hellenistic period have now been shown to be modern forgeries (Nicolet-Pierre and Amandry (1992)).

525. Telos (Telios) Map 61. Lat. 36.30, long. 27.20. Size of territory: 2 (63 km²). Type: B. The toponym is *Tῆλος, ἡ* (Hdt. 7.153.1; Ps.-Skylax 99; *IG* I³ 71.II.145). An alternative toponym is *Ἀγαθοῦσσα* (Hsch. *A*280; Steph. Byz. 621.1; cf. Callim. fr. 581). The city-ethnic is *Tῆλιος* (*IG* I³ 284.12; *RivFil* 70 15.1 (c.300)). Telos is not explicitly called a *polis* until C3f (*IG* XII.3 29.6), but an unpublished arbitration of c.300 strongly suggests *polis* status in C4s (*infra*), and membership of the Delian League indicates *polis* status in C5s. The collective use of the city-ethnic is attested internally in the arbitration of c.300 (*supra*) and externally in the Athenian tribute lists (*supra*). The external and individual use is attested in an epitaph from Mesambria Pontica (*SEG* 47 1075 (C5–C4)).

Ps.-Skylax 99 lists Telos in his chapter on Karia among the inhabited islands near Rhodos. According to Strabo, it belonged to the Sporades (10.5.14), whereas Steph. Byz. assigns it to the Kyklades (620.22).

Telos was a member of the Delian League. It belonged to the Ionian district (*IG* I³ 71.II.145) and is recorded in the tribute lists by city-ethnic (*IG* I³ 284.12), but in the assessment decree of 425/4 by toponym (*IG* I³ 71.II.145). It is recorded twice, in 427/6 or 426/5 (*IG* I³ 284.12) and in 415/14 (*IG* I³ 290.I.27) paying an unknown amount. Telos was assessed for tribute in 425/4 (*IG* I³ 71.II.145) (2 tal.) and in 410/9 (*IG* I³ 100.II.5 (1 tal.)), but city-ethnic almost completely restored). Telos was under Spartan control from 404 until liberated in 394 by Pharnabazes and Konon; it remained independent of Rhodos (no. 1000) throughout C4 (Diod. 14.84.3 with L. Robert (1969–90) i.569–74; for absorption by Rhodos in C3, see Papachristodoulou (1989) 46–47).

An unpublished Koan arbitration for Telos of c.300 includes a civic oath in which the citizens swear to stand by the existing political organisation (*politeuma*), to preserve the *damokratia*, and not to oppose the *damos* (*RivFil* 70 no. 15; cf. Rhodes, *DGS* 290).

The cult of Athena Polias and Zeus Polieus is epigraphically attested in C3e (*IG* XII.3 40.9; cf. *SEG* 3 715.8 (second century AD)) and probably to be connected with the obverse types of the C4 coins (*infra*; Fiehn (1934) 430). A C4 dedication inscribed *Ποτειδ[ά]νος* testifies to a cult of Poseidon (*IG* XII.3 37).

The town was situated in the northern part of the island and was apparently the only settlement. So far no traces have

been found of villages, hamlets or even isolated farmsteads (Hoepfner (1999) 170). Remains of the city walls are still extant (Dawkins (1905–6) 1–3); they have been dated to the Hellenistic period (Hope Simpson and Lazenby (1970) 63–66) or in C4 (Scranton (1941) 172; Hoepfner (1999) 174) and seen as part of Mausolos' building programme (Bean and Cook (1957) 142; Hornblower (1982) 331–32; sceptical: Sherwin-White (1978) 70 n. 212). On the acropolis are remains of a tower and the sanctuary of Athena Polias (Fiehn (1934) 427; Lauffer (1989) 653). The walls enclosed an area of just over 10 ha, but the town lay on a steep slope and most of the houses had to be built on terraces. There cannot have been more than c.150 houses in the town (Hoepfner (1999) 185).

Telos struck bronze coins in C4s. Types: *obv.* head of Zeus, or of Athena (on some, head of Athena with aegis outspread behind); *legend:* ΔΑΜΟΚΡΑΤΙΑΣ; *rev.* crab; *legend:* ΤΗΛΙ and sometimes magistrate's name (Head, *HN*² 642).

Telos joined Lindos in colonising Gela (Hdt. 7.153.1; see *supra* 192).

525. Tenos (Tenios) Map 60 (inset). Lat. 37.30; long. 25.10. Size of territory: 3 (195 km²). Type: A. The toponym is *Tήνος, ἡ* (Hdt. 4.33.2), denoting the island (Aesch. *Pers.* 885), the town (Ps.-Skylax 58) and the political community (Eupolis fr. 245, *PCG*). According to Arist. fr. 612, alternative toponyms were *Ἰδρόεσσα* and *Ὀφιοῦσσα*. The city-ethnic is *Tήνιος* (*IG*² II 1635A.20 (377/6–374/3); Thuc. 8.69.3). Steph. Byz. 622.4–6 records *Tηνεύς* as a variant form, perhaps attested in a C4s inscription from Kyrene (*SEG* 9.2.15; *T[η]νέσι* = Tod 196; cf. *SEG* 42 1663 and *infra*). Tenos is implicitly called a *polis* in the urban sense by Ps.-Skylax 58 (Flensted-Jensen and Hansen (1996) 142), and the Tenians appear under the heading *polis* used in the political sense in the so-called Charter of the Second Athenian Naval League (*IG* II² 43.32, 70, 78, B17) and in the accounts of the Delian *amphiktyones* (*I.Délos* 98Aa12, Ba4 = *IG* II² 1635 (377/6–374/3)); cf. also Hdt. 4.33.2. After C4m the prepositional group *ἐκΠόλεως* denotes one of the *phylai* (Étienne (1990) 22), but the noun *πόλις* is still being used in its usual sense, denoting the political community (*IG* XII.5 798.6 (C3)). The collective use of the city-ethnic is attested internally in abbreviated form on coins of C4l (*infra*) and externally on the Serpent Column at Delphi (ML 27.7), in the Athenian tribute lists (*IG* I² 263.IV.19), on Delos (*I.Délos* 98A12 (377/6)) and in Thucydides (7.57.4). Several inscriptions of C4 give the external individual ethnic (*IG* II² 10446; *IG* XII.5 542.45; *I.Délos* 98A20). *Patris* is found in *IG* II² 466b.38 (307/6).

Strabo, citing Artemidoros, places Tenos among the Kyklades (Strabo 10.5.3). Tenos was settled by Ionians c.1000 (Lauffer (1989) 655). The island seems to have fallen under the control of Eretria (no. 370) in C8; this control would have ended by c.650 (Strabo 10.1.10). The Persians captured the island in 490 (as implied by Hdt. 6.96–97; cf. Aesch. *Pers.* 885). Tenians served in Xerxes' fleet at Salamis (Hdt. 8.66.2), but desertion to the Greek side by one commander earned the Tenians a place on the Serpent Column at Delphi (Hdt. 8.82.1; ML 27.7); they appear also in the dedication at Olympia (Paus.5.23.2).

Tenos was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district and is recorded in the tribute lists from 450/49 (*IG* I³ 263.IV.19) to 416/15 (*IG* I³ 289.I.29) a total of twelve times, twice completely restored, paying a *phoros* of first 3 tal. (*IG* I³ 263.IV.19), reduced to 2 tal. (*IG* I³ 271.I.89) in or before 443/2 (*IG* I³ 269.V.15). It was assessed for tribute in 425/4 (*IG* I³ 71.I.73) of 10 tal. They were still paying members in 413, and naval forces, probably with marines, participated in the Sicilian expedition (Thuc. 7.57.4). In 411 a contingent of soldiers from Tenos supported the Four Hundred in Athens (Thuc. 8.69.3), and from this Gehrke, *Stasis* 159 infers that Tenos must have been one of the *poleis* in which the constitution was changed from a democracy to an oligarchy after the oligarchic revolution in Athens (cf. Thuc. 8.64.1).

The Tenians joined the Second Athenian Naval League in the 370s (*IG* II² 43B.17); one, Bion, served as Tenian envoy to Athens (no. 361) in connection with League business c.370–340 (*IG* II² 279 with D.M. Lewis (1954) 50). Other Tenian envoys to Athens are mentioned in a later inscription in which Tenians residing in Attika were awarded *isoteleia* in C4s (*IG* II² 660 with Pečirka (1966) 93–95). Tenos was subjected in 362 to *andrapodismos* by Alexander of Pherai (Dem. 50.4). The relocation of the town in C4m (*infra*) and the reorganisation of the civic subdivisions were probably caused by the *andrapodismos* and carried out in connection with a repopulation of the island (Étienne (1984) 211). If *T*[. . .]σι at *SEG* 9 2.15 refers to Tenos, the Tenians received 20,000 *medimnoi* of grain from Kyrene (no. 1028) during the grain crisis of 330–326 (see *SEG* 92 1663; Gasperini (1996) 103 improperly corrects the text to read *T*[*ηνίους*]; Brun (1993b) 187–88 rejects both restorations and prefers to leave the text unemended; but, given the multiple odd ethnics in this inscription, it would not be surprising if the Kyrenaians simply got it wrong).

Pace Hiller von Gaertringen (*IG* XII.5 xxiii, 1516) and Gigon (no. 138), there is no evidence to support the view that

the Aristotelian collection of *politeiai* included a constitution of the Tenians. The eponymous official was the archon (*IG* XII.5 872.1); the theory that the office lasted only six months rather than a year is to be rejected (Gauthier (1992) against Étienne (1990) 42–45). *Prytaneis* are restored in an Athenian decree of C4m (*IG* II² 279.2–3; cf. D. M. Lewis (1954) 50; Pečirka (1966) 53–54). *Astynomoi* appear in the register of sales of land of C4e (*IG* XII.5 872.1). Citizens from Tenos were appointed *proxenoi* by Karthaia (no. 492) (*IG* XII.5 542.45 (C4m)) and by Chios (no. 840) (*PEP Chios* 50 (C4)).

The Tenian citizens were subdivided into, presumably, ten territorial *phylai*. These tribes may have been created or reorganised as part of a large-scale civic reform of C4m in which the moving of the urban centre was an important element (Étienne (1990) 45–47). The names of Tenian tribes are attested epigraphically, typically in the form of phyletics added to name and patronymic; all are known from the large register of sales of land of C4l (*IG* XII.5 872); after each one listed below, only additional references to earlier attestations are noted: *Γυρα(ιεύς)* (873.9, 12 (C4s), 875.17 (C4s)); *Δονα(κεύς)* (873.9 (C4s)); *Ἐλειθυ(αιεύς)* (875.31 (C4s)); *Ἐσχα(τιώτης)* (873.3 (C4s), 875.15 (C4s)); *Ἡρακλείδης* (876.4 (C4l?)); *Θεστιεύς* (875.9, 16 (C4s)); *Θρῆσιος* (876.1 (C4l?)); *Ἰακωθεύς* (875.30 (C4s)); *Κλυμενεύς* (872.109 (C4l)); *ἐκΠολεως* (872, 875.8 (C4s)). The name of an “eleventh” tribe, *Σησταῖς*, seems to be a false reading (Étienne (1990) 46). The tribe called *ἐκΠολεως* refers to Tenians registered in the former *polis* site at Xombourgo (see *supra*) and probably embraced the majority of the inhabitants of the new *asty* on the seashore (so Étienne (1990) 22).

Inhabitants were registered in one of at least eleven *tonoi*, neighbourhoods, of the *asty* (*IG* XII.5 872.6, 21, 25, 36, 44, 72, 123 with Étienne (1990) 22–23). As many as twenty-three toponyms are attested, mostly in the large register of sales of land (*IG* XII.5 872); their locations throughout the island have been debated (Étienne (1990) 24–30; Psarras (1994)). The Thryesioi were probably located in the central part of the island at modern Komi, persuasively identified with the *Κώμη* recorded in *IG* XII.5 872.19 (Étienne (1990) 29). From the toponym it can be inferred that ancient Kome was a village. There is no evidence of any other nucleated settlement on Tenos.

A different gentilician civic subdivision was into *πάτραι*. By contrast with the *phylai*, the *patrai* may be seen as an aristocratic holdover: the law of introduction, *νόμος εἰσαγωγῆς*, which very likely regulates induction into the

patrai, insists on legitimacy through the male line and sets an age restriction of at least 50 years (*IG XII* suppl. 303 with Étienne (1990) 40–42 no. 2). A decree of the *patra* of the Androkleidai survives (Étienne (1990) 37–39 no. 1 (C4e–C3s)).

The huge register of sales of land (*IG XII.5* 872) and a few small related inscriptions (873–79) provide us with valuable information about ownership of landed property, inheritance and size of families (often more than two adult children in a family); see the analysis in Étienne (1990) 51–84.

The protective deities were Poseidon and Amphytrite, whose sanctuary lay on the sea 2.5 km west of the post-C4m urban centre (see *infra*). There was probably a cult and a sanctuary of Demeter Thesmophoros from c.700 (see *infra*). An inscription of C4m attests to a cult of Ge, possibly private only (Despinis (1979) 228–29).

The Tenian calendar is known most completely through *IG XII.5* 872. The names of nine months are given. Some are identical with the Athenian months, but apart from Tenos, *Ἀπρῆλειών* (872.15) is attested only in Dorian and north-western *poleis* (Étienne (1990) 47–50; Trümper, *Monat.* 60–63).

The urban centre of Tenos in the Archaic and most of the Classical periods was located at Xombourgo above the modern town (not in *Barr.*). This site was walled by C7 or later, and had a sanctuary in use from C8e which has been plausibly assigned to Demeter Thesmophoros (see Themelis (1976) 4–23 for good overall plans and a summary of the excavations, which were never published as an ensemble; his interpretations, however, are to be rejected (Boardman (1978))). Some time around or after C4m, this centre was abandoned, and the urban centre of the *polis* was transferred to its present site by the sea. In Tenian sources, this new urban centre is usually referred to as the *asty* (*IG XII.5* 872.21 *et passim*; *I.Délös* 104–32.4 (320s?); cf. Étienne (1984), (1990) 15–24). The new *asty* was equipped with massive fortification walls dated to C4s (see the detailed description of Graindor (1910) 236–42, with corrections and commentary by Étienne (1990) 15–18); the walls are mentioned in an inscription of C1 (*IG XII* suppl. 315 with Étienne (1990) 139) and enclosed an area of c.10 ha (Étienne (1990) 17 with plate II). The main sanctuary of the chief deities Poseidon and Amphytrite was located 2.5 km west of the new urban centre on the sea; started in C4m or after, the sanctuary and the *asty* form part of a coherent plan to reconfigure Tenian urban and sacred space (Étienne and Braun (1986)). Philoch. fr. 175 claims that Poseidon was honoured there as a doctor.

The Tenians began striking anepigraphic silver coins on the Aiginetan standard from c.600 to c.500. Denominations: staters (rare), hemidrachms and triobols. Types: *obv.* bunch of grapes; *rev.* incuse square (Head, *HN*² 492–93; Artemis-Gyselen (1977)). Minting was resumed in C4l, and the oldest series of tetradrachms on the Attic standard is now dated to the period c.315–308. Types: *Obv.* head of Herakles in lion's skin; *rev.* Zeus enthroned, holding eagle and sceptre; legend: *TH* (Head, *HN*² 493; Étienne (1990) 225–52; *SNG Cop. Aegean Islands* 766–68).

526. Thasos (Thasios) Map 51. Lat. 40.45; long. 24.45. Size of territory: 4 (380 km²). Type: A. The toponym is *Θάσος*, ἡ (*IG I*³ 1144.43, 130 (465/4); *SEG* 38 851.B.22 (407); Archil. fr. 228.1; Thuc. 8.64.2), denoting both the island (Arist. *Hist. an.* 549^b16) and the town (Archestratos fr. 5.9, Olson and Sens). The city-ethnic is *Θάσιος* (*IG XII.8* 264.11 = Koerner (1993) no. 71 (C4e); Thuc. 1.100.2). Thasos is called a *polis* both in the urban sense (Archil. fr. 49.7; Thuc. 8.64.3, 4, first occurrence; Dem. 35.35; Ps.-Skylax 67; Duchêne (1992) 125 no. 24.1, 15 (C5m)) and in the political sense (*IG XII.8* 356.2 = *CEG I* 415 (C6l); *IG XII* suppl. 412.2 = *CEG I* 416 (C6l); *SEG* 42 785 *passim* (C5f); *ML* 83 *passim* (C5l); *SEG* 26 1029.5 (C4s); Hdt. 6.44.1; Thuc. 8.64.4, second occurrence); the first occurrence at Thuc. 8.64.4 has the territorial sense as a connotation. The collective use of the city-ethnic is attested internally on coins (*infra*) and amphora stamps (Garlan (1999) 17–20) and in inscriptions (*IG XII* suppl. 412.1 = *CEG* 416 (C6l); *ML* 83.π.7, before 407 (Graham and Smith (1989)); *IG XII.8* 264.11 (C4e)) and externally in both literary texts (Archil. fr. 20; Thuc. 1.100.2; Dem. 20.59) and inscriptions (*IG I*³ 101.31 (410/9); *IG XII.4* 109 (C5); Moretti (1953); *SEG* 43 486.33 (C4m)). The individual and external use is attested in inscriptions (*IG I*³ 1373–74 (c.407); *IG IV*².1 122.7 (C4m/C4s)) and in literary sources (Lys. 13.54; Dem. 20.61; Arist. *Poet.* 1448^a12). *Patris* is found in Dem. 20.59.

Ps.-Skylax 67 places Thasos in Thrace, and Strabo classes Thasos among the islands lying off Greece as far as Makedonia and Thrace (2.5.21). Though Herodotos mentions a Phoenician colony on Thasos (2.44.4; cf. also Paus. 5.25.12), the island was more famously colonised by the Parians (no. 509) under Telesikles in 710–680 (Thuc. 4.104.4; Strabo 10.5.7; Steph. Byz. 306.14); for a foundation date of C7m, see Graham (2001) 228–29, 365–402. Archilochos has a good deal to say about the circumstances of the early colony (fr. 92–112). An inscription of C5 mentions as *archegetes* one Sotion (Pouilloux (1954) 335 no. 127; cf. Leschhorn (1984) 56–60 and the useful summary in Pouilloux (1982)); Hippoc. *Epid.* 1 case 5 mentions the *archegetes*.

In C61 Thasos was controlled by the tyrant Symmachos, expelled by the Spartans (Plut. *Mor.* 859D; Salviat (1979) 123–25; Bowen (1992) 119). The Thasians were probably under an oligarchy in the earlier part of C5 (Pouilloux (1954) 43). They had an income from their mines on the island and the *peraiā* ranging between 200 and 300 tal./year c.500 (Hdt. 6.46.3). Histiaios attacked the island in 494, but was repelled by the arrival of a Phoenician fleet (Hdt. 6.28). In 492 the Thasians surrendered to Mardonios and remained under Persian control until 479 (Hdt. 6.44.1). They joined the Delian League as contributors of ships, but revolted in 466/5; the Athenians besieged the island for three years before finally defeating the rebels. The Thasians were forced to pull down their walls, to surrender their fleet, to pay an indemnity, to pay *phoros* in the future and to cede their possessions on the mainland (Thuc. 1.100–1; Plut. *Kim.* 14.1–2 Polyae. 2.33, 8.67; *IG* I³ 1144B.III.43, 130; cf. Pébarthe (1999)). Thasians appear thereafter serving in the Athenian fleet (*IG* I³ 1032.431), and Athenians owned property on Thasos (*IG* I³ 426.45, 144). The Thasians became paying members of the Delian League. They belonged to the Thracian district (*IG* I³ 272.II.56) and are recorded in the tribute lists from 454/3 (*IG* I³ 259.V.14) to 429/8 (*IG* I³ 282.II.17) a total of fourteen times, once completely restored, paying a *phoros* of 3 tal. (*IG* I³ 259.V.14), raised to 30 tal. in 446/5 (*IG* I³ 266.III.8) or the year before when the Thasians are recorded three times (*IG* I³ 265.I.94, 107, II.66, restored). The Thasians were assessed for tribute in 425/4 (*IG* I³ 71.III.155) of 60 tal.

In 411, in the wake of the revolution of the Four Hundred, the Athenian *strategos* Daitrephes abolished the democracy in Thasos (Thuc. 8.64.2) and established an oligarchy, called *ἀριστοκρατία* and *εὐνομία* by the Athenians in 411 (64.3, 5) but *δλιγαρχία* by Thucydides (64.5) and by the Athenians in 407 in a contemporary inscription (*SEG* 38 851.A.4, 19, B.2–3, 20). But soon afterwards the anti-Athenian faction got the upper hand, and the Thasians defected from Athens with the help of a squadron commanded by Timolaos of Corinth (*Hell. Oxy.* 10.4–5; *IG* XII.8 402). The *polis* brought back its old institutions, restored its fortification walls and fleet (Thuc. 8.64.3–5), and accepted a Lakedaimonian harmost (Xen. *Hell.* 1.1.32). They punished Athenian supporters (*IG* XII.8 263; ML 83; cf. Pouilloux (1954) 139–42 no. 18; on the date of this inscription as C51 but not autumn 411 or spring 410, see Graham and Smith (1989)). In the following year a *stasis* among the Thasians resulted in a short-lived expulsion of the pro-Lakedaimonian faction (Xen. *Hell.* 1.1.32; Gehrke, *Stasis* 161). Thasos must have defected once again, for in

410/9 the Thasian colony Neapolis (no. 634) was besieged by Thasians and Peloponnesians, but resisted with Athenian support (*IG* I³ 101 = ML 89; see Pouilloux (1954) 155–60), and in the spring of 407 the Athenians under Thrasyboulos recovered the island after a siege and restored the democracy (Xen. *Hell.* 1.4.9; Diod. 13.72.1), called explicitly *δημοκρατία* in a contemporary inscription (*SEG* 38 851.A.7 = Grandjean and Salviat (1988)). The Parians facilitated a reconciliation between the Thasians and the Neapolitans probably soon after 407 (*IG* XII.5 109 as reinterpreted by Pouilloux (1954) 178–92; Piccirilli (1973) 144–49 no. 33; see also the bas-relief from Delphi: Moretti (1953)). Thasos' mainland possessions were apparently recovered only gradually, in 410–407 and the 390s (Brunet (1997)).

With Spartan victory at the end of the war, a squadron under Eteonikos captured Thasos (Xen. *Hell.* 2.2.5). In Polyaeus the conquest is ascribed to Lysandros, and we are told that, after a battle, he tricked Athenian sympathisers who had taken refuge in the temple of Herakles to surrender, whereupon they were executed (Polyae. *Strat.* 1.45.4; the story is questioned by Gehrke, *Stasis* 162–63). Thasians who supported the democracy (*IG* II² 6) and had been exiled from Thasos for supporting Athens (*IG* II² 33.6–7 with Pouilloux (1954) 203, and Polyae. *Strat.* 1.45.4) were honoured by the Athenians in C51 and C4e (*IG* II² 6, 17, 24, 25, 33; cf. *SEG* 15 83–87, with Pouilloux (1954) 203; Salviat (1979) 120–25 and Karamoutzou-Teza (1987)).

The Spartans controlled Thasos from 404, but, with the help of a pro-Athenian faction, the Athenians recovered the island for themselves in 389/8 (Dem. 20.59; *IG* II² 17). A few years later the pro-Athenians were expelled and found refuge in Athens (*IG* II² 24, 33; Dem. 20.61; cf. Osborne (1981–83) ii.48–57). But in c.375 the Thasians joined the Second Athenian Naval League (*IG* II² 43.B.4: [Θάσι]οι). Philip II gained control of Thasos in (probably) 340/39 with the help of Thasian supporters (Dem. 18.197). The Thasians belonged to the League of Corinth in 338 (*IG* II² 236.b.5 = *Staatsverträge* 403).

Thasian *presbeis* in Athens (no. 361) are attested in C4e (*IG* II² 24.b.16), and in the same period Thasians are honoured with Athenian citizenship (*IG* II² 17). The Thasians granted *proxenia* to a citizen from an unknown *polis* (*IG* XII suppl. 352 (C41)) and to a citizen from Olynthos (no. 588) (*Ét. Thas.* 5 p. 223 no. 376 (C41/C3e)), and Thasians were granted *proxenia* by Athens (*IG* II² 6 (C51/C4e), with Walbank (1978) 324–28 no. 61 (doubts about the identity of the family as Thasian) and Grandjean and Salviat (1988)). Thasian *theorodokoi* are recorded as hosts of *theoroi* from

Epidaurus (no. 348) in 359 (*IG* iv².1 94.31) and as hosts of *theoroi* from Argos (no. 347) in c.330 (*SEG* 23 189.ii.20). The Thasians gave the Athenians a gold crown in 354/3 (*IG* ii² 1437.10–11, 1438.15–16).

Many public enactments are known from Thasos. There are several wine laws. The earliest dates from c.460 (*SEG* 36 790 = Koerner (1993) no. 66); later parts belong to C5l and C4e (*IG* xii suppl. 347.1–11 = Koerner (1993) nos. 68–69; cf. *SEG* 36 791 and Salviat (1986)). A law regulating the cleanliness of the streets was passed in the 480–460s (*SEG* 42 785 = Duchêne (1992); cf. Graham (1998) with Gauthier in *BE* (1999) 428). A law on commerce of 425–415 regulated exports and imposed fines (*SEG* 36 792 = Koerner (1993) no. 67). The revolutionary government of 411–408 established rewards for informers in the last years of the Peloponnesian War (ML 83 = Koerner (1993) no. 70). A decree of C5l/C4e set up funerary honours for those who died for the fatherland (Pouilloux (1954) 371–80 no. 141). A law set out conditions for accepting foreigners into the civic body of Thasos soon after the end of the Peloponnesian War (*IG* xii.8 264 = Koerner (1993) no. 71, *pace* Pouilloux (1954) 204–13). A sacred law of C5m regulated a cult of Herakles (*IG* xii suppl. 414 = Duchêne (1992) 124–25 no. 23); another, dated (perhaps over-precisely?) to 430–420, deals with a cult instituted by an individual (*SEG* 38 853). A law from C4l seems to give a complete list of the city's festivals (*SEG* 17 415; Salviat (1958b)).

At least from C5l on, public enactments were passed by the *boule* and/or the *demos*. The only preserved attestation is a law about naturalisation passed in C5l by the *boule*, with a major amendment passed by the *demos* (*IG* xii.8 264 = Koerner (1993) no. 71). For a C4l example of a decision presumably made by (*boule* and) *demos*, see *IG* xii suppl. 352.5.

Lists of *theoroi* beginning about C6m (*IG* xii.8 273–330, 283, 285) refer to the government of the Three Hundred and Sixty (*IG* xii.8 276.5–7 (rC6l)); this may be a *boule*, with a member for every day of the year (Salviat (1979)). The wine law of C5f (*SEG* 36 790.8), the denunciation law of C5l (ML 83.3) and a C5l decision about confiscation of property (*IG* xii.8 263.7) all mention a board of “Three Hundred”, presumably a lawcourt (ML p. 264; Koerner (1993) 246, 264).

The usual Thasian eponymous official was the archon, who served with two colleagues (ML 83.1.6; *SEG* 38 851.B.22–23 (both C5l)); many fragments of archon lists survive, starting in C6 (but inscribed in C4): Pouilloux (1954) 259–75 nos. 28–34 and Dunant and Pouilloux (1957) nos. 199–220 with p. 104; Sherk (1990) 292–94). But during the period of Athenian domination from 463, only a single archon served (Salviat (1984) 243–46). In 397 the Spartan

Lichas occupied the office (Salviat (1983)). The *theoroi* appear also occasionally as eponymous officials (*IG* xii.8 263.a.1 (412/11)). The archons forming a board of unknown number attested by c.480–460 are not to be confused with the eponymous officials (*SEG* 42 785.27; Duchêne (1992) 64–68). Inscriptions provide evidence of a raft of public officials, including *polemarchoi* (Pouilloux (1954) 371–80 no. 141 (c.400)), *theoroi* (*IG* xii.8 263 (C5l)), *prostatai* (*IG* xii.8 264.13 = Koerner (1993) no. 71, with Pouilloux (1954) 204–13), a *grammateus*, once called “of the *boule*” (*IG* xii.8 264.13 = Koerner (1993) no. 71 with Pouilloux (1954) 204–13, 371–80 no. 141 (c.400)), *agoranomoi* and *gynaikonomoi* (Pouilloux (1954) 371–80 no. 141 (c.400); Salviat (1958a) 319–23 no. 1 (C4)), and *epistatai* (*SEG* 42 785.29–30; Duchêne (1992) 68–71). *Apologoi* are known from dedications (Bernard and Salviat (1962) no. 10 = Duchêne (1992) 124 no. 23; Salviat (1957)). *Karpologoi* appear in the famous law on commerce (*SEG* 36 792.2, 9 with Pouilloux (1954) 121–34, date: 425–415).

Inscriptions of C5l–C4e attest to groups designated by plural patronymic names: e.g. *Φαστάδαι* (Rolley (1965) 441–42 no. 1). They are usually identified with the *πάτραι* known from C3 grants of citizenship (*IG* xii suppl. 355.4) and are interpreted by Jones, *POAG* 184–86 as civic subdivisions of an “essentially private nature”. He argues too that one of the groups, the *Γελέοντες* (Rolley (1965) 449 no. 8), was in fact not a *patra* but a larger subdivision, possibly a *phyle*, *contra* Grandjean and Salviat (2000) 221.

Many communal cults and sanctuaries are attested for Thasos (brief surveys in Schachter (1992) 22–25; Cole (1995) 309–12). From the earliest written records we can see that Thasos was not identified with a single primary divinity, but with a constellation of divinities who catered to the needs of the community. Four of these divinities—Artemis (Hekate), Herakles, Apollo (Pythios) and Athena (Poliouchos)—seem to have been more prominent than others. Thasos therefore had not one major sanctuary, but four. Apollo Pythios and Athena Poliochos were located on the double summit, and Artemis and Herakles in the lower area (Cole (1995) 310). (1) Artemis, whose Artemision (Hippoc. *Epid.* 3.17a) was begun in C6s (Grandjean and Salviat (2000) 89–91), was sometimes known by various epithets, including Hekate (*SEG* 42 785.49 (C5f)). (2) Herakles sometimes bore the epithet Thasios (*IG* xii suppl. 414); he is attested in C6l as one of the protective divinities of Thasos (*IG* xii.8 264.16, 351.3); his cult was supposed to have been founded by the Phoenicians, and his temple existed by 480–460 (Hdt. 2.44.4; Hippoc. *Epid.* 3.17y; Polyæn. *Strat.*

1.45.4; Paus. 5.25.12–13; *SEG* 42 785.2, 23–24 (C5f); *IG* XII suppl. 412 = *CEG* I 416 (C6); *IG* XII suppl. 350 (C5); cf. Grandjean and Salviat (2000) 142–45; Launey (1944). (3) Apollo Pythios (*SEG* 36 790.6 (C5f) (restored); *SEG* 42 785.9) was worshipped in the Pythion, which is attested epigraphically in C4 (*IG* XII suppl. 350 (C4)) and has produced sherds of 525–500 (Grandjean and Salviat (1995); cf. also *SEG* 45 1205; Grandjean and Salviat (2000) 111–12). (4) Athena is attested as Poliochos from C5f (*SEG* 36 790.6); her sanctuary dominated the acropolis (Grandjean and Salviat (2000) 114–16). Finally, Dionysos is attested alongside Herakles as a protective divinity of Thasos (*IG* XII.8 356 (C61), 262.16; *IG* XII suppl. 398 (C4)); the earliest archaeological remains of his sanctuary are C4 (Grandjean and Salviat (2000) 92–94), but it is attested by Hippokrates by C5s (Hippoc. *Epid.* 1.21) public enactments were sometimes inscribed there (*IG* XII.8 262.16–17), and dramatic festivals connected with Dionysos are attested in inscriptions (*SEG* 38 851.A.17 (C5l); *IG* XII suppl. 354.a.21–22 (c.300)).

Other gods worshipped by the Thasians included Hera, who had a sanctuary by C5e, though it has not yet been located (Hippoc. *Epid.* 1.14). Zeus is attested with various epithets, as Zeus Katharsios (Pouilloux (1954) no. 101 with *LSCG* suppl. p. 124 (C4)) and Zeus Agoraios, who had a sanctuary dating from C4e (*BCH* 74 (1950) 333–41; Pouilloux (1954) 230–31 with *IG* XII.8 361; Grandjean and Salviat (2000) 76). Zeus also served, under three different epithets, as patron deity of three of the Thasian *patrai*: Zeus Alastos, Zeus Ktesios and Zeus Patroios, along with Athena Mykesis and Athena Patroia (*IG* XII suppl. 407 (c.400); Rolley (1965); Grandjean and Salviat (2000) 102–5). Poseidon had a sanctuary dating from C5e/C4s (*IG* XII suppl. 432 (C4); Bon and Seyrig (1929); Grandjean and Salviat (2000) 97–98). Demeter Thesmophoros had her sanctuary the Thesmophorion (Paus. 10.28.3 (rC7); Rolley (1965); Müller (1996); Grandjean and Salviat (2000) 102–5). Pan had a sanctuary (*IG* XII suppl. 429; Grandjean and Salviat (2000) 117–19). The Charites' sanctuary was in place by 480–460 (*SEG* 42 785.41; Duchêne (1992) 75–77, 93–94; Berranger (1992) 184–203). An Asklepieion is also attested (Salviat (1958c)). Hippokrates mentions a temple of Ge (*Epid.* 3.1a).

Among the cults of heroes may be mentioned the Mnema of Glaukos, which was located in the corner of the agora; the inscription which identifies it dates to c.600 (Pouilloux (1955); Grandjean and Salviat (2000) 69–70; cf. also Jeffery (1990) 300–1). Infamously, the Thasians wanted to establish a cult for Agesilaos in 394, though he refused (Plut. *Mor.* 210C–D).

The Thasians are known as a community to have consulted Apollo at Delphi twice in C5 (Paus. 6.11.7–9). They made a communal dedication of a statue of Herakles at Olympia after their liberation from the Persians in 479/8 (Paus. 5.25.12–13). Thanks to Pausanias (6.11.2–9), we know a good deal about the athlete-hero Theogenes, whose cult had begun by the start of C4. His victories included two in the Olympic Games (in 480 and 476: *Olympionikai* 201 and 215), ten in the Isthmian, nine in the Nemean, and three in the Pythian (Pouilloux (1994) with the other sources; on the date of *SEG* 18 359 as 346, see Holzman (1994) 152; Grandjean and Salviat (2000) 73–76); statues of him were erected at Delphi (*Syll.*³ 36A; Jacquemin (1999) 354 no. 459) and Olympia (*Syll.*³ 36B).

The Thasian calendar was of the Ionian type and was virtually identical with that of Paros (Salviat (1992) 263; Trümpy, *Monat.* 65–72).

The city itself, at the north-east corner of the island, was oriented towards the sea and exploited the natural landscape, rising gradually on a series of terraces to a striking and steep acropolis. There were two major centres. The lower city developed around the agora and harbour. To the south, the upper city was organised around the acropolis. The major sanctuaries determined the pattern of settlement and the orientation of major streets. There were two primary areas of habitation: one near the Artemision, the other near the Herakleion (Grandjean (1988) i.312–23, 336–46).

In C6l the city was surrounded by a defence circuit (Grandjean and Salviat (2000) 94–139) with gates named after specific divinities (*IG* XII.8 356; Picard (1962)). The walls enclosed an area of almost 70 ha. Following the attack of Histiaios in 494, the Thasians used their great wealth to strengthen their existing fortification walls (Hdt. 6.46.2). In 491 Dareios ordered these walls to be torn down and the Thasian fleet conveyed to Abdera (Hdt. 6.46.1). These walls must have been rebuilt (or perhaps the order was never fully carried out), for the Thasian urban centre was fortified in 463, when the Athenians ordered the walls to be torn down again after the Thasian Revolt (Thuc. 1.101.3). In 411 the Thasians rebuilt their walls (Thuc. 8.64.3). These walls are mentioned in an inscription of C4l–C3e (*Ét. Thas.* 5 223 no. 376 = Maier (1959–61) no. 55), and ruins of them, with gates and towers, are still to be seen in the city (Grandjean and Salviat (1999), (1995), (1990), (1993)).

Thasian public architecture included a *prytaneion*, attested as early as C5f (*SEG* 42 785.43–44) and frequently thereafter (*IG* XII.8 262.1 (C5l); restored, see *SEG* 38 851); Theophr. *De Odoribus* 51; cf. S. G. Miller (1978) no. 439; Duchêne

(1992) 98–99). The theatre claimed by Grandjean and Salviat (2000) 105 after Hippoc. *Epid.* 1.20 seems to be a misreading; Arist. *Poet.* 1.448^a12 attests to a Thasian actor, but this does not prove that a pre-Hellenistic theatre existed on Thasos; the earliest evidence seems to be *I.Lampsakos* 1.21 (c.300), *IG XII* suppl. 354.a.21–2 (c.300) and the Hellenistic archaeological remains (*TGR* ii. 303–4). By C5f Thasos had an agora (Grandjean (1988) 480–85; Duchêne (1992) 101–4; Grandjean and Salviat (2000) 62–64; for an “agora of liars”, see Hippoc. *Epid.* 3 cases 8 and 12). From C4m the agora was flanked with stoas, and in the north-eastern corner was a building of C4l with offices for magistrates (Grandjean and Salviat (2000) 62–71). Most extraordinary is the epigraphic attestation of a building called the ἀργυραμοιβήϊον in c.480–460, where Thasian civic officials oversaw the exchange and circulation of money (Duchêne (1992) 19–20 ll. 41–42, 79–85). Next to it stood a συμπόσιον (Duchêne (1992) 19–20 ll. 41–42, pp. 79–85). Thasos had two harbours, one of which is described as κλειστός (Ps.-Skylax 67). The Thasians had military facilities for their ships by c.500 (Grandjean and Salviat (2000) 52–57).

We know a fair amount about settlement patterns in the Thasian countryside, thanks in part to a remarkable inscription found at Aliko (see *infra*) which gives directions and distances around the island (Salviat and Servais (1964)). The inscription mentions two places. The first from the city (*polis*), *Αύνυρα*, was known already from Herodotos in connection with the Thasian mines (6.47.2) and must be a region rather than a village (Salviat and Servais (1964) 282 with n. 1; which is not to say that there might not also have been a settlement with the same name). The other is called τὸ Διάσιον τὸ ἐν Δημητρίῳ, which was a sanctuary of Zeus located at a place, probably a settlement, called Demetrium (ibid. 285); if this place has been rightly located, the village’s god will have been Apollo Komaios (ibid. 287). Koinyra (Hdt. 6.47.2) was a village with mines nearby (*Barr. C*). The modern village of Aliko lies at the site of an ancient settlement with a sanctuary that began in C7m, soon after the Parian colonisation of the island; Grandjean and Salviat (2000) 161–68), and of important marble mines that began to be exploited in C6 (*Barr. AC*). Remains of a Classical settlement have been found at modern Koukos, near the southern tip of the island (*Barr. C*). The name Αἰγγροκλήης may derive from the Thasian river Angros (Hdt. 4.49.2 with L. Robert (1938) 201–2). The mines and quarries found in many places on the island were exploited from at least C6 (Muller (1979); des Courtils *et al.* (1982); Weisgerber and Wagner (1988a), (1988b); Sodini *et al.* (1980)). The remains

of many towers no doubt represent farmsteads (Bon (1930); Osborne (1986)), but there is also a lighthouse (*pharos*) constructed in C6e in memory of Akeratos (*IG XII*.8 683 with Koželj and Wurch-Koželj (1989)). Ateliers of amphoras continue to be found throughout the Thasian countryside (Garlan (1999) 2–4).

The Thasians struck silver coins on the so-called Thrako–Makedonian standard from C6l (perhaps first in 520–510) up until C5l. It is hard to find much sign of the defeat of the Thasians by the Athenians on Thasian coinage (Duchêne (1992) 87). The coins have been sorted into three general groups on the basis of variations in details of the types, especially in the appearance of the maenad; the date of the groups is imprecise, but they fall roughly in order from C6l/C5e through C5 to perhaps 412–404 for the third group. Types: *obv.* satyr/Silenos with a maenad (stater, trite), or satyr alone (hemihekte), or head of satyr (hekte), or two dolphins (quarter hekte), or dolphin (eighth hekte); *rev.* incuse square (all denominations). Anepigraphic till C5e, when legends appear: ΘΑΣΙ (hekte), ΘΑΣΙΩΝ (hemihekte), ΘΑ (quarter and eighth hekte). After an apparent pause in minting (404–391), a new coinage on a new system (but the same standard) starts (probably) in 390, with the return of democracy to Thasos, and runs to c.335; some modifications were introduced c.360. The new coinage includes issues in gold and bronze along with silver. Denominations now include tetradrachms and drachms (replacing the old trite of the stater) in gold and silver; dichalkons, triobols, hemiobols and chalkous in bronze. Types: *obv.* Dionysos, bearded or juvenile (gold, silver), or head of Herakles (bronze); *rev.* Herakles as archer; legend: ΘΑΣΙΩΝ (gold, silver), or Silenos with kantharos or amphora (gold), or Herakles’ symbols (bow, club, star); legend: ΘΑΣΙΩΝ (bronze; Pouilloux (1954) 216–17; Picard (1982), (1987); Duchêne (1992) 85–87; Grandjean and Salviat (2000) 303–9; *SNG Cop. Thrace* 1007–35).

The Thasians are said to have colonised the Hedonian city of Myrkinos (no. 633), Galepsos (no. 631) and Oisyme (no. 635); cf. Thuc. 4.107.3 and 5.61.1. An inscription attests to their colonisation of Neapolis (no. 634) (*IG I³* 101.7 = ML 89.7: ἀποικοὶ ὄντες Θασιῶν (110/9)) (*infra* 863). For the Thasian *peraia*, see Hdt. 6.46.2–3, 7.109.2; Dem. 50.47; Diod. 11.68.4, 16.3.7. Thasian magistrates in the *peraia* are attested c.400 (*IG XII* suppl. 347II = Salviat (1986) 147–48; cf. Loukopoulou (1989) 62, 185).

527. Thera (Theraios) Map 61. Lat. 36.20; long. 25.30. Size of territory: 2 (83 km²). Type: A. The toponym is Θήρα, ἡ

(Pind. *Pyth.* 4.20; Arist. *Pol.* 1290^b11; *IG* XII.7 6.6; *F.Delphes* III.1 497.12 (C4l/C3e)), in the Ionic dialect *Θήρη* (Hdt. 4.147.4); the toponym denotes both the island and the town (Strabo 8.3.19). The city-ethnic is *Θηραῖος* (ML 5.6 (C4f); Pind. *Pyth.* 4.10). Thera is called a *polis* in the political sense (ML 5.37 (C7); Arist. *Pol.* 1290^b11–12); the territorial sense seems to be a connotation at Hdt. 4.150.2. At Pind. *Pyth.* 4.20 Thera is called a *matropolis*. The collective use of the city-ethnic is attested internally in a C4f version of what claims to be a Theraian decree of C7s (ML 5.25) and in abbreviated form on bronze coins of C4 (*infra*); it is attested externally in inscriptions (*IG* I³ 71.1.68 (425/4); ML 5.2 (C4)) and in literary sources (Hdt. 4.150.1). The individual and external use is found in Athenian C5 inscriptions (*IG* I³ 30.5 (C5m), *IG* I³ 977–80 (C5s)) and in literary sources (Hdt. 4.154.3).

Thera was regarded as one of the Kyklades (Thuc. 2.9.4); for Strabo it is one of the islands near Crete (10.5.1). The names of a number of smaller settlements around Thera are known, and some of them have been located and explored archaeologically. Oia (*IG* XII.3 suppl. 1291.10) shows traces of settlement from the Archaic period to the end of Antiquity (see especially *IG* XII.3 526), and Eleusis has produced evidence of settlement from the Classical period (Hiller von Gaertringen (1899–1909) i.299–308). There may have been a settlement of Archaic and Classical date at modern Perissa (Sperling (1973) 30–31).

Thera was generally recognised to be a colony of Sparta (no. 345) under the oecist Theras (Hdt. 4.147–49; Pind. *Pyth.* 4.251–59 and 5.72–76; Paus. 3.1.7–8, cf. *IG* XII.3 382 (C4); Malkin (1994) 89–111); in C4f Akсандros claimed that the oecist was called Samos and that a descendant called Aristoteles led the colony to Kyrene (no. 1028) ((*FGrHist* 469) fr. 5a). The early and better version attributes the foundation of Kyrene, around 631, to Battos (Hdt. 4.150–58; Pind. *Pyth.* 4.4–8, 5.85–95; ML 5; see Malkin (1987) 60–69; on the oath in ML 5, see now Dobias-Lalou (1994), who argues that the text was Theraian). In Herodotus' version, it was a severe and prolonged drought that drove the Therans to consult Apollo at Delphi and dispatch colonists. Menekles of Barka (C2) claims rather that *stasis* on Thera drove one of the factions off the island, but this may be a reflection of Hellenistic history making or of C4e problems on the island ((*FGrHist* 270) fr. 6; cf. Ager (2001) 107). The Therans at Kyrene maintained their identity separately from settlers from the Peloponnesos and Crete until C6 (Hdt. 4.161.3).

Hostile to Athens in 431 (Thuc. 2.9.4), the Theraians are recorded as paying members of the Delian League from 430/29 (*IG* I³ 281.11.54, completely restored) or 429/8 (*IG* I³

282.111.23, partially restored) to at least 418/17 (*IG* I³ 287.1.10) and possibly 416/15 (*IG* I³ 289.1.10, completely restored). Mattingly (1996) 77 argues that *IG* I³ 282 should be dated rather to 427/6 and that Thera was added to the Athenian sphere of authority at that date. Thera belonged to the Island district and was assessed for tribute in 425/4 (*IG* I³ 71.1.68) (5 tal.); cf. the decree of 426/5 (*IG* I³ 68) in which Thera, paired with Samos, was denied the privilege of electing *eklogeis* to collect the tribute, perhaps as a punishment (*IV* I³ 68 21–24).

Thera fell under Spartan hegemony after the Peloponnesian War and may have continued to be under that authority until Chabrias' expedition in the Aegean in 377/6 (Diod. 15.30.5). Part of the Theraian state, [*Θη*]ραίων [ὁ δῆ]μος (*IG* II² 43.B.1–2), may have joined the Second Athenian Naval League in the early 370s (Coleman and Bradeen (1967); but cf. Cargill (1981) 45–47: [- c.2-]ραίων [ὁ δῆ]μος), which is restored in *IG* II² as [*Κερκυ*]ραίων; the expression here has recently been interpreted to reflect *stasis* on the island between oligarchic and democratic factions (Ager (2001); see *infra*). The Kyrenaians (no. 1028) renewed in C4f the *isopoliteia* the Theraians had long enjoyed at Kyrene (ML 5.12–13 (C4f)). The Theraians received grain from Kyrene during the crisis of c.330–326 (*SEG* 9 2.17; cf. Marasco (1992) and Gasperini (1996) 106 n. 18).

As befits a colony of Sparta (see *supra*), the eponymous official on Thera was a board of three *ephoroi* (*IG* XII.3 336 (C3 but presumably to be interpreted retrospectively)). In the Archaic period Thera had a king (Hdt. 4.150.2). From Arist. *Pol.* 1290^b11–14 it can be inferred that, in an earlier period, Thera had been an oligarchy in which citizen rights were restricted to the descendants of the original colonists. The presumption is that Thera in C4s had become a democracy. It cannot be established when the constitution was changed from monarchy to oligarchy and from oligarchy to democracy.

Recently *stasis* between oligarchic and democratic factions has been suggested for the 370s; evidence includes the restoration of [*Θη*]ραίων [ὁ δῆ]μος at *IG* II² 43B.1–2 (see *supra*), the appearance of an *ekklesia* in an inscription of C4 (*IG* XII.3 suppl. 1289, *infra*), and the unlikely assumption that, in the famous inscription from Kyrene (ML 5), the *polis* referred to in line 3 is Thera and not Kyrene itself; see on all this Ager (2001) 101–13, with other arguments; but it is better to be cautious here (Dreher (1995) 13–14 n. 14).

There is no basis for Gigon's view that the Aristotelian collection of *politeiai* included a Constitution of the Theraians (no. 62). *Damiorgoi* are known from inscriptions of c.500(?) and C4 (*IG* XII.3 450.2–3, 16–17; Jeffery (1990) 323 for the date; *IG* XII.3 suppl. 1289 (C4)); the later inscription may also attest

to an assembly (*ἐκκλησία*) functioning as a court in criminal actions (IG XII.3 suppl. 1289). Public enactments include a sacrificial regulation c.500(?) apparently regulating sacrifice to Athena (IG XII.3 450 with Jeffery (1990) 323), another of C4e (IG XII.3 452; LSCG no. 133; Gialelis (1997) 50–51 (but cf. SEG 45 1104)), and a law regulating sacrifice to the Mother of the Gods (IG XII.3 436 (C4)). The Theraians may have had an agreement or treaty with the Athenians (no. 361) in C4f (IG II² 179c with Ager (2001) 101, 109–10). A Theraian citizen received *proxenia* from Arkesine (no. 472) (IG XII.7 6 (C4)).

Theraian citizens were organised into *phylai* (Hdt. 4.148.1), obviously the three Dorian *phylai* all attested on the island: Hylleis (IG XII.3 378 (C4)), Dymanes (IG XII.3 377 (C4), restored) and Pamphyloi (IG XII.3 626 (Roman), abbreviated). The seven *choroi* noted by Herodotos (4.153) should perhaps be associated with the toponyms of Eleusis, Melainai and Oia (so Jones, *POAG* 215–16).

The patron deities were Zens Polias and Athena Polias (IG XII.3 suppl. 1362 (C5?; for the date, see at IG XII.3 427 with IG XII.3 495 (first century AD) IG XII.3 427 may also refer to Zeus Polias). Other communal cults included those of Artemis(?) Soteira (IG XII.3 155a (no date)) and Zeus Damatrios (?) (IG XII.3 418 with Kose (1997); SEG 45 1105). A wide variety of deities is mentioned in rock-cut inscriptions of Archaic and Classical date (IG XII.3 350–83, 399–406, suppl. 1312–13, 1316–18). The Theraians consulted Apollo at Delphi in connection with the founding of a colony at Kyrene (Hdt. 4.155.3; ML 5.10–11, 24–25; cf. Fontenrose (1978) 283–85 Q45–9, Q51). As for the calendar, two months are attested in C4, Artamitios and Hyakinthios (IG XII.3 452 = LSCG no. 133; IG XII.3 436); the first is known in Kyrene too, the second shows Thera's connection with Lakedaimon (Trümpy, *Monat.* 186).

We have no information on whether Thera was walled before the Hellenistic period (W. Dörpfeld argued in favour of an early fortification wall in Hiller von Gaertringen (1899–1909) i.190–96, but withdrew his interpretation of the evidence in iii.160–61; cf. Sperling (1973) 90); the ruins seen today date mostly from the massive Hellenistic rebuilding of the city in connection with its use as a major Ptolemaic base (Bagnall (1976) 123–34). A *basilike stoa* (IG XII.3 326.18–20

(second century AD)) has been thought “conceivably . . . archaic” (Hansen and Fischer-Hansen (1994) 80), but was rebuilt in any case and dedicated in 161/60 by P. Mummius Sisenna Rutilianus (see now Dietz (1993)); it is possible that the original structure was erected by or in honour of the island's Ptolemaic hegemony. A temple of Apollo Karneios, which may have been the chief archive of the city, is known from c.600 (Hiller von Gaertringen (1899–1909) i.275–83, iii.63–70; Sperling (1973) 82–84) and one of Apollo Pythios from C6 (IG XII.3 322.20 (C2)). Thera had an agora of Archaic and Classical date (Witschel (1997) 24–25). A sanctuary of Athena existed from at least C5s at modern Skaros (IG XII.3 411; Sperling (1973) 35–36). Property belonging to the Mother of the Gods is attested by an inscription of C4 (IG XII.3 436; Sperling (1973) 33–34).

The island of Therasia lies opposite Thera, across the flooded caldera of the volcano that exploded in about 1648 to create the topography of this little archipelago. (The smaller islands in the caldera were created by post-Classical eruptions; see Forsyth (1992).) Although there is some evidence to suggest that Therasia had an independent political existence for a time in C3 (an ethnic in IG XI.2 120.48 (236) with L. Robert (1946) 93), there is no evidence for the Archaic or Classical periods to suggest that it was anything more than a dependency of Thera at best, or simply a part of the territory of Thera at the least. For the toponym Therasia (*Θηρασία*), see Strabo 1.3.16, 10.5.1; Plut. *Mor.* 399C; Steph. Byz. 313.18–20; Ptol. *Geog.* 3.15.28. Ruins reported on the north-west part of the island have been associated with the *polis* of Ptolemy (3.15.28; cf. Sperling (1973) 40–41).

Anepigraphic silver staters of C7 on the Aiginetan standard have sometimes been assigned to Thera. Types: *obv.* two dolphins swimming right and left; *rev.* incuse square (Head *HN*² 480; Boutin (1986) 1–6 reasserts the attribution; accepted by Sheedy (1998a) 321). Otherwise Thera seems to have coined only in bronze starting in C4. Types: *obv.* head of Apollo, facing or in profile, or head of Zeus, or head of Hermes, or female head; *rev.* rushing bull sometimes with dolphins, or three dolphins, or lyre, or fulmen, or caduceus; legend: *ΘH* or *ΘHP* (Head, *HN*² 493; *SNG Cop. Aegean Islands* 789–91).

MAKEDONIA

M. B. HATZOPOULOS

(with the collaboration of Paschalis Paschidis)

I. The Region

The name of the region is *Μακεδονία*, -η (Hdt. 5.17.1; Thuc. 1.58.1; Hatzopoulos (1996*b*) ii. no. 1.B9). It is derived from the ethnic *Μακεδών* (Hdt. 5.18.2; Thuc. 1.57.2; IG I³ 89.26), in the Thessalian dialect *Μακετούν* (SEG 27 202.10); the feminine form is normally *Μακέτα* (IG II² 9258 (C3)). As Makedonia is simply the land of the *Makedones*, its extent followed Makedonian expansion. By the time of Alexander's accession, it ranged from the foothills of the Pierian mountains to the whole region between Mt. Pindos and the Strymon valley, and between the Peneios and roughly the present Greek frontier. To the south Makedonia bordered on Thessaly. Its southernmost cities were, from east to west, Herakleion and Balla in Pieria, Aiane in Elemia, Aiginion in Tymphaia. To the west it bordered on Epeiros, and its westernmost city was Argos Orestikon in Orestis. To the north-west it bordered on Illyria, and its north-westernmost city was Herakleia in Lynkos. To the north of Makedonia lay Paionia (including Pelagonia). The northernmost Makedonian cities, from west to east, were Styberra in Derriopos, Idomene in Parorbelia, and Herakleia in Sintike. To the east Makedonia bordered on Thrace and, until the annexation of the plain of Philippoi in late Hellenistic times, its easternmost cities, from north to south, were Serrhai in Odomantike, the Bisaltic Pentapolis, and Amphipolis in Edonis. In Roman times, Makedonia reached the Nestos valley in the east and encompassed Pelagonia and Paionia as far north as Mt. Golesniča.

The Makedonian expansion was a gradual process, but the strongest impetus both to conquest and to colonisation was given by Philip II (360–336), who also systematically divided Makedonia into self-governing cities, each with its civic territory, and into administrative districts (see Hatzopoulos (1996*b*) i. 167–260). For practical reasons, the “greater Makedonia” of the reign of Philip II and his Temenid and Antigonid successors has been subdivided into (a) a western part comprising the Old Kingdom, cradle of

the Makedonian power, and Upper Makedonia—that is to say all Makedonian territories west of the Axios—and (b) an eastern part consisting of the new territories between the Axios and the plain of Philippoi, which were incorporated into Makedonia proper by Philip II and his successors. The former areas had been almost entirely settled by Makedonians (who had subjected and mostly driven out or exterminated the indigenous populations), at least since the end of the Archaic period, whereas the latter were colonised in later times, and their former inhabitants had in most cases been permitted to remain in their old homes. Both of these parts, however, were integrated into a unified state, the citizens of which shared the same *politeia* and formed *τὴν . . . χώραν τῆν Μακεδόνων* (SEG 12 374.6), Makedonia proper, as opposed to the external possessions of the Makedonian kings south of the Peneios, Mt. Olympos and the Kambounian mountains, west of Mt. Pindos and Lake Lychnitis, north of the present Greek frontier and east of the Strymon valley. The “greater Makedonia” created by Philip II was subdivided into four administrative districts called *ethne* in our sources: from west to east, Upper Makedonia (between Mt. Pindos and Mt. Bermion), Bottia (between Mt. Bermion and the Axios), Amphaxitis (between the Axios and modern Mt. Bertiskos) and Paroreia and Parastrymonia, also known as the First Meris (between Mt. Bertiskos and the plain of Philippoi). Within these large administrative districts subsisted older regional names, often derived from the *ethnika* of their actual or former inhabitants: Elemia, Orestis, Tymphaia-Parauaia, Lynkos, Derriopos in Upper Makedonia; Pieria, Bottia (or Emathia), Almopia in the administrative district of Bottia; Mygdonia, Krestonia, Parorbelia, Bottike, Chalkidike, Anthemous, Krousis in Amphaxitis; Sintike, Odomantike, Bisaltia, Edonis, Pieris in the First Meris. Eordaia, although geographically part of Upper Makedonia, was considered from the political point of view as being part of Bottia since it had always belonged to the Temenid kingdom.

The collective use of the ethnic is attested externally for the first time in the C5l treaty between Perdikkas II and Athens (*IG*¹ 89.26) and internally in the C4l list of priests of Asklepios from Kalindoia (Hatzopoulos (1996*b*) ii. no. 62.6) and in the dedication of Kassandros from Dion, also C4l (ibid. no. 23). For the oldest individual and external use, see, perhaps, *IG*¹ 422.1.79–80 (414/13) (a slave) and *SEG* 34 355.4–6 (365). As expected, we find no individual and internal use, since for a Makedonian within Makedonia the ethnic *Μακεδών* would normally be superfluous.

The region Makedonia is described by the term *χώρα -η* (Hatzopoulos (1996*b*) ii. no. 1.A6 (C4e, restored) and 58.6 (243). If not from C5l (Thuc. 2.99.6, implicitly), from C4f onwards the term *ἔθνος* is used for the people (Ps.-Skylax 66).

Makedonia attracted the interest of city-state writers and developed an indigenous literary tradition only from the reign of Philip II onwards, when it became the dominant power in Greek politics. For this reason, evidence about Makedonian cities is relatively late, although by then urban settlements already had a long history in the area. Thus, many cities attested for the first time in the Hellenistic period most probably existed in the previous period too. Since the rules set down for the present project stipulate that only cities attested as such in the Archaic and Classical periods should be included in the Inventory, cities first appearing in Hellenistic times have been separated from the rest and are listed below along with other doubtful cases. On the other hand, toponyms which have been erroneously regarded as denoting cities by ancient authors or modern scholars have been entirely omitted; the same applies to settlements (mostly villages) first attested in Roman times, or which are mere lexicographical entries without indication of their—even approximate—location and/or date, although many of them, as their dialectal forms show, surely existed in earlier periods.

A special problem arises from urban settlements in Upper Makedonia, particularly Aiane in Elemia, Bokeria in Eordaia, and Herakleia in Lynkos, which are sometimes actually described, *expressis verbis*, as *poleis*. From the administrative point of view, however, the equivalent of the Lower Makedonian *poleis* was not the urban settlement but each of the Upper Makedonian *ethne* such as the Orestai or the Elemiotai, comprising both cities and villages. After some hesitation, I have decided to include Aiane, for which there is enough evidence to allow it to qualify as a *polis* type C, but to exclude Bokeria and Herakleia from the Inventory itself and instead to list them with the other non-*polis* settlements.

Finally, I have decided not to consider unidentified ancient settlements. Makedonia is a vast country which has not been surveyed methodically. We know of many *trapezai*, which are a certain sign of a settlement in historical times. However, the absence of systematic investigation does not allow us to date these settlements precisely, even less to determine their status. A random inclusion of such cases would only contribute to creating an inexact image of the settlement pattern without enhancing our understanding of the *polis* phenomenon in Makedonia.

In Makedonia west of the Axios I have counted forty-two settlements attested either in Archaic and Classical or in Hellenistic times but which can most probably be dated to earlier periods: Agassai, *Aiane*, *Aigeai*, Aiginion in Pieria, Aiginion in Tymphaia, *Alebaia*, Alkomena, *Allante*, *Aloros*, Argos Orestikon, Arnisa, Balla, *Beroia*, Bokeria, Bryanion, *Dion*, *Edessa*, Euia, *Europos*, Gaimeion, Galadrai, Genderrhos, Gortynia, Greia, Herakleia Lynkou, *Herakleion*, *Ichnai*, Keletron, *Kyrrhos*, *Leibethra*, Marina, *Methone*, *Mieza*, Nea[---], *Pella*, Petra, Phylakai, Pimpleia, *Pydna*, Skydra, Styberra and Tyrissa. Of these, five almost certainly (Gaimeion, Genderrhos, Greia, Nea[---] and Pimpleia) and one most probably (Arnisa) did not enjoy *polis* status. Of the remaining thirty-six, only seventeen (those in italics) can be positively dated to the pre-Hellenistic period and qualify certainly (type A), probably (type B), or possibly (type C) as *poleis* and are described in the Inventory below. Two (Bokeria and Herakleia) were, probably, the principal town in a whole region. The remaining seventeen settlements, which are first attested in the Hellenistic period, along with the six villages mentioned above, are listed here in alphabetical order. The principal towns in Eordaia (Bokeria) and Lynkos (Herakleia) have been given a somewhat fuller treatment than the others.

1. Pre-Hellenistic Settlements not Attested as Poleis

***Agassai** (*Agassae*, Ἀγεσαί?) Livy 44.7.5, 45.27.1 (*urbs*); Steph. Byz. 59.3 (πόλις); *ethnikon*: Ἀγεσαίος or Ἀγεσίτης? (Steph. Byz. 59.3); unlocated settlement, somewhere in Pieria (Papazoglou (1988) 118–19; Hammond (1972) 139 n. 1; Hatzopoulos (1996*b*) 109–10 n. 8). *Barr.* 50, H.

***Aiginion** (*Aeginium*) Livy 44.46.3 (*oppidum*) and 45.27.1–3 (*urbs*); Plin. *HN* 4.33; unidentified location, somewhere in Pieria (Papazoglou (1988) 119–20). *Barr.* 50, R.

Aiginion (*Αἰγίνιον*) Livy 32.15.4, 36.13.6; Strabo 7.7.9; *Gonnoi* no. 35B.6 (δῆμος (C2m)); cf. *IG IX.2 324* (πόλις), 329 (πόλις (c.AD 200, when it was no longer part of Makedonia, but belonged to Thessaly)). Capital of Tymphaia-Parauaia. *Gonnoi* pp. 35–36. *Barr.* 54, H.

Alkomena (*Ἀλκομενά*) Strabo 7.7.9 (πόλις); Steph. Byz. 75.15 (πόλις); *IG x.2.2 348* (κώμη (AD 192/3)); *ethnikon*: *Ἀλκομενεύς* (Arr. *Ind.* 18.6); *Ἀλκομεναῖος* (*IG x.2.2 348*). At Bučin near Bela Cerka in Derriopos. Papazoglou (1988) 302–3; Hatzopoulos (1996b) i. 85–87, 411–16). Alkomena was apparently one of the urban centres of Derriopos, which as a whole constituted a political entity (cf. *SEG 46 807*: ἐν Δερριόπῳ . . . βουλευτήριον). *Barr.* 49, HR.

Argos Orestikon (*Ἄργος Ὀρεστικόν*) Strabo 7.7.8 (πόλις); App. *Syr.* 63; Steph. Byz. 113.1 (πόλις); *ethnikon*: *Ἄργεσταῖος* (Livy 27.33.1 (*Argestaeum campum*)). Most probably at modern Argos Orestikon (Papazoglou (1988) 236–38). *Barr.* 49, RL.

Arnisa (*Ἄρνισα*) Thuc. 4.128.3. At Vegora or, less probably, at Petrai/Gradista, in Eordaia (Papazoglou (1988) 161–64; Hatzopoulos (1996b) i. 94, n. 4). *Barr.* 49, C.

Balla (*Βάλλα*) Theagenes (*FGrHist 774*) fr. 3; Ptol. *Geog.* 3.12.37 (cf. 17: πόλις); Steph. Byz. 157.11 (πόλις); *ethnikon*: *Βαλλαῖος* (Theagenes); *Vallaesus* (Plin. *HN* 4.34). Possibly at Palaiogratsianon in Pieria (Papazoglou (1988) 120–22; Hatzopoulos (1996b) i. 109–10 and (2003)). Undated and unlocated in *Barr.* 50.

Bokeria (*Βοκερία*) *EAM* 109 (C4/C3, stadium stone); *ethnikon*: *Βοκέρριος* (*AG* 9.149; Papazoglou (1988) 164–66 and J. and L. Robert, *BE* (1971) no. 392 mistakenly write *Βοκκέρριος*) or *Βοκερραῖος* (*Bocerraesus*, in an unpublished boundary stone of the Roman period; cf. *BE* (1997) 364). At Pharangi in Eordaia (cf. Petsas (1966–67) 351, no. 245; Mackay (1976)); probable remnants of a circuit wall (Hammond and Hatzopoulos (1982) 143). Bokeria was the principal urban centre of the *ethnos* of the Eordaioi, who as a whole constituted a political unit equivalent to the *poleis* of coastal Makedonia (cf. the βουλή Ἐορ[δαίων] of the Roman period in *SEG* 48 800). *Barr.* 50, HR.

Bryanion (*Βρυάνιον*) Livy 31.39.5; Strabo 7.7.9 (πόλις). Unidentified location in Derriopos (Papazoglou (1988) 303). *Barr.* 49 (Graište?), CHR.

Eua, Euboia (*Εὔα, Εὔβοια*) Diod. 19.11.2; Strabo 10.1.15 (πόλις); Steph. Byz. 284.2 (πόλις); *ethnikon*: *Εὐέεστης* (*EAM* 87 (181–180); Livy 42.51.4); cf. the *Εὐιαστική πύλη* in

Beroia (*I.Beroia* 41). At Polymylos in Elemia or Eordaia (*I.Beroia* 41 with comm.; Karamitrou-Mentesidi and Vatali (1997)). *Barr.* 50 (Euboia at Sevastiana?), L.

Gaimeion (*Γαίμειον*) *SEG* 24 524.B21, 35 (C3). Unidentified location, probably in Bottia (Papazoglou (1988) 150). Not in *Barr.*

Galadrai (*Γαλάδρα, Γαλάδραι*) Lycoph. *Alex.* 1444; Polyb. book 13, *apud* Steph. Byz. 196.5 (πόλις); *ethnikon*: *Γαλαδραῖος* (Lycoph. *Alex.* 1342). Unidentified location in Pieria (Papazoglou (1988) 120). Undated in *Barr.* 50.

Genderrhos (*Γένδερρος*) Vavritsas (1977) 10 (κώμη) (C3); *ethnikon*: *Γενδερραῖος* (ibid.), *Γενδέρριος* (*SEG* 27 258, *app. crit.*). Unidentified location near Kyrrhos in Bottia, possibly at Mandalon (Hatzopoulos (1996b) i. 112). *Barr.* 50 tentatively puts it at Mylotopos (following Papazoglou (1988) 154) but indicates no date.

Gortynia (*Γορτυνία*) Thuc. 2.100.3; Ptol. *Geog.* 3.12.36 (πόλις); Plin. *HN* 4.34; Strabo 7 fr. 4 (πόλις); Steph. Byz. 212.1. Perhaps located at Vardarski Rid, near Gevgelija, where recent excavations have revealed several building phases of a walled settlement; most important are the C6–C5e and the C5m–C4 phases, the latter with remains of a monumental public building (Mitrevski (1996)). Papazoglou (1988) 181–82. *Barr.* 50, CHRL.

Greia (*Γρήια*) *EAM* 87 (181–180). *Kome* of Eordaia or Elemia (Hatzopoulos (1996b) i. 96–102). Undated in *Barr.* 50.

Herakleia (*Ἡράκλεια*) Polyb. 34.12.7 (διὰ Ἡρακλείας καὶ Λυγκηστῶν); *IGBulg* 1 13.35 (ἐπὶ τοῦ Λύκου); *SEG* 15 380 (πρὸς Λύγγον); perhaps one of the *poleis* mentioned by Demosthenes at 4.48; *IG x.2.2 53* (*polis* (second century AD)); *IG x.2.2 73* (*polis* (second century AD)); *ethnikon*: *Ἡρακλεώτης* (*SEG* 15 380; *IG x.2.2 74*). Near Bitola in Lynkestis. Not Herakleia alone, but the *ethnos* of the *Lynkestai* as a whole constituted a political unit equivalent to the *poleis* of Lower Makedonia. For the evidence from the Roman period, see Papazoglou (1988) 259–68, Mikulčić (1974) 199–202, Gounaropoulou and Hatzopoulos (1985) 14–22 and *IG x.2.2* pp. 29–74. *Barr.* 49, CHRL.

***Keletron** (*Celetrum*) Livy 31.40.1 (r199) (*oppidum*). At Kastoria in Orestis (Papazoglou (1988) 238). *Barr.* 49, HRL.

***Marinia** (*Μαρινιαῖος*) *SEG* 24 524 (C3). At Marina in Bottia (Petsas (1961) 49–55). Not in *Barr.*

Nea[---] (*Νεα*[---]) *SEG* 24 524 (C3). Unknown location in Bottia, probably a *kome* of Mieza. Not in *Barr.*

***Petra** (*Petra*) Livy 39.26.1, 44.32.9, 45.41.4. At modern Petra in Pieria. (Papazoglou (1988) 116–17). *Barr.* 50, HRL.

Phylakai (*Φυλακαί*) Ptol. *Geog.* 3.12.37 (cf. 17: *πόλις*); *ethnikon*: *Φυλακαῖος* (*I.Beroia* 140 (C3/C2)), *Phylacaeus* (Plin. *HN* 4.34). Possibly at Moschopotamos, in Pieria (Papazoglou (1988) 120; Hatzopoulos (1996*b*) i. 109–10). Undated and unlocated in *Barr.* 50.

Pimpleia (*Πίμπλεια*) Callim. *Hymn* 4.7; Posidippus 118; Strabo 7 frf. 17 and 18 (*κώμη* of Dion). Possibly at Ag. Paraskevi near Litochoron, in Pieria (Schmidt (1950); Papazoglou (1988) 112). *Barr.* 50, HR.

Skydra (*Σκύδρα*) Theagenes (*FGrHist* 774) fr. 13 *apud* Steph. Byz. 578.8 (*πόλις*); Plin. *HN* 4.34 (*civitas*); Ptol. *Geog.* 3.12.36 (cf. 17: *πόλις*); *SEG* 24 530 (third century AD); *ethnikon*: *Σκυδραῖος* (*SEG* 24 524 (C3)). At Arseni in Bottia (Petsas (1961) 44–48). *Barr.* 50 (Loutrokhoroí?), HR.

Styberra (*Στύβερρα*) Polyb. 28.8.8; Strabo 7.7.9 (*πόλις*); Livy 31.39.4; *IG* x.2.2 323–28, 330 (*πόλις*) (all from the Imperial period); *ethnikon*: *Στυβερραῖος* (*IGBulg* v 5003 (C2/C1)). At Čepigovo in Derriopos (Papazoglou (1988) 298–302). *Barr.* 49, HRL.

Tyrissa (*Τύρισσα*) Plin. *HN* 4.34 (*Tyrissaei*); Ptol. *Geog.* 3.12.36 (cf. 17: *πόλις*). Most probably at Pentaplanos in Pieria. If the five *tagoi* recorded in a C2e deed of sale found at Asvestario, 6 km to the north of Pentaplanos (*SEG* 47 999) are the supreme magistrates of Tyrissa and not of Pella, Tyrissa was a *polis* in the Hellenistic period (Papazoglou (1988) 158–59; P. Chrysostomou (1997); *BE* (1999) 349). Not in *Barr.*

Of the twenty-five settlements listed above, three (Alebaia, Genderrhos, Pimpleia) are described *expressis verbis* in our sources as *komai*. In any case, all settlements in Upper Makedonia (including Eordaia), even when these are called *poleis*, did not enjoy the full prerogatives of the cities of Lower Makedonia, for these were reserved for the territorial units called *ethne* in our sources, which included both cities and villages, called *politeiai* in our sources of the Roman period. Examples of other such Upper Makedonian settlements are Aiginion in Tymphaia, Alkomena, Bryanion and Styberra in Derriopos, Argos Orestikon and Keletron in Orestis, Euia and Greia in Elemia or Eordaia. Of the remaining nine, Agassai and Aiginion are called *urbes* in Hellenistic times, and Tyrissa seems to have had its own magistrates in the same period. They most probably had inherited this status from the previous period. The same is true of Balla,

mentioned by the C3 writer Theagenes referring to an event that probably took place in the reign of Philip II. Galadrai is mentioned by Lykophron in the early Hellenistic period. Its presence in the work of Polybios guarantees that it was not a mythological invention. Its existence in Classical times is possible and even probable. We should have even fewer doubts concerning Marinia and Skydra, the *ethnika* of which figure in a C3 register of sales. Phylakai, too, the *ethnikon* of which appears in an Early Hellenistic agonistic catalogue, was most probably a city in the previous period. Such favourable indications are lacking in the case of Gaimeion and Nea[---], probably a small place, and also of Petra, the site of which can hardly “contain more than thirty little houses” (Heuzey (1860) 147). To conclude, at least eight more *poleis* (Agassai, Aiginion, Balla, Galadrai, Marinia, Skydra, Phylakai and Tyrissa) should probably be added to the seventeen listed in the following Inventory.

II. The *Poleis*

528. Aiane (Aianaios?) Maps 49–50. Lat. 40.10, long. 21.50. Size of territory: ? Type: C. The toponym is *Αἰανή*, ἡ (*EAM* 47; Steph. Byz. 37.7; later spelt *Ἐανή* (*EAM* 15)); possibly *Aeane* in Livy 43.21.5 (Megas (1976)). The city-ethnic *Αἰαναῖος* is given by Steph. Byz. 37.9.

Aiane is called a *polis* in the political sense in *EAM* 15, which dates from the second century AD. The ethnic is attested only by Steph. Byz., but there is no reason to doubt its authenticity.

Although Aiane, as the recent excavations at Megale Rachi have shown, was the capital of the kings of Elemia from Archaic times, it is not mentioned in the surviving historical works with the possible exception of Livy 43.21.5 in connection with the first military operations of the Third Makedonian War (Megas (1976)).

The three monumental buildings discovered on the top and on the slopes of the acropolis, one of which is certainly a portico belonging to an agora complex, as well as the urban planning of the residential area, show that Aiane had the external aspect of a *polis* from C6l, to which the oldest of these buildings belong (Karamitrou-Mentesidi (1993), (1994), (1996*a*) 16–32, (1996*b*) 25–29). The power of the Elemiote kings, which in the C4e equalled that of the Temenids of Lower Makedonia, goes a long way to explain the early promotion of their residence to a full-blown city comparable to Aigeai. After the annexation of Upper

Makedonia to the Temenid kingdom and its reorganisation by Philip II, Aiaine remained the capital of Elemia, although from the administrative point of view not Aiaine alone but the whole of Elemia with its other towns and villages constituted a political unit equal to the *poleis* of Lower Makedonia (Hatzopoulos (1996b) ii. 89–91).

At Aiaine probably were struck the bronze coins of King Derdas in the C4e. Types: *obv.* galloping horseman, or youthful Apollo, or youthful Herakles; *rev.* club and spearhead, or galloping horseman; legend: ΔΕΡΔΑ, ΔΕΡΔΑΙΟΝ (Liampi (1998)).

529. Aigeai (Aigaios) Map 50. Lat. 40.30, long. 22.15. Size of territory: 2. Type: A. The toponym is *Αἰγαί, αἶ* (IG iv 617.15) or *Αἰγέαι* (Diod. 16.92.1) or *Αἰγαῖαι* (Diyillos (FGrHist 73) fr. 1) or *Αἰγαῖαι* (Diod. 19.52.5; *I.Leukopetra* 103) or *Αἰγαί* (Diod. 16.3.5) or *Αἰγεῖαι* (Theophr. fr. 5.27; Syll.³ 269L) or *Αἰγαία* (Ptol. Geog. 3.12.36). The city-ethnic is *Αἰγαῖος* (Plut. Pyrrh. 26.11; IG xii.8 206.12 (C11)), later spelled Ἐγέος (*I.Leukopetra* 73 (AD 229)). Aigeai is called a *polis* in the urban sense by Euphorion fr. 33, van Groningen (rC7) and Plut. Pyrrh. 26.11 (r274). A combined description of the urban and political aspects of the community is found in the phrase ἄστὺ κτίζε πόλῆος (where *asty* is Aigeai and the *polis* is the Makedonian state), referring to the foundation of Aigeai in C7 and attested in a Delphic oracle of c.500 (Diod. 7.16; for the date see Hatzopoulos (1996b) 464–65). The epithet *μηλοβότειρα* shows that the toponym was used for the territory as well as for the urban centre (Steph. Byz. 39.1; cf. Just. 7.1.10). The political sense is implicit in the designation of Makedonians as belonging to the citizen body of Aigeai (cf. Syll.³ 269L and *IMagnesia* 10.11–12: *Αἰσχρίων Ἀμ[ύ]ντα Μακε[δ]ῶν ἐξ Ἀἰγεῶν* (C3); for the date, see Gauthier, *Prakt* (1984) 98). The earliest attestation of the individual use of the city-ethnic occurs in IG xii.8 206.12 (C11), but in Plut. Alex. 41.9 a C4 Makedonian citizen is called *Ἐνρύλοχος Αἰγαῖος*.

The territory of Aigeai bordered on that of Beroia to the west and Aloros to the east. The marshes of the mouth of the Haliakmon formed its northern limit, and the heights of the Pierians its southern one. Thus it extended over c.12.5 km from the gorges of the Haliakmon to the river-bed of the Krasopoulis, and over c.5 km of arable territory between the mountain and the marshes (62.5 km²). The territory of Aigeai comprised several minor settlements, of which only one has been identified: Blaganoi (Hatzopoulos (1987a), (1990) 59–60). Although situated on the right bank of the Haliakmon, Aigeai did not belong to Pieria, but, just like

Aloros, to Bottia (Diod. 7.16) or Emathia (Ptol. Geog. 3.12.36), as this region was called in later times (Hatzopoulos (1996b) i. 239–47, (1996a)).

According to its foundation legend, Aigeai was originally a Phrygian (Brygian) city called Edessa, and the name Aigeai was first given to it by its Greek Makedonian conquerors (Euphorion fr. 33, van Groningen; Just. 7.1.10 (rC7)). From then on it was the Temenid capital, and it remained a part-time royal residence even after the transfer of the usual residence to Pella under King Amyntas III (Hatzopoulos (1987b)); in particular, it retained its character of royal cemetery at least until the end of the Temenid dynasty.

Citizens of Aigeai are known to have been *proxenoi* of several cities: Delphi (no. 177) (Syll.³ 269L (c.300 or 272)), Histiaia (no. 372) (IG xii.9 1187.30 (c.266)) and Magnesia on the Maiandros (no. 852), where the recipient also received citizenship (*IMagnesia* 10 (C3)).

Aigeai does not appear in the list of the *theorodokoi* of Nemea (in 323), but its name can be safely restored on the Argive list of contributors (IG iv 617.15 (c.300)), which could be a reference to *theoroi* (cf. Perlman (2000) 74). Its main deities were Zeus (Arr. Anab. 1.11.1) and Herakles Patroos (Hatzopoulos (1996b) ii. no. 30). Eukleia (Saatsoglou-Paliadeli (1987), (1992)) and the Mother of the Gods (Drougou (1996)) were also popular.

Excavations at Vergina-Palatisia, begun by L. Heuzey in the middle of the nineteenth century and continued since by C. Romaios, and by M. Andronicos and his students, have unearthed, besides the extensive cemetery (Kottaridi (2002)), two palaces, a theatre, an agora, several sanctuaries and other facilities. The great palace (104.5 × 88.5 m), built around a peristyle court, with porticoes on the north and east sides, an extended balcony beyond the north portico and a monumental gate on the east side, belongs to the C4s, but the smaller one, to the west, seems to be earlier and may be the very structure decorated by Zeuxis in C5l (Andronicos (1984) 38–46; Ginouvès (1993) 84–88; Saatsoglou-Paliadeli (2001)). The C4s theatre (TGR ii. 317) lay immediately to the north of the palace. Stone benches rose only to the second row (Drougou (1997)). The theatre is mentioned by Diodorus in his account of the murder of Philip in 336 (Diod. 16.92.5ff). The agora of the city lay to the north of the theatre; it comprised the C4m temple dedicated to Eukleia (Saatsoglou-Paliadeli (1996)). To the north-east of the palace a sanctuary of the Mother of the Gods was discovered, the earliest building phase of which belongs to C4l (Drougou (1996)).

On the acropolis, south of the palace, which dominated the city, no major public buildings have been found (Phaklaris (1996) 70–74).

The C4l circuit wall roughly forms a triangle, with its apex to the south on the acropolis and its base on a line joining the two streams on either side of the acropolis hill probably to the south of the Rhomaios tomb. It is a pseudo-isodomic structure of local stone with towers at irregular intervals. Monumental gates opened from the acropolis to the south, towards Pieria, to the north towards the city, and west of the theatre towards Upper Macedonia (Andronicos *et al.* (1983) 42–45, (1987) 146–48; Phaklaris (1996) 69–70).

According to legend, Aigeai was founded by the Temenid Perdikkas or Karanos or Archelaos, alone or with an army of Argive colonists in the C7m or C8e (Hammond and Griffith (1979) 3–14).

530. Alebaia Map 50. Unlocated (but see Hatzopoulos (2003) for a possible identification with Bravas). Type: A (rC7). The toponym is *Λεβαίη, ἡ* (Hdt. 8.137.1) *Ἀλ(α)ιβαῖοι* (sc. *τόποι*) (*I.Leukopetra* 12.4 (AD 171/2)), *Ἀλεβία* (*κώμη*; *I.Leukopetra* 106.14 (AD 253/4)). The city-ethnic is unattested but was presumably *Ἀλεβαῖος* (*I.Leukopetra* 12.4). Alebaia is called a *polis*, in the urban sense, exclusively in Hdt. 8.137.1, in the mythical context of the foundation of the Macedonian state by the Temenids. It is not clear whether Herodotos is considering (A)lebaia to be a *polis* in his own time or only in the C7, when the legend he narrates is dated. It is clear, however, that by the Roman period (A)lebaia was not an independent *polis* but a *kome* of Elemia, and it is probable that even earlier not (A)lebaia alone but the whole *ethnos* of the Elemiotai constituted a political unit equivalent to the *poleis* of Lower Macedonia.

531. Allante (Allantaios) Map 50. Lat. 40.45, long. 22.35. (Allante was most probably situated at Nea Chalkedon (Gounaropoulou and Hatzopoulos (1985) 56–61). Military action during the First World War and the construction of a modern settlement after 1922 have destroyed practically all ancient remains.) Size of territory: ? Type: B. The toponym is *Ἀταλάντη, ἡ* (Thuc. 2.100.3) or *Ἀλλάντειον, πό* (Theopomp. fr. 33; *BCH* 45 (1921) 17 III.64 (230–220)) or *Ἀλάντη* (*SEG* 36 331B.21) or *Ἀλλάντη* (Steph. Byz. 76.1). The city-ethnic is [*Ἀταλα*]- *vel* [*Ἄλλα*]-*νταῖος* (*IG* IV 617.17 (C4l); *Ἀλλανταῖος* *SEG* 35 753.12 (c.AD 198)); Steph. Byz. 76.3 suggests *Ἀλλάντιος*; Pliny's *Allantenses* (*HN* 4.35) is not helpful. The only classification in literary sources of Allante as a *polis* is in Steph. Byz. 76.1. The only epigraphic attestation of a *πόλις Ἀλλανταίων* is on a c.AD 198 milestone from

Allante (*SEG* 35 753.12), where the term *polis* is used in the political sense. Allante is called a *chorion* in Thuc. 2.100.3. The collective use of the city-ethnic is attested both internally (*SEG* 35 753.12) and externally (*IG* IV 617.17).

The territory of Allante bordered on that of Pella to the north-west, Ichnai to the north and Herakleia to the east, across the Axios; to the south it reached the ancient shoreline. Allante was probably a C5e Macedonian foundation designed to cut off the then Paionian city of Ichnai from the sea (Hatzopoulos (1996b) i. 111).

Allantian *theorodokoi* were appointed to host *theoroi* from Nemea (*SEG* 36 331.B.21 (331/30–313)). If the ethnic is correctly restored in *IG* IV 617.17, Allante is recorded on the Argive list of contributors of C4l, which may be connected with the dispatching of *theoroi* (cf. Perlman (2000) 74).

532. Aloros (Alorites) Maps 49–50. Lat. 40.35, long. 22.30. Size of territory: ? Type: A. The toponym is *Ἄλωρος, ἡ* (Ps.-Skylax 66; Strabo 7 fr. 20), and the city-ethnic *Ἀλωρίτης* (Diod. 15.71.1). Aloros is called a *polis* in the urban sense by Ps.-Skylax 66 (C4m). The individual use of the ethnic is attested externally in Diod. 15.71.1 (r368) and Arr. *Ind.* 18.6 (r320s).

The territory of Aloros bordered on that of Aigeai to the west and Methone to the south, while to the north it must have been delimited by the marshes of Lake Loudiake.

Traces of a circuit wall of poros blocks c.1 km long have been spotted (Hatzopoulos (1987b) 38). Excavations begun in 1988 (Apostolou (1998)) have revealed a C4 two-room building, probably a temple, with an adjoining Archaic structure, probably an altar (Apostolou (1991)).

533. Beroia (Beroiaios) Maps 49–50. Lat. 40.30; long. 22.10. Size of territory: 4. Type: A. The toponym is *Βέροια, ἡ* (Thuc. 1.61.4), later spelled *Βέρροια* (App. *Syr.* 57 and late Roman sources). The city-ethnic is *Βεροιαῖος* (unpublished C4s inscription from the Perrhaibian *tripolis*; Polyb. 28.8.2); *Βεροιῖος* in *I.Leukopetra* 31.5; *Βαιροιαῖος* in *I.Leukopetra* 84.4–5 or *Βεροιεύς* (Polyb. 27.8.6); *Βερωαῖος* (*IG* IV².1 96.22) is probably a mistake. Beroia is first attested as a *polis* in the political sense in a C4l dedication (*I.Beroia* 29 = Hatzopoulos (1996b) no. 73) and is called a *polis* in the urban sense in Ps.-Skymnos 626 (C2). The term *chorion* is used by Thuc. 1.61.4, and the term *polisma* by App. *Syr.* 57. The collective use of the city-ethnic is attested internally in an honorific inscription (*I.Beroia* 59 (C1)). The individual use of the city-ethnic is attested internally in a consecration from the sanctuary of Leukopetra (*I.Leukopetra* 31.5 (AD 192/3)) and externally in an unpublished dedication from

the Perrhaibian Tripolis (cf. Hatzopoulos (1996*b*) i. 156, n. 15 (C4s)) and in a C3f Epidaurian list of *theorodokoi* (IG IV².1 96.22).

The territory of Beroia bordered on that of Mieza to the north, Pella to the north-east, Aigeai to the south-east and on the regions of Eordaia to the north-west and Elemia to the south-west. Among the secondary settlements of the original territory of Beroia, we know the names of Kyneoi, Aurantion, Kannonea and Droga (Hatzopoulos (1990)).

The constitution of Beroia, like the constitution of all the cities of Makedonia, had a pronounced aristocratic character. Not only slaves, but also freedmen, their sons, male prostitutes and craftsmen were excluded from civic life (Gauthier and Hatzopoulos (1993) 78–87), and full enfranchisement probably was subject to a minimum census in landed property (Hatzopoulos (1996*b*) i. 209 n. 1). The chief executive official was the *epistates* (Hatzopoulos (1996*b*) ii. no. 73), who—at least later—was assisted by a board of magistrates who may have been called *tagoi* (Hatzopoulos (1996*b*) i. 156).

The patron deity of Beroia was Herakles Kynagidas, who was revered as the ancestor of the royal family—not only of the Temenids, but also later of the Antigonids (Edson (1934) 226–32; Allamani-Souri (1993*b*); Hatzopoulos (1994*a*) 102–11). The cult of Asklepios was also important (Voutiras (1993) 257), and his priest was eponymous, as in all Makedonian cities (Hatzopoulos (1996*b*) i. 152–54). His cult was, at least later, associated with those of Apollo and Hygieia (*I.Beroia* 16 (C3s)). The cult of Dionysos was an ancient one (cf. the epistylon of the theatre bearing a dedication to the god, *I.Beroia* 21 (C4l)); with the epithets Agrios, Erikryptos, Pseudanor it is attested only in Imperial times, but, given its archaic character, it certainly had much earlier origins (Hatzopoulos (1994*a*) 65–85). From the Hellenistic period are attested cults of Athena (*I.Beroia* 17), Ennodia (*I.Beroia* 23), Hermes (*I.Beroia* 24), Pan (*I.Beroia* 37) and Atargatis (*I.Beroia* 19). Beroia is recorded on the Argive list of contributors (IG IV 617.17 (C4l)), which may be connected with the dispatching of *theoroi* (cf. Perlman (2000) 74).

The failure of the Athenians to capture Beroia in 432 (Thuc. 1.61.4) probably implies that at least part of the city, such as the acropolis situated in the western extremity, was already fortified. Traces of a C4l circuit wall made of local poros have been discovered in different parts of the modern town (Petkos (1997) 272). There were at least three gates, one of which bore the name *Ἐὐσιαστικὴ* (*I.Beroia* 41; cf. Brocas-Deflassieux (1999) 37–41). The continuous habitation of the site from the Iron Age to the present (cf. Allamani-Souri

(1993*a*); Allamani-Souri and Apostolou (1992) 97) have left very few traces of the ancient town plan. It is presumed that the ancient agora and main road axes correspond to the modern civic centre and road system (Brocas-Deflassieux (1999) 99–101). The *stadion* has been located in the eastern outskirts of the city. Epigraphic finds have permitted the location of the *gymnasion*—first attested in the Hellenistic period—in the same area south of the *stadion* (Brocas-Deflassieux (1999) 87–90). A late Classical or early Hellenistic epistylon with a dedication to Dionysos (*I.Beroia* 21) provides evidence for the functioning of the theatre in that period.

534. Dion (Diestes) Maps 49–50. Lat. 40.10, long. 22.30. Size of territory: 4. Type: [A]. The toponym is *Δῖον*, *τό* (Thuc. 4.78.6; *Staatsverträge* 308.9), *Δεῖον* (SEG 31 630). The city-ethnic is *Διέστης* (SEG 48 785; Steph. Byz. 522.3) or *Διάστης* (Paus. 9.30.8) or *Δεῖος* (Oikonomos (1915) no. 4) or *Διεύς* (Steph. Byz. 232.5). The form *Διαῖος* attested on coins (Hatzopoulos and Psoma (1999) 10–12) has nothing to do with Makedonian Dion.

In Ps.-Skylax, the chapter about Makedonia (66) opens with *πρώτη πόλις Μακεδονίας Ἡράκλειον, Δῖον . . .* Thus, Dion is implicitly classified as a *polis* in the urban sense in C4f, and explicit references are found in later sources, both literary (Paus. 10.13.5 (rC6l/C5e); cf. *CID* I 1) and epigraphical (Oikonomos (1915) no. 4 (early second century AD)). Thuc. 4.78.6 calls Dion a *polisma*. The collective use of the city-ethnic is attested internally in a C2e letter of Philip V to the city (SEG 48 785). In the same letter *polites* occurs (cf. the *χῆραι πολίτιδες* in a Hellenistic catalogue of names: Pandermalis (2002) 381–82).

The territory of Classical Dion bordered on that of Leibethra to the south, Pydna to the north-east and possibly Phylakai to the north-west. We know the name of only one of its secondary settlements: Pimpleia, called *kome* by Strabo at 7 fr. 17, which was famous because of its connection with the legend of Orpheus and the cult of the Muses (Schmidt (1950)).

Dion was the religious centre of Makedonia at least from C5 and probably much earlier (cf. Diod. 17.16.3). The patron deity of Dion was Olympian Zeus, to whom the city owed its name (Just. 24.2.8) and who was venerated along with the Muses (Diod. 7.16.3). Other communal cults were those of Demeter, Dionysos, the Mother of the Gods, Aphrodite, Baubo, Orpheus, Athena, Eileithyia, Asklepios and Hermes. Sarapis and Isis are also attested from early Hellenistic times onwards (Pandermalis (1977), (1993); Hatzopoulos (1994*b*)).

106). The most important religious but also political event at Dion, and in Makedonia as a whole, was the *panegyris* of Olympia held in the month of Dios and lasting nine days (Diod. 17.16.4). Among other contests it included the *pentathlon*, the *dolichos* and the *taurotheria* (Hatzopoulos (1996b) i. 129 n. 2; cf. *BE* (1978) no. 232). Dion maintained close relations with Delphi from the Archaic period (*CID* 11 (C6/C5e); cf. Paus. 10.13.5 and Mari (2002) 29–31).

From a C4m fiscal law (Hatzopoulos (1996b) ii. no. 56) and a C4l decree (*ibid.* no. 57), both unpublished, we are informed that Dion had fewer than ten *archontes* and at least two *tamiai*.

The site of Dion comprises the sanctuaries area in the open plain and the walled city to its north. The latter occupies an area of c.43 ha, which justifies the descriptions of Thuc. 4.78.6 (*πόλισμα*) and Livy 44.7.3 (*urbem non magnam*). The rectangular grid-line of the street planning, leaving an open space for the agora, is contemporary with the erection of the walls (Stephanidou-Tiveriou (1998) 216–23). These, 2.60–3.30 m wide, date from C4l and were probably built by Kassandros (after 305?). In their pre-Roman phase they had a regular rectangular perimeter of c.2,625 m and about sixty towers. Of a probable total of at least six or seven gates, four have been identified so far. One of the northern ones, leading to two consecutive courtyards, was probably the main entry to the city. The walls were built from local conglomerate stone. Above the stone substructure rose a brick superstructure of indeterminate height (Stephanidou-Tiveriou (1988)).

In the open plain several sanctuaries have been located: two *megaron*-shaped temples of Demeter adjacent to each other (in which the Mother of the Gods, Baubo and Hypolympidia Aphrodite were probably worshipped as well) date from C6l (Pingioglou (1996); Pandermalis (1999) 60–73); near the theatre lay the small C5 temple of Asklepios (Pandermalis (1999) 84–87); finally, the famous temple and temenos of Olympian Zeus has now been located in the south-eastern part of the sanctuaries area (Pandermalis (1999) 44–59, (2000) 291–92). Other important public buildings in the open plain are the C4e theatre, which was rebuilt in Hellenistic times (Karadedos (1986) 337–40) and the C6l *stadion* (Leake (1835) 409 and now Pandermalis (1999) 76, 80–81).

535. Edessa (Edessaioi) Maps 49–50. Lat. 40.45, long. 22.05. Size of territory: ? Type: C. The toponym is Ἔδεσσα, ἡ (*IG* IV 617.16 (C4l); Strabo 7.7.4). The city-ethnic is Ἐδεσσαῖος (*F. Delphes* III.3 207.2 (C3m)), also spelt

Ἐδεσσῆος (Tataki (1994) no. 56). Edessa is called a *polis* in Diod. 31.8.8 (r167), probably in the political, urban and territorial senses combined. For late attestations of the urban sense, see Ptol. *Geog.* 3.12.39 (cf. 17), and for the political sense, see Demitsas no. 3 (second or third century AD). The term *polisma* is attested in App. *Syr.* 57, and the term *polites* in Antoninus (1879) 227, no. 26. The collective use of the city-ethnic is attested internally in *SEG* 36 615.4 (c.AD 200). The individual use of the city-ethnic is attested internally in Cormack (1973) no. 4 (second century AD) and externally in *F. Delphes* III.3 207.2 (C3m).

The territory of Edessa bordered on the region of Almopia to the north, on the territories of Kyrrhos to the east, on those of Marinia and Skydra to the south, and on the region of Eordaia to the west (Hatzopoulos (1996b) i. 112).

The constitution of Edessa is known to us only from inscriptions of the Roman period (e.g. *SEG* 24 531.6 (AD 180/1)), which is also the earliest attested public enactment; Antoninus (1879) 227, no. 26). Edessaians were granted *proxenia* by Delphi (*F. Delphes* III.3 207.2 (C3m)) and Haliartos (*IG* VII 2848.4 (C3?)), and received citizenship from Larisa (*SEG* 27 202 (220–210)). Edessa is recorded on the Argive list of contributors of C4l, which may be connected with the dispatching of *theoroi* (*IG* IV 617.16; cf. Perlman (2000) 74).

The cult of Herakles is mentioned by Hesychius, s.v. Ἐδεσσαῖος, and is attested epigraphically (Struck (1902) 310 no. 15 and, with the epithet Kynagidas, in two unpublished C2s and C1m inscriptions). From the same period date inscriptions referring to the cults of Zeus Hypsistos (P. Chrysostomou (1989–91) 30–34) and Parthenos (Hatzopoulos (1995)). Evidence for other cults is of later date.

A probably C4l (A. Chrysostomou (1988) 60, (1996) 174) wall enclosed both the acropolis (triangular perimeter, one tower on the north-west apex of the triangle and one on each of the west and north sides) and the lower city (polygonal perimeter, 2.4–3 m wide) covering an area of 3.5 and 23 ha respectively (A. Chrysostomou (1987), (1996)). The walls are mentioned by Polyæn. 2.29.2 (r274). The only public monuments known are the temple of Ma and its stoas, which are epigraphically attested (Hatzopoulos (1995) 126). The site has been occupied continuously since the Bronze Age, which accounts for the lack of Archaic and Classical remains (A. Chrysostomou (1996) 180–82); however, Livy 45.30.5 refers to Edessa as among the *urbes nobiles* of central Makedonia in 167, and it was presumably already so in the Classical period.

536. Europos (Europaioi) Map 50. Lat. 40.55, long. 22.35. Size of territory: ? Type: B. The toponym is *Ἐὐρωπός, ἡ* (Thuc. 2.100.3; Strabo 7.7.9; cf. Kotzias, *AA* 54 (1939) 257 (inscribed tiles)), *Ἰωρωπός* (App. *Syr.* 57; *BCH* 45 (1921) 17, III.62). The city-ethnic is *Ἐὐρωπαῖος* (*F.Delphes* III.4 405.3 (C3e)) or *Ἐὐρώπιος* (*I. Oropos* 98 (C3l)). Europos is called a *polis* in the urban sense in Ptol. *Geog.* 3.12.36 (cf. 17) and in the political sense in two honorific decrees for Roman generals (*SEG* 41 570 (c.110), 42 575 (c.39–38)). Thuc. 2.100.3 calls Europos a *chorion*. The collective use of the city-ethnic is attested internally in *SEG* 41 570 (c.110) and externally in the C4l contribution list from Argos (*IG* IV 617.17). For the earliest individual use of the city-ethnic, see the *proxenia* decree from Delphi (*F.Delphes* III.4 405.3 (C4l)).

The territory of Europos bordered on those of Pella to the south-west, Ichnai to the south-east and Gortynia to the north.

Citizens of Europos received the *proxenia* at Delphi (*F.Delphes* III.4 405.3 (C4l)). A cult of Artemis Elaphebolos is attested in a C3 inscription (*SEG* 43 399). The Europaiaans are recorded in the Argive list of contributors of C4l, which may be connected with the dispatching of *theoroi* (*IG* IV 617.17; cf. Perlman (2000) 74).

Europos was most probably a walled city in 429, since Sitalkes besieged it but was unable to capture it (Thuc. 2.100.3). Of its public buildings we know only of an aqueduct mentioned in an inscription of Imperial times (*SEG* 38 608). Ongoing excavations aim to delimit the settlement; sporadic finds, such as an unpublished late Archaic *kouros* (Savvopoulou (1988) 137), testify to Europos' importance as a trading centre of the Axios valley.

537. Herakleion (Herakleiotai) Map 50. Lat. 40.00, long. 22.40. Size of territory: 3. Type: A. The toponym is *Ἡράκλειον, τό* (Damastes (*FGrHist* 5) fr. 4.3; Ps.-Skylax 66; *IG* I³ 77.v.21 (*Ἐράκλειον*)), *Ἡράκλεια, ἡ* (Steph. Byz. 304.3). The city-ethnic is *Ἡρακλειώτης* (*Gonnoi* 93). Herakleion is called a *polis* in the urban sense in Ps.-Skylax 66. The collective use of the ethnic is attested externally in *Gonnoi* 93B.24 (C3l).

The territory of Herakleion bordered on that of Gonnoi to the south-west (see the dossier in *Gonnoi* 93–107), Leibethra on the north and possibly Homolion, beyond the Peneios, before the foundation of Phila on the mouth of that river in Hellenistic times.

Herakleion became a member of the Delian League some time between 430/29 and 425/4 or, at least, the Athenians claimed its membership and had it assessed for a tribute of

1,000 drachmas (*IG* I³ 71.IV.108, completely restored; 77.v.21).

Herakleion appears as a walled city in 169 (Polyb. 28.11.1; Livy 44.9.1–9), but its fortifications most probably date from C5, since the city could successfully challenge the authority of Perdikkas II and remain a member of the Delian League for years. Presumably, the walls covered the entire hill, since Heuzey (1860) 92–93 saw remains of them at the bottom of the hill, near the river bank.

538. Ichnai (Ichnaios) Map 50. Lat. 40.45, long. 22.35. (On the location of Ichnai on the right bank of the Axios, see Hatzopoulos (2001) 159–60.) Size of territory: ? Type: A. The toponym is *Ἰχναί, αἱ* (Hdt. 7.123.3; *BCH* 45 (1921) 17.III.63), *Ἰχναί* (Eratosthenes according to Steph. Byz. 342.17, but probably referring to the Thessalian Ichnai; cf. Steph. Byz. 152.16). The city-ethnic is *Ἰχναῖος* (*IG* II² 8944 (undated)). Ichnai is called a *polis* in the urban sense in Hdt. 7.123.3 and in the political sense in a treaty(?) between that city and Dikaia(?) (Struck (1902) 310 no. 15.2 (undated)). The collective use of the city-ethnic is attested internally on coins of C5e (*infra*) and in inscriptions (Struck (1902) 309 no. 14.6 and 310 no. 15.2). The individual use of the city-ethnic is attested in a Delphic C3m proxeny decree (*F.Delphes* III.3 207.3 (C3m)) and in an undated Attic sepulchral inscription (*IG* II² 8944).

The name of the territory of Ichnai might be *Ἰχναίων χώρα* (Hsch. s.v. *Ἰχναίων*, unless the reference is to the homonymous Thessalian city). It bordered on the territories of Pella to the south-west, Allante to the south, Tyrissa to the north-west, and probably Herakleia in Mygdonia to the east, across the Axios. The probable site of the urban centre has been totally destroyed by intense agricultural activity (*ArchDelt* 49 (1994) *Chron.* 455).

Two fragments of an inscription of unknown date might belong to a treaty between Ichnai and Dikaia (Papazoglou (1988) 155–56). A citizen of Ichnai was awarded *proxenia* by Delphi (*F.Delphes* III.3 207.3 (C3m)); another Ichnaian was appointed *theorodokos* for *theoroi* arriving from the same city (*BCH* 45 (1921) 17 III.63 (c.220)).

Judging by the onomastic evidence, Ichnai must have been originally a Paionian settlement which already in Archaic times received an influx of Southern Greek colonists. After the Makedonian conquest, settlers from the Old Kingdom were added to its population (cf. Hatzopoulos (1996b) i. 107 n. 1). It seems that citizens of Ichnai, in their turn, participated in the Makedonian colonisation of Amphipolis (Hatzopoulos (1991) 86).

Before the Makedonian conquest, Ichnai struck silver staters and octadrachms (c.490–480). Types: *obv.* male figure, usually between two bulls, or beside a horse; *rev.* wheel, or cross in an incuse square; legend: [IX]NAI[ON], IXNAI, IXNAON, IXNAION (Gaebler (1935) 63–65; Price and Waggoner (1975) 29–30, 117; Papazoglou (1988) 155; SNG Cop. Macedonia 183–84).

539. Kyrrhos (Kyrrhestes) Map 50. Lat. 40.50, long. 22.15. Size of territory: 4? Type: B. The toponym is *Κύρρος*, ἡ (Thuc. 2.100.4; Steph. Byz. 430.17; Vavritsas (1977) 8), *Κύρνος* (Diod. 18.4.5, MSS, apparently a mistake), *Κύριος* (in the MS of Ptol. *Geog.* 3.12.36; cf. the form *Scurio* (*It. Burd.* 606.3). The city-ethnic is *Κυρρέστης* (SEG 40 520; Plin. *HN* 4.34: *Cyrrstae*; cf. SEG 27 258 (Roman)) or *Κυρραῖος* (SEG 43 435.3 (early third century AD)). The only attestations of Kyrrhos as a *polis* (in the urban sense) are Plin. *HN* 4.34 and Ptol. *Geog.* 3.12.36 (cf. 17), but its mention alongside Dion and Amphipolis in Alexander's *Ῥπομνήματα* (*infra*) leaves no doubt that Kyrrhos too was a *polis* already in C4. The collective use of the city-ethnic is attested internally on a second century AD boundary stone (SEG 40 520). For the individual and external use of the city-ethnic, see SEG 43 435 (early third century AD).

The territory of Kyrrhos bordered on the territories of Edessa to the west, Skydra to the south-west, Pella to the south-east, Tyrissa to the east, and Europos to the north-east. An unpublished C3 decree (cf. Vavritsas (1977)) reveals that Genderrhos was a *kome* of Kyrrhos. The name of another *meros* (*kome*?) of the city, Mandarai, is preserved in Steph. Byz. 430.17.

The earliest public enactment of Kyrrhos is an unpublished C3 decree concerning public works in the vicinity and in the agora of the city (Vavritsas (1977)).

Kyrrhos was renowned for its sanctuary of Athena Kyrrhestis, which was located on the hill of Palaiokastron (Vavritsas (1977)). It would be tempting to interpret the mass of semi-worked limestone blocks in a nearby C4s quarry (Bakalakis (1970)) as preliminary work for the *ναὸς πολυτελής* of Athena which Alexander was planning to build in Kyrrhos (Diod. 18.4.5); two C4l/C3e poros capitals—probably of a temple—may attest a later attempt to implement Alexander's plan (Haddad (1993); Adam-Veleni (1998) 6). The sanctuary of Artemis Agrotera is known from dedications of the Roman period (Panayotou and Chrysostomou (1993) 379–80). The agora of the city is mentioned several times in the C3 unpublished decree (Vavritsas (1977) 8; Hatzopoulos (1996b) i. 438–39).

The patron deity of Kyrrhos was Athena, for whom Alexander was planning to build a magnificent temple at the time of his death (Diod. 18.4.5). The cult of Athena Kyrrhestis, which is also attested epigraphically (SEG 27 258 (Roman)), was transferred to the homonymous city in Syria. Other communal cults were those of Artemis Agrotera (attested by Roman evidence: SEG 30 553–54, 35 750, 43 404–5) and of Zeus Hypsistos (P. Chrysostomou (1989–91) 40–41).

540. Leibethra (Leibethrios) Map 50. Lat. 40.50, long. 22.30. Size of territory: 3. Type: C. The toponym is *Λεῖβηθρα*, τὰ (Aesch. fr. 83a.9; BCH 45 (1921) 17 III.53) or *Λεῖβηθρον* (Strabo 10.3.17) or *Λίβηθρα* (Paus. 9.30.9). The city-ethnic is *Λεῖβήθριος* (Arist. fr. 552; *Gonnoi* 2.6) or *Λιβήθριος* (Paus. 9.30.11).

Leibethra is called a *polis* in the urban sense in Paus. 9.30.9, referring to the mythical period. The term *patris* is used in *Orph. Argonaut.* 1374. Alternative site-classifications are *ethnos* (Arist. fr. 552), *chorion* or *oros* (Strabo 10.3.17), *topos* (Hsch., s.v. *λεῖβηθρον*) and *σκοπιή* (Lyc. *Alex.* 275). The collective use of the city-ethnic is attested internally on an inscribed weight of one mina (SEG 27 283 (undated)) and externally in Arist. fr. 563 and in a C3e decree from Gonnoi (*Gonnoi* 2.6).

Originally populated by Thracian Pieres, Leibethra and this part of Pieria were conquered by the Makedonians c.C7 (Strabo 10.3.17; cf. Hammond (1972) 417).

According to the legend mentioned by Pausanias (9.30.11), the city was destroyed by the river Sys. The topography of the site and the remains of the walls make such a “destruction” by the four torrents in the area quite possible (Kotzias (1948–49) 33–34), although the continued existence of the city is secured by Classical (Pritchett (1991) 127) and Hellenistic (Kotzias (1948–49) 34) remains, by the mention of the city in the C3 inscription from Gonnoi (*Gonnoi* 2.6) and by the C3l Delphic list of *theorodokoi* (BCH 45 (1921) 17 III.53).

The territory of Leibethra probably extended from the mountainous area of Lower Olympos to the valley of Sys (Helly (1973) 35–36; *Gonnoi* 5). The city bordered on Gonnoi to the south-west, presumably on Herakleion to the south, and Dion to the north.

The cults of Orpheus, the Nymphs, the Muses and Dionysos are attested in literary sources (Kotzias (1948–49) 26–28). The cult of the latter deity has now found a possible archaeological confirmation (SEG 27 283).

The legend of the city's destruction mentions the existence of walls (Paus. 9.30.11). Kotzias ((1948–49) 33–34), who

excavated the site, discovered part of a circuit of 1.5 m-wide walls. According to Pritchett ((1991) 127), the circuit was no more than 500 m long. Recent work has confirmed that the acropolis (1.5 ha) was walled and that the site was not abandoned until C1 (*ArchDelt* 50 (1995) *Chron.* 497–98).

541. Methone (Methonaios) Maps 49–50. Lat. 40.30, long. 22.35. Size of territory: ? Type: A. The toponym is *Μεθώνη*, ἡ (Thuc. 6.7.3; *IG* II² 130), *Μεθώνα* (*IG* IV².1 94.1b.8). The city-ethnic is *Μεθωναῖος* (*IG* I³ 61; Thuc. 4.129.4; Arist. fr. 551–52). Methone is called a *polis* both in the urban sense (Dem. 9.26; Ps.-Skylax 66) and in the political sense (*IG* I³ 61.44–45; Plut. *Mor.* 293B, probably derived from Aristotle's treatise). In Din. 1.14 *polis* is used in both senses simultaneously. The *politai* of Methone are mentioned in Diod. 16.34.5 (r354), and there was an Aristotelian *Methonaion politeia* (fr. 551–52). The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in *IG* I³ 61.1. For the individual and external use of the city-ethnic, see e.g. *IG* II² 9330 (C51).

According to Thuc. 6.7.3, Methone bordered on Makedonia (τῆν ὄμορον Μακεδονία), and its territory (τῆς χώρας τῆς Μεθ[ο]ναίων) is mentioned in *IG* I³ 61.22. The territory of Classical Methone bordered on that of Pydna to the south and Aloros to the north-west. The size of the territory must have been close to 100 km², perhaps a little more. After 354 it must have been added to that of Pydna (Hatzopoulos (1996b) i. 181).

Methone was originally a Thracian settlement. It was colonised by Eretrians c.730 (Hammond (1972) 425–26) and joined the Delian League after 431 (for the date and the erroneous restoration of the ethnic in *IG* I³ 280.11.67, see Piérart (1988)). It belonged to the Thracian district and is registered in the tribute lists from 430/29 (*IG* I³ 281.11.33, restored) to 415/14 (*IG* I³ 290.111.8) a total of three times, paying a *phoros* of 3 tal. (*IG* I³ 282.11.53). It was assessed for tribute in 425/4 (*IG* I³ 71.111.157 (5 tal.), ethnic completely restored).

In 364 or 363 it was captured by the Athenian Timotheos (Din. 1.14 = 3.17) and became an ally of Athens but probably without becoming a member of the Second Athenian Naval League (Dreher (1995) 26). Methone was conquered and destroyed by Philip II in 354 (Dem. 4.4; Diod. 16.31.6 and 34.4–5). The inhabitants were allowed to leave the city with one garment each; the city itself was razed to the ground, and its territory distributed to Makedonian settlers. A few decades later, old Methone was succeeded by a new settlement 1 km to the north-west of the former city, which, however, did not enjoy the status of *polis* but was probably a

kome of Pydna (Hatzopoulos *et al.* (1990); for the origin of the new settlers, see Hatzopoulos (1996b) i. 180–81).

Our only information about the constitutional arrangements of Methone concerns its magistrates, the *archontes* and the *polemarchos* mentioned in Arist. fr. 551. A Methonaian *theorodokos* hosted the *theoroi* from Epidauros (no. 348) (*IG* IV².1 94.b.8) c.360. Another Methonaian is known to have been granted citizenship in Ephesos (*I.Ephesos* 48 (C41)).

Methone was a walled city in 354 (Dem. 1.9; Theopomp. fr. 52; Polyae. 4.2.15; Just. *Epit.* 7.6.14). No remains of the walls are visible today.

Methone struck only one type of bronze coinage in C4f. Types: *obv.* female head to the r.; *rev.* lion breaking spear; legend: *ΜΕΘΩ* (Gaebler (1935) 78–79; Psoma (2001) 115).

542. Mieza (Miezaïos/Miezeus) Map 50. Lat. 40.40, long. 22.05. Size of territory: ? Type: B. The toponym is *Μιέζα*, ἡ (Plut. *Alex.* 7.4), *Μέζα* (BCH 45 (1921) 17, 111.59), *Μύεζα* (in the MS of Ptol. *Geog.* 3.12.36); the alternative name *Στρυμόνιον* given by Steph. Byz. 452.1 (perhaps quoting Theagenes (*FGrHist* 774) fr. 7) is probably an epithet. The city-ethnic is *Μιέζαῖος* (Theagenes (*FGrHist* 774) fr. 7), later spelt *Μιέζεος* (*I.Leukopetra* 71.8–9), or *Μιέζεός* (Arr. *Ind.* 18.6 (r325)).

Mieza is called a *polis* in the urban sense by Steph. Byz. 452.1, possibly quoting Theagenes (*FGrHist* 774) fr.7 (C3); cf. Ptol. *Geog.* 3.12.36 (cf. 17). For the individual use of the city-ethnic, see Arr. *Ind.* 18.6.

The territory of Mieza is called *Μιέζεοι τόποι* in *I.Leukopetra* 71.8–9; we know the names of two settlements that were probably its *komai*, Gaimeion and Nea [---] (*SEG* 24 524 (C3)). It bordered on the territory of Beroia to the south, Marinia to the north-west, and Skydra to the north-east.

Among the magistrates, the eponymous priest of Asklepios, the *epistates*, *tagoi* and *dikastai* are attested in the Hellenistic period (*SEG* 24 524 (C2f)), and at least the priest of Asklepios and the *epistates* are likely to have existed since C4 (Hatzopoulos (1996b) i. 156). The cults of Asklepios (*SEG* 24 524 (C2f)), the Nymphs (Plut. *Alex.* 7.4), Artemis (*SEG* 24 525–26), Herakles Kallinikos (Demitsas (1896) no. 18) and the river god Olganos (Kallipolitis (1952)) are attested in Mieza.

Although the archaeological complex of Leukadia–Kopanos–Naoussa was well known from the nineteenth century, only most recently have excavations started at the very site of the ancient city (Rhomiopoulou (1997)). A large

(over 106 m long) C4 stoa, which might form part of a Asklepieion complex, has come to light (Allamani-Souri and Misaelidou (1992) 203–12; Allamani-Souri et al. (2002)). Moreover, the school that Aristotle founded in Mieza (Plut. *Alex.* 7.4) is almost certainly to be identified with the building complex at Isvoría, to the south-west of the civic centre, where three caves are joined by elaborate *peripatoi*, niches, stoas and staircases (Siganidou and Trochides (1990), with earlier refs.).

543. Pella (Pellaios) Maps 49–50. Lat. 40.45, long. 22.30. Size of territory: 4 (P. Chrysostomou (1990) 223). Type: A. The toponym is *Πέλλα*, ἡ (Hdt. 7.123.3; Thuc. 2.99.4; *Syll.*³ 267A.4), earlier (or as an epithet?) *Βούνομος* or *Βουνόμεια* (Steph. Byz. 515.7–8). The city-ethnic is *Πελλαῖος* (Arvanitopoulos (1909) no. 16; Arr. *Anab.* 3.5.3). The alternative forms *Πελληναῖος* of Plut. *Mor.* 339B and *Πελληνός* of Steph. Byz. 515.9–10 are otherwise unknown. Pella is called a *polis* in the urban sense in Hdt. 7.123.3 and Ps.-Skylax 66. At Xen. *Hell.* 5.2.13, *μεγίστη τῶν ἐν Μακεδονίας πόλεων* is used about Pella both in the personal-political and in the urban sense. The earliest attestation of *polis* in a purely political sense is in the *asylia* decree for Kos (*SEG* 12 374.9 (243)). In a verse dedication of Queen Eurydika, wife of Amyntas II, *πολίτις* is used about the female citizens, presumably of Pella (Plut. *Mor.* 14B with *BE* (1984) 249). Pella is called a *polisma* in App. *Syr.* 57 and a *metropolis* in Strabo 16.2.10. Ps.-Skylax 66 writes: *πόλις καὶ βασιλείον ἐν αὐτῇ* (C4m). *πατρίς* is used about Pella in a C4s epigram from Delphi (*SEG* 18 222a), in *AG* 7.139 (C1) and in Strabo 16.2.10. Demosthenes' description of Pella as a *χωρίῳ ἀδόξῳ . . . καὶ μικρῷ* (18.68 (rC4e)) is clearly a rhetorical distortion (cf. Xen. *Hell.* 5.2.13). The collective use of the city-ethnic is attested internally in the C2f coinage of the city (Gaebler (1935) 93–97) and externally in the *asylia* decree for Kos (*SEG* 12 374 (243)). For the individual use of the city-ethnic, see Arr. *Ind.* 18.3 (r325), and Arvanitopoulos (1909) no. 16 (C3e).

Pella's extensive territory, *Πελλαία* (Strabo 7 fr. 20), bordered on the territories of Allante to the south-east, Ichnai to the east, Tyrissa to the north, and Kyrrhos to the north-west and to the west. We know the sites of five secondary settlements, at Archontikon, Damianon B, Agrosykia, Leptokarya B and Ag. Nikolaos (Krya Vrysi), and two suburbs, one to the north-west and one to the west of the city (P. Chrysostomou (1990); Hatzopoulos (1996b) i. 111–12).

Pella, originally a Paionian settlement, received an important Ionian influx from early Archaic times. It became a member of the Chalkidian Federation for a brief period in

the 380s (Xen. *Hell.* 5.2.13). The transfer of the royal residence to the city in the reign of Amyntas III was accompanied by a significant Makedonian migration which transformed the character of the city, as the onomastics and the archaeological remains show (Hammond and Griffith (1979) 56; Hatzopoulos (1996b) i. 171–73).

There is no evidence for the Classical constitution of Pella; in C3 there is evidence of an *archon*, an *epistates* (*SEG* 48 818), a *boule* and a *demos* (*SEG* 48 817) as well as *tamiai* (*SEG* 12 374). In C4s (*Syll.*³ 267; *SEG* 18 222a) and in C3m (*F.Delphes* III.3 207.2) several citizens of Pella received the *proxenia* of Delphi.

The patron divinity of Pella was Athena Alkidemos (Livy 42.51.2; cf. Gaebler (1935) 93–97). Among other cults, those of Apollo, Artemis, Asklepios, Dionysos, Zeus Meilichios, Herakles Kynagidas, Herakles Phylakos, the Muses and Pan are attested from epigraphic, literary and archaeological sources (*SEG* 24 540; Papakonstantinou-Diamantourou (1971) 38–51; P. Chrysostomou (1989) 105–6). Moreover, the C4l sanctuaries of the Mother of the Gods, of Demeter and of Darron have been uncovered in or near the city (Lilimpaki-Akamati (1987), (1990), (1991), (1996), (2000), (2002)). For none of the cults do we have evidence from the Classical period. A Pellaian *theorodokos* was appointed to host *theoroi* from Nemea (*SEG* 36 331.B.23–24 (323–317); for the identification of the *theorodokos*, see Knoepfler (2001) 187–90). A citizen of Pella was victorious in the Isthmian and Pythian Games (*SEG* 18 222a (C4s)).

Pella was the largest city of Makedonia; for a general description, see Lilimpaki-Akamati (2002). The rectangular C4s wall is of mudbrick upon a stone foundation and predates the C4l grid plan of the town (Siganidou (1987a)). The city had two citadels. The acropolis, situated on the northern hill and covering an area of 6 ha, is entirely occupied by the palatial complex. At the southern end of the city the islet Phakos in Lake Loudiake, which was connected with the mainland via a drawbridge, qualified as an *ἄκρα* and housed the central Makedonian treasury (Strabo 7 fr. 20). The city was built on a regular Hippodamian grid line with two main north–south roads and one west–east road crossing them in the agora area (Siganidou (1990)). The 200 × 182 m-wide agora is surrounded by stoas: the north one probably housed the seat of the politarchs, while on the north-west side of the agora probably lay the city archive; along with the building complex around it, the agora covers an area of ten blocks in the centre of the city (Akamatis (1999)). The palace of the Makedonian kings (central complex C4f) covers the entire acropolis area (6 ha) north of the agora. It consists of

three building complexes, along an east–west axis. Each building complex is composed of two buildings, one to the south, towards the city, and one to the north. All three southern buildings have a large peristyle court. The northern buildings of the west and central complex have bathing facilities. A long *stoa* of more than 153 m with a 15 m-wide propylon forms the southern façade of the central and east complex facing the city (Siganidou (1987*b*), (1996); Ginouvès (1994) 88–91; P. Chrysostomou (1996)). Other public buildings uncovered are a large C4l tholos, probably a *heroon* of Herakles and used as *bouleuterion* by the Makedonian Council (Hadzisteliou-Price (1973)) and the sanctuaries of the Mother of the Gods and Aphrodite in the agora area, of Demeter in the south-east quarter of the city, and of Darron in the south-west quarter (Lilimbaki-Akamati (1987), (1990), (1991), (1996), (2000)). A theatre is mentioned by Plutarch in a C4s context (*Mor.* 1096B).

544. Pydna (Pydnaïos) Maps 49–50. Lat. 40.25, long. 22.35. Size of territory: 3 or 4. Type: A. The toponym is Πύδνα, ἡ (Thuc. 1.61.2; *Gonnoi* 98.7), Πύτνα (*IG* II² 329.13 = *Staatsverträge* 403), Κύδνα, which is considered to be the authentic form of the name (Theagenes (*FGrHist* 774) fr. 5 = Steph. Byz. 390.8–10). The city-ethnic is Πυδναίος (Dem. 1.5; Hatzopoulos (1996*b*) ii. no. 55), Πυδναίος, Πυδδναίος (only on coins: Tselekas (1996) 14); Πυτναίος (*IG* II² 339.b.3). Pydna is called a *polis* in the urban sense at Ps.-Skylax 66) and is listed as a *polis* in the urban and political senses simultaneously at Din. 1.14 = 3.17. The term *asty* is attested in Polyaeus. 4.11.3 (r317), and the term *polichnion* in a *scholion* on Arist. *Rh.* 1411^a9. The earliest epigraphical attestation of the πόλις Πυδναίων is in an honorific decree of c.169 (Hatzopoulos (1996*b*) ii. no. 55). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally perhaps on a fragmentary *asylia* decree (*SEG* 12 374.16 (243)). The individual use of the city-ethnic is attested internally in an honorific decree (Hatzopoulos (1996*b*) ii. no. 55.2 (c.169)) and externally in a C4s Athenian proxeny decree (*IG* II² 339.b.3 (333)).

The territory of Classical Pydna bordered on that of Methone to the north and of Dion to the south, and may have covered over 200 km².

As the recent excavations have shown, Pydna was not a colonial foundation but a Makedonian settlement (Bessios and Pappa (1996) 5). Already in the reign of Alexander I it

belonged to the Makedonian kingdom (Thuc. 1.137.1). In 432 it was unsuccessfully besieged by the Athenians (Thuc. 1.61). In 410 it rebelled against King Archelaos and seceded from the kingdom, but it was besieged again, and captured after a long siege. Its inhabitants were transferred some 4 km inland, perhaps to modern Kitros (Diod. 13.49.2). Apparently the old site was reoccupied already in C4e (Bessios (1990) 241), and in the reign of Amyntas III Pydna seems for a time to have again successfully seceded from the kingdom, since it struck its own coins; but in the reign of Alexander II, at the latest, it seems to have returned to the fold of the kingdom (Hatzopoulos (1985) 253 n. 66; for a different interpretation of the numismatic evidence, see Tselekas (1996) 19–24). In 364 or 363 it was captured by Timotheos (Din. 1.14 = 3.17; for the date see Diod. 15.81.6) and became an ally of Athens, but probably without becoming a member of the Second Athenian Naval League (Dreher (1995) 26). In 357 it was besieged and captured by Philip II (Dem. 1.9; Diod. 16.8.3), presumably by being betrayed to the Makedonians (Dem. 20.63, see Hammond and Griffith (1979) 242–44); it thereafter remained an integral part of the Makedonian kingdom.

Only two temples are attested in the Classical period: that of Athena (*IG* II² 329.13 = *Staatsverträge* 403 (336)) and that posthumously erected in honour of Amyntas III (Habicht (1970) 11–12). Pydnaian *theorodokoi* received *theoroi* from Epidauros c.360 (*IG* IV² 94 I.b.7).

Pydna was a walled city at least from 432 (Thuc. 1.61.3, implicitly; cf. Diod. 19.49.1 (r317)), but probably already in C5e (Bessios and Pappa (1996) 5–6). Traces of the walls were seen by Hammond ((1984) 377). The area enclosed by the walls was c.25 ha, making Pydna one of the largest Makedonian cities in C5e, undoubtedly because of the importance of its harbour (Bessios and Pappa (1996) 6).

Pydna struck bronze coins in C4f. (1) During the reign of Amyntas III, types: *obv.* head of young Herakles wearing lion skin to the r.; *rev.* eagle with closed wings to the r. devouring serpent which it holds with its talons; legend: ΠΥΔΝΑΙΩΝ or ΠΥΝΔΝΑΙΩΝ and once ΠΥΔΔΝΑΙΩΝ. (2) C.364–357: *obv.* female head facing l. or r., wearing ear-ring and necklace, her hair in a sphenone; *rev.* owl to the r., standing on olive branch; legend: ΠΥΔΝΑΙΩΝ (Gaebler (1935) 105–6; Tselekas (1996) 14, 26–30; *SNG Cop. Macedonia* 317).

THRACE FROM AXIOS TO STRYMON

PERNILLE FLENSTED-JENSEN

I. The Region

The region “from the Axios river to the Strymon river” is wholly artificial and consisted, in Antiquity, of a number of smaller regions of various ethnic affiliations. These regions were situated in two broader regions: Makedonia (*Μακεδονία*, Hdt. 5.17; *Μακεδονία*, Thuc. 6.7.3) and Thrace (*Θρηάκη*, Hdt. 8.185.1; *Θράκη*, Thuc. 1.100.2). About these two regions, see the introductions by M. B. Hatzopoulos (794–95) and L. D. Loukopoulou (854–56). Until C6 the border between Makedonia and Thrace was roughly the river Axios, but after that the border seems to have fluctuated. Thucydides, for instance, evidently locates Pydna (no. 544) and Therme (no. 552) in Makedonia (1.61.2), but in the Athenian tribute lists the *poleis* of the Chalkidic peninsula and even Methone (no. 541), north of Pydna, are included in the *Θράκιος φόρος* (probably for practical purposes). By the time of Philip II the river Strymon constituted the border between Makedonia and Thrace (Flensted-Jensen (2000) 121–25). Within these two larger regions there were a number of smaller regions.

1. Mygdonia

Mygdonia (*Μυγδονία*, Hdt. 7.123.3; *Μυγδονία*, Thuc. 2.100.4) was the district north and south of Lake Bolbe (Thuc. 1.58.2), from the Thermaic Gulf to the eastern end of Lake Bolbe. In C5 it was annexed by the Makedonians, but it was probably not incorporated into Makedonia until the time of Philip II (Hatzopoulos (1996a) 171–74). The Inventory describes eight *poleis* situated in Mygdonia (nos. 545–52).

Cities founded after the Makedonian expansion are not considered in the present chapter. Accordingly, the following cities do not appear in the discussion: Antigoneia, Stratonike, Kassandreia, Ouranopolis and Thessalonike.

2. Bisaltia

Bisaltia (*Βισαλτία*, Hdt. 7.115.1; *Βισαλτία*, Thuc. 2.99.6) was the district west of the lower Strymon, up to Herakleia Sintika (no. 549). According to Hdt. 7.115.1, Bisaltia was the coast west of the Strymon and the land above the coast. The river Strymon constituted the border between Bisaltia and Edonia (Papazoglou (1988) 351). In C5e the Bisaltians were ruled by a Thracian king (Hdt. 8.116.1). It seems that the Bisaltians were not driven out of their district when the Temenids took over large parts of what became Makedonia (Thuc. 2.99, esp. 2.99.4). The Bisaltians struck coins on the Phoenician standard in the Archaic period. Denominations: octadrachms, tetradrachms, drachms, octobols and tetrobols. Types: *obv.* naked warrior with two spears and horse; legend: *ΒΙΣΑΛΤΙΚΟΝ*; *rev.* quadripartite incuse square (Gaebler (1935) 48–50; *SNG Cop. Macedonia* 135). The coins without legend are indistinguishable from those of Alexander I (Head, *HN*² 200). There were three *poleis* in Bisaltia (nos. 553–55), of which one, Argilos (no. 554), was considered a colony of Andros (no. 475) (Thuc. 4.103.3). Thuc. 4.109.4 mentions that there were Bisaltians in Athos in his day.

3. The Chalkidic Peninsula

There was no name in antiquity for the Chalkidic peninsula as a whole. It is possible that Hekataios called it *ἡ ἐν Θράκῃ χερρόνησος* (see Zahrtnt (1971) 4ff; cf. Flensted-Jensen (2000) 122 n. 3) and Thucydides refers to it as *τὰ ἐπὶ Θράκης* (e.g. at 1.59.1; cf. Xen. *Hell.* 5.2.24). Traditionally, the Chalkidic peninsula was colonised during C8 and C7, by the Corinthians (no. 227), the Andrians (no. 475) and the Eretrians (no. 370), but it was clearly inhabited by Greeks prior to that period (cf. Mende (no. 584) and Torone (no. 620)).

Until C4m the northern parts of the Chalkidic peninsula, i.e. Anthemous (no. 562) and Mygdonia, belonged to Makedonia, whereas the rest was considered part of Thrace.

In 356 Philip took Poteidaia (no. 598), and in 348 Olynthos (no. 588) was taken and destroyed, a fate it probably shared with Stagiros (no. 613). Dem. 9.26 asserts that Philip destroyed thirty-two cities, which is probably an exaggeration (see useful discussion in Hammond and Griffith (1979) 365–79). The whole region, up to the river Strymon, was incorporated into Makedonia. Some inscriptions are evidence that the territories of (former?) *poleis* were given to Makedonians (*Syll.*³ 332 (306–297); *SEG* 38 619 (c.285)), but some scholars argue that the region was left more or less intact (Borza (1990) 219). Thus, in the Archaic and Classical periods the region as a whole was inhabited by Greeks, Makedonians and probably also various Thracian peoples (Thuc. 4.109; Hatzopoulos (1989)). The Chalkidic peninsula had only a few large and well-known *poleis*—Akanthos (no. 559), Olynthos (no. 588), Mende (no. 584), Skione (no. 609), Torone (no. 620) and Poteidaia (no. 598)—and a large number of smaller *poleis* which in many cases must have been situated within a few kilometres of each other.

3.1 Krousis

The western coast of the Chalkidic peninsula was called *χώρη Κροσσαίη* (Hdt. 7.123.2) or *Κρουσίς γῆ* (Thuc. 2.79.4; cf. Strabo 7 fr. 21: *Κροῦσις*). According to Hdt. 7.123.2, there were seven *poleis* in Krousis. Only one, Aineia (no. 557), is relatively well known. Dionysios of Halikarnassos mentions *οἱ Κρουσαῖοι* and calls them an *ἔθνος Θράκιον* (*Ant. Rom.* 1.47, 49). According to Dionysios (*Ant. Rom.* 1.48), they inhabited Pallene at the time of Aineias, and he may have this information from Hellanikos (cf. *FGrHist* 4 fr. 31). The Krousaians may have been the original inhabitants of Krousis. If so, they were Hellenised relatively early. The Inventory describes seven *poleis* situated in Krousis (nos. 557, 572–73, 577, 581–82, 611).

3.2 Bottike

The name of the region was *Βοττική* (Thuc. 1.65.2), which was derived from the ethnic *Βοττιαῖος* (Hdt. 8.127). Bottike was the region inhabited by the Bottiaians, who, according to Hdt. 8.127 and Thuc. 2.99.3, were expelled from the Makedonian district Bottiaia in C7 or C6. In C5 their chief *polis* was Spartolos (no. 612) (Thuc. 2.79). To the west Bottike bordered on Krousis, to the north on Makedonia, to the east on Chalkidike, and to the south on the territory of Poteidaia.

In C5 the Bottiaians were members of the Delian League—normally they are represented by Spartolos in the

Athenian tribute lists (e.g. *IG* 1³ 277.v.15), but in 446/5 the entry in the Athenian tribute lists is *Βοττιαῖοι καὶ σ(υν)τελεῖς*] (*IG* 1³ 266.ii.19). In 432 the Bottiaians revolted from Athens (Thuc. 1.58), but c.422 they entered into an alliance with the Athenians (*IG* 1³ 76). It seems from the inscription that they had probably formed a confederacy (Flensted-Jensen (1995) 126–28). The Bottiaians struck silver coins on the Phoenician standard, and also bronze coins, c.430–c.348. Denominations: tetradrachms, tetrobols and hemiobols. Types: *obv.* head of Apollo, or Demeter; *rev.* lyre; legend: *ΒΟΤΤΙΑΩΙΝ* or *ΒΟΤΤΙΑΙΕΩΝ* (Psoma (1996); *SNG Cop. Macedonia* 140–45). There were between six and twelve Bottiaian *poleis* (see Flensted-Jensen (1995); cf. nos. 558, 575–76, 579, 595, 599, 606, 612, 619, 621). In addition, it may be noted that according to Hdt. 8.127, Olynthos (no. 588) was originally a Bottiaian community: after their defeat, the Persians (whose dependency Olynthos was) feared that the city would revolt, and consequently it was conquered by Artabazos, subjected to an *andrapodismos* and handed over to Kritoboulos of Torone and the Chalkidians (Flensted-Jensen (1995) 122).

3.3 Chalkidike

The name of the region was *Χαλκιδική* (Thuc. 1.65.2). Hdt. 7.185 calls the inhabitants *τὸ Χαλκιδικὸν γένος*, but other authors call them *οἱ (ἐπὶ Θράκης) Χαλκιδαῖς* (Thuc. 2.79.1; Diod. 12.50.3).

Chalkidike was the area inhabited by the Chalkidians. By excluding all the areas which were demonstrably not Chalkidian, Harrison (1912) 96 concluded that Chalkidike covered the area north of Sithonia in C5. The exact borders of Chalkidike are not known, nor which towns were Chalkidian. However, the Chalkidians themselves are mentioned twice by Herodotos: at 7.185 he lists them among many tribes that supplied Xerxes with auxiliaries in 480. He uses the curious phrase *τὸ Χαλκιδικὸν γένος* about them. At 8.127 Herodotos tells us that Artabazos suspected that the inhabitants of Olynthos (no. 588), then belonging to the Bottiaians, would revolt and therefore he killed the population of Olynthos and gave the town to the Chalkidians and Kritoboulos from Torone. Thus, from 479 Olynthos was a Chalkidian town.

In 432 the Chalkidians, the Bottiaians and Poteidaia (no. 598) made an agreement with Perdikkas (Thuc. 1.58, 62–63) and revolted from Athens. Furthermore, at the instigation of Perdikkas, the Chalkidians left their *poleis* along the coast (*τὰς ἐπὶ θαλάσσης πόλεις*) in order to create one strong

city at Olynthos. It is evident from Thucydides' description that the Chalkidians possessed several *poleis* and that at least some of them were situated on the littoral. Scholars do not agree as to the political significance of the synoecism; some hold that it was a purely military measure, whereas others think that the move brought a political change (Demand (1990) 77–83 with refs.).

In the following years the political life of the Chalkidians was rather tumultuous: in 431 Perdikkas became reconciled with the Athenians (Phormion) and made an expedition against the Chalkidians (Thuc. 2.29), and in the following year Hagnon campaigned against the Chalkidians (2.58). Despite new campaigns, led by Xenophon in 429, the Athenians were not able to subjugate the Chalkidians. In 425 they were still unvanquished (Thuc. 4.7). In 424/3 Brasidas campaigned in the Chalkidic peninsula and won over many more *poleis*. Perdikkas and the Chalkidians were again on good terms (Thuc. 4.78–79). Some of the *poleis* which were probably or possibly Chalkidian are treated in separate sections in the Peace of Nikias of 421: Stolos (no. 614) and Olynthos (no. 588) are mentioned at Thuc. 5.18.5, Mekyberna (no. 583), Sane (no. 600) and Singos (no. 605) at Thuc. 5.18.6, and Sermylia (no. 604) along with Skione (no. 609) and Torone (no. 620) at Thuc. 5.18.8. But the recalcitrant Chalkidians refused to accept the peace terms, and they were still enemies of the Athenians in 416 (Thuc. 4.83.4). However, in 415 the Spartans urged the Chalkidians to assist Perdikkas, but they refused, because they had a ten-day truce with the Athenians (Thuc. 6.7.4).

Next followed 20 years in which virtually nothing is known about the Chalkidians. When they re-entered the arena, in 395, they concluded a treaty with the Boiotians, the Athenians, the Corinthians and the Argives, to fight on their side in the Corinthian War (Isae. 5.46; Diod. 14.82.3). A few years later, probably in 393 (Zahrnt (1971) 81 n. 4), they were allied with Amyntas III (Tod 111 = *Staatsverträge* 231).¹ The famous alliance will not be discussed in detail here, but it will be noted that from a political point of view it is of interest that the Chalkidians were evidently no longer on good terms with the Bottiaians, since it was clearly stipulated that neither the Chalkidians nor Perdikkas were to enter into alliance with them (except by common action). Other communities mentioned in that section are Mende (no. 584), Amphipolis (no. 553) and Akanthos (no. 559).

In 393/2, and probably again in 383/2, Amyntas III gave some land to the Chalkidians (Diod. 14.92.3, 15.19.3; Ellis (1969)). At this time, i.e. in 383, it seems that the Chalkidians were a prominent power, because in that year Akanthos (no. 559) and Apollonia (no. 545) sent envoys to Sparta to ask for help against the expanding federation (Xen. *Hell.* 5.2.11). At the time the federation evidently covered the western part of the Chalkidic peninsula all the way to Pella (no. 543). This resulted in the so-called Olynthian War, after which the federation was suppressed or dissolved (Xen. 5.3.26; Diod. 15.23.3; siege mentioned by Isoc. 4.126). However, the federation was formed again shortly after: the Chalkidians are listed in the Charter of the Second Athenian Naval League (restored: [Χαλκι]δῆς ἀπὸ [Θράκης]), which they left again at some point before 365 (*IG* II² 43.5–6; cf. Cargill (1981) 42; Dreher (1995) 186–87). A few years later the Chalkidians entered into an alliance with the Athenians, as is attested by the very fragmentary treaty *Staatsverträge* 250, probably dating to the middle of the 370s (Zahrnt (1971) 127). However, the alliance did not last long, as we find the Athenians allied with Amyntas some time between 375 and 373 (*IG* II² 102). Aristotle, in two somewhat obscure passages, states that some Chalkidian settlers (ἔποικοι), led by a certain Kleotimos, expelled the majority of the Amphipolitans (*Pol.* 1303^b3, 1306^a2). This may be seen in connection with the fact that the Chalkidians held Amphipolis (no. 553) c.363 (Dem. 23.149; Zahrnt (1971) 101). In 357/6 the Chalkidians entered into an alliance with Grabos, king of the Illyrians (*SEG* 37 567 with refs.), but shortly afterwards they entered into a new alliance, this time with Philip II (Robinson (1934) = Tod 158; cf. Hammond and Griffith (1979) 243–46). Philip ejected the Athenians from Poteidaia (no. 598) and handed it over to the Chalkidians (Dem. 2.7, 2.14, 6.20). The Chalkidians' alliance with Philip did not last long, because in 352 they concluded a treaty with the Athenians (*Staatsverträge* 317), and a few years later they entered into an alliance according to which the Athenians were to aid the Chalkidians against Philip (*Staatsverträge* 323). However, in 348 Olynthos (no. 588) was betrayed to Philip, who destroyed the city completely (Hyp. fr. 19; Dem. 9.26, 19.266; cf. App. *B Civ.* 4.102). According to Dem. 9.26, Philip destroyed thirty-two towns in Thrace, apart from Olynthos, Methone (no. 541) and Apollonia (no. 545), while Hyp. fr. 76 says that the Chalkidians had forty *poleis*—both numbers probably exaggerated. *IG* XII.8 4 is an inscription from Myrina (no. 502), showing that (some of) the Chalkidians sought refuge there after the destruction of Olynthos (Χαλκιδέες οἱ ἐν Μυρίνῃ). The Chalkidians

¹ Zahrnt (1971) 122–24 argues that the inscription is in fact two treaties, to be dated c.393 and 382 respectively.

may also have been listed in the peace treaty of 338/7 between Philip and the Greeks (Tod 177). Line 31 reads: ---ἀ]πὸ Θράκης καὶ [---] Φωκέων.

When did the Chalkidians form a state? A body known as οἱ Χαλκιδεῖς is mentioned by Herodotos and Thucydides. Furthermore, these Chalkidians were settled in *poleis*. Was there a change in the political structure after 432? The vocabulary of Thucydides does not change; he still calls them οἱ Χαλκιδεῖς after 432, and his description of the synoecism does not indicate that there was a political change. However, in 424 we hear of a Στρόφακος πρόξενος ὧν Χαλκιδέων (Thuc. 4.78.1; see Gerolymatos (1986) 30), and about οἱ Χαλκιδέων πρέσβεις (Thuc. 4.83.3). Furthermore, in 422 the Chalkidians entered into an alliance with Argos (no. 347): οἱ ἐπὶ Θράκης Χαλκιδῆς Ἀργείων ξύμμαχοι (Thuc. 5.31.6). All this shows that the Chalkidians had some kind of common political organisation. The C5l coins inscribed Χαλκιδέων are sometimes taken as an indication of the formation of the federation (SNG Cop. Macedonia 233–49). Coins inscribed with a (tribal) ethnic are not in themselves proof that the tribe had formed a federal state, but in this case they may be. Shortly before the synoecism Olynthos struck coins inscribed with ΟΛΥΝ, but these were struck for a short period only and were replaced by coins inscribed with Χαλκιδέων (for the dates of the coins, see Robinson and Clement (1938) 112ff; Westermarck (1988); see also s.v. Olynthos (no. 588)). Thus, there cannot be much doubt that the Chalkidians constituted a state, which was formed in 432 or during the subsequent years.

But what kind of state was formed? Some scholars believe that it was a federal state (West (1918) 31, 140; Larsen (1968) 59 with n. 1), whereas others argue that it was a unitary state that developed into a federal state in C4—Hampl suggests that the unitary state existed even before 432 (Hampl (1935) 182; Zahrnt (1971) 65–66). Is anything known about the status of the participating *poleis* after 432? At 1.65.2 Thucydides explains that many Sermyleians were killed near their *polis* (no. 604) in 432, but after the revolt. However, it appears from the passage that the Sermyleians (or at least some of them) were enemies of the Chalkidians at the time, so they may not have taken part in the formation of the state (yet). In the Peace of Nikias, Stolos (no. 614), Mkyberna (no. 583), Sane (no. 600), Singos (no. 605) and Sermyleia are mentioned (Thuc. 5.18.5, 6, 8), and there is no doubt that they are all called *polis*. Mkyberna, Sane and Singos may have been depopulated, but there is no doubt about the remaining two towns. The character of the Olynthian constitution is unknown: some scholars think that Olynthos (no. 588) was

an oligarchy (Zahrnt (1971) 94; Larsen (1968) 58ff, esp. 76), while others argue that it was a democracy (Gehrke, *Stasis* 124).

In C4 there is more information available about the organisation of the Chalkidian Federation. From Xen. *Hell.* 5.2.12 it is known that in c.383 there were common laws and *sympoliteia*, common citizenship (*Hell.* 5.2.18), *epigamia* and *enktesis* (*Hell.* 5.2.19). Furthermore, the Chalkidians possessed a federal army (Xen. *Hell.* 5.2.14). Xenophon does not specify which cities in the Chalkidic peninsula had become members of the Federation, except Poteidaia (no. 598) (Xen. *Hell.* 5.2.15), but it is evident that it included several cities, some of them large (Xen. *Hell.* 5.2.12). They had also captured several cities in Makedonia, among them Pella (no. 543) (Xen. *Hell.* 5.2.13). Finally, Xen. *Hell.* 5.2.16 mentions that the Federation had revenues from many harbours and *emporía*, and that it was a populous state. Furthermore, the existence of eponymous federal priests is attested (Hatzopoulos (1996a) 196, 388–89). Last but not least, Aristotle may have written a *politeia* of the Chalkidians (Arist. fr. 44). In this connection it is of interest that several possible members struck (bronze) coins in C4, probably in C4f. They are Sermyleia (no. 604), the Skapsaians (no. 608), Torone (no. 620) and possibly Gale(psos) (no. 571). This could indicate that civic mints existed alongside the federal mint.

In C4 the Federation was called οἱ Χαλκιδεῖς in official documents, such as the alliance of Amyntas and the Chalkidians, the Charter of the Second Athenian Naval League, etc., but it was often called οἱ Ολύθιοι in literary sources (e.g. Xen. *Hell.* 5.2.13; Dem. 1.5; see, however, Arist. *Pol.* 1274^b23). Diodorus and Isaios, referring to the same events, call them οἱ Χαλκιδεῖς οἱ πρὸς τῇ Θράκῃ and οἱ Ὀλύθιοι respectively (Diod. 14.82.3; Isae. 5.46).

3.4 Pallene, Sithonia and Athos

The three peninsulae of (a) *Pallene*, (b) *Sithonia*, and (c) *Athos* are natural geographical subdivisions. (a) There were eight *poleis* in Pallene (Hdt. 7.123.1; nos. 556, 563, 584, 586, 598, 601, 609, 616), which, according to Herodotos, was formerly called Phlegra. One *polis*, Poteidaia (no. 598), was a colony of Corinth (no. 227) (Thuc. 1.56.2); Mende (no. 584) was probably a colony of Eretria (no. 370) (Thuc. 4.123.1); Neapolis (no. 586) was probably a colony of Mende (*IG* 1³ 263.III.26–27); and the inhabitants of Skione (no. 609) claimed that they were colonists from Achaia (Thuc. 4.120.1).

(b) Athos had six *poleis* (Hdt. 7.22.3; nos. 560, 569, 580, 587, 600, 618) including Sane (no. 600) on the isthmus. Sane may have been a colony of Andros (no. 475) (Thuc. 4.109.3), whereas the other five *poleis* had a mixed, bilingual population in C5 (Thuc. 4.109.3; see Papadopoulos (1996) 170).

(c) Sithonia is more difficult to define. Herodotos, who is our only source to name the area Sithonia—apart from Steph. Byz., who simply paraphrases Herodotos—includes Torone (no. 620), Gale(pson) (no. 571), Sermylia (no. 604), Mekyberna (no. 583) and Olynthos (no. 588) in the area of Sithonia (7.122), which means that “Sithonia” was the western part of the peninsula and the area north of it. The *poleis* on the eastern side of the peninsula (Singos (no. 605) and Sarte (no. 602)) were located, according to Hdt. 7.122, “in the bay [of Singos].”

3.5 The Edonians

It is highly probable that the Edonians, a Thracian tribe ruled by a king, inhabited at least part of the Chalkidic peninsula. Thuc. 4.109.4 mentions that there were Edonians in Athos. The Edonian king Getas struck silver octadrachms around 500. Some of the coins bear the legend ΓΕΤΑΣ ΗΔΟΝΕΟΝ ΒΑΣΙΛΕΥΣ (Gaebler (1935) 144).

4. Unlocated

Four *poleis*—Aison (no. 623), Brea (no. 624), Kossaia (no. 625) and Okolon (no. 626)—have been included in the present chapter. They are all unlocated, but in all four cases it is known that they were situated somewhere in Thrace.

1. Pre-Hellenistic Settlements not Attested as Poleis

Aigialos (Αἰγιαλός) Hecat. fr. 155; Kleidemos (FGrHist 323) fr. 3. According to Steph. Byz. 40.18–19, perhaps following Hekataios fr. 155, located in Thrace near the river Strymon. Not in *Barr.* Hecat. fr. 155 indicates A.

Ampelos (Ἄμπελος) The cape of Sithonia was called Ampelos (Hdt. 7.122). Ampelos is called *oppidum* and *polis* by Pliny and Hesychios respectively (Plin. *HN* 4.37; Hsch. *A*3778). Hdt. 7.122 calls it simply ἡ Τορωναίη ἄκρη, and for that reason Zahrnt (1971) 152 is right in thinking that there never existed a *polis* Ampelos. Unlocated. *Barr.* 51, C.

***Apollonia** (Ἀπολλωνία) Unlocated. In *Barr.* 51 dated C, but the only evidence is Plin. *HN* 4.37.

Arnai (Ἄρναί) Thuc. 4.103.3. South of Bormiskos (no. 547). Zahrnt (1971) 161–62. *Barr.* 51, C.

Chalkis (Χαλκίς) The only source for this Chalkis is Steph. Byz. 685.2–5, who locates it on Athos and quotes Eudoxos (fr. 309, Lasserre), according to whom it was the name of a gulf, not a settlement. Unlocated. *Barr.* 51, C.

(Kallipolitai) (Καλλιπολίται) The Kallipolitai are mentioned in the so-called Holomondas inscription (*SEG* 40 542.32), which probably originates from the north-western part of the Chalkidic peninsula and dates to C4m (Hatzopoulos and Loukopoulou (1992) 123–45, *pace* Vokotopoulou (1996)). The inscription deals with boundaries between various communities. A number of ethnics occur: Παραιπ[ίος] (2–3), Παμίους (14), Κισσείτα[ις] (14), Ὀσβαίους (26, 30 (restored), 32), [Πρα]σιλίους (28) and Καλλιπολίτας (32). The Kallipolitai are said by Hatzopoulos and Loukopoulou (1992) 130–31 to be known from the Athenian tribute lists, and it is true that some Kallipolitai are recorded under the headings αὐταί and τάκται from 434/3 onwards (see e.g. *IG* 1³ 279.11.87). Hatzopoulos and Loukopoulou suggest that *Kallipolis belongs in the Thracian panel (like some other communities in the rubrics), and tentatively suggest that *Kallipolis and Kalindioia (no. 575) are identical. But the Kallipolis recorded in the tribute lists belong in the Hellespontine *phoros* (see no. 744). Furthermore, it is unlikely that *Kallipolis and Kalindioia are identical unless that city actually had two names, of which only one (Kalindioia) is attested as a toponym. Therefore, Vokotopoulou (1996) 215 suggests that *Kallipolis may be identified with a mound near Ormylia (not far from ancient Sermylia), because that mound “preserves the name of Kallipolis . . . the place-name could well have survived since the ancient period, as have many other place-names in Chalcidice”. It is not impossible that the name has been preserved since Antiquity, although perhaps unlikely. *Barr.* 50, C.

Kerdyllion (Κερδυλίον) In the territory of Argilos (no. 554) (Thuc. 5.6.3). A site in the vicinity of Nea Kerdyllia has been identified with the Kerdyllion of Thucydides. Here a part of a Classical circuit wall has been found along with a gate (*ArchDelt* 41 (1986) *Chron.* 177–78). *Barr.* 51, C.

Kophos (Κωφός) Called a *limen* in the territory of Torone (no. 620) at Thuc. 5.2.2–3. Meritt (1923) 453–54; Hornblower (1996) 425–26. *Barr.* 51, C.

Panormos (Πανορμός) In *Barr.* 51 dated C, but the only evidence is Ptol. *Geog.* 3.12.9.

(Paraipioi) (*Παραίπιοι*) See Kallipolitai (*supra*). Unlocated. *Barr.* 50, C.

Parthenopolis At Parthenonas, about 5 km inland from the presumed site of Gale(psos) (no. 571), and thus possibly in its territory, a worship area (4 × 8 m, oriented north–south) has been excavated. The area was in use from C7 to C3, and inscribed sherds attest to the nature of the area: for instance, a sherd from a C5e Attic vessel with the inscription [ἀν]έθεκεν. The site was perhaps consecrated to Zeus Koryphaios; a sherd from a C5 Attic kylix bears the inscription ΔΙΟΣ. The excavators claim that the area belonged to a certain Parthenopolis mentioned in ancient sources (Vokotopoulou *et al.* (1990)). However, the only source to mention a Parthenopolis is Stephanos of Byzantium, who calls it a πόλις Μακεδονίας and then continues: ἀπὸ τῶν θυγατέρων Γραστοῦ τοῦ Μύγδονος παιδός, ὡς Θεαγένης ἐν Μακεδονικοῖς “ἀπὸ δὲ τῶν θυγατέρων διὰ τὸ ἄγροικον αὐτῶν τῆς διαίτης καὶ τὸ ἄμικτον ἔκτισε πόλιν κτλ” (504.8ff). Although the mention of Grastos and Mygdon indicates that Parthenopolis had some connection with Krestonia and Mygdonia, this piece of evidence is not sufficient to identify the worship area with the Parthenopolis mentioned by Stephanos. *Barr.* 51, C.

Physka (*Φύσκα*) Thuc. 2.99.5; Theagenes (*FGrHist* 774) fr. 15; Steph. Byz. 675.12 (πόλις). In Ptol. *Geog.* 3.12.33 listed under Mygdonia. *Barr.* 51, undated, but C is attested by Thuc. 2.99.5.

Physkelle, Myskella (*Miscella*) In *Barr.* 50 dated C, but there is no other evidence than Plin. *HN* 4.37 and Pomponius Mela 2.34.

Rhaikelos (*Ῥαίκελος*) Arist. *Ath. Pol.* 15.2 (*χωρίον*); Lycoph. *Alex.* 1236; Steph. Byz. 543.2 (πόλις). Fortified village or strong point near the Thermaic Gulf (Edson (1947) 89–91). *Barr.* AC.

(Rhamioi) (*Ραμίοι*) See Kallipolitai (*supra*). Unlocated. *Barr.* 50, C.

Trapezous (*Τραπεζοῦς*) *Syll.*³ 332.5–6 (306–297); *SEG* 38 619.12 (285–284), area or territory near Olynthos. *Barr.* 50, C.

2. Unidentified Settlements

Ag. Ioannis, near Nikiti Traces of an early settlement no later than C7; fifty-seven graves from the Archaic and

Classical periods (*ArchDelt* 32 (1977) *Chron.* 204). Remains of a Classical house, pieces of tile roof. Also forty-five graves from the Iron Age (900–750) (*ArchDelt* 43 (1988) *Chron.* 361–62; cf. *ArchDelt* 39 (1984) *Chron.* 224). Of the forty-five graves, forty were inhumations in *pithoi*, and five were cremations. Some of the inhumations were placed *inside* perimeter walls. The cemetery was used in the Iron Age and the Archaic period (Trakosopoulou-Salakidou (1988)). Not in *Barr.*

Anchialos Excavations at Anchialos (north-west of Thessaloniki) have been conducted. Layers from the late Mycenaean period and Iron Age were reached, while a big pit contained sherds from the Classical period. The pottery was partly imported, partly local ware. The excavators argue that Anchialos can be identified with Sindos (no. 551), and Chalastre (no. 548) with the site at Ag. Athanasios (Tiverios (1992), *pace* Hatzopoulos (1996a) 107 nn. 2 and 3; idem (1996b) 602 no. 262). A single inscription has been found at Anchialos. A C5m Attic black-figured sherd is incised with the name Ἀργανθόνιος in Ionic lettering (Panayotou (1996) 150 n. 39). Not in *Barr.*

Epanomi Four late Archaic and Classical graves were excavated in 1989 (Tsibidou-Auloniti (1989)). Not in *Barr.*

Koukos About 4 km from Torone (no. 620), at modern Koukos, a hill-top site has been investigated. There are remains of a fortification wall, a settlement and a cemetery. The original height of the wall, which is preserved to a height of 60–80 cm, was probably more than 2 m, and the average width is 1.25 m. The extensive settlement was probably crowded, and apparently there was no urban planning. The area tested covers 274 m². The settlement, which was used in the early Iron Age, and probably later, was built in six phases. Remains of walls of ten or eleven buildings have been found, all oriented in different directions. They probably all date to the early Iron Age. The most substantial building consists of a porch and one long chamber, 5 × 14 + m. In the cemetery ninety-eight graves have been found, apparently with cremation as the only rite. There are three types of grave: (1) cist graves (forty-nine), (2) pit graves (fifteen), and (3) *pithoi* (thirty-four). There are two types of pottery: (1) handmade northern types, of which some are Chalkidian, and some are like the early Iron Age types found at e.g. Vergina; part of a bowl, of the “pre-Persian” type known from Olynthos (no. 588), was found; (2) wheel-made types, related to late Protogeometric and sub-Protogeometric styles at Euboea and the surrounding areas. Other finds

include fibulae, beads, bracelets, knives and stone tools. A mould and other finds show that metal working took place at Koukos. The site was probably abandoned about 700. (Carington-Smith and Vokotopoulou (1988), (1989), (1990), (1992), (1992–93); *ArchDelt* 42 (1987) 370–71; Snodgrass (1994)). Not in *Barr.*

Krini An unknown number of graves from the Classical and following periods (*ArchDelt* 39 (1984) *Chron.* 224). Not in *Barr.*

Nea Triglia Traces of an ancient settlement and a cemetery, C5–C4 potsherds (*ArchDelt* 32 (1977) *Chron.* 202). Not in *Barr.*

Ossa An urban settlement (in ancient Bisaltia) with a fortification wall and a citadel, which was founded in C4 (Adam-Veleni (1988)). Not in *Barr.*

Sourota C4 graves (*ArchDelt* 29 (1977–74) *Chron.* 697). Not in *Barr.*

Thermi At modern Thermi (the so-called table of Sedhes, a few km south of Thessaloniki) a cemetery has been excavated. The 303 graves date from C8e to C4. The oldest pottery dates to C8–C7, and similar pottery has been found at Vergina, Dion, Kozani and other places. There is also C6 Corinthian pottery, pottery of Ionian type, C6m–C5e Chalkidian ware, along with Attic black-figure pottery and pottery dating to C5–C4. The male graves contained weapons, and the female jewellery (*ArchDelt* 45 (1990) *Chron.* 308–9). Moschonisioti (1988) has examined ninety-nine graves dating from C6e to C5e. The male graves faced west, the female east. 70 per cent of the men were buried with weapons, while the women were buried with jewellery. Among the finds was a C5e coin from Dikaia (no. 568). Not in *Barr.*

II. The *Poleis*

1. Mygdonia

545. Apollonia (Apolloniatas) Map 50. Lat. 40.40, long. 23.30. Size of territory: ? Type: A:a. The toponym is Ἀπολλωνία, ἡ (Xen. *Hell.* 5.2.11; Dem. 9.26; *IG* iv².1 94.1.b.5 (359)). The city-ethnic is Ἀπολλωνιάτης (Xen. *Hell.* 5.2.13). Apollonia is called a *polis* in the political and urban senses combined by Xen. *Hell.* 5.2.11 (Hansen (2000a) 210), and in the urban sense by Ps.-Skylax 66 (Flensted-Jensen and

Hansen (1996) 142) and Dem. 9.26. The collective use of the city-ethnic (abbreviated as ΑΠΟΛΛΩ) is attested internally on coins (*infra*) and externally at Xen. *Hell.* 5.2.13. It appears from Xen. *Hell.* 5.3.11 that the toponym Ἀπολλωνία could denote the territory as well as the town.

There has been some discussion as to how many Apollonias there were in the Chalkidic peninsula and where exactly they were located. Hatzopoulos (1994) has come to the conclusion that there was only one Apollonia, and that it was located near the southern shores of Lake Bolbe, i.e. in ancient Mygdonia; see also Flensted-Jensen (1997) 117–21.

Xen. *Hell.* 5.2.11 calls Apollonia and Akanthos (no. 559) the two largest *poleis* around Olynthos (no. 588), and relates how in 382 they sent envoys to Sparta (no. 345) to ask for help against the expanding Chalkidian Federation. Apollonia is recorded in the Epidaurian list of *theorodokoi* of 359 (*IG* iv².1 94.1.b.15).

Remains of an undated city wall are reported by Hatzopoulos (1994) 178. Xen. *Hell.* 5.3.6 mentions Apollonia's *proasteion* and its gates. According to Dem. 9.26, Apollonia was destroyed by Philip II, though when is unknown.

Apollonia struck coins in C4, and after 187 (Gaebler (1926), (1935) 46–47). *Obv.* head of Apollo; *rev.* aquatic bird, or fish; legend: ΑΠΟΛΛΩ.

Since Apollonia is called ἡ Χαλκιδική by Hegesandros (*FHG* p. 420 fr. 40), it is generally assumed that Apollonia could have been founded by the Chalkidians (West (1923) 49 n. 2; Hatzopoulos (1994) 165), when they were given a piece of land near Lake Bolbe in 432 (Thuc. 1.58.2).

546. Arethousa (Arethousios) Map 51. Lat. 40.40, long. 23.40. Size of territory: probably 2 or 3. Type: A:a. The toponym is Ἀρέθουσα, ἡ (Ps.-Skylax 66; Plut. *Lyc.* 31.5; *IG* iv².1 94.1.b.16 (359)). The city-ethnic is recorded as Ἀρεθούσιος ἀπὸ Θράκης (*Syll.*³ 268G (C4m) = *F.Delphes* III.1 396), and after the Makedonian expansion as Ἐρεθούσιος (probably a misspelling) Μακεδόν (*Syll.*³ 269 (c.300) = *F.Delphes* III.1 186 (188?)).

Arethousa is called a *polis* in the urban sense by Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 142). The political sense is attested in *IG* II² 43.78 and 83, where Arethousa under the heading πόλεις αἰῶε is listed as one of the members of the Second Athenian Naval League. The collective city-ethnic is attested externally in a C4m inventory of crowns donated to Athena in Athens (*IG* II² 1437.1.18; cf. *SEG* 28 112). The individual city-ethnic is attested externally in a Delphic proxeny decree of C4m (*Syll.*³ 268G).

Arethousa was located in Mygdonia, on the eastern shore of Lake Bolbe (Strabo 7 fr. 36; cf. Ps.-Skylax 66), which was part of Makedonia in 432 (Thuc. 1.58.2). Arethousa may well have existed in C5 (although no sources confirm that), and if it did, it must have gained independence from Makedonia at some time in the beginning of C4, for a brief period.

Arethousa was a member of the Second Athenian Naval League (*IG* II² 43.82). It seems certain that this was Arethousa in Chalkidike, not the one in Euboia (Dreher (1995) n. 103). Arethousa is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* IV².1 94.1.b.16).

In the cemetery (see *infra*) a judicial lead tablet has been found (Moschonisioti *et al.* (1997)). The tablet dates from c.300. There is no doubt that the rather mutilated text concerns judicial matters: the verb *καταγράφω* ("register, enrol") occurs several times, in B4 *δικαστὰς ὄσα ἔγ<ρ>αφο[ν]* can be read, and in Δ2 *τῶ]ν συνδ[ικων* (195–96).

The recently excavated remains of an ancient town near modern Rentina have been identified with Arethousa by the excavator (Moschonisioti (1992)). One hundred and twenty-nine graves have been excavated, yielding pottery, jewellery, etc. The graves date from C4m to C2m. Part of a circuit wall was excavated, along with the foundation of a C4l circular tower. There are reports of "Archaic and Classical finds" from a neighbouring hill, which has been identified with Bormiskos (no. 547). However, as the excavator points out (Moschonisioti (1992) 410), it is remarkable to find two towns located within such a short distance (and on the same side of the river), and since there are no Archaic or Classical finds from the hill that has been identified with Arethousa, we may simply suggest (as already in *RE*s.v.) that Bormiskos and Arethousa are connected; that for some reason the inhabitants of Bormiskos left the settlement and moved to the neighbouring hill.

547. Bormiskos Map 51. Lat. 40.40, long. 23.40. Size of territory: 2. Type: C? Bormiskos was located near the Gulf of Strymon, where Lake Bolbe runs into the sea (Thuc. 4.103.1), which (at least in 432) was a part of Makedonia (Thuc. 1.58.2). The toponym is *Βρομίσκος* (Thuc. 4.103.1) or *Βορμίσκος* (*IG* I³ 77.v.26). Apart from Steph. Byz. 176.4–5, there is no attestation of the city-ethnic.

Thuc. 4.103.1 mentions that Brasidas stopped at Bormiskos, but he does not give it any site-classification (and Stephanos calls it a *chorion* at 176.1). However, Bormiskos was assessed at 1,000 dr. in 422/1 (*IG* I³ 77.v.26). Furthermore, it may have been recorded in the assessment

decree of 425/4 (the toponym is restored in *IG* I³ 71.IV.113). Consequently, Bormiskos was probably a member of the Delian League, and thus a political community.

548. Chalestre Map 50. Lat. 40.40, long. 22.45. Size of territory: ? Type: A:γ. The toponym is *Χαλάστρη* (Hecat. fr. 146) or *Χαλέστρη* (Hdt. 7.123.3). Apart from Steph. Byz. 679.8, the city-ethnic is attested only in a very late source: *IG* x.2.1 815, a second to third century AD gravestone which in the first line has ὁ *Χαλεστρῆ[ος]* (with dots under all the letters except -εσ-). Hecat. fr. 146 calls Chalestre a *polis* in the urban sense (cf. Hansen (1997b) 19). Hdt. 7.123.3 locates Chalestre in Mygdonia, in the Thermaic Gulf.

Modern Sindos is probably identical with ancient Chalestre (Hatzopoulos (1996a) 197). At the site a rich cemetery, containing 121 graves, has been excavated. Although half of the graves had been robbed in Antiquity, the finds were still remarkable. Most of the graves were rectangular pits, but there were also some cists and sarcophagi. In the graves were found weapons and other military equipment, and a large amount of Makedonian jewellery of exceptional quality. Most of the vessels, however, were imported ware from southern Greece. The finds date the cemetery to the period C6m to C5e (*Macedonians* 162 with tables 153–76). At the settlement have been found a floor with C8 pottery, mudbrick walls destroyed in C7, successive building strata dating from C7 to c.570 (Tiverios (1990)). A gold ring, dating to C5m, is inscribed with the word *δῶρον* in Ionic script (Panayotou (1996) 150 n. 39).

Chalestre is called a *polis* in the urban sense by Hekataios (fr. 146) and Herodotos (7.123.3). Hekataios calls it a *πόλις Θρηίκων* and juxtaposes the town with Therme, which is called a *πόλις Ἑλλήνων Θρηίκων*. The evidence suggests that it was a Thracian *polis* in close contact with the Greek world, in which case it should be deleted from this Inventory as a non-Greek *polis*. Hatzopoulos, however, thinks that Chalestre was probably a mixed settlement ((1996a) 107).

549. Herakleia (Herakleotes) Not in *Barr.* Lat. 40.45, long. 22.40 (cf. Gounaropoulou and Hatzopoulos (1985) 62–71). Size of territory: ? Type: C:a? The toponym *Ἡράκλεια* is known only from late sources (*Demitsas* 160.10 (Hell. or Roman)). The city-ethnic is *Ἡρακλεώτης* (*SEG* 27 299 (C4e)), attested at Pella. All sources concerning Herakleia are late (e.g. a second century AD milestone mentioning ἡ *πόλις Ἡρακλεωτῶν* (*SEG* 35 754.A12–13)), but the existence of a C4f city-ethnic indicates that the town existed in the Classical period (see Hatzopoulos (1996a) 176), and Steph. Byz. mentions a *Ἡράκλεια Μακεδονίας*,

Ἀμύντου τοῦ Φιλίππου κτίσμα (304.3). Herakleia may have been situated on the eastern bank of the river Axios (Hatzopoulos (1996a) 176).

A burial mound near modern Ag. Athanasios (north-west of Thessaloniki) turned out to be an extended Archaic and Hellenistic cemetery. It is probably the cemetery of Herakleia (if the site near the river Axios is Herakleia). In the excavated area ten graves were found; eight of them dated to C6, one to C4s, and one to C3e. The Archaic graves are similar to those found at Sindos and Ag. Paraskevi. Most of the pottery was Corinthian, but an intact Chian chalice was also found (Tsibidou-Auloniti (1992)).

550. Lete (Letaios) Map 50. Lat. 40.45; long. 23.00. Size of territory: ? Type: B:β. The toponym is Λήτη (*SEG* 36 331.19 (323/2); Steph. Byz. 413.19, possibly quoting Theagenes (C3?) or Λητή (Harp. Λ19, quoting Hyp. fr. 87, Sauppe). The city-ethnic is Ληταῖος (*SEG* 24 544 (C4–C3)). Lete is called a *polis* in late sources only (*Syll.*³ 700 (second century AD); Harp. Λ19), but *polis* status in the Archaic and Classical periods is indicated by the C6–C5 mint and the Nemean *theorodokos* (*infra*). The collective city-ethnic is used internally on Archaic coins (*infra*). The individual city-ethnic is used externally on a gravestone from Pella (*SEG* 24 544 (C4–C3)).

In the C4s list of Nemean *theorodokoi* Lete is placed after the heading *Makedonia* (*SEG* 36 331.19), but it cannot have become a part of Makedonia proper until after c.480, since no city of Makedonia proper minted its own coins until C2 (Hatzopoulos (1996a) 172). Lete is recorded in the Nemean list of *theorodokoi* of 323/2 (*SEG* 36 331.19).

Lete struck silver coins on the so-called Babylonian standard c.530–480. Denominations: stater, 1/8 stater, and 1/2 obols. Types: *obv.* Silen and nymph; *rev.* incuse square; legend: sometimes ΛΕΤΑΙΟΝ (Head, *HN*² 197–98; Gaebler (1935) 67–72; *SNG Cop. Macedonia* 191–94). However, Kraay ((1976) 148–49) does not believe that all the coins attributed to Lete were actually issued by Lete: “Another important coinage of this area . . . has long passed under the name of ‘Lete’, on the strength of a tentative reading of an obscure coin-legend. Lete . . . certainly minted a few coins clearly inscribed with its ethnic, but it is unlikely to have been responsible for the considerable coinage under discussion.” See also Smith (2000).

At the site of ancient Lete two cemeteries have been found, one consisting of four C4l graves and one of twenty C4m–C3e graves (Tsakalou-Tzanavari (1989)).

Judging from the onomastic material, Lete probably had a mixed Greco–barbarian population until its conquest by

the Makedonians; the considerable influx of Makedonians that followed did not lead to the extinction of the native element (Hatzopoulos (1996a) 211–13).

551. Sindos (Sindonaios?) Map 50. Lat. 40.40, long. 22.45. Size of territory: ? Type: A:β. The toponym is Σῶδος (Hdt. 7.123.3) or Σῶδοι (schol. Ap. Rhod. 4.4.322; Steph. Byz. 569.27). The corresponding city-ethnic may be Σινδοναῖος (Steph. Byz. 570.3: Σινδοναῖοι, Θράκιον ἔθνος, ὡς Ἐκαταῖος ἐν Εὐρώπῃ = Hecat. fr. 147). Sindos is called a *polis* in the urban sense by Hdt. 7.123.3.

Hdt. 7.123.3 locates Sindos in Mygdonia, in the Thermaic Gulf. Hatzopoulos thinks that Sindos was situated at modern Thessaloniki ((1996a) 107 n. 3). Papazoglou (1988) 201 suggests that Sindos was one of the settlements that contributed to the foundation of Thessalonike in 316/15.

At modern Thessaloniki—at the so-called Toumba—have been found remains of buildings, built in several phases dating from C10 to C4 (Souereph (1990), (1992)). The excavations clearly show that there was an important settlement at the site before the foundation of Thessalonike in 316/15.

Sindos was probably a mixed settlement (Hatzopoulos (1996a) 107).

552. Therme Map 50. Lat. 40.35, long. 22.55. Size of territory: ? Type: A:β. The toponym is Θέρμη, ἡ (Hdt. 7.124). Apart from Steph. Byz. 310.1, there is no attestation of the city-ethnic. Therme is called a *polis* in the urban sense by Hecat. fr. 146 (cf. Hansen (1997b) 19); Hdt. 7.124; and Ps.-Skylax 66 (cf. Flensted-Jensen and Hansen (1996) 151). There is no evidence that it was a *polis* in the political sense as well. Theopomp. fr. 140 seems to have called it a Thracian *polis* (cf. Hansen (2000b) 144–45).

Hdt. 7.123.3 locates Therme in Mygdonia, on the Thermaic Gulf. The exact location of Therme is unknown, although many scholars hold that it was the predecessor of Thessalonike (Vickers (1981) with refs.), and others that it was situated to the south of it, at Mikro Karabournaki (Borza (1990) 105 n. 21; Hatzopoulos (1996a) 107 n. 4).

According to Hdt. 7.124, Therme was a base for the Persian fleet in 480. In 432 Therme was captured by the Athenians (Thuc. 1.61.2), but it was given back to Perdikkas shortly after (Thuc. 2.29.6). Furthermore, Therme was one of the three places occupied by the pretender to the throne, Pausanias, in 368 (Aeschin. 2.27). Some Archaic coins attributed by Head, *HN*² 203 to Therme (cf. Zahrnt (1971) 188 n. 196) have recently been reattributed to Argilos (Liampi (1994)).

Therme is believed by archaeologists to have been located near modern Karabournaki; Rhomaios examined the site in the 1920s and found C5 sherds of Rhodian, Corinthian and Attic pottery, as well as seventeen graves of unknown date (they had been robbed several times) and traces of habitation, also undated, along with prehistoric Makedonian pottery. Rhomaios assumed that the site was inhabited from C8l to C5s (*BCH* 54 (1930) 497–98). More recent investigations have confirmed Rhomaios' findings: remains of a settlement have been found during excavations, and the latest phase seems datable to c.500. The pottery, both imported and local, dates from C8 to C5. Remains of C6l brick and stone walls of houses have been found (Tiverios *et al.* (1994)). In 1998 the remains of a semi-subterranean dwelling were found; similar buildings have been found in other areas on the fringes of the Greek world, e.g. the Euxine (Tiverios *et al.* (1998) 225). For the sherds of the Mycenaean period and later, see Tiverios (1987). About 150 m to the east of the settlement a cemetery has been located, and so far twenty-eight graves dating to C6–C5 have been excavated (Pandermali and Trakosopoulou (1994)).

Therme was called a πόλις Ἑλλήνων Θρηάκων by Hecat. fr. 146 = Steph. Byz. 679.5–6 (cf. Theopomp. fr. 140: Θράκιον . . . πόλισμα (*apud* Harp.)), even though it seems to have belonged to Makedonia all the time, except in 432/1. Perhaps it was originally a mixed settlement that was taken over by the Makedonians at an early period (see Hatzopoulos (1996a) 107). Therme is also mentioned by Ps.-Skylax 66, who specifically calls it a *polis* (on the distinction between *polis* and *polis Hellenis* in Ps.-Skylax, see Flensted-Jensen and Hansen (1996) 151; for a different interpretation, see Hatzopoulos (1996a) 473).

2. Bisaltia

553. Amphipolis (Amphipolites) Map 51. Lat. 40.50, long. 23.50. Size of territory: ? Type: A:a. The toponym is Ἀμφίπολις, ἡ (Thuc. 1.106.4; Tod 150.5 (357)). The city-ethnic is Ἀμφιπολίτης (Thuc. 4.104.1; Tod 111.20 (380s)). Amphipolis is called a *polis* both in the urban sense (Thuc. 4.102.4; Isoc. 5.2; Dem. 12.22; Aeschin. 2.27–28) and in the political sense (Thuc. 4.106.3; Dem. 1.5, 8). The urban centre is called *polisma* at Thuc. 4.103.5. The territory of Amphipolis (called *chora*) is mentioned at Aeschin. 2.27 and Tod 150.4 (called *ge*). The collective city-ethnic is used internally on C5l coins (*infra*), and in a decree of 357 (Tod 150.4–5), and externally in a treaty between the Chalkidians and Amyntas (Tod 111.20). For the individual and external

use, see Ἐπισθένης Ἀμφιπολίτης, the commander of the peltasts of the Ten Thousand (Xen. *An.* 1.10.7) and the Athenian C4 honorific decree for an Amphipolitan (*IG* 11² 421.5).

The site of Amphipolis was originally an Edonian settlement called Ἐννέα Ὀδοί. In 497 Aristagoras of Miletos tried in vain to settle the place (Thuc. 4.102.2; Diod. 12.68.3), and in 465 the Athenians made another abortive attempt to settle it with 10,000 colonists (Thuc. 1.100.3, 4.102.2; Diod. 12.68.2; schol. Aeschin. 2.34). They did not succeed until 437/6, when they founded a colony just south of Ennea Hodoi and called it Amphipolis (Thuc. 4.102.3; Diod. 12.68.2; schol. Aeschin. 2.34). Hagnon was the oecist. Later Brasidas was celebrated as the oecist of Amphipolis (Thuc. 5.11.1, alluded to at Dem. 12.21; see Malkin (1987) 228–32, (1994) 136–37).

The population of Amphipolis consisted of Greeks from different areas of Greece (Thuc. 4.106.1), among them a group of Argilians (Thuc. 4.103.3) and one of Athenians (Diod. 12.32.2). Apparently some additional Chalkidian settlers (ἔπιοικοι), led by a certain Kleotimos, caused a *stasis* and had the majority of the population expelled (Arist. *Pol.* 1303^b2–3, 1306^a2). This may be connected with the fact that the Chalkidians held Amphipolis c.363 (Dem. 23.149; see Zahrnt (1971) 101). Expulsion of Athenians is also mentioned at Dem. 12.21.

In 424 Brasidas marched against Amphipolis (Thuc. 4.103; Diod. 12.68.3); his arrival triggered a *stasis* between a ruling pro-Athenian faction and an anti-Athenian faction of “traitors”; Brasidas won the town over by an agreement whereby the pro-Athenian faction was allowed to leave (Thuc. 4.103.5–106.3). For the history of Amphipolis in the 420s, see Hornblower (1996) 319–42, 435–57. Amphipolis was evidently an enemy of Makedonia and the Chalkidians c.393 (Tod 111.19). In 370/69 the Spartans and other Greeks, along with Amyntas, voted that Amphipolis should be given back to the Athenians (Aeschin. 2.32), who accordingly sent Iphikrates to Amphipolis in the following year in order to take the city (Aeschin. 2.27), but he did not succeed. In the following years the Athenians made several attempts to take Amphipolis (see Papastavru (1936) 24–31 with refs.). In 360 Philip withdrew the Makedonian garrison placed in Amphipolis by Perdikkas III and left the city *autonomos* (Diod. 16.3.3). He abandoned his claim to Amphipolis (Diod. 16.4.1), a measure which the Athenians later took to be a promise to restore Amphipolis to them (Dem. 2.6, 23.116). However, in 357 he laid siege to Amphipolis (Dem. 23.116) and captured the city (Dem. 12.21; Diod. 16.8.2).

Philon and Stratokles were exiled from Amphipolis in 357/6 (Tod 150 = *Syll.*³ 194). Stratokles is probably the envoy who, along with Hierax (see Theopomp. fr. 42), was sent to Athens in 357 to request them to take over Amphipolis (Dem. 1.8). For the history of Amphipolis 395–357, see Hammond and Griffith (1979) 230–42.

Being originally an Athenian foundation, Amphipolis probably had a democratic constitution. Thuc. 4.104.4 mentions a *strategos* named Eukles who functioned as *phylax tou chorion*. There is no evidence that the constitution changed after Brasidas' conquest in 424, although he appointed Klearidas as governor (*archon*) of the city (Thuc. 4.132.3). However, when Kleotimos brought in the Chalkidian settlers, Amphipolis seems to have been ruled by the wealthy (*euporoi*), and in order to obtain tyrannic powers, he attempted a *coup d'état* (Arist. *Pol.* 1305^b 40–1306^a 4). Whether or not he succeeded is unknown, but a decree (*psephisma*) of 357 was passed by the *demos* (ἔδοξεν τῶν δῆμων), which points to a democratic constitution (Tod 150 = *Syll.*³ 194). C4 deeds of sale show that an *epistates* served as eponymous official (*SEG* 41 562.8), and Tod 150.17 (357) refers to a board of *prostatai*. For constitution and officials, see also Papastavru (1936) 47–50. A priest of Asklepios is mentioned in several C4m deeds of sale (Hatzopoulos (1991) = *SEG* 41 555–66). A man from Amphipolis was granted *proxenia* at Kos in C4l (*Iscr. Cos* ED 190). Amphipolis is recorded in the Epidaurian catalogue of *theorodokoi* of 360/59 (*IG* IV².1 94.1.b.18) as well as in the Nemean of 323/2 (*SEG* 36 331B.17).

The urban centre of Amphipolis has been excavated, but, apart from the fortifications, most of the remains are Hellenistic or later (D. Lazaridis (1993)).

Thucydides mentions the agora (5.11.1) and the city wall of Amphipolis (4.102.4, 104.1), along with the gates (4.104.4). There were houses in the *proasteion* (Thuc. 4.103.5; Diod. 12.68.1). The city walls have been excavated. They are built in isodomic or pseudo-isodomic masonry and stand to a height of 7.25 m in some places (AAA 8.1 (1975) 56–76). The circumference of the city wall is 7,450 m, and that of the acropolis 2,220 m (Lorber (1990) 9; cf. D. Lazaridis (1993) 24–52). The city wall encloses an area of 250 ha, the acropolis wall an area of 37 ha. The *gymnasion* of Amphipolis goes back to C4 (K. Lazaridis (1988), (1989)). There was a monument to Rhesos and a temple for his mother Kleio at Amphipolis (Marsyas, *FGH* 135 fr. 7; see Malkin (1987) 81–84). A temple of Athena is mentioned by Thuc. 5.10.2. A temple of Apollo and Strymon is recorded in *Syll.*³ 194.15. Lorber surveys the archaeological remains ((1990) 7–11) and the cults of Amphipolis (*ibid.* 11–14).

Amphipolis struck silver coins on the Phoenician standard (and rare gold coins on the Attic, c.400) from c.413 to c.357 (Gaebler (1935) 30ff; Head, *HN*² 214ff; *SNG Cop. Macedonia* 37–41) or from 370 to 354 (Lorber (1990) 107). Denominations: tetradrachms, drachms, hemidrachms, tetrobols, triobols and obols. Types: *obv.* head of Apollo; *rev.* race-torch in a raised frame; legend: *ΑΜΦΙΠΟΛΙΤΕΩΝ* or *ΑΜΦΙΠΟΛΙΤΩΝ* (rare). Amphipolis struck bronze coins as well (*SNG Cop. Macedonia* 42–49).

554. Argilos (Argilios) Map 51. Lat. 40.45, long. 23.50. Size of territory: 2. Type: A:a. The toponym is Ἄργυλος (Hdt. 7.115.1) or Ἄρκιλος (*IG* IV².1 94.1.b.17 (359)). The city-ethnic is Ἄργύλιος (*IG* I³ 270.III.21) or Ἄρκί(λιος) (C5e–C4 coins, *infra*). Argilos is called a *polis* both in the urban sense (Hdt. 7.115.1; Thuc. 4.103.4) and in the political sense (Thuc. 4.103.4, 5.18.5; Peace of Nikias). The collective use of the city-ethnic is attested internally in abbreviated form on C5e–C4 coins (*infra*) and externally in the Athenian tribute lists (*IG* I³ 271.II.56). For the individual and external use, see Thuc. 1.132.5 (r467).

In C5 Argilos was considered a colony of Andros (Thuc. 4.103.3). The existence of Argilos is not attested in written sources prior to 480, but if it was an Andrian colony, it may have been founded in C7, since it is generally assumed that Andros established its colonies c.655 (Lauffer (1989) 114, probably on the basis of Eusebius, who gives 655 as the foundation year of Akanthos and Stagiros, *Chron.* 95b).

According to Hdt. 7.115.1, Argilos was located in Bisaltia. In the territory of Argilos, across the river from Amphipolis, was a place called Kerdyllion (Thuc. 5.6.3). A site in the vicinity of Nea Kerdyllia has been identified with this Kerdyllion. Here a section of a Classical circuit wall has been found along with a gate (*ArchDelt* 41 (1986) *Chron.* 177–78). At Vrasna, also in the territory of Argilos, a five-sided *phrourion* with towers has been excavated. The *phrourion* dates to C4 (one coin of Philip II was found inside it), and its perimeter was c.70 m (Adam-Veleni (1992)).

Argilos was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* I³ 259.IV.22) to 429/8 (*IG* I³ 282.II.9) a total of twelve times. In 454/3 it paid the enormous sum of 10½ tal. (*IG* I³ 259.IV.22). Some scholars find it unbelievable that Argilos could have paid that much and want to correct the amount to 1½ tal. (Lewis in *IG* I³), while others think that the amount can be explained (Isaac (1986) 53–54). From 446/5 (*IG* I³ 266.II.30) to 438/7 (*IG* I³ 274.VI.15) Argilos paid 1 tal., and after that

1,000 dr. (*IG* 1³ 279.11.54). Argilos is absent from the full panel of 432/1 (*IG* 1³ 280.11.37–67), which may mean that it took part in the revolt of 432, but it is listed in 430/29 (*IG* 1³ 281.11.24) and 429/8 (*IG* 1³ 282.11.9). It was probably assessed in 425/4 (*IG* 1³ 71.111.177: [Ἀργίλι(λοι)]).

Argilos followed Brasidas (Thuc. 4.103.4), along with the two other Andrian colonies in the area (*sc.* Akanthos (no. 559) and Stagiros (no. 613); Sane (no. 600), the fourth Andrian colony, remained a loyal member of the Delian League). In the Peace of Nikias it is stipulated that Argilos be *autonomos* and liable to the tribute assessed by Aristides (Thuc. 5.18.5).

Argilos is recorded in the Epidaurian list of *theorodokoi* of c.359 (*IG* 1².1 94.1.b.17).

There was an Aristotelian *politeia* of the Argilians (no. 23 = Heracl. Lemb. 75). A C4 deed of sale shows that an *epistates* served as eponymous official (Hatzopoulos (1991) 14–19 = *SEG* 24 583.1–2, supposedly from Argilos: Hatzopoulos (1996a) 192).

Apparently a group of Argilians resided in Amphipolis and acquired citizenship there (Thuc. 4.103.4). Thucydides uses the verb *ἐμπολιτεύω* about them, but it is uncertain whether this means that they had retained their civil rights in Argilos or whether they had lost their citizenship in Argilos when they settled in Amphipolis (Hornblower (1996) 329).

Argilos was situated on a hill about 4 km west of the Strymon estuary. On the southern side of the hill there were houses, of which the earliest date from C6m, and on the eastern side a cemetery. Parts of the city wall have been found near the coast. The earliest finds are sherds dated to C7m. According to the excavators, the city flourished in C6–C5, but it lost some of its territory to Amphipolis when that city was founded in 437, and Argilos had ceased to exist by C3. They also claim that Argilos was destroyed by Philip and that only the acropolis was inhabited after that. A large square building of the Hellenistic period may be the seat of some member of the royal Makedonian retinue (Bonias and Perrault (1996)). East of the settlement three graves have been found, dating from C4/C3e.

Some late Archaic coins, formerly attributed to Therme (Head, *HN*² 203), have recently been attributed to Argilos (Liampi (1994)). Argilos struck silver coins in C5e and bronze coins in C4. (1) Silver: denominations: tetrobols, obols and hemiobols; *obv.* forepart of Pegasus; *rev.* incuse square; legend: *APKI* (*SNG Cop. Macedonia* 343–45). (2) Bronze: *obv.* head of Apollo; *rev.* *APKI* between bow and arrow (Liampi (1994) 29–31).

555. Traïlos (Traïlios) Map 51. Lat. 40.50, long. 23.45. Size of territory: ? Type: B:β. The toponym is *Τραΐλιος* (*IG* 1³ 77.v.25) or *Τράγυλα* (*IG* 1².1 94.1.b.20 (359)) or, later, *Τράγυλος* (Steph. Byz. 630.11); see Masson (1995). The city-ethnic is *Τραγύλιος* (*Syll.*³ 239B.35 (364/3)) or, on C5 coins, *Τραΐλιος* (*infra*). The only source in which Traïlos is called a *polis* is Steph. Byz. 630.11, but *polis* status in the Archaic and Classical periods is indicated by membership of the Delian League, the C5–C4 mint, and the appointment of a *theorodokos* in C4m (*infra*). The collective city-ethnic is used internally on coins (*infra*). The external individual use of the city-ethnic is found in *CID* II 4.1.35 (360). Traïlos was the home town of the C4 mythographer Asklepiades ((*FGrHist* 12) T1 = Steph. Byz. 630.12–13).

Traïlos has been identified with the site at modern Aidonichori, c.12 km north-west of Amphipolis. A C6l–C4m cemetery has been found, along with a large C4s–C3e building (Nikolaïdou-Patera (1989), (1990)). See also Isaac ((1986) 5–6), who summarises the result of the excavations carried out in 1971, and Koukouli-Chrysanthaki (1983).

Traïlos may have been a member of the Delian League. It was assessed at 1 tal. in 422/1 (*IG* 1³ 77.v.25), but it may also have been assessed in 425/4 (*IG* 1³ 71.iv.112—the toponym is restored, but the amount (1 tal.) is legible).

Traïlos is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* 1².1 94.1.b.20).

Traïlos struck silver coins on the Phoenician standard in C5 and bronze coins in C4f. Denomination: hemiobol. Types: *obv.* corn-ear, or bunch of grapes, or head of Hermes; *rev.* incuse square with *TPAI*, or *TPAIΛION* around a rose (Head, *HN*² 217; Gaebler (1935) 131–32; Robinson and Clement (1938); *SNG Cop. Macedonia* 445–53).

The onomastic material from Traïlos does not support the view that it was originally a barbarian town (Hatzopoulos (1996a) 214, *pace*, e.g., Hammond and Griffith (1979) 121 n. 5).

3. The Chalkidic Peninsula

556. Aige (Aigantios) Map 51. Lat. 40.00, long. 23.40. Size of territory: 2. Type: A:α. The toponym is *Ἀϊγή* (Hdt. 7.123.1). The city-ethnic is *Ἀϊγάντιος* (*IG* 1³ 269.111.5). The only source in which Aige is explicitly called a *polis* is Steph. Byz. 38.9–39.1; but at 7.123.1 Herodotos uses the pronoun *αὐταί* about Aige and seven other *poleis* on Pallene, and it is an almost certain inference that the noun to be supplied is *πόλεις*. The collective city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 269.111.5).

Hdt. 7.123.1 locates Aige on Pallene, between Neapolis and Therambos. According to Hdt. 7.123.1, Xerxes received ships and troops from Aige in 480, which indicates that it may have been a *polis* at that time. Aige was probably one of Poteidaia's allies when that city fought against the Persians in 479 (Hdt. 8.128). Aige was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.III.17) to 415/14 (*IG* 1³ 290.III.9) a total of eighteen times, paying either 2,000 dr. (*IG* 1³ 259.III.17) or 3,000 dr. (*IG* 1³ 262.I.6). After C5 Aige is not heard of. It is possible that it was absorbed by one of its larger neighbours.

557. Aineia (Aineiates) Map 50. Lat. 40.30, long. 22.50. Size of territory: 1 or 2. Type: A:a. The toponym is *Αἰνεία* (Hdt. 7.123.2) or *Αἰνεά* (Perlman (2000) 177–78, E.1b.10 (360/59)). The city-ethnic is *Αἰνιάτης* (*IG* 1³ 262.IV.12) or *Αἰνεάτης* (*IG* 1³ 278.v.18), or *Αἰνειάτης* (*IG* 1³ 281.II.20), all attested in the Athenian tribute lists. On C5/C4f coins the variants *AINEIATΩN*, *AINEHTΩN* and *AINEHTΩN* are found (Gaebler (1935) 22).

Aineia is called a <*polis*> *Hellenis* in the urban sense by Ps.-Skylax 66 (cf. Flensted-Jensen and Hansen (1996) 142). Hdt. 7.123.2–3 calls it a *polis* mainly in the urban, but probably also in the political sense (cf. Hansen (2000a) 175–76). The collective use of the city-ethnic is attested internally on coins of C4 (Gaebler (1935) 22), and externally on the Athenian tribute lists (e.g. *IG* 1³ 278.v.18).

According to Hdt. 7.123.2, Aineia was a *polis* in Krousis which in 480 provided Xerxes with troops. Aineia was a member of the Delian League. It belonged to the Thracian district and is registered in the tribute lists from 451/50 (*IG* 1³ 262.IV.12) to 429/8 (*IG* 1³ 282.II.24) a total of sixteen times, once completely restored, paying 3 tal. (*IG* 1³ 266.II.34) until 430/29, when the tribute was lowered to 1,000 dr. (*IG* 1³ 281.II.20). Aineia is recorded in the Epidaurian list of *theorodokoi* of 360/59 (Perlman (2000) 177–78, E.1b.10). Aineia existed down to the time of Kassandros, when it was destroyed together with twenty-five other settlements, all synoecised into Thessalonike (Dion. Hal. *Ant. Rom.* 1.49.4; Strabo 7 fr. 21, 24). Livy, however, mentions Aineia three times in a C2 context (40.4.9; 45.27.4, 30.4), and it is recorded in the list of Delphic *theorodokoi* of 230–220 (*BCH* 45 (1921) 18, III.75).

The urban centre of Aineia must have been at modern Nea Michaniona, where there are abundant sherds and other remains of C5–C4 (Zahrnt (1971) 143). A rescue excavation has revealed twenty graves, all except one dating to

C4f, the exception being a C5 burial; between 1979 and 1982 three burial mounds were excavated; they belong to a well-known cemetery of the Archaic and Classical periods (Tsigarida (1994)).

Aineia struck silver coins on the Euboic standard from C6l to c.424, and on the Phoenician standard from c.424 to c.350. Denominations: tetradrachms, tetrobols and diobols. Types: *obv.* Aineias, Anchises, Kreusa and Askanos; legend: *AINEΑΣ*; *rev.* incuse square. Later coins have *obv.* head of Athena, or head of Aineias; *rev.* bull; legend: *AINEΑΣ* or *AINE(I)ATΩN*, or *AINEHTΩN*. In C4f Aineia struck bronze coins with the same types and legends (Head, *HN*² 214; Gaebler (1935) 20–22; *SNG Cop. Macedonia* 33–35).

Aineia was said to have been founded by Aineias. C6l coins depict Aineias carrying Anchises on his shoulders, behind Kreusa, who carries a small girl on her shoulders (Gaebler (1935) 20; cf. Kraay (1976) 134 with no. 469). The legend on the coin is, remarkably, *AINEΑΣ*, interpreted as the name of the city Aineia in the genitive (Gaebler (1935) 21), although it could also be the name Aineias in the nominative. Dion. Hal. *Ant. Rom.* 1.47.6, 48.1, 49.4 also credits Aineias with the foundation of Aineia, and he evidently has this piece of information from Hellanikos (*FGrHist* 4) fr. 31.

558. Airoleion (Airolites) Map 50. Lat. 40.20, long. 23.10: Airoleion was situated in Bottike (*infra*), but the precise location of the town is unknown; *Barr.*'s recording of Airoleion south of Spartolos (no. 612) and north of Pleume (no. 595) is just a guess; see Zahrnt (1971) 145. Size of territory: ? Type: A:a? The toponym is *ἡιόλειον* (*IG* 1³ 76.53 (c.422) = Tod 68; restored: *ἡιό[λειον]*—though *ἡιο[λίται]* is equally possible) or *Αἰόλειον* (Theopomp. fr. 144, *apud* Steph. Byz. 53.2). The city-ethnic is *Αἰολίτης* (*IG* 1³ 278.vI.7). Airoleion is listed after the heading *αἴδε πόλεις* in a treaty of c.422 (*IG* 1³ 76.44, 53), and in the Athenian tribute lists the city-ethnic occurs twice after the heading *πόλεις αὐτὰι φόρον ταξάμεναι* (*IG* 1³ 278.vI.5–7, 279.II.76–77 and 84) and once after the heading *ταῖσδε (sc. πόλεσιν) ἔταξαν οἱ τάκται* (*IG* 1³ 282.II.34–36, 42); in all four cases *polis* is used in the political sense. At Theopomp. fr. 144 Airoleion is attested as a *polis* in the political and urban senses simultaneously. The collective city-ethnic is used externally in the Athenian tribute lists (*IG* 1³ 278.vI.7).

Airoleion was a Bottiaian *polis* (Flensted-Jensen (1995) 117–18), but its exact location is unknown. C.422 the Bottiaians entered into an alliance with the Athenians (Tod 68 = *IG* 1³ 76). The same inscription seems to show that the Bottiaians had formed a confederacy at that time (Flensted-

Jensen (1995) 126–28). If they did, Aioleion must have been one of the members (cf. *IG* 1³ 76.53).

Aioleion was a member of the Delian League, and it is recorded in the tribute lists three times, in 434/3 (*IG* 1³ 278.vi.7), 433/2 (*IG* 1³ 279.ii.84) and 429/8 (*IG* 1³ 282.ii.42), paying 500 dr. in all three years. It is absent from the full panel of 432/1 (*IG* 1³ 280.ii.37–67) but was assessed for tribute in 422/1 (*IG* 1³ 77.v.17) (500 dr.). In C4 Aioleion may have been a member of the Chalkidian Federation (Flensted-Jensen (1995) 117).

559. Akanthos (Akanthios) Map 51. Lat. 40.25, long. 23.50. Size of territory: 3. Type: A:a. The toponym is Ἀκανθος, ἡ (Thuc. 4.114.3; *IG* 1³ 94.i.b.22 (360/59)). The city-ethnic is Ἀκάνθιος (Xen. *Hell.* 5.2.11; *IG* 1³ 266.ii.29). Akanthos is called a *polis* both in the urban sense (Ps.-Skylax 66; cf. Flensted-Jensen and Hansen (1996) 142) and in the political sense (Thuc. 4.85.6, 5.18.5; Peace of Nikias). At Thuc. 5.18.6: Peace of Nikias, the territorial sense is a connotation, and at Xen. *Hell.* 5.2.11 *polis* is used in the urban and political senses combined (Hansen (2000a) 210). The collective city-ethnic is used internally on C5 coins (*infra*) and externally in the Athenian tribute lists (*IG* 1³ 266.ii.29). The individual city-ethnic is used externally by Xen. *Hell.* 5.2.12. *Patris* is found in Amphis fr. 36, KA.

Munro (1896) 313 describes a fragment of an undated inscription which is probably a boundary stone; only *OP ΔΗ ΑΚ* is left; it could be restored ὄρος δήμου Ἀκάνθιων, *pace* CIG add. 2007k, where it is interpreted ὄρος Δημητρὸς Ἀκανθίας.

Akanthos may have been a colony of Andros (Thuc. 4.84.1; Strabo 7 fr. 31; Ps.-Skymnos 647), probably founded in C7e (Panayotou (1991) 127). Although one C5e graffito found at Akanthos was inscribed in the Andrian alphabet (*SEG* 36 580), a preliminary examination of the grave material from Akanthos does not in itself indicate that Akanthos was an Andrian colony (H. Trakosopoulou *per litt.*). The first time Akanthos is mentioned in a literary source is in connection with Xerxes' march in 480; from Hdt. 7.116 it appears that Akanthos entertained Xerxes and his army in 480. Herodotos does not call Akanthos a *polis*, but Xerxes declared that there existed *xenia* between Akanthos and himself, which indicates status as a political unit.

Akanthos was a member of the Delian League. It belonged to the Thracian district and is recorded from 450/49 (*IG* 1³ 263.iii.34) to 429/8 (*IG* 1³ 282.ii.13) a total of eleven times, paying 5 tal. in 450/49 (*IG* 1³ 263.iii.34) (amount not implausibly restored) and thereafter 3 tal. (*IG*

1³ 266.ii.29). In 424 Brasidas made an expedition against Akanthos (Thuc. 4.84). His arrival triggered a *stasis* between two opposing factions: Chalkidian supporters of Brasidas and the *demos* (Thuc. 4.84.2). The Akanthians voted to revolt against the Athenians and make a treaty with Brasidas (Thuc. 4.88.1; cf. *Syll.* 3 79). According to Diod. 12.67.2, Akanthos was the first town that Brasidas persuaded to break away from Athens. In 423 Akanthos sent troops into Lynkestis with Brasidas (Thuc. 4.123.1). In the Peace of Nikias it is stipulated that Akanthos be *autonomos* and pay the tribute as fixed by Aristides (Thuc. 5.18.5). The Akanthians were enemies of the Chalkidians in the 380s, according to the second of the treaties between Amyntas III and the Chalkidians (*Syll.* 3 135; Zahrnt (1971) 122ff). That Akanthos was not a member of the Chalkidian Federation is also clear from Xenophon's description at *Hell.* 5.2.11 of how in 382 Akanthos sent envoys to Sparta to obtain aid from Sparta in order to avoid being incorporated into the expanding Chalkidian Federation. It is highly probable that Ass(era) (no. 564), Akanthos' nearest neighbour to the west, was now a member of the Chalkidian Federation (see *infra*). Apparently, Akanthos was a not unimportant town in 382: Xenophon calls Akanthos and Apollonia "the largest of the *poleis* around Olynthos", and emphasises that the Akanthians still had their *patrioi nomoi* and called themselves *autopolitai* (*Hell.* 5.2.14).

About 349 Akanthos sent envoys to Athens to ask for help against Philip (*IG* 1² 210 + 259; Schweigert (1937) 329–32). Akanthos was not one of the *poleis* in the Chalkidic peninsula destroyed by Philip. Not only does it appear on the C3l Delphic list of *theorodokoi* (*BCH* 45 (1921) iii.86), but it is also mentioned by Livy (31.45.16 (r200)), and the cemetery at Akanthos was in use continuously from the Archaic through to the Roman period.

Since the treaty with Brasidas in 424 was decided by a secret vote (Thuc. 4.88.1) taken among the *plethos* (Thuc. 4.84.2), Akanthos probably had a democratic constitution, at least at the time of the Peloponnesian War (Grayson (1972) 64). Akanthos is recorded in the Epidaurian list of *theorodokoi* in 360/59 (*IG* 1² 94.i.b.22). The Akanthians had a treasury in Delphi erected in C6 and rebuilt in 423 (*Syll.* 3 79; Plut. *Lys.* 1.1; Bommelaer (1991) no. 303).

The acropolis of Akanthos was situated on a hill overlooking the sea and the cemetery, which was situated near the coast. The site is partly covered by modern Ierissos. On the acropolis not much has been found: there are remains of walls believed to be the walls surrounding the acropolis. They were built in two phases; the oldest part is on the east

side of the hill. A stretch of c.30 m, c.8 m in height, has been found. The next phase is either late Classical or early Hellenistic. On the south part of the hill there are remains of a square tower or possibly a gate (Trakosopoulou-Salakidou (1996) 299–300). On top of the hill are the remains of a temple, which is contemporary with the oldest part of the wall, i.e. probably early Classical (ibid. 301–2). Remains of one other, early Hellenistic, building have been found: the quality and decoration of the building suggest that it may have been a *prytaneion* (ArchDelt 39 (1984) Chron. 223). The cemetery has hitherto yielded more than 9,000 graves, covering the period C71 to the third century AD. The majority of the graves are from the Classical period (Trakosopoulou-Salakidou (1996) 297ff). In 1998 some 400 graves which had been uncovered in 1979 were published (Kaltsas (1998)). The area covered by the cemetery is estimated to be at least 60 km². The earliest pottery is C71 Ionian pottery along with pottery from Aiolis and the islands along the coast of Asia Minor. From C6m Attic pottery is the most common type, Corinthian the second most common. Of interest are three sherds from Panathenaic amphoras, showing that Akanthians had participated in and been victorious in the Panathenaic Games. Furthermore, a C5 bronze strigil inscribed with ΔΕΜΟΣΙΗ has been found. It has been suggested that the strigil “belonged to the city of Akanthos, and had probably been registered in the gymnasium under the number five” (Macedonians (1994) 76 pl. 9).

Akanthos struck silver coins on the Euboic standard from c.500 (or perhaps already from c.530; see Desneux (1949)) to c.424 and on the Phoenician standard from c.424 to c.350. Denominations: tetradrachms, tetrobols, triobols, diobols and obols. (1) Silver coins: *obv.* lion and bull, or bull, or lion, or head of Athena; legend: sometimes magistrate’s name; *rev.* quadripartite incuse square; legend: ΑΚΑΝΘΙΟΝ. (2) Silver coins c.392 to c.379: *obv.* head of Apollo; *rev.* quadripartite incuse square; legend: ΑΚΑΝΘΙΟΝ. (3) Bronze coins, all after c.400: *obv.* head of Athena; *rev.* quadripartite square; legend: ΑΚΑΝ (Head, HN² 204–5; Gaebler (1935) 23–29; Lorber (1990) 72–73; SNG Cop. Macedonia 1–24).

560. Akrothooi (Akrothoios) Map 51. Lat. 40.10, long. 24.20 (but see Zahrnt (1971) 150–51). Size of territory: 2. Type: A:β. The toponym is Ἀκρόθωον (Hdt. 7.22.3) or Ἀκρόθωοι (Thuc. 4.109.3). Strabo 7 fr. 35 and Steph. Byz. 63.13 have Ἀκρόθωοι. The city-ethnic is Ἀκρόθωιος (IG¹³ 77.v.33–34) or Ἀκροθώτης (Ps.-Skylax 66). Hdt. 7.22.3 and Ps.-Skylax 66 (cf. Flensted-Jensen and Hansen (1996) 142) call Akrothooi a *polis* in the urban sense, whereas Thuc.

4.109.3–5 probably uses *polis* in the political sense, using *polisma* about the settlement. The collective use of the city-ethnic is attested internally in a C2 proxy decree passed by the Akrothonians’ *boule* and *demos* (SEG 46 710) and externally in the Athenian assessment decree of 422 (*infra*).

Akrothooi was located on Athos (Hdt. 7.22.3; Thuc. 4.109.3). It was probably a member of the Delian League, because it revolted from Athens and joined Brasidas in 423 (Thuc. 4.109.4), but it never occurs in the tribute lists, only in the assessment decree of 422/1 (IG¹³ 77.v.33–34).

Strabo (7 fr. 33, 35) says that the five *poleis* on Athos were settled by Pelasgians from Lemnos. According to Thuc. 4.109.3–4, Akrothooi had a mixed (i.e. barbarian–Hellenic) bilingual population, but about a century later it is called a <*polis*> *Hellenis* by Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 151).

561. Alapta (Alaptēs) Unlocated. Type: A:a. The toponym is Ἀλαπτα (Ps.-Skylax 66). The city-ethnic is Ἀλάπτης (Galen. *Ling. Hipp.* 19.74). Alapta is mentioned by Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 142), who calls it a <*polis*> *Hellenis*. The only other source to mention Alapta is Galenos, who uses the ethnic, but calls Alapta a *chorion* in Thrace.

562. Anthemous (Anthemountios) Map 50. Lat. 40.25, long. 23.45. Size of territory: ? Type: C:a? The toponym is Ἄνθεμοῦς (Aeschin. 2.27), ὄ (Thuc. 2.99.6) or ἦ (Dem. 6.20). The city-ethnic is Ἄνθεμούντιος (Harp. A143) or Ἄνθεμούσιος (Steph. Byz. 96.8; cf. Arr. *Anab.* 2.9.3). Anthemous is classified as a *polis* in late lexicographers only: viz. Harp. A143; Steph. Byz. 96.7; *Suda* A2491; and Hsch. A5118. But in Aeschin. 2.27 Anthemous is juxtaposed with Therme and Strepsa, both of which were *poleis*: ἐλληφότος δὲ Ἄνθεμόντα καὶ Θέρμαν καὶ Στρέψαν καὶ ἄλλ’ ἄττα χωρία (sc. Πανσάνιου). For *chorion* used about a *polis*, see Hansen (1995) 44 n. 167. Thus, on analogy with Therme and Strepsa, Anthemous may have been a Classical *polis*.

Hatzopoulos and Loukopoulou (1987) 59 n. 155 locate Anthemous near the church of Ag. Paraskevi 3.5 km to the south of modern Galatista (cf. Wace (1913–14); Edson (1955) 171–72). At the site near Galatista a number of late inscriptions (the earliest being from c.180) have been found, among them two decrees and an ephebic list (Hatzopoulos and Loukopoulou (1987) 34–67).

Hdt. 5.94.1 and Thuc. 2.99.6, 100.4 both know Anthemous, but clearly as a district of Makedonia. From Aeschin. 2.27 (*χωρίον*) it appears that Anthemous was an urban centre (or perhaps a fortress). In C4 Anthemous was

fought over by the Makedonians and the Chalkidians, and belonged to the Chalkidians at least once (Dem. 6.20; Diod. 14.92.3 (r393), 15.19.2 (r383)). Anthemous provided Alexander with an *ile* (Arr. *Anab.* 2.9.3). The sources seem to indicate that Anthemous was originally a district which belonged to the Makedonian king, and that the town Anthemous emerged during C4.

563. Aphytis (Aphytaios) Map 50. Lat. 40.05, long. 23.30. Size of territory: 2. Type: A:a. The toponym is Ἀφυτις, ἡ (IG IV².1 94.I.b.24 (360/59); Xen. *Hell.* 5.3.19; Paus. 3.18.3), gen. -ιος (Thuc. 1.64.2), -εως (Theopomp. fr. 141). Steph. Byz. (151.1) gives Ἀφύτη ἢ Ἀφυτις ἢ Ἀφυτος. The city-ethnic is Ἀφυτᾶϊος (IG I³ 281.II.10).

In Ps.-Skylax 66 Aphytis is one of the toponyms listed after the heading πόλεις αἰδε ἐν τῇ Παλλήνῃ Ἑλληνίδες, where *polis* is used in the urban sense. At 7.123.1 Herodotos uses the pronoun αὐταὶ about Aphytis and seven other *poleis* on Pallene, and it is an almost certain inference that the noun to be supplied is πόλεις. For *polis* in the political sense, see Arist. *Pol.* 1319^a10 and 14, where Aphytis is listed as one of two examples after the heading ἐν πολλαῖς πόλεσι νενομοθετημένον. The collective city-ethnic is used externally in the Athenian tribute lists (IG I³ 281.II.10), and internally on coins (*infra*). For the individual and external use of the city-ethnic, see IG I³ 1032.vI.83, 99.

According to Hdt. 7.123, Aphytis was located on Pallene between Poteidaia and Neapolis (cf. Thuc. 1.64.2; Strabo 7 fr. 27), i.e. at modern Athytos. Arist. *Pol.* 1319^a15–16 states that the Aphytaians had a small territory even though the population was large.

Aphytis supplied Xerxes with troops and ships in 480, which indicates that at that time it was a *polis* in the political sense (Hdt. 7.123.1). Aphytis was a member of the Delian League and seems to have been a loyal member for the whole period: it belonged to the Thracian district and is recorded from 452/1 (IG I³ 261.I.2); it is present in the full panel of 430/29 (IG I³ 281.II.10) and also appears on the last list of 415/14 (IG I³ 290.III.5). It appears a total of sixteen times, once completely restored, paying 3 tal. from 452/1 (IG I³ 261.I.2) to 447/6 (IG I³ 265.I.24), 1 tal. from 446/5 (IG I³ 266.II.22) to 440/39 (IG I³ 272.I.47), and 3 tal. again from 435/4 (IG I³ 277.V.14) to 429/8 (IG I³ 282.II.11). It was assessed in 425/4 (IG I³ 71.III.168). In an area of general rebellion, Aphytis remained a loyal Athenian ally: it served as an Athenian base in 432 (Thuc. 1.64.2), and it was also rewarded for its loyalty: an Athenian decree (IG I³ 62 (c.428/7)) granted Aphytis the privilege of importing a certain amount

of grain. It appears from the inscription that there were (Athenian?) *archontes* in Aphytis (Meritt (1944) 211–29), and that envoys were sent from Aphytis to Athens c.428 (IG I³ 63.8). Aphytis was besieged, but not conquered, by Lysander in 405/4 (Paus. 3.18.3). The continued importance of Aphytis is apparent from the fact that it is recorded in the Epidaurian list of *theorodokoi* (IG IV².1 94.I.b.24 (360/59)). Aphytis was probably synoecised into Kassandreia (Hatzopoulos (1996a) 121, 199–200, 255).

There was an Aristotelian *politeia* of the Aphytaians (no. 29 = Heracl. Lemb. 72). There was a census requirement for citizenship in C4s, but it was so low that it was passed even by the poor (Arist. *Pol.* 1319^a14–19).

There was a temple of Dionysos at Aphytis (Xen. *Hell.* 5.3.19), and according to Paus. 3.18.3 the Aphytaians worshipped Ammon, whose head adorns their coins (*infra*). Excavations have revealed the ruins of a C4s temple, presumably of Zeus Ammon (AAA 4 (1971) 356–67; BCH 96 (1972) 730, 736). Furthermore, south of the temple was found a sanctuary of Dionysos (an inscribed C5 sherd reads Δι|ονυσο (SEG 30 586)) and the Nymphs, inside which were sherds from C8s onwards.

For the archaeological remains at modern Athytos, dating from C8s to the Classical period, see *ArchDelt* 32 (1977) *Chron.* 202; *ArchDelt* 34 (1979) *Chron.* 279. Parts of a defence wall from the Classical period have been found (*ArchDelt* 32 (1977) *Chron.* 202 with photo). Inside the sanctuary of Dionysos were found C8s pottery, which indicates that Aphytis was founded in C8s (AAA 4 (1971) 356–77). At Nea Kallitheia, 3 km south of Athytos, have been found sherds etc., probably from the Classical period (*ArchDelt* 24 (1969) *Chron.* 312). Twenty-one graves dating from C6m–C5l have been found at Aphytis (Misailidou-Despotidou (2001)).

Aphytis struck coins on the Phoenician standard from C5m (Gaebler (1935) 44–46; Robinson and Clement (1938) 273), or from c.424 (*ArchDelt* 41 (1986) *Chron.* 148) to C4m. Head, however, does not believe that Aphytis struck coins while a member of the Delian League, and dates all coins of Aphytis to the period before 358 (HN² 209–10). (1) Silver, C5; denomination: tetrobols. Types: *obv.* head of Zeus Ammon, or Ares helmeted; *rev.* kantharos, or eagle(s), or linear square with vine; legend: ΑΦΥ or ΑΦΥΤΑΙΟΝ. (2) Bronze, C4f. Types: *obv.* Zeus Ammon, or Apollo Karneios; *rev.* kantharos, or eagle(s); legend: ΑΦΥ or ΑΦΥΤΑΙΩΝ (Head, HN² 209–10; Gaebler (1935) 44–46; SNG Cop. *Macedonia* 123–28).

According to Theopomp. fr. 141 (*apud* Steph. Byz. 698.15), Aphytis founded a place called Chytropolis. Stephanos calls it

a *chorion*. Its location is unknown, but Zahrnt (1971) 254 suggests that it may have been located in the territory of Aphytis.

564. Ass(er)a (Asserites) Map 51. Lat. 40.20, long. 23.50. Size of territory: 2. Type: A:a. The toponym is Ἄσσα (Hdt. 7.122), or Ἄσσηρα, τὰ (Theomp. fr. 147 *apud* Steph. Byz. 136.1). Stephanos Byzantios has two entries: Ἄσσα, πόλις πρὸς τῷ Ἄθῳ. Ἡρόδοτος ἐβδόμῃ (135.18) and Ἄσσηρα, οὐδετέρως, πόλις Χαλκιδέων, Θεόπομπος εἰκοστῇ τετάρτῃ (136.1). Either Assa and Assera are two different places, or Stephanos did not know that Herodotos and Theopompos referred to the same place. The city-ethnic is either *hasserítēs* or *Asserítēs*, both recorded in the Athenian tribute lists (IG I³ 266.II.26 and IG I³ 270.III.16).

At Hdt. 7.122 Ass(er)a is twice called a *polis*, first in the urban sense, but the information that Ass(er)a was one of the *poleis* which supplied Xerxes with troops in 480 indicates that *polis* is used in the political sense as well. Furthermore, he locates Ass(er)a in the bay of Singos; cf. Steph. Byz. 135.18: πόλις πρὸς τῷ Ἄθῳ. The territory of Ass(er)a, Ἄσσηρίτις (some MSS have Ἄσσυρίτις) is mentioned by Arist. *Hist. an.* 519^a15. He says that a river named Ψυχρός ran through the territory, and that the territory was situated ἐν τῇ Χαλκιδικῇ; cf. Steph. Byz. 136.1, who calls Ass(er)a a πόλις Χαλκιδέων, perhaps quoting Theopompos fr. 147. The collective city-ethnic is used externally in the Athenian tribute lists (IG I³ 266.II.26).

Scholars seem to agree that the inhabitants of Ass(er)a were the Asseritans known from the Athenian tribute lists (e.g. Zahrnt (1971) 163). The Asseritans were members of the Delian League: they belonged to the Thracian district and are recorded in the tribute lists from 454/3 (IG I³ 259.V.7–8) to 433/2 (IG I³ 279.II.72) a total of fourteen times. In the first year they paid together with the Olynthians (no. 588) and the Skablaians (no. 607). Thereafter they paid separately. They paid 2,400 dr. (IG I³ 262.III.22) until 438/7, when they paid 3,000 dr. (IG I³ 274.VI.14). Since the Asseritans are not recorded in the tribute lists after 432/1, it may be inferred that they participated in the Revolt of 432, along with several other towns in the area (Thuc. 1.58).

It is not known whether Ass(er)a was also a member of the Chalkidian Federation, but its location, and the fact that Aristotle says that its territory lay ἐν τῇ Χαλκιδικῇ (*supra*), and that Theopompos probably called it πόλις Χαλκιδέων (*supra*), suggest membership of the Chalkidian Federation.

565. Charadrous Map 51. Unlocated. Type: A:β? The toponym is Χαραδρούς (Ps.-Skylax 66). Charadrous is called a *polis* in the urban sense by Ps.-Skylax 66 (Flensted-

Jensen and Hansen (1996) 142), who lists Charadrous between Akrothooi (no. 560) and Olophyxos (no. 587) on Akte. Charadrous is not mentioned in any other source.

566. (Chedrolioi) Map 50. Unlocated. Type: [A]:a? The toponym is not attested, unless the restoration suggested by Hatzopoulos and Loukopoulou (1992) 126–27 is correct (SEG 40 542, comm. to ll. 9–10), *pace* Vokotopoulou (1996) 215). They suggest that Γ[έδ]ρωλον is a “forme macédonienne de Χέδρωλον” (cf. Hatzopoulos (1987) on the development of χ = γ in Macedonia). The city-ethnic is *hedrólios* (IG I³ 264.III.3) or *Xedrólios* (IG I³ 277.VI.25). In 434/3 (IG I³ 278.VI.5–6, 16, completely restored) and 433/2 (IG I³ 279.II.76–77, 88) the Chedrolians are recorded under the heading πόλις αὐταὶ ταχσάμεναι.

The Chedrolians were members of the Delian League. They belonged to the Thracian district and are recorded in the tribute lists for the first time in 448/7 (IG I³ 264.III.3), then in 447/6 (IG I³ 265.II.33), 435/4 (IG I³ 277.VI.25, as ἄτακτοι 434/3 (IG I³ 278.VI.16), and the last time in 433/2 (IG I³ 279.II.88), paying first 500 and later 1,000 dr. Since the Chedrolians are absent from the full panel of 432/1, it may be inferred that they revolted in 432, along with Poteidaia (no. 598), the Chalkidians and the Bottiaians (Thuc. 1.58.2), and thus, that they lived somewhere in the Chalkidic peninsula.

567. Chytropolis (Chytropolitēs) Map 51. Unlocated. Type: C:a. The toponym is Χυρόπολις (Theomp. fr. 141 *apud* Steph. Byz. 698.16–18); the city-ethnic is Χυτροπολίτης (ibid.). According to Stephanos, Chytropolis was called a *chorion* by Theopompos, but Theopompos also mentioned that it was settled (ἀποικισμένον) by Aphytis. Furthermore, he called the inhabitants *Chytropolitai*. It is difficult to determine whether Chytropolis was a *polis*, and if so, where it was located. Zahrnt ((1971) 254) suggests that it was situated within the territory of Aphytis.

568. Dikaia (Dikaiopolites) Map 50. Lat. 40.30, long. 22.55. Size of territory: ? Type: [A]:a. The toponym is Δίκαια (IG I³ 266.II.27; Kraay (1976) no. 392). The city-ethnic is Δικαιοπολίτης (IG I³ 279.II.55–56). The Dikaiopolitai are listed once under the heading *Haíde τὸν πόλεον* in the Athenian tribute lists (IG I³ 282.II.51, 55–56, restored in IG I³ 281.II.31ff) and again under the heading πόλις αἶδε as members of the Second Athenian Naval League (IG II² 43.B.9); in both contexts *polis* is used in the political sense. The collective city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (IG I³ 279.II.55–56).

In the Epidaurian list of *theorodokoi*, Dikaia is listed between Aineia and Poteidaia (*IG* II².1 94.1.b.11 (360/59)), and Pliny mentions it after Therme (*HN* 4.36). It is not, however, mentioned by Herodotos or Ps.-Skylax in their descriptions of the coast of the Chalkidic peninsula, so it may be inferred that Dikaia was situated inland, somewhere in the north-western part of the Chalkidic peninsula; see also Viviers (1987) 194–95.

Dikaia was colonised from Eretria (*IG* I³ 282.11.55–56) and the earliest coins of Dikaia bear Eretrian types (bull/octopus; see Allan (1940) 34). Dikaia was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.1V.19–20) to 429/8 (*IG* I³ 282.11.55–56) a total of sixteen times, once completely restored. It is absent from the full panel of 432/1 (*IG* I³ 280.11.37–67), which may indicate that it participated in the Revolt of 432 (Thuc. 1.58); but it is recorded in the lists of 430/29 and 429/8 after the heading ἀῤε τῶν πόλεων ἀπὸ τὴν τὴν ἀπαρχὴν ἀπήγαγον (*IG* I³ 281.11.35, 282.11.55–56), paying 4 tal. in 454/3 (*IG* I³ 259.1V.19–20) and 5 tal. in 453/2 (*IG* I³ 260.1X.8, ethnic partly restored). In 435/4 it paid 1 tal. (*IG* I³ 277.VI.15–16). In 430/29 and in 429/8, however, it paid the quota only, i.e. 100 dr. In all other years the amount is restored by the editors. Dikaia became a member of the Second Athenian Naval League (*IG* II² 43.B.9; Kahrstedt (1936) 440) and is also recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* IV².1 94.1.b.11).

Dikaia struck silver coins on the Euboic standard from c.500 to c.350. Denominations: tetradrachms, tetrobols, diobols and obols. (1) 500–450. Types: *obv.* cow, or cock; legend: occasionally ΔΙ, ΔΙΚΑ or ΔΙΚΑΙ; *rev.* octopus in incuse square. Some coins have the city's name in full: ΔΙΚΑΙΑ. There are several other types. (2) C4f. Types: *obv.* head of Athena, or female head; *rev.* bull; legend: ΔΙΚΑΙΟΠΟΛΙΤΩΝ (Head, *HN*² 213–14; Gaebler (1935) 59; *SNG Cop. Macedonia* 156).

569. Dion (Dieus) Map 51. Lat. 40.20, long. 24.10. Size of territory: 1 or 2. Type: A:β. The toponym is Δίον, τὸ (Hdt. 7.22.3; Thuc. 4.109.3). The city-ethnic is Διεύς (*IG* I³ 269.11.35; Thuc. 5.35.1).

Dion is called a *polis* in the urban sense by Hdt. 7.22.3 and Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 142), whereas Thuc. 4.109.3–5 probably uses *polis* in the political sense, using *polisma* about the settlement. The collective and external use of the city-ethnic is attested in the Athenian tribute lists (e.g. *IG* I³ 269.11.35). Dion was situated on Athos (*IG* I³ 272.11.59; Hdt. 7.22.3; Thuc. 4.109.3).

Dion was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* I³ 259.11.26, restored) to 429/8 (*IG* I³ 282.11.22) a total of seventeen times, three times completely restored, paying 1 tal. throughout the period (*IG* I³ 269.11.35). In 454/3 it formed a syntelic group with Sane and Olophyxos. During the Peloponnesian War Dion withstood an attack from Brasidas in 423, and consequently its territory was ravaged (Thuc. 4.109.5). The incident indicates that Dion was fortified. In 421 Dion took Thyssos, which was situated about 10 km from Dion on the opposite coast of the peninsula (Thuc. 5.35.1). Thyssos was an Athenian ally at that time, and Dion may have been so too, since it is known that it did not revolt against Athens and join the Chalkidians until 417 (Thuc. 5.82.1). Dion was also a member of the Second Athenian Naval League (*IG* II² 43.B.32–33). C.349 Dion may have sent envoys to Athens (the text is restored Δι[ῆς], l.4) to ask for help against Philip (*IG* II² 210 + 259; Schweigert (1937) 329–32).

A C4 coin found in 1928 may be attributed to Dion: *obv.* Athena; *rev.* tripod; legend: ΔΙΕΩΝ. It is uncertain whether the coin was issued in Dion in Pieria or Dion on Akte, but Robinson and Clement prefer Dion on Akte ((1938) 282; cf. Hatzopoulos (1996a) 172).

According to Strabo (7 fr. 33, 35), Dion and the four other *poleis* of Athos were founded by Pelasgians from Lemnos. Thuc. 4.109.3 informs us that in his day Dion had a mixed (i.e. barbarian–Hellenic) bilingual population, but a century later Dion is called a <*polis*> *Hellenis* by Ps.-Skylax 66 (Flensted-Jensen and Hansen (1998) 151).

570. Eion Not in *Barr.* Maps 50–51. Unlocated. Size of territory: ? Type: C:a. Only the toponym Ἐίων is known (Thuc. 4.7). Virtually nothing is known of Eion, which Thuc. 4.7 calls a *Μενδαίων ἀποικία*, perhaps indicating that it was a *polis*. It is not the same as its better-known namesake on the Thracian coast: Steph. Byz. distinguishes between the two and calls this one πόλις ἐν χερρονήσῳ, ὡς Θουκυδίδης and then adds: ἔστι καὶ ἄλλη πρὸς τῇ Πιερίᾳ (cf. Eust. *Il.* 2.92). It is clear from Thuc. 4.7 that Eion was an enemy of the Athenians in 425, but whether that means that it was once a member of the Delian League and had revolted in 432, or that it had never been a member, is unknown. It never occurs in the Athenian tribute lists. In 425 the Athenians took Eion by treachery, which indicates that it was fortified (Thuc. 4.7).

571. Gale(psos) (Galaïos) Map 51. Lat. 40.10, long. 23.40. Size of territory: 2 or 3. Type: A: a. The toponym is

Γαλήψος (Hdt. 7.122; cf. Kinch (1894) 149). The city-ethnic is *Γαλαῖος* (*IG* 1³ 278.vi.8), which may be a derivative of a toponym **Γάληη*; if the coins discussed below belong to the present community, they attest the city-ethnic *Γαλήψιος*. It is possible that Herodotos confounded the name of **Gale* with that of *Galepsos* (no. 631) in the Thasian *peraia* (Thuc. 4.107.4), so that the toponym is in fact **Gale* and not *Galepsos* (Kinch (1894) 149, followed by Zahrnt (1971) 178, *pace* Lepper (1962) 35); there may, however, be numismatic evidence in support of Herodotos' form if the coins inscribed *ΓΑΛΗΨΙΩΝ* (*infra*) were struck by the present community. Hdt. 7.122 calls *Gale*(psos) a *polis* principally in the urban, but probably also in the political sense. The political sense is attested in *IG* 1³ 278.vi.5, 8 and 279.ii.76, 78, where the Galaians are listed under the heading *πόλις ἀῖδε*. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 278.vi.8). The undated Athenian grave inscription with the ethnicon *Galepsios* (*SEG* 32 297) probably belongs to *Galepsos* (no. 631) in the Thasian *peraia*.

According to Hdt. 7.122, *Gale*(psos) was situated on Sithonia between Torone and Sermylia. Zahrnt (1971) 178 locates *Gal*(epsos) south of Neos Marmaras, where a *pithos* grave containing Archaic Attic and Corinthian pottery has been found (*ArchDelt* 42 (1987) *Chron.* 371). For a sanctuary presumably in its territory, see *supra* 815 on Parthenopolis.

Gale(psos) supplied Xerxes with troops and ships in 480 (Hdt. 7.122). It was a member of the Delian League. The Galaians belonged to the Thracian district and are recorded for the first time in 436/5 (*IG* 1³ 276.v.26) and in the subsequent three years. In 435/4 the Galaians are recorded as *ἄτακτοι* (*IG* 1³ 277.v.31). In 434/3 (*IG* 1³ 278.vi.8) and in 433/2 (*IG* 1³ 279.ii.78) they are listed after the heading *πόλις αὐταὶ φόρον ταξάμεναι*, paying 500 dr. in 436/5 and 435/4, and 3,000 dr. in 434/3 and 433/2. Since *Gale*(psos) is not recorded in the lists after 432/1, it may have participated in the Revolt of 432 (Thuc. 1.58.2) and was presumably one of the *poleis* that took part in the synoecism of Olynthos (no. 588) in 432 (Thuc. 1.58.2; Zahrnt (1971) 54). The wording of Thuc. 1.58.2 (*πόλις . . . καταβαλόντας* and *καθαίρουντες τὰς πόλις*) suggests that the city was destroyed in connection with the synoecism. It was assessed at 10 dr. in 422/1 (*IG* 1³ 77.v.24).

In the early 1970s a bronze coin (a) was found at the presumed site of *Gale*(psos) (Demetriadi (1974)). Type: *obv.* young male head; *rev.* forepart of goat looking back; legend: *ΓΑΛΗΨΙΩΝ*. One other specimen (b), bought from a coin dealer, is known. The coins have been dated tentatively

to C4f. The provenance of the coin found on Sithonia is the reason why these two coins have been attributed to the *Gale*(psos) under discussion and not to its namesake in the Thasian *peraia* (no. 631). Demetriadi (1974) claims that no coins from the Thracian *Gale*(psos) are known. However, in 1936 Bon published a coin (c) found during the excavations of Thasos and now (at least in 1936) in the Numismatic Museum in Athens, which she claims was struck at *Galepsos* (no. 631) in the Thasian *peraia*. There is absolutely no doubt that Bon and Demetriadi describe the same coin type. The diameters of (a) and (b) are 14 and 15 mm respectively, and the diameter of (c) is 13 mm. All three have on the *obv.* an identical head of a young man (Dionysos?) wearing an ivy wreath. On the *rev.*, coins (b) and (c) have the forepart of a goat (again the types are identical) facing l, and on (a) the goat faces r. All three have the legend *ΓΑΛΗΨΙΩΝ*. Hatzopoulos attributes the coins to *Galepsos* in the Thasian *peraia* (in conversation).

572. Gigonos Map 50. Lat. 40.20, long. 23.00. Size of territory: 1 or 2. Type: A:α? The toponym is *Γίγωνος* (Hdt. 7.123.1; *IG* 1³ 278.vi.32). Apparently the C2 author Artemidoros called it *Γίγωνίς, ἡ* (Steph. Byz. 208.2). Apart from Steph. Byz. 208.1 there is no attestation of the city-ethnic. Hdt. 7.123.2–3 calls *Gigonos* a *polis* in the urban and political senses combined (cf. Hansen (2000a) 175–76), and the political sense is attested in *IG* 1³ 278.vi.19, 32, where *Gigonos* is listed under the heading *πόλις*. According to Hdt. 7.123.1, *Gigonos* was located in Krousis.

Gigonos was a member of the Delian League, but is recorded only once in the tribute lists, in 434/3 (*IG* 1³ 278.vi.32), paying along with the Tindaians (no. 619), Kithas (no. 579), Smila (no. 611) and Haisa (no. 573), under the heading *πόλις ἃς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν*. It was perhaps assessed in 425/4 (*IG* 1³ 71.iv.84, completely restored).

573. Haisa Map 50. Lat. 40.20, long. 23.05. Size of territory: 1? Type: A:a. The toponym is *χαῖσα* (*IG* 1³ 278.vi.33). Apart from Steph. Byz. 54.11, there is no attestation of the city-ethnic.

Hdt. 7.123.2 mentions a *polis* *Λίσαι* in Krousis. *Lisai* is not known from any other source, and it is commonly assumed that *Λίσαι* is a scribal error for *Αἷσα* (Zahrnt (1971) 145). If so, Hdt. 7.123.2–3 calls *Haisa* a *polis* mainly in the urban, but probably also in the political sense (cf. Hansen (2000a) 175–76). In the Athenian tribute lists *Haisa* is recorded under the heading *πόλις ἃς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν* (*IG* 1³ 278.vi.18–21, 33), where *polis* is used in the political sense.

Haisa was a member of the Delian League. However, it occurs only once in the tribute lists: viz. in 434/3 (*IG* 1³ 278.vi.33), where it pays along with the Tindaians (no. 619), Kithas (no. 579), Smila (no. 611) and Gigonos (no. 572). They pay 3,000 dr. altogether. The toponym is completely restored in the assessment decree of 425/4 (*IG* 1³ 71.iv.85), but the amount (3,000 dr.) is legible. Haisa may have been listed in the assessment decree of 422/1 (the heading in *IG* 1³ 77.v.41–42 is restored [πόλις] [Κροσσίδος]).

Excavations at Nea Kallikrateia have revealed potsherds from the early Iron Age and the Geometric period (*ArchDelt* 31 (1976) *Chron.* 247), and remains of a C5 settlement (*ArchDelt* 29 (1973–74) *Chron.* 697, 677–78). According to the excavators, the site is a colony of at least C8l. It was occupied until the beginning of Christian times. The site has not yet been positively identified with Haisa (*ArchDelt* 32 (1977) *Chron.* 202). Additional finds (C5 graves) are mentioned in *ArchDelt* 33 (1978) *Chron.* 236, 34 (1979) *Chron.* 279.

574. Istasos Map 51. Unlocated. Type: C:?. The toponym is Ἰστασος (*IG* 1³ 77.v.16). Istasos may have been a member of the Delian League. In 422/1 it was assessed at 500 dr. (*IG* 1³ 77.v.16), but is unattested in the tribute lists. The editors of the Athenian tribute lists (*ATL* i. 538) identify Istasos with Pistasos (s.v.).

575. Kalindoia Map 50. Lat. 40.35, long. 23.20. Size of territory: ? Type: [A]:a. The toponym is Καλίνδοια (*IG* 1³ 76.45 = Tod 68 (422); *IG* 1³ 194.i.b.13 (360/59)); Steph. Byz. 75.7 gives Ἀλίνδοια. Apart from Steph. Byz. 75.8, there is no attestation of the city-ethnic. Kalindoia is listed under the heading αἰδε πόλις in a treaty of c.422 (*IG* 1³ 76.44, 45), where *polis* is used in the political sense.

Kalindoia was situated in northern Bottike, perhaps on the border with Mygdonia, but it was clearly a Bottiaian *polis* (Flensted-Jensen (1995) 112–15). C.422 the Bottiaians entered into an alliance with the Athenians (Tod 68 = *IG* 1³ 76). The same inscription seems to show that the Bottiaians had formed a confederacy at that time (Flensted-Jensen (1995) 126–28). If they had, Kalindoia must have been one of the members (cf. Tod 68.46).

Kalindoia is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* 1³ 94 i.b.13). The name of the *theorodokos* was Πασανίας, who was probably the pretender to the Makedonian throne in 368/7 (Aeschin. 2.27) and in 360/59 (Diod. 16.2.6). He may also be the Pausanias who issued his own coins (M. C. J. Miller (1986)). In 323 Kalindoia and three neighbouring territories were given to the Makedonians by Alexander (*SEG* 36 626.4–8).

At modern Kalamoto (possibly the site of Kalindoia) pottery from the Classical through the Roman periods has been found, along with seven pits containing Archaic sherds (Sismanides and Keramaris (1992)).

576. Kamakai Map 50. Unlocated. Type: A:?. The toponym is Καμακαί (*IG* 1³ 285.iii.11 (C5)) or [Κ]εμακαί (*IG* 1³ 76.47 = Tod 68.48 (422)). The city-ethnic is not recorded in any source. Kamakai is listed under the heading αἰδε πόλις in a treaty of c.422 (*IG* 1³ 76.44, 47), where *polis* is used in the political sense.

Kamakai was a Bottiaian *polis* situated in the vicinity of Kalindoia, i.e. probably in northern Bottike (Flensted-Jensen (1995) 116–17). The name of its territory was Καμακαία (*SEG* 36 626.9). C.422 the Bottiaians entered into an alliance with the Athenians (Tod 68 = *IG* 1³ 76). The same inscription seems to show that the Bottiaians had formed a confederacy at that time (Flensted-Jensen (1995) 126–28). If so, Kamakai must have been one of the members (cf. Tod 68.48). Its territory was given to the Makedonians in 323/2 by Alexander (*SEG* 36 626.4–8).

Kamakai was a member of the Delian League; it belonged to the Thracian district, but it is recorded only once in the tribute lists, namely in 421/20 (*IG* 1³ 285.iii.11), paying only 600 dr. About the same time the Bottiaians had probably formed a confederacy of which Kamakai was a member (*IG* 1³ 76).

577. Kampsā Map 50. Unlocated. Type: A:a?. The toponym is Κάμψα (Hdt. 7.123.2) or Κάψα (Steph. Byz. 370.18). *KA* is the legend on coins of C5e (Head, *HN*² 212) and may represent the city-ethnic *Καμψαῖος or *Καψαῖος, the latter being the city-ethnic suggested by Steph. Byz. 370.19. Hdt. 7.123.2–3 calls Kampsā a *polis* mainly in the urban sense, but probably in the political sense too (cf. Hansen (2000a) 175–76).

Kampsā was located in Krousis (Hdt. 7.123.2). Some scholars have argued that the Skapsaians recorded in the Athenian tribute lists are the inhabitants of Kampsā (Zahrnt (1971) 232, followed by Barr.).

Kampsā may have struck silver coins before 480 (on the attribution to Kampsā, see Flensted-Jensen (1997) 122–25). Denomination: tetrobols. Types: *obv.* ithyphallic ass and kylix; *rev.* mill-sail pattern and *KA* in two of four triangles (Head, *HN*² 212; Gaebler (1935) 66–67; *SNG Cop. Macedonia* 146). For the type, see Wroth (1900) 275–76). The reverse punch is the same as that used for some of the coins of Mende (Gaebler (1935) 66–67). Likewise, an ithyphallic ass is also depicted on the earliest coins of Mende, though it is not the same die.

578. Kissos (Kisseites) Unlocated. Type: C:a? The toponym is *Kισσός* (Strabo 7 fr. 21, 24). The city-ethnic is *Κισσεΐτης* (SEG 40 542.14 (C4)). The only literary source to mention Kissos is Strabo, who says (fr. 21, 24) that Kassandros founded Thessalonike by synoecising Kissos and other *polismata* and *polichnia* respectively. However, the city-ethnic is known from an inscription (SEG 40 542) which can be dated either to c.350 and assigned to north-western Chalkidike (Hatzopoulou and Loukopoulou (1992) 123–45), or to 294/3 and assigned to south-eastern Chalkidike (Vokotopoulou (1996)). The inscription concerns the boundaries of various communities.

An ancient settlement at the top of Mt. Chortiatis in north-western Chalkidike has been investigated by Bakalakis (1956). It consists of a circuit wall (250 × 40 m) with remains of houses. The pottery found at the settlement dates it to C4. Hammond thinks that this must be ancient Kissos (Hammond (1972) 187; cf. Edson (1947) 89).

579. Kithas Map 50. Lat. 40.25, long. 23.05. Size of territory: ? Type: A:? Only the toponym *Κίθας* is known, from an Athenian tribute list in which Kithas is recorded under the heading *πόλεις ἄς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν* (IG I³ 278.vi.18–21, 30), where *polis* is used in the political sense. Kithas may have been a Bottiaian *polis* (Flensted-Jensen (1995) 123–24).

Kithas was a member of the Delian League. However, it is recorded only once in the tribute lists, in 434/3 (IG I³ 278.vi.30), paying 3,000 dr. along with the Tindaians (no. 619), Smila (no. 611), Gigonos (no. 572) and Haisa (no. 573). The toponym is completely restored (but the amount is legible) in the assessment decree of 425/4 (IG I³ 71.iv.83).

580. Kleonai Map 51. Lat. 40.10, long. 24.15. Size of territory: 1 or 2. Type: A:β. The toponym is *Κλεωναί, αἱ* (Hdt. 7.22.3; IG I³ 278.vi.23 (C5)). Hdt. 7.22.3 and Ps.-Skylax 66 (cf. Flensted-Jensen and Hansen (1996) 142) call Kleonai a *polis* in the urban sense, whereas Thuc. 4.109.3–5 probably uses *polis* in the political sense, using *polisma* about the settlement. In the Athenian tribute lists Kleonai is twice recorded under the heading *πόλεις* (IG I³ 278.vi.18–21, 23 and 279.II.89–92, 93). Hdt. 7.22.3 locates it on Athos.

Kleonai was a member of the Delian League. It is recorded four times, in 434/3 (IG I³ 278.vi.23), 433/2 (279.II.93), 430/29 (281.III.62, completely restored) and 429/8 (282.II.49), always with its toponym. In 434/3 and 433/2 it is listed under the heading *πόλεις ἄς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν* (IG I³ 278.vi.23, 279.II.93), in 430/29 (IG I³ 281.III.62) under the heading *ταῖσδε ἡ βουλή καὶ οἱ*

πεντακόσιοι καὶ χίλιοι ἔταξαν (but here the name is completely, and the amount partly, restored), and in 429/8 under the heading *ταῖσδε βουλή σὺν τῷ δικαστηρίῳ ἔταξαν* (IG I³ 282.II.49; the amount is completely, and the name partly, restored; it seems plausible, however, that *K[.]ov[.]* should be restored *K[λε]ov[αί]*). Kleonai paid 500 dr. in all four years. The editors of the Athenian tribute lists have suggested that the *poleis* listed after the headings *αὐταί* and *ἰδιῶται* were either cases of *apotaxis* or they were isolated or peripheral towns that had not been members of the Delian League (ATL i. 455). If Kleonai was a case of *apotaxis*, we must assume that it had previously paid along with one of the *poleis* in its immediate vicinity—for instance Thyssos (no. 618), Dion (no. 569) or Olophyxos (no. 587)—and we could reasonably (albeit not necessarily) have expected the payments by these towns to be lower in 434. But there are no such changes in the payments of Thyssos, Dion or Olophyxos, so it is equally likely that Kleonai belongs to the group of *poleis* which were isolated and peripheral. The year 434/3 was probably the first year of a new assessment period, but Kleonai was not assessed by the normal procedure: it was added to the list of those already assessed. The same thing happened in the following year (433/2), but in 430/29 it was assessed by the *boule* and a court of 1,500. The editors of the tribute lists interpret this as a sanctioning of Kleonai's assessment (ATL i. 457). In 424/3 it joined Brasidas (Thuc. 4.109.4), but in 422/1 it was assessed at 100 dr. (IG I³ 77.v.14).

According to Aristotle (Heracl. Lemb. 62), Kleonai was colonised by Chalkidians from Elymnios (in Euboea = no. 365; see Bakhuizen (1976) 15), whereas Strabo (7 fr. 35) says that Pelasgians from Lemnos settled the five *poleis* on Athos. Thuc. 4.109.3 says that Kleonai had a mixed bilingual (i.e. Hellenic–barbarian) population, but about a century later Ps.-Skylax 66 calls it a *polis Hellenis* (Flensted-Jensen and Hansen (1996) 151).

581. Kombreia Map 50. Unlocated. Type: A:? The toponym is *Κώμβρεια* (Hdt. 7.123.2). Kinch (1894) 152 has suggested that the ending *-βρεια* is the Thracian word *βρια* (meaning “town”) found in, e.g., Selymbria (see Detschew (1957) s.v. *-bria*), and some MSS do in fact have *Κωμβρία*. The city-ethnic is *Κομβρεάτης* (SEG 38 681.14, an ephebic inscription of the first century AD; see Papazoglou (1988) 419). It is significant that the city-ethnic occurs several centuries later than the latest reference to the town. This may mean that the town existed from c.500 until the first century AD, but it may also mean that the (former) city-ethnic was

used as a name, just as the city-ethnic Ὀλύνθιος is attested long after the city Olynthos was destroyed (s.v. Olynthos).

Hdt. 7.123.2–3 calls Kombreia a *polis* mainly in the urban sense, but probably in the political sense too (cf. Hansen (2000a) 175–76). Kombreia was situated in Krousis and provided Xerxes with troops in 480 (Hdt. 7.123.2).

582. Lipaxos Map 50. Unlocated. Type: A:?. The toponym is Λίπαξος (Hdt. 7.123.2). Apart from Steph. Byz. 418.7, the city-ethnic is not attested. Hecat. fr. 149 (*apud* Steph. Byz. 418.7) mentioned Lipaxos, but it is not clear whether he also called it a *polis* (cf. Hansen (1997b)). Hdt. 7.123.2–3 calls Lipaxos a *polis* mainly in the urban sense, but probably in the political sense too (cf. Hansen (2000a) 175–76). Hdt. 7.123.2 locates Lipaxos in Krousis and says that it supplied Xerxes with troops in 480.

583. Mekiyberna (Mekiybernaios) Map 50. Lat. 40.15, long. 23.25. Size of territory: 1 or 2. Type: A:a. The toponym is Μηκύβερνα, ἡ (Hdt. 7.122; Harp. M31) or Μηκύπερνα (Strabo 7 fr. 29). The city-ethnic is Μηκυβερναίος (Thuc. 5.18.6) or Μεκυπερναίος (IG I³ 263.III.15; cf. Strabo 7 fr. 29, who gives the corresponding toponym).

Mekiyberna is called a *polis* in the urban sense by Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 142) and in the urban and political senses combined by Hdt. 7.122. At Thuc. 5.18.6 (Peace of Nikias) the territorial sense is a connotation. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (e.g. IG I³ 263.III.15).

Hdt. 7.122 locates Mekiyberna between Sermylia (no. 604) and Olynthos (no. 588) on Sithonia. According to Harp. M31, it was located 20 stades (3.6 km) from Olynthos, and excavations confirm this (Mylonas (1943) 78).

It is not known who founded Mekiyberna or when it was founded. The earliest attestation of Mekiyberna is in Hecat. fr. 150; but the settlement identified with Mekiyberna goes back to the early Archaic period (*infra*). Mekiyberna supplied troops and ships to Xerxes in 480 (Hdt. 7.122).

Mekiyberna was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (IG I³ 259.v.10), in which year it formed a syntelic group along with Stolos (no. 614) and the Polichnitans (no. 596). It is recorded for the last time in the list of 433/2 (IG I³ 279.II.46), which probably means that it took part in the Revolt of 432 (Thuc. 1.58). It was assessed for tribute in 422/1 (IG I³ 77.v.23, 10 dr.). Mekiyberna is recorded in the tribute lists sixteen times, twice completely restored, paying 1 tal. in 450/49 (IG I³ 263.III.15) and in 447/6 (IG I³ 265.I.12), 4,000 dr. from 446/5 (IG I³ 266.II.23) to 440/39 (IG

I³ 272.II.45), and 1 tal. again from 436/5 (IG I³ 277.v.19) to 433/2 (IG I³ 279.II.46).

According to the Peace of Nikias (Thuc. 5.18.6), the Mekiybernaians, the Sanians (no. 600) and the Singaiaians (no. 605) were to live in their own *poleis* (οἰκεῖν τὰς πόλεις τὰς εὐαυτῶν)—many take this to mean that Mekiyberna had taken part in the synoecism of Olynthos in 432 (in which connection it was probably razed; cf. the wording of Thuc. 1.58.2: πόλεις . . . καταβαλόντας and καθαιρούντες τὰς πόλεις) and was now to be re-established as a *polis* (Demand (1990) 76–77). Mekiyberna was garrisoned by the Athenians, but in 420 it was captured by the Olynthians (Thuc. 5.39.1; cf. Diod. 12.77.5). In 349, before attacking Olynthos, Philip captured Mekiyberna by treachery (Diod. 16.53.2). Robinson (Robinson and Clement (1938) 373–74; cf. Robinson (1952) 403) thinks that the city was not destroyed by Philip, and that it was still inhabited in Alexander's time (down to Kassandros). Ps.-Skymnos 641 refers to it as no longer in existence.

Strabo (7 fr. 29) calls Mekiyberna *epineion Olynthou*, which may be insignificant, but an underwater survey has shown that it is very likely that Mekiyberna was actually the harbour town of Olynthos (AAA 21 (1988) 102–1; see also Mylonas (1943) 78). The ancient site near the harbour dates to the period 432–316.

During the excavations of Olynthos, Robinson (1935) 229–31 found “the Hippodamian plan of the town [Mekiyberna]”, along with shops and houses. Seven streets have been found, unpaved and c.2.5 m wide (Mylonas (1943) 82). The houses differ very much in size, layout, etc. from those excavated at Olynthos (*ibid.* 84). Contrary to what has been found at Olynthos, there were no drainage alleys at Mekiyberna (*ibid.*). The settlement goes back to the early Archaic period (*ibid.* 86).

584. Mende (Mendaios) Map 51. Lat. 40.00, long. 23.25. Size of territory: 2. Type: A:a. The toponym is Μένδη, ἡ (Hdt. 7.123.1; Thuc. 4.121.2) or Μένδα (IG IV².1 94.1.b.26 (360/59)). The city-ethnic is Μενδαίος (SEG 13 313 (C4)). On Archaic coins it is sometimes ΜΙΝΔΑΟΝ or ΜΙΝΔΑΙΟΝ (Gaebler (1935) 73–74). Mende is attested as a *polis* both in the urban sense (Thuc. 4.129.3) and in the political sense (Thuc. 4.121.2; Arist. *Oec.* 1350^a8, 14); in Ps.-Skylax 66 Mende is the second of the toponyms listed after the heading πόλεις αἶδε ἐν τῇ Παλλήνῃ Ἑλληνίδες, where *polis* is used in the urban sense. The collective use of the city-ethnic is attested internally on coins of C5f (*infra*) and externally in the Athenian tribute lists (e.g. IG I³ 270.III.20) and in

literary sources (Thuc. 4.123.2; Arist. *Oec.* 1350^a6). The individual use of the city-ethnic is attested externally on a C4m Megarian gravestone (*SEG* 13 313) and in Plato's reference to *Ἀντίμυρος ὁ Μενδαῖος* (*Prt.* 315E).

The territory, called γῆ, is mentioned by Thuc. 4.130.2, who says that it bordered on that of Skione (no. 609) and was ravaged by Nikias. Hdt. 7.123.1 locates Mende on Pallene between Skione and Sane (no. 601) (cf. Ps.-Skylax 66). About 4 km from Mende, on a promontory, a sanctuary of Poseidon was found in 1989, with building remains of C6l–C5 and pottery of C6e (Vokotopoulou (1989), (1990a), (1991)). It is probably identical with the *Ποσειδώνιον* situated in the territory of Mende (Thuc. 4.129.3).

No literary source gives the date of the colonisation of Mende, but according to the sources the site was a colony from Eretria (Thuc. 4.123.1; cf. Harp. s.v. *Μένδη*). This is supported by the archaeological remains: the late Mycenaean and early Geometric pottery found at the site of ancient Mende is similar to that found at Lefkandi (*ArchDelt* 42 (1987) *Chron.* 368–69, *pace* Papadopoulos (1996)). Furthermore, peculiar stone-paved circles (diameter 1.80 m), similar to those found at Lefkandi, have been found inside house *H*, which dates to C8, along with pendant semi-circle skyphoi (*ArchDelt* 45 (1990) *Chron.* 315 and fig. 141a; Vokotopoulou (1990a)). Most scholars think that Mende was founded in C8 (Boardman (1980) 229). However, it seems that the site of Mende was occupied long before the colonisation took place, and that it had links with Euboia from a very early period. For interpretations of the finds, see Snodgrass (1994) and Papadopoulos (1996) 163–65.

According to Hdt. 7.123.1, Mende supplied troops and ships to Xerxes in 480. Mende was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.III.15) to 415/14 (*IG* I³ 290.III.10) a total of nineteen times, paying between 5 tal. (*IG* I³ 268.III.5) and 15 tal. (*IG* I³ 259.III.15), but mostly 8 tal. (*IG* I³ 262.I.7). In 423 Mende joined Brasidas, even though Athens and Sparta had already concluded an armistice (Thuc. 4.123; cf. Diod. 12.72.7). The uprising was instigated by an oligarchic faction which seems to have forced the majority to accept the defection (Thuc. 4.123.2, cf. 4.121.2); an oligarchic constitution was adopted (4.130.7); a Peloponnesian garrison was placed in the city; and Brasidas had the women and children sent to Olynthos (no. 588) (Thuc. 4.123.4). The Athenians sent a force of 50 triremes, 1,000 hoplites and a higher number of light-armed soldiers against Mende (4.129.2). They took the *proasteion*, ravaged the territory, and eventually captured the city, when the

Mendaian *demoi* took up arms against the oligarchs and the Peloponnesian garrison and opened the gates (Thuc. 4.129–30). Having arranged a siege of the oligarchs and the Peloponnesians (4.131.3), who made a last stand on the acropolis, the Athenians left a garrison in Mende, ordering that the Mendaian restore their (democratic) constitution and prosecute the leaders of the Revolt (Thuc. 4.130.7; Gehrke, *Stasis* 111–12).

From the treaty of the 380s between Amyntas III and the Chalkidians, it appears that the Mendaian were enemies of the Chalkidians (*Syll.*³ 135.19 = Tod 111), and Mende is known to have been at war with Olynthos at some point in C4 (Arist. *Oec.* 1350^a11–14). Mende was probably not destroyed by Philip, but it may have lost its *polis* status. It is called a *vicus maritimus* of Kassandreia c.200 (Livy 31.45.14).

In C4e Theotimides, a citizen of Mende was granted *proxenia* by Elis (no. 251) (*SEG* 15 241). About the same time, perhaps a little earlier, some Mendaian were granted *proxenia* in Delphi (no. 177) (*SEG* 31 557; *BCH* 105 (1981) 433–40). Mende is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* IV².1 94.1.b.26).

Thuc. 4.130.6–7 and 131.3 mentions that Mende had a fortified acropolis. A Geometric wall surrounding the presumed acropolis of Mende has been found (*AR* (1992–93) 54). Thucydides also mentions the walls (4.130.3) and gates (4.130.2, 5) of Mende, along with the *proasteion* (4.130.1). The harbours of Mende are mentioned at Arist. *Oec.* 1350^a6. Excavations at Mende have revealed various remains: a destruction layer from C4m can perhaps be connected with the Makedonian invasion in 356 or 348 (*ArchDelt* 41 (1986) *Chron.* 148). Pits (probably used for storage) filled with debris from the Mycenaean to the Geometric periods show that the site of Mende was inhabited from an early period (*ArchDelt* 41 (1986) *Chron.* 149). Two houses have been excavated in the *proasteion*, which seems to have been occupied continuously from C8 to C4 (*ArchDelt* 41 (1986) *Chron.* 147, 42 (1987) *Chron.* 369). Underneath house Θ (C8m) were found six more habitation layers, the earliest of C9m (Vokotopoulou (1990a)). A cemetery has been found near the coast. It was in use from C8l to C7l/C6e. By 1990, 214 graves had been found.

Mende struck silver coins on the Euboic standard c.500–c.424 and on the Phoenician standard c.424–c.358. Denominations: tetradrachms, tetrobols, obols, hemiobols, tritemorias and tetartemoria. (1) Silver, 500–450: types: *obv.* ithyphallic ass with crow on back; legend: *MEN, MIN, MINΔAON* or *MINΔAION* (sometimes no legend); *rev.* various forms of incuse square. (2) Silver, 450–424: types:

obv. Silenos and an ass; *rev.* vine with clusters of grapes; legend: *MENΔAION*. (3) Silver, 424–358: types: *obv.* Silenos, or head of Dionysos; *rev.* various types; legend: *MENΔAION*, *MENΔAIH* or *MENΔA*. (4) Bronze, C4: *obv.* Dionysos wearing ivy wreath; *rev.* amphora sometimes with ivy; legend: *ME*, *MEN* or *MENΔAION*. (Head, *HN*² 210: minting period c.500–358; Gaebler (1935) 72–78: minting period C6l–C4m; *SNG Cop. Macedonia* 198–221. See also Regling (1923) and Noe (1926). For an interpretation of the types, see Knoblauch (1998)).

Mende colonised Neapolis (no. 586) (*IG* I³ 263.III.26–27), which was situated c.12 km from Mende on the opposite coast of Pallene, and Eion (no. 570) (Thuc. 4.7), the location of which is unknown.

585. Milkoros (Milkorios) Map 51. Unlocated. Type: [A]:? The toponym *Μιλκωρος* is known only from Steph. Byz. 453.11 quoting Theopomp. fr. 152, presumably referring to the year 347 (Shrimpton (1991) 240). The city-ethnic is *Μιλτόριος* (*IG* I³ 277.VI.31) or *Μιλκόριος* (*IG* I³ 279.II.85). In the Athenian tribute lists of 434/3 (*IG* I³ 278.VI.5–6, 9) and 433/2 (*IG* I³ 279.II.76–77, 85) the Milkorians are recorded after the heading *πόλεις αὐταὶ φόρον ταξάμεναι*. Steph. Byz. 453.11 describes Milkoros as a *Χαλκιδικὴ πόλις ἐν Θράκῃ*. He may have used Theopompos (cf. fr. 152) as a source for this information, which is ambiguous, since “Chalkidian” can refer to either (a) the geographical position of the Milkorians, (b) membership of the Chalkidian Federation, or (c) ethnic affiliation. The editors of the Athenian tribute lists state that Milkoros must be a member of the Chalkidic state but that its precise location is not known (*ATL* i. 520).

Milkoros was a member of the Delian League. It belonged to the Thracian district and is recorded three times in the tribute lists, in 435/4 (*IG* I³ 277.VI.31, *ἄτακτοι*), in 434/3 (*IG* I³ 278.VI.9) and in 433/2 (*IG* I³ 279.II.85). Some scholars believe that it took part in the Revolt of 432 (e.g. Zahrnt (1971) 205). It paid 1,000 dr. in 435/4, and 500 dr. in the following two years.

586. Neapolis (Neopolites) Map 50. Lat. 40.00, long. 23.30. Size of territory: 2. Type: A:a. The toponym is *Νέη Πόλις* (Hdt. 7.123.1), or *Νεάπολις* (*IG* I³ 267.II.29). The city-ethnic is *Νεοπολίτης* (*IG* I³ 259.III.28). The citizens are sometimes called *Νεοπολίται ἐκ Παλλήνες* (*IG* I³ 262.I.9–10) in order to distinguish them from the other Neopolitans in the Thasian *peraia* (see *infra* no. 634), and sometimes they are identified politically as the *Νεοπολίται Μενδαίων ἄποικοι* (*IG* I³ 263.III.26–27) or simply the *Νεοπολίται Μενδαίων* (*IG* I³ 281.II.13). The classification of

Neapolis as a *polis* seems to follow from the toponym, but at Hdt. 7.123.1 *polis* is used explicitly about the community, in the urban and political senses simultaneously (cf. Hansen (2000a) 175–76). The collective city-ethnic is used externally in the Athenian tribute lists (*IG* I³ 263.III.26–27).

Neapolis was probably a colony from Mende (no. 584) (*IG* I³ 263.III.26–27). Hdt. 7.123.1 locates the city between Aphytis (no. 563) and Aige (no. 556) on Pallene and says that Neapolis supplied troops and ships to Xerxes in 480. Neapolis was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.III.28) to, perhaps, 415/14 (*IG* I³ 290.III.6: in this case it is not certain whether the Neapolis listed is the Thasian Neapolis (no. 634) or Neapolis on Pallene) a total of twenty (or perhaps twenty-one) times, paying 3,000 dr. in all years (*IG* I³ 259.III.28).

A settlement of C6–C5, at modern Polychronon, has been excavated since 1987, and it has been suggested that Polychronon is ancient Neapolis (*AR* (1988–89) 73, (1989–90) 52), although it may also be Aige (Vokotopoulou (1993) 95). The following have been found at Polychronon: sherds from the Archaic and Classical periods, a C5 kiln, remains of C6 buildings, two cemeteries dating to C6l–C4m (*ArchDelt* 42 (1987) *Chron.* 369–70; Vokotopoulou (1990b)). The place was probably abandoned in C4s (*ArchDelt* 43 (1988) *Chron.* 364). An inscribed sherd, c.500, bears the word *δεμοσίε* (*SEG* 39 614; photo in Vokotopoulou *et al.* (1988) fig. 16). The ancient settlement was located on the slopes of a hill, and the houses were placed on terraces. The walls were either parallel to the terraces or vertical retaining walls (Vokotopoulou *et al.* (1989)).

587. Olophyxos (Olophyxios) Map 51. Lat. 40.20, long. 24.10. Size of territory: 1 or 2. Type: A:β. The toponym is *’Ολόφυξος, ἡ* (Hdt. 7.22.3; schol. Ar. *Av.* 1042) or, once, *’Ολόφυξίς* (Strabo 7 fr. 33) or *’Ολύφυξίς* (Ps.-Skylax 66, emended to *’Ολόφυξος*). The city-ethnic is *’Ολοφύχσιος* (*IG* I³ 268.II.23; Ar. *Av.* 1041) or sometimes *’Ολοφύχσιος ἐχς ἄθο* (*IG* I³ 281.II.22). Hdt. 7.22.3 and Ps.-Skylax 66 (cf. Flensted-Jensen and Hansen (1996) 142) call Olophyxos a *polis* in the urban sense, whereas Thuc. 4.109.3–5 probably uses *polis* in the political sense, using *polisma* about the settlement. The collective city-ethnic is used internally on coins (*infra*) and externally in the Athenian tribute lists (*IG* I³ 268.II.23).

Olophyxos was located on Athos (Hdt. 7.22.3; Thuc. 4.109.3; *IG* I³ 281.II.22). Zahrnt (1971) 184, 208 suggests that it was situated at modern Vatopediou or Iviron (on the northern side of the peninsula).

Olophyxos was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3, paying together with Sane (no. 600) and Dion (no. 569) (*IG* I³ 259.ii.25–26) and then, paying separately, until 429/8 (*IG* I³ 282.ii.26) a total of sixteen times, three times completely restored, paying 2,000 dr. (*IG* I³ 262.i.26) except in 448/7, when it paid 1,500 dr. (*IG* I³ 264.ii.25). In 424/3 Olophyxos revolted from Athens at the instigation of Brasidas (Thuc. 4.109.4).

Strabo says that Olophyxos and the other four *poleis* on Athos (nos. 560, 569, 580, 618) were settled by Pelasgians from Lemnos (7 fr. 35). According to Thuc. 4.109.3–4, Olophyxos had a mixed (i.e. barbarian–Hellenic) bilingual population, but about a century later it is called a <*polis*> *Hellenis* by Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 151).

Olophyxos struck bronze coins, c.350. Types: *obv.* female head; *rev.* eagle; legend: *ΟΛΟΦΥΞΙΩΝ* (Gaebler (1935) 83–84; Head, *HN*² 206).

588. Olynthos (Olynthios) Map 50. Lat. 40.15, long. 23.25. Size of territory: 5, after 432 c.630 km², in C4 larger. Type: A:a. The toponym is *Ὀλυνθος*, ἡ (Thuc. 1.63.1; Dem. 9.56). The city-ethnic is *Ὀλυνθιος* (Dem. 1.7; *SEG* 21 982 (C4)). Olynthos is called a *polis* both in the urban sense (Hdt. 8.127; Thuc. 1.58.2; Dem. 9.11; Xen. *Hell.* 5.3.3; Ps.-Skylax 66; cf. Flensted-Jensen and Hansen (1996) 142), and in the political sense (Thuc. 5.18.5; Peace of Nikias; Dem. 3.7). At Thuc. 5.18.6 the territorial sense is a connotation. The collective city-ethnic is used externally in the Athenian tribute lists (*IG* I³ 271.ii.50), and internally on coins (Gaebler (1935) 84 (c.432–420)) and sling-bullets (Robinson (1941) no. 2220) with the legend *ΟΛΥΝ*. The individual city-ethnic is used externally in funerary inscriptions from Attika (*SEG* 21 982 (C41)) and Thasos (no. 526) (*IG* xii.8 434 (c.400)). The use of the city-ethnic is attested long after Olynthos was destroyed (*SEG* 19 595, from Thasos (C4–C3); *IG* xii.3 42, from Telos (C2); *Syll.*³ 751, from Mytilene (C1); see Gude (1933) 39–50 (a complete *Prosopographia Olynthia*) and Papazoglou (1988) 426–27). Demosthenes (1.5, 9.56) and Hypereides (Hyp. fr. 80, Sauppe) use *patris* about Olynthos, and Dem. 9.56 refers to the *politai* of Olynthos (9.56).

The name of Olynthos' territory was *Ὀλυνθία* (Xen. *Hell.* 5.3.18; *SEG* 38 619.11 (c.285); Theophr. *Caus. Pl.* 1.20.4). After the synoecism in 432 (Thuc. 1.58.2) the size of the territory was perhaps 630 km², but in the 380s it was much larger (Hoepfner and Schwandner (1994) 71).

According to Dem. 19.263, the military strength of Olynthos before the synoecism was 400 cavalry and in all

some 5,000 men in service, corresponding to some 7,000 adult male citizens; see Hansen (1985) 9–13, 18–20. (Xenophon's figures for 382 (*Hell.* 5.2.14) are corrupt. Demosthenes' 1,000 horse and 10,000 foot in 348 (19.266) are the army of the Chalkidic Confederacy, not that of Olynthos.) Given the growth of Olynthos in the following period, a total of 7,000 citizens before the synoecism matches Diodorus' information that, in 357, Olynthos had a large population (16.8.4) and that, in 348, it was a *myriandros polis*: i.e. a *polis* with 10,000 citizens (32.4.2). In the period 432–380 the population living in the urban centre of Olynthos (see *infra*) was probably less than 5,000, and in 370–348 less than 10,000 (Hansen (1997a) 30; cf. Hoepfner and Schwandner (1994) 72).

Olynthos supplied Xerxes with troops and ships in 480 (Hdt. 7.122). Hdt. 8.127 says that Olynthos belonged to the Bottiaians before 479, and that it was handed over to the Chalkidians in 479. This is confirmed by the pottery found during the excavations of Olynthos. Above the destruction layer of 479 the sherds were Attic red-figure, but underneath the destruction layer was found pottery "that bears no resemblance to the ware produced at the same time in Attica" (Robinson (1933b) 15–16). In 424 Olynthos is called "Chalkidian" by Thuc. 4.123.4 (see Hornblower (1997)).

Olynthos was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* I³ 259.v.6, forming a syntelic group with Ass(er)a (no. 564) and the Skablaians (no. 607)) to 433/2 (*IG* I³ 279.ii.45) a total of eleven times, paying 2 tal. (*IG* I³ 263.iii.30). In 432 the Chalkidians (represented by Olynthos in the tribute lists) revolted from Athens, along with Poteidaia (no. 598) and the Bottiaians, at the instigation of Perdikkas, who also suggested that the Chalkidians abandon their *poleis* on the coast and create a larger and stronger city at Olynthos (Thuc. 1.57.5, 58.2; cf. Diod. 12.34.2). In the Peace of Nikias Olynthos is declared *autonomos* and liable to the tribute assessed by Aristides (Thuc. 5.18.5).

Olynthos was the leading member of the Chalkidian Federation, which was formed some time after 432 (West (1918) 31 and Larsen (1968) 62 suggest 432; Gude (1933) 23 and Zahrnt (1971) 80ff after 400; cf. Demand (1990) 196 n. 28). It is uncertain whether the federation was formed simultaneously with the synoecism of Olynthos, or later. In official documents the name of the federation is *οἱ Χαλκιδεῖς* (*Syll.*³ 135.3), but in literature it is often *οἱ Ὀλυνθιοι* (Xen. *Hell.* 5.2.13). In the Corinthian War the Chalkidians seem to have fought on Athens' side (Isae. 5.46; Diod. 14.82.3). In the 380s the Federation evidently covered

the western part of the Chalkidic peninsula all the way to Pella (no. 543). Apollonia (no. 545) and Akanthos (no. 559) saw the Federation encroaching on their lands and sent envoys to Sparta to ask for help against it (Xen. *Hell.* 5.2.11ff). This resulted in the so-called Olynthian War, after which the Chalkidians had to surrender to the Spartans (Xen. 5.3.1–10, 18–19, 26; Diod. 15.19.3, 21.1–23.3; siege mentioned by Isoc. 4.126; Diod. 15.23.3 with Stylianou (1998) 209–26). The Federation was suppressed or dissolved, but formed again shortly after: the Chalkidians are listed as members of the Second Athenian Naval League (*IG* II² 43.B.5–6; cf. Dreher (1995) 186–87). The original members of the Chalkidian Federation are not known, but possible candidates are Ass(er)a (no. 564), Gale(ψ)os (no. 571), Mekyberna (no. 583), Milkoros (no. 585), Piloros (no. 593), Singos (no. 605), Skablaioi (no. 607) and Stolos (no. 614). In 356 Philip II concluded an alliance with the Chalkidic Federation (Tod 158) whereby Poteidaia (no. 598), when conquered, and Anthemous (no. 562) were ceded to Olynthos (Dem. 2.7, 20; 6.20, 23.107; Diod. 16.8.3–5). But in 349 the Olynthians concluded an alliance with Athens (Dem. 1 and 2; Philoch. fr. 49). Philip attacked Olynthos, won two battles and laid siege to the city. The Athenians sent three auxiliary forces; but in August 348, Olynthos was betrayed to Philip by the leaders of its cavalry (Dem. 9.11, 19.263–67; Diod. 16.53.2; Philoch. fr. 49–51; *Suda* K356; see Hammond and Griffith (1979) 324 n.1).

Olynthos experienced *andrapodismos* twice, in 479 and in 348: when in 479 the Olynthians were suspected of revolting against the Persians, the inhabitants were killed and the city given to the Chalkidians (Hdt. 8.127). The town was probably burnt (Robinson (1933b) 15). The city was synoecised in 432, when the coastal *poleis* in the neighbourhood of Olynthos were abandoned and the inhabitants moved to Olynthos (Thuc. 1.58; Moggi, *Sin.* 173–88), thus causing the formerly small town to be enlarged (Hoepfner and Schwandner (1994) 74–76 fig. 55). In the years after 379 the urban centre of Olynthos was considerably enlarged (ibid. 92), presumably the result of a new *synoikismos* by which more Chalkidians were moved to Olynthos (Dem. 19.263). Xenophon calls Olynthos “the largest *polis* of Thrace” (*Hell.* 5.2.12). In 348 the city was completely destroyed by Philip (Dem. 9.26, 9.56; Hyp. fr. 80, Sauppe), and the inhabitants suffered *andrapodismos* once more (Diod. 16.53.3), although some of them evidently managed to flee, e.g. to Lemnian Myrina (no. 502) (*IG* XII.8 4). Diod. 19.52.2 (r316) mentions surviving Olynthians too. According to Theophrastos (*apud* Harp. 162.10–11), the Olynthians living in Athens after the

destruction of Olynthos were *isoteleis*. Even though it seems clear that Olynthos was razed to the ground in 348, it must have been refounded, though not necessarily as a *polis*: a couple are recorded as living ἐν Ὀλύνθῳ in the imperial period (*SEG* 38 625), and Hatzopoulos (1988b) 64–65 argues that Olynthos was a *kome* of Kassandreia at that time.

The character of the Olynthian constitution is unknown: some scholars think that Olynthos was an oligarchy (Zahrnt (1971) 94; Larsen (1968) 58ff, esp. 76), whereas others argue that it was a democracy (Gehrke, *Stasis* 124). Theopomp. fr. 143 mentions the *boule*, and Xen. *Hell.* 5.2.17 a popular assembly (*demos*) whose decisions are described as *psēphismata* (5.2.15). Dem. 9.56 reports how the assembly (ὁ δῆμος ὁ τῶν Ὀλυνθίων) imposed a sentence of exile. Not much is known about Olynthian officials; but *hipparchoi* are known to have been elected by show of hands (Dem. 9.66). Olynthos is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* IV².194.I.B.14). Olynthos is sometimes thought to represent the Chalkidian Federation in the list (e.g. Zahrnt (1971) 103). Hegias of Olynthos was granted citizenship by Ephesos (no. 844) in C4l/C3e (*SEG* 39 1156).

Olynthos was excavated in the 1930s. The town was situated on a table-shaped hill, about 3.5 km from the coast. Down to c.432 Olynthos was a relatively small town (it probably covered c.6 ha: Hoepfner and Schwandner (1994) 74), occupying the southern part of the elevation on which the city was built. In 432 the city was greatly enlarged (to cover c.27 ha) and during the first 20 years of C4 it was enlarged once more: this time houses were built outside the city walls (ibid. 76–91 figs. 55 and 56). The old part of the city did not have a grid plan, but the new town was laid out in rectangular fashion in blocks of up to ten houses of the so-called *pastas* type (ibid. 34–38 and figs. 23 and 24; Wycherley (1976) 187–92). The elevation on which Olynthos was situated is about 600 m long, and runs almost exactly north–south. Nearly the whole north hill is divided into sections by streets (Robinson and Graham (1938) 18ff). On the urban organisation of Olynthos, see also Cahill (2002).

Not many public buildings have been identified, exceptions being the agora (Hoepfner and Schwandner (1994) 78), along with a C5l *bouleuterion* (Gneisz (1990) 341, no. 48 (C5l)) and a public building that has been variously identified as a *prytaneion* (ibid. 342, no. 49 (C5e)) or a *bouleuterion* (S. G. Miller (1978) 131–32). The south room accommodated c.250 persons (McDonald (1943) 236), which indicates that it may have been a *dikasterion*.

The city walls of Olynthos are mentioned by Thuc. 1.63.2 and Xen. *Hell.* 5.3.5, who also mentions towers. However,

hardly anything is left. The city walls were built of mudbrick, mostly on a rubble foundation. No sherds or any other evidence useful for dating the wall have been found (Robinson and Graham (1938) 39–44).

There are a few remains of a free-standing fountain house with an underground aqueduct made of terracotta pipes. It is one of the best-preserved Greek aqueducts. Robinson argues that it was completed before 400, or perhaps even before 420, and that the source of the aqueduct was at modern Polygyros, about 15 km to the north-east of Olynthos (Robinson (1946) 95–114; on the water management, see Crouch (1993) 171–76).

Remains of what may have been an Archaic temple (destroyed in 479) have been found (Robinson (1930) 16–17). The excavations at Olynthos brought to light not only vases, mosaics, etc., but also more curious things, such as ear-picks, tweezers and fish-hooks (Robinson (1941) 354–55, 355–56, 365–74). At least eight Panathenaic vases have been identified, indicating that Olynthians must have participated and been victorious in the Panathenaic Games (Robinson (1933*b*) 87–90 nos. 97–100, (1950) 9, 59–66 nos. 11–14).

Around the city were three cemeteries (Robinson (1942)). The largest is the so-called Riverside cemetery, containing 528 graves, the cemeteries to the east and north being much smaller. There were altogether 598 graves. The Riverside cemetery is the earliest of the three, although no grave can be dated earlier than C61. Graves in the eastern cemetery date to C51, and those in the northern one to C4f (*ibid.* 137).

Six month names are known, principally from C4m deeds of sale (Hatzopoulos (1988*a*) 65–66, 80), attesting to a clear affinity between the Olynthian calendar and that of the Euboian cities (Trümpy, *Monat.* 42–43).

Olynthos started striking silver coins on the Phoenician standard c.433. Denominations: tetradrachms, octobols, tetrobols and diobols. Types: *obv.* horse; *rev.* eagle holding snake; legend: *ΟΛ* or *ΟΛΥΝ*. From 432, or perhaps later, down to 348, the coins have *obv.* head of Apollo; *rev.* a kithara; legend: *ΧΑΛΚΙΔΕΩΝ*. Some have magistrates' names on *rev.* The Chalkidians also struck gold and bronze coins in C4 (Head, *HN*² 207; Gaebler (1935) 84–89; Robinson and Clement (1938) 1–210; Westermarck (1988); *SNG Cop. Macedonia* 233–49). Some C5f coins inscribed *ΧΑΛΚ* must be attributed to Chalkis (*LSAG* 82–83, 364), rather than to Olynthos (no. 365) (Head, *HN*² 207).

589. (Osbaioi) Map 50. Unlocated. Type: C:?. Only the city-ethnic is known: *Ὀσβαίως* (*SEG* 40 534 (c.400)). The

individual city-ethnic is used externally on a gravestone from Beroia (*SEG* 40 534), and the collective city-ethnic is used externally(?) in an inscription concerning borders (*SEG* 40 542.26, 32). There is some dispute as to the provenance and date of this inscription. Vokotopoulou (1996) assigns it to south-eastern Chalkidike and dates it to 294/3, whereas Hatzopoulos and Loukopoulou (1992) 123–45 assign it to north-western Chalkidike and date it to c.350. Since the ethnic is known exclusively from these two inscriptions, there is no way of telling whether *Osbaioi* is a sub-ethnic, a city-ethnic or a regional ethnic (for these distinctions, see Hansen (1996) esp. 182–90), although Hatzopoulos (1996*a*) 202 seems certain that it is a city-ethnic.

590. Othoros (Othorios) Map 51. Unlocated. Type: [A]:? The toponym is *Ὀθορος* (*IG* I³ 278.vi.35). The city-ethnic is *Ὀθόριος* (*IG* I³ 269.iii.27). In the Athenian tribute list of 434/3 Othoros is recorded after the heading *πόλεις αὐτῶν οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν* (*IG* I³ 278.vi.18–21, 35). The location of Othoros is not known. It disappears from the tribute lists in 434/3, which indicates that Othoros took part in the Revolt of 432 (Thuc. 1.58) and was, therefore, situated somewhere on the Chalkidic peninsula (see Edson (1947) 99). However, the editors of the Athenian tribute lists think it may have been situated near Methone (*ATL* i. 489).

Othoros was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 448/7 (*IG* I³ 264.ii.18) to 434/3 (*IG* I³ 278.vi.35) a total of nine times, three times completely restored. It is recorded once by toponym (*IG* I³ 278.vi.35), and otherwise by city-ethnic, paying between 500 (*IG* I³ 278.vi.35) and 700 dr. (*IG* I³ 269.iii.27). In 435/4 the Othorians are recorded as *ataktoi* (*IG* I³ 277.vi.24). In 422/1 Othoros was assessed for tribute of 1,000 dr. (*IG* I³ 77.v.15). Othoros is not known from any other source.

591. Pharbelos (Pharbelios) Map 51. Unlocated. Type: [A]:? The toponym is *Φάρβηλος* (*IG* I³ 268.ii.24; Steph. Byz. 658.15). The city-ethnic is *Φαρβέλιος* (*IG* I³ 268.ii.24). In the Athenian tribute lists of 434/3 (*IG* I³ 278.vi.5–6, 15) and 433/2 (*IG* I³ 279.ii.76–77, 86) the Pharbelians are recorded after the heading *πόλεις αὐτῶν ταχσάμεναι*.

The Pharbelians were members of the Delian League. They belonged to the Thracian district and are recorded from 454/3 (*IG* I³ 259.i.15) to 433/2 (*IG* I³ 279.ii.86) a total of fourteen times, once completely restored, paying 1,000 dr. from 454/3 to 435/4, but only 500 dr. in the two following years (*IG* I³ 278.vi.15, 279.ii.86). They were assessed for

tribute in 422/1 (*IG* 1³ 77.v.19), 500 dr. The fact that the Pharbelians did not pay tribute after 432 may indicate that they took part in the Revolt of 432 (Thuc. 1.58.2), and also that they lived in the Chalkidic peninsula (*ATL* i. 560).

Steph. Byz. 658.15 calls Pharbelos a *polis Eretrieon*. Zahrnt (1971) 251 thinks that the Pharbelos mentioned by Stephanos must be a locality in Euboia and different from Pharbelos in the Chalkidic peninsula. However, Knoepfler (1997) 358 argues that Pharbelos was a colony in Chalkidike funded by Eretrians.

592. (Phegontioi) Map 50. Unlocated. Type: B:?. Only the city-ethnic is known: *Φεγέτιος* (*IG* 1³ 263.III.18), *Φεγέντιος* (*IG* 1³ 268.III.9) or *Φεγόντιος* (*IG* 1³ 267.II.27), all three variants known from the Athenian tribute lists. The singular of the city-ethnic (*Φε[γόντιον]*) was restored in *SEG* 10 53 (c.430) but not adopted in *IG* 1³ 159. Since the Phegetians disappear from the tribute lists after 432, it is possible that they revolted along with Poteidaia (no. 598), the Bottiaians and the Chalkidians in that year (Thuc. 1.58), and therefore, that they lived somewhere on the Chalkidic peninsula, but it cannot be determined with any certainty.

The Phegetians were members of the Delian League. They belonged to the Thracian district and are recorded from 451/0 (*IG* 1³ 262.III.29) to 433/2 (*IG* 1³ 279.II.63) a total of thirteen times, paying 1,600 dr. from 451/0 (*IG* 1³ 262.III.29) to 447/6 (*IG* 1³ 265.I.47) and thereafter 1,000 dr. (*IG* 1³ 266.II.33). The fact that the Phegontians did not pay tribute after 432 may indicate that they took part in the Revolt of 432 (Thuc. 1.58.2).

593. Piloros Map 51. Lat. 40.20, long. 23.45. Size of territory: 1 or 2. Type: A: *a*? The toponym is *Πίλωρος* (Hdt. 7.122; *IG* 1³ 278.vi.22). Apart from Steph. Byz. 523.12, there is no attestation of a city-ethnic. At Hdt. 7.122 Piloros is twice called a *polis*, first in the urban and then in the political sense.

It was a member of the Delian League, but it is listed only once, in 434/3 (*IG* 1³ 278.vi.22), under the heading *πόλεις ἄς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν* (18–21, where *polis* is used in the political sense), paying 600 dr. Herodotos locates it in the bay of Singos along with Ass(er)a (no. 564), Singos (no. 605) and Sarte (no. 602). Piloros supplied Xerxes with troops in 480 (Hdt. 7.122.1).

594. Pistasos Map 51. Unlocated. Type: [A]:? The toponym is *Πίστασος* (*IG* 1³ 278.vi.27). Pistasos was a member of the Delian League, but it is recorded only once: *viz.* in 434/3 under the heading *πόλεις ἄς οἱ ἰδιῶται*

ἐνέγραψαν φόρον φέρειν (*IG* 1³ 278.vi.19–21, 27, where *polis* is used in the political sense), paying 500 dr. In *ATL* i. 538 Pistasos is identified with Istasos, listed in the Thracian district in the assessment decree of 422/1 (*IG* 1³ 77.v.16) and assessed at 50 dr. For a critical view, see Zahrnt (1971) 213.

595. Pleume (Pleumeus) Map 50. Lat. 40.20, long. 23.10. Size of territory: 1. Type: [A]:? The toponym is *Πλεύμε* (*IG* 1³ 77.v.35). The city-ethnic is *Πλευμεύς* (*IG* 1³ 278.vi.17). In the Athenian tribute lists Pleume is recorded in 434/3 under the heading *πόλεις αὐταὶ φόρον ταξάμεναι* (*IG* 1³ 278.vi.5–6, 17, where *polis* is used in the political sense), and in 429/8 under the heading *ταῖσδε ἔταξαν οἱ τάκται* (*IG* 1³ 282.II.34–36, 40). Pleume may have been a Bottiaian *polis* (Flensted-Jensen (1995) 124–25). It is known exclusively from the Athenian tribute lists, where it is recorded twice (*supra*), paying 1,000 dr. Pleume is also recorded in the assessment decree of 422/1 (*IG* 1³ 77.v.35).

596. (Polichniti) Unlocated, not in *Barr.* 51. Type: C:*a*. No toponym is attested. The city-ethnic is *Πολιχνίται* (*IG* 1³ 260.viii.17).

The Polichnitans were members of the Delian League. They are recorded in the first two years of the tribute lists, 454/3 and 453/2 (*IG* 1³ 259.v.11–12, 260.viii.17). In the first year the Polichnitans were in a syntely with Stolos (no. 614) and Mekyllerna (no. 583), paying 2 tal. and 1,880 dr. They are also recorded (as *Πολιχνίται παρὰ Στῶλον*) in the assessment decree of 425/4 (*IG* 1³ 77.III.173–74).

The site of the Polichnitans has been identified tentatively with modern Smixi (Hatzopoulos (1988*a*) 70–72), where a number of deeds of sale have been found (*SEG* 37 575–76 (C4m)). The name of the month *Demetrium* is attested in one of them (*SEG* 37 576.5). Moreover, an eponymous priest is mentioned in 575.2–3 (and possibly in 576.3–4; the name, as restored, is Euphrantides son of Aristotimos, who is mentioned in a deed of sale from Torone, *SEG* 24 574.2, and who was perhaps a priest of the Chalkidian Federation).

597. Posideion Map 51. Unlocated, not in *Barr.* Type: C:?. A Posideion is known from the tribute assessment list of 422/1 (*IG* 1³ 77.v.32). It was assessed at 1,000 dr. and located in the Thracian *phoros*; otherwise its location is unknown. There were two places in the Chalkidic peninsula called Pos(e)ideion. One is a promontory (modern *Ποσειδί*) about 4 km from Mende (and in its territory); a sanctuary of Poseidon has been found there (*supra* 832). The other is *Ποσιδήμιον* mentioned by Hdt. 7.115.2 between Argilos (no. 554) and Akanthos (no. 559), probably the promontory *c.*20

km north of Akanthos (not in *Barr.*). However, Zahrnt ((1971) 214) does not believe that this area could have supported a *polis* that (possibly) paid 1,000 dr. to the Delian League.

598. Poteidaia (Poteidaiaites) Map 50. Lat. 40.10, long. 23.20. Size of territory: 2. Type: A:a. The toponym is *Ποτεΐδαϊα*, ἡ (Hdt. 8.126.3; Thuc. 1.61.3; *IG* 1³ 268.II.14) and later *Ποτίδαϊα* (Isoc. 15.108; Ps.-Skylax 66; Diod. 12.46.2). The city-ethnic is *Ποτεΐδαιήτης* (Hdt. 8.129.2), *Ποτεΐδαιήτης* (Thuc. 1.56.2; *IG* 1³ 272.II.50), *Ποτεΐδαιάρης* (ML 27.9 (the Serpent Column); Diod. 12.46.6) or *Ποτεΐδαεύς* (*IG* II² 10109 (C4m)). Poteidaia is called a *polis* both in the urban sense (Thuc. 1.62.1; Aen. Tact. 31.25; Ps.-Skylax 66) and in the political sense (Thuc. 1.66; Isoc. 15.108; *SEG* 38 662.4 (C4f)). The collective city-ethnic is used internally (in abbreviated form) on C5–C4 coins (*infra*), and externally in the Athenian tribute lists (*IG* 1³ 272.II.50). The individual and external use of the city-ethnic is attested in a C4m sepulchral inscription from Attika (*IG* II² 10109).

At Xen. *Hell.* 5.2.39 the toponym ἡ *Ποτεΐδαϊα* denotes the territory of Poteidaia. Thuc. 1.64.2 mentions that the territory (*ge*) of Poteidaia was ravaged by Phormion. Although Poteidaia was one of the most important *poleis* on the Chalkidic peninsula, its territory cannot have been larger than c.65 km², since Olynthos (no. 588) was situated c.11 km to the north, and Aphytis (no. 563) and Sane (no. 600) c.14 and 15 km respectively to the south of it. Furthermore, the isthmus of Pallene is 900 m wide (Strabo 7 fr. 25) at its narrowest. Hdt. 7.123.1 locates Poteidaia on Pallene next to Aphytis. Thuc. 1.56.2 and Xen. *Hell.* 5.2.15 place it on the isthmus of Pallene.

Poteidaia was colonised from Corinth (no. 227) (Thuc. 1.56.2, 66.1), and according to Nikolaos of Damaskos (*FGH* 90) fr. 59, the oecist was Euagoras, son of Periandros. Thus, it was probably founded c.600. Annual magistrates called *ἐπιδημιουργοί* were still sent from Corinth to Poteidaia in C5s (Thuc. 1.56.2), but there is no evidence that Poteidaia was ruled from Corinth (Graham (1964) 135–37). Poteidaia sent donations to Delphi in C6l (*Syll.*³ 15; Alexander (1963) 29–30), where it also had a treasury (Paus. 10.11.5; Alexander (1963) 25–29; Bommelaer (1991) 140–41).

Poteidaia supplied troops and ships to Xerxes in 480 (Hdt. 7.123.1). Furthermore, it had 300 hoplites at Plataiai (Hdt. 9.28.3; ML 27.9 (the Serpent Column); see Alexander (1963) 34–35; Paus. 5.23.2 Arist. *Rh.* 1396^a20). Apparently Poteidaia entered into an alliance with the other towns of Pallene against the Persians in 479 (Hdt. 8.128.2).

Poteidaia was a member of the Delian League (Thuc. 1.56.2, 1.66). It was probably a member from the very beginning (it is recorded on the Serpent Column; see e.g. Sealey (1966) 243), but it does not appear in the tribute lists until 446/5 (*IG* 1³ 266.III.7). Alexander (1963) 41–42 suggests that Poteidaia supplied a quota of ships and only later a quota of tribute. After 446/5 Poteidaia occurs regularly in the lists until 433/2 (*IG* 1³ 279.II.70) a total of eleven times, twice completely restored. Poteidaia belonged to the Thracian district and is recorded sometimes by toponym (*IG* 1³ 268.III.14), sometimes by city-ethnic (*IG* 1³ 272.II.50), paying a *phoros* of 6 tal. down to 440/39 (*IG* 1³ 272.II.50), but 15 tal. in 433/2 (*IG* 1³ 279.II.70). It revolted in 432 along with the Chalkidians and the Bottiaians (Thuc. 1.58.2), and consequently it is not recorded in the complete panels of 432/1 and 430/29. However, it appears from Thuc. 4.120.3 that it belonged to the Athenians in 423.

In 432, the Athenians requested that Poteidaia demolish part of its city wall, give hostages and refuse to accept the *epidemiourgoi* from Corinth (*supra*). Poteidaia sent envoys to Athens and Sparta simultaneously, and then countered the Athenian request by entering into an alliance with the Bottiaians and the Chalkidians and revolting against the Athenians (Thuc. 1.56–58). Poteidaia was besieged by the Athenians from 432 until 430 (Thuc. 1.59–67, 2.58; Pl. *Chrm.* 153A–B), when it capitulated (Thuc. 2.70.1–3). The inhabitants left Poteidaia and went to Chalkidike and other places (Thuc. 2.70.4; cf. Diod. 12.46.6). The Athenians settled Poteidaia with 1,000 *klerouchs* (ML 66: *ἐποίκων ἐς Ποτεΐδαιαν*; Thuc. 2.70.4; Diod. 12.46.7), who in *IG* 1³ 62.8, 20 are referred to as *οἱ ἔποικοι οἱ Ἀθηναίων οἱ Ποτεΐδαιαν ἔχοντες*. In 423 there is evidence of *stasis* in Poteidaia (Thuc. 4.121.2), but Brasidas' attempt to conquer the city failed (Thuc. 4.135.1). According to Xen. *Hell.* 5.2.15, 24, Poteidaia was a member of the Chalkidian Federation in the 380s. In 364/3 Timotheos captured Poteidaia (and Torone (no. 620)) from the Chalkidian Federation (Isoc. 15.108, 113; Din. 1.14, 3.17; Diod. 15.81.6). Some pro-Athenian Poteidaians sent envoys to Athens to ask for additional settlers, and in 362/1 Poteidaia became once again a *klerouchy* (*IG* II² 114 = Tod 146) settled with a contingent called *Ἀθηναῖοι οἱ ἐν Ποτεΐδαίᾳ κατοικοῦντες* (Dem. 7.10). In 356 Philip forced Poteidaia to surrender to the Olynthians (no. 588) (Dem. 6.20, 7.10, 23.107–8; cf. Diod. 16.8.3–5). Philip let the Athenians leave Poteidaia, but exposed the Poteidaians to an *andrapodismos*: they were sold off as slaves, and the town and territory given to the Olynthians (Diod. 16.8.5). However, the city was not destroyed by Philip

(Alexander (1963) 91, *pace* West (1918) 133 n. 137). It appears from Dem. 20.61 that Poteidaia was still in existence in 355 and was now a Makedonian dependency. The presumption is that the town was given to a new stock of settlers, probably Olynthians (Hammond and Griffith (1979) 361). Paus. 5.23.2 says that the Poteidaians were forced to leave their town twice, first under the Athenians, then under Philip. Kassandros brought them back to Poteidaia c.316, but changed the name of the town to Kassandreia (Diod. 19.52.2). We have no information about the status of Poteidaia in the years 356–316.

Poteidaia may have had an oligarchic constitution, at least until 433 (Rhodes (1981) 299).

There is no evidence of civic subdivisions in Poteidaia, apart from Athenian tribes and demes from the time of the first klerouchy (AAA 7 (1974) 190–98; Jones, *POAG* 266–67). Being an Athenian klerouchy once again from 361 to 356, Poteidaia is recorded in the Epidaurian list of *theorodokoi* of, probably, 360/59 (*IG* IV².1 94.I.b.12) and functioned as a (dependent) *polis* as is attested in a proxeny decree dated to the years 359–357 (Hatzopoulos (1988b) 55–61 = *SEG* 38 662). The inscription was found in Ag. Mamas (between Olynthos and Poteidaia) and Hatzopoulos believes that it comes from Poteidaia rather than Olynthos. If that is so, there is evidence of a *boule* (l. 7), an *ekklesia* (l. 8, heavily restored) and a *tamias* (l. 16), and the community is twice referred to as a *polis* in the political sense (ll. 4, 13).

Thuc. 1.56.2 mentions the city walls of Poteidaia. Alexander (1963) 3 writes that “traces of ancient wall construction, apparently classical, were reported to have been found”, and during recent excavations parts of the C5 walls have been found along with C6 sherds (*ArchDelt* 40 (1985) *Chron.* 237–38; 41 (1986) *Chron.* 147; Sismanides and Karaïskou (1992) 485, 489; Koussoulakou (1997) 457–58). Poteidaia must have been strongly fortified: in 479 it was able to withstand a siege for three months (Hdt. 8.126–28; cf. Aen. Tact. 31.25–27 and Polyæn. 7.33.1), and from 432 it was besieged by the Athenians for 2½ years (Thuc. 2.70).

Not much of ancient Poteidaia is left; much material has been employed in later constructions (Alexander (1963) 1–7; cf. Gomme (1945) 199). Two passages in Thucydides suggest that Poteidaia had two harbours, one to the east and one to the west (Thuc. 1.63, 4.129; cf. Alexander (1963) 19). At some point in Antiquity there may have been a canal through the isthmus on which Poteidaia was situated. Strabo says that the isthmus of Pallene is *διορωρυγμένος* (7 fr. 25). Hdt. 7.22 mentions the canal on Athos, but he does not mention any canal on Pallene, so it may have been dug later. There was a

temple of Poseidon in the *proasteion* of Poteidaia in 479 (Hdt. 8.129.3; Thuc. 4.129.3). *IG* IV 673 is a C4 honorific inscription for a Nauplian victor in athletic contests. The name of Poteidaia is restored in line 6, and if the restoration is correct, this is the only known example of games held in Poteidaia.

Poteidaia struck silver coins on the Euboic standard from c.550 (Alexander (1953), (1963) 50), C61 (Gaebler (1935) 103–5; Robinson and Clement (1938) 307; *SNG Cop. Macedonia* 312–316), or c.500 (Head, *HN*² 212) until c.356. Denominations: tetradrachms, tetrobols, diobols and tritemoria. (1) c.500–429: types: *obv.* Poseidon on horseback; legend: *Π* or *ΠΙΟ*; *rev.* incuse square. (2) 400–358: types: *obv.* head of Athena; *rev.* Pegasos, or trident; legend: *ΠΙΟ* or *ΠΙΟΤΕΙ*. Others have female head on the *obv.*, a sitting bull and legend on the *rev.* Poteidaia struck bronze coins in C4 as well.

599. Prassilos (Prassilios) Unlocated. Type: B:?. The toponym is *Πράσιλος* (*IG* I³ 285.III.10). Steph. Byz. 534.11 has *Πράξιλος* (and the city-ethnic *Πραξιλιος*). The city-ethnic is restored [*Πρα*]σιλιος in a C4m inscription (*SEG* 40 542.28). Prassilos may have been located in Bottike (Flensted-Jensen (1995) 124).

Prassilos was a member of the Delian League, but it is listed only once, in 421/0 (*IG* I³ 285.III.10), paying 900 dr.

600. Sane (Sanaïos) Map 51. Lat. 40.20, long. 23.55. Size of territory: 2 or 3. Type: A:a. The toponym is *Σάνη*, ἡ (Hdt. 7.22). The city-ethnic is *Σαναίος* (*IG* I³ 260.VIII.19). Hdt. 7.22.3 calls Sane a Hellenic *polis* (πόλις ‘Ἑλλάς), using *polis* in the urban sense, whereas Thuc. 4.109.3–5 probably uses *polis* in the political sense, using *polisma* about the settlement. The collective city-ethnic is used externally in the Athenian tribute lists (*IG* I³ 260.VIII.19).

In C5 Sane was considered a colony from Andros (no. 475) (Thuc. 4.109.3). Plutarch (*Mor.* 298A), however, says that Sane was settled jointly by the Chalkidians (no. 365) and the Andrians.

Sane was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* I³ 259.II.25, completely restored) to 415/14 (*IG* I³ 290.III.12) a total of nineteen times, four times completely restored, paying a *phoros* of 4,000 dr. from 447/6 (*IG* I³ 265.II.100) to 442/1 (*IG* I³ 270.III.6). From 435/4 (*IG* I³ 277.VI.27) to 433/2 (*IG* I³ 279.II.74) it paid 1 tal., and in 430/29 (*IG* I³ 281.II.27) just 1,000 dr. It is universally accepted that the Sane recorded in the tribute lists is Sane on Athos. But an inspection of its position in the tribute lists shows that it may equally well be Sane (no. 601) on Pallene, thus Hansen (2004).

Sane withstood an attack from Brasidas in 424, but its territory was ravaged (Thuc. 4.109.5). The incident indicates that Sane was fortified. Sane is mentioned in the Peace of Nikias (Thuc. 5.18.6). The passage runs as follows: *Μηκυβερναίους δὲ καὶ Σαναίους καὶ Σιγγαίους οἰκεῖν τὰς πόλεις τὰς ἑαυτῶν, καθάπερ Ὀλύνθιοι καὶ Ἀκάνθιοι*. This may be interpreted to mean that the Mekybernaians (no. 583), the Sanaians and the Singaians (no. 605) are to live in their own *poleis*, the Mekybernaians and the Singaians independently of Olynthos (no. 588), and the Sanaians independently of Akanthos (no. 559) (Gomme (1956) 672; cf. Hornblower (1996) 478–79). Others want to emend the passage and write *Γαλαίους* instead of *Σαναίους* (West (1937b) 166–73, accepted by e.g. Zahrnt (1971) 220).

Sane may have been incorporated into Ouranopolis, which was founded by Alexarchos c.315 (Zahrnt (1971) 209–10), or perhaps into Akanthos, since it is not mentioned by later sources.

South-west of modern Nea Rhoda (in the territory of Sane?) an Archaic sanctuary has been found. The sanctuary was in use from the Archaic period to C3 (Vokotopoulou and Tsigarida (1992), (1993); Tsigarida (1996)).

601. Sane Map 50. Lat. 40.05, long. 23.20. Size of territory: 2. Type: A:a. The toponym is *Σάνη, ἡ* (Hdt. 7.123.1). The city-ethnic is not attested.

At 7.123.1 Herodotos uses the pronoun *αὐται* about eight *poleis* on Pallene, and it is an almost certain inference that the noun to be supplied is *πόλεις*. He mentions Sane after Mende (no. 584) and locates it on Pallene. Furthermore, he says that it supplied ships and troops to Xerxes in 480.

West (1918) 73 argues that Sane at Hdt. 7.123.1 must be an error and that Sane on Pallene would have been distinguished from Sane (no. 600) on Akte, in, e.g., the Peace of Nikias (see also Gomme (1956) 588). This argument carries no weight; see *supra* 839. Furthermore, according to Strabo (7 fr. 27) Sane was one of four *poleis* on Pallene. Pomponius Mela (2.3.35) mentions Sane too. Finally, Geometric and Archaic remains of a considerable settlement have been found on some hills near modern Sani, c.15 km south of Poteidaia (no. 598) (*ArchDelt* 41 (1986) *Chron.* 147, 42 (1987) *Chron.* 367–68; Vokotopoulou (1987) 279). The fact that some Archaic sherds are inscribed in the Corinthian alphabet (*SEG* 38 667) may indicate Corinthian influence, possibly via nearby Poteidaia, at Sane; these sherds seem to originate from the site of a nocturnal cult of a female chthonic deity (*ibid.*). It cannot be precluded that the Sane recorded in the Athenian tribute lists is Sane on Pallene, not Sane (no. 600) on Athos.

602. Sarte (Sartaïos) Map 51. Lat. 40.05, long. 24.00. Size of territory: ? Type: A:a. The toponym is *Σάρτη* (Hdt. 7.122). The city-ethnic is *Σαρταίος* (*IG* 1³ 281.111.57). At Hdt. 7.122 Sarte is twice called a *polis*, first in the urban sense; but the information that Sarte was one of the *poleis* that supplied Xerxes with troops in 480 indicates that *polis* is used in the political sense as well. In the Athenian tribute lists Sarte is recorded three times under the heading *πόλεις* (*infra*), where *polis* is used in the political sense. The collective city-ethnic is used externally in the tribute lists (e.g. *IG* 1³ 281.111.57).

Hdt. 7.122 locates Sarte on the bay of Singos and says that it supplied troops to Xerxes in 480. Sarte was a member of the Delian League. It belonged to the Thracian district and is recorded in 434/3 (*IG* 1³ 278.vi.13), 433/2 (*IG* 1³ 279.11.79) and in 432/1 (*IG* 1³ 280.11.71) under the heading *πόλεις αὐταὶ φόρον ταξάμεναι*, in 430/29 (*IG* 1³ 281.111.57) and in 429/8 (*IG* 1³ 282.11.38) under the heading *ταῖσδε ἔταξαν οἱ τάκται ἐπὶ Κρ[. . .]ου γραμματεῦντος*. It is also on the lists of 421/0 (*IG* 1³ 285.111.12) and 415/14 (*IG* 1³ 290.111.11), paying 1,500 dr. from 434/3 to 429/8, but only 100 dr. in 421/0.

603. Serme (Sermaïos) Not in *Barr* 50. Unlocated. Type: C:?. The toponym is *Σέρμε* (*IG* 1³ 77.V.20). The city-ethnic is *Σερμεύς* (*IG* 1³ 264.111.34) or *Σερμαίος* (*IG* 1³ 272.11.48). It is restored as *Σερμαίεύς* in the tribute lists of 443/2 (*IG* 1³ 269.111.33) and 442/1 (*IG* 1³ 270.111.32). The collective city-ethnic is used externally in the Athenian tribute lists (*IG* 1³ 264.111.34).

The editors of the Athenian tribute lists suggest that the Sermaians were the inhabitants of Therme (Hdt. 7.124), but most scholars disagree (*ATL* i. 546, *contra* e.g. Zahrnt (1971) 223–25).

The Sermaians were members of the Delian League. They belonged to the Thracian district and are recorded in the tribute lists from 450/49 (*IG* 1³ 263.iv.14) to 432/1 (*IG* 1³ 280.11.57) a total of fourteen times, twice completely restored, paying 500 dr. They were assessed for tribute in 422/1 (*IG* 1³ 77.v.20) 500 dr.

604. Sermylia (Sermylieus) Map 51. Lat. 40.15, long. 23.30. Size of territory: 1 or 2. Type: A:a. The toponym is *Σερμύλη* (Hdt. 7.122) or *Σερμυλία* (*IG* 1³ 1184.1.50; Ps.-Skylax 66). The city-ethnic is *Σερμυλιεύς* (*IG* 1³ 277.vi.26), *Σερβυλιεύς* (*IG* 1³ 264.iv.34) and *ΣΕΡΜΥΛΙΑΙΟΝ* on Archaic coins (Gaebler (1935) 106–7). Sermylia is called a *polis* both in the urban sense (Thuc. 1.65.2; Ps.-Skylax 66 (cf. Flensted-Jensen and Hansen (1996) 142)) and in the political

sense (Thuc. 5.18.8: Peace of Nikias). At Hdt. 7.122 *polis* is used in both senses simultaneously (Hansen (2000a) 175–76). Hecat. fr. 151 (*apud* Steph. Byz. 561.14) mentioned Sermylia, although it is not certain whether he called it a *polis* (cf. Hansen (1997b)). The collective city-ethnic is used internally on coins of c.500 (Gaebler (1935) 106–7) and externally in the Athenian tribute lists (*IG* 1³ 270.III.27).

Hdt. 7.122 lists Sermylia between Gale(psos) (no. 571) and Mekyberna (no. 583); Zahrnt (1971) 225 mentions an ancient settlement c.3 km south of modern Ormylia. The name of Sermylia's territory was *Σερμυλίαία* (*SEG* 38 619.6 (c.285)).

Sermylia supplied Xerxes with troops and ships in 480 (Hdt. 7.122).

Sermylia was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* 1³ 259.v.9) to 434/3 (*IG* 1³ 278.v.9) a total of thirteen times, once completely restored. In 445/4 it is recorded as *Σερμυλιῆς καὶ συν* (*IG* 1³ 267.II.25; see West (1918) 12 n. 20). In the first years it paid odd sums such as 4,622 dr. in 454/3 (*IG* 1³ 259.v.9), 3,550 dr. in 451/0 (*IG* 1³ 262.II.28). In 448/7 and 447/6 it paid 3 tal. (*IG* 1³ 264.IV.34, 265.II.29). From 445/4 it paid 5 tal. (*IG* 1³ 267.II.25), and from 435/4 4½ tal. (*IG* 1³ 277.VI.26). It was assessed for tribute in 425/4 (*IG* 1³ 71.III.165, completely restored).

In 432 the Peloponnesians under Aristeus killed many Sermyliaians near their *polis*, and, since he helped the Chalkidians, they must have been enemies of the Chalkidians (Thuc. 1.65.2). Nevertheless, the Chalkidians must have secured control of Sermylia shortly after, since they do not appear in the complete panels of the tribute lists of 432/1 and 430/29. However, it appears from the Peace of Nikias (Thuc. 5.18.8) that Sermylia was once again in the hands of the Athenians.

It seems reasonable to infer that Sermylia was a member of the Chalkidian Federation in C4 (Zahrnt (1971) map 4), and that it was one of the *poleis* annihilated by Philip II, since there is no mention of Sermylia after 348. Hatzopoulos (1996a) 121 suggests that it became a *kome* of Kassandrea. Around 285 some land in the territory of (the former *polis*?) Sermylia was given to Limnaios by Lysimachos (Hatzopoulos (1988b) 37; cf. *SEG* 38 619).

Sermylia struck silver tetradrachms on the Euboic standard c.500 (Head, *HN*² 207; cf. Gaebler (1935) 106–7) or perhaps as early as the third quarter of C6 (Robinson and Clement (1938) 313). Types: *obv.* naked horseman and dog; legend: *ΣΕΡΜΥΛΙΚΟΝ* or *ΣΕΡΜΥΛΙΑΙΟΝ*; *rev.* quadripartite incuse square. A few C4 bronze coins have been found (*ibid.* 313).

605. Singos (Singaios) Map 51. Lat. 40.15, long. 23.45. Size of territory: ? Type: A:a. The toponym is *Σίγγος* (Hdt. 7.122). The city-ethnic is *Σίγγυιος* (*IG* 1³ 260.VIII.18) or *Σίγγυαίος* (Thuc. 5.18.6). Singos is called a *polis* at Hdt. 7.122 in the urban and political senses simultaneously (Hansen (2000a) 175–76) and in the political sense at Thuc. 5.18.8 (Peace of Nikias). The collective city-ethnic is used externally in the Athenian tribute lists (*IG* 1³ 260.VIII.18).

Singos supplied Xerxes with troops in 480 (Hdt. 7.122). It was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.v.13) to 433/2 (*IG* 1³ 279.II.75) a total of sixteen times, once completely restored, paying a *phoros* of between 1 tal. (*IG* 1³ 279.II.75) and 4 tal. (*IG* 1³ 263.IV.11). Singos was assessed for tribute of 10 dr. in 421 (*IG* 1³ 77.v.22), and possibly in 425/4 too (*IG* 1³ 71.IV.109, completely restored).

In the Peace of Nikias it is stipulated that the inhabitants of Singos live in their own *polis* (Thuc. 5.18.6), which probably means that Singos was one of the *poleis* that took part in the synoecism of Olynthos (no. 588) in 432 (Thuc. 1.58.2; see West (1918) 74 and Hornblower (1996) 478–79); the wording of Thuc. 1.58.2 (*πόλεις . . . καταβαλόντας* and *καθαιρόντες τὰς πόλεις*) suggests that the city was destroyed in connection with the synoecism. Perhaps Singos was one of the towns destroyed by Philip II, since Strabo calls it a *πόλις ἀρχαία κατεσκαμμένη* (7 fr. 31). Remains of the urban centre and its harbour have been found near modern Ag. Nikolaos; the urban centre was protected by a wall of the Classical or Hellenistic period (Zahrnt (1971) 227–28).

606. Sinos Map 50. Lat. 40.15, long. 23.45. Size of territory: ? Type: [A]:? Only the toponym *Σίνος* (*IG* 1³ 278.VI.24) is attested. In the Athenian tribute lists Sinos is twice recorded under the heading *πόλεις ἄς οἱ ιδιωταὶ ἐνέγραψαν φόρον φέρειν*, in 434/3 (*IG* 1³ 278.VI.18–21, 24) and in 433/2 (*IG* 1³ 279.II.89–92, 98, restored), where *polis* is used in the political sense. The name of the territory, *Σιναία*, is mentioned in *Syll.*³ 332 (306–297), according to which a field in the Sinaia was given by Kassandros to Perdikkas. Sinos may have been situated in Bottike (Flensted-Jensen (1995) 125).

Sinos was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists for the years 434/3 (*IG* 1³ 278.VI.24), 433/2 (*IG* 1³ 279.II.98) and 421/0 (*IG* 1³ 285.III.9), paying 1,500 dr. in 434/3 and 433/2 and 800 dr. in 421/0. Furthermore, it was assessed in 422/1 (*IG* 1³ 77.v.38).

607. Skabala (Skablaïos) Map 51. 40.20, long. 23.35. Size of territory: ? Type: B:a. The toponym is presumably *Σκάβαλα* (Theompomp. fr. 151; cf. Knoepfler (1997) 358 with n. 49). The city-ethnic is *Σκαβλαῖος* (*IG* I³ 263.II.16). The collective city-ethnic is attested externally in the Athenian tribute lists (*IG* I³ 259.v.6–7).

Theompomp. fr. 151 describes Skabala as a *χωρίον Ἐρετριέων*, which indicates that he took it to be a colony of Eretria (Knoepfler (1997) 358 with n. 49).

The Skablaïans were members of the Delian League. They are recorded from 454/3 (*IG* I³ 259.v.6–7) to 433/2 (*IG* I³ 279.II.71) a total of fourteen times, once completely restored. In the first year (*IG* I³ 259.v.6–7 (454/3)) they appear in a syntelic group along with Olynthos (no. 588) and Ass(er)a (no. 564), paying 2 tal., 4,000 dr. altogether. When the Skablaïans are listed alone, they pay either 3,000 dr. (*IG* I³ 263.II.16) or 2,000 dr. (*IG* I³ 266.II.25) or, once, 1,500 dr. (*IG* I³ 279.II.71). Since they are absent from the full panel of 430/29 (*IG* I³ 281.II.5–27), many scholars believe that the Skablaïans revolted in 432 (Zahrnt (1971) 231). This, and the fact that they paid along with Olynthos and Ass(er)a, led the editors of the Athenian tribute lists to believe that the Skablaïans lived north of Sithonia (*ATL* i. 549).

608. (Skapsaioi) Unlocated. Type: B:a? The city-ethnic is *Σκαψαῖος* (*IG* I³ 279.II.49). The abbreviated collective city-ethnic is used internally on C4f coins (*infra*) and externally in the Athenian tribute lists (*IG* I³ 290.III.13).

The Skapsaïans were members of the Delian League. They belonged to the Thracian district and are recorded in the tribute lists from 452/1 (*IG* I³ 261.II.6, heavily restored) to 415/14 (*IG* I³ 290.III.13) a total of fourteen times, once completely restored. However, they are not listed in the complete panel of 430/29 (*IG* I³ 281.II.5–27), which may indicate that they took part in the Revolt of 432 (Thuc. 1.58.2). If so, they must have joined the Athenians again at some point before 415. The Skapsaïans paid a *phoros* of 1,000 dr.

During the excavations at Olynthos a Skapsaïan bronze coin was found. It dates from C4f. Type: *obv.* head of Apollo; *rev.* lion (or panther); legend: *ΣΚΑΨΑΙ* (Robinson (1952) 407–8, 419; Flensted-Jensen (1997) 122–25).

609. Skione (Skionaios) Map 51. Lat. 39.55, long. 23.35. Size of territory: 2. Type: A:a. The toponym is *Σκιώνη*, ἡ (Thuc. 4.120.2) or *Σκιώνα* (*IG* IV².1.1.b.94.25 (359)). The city-ethnic is *Σκιωναῖος* (Thuc. 4.120.1; *IG* I³ 266.II.31). Skione is called a *polis* both in the urban sense (Thuc. 4.131.1; Ps.-Skylax 66, where it is listed under the heading *πόλις αἰδέε*) and in the political sense (Hdt. 8.128.3; Thuc. 4.122.4,

5.18.8: Peace of Nikias). Thuc. 5.2.1 once describes Skione as a *chorion* in Thrace. The collective city-ethnic is used internally on C5f coins (Head, *HN*² 210), and externally in the Athenian tribute lists (*IG* I³ 266.II.31). The individual and external use is attested in Attic sepulchral inscriptions (*IG* II² 10365–66 (C4)) and in literary sources (Hdt. 8.8.1).

Hdt. 7.123, locates Skione between Therambos (no. 616) and Mende (no. 584) on Pallene (cf. Thuc. 4.120.1).

Skione supplied troops and ships to Xerxes in 480 (Hdt. 7.123). Hdt. 8.128.1–3 mentions a *strategos* from Skione in reference to 479. Skione was a member of the Delian League. It belonged to the Thracian district and is recorded in the Athenian tribute lists from 454/3 (*IG* I³ 259.II.9) to 429/8 (*IG* I³ 282.II.12) a total of fourteen times. In the years 454/3–451/0 Skione and Therambos (no. 616) paid jointly 6 tal. (*IG* I³ 262.1.3); in the following period Skione paid 6 tal. (*IG* I³ 266.II.31) until 432/1, when the tribute was lowered to 4 tal. (*IG* I³ 280.II.52), but in 430/29 (*IG* I³ 281.II.14) and in 429/8 (*IG* I³ 282.II.12) it paid 9 tal.

Skione joined Brasidas in 423 (Thuc. 4.120–21; cf. Diod. 12.72.1), just after Athens and Sparta had concluded an armistice for a year (Thuc. 4.117–19). Therefore, on the motion of Kleon, the Athenians decreed that Skione be destroyed and the inhabitants killed (Thuc. 4.122.6). Having captured Mende, the Athenians laid siege to Skione and built a wall round the city (Thuc. 4.130.7–132.1, 133.4, 5.2.2; Ar. *Vesp.* 210). In the Peace of Nikias Skione is ceded to Athens (Thuc. 5.18.7–8). Shortly after, the Athenians captured Skione and exposed the city to *andrapodismos*: the adult males were killed, the women and the children enslaved, and the land given to the Plataians (Thuc. 5.32.1; Isoc. 4.109)—in later sources described as a harsh treatment (Xen. *Hell.* 2.2.3; Isoc. 4.100). In 405/4 Lysander gave Skione back to its former inhabitants (Plut. *Lys.* 14.3; cf. Xen. *Hell.* 2.2.3, 9). Skione is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* IV².1.94.I.b.25).

Meritt (1923) 450–51 offers a description of the site of Skione. He located the acropolis of Skione on a fortified hill (p. 447) from which C4 remains of a building have been reported (*ArchDelt* 41 (1986) *Chron.* 149), and later excavations have revealed remains of, *inter alia*, a large C5 building, built in isodomic masonry (Sismanides (1991)).

The Skionaians believed that, originally, they came from Pellene in the Peloponnese. The first settlers were driven by a storm on their way back from Troy (Thuc. 4.120.1; cf. Polyæn. 7.47). Borza (1990) 75 suggests that Achaïans settled at Skione. This tradition is undoubtedly an attempt to connect Peloponnesian Pellene with Thracian Pallene, on which

Skione was located. An Archaic coin testifies to a different tradition: on the obverse Protesilaos is celebrated as the oecist of Skione (Kraay (1976) 134 with no. 470). The two traditions are not mutually exclusive: “Protesilaos the ‘Achaian’ (in the broad Homeric sense) is easily reconcilable with the story of a foundation from Achaia (in the narrow geographical sense of Achaia, i.e. northern Peloponnese)” (Hornblower (1996) 377–78). Skione was considered an Achaian colony by later writers: Pomponius Mela 2.33 and Polyaeus 7.47 both say that Skione was founded by Achaians escaping from Troy, whereas Konon (13 = Phot. 133a) attributes the foundation of Skione to Protesilaos. However, it was well known that Protesilaos was killed as soon as he arrived at Troy (Hom. *Il.* 2.698–702). Various solutions to this problem have been suggested: Protesilaos participated in the first expedition against Troy (with Herakles) and founded Skione after that expedition (Hornblower (1996) 377 with refs.); or there may have been an alternative tradition according to which Protesilaos did not die when he arrived at Troy, and thus was able to found Skione (Boedeker (1988) 36 n. 22).

Skione struck silver coins on the Euboic standard from C61 to c.450, and on the Phoenician standard before c.424. (1) Tetradrachm (*supra*): *obv.* head of Protesilaos with the name written out along the crest-holder of the helmet; *rev.* ΣΚΙΟ in corners of incuse square containing stern of galley. (2) Other coins: denominations: tetradrachms, tetrobols, triobols and hemiobols. Moreover, it struck bronze coins in C4f. Types: *obv.* heroic head, or female head; *rev.* Corinthian helmet; legend: ΣΚΙΟ, ΣΚΙΩΝΑΙΩΝ or ΣΚΙΩ. (Head, *HN*² 210; Gaebler (1935) 108–9; *SNG Cop. Macedonia* 318–24, *pace* Robinson and Clement (1938) 311–12).

610. Skithai (Skithaios) Not in *Barr.* Unlocated. Type: B:a. The toponym is Σκίθαι (Steph. Byz. 574.17). The city-ethnic is Σκιθαῖος (Theopomp. fr. 375), ΣΚΙΘ(ΑΙΟ)Ν found on coins (*SNG Cop. Macedonia* 325). Steph. Byz. 574.17 describes Skithai as a *polis* in Thrace, in the vicinity of Poteidaia (πλησίον Ποτειδαίας). Since he calls Skithai a *polis* in Thrace, not in Makedonia, he probably used a pre-350 source. Skithai is sometimes identified with Kithas (s.v.; Gaebler (1929) 256; but see Flensted-Jensen (1997) 125–27). Skithai minted silver coins c.500. Denominations: tetrobols and hemiobols. Types: *obv.* lion; legend: ΣΚΙΘ or ΣΚΙΘ(ΑΙΟ)Ν; *rev.* Quadripartite incuse square (Gaebler (1929), (1935) 110; *SNG Cop. Macedonia* 325–26).

611. Smila Map 50. Unlocated. Type: A:? The toponym is Σμίλα (Hecat. fr. 148; Hdt. 7.123.2) or Σμίλλα (*IG* 1³

278.vi.31). Apart from Steph. Byz. 580.10, there is no attestation of a city-ethnic. Smila is called a *polis* in the urban sense by Hecat. fr. 148 (Hansen (1997b) 25), and in the urban and political sense combined (Hansen (2000a) 175–76) by Hdt. 7.123.2–3. In an Athenian tribute list Smila is recorded under the heading πόλεις ἅς οἱ ἰδιῶται ἐνέγραψαν φόρον φέρειν (*IG* 1³ 278.vi.18–21, 31), where *polis* is used in the political sense. Hdt. 7.123.2–3 locates Smila in Krousis.

Smila supplied Xerxes with troops in 480 (Hdt. 7.123.2). It was a member of the Delian League, but is listed only once, in 434/3 (*IG* 1³ 278.ii.31), paying 3,000 dr. along with the Tindaians (no. 619), Kithas (no. 579), Gigonos (no. 572) and Haisa (no. 573). [Σμίλλα] is restored in *IG* 1³ 71.1v.84 (425/4).

612. Spartolos (Spartolios) Map 50. Lat. 40.20; long. 23.10. Size of territory: ? Type: A:a. The toponym is Σπάρτωλος, ἡ (Thuc. 2.79.2). The city-ethnic is Σπαρτόλιος (*IG* 1³ 259.iii.24). Spartolos is called a *polis* both in the urban sense (Thuc. 2.79.2) and in the political sense (Thuc. 2.79.2, 5.18.5; Peace of Nikias). The collective city-ethnic is used externally in the Athenian tribute lists (*IG* 1³ 259.iii.24).

Spartolos was a *polis* in Bottike (Thuc. 2.79.2; Harp. Σ34). The name of its territory was probably also Σπάρτωλος (*Syll.*³ 332.15–16 (306–297); cf. Flensted-Jensen (1995) 125).

Spartolos was a member of the Delian League until the beginning of the Peloponnesian War. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.iii.24) to 434/3 (*IG* 1³ 278.v.5) a total of sixteen times, once completely restored, paying 2 tal. each year, except in 434/3 (*IG* 1³ 278.v.5) and 433/2 (*IG* 1³ 279.ii.73), when it paid 3 tal. 500 dr. In 432 the Bottiaians revolted against the Athenians (Thuc. 1.57.5), and in 429 they fought and won a battle against the Athenians outside Spartolos (Thuc. 2.79.2–7; Isae. 5.42; Flensted-Jensen (1995) 121–22). Spartolos may have been listed in the assessment decree of 425/4 (*IG* 1³ 71.iii.167: Σπ[αρτόλιοι]). According to the Peace of Nikias, Spartolos was to be *autonomos* and pay the tribute as fixed by Aristeides (Thuc. 5.18.5).

A C4m deed of sale has been found at the presumed site of Spartolos (Papangelos (1996)). The inscription indicates that Spartolos was a member of the Chalkidian Federation at that time, since Aristoboulos, son of Kallikrates (Il. 1–2), was a priest of the Chalkidian Federation, perhaps in 353/2 (Hatzopoulos (1988a) 59, 67, 73–75).

It appears from Thuc. 2.79 that Spartolos was walled. At the presumed site of Spartolos there are remains of a

cemetery containing graves from the Archaic and Classical periods and of a settlement. Furthermore, excavations at Nea Syllata, c.3 km from ancient Spartolos, show continuous habitation from the Bronze Age, through the Classical, Roman and Byzantine periods (*ArchDelt* 31 (1976) *Chron.* 247); also a cemetery has been found at Nea Syllata (AAA 14 (1982) 246–50).

613. Stagiros (Stagirites) Map 51. Lat.40.35, long. 23.45. Size of territory: ? Type: A:a. The older toponym is *Στάγιρος* (Hdt. 7.115.2; Thuc. 4.88.2) or *Στάγιρα* (*IG* IV².1 94.1.b.21 (360/59)), and the later one is *Στάγιρα, τὰ* (Dion. Hal. *Ad Amm.* 1.5) or *Στάγιρος* (Strabo 7 fr. 33 (but note *Στάγιρα*, fr. 35)). The city-ethnic is *Σταγυρίτης* (*IG* I³ 271.11.53), and later *Σταγυρίτης* (Diod. 18.8.3; Dio Chrys. 47.9). Herodotos calls Stagiros a *polis* in the urban sense (*πόλις Ἑλλάς*: 7.115.2), and Thucydides in the political sense (5.18.5: Peace of Nikias). The collective city-ethnic is found internally in abbreviated form on C61 coins (*infra*), and externally in the Athenian tribute lists (*IG* I³ 281.11.18). The individual city-ethnic is used externally on a gravestone from Athens (*IG* I³ 1370 (C5s)) and in *Syll.*³ 275 (334–332).

According to early tradition, Stagiros was a colony from Andros (Thuc. 4.88.2, 5.6.1), but Dion. Hal. *Ad Amm.* 1.5 seems to believe that it was founded from Chalkis (no. 365). Hdt. 7.115.2 mentions Stagiros in connection with Xerxes' march in 480. Stagiros was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* I³ 259.1.14) to 429/8 (*IG* I³ 282.11.10) a total of fifteen times, once completely restored, paying 1,000 dr. in all years (*IG* I³ 263.IV.15). In 424 Stagiros revolted and joined Brasidas (Thuc. 4.88.2), and in 422 Kleon made an unsuccessful attack on the city (Thuc. 5.6.1). In the Peace of Nikias Stagiros is declared *autonomos* and liable to the tribute assessed by Aristides (Thuc. 5.18.5). It was assessed for tribute in 410/9 (Krateros fr. 25 (Krech 1888) = *IG* I³ 100). If we can trust some late sources (Tzetzes, *Chil.* 7.441, 11.849; Dio Chrys. 47.9), Stagiros had been a *polis* (or *kome*) in Olynthian territory, i.e. a member of the Chalkidic Federation (Zahrnt (1971) 242–43). According to an emended passage in Diod. 16.52.9 and two passages from *Vit. Arist.* (fr. 655, Rose), Stagiros was destroyed by Philip in 348 (see Hammond and Griffith (1979) 376 and Hatzopoulos (1996a) 191). It is not clear from Plut. *Alex.* 7.2 and Dio Chrys. 47.9 whether the town was in fact destroyed; what is clear is that the population was expelled and later allowed to move back. Excavations show that the site of Stagiros was fortified in the Hellenistic period (see *infra*).

Stagiros is recorded in the Epidaurian list of *theorodokoi* of 360/59 (*IG* IV².1 94.1.b.21). The most famous citizen of Stagiros, Aristotle, was praised by the Delphic Amphiktyony in 334/3 (*Syll.*³ 275).

Excavations were begun in 1990. The city was situated on a promontory consisting of two hills. The earliest settlement was located on the northern hill. When the town expanded in the Classical period, building was begun on the southern hill as well, and both hills were surrounded by a wall, which is very well preserved, especially on the southern side. The wall is built in various types of masonry (Lesbian and polygonal) and has an estimated length of 1.5–2 km, with both square and circular towers. It is about 2 m in width. The building of the wall was begun c.500 (Sismanides (1997) 5; cf. Sismanides (1991); *BCH* 118 (1994) 762; Sismanides (1996) 279–80; Camp (2000) 44).

On the north-east part of the northern hill there is a 150 m zigzag stretch of a wall built in the late Classical period, presumably after Philip II destroyed the town (Sismanides (1996) 280).

On the northern hill there are remains of a complex from the Byzantine period. Remains of the Archaic wall was found in this complex, along with a C6 lintel with a C6 inscription, which seems to be some kind of tax regulation, imposing a tax of 5 dr. (autopsy).

On the northern hill, where the oldest settlement was located, three Archaic sanctuaries have been found. One, which is situated close to the sea, may have been for Demeter. In connection with this sanctuary, many fragments of female clay protomes have been found; the other sanctuary is a circular structure, 11 m in diameter, which is probably a Thesmophorion (Sismanides (1997) 19). The third one is situated closer to the top of the hill. The divinity worshipped in this temple has not been identified. Theophr. *Hist. Pl.* 4.16.3 refers to a Mouseion in Stagiros, but it may have been located on the southern hill.

Between the two hills is a depression, where the agora was situated. On the agora a C4 stoa, 6 × 26 m, has been found. It is built in pseudo-isodomic masonry. Only the marble bases of the columns survive. Near the agora is a paved road, 3 m wide. A stretch of 30 m has been located so far. Furthermore, there are remains of commercial buildings, such as shops, store-rooms and a wine vat (Sismanides (1996) 286–87, (1997) 12, 14).

On top of the southern hill are the remains of the triangular acropolis. One of the sides is formed by the Classical wall, and on this side there is also a small gate. Opposite the gate is a cistern. The walls surrounding the acropolis are

preserved, in some places very well, with flights of internal steps, etc. On the north-west corner there is also a watch-tower. Remains of water pipes are preserved *in situ*, and about forty have been found so far (Sismanides (1996) 284).

On both hills remains of dwellings have been found, dating to the Archaic, Classical and Hellenistic periods (Sismanides (1996) 285–86).

Stagiros struck silver staters on the Euboic standard from C6l. Types: *obv.* lion and boar; *rev.* incuse square, or *obv.* wild sow; *rev.* incuse square; legend: ΣΤΑΓΓΙ. (Gaebler (1930) 302, (1935) 110–11; *SNG Cop. Macedonia* 327; Cahn (1973)).

614. Stolos (Stolios) Map 51. Lat. 40.20, long. 23.40. Size of territory: ? Type: A:a. The toponym is Στωλος (*IG* IV².1 94.1.b.23 (360/59); Steph. Byz. 588.18) or Σκωλος, ἡ (Thuc. 5.18.5; Strabo 9.2.23; Eust. *Il.* 2.497). The city-ethnic is Στόλιος (e.g. *IG* I³ 259.v.11).

Stolos is referred to as a *polis* in the urban sense in three C4 deeds of sale (*SEG* 38 670.4, 671.7, 672.4; cf. *infra*). It is called *polis* in the political sense at Thuc. 5.18.5 (Peace of Nikias). The city-ethnic is used externally in the Athenian tribute lists (*IG* I³ 259.v.11).

West (1937a) 166 thinks Stolos must be located in the interior of the Chalkidic peninsula, west of Akanthos (no. 559). Hatzopoulos (1988a) 70–72 tentatively identifies Stolos with modern Kellion, where a number of deeds of sale have been found (*SEG* 38 670–73 (C4m)). According to Sismanides, however, there was “an unknown, but important ancient town” at Kellion; building debris has been found there (*ArchDelt* 41 (1986) *Chron.* 150).

Stolos was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (*IG* I³ 259.v.11) to 434/3 (*IG* I³ 278.vi.3) a total of fourteen times. In the first year Stolos paid in a syntely with the Polichnitans (no. 596) and Mekyberna (no. 583). After that, it paid 4,000 dr. in 450/49 (*IG* I³ 263.iv.17), 5,000 dr. in 448/7 (*IG* I³ 264.iii.2) and 447/6 (*IG* I³ 265.ii.32), and again 4,000 dr. from 445/4 (*IG* I³ 267.ii.26). In 438/7 and 434/3 Stolos paid 1 tal. (*IG* I³ 274.vi.12, 278.vi.3). According to the Peace of Nikias, Stolos was to be *autonomos* and pay the tribute as fixed by Aristides (Thuc. 5.18.5).

Stolos may have been a member of the Chalkidian Federation, at least in C4. Hatzopoulos (1996a) 388–89 argues that Stolos must have been a member of the Chalkidian Federation, since it is evident from a number of C4m deeds of sale that Stolos used the calendar also in use at Olynthos (no. 588). Four month names are known from

C4m deeds of sale (Hatzopoulos (1988a) 65–66, 80; Trümper, *Monat.* 42–43).

Steph. Byz. 588.18–20, without quoting any source, reports that Stolos originally was an Edonian town, which was later taken over by the Chalkidians.

615. Strepsa (Strepsaios) Map 50. Lat. 40.30, long. 23.10. Size of territory: ? Type: B:a. The toponym is Στρέψα, ἡ (Aeschin. 2.27). The city-ethnic is Στρεψαίος (*IG* I³ 259.iv.14; Ar. fr. 126, *PCG*). Harp. Σ44, quoting Hellan. fr. 61, classifies Strepsa as a *polis* in Thrace (πόλις ἐστὶ τῆς Θράκης). Hellanikos was obviously Harpokration’s source for the location, but not necessarily for the site-classification. Strepsa’s status as a *polis* is indicated by its membership of the Delian League combined with the evidence that Strepsa was a nucleated settlement. The collective city-ethnic is attested externally in the Athenian tribute lists (*IG* I³ 259.iv.14).

The location of Strepsa has been the subject of considerable scholarly discussion (Hatzopoulos and Loukopoulou (1987) 59; cf. Gomme (1956) 215–18; Edson (1955); Borza (1990) 294–95). Hatzopoulos and Loukopoulou suggest that Strepsa be identified with modern Vasilika (cf. *AR* (1986–87) 34; Papazoglou (1988) 202–3; cf. Hammond (1972) 190–91). Not far from that, at modern Ag. Paraskevi, a large C6 cemetery containing c.500 graves has been excavated in the period 1981–88. All the female burials faced east, and the male west (as in nearby Thermi). Men were buried with weapons, and women with jewellery. A large amount of vessels have been recovered, both imported and local ware, and virtually all types are represented (Sismanides (1987); *Macedonians* (1994) 170 with photos 177–93). The degree of organisation seems to show that the cemetery was part of an organised community, not just the result of private enterprise. The cemetery was remarkably rich, and it is noteworthy that weapons were found in a period when they were no longer used as grave-offerings in Attika (Kurtz and Boardman (1971) 75). Traces of the settlement to which the cemetery belonged were found nearby (*ArchDelt* 41 (1986) *Chron.* 139). At Souroti in the vicinity two C4 graves have been found (*ArchDelt* 29 (1973–74) *Chron.* 697), and a further eight C6l–C4l graves were excavated in 1999 (Souereph and Havela (2001)).

The name of Strepsa’s territory was Στρεψαία (*SEG* 38 619.17 (C3e)). In 285 King Lysimachos gave to Limnaios τὸν [ἀγρὸν] ἐν τῇ Στρεψαίᾳ (*ibid.*). It appears from the inscription that Limnaios was also given land in Sermyliaia and in Olynthia. Those two districts were indisputably quite

close to each other, and Strepsaia seems to have been situated in the same area (Hatzopoulos (1988*b*)). A fragmentary C4 deed of sale is from Vasilika, supposedly ancient Strepsa (SEG 37 583).

It is mentioned again in connection with Kallias' march from Pydna (no. 544) to Poteidaia (no. 598) in 432 (Thuc. 1.61.4, if indeed Pluygers' emendation of ἐπιστρέψαντες is correct), and once more in 368 when the pretender Pausanias seized Strepsa along with Anthemous (no. 562) and Therme (no. 552) (Aeschin. 2.27).

Strepsa was a member of the Delian League. It belonged to the Thracian district and is recorded from 454/3 (IG¹ 259.IV.14) to 433/2 (IG¹ 279.II.68) a total of sixteen times, paying 1 tal. (IG¹ 277.VI.9). It is absent from the full panel of 430/29 (IG¹ 281.II.5–27), which indicates that it may have participated in the Revolt of 432.

616. Therambos (Thrambaios) Map 51. Lat. 39.55, long. 23.40. Size of territory: 2. Type: A:α. The toponym is Θεράμβως (Hdt. 7.123.1) or Θεραμβηίς (Ps.-Skylax 66). The city-ethnic is Θραμβαίος (IG¹ 62.6) and perhaps Στραμβαίος (Krateros fr. 25 (Krech 1888)). Therambos is probably the ΣΤράμβαι of Steph. Byz. 586.11. Furthermore, he mentions a Θράμβος, ἀκρωτήριον Μακεδονίας (317.5). Ps.-Skylax 66 lists Therambos as the fourth toponym after the heading πόλεις αἰδε, where *polis* is used in the urban sense. At 7.123.1 Herodotos uses the pronoun αὐται about Therambos and seven other *poleis* on Pallene, and it is an almost certain inference that the noun to be supplied is πόλεις. That Therambos was a *polis* in the political sense too is indicated by its membership of the Delian League and, if correctly restored, by IG¹ 62.6: Θραμβαίοι . . . καὶ αἱ ἄλλαι πόλ]εις, where the city-ethnic is attested in its collective and external sense. Hdt. 7.123.1 locates Therambos on Pallene between Aige (no. 556) and Skione (no. 609).

Therambos supplied Xerxes with troops and ships in 480 (Hdt. 7.123.1). Therambos was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (IG¹ 259.II.10) to 429/8 (IG¹ 282.II.8) a total of sixteen times, once completely restored. In the first years Therambos paid jointly with Skione; from 446/5 it paid alone a *phoros* of 1,000 dr. (IG¹ 266.II.32). It was also assessed (IG¹ 100; Krateros fr. 25 (Krech 1888)). Apparently Therambos supported the (Athenian?) *archontes* present at Aphytis (no. 563) c.428 (IG¹ 62.6, cf. Meritt (1944) 217).

617. Thestoros Not in Barr. Unlocated. Type: C:?. The toponym is Θέστωρος (IG¹ 77.V.36; Theopomp. fr. 142). Apart from Steph. Byz. 312.14, there is no attestation of a city-

ethnic. Steph. Byz. classifies Thestoros as a πόλις Θράκης . . . Θεόπομπος κβ'. We cannot know, however, whether the site-classification stems from Theopompos (Hansen (2000*b*) 141–42). The editors of the Athenian tribute lists assume that Thestoros may have been located “in the Olynthian territory”, since the fragment of Theopompos' *Philippika* in which Thestoros is mentioned deals with the C4m war between Philip and Olynthos (no. 588 (ATL i. 490; cf. Shrimpton (1991) 61). Thestoros is recorded in the Athenian assessment decree of 422/1 (IG¹ 77.V.36), but not in any of the tribute lists. It was presumably a member of the Delian League, or at least the Athenians claimed that it was.

618. Thyssos (Thyssios) Map 51. Lat. 40.15, long. 24.10. Size of territory: ? Type: A:β. The toponym is Θύσσος (Hdt. 7.22.3; Strabo 7 fr. 35) or Θυσσός, ἡ (Thuc. 5.35.1). The city-ethnic is Θύσσιος (IG¹ 261.IV.7 (422/1)).

Hdt. 7.22.3 and Ps.-Skylax 66 (Flensted-Jensen and Hansen (1996) 142) call Thyssos a *polis* in the urban sense, whereas Thuc. 4.109.3–5 probably uses the word in the political sense, using *polisma* about the settlement. The collective city-ethnic is attested externally in the Athenian tribute lists (IG¹ 261.IV.7). Thyssos was located on Athos (Hdt. 7.22; Thuc. 4.109).

Thyssos was a member of the Delian League (cf. Thuc. 5.35.1). It belonged to the Thracian district and is recorded from 454/3 (IG¹ 259.II.14) to 429/8 (IG¹ 282.II.25) a total of seventeen times, twice completely restored, paying 4,000 dr. from 454/3 (IG¹ 259.II.14, restored) to 451/0 (IG¹ 262.II.29), 1½ tal. from 450/49 (IG¹ 263.III.23) and 1 tal. from 446/5 (IG¹ 266.II.11) to 429/8. Thyssos was assessed for tribute in 425/4 (IG¹ 71.III.175). In 424/3 Thyssos joined Brasidas (Thuc. 4.109.5), but it must have become a member of the League again shortly after, because it was allied with Athens in 421 when it was captured by Dion (Thuc. 5.35.1).

Thuc. 4.109.4 says that Thyssos had a mixed (i.e. barbarian–Hellenic) bilingual population, but about a century later Ps.-Skylax 66 calls it a <*polis*> *Hellenis* (Flensted-Jensen and Hansen (1996) 151).

619. Tinde (Tindaios) Map 50. Lat. 40.25, long. 23.00. Size of territory: ? Type: A:?. The toponym is Τίνδη, known only from Steph. Byz. 624.18. The city-ethnic is Τινδαίος (IG¹ 278.VI.29). In an Athenian tribute list, the Tindaiοι are recorded under the heading πόλεις ἃς οἱ ἰδιώται ἐνέγραψαν φόρον φέρειν (IG¹ 278.VI.18–21, 29, where *polis* is used in the political sense), attesting to the collective and external use of the city-ethnic. Tinde may have been a Bottiaian *polis* (Flensted-Jensen (1995) 123).

Tinde was a member of the Delian League, but it is recorded in the tribute lists only once: *viz.* in 434/3 (*IG* 1³ 278.vi.29), paying 3,000 dr. together with Kithas (no. 579), Gigonos (no. 572) and Haisa (no. 573). Perhaps Tinde was also listed in the assessment decree of 425/4 (*IG* 1³ 71.IV.83, completely restored).

620. Torone (Toronaïos) Map 51. Lat. 40.00, long. 23.55. Size of territory: 3. Type: A:a. The toponym is *Τορώνη*, ἡ (Hdt. 7.122; Thuc. 4.129.1). The adjective *Τορωναίην* occurs in Archil. fr. 89.20, West, which implies that the toponym antedates C7m. The city-ethnic is *Τορωναίος* (*IG* 1³ 266.II.28; *IG* II² 10454) or *ΤΕΡΩΝΑΙΟΝ* on C5 coinage (Head, *HN*² 207).

Torone is called a *polis* in the urban sense (Hdt. 7.122; Thuc. 4.110–14; Ps.-Skylax 66), in the territorial sense (Thuc. 4.110.2) and in the political sense (Thuc. 4.110.1, 5.18.8 (Peace of Nikias); Isoc. 15.107–8; Xen. *Hell.* 5.3.18); cf. *politeuein* used of the Toronaïans in Thuc. 4.114.1. The poet Arcestratos (C4m) described Torone as an *asty* (fr. 24.1–2, Olson and Sens). The collective city-ethnic is used internally on coins (*infra*) and externally in the Athenian tribute lists (*IG* 1³ 266.II.28). The individual city-ethnic is attested externally in a citizenship decree from Samos (*SEG* 38 845 (C4l)) on a gravestone from Attika (*IG* II² 10454 (C4)) and in Hdt. 8.127.

Hdt. 7.122 locates Torone before Gale(psos) (no. 571) on Sithonia. Perhaps the southernmost part of the peninsula was Toronaïan territory; Steph. Byz. s.v. *Ἄμπελος* calls Ampelos *akra Toronaion*. Thuc. 4.113.2 mentions a *phrourion Lekythos* on a promontory close to the city itself. About 3 km south of Torone was the *Kophos limen*, which belonged to Torone (Meritt (1923) 453–54).

The *communis opinio* is that Torone was a C8 colony from Chalkis (no. 365) (e.g. Boardman (1980) 229, *pace* Harrison (1912)). Nevertheless, the only ancient source to call Torone a colony from Chalkis is Diod. 12.68.6, who evidently interpreted Thucydides' *Τορώνη ἡ Χαλκιδικὴ* (4.110.1) as meaning "Torone, a colony from Chalkis". But the phrase does not necessarily mean that Torone was a colony from Chalkis. Thucydides may refer to Torone's membership of the Chalkidian Federation, although it is unclear whether the meaning of "Chalkidian" is (a) geographical/territorial (= "situated in Chalkidike"), (b) ethnic (= "of the Chalkidian tribe"), or (c) specifically of Chalkis (cf. Hammond (1995) 315 n. 37; Hornblower (1997)). In any case, Torone cannot have been a Euboian colony founded *ab novo* in C8, since excavations have shown that the site of Torone was inhabited several centuries prior to C8. Furthermore,

the excavations do not support the assumption that Torone was a colony from Chalkis (see also Papadopoulos (1996)).

According to Hdt. 7.122, Torone supplied troops and ships to Xerxes in 480. It was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.II.15) to 429/8 (*IG* 1³ 282.II.29) a total of fourteen times, paying in most years 6 tal. (*IG* 1³ 266.II.28), in some years 12 tal. (*IG* 1³ 259.II.15, 260.VIII.10, 281.II.17) and in 447/6 possibly two payments adding up to 16 tal. (*IG* 1³ 265.II.71, 101). In 423 an oligarchic faction (Thuc. 4.110.1–2) invited Brasidas to attack Torone, which was held by the Athenians, and he managed to seize it with the help of traitors inside the town (Thuc. 4.110–13; Gehrke, *Stasis* 197–98). The majority of the Athenians who were in Torone and those of the Toronaïans who had not joined Brasidas fled to Lekythos, a fortification on a promontory a short distance from the city itself. The Athenians defended themselves, but were eventually forced to leave (Thuc. 4.114–16). In 422 Kleon recaptured Torone (Thuc. 5.3.4), whereupon he exposed it to an *andrapodismos* by enslaving the women and the children; the men were taken captive and sent to Athens, but later ransomed by Olynthos (no. 588) (Thuc. 5.3.4; cf. Xen. *Hell.* 2.2.3 and Isoc. 12.63).

Torone was a member of the Chalkidian Federation at least until 380 (Xen. *Hell.* 5.3.18). During the Olynthian War (i.e. in 380) Torone, then a member of the Chalkidian Federation, was attacked and taken by the Spartans (Xen. *Hell.* 5.3.18). In 364 Torone was taken again, this time by Timotheos (Diod. 15.81.5; Isoc. 15.108; Polyæn. 3.10.15). And finally, in 349, before attacking Olynthos, Philip captured Torone by treachery (Diod. 15.81.5), but did not destroy the city. In C4l Gyges of Torone was granted citizenship in Samos (*IG* XII.6 46; see Hatzopoulos (1988b) 47 n. 8).

Thuc. 4.113.2 mentions the agora of Torone. It appears from Thuc. 4.110.1 that there was a *Dioskoreion* c.3 stades (540 m) from the city. Thuc. 4.116.2 mentions a temple of Athena in Lekythos (near the city). Fragments of a Doric temple have been interpreted as the remains of this temple (Cambitoglou and Papadopoulos (1988) 205; Cambitoglou (1990) 191–92; Cambitoglou and Papadopoulos (1991) 159).

Thucydides has several references to the walls of Torone (e.g. 4.110–11). Part of the extant wall dates from the Classical period, and part of it from the Hellenistic period (*Ergon* (1978) 27 fig. 29). The remains of the early Hellenistic fortifications are extensive (Cambitoglou and Papadopoulos (1988) 183).

Excavations have shown that the site of Torone was inhabited continuously from the late Neolithic period to the

post-Byzantine period (Papadopoulos (1996) 160). Torone probably had two harbours, one by the city itself, and one c.3 km to the south, the *Kophos limen* (Thuc. 5.2.2–3; Hornblower (1996) 425–26). Thuc. 5.2.4 mentions the *proasteion* of Torone, and it is clear from Thuc. 4.114.2 that there were houses close to Lekythos. Beneath the Classical city an early Iron Age cemetery has been found. By 1984, 134 graves had been excavated, yielding more than 500 vessels. The finds dated from c.1125 to c.850 (Cambitoglou and Papadopoulos (1988) 187). A house excavated in 1976 and 1978 seemed not to be of the pastas type known from Olynthos, but resembled “the lay-out of the so-called *Herdraumhäuser* prevalent in north-west Greece” (Cambitoglou and Papadopoulos (1988) 186). Excavations on the promontory of Lekythos show that Torone was a relatively important settlement in the early Iron Age (Cambitoglou (1990) 188). Henry (1993) combines Thucydides’ description with the archaeological evidence.

Only one month name is known from Torone: *viz.* Artemision, found in a deed of sale (Karamanoli-Siganidou (1966); cf. *SEG* 24 574.2 (C4)).

Torone struck silver coins on the Euboic standard from C61 to c.480 and on the Phoenician standard from c.480 to c.420. Denominations: tetradrachms, tetrobols, obols and hemiobols. (1) C61–480: types: *obv.* amphora, or oinochoe; legend: *TE* or *HE*; *rev.* incuse square. (2) 480–424: types: *obv.* amphora, or oinochoe; *rev.* forepart of a goat. (3) 424–420: types: *obv.* satyr and oinochoe; *rev.* *TE* and a goat in an incuse square, or *TEPQNAON* and a square (Head, *HN*² 206–7; Gaebler (1935) 114–15; *SNG Cop. Macedonia* 336–38). Bronze coins were struck in C4 (Hardwick (1998)).

621. Tripoiāi Unlocated. Type: [A]:? The toponym is *Τριποιαί* (*IG* 1³ 76 l.46 = Tod 68 (c.422)) or *Τριποαί* (*IG* 1³ 285.111.8). Tripoiāi is listed under the heading *αἰδε πόλεις* in a treaty of c.422 (*IG* 1³ 76.44, 46).

Tripoiāi was a Bottiaian *polis* which was located in the vicinity of Kalindoia, i.e. probably in the northern part of Bottike (Flensted-Jensen (1995) 116–17). The name of the territory was *Τριποαίτις* and it was given to the Makedonians by Alexander (*SEG* 36 626.6–7 (323)).

Tripoiāi was a member of the Delian League, but it is recorded only once in the tribute lists in the Thracian district: *viz.* in 421/0 (*IG* 1³ 285.111.8), paying 800 dr. About the same time the Bottiaians had probably formed a confederacy (Flensted-Jensen (1995) 126–28), of which Tripoiāi was a member (*IG* 1³ 76.47).

622. Zereia (Zeranos) Map 51. Unlocated. Size of territory: ? Type: C:?. The toponym is *Ζερεία* (*IG* 1³ 77.v.18). It has been suggested (Zahrnt (1971) 186 with refs.) that the inhabitants of Zereia were the *Ζηράνιοι* mentioned by Theopomp. fr. 214. Their territory is called *Ζηρανία* by Ephor. fr. 88. Zereia may have been a member of the Delian League: it was assessed for tribute in 422/1 (*IG* 1³ 77.v.18) 500 dr., but is unattested in the tribute lists.

4. Unlocated *Poleis*

623. Aison (Aisonios) Unlocated. Not in *Barr.* Type [A]:? The toponym is *Αἴσων* (*Αἴσων*, *IG* 1³ 262.IV.27) or *Αἴσων* (*χαίσων*, *IG* 1³ 271.II.48). The city-ethnic is *Αἴσονεύς* (*Αἴσονῆς*, *IG* 1³ 268.III.16) or *Αἴσωνεύς* (*χαίσοιῆ[ς]*, *IG* 1³ 279.II.66) or *Αἴσώνιος* (*χαίσόνιοι*, *IG* 1³ 277.v.28).

Aison was a member of the Delian League. It belonged to the Thracian district (*IG* 1³ 271.II.48) and is recorded from 454/3 (*IG* 1³ 259.II.19) to 429/8 (*IG* 1³ 282.II.54) a total of seventeen times, twice completely restored, paying a *phoros* of 1,500 dr. (*IG* 1³ 268.III.16), reduced to 1,000 dr. in 432/1 (*IG* 1³ 280.II.62) or perhaps in 433/2 (*IG* 1³ 279.II.66, amount completely restored). It is recorded twice by toponym, and otherwise by ethnic (*supra*). In the tribute list for the year 429/8 the Aisonioi are recorded under the heading *χαίδε τῶν πόλεων αὐτὴν τὴν ἀπαρχὴν ἀπέγαγον* (*IG* 1³ 282.II.51–52, 54) where *polis* is used in the political sense.

As the Athenian tribute lists are the only sources we have for Aison, all we know about its location is that it was located somewhere in the Thracian district. A river by the name of *Αἴσων* situated in southern Makedonia is mentioned by Plutarch at *Aem.* 16.9. Referring to this source, *RE* i–ii suppl. 40 and *ATL* i. 467 followed by Zahrnt (1971) 146 suggest a location near the modern river Pelikas (= ancient Aison). However, Edson (1947) 88 argues that, apart from Methone (no. 541), it is highly unlikely that any other Makedonian city was a member of the Delian League. He prefers to identify Aison with Haisa (no. 573), a suggestion rejected by Zahrnt (1971). As the evidence stands, Aison’s precise location within the Thracian district remains unknown.

624. Brea (Breaios) Map 50. Lat. 40.15, long. 23.10, but see *infra*. Size of territory: ? Type: B:a. The toponym is *Βρέα*, ἡ (*ML* 49.33), the city-ethnic *Βρεαῖος* (Theopomp. fr. 145 *apud* Steph. Byz. 185.8–9).

An Athenian decree of c.445 (*ML* 49), 439/8 (Woodhead (1952) 61), or perhaps 426/5 (Mattingly (1966) 185) lays down the rules for the founding of a new colony (*apoikia*), Brea, in

Thrace. The name of the oecist was Demokleides. The attestation of the city-ethnic in a fragment of Theopompos (fr. 145) is the only evidence that the decree was carried into effect (Hansen (2001) 320–21).

Some scholars believe that Brea was situated in the Chalkidic peninsula (Woodhead (1952) 62; Asheri (1969)), others that it was in Bisaltia (Meritt (1967) 48; Gomme (1945) 373). Following Pazaras and Tsanana (1990), *Barr.* identifies Brea or Beroia with modern Veria, which has, however, only random C4 finds.

625. Kossaia (Kossaios) Map 51. Unlocated. Type: C:? The toponym is *Κοσσαία*, ἡ (Steph. Byz. 378.11–12). The ethnic is *Κοσσαίος* (IG¹ 71.111.172: *Κοσσι[αῖοι]*); but, given the large number of toponyms in IG¹ 71, an equally possible restoration would be *Κοσσαία*.

- The link between our two sources was suggested by *ATL* i. 506. In Steph. Byz. Kossaia is listed as a *Θράκης πολίχνιον*. In the assessment decree of 425/4 Kossaia—or the Kossaians—is placed in the Thracian district. There is no other source. So all we know is that Kossaia was a settlement somewhere in Thrace which in 425/4 was assessed for tribute by the Athenians. The suggestion to locate Kossaia in Chalkidike (Bradeen (1952) 374–75) was rightly rejected by Zahrnt (1971) 195.
- 626. Okolon** Unlocated, not in *Barr.* Type: C:? The toponym is *Ὀκωλον* (Steph. Byz. 488.11–12 = Theopomp. fr. 150: *Ὀκωλον· χωρίον Ἐρετριέων Θεόποντος Φιλίππων εἰκοστῶ τετάρτῳ τῷ ἔθνικόν Ὀκώλιος*). There is no other source, but, on the analogy of Skabala (no. 607), Okolon is usually taken to be an Eretrian colony situated in Thrace (*RE*xii.2. 2385–86; cf. Knoepfler (1997) 358 with n. 49).

THRACE FROM STRYMON TO NESTOS

LOUISA LOUKOPOULOU

I. The Region

The region bounded by the lower courses of the rivers Strymon and Nestos consists of two extensively marshy plains, well watered by the river Strymon and by its tributary, the Angites, dominated by imposing richly wooded mountains—Mt. Pangaion to the south-west, Mt. Lekane to the east, Mt. Kerkiné and the Rhodope range to the north. A third plain, rich in agricultural lands, extends between Mt. Pangaion and Mt. Symbolon to the south-east. The latter mountain range and Mt. Lekane further north-east together define a narrow coastal strip, whose easternmost part was considerably extended through the centuries by the massive alluvial deposits of the river Nestos.

Various tribes are known to have occupied this part of Thrace: Bisaltians (lower Strymon valley), Odomantes (the plain to the north of the Strymon), Sintoi (middle Strymon valley, to the north of the Bisaltians and the Odomantes), Pieres (the area south of Mt. Pangaion), Edonians (the left bank of the lower Strymon, south of the Angites, and the plain of Philippoi), Satrai (the Pangaion range), Dersaioi (further north), Sapaïans (lower Nestos course) (Papazoglou (1988) 351–413).

It was most probably the rich mineral resources of the area, the famed gold and silver of Mt. Pangaion, said to have been discovered first by the Phoenicians (Isaac (1986) 4), then systematically mined and exploited by Pierians, Odomantes and Satrai (Hdt. 7.112), which attracted early Greek ventures and settlements in the area.¹ Thus, soon after the foundation of a Parian colony on Thasos in early C7, the fertile coastal zone² across this island from the mouth of the

Strymon to that of the Nestos—and beyond, *infra* 859–60, Stryme—appears to have been studded with various Thasian *emporía*, settled and supported by means of ferocious fighting against the local inhabitants.³ Early on in C6, these invaluable resources, not least the area's abundant supplies of timber for shipbuilding and oar making,⁴ must have become widely renowned: following a brief but very profitable venture of the Athenian Peisistratos (Arist. *Ath. Pol.* 15.2; cf. Isaac (1986) 14), the importance of these resources became known to the Athenians; soon thereafter (c.509; Hammond and Griffith (1979) 68 n. 4), it attracted Histiaios, tyrant of Miletos, who briefly settled Myrkinos of the Edonians, only to be recalled when the Persian king realised the importance of the area (Hdt. 5.11, 23–24); in 497 Histiaios' venture was repeated by his nephew and successor Aristagoras (Hdt. 7.124, 125; cf. Thuc. 4.102; Diod. 12.68). Milesian efforts were thwarted, however, both by an intense Thracian counter-offensive and by the extension of Persian occupation over the Thracian coast following the campaigns of Megabazos (513) and Mardonios (492) and the establishment of an important supply base at Eion.⁵ Interestingly, Thasos under Persian rule seems to have retained control of her *peraiá* and of vested interests in regional mineral resources. The annual income of Thasos from mining ventures is said to have amounted to no less than 200 (in better years 300) talents c.493, derived for the greatest part from gold and silver mines on the mainland; those at Skapte Hyle alone, presumably located opposite Thasos, on the southern slopes of Mt. Lekane east of Neapolis (Koukouli-Chryssanthaki (1990)), are known to

¹ Both literary sources (discussed by Isaac (1986) 31–34) and archaeological research (cf. most recently Koukouli-Chryssanthaki (1990)) attest to the existence of various productive mining areas in the region.

² According to Armenidas (*apud* Athen. 1.31a), the coastal zone between Antisara and Oisyme was named Biblia (Bibline in Steph. Byz. 168. 10; cf. the *Βίβλια ὄρη* of Epicharmos in Athen. 1.31a), well known for its wine (cf. Steph. Byz. 168.10: *Βίβλία ἄμπελος* and *Βίβλινος οἶνος*).

³ For literary testimonies and archaeological evidence on the establishment of the Thasian *peraiá*, see Isaac (1986) with refs. A C6l epigram engraved on the base of a funerary monument discovered in Amphipolis (Lazaridis (1976)) testifies to the unrelenting war between Thasian/Parian colonists and local Thracian tribes.

⁴ Thuc. 4.108.1, on Athenian revenues from Amphipolis.

⁵ For the extent and nature of Persian occupation in Thrace, see Isaac (1986) 17–18, with references and bibliography.

have yielded a higher income than the famous gold mines on Thasos itself (Hdt. 6.46; cf. Isaac (1986) 21–22).

Following Xerxes' defeat, Kimon's Thracian expedition and the capture of Eion in 476 provided the Athenians with a long-sought-after opportunity to gain a foothold in the lower Strymon valley: they settled at Eion, probably also at Ennea Hodoi, challenging Thasian interests in the area. Thasos, deprived of her fleet and with her fortifications dismantled on Persian orders, had no choice but to join the Delian League (Isaac (1986) 19–21). After 442, the area was included in the Thraceward district, which contributed by far the largest tribute (see tables in Meiggs (1972) 529–30) to the Athenian League. Inevitably, conflicting interests over the *emporía* and mining resources on the *peraia* caused Thasos to revolt as soon as her defensive power and her fleet were restored (Thuc. 1.100–1; Diod. 11.70.1; Polyæn. 2.35, 8.67; Plut. *Cim.* 14.2). Capturing the city after a two-year siege (465–463), Kimon acquired for the Athenians the Thasian settlements (including probably Berga, which appears in the tribute lists at least from 451) and gold mines on the mainland (probably Skapte Hyle). Concurrently, 10,000 Athenian and allied settlers launched an ambitious project to penetrate the Thracian hinterland and gain control over the mines (probably on Mt. Pangaion and in the lower Strymon valley) worked and controlled by the local Thracian tribes. Having occupied Ennea Hodoi, the newcomers under the Athenian generals Sophanes and Leagros were ambushed and annihilated by the Thracians at Drabeskos near Daton.⁶ However, Athens' aspirations to extend and expand her control over south-western Thrace were not abandoned. Epigraphic evidence (*IG* 1³ 1, 46) attests in detail the otherwise undocumented foundation c.445 of a colony at Brea in Bisaltia (location unidentified); the venture, which has been plausibly related (ML 132–33; Meiggs (1972) 159; disputed by Isaac (1986) 36) to the dispatch of 1,000 Athenian settlers by Perikles to Bisaltia (Plut. *Per.* 11.5), was presumably short-lived.⁷ Athenian colonising efforts in the north Aegean were finally crowned by success in 437/6, with the foundation of Amphipolis. Inevitably, the importance of the interests at stake kindled anti-Athenian sentiments among both Greek settlers of various origins

and Greek and native neighbours, such as the Edonians of Myrkinos. Thus, a Lakedaimonian expedition under Brasidas in 424 met with unprecedented support; the Athenians were expelled from Amphipolis (Thuc. 4.102–8; cf. Isaac (1986) 40–43). Two years later (422) an expedition under Kleon succeeded in regaining control only of Galepsos, but failed to recapture Amphipolis (Thuc. 5.2–3, 6–11), which remained loyal to the Spartan League, despite repeated Athenian campaigns, till it eventually fell under Makedonian rule under Philip II. Athens, however, is believed to have maintained control over the Thasian *peraia* to the end of the Peloponnesian War, even through the troubled years of the second secession of Thasos (411–407) (see Isaac (1986) 67–68).

The collapse of the Athenian Empire provided Thasos with the opportunity to reclaim possession of mainland territories: since Amphipolis—now an established and flourishing independent city—controlled the lower Strymon basin, the Thasians targeted the eastern entrance to the Angites plain and the Pangaion mines: c.360 they founded Krenides (no. 632) and Datos (no. 629), the latter with the guidance and support of Kallistratos, the exiled Athenian orator. The new settlements marked the resurrection of the Thasian *peraia* and immediately provoked the hostility of the Thracians;⁸ most importantly, they provided Philip II with a legitimate justification for penetrating the area and for the founding in 356 of Philippoi, a Makedonian colony in the Angites plain (Collart (1937)).

Written sources provide information about a total of twenty-five named settlements of the Archaic and Classical periods, thirteen of them attested to have had *polis* status, in the area between the lower and middle courses of the rivers Strymon and Nestos.⁹ Despite rather extensive archaeological research, particularly in recent decades,¹⁰ only ten have been securely identified (Antisara, Berga, Gasoros, Galepsos, Neapolis, Neine, Oisyme, Phagres, Philippoi and Sirra); the location of the remaining fourteen (Acontisma,

⁸ On the identity of the Thracians who threatened Krenides, see Isaac (1986) 50 (with ref.), who plausibly suggests the possibility that local tribes—indeed, the ever independent Thracians of Mt. Pangaion whose interests were threatened—should be counted among the most probable candidates.

⁹ We have omitted the following toponyms of probable pre-Roman date, which do not belong to urban settlements and remain unidentified (cf. Samsaris (1976) 196–97): *Asyla* (App. *B Civ.* 4.106), *Biblia*, or *Bibline chora* (Armenidas *apud* Athen. 131a); *Daineros* (letter of Alexander to Philippoi, see Philippoi); *Himeraiion* (Thuc. 7.9 (r414)); *Nereidon Choroi* (Ps.-Skymnos 649–51); *Thasion Kephalaí* (Strabo 7 fr. 44).

¹⁰ More or less regularly presented in *ArchDelt.*, *Prakt* and, more recently, *AEMΘ*; results summarised by Isaac (1986) 1–71 and Papazoglou (1988) 345–413.

⁶ For a detailed discussion of sources and bibliography, see Isaac (1986) 24–30.

⁷ The controversy concerning the location of Brea is succinctly summarised by Isaac (1986) 52 (with refs.). Recent finds have now affirmed beyond doubt that Bisaltia, usually located according to Hdt. 7.115 west of the Strymon, extended over this river's eastern bank as well, as suggested by Strabo 7.36 (cf. Koukoulis-Chryssanthaki (2000)). It becomes clear that all Athenian colonising ventures targeted the lower Strymon and the rich hinterland to which it provided access.

Apollonia, Daton, Drabeskos, Eion, Ennea Hodoi, Krenides, Myrkinos, Paroikopolis, (Herodotean) Pistryros, Sapai, Skapte Hyle, Skoutoussa and Tristolos) remains, in our opinion, inconclusive, while that of Brea is unknown and strongly disputed. The following Inventory comprises thirteen settlements considered to have been *poleis* in the Archaic and/or Classical periods; in addition to the *poleis*, ten second-order settlements are known, to which can be added the remains of fourteen unidentified settlements.¹¹

1. Pre-Hellenistic Settlements not Attested as Poleis

***Akontisma** (*Acontisma*) Mentioned only in Roman literary and epigraphical sources as a station on the *via Egnatia*, situated in a narrow defile between Mt. Lekane and the sea, 9 miles east of Neapolis (*It. Ant.* 321.2, 331.3; *Acontisma*; *It. Burd.* 603.8: *mansio Hercontroma*; *Amm. Marc.* 26.7.12, 27.4.8, 36.7; cf. Collart (1935) 403 no. 1 for a milestone dated to the reign of Trajan), it is probably identified with a fortress built on a stronghold east of Nea Karvali (Koukouli-Chryssanthaki (1972*b*)). Traces of C6l masonry in the Roman walls and C4 surface pottery were interpreted as indicating a strategically located *emporion* of Thasos, possibly with the name *Akontisma, controlling the passage to the lower Nestos valley (Koukouli-Chryssanthaki (1980*b*) 320–22; cf. Isaac (1986) 12, 69). Not in *Barr.*

Antisara (*Ἄντισάρα*) Steph. Byz. 100.17, quoting Herodian; Ath. 31A, quoting Armenidas (C4l); cf. *Νεάπολις παρὰ Ἄντισάραν* (*IG* 1³ 263.111.13). Citing some unnamed authors, Steph. Byz. 100.17 offers *Τισάρη* as an alternative toponym. Antisara was an urban centre (a *polis* according to Herodian (Steph. Byz. 100.17)) located, together with Oisyme, on the coast of the wine-producing *Βιβλία χώρα*

¹¹ It is noteworthy that inscriptions of the Roman period have preserved exceptionally full information on many unidentified rural settlements of Philippoi, most of them bearing indigenous names and populated by pre-Roman inhabitants (Papazoglou (1988) 411–12, with complete list of the 15 known *komai*). Their names are either ethnics or derivatives of local epithets of gods, mostly of non-Greek (and non-Latin) origin (e.g. Satriceni, Kalpapouritai, Tasibasteni). They may well have been pre-Greek settlements of unknown political status before the foundation of the Roman colony. Indeed, some of the unidentified rural sites attested by archaeological remains are dated to the Hellenistic period and earlier: fortress of Palaiokastro, 1 km east of Angista, with a Macedonian tomb and finds dating from C5 to the Roman period (*ArchDelt* (1968) *Chron.* 359–60; *ArchDelt* (1973) *Chron.* 455–59); rich tumulus at Nikisiani with six tombs dating to Philip II and Alexander (*ArchDelt* (1963) *Chron.* 257; *ArchDelt* (1964) *Chron.* 374); inscriptions from a settlement at Kalambaki (Koukouli-Chryssanthaki (1968)), one mentioning ὁ δῆμος. In view of the modest size of C4s Philippoi, it is very doubtful whether these settlements were part of its territory in pre-Roman times.

(Armenidas *apud* Athen. 1.31a), which served Datas as a port (Steph. Byz. 100.17: *ἐπίκειον Δατηνῶν*). It is probably to be identified with a fortified C6l settlement on the promontory of Kalamitsa, west of Kavala, with remains of a C6–C4 sanctuary, dedicated to Asklepios since C4e (Koukouli-Chryssanthaki (1980*b*) 314–16; (1990) 500; plan in Lazaridis (1971) fig. 68; cf. Isaac (1986) 10, 65); presumably an *emporion* of the Thasians, serving as a maritime outlet for Datas. *Barr.* AC.

Drabeskos (*Δραβησκός*) Thuc. 1.100.3, 4.102.2, some MSS; cf. Herod. *De prosodia cath.* 3.1.153; also *Δραβῆσκος* (Thuc. 1.100.3, 4.102.2, some MSS; Strabo 7 fr. 33; Steph. Byz. 238.1) and *Δράβησκος* (Diod. 12.68.2); a Thracian settlement attributed to the Edonians and situated in the Thracian hinterland (Thuc. 1.100.3; cf. Steph. Byz. 238.1), called a *polis* only by Strabo (7 fr. 33). Together with Argilos and Daton it was situated not far from the Strymonic Gulf, and was said to have occupied, together with Myrkinos, the western end of the plain of Philippoi, near the river Strymon (*App. B Civ.* 4.13.105). In 465 it was the site of the catastrophic ambush by the Edonians of 10,000 Athenians and allies under Leagros and Sophanes attempting to establish a colony in Ennea Hodoi (Thuc. 1.100.3, 4.102.3; Diod. 12.68; Paus. 1.29.4; however, according to Hdt. 9.75 and Isoc. 8.86, the massacre happened ἐν Δάτω). Drabeskos was identified with the village of Zdravik (present-day Draviskos), 12 km north of Amphipolis, which presumably preserved the altered form of the ancient toponym (Papazoglou (1988) 391–92, *contra* Samsaris (1976) 141 and 145; cf. *BE* (1988) no. 854). Remains of a settlement from the Hellenistic period to late Antiquity at Frangala, 1–2 km to the west of Zdravik/Draviskos, were first recorded by Perdrizet ((1910) 14ff; cf. Kaphtantzis (1967) nos. 568–74). In *Barr.* only HR, but C also attested.

Ennea Hodoi (*Ἐννέα Ὅδοι*) Thuc. 1.100.3 (*χωρίον*); Hdt. 7.114 (*χώρος*); Harp. *Ε58* (*τόπος*); cf., however, Strabo 7 fr. 35 (*Ἀθηναίων κτίσμα ἐν τῷ τόπῳ τούτῳ*). However, if the plausible combination of Thuc. 4.102.2 and Diod. 12.68.1–2 is correct (Collart (1937) 60), Ennea Hodoi is the *polis* of the Edonians not named in Hdt. 5.126 (r497). Presumably identified with Hill 133, c.3 km north of Amphipolis (Lazaridis (1964), (1965*a*), (1965*b*); Pritchett (1965) 46, 48; cf. the grave mound at nearby Kastis: Lazaridis (1973); Isaac (1986) 4–5, 24, 28, 37; Koukouli-Chryssanthaki (1993) 682–84). *Barr.* AC.

Gasoros (*Γάσωρος*) Hatzopoulos (1996) ii. no. 39.20 (AD

158); *Γάζωπος* in literary sources. A *polis* according to Steph. Byz. 195.7, listed among the cities of Odomantike and Edonis in Ptol. *Geog.* 3.12.8. The ethnic *Γαζώριος*, known from Steph. Byz., is epigraphically attested both individually (Roger (1945) 46, from Toumba (AD 144/5) and collectively (Hatzopoulos (1996) ii. no. 39.15–16 (c.215); cf. Roger (1938) (early third century AD)). Gasoros has been securely located on the hill of Ag. Athanasios, between the villages of Ag. Christophoros and modern Gazoros (Papazoglou (1988) 382–84 with refs.; for the identification of a C5–C4 cemetery west of the hill of Ag. Athanasios, cf. Samartzidou (1982); Tasia (1985)). Gasoros may have acquired *polis* status either under Philip II (Hatzopoulos (1996) i. 51–75) or at least under the Antigonids (Papazoglou (1988) 383), but all the evidence we have is Hellenistic and too late for inclusion in this Inventory. In *Barr.* only HR, but C also attested in the cemetery.

Paroikopolis (*Παροικόπολις*) A *polis* of the Sintike according to Ptol. 3.12.27 (cf. Hierocl. 639.8, but most importantly Phlegon of Tralleis (*FGrH* 257) fr. 37, nos. 47–53 (first century AD)), it was presumably a Makedonian foundation, reinforced by large numbers of *paroikoi*, incorporated in the community as citizens with full civic rights (Papazoglou (1988) 372). It is probably to be identified with the remains of a large unnamed urban centre inhabited from C5, which was excavated at Sandanski. On the evidence of finds dating to the Hellenistic period, it was presumably organised as a *polis* at the time of the Roman conquest at the latest (ibid. 373–75). In *Barr.* only HR, but C also attested.

Pergamos (*Πέργαμος*) One of two fortresses (*teichea*) of the Pieres in the plain crossed by the army of Xerxes south of Mt. Pangaion (Hdt. 7.112). It has been suggested that Pergamos was a member of the Delian League; but this is based on unconvincing restorations of the toponym ([Πί]ερες {σ} π[α]ρα Πέρ[γ]αμο[ν] (*IG* 1³ 71.1v.61–62) and of the ethnic ([Περγ]αμ[ο]σειχίται (*IG* 1³ 71.1v.64)). Pergamos, formerly sought at Eleutheroupolis (Pravi; cf. Samsaris (1976) 161) has tentatively been identified with a fortified settlement (surface finds of Classical and Hellenistic pottery) located on the hill of Koules or Alonaki, near Moustheni (Pikoulas (2001) 64–65 and 176–79). Unlocated in *Barr.* and without periodisation.

Skapte Hyle (*Σκαπτὴ Ὑλη*) Hdt. 6.46.9; Plut. *Cim.* 4.3 (τῆς Θράκης χωρίον); Steph. Byz. 573.20 (*Σκαπτῆσὺλη πόλις Θράκης μικρὰ ἀντικρὺ Θάσου*); cf. *IG* 1³ 376B.118–19 (*φθοῖδες χρυσίου Σκαπτεσυλικῶ*). The restoration of the name of *Skaptesytle* after Maroneia and

before Lysimacheia in the C3l *theorodokoi* list from Delphi (*BCH* 45 (1921) III.94) seems unwarranted. A most important gold-mining area in the mainland *peraiá* of Thasos, with a yearly yield of 80 talents (Hdt. 6.46); invariably sought on the slopes of Mt. Pangaion (*TIR* 54), it was more recently located east of Kavala, immediately below Mt. Lekani (Koukouli-Chryssanthaki (1990) 493–96). Unlocated in *Barr.*, dated C.

Skotoussa (*Σκοτούσσα*) Strabo 7 fr. 36; cf. Plin. *NH* 4.42 and 35; a *polis* in the Odomantike according to Ptol. 3.12.28. Located by Strabo (7 fr. 36) on the river Strymon, it is listed among the inland cities east of the Strymon by Pliny 4.42—indeed, between Herakleia of Sintike and Sirrai according to the *Tabula Peutingeriana*. It has been tentatively located north of Lake Tachinos, between Vamvakofyton and Palaiokastro and, more recently, at Sidirokastron (Papazoglou (1988) 381–82, with refs.). *Barr.* C.

Tristolos (*Τρίστολος*) A city of the Sintike attested in Ptol. 3.12.27 but otherwise unknown. It has been tentatively identified with the remains of an urban centre strategically located at Hijadnica, between the villages of Ilindenci and Gorna Gradesnica c.15 km north of Sandanski (Papazoglou (1988) 375–76, with bibliography). Unlocated in *Barr.* and without periodisation.

2. Unidentified Settlements

The archaeological atlas of the area is further supplemented by frequent discoveries of numerous unidentified sites, mostly of Roman date. However, substantial archaeological remains of pre-Hellenistic date, including inscriptions, have been reported in the following locations.

Alistrati (Panokklissi) Tombs dating from C4 to the Hellenistic and Roman periods indicate the presence of some still unidentified settlement—a *kome*? (Koukouli-Chryssanthaki (1981) 346). Not in *Barr.*

Amygdaleonas (Vassilaki) Fortified citadel (irregular masonry), with pottery finds dating up to C4 (Koukouli-Chryssanthaki (1986)). Probably identified with the Roman station *Fons co* on the *via Egnatia* (Koukouli-Chryssanthaki (1983) 322; Samartzidou (1990)). Not in *Barr.*

Dialekton-Paradeisos (location Pigadi north-east of Dialekton) Surface pottery of Archaic–Classical date, some Iron Age, some Roman. Roman pottery at Dyo Gefyres (Poulios (1987); Koukouli-Chryssanthaki (1990) 503, n. 69; cf. (1967)). Not in *Barr.*

Kali Vrysi (dept. of Drama) Remains of a C4l or C3e large unidentified building with regular masonry (Peristeri (1991) with plan). Not in *Barr*.

Karyani (on the coast) An ancient settlement was identified on Pithari hill, located 1 km to the east of Gaïdourokastro (= Galepsos (no. 631)). Not in *Barr*.

Mesia (Kavala, north-west slopes of Mt. Symbolon). C6l–C5e cemetery (Koukouli-Chryssanthaki (1988)). Not in *Barr*.

Mesokomi Tombs of late Classical (C4s) and Hellenistic date (Poulios (1987)). Not in *Barr*.

Nea Karvali (south-west) Unidentified trapezoidal C6 to Roman period fortress located on a hill (Koukouli-Chryssanthaki (1990) 502 n. 68: possibly an island in Antiquity) west of Nea Karvali (plan in Lazaridis (1971) fig. 70), formerly identified with Acontisma (Koukouli-Chryssanthaki (1967); Lazaridis (1971)). The fortress, which controls a natural port, was occupied according to surface pottery from C6l, being some unknown Thasian *emporion* (Koukouli-Chryssanthaki (1972*b*), (1990) 503 n. 69, (1980*b*) 320–22). Not in *Barr*.

Nea Zichni C.1 km south of the village a cemetery dated from C6 to C3 was excavated, presumably belonging to a settlement located on a neighbouring hill (Samartzidou (1982); cf. Koukouli-Chryssanthaki (1983) 323). Not in *Barr*.

Nikesiane A rich tumulus with six tombs dated to the reigns of Philip II and Alexander III (*ArchDelt* (1963) *Chron.* 257, (1964) *Chron.* 374). This evidence is perhaps not quite enough to justify *Barr*'s classification of the site as a settlement. *Barr*. C.

Palaiokomi (Provista) Probably identified with Myrkinos (no. 633) (cf. Papazoglou (1988) 390–91). *Barr*. Myrkinos, AC.

Paliampela (by Eletheroupolis) Ancient citadel located on the Paliampela hill near Eletheroupolis, with remains dating from the late Bronze Age to the early Iron Age and in historic times down to the Hellenistic period, probably the site of some tribal settlement (*ArchDelt* 34 (1979) *Chron.* 332; Koukouli-Chryssanthaki (1982) 325; cf. Koukouli-Chryssanthaki (1984) 272; cf. most recently, Koukouli-Chryssanthaki (1998–9) and Pikoulas (2001) 179–80). The cemetery of the settlement was identified on the north slopes of the hill. The proposed identification with Phagres is invalidated by the discovery (Poulios (1981)) of a C4 epigraph of a *Phagresios* (*BE* (1990) no. 491). Not in *Barr*.

Podochori North of the deserted village, on the flank of Mt. Pangaion, a cult cave (Arkoudotrypa) with rich ceramic finds dating from the early Bronze Age and from C6 to the Roman period (Koukouli-Chryssanthaki (1982) 327). In *Barr*. only RL, but AC also attested.

Stathmos Angistas (Angista station) Remains of an extensive cemetery, with phases from prehistoric to historic (C4s pottery) periods (Koukouli-Chryssanthaki (1989)) including a Makedonian tomb (Koukouli-Chryssanthaki (1973) 455, (1973–74) 786–87) were discovered on the hills to the west of the important but unknown urban centre identified at Palaiokastro west of the village of Angista Station. Not in *Barr*.

II. The *Poleis*

627. Apollonia Map 51. Lat. 40.45, long. 24.10. Size of territory: ? Type: A:a. The toponym is *Ἀπολλωνία*, ἡ (Dem. 9.26; Strabo 7 fr. 35 (rC4f)). Apollonia is implicitly called a *polis* in the urban sense at Dem. 9.26, where Olynthos, Methone and Apollonia are juxtaposed with thirty-two unnamed Thracian *poleis*, all destroyed by Philip; cf. also Strabo 7 fr. 33 and Pompon. 2.30: *urbs*.

Apollonia was located on the Pierian coast between Galepsos and Oisyme, on the cape enclosing the Strymonic Gulf from the east, opposite Mt. Athos (Strabo 7 fr. 33; Plin. *HN* 4.42). It was allegedly an Ionian colony (Steph. Byz. 106.13, probably referring to Dem. 9.26). Together with Galepsos, it was conquered and destroyed by Philip II (Strabo 7 fr. 35E; Dem. 9.26), presumably following the capture of Krenides in 356 (Hammond and Griffith (1979) 363). This Apollonia has often been confused with Apollonia in Mygdonia (Hirschfeld (1895); cf. Papazoglou (1988) 399–400, see *supra* no. 545).

Apollonia is tentatively identified with the sparse remains on the rocky promontory called Pyrgos Apollonias (ruins of a Byzantine fortress), c.6 km to the east of Loutra Eleftheron (Papazoglou (1988) 400, following Collart (1937) 88ff).

628. Berga (Bergaios) Map 51. Lat. 40.55, long. 23.30, but see *infra* for a recently established different location. Size of territory: probably 3. Type: B:β. The toponym is *Βέργα*, ἡ (*IG* IV².1 94.19 (360/59); Ps.-Skymnos 653–54; cf. also Ptol. 3.12.28) or *Βέρρη* (Strabo 7 fr. 36; Steph. Byz. 163.13 and Hierocl. *Synekd.* 640.6; cf. Koukouli-Chryssanthaki (2000) 351, n. 9 for an unpublished C4 inscription from Dion, where the toponym (dat. *Βέρρητι*) is mentioned twice) or *Βέρρηιον*

(Steph. Byz. 163.18). The city-ethnic is *Βεργαῖος* (*IG* 1³ 261.iv.29; Bonias (2000) 231; cf. Alexis fr. 90.1, *PCG*). Berga is called a *polis* only in late sources (Ptol. 3.12.28; Steph. Byz. 163.13). In Strabo 7 fr. 36 it is called a *kome* in Bisaltia. The site-classification as a *polis* in the Classical period is corroborated (a) by the appearance of Berga in the tribute lists as a paying member of the Delian League (*infra*); (b) by the C5 coins; and (c) by the listing of Antiphanes Bergaios (probably the famous C4 author of *Apista*) among the *theorodokoi* to host *theoroi* from Epidauros (*IG* 1V².1 94.19). The collective use of the city-ethnic is attested internally on coins (*infra*) and in an inscription of C5f (Bonias (2000) 231) and externally in the Athenian tribute lists (*infra*). For the individual and external use, see Polyb. 34.6.15.

Recorded between Amphipolis and Tragilos in the Epidaurian *theorodokoi* list, Berga is located by Strabo (7 fr. 36) in the territory of the Bisaltai, c.200 stadia (some 36 km) upstream from Amphipolis in the Strymon valley. Berga was usually sought in different locations on the west bank of the river Strymon, which was considered to be the easternmost frontier of Bisaltia (for a review of the various identifications, see Koukouli-Chryssanthaki (2000) 353–58). It is now identified beyond reasonable doubt with the remains of an important urban centre by Neos Skopos, close to the eastern bank of the now drained Lake Achinos (ancient Kerkinitis) in the lower Strymon basin (Bonias (2000) 236 n. 28; Koukouli-Chryssanthaki (2000) 359–61, recording imported Ionic and Attic pottery of C6 and C5 date, C5 and C4 Attic sculpture, and various finds indicative of strong Thasian and Attic influence). On the remnants of the defence circuit—now destroyed—see Samsaris (1976) 133. The use of the Parian–Thasian alphabet in the new C5f inscription from Neos Skopos (Bonias (2000)) strongly supports the view that Berga was established as a dependent colony and, probably, *emporion* of Thasos providing access to commercial routes and Thracian resources through the Strymon and the Angites valleys. In 463, following the suppression of its secession from the Delian League, Thasos must have lost control of Berga along with the rest of its mainland possessions.

Consequently, the Bergaians became members of the Delian League. Berga belonged to the Thracian district and is recorded in the tribute lists from 451 (*IG* 1³ 261.iv.29) to 429/8 (*IG* 1³ 282.11.32) a total of seven times. There is a gap of twelve years between 447/6 and 435/4, and Berga is absent from the full panel of 443/2 (*IG* 1³ 269.11.27–111.33). The gap may be connected with the Athenian venture to settle 1,000 colonists in Bisaltia (Plut. *Per.* 11.5; cf. Hammond and Griffith (1979) 117). Berga paid 2,880 dr. in 452/1 (*IG* 1³

261.iv.29), 3,240 dr. in 447/6 (*IG* 1³ 265.1.93) and 3,120 dr. from 435/4 on (*IG* 1³ 277.vi.30).

In the new inscription, the obscure term *βολη* is unconvincingly interpreted as a reference to a council (Bonias (2000) 231 line 3). Berga is recorded in the Epidaurian list of *theorodokoi* of 359 (*IG* 1V².1 94.1.b.19). The name of the *theorodokos* was Antiphanes, who may be identical with the author whose *patris* was Berge according to Ps.-Skymnos (653–54) (Isaac (1986) 59).

Berga struck silver coins in, probably, C5s. Types: *obv.* kneeling Silenos carrying a nymph; *rev.* incuse square; legend: some have *ΒΕΡΓ* or *ΒΕΡΓΑΙ* on *obv.*, others have *ΒΕΡΓΑΙΟΥ* on *rev.* (Svoronos (1918–19) 99–100; cf. Edson (1947) 96; Hammond and Griffith (1979) 117, 121, with an interpretation of the gen. as *Βεργαίου συνοικισμού*, implying the mixed settlement of Athenians and Bisaltians; cf. however, Peter (1997) 104–6: early C4. For a review of possible interpretations of the legends, see Koukouli-Chryssanthaki (2000) 352).

629. Datos (Datenos) Map 51. Lat. 40.55, long. 24.20, in *Barr.* recorded as *Fons Co*(. . .). Size of territory: probably 3. Type: A:β. The toponym is *Δάτος* (*IG* 1V².1 94.32), *ή* (Ephor. fr. 37), or once *ό* (Theopomp. fr. 43), also *Δάτον*, *τό* (Ps.-Skylax 67; Steph. Byz. 221.3). The city-ethnic is exclusively attested in late literary sources in the collective and external form (Harp. Δ7; Strabo 7 fr. 36). Datos is called a *polis Hellenis* by Ps.-Skylax 67 and in Harp. Δ7 quoting Ephoros, where we cannot be sure that the term *polis* stems from Ephoros (cf. fr. 37).

Δάτος/Δάτον appears to have been the name both of the settlement itself and of the surrounding region (Ephor. fr. 37; *Suda* Δ92). Datos was proverbially rich in fertile lands, timber and gold mines (Harp. Δ7; *Suda* Δ92). It was inhabited by Edonians (Hdt. 9.75), and situated near the Strymonian Gulf (Strabo 7 fr. 33; cf. fr. 36). The region has been identified with a more or less vast area including the left (east) bank of the lower Strymon below Mt. Pangaion, bordering on ancient Lake Prasias and extending across the Strymon–Angites confluence further eastward into the territory of the Edonians, probably into the marshlands of the plain of Philippoi (Collart (1937) 133–37; cf. Hammond and Griffith (1979) 72, 188; Vatin (1984) 265–68; Borza (1989) 63–65). Antisara, situated on the Gulf of Kavala, west of Neapolis, served as its outlet to the sea (Steph. Byz. 100.17: *ἐπίκειον Δατηγῶν*). Herodotos (9.75) locates in the region of Datos the massacre by the Edonians of the Athenian settlers under Leagros and Sophanes in 465.

Part of the Datos region probably became the territory of the homonymous urban centre, an *apoikia* founded c.360 by the Thasians (Diod. 16.3.7 (r360/59); cf. Eust. *ad Dion. Perieg.* 517 = *GGM* II 315.40–44) under the exiled Athenian Kallistratos (Ps.-Skylax 67; Isoc. 8.24; Zenobios 4.34, where τὴν ἀντίπεραν γῆν οἰκῆσαι shows that Θασίους is an obvious emendation of MS Ἀθηναίους). In 360/59 Datos appointed a *theorodokos* to host the *theoroi* of Epidauros (*IG* IV².1 94.32).

By founding the colony at Datos, Kallistratos and the Thasians created a bridgehead aimed at controlling the whole of the Datos region, which is identified with the “Thasian continent” of the coinage minted in 360. Recently it was tentatively proposed to identify Datos with the fortified settlement on top of Vassilaki hill, near the village of Amygdaleonas, at the entrance of the pass leading from the plain of Philippoi over Mt. Symbolon to Neapolis (Samartzidou (1990)).

Shortly afterwards Datos was conquered by Philip of Makedon and renamed Philippoi (Harp Δ7, quoting Ephor. fr. 37; Philoch. fr. 37). Epigraphic evidence indicates that Datos and its territory (or at least part of it) were absorbed into the territory of Philippoi: Δάτου χώρα is mentioned in Alexander’s settlement concerning the territory of Philippoi (*SEG* 34 664.15; Hatzopoulos (1996) ii. no. 6), and the hypothesis is further corroborated by the plausible identification of Timandros, the Epidaurian *theorodokos* in Datos (*IG* IV².1 94.32) with Timandros the father of five citizens of Philippoi honoured with *proxenia* in a Delphic decree of C4s (*Syll.*³ 267A.3; cf. Collart (1937) 177–78). Thus, Datos was incorporated into Philippoi, and it is this reform that lies behind the information in several sources that Datos was renamed Philippoi. A complete equation of Datos with Krenides-Philippoi, as indicated at App. *B Civ.* 4.13.105 (rC4) and accepted by Avramea in *TIR* 23–24, is plausibly refuted by Hammond (Hammond and Griffith (1979) 187–88, cf. 235). According to Vatin ((1984) 267–68), Krenides was the name of a locality populated by Thracians on the border of the region called Datos.

630. Eion Map 51. Lat. 40.45, long. 23.50. Size of territory: probably 3. Type: A: a? The toponym is :’*Ἡίων*, ἦ (Hdt. 7.25.2; Thuc. 4.102.3; *SEG* 27 249 (C5e); *IG* I³ 265.1.105). The only attestation of a city-ethnic is at Steph. Byz. 298.22. Eion is called a *polis* in the urban sense by Herodotos (7.113.1), who also mentions the *asty* and its defence circuit (*teichos*, 7.107.2), whereas Thucydides calls it a maritime *emporion* of the Athenians (4.102.3). On the combined evidence of

literary and numismatic sources, Hansen argues that Eion was not simply a fortified *emporion* (Isaac (1986) 60–63; cf. Papazoglou (1988) 388) but indeed a (dependent) *polis* in the political sense (Hansen (2000) 197–98), at least until the foundation of Amphipolis.

Eion is said to be the maritime outlet (*limen*) of Amphipolis (schol. Thuc. 1.98.1). Literary sources identify Eion as ἡ ἐπὶ Στρυμόνι (Hdt. 7.25.2; Thuc. 1.98.1) and ἡ πρὸς Ἀμφιπόλει (Dem. 23.199), as opposed to Ἡίων ἐπὶ Θράκης, the homonymous colony of Mende in the Chalkidike (Thuc. 4.7; see no. 570). Colonising ventures in the area of Eion by the Parians (no doubt involving the Parian colonists of Thasos) are inferred from a C6l epigram from Amphipolis (Lazaridis (1976); cf. *BE* (1978) no. 297; *SEG* 27 249 (525–490)) combined with extensive C7–C6 archaeological remains in the area. Eion is recorded as a strongly fortified supply base of the Persian army in C5e (Hdt. 7.25.2), heroically defended by its governor Boges against the Athenians in 476/5 (Hdt. 7.107). After a protracted siege by the Athenians under Kimon, Eion was conquered and exposed to *andrapodismos* (Thuc. 1.98.1). Its capture raised unprecedented enthusiasm in Athens (Plut. *Cim.* 7–8; cf. Perdrizet (1910) 9–11), which reveals the strategic importance attached to the conquest. Eion became an *emporion* of the Athenians and was used as a base for their penetration and colonising efforts in the Strymon valley (Drabeskos: Thuc. 4.105; cf. schol. Aeschin. 2.31), which culminated in the foundation of Amphipolis in 437/6 (Thuc. 4.102). It became a strongly fortified naval base (Thuc. 4.107.2), and in 447/6 Abdera is recorded in the Athenian tribute lists paying 1 talent to Eion (*IG* I³ 265.1.105). In the Peloponnesian War it controlled the entrance of the river, especially during the siege of Amphipolis in 424 and 422 (Thuc. 4.106–8, 5.6). It was probably incorporated into the territory of Amphipolis (cf. Theopomp. fr. 51). After the fall of Amphipolis in 424, Brasidas’ attack on Eion failed (Thuc. 4.107.1–2), and Eion served as a base for Kleon’s campaign in 422 (Thuc. 5.6). The Athenians in Eion were, however, forced into exile after Aigos potamoi (schol. in Aeschin. 2.31). At an unspecified date, Eion was razed to the ground by the Athenians, and its Amphipolitan inhabitants were expelled (Theopomp. fr. 51; cf. Jacoby *ad loc.* 364, where the event is connected with the operations of Chares against Philip II in 357), following which Eion does not appear in any source, either historical or geographical.

According to Thuc. 4.102.3, Eion was situated on the estuary of the river Strymon, 25 stadia (c.30 stadia according to Diod. 12.73.3) downstream from Amphipolis. It was usually

sought at the mouth (most probably on the left bank) of the Strymon (Collart (1937) 73ff). The acropolis of Eion was recently identified on the Prophitis Elias hill, with surface finds dating from C7 to C5f (Koukouli-Chryssanthaki (1980a) 423) and C6 cemetery strata (Koukouli-Chryssanthaki and Samartzidou (1984) 276; cf. Pritchett (1965) 40 and Papazoglou (1988) 389. For remains of the pre-colonial period, see Koukouli-Chryssanthaki (1993) 684–85). A fragmentary boundary stone of “Classical date” from the ruins of the Byzantine castle of Marmarion is tentatively restored as indicating the presence of a sanctuary of Artemis in the area (Papangélos (1990); cf. *BE* (1991) no. 414).

A number of C5f silver and electrum coins discovered in the area have been attributed to Eion. (1) Electrum: denominations: hekte and fractions. Type: *obv.* goose with or without lizard; *rev.* incuse square. (2) Silver: denominations: drachm and fractions down to hemiobol. Type: *obv.* one or two geese usually with lizard, often letters in field; *rev.* incuse square (Head, *HN²* 197; *SNG Cop. Macedonia* 173–81).

631. Galepsos (Galepsios) Map 51. Lat. 40.45, long. 24.00 (to be distinguished from Galepsos in Sithonia (no. 571); size of territory: probably 3. Type: [A]:a. The toponym is *Γαληψός, ἡ* (Thuc. 4.107.3; schol. Thuc. 5.6.1; Ps.-Skylax 67), said to derive from Galepsos, son of Thasos and Telephe (Marsyas the Younger (*FGrH* 136) fr. 5). The city-ethnic is *Γαλήψιος* (*IG* 1³ 259.IV.15). In Ps.-Skylax 67 Galepsos is the third of four toponyms listed after the heading *πόλεις Ἑλληνίδες αἰθε*, where *polis* is used in the urban sense. For *polis* used in the political sense, see Diod. 12.68.4 (rC5s). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (*infra*). For the individual and external use, see an undated Athenian funerary inscription (*SEG* 32 297; cf. no. 571).

Galepsos was a colony (*apoikia*) of Thasos (Thuc. 4.107.3, 5.6.1; Heraclid. Pont. fr. 125, Wehrli; Diod. 12.68.4). Qualified as a *πόλις Ἑλληνίς* and one of the *emporía* of the Thasians by Ps.-Skylax 67, it is generally considered as one of the mainland *emporía* of Thasos (Avram (1995) 193: “Ursprünglich bloss einem *Emporion* der Thasier”) or rather a dependent *polis* and an *emporion* in the mainland *peraía* of Thasos (Hansen (1997) 88, (2000) 199).

Galepsos was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.IV.15) to 415/14 (*IG* 1³ 290.III.21, heavily restored) a total of fourteen times, paying first c.1½ tal. (*IG* 1³ 259.IV.15) reduced to 3,000 dr. in 443/2 (*IG* 1³ 269.III.3) and

further reduced to 1,000 dr. in 433/2 (*IG* 1³ 279.II.35). After the fall of Amphipolis in 424, Galepsos was won over by Brasidas with the assistance of the Makedonian king Perdikkas (Thuc. 4.107.3), but was recaptured by Kleon two years later (Thuc. 5.6.1). It was conquered and destroyed by Philip II (Strabo 7 fr. 35), presumably soon before or after his capture of Krenides in 356 (Hammond and Griffith (1979) 363); however, it was probably refounded by the Makedonians, as inferred by the mention of Galepsos in Livy (44.45.14–15 (rC2f)), drawing on Polybios.

Galepsos is generally identified with the ruins at Gaïdourokastró, a C5e fortified citadel, strategically located south of the village of Karyani (7–8 km south-west of Orfano), which dominates both the Strymonic Gulf and the Pierian coast (Collart (1937) 78–80, following Perdrizet (1894) 440; detailed description of the site in Bakalakis and Mylonas (1938); plan of the citadel in Lazaridis (1971) fig. 64). The earliest finds are dated to C7l and C6e (Romiopoulou (1960)), indicating its foundation as a Thasian colony as early as C7l, possibly on the site of a pre-existing Thracian settlement. A C6–C4 cemetery, including both inhumation and cremation burials, was excavated on a low hill, south-west of the citadel, some 200 m from the coast (Koukouli-Chryssanthaki (1972c) 526–27). The existence of a sanctuary of Zeus, worshipped with the epithets *herkeios, patroios and ktesios*, is assumed from the discovery of two C5l–C4e boundary stones with characteristic Parian/Thasian lettering (Collart (1937) 79, n. 4, with refs.). Moreover, the urban centre at Gaïdourokastron may be related to the neighbouring coastal settlement identified 1 km to the east, on the Pithari hill, which is probably linked to the C6 tombs excavated in the vicinity, and with an unlocated sanctuary of Demeter with a *hekatompedos* temple, mentioned on four inscribed boundary stones found at the foot of the hill (unpublished; cf. Koukouli-Chryssanthaki (1982) 325–26; *BE* (1994) no. 433).

Galepsos struck bronze coins, probably in C4e, but so far only three pieces are known (Bon and Bon (1936); *BCH* (1930); cf. Robert (1940) 90, n. 1). *Obv.* head of Dionysos; *rev.* protome of ram; legend: *ΓΑΛΗΨΙΩΝ* (Bon (1936) 172–74; Robert (1940) 90 n. 1; Liampi (1991) 30 with n. 63). These coins are sometimes erroneously attributed to Galepsos on Sithonia (Blanchet, *RN* (1937) 325; Demetriadi (1974)).

632. Krenides (Krenites) Map 51. Lat. 41.00, long. 24.15. Size of territory: ? Type: B:a. The toponym is *Κρηνίδες, αἱ* (*IG* 1² 127.45; Tod 157, 356; Diod. 16.3.7). The city-ethnic is

Κρηνίδης (Artem. fr. 15, GGM 1 476). Krenides is called a *polis* in late sources only (Diod. 16.8.6 (r361)), but *polis* status in C4 is strongly indicated by its mint (*infra*). The legend on the coins shows that the *polis* was a Thasian dependency (*infra*). In C1 it had dwindled to a *κατοικία μικρά* (Strabo 7 fr. 41).

Krenides is said to have drawn its name from springs rising near the foot of its acropolis (App. *B Civ.* 4.105; Strabo 7 fr. 34; cf. Collart (1937) 39ff). It was colonised by the Thasians c.360/59 (Diod. 16.3.7). That the exiled Athenian Kallistratos was involved in the colonisation is argued by some historians (Hammond and Griffith (1979) 187–88, 235; Vatin (1984) 267–68), but has no foundation in the sources (see *supra*). Krenides was located near Mt. Pangaion, possessing numerous gold mines, where the city of Philippoi was eventually established (Strab. 7 fr. 34; Artem. fr. 15; Diod. 16.3.7). Threatened by Thracian attacks, it requested aid from Philip II, who occupied and fortified it (356), introducing new Makedonian settlers and renaming it Philippoi (Artem. fr. 15; Diod. 16.3.7, 8.6; Steph. Byz. 383.9–10; App. *B Civ.* 4.105); see *infra* 865.

Krenides struck coins of gold and bronze c.360–356. Type: *obv.* head of Herakles; *rev.* tripod (gold), or club and bow (bronze); legend: ΘΑΣΙΟΝ ΗΠΙΕΙΠΟ. The types are identical with those of Philippoi, which shows that they were struck by the precursor of Philippoi, i.e. Krenides (Head, *HN*² 217; Le Rider (1956) 16–19; Kraay (1976) no. 509; SNG *Cop. Macedonia* 219).

633. Myrkinos (Myrkinios) Map 51. Lat. 40.55, long. 23.50, according to *Barr.*, but precise location unknown (*infra*). Size of territory: probably 3. Type: A:β. The toponym is *Μύρκινος*, ἡ (Hdt. 5.11.2; Thuc. 4.107.3), but *Μυρκιννία* according to Parthenios fr. 659.1, *apud* Steph. Byz. 463.15. The city-ethnic is *Μυρκίνιος*, attested at Thuc. 5.10.9 in the collective and external sense. Myrkinos is called a *polis* both in the urban sense (Hdt. 5.11.2) and in the political sense (Thuc. 4.107.3), but only a *polichmion* by Diodoros (12.68.4 (r424)). The toponym designates both the settlement and its hinterland (Hdt. 5.23.1; Steph. Byz. 463.14).

Myrkinos was an Edonian community (Thuc. 4.107.3; Hdt. 5.126.2), with a mixed population of Greeks and barbarians (Hdt. 5.23.2). It was colonised and fortified (Hdt. 5.23.1, 124.2) c.509 (Hammond and Griffith (1979) 68 n. 4) by Histiaios, the tyrant of Miletos, who received it as a gift from Dareios (Hdt. 5.11, 124.2). In 497 the city received a new contingent of Greek colonists when Aristagoras fled Miletos with a group of Milesians and settled in Myrkinos (Hdt.

5.124.2, 126). Shortly afterwards he and his army were massacred by the Edonians (Hdt. 5.126). In C5s Myrkinos was ruled by the king of the Edonians, Pittakos; after he was murdered, Myrkinos fell to the sons of Goaxis and his wife Brauro, and following the fall of Amphipolis in 424, the Myrkinians joined Brasidas and provided a sizeable contingent of cavalry and peltasts (1,000 together with the Chalkidians) and cavalry for his campaign against Kleon, who was actually killed by a Myrkinian peltast (Thuc. 5.6.4 and 5.10.9).

Myrkinos was situated in an area rich in gold, silver and timber (Hdt. 5.23) at the western end of the plain of Philippoi, near Drabeskos and the river Strymon (App. *B Civ.* 4.105; Strabo 7 fr. 33); but the precise location remains unidentified (Samsaris (1976) 141: = modern Myrkinos (formerly Doxambos); more probably = ancient site near Palaioikomi (formerly Provista), to the north-west of Mt. Pangaion (Papazoglou (1988) 390–91; cf. Hammond and Griffith (1979) 68; *TIR* 42–43 s.v.).

634. Neapolis (Neopolites) Map 51. Lat. 40.55, long. 24.25. Size of territory: probably 2. Type: A:a. The toponym is *Νεάπολις* (*IG* 1³ 263.III.13–14; Ps.-Skylax 67; *IG* 1^{v2}.1 94.27 (360/59)) or *Νέα Πόλις* (*IG* 1³ 101.44; Ps.-Skymnos 659), often accompanied by geographical specifications: *ἐν Θράκη* (*IG* 1³ 259.VI.9–10) or *παρὰ Ἀντισάραν* (*IG* 1³ 263.III.13) to distinguish it from homonymous cities. The city-ethnic is *Νεοπολίτης* (*IG* 1³ 101.2) or *Νεαπολίτης* (*F.Delphes* III.4 414.13 (C3f)) and is often geographically specified: *Νεοπολίται παρ' Ἀντισάραν* (*IG* 1³ 278.V.14–15) or *Νεοπολίται οἱ ἀπὸ Θράκης* (*IG* 1³ 101.32 and 48). The second part of the compound toponym testifies to the *polis* status of Neapolis. In Ps.-Skylax 67 Neapolis is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες αἶδε*, where *polis* is used in the urban sense; and in the so-called Charter of the Second Athenian Naval League Neapolis appears under the heading *πόλεις αἶδε σύμμαχοι* (*IG* 1² 43.78 and B.34). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian decrees and tribute lists (*supra*). The individual and external use is attested in a Thasian inscription of C51 (*IG* XII.8 263.12–13).

Neapolis was situated at the northernmost limit of the Strymonic Gulf, near the coast of the Datenoi (Strabo 7 fr. 32 and 36) not far from Daton itself (Ps.-Skylax 67). It is the last city attested by Ps.-Skylax 67 west of the river Nestos; in the list of the Epidaurian *theorodokoi* it is recorded before Abdera and after Mende (*IG* 1^{v2}.1 94.27), in the Delphic list

of *theorodokoi* after Philippoi and Oisyme but before [Σ]άπαι (*BCH* 45 (1921) 111.82). According to Cassius Dio (47.35.3) it was located on the coast opposite Thasos, separated from the plain of Philippoi by Mt. Symbolon. The port of Neapolis is mentioned in an Athenian decree of 409 (*IG* I³ 101.28; Lazaridis (1969) 20 and 23). The proposed identification with Kavala (Heuzy and Daumet (1876) 18–20; cf. Collart (1937) 105–6) was archaeologically confirmed by the discovery of segments of polygonal fortification walls of a Classical citadel on the Pharos peninsula (plan in Lazaridis (1971) fig. 69).

The disputed origin of Neapolis from either Thasos or Athens or Eretria (Collart (1937) 112–24) was settled by Pouilloux ((1954) 158ff), who emphasised the decisive argument provided by the archaeological material: Thasian–Parian lettering in C6 graffiti and standard Thasian types of early Neapolis coinage (Kraay (1976) 150–51). It is notable that in 411–409, at the request of the Neopolitans, Athens erased the express reference to Neapolis being a colony of Thasos from the first of two honorific decrees (*IG* I³ 101.7, 8 (*rasurae*), cf. 68–69).

Neapolis was a member of the Delian League. It belonged to the Thracian district and was entered on the Athenian tribute lists first by toponym (*IG* I³ 259.vi.9–10) but from 443/2 by city-ethnic (*IG* I³ 269.ii.28). It is recorded in the tribute lists from 454/3 (*IG* I³ 259.vi.9–10) to 429/8 (*IG* I³ 282.ii.19–20) a total of fourteen times, once completely restored, and paid in all years 1,000 dr. (*IG* I³ 265.i.20).

A further proof of its continued independence of Thasian control is inferred from the fact that it had control over customs dues collected in its own harbour (*IG* I³ 101.27–30; Isaac (1986) 67). Thus the fact that some Neopolitans possessed property in Thasos, which was confiscated by the oligarchic government of that island in 411 (*IG* xii.8 263.5–7, 12–13), reflects most probably the survival of a situation dating from before 463, when Neapolis, with the rest of the Thasian *peraia*, was detached from the territory of Thasos.

Following the defection of Thasos from the Athenian League in 411, Neapolis remained loyal to Athens, causing Neopolitan oligarchs to take refuge in Thasos, while the property of Neopolitan democrats in Thasos was confiscated (*IG* xii.8 263; cf. the admission into the citizen body of Thasos of presumed Neopolitan refugees born of Thasian mothers (*IG* xii.8 264 (c.408–404); cf. Wilhelm (1911–32) ii (1914) no. 14; Collart (1937) 129–30). Unsuccessfully besieged by the Thasians, the Neopolitans were praised by the Athenians for their loyalty and for participating in the siege of Thasos by Thrasyboulos (*IG* I³ 101 (410/9)).

A problematic inscription from Paros (*IG* xii.5 109 (C51–C4e)), usually considered as a treaty between Thasian oligarchs and Paros with the participation of Neopolitan refugees (*οἱ Νεοπολιῖται οἱ ἐν Θάσῳ*), has been interpreted as a peace treaty between Thasians and Neopolitans organised by Paros (Pouilloux (1954) 178–92; cf. *IG* xii.8 264, from Thasos and the fragmentary treaty of reconciliation between Thasos and Neapolis in 390 recently discovered in Delphi: Moretti (1987) with refs.).

Having preserved its independence from Thasos in the aftermath of the Peloponnesian War, Neapolis became a member of the Second Athenian Naval League in 375/4 (*IG* ii² 43B.34). This independent status seems to have been preserved even after the expansion of the *peraia* of Thasos in the plain of Daton in 360/59, obliging Thasos to seek an alternative outlet to the sea for the produce of her new possessions: it may account for the record of Antisara as a port of the Datenoi in Steph. Byz. (100.17). In the spring of 355 Neapolis sent ambassadors to Athens to negotiate the conclusion of an alliance with Athens, presumably against Philip II of Makedon (*IG* ii² 128). The termination of the Neopolitan coinage around the same period indicates the final annexation of Neapolis to the Makedonian kingdom. C3 epigraphic testimony from Delphi (*F.Delphes* iii.4 414.13) and the fact that Neapolis hosted *theoroi* of Delphi in C31 (*BCH* 45 (1921) 111.82) indicate that its civic status remained unchanged after the foundation of Philippoi; cf. Papazoglou (1988) 403.

The poliad deity of Neapolis was Athena Parthenos, as confirmed by epigraphic and figurative testimonies (Bakalakis (1936a) 33 nos. 1 and 2). The relief crowning a C4m Athenian decree in favour of the Neopolitans represents Athena and a *polos*-wearing goddess, identified by the legend ΠΑΡΘΕΝΟΣ (*IG* ii² 128; Lawton (1995) no. 28), and Parthenos is presumed to be represented in the relief crowning the C5l decree as well (*IG* I³ 101; Lawton (1995) no. 7). Her sanctuary, attested in *IG* I³ 101.45, 57 and 63 (cf. Tod 84), was identified on decisive epigraphic evidence with the archaeological remains of a monumental C6 temple (Ionic capitals and fragments of entablature) discovered inside the citadel, on the Pharos peninsula in Kavala, presumed to have replaced an earlier wooden construction. The earliest pottery finds in the sanctuary were dated to c.650–625 (Lazaridis (1961–62) 235–6), while a rich Archaic deposit yielded Thasian, Corinthian and East Greek ware (625–600) and C6m Attic black-figure (Lazaridis (1961–62); for probable pre-colonial pottery, cf. Koukouli-Chryssanthaki (1993) 686–87). Moreover, a cult of Artemis with the epithet *Opitais* is epigraphically attested (Lazaridis (1941–42)). Some

further information concerning religious institutions in Neapolis is preserved in a C4(?) inscription mentioning a *neokoros* of the Parthenos and the existence of a *kreophylakion* (= archives; Collart (1937) 108–9).

Neapolis struck silver coins from c.530 to the Makedonian conquest in C4m, and bronze in C4s. (1) Silver on the Babylonian standard, c.530–C5l: denominations: stater, third, ninth. Type: *obv.* Gorgoneion; *rev.* incuse square. (2) Silver on the Phoenician standard, C5l–C4m: denominations: drachm, triobol, diobol. Type: *obv.* Gorgoneion; *rev.* head of Parthenos; legend: *NEOII* or *NEOΠOΛΙΤΕΩΝ*. (3) Bronze, C4e onwards: *obv.* Gorgoneion; *rev.* head of Parthenos, or Parthenos standing; legend: *NEAIIOA* or *NEAIΠOΛITΩH* (Head, *HN*² 196–97; Gaebler (1906–35) 79–83; Bakalakis (1936*b*) 36, 43; Lazaridis (1969) 21; Oikonomidou (1990); Picard (1990) 541–47; *SNG Cop. Macedonia* 222–32).

635. Oisyme (Oisymaios) Map 51. Lat. 40.50, long. 24.20. Size of territory: probably 3. Type. A: *a.* The toponym is *Οἰσύμη*, ἡ (Thuc. 4.107.3; Ant. fr. 25, Sauppe), *Οἰσύμα* in the Delphic list of *theorodokoi* (*BCH* 45 (1921) III.81), identified in Steph. Byz. 487.8 with Homeric *Αἰσύμη* (Hom. *Il.* 8.304). Oisyme is said to have been renamed *Ῥμαθία* after Makedonian Emathia (Ps.-Skymnos 456–58; Steph. Byz. 487.8), presumably following its occupation by Philip II. The city-ethnic is *Οἰσυμαῖος* (C4 stamped amphora handles (Bakalakis (1938) 101–2; cf. Koukouli-Chryssanthaki (1969)). Both the toponym and the ethnic are epigraphically attested in C3 (*SGDI* 2600; *BCH* 45 (1921) III.81; cf. Robert (1940) 89 n. 4). Oisyme is called a *polis* by Harpokration (*O*12), quoting Ephoros (fr. 36): *πόλις ἐστὶ τῆς Θράκης, καθὰ φασιν ἄλλοι τε καὶ Ἐφορος ἐν δ'.* Here Ephoros is probably quoted for the site-classification, since Harp. quotes Antiphon for the toponym. *Polis* is probably used in the urban sense (see Ant. fr. 23, Sauppe). In Ps.-Skylax 67, Oisyme is the last of four toponyms listed after the heading *πόλεις Ἑλληνίδες αἰθε*, where *polis* is used in the urban sense; cf. Ps.-Skymnos 656–57. For *polis* used in the political sense, see Diod. 12.68.4 (rC5s). The collective use of the city-ethnic is attested internally on stamped handles (*supra*) and on coins (*infra*). The individual and external use is attested in a C3m Delphic proxeny decree (*SGDII* 2600).

Oisyme was a colony (*apoikia*) of Thasos (Thuc. 4.107.3; Diod. 12.68.4 (r424)). Qualified as a *πόλις Ἑλληνίς* and one of the *emporía* of the Thasians by Ps.-Skylax 67, it is classified as both a dependent *polis* and an *emporion* in the mainland *peraiá* of Thasos (Hansen (1997) 88, (2000) 199).

Situated in Thrace (Ephor. fr. 36), Oisyme is indeed the only city of the Thasian *peraiá* mentioned in Homer (*Il.* 8.304). Listed in the C3l Delphic list of *theorodokoi* between Philippoi and Neapolis (*BCH* 45 (1921) III 81), it is located by Armenidas (*apud* Athen. 1.31a), together with Antisara, in the *βιβλία χώρα* renowned for the excellent quality of its wine, and by Ptolemy on the coast of Edonis (Ptol. 3.12.7).

Oisyme joined Brasidas after his capture of Amphipolis in 424, following the example of Myrkinos and Galepsos (Thuc. 4.107.3). Thereafter and during C4 her fortune seems to have followed that of the neighbouring communities: Phagres, Galepsos and Apollonia.

Oisyme was securely—yet without definitive proof—identified by Bakalakis ((1938) 97–102, following Heuzey and Daumet (1876) and Collart (1937) 81–87) with the fortified citadel on Cape Vrasidas, south of the village of Nea Peramos, in the southern part of the bay of Eleutherai (Leftero Limani). Excavations undertaken in 1938 and again in 1964, 1968 and 1987–90 are summarised in Giouri and Koukouli (1987); cf. Koukouli-Chryssanthaki (1980*b*) 317–18; Koukouli-Chryssanthaki and Papanikolaou (1990).

The acropolis wall was built over a pre-colonial stratum on the hill-top (plans in Lazaridis (1971) figs. 66–67; Giouri and Koukouli (1987) 366) and shows two distinct phases (irregular polygonal and rectangular ashlar local granite masonry, respectively); in C5f, a second wall extended the walled area to the north. The settled area spread to the south-east flank of the hill, towards the natural harbour. The cemetery of Oisyme, excavated in the sea-coast sandunes south of the citadel, testifies to the existence of the settlement from 650 to 625 and indicates close cultural relations with Thasos and its mainland colonies (Giouri and Koukouli (1987) 365, with refs.). Remains of a monumental rectangular C5e temple excavated at the top of the acropolis hill (plans in Giouri and Koukouli (1987) plans 2–3; Koukouli-Chryssanthaki and Papanikolaou (1990) 488) were found to succeed an older temple which was destroyed in C5e. A pre-colonial stratum was identified under the Archaic temple (Koukouli-Chryssanthaki (1987), (1988)). Finds in the destruction layer and in a nearby deposit include roof tiles, decorated terracotta antefixes, C7s–C5e pottery, various types of terracotta female figurines, and fragments of large-size C6l clay kore-type statues, mostly relating to materials from Thasos. Imported ware include C7 and C6 Corinthian, Attic, Cycladic and East Greek productions. The excavators attributed the sanctuary—mainly on the basis of the figurine types and of bronze shield dedications—to Athena Polias, referring to the sanctuary of the

same goddess on the acropolis of Thasos, which also suffered destruction in C5e and was similarly reconstructed on a larger scale. The construction of the C5 temple in Oisyme is considered to be contemporary with the restoration and extension of the defence walls, as in the case of Thasos. Its destruction layer abounds in C2 pottery (C4–C2 are represented only sparsely in surface finds).

Rare C4 bronze coins of Oisyme have been related to a short period of civic autonomy (Picard (1993); cf. (1994) 467). Type: *obv.* head of helmeted Athena; *rev.* kneeling archer Herakles; legend: *OISYMAIΩN* (Head, *HN*² 892).

636. Phagres (Phagresios) Map 51. Lat. 40.45, long. 23.55. Size of territory: probably 3. Type: [A]:a. The toponym is *Φάγρης*, -ητος (Hecat. fr. 156; Hdt. 7.112.2; Ps.-Skylax 67). The city-ethnic is *Φαγρήσιος* (*SEG* 38 656 (C4)). In Ps.-Skylax 67, Phagres is the second of four toponyms listed after the heading *πόλεις Ἑλληνίδες αἰθε*, where *polis* is used in the urban sense. In Hdt. 7.112.2 it is described, together with Pergamon, as a *teichos* of the Pieres (Hdt. 7.112), whereas Thuc. 2.99.3 calls Phagres a *chorion*. That Phagres was a *polis* in the political sense is indicated by its mint (*infra*) and by the recording of its city-ethnic in a Delphic catalogue of communities which seem to have been either *poleis* or islands with more than one *polis* (*F.Delphes* III.1 497.4 (C41–C3e)). The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in the Delphic catalogue (*supra*). The individual and external use is attested on a C4 funerary *stele* from Eleutheropolis (*SEG* 38 656).

Phagres was one of the *πόλεις Ἑλληνίδες* in Thrace, listed between Amphipolis and Galepsos by Ps.-Skylax 67 and further described as a Thasian *emporion*. From the time of Philip II and Alexander III it was part of Makedonia (Strabo 7 fr. 33). Phagres is said to have been settled by Pieres expelled from the Makedonian Pieria under Perdikkas I east of the mouth of the river Strymon, at the westernmost end of the Pierian coast (Thuc. 2.99.3). It must have been strongly fortified, as indicated by its classification as a *teichos* in Hdt. 7.112.2. At an unknown date in C6(?), Phagres was presumably colonised by the Thasians and incorporated in their mainland *peraia*. Together with Galepsos and Apollonia, Phagres may have been one of the *poleis* occupied and destroyed by Philip II after his capture of Amphipolis (Strabo 7 fr. 35; cf. Dem. 9.26).

The urban centre was tentatively located on a hill (Kanoni) rich in ancient remains east of the village of Orphanion, c.8 km to the east of the mouth of the Strymon

(Leake (1835) iii. 176ff), followed by Perdrizet (1894) 440 and Collart (1937) 76ff; cf. *BE* (1990) no. 491). Recent excavations on the site revealed abundant C6s–C5e good-quality Attic and Thasian pottery, which was collected from a group of circular pits and was interpreted as remains from a destruction suffered by the city in C5f (Nikolaidou-Patera (1989) 490). Archaeological remains, including a Hellenistic building and a cemetery of Hellenistic date (C31–C2e) located to the north-west of the hill, indicate the survival of the settlement probably down to the Roman period (Nikolaidou-Patera (1987), (1989) 489–91, (1990) 517–21, (1996)). The site identification was confirmed by the discovery of one bronze coin of C4f. Type: *obv.* laureate head of Apollo; *rev.* lion protome; legend: *ΦΑΓΡ* (Liampi (1991)).

637. Philippoi (Philippeus) Map 51. Lat. 41.00, long. 24.15. Size of territory: probably 2 or 3. Type: B:a. The toponym is *Φίλιπποι*, οἱ (Arist. *Mir. ausc.* 833^a28; Artem. fr. 15, *GGM* I 576.7 (rC4m); *BCH* 45 (1921) III.80 (C31)). The city-ethnic is *Φιλιππεύς* (*IG* IV 617.21 (C41)) or (once in Polybios) *Φιλιππηνός* (fr. 85), or (internally and in plural) *Φίλιπποι* (coins, *infra*; Hatzopoulos (1996) ii. no. 36.13, Kos: τῆμ πόλιν τὴν Φιλιππων, 243; cf. Hatzopoulos (1993) 322 with n. 22). Philippoi is not called a *polis* in any Classical source, but its status as a *polis* is strongly indicated by its C4m coinage combined with numerous attestations of *polis* status in the Hellenistic period (Rigsby (1996) no. 27.7, 9, 13, 15 (243/2); Hatzopoulos (1996) ii. no. 37.2 (C2); Artem. fr. 15, *GGM* I 576.7; cf. Hammond and Griffith (1979) 358–61). The collective form of the city-ethnic is attested internally on coins (*infra*) and in inscriptions (*IG* IV 617.21 (C41); *IG* II² 1956.149 (C41)). For the individual and external form, see *IG* VII 2433, Thebes (C3–C2).

Founded and fortified by Philip II (Artem. fr. 15), who intervened to protect Krenides in 356 when it was threatened by the Thracians of Kersebleptes in 356, Philippoi is recorded as having replaced Krenides (Strabo 7 fr. 41 and 43; Diod. 16.3.7, 8.6; Artem. fr. 15 (all rC4f)) or Daton (Ephor. fr. 37; Philoch. fr. 44; cf. App. *B Civ.* 4.13.105; Krenides = Daton = Philippoi). The identification of Timandros (the *theorodokos* of the Epidaurian *theoroi* at Daton in 360/59 (*IG* IV².1 94.32)) with the father of five *Philippeis* appointed *proxenoi* of Delphi in a C41 decree (*Syll.*³ 267A; cf. Collart (1937) 177–78) confirms the permanence of the pre-Makedonian population (of Thasian origin) in Philip's new foundation.

Philippoi is listed between Amphipolis and Oisyme in the catalogue of Delphic *theorodokoi* (*BCH* 21 (1945) III.80). It is located near Mt. Pangaion, rich in gold and silver mines, on

the site of Krenides (Strabo 7 fr. 34; cf. fr. 41); it is also said to lie near Mt. Symbolon, which extends between Neapolis and Philippoi, i.e. in the plain between the mountains (Dio Cass. 47.35.4). According to App. *B Civ.* 4.105, the city of Philippoi covered—at least in Roman times—the entire width of a steep hill. The original boundaries of Philippoi remain unknown.

A boundary settlement concerning Philippoi dictated by Alexander III (recently, Hatzopoulos (1996) ii. no. 6 = Ager (1996) no. 5) and dated to 335 or 330 attests not only to ambassadors of Philippoi submitting requests to the Makedonian king (ii.11, as restored in Ager), but also to the king's intervention in matters of boundary disputes: *viz.* exploitation and allocation of uncultivated lands and dues thereon (i.4–6); delimitation and re-establishment of the integrity of the territory (i.8) initially donated to the city by its founder Philip II (i.8–13), which had apparently been trespassed upon (8 and 12), presumably by the Thracians; a special provision (exclusion ?) concerning part (more than 2,000 *plethra*) of the territory of Daton (i.13–15); the measurement and addition of new territory (ii.1–2); the confirmation of territorial rights of Philippoi as opposed to those of the Thracians (ii.2–5), followed by a summary topographic delimitation, presumably of the new borders of the territory of Philippoi mentioning hills (ii.7), attributing to Philippoi the land around the territory of Sirra (ii.8) and including *Daineros*, as established by Philip II (ii.8–10), allocating the marshes to Philippoi as far as “the bridge” (ii.12–13), and provisionally forbidding sales of forest land on Mt. Dysoron (ii.10). The document indicates that the boundaries of Philippoi following Alexander's arbitration (and confirming Philip's initial settlement—as indeed in the Roman period (Papazoglou (1982) 99–102)—included only part of the territory to the west and north-west (possibly east of Mt. Menoikion), allowing the Thracians of the Strymon valley to remain in possession of at least part of their lands.

Attested sales transactions from Philippoi include the sale of sacred lands in C4s (*temene*), and a unique testimony regarding civic taxation is inferred from the mention of a c.2 per cent *ἐπώνιον* imposed on land transactions. The documents also record several deities worshipped in C4s Philippoi, one each for Ares, Poseidon and the Heroes, two for Philip—presumably Philip II, being the object of heroic cult as the *ktistes* of the city (Hatzopoulos (1996) ii. no. 83; cf. Ducrey (1988), (1990)).

The constitution of pre-Roman Philippoi presents all the characteristics of a Hellenistic *polis*. It is inferred from, especially, the decree of *asylia* for Kos (Hatzopoulos (1996) ii. no.

36, Kos (243) = Rigsby (1996) no. 27), that the original constitution remained unchanged during C4 and most of C3. The documents confirm the particular political status of Philippoi, formally founded as a—theoretically—independent *polis*, an ally of the Makedonians, yet institutionally organised on the Platonic model current at that time (Hatzopoulos (1996) i. 158–60, 186–88). Furthermore, evidence from unpublished *hierokerykeia* sales deeds supports the view that the calendar used in pre-Roman Philippoi was not the Makedonian, but “an original calendar with names of months formed on the names of the Twelve Gods, just as in Cassadrea”, another Makedonian foundation with closely related institutions of Platonic inspiration according to Hatzopoulos (Hatzopoulos (1993) 322–23; cf. (1996) i. 158–60). Philippoi, as the oldest Makedonian foundation, must have served as a model for subsequent foundations. The political status and institutions of the pre-Roman city were recently reconstructed from Hellenistic epigraphic material (Hatzopoulos (1993); cf. Hatzopoulos (1996) i. *passim*).

Philippoi struck coins of gold, silver and bronze c.356–330. Denominations: gold stater; silver tetradrachm, drachm, hemidrachm; and fractions in bronze. Types: *obv.* head of Herakles in lion's skin; *rev.* tripod and various symbols; legend: *ΦΙΛΙΠΠΙΩΝ* (Collart (1937) 162 pl. 23; Le Rider (1977) 438–39; Hammond and Griffith (1979) 358–61; *SNG Cop. Macedonia* 291–303).

638. Pistyros Map 51. Lat. 41.00, long. 24.35 in *Barr.* but see *infra* for an alternative location. Size of territory: probably 3. Type: A:a. The toponym is *Πίστυρος* (Hdt. 7.109.2). Pistyros is not mentioned in any other source, unless it is identified with *Βίστιρος*, πόλις *Θράκης ὡς Πίστυρος τὸ ἐμπόριον* (Steph. Byz. 171.6). Thus, the *polis* Bistiros is explicitly distinguished from the *emporion* Pistiros, mentioned again at Steph. Byz. 524.11: *Πίστυρος, ἐμπόριον Θράκης*, undoubtedly to be identified with the toponym *Πίστυρος* and the collective ethnic *Πιστιρηνοί* epigraphically attested in a recently published C4 inscription from Vetren in Bulgaria (*SEG* 43 486 = *BCH* 123 (1999) 246–56).

At Hdt. 7.109.2 Pistyros is called a *polis* twice, first in the territorial sense, denoting the town with its hinterland, next in (probably) the urban sense, perhaps with the territorial sense as a connotation. It is described as one of the coastal *ἡπειρώτιδες πόλεις* of Thasos, qualified as *Ἑλληνίς* and *παραθαλασσία*, situated near a salt lake west of the Nestos estuary, on the route traversed by Xerxes' army through southern Thrace in 480 (Hdt. 7.109–10).

Pistiros has tentatively been identified with the remains of a C6I fortified settlement east of Pontolivado, located near the Vassova salt lake. Archaeological reports (Koukouli-Chryssanthaki (1972*a*) 529, (1973) 451; (1980*b*) 322–25; cf. Koukouli-Chryssanthaki (1990)) record fortification walls with regular masonry of the “Thasian” type, Thasian stamped amphoras and roof tiles stamped ΘΑΣΙΩΝ, indications of active metal working (silver), traces of buildings dating to C2 and an important coin hoard, containing coins of Neapolis and Thasos dated c.520–510 (Oikonomidou (1990)). It is possible that the homonymous C5–C4 *emporion* excavated in the upper Hebros valley, near Vetren in Bulgaria (Velkov and Domaradzka (1994) = *SEG* 43 486) duplicated—or replaced—the coastal settlement, following the successful penetration of the Thasians deep into the Thracian hinterland (Loukopoulou (1999) 368).

639. Sirra (Sirraios) Map 51: Lat. 41.05; long. 23.35. Size of territory: probably 3. Type: C:β. The toponym is Σίρρα, ἡ (Theomp. fr. 125) or Σέρραι (Hierocl. *Synekd.* 639.10) or *Sirai* (Livy 45.4.2). The city-ethnic is Σειραῖος (Papakonstantinou-Diamantourou (1971) 140 no. 223 (C3); *IG* XII.8 206.8 (first century AD)) or Σιρραῖος (*CIG* 2007 (first century AD)). The only source in which Sirra is called a *polis* is Steph. Byz. 572.16: Σίρρα, πόλις Θράκης, quoting

Book 20 of Theopompos’ *Philippika* (fr. 125); but it is unknown whether Steph. Byz. found the site—classification in Theopompos’ work or just the toponym.

First mentioned in Theopompos, Sirra is located in the territory of the Odomantes according to Livy 45.4.2. Its *polis* status and civic institutions are epigraphically attested only for the Roman period (Papazoglou (1988) 379–81). According to Hatzopoulos, it was one of several native communities expanded with immigrants under Philip II and extended to comprise a vast territory with its *komai* (Hatzopoulos (1996) i. 70). For the participation of Sirra in the local Pentapolis—probably also in the earlier local *sym-politeia*—see *supra* 857/859, Gasoros, and Berga (no. 628).

The territory of Sirra (Σειραϊκὴ γῆ) is mentioned in the settlement of Alexander III concerning Philippoi (Hatzopoulos (1996) ii. no. 6, l.8 (330)). It was, together with the otherwise unknown Daineros, the northern limit of the territory granted to the city of Philippoi by Philip II.

Sirra survives with its name virtually unchanged from Antiquity through the Middle Ages to the present day (Serres). On the precise location of ancient Sirra on the Koulas hill dominating the modern city from the north, and the sparse ancient remains, see Bakalakis (1957) and Samsaris (1976) 128, with references. Some commentators (How and Wells (1928) ii. 274) have improbably identified Σίρρα with Σίρις τῆς Παιονίας in Hdt. 8.115.3; cf. Steph. Byz. 572.9.

THRACE FROM NESTOS TO HEBROS

LOUISA LOUKOPOULOU

I. The Region

East of the lower Nestos and its delta, along the Aegean coast, extend vast alluvial expanses. They are barred to the north by the formidable heights of the Rhodope Mts. and bordered to the east by Mts. Ismaros and Zonaia. This fertile plain is richly watered and often flooded by the Nestos (Strabo 7 fr. 44; cf. Theophr. *Hist. pl.* 1.3.5) and by numerous lesser rivers. They drain the overlying southern flanks of the Rhodopes, and are—from west to east—(a) Koudetos (Ps.-Skylax 67), (b) Trauos, (c) Kompsatos/Kompsantos (Hdt. 7.109; cf. also Ael. *NA* 15.25), (d) Kossinites, which flows into Lake Bistonis, and (e) Lissos (Hdt. 7.108, 109). Now, as in the past, vast tracts, particularly near the coast, are covered by extensive marshes, some of them forming lakes. The most important are, to the west, Lake Bistonis, by Dikaia (Hdt. 7.109; Strabo 7 fr. 47) and to the east, Lake Ismaris, between Stryme and Maroneia (Hdt. 7.109; Strabo 7 fr. 44). Thus, most of the otherwise fertile and arable expanses were plagued by a notoriously noxious climate, as is evidenced by records in the works of Hippocrates (see *infra*, s.v. Abdera). A second coastal plain stretches east of the Rhodopes and the Zonaia Mts. It receives the abundant waters of the Hebros river and its tributaries and forms the maritime exit of this river's valley. The Hebros river provides easy access to the uppermost reaches of the Thracian plain and hinterland, and is indeed the unique waterway leading north from the Aegean coast through the outstretched beachy plain named Doriskos.

By contrast with the lands west of the Nestos, there are no precious mineral resources in the area between the Nestos and the Hebros. Moreover, the narrow gorges of the Nestos and the few passages afforded through the Rhodopes made regular communications with the Thracian hinterland virtually impossible.¹ Furthermore, the warlike Thracian

tribes created an impenetrable barrier along the northern limit of the coastal plain and endangered east–west land communications across narrow passes crossing the Nestos river and overriding the Zonaia Mts.² The tribes were—from west to east—the Sapaioi/Saioi/Sinties (Strabo 12.3.19), the Bistones, the Kikones, the Korpiloi and the Apsinthians, Paitoi (Hdt. 7.110). Yet, the area attracted early on the interest of Greek colonists, both from the adjacent northern Aegean islands, Thasos and Samothrake and from East Greek cities. A detailed, yet partially confusing description of the geography and settlement pattern of the area in early C5 is provided by Herodotos in connection with Xerxes' campaign through southern Thrace in 480 (Hdt. 7. 58–59, 108–9).

By C6s, despite long and ferocious Thracian reaction, the coastal plain west of Mts. Ismaros and Zonaia had been divided between three Greek colonies: Abdera, Dikaia and Maroneia, and at least one *emporion* of the Thasians: Stryme; while Samothrake claimed a series of mainland beachheads on the opposing coastline, east of Cape Serreion and the Zonaia Mts: *viz.* Zone, Mesambria, Drys and Sale. Moreover, Aiolians from Alopekonnesos, reinforced by colonists from Mytilene and Kyme, founded Ainos at the Hebros estuary, with a territory extending east of the river along the gulf of Melas and protected by a number of unnamed forts (Ps.-Skylax 67).

As with the most of Thrace, this part of the Aegean coast was occupied by Megabazos in the aftermath of Dareios' Skythian expedition (Hdt. 4.143–44, 5.1–26; cf. Balcer (1972); Castritius (1972); Hammond (1980)). He established a fortified supply base at Doriskos (Hdt. 7. 25, 59), securing control of both the east–west and north–south throughfares as well as of the crossing of the Hebros. Following the departure of Persian forces, the area was drawn into the Athenian sphere of interest, and the cities became members of the Delian

¹ For a succinct presentation of geomorphology, mountain passes and natural resources of the area, see Casson (1926) 9–12, 21–24, 24–25, 30–31, 32, 52–79, 90–91, who overestimates, in our opinion, the importance of land routes (correctly assessed by Isaac (1986) 73–74, 140–46).

² The famous passes of the Sapaioi and the Korpiloi mentioned in literary sources are of Roman date. Cf. Collart (1929) and, more recently, Loukopoulou (1987) and (1997), with refs.

League, as evidenced by the contributions recorded in the Athenian tribute lists.

In the course of C5s the cities of the area developed close relationships with the Odrysian kingdom, furthering both their own and the Athenian financial and political interests, a role renewed in C4 in connection with the Second Athenian League,³ until Macedonian rule extended over the entire Thrace under Philip II.

The impressive wealth of the major *poleis* in the area—Abdera, Dikaia, Maroneia and Ainos—should probably be attributed more to their key position in politics and finance rather than to the agricultural value of their territory, although they did have a rich production, and export, of grain and fish and of the famous wine from the vineyards of Mt. Ismaros (Casson (1926) 90–92). Their early success is attested in literary sources as well as in the quality, early date and wide distribution of their coins, in particular those of Abdera, Dikaia and Ainos. They must have had direct or indirect access to the valuable mineral resources of the region, which enabled them to develop a delicate network of advantageous political and commercial relationships, and to exploit their intermediary position between the Greek world of the Aegean and the Thracian hinterland (Loukopoulou (2002)).

Written sources pertaining to the region between the rivers Nestos and Hebros provide us with information about a total of nineteen named settlements of the Archaic and Classical periods, of which twelve are attested as *poleis*,⁴ whereas seven are non-*polis* settlements or *poleis* about which we do not have sufficient evidence to establish their status. In addition to the nineteen settlements attested in the written sources are remains of eight unidentified settlements. Despite rather extensive archaeological research, especially in recent decades,⁵ only five of the *poleis* have been

securely identified: viz. Abdera, Ainos, Kypsela, Maroneia and Zone. In our opinion, the location of the other seven remains inconclusive. The inventory below comprises twelve settlements considered to have been *poleis* of type A, B or C in Classical Antiquity. The remaining fifteen settlements are as follows in the next two sections

1. Pre-Hellenistic Settlements not Attested as Poleis

Charakoma (*Χαράκωμα*) Unidentified settlement (probably *teichos* or *emporion*?) in the *peraiá* of Samothrake (Strabo 7 fr. 47 (48): *Σαμοθράκων πολίχμιον*); in C3l it hosted *theoroi* of the Delphic Apollo C3l (Plassart (1921) 18, III 72; cf. Isaac (1986) 133, with refs. and bibliography; *TIR* 22). *Barr.* H, but, although the earliest explicit attestation is of C3, the settlement seems to have existed already in C4.

Doriskos (*Δορίσκος*) Hdt. 7.59.1, 108.1, 121.2 (*τείχος βασιλήμιον*); Ps.-Skylax 67 (*τείχος*); Aeschin. 3.82 (*τείχος*); cf. Dem. 18.70, 19.156; Harp. Δ75 (*χωρίον τῆς Θράκης*). Fortified stronghold located in the homonymous vast plain (and beach) extending west of the Hebros delta and east of the *peraiá* of Samothrake actually located on the river bank and probably controlling an important crossing point (Isaac (1986) 137–40). The only source to call it a *polis* is Steph. Byz. 236.5. A C3/C2 proxeny decree discovered on the hill Saraya, usually identified with Doriskos, has been attributed, without conclusive evidence, to this city (Bakalakis (1961) 18–19). *Barr.* AC.

Ismaros (*Ἴσμαρος*) Hom. *Od.* 9.197. According to lexicographic sources (Harp. *M7*; Hsch. *I44*), Ismaros was the older name of Maroneia. In the *Odyssey* (9.40–41) it is called a *polis*. According to Strabo 7 fr. 43 it was—with Xantheia and Maroneia—one of three *poleis* of the Kikones, situated near Maroneia and the sea-ward outlet of Lake Ismaris (for the lake, located between Maroneia and Stryme, cf. Hdt. 7.109). Ismaros was tentatively identified (Bakalakis (1958) 97) with the prehistoric acropolis of Ergani (Turkish Asar Tepe) or, more probably, though with no decisive evidence, with the fortified acropolis of Ag. Georgios, east of Maroneia, with finds dating to the prehistoric and early Iron Age (Isaac (1986) 112; Bakirtzis and Triantaphyllos (1988) 56). Unlocated and without periodisation in *Barr.*

Mende (*Μένδη*) Paus. 5.27.12; cf. 5.10.8. Pausanias quotes an elegiac couplet, perhaps of the Archaic or Classical period, commemorating the Mendaian's conquest of Sipte.

³ The precise nature of Odrysian relationships with Greek cities in the northern Aegean during C5s and C4f is a matter of continuing controversy, recently reviewed by Veligianni (1995a) and Archibald (1998) 145–48; cf. also Loukopoulou (1999) and two forthcoming publications by the same author based on her interpretation of the Pistiros inscription.

⁴ We have omitted the following toponyms of probable pre-Roman date, which do not belong to urban settlements: *Maronos Heroon* (Strabo 7 fr. 43, 44a); *Parthenion locus* (Plin. *HN* 4.42); *Polydori tumulus* (Plin. *HN* 4.42); *Thasion Kephalaí* (Strabo 7 fr. 43); *Zerynthion antron* (Apollod. *Rhod. Argon.* 128, with schol.; Nic. *Ther.* 458–64). Also omitted are settlements which are exclusively attested in literary sources of Roman date: viz. *Cosinto* (*It. Ant.* 321.4; cf. *TIR* 23); *Kartera kome* (Strabo 7 fr. 43; cf. Ael. *NA* 15.25); *Phalesina* (Plin. *HN* 4.42); *Rumbodona* (*It. Burd.* 603; cf. *TIR* 51); *Stabulum/turris Diomedis* (*It. Ant.* 331.5; *It. Burd.* 603.3; Pompon. 2.2); *Tempyra* (Strabo 7 fr. 47; cf. Livy 38.41 (188)); *Tirida*, *Diomedis equorum stabulis dirum* (Plin. *HN* 4.42; Mart. Cap. 6.657; Pompon. 2.2; *It. Burd.* 603.3); *Tirida/Tyrida* (Plin. *HN* 4.42).

⁵ More or less regularly presented in *Deltion*, *Praktika*, *Ergon* and, more recently, in *AEMΘ*.

Mende is described as a Greek settlement of Ionian colonists near Ainos, at some distance inland from the sea. On its disputed location and its presumable status—one of the forts (*teiche*) of the Ainians?—see Isaac (1986) 158. The couplet's reference to an ethnic—*Μενδαῖοι*—may indicate that Mende was a *polis*, but the evidence is too slim to allow inclusion in the Inventory. *Barr.* AC.

Sipte (*Σίπτη*) Paus. 5.27.12 (*τείχος καὶ πόλις*). A Thracian fortified settlement, presumably in the hinterland of Ainos. Pausanias quotes an elegiac couplet of, perhaps, the Archaic or Classical period, commemorating a victory over Sipte by the Mendaiaans (*supra*). Sipte may have been a *polis*, but the evidence is too slim to allow inclusion in the Inventory. Not in *Barr.*

Xantheia (*Ξάνθεια*) Strabo 7 fr. 43 (*πόλις*). In *Barr.* recorded as a Classical settlement near Lake Vistonis. However, the reference given does not support the suggested location.

Zeirenia (*Ζειρηνία*) Steph. Byz. 295.1 (*πόλις*, quoting Theopomp. fr. 44 but only for the toponym, not necessarily for the site-classification). Undated (though Theopomp. fr. 44 indicates C4) and unlocated in *Barr.* cf. *Itin. Ant.* 332.6: *Zervae; Tab. Peut.* 592).

2. Unidentified Settlements

Indications and remains of unidentified pre-Roman rural settlements have come to light at various points of the Thracian plain south of the Rhodopes; they have been conveniently presented and documented by Pantos ((1983), (1975–76)) and, more recently, by Skarlatidou ((1990), for sites located west of Lake Bistonis in particular, plausibly attributed to the territory of Abdera). Substantial archaeological remains of pre-Hellenistic date—including inscriptions—have been reported only at the following locations.

Ag. Athanassios/Prophitis Ilias Remains of C4 settlement (Skarlatidou (1990) 613, with refs.). Not in *Barr.*

Chryssa Late Classical to Byzantine settlement (Skarlatidou (1990) 616, with refs.). Not in *Barr.*

Diomedeia C5 to Roman date rural settlement (Skarlatidou (1990) 616, with refs.). Not in *Barr.*

Kalyva C4s fort (Triantaphyllos (1988)). In *Barr.* only HR, but the castle at Kalyva is believed to have been built c.340 by Philip II.

Komnina Remains of Classical (?) settlement or sanctuary (*TIR* 32 with refs.). Not in *Barr.*

Koutson Settlement of Hellenistic–Roman date, tentatively identified (cf. *supra*) with Bergepolis (Skarlatidou (1990) 616, followed by *Barr.*) *Barr.* C.

Makri Relatively important urban settlement, with remains dating from the late Neolithic to the Classical–Hellenistic and Roman periods. Tentatively identified on no conclusive evidence with some of the unlocated urban centres of the area (Serrion, Zone, Mesambria or Orthagoria), it is described as a small, possibly fortified trading port (Kallintzi (1992), (1993)). In *Barr.* identified with Zone (no. 651).

Toxotes (Mausolleion hill) Pre-colonial settlement (Skarlatidou (1990) 617, with refs.). Not in *Barr.*

II. The *Poleis*

640. Abdera (Abderites) Map 51. Lat. 40.55, long. 25.00. Size of territory: 5. Type: A:a. The toponym is *Ἀβδηρα*, *τά* (Anakreon fr. 505, Page; Hdt. 8.120; Thuc. 2.97.1; *IG* IV² 1 94.1b.28) or, once, *Ἀβδηρος* (Ephor. fr. 154) or, once, *Ἀβδηρα, ἡ* (Diod. 31.8.8). The city-ethnic is *Ἀβδηρίτης* (Hecat. fr. 158; Hdt. 7.120; *F.Delphes* III 1 497.2 (C41–C3e)) or *Ἀβδηρίτης* (*IG* I³ 263.III.21). Abdera is called a *polis* both in the political sense (Anacr. fr. 100 = *AG* 7.226; Aen. Tact. 15.10) and in the urban sense (Hdt. 7.109.1; Thuc. 2.97.1; Aen. Tact. 15.9; Ps.-Skylax 67). At Thuc. 2.97.1 the territorial sense is a connotation. The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (*IG* I³ 263.III.21) and in literary sources (Hdt. 7.120). The individual and external sense is used in reference to *Δημόκριτος ὁ Ἀβδηρίτης* (Arist. *Cael.* 303^a4) or *Πρωταγόρας ὁ Ἀβδηρίτης* (Pl. *Resp.* 600C) and a C5 Attic sepulchral monument (*IG* I³ 1018).

Abdera was a coastal city situated on the left (eastern) bank of the Nestos estuary (Hdt. 7.126), across the strait from Thasos, in a heavily marshy area often flooded by the river (Strabo 7 fr. 44; Casson (1926) 9–10; Lazaridis (1971b) 2ff). Originally, the area belonged to the neighbouring Thracian tribe of the Sintoi, known also as Saïoi or Sapaioi (Strabo 12.3.20). Despite the moorlands and the noxious climate (Mart. 10.25; cf. Cic. *Att.* 7.7.4; Lucian, *Hist. conscr.* 2; and numerous passages in the Hippocratic literature),

Abdera came to own fertile agricultural land (Pind. fr. 52b.25) and fishing banks rich in cuttle fish and mullets (Archestratos fr. 43, 56, Olson and Sens) The city occupied one of the very few natural harbours east of the Nestos and had access to an important though probably rarely practicable land route linking the Aegean coast to the Thracian hinterland and to the Istros, probably through the modern Nymphaia pass (Thuc. 2.97.1–3; cf. Samsaris (1980) 58, 79).

The territory of Abdera was called ἡ Ἀβδηρῆτις (Theophr. *Hist. pl.* 3.1.5) or ἡ Ἀβδηρῆτων χώρα (Aen. *Tact.* 15.8). During the Classical period it presumably extended from Lake Bistonis to the Nestos and from the Aegean coast to the northern end of the plain and the southern foot of Mt. Rhodope, roughly along the modern Xanthe–Toxotes motorway (Lazaridis (1971*b*) 2 nos. 5–9; Samsaris (1980) 62–63; Skarlatidou (1984*a*) 150; Isaac (1986) 73); it was crossed by the course of the river *Kossinites*, which flowed into Lake Bistonis (Ael. *NA* 15. 25; identified with the river of Xanthi; Pantos (1975–76), (1983)). The territory of Abdera appears to have included at least one second named but unlocated urban centre, *Bergepolis* (Pantos (1975–76) 3, 10, (1983) 166, no. 8; see *infra* s.v.).

The population of Abdera, the largest city in the northern Aegean coast, has been variously calculated as from 15,000–20,000 to 40,000–100,000 (Lazaridis (1971*b*) 33–34. 167–70; Samsaris (1980) 167; Skarlatidou (1984*a*) 154–55); on epigraphic evidence from Teos (Herrmann (1981)), supported by the size of tribute paid by Teos and Abdera respectively, the latter's population was presumably 2.5 larger than that of her metropolis (Graham (1991), (1992) 59).

Strabo's testimony at 3.4.3 concerning a homonymous Phoenician foundation in southern Spain led modern historians to suggest a Phoenician origin both for the toponym and for the initial foundation of Abdera (Isaac (1986) 76–77). However, literary tradition records a first unsuccessful colonizing venture by Klazomenians under the leadership of Timesios (Hdt. 1.168; Plut. *Mor.* 812*A*; Ael. *VH* 12.9) c.650 (Solin. *Coll.* 10.10; Euseb. *Chron.* 95*b*, Helm). That another early, yet equally unsuccessful, attempt was undertaken by the Thasians has been argued by Isaac (1986) 79–80 on the basis of Archilochos' accounts of ferocious fights against Thracian Saioi (= Sinties = Sapaiaoi). For a critical view, see Graham (1992) 48.

Abdera was eventually refounded in 544 by Teians fleeing from Persian rule (Hdt. 1.168–69; Strabo 14.1.30; Ps.-Skymnos 670–71; cf. Isaac (1986) 81–85, with an interesting analysis of the poems of Anakreon, who participated in the foundation of the colony). Pindar's second *Paian* (Radt

(1958); cf. Isaac (1986) 85–86) records the colonists' successful struggles to establish and extend their territory until C6s, probably even C5m (Graham (1992) 62–64); according to Strabo, some of the Teian refugees were eventually repatriated (Strabo 14.1.30; cf. Veligianni-Terzi (1997) 692–93).

The history of Abdera in the late Archaic and Classical periods has been largely reconstructed on the basis of the numerous and plentiful series of its important coinage by May (1966). However, recent numismatic research by Katerina Chryssanthaki (diss. Paris IV, 2000; forthcoming) has brought forth evidence which leads to a drastic revision of May's dates, and consequently of his historical reconstruction. In anticipation of Chryssanthaki's substantial revision of May's seriation and dating, the following account is based mainly on the testimony of literary, epigraphic and material sources other than the important numismatic evidence.

Abdera rapidly grew into a major financial power. Its silver coinage, presumably initiated as early as c.540–35 (May (1966) 49–58; Kraay (1976) 35; cf. however Chryssanthaki, forthcoming) and widely exported and distributed in the East, indicates direct access to rich silver-bearing Thracian regions (Mt. Symbolon, west of the Nestos or the Thracian hinterland?). Her growing rivalry with Thasos became manifest during the period of Persian occupation. Following Dareios' Skythian expedition, the Thasians were denounced by their neighbours for planning rebellion, and were ordered by Dareios to demolish their fortifications and bring their ships to Abdera (Hdt. 6.46.1), while the latter city was rewarded with the Persian king's trust and friendship (Hdt. 8.120).

Under unknown circumstances and at an unspecified date Abdera joined the Delian League. Numismatic evidence during the period following the evacuation of the Persians appears to indicate a further increase of the city's opulence, especially following the sedition and fall of Thasos in 463/2. Abdera belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.v.5) to 429/8 (*IG* 1³ 282.ii.30) a total of thirteen times, once completely restored, paying an exceptionally high *phoros* of mostly 15 tal. (*IG* 1³ 261.v.17) reduced to 10 tal. from 432/1 on (*IG* 1³ 280.ii.46). In 425/4 and 422/1 it was presumably assessed for tribute together with Dikaia (*IG* 1³ 71.iii.153–4 and *IG* 1³ 77.iv.29–30, city-ethnics completely restored), see *infra*.

Abdera's opportunistic policies revived after the rise of the Odrysian power: with the Abderitan Nymphodoros as intermediary, she was the first to establish relations with the

Odryian royalty (Hdt. 7.137.3; Thuc. 2.29.1, 5). The purpose was evidently to secure and develop her exploitation of Thracian resources, even under burdensome financial obligations. On the justifiably disputed tribute imposed on Abdera and other Greek cities of the northern Aegean by the Odrysians, see Veligianni (1995*a*) and Loukopoulou (2002). The same Nymphodoros extended his services by negotiating in 431 in favour of the Athenians the valuable alliance of the Odrysian king Sitalkes, not least the ephemeral *rapprochement* of Perdikkas, king of Macedonia (*Staatsverträge* 165). The reduction of Abdera's tribute to the League by some 33 per cent in 432/1 may have been a reward in recognition of Nymphodoros' mediation (Isaac (1986) 102; for a different interpretation, see *ATL* iii. 310–11). There is no satisfactory explanation of the marked reversal of this situation in 425, when Abdera (with Dikaia) was assessed for the enormous sum of 75 tal. (*IG*¹³ 71.III.153–54). Dissatisfaction and unrest among Athen's allies in the northern Aegean resulted in Abdera's defection from the League, probably following the second secession of Thasos in 411 (Isaac (1986) 105). Abdera was brought back into the League by Thrasyboulos in 407 (Diod. 13.72.2; Xen. *Hell.* 1.4.9; cf. May (1966) 181–83).

In 376/5 Abdera fell victim to a massive invasion of Triballians, allegedly assisted—if not invited—by Maronitans; despite untrustworthy support by neighbouring Thracians, the city suffered enormous losses and was saved from complete devastation only thanks to the intervention of an Athenian squadron under Chabrias (Aen. Tact. 15.8–10; Diod. 15.36.1–4). An Athenian garrison was established, and Abdera became a member of the Second Athenian Naval League (*IG* II² 43.B.3 = Tod 123; Diod. 15.36.3–4; cf. schol. Ael. Arist. 172.7, 173.17). Still suffering from the disastrous effects of her crushing defeat, the city was occupied by Philip II (Polyaen. *Strat.* 4.2.22; for diverging opinions on the date, see Isaac (1986) 106). In 346/5 Athens granted asylum to pro-Athenian refugees from Abdera (*IG* II² 218).

Abdera seems to have persistently maintained close relations of affiliation with its metropolis, Teos, down to the Roman period. Characteristically, colony and mother city shared the same religious festivals (Herrmann (1981); Graham (1991)); Abderitan coins (and amphora stamps; cf. Lazaridis (1954) 169) show that a griffin was the city emblem of both *poleis*, while occasional decrees promulgated in Teos are expressly proclaimed valid also for Abdera (Herrmann (1981) from Teos (C5f)); one contains public imprecations and seems to be a kind of citizen oath applying equally to

Teians and Abderitans (*SEG* 31 985). Also two decrees of Abdera were found in Teos (Herrmann (1971), (1981)).

In C5 the constitution was presumably democratic, as is indicated by the provision that confiscation of property, imprisonment and capital punishment could only be imposed by a court manned with a minimum of 500 citizens (*SEG* 31 985.A.13–22; Lewis (1982)). Predictably, some at least of the institutions of Abdera reproduced those of its metropolis: most importantly, as in Teos, the board of executive magistrates in Abdera were the *timouchoi* (Bousquet (1940–41) 100–107; C3m, from Delphoi). As in Teos, the citizen body of Abdera appears to have been subdivided in smaller entities; the only one attested in Abdera may be a subdivision of a *phyle*, perhaps a *genos*; see *Ἐρωμῶναξ Διονυσᾶδος Ἐδρυσθενίδης* in a C4l dedication (Kallintzi and Veligianni (1996); *SEG* 46 841). The eponymous official was presumably the priest of Apollo, at least after C4m (Lazaridis (1971*b*) 27, 140; *Thrace* (1994) 61). The names engraved on Abderitan coins (*ἐπὶ τοῦ δεῖνος*) are usually interpreted as those of annual(?) mint officials. One C5s moneyer, *Δημόκριτος*, is often identified with the pre-Socratic philosopher of Abdera (Isaac (1986) 103). Other institutions, including the *boule* and *demos* of Abdera (Herrmann (1981)) and magistracies, are only expressly attested in epigraphic sources of Hellenistic and Roman date.

An Abderitan ambassador is said to have been sent to the king of Sparta, Agis, son of Archidamos, in the latter part of C4 (Plut. *Mor.* 215 E). Abderitans are awarded *proxenia* by Athens (*IG* II² 77 (378/7); *SEG* 35 71 (332/1)) and Kolophon (*AJP* 56 (1935) 363 l. 142 (C4l)). In 370/69, a golden crown is recorded as offered by the Abderitans to the goddess of Athens (*IG* II² 1425.119 (370/69)). In 359 the city had a *theorodokos* to host *theoroi* from Epidauros (*IG* IV².1. 94.1b.28). Our knowledge of Abderitan legislation is limited to a C5 Abderitan law forbidding the burial of persons who had dispersed the family fortune, recorded in connection with Demokritos (Ath. 4.168b), and a C4 regulation concerning the marketing of cattle (Feyl (1942–43) 180, no. 2).

Pindar's second *Paian* evokes the organisation of the army (with emphasis on cavalry units) in the first days of the establishment of the colony (Pind. fr. 52b.104; cf. Isaac (1986) 85–86). Some indications of the importance of its size can be obtained in relation to the battles fought in 376 against the invading Triballians (Lazaridis (1971*b*) 33–34 nos. 168–70).

The poliad deity of Abdera was probably Dionysos, frequently mentioned by Anakreon (Isaac (1986) 82–85). Also important was the cult of Apollo, evoked with the eponym

Derainos or *Derenos* in Pindar's second *Paian* (Pind. fr. 52b.5) and regularly portrayed on C4 coinage (Isaac (1986) 84 n. 65, 106–7). Also attested in epigraphic and literary sources is the celebration of Thesmophoria, Anthesteria, Herakleia and the festival of Zeus (Herrmann (1981)), the cult of Athena Epipyrgitis, probably imported from the metropolis Teos (Lazaridis (1971b) 27 no. 138; Skarlatidou (1984a) 158), that of Aphrodite and Hekate (Pind. fr. 52b.5; 78; cf. Isaac (1986) 107–8), and a grove dedicated to the Nymphs near the city wall (Lazaridis (1971b) 41 no. 206); for the discovery of a C4l–C3e sanctuary presumably of Demeter or Kore, see Koukouli-Chryssanthaki (1982) 3, (1983) 7; Skarlatidou (1984a) 159; Koukouli-Chryssanthaki (1987b) 180–82, (1988) 143–45, (1989) 222–23, (1992) 165–66). Further attested are the heroic cult of Abderos, celebrated with athletic contests, excluding horse and chariot events (Philostr. 2.25; presumably to be identified with the hero Mesopolites *Epenor* (Kallintzi and Veligianni (1996) 62), and that of Timesios the Klazomenian *ktistes* of the first colony at Abdera (Hdt. 1.168); in C4s, Parmenion is said to have built a temple for Jason (Strabo 11.14.12),

Abdera has been identified beyond any doubt with the archaeological site near Cape Bouloustra (with visible remains of the modest Byzantine town Polystylon on its south-west end), some 7 km south-west of the homonymous (formerly Bouloustra) modern village (Reinach (1881); Regal (1887); Kazarow (1918)). Despite dramatic geomorphological mutations of the lowlands from the alluvial activity and the westward movement of the Nestos estuary (cf. Strabo 7 fr. 43), recent excavations have uncovered parts of the Archaic and Classical *polis*, located further north of Cape Bouloustra, presumably on a promontory linked to the mainland by a narrow strip with natural bays to the east and west: identified are parts of two early phases (C7s–C5; Koukouli-Chryssanthaki (1987b) 177–83) of fortification walls protecting the city's portuary installations (a *neosoiikos?*), remains of an important public building (Koukouli-Chryssanthaki (1991) 200–1), traces of C6–C4 houses and the C7s–C6f (Klazomenian) cemetery (Koukouli-Chryssanthaki (1997)). A vast Late Classical–Classical tumuli necropolis extended to the north and north-west (Romiopoulou (1964) 377; Lazaridis (1965) 460–61; Triantaphyllos (1973–74) 809–10; Koukouli-Chryssanthaki (1982) 9–16; Triantaphyllos (1975) 297–98). Two gates are known from literary tradition: the Thracian (Hippocr. 3.3.17) and the Prourides (Callimach. 4.90). Due undoubtedly to the changing geomorphology, the site was abandoned in C4m (Koukouli-Chryssanthaki (1987a) 412), and the city was relocated further south, where systematic

excavations since the early 1950s have revealed segments of the C4 fortifications with a gate, and several insulae of Hellenistic and Roman dwellings. The walls enclosed an area of 112 ha, and the city was apparently grid-planned from its foundation (Hoepfner and Schwandner (1994) 180–87). Only undated traces of the theatre (*TGR* ii. 115) were identified (Lazaridis (1971b) 38 no. 193; Lazaridis (1966) 359–61; Triantaphyllos (1984) 32–33), but it is attested in a C2 inscription (Avezou and Picard (1913) 122–24, 128–29; *BCH* 37 (1913) 122–37 (C2)) and mentioned by Lucian in a C4l–C3e context (*Hist. conscr.* 1). The *palaistra* (Hippocr. 6.8.30: *palaistrophylax*) remains unidentified.

Abdera struck high-quality coins from C6s and throughout the entire Classical period. Its mint was one of the most important and enjoyed a wide circulation. Seriation and dating of this coinage, established by May's exhaustive study (1966), has now been drastically revised following important evidence mainly from coin hoards discovered in various parts of the East (Price and Waggoner (1975); Mattingly (1977)). Since the results of recent research are still unpublished (cf. *supra* 873), it is preferable to refrain from reproducing May's conclusions and limit the presentation to a summary description of the coin types. Abdera struck silver coins on variable weight standards, of mostly large denominations: octadrachm, tetradrachm, didrachm, drachm and subdivisions. Type: *obv.* griffin to left (Abdera's city emblem, as opposed to that of Teos: griffin facing right), often accompanied by various symbols (May (1966) 86); *rev.* incuse square and later various representations (portraits or full-length representations of deities—in particular Dionysos—and symbols thereof, animals or birds, objects, fruits). Legend: full or abbreviated name of annual magistrate in the nominative or in the genitive case after *EIII*; also, at times, the city-ethnic *ABΔH* or *ABΔHPITEΩN*. In addition to the silver coins there were limited bronze emissions from C5l, presumably for local use, and in C4m a limited emission of gold coins (*SNG Cop. Thrace* 308–73).

641. Ainos (Ainios) Map 51. Lat. 40.45, long. 26.05. Size of territory: probably 4 or 5. Type A:a. The toponym is *Αἴνως*, ἡ (Hom. *Il.* 4.520: *Αἰνόθεν*; Hdt. 4.90.2; Ant. 5.20; Thuc. 4.28.4; Ps.-Skylax; *IG* IV² 94.1b.30 (359)). The city-ethnic is *Αἴνως* (*IG* I³ 260.vi.15; *F.Delphes* III. 1 497.6 (C4l–C3e); Thuc. 7.57.5) or *Αἰνεύς* (Hipponax fr. 72.7, West). Ainos is called a *polis* both in the urban sense (Hdt. 4.90.2, 7.58.3; Ephor. fr. 39; Ps.-Skylax 67) and in the political sense (Ant. 5.78). The town is called *polisma* at Ephor. fr. 39. The collective use of the city-ethnic is attested internally on coins

(*infra*) and externally in inscriptions (*IG* II² 43.B.7 = Tod 123) and literary sources (Thuc. 7.57.5; Dem. 23.119). For the individual and external form, see *IG* II² 152 (C4f); *SEG* 38 217, Athens (C4); *IG* IV² 1 58.7, Epidauros (C4l–C3e); Arist. *Pol.* 1311^b21.

Ainos was situated in the Melas Gulf, at the mouth of the Hebros delta (Strabo 7 fr. 52), commanding the exit of the vast Hebros plain and lowlands famous for their fertility (Plin. *HN* 18.7.70). It was apparently situated in close proximity to the Lake Stentoris (Hdt. 7.58.3), on what was probably a peninsula and is known to have possessed a well-protected harbour (Ps.-Skylax 67), probably a river harbour on Lake Stentoris = Gala Gölu (Plin. *HN* 4.43: *portus Stentoris*). For sketch plans of the Hebros delta, cf. May (1950) figs. 1–3). The harbour served communications both with the Aegean and with the Thracian hinterland, as the river must have been easily navigable (May (1950) 1–7; Isaac (1986) 140–46). The area was also renowned for its fishing banks rich in large mussels, anchovy and pig-fish (Archestratos fr. 7, 23, Olson and Sens; cf. May (1950) 6).

The extent of the territory of Ainos is unknown; attested however is the existence of dependent forts (*teiche*) on the Thracian littoral south of Ainos and north of the mouth of the river Melas (Ps.-Skylax 67).

Ainos is already known in the *Iliad* (4.519–20); and according to Hipponax (fr. 741, Diehl (c.540–537)) the legendary king Rhesos was king of the Ainians. Ainos was an Aiolian colony (Hdt. 7.58.3), first established, presumably in C7s or C6f (Isaac (1986) 147–48) by Alopekonesians, subsequently reinforced by Mytilenaians and Kymaians (Ephor. fr. 39; Ps.-Skymnos 697; Strabo 7 fr. 51) on land (Apsinthis) owned by the Thracian Apsinthioi, later known as Korpiloi (Strabo 7 fr. 57; cf. fr. 51a).

Undoubtedly occupied by the Persians in C6l, it recovered its independence under unknown circumstances after 480 and joined the Delian League as a tribute-paying member (Thuc. 5.57.5; cf. May (1950) 14). It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.I.23) to 436/5 (*IG* I³ 276.VI.29) a total of fourteen times, twice completely restored, paying a *phoros* of 12 tal. (*IG* I³ 260.VI.15) reduced to 10 tal. after 445 (*IG* I³ 267.III.2) and finally 4 tal. in 435 (*IG* I³ 276.VI.29). In 425 Ainos was presumably assessed at 20 tal. (*IG* I³ 71.III.159, ethnic completely restored). The reasons for the tribute fluctuations as well as for the absence of Ainos from the full panels of 435/4 (*IG* I³ 277), 432/1 (*IG* I³ 280) and 429 (*IG* I³ 282) remain obscure (Meiggs (1972) 249; Isaac (1986) 151–52). The army of Ainos included peltasts before the end of C5 (cf. Thuc. 4.28.4

(r425)), and Ainian forces are recorded as having participated in the expedition of Sicily (Thuc. 7.57.5).

In 375, with Athens once more the undisputed mistress of the Aegean, Ainos became a member of the Second Athenian Naval League (*IG* II² 43.B.7; cf. May (1950) 187). Yet, numismatic evidence has been interpreted as indicating a decline of prosperity since early C4, undoubtedly aggravated since 365 under the pressure of Odrysian expansionism over south-eastern Thrace and the Thracian Chersonesos (May (1950) 174–94). The adverse situation was temporarily averted when Kotys I (383/2–359) was murdered by two Ainian citizens, Python and Herakleides, who were handsomely rewarded by the Athenians (Dem. 23.119; Arist. *Pol.* 1311^b22). However, the improved relations between Athens and the successors of Kotys could not forestall Philip II's successful advance in Thrace. Renewed aggression by the Odrysians and burdensome contributions imposed by the Athenians could be exploited by a pro-Makedonian faction, active in Ainos at least since 344/3. As a result, Ainos went over to the Makedonian king c.342 or shortly thereafter and accepted a Makedonian garrison (Dem. 58.37–38; cf. May (1950) 195–203; Gehrke, *Stasis* 16; Isaac (1986) 154–55).

In 359 Ainos had a *theorodokos* to host *theoroi* from Epidauros (*IG* IV² 1 94.Ib.30). The two Ainians who killed the Odrysian king Kotys in 359 were awarded Athenian citizenship and proxeny (Dem. 23.119; Arist. *Pol.* 1311^b); Timaphenides of Ainos was granted *proxenia* in Athens before 353/2 (*IG* II² 152). In 303/2 another Ainian, Alkaios, son of Heraios, was granted Athenian citizenship, *proxenia* and a golden crown in Athens (*IG* II² 495); furthermore, he was honoured with the *proxenia*, *ateleia* and *asyllia* in Epidauros (*IG* IV² 158).

The poliad deity of Ainos was most probably Hermes Perpheraios, whose wooden statue, a work of Epeios, was washed up at the neighbouring coast, where a sanctuary was presumably built in his honour (Callim. *Ia.* 7 fr. 197, Pfeiffer; cf. May (1950) 272–73 for C5 coin representations). Pan and the Nymphs depicted on a C4 relief were presumably worshipped in a cave at the foot of the acropolis (Casson (1926) 257–58). Also presumed from epigraphic, numismatic and literary evidence are the cults of Dionysos, the legendary king Rhesos and Asklepios (Isaac (1986) with refs.).

The town of Ainos is securely identified with Byzantine and modern Ainos (Turkish Enez) on the left bank of the Hebros river; it is now, following extensive geomorphological changes and the formation of a sand-bar blocking the river's mouth, situated 2.5 km upstream from the modern coastline, surrounded by marshes and lagoons (Hasluck

(1908–9) 249–51; Casson (1926) 256–57; May (1950) 1–2). The ancient site is hidden under the modern town, and archaeological remains are sporadic.

The coinage of Ainos, of great artistic excellence, was initiated shortly after the departure of the Persians. Ainos struck coins in gold, silver and bronze. (1) Silver, c.478–341: denominations: tetradrachm, drachm, tetrobol, diobol; type: *obv.* head of Hermes, in C4 often facing; *rev.* goat with various symbols. Legend: *AI* or *AINI* or *AINION*. Sometimes name of magistrate. (2) Bronze, C5s: type: *obv.* head of Hermes; *rev.* caduceus. Legend: *AINI* or *AINION*. (3) Gold, C4f: type: *obv.* head of Hermes; *rev.* Hermes on throne (May (1950); Mattingly (1977) 99–101; *SNG Cop. Thrace* 389–421).

642. Bergepolis (Bergepolites) Map 51. Lat. 41.05, long. 25.00. Size of territory: ? Type: C?: Both the toponym, *Βεργέπολις*, ἡ, and the city-ethnic *Βεργεπολίτης* are exclusively attested at Steph. Byz. 163.13: *Βεργέπολις Ἀβδηριτῶν, τὸ ἐθνικὸν Βεργεπολίτης*. If this entry can be trusted, Bergepolis was an urban centre dependent on Abdera. The second part of the composite toponym suggests that it was a *polis*: viz., a dependent *polis* lying in the territory of Abdera.

Otherwise unknown, Bergepolis has been tentatively located—on no conclusive evidence—at the ancient site identified between Koutson and Vafeika (*TIR* 21 with refs.; Triantaphyllos (1973–74) 810–13, and, more recently, Skarlatidou (1990) 616). The excavation report mentions sparse ceramic finds from the Archaic to the Roman period, as well as coins of Abdera of the Classical period. If one accepts the identification of Bergepolis with this site, the presumption is that Bergepolis' status as a *polis* goes back at least to the Classical period.

643. Dikaia Map 51. Lat. 41.00, long. 25.10. Size of territory: 2 or 3. Type: A:a. The toponym is *Δίκαϊα*, ἡ (Hdt. 7.109.1; Ps.-Skylax 67; *IG* 1³ 263.III.19: *Δίκαϊα παρὰ Ἀβδέρα*) or *Δικαιόπολις*, ἡ (Harp. Δ64, quoting Lysias fr. 115, Sauppe; cf. *Suda* Δ1967). Apart from Steph. Byz. 230.15 there is no attestation of a city-ethnic. Dikaia is listed as a *polis* in the urban sense alongside Abdera and Maroneia at Hdt. 7.109.1 and Ps.-Skylax 67. *Polis* status in the political sense is confirmed by her coinage (*infra*) and membership of the Delian League (*infra*).

According to Herodotos (7.109.1) Dikaia was situated on the Thracian coast between Abdera and Maroneia, near Lake Bistonis and west of the river Koudetos (Ps.-Skylax 67, to be identified with Herodotos' river Kompsatos, according

to *ATL* i. 517). According to Strabo 7 fr. 43 and 46, it lay in a bay near the sea-ward side of the lake, which served her as a port. It was situated in the vicinity of the legendary palace of Diomedes, king of the Bistonis, and off the sea-ward canal of Lake Bistonis allegedly cut by Herakles.

Usually sought south or south-east of Porto Lagos (*ATL* i. 517; cf. Bakalakis (1958) 89–90), Dikaia has been located—yet without any conclusive archaeological or epigraphic evidence (Isaac (1986) 109)—on a low hill named Katsamakia, a few kilometers north of Cape Phanari (Bakalakis (1958) 89; Lazaridis (1971*b*) 45 no. 223). At this site were found traces of part of a C4 fortification wall and sparse remains of Hellenistic houses (Bakalakis (1958) 68; Triantaphyllos (1972) 535). Some C61–C5 sepulchral tumuli found west of Katsamakia have been attributed to the city's cemetery (Triantaphyllos (1972) 535, (1973); for a tentative demarcation of the territory of Dikaia, see Lazaridis (1971*b*) 46 no. 225).

On the uncertain evidence of sparse archaeological remains and the modest amount of tribute, the population of Dikaia was estimated as a maximum of 1,000 inhabitants (Samsaris (1980) 168; cf. Lazaridis (1971*b*) 51 no. 243).

Dikaia was probably founded in C6, but, in the absence of literary testimonia, the origin and foundation date remain obscure (Isaac (1986) 109–10). The bull's head on Dikaia's coins in 492 has been taken to indicate a Samian origin or, more probably, financial relations with Samos (May (1965)). Dikaia was a member of the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.IV.28) to 432/1 (*IG* 1³ 280.II.60) a total of thirteen times, once completely restored, paying a *phoros* of 3,000 dr. from 454/3 to 447/6 (*IG* 1³ 265.II.44), reduced to 2,000 dr. in 446/5 (*IG* 1³ 266.II.8) but raised again to 3,000 dr. (*IG* 1³ 280.II.60) perhaps in 435/4 (*IG* 1³ 277.VI.19, amount restored). In 425/4 and 422/1 it was presumably assessed for tribute together with Abdera (*IG* 1³ 71.III.153–4 and *IG* 1³ 77.IV.29–30). In 425/4 the two members were assessed at the enormous sum of 75 tal.

From C6s to the end of Persian occupation in the area, c.476, Dikaia minted two series of silver coins of excellent workmanship. (1) Series I was struck C61–480 on the Thrako-Makedonian standard of Thasos. Denominations: tetradrachm, stater and subdivisions. Type: *obv.* head of Herakles; *rev.* incuse square. (2) Series II was struck 480–476 on the Thrako-Makedonian standard of Maroneia, probably in accordance with the city's changing political and financial dependencies (May (1965)). Denominations: didrachm, drachm and subdivisions. Type: *obv.* head of

Herakles; *rev.* cock or bull's head. Legend: Δ or ΔIK or $\Delta IKAI$. (3) A series of drachms was struck in C5m. Type: *obv.* female head, hair rolled; *rev.* bull's head. Legend: Δ , ΔIK , $\Delta IKAI$ (Head, *HN*² 252; May (1965); Price and Waggoner (1975) 38; Isaac (1986) 110, underlining the necessity for a revision of May's dates; *SNG Cop. Thrace* 551–5, suppl. 98). (For a tetradrachm with *obv.* ox, *rev.* octopus, legend $\Delta IKAI$, see Skarlatidou (1984b) 54 figs. 10–11).

644. Drys (Dryites) Map 51. Lat. 40.05, long. 25.40. Size of territory: probably 2 or 3. Category: B:?. The toponym is $\Delta\rho\upsilon\varsigma$, η (Hecat. fr. 160; Ps.-Skylax 67; Dem. 23.132; *IG* I³ 77.v.29–30: $\Delta\rho\upsilon\varsigma$ *παρὰ Σέρρειον*). The city-ethnic is $\Delta\rho\upsilon\tau\eta\varsigma$ (*F.Delphes* III.1 497.5 (C4l–C3e)). According to Ps.-Skylax 67, Drys and Zone were *emporía* lying on the coast opposite Samothrake. Drys is classified as a *polis* only in late sources (Polyaen. *Strat.* 2.22.3 (r375); Harp. Δ 82; *Suda* Δ 1551; Steph. Byz. 240.3). Harpokration is quoting Theopompos (fr. 161) and Stephanos Hekataios (fr. 160), but in neither case is it possible to ascertain that the site-classification as a *polis* stems from the author quoted. In the Athenian assessment decree of 422/1 Drys is listed as a member of the Delian League and assessed at 1 tal. (*IG* I³ 77.5.29–30). In a Delphic inscription of C4l or C3e, the ethnic $\Delta\rho\upsilon\tau\alpha\iota$ is listed alongside other ethnics which are indisputably city-ethnics (*F.Delphes* III.1 479.5). The presumption is that Dryites is a city-ethnic too. Thus, Drys appears to have been a *polis* from C5s to, perhaps, C3e (Robert (1940) 81–87).

Apart from its membership of the Delian League, the only information we have about the history of Drys is that it was a fortified town which in 375 was besieged by the Athenians under Chabrias (Polyaen. *Strat.* 2.22.3), and that in c.360 it was the home of the Athenian *strategos* Iphikrates (Dem. 23.132). Drys is believed to have been absorbed by Traianoupolis under the empire (Isaac (1986) 129).

Drys is tentatively but unconvincingly identified by some scholars with Mesambria (Perdrizet (1909) 35) or with Orthogoria (*ATL* i. 519) and in turn located south-west of Dikella (Kazarow (1918) 52–55; *ATL* i. 518–19; Bakalakis (1961) 15–16 *et al.*), at Shabla Dere = *infra* Zone (Meyer (1976); cf. however Robert (1940) 86–87 and, more recently, Isaac (1986) 129–30 and Mottas (1989) 89, 103).

645. Kypsela Map 51. Lat. 40.55, long. 26.25. Size of territory: ? Type: B:β. The toponym is $K\upsilon\psi\epsilon\lambda\alpha$, $\tau\acute{\alpha}$ (Damoxenos fr. 1.5, *PCG*; Steph. Byz. 400.7); Apart from Steph. Byz. 400.8–9 there is no attestation of a city-ethnic. Kypsela is classified as a *polis* only in late sources (Polyaen. *Strat.* 4.16: $K\upsilon\psi\epsilon\lambda\alpha$ $\Theta\rho\acute{\alpha}\tau\tau\alpha\nu$ $\acute{\rho}\omicron\lambda\iota\nu$; Strabo 7 fr. 10; Steph. Byz. 400.7;

Ptol. 3.11.7). The *polis* status of Kypsela in C4l–C3e is known exclusively from its short-lived bronze coinage. Type: *obv.* head of Hermes; *rev.* beehive-type vase. Legend: $KY\psi E$. Stylistic and iconographic parallels and chronology (c.415–387) seem to suggest a former dependency on Ainos and a short period of self-government followed by Odrysian rule at least since c.390–380 (Schönert-Geiss (1993); *SNG Cop. Thrace* 532).

Kypsela was located near the (left) bank of the Hebros, some 120 stades upstream from the river's mouth (Strabo 7 fr. 47), 25 miles east of Traianoupolis on the *Via Egnatia* (*It. Burd.* 602.5; 29 miles according to the *It. Ant.* 332.2); it is identified with modern Ipsala (Turkey).

646. Maroneia (Maronites) Map 51. Lat. 40.50, long. 25.30. Size of territory: probably 5. Type: A:a. The toponym is Μαρωνεία , η (Hdt. 7.109.1; Arcestratos fr. 56, Olson and Sens; *IG* IV² 94.1b.29, Epidaurus (359); *SEG* 43 486.21, Bulgaria (C4m)). The toponym evidently recalls Maron, son of Euanthes, Apollo's priest at Homeric Ismaros (Hom. *Od.* 9.197; C5f coins (*infra*)); the probable linguistic connection between Maroneia and Ismaros is underlined by Isaac (1986) 113 n. 224. The city-ethnic is Μαρωνίτης (*IG* I³ 260.vi.19; Xen. *An.* 7.3.16; *SEG* 43 486.27–8, Bulgaria) or Μαρωνεύς (*IG* I³ 263.iii.22) or Μαρωνειεύς (*IG* I³ 269.iii.6). Maroneia is called a *polis* in the urban sense by Hekataios (fr. 159), Herodotos (7.109.1) and Ps.-Skylax (67). The political sense is attested in *IG* II² 43.78 and 87 where Maroneia, under the heading $\acute{\rho}\omicron\lambda\epsilon\iota\varsigma$, is listed as one of the members of the Second Athenian Naval League. The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (*IG* I³ 260.vi.19) and in literary sources (Dem. 50.20–23). For the individual and external use, see the funerary inscriptions *IG* II² 9286–93 from Athens and Xen. *An.* 7.3.16.

The city's territory extended according to Lazaridis ((1972) 4 and plan 21) from the slopes of Mt. Ismaros in the east to the course of the river Philiouri (probably identified with the ancient Lissos) and the banks of Lake Ismaris in the west and to the river Kourou and the northern slopes of Mt. Ismaros to the north, but Pantos claims that it must at times have been far more extended, including Stryme to the west (Pantos (1983) 168 para. 14). The C5s population of Maroneia, a vast and prosperous city, is estimated at c.12,000 (Lazaridis (1972) 14.44–45, with refs.), or at 15,000–20,000 (Samsaris (1980) 167–68).

Maroneia was situated on a coastal plateau east of Stryme and Lake Ismaris = lake of Mitrikon (Hdt. 7.109.1; Strabo 7

fr. 44) and west of Orthagoria (Strabo 7 fr. 48; Plin. *HN* 4.42: between Dikaia and Cape Serreion), on the fertile vine-growing slopes of Mt. Ismaros (*Suda* I645, *M*222; Eust. *Od.* 1.133.9; cf. Hom. *Od.* 9.196–211; Archiloch. fr. 2; Plin. *HN* 14.53–54).

The exclusive testimony of Ps.-Skymnos (675–78) referring to Maroneia as a colony of Chios is usually accepted (Isaac (1986) 114). Its foundation is dated before C7m, when Maronitans clashed with Thasians over the possession of Stryme (Archiloch. fr. 2, quoted by Philoch. fr. 43). The city fell undoubtedly under Persian rule following the occupation of Thrace by Megabazos. With the Persian rule terminated under unspecified circumstances (Isaac (1986) 115–16 with bibliography) Maroneia predictably entered the Delian League. It belonged to the Thracian district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.IV.5) to 415/14 (*IG* I³ 290.III.19) a total of twenty times. It paid a *phoros* of 1 tal. 3,000 dr. down to 443/2 (*IG* I³ 269.III.6) or perhaps 441/0 (*IG* I³ 271.II.44). From 436/5 it paid 10 tal. (*IG* I³ 276.V.29), reduced to 3,000 dr. in 430/29 (*IG* I³ 281.II.8). In 425/4 it was presumably assessed at the enormous sum of 21 tal. (*IG* I³ 71.III.156, city-ethnic restored). Moreover, numismatic evidence suggests close financial and political relations with the Odrysian kingdom. On the justifiably disputed tribute imposed on Abdera and other Greek cities of the northern Aegean by the Odrysians, see Veligianni (1995a) with refs. and Loukopoulou (2003).

In C4, Maroneia became a member of the Second Athenian Naval League (*IG* II² 43.87). Moreover, its relations with the Odrysians were further strengthened in C4f, as was the antagonism with other powerful Greek cities of the north Aegean who had financial interests in the Thracian hinterland. C.400 a Maronitan served as a councillor at the court of Seuthes II (Xen. *An.* 7.3.16). In 376/5 Maroneia is believed to have supported, if not invited, the Triballian invasion which resulted in the catastrophic defeat of Abdera (Diod. 15.36.3–4; cf. schol. Ael. Arist. 172.7, 173.17). She had apparently also succeeded in driving Thasos away from Stryme, and the dispute was solved only with Athenian intervention (Dem. 12.17, 17.23, 50.20–23, 51.17). A recently published inscription from Vetren in Bulgaria discloses the privileged position of Maroneia in the Thracian commerce under Kotys I and his successors (*SEG* 43 486; Velkov and Domaradzka (1994); cf. Loukopoulou (1999), (2002), 2003)); it was brought to an end by Philip II's conquest of southern Thrace and the dissolution once and for all of the Odrysian power (Dem. 23.183; Polyæn. *Strat.* 4. 2. 22). Maroneia's triremes and army, which included mercenaries

and "neighbouring barbarians" are mentioned in relation to her dispute with Thasos over Stryme in 361 (Dem. 50.14–15, 20–23).

We have no information about the constitution of Maroneia. Maronitan ambassadors are recorded in 361/0 (Dem. 50.20–23). In 359 Maroneia had a *theorodokos* to host *theoroi* from Epidauros (*IG* IV²¹ 94.IB. 29). In C4 Karthaia bestowed *proxenia* on a citizen of Maroneia (*IG* XII 5 242.b.2). *I.Priene* 10 (C4) is a decree by Priene (no. 861) bestowing various judicial privileges on citizens of Maroneia. A citizen of Maroneia was Olympic victor in 476 (*Olympionikai* 213).

The poliad deity of Maroneia was most probably Dionysos, whose portrait appears on coins; his sanctuary (Dionysion) was the place of publication of official documents (*SEG* 35 823.43–4 (C2)). With Dionysos' cult was apparently associated that of the city's eponymous hero Maron (cf. the legend *MAPΩNOΣ* on C5f coins (*infra*)), as indicated by their joint cult, along with that of Zeus and Rome, in the Roman period (Triantaphyllos (1983) 425). The cult of Apollo is presumed on legendary evidence (Hom. *Od.* 9.187–215).

The town of Maroneia is securely located in the well-protected bay of Ag. Charalambos, which also served as the city harbour. A vast 10.5 km-long fortification wall protected the entire area from the port, west of the bay (reinforced to the east by an artificial mole; cf. Sarla-Pentazou and Pentazos (1984) 47 figs. 2–3, 5–6), to the acropolis, identified on the hill of Ag. Athanasios (height 678m). Archaeological research has not yet identified traces of the Archaic–Classical city. The isodomic city wall was reinforced with numerous semicircular and rectangular towers. Also identified are a C4 sanctuary, presumably of Dionysos, and the sanctuary of the Egyptian deities (Tsimbidis-Pentazos (1971) 104, (1973) 84–86 fig. 1; Pentazos (1982) 29–30; Sarla-Pentazou and Pentazos (1984) 48 fig. 10; Lazaridis (1972) 40.140; Pentazos (1986); *Ergon* (1973) 59–61, (1986–87) 44–45, (1987) 20–22; Triantaphyllos (1983) 431–32).

In C6l Maroneia struck a limited series of silver coins on the Thrako-Makedonian standard. Denominations: stater, tetrobol, diobol and obol. Type: *obv.* horse protome; *rev.* incuse square. In the Classical period silver coins were struck first on the Phoenician standard, later on the Persian standard, sometimes on the Attic standard. Denominations from C5e on: didrachm, drachm, triobol, diobol, trihemiobol. Types: *obv.* forepart of horse, or prancing horse, or head of Dionysos; *rev.* first, incuse square; later, vine or grapes in square. Legend: c.500 on *obv.* *MA* or *MAPΩ* or

ΜΑΡΩΝΟΣ, later on *rev. MA* or *ΜΑΡΩ* but mostly *ΜΑΡΩΝΙΤΕΩΝ* or later *ΜΑΡΩΝΙΤΩΝ* and often a magistrate's name. The same types appear on bronze coins and on two series of gold coins struck in C4f (Head, *HN*² 248–50; Schönert-Geiss (1987) 46–47; *SNG Cop. Thrace* 592–633). The dating, seriation and distribution of the important coinage of Maroneia, as well as the systematic study of its impact on political and financial developments in Thrace and on the Odrysian coinage, have been based on the mints of Abdera and Ainos (May (1965); West (1929) 55–147; Schönert-Geiss (1979), (1985), (1987); Peter (1997) *passim*). As a consequence of the revision of Abdera's monetary history (no. 640), historical conclusions are now open to reconsideration.

647. Mesambrie Map 51. Lat. 40.50, long. 25.40, but see *infra*. Size of territory: probably 2. Type: A:?. The toponym, *Μεσαμβρία*, ἡ, is attested exclusively by Herodotos (7.108.2, quoted at Steph. Byz. 446.19–21: *Μεσημβρία*). Herodotos describes Mesambrie as the westernmost *teichos* of the *peraia* of Samothrake and, at the same time, as a *polis* both in the urban sense and in the territorial sense, *viz.* as bordering on the *polis* of Stryme and the river Lissos. It was situated in the Briantike, formerly called Gallaike, a part of the region formerly owned by the Kikones. Herodotos' description indicates that Mesambria was a dependent *polis* belonging to Samothrake.

Mesambrie was tentatively but unconvincingly identified by some scholars with Drys (Perdrizet (1909) 35; cf. Seure (1900) 152 n. 1), by others with Orthagoria (Meyer (1976) 3, (1978) 97–98) or with Zone (*Thrace* (1994) 80). For an early discussion of proposed unjustified identifications, simplifying the admittedly confused settlement pattern transmitted by literary sources for this area, see Robert (1940) and, more recently, Isaac (1986) 128–33. Mesambrie has persistently been identified with the site systematically excavated near the stream Shabla Dere (Kazarow (1918) 33; Amandry (1940–41); Walter (1942) 189–90; Bakalakis (1961) 15; Lazaridis (1971c) 39; supported by the excavator of the site, A. Vavritsas, and followed by Barr.). But this identification has now been abandoned in favour of Zone (Tsatsopoulou (1995) 671–73; cf. *TIR* 37; Isaac (1986) 131; disputed by Soustal (1991) 354–55; see *infra* 881). Mesambrie should be sought 3 km further west, at the mouth of the stream Yali Dere (Meyer (1976) 3; (1978) 97–98; Mottas (1989) 89).

648. Orthagoria (Orthagoreus) Map 51. Unlocated. Type: B:a? The toponym is Ὀρθαγορία, ἡ (Strabo 7 fr. 47), according to Pliny (*HN* 4.42) the former name of Maroneia. The

city-ethnic Ὀρθαγορεύς is attested on C4m coins (*infra*), indicating that it was a self-governing *polis* at the time.

Orthagoria has been unconvincingly identified with various locations on the Aegean coast, usually east of Maroneia (Robert (1940) 87–90; Lazaridis (1972) 40.158, 46.164; Pantos (1983) 171.27 and, more recently, Isaac (1986) 123, with refs.).

Orthagoria minted silver and bronze coins in C4m or later. Denominations: stater, triobol and fractions in bronze. Type: *obv.* head of Artemis or Apollo; *rev.* Makedonian helmet surmounted by star. Legend: *ΟΡΘΑΓΟΡΕΩΝ* (Gaebler (1935) 92–93; cf. Head, *HN*² 203; *SNG Cop. Thrace* 689–91).

649. Sale Map 51. Lat. 40.50, long. 25.55. Size of territory: probably 3. Category: A:?. The toponym is Σάλη, ἡ (Hdt. 7.59.2; *IG* 1³ 77.5.31 (422/1)). The city-ethnic remains unattested. According to Herodotos, Sale and Zone were Samothrakean *poleis* (in the urban sense), situated on the coast of the Doriskos plain, in the region formerly owned by the Kikones. Like other cities of the *peraia* of Samothrake it appears in 422/1 as a member of the Delian League, assessed at 3,000 dr. (*IG* 1³ 77.5.31).

Sale was situated 15 miles west of Traianoupolis on the *Via Egnatia* (*It. Burd.* 602.9: *mutatio Salei*) and is tentatively, but not beyond reasonable doubt, located at or near modern Alexandroupolis (Isaac (1986) 131) or further west, at Makri (Mottas (1989) 88, 95).

650. Stryme Map 51. Lat. 40.55, long. 25.20. Size of territory: probably 3. Type: A:a. The toponym is Στρυμὴ, ἡ (Hdt. 7.108–9; Dem. 50.32; *SEG* 39 666.27, AD 202). Apart from Steph. Byz. 587.17 there is no attestation of a city-ethnic. At Hdt. 7.108.2 Stryme is called a Thasian *polis* bordering on Mesambria: . . . *Μεσαμβρία*. ἔχεται δὲ ταύτης *Θασιῶν πόλις Στρυμὴ* . . . Thus, *polis* is used in the territorial and political senses combined. For its urban centre, see *infra*. Some lexicographers seem to agree in calling Stryme an *emporion* (Harp. Σ49, perhaps derived from Philoch. fr. 43 or from Dem. 50.20; cf. *Suda* Σ1231).

Stryme was situated in the Briantike, a region formerly called Gallaike and belonging to the Thracian Kikones (Hdt. 7.108–9). Stryme was an island off the Thracian coast colonised by Thasos (Harp. Σ49, quoting Heraclid. Pont. fr. 125, Wehrli) and the C3 historian Philostephanos of Kyrene (*FHG* III 28–34, omitting this fragment)). Demosthenes stresses its lack of a safe harbour at least for naval units (Dem. 50.22: ἀλίμενον χωρίον). Describing the march of Xerxes' army through the Aegean Thrace, Herodotos

(7.108–9) presents a confusing account of Stryme's location: west of Mesambria, the westernmost settlement in the *peraiá* of Samothrake, and separated from it by the river Lissos, but also east of Lake Ismaris, which lay between Maroneia and Stryme. These incoherent pieces of information do not allow any secure identification. It is usually assumed that Stryme was a Thasian coastal outpost bordering on the territory of Maroneia (Lazaridis 1971a), and therefore, ever since its foundation in, probably, C7, a constant bone of contention between these two cities. Vaguely attested is a first contention in C7s (Philoch. fr. 43, citing Archilochos, fr. 291, West); a direct conflict in 361/60 was solved by Athenian intervention in support of the Thasians (Dem. 12.17, 50.20–22) recording the Athenian arbitration (cf. Isaac (1986) 70–71). Stryme was presumably destroyed c.350 by the Maronitans, possibly supported by Philip II (Bakalakis (1967) 145).

Stryme is inconclusively identified with the ancient fortified settlement excavated on a peninsula north-east of Cape Molyvoti (plan in Lazaridis (1972) fig. 71) with remains dating from C6l to C4f (Bakalakis (1967); disputed by Isaac (1986) 12, 71–72). The present configuration of the peninsula allows the hypothesis that, as recorded by Philostephanos (*supra*), it was indeed an island during at least part of Antiquity (Kranioti (1990) 629; for a tentative demarcation of the extent of Stryme's territory, see Lazaridis (1972b) 4.19). Archaeological remains include parts of C5–C4m fortification walls and cross-walls built in irregular masonry with brick superstructure, subterranean tunnels, cisterns and wells in the southern edge of Cape Molyvoti, which were interpreted as having constituted a major aqueduct, on the analogy of the Eupalinean aqueduct in Samos but on a much smaller scale. Furthermore, there are traces of a small port located south of the city, and a group of five grave monuments with three inhumations and two cremations dated to 450–425 bordering a roughly paved road, to the north-east of the cross-wall. Imported pottery in the entire excavated area consists exclusively of Attic C5–C4 ware. The urban centre extended south and east of the citadel, while the cemetery spread over the west flank of the cape, outside the wall. On the evidence of a few excavated C5l–C4m private houses, it is believed to have conformed to the Hippodameian urban system (Bakalakis (1967); Kranoti (1984)). A cemetery with tumuli containing C5 cist graves and sarcophagi was excavated 4 km north of the walled settlement (Bakalakis (1967) 3–18; on the recent discovery c.4 km north to north-east of Molyvoti of four C5 sepulchral tumuli, see Triantaphyllos (1992) 655–59).

651. Zone (Zoniaios) Map 51. Lat. 40.50, long. 25.45. Size of territory: probably 2. Type: A.a. The toponym is Ζώνη, ἡ (Hecat. fr. 161; Hdt. 7.59.2; Ps.-Skylax 67; *IG* 1³ 77.5.27–28: Ζόνη παρὰ Σέπρειον). The city-ethnic is Ζωναῖος (*F.Delphes* III.1 497.5; cf. Robert (1940) 81–90). Zone is called a *polis* in the urban sense at Hdt. 7.59.2, whereas Ps.-Skylax 68 lists Drys and Zone as two coastal *emporía* situated opposite Samothrake. The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in a Delphic list of C4l–C3e. The individual and external use is attested in a C3 honorific decree from Samothrake.

Zone is listed among members of the Delian League in the assessment decree of 422/1, and was assessed at 2 tal. (*IG* 1³ 77.5.27–28), an indication that it was the richest if not the largest of the cities of the *peraiá* of Samothrake.

Zone was situated on the beach front, between Sale and Serreion (Hdt. 7.59.2), in the vicinity of Drys (Ps.-Skylax 67), also located near Serreion. It has been sought at Cape Makri (identified with Serreion), right below the Zonaia Mts. (presumably Choban Dag), and was tentatively identified with a site near the modern village of Makri (*ATL* i. 518; Bakalakis (1961) 15; Lazaridis (1971c) 39; for an early discussion of proposed unjustified identifications simplifying the admittedly confused settlement pattern transmitted by literary sources for this area, see Robert (1940) and, more recently, Isaac (1986) 128–33). However, numerous, otherwise rare coins of Zone have turned up during the systematic excavation of the urban centre near the mouth of the stream Shabla Dere, formerly identified with Mesambria. These finds strongly support the now prevailing view that the site is ancient Zone (*BE* (1976) 464, (1978) 312, (1979) 282, (1980) 319, (1981) 326; *TIR* 61; *Thrace* (1994) 80; J. Tsatsopoulou (1995) 671–73; Galani-Krikou (1996), *contra* Soustal (1991) 354–55; according to Triantaphyllos (*Thrace* (1994) 80) Mesambria may have been some older name of Zone). This identification was reinforced by the discovery of an Archaic sanctuary of Apollo (see *infra*), the poliad deity of Zone, as evidenced by this city's C4 coinage.

The excavated urban centre near Shabla Dere, dating from C6 to the Hellenistic period, is organised in accordance with the Hippodamic system, with cross-intersecting paved roads, various types of house and an elaborate sewage system. It is protected by two contiguous fortification walls (ashlar and pseudo-isodomic poros masonry, the western wall in Lesbian masonry) measuring 1370 and 960 m respectively and enclosing an area of 50 ha, reinforced with rectangular towers extending from the seaboard to the top of a 108.5 m-high acropolis; the southern sea-wall is

presumed to have disappeared in the sea (J. Tsatsopoulou (1987) 472), as did the presumed port installations (Vavritsas (1988) 80). The south-west part of the enclosed area, measuring 50.50 × 46.50 m, was densely built and additionally fortified with an internal wall. Ceramic pipes probably belonging to the city aqueduct were discovered near a mountain spring c.1,500 m to the north-west (Vavritsas (1973) 122). Extensive C5–C3 cemeteries were identified west of the urban centre (P. Tsatsopoulou (1997)). A decree discovered in the excavations remains unpublished (*BE* (1976) 464).

The evidence of the coins indicates that the poliad deity of Zone was Apollo (Galani-Krikou (1996), (1997)). His sanctuary, with a C6 temple, probably in *antis* or *prostyle*, has been identified on the hill-top near the eastern fortification wall. Inside the *temenos* were found parts of the cult statue of

c.600, as well as rich votive offerings, including numerous sherds with graffiti (J. Tsatsopoulou (1988) 491–92; (1989); *Thrace* (1994) 83). Epigraphically attested is the cult of Demeter in a small C4 sanctuary by the south-eastern end of the western fortification wall, with numerous offerings of silver and gilded votive plaques representing Demeter, Kore and Cybele (Vavritsas (1973) 77–81, (1984) 27–29). Moreover, the rich oak forest covering the Zonaia Mts. in the vicinity of Cape Serreion and lying in the territory of Zone, has been associated with the activity of Orpheus (Apoll. Rhod. *Argon.* 23–31; Nic. *Ther.* 458–464; cf. Pompon. *Mela* 2.28; cf. Robert (1940) 82–90).

Zone struck bronze coins in C4–C3. Type: *obv.* head of Apollo; *rev.* lyre or laurel wreath, more rarely running deer. Legend: ΖΩΝΑΙΩΝ or ΖΩΝΑΙ or ΖΩΝ or ΖΩ (Galani-Krikou (1996)).

INLAND THRACE

ZOFIA HALINA ARCHIBALD

I. The Region

The reaction of most students of Classical Antiquity to the subject of this chapter might well be: were there any *poleis* in inland Thrace? Most of the sites marked on *Barr. Maps* 22, 51 and 52 are coastal,¹ and most of the inland ones seem to be of Roman date. There are some strange exceptions in the central (Thracian) plain of modern Bulgaria, but these are cemetery sites, not the locations of known settlements, however designated. We may assume that the cemeteries were connected with communities nearby, but there is no hint on the maps of what these agglomerations may have been.² The foundations of Philip II of Makedonia, at Philippopolis and Kabyle in particular, usually get a mention in political histories of Greece, and Diodorus speaks of some of these as having acted as ἀξιόλογοι πόλεις (16.71.2), implying that they were garrison towns rather than civilian centres. Demosthenes' derogatory remarks about hell-holes like Drongylion and Masteira (Dem. 8.44, 10.15), and the nasty things Theopompos allegedly had to say about Philippopolis and Kabyle (one or other was dubbed "Poneropolis" or "slave city") hardly inspire confidence. It would be easy to dismiss the whole region on the basis of such reports as a mess of mud huts, a wasteland peopled by boorish rascals, whether native or incomers.

Demosthenes' and Theopompos' derogatory remarks and the terms they use show us what they thought of the places they were writing about. But Demosthenes' business was belittling Philip II, and one of the ways to achieve this effect was to belittle his achievements, by denigrating his conquests.³ If there was something worth capturing in inland Thrace, we can be confident that Demosthenes refrained from mentioning it. The feeble scraps of citations that constitute, for our benefit, Theopompos' *Philippikai*

Historiai, wherein a series of Thracian sites was sketched, are sufficient for little more than highly speculative judgements about what the historian actually said, and why.⁴ Both Demosthenes and Theopompos were widely cited in the late lexicographical works, but fossils with such a dubious pedigree do not make a good starting point for our enquiry. It would be better to leave them aside until other approaches have been explored.

Herodotos and Thucydides provide valuable references to communities in inland Thrace, but their accounts do not address our topic directly, not least because subjects that are named explicitly refer to the highest order of political groupings responsible for decision making with respect to outside powers, be they Persian kings or representatives of Greek states. The Odrysians, a "tribal" dynasty that came to dominate the east Balkan region from the Haemus range to the Aegean and Black Seas, are the most prominent agents in Thucydides' narrative, while Herodotos' text reflects the manifest change that came about in the post-Persian War period. During Dareios' and Xerxes' invasions, various "tribal" groupings either succumbed to, or opposed, the Persian armies. But in the post-war years, Odrysian leadership is taken for granted (Hdt. 7.137; cf. Thuc. 2.67).⁵ But neither historian was especially concerned with institutional development or state formation in the region. At the very least, there are a number of Thracian communities listed by Hekataios in the European section of his *Periodos Ges*, but not mentioned by Herodotos or Thucydides.⁶

⁴ Jacoby, *FGrHist* no. 115; Pédech (1989) 63–100; Meister (1990) 90ff; Shrimpton (1991); Flower (1994) 164 and *passim*.

⁵ Archibald (1998) 79–90, 93–125.

⁶ Steph. Byz. s.v. Darsioi = Hecat. fr. 175 (apparently not the same as Derraioi, called Dersaioi by Hdt.), Datyleptoi (Hecat. fr. 177), Desiloi (fr. 176), Disorai (fr. 178), Entribai (fr. 179), Xanthioi (fr. 180, ethnic only); Lipaxos (fr. 149), and Kabassos (fr. 169, *poleis*). This list includes sites in Thrace only, and excludes such entities as can be confidently located in the Chalkidic peninsula or along the Aegean coastline. Other references collected by lexicographers and grammarians are dealt with below.

¹ See L. Loukopoulou, in this volume 854–84, 900–23.

² Reviewing *Barr.*, Alcock *et al.* (2001) 460 with n. 17 have drawn attention to the fact that archaeological evidence has often been included only in areas outside the principal zone of Greek and Roman settlement.

³ Cf. the comments of Bošnjakov (1999) 326–29.

1. Epigraphic Documents

One of the most important new sources of information about inland communities is epigraphy. There are a small but growing number of inscriptions from Thrace that are connected with hitherto unknown historical entities. All, or at least some, of these may be classifiable as *poleis*, and perhaps even as Greek *poleis*. Three documents are particularly important in this context.

(1) The first is a decree of C_{4s}–C_{3e} tabled by the *politai* of an unknown community found at the sanctuary near Batkun, in the foothills of the Rhodope mountains, southwest of Pazardjik: *IGBulg.* 111.1 1114.⁷ Dumont and Kazarow thought that the *polis* issuing the decree must have been somewhere near Pazardjik, the main market town at the western end of the Thracian plain, speculating that it could have been among Philip II's foundations. Mihailov (1986) preferred Philippopolis as the location of the *polis*, arguing that the sons of Seuthes III were honoured around this time in (other) major administrative centres.⁸ But this is an inference based on evidence from the Valley of the Roses, the epicentre of Seuthes' power at this time.

The recipients of the monument or statue(s) voted by our unknown *polis* were an unnamed man and his brothers. It is quite possible that the sons of Seuthes III were the intended recipients.⁹ But so far there are no public inscriptions from Philippopolis dating from C_{4s}.

(2) The Seuthopolis inscription records an oath sworn by Berenike and her four sons by the Odrysian prince Seuthes (III): Hebryzelmis, Teres, Satokos and Sadalas. The inscription is dated to C_{3e} by V. Velkov, D. Draganov and K.-L. Elvers.¹⁰ It is stated in the document that it was to be set up in the Phosphorion at Kabyle, and in the agora at the same site, by the altar of Apollo; as well as in two places at Seuthopolis—in the sanctuary of the Great Gods and on the agora, in the sanctuary of Dionysos, by the altar (29–34). The

Batkun inscription was to be erected by the altar in the sanctuary of Apollo (ll. 15–17). This resembles the phrasing in the Seuthopolis inscription with reference to the sanctuary of Apollo at Kabyle. But there is nothing to connect the subjects of the latter with those of the former text. If the Batkun inscription really did belong to Alexander III's reign (unfortunately, this can no longer be verified), then what we may be seeing in this rather isolated stone is confirmation of Odrysian elite patronage in the western part of the Thracian plain *before* the military conflict between Lysimachos and Seuthes, a protracted confrontation that created a different kind of *status quo* between native and Makedonian power-holders, and restricted Odrysian control in the south and west.¹¹ The excavations at Vetren, north-west of Pazardjik, have demonstrated strong Odrysian princely connections, both in the range of native regal coins, and in the prosopography revealed by inscriptions and graffiti, during C_{5l} and throughout C₄.¹² The most powerful Odrysian princes in this period—Amadokos I, Kotys I and Amadokos II—appear to have been connected with this site, no matter how the Pistiros inscription is to be interpreted.¹³ The radical changes that took place there after c.300 presuppose a marked change of political status at Vetren, which coincides, directly or indirectly, with the consolidation of Lysimachos' power.¹⁴ Lysimachos reasserted Makedonian control along the Aegean coast and some way into the interior during a series of campaigns after 323, when he nominally acquired the title of governor of Thrace with the approval of his fellow generals,¹⁵ though it is still hard to define how Lysimachos and Seuthes eventually compromised in territorial terms. Coin hoards suggest that Seuthes maintained his power north of the river Hebros (Maritsa). There is no doubt that this power base included the Valley of the Roses, but the dense distribution of hoards containing coins of Seuthes III extends south of the Sredna Gora range into the area around Stara Zagora (the city of Augusta Traiana in Imperial times), and as far west as the river Stryama, which bisects the Thracian plain due north of Plovdiv.¹⁶ Kabyle, which was garrisoned by Philip II, can have been in Makedonian hands for only a few decades at most. The absence of any clear evidence of a Makedonian political

⁷ Archibald (1999) 437–38 with n. 26; Domaradzka (1993) 55 no. 1. Georgi Mihailov provides a detailed history of the stone, which is now lost. Albert Dumont, one of the great early collectors of inscriptions in the Balkan region, dated this text no later than the reign of Alexander the Great. This was accepted by G. Kazarow, the doyen of Bulgarian archaeology in the first part of the twentieth century, while Mihailov (1986) himself adopted a slightly more cautious approach, suggesting a date of C_{4l}/C_{3e}.

⁸ G. Mihailov, *IGBulg.* 111.1 (1961) 117, referring the reader to *ibid.* 111.2, pp. 146–49, nos. 1731–32 (= Seuthopolis inscription and the “Epimenes” inscription from the same site).

⁹ There are other potential candidates: a Rheboulas, son of Seuthes (II?) and brother of Kotys, was granted honours by the Athenians in June 330 (*IG* 11² 349 = *Tod* 193; Schwenk (1985) 223 no. 45). Note also the Argive *proxenos*, L---, son of Seuthes, the Thracian, who was also *theorodokos* at the sanctuary of Zeus at Nemea and of Hera at Argos: *SEG* 30 124, no. 357 (c.300).

¹⁰ *SEG* 42 661 (*editio princeps*) with further bibliography.

¹⁶ See the distribution maps in Domaradzki (1987) map 2 at p. 7, (1998a) 30, and an important discussion of the evidence for the earlier site at Seuthopolis, prior to the construction of the planned city, pp. 29, 39–43, 57–60.

presence, and the presence of many indicators of native rule and administration (including locally struck coin issues, as well as the contents of the Seuthopolis inscription), point to a speedy erosion of Makedonian power in the whole region that later emerged as the kingdom of Seuthes III.

The two epigraphic texts already referred to (from Batkun and Seuthopolis) demonstrate a style of decision making that owes much to contemporary civic practice in Greek *poleis*. Although the preamble of the Batkun inscription is missing, there must have been an opening formula that would have qualified the laconic reference to the decision of the *politai* in lines 11–12. Honorific decrees are among the commonest stone inscriptions in almost all Greek communities (e.g. Odessos: *IGBulg.* I 35–43).¹⁷ The presence of this stone in a shrine that always remained a native sacred space, notwithstanding the later associations with Asklepios (*IGBulg.* III.1 1114–1296), is a strong indication that the political networks honoured there were local ones, unconnected with the Makedonian power.

(3) The third document that deserves consideration here is the Pistiros inscription. This princely decree, evidently issued by order of an unknown Odrysian monarch, perhaps Amadokos II, is undoubtedly the most important single text from the pre-Hellenistic period to have been discovered in the east Balkan peninsula. The letter-forms, the comparatively undeveloped style of expression, and internal evidence (which includes what appears to be a citation of Kotys I (383–359)), all point to a date prior to the capture of Odrysian Thrace by Philip II of Makedonia between 340 and 339.¹⁸ The granite block, reused at the Roman *mansio* of Lissae/Bona Mansio, on the principal road between Constantinople and Serdica, also known as the *via diagonalis*, is 1.64 m high, 0.27–0.21 m deep, and required six men's strength to lift. It is unlikely that the stone has moved far from its original location. No substantive evidence of pre-Roman activity has been identified at the *mansio*, and the likeliest candidate is the river port at Adjyiska Vodenitsa near Vetren, approximately 2 km south-west of the *mansio*,

which became a regularly planned settlement during C5 and was abandoned some time in C2, and where excavations were begun in 1988.

The text is crucial to our understanding of relationships between rulers and local communities, whether indigenous, immigrant or mixed. The original editors of the text, Velizar Velkov and Lydia Domaradzka, took into account the range of epigraphic material from Bulgaria, including Georgi Mihailov's magisterial survey, *Inscriptiones Graecae in Bulgaria repertae* (1958–70), as well as information made available by Mieczysław Domaradzki. The text of the decree consists of guarantees bestowed upon the *emporitai* of one or more settlements (ll. 8–10, 12–13). The property(?) of the *Pistirenoi* is then referred to (ll. 16–17, certainly ll. 18–20), and tolls are waived between Pistiros and Maroneia, as well as, it appears, to or from other *emporion* (ll. 21–25). Much of the second half of the text cites what seems to be an earlier ruling by Kotys I, which also guaranteed the rights of habeas corpus and of property to people of Maroneia. These were (or are) equally applicable to citizens of Apollonia and Thasos resident at Pistiros (ll. 27–38). The text refers to different communities in the following way: *Πιστιρηνοί* (l. 16), *Μαρωνίται* (ll. 28–29), *Ἀπολλωνιῆται* (l. 32), *Θάσιοι* (l. 33) *Θράκες* (ll. 8–9). In addition, *emporitai* are referred to six times (ll. 5, 8, 11, 13, 18, 25); *emporion* twice (ll. 23–24, 25), and there is a further reference to *τὰ ἐμπόρια Βελανα Πρασε.ν* (ll. 24–25), a phrase that suggests that at least two named *emporion* were being indicated.¹⁹

An identification of the site near Vetren, north-west of Pazardjik, with Pistiros is still a persuasive one.²⁰ But it is not without difficulties, as the excavator himself was not slow to acknowledge. The excavated site shows many of the characteristics that might be expected of a port facility (a fortified nucleus, paved roads, well-built masonry structures suitable for storage, extensive evidence of commercial items, including weights and measures, and large numbers of coins); but it is rather low-lying, situated on a shallow terrace above the flood plain of the largest river in the east Balkan land mass.

Whether or not the Pistiros of the inscription has been identified on the ground, the community referred to must belong to the Thracian interior. The decree was issued on behalf of a local ruler whose influence might impinge on those of coastal *poleis*, but whose authority can never have included juridical powers of the kind enunciated here if Pistiros were either an autonomous *polis* or a dependent

¹⁷ Nawotka (1999) 173–76; appendix 1, 179–91.

¹⁸ Velkov and Domaradzka (1994), (1996); *SEG* 43 486; Chankowski and Domaradzka (1999); the other contributors to the *Dossier: nouvelles perspectives pour l'étude de l'inscription de Pistiros* in *BCH* 123 (1999) 259–371 all accepted a date prior to c.340: Salvat (1999) 259 (summer 359); Bravo and Chankowski (1999) 308–9 (soon after 359); Bošnakov (1999) 319 (contents composed in reigns of Kotys I (384/3–360/59), and Amadokos II (359–351)); Picard (1999) 340 (“vers le milieu du IV^e siècle”); Loukopoulou (1999) 365 (360–359, issued by one of the successors of Kotys I). Cf. Archibald (2001). The main proponents of a Hellenistic date for the inscription have been Tacheva (2002) and Tsetskhladze (2000). Tacheva's arguments are based on evidence unconnected with the stone itself. Tsetskhladze is not committed to any date, but was drawing on discussions of the text with A. Avram and Y. Vinogradov.

¹⁹ Bravo and Chankowski (1999) 251, 287; Hansen (2004).

²⁰ I have discussed these terms briefly in Archibald (2001). See also my further remarks in Archibald *et al.* (2002).

community of Thasos, as was Herodotos' Pistiros (7.109.2). In institutional terms, the arrangements are in many respects comparable to those at Naukratis (a parallel that seems all the more compelling with the discovery of a second stele, at Thonis, near the mouth of the Canopic branch of the Nile, identical to that from Naukratis, and issued on behalf of Nectanebo in 380).²¹ The Pistiros text refers to three coastal *poleis*: Thasos and Maroneia on the Aegean, and Apollonia (whether Pontika or the Chalkidian city of that name).²² All other communities referred to in the inscription either belong to *emporia*, or to unnamed Thracian entities (8–9; 38: οἰκήτορες), which may or may not include the shadowy ἐπαυλισταί (12).²³ The plural form of *emporia* is hardly accidental. The existence of other *emporia*, coastal or inland, is documented in contemporary literary sources (Dem. 23.110: revenues collected by Kersebleptes from the Chersonese amounted to 30 talents in peacetime, while those collected annually from *emporia* were as much as 200 talents; cf. Arr. *Anab.* 1.1.6: merchants confronting Alexander III),²⁴ and can be inferred from the circulation of coined money within the east Balkan land mass.²⁵ Margarita Tacheva has argued that trade between Aegean *poleis* and the continental interior of Thrace was very limited prior to Makedonian expansion into the region. But the volume of exchanges was far greater, in the pre-Makedonian period, than her analysis suggests, and some categories of data diminished rather than increased after 340.²⁶

There are three principal reasons in favour of Adjijyska Vodenitsa, near Vetren, as the original location of the stone. First, it is the largest archaeological site within a radius of 10–20 km from the findspot whose dating coincides with the period of the inscription, and whose physical remains and portable finds identify it clearly as a centre of exchange. Second, five other Greek inscriptions have been found at the site, three of them *in situ*, while two were reported by nineteenth-century antiquarians.²⁷ Third, the pattern of coin hoard distributions in the Thracian plain points to the area of Vetren as one of the most significant concentrations of C5 and C4 coins in the region as a whole.²⁸ This was one of the

reasons why the site was investigated in the first place. Other sites with similar concentrations of coin hoards may indicate further *emporia*. Domaradzki has suggested two further sites of putative *emporia*, on the basis of commercial-type finds: at Arzos, near Kalugerovo, on the right bank of the river Sazliyka near its junction with the river Hebros, where lead seals of the pre-Roman period have been found; and Kocherinovo, in the upper Strymon valley.²⁹ His interpretation of pre-Makedonian finds at Nebet tepe, in Plovdiv, and on the acropolis of Zaiči vrh, Kabyle, is of temporary markets at native sanctuary sites.

A comparison of the three inscriptions leads to a number of observations. The Seuthopolis and Pistiros decrees are royal edicts. The one was intended to bring order to some irregularities in the relations between Seuthes III's relatives and a powerful local leader, Spartokos (referring *pari passu* to a range of civic institutions and amenities). The other regulates inter- and intra-community relations at Pistiros, as well as dictating the scope of commercial privileges. In both cases, the decisions have ramifications that go well beyond the remit of any one individual community. The special conditions to which both decrees apply required special authority (even if we are unable to infer all the relevant implications). So neither text is directly comparable to the day-to-day decision making of a *polis*. The particular importance of the circumstances in either case may explain why they were committed to stone. Yet they were intended to be civic documents, as the instructions at Seuthopolis make clear. The oath of Berenike was to be made available to the people of Seuthopolis and Kabyle. The Pistiros decree affected a large number of communities, including, but by no means confined to, Maronitans, Thasians and Apollonians living in Pistiros.

Seuthopolis was consciously and deliberately intended by its presumed founder, Seuthes III, to be seen alongside the new cities of Philip II, Alexander III and their successors. It was meant to be a *polis*, but there is no reason to think that this was anything other than a native settlement, even if there were some Greeks living there.³⁰ It was created by and for natives, using the most up-to-date designs in town planning (albeit adapted to a modest scale) and innovative local techniques, such as baked brick,³¹ as well as better-known construction materials. Local, east Balkan features— notably low decorated hearth altars—were incorporated

into domestic units that might otherwise look familiar in coastal *poleis*.

The Batkun inscription, on the other hand, has closer similarities with the kind of text that we might expect to find emanating from a Greek *polis*. Nevertheless, the location and style of the monument suggest the adoption of contemporary forms by a native community, rather than the presence of immigrant Greeks. The sanctuary is too far from Philippopolis to have been the natural choice for an honorific monument dedicated by its citizens.³² Moreover, if the stone is to be dated to the final third of C4, perhaps even very early in this period, it suggests some very rapid developments in the citizen body there. Even if the originators of the decree were Philippopolitans, it makes little political sense to have a body of new citizens honouring native leaders, in a native sanctuary (and, by implication, unconnected with the new regime?), at a time when Philip's city was, first and foremost, a garrison town, and the fledgling civic body still very much under a military eye. The curious style of the motion formula: *δεδόχθαι [το]ῖς πολίταις*, without reference immediately thereafter to the identity of the community, is unusual.³³ This is not a style that we find in the institutional repertoire of Attic and Ionian communities. Civic decrees from Makedonia do sometimes adopt *δεδόχθαι* or *ἔδοξε τῆι πόλει*, but in the singular, not the plural form. So the formula at Batkun has no clear antecedent.

In the case of the Pistiros and Seuthopolis decrees, we have examples of royal decisions couched in the style of a *polis*.³⁴ We can envisage how the chancery styles of royal dynasties, which were closely involved in Aegean affairs from the time of the Persian Wars onwards, acquired some of the formal characteristics of documents produced by the more officious Aegean *poleis*. But at Batkun we may have

³² Bravo and Chankowski (1999) 296–99 argue that the Batkun stele cannot have originated in the sanctuary, because it refers to Apollo, whose cult is not attested there. They believe that either the stele was displayed at Vetren, an Odrysian dynastic seat, then reused at Batkun, or the Batkun stone was copied from a text displayed elsewhere. The latter argument explains nothing; the former presupposes that a civic community somewhere else honoured the ruler in his own seat. These are, of course, possibilities, but no evidence has been furnished in support of either. The authors do not discuss the curious motion formula of the decree. It should be noted that the evidence so far produced by investigations at the sanctuary does not extend back into the period in question (cf. Tsontchev (1941)).

³³ Nawotka (1999) 37–68, for the formulas of Miletos (no. 854) and Milesian Pontic colonies, which are comparatively standardised, and thus very different indeed; there are some parallels with the smaller civic centres of east Makedonia, but these do normally give the name of the issuing city in the formula: Hatzopoulos (1996) no. 41.10 (Amphipolis), 53.12 (Moryllos), 55.17 (Pydna), 58.9 (Pella), 60.16 (Beroia).

³⁴ Rhodes, *DGS* 18–29, 550–57.

evidence of a non-Greek community operating with a considerable degree of autonomy and adopting the bureaucratic procedures of a Greek *polis*.

Pistiros is clearly an exceptional case, but its status could have some bearing on how we view the Batkun decree. The original editors of the inscription were content to characterise Pistiros as an *emporion*.³⁵ Thereafter opinion divided sharply. Hansen, in his study of Archaic and Classical *emporion*, concluded that Pistiros appeared to be the only example of an *emporion* that was definitely not a *polis*.³⁶ He has since changed his mind, and in the revised version of the 1997a article he argues that Pistiros was both a *polis* and an *emporion*, that the citizens of Pistiros are the Pistirenoi (l. 16), whereas the Greek *emporitai* include citizens of Maroneia, Apollonia and Thasos living or staying in Pistiros as foreigners (Hansen (2004)).

Most commentators have accepted that the site at Adjiyska Vodenitsa corresponds, wholly or partly, with Pistiros. The question of status has been explored most explicitly by Bravo.³⁷ In his view, the Pistiros of the inscription is not an *emporion* but a *polis*, in the juridico-political sense of the term, while the *emporitai* referred to are subject to an Odrysian ruler. Pistiros cannot, on this reckoning, be connected with the site at Adjiyska Vodenitsa, nor, indeed, with any site so deep into the heart of the continent.³⁸ Pistiros must therefore refer to the coastal community referred to by Hdt. 7.109.2. The two references in Stephanos to a *polis* and an *emporion* of this name are therefore seen to apply to the latter. The site near Vetren would then be one of the *emporion* to which the text refers. A. S. Chankowski, co-author of the same article, adopts similar conclusions. The principal objection to their thesis is the fact that the inscription shows an Odrysian ruler manifestly dictating terms to the people of Pistiros. No contemporary source attributes to an Odrysian ruler such decisive power over coastal (Greek) communities. Nor does any contemporary source locate a major *emporion* on the Aegean coast, in the vicinity of Thasos. Neither of these two authors addresses the issue of whether the evidence of a coastal Pistiros squares with the evidence of complex traffic across Rhodope, with which the stipulations of the decree are specifically concerned. If Pistiros were on the Aegean coast, it is hard to see why an

³⁵ Velkov and Domaradzka (1994) 14–15.

³⁶ Hansen (1997a) 99, 103.

³⁷ Bravo and Chankowski (1999).

³⁸ “La ville de Vetren était-elle une *polis* au sens politique du mot? La question semblera sans doute absurde. Aux yeux de tous ceux qui se sont intéressés à cet établissement, il va de soi qu'il n'était une *polis*.” (Bravo and Chankowski (1999) 281).

Odrysian ruler would place most emphasis on the routes between Pistiros and Maroneia, and less on those between Pistiros and the “other *emporía*” (ll. 22–25), if the latter involved the most difficult overland routes. Indeed, the very vague way in which the “other *emporía*” are referred to in the inscription leaves no clear motive for the presence of the stone (originally) at Vetren. The relationship between the data on the stele and its siting would be opaque. Locating the epigraphic Pistiros on the Aegean coast does not fit the ancient literary evidence either, whether in near contemporary *periploi* or in the historical fragments reported in later transmissions, such as those of Stephanos of Byzantion. In order to interpret documents such as these inscriptions, we need to construct a clearer view of the evolution of *poleis*, or cognate forms, in inland Thrace.

2. *Lexicographic Sources—Stephanos of Byzantion*

The most informative source of information about communities of the Thracian interior is the treatise *Ethnika* by Stephanos of Byzantion. (Stephanos’ focus of interest lies in the names of various settlements, although he reproduces a limited amount of information concerning the status of his named locations, as well as references to communities not connected with specified centres.) “Thrace” is nowhere explained, of course, because Stephanos did not see it as his remit to analyse the contents of his list. Thrace thus extends from the Haimos mountains to the Chalkidic peninsula and the coastal regions of the Aegean as far as Therme, a geographical definition that corresponds neither to the politico-administrative divisions of his own day, nor to those of the Classical or Hellenistic periods, but one that we do find used in the principal narrative sources that supplied substantial parts of his data (as well as in C5 and C4 inscriptions).³⁹ Because of the linguistic focus of his work, Stephanos’ treatise does not distinguish between “Greek” and “non-Greek” *poleis*, but categorises sites simply as *poleis*, *polichnia*, *choria*, *akrai* and the like. Comparison with various *periploi* shows how Stephanos’ information might be illuminated further.⁴⁰ But there are two aspects of his work that render his data especially frustrating. One is that Stephanos’ text depends heavily on a limited number of illustrious pioneers, whose geographical knowledge was evidently ransacked for information by later writers, like

himself, without any more contemporary verification of whether the places or communities mentioned by earlier writers still existed, or how regions might have changed since then. The existence of a site or polity in Hekataios’ or Herodotos’ day is no guarantee that the same entity continued in succeeding centuries. On the contrary, it is more than likely that centres of population, and the status of communities, changed considerably over the huge time period that his treatise covers. Political considerations could influence the currency of a name, whether or not an autonomous community had existed previously in the locality.

The range of names represented in Stephanos’ treatise is a separate problem. In simple numerical terms, the largest number come from locations on or near the coast of the northern Aegean, with the Chalkidic peninsula and the coastlines west and east of it being particularly well represented, with far fewer names that can be associated with the Euxine coast. Even fewer can be identified as “continental”. It is difficult to judge whether the imbalance between the coast and the continental interior reflects a genuine phenomenon—that is, a general preponderance of maritime *poleis* over inland ones⁴¹—or whether a self-selecting principle is at work: *viz.* an over-reliance on *periploi* and similar treatises whose focus was inevitably coastal. Maps in Antiquity, with a few notable exceptions, were mainly coastal itineraries. Whereas knowledge of coastal geography played a vital role in maritime activity, and the need to map coastlines provided an important impetus to the creation of detailed descriptions for the benefit of sea captains, there was no analogous incentive to map inland areas, except for internal fiscal or administrative purposes. Access to ports and docking facilities, for non-local people, was far more straightforward than access to inland areas. Strabo’s *Geography* is just as prone to this imbalance between coastal and inland areas, as were earlier historians and geographers. Pliny’s knowledge of inland Thrace betrays a similar weakness. The majority of Stephanos’ Thracian *poleis* are not attributed to any writer. Of those that are attributed, Hekataios, Herodotos, Thucydides and Theopompos are most frequently cited, with Strabo, Polybios and Lykophon mentioned occasionally. Hekataios’ *Periegesis*, which became a model for later writers, shows a preponderance of coastal names. Some of these are rather obscure or other-

³⁹ See most recently Flensted-Jensen (2000).

⁴⁰ Flensted-Jensen and Hansen (1996).

⁴¹ Collis (2000), a study of Celtic *oppida* in Gaul, has speculated on the preponderance of nucleated sites of *polis* type on the Mediterranean coast of southern Gaul, in contrast to the more diffuse character of settlements in northern Gaul. The relationship between “tribal” formations and nucleated sites is a matter that has not yet been satisfactorily resolved by archaeologists and historians of the region.

wise unattested. These more obscure place-names may have been ephemeral. But most of the sites Hekataios referred to became more, not less, important as population centres.⁴² Leaving aside sites along the Aegean seaboard, which have been studied elsewhere, we are left with a small core of native-sounding names, notably Boryza (*FGrHist* 1 fr. 166), Lipaxos (fr. 149), Kreston (fr. 153), Iton (fr. 168) and Kabassos (fr. 169). (Note that the only one which is explicitly called a *polis* by Hekataios is Boryza (fr. 166), and here we learn that it is a *polis* inhabited by Persians, i.e. not by Greeks or Thracians. In the other four cases the site-classification of *polis* has no authority other than Stephanos and cannot with any certainty be traced back to Hekataios (Hansen (1997*b*) 17–18).) Stephanos quotes Hekataios about Boryza, to indicate that this was a *polis* of Persian origin before Cape Thynias. More surprisingly perhaps, Kabassos was a *polis* beyond the Haimos mountains, connected, in Hekataios' narrative, with the prodigal attitude of Thracians in those parts towards marriage. As Hansen has pointed out, Hekataios applied the term *polis* to a significant number of non-Hellenic communities.⁴³ Since he used the term *polis* in the political and geographical senses with respect to Hellenic *poleis*, it is interesting to speculate what he may have understood as the institutional framework of the non-Hellenic settlements at a time when commercial relations between the Aegean and other parts of the Mediterranean (or, indeed, beyond) were still comparatively rudimentary, and contacts of any kind irregular. Hekataios' fragments of the *Periegesis ges* give an impression of spectacular insights that have been blurred by the peculiar way in which his words have been transmitted. (The range of place-names is so erratic that we can see only small glimpses of what must, to him, have been a landscape full of *poleis*, from Eliburge (fr. 38), a *polis* of Tartessos, or Nurax in Keltike (fr. 56), to Chorasmie of the Parthians (fr. 293) and Kaspapyros, a *polis* of Gandara (fr. 295).) What is striking about this vision of Hekataios is that he used the same terms for communities that were culturally dissimilar. He perceived a complementarity in the sites of different regions, a complementarity that we find hard to understand, not least because most of our written evidence postdates the Persian War and the consequent tendency of Greek authors to distinguish Hellas from its neighbours.

Alongside Hekataios' sites in Thrace, we have a longer list of names from Stephanos, derived from a variety of sources, referring to non-coastal *poleis* about which very little is

known. We could even include here the putative native foundations of Byzantion, Mesembria Pontika, Poltymbria and Selymbria. Although the source is late (Nicolaus of Damascus), etymology presupposes some native connection that goes back to the founding days of these *poleis*.⁴⁴ Some of these are sites known in Hellenistic or Roman times as urban centres, but we lack sufficient data at present to be able to specify which communities had an earlier history as *poleis*. But these were not among the nuclei that became significant civic centres in Imperial times. Some names look like *polis* names derived from community or geographical ones.

Possible inland *poleis* referred to by Stephanos

Agessos (*Ἀγησσός*); Alybas (*Ἀλύβας*); Apsynthos (*Ἀψυνθος*); Arne (*Ἄρνη τῆς Ἐρασινίων*); Benna (*Βέννα*); Beres (*Βέρης*); Bibastos (*Βίβαστος*); Bizye (*Βιζύη*; cf. *RE* iii.1. 552; *SEG* 40 565); Boiotia (*Βοιωτία*); Daphnousion (*Δαφνούσιον*; cf. Daphnousios: *SEG* 43 880–83?, 884); Daunion Teichos (*Δαύνιον τεῖχος*); Doriskos (*Δορίσκος*); Epimaston (not a proper name?);⁴⁵ Gigonos (*Γίγωνος*); Goeis (*Γοεῖς*); Karos Kepoi (*Καρὸς κῆποι*); Kattouza (*Κάττουζα*); Kobrys (*Κῶβρυς*; cf. Ps.-Skylax 67: *emporion*); Kossaia (*Κοσσαία*); Lykone (*Λυκῶνη*); Lykozeia (*Λυκόζεια*); Milkoros (*Μίλκωρος*); Naisos (*Ναῖσος*); Nastos (*Νάστος*); Nestos (*Νέστος*); Nikaia (*Νίκαια*); Nipsa (*Νίψα*; cf. *Νιψαρων*; *SEG* 44 1302?); Nysa (*Νῦσα*); Passa (*Πάσσα*); Perne (*Πέρνη*); Phlegra (*Φλέγρα*); Phorunna (*Φόρθννα*); Pisey/Pitye (*Πισύη, Πιτύη*); Sirra (*Σίρρα*; cf. *SEG* 45 791: *Σιρραῖος*?); Spartakos (*Σπάρτακος*); Strambai (*Στραμβαι*); Therne (*Θέρνη*); Thestoros (*Θέστωρος*); Tomeus (*Τομεύς*); Tyllis (*Τύλλις*).

Although Stephanos rarely gives much additional information about his sources, occasionally we are rewarded. His references to Kabyle and Pistiros draw on the work of Anaximenes of Lampsakos, probably his *Philippic Histories* (Jacoby, *FGrHist* 72). Harpokration's reference to Masteira contains a telling comment: *viz.* that he could not identify any trace of a Drongylion or a Masteira (the places Demosthenes bandied about) in Anaximenes' *Philippika*, whereas there was mention of a Basteira, or Pisteira, or Epimaston (*FGrHist* 72 fr. 10). Could these belong to a digression on the names of Pistiros?⁴⁶ There is no evidence

⁴² Hansen (1997*b*).

that a Beroe/Beroia was another of Philip's foundations, on the site of Augusta Traiana (Stara Zagora),⁴⁷ and traditions about Binai are deeply confused.⁴⁸

3. Defining Thracian Poleis

The appearance of the term *polis* in a frankly non-Greek environment can be interpreted in at least three different ways. Either the communities so designated were constituted from without (as a result of colonisation, conquest or some other form of territorial acquisition by a Greek authority); or the term applies to native institutions, interpreted or equated with the Greek word *polis*. Third, it is at least theoretically possible that *poleis* appeared in non-Greek areas in emulation of Greek institutions. Each of these interpretations is closely associated with a particular vision of community development in and around the Aegean, or, more broadly, the Mediterranean, in the first millennium BC. Despite the paucity of written data for inland Thrace, there is evidence of *poleis*, however interpreted, from at least 500 onwards, though we know little of how they were organised internally. In a seminal paper Georgi Mihailov (1986) explored the evolution of towns in the Balkan region in Antiquity. Inevitably, much of his discussion ranged over material from the Imperial period. But he began his essay, consciously and deliberately, in the period prior to the Makedonian expansion into Thrace, exploring some of the principal ideas about internal socio-political development that had characterised Bulgarian scholarship in the 1960s and 1970s. It was clear from the ancient literature that cities did exist, but it was hard to find appropriate evidence. As an epigraphist, Mihailov was more conscious of the need to investigate institutions as well as typologies of place. In the 1980s, the subject of urbanisation began to attract more attention (Balabanov (1986)).

The study of political institutions in neighbouring Makedonia was beginning to produce interesting results that also had implications for their cognates in Thrace (Hatzopoulos (1984)). Much of this research was concerned with political institutions in the post-Makedonian and Roman Imperial eras. But, in tracing these back to their beginnings, Miltiades Hatzopoulos discovered how much had escaped the gaze of historians, who were still inclined to think mainly in terms of rulers and conquered, rather than of communities and their institutions. His *Macedonian*

Institutions under the Kings (1996) was a substantial monograph which attempted to sketch the relationships between individual communities and their representatives, on the one hand, and the machinery of government, on the other (Hatzopoulos (1997)). Far from being late attempts by rulers to impose order on their subjects, Makedonian civic institutions are emerging as a series of interconnected levels of government, beginning with the village and its connections with the nearest town. No such study is as yet possible for Thrace, but I believe that the organisation of cities and territories in this region would benefit from a similar approach (Archibald (2000)).

II. The Poleis

652. Alexandropolis Unlocated. Not in *Barr*. Type: B;β. The toponym is *Ἀλεξανδρόπολις* (Plut. *Alex.* 9.1); for *Ἀλεξανδρεία* at Steph. Byz., see *infra*. The *polis* status can be inferred from the toponym, but see *infra*.

The principal, perhaps, only source for this *polis* is Plut. *Alex.* 9.1: Alexander, left in charge of affairs and of minting in Makedonia during Philip's absence on campaign against Byzantion (no. 674) in 341, suppressed an uprising of the Maidoi, captured their *polis*, ejected its inhabitants, and settled a mixed community in their place, calling this new foundation Alexandropolis. The incident is usually connected with the same campaign that led to a confrontation between Antipater and Parmenio on the Makedonian side, with the "Tetrachoritai" on the other (*P.Ryl.* 1.19 = Theopomp. fr. 217; cf. Archibald (1998)).

The other possible source is Steph. Byz. 70.8: *Ἀλεξάνδρειαι πόλεις ὀκτωκαίδεκα* with 71.8–9: *τρίτη Θράκης πρὸς τῇ Μακεδονίᾳ*, "the one he founded before the big Alexandria, being seventeen years of age".

Since Stephanos lists all eighteen cities founded by Alexander under the heading *Ἀλεξάνδρειαι*, the presumption is that the third one, that in Thrace, is identical with Plutarch's Alexandropolis and that its name was in fact Alexandropolis, as reported by Plutarch. However, the story that Alexander founded a *polis* at the age of 16 or 17 may be just another anecdote about Alexander, of which there are so many in late sources (cf. Fraser (1996) 26 and 29–30).

653. Apros Map 52. Lat. 41.00, long. 27.05. Size of territory: ? Type: C: γ? The toponym is *Ἄπρος*, ἡ (*SEG* 37 618; (C4f); Steph. Byz. 107.5); the later Roman colony was called *Ἄπροι* in the plural (Ptol. 3.11.7; Plin. *HN* 4.47). Steph. Byz.

⁴⁷ *RE* iii.1.306, s.v. Beroia (3).

⁴⁸ Theophr. *De lapidibus* 2.15; *Etyim. Magn.* 197.44–46; Zambon (2000) 72 n. 4 with discussion.

107.7 is our only source for the city-ethnic Ἀπραῖος or Ἀπριος.

Apros is one of the names that appears on a silver bowl from Rogozen (SEG 37 618; cf. Archibald (1998) 121, 225, 234). In Steph. Byz. Apros is classified as a πόλις Θράκης (107.5). Stephanos quotes Theopompos: τοῦ δ' Ἀντιπάτρου διατρίβοντος περὶ τὴν Ἀπρον. It is clear from the quote that the classification of Apros as a polis does not stem from Theopompos. Thus the only thing we know about C4 Apros is that Antipatros was operating from Apros, probably against some native Thracians.

654. Kabyle (Kabylenos) Map 22. Lat. 42.30, long. 26.30. Size of territory: ? Type: C:γ. The toponym is Καβύλη, ἡ (Dem. 8.44, 10.15; Harp. K1; Steph. Byz. 346.1, quoting Polyb. 13.10.10). Variant forms are attested in late sources: Καλύβη (Plin. HN 4.41; Steph. Byz. 350.4; Ptol. 2.11.7) and, perhaps, Βαβύλη (Steph. Byz. 154.8). The city-ethnic is Καβυληνός (C2 coins: Head, HN² 278). Kabyle is called a polis in late sources only (Strabo 7.6.2; Steph. Byz. 350.4) and is described as a chorion by Harpokration, quoting Theopompos (fr. 220) and Anaximenes (FGrHist 72 fr. 12). At Suda (K9) it is referred to as a χώρα τῆς Θράκης. Kabyle was apparently a military colony founded or perhaps refounded by Philip II (Dem. 8.44; Strabo 7.6.2; Steph. Byz. 350.4) c.340 (Theopomp. fr. 220).

Ancient Kabyle was situated on a plateau overlooking a bend in the river Tonzos (modern Tundja), 7 km north of the modern city of Yambol (Velkov (1982a)). Excavated inscriptions have confirmed its location (Velkov (1991a)). In Antiquity, the river-bed of the Tonzos (modern Tundja, now occupied by a tributary of the Tonzos, the Azmak), lay some 3 or 4 km nearer Kabyle, and thus washed around its south-eastern periphery. The excavators assume that docking facilities would have existed close by. The nucleus of the ancient settlement was the acropolis of Zaiči vruh, where an Iron Age cult centre was located, associated in Hellenistic times with Artemis Phosphoros and Herakles (Velkov (1983) 237–38). Traces of occupation in the early Iron Age have been discovered on the lower hill to the south-east, called Hisarlik (Archibald (1998) 45 with further refs.).

Excavations along the lower slopes of Zaiči vruh, where the C4 western gateway and contemporary parts of the adjacent circuit wall were discovered (Domaradzki (1991)), have shown that the earliest occupation layer in this area dates from the same period, on the basis of imported amphora stamps of C4s (Domaradzki (1991) 59; Getov (1995) 99–101). Deep trenches in the Roman city have revealed evidence of

earlier deposits. None of this material has yet been published, although brief reports have appeared in the annual bulletin of excavations of the Institute of Archaeology, Sofia (Archeologicheski Otkriiya i Razkopki = AOR). Between 1986 and 1990, Getov excavated the road leading into the city from the western gate. Domaradzki revealed a road surface paved with river stones and fired clay sherds at the level of the early Makedonian gateway, and a similar road surface made of pebbles close to tower no. 2. Stone foundations belonging to various structures of the late Iron Age (second half of the first millennium BC) were discovered near the same tower and below the floor of the Roman horreum. The foundations of an oval(?) hut were found near the western gate, together with stone footings and clay floors belonging to residential units whose design cannot as yet be determined.

The most important evidence dating to the first 100 years after Philip II's foundation comes from burials in tumuli outside the city (Getov (1991)). These suggest that local élite families continued to dominate civic affairs; the names of moneys and such information as can be gleaned from epigraphic and written sources tend to confirm this impression (Draganov (1993); cf. Dimitrov in Dimitrov and Penchev (1984) concerning Seuthopolis; Archibald (1998) 311, 315–16). On the basis of numismatic, archaeological and epigraphic data, scholars have postulated a formative phase of the city while a Makedonian garrison was resident, c.340–280, followed by a period dominated by one or more local rulers, from c.280, with a marked diminution of activity from C2 onwards, precipitated perhaps by the aggressive campaigns of Philip V.

The spatial characteristics of the city in pre-Imperial times are uncertain. The agora and sanctuary (Phosphorion) of Artemis, mentioned in the Seuthopolis inscription, have not yet been located. The acropolis shrine was put out of use by a tower, associated by Velkov with the introduction of the Makedonian garrison, but activities at the shrine resumed, perhaps later in C3. Unpublished evidence from Hisarlik of extensive trading contacts in C5–C4 suggests that there may have been a permanent settlement there before the advent of Philip II; but how this changed in response to the Makedonian garrison, and the creation of a fortified enclosure, is still unknown.

Kabyle minted coins on behalf of two local leaders, Spartokos and Skostokos, and later for the Celtic chieftain Cavarus. An autonomous bronze coinage began some time in the second quarter of C3, showing the city's patron goddess, Artemis Phosphoros, and the legend KAB (Draganov

(1993), (1998)). In C₃ coins of Kabyle circulated in an area extending westwards along the upper Tundja valley north of Nova Zagora, and southwards some 40 km downstream (Draganov (1998) map 1). The issues of Spartokos and Skostokos suggest that whatever power they had was of limited scope and duration, and that they acted as lieutenants, or officials, rather than rulers (Draganov (1984), (1985); Archibald (1998) 311–12).

655. Philippopolis (Philippopolites) Map 22. Lat. 42.10, long. 24.45. Size of territory: ? Type: B:γ. The toponym is *Φιλιππόπολις*, ἡ (Steph. Byz. 666.9; Plin. *HN* 4.41; Dexippus ((*FGrHist* 100) fr. 27.1). The city-ethnic is *Φιλιπποπολίτης* (Steph. Byz. 666.10, perhaps just a conjecture). Philippopolis is called a *polis* in late sources only (Steph. Byz.; Dexippus) but probably by Theopompos too, since the late tradition about the nickname *Πονηρόπολις* seems to be a direct quotation of his work (Plut. *Mor.* 520B; Plin. *HN* 4.41; *Suda* Δ1423 = Theopomp. fr. 110, see *infra*).

Philippopolis (Plovdiv) is usually considered to have been one of the cities founded by Philip II when he was consolidating his power in Thrace after the defeat of Kersebleptes, the last independent ruler of the region (Diod. 16.71.2). Diodorus does not name any of the cities, but Pliny says “oppidum sub Rhodope Poneropolis antea, mox a conditore Philippopolis, nunc a situ Trimontium dicta” (*HN* 4.11.41), without specifying which king was being referred to. But Dexippus specifies that Philip is the son of Amyntas, which rules out Philip V (whom Domaradzki (1993) 36 preferred, judging by the absence of any clear military architecture before the late Hellenistic period). The epithet “Poneropolis” derives from Theopompos (fr. 110, see *supra*), and is consistent with the sort of moralistic, disparaging phrases the historian used liberally of Philip II (e.g. fr. 162; cf. Flower (1994) 119–30). Pliny takes the disparaging name too literally, assuming it to have been an earlier epithet of Philippopolis.

The historical origins of Philippopolis lie in the sanctuary that occupied part or all of the summit of Nebet tepe, which, together with Djambaz tepe and Taksim tepe, constituted “Trimontium” under the Roman Empire. The earliest traces of cult activity date to the early Bronze Age (Tsonchev (1938); Peykov (1990), (1994), (1995)). Some controversy has attached to the Iron Age remains that succeeded these (see Domaradzki (1998) 22–29; Popov (2000) 125–26). But recent excavations have shown that the cult centre here was far larger and more ambitious in C₄l and C₃e than had previously been thought (Koleva (1997); Koleva *et al.* (2000)

103–8). These discoveries have dispelled any doubts that may have existed about the religious nature of activities on the summit. Six locations have been investigated in detail on the summit of Nebet tepe, and one below it, on the eastern side of the ancient city. A concentric circular stone foundation (St. Matanov trench) marks a substantial structure belonging to the late Bronze or beginning of the Iron Age (i.e. in absolute dates, end of second and early first millennium). Cult deposits in the area of the temple continued until C₆ or C₅.

Approximately 300 m away, on the same terrace, three strata were identified belonging to the period between C₅ and C₃. In the latest stratum was the foundation of a rectangular structure, oriented north–south, whose hard-beaten floor contained a decorated hearth altar and a trapezoidal platform, the former resembling well-known types from Seuthopolis, Vetren and elsewhere in Thrace (Koleva *et al.* (2000) 104 fig. 1 for plan; fig. 3, hearth altar). Elsewhere rock carvings bring this sanctuary into line with upland cult sites in the Sakar and Strandja mountains and at Kabyle (Zaiči vrh). Twenty-six pits associated with cult activity and three hearth altars were discovered on Kamchya Street, at the north-eastern foot of Nebet tepe. This area seems to be linked with activities on the summit not just in terms of chronology (C₆ onwards) and function, but also in the design of specific structures. Some of the pits were superseded by a roofed construction, resembling the form of a building that succeeded the circular “temple” on the summit.

There is now growing agreement among scholars that D. Tsonchev was right to postulate a fortified enclosure on the summit of Nebet tepe before the Makedonian conquest (Tsonchev (1938); Botusharova (1963); Domaradzki (1998) 28; Koleva *et al.* (2000) 110–11; Popov (2000) 129). Traces of a wall made of river stones have been dated before C₆ (Domaradzki (1998) 28, with discussion). The earliest section of masonry in the city’s fortifications has been dated to between C₃ and C₂, and may be connected with the campaigns of Philip V rather than Philip II (Botusharova (1963)).

The nucleus of Iron Age activity at Plovdiv expanded from the summit of Nebet tepe to its surrounding plain. This expansion was already in progress in C₆–C₅. A little further from Nebet tepe, to the south-east, a cultural deposit of C₄–C₃ (4 m below the modern street) has revealed domestic structures and abundant movable finds (ceramics, including imported fine wares, numerous loom weights and coins of Maroneia, Philip II and Alexander III). In the vicinity are burial mounds and flat cremation burials dating

from C₃ to C₂ (Bospachieva (1995), (1997), (2000); cf. tumulus with built tomb near Filipovo (Botusharova and Kolarova (1961); Archibald (1998) 283, 296–98, 338)).

656. Pistiros (Pistirenos) Not in Barr., cf. *infra*. Size of territory: ? Type: C:β. The toponym is Πίστιρος (BCH 123 (1999) 248–49, hereafter BCH, see *infra*; Steph. Byz. 171.6, 524.11; *Etym. Magn.* 488.10 = Hdn. III.2 449.2). The city-ethnic is Πιστιρηνός (BCH 16), Steph. Byz. 524.11 erroneously conjectures Πιστιρίτης. Pistiros is classified as a *polis* by *Etym. Magn.* 488.10, as an *emporion* by Steph. Byz. 524.11: ἐμπόριον Θράκης). The collective and external use of the city-ethnic is attested at BCH 16.

Notwithstanding the alternative proposals put forward by Salviat (1999) and Bravo and Chankowski (1999) in favour of Herodotos' Pistryros on the Aegean coast (7.109.2) as the location of the epigraphically attested Pistiros, most scholars have accepted the arguments put forward by the editors, Velkov and Domaradzka, reinforced by the archaeological evidence adduced by M. Domaradzki, that the site of Adjyska Vodenitsa corresponds wholly or partly to the place and community referred to in the decree (Velkov and Domaradzka (1994), (1995), (1996); Domaradzka (1996), (2002a); Domaradzki (1993), (1995), (1996), (1998), (2000a), (2000c), (2002); Lazova (1996); Bošnjakov (1999); Hansen (1997a) 88, 90–91; Loukopoulou (1999); Archibald (1998) 224, 226–28, (2002a and b)).

The main source for Pistiros is the recently found C₄ inscription (BCH, discussed *supra* 887–90). It is a renewal of the privileges bestowed by the late Kotys on a community of Greeks in Pistiros. As a group the Greeks are called ἐμπορίται, a rare word presumably used synonymously with ἔμποροι, but not quite: ἔμποροι are traders who travel from place to place. The ἐμπορίται seem to be the inhabitants of the *emporion*, only some of whom were *emporoi* (ll. 10–11). Pistiros is not explicitly called an ἐμπόριον, but from the term *emporitai* and the reference to other *emporion* in the neighbourhood (ll. 22–24) it seems safe to infer that the place was an *emporion*, an inference supported by Stephanos' note: Πίστιρος, ἐμπόριον Θράκης (524.11).

In constitutional terms, Pistiros appears to be a *polis*, not just an urban centre, but it also enjoyed some degree of autonomy, which was asserted, as well as constrained, by the unnamed ruler in relation to other named and unnamed groups. It is worth noting that the terminology of the decree might be distinguishing between *oi Pistirenoi* (l. 16) and "Apollonians and Thasians who are in Pistiros" (ll. 32–33;

Maronitans, l. 28, also understood?). But the reference to Pistirenians comes from the main body of the decree, while the latter distinction is contained in the citation attributed to Kotys (I).

To understand the status of Pistiros, one must start with the toponym Πίστιρος (ll. 12, 22–24, 33) and the ethnic Πιστιρηνώμ (l. 16). Pistiros is a rare name, and it seems reasonable to assume that there must have been some connection between the *polis* Pistiros on the coast and the homonymous inland *emporion*, and that the Pistirenians living in the *emporion* were citizens of the *polis*, just as others among the inhabitants were citizens of Apollonia, Maroneia and Thasos (Hansen (2004); Velkov and Domaradzka (1994) 7; Loukopoulou (1999) 368 assumes a transfer of the settlement, i.e. a *metoikesis*). It is nowhere stated that the citizens of Apollonia, Maroneia and Thasos were among the *emporitai* = the Pistirinians. The Maronitai, Apolloniatai and Thasioi may well have been *emporoi*, i.e. travelling merchants or merchants living for a shorter or longer period in Pistiros without becoming citizens of the community.

One possible scenario is as follows (Hansen (2004)). The *emporion* of Pistiros was an inland trading station, originally founded by merchants coming from the *polis* of Pistiros, a dependency of Thasos situated on the Thracian coast (Hdt. 7.109.2). The core of the settlers (τῶν οἰκητόρων in l. 38) were from the outset citizens of the *polis* Pistiros (cf. Πιστιρηνώμ at l. 16), but some of the other inhabitants were citizens of Maroneia, Apollonia and Thasos (ll. 27–33), and in C₄ they may have formed the most important element of the population. It is apparent from the inscription that it was only one out of a number of *emporion* in inland Thrace involved principally in trade with Maroneia (ll. 21–24). The *emporion* was surrounded by native Thracians (τοῖς Θραιξίν in ll. 8–9). The mixture of four different ethnics suggests that Pistiros was not an ordinary *polis* in its own right. But we cannot exclude the possibility that Pistiros was a kind of dependent *polis* whose citizens are described as Πιστιρηνοί, and that the *Μαρωνῖται*, the *Θάσιοι* and the *Ἀπολλωνιῆται* lived in Pistiros as metics.

At present the origins of the *emporion* are uncertain. The site at Adjyska Vodenitsa was occupied some time in C₅ (Bouzek (2002a) discusses the evidence prior to C₅). Excavations have yet to reveal the character of the earliest settlement. During C₅, the area was (re)organised in a formal manner, based on a street system integrated with the fortification walls and the eastern gateway, through which

the main east–west road runs (Domaradzki (1993), (1995), (1996), (2002)). This east–west road has at least three major surfaces, which mirror the key events that affected life on the site in its three phases. The initial plan consisted of an ambitious double-faced masonry wall enclosing a grid plan of streets, paved with ashlar slabs, similar to the wall itself and the main drain. Some time in C4f, perhaps in the 370s, the eastern gateway was modified substantially, with the reconstruction of the exterior tower. This reconstruction heralds a phase of spectacular internal development, both architectural and commercial. Multi-roomed structures, on stone footings, roofed with imported and locally made tiles, can certainly be traced back to this period. The largest number of bulk imports, including storage amphoras from Chios, Thasos and elsewhere in the Aegean, together with Attic figured and black-glazed pottery, belong to this period. C.300, the eastern gateway perished in a fierce blaze and was never rebuilt in the same form. The successor gateway was far more modest and lacked many of the specific defensive features of its predecessor. The road was relaid with cobbles made of river stones, not dressed slabs (Domaradzki (1993), (1995), (1996), (2002)). There followed a lengthy period of redevelopment, involving the reuse of older materials. Some areas seem to have changed their function (Domaradzki (1999); Archibald *et al.* (2002)). The interpretation of this phase is still in progress.

One of the most remarkable aspects of the finds at Vetren is the large number of coins discovered during the excavations. The total number currently stands at c.1,800 items. A pot hoard of 552 Makedonian coins, datable to the 280s, was found by the Czech team in a building adjacent to the east–west road. The coins range from rare regal issues of Amadokos I, Kotys I, Amadokos II and other Thracian rulers, to imitation Thasian denominations, silver from Parion, the Chersonese, Mesembria and Apollonia on the Black Sea, as well as other Aegean civic coins. Other items of commercial significance include weights and measures, and graffiti. Domestic items include loom weights, spindle whorls, gaming tokens, metallic pins, needles, ornaments and other equipment, together with tools for domestic and industrial (metallurgical) use.

657. Seuthopolis Map 22. Lat. 42.40, long. 25.20. Size of territory: ? Type: B:γ. The toponym is Σευθόπολις (SEG 42 661.31 (C3e)). The *polis* status of Seuthopolis can be deduced from its toponym.

The name of the city indicates that it was either founded or refounded in C4l by Seuthes III, a Thracian prince who in the years c.325–315 asserted his independence of Makedonia (Bengtson (1962) 19–20). Seuthopolis is usually taken to be the residence of Seuthes III (Archibald (1998) 313). The city of Seuthes III was unknown until its chance discovery and excavation in advance of the construction of the Georgi Dimitrov Dam in the upper course of the river Tundja. The only known reference to Seuthopolis in written sources is in the inscription found in a room of the “palace” during its excavation. The publication formula (ll. 27–34) prescribes that one copy of the text be deposited in Seuthopolis (l. 31) in the sanctuary of the Great Gods, and a second copy in the *hieron* of Dionysos, in the agora (IGBulg. III.2 (1964) 146–49 no. 1731; Velkov (1991a) 7–11; SEG 42 661 (*ed. pr.*), 46 877*, 48 995).

The plan of the excavated city (8 km west of modern Kazanluk) covered a mere 5 ha and was situated on a ridge above the river Chiflikchiyska, a tributary of the Tonzos (Tundja), which protected the city on its eastern flank. From the other three sides it was enclosed by a circuit wall of brick on a foundation of two stone courses, the lowest of which forms a slight bench extending away from the outer face. Squarish towers protected the corners of a pentangular area, divided into *insulae* by a cruciform pattern of streets, north–south and east–west, with narrower cross-streets. The *insulae* were divided into residential property units, comprising house designs of *pastas* and *prostas* types. One room usually contained a decorated hearth altar. The north-western corner of the city plan was separated from the city by an additional fortification wall, also with towers at each corner, and entered through a gateway without special elaboration. The inscription refers to the agora, a sanctuary of Dionysos and a shrine of the Samothrakian gods. The latter shrine was identified with the complex of rooms in the “acropolis” area. The agora was situated north of the east–west road, but remains in the area were not sufficiently well preserved to allow any clear identification of the sanctuary of Dionysos.

The circulation of Seuthes III’s coins in a relatively homogeneous area suggests the possible scope of his political power. This area included the Valley of the Roses, the Thracian plain between the valley of the river Tundja on the east, including Kabyle, and the river Sazliyka in the west, east of Plovdiv, extending down the Hebros valley towards Haskovo and Svilengrad (Domaradzki (1987) 7 and map 2 = Archibald (1998) 312 fig. 13.1).

THRACIAN CHERSONESOS

LOUISA LOUKOPOULOU

I. The Region

North of the Hellespont—the only waterway linking the Aegean Sea to the Propontis and thence to the Black Sea—lay the relatively low peninsula (maximum altitude 300 m) called the Thracian or Hellespontine Chersonesos, or simply Chersonesos: ἡ Θρακία Χερρόνησος (Ps.-Skylax 67; cf. Ps.-Skymnos 698; Strabo 7 fr. 52); Χερσόνησος ἡ ἐν Ἐλλησπόντῳ (Hdt. 7.33); Ἐλλησποντία Χερρόνησος (Steph. Byz. 80.13); Χερρόνησος (Hdt. 6.36.2; Xen. *Hell.* 1.5.17).¹ The corresponding ethnic is Χερσονησίτης (Hdt. 4.137.1), or Χερρονησίτης (Dem. 5.25). The region is only indirectly known in the *Iliad* (2.836), where Sestos (no. 672) is mentioned together with Abydos (no. 765), its counterpart on the Asiatic shore of the Straits. It covers c.900 km² of mostly fertile agricultural land (Xen. *Hell.* 3.2.10), but above all, it was of major strategic importance. The Hellespont narrows to a width of 1.2 km just west of Sestos (between Dardanos and Kynos Sema), and provides a good crossing point and even the possibility of bridging from coast to coast. The peninsula is linked to the Thracian mainland by a narrow isthmus (minimum width 3 km). It was exposed to continuous marauding from neighbouring inland tribes, but could relatively easily be fortified and defended. The isthmus and the Long Wall—constructed from sea to sea as early as C6s (Hdt. 6.36.2; cf. Plin. *HN* 4.43, cf. 48) and repeatedly restored thereafter—constituted the inland border of the Chersonesos, at least in the Archaic and Classical periods (Ps.-Skylax 67; Ps.-Skymnos 698–712). However, Hegesippos (Dem. 7.39–41) claims that the frontier of the Chersonesos lay far beyond Agora—thus well beyond the isthmus wall on which Kardia (no. 665), Agora (no. 661) and Paktye (no. 671) were situated—and that its border was marked by the altar of Zeus Horios, between Pteleon and Leuke Akte, where Philip II planned to dig a canal.

According to the literary tradition (Ps.-Skymnos 698–710; cf. Strabo 7 fr. 50), the Chersonesos was first colonised by Aiolians, who came mainly from Lesbos. They founded Sestos (no. 672) and Madytos (no. 669) on the Hellespontine coast, and Alopekonesos (no. 659) at the southernmost end of the Gulf of Melas. The first colonists were followed by Milesians (no. 854), who founded Limnai (no. 668) (cf. Strabo 14.1.6), in collaboration with Klazomenians (no. 847), who founded Kardia (no. 665) (Strabo 7 fr. 50). At the southernmost end of the peninsula, opposite Sigeion (no. 791), on the site of Elaiou (no. 663), archaeological remains of the same period (C7) testify to a presumably Aiolian or Athenian settlement (Loukopoulou (1989) 35 n. 2 and 68 n. 6; cf. Isaac (1986) 192–93).

Before the end of C7, the strategic and financial importance of the Straits attracted the Athenians, who secured control over Sigeion, a Mytilenian colony on the Asiatic coast of the south entrance of the Hellespont. Athenian interests in the area were further pursued around the middle of C6 under Peisistratos. They were presumably triggered by a call of the native Chersonesitan Dolonkoi, who were threatened by the neighbouring Apsinthians (Hdt. 6.34ff.; cf. Hecat. fr. 163). Under the leadership of Miltiades the Elder, several Athenian colonies were founded or refounded: *viz.* Krithote (no. 667), Paktye (no. 671), Elaiou (no. 663) (Ps.-Skymnos 709ff; Ephor. fr. 40), Agora (no. 661) (Hdt. 7.58; cf. the *polis* Cherronesos in Hecat. fr. 163) and Kardia (no. 665) (according to Ps.-Skymnos 699–702). Next, Miltiades constructed the 36 stadia-long fortification wall across the isthmus of the peninsula (Hdt. 6.36.2). It was repeatedly rebuilt, first in C5 (Plut. *Per.* 19.1), then in C4e (Xen. *Hell.* 3.2.9–10), and again in later centuries (Procop. *Aed.* 4.12f). On the presumed location and traces of the wall, see Kahrstedt (1954) 11–14. Miltiades also sought to strengthen the defences of the Chersonesos against incursions by the Apsinthians by securing fortified outposts (see *infra* 903 (*Teichos Aratou*)). Miltiades became *tyrannos* of the Dolonkoi; he appears to have ruled the entire peninsula and was posthumously honoured as the *oikistes* of the Chersonesitan state (Hdt. 6.38.1,

¹ For a discussion of the dual use of the name Chersonesos (geographical as well as political) and the city-ethnic derived from the toponym, see Hansen (1997a) 21–22 and *infra* s.v. Chersonesos/Agora (no. 661).

103.4; cf. Paus. 6.19.6 for a dedication set up in Olympia in the name of the Chersonesitans).²

The political situation remained unchanged under his successors: Stesagoras, who inherited the oecist's powers (*ἀρχή*, Hdt. 6.38.1), and Miltiades the Younger (*στρατηγούontos καὶ τυραννεύοντος τῶν Χερσονησιτέων*, Hdt. 4.137.1). It is usually believed, however, that the old political entities, the *πόλεις συχναί* (Hdt. 6.33.1), represented by *δυναστεύοντες* (Hdt. 6.39.2; cf. Kahrstedt (1954) 8) survived alongside a central administrative centre with a *prytaneion* (Hdt. 6.38.2) presumably established in Agora (no. 661). The political identity of the Chersonesitan state is supported by the identification of a series of silver coins struck on the Euboic standard and dated c.515–493: *obv.* lion; *rev.* incuse square containing head of Athena, some with the legend *XEP* (Head, *HN*² 257; Seltman (1924) 141–42).

In the aftermath of the suppression of the Ionian Revolt, following the flight of Miltiades, the Chersonesos—except for Kardia (no. 665)—was occupied by the Phoenician fleet in 493 (Hdt. 6.33.1). The region joined the Delian League after its final liberation by Kimon, probably c.466 (Plut. *Cim.* 9.3–6, 14.1; Polyæn. 1.34.2; on the date, see Isaac (1986) 176–77). Athenian presence and control were further strengthened by Perikles, who restored the defence works on the isthmus and brought in 1,000 Athenian *epoikoi*, probably in 447 (Plut. *Per.* 19.11; on the date, see ML 48 and Isaac (1986) 177–80).

The survival or breakdown of the political entity established on the Chersonesos in C6 remains a matter of major controversy. In the Athenian tribute lists the enormous sum of 18 tal. was paid in the first period by the Cherronesitai (*IG* I³ 259.II.28, 260.x.6, etc.), whereas the Alopekonesians were independently assessed (*IG* I³ 263.v.14). But the sum was drastically reduced after 447/6 to a total of less than 3 tal., divided among a number of independently contributing Chersonesitan cities: Limnaioi (no. 668), Madytioi (no. 669), Elaiousioi (no. 663), Sestioi (no. 672), Alopekonesioi (no. 659) and Cherronesitai (no. 661) or *Χερρονεσιῆται ἀπ' Ἄγορᾶς*, listed from 443/2 in the Hellespontine district (*IG* I³ 269.II.14–21). The evidence has been variously interpreted as indicating either (a) the temporary survival of the Chersonesitan state or religious entity, or (b) an initial *syn-teleia* of otherwise independent city members, or (c) a switch from contributing ships to paying tribute by the group of individual Chersonesitan cities that are first listed

in the second period, or (d) as a consequence of the settlement of Athenian colonists.³ As for the few cities that are never recorded in the tribute lists (Krithote (no. 667), Paktye (no. 671), Kardia (no. 665)), it is inferred that they held on to the old Chersonesitan state, that they received the largest numbers of Athenian colonists and are presumably included in the *Cherronesitai/Cherronesitai ap' Agoras* of the tribute lists (Kahrstedt (1954) 18).

During the last decades of C5, the Pontic grain trade became of vital importance to the Athenian economy (Xen. *Hell.* 1.1.35–36; Isaac (1986) 180–81; Garnsey (1988) 132–33) and, consequently, the Hellespont became one of the centres of the final phase of the Ionian War (Thuc. 8.62.3, 99.2–107.1; Xen. *Hell.* 1.3.8–10, 1.5.17, 2.1.17–32). For the Chersonesos, a troubled period followed, marked by the ever growing pressure of the Odrysians, who now either directly or through vassal Thracian dynasts occupied vast tracts of the bordering inland region. Presumably they also controlled parts of the adjacent Propontic coast (see Bisanthe (no. 673)). Tensions were increased by the presence of famous exiled adventurers, such as the Athenian Alkibiades and the Spartan Klearchos. They held some forts and strongholds at the north-eastern border of the Chersonesos and on the adjacent Propontic coast, and they established themselves as mercenary leaders, providing protection against the Thracians (cf. Kahrstedt (1954) 22–24 and Isaac (1986) 180–85, with refs.). In 398 Chersonesitan envoys requested Sparta's help against Thracian incursions, and Derkyllidas undertook to restore the isthmus wall, now said to protect eleven or twelve *poleis* on the Chersonesos (Xen. *Hell.* 3.2.8–10; Diod. 14.38.6).

Entering the Peloponnesian League after the defeat of Athens, the Chersonesos appears to have hosted harmosts and persons who had received land from the Lakedaimonians (Xen. *Hell.* 4.8.5; cf. *An.* 7.2.15). In 378/7, a new political situation can be inferred from the list of members of the Second Athenian Naval League, where Elaious (no. 663) is the only city of the Chersonesos to be recorded (*IG* II² 43B.27); the rest of the Chersonesos was presumably occupied by the Persians and subject to the satrap Ariobarzanes. Athenian interests in the region were, however, reconfirmed in 365, when Ariobarzanes ceded Sestos (no. 672) and Krithote (no. 667) to Timotheos (Isoc. 15.108, 112); they must have entered the Athenian alliance in order to ward off continuous Thracian pressure (Xen. *Ages.* 26:

² On the political form and the extent of Miltiades' Chersonesitan "state", see the discussion in Kahrstedt (1954) 7–9; Loukopoulou (1989) 69–78, and, more recently, Hansen (1997a) 21.

³ For detailed bibliography and arguments, based mainly on relevant epigraphic and numismatic evidence, cf. Kahrstedt (1954) 14–18 and Isaac (1986) 178–80.

siege of Sestos by Kotys; Kardia (no. 665) controlled by Charidemos in 364/3). Despite the Athenian counter-offensive (Dem. 50), Sestos was in 361 conquered by Kotys with help from Abydos (no. 765), and soon afterwards the last Athenian strongholds, Elaious and Krithote, were besieged by Charidemos (Dem. 23.158, *hypoth.* 2.2; cf. Foucart (1909) 93, 113). Thracian control was extended over the entire Chersonesos with the fall of Alopekonnesos, which had become a nest of pirates (Dem. 23.166–67).

Under the successors of Kotys, the Athenians had an opportunity to regain control over the Chersonesos. A treaty favouring Athenian interests was eventually reached in 357, on terms that are hotly debated even today (Dem. 23.173; *IG* II² 126). The Hellenic *poleis* in Chersonesos became allies of both the Thracian princes and Athens, without becoming members of the second Athenian Naval League (Dreher (1995) 26). They were considered “free and autonomous” (*ἐλευθέρως καὶ αὐτονόμους*), but they were obliged to pay a tribute (*phoros*) and not allowed to leave the alliance; see most recently Veligianni (1995) 161–68). The ensuing crisis of the Thracian state encouraged the Athenians under Chares to seize Sestos (no. 672) in 353 and settle it with new colonists (Diod. 16.34.3–4; cf. the ships of Athenian colonists (*oikistai*) in Chersonesos in *IG* II² 1613.297–98 (353/2)), forcing Kersebleptes, already pressured by Philip II, to cede the entire Chersonesos except Kardia (no. 665). Dealing thereafter with Philip, who eventually crushed the Thracian power in 340, Athens secured her claims over the Chersonesos (except Kardia, now an ally of the Makedonian king) in the Peace of 346 (Dem. 19.78), and proceeded (343/2) to send fresh klerouchs under Diopeithes to the cities of the Chersonesos (Dem. 8 *hypoth.* 1). Direct Makedonian control is, however, attested for the area immediately “beyond Agora” (*ἐξω Ἀγορᾶς*) in the form of royal land granted by Philip II to Apollonides, a citizen of Kardia, thereby ignoring Athenian claims that it was “inside” the border of the Chersonesos (Dem. 7.39–41).

Despite the cruel massacre of the Sestians by Chares in 353 (Diod. 16.34.3–4), Athenian colonists appear to have been welcomed in the Chersonesos, and close relations are inferred from (a) the award to the Athenians in 346/5 of golden crowns (*IG* II² 1443) by the Elaiousian *demos* (l. 94), the *demos* in Chersonesos,⁴ the Alopekonneseans, the Madytians and some other unidentified cities (ll. 95–98) and, probably, the *demos* of the Chersonitans from Agora

(117–18); and (b) an Athenian decree of 341/0 (*IG* II² 228), which extended the privileges of the “Chersonesitans” to the Elaiousians, while instructing the *strategos* Chares to guarantee equal property rights to the Elaiousians and to the Athenian klerouchs settled in the Chersonesos. Athenian control of the Chersonesos came to a definitive end with the Peace of 337, when the *poleis* of the Chersonesos presumably joined Philip’s Panhellenic League (*IG* II² 236; for various restorations of the Chersonesitai in b7, see *Staatsverträge* no. 403). The latter evidence was interpreted (Kahrstedt (1954) 37–40) as revealing the formation of a new (federal?) political entity, which presumably included all Chersonesitan cities except Kardia (no. 665) and was responsible for issuing a series of bronze coins with the inscription *XEP* or *XEPPPO*: *obv.* lion’s head, or female head, or head of Athena; *rev.* corn-grain (Head, *HN*² 258; *SNG. Cop. Thrace* 844–49; for an alternative interpretation of this coinage, see *infra* 905).

Written sources provide us with information about a total of twenty-four named settlements on the Chersonesos of the Archaic and Classical periods.⁵ Owing to the lack of systematic archaeological research (with the exception of excavations at Elaious (no. 663)), only three of these settlements have been identified beyond reasonable doubt (Alopekonnesos (no. 659), Elaious (no. 663) and Madytos (no. 669)); the location of three others (Chersonesos/Agora (no. 661), Kardia (no. 665), Sestos (no. 672)) has been established with some degree of probability, while eighteen remain unlocated.⁶ The following Inventory comprises fifteen settlements considered to have been *poleis* of type A or B or C in the Archaic and Classical periods;⁷ the remaining nine are listed below in alphabetical order:

⁵ The list of settlements excludes sanctuaries, altars, *heroa* and other minor localities recorded in Classical or in late sources, such as Argos (App. *Syr.* 63); tomb/monument of Hekuba (Strabo 13.1.28: *Ἐκάβης τάφος*; Diod. 13.40.6; *Ἐκάβης μνημείον*, alternatively named *Κυνὸς σῆμα* (Thuc. 8.104.5; Strabo 13.1.28; Plin. *HN* 4.49)); *Ἐλλης τάφος* (Hdt. 7.58.2); *Λευκί ἀκτή* (Hdt. 7.25.2); *Πρωτεσιλάειον* (Strabo 7 fr. 52, 13.1.31; cf. Hdt. 7.33; Thuc. 8.102.3; Arr. *An.* 1.11.5; Plin. *HN* 4.49). On a city named *Αἰόλειον* attributed to the Thracian Chersonesos by Steph. Byz. 53.1, see Flensted-Jensen (1995) 117; according to Plin. *HN* 4.49, *Aiolion* was the name of the extreme tip of the Chersonesos peninsula (*extrema Cherronesi frons*).

⁶ Later sources provide the names of 7 additional settlements unattested in Classical sources: Aphrodisias (Ptol.) = Aphroditis polis (Steph. Byz.), Hexamilion (Ptol.), Theskos (Agathias), Kallipolis (Livy 31.16.5 (r209)); Kiberis (Procop.), Cissa (Plin. *HN* 4.48), Koila (= *Caela*, *Cuela*; Plin. *HN* 4.47).

⁷ This number is higher than the 11 or 12 suggested by Xenophon at *Hell.* 3.2.8–10 and the 12 listed in Ps.-Skylax, i.e. 11 toponyms after the heading *πόλεις* . . . *αἰῶε* plus Agora called *polis* individually. Note, however, that Aigos potamoi was not a *polis* in the period described by Xenophon and that Deris is outside the Thracian Chersonese proper.

⁴ Usually interpreted as the political community of Athenian colonists; cf. a decree of “the Athenians in Chersonesos” (*IG* II² 275 (336/5)).

1. Pre-Hellenistic Settlements not Attested as Poleis

Arrhianoi (Ἀρριανοί or Ἀρριανά) Locality on the Hellespontine coast of the Chersonesos (Thuc. 8.104.2: ἀπὸ Ἰδάκου μέχρι Ἀρριανῶν), otherwise unattested. Not in *Barr.*

Drabos (Δράβος) Strabo 7 fr. 51 (52). Locality on the north coast of the Chersonesos west of Kardia (no. 665), sometimes identified with Araplos (no. 660) (Kahrstedt (1954) 20 n. 47). *Barr. C.*

Idakos (Ἰδακος) Locality on the Hellespontine coast of the Chersonesos (Thuc. 8.104.2), otherwise unattested. Not in *Barr.*

Kobrys (Κῶβρυς) Listed as a πόλις Θράκης by Steph. Byz. 400.10, quoting Theopomp. fr. 84, but in such a way that we cannot be sure whether Theopompos is his authority for the toponym only or for the site-classification as well (Hansen and Nielsen (2000) 141). According to Ps.-Skylax 67, it was one of two *emporía* (with Kypasis, *infra*), both dependencies of Kardia (no. 665), located on the Gulf of Melas, south of the estuary of the river Melas (Hansen (1997*b*) 88–89). Kobrys has tentatively but unconvincingly been identified with Krobyle by *ATL* i. 480 followed by Kahrstedt (1954) 20 n. 47. *Barr. C.*

Koila (Κοίλα) According to Ptol. *Geog.* 3.12.4, a settlement on the Hellespontine coast of the Chersonesos, between Elaious (no. 663) and Sestos (no. 672). According to Plin. *HN*, a harbour on the Gulf of Melas (4.49) not far from Alopekonnesos (no. 659) (4.74). In *Barr.* identified with a site between Madytos (no. 669) and Sestos with remains of the Classical period. *Barr. C.*

Kypasis (Κύπασις) Listed as a πόλις περὶ Ἐλλάσποντον by Steph. Byz. 395.12, quoting Hecat. fr. 162, but in such a way that we cannot be sure whether Hekataios is his authority for the toponym only or for the site-classification as well (Hansen (1997*a*) 18). According to Ps.-Skylax 67, it was one of two *emporía* (with Kobrys, *supra*), both dependencies of Kardia (no. 665), located on the Gulf of Melas, south of the estuary of the river Melas (Oberhammer (1925); Kahrstedt (1954) 20 n. 47; Isaac (1986) 187; Hansen (1997*b*) 88–89). In *Barr.* Kypasis is located north of the river Melas. *Barr. C.*

Pteleon (Πτελεόν) Locality in the vicinity of Leuke Akte and the altar of Zeus Horios (Dem. 7.39–40); presumably

situated near Baklar Burnu (*ATL* i. 564 n. 5; Kirsten (1959) 1484, 2465; Isaac (1986) 197) and tentatively equated with Kypasis (Kahrstedt (1954) nn. 46–47; see *supra*, Kypasis). Not in *Barr.*

Teichos Aratou (τείχος Ἀράτου) A fort (presumably Thracian), in the vicinity of the isthmus of the Chersonesos, occupied by the Athenians under Miltiades (Paus. 6.19.6 (rC6); cf. Berve (1937) 39; Kahrstedt (1954) 10; Loukopoulou (1989) 74, 186). Not in *Barr.*

“Tower of Hero” (Ἡρώυς πύργος) A coastal locality, presumably west of Sestos (no. 672) (Strabo 13.1.22). Not in *Barr.*

II. The Poleis

658. Aigos potamoi (Aigos po(-)) Map. 51. Lat. 27.20, long. 26.35. Size of territory: 1 or 2. Type: C:*a*. The toponym is Αἰγὸς ποταμοί, οἱ (Xen. *Hell.* 2.1.24; *Marm. Par.* A57 (r468/7)), named after the nearby river: Αἰγὸς ποταμός (Ps.-Skylax 67; *IG* v.1 239.5 (C4ε)). The collective and internal use of the city-ethnic is attested in abbreviated form on some C4s coins: ΑΙΓΟΣ ΠΟ (*infra*).

Aigos potamoi was situated on the Hellespontine coast of the Chersonesos, not far from Sestos (no. 672), and presumably near the river Aigos potamos (Xen. *Hell.* 2.1.20–29; cf. schol. Ael. Arist. 164.17). Hauvette-Besnault (1880) 517–18 found no remains along the river. The actual distance between Sestos and the river Aigos potamos is c.105 stadia; but the distance between Sestos and Aigos potamoi was 15 stadia according to Xen. *Hell.* 2.1.25 and 280 according to Strabo 7 fr. 55. Both must be wrong, but Xenophon’s account of the situation leading up to the battle in 405 shows beyond doubt that Sestos must have been within walking distance of Aigos potamoi; see also πλῆσιον Σηστοῦ at schol. Ael. Arist. 1.167. It seems, *pace Barr.*, that Aigos potamoi must be located somewhere south of the river.

It is apparent from Xen. *Hell.* 2.1.25 and 28 that Aigos potamoi was not a *polis* in 405, but the silver coins of, probably, C5, and the bronze coins issued in C4s (*infra*) indicate that Aigos potamoi probably had had *polis* status at some point in C5, and probably acquired *polis* status again some time c.350: it is not among the *poleis* on the Chersonesos listed at Ps.-Skylax 67, a chapter that includes Datos (no. 629) and thus must be dated to C4m or a little later. Aigos potamoi is called a deserted *polichne* by Strabo (7 fr. 55) and a *polis* by Steph. Byz.

Aigos potamoi struck coins in C5–C4. (1) “Small silver coins with *obv.* head of a goat; *rev.* incuse reverse of the Chersonesian pattern” (Head, *HN*² 258, referring to BM). According to Head, these coins are certainly earlier than 405. (2) Bronze: *obv.* Demeter; *rev.* goat; legend: *ΑΙΓΟΣ ΠΙΟ*. Date: c.300 (Head, *HN*² 258; Kahrstedt (1954) 35, 38; Isaac (1986) 196; *SNG Cop. Thrace* 850–54); before Alexander: *BM*; C4; Grose/McClean; MacDonald/Hunterian).

659. Alopekonnesos (Alopekonnosios) Map 51. Lat. 40.20, long. 26.15. Size of territory: 2 or 3. Type: [A]:a. The toponym is *Ἀλωπεκόννησος*, ἡ (Dem. 23.166; Ps.-Skylax 67). The city-ethnic is *Ἀλωπεκοννήσιος* (*IG* II² 1443.97 (344/3)) or, once, *Ἀλωποκοννήσιος* (*IG* I³ 282.I.21). Alopekonnesos is not explicitly called a *polis* in any Archaic or Classical source, but in Ps.-Skylax 67, where *polis* is used in the urban sense, *Ἀλωπεκόννησος* is the fourth of eleven toponyms listed after the heading *πόλεις... αἰδε*. The political sense is attested in *IG* I³ 282.I.15 and 21, where the Alepokonnosians are listed under the heading *αἰδε πόλεις*. The collective use of the city-ethnic is attested internally in abbreviated form on C4 coins (*infra*) and externally in literature (Ephor. fr. 39) and in inscriptions (*IG* I³ 277.v.8). The individual use is attested both externally (*IG* XII.8 95 (C2), Imbros; *IG* XII.8 190.10–11 (C1), Samothrake; cf. Robert (1948) 37 (C1)) and internally in funerary inscriptions of Roman date, discovered at neighbouring sites in the Chersonesos, also with variant forms such as *Ἀλαποκονήσιος* (cf. Robert (1948) 37–39).

Alopekonnesos was situated between Limnai (no. 668) and Elaious (no. 663) (Ps.-Skymnos 705–7), at the southern end of the Gulf of Melas, directly north of Cape Mazousia and Elaious (Strabo 7 fr. 51). In Ps.-Skylax 67 it is listed between the unlocated settlements of Paion (no. 670) and Araplos (no. 660). It lay on a headland running out towards Imbros, a place swarming with robbers and pirates in C4m (Dem. 23.166–68). The presumed location of Alopekonnesos on the promontory of Küçük Kemikli, at the north end of Suvla Bay, following Strabo’s description, is archaeologically and epigraphically confirmed (Hauvette-Besnault (1880) 518–20; Picard and Reinach (1912) 277; Hutton (1914–16); cf. Robert (1948) 37–39; Isaac (1986) 189–91).

Alopekonnesos was founded by Aiolians, and the Alopekonnosians were the first to colonise Ainos (no. 641) (Ephor. fr. 39; cf. Strabo 7 fr. 52). The foundation of Alopekonnesos is presumed to antedate the C6 Athenian colonisation of the Chersonesos. It was probably integrated into the Chersonesitan state set up by Miltiades, but after

the flight of Miltiades and the Persian occupation, it regained its independence and became a member of the Athenian League. Thus, it is the first city of the Chersonesos to appear independently as a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 452/1 (*IG* I³ 261.III.29, mostly restored) to 429/8 (*IG* I³ 282.I.21 and III.55, almost entirely restored) a total of fifteen times, three times completely restored, paying 3,240 dr. in 450/49 (*IG* I³ 263.v.14), 1,000 dr. from 442/1 onwards (*IG* I³ 270.II.14, a reduction usually attributed to the establishment of Athenian klerouchs; cf. Kahrstedt (1954) 16; Isaac (1986) 179–80, 190), and later, from 435/4, 2,000 dr. (*IG* I³ 277.v.8). In 429/28 Alopekonnesos is listed (with Sestos (no. 672)) among *poleis* of the Hellespontine district that *καταδηλοῦσι τὸν φόρον* (present a voucher for tribute) (*IG* I³ 282.I.15–16 and 21), presumably contributing to the maintenance of the *hellespontophylakes* and serving as bases for the fleet patrolling the Hellespontine waters (*ATL* i. 449–50; cf. Thuc. 2.24.1). During the lengthy conflict between Athens and the Odrysians for control of the Chersonesos in the second-quarter of C4, Alopekonnesos, which had become a pirates’ nest, was besieged by the Athenians in 360/59 (Dem. 23.166–68), and seems to have become part of the Atheno-Thracian condominium, ratified by the short-lived treaty of 357 (*IG* II² 126; cf. Kahrstedt (1954) 27; contested by Veligianni (1995) 161–68). Ten years later Alopekonnesos joined the *demoi* of Chersonesos (no. 661) and of Madytos (no. 669) in awarding Athens a golden crown (*IG* II² 1443.95–97 (347/6)).

Alopekonnesos struck bronze coins from c.400 to c.200: *obv.* usually Dionysos, or head of maenad, rarely Apollo or Athena; *rev.* fox, or kantharos, or bunch of grapes; on later coins, ear of wheat. Legend: *ΑΛΩ* or *ΑΛΩΠΕΚΟΝ* (Head, *HN*² 258; *SNG Cop. Thrace* 856–61; Yarkin (1978)).

660. Araplos Map 51. Unlocated. Type: [A]:a? The only reference to the site is in Ps.-Skylax 67, where *Ἄραπλος* is one of eleven toponyms listed after the heading *πόλεις... αἰδε* and located between Alopekonnesos (no. 659) and Elaious (no. 663) on the north coast of the Chersonesos. Tentatively identified with Drabos (Kahrstedt (1954) 31 and n. 47). But Drabos (Strabo 7 fr. 51) is east of Alopekonnesos, while Ps.-Skylax locates Araplos south-west of that town (Isaac (1986) 188). Thus, the two sites should be distinguished as they are in *Barr*.

661. Chersonesos/Agora (Chersonesites ap’ Agoras) Map 51. Lat. 40.30, long. 26.45. Size of territory: 3. Type: A:a.

The toponym is either *Χερρόνησος* (Hecat. fr. 163) or, usually, *Ἄγορά* (Hdt. 7.58.2; Ps.-Skylax 67; Dem. 7.39 with schol. (no. 43, Dilts); Steph. Byz. 20.9). The city-ethnic is *Χερρονήσιοι* (Hecat. fr. 163) or *Χερρονεσίται* (IG I³ 259.11.28, 268.11.7). In literary sources, it is in most cases impossible to distinguish whether *Χερσονησίτης* is a city-ethnic designating the *polis* of Agora (no unquestionable example) or a regional ethnic designating all the inhabitants of the peninsula (cf. e.g. Hdt. 6.39: *οἱ Χερσονησίται . . . ἀπὸ πασέων τῶν πολίων*). Agora is called a *polis* in the urban sense by Ps.-Skylax 67 and in the territorial sense by Hdt. 7.58.2 (see Hansen (1996) 37). The political sense is implicitly attested in the Athenian tribute lists, where the Chersonesitai ap' Agoras are once recorded under the heading *πόλεις ἡλίδε* (IG I³ 282.B1.11–14). That it was a *polis* in the political sense as well is indicated by its membership of the Delian League (*infra*). The collective and external use of the city-ethnic is attested in the Athenian tribute lists (*supra*). The individual and external use of the city-ethnic *Χερσονησίτης* is attested in Attic funerary inscriptions (IG I³ 1301 (C5m); IG II² 10505 (C4m)), but in both cases it is impossible to decide whether the reference is to the Taurian or the Thracian Chersonesos.

Chersonesos/Agora was situated between Paktye (no. 671) and Kardia (no. 665) (Ps.-Skylax 67) in the middle of the isthmus of the Chersonesos peninsula, presumably on the line of the fortification wall constructed for defensive reasons by Miltiades (Hdt. 6.36.2). It is usually identified with Hellenistic Lysimacheia (Strabo 7 frs. 51 and 53), and is tentatively located at Bulair (ATL i. 564–65).

Chersonesos/Agora was presumably settled with Athenian colonists by Miltiades the Elder, honoured by law (*ὡς νόμος*) as *oikistes* with sacrifices and athletic games (Hdt. 6.38.1; see Isaac (1986) 166–67). It is believed to have been his capital (ATL i. 563), with the appellation *Agora* reflecting the function of the settlement as a market-place—indeed, the major trading centre with the Thracian tribes of the adjacent hinterland—situated on the *limes* of the Chersonesitan state, i.e. along the Long Wall constructed across the neck of the peninsula of the Chersonesos (Kahrstedt (1954) 7; in n. 10 he interprets *Ἄγοραῖον τεῖχος* in Steph. Byz. 20.10 as signifying “Agora by the Wall of Miltiades”). Undoubtedly Chersonesos/Agora received fresh colonists both in C5m, under Perikles, and in C4f, under Derkyliidas (Xen. *Hell.* 4.8.5 (398)), Chares (Diod. 16.34.3–4 (353/2)) and Diopeithes (Dem. 8 *hypoth.* (343/2)). In 347/6 a golden crown was awarded to Athens by the *demos* in Chersonesos (IG II² 1493.97, partly restored).

If Chersonesos/Agora was indeed the centre of Miltiades' Chersonesitan state, we should assume that it housed the *prytaneion* mentioned by Hdt. 6.38.2. It is generally believed that the entry *Χερρονεσίται* in the Athenian tribute lists refers to the *polis* Chersonesos/Agora, presumably representing the remains of the old Chersonesitan state. The Chersonesitai belonged to the Hellespontine district and are recorded in the tribute lists from 454/3 (IG I³ 259.11.28) to 418/17 (IG I³ 287.11.27) a total of seventeen times, twice completely restored. They are first recorded as *Χερρονεσίται* (IG I³ 268.11.7) but from, probably, 441/0 (IG I³ 271.1.34–35) mostly as *Χερρονεσίται ἀπ' Ἄγορᾶς* (IG I³ 277.v.9–10). Chersonesos was regularly assessed at 18 tal. from 454/3 to 452/1 (IG I³ 261.11.31), but 13 tal, 4,840 dr. in 450/49 (IG I³ 263.v.12). Their contribution appears drastically reduced to 1 tal. (IG I³ 270.11.13), perhaps after 447/6 (IG I³ 265.1.91, amount not preserved) following the establishment of 1,000 Athenian colonists under Perikles (ATL i. 563–64; Kahrstedt (1954) 15). Chersonesos was assessed for tribute in 425/4 (IG I³ 71.111.73–74).

Apart from the coins struck in C6–C5 when Chersonesos/Agora was the capital of Miltiades' state (*supra* 901), the Chersonesitai struck coins (silver and bronze) from c.350 onwards (Kraay (1976) 158; SNG *Cop. Suppl.* 99). (1) Half-sigloi in silver: *obv.* bounding lion with head reverted; *rev.* a variety of types in quadripartite incuse square (olive leaf, dolphin, lizard, etc.). (2) Small denominations in bronze: *obv.* lion's head, or head of Athena; *rev.* barley-corn; legend: *XEP* or *XEPPPO* (Head, *HN*² 257; SNG *Cop. Thrace* 824–49, *Suppl.* 99). These coins are often taken to be federal (Head, *HN*² 258; Kahrstedt (1954) 40; see *supra* 902), but they are apparently contemporary with the silver half-sigloi and with the C4s coins of Elaiou (no. 663), Krithote (no. 667) and Madytos (no. 669), and are better interpreted as a *polis* coinage struck by Agora/Chersonesos (M. H. Hansen *per litteras*).

662. Deris (Deraios?) Map 51. Lat. 40.40, long. 26.50. Size of territory? Type: B:a? The only reference to the site is in Ps.-Skylax 67, where *Δερίς* is listed as an *emporion* situated between the river Melas and Kobryis; cf. ATL i. 480, where a location between Ainos (no. 641) and the river Melas is proposed; see also Kahrstedt (1954) 20–21 with nn. 47–48; Isaac (1986) 187. *Δερίς* is tentatively equated with *Δειρή*, ethnic: *Δειραῖος*, recorded in Steph. Byz. 224.1–2 as a *polis* and a member of the Delian League (*πόλις Ἀθηναίων συμμαχική*). Following Meineke and Krech, the editors of IG I³ believe that Stephanos' source is Krateros' *συναγωγή*

ψηφισμάτων, and at *IG* I³ 100 fr. 26 they print the reconstructed city-ethnic Δεραῖοι. For settlements which were both a *polis* and an *emporion*, see Hansen (1997b).

663. Elaious (Elaiousios) Map 51. Lat. 40.05, long. 26.15. Size of territory: 2 or 3. Type: [A]:a. The toponym is Ἐλαιούσις, ὄ (Hdt. 7.22; Thuc. 8.102.2) or, later, Ἐλεούσις (Diod. 13.49.5; Strabo 7 fr. 51; Paus. 1.34.2). The city-ethnic is Ἐλαιούσιος (*IG* II² 228.9 (341/0)). Elaious is not explicitly called a *polis* in any Archaic or Classical source, but in Ps.-Skylax 67, where *polis* is used in the urban sense, Ἐλαιούσις is the sixth of eleven toponyms listed after the heading πόλεις . . . αἰδέ. The political sense is attested in *IG* II² 43.78 and B27, where the Elaioussians under the heading πόλεις are listed as members of the Second Athenian Naval League. The collective use of the city-ethnic is attested internally on C4s coins (*infra*) and externally in both literary sources (Hdt. 9.120.4; Thuc. 8.107.2) and inscriptions (*IG* I³ 285.II.81–82 (421/20); *IG* II² 228 = Tod 174 (340)). The individual and external form is found in a C4 honorary decree passed by the klerouchs in Samos (no. 865) (*SEG* 1 349 (C4), Samos; *IG* XII.6 253.12 (c.350)).

A city of the Thracian Chersonesos, Elaious is listed between Araplos (no. 660) and Madytos (no. 669) by Ps.-Skylax 67, between Alopekonnesos (no. 659) and Sestos (no. 672) by Ps.-Skymnos 707–8. According to Strabo (7 fr. 51 and 55), its precise location was on a bay directly east of Cape Mazousia at the southernmost tip of the Chersonesos, at a distance of 40 stadia from the city of Sigeion (no. 791). Strabo gives the distance from Kardia (no. 665) as just over 400 stadia, and from Sestos as 170 stadia. Thanks to archaeological and epigraphic finds, Elaious has been securely identified with the modern village of Eski Hissarlik at the eastern end of Morto Bay.

The archaeological evidence points to the presence of Greek colonists in C7l (Isaac (1986) 193). In C6m Elaious was colonised by Athenians under Φορβοων (Ps.-Skymnos 707–8), in *ATL* i. 289 n. 75 emended to Φρόνων (Loukopoulou (1989) 68). According to Bengtson (1939) 19–20, it is a legend fabricated to serve Athenian propaganda, but Elaious was undoubtedly in Athenian hands in C5e (Hdt. 6.140.1). Elaious was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 447/6 (*IG* I³ 265.I.100) to 421/0 (*IG* I³ 285.II.81–82) a total of fourteen times, four times completely restored, paying a *phoros* of 3,000 dr. in all years (*IG* I³ 265.I.100). In 430/29 and 429/8 the Elaioussians are listed among cities of the Hellespontine district who paid part of

their tribute in the form of *misthos* (*IG* I³ 281.III.47, 282B.I.9), presumably contributing to the maintenance of the *hellespontophylakes* (*ATL* i. 449–50; cf. Thuc. 2.24.1). Elaious was assessed for tribute in 425/4 (*IG* I³ 71.III.78–79). It is the only city of the Chersonesos to have joined the Second Athenian Naval League (*IG* II² 43.B27). It remained loyal to Athens even under pressure from Kotys and despite the siege by Charidemos in 360 (Dem. 23.158); cf. the golden crown awarded in 347/6 to the Athenians by the Elaioussian *demos* (*IG* II² 1443.93–95); its loyalty was recognised and recompensed by the Athenians: in 341 the privileges of the “Chersonesitans” were extended to the Elaioussians, who obtained equal property rights with the Athenian klerouchs settled in the Chersonesos, probably in 353 under Chares and in 343 under Diopieithes. On this occasion, the ambassadors of Elaious are presumed to have been awarded Athenian citizenship, since they were invited to dine (ἐπιδέπνον not ξένια) in the *prytaneion* (*IG* II² 228 = Osborne (1981) D15). In C4 a citizen of Elaious was granted *proxenia* by Chios (*PEP* Chios 50.10).

Elaious is known to have possessed a safe harbour at the southern entrance of the Hellespont (Hdt. 6.140.1; Thuc. 8.101) and at the eastern end of Morto Bay (Picard and Reinach (1912) 314–15; cf. Isaac (1986) 192–93). The sieges of Elaious in 411 (Thuc. 8.103.1) and in 360 (Dem. 23.158) indicate that the town was fortified in the Classical period. The tomb and sanctuary of Protesilaos were situated in the immediate vicinity of the city (Hdt. 7.33, 9.116; Thuc. 8.102; Arr. *An.* 1.11.5; Plin. *HN* 4.11.49; cf. Strabo 7 fr. 51 (52): Πρωτεσιλάειον). The *Protesilaion* was tentatively identified with a prehistoric mound on the western shore of the bay (Casson (1926) 217–18). Excavations of the cemetery of Elaious have confirmed both the first foundation of the city in C7l as an Athenian (or Aiolian) colony and the unambiguous Athenian predominance after 550 (Pottier (1915); *CRAI* (1915) 268ff, (1916) 40ff, (1921) 130ff; cf. *BCH* 44 (1920) 411; Waiblinger (1978)).

Elaious struck bronze coins from c.350 to 281: *obv.* prow, head of Athena, or of Artemis; *rev.* wreath, or owl, or bee; legend: ΕΛΑΙ, ΕΛΑΙΟΥΣΙΩΝ (Head, *HN*² 259–60; *SNG Cop. Thrace* 889–98).

664. Ide Map 51. Unlocated. Type: [A]:a? The only reference to the site is in Ps.-Skylax 67, where Ἰδέη is the second of eleven toponyms listed after the heading πόλεις . . . αἰδέ and, alongside Paion (no. 670), located between Kardia (no. 665) and Alopekonnesos (no. 659) on the north coast of the Chersonesos (Kahrstedt (1954) 20 n. 47; Isaac (1986) 188).

665. Kardia (Kardianos) Map 51. Lat. 40.35, long. 26.45. Size of territory: 2 or 3. Type: A:a. The toponym is *Καρδία*, *ἡ* (Hdt. 6.36.2; Charon of Lampsakos (*FGrHist* 262) fr.1–7; *IG* I³ 1144.35 (464)). The city-ethnic is *Καρδιανός* (*IG* XI.6 20.4, Samos (314–306)). Kardia is called a *polis* in both the political and the urban senses at Dem. 8.64 and 9.35. For the political sense, see also Dem. 23.181–82. For the urban sense, see also Hdt. 6.33.3, 36.2, 41.1, 7.58.2, 9.115.1. In Ps.-Skylax 67, where *polis* is used in the urban sense, *Καρδία* is the first of eleven toponyms listed after the heading *πόλεις . . . αἰδε*. The collective use of the city-ethnic is attested internally on C4s coins (*infra*) and externally in Hegesippos' speech about the Chersonesos (Dem. 7.41–44). The individual and external use is found in an Epidaurian proxeny decree (*IG* IV² 49.4 (C41)) and in an Attic funerary inscription (*IG* II² 8961 (C4)).

Kardia was situated at the southern end of the Gulf of Melas (Ps.-Skylax 67; Strabo 7 fr. 51; cf. Plin. *HN* 4.48), on the western coast of the isthmus of the Chersonesos, at the western end of the Long Wall, at a distance of 40 stadia from Paktye (no. 671) at the other end (Strabo 7 fr. 53). Kardia is considered to be the first *polis* of the Thracian Chersonesos (Ps.-Skymnos 698–99; Strabo 7 fr. 51; cf. Dem. 5.25) at a distance of 420 stadia from the southernmost tip at Elaious (no. 663) (Hdt. 6.36.2) or 400 stadia according to Ps.-Skylax 67. It is tentatively located at Cape Bakla Burnu, west of Baklar Liman (cf. Kahrstedt (1954) 13–14; Isaac (1986) 188 with n. 162).

Kardia was founded by Milesians (no. 854) and Klazomenians (no. 847), and refounded in C6m by Athenians under Miltiades the Elder (Ps.-Skymnos 700–3; cf. Strabo 7 fr. 51). The name of its *ktistes* was either Hermochares (Steph. Byz. 358.3–4) or Hermokrates of Miletos (schol. Dem. 5.25 no. 38, Dilts). An anecdote told by Charon of Lampsakos (*FGrHist* 262) fr. 1 indicates that the Kardians were defeated by the Bisaltians in a battle fought in, probably, C6. Kobrys and probably also Kypasis, *emporion* on the adjacent coast south of the estuary of the river Melas, are said to have belonged to the Kardianoi (Ps.-Skylax 67). Holding a key location for the Chersonesos (Dem. 23.182), Kardia was used by Miltiades II as a port of his capital in Chersonesos/Agora (Hdt. 6.41.1), and is said to have escaped occupation by the Phoenician fleet in the Ionian Revolt (Hdt. 6.33.1). Kardia's absence from the Athenian tribute lists is usually explained by assuming that, together with other unnamed neighbouring cities, it is included among the *Χερσονησίται*, later the *Χερσονησίται ἀπ' ἀγορᾶς* (Kahrstedt (1954) 18; Isaac (1986) 188). In the troubled

period following the defeat of Athens, Kardia fell under Thracian rule and became an operational base (*δρμητήριον*) for Charidemus under Kotys and his successors. Charidemus and the Kardians murdered the pretender Miltokythes, who was allied with Athens (Dem. 23.169, 175), and the city was explicitly excluded from all treaties between the Athenians and the Thracian kings (Dem. 23.181–82; cf. Diod. 16.34.4 for the treaty of 353/2).

After the eclipse of the Thracian kingdom, Kardia refused to admit Athenian klerouchs (Dem. 8 *hypoth.* 2; Diod. 16.34.4) and became allied with Philip II (Dem. 12.11), probably as early as 352 (Hammond and Griffith (1979) 380–81). He protected the city against attacks from the Athenian klerouchs and offered, in vain, the Athenians to settle the dispute by arbitration (Dem. 7.41–44). The Athenians refused, whereupon Philip sent a force to Kardia (Dem. 8.58, 64, *hypoth.* 2, 12.11). The Kardianoi are believed to have participated in 338/7 in the League of Corinth (city-ethnic tentatively restored in *IG* II² 236b7 by Kahrstedt (1954) 37–38). During the reign of Alexander, Kardia was ruled by a tyrant, Hekataios (Plut. *Eum.* 3.6), and in C41 *Ἡγησίστρατος Ἐκαταίου Καρδιανός*, presumably the son of the tyrant, was proclaimed *proxenos* and *theorodokos* of Asklepios and was granted *ateleia* and *asylia* in Epidauros (*IG* IV².1 49).

Kardia is said to have a *gymnasion* in C4 (Plut. *Eum.* 1).

Kardia struck bronze coins, probably from 350 to 309, when the city seems to have been incorporated into Lysimacheia: *obv.* head of Demeter wearing corn wreath, or lion, or lion's head; *rev.* lion, or corn-grain in linear square. Legend: *ΚΑΡΔΙΑ* or *ΚΑΡΔΙΑΝΟΣ* or *ΚΑΡΔΙΑΝΩΝ* (Head, *HN*² 259; *SNG. Cop. Thrace* 862–71; cf. Kahrstedt (1954) 38–40).

666. Kressa Map 51. Lat. 40.20, long. 26.35. Size of territory: ? Type: [A]:a? The only unquestionable reference to the site is in Ps.-Skylax 67, where *Κρήσσα* is the ninth of eleven toponyms listed after the heading *πόλεις . . . αἰδε* and is located between the river Aigos potamos and Krithote (no. 667) on the south coast of the Chersonesos. Presumably to be identified with Cissa listed in Plin. *HN* 3.48: *Cherronesos a Propontide habuit Tiristasin, Crithoten, Cissam flumini Aegos adpositam*. The position near the river Aigos potamos has led to the further identification of *Κρήσσα*/Cissa with the settlement of *Αἰγὸς ποταμοί* (no. 658) (Müller in *GGM* I 56; Kahrstedt (1954) 20 n. 47), which, however, must have been situated south of the river and close to Sestos (*supra* 903).

667. Krithote (Krithousios) Map 51. Lat. 40.25, long. 26.40. Size of territory: 2 or 3. Type: A:a. The toponym is

Κριθώτη (Hellan. fr. 27; Isoc. 15.112) or *Κριθωτή* (Ps.-Skylax 67; Strabo 7 fr. 55). The city-ethnic is *Κριθούσιος* on C4s coins (*infra*). Isoc. 15.107–8 calls Krithote a *polis* in both the political and the urban senses. In Ps.-Skylax 67, where *polis* is used in the urban sense, *Κριθώτη* is the tenth of eleven toponyms listed after the heading *πόλεις . . . αἰδε*. The internal collective use of the city-ethnic is attested on C4s coins (*infra*).

Krithote is listed among the cities of the Hellespontine coast south of Paktye (no. 671) and north of Kressa (no. 666) (Ps.-Skylax 67) or north of Madytos (Ps.-Skymnos 711) or north of Kallipolis (Strabo 7 fr. 55) or between Tiristasis and Cissa (Plin. *HN* 4.48). According to Steph. Byz. 384.18–19, it was situated at a distance of 80 stadia from Kardia (no. 665). Krithote must be located somewhere near modern Gelibolu (Isaac (1986) 191), and probably to the north (Kahrstedt (1954) 10–11) rather than to the south (*Barr.*).

Krithote was founded by the Athenians under Miltiades (Ephor. fr. 40; Ps.-Skymnos 712; see Obst (1932)). Never listed independently as a member of the Delian League, Krithote was presumably included among the *Chersonesitae* in the tribute lists. Occupied by Ariobarzanes in C4e, it was recovered by the Athenians under Timotheos (Isoc. 15.108, 112). Later besieged by the Thracians under Charidemos (Dem. 23.158), it remained, with Elaious (no. 663), an Athenian possession. The mention of a siege shows that Krithote was fortified.

Krithote struck bronze coins from c.350 to 281. *Obv.* head of Demeter, or of Athena; *rev.* corn-grain; legend: *KPI* or *KPIΘO* or *KPIΘΟΥΣΙΩΝ* (Head, *HN*² 259; *SNG Cop. Thrace* 886–88; cf. Kahrstedt (1954) 39–40).

668. Limnai (Limnaios) Map 51. Lat. 40.15, long. 26.15. Size of territory: probably 2. Type: [A]:a. The toponym is *Λίμναι, αἱ* (Hecat. fr. 164; Anaximenes (*FGrHist* 72) fr. 26; Ps.-Skymnos 705). The city-ethnic is *Λιμναῖος* (*IG* 1³ 71.III.107). In the Athenian tribute list of 429/8 the Limnaioi are recorded under the heading *πόλεις αἰδε* (*IG* 1³ 282B.I.11–13). Limnai is listed as a *πόλις ἐν Ἑλλησπόντῳ περὶ Σηστόν* by Steph. Byz. 417.11, quoting Hecat. fr. 164, but in such a way that we cannot be sure whether Hekataios is his authority for the toponym only or for the site-classification as well (Hansen (1997a) 18). However, its status as a *polis* is confirmed both by its membership of the Delian League (*infra*) and by its status as a colony of Miletos (no. 854). The city-ethnic is unattested in literary sources, but the collective and external use is recorded in the Athenian tribute lists (*infra*).

In Ps.-Skymnos 705, Limnai is located west of Lysimacheia and east of Alopeknesos (no. 659). In Strabo 7 fr. 51, it is located west of Kardia (no. 665) and Drabos and east of Alopeknesos. Isaac (1986) 189 states: “in the tribute lists it appears between Elaious and Alopeknesos”. But the only attestation of this sequence is in *IG* 1³ 272.II.30–34, where all ethnics are completely restored. Nevertheless, following Isaac, *Barr.* locates Limnai south of Alopeknesos.

Limnai was colonised by Milesians (Anaximenes (*FGrHist* 72) fr. 26; Ps.-Skymnos 705). It was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 447/6 (*IG* 1³ 265.I.97) to (*IG* 1³ 282.I.13) a total of thirteen times, five times completely restored, paying a *phoros* of 2,000 dr. in 447/6 (*IG* 1³ 265.I.97), reduced to 500 dr. in or before 442/1 (*IG* 1³ 270.II.11) and raised to 1,000 dr. in the years 433/2–429/8 (*IG* 1³ 279.II.25). In 430/29 (*IG* 1³ 281.III.67, restored) and 429/8 (*IG* 1³ 282B.I.13) the Limnaioi are recorded (together with the *Χερρονεῖται ἀπ’ Ἀγοράς*) as having paid their tribute to the *archontes*; presumably they had to contribute to the maintenance of magistrates established in these two cities, following the special measures instituted by the Athenians in the Hellespontine district; cf. Thuc. 2.24.1. Limnai, not mentioned by Ps.-Skylax, is believed to have vanished by C4.

669. Madytos (Madytios) Map 51. Lat. 40.10, long. 26.20. Size of territory: 3. Type: A:a. The toponym is *Μάδυτος, ἡ* (Hecat. fr. 165; Hdt. 9.120.4; Ps.-Skymnos 709). The city-ethnic is *Μαδύτιος* (*IG* 1³ 1144.II.34 (464)). It is called a *polis* in the urban sense by Hdt. 9.120.4. In Ps.-Skylax 67, *Μάδυτος* is the seventh of eleven toponyms listed after the heading *πόλεις . . . αἰδε*, where *polis* is used in the urban sense. The political sense is attested in the Athenian tribute lists, where Madytos appears under the heading *αἰδε* (*πόλεις*) (*IG* 1³ 281.III.51). The C4s mint is further evidence for *polis* status in the political sense (*infra*). The collective form of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (*IG* 1³ 271.II.34). The individual and external use is attested only in one late inscription (*IGRR* I 822).

Madytos is listed between Elaious (no. 663) and Sestos (no. 672) (Ps.-Skylax 67; cf. Ps.-Skymnos 709–10), to the east of Cape Kynos Sema and the site of Hekuba’s tomb, and west of Cape Sestias (Strabo 7 fr. 55); together with Sestos it lay at the narrowest part of the Hellespont (Ps.-Skymnos 709–10). The *Kynos Sema* or tomb of Hekuba (Strabo 7 fr. 55) presumably belonged to its territory, as indicated by the representation of a seated dog on the reverse of Madytos’ coins

(*infra*). The toponym survived through the centuries in the modern village of Maïto (now Eceabat), where several antiquities—including inscriptions—were discovered, confirming the identification (Hauvette-Besnault (1880) 506–10; Picard and Reinach (1912) 306–12; *IGRR* 1 822; cf. Robert (1948) 38–39; *BE* (1972) 279; Isaac (1986) 194).

Madytos was colonised by Lesbians (Ps.-Skymnos 709–10), presumably in C7 (Isaac (1986) 161), and in any case before the arrival of the Athenian colonists under Miltiades the Elder (*supra* 900). Some Madytians are listed in the Athenian casualty list of c.465 (*IG* 1³ 1144.34–38), indicating that the city was a member of the Delian League. Madytos belonged to the Hellespontine district and is recorded in the tribute lists from 445/4 (*IG* 1³ 267.v.3, completely restored) to 421/0 (*IG* 1³ 285.11.79) a total of twelve times, six times completely restored, paying 500 dr. (*IG* 1³ 270.11.12), attested until 440/39 (*IG* 1³ 272.11.32), later raised to 2,000 dr., attested from 435/4 (*IG* 1³ 277.v.5). In 430/29 Madytos is listed among those cities in the Hellespontine district whose tribute (*phoros*) of 1,920 dr. took the form of pay (*misthos*), presumably a contribution to the maintenance of the *hellespontophylakes* (*IG* 1³ 281.111.42–43 and 51; cf. Thuc. 2.24.1). Xen. *Hell.* 1.1.3 indicates that it possessed a good harbour, which served as a base for the Athenian fleet in 411 (cf. Casson (1926) 212ff). In 346/5 Madytos joined other cities of the Chersonesos in awarding Athens a golden crown (*IG* 11² 1443.98).

Madytos struck bronze coins in C4s. Types: *obv.* rushing bull and fish, or female head; *rev.* dog seated, or lyre; legend: *ΜΑΔΥ* (Head, *HN*² 260: from 350; *BMC*: before Alexander; *SNG Cop. Thrace* 923–26: 350 and later).

670. Paion Map 51. Unlocated. Type: [A]:? The only reference to the site is in Ps.-Skylax 67, where *Παιών* is the third of eleven toponyms listed after the heading *πόλεις . . . αἰῶδε* and, alongside Ide (no. 664), is located between Kardia (no. 665) and Alopekonnos (no. 659) on the north coast of the Chersonesos (Kahrstedt (1954) 20 n. 47; Isaac (1986) 188).

671. Paktye Map 51. Lat. 40.30, long. 26.45. Size of territory: 1 or 2. Type: [A]:a. The toponym is *Πακτύη* (Hellan. fr. 127; Hdt. 6.36.2). The city-ethnic remains unattested. The only source in which Paktye is described as a *polis* is the late Hellenistic Ps.-Skymnos 711, but in Ps.-Skylax 67 *Πακτύη* is the last of eleven toponyms listed after the heading *πόλεις . . . αἰῶδε*, where *polis* is used in the urban sense. According to Ps.-Skymnos 711–12, Paktye was founded by the Athenians under Miltiades, i.e. in C6. Kahrstedt (1954) 20 n. 47

and Isaac (1986) 196–97 suggest that Paktye in C5–C4 was a second-order settlement and a dependency of the *polis* of Chersonesos/Agora (no. 661), a view which seems to be contradicted by the only source we have (Ps.-Skylax). It should be noted, however, that Paktye is never included in the Athenian tribute lists and is not known to have minted coins.

Paktye was situated on the Propontic coast of the isthmus of the Chersonesos (Strabo 7 fr. 52 and 54), near the site of Helle's tomb (Hellan. fr. 127), at the eastern end of the fortification wall constructed by Miltiades across the isthmus (Hdt. 6.36.8; Strabo 7 fr. 54; Plin. *HN* 4.48). It lay east of Krithote (no. 667) and west of Leuke Akte and the Hieron Oros (Ps.-Skylax 67; Ps.-Skymnos 711–12; Strabo 7 fr. 56), at a distance of 40 stadia from Kardia (no. 665), which occupied the western end of the isthmus (Ps.-Skylax 67). Alkibiades is said to have sought refuge in Paktye in 408 (Diod. 13.74.2; Nep. *Alc.* 7.4). Its exact location remains uncertain (cf. Kahrstedt (1954) 13–14; Isaac (1986) 197).

672. Sestos (Sestios) Map 51. Lat. 40.15, long. 26.25. Size of territory: 3 or 4. Type: A:a. The toponym is *Σηστός, ἡ* (Hdt. 7.78; Thuc. 1.89.2; *IG* 11² 274.3 (C4m)) or *ὁ* (Xen. *Hell.* 4.8.5; Ephor. fr. 155); cf. Hom. *Il.* 2.836. The city-ethnic is *Σηστίος* (*MDAI* (1957) 165–69 2 = *IG* 11.6 43.3 (C4s)). Sestos is called a *polis* both in the urban sense (Hdt. 7.33; Thuc. 8.62.3; Isoc. 15.107–8) and in the political sense (Isoc. 15.107–8). Furthermore, after the heading *αἰῶδε πόλεις*, the Sestians are recorded in the Athenian tribute lists as members of the Delian League (*IG* 1³ 282B.1.20), and Sestos is recorded in Ps.-Skylax's list of cities on the Chersonesos (67). The collective form of the city-ethnic is attested internally on Hellenistic coins (*ΣΕΣΤΙ*, *SNG Cop. Thrace* 943), and externally in literary (Dem. 23.160) and epigraphical sources (*IG* 1³ 267.1v.33). For the individual and external use, see *MDAI* (1957) 165–69 2 = *IG* 11.6 43.3, Samos (C4s); *IG* 11² 10262–64, Athens (C4).

Sestos lay at the narrowest part of the Hellespont, opposite Abydos (no. 765), east of Cape Sestias where the bridge constructed by Xerxes touched the coast of Europe (Hdt. 7.33–34; Thuc. 8.62.3; Xen. *Hell.* 4.8.5; Ps.-Skylax 67; Polyb. 16.29.3–14; Strabo 2.5.22, 7 fr. 51, 55, 13.1.22; Ps.-Skymnos 709–10). It is probably to be located near Yalova, in the little bay of Ak-Bachi, on the dominating hill of the Teke of Ak-Bachi (Isaac (1986) 195, mentioning only a mediaeval castle and monastery).

Sestos was colonised by Lesbians (Ps.-Skymnos 709–10; Eustath. in Dionys. Per. 513 = *GGM* 11.314.43, quoting the lost part of Strabo 7), presumably in C7 (Isaac (1986) 161),

and in any case before the arrival of Athenian colonists in C6 (*supra* 900). Sestos was conquered by the Persians alongside all the other cities that were part of Miltiades' Chersonesitan state (Hdt. 6.33, 39), and governed by Artayktes (Hdt. 7.33, 78, 9.116–22). The city was besieged and captured by the Athenians in 479/8 (Hdt. 9.114–19; Thuc. 1.89.2; Diod. 11.37.4–5). Sestos was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 446/5 (*IG* I³ 266.v.24) to 421/0 (*IG* I³ 285.11.74) a total of thirteen times, five times completely restored, paying a *phoros* of 500 dr. (*IG* I³ 270.11.10) until 435/4, when it was raised to 1,000 dr. (*IG* I³ 277.v.7). In 429/8 Sestos is listed (with Alopekonnesos (no. 659)) among *poleis* which *καταδελόσι τὸμ φόρον* (present a voucher for tribute), presumably contributing to the maintenance of the *hellespontophylakes* and serving as bases for the fleet patrolling the Hellespontine waters (*IG* I³ 282B.1.20; cf. Thuc. 2.24.1; Bradeen and McGregor (1973) 3–23). Thanks to its strategic location for seafaring and the excellence of its harbour, Sestos served as a main base and strong point (*phourion*) for the Athenian fleet in 411 (Thuc. 8.62.2, *φρούριον*; cf. 102.1, 104.1, 107.1; Xen. *Hell.* 2.1.25, 4.8.5; Pol. 16.29; Strabo 13.1.22; Procop. *Aed.* 4.10, 5.1.8). After the battle at Aigos potamoi in 405, it was occupied by Lysandros (Diod. 13.106.8), who expelled the Sestians and gave the city and its territory to his officers; the Lakedaimonians, however, soon decreed that the Sestians should be restored to their country (Plut. *Lys.* 14.3). Liberated from the Lakedaimonians by Konon in 393 (Xen. *Hell.* 4.8.3, 5, 6), the city

fell under the rule of Ariobarzanes who, assisted by Agesilaos and Timotheos, averted its occupation by Kotys in 365 (Xen. *Ages.* 2.26; Isoc. 15.108, 112) and presumably gave it to Timotheos together with Krithote (no. 667) (Nep. *Tim.* 11.3). Sestos was eventually occupied by Kotys with support from Abydos (360). In 353 the city was seized and exposed to *andrapodismos* by the Athenian general Chares: the adult population was killed, the rest enslaved (Diod. 16.34.3), and new colonists (klerouchs) were settled by Chares in 353/2 (Diod. 16.34.4; *IG* II² 1613.297). An Athenian(?) *archon* in Sestos is mentioned in an Athenian decree of the same period (*IG* II² 274; cf. the *archontes* in Chersonesos in *IG* II² 275 (before 336/5)). In 355/4, the year before the *andrapodismos*, a citizen of Sestos was granted *proxenia* by Athens (*IG* II² 133).

Information about political institutions and public architecture is amply attested in inscriptions of Hellenistic and Roman date, especially in the famous honorary decree for the *gymnasiarchos* Menas (*I.Sestos* 1 (C2)).

Hdt. 9.115 describes Sestos as the strongest fortress (*teichos*) of the region, and according to Theopomp. fr. 390 it was small but strongly fortified and was connected with its harbour by long walls, 2 *plethra* (61 m) apart (cf. Xen. *Hell.* 4.8.5; Ages. 2.26). The C4m Athenian rhetor Peitholaos called Sestos “the Baker’s board of the Peiraeus” (Arist. *Rh.* 1411^a14–15), undoubtedly referring to its importance for the Athenian import of grain from the Pontic region.

Sestos did not begin to strike coins until c.300 (Head, *HN*² 260–61; cf. Kahrstedt (1954) 39).

PROPONTIC THRACE

LOUISA LOUKOPOULOU, ADAM LAITAR

I. The Region

The European coast of the Propontis was settled by Megarians (no. 225) and Samians (no. 864). By 480 four colonies are recorded: *viz.* from east to west, Megarian Byzantion (no. 674) and Selymbria (no. 679), and Samian Perinthos (no. 678) and Bisanthe (no. 673), along with two probably smaller and presumably dependent settlements, Tyrodiza (no. 681) and Heraion [Teichos] (no. 676) (Loukopoulou (1989) 51–57).

The settlement pattern appears enriched after the middle of C5. In the Athenian tribute lists are recorded not only the Greek colonies of this area, with the addition of Tyrodiza, but also new independent members: *viz.* Neapolis “from Athens” or “by Chersonesos” (no. 677) (evidently an Athenian colony), Daminon Teichos (no. 675) and Serrion Teichos (no. 680). The absence of Bisanthe and Heraion Teichos from the tribute lists is usually believed to indicate a probable extension in C5m of Thracian rule over the north-western part of the coastal zone (Hdt. 7.137; Thuc. 2.67). In fact, Bisanthe first appears in the assessment decrees of 425/4 (restored) and 422/1, and then again in 410/9 (restored). With the rest of the western Propontis it probably came under Athenian control after the victory at Kyzikos. Other sites—*viz.* Ornoi, Ganos and Neon Teichos, probably situated in the westernmost part of the Propontic zone—are first attested in connection with Alkibiades’ activity in the area soon after 410.

In the following century, Ps.-Skylax 67 lists a total of six “Thracian *teiche*” between the Chersonesos and Perinthos. From west to east they are Leuke Akte, Teiristasis (usually identified with Herodotos’ Tyrodiza), Herakleia, Ganos, Ganiai and Neon Teichos. A seventh—Daminon Teichos—is recorded between Perinthos and Selymbria.

Furthermore, a number of settlements—some of them of unspecified origin and status—are attested as places

conquered by Philip II. They are Apros, Ergiske, Ganos, Ganiai, Hieron Oros, Myrtenon/Myrgiske and Serrion Teichos (Theopomp. fr. 160; Dem. 18.27; Aeschin. 2.90, 3.82). Two of them, Apros and Ergiske, together with Beos and Sauthaba, are now epigraphically attested on silver vessels from the treasure discovered in Rogozen in north-west Bulgaria (SEG 37 618 (C4f)). All of these should be more or less safely located in the hinterland of the Thracian Chersonesos and the Propontic coast. Indeed, the vast area extending east of Ainos (no. 641) to the Gulf of Bisanthe, occupied in C6–C5 by the Apsinthians (Hdt. 6.39ff, 9.119.1) and dominated by the imposing heights of the Hieron Oros (= modern Tekir Dag), seems regularly to have shunned permanent Greek control before the Makedonian conquest, despite its importance for land communications between the Propontic coast and the Gulf of Melas. As in other parts of Thrace, the territories of the Greek colonies did not extend far inland; no Greek foundations are recorded in the hinterland of south-east Thrace, despite the explicit mention of a land route linking the western Pontic coast with the Propontis (Hdt. 4.90.2). According to literary and epigraphic sources of Roman date, the rich plain of the river Ergines, dominated by Mt. Strandza and as far as Cape Thynias—thus in the immediate hinterland of Perinthos and Byzantion—was the land of the Thracian *ethnos* of the Astai (Strabo 7.6.1–2; Steph. Byz. 137.12, quoting Artemidoros; Livy 38.40.7; Ps.-Skymnos 729; cf. Sayar (1998) 412, no. 294). In the latter part of C5 and until the conquest of Thrace by Philip II, the same area appears to have been under Odrysian rule, either directly or indirectly through suzerainty over local dynasts or chieftains; at times this rule extended as far south as the north-western part of the Propontic seaboard (Xen. An. 7.5.8).

Particularly notable in this area is the exceptionally frequent use of the technical term *teichos* as a standard component of toponyms and often also of the ethnics derived from the toponyms. Such names denote fortified places and indicate the imperative need for protection of the agricultural *chora* of the colonies from incursions by native or

neighbouring (sometimes even remote) barbarian tribes (Loukopoulou (1989) 185–90). Indeed, the rise of the Odrysian power in the latter part of C5 intensified the precarious situation of the Greek settlements and the need for external support from the leading Greek powers with vested interests in the area, in particular the desire to control the only maritime access to the Black Sea through the Hellespont and the Bosphoros.

The historical and political map of the area is doomed to obscurity owing to the scarcity of literary sources, the lack of systematic archaeological investigation in the Propontic region and, in recent years, the dramatic development and uncontrolled urbanisation of the coastal zone. In all, a total of twenty-two ancient toponyms are known to denote settlements of the Propontic coast and the adjacent Thracian hinterland, not including the altar of Zeus Horios, the “advanced” boundary (*horos*) of the Thracian Chersonesos, between Pteleon and Leuke Akte (Dem. 7.39–41). Of these, only four (Byzantion (no. 674), Heraion (no. 676), Perinthos (no. 678) and Selymbria (no. 679)) are explicitly described as *poleis* in literary sources of Classical date. Mainly on epigraphic and numismatic evidence, five others are more or less securely believed to have been *poleis* at least during part of the same period, *viz.* Bisanthe (no. 673), Daminon Teichos (no. 675), Neapolis “from Athens” (no. 677), Serrion Teichos (no. 680) and Tyrodiza (no. 681). Yet only two of these (Bisanthe and Tyrodiza) can be identified with some degree of certainty. For the remaining thirteen, listed below in alphabetical order, the existing evidence is inconclusive.

1. Pre-Hellenistic Settlements not Attested as Poleis

Apros (Ἄπρος) According to Steph. Byz. 107.5, a *polis* in Thrace, conquered by the Makedonian army in C4m (Theopomp. fr. 160). The toponym is epigraphically attested on C4f silver vessels in the treasure of Rogozen, north-west Bulgaria (SEG 37 618). Situated at a distance of 22–26 miles west of Rhaidestos on the eastern extension of the *Via Egnatia* (Plin. HN 4.11.48; *It. Ant.* 175, 332, 333, 334; *It. Burd.* 601: *civitas Apris* 24 [miles]), it is tentatively identified with a site of Roman date located near the village of Germeyan (Polychronidou-Loukopoulou (1990)). *Barr.* RL, but C also attested (*supra*).

Beos or Beon (Βέος or Βέον) Epigraphically attested on C4f silver vessels in the treasure of Rogozen, Bulgaria (SEG 37 618: ἐγ Βέο), it was tentatively identified with the Roman

mutatio Bedizo, halfway between Rhaidestos and Apros (*It. Burd.* 601; Polychronidou-Loukopoulou (1990)); cf., however, the *mutatio* Beodizum situated according to the same source halfway between Tzurullon (= modern Corlu) and Perinthos (no. 678) (*It. Burd.* 570.2), tentatively located in the area of the village of Türkmenli, near the remains of an ancient bridge (Sayar (1998) 67). *Barr.* (s.v. “Beodizo”) L, but C also attested.

Ergiske (Ἐργίσκη) Called *chorion* at Dem. 7.37, 18.27; Aeschin. 3.82; and Harp. s.v. Epigraphically attested on C4f silver vessels in the treasure of Rogozen, Bulgaria (SEG 37 618). Not in *Barr.*

Ganiai (Γανίαι) In Ps.-Skylax 67, Ganos and Ganiai are listed as the fourth and fifth of six Thracian *teiche*. MS *Γανίαι* is sometimes interpreted as a corruption of Πάνιον (see *infra*); but this emendation is unlikely when Ps.-Skylax’s text is compared with Aeschin. 3.82, where a list of *choria* in Thracian Propontis ends with Γάνος καὶ Γανιάδα. Some commentators have rejected the toponym *Γανιάδα* as a sarcastic duplication of Ganos (Richardson (1889) 102), but its existence is ensured by a number of lexicographers, principally Harp. Γ3, quoting the C2 geographer Artemidoros; see also Phot. Γ30 and *Suda* Γ59. Either *Γανίαι* and *Γανιάς* are variant toponyms or *Γανίαι* in Ps.-Skylax should be emended to *Γανιάς*. Not in *Barr.*

Ganos (Γάνος) According to Aeschin. 3.82 a *chorion*; in Xen. *An.* 7.5.8 listed as a *teichos* and together with Bisanthe (no. 673) and Neon Teichos; in Ps.-Skylax 67 listed under the heading *τείχη τάδε*. In *Barr.* identified with Serrion Teichos (no. 680) and dated C.

Herakleia (Ἡράκλεια) In Ps.-Skylax 67 listed as the third toponym after the heading *τείχη τάδε* (after Teiristasis/Tyrodiza and before Ganos), and usually identified with Heraklitza/Erikli (Isaac (1986) 202). In *Barr.* identified with Neapolis (no. 677) and dated C.

Krobyle (Κρωβύλη) An unlocated settlement, together with Tiristasis (*infra* 914) exposed to *andrapodismos* by the Athenian general Diopieithes in 341 (Dem. 12.3; cf. Dem. 8 *hypoth.* 2–3); tentatively but unconvincingly identified with Kobrys by ATL i. 480 followed by Kahrstedt (1954) 20 n. 47. For Kobrys, one of the *emporía* of Kardia (no. 665) in the Gulf of Melas, see *supra* 903. For an equally unlikely equation with *Neapolis ap’ Athenon* (no. 677), see ATL i. 525. Not in *Barr.*

Myrtenon (Μυρτηνόν) Together with Serrion Teichos (no. 680) and Ergiske, one of the ἐπίκαιρα χωρία held by

the Thracians in C4m (Dem. 18.27). A *phourion* according to Harp. *M44*, quoting Marsyas (*FGrHist* 135) fr. 1 and Anaximenes of Lampsakos (*FGrHist* 72) fr. 14. Conquered in 346 by Philip II (Lib. *Decl.* 23.1.41). Ironically referred to in the diminutive form *Myrtiske* (*Μυρτίσκη*), it appears in Aeschin. 3.82 alongside Serrion Teichos (no. 680), Doriskos, Ergiske, Ganos and Ganiias. Not in *Barr.*

Myrtiske See Myrtenon (*supra*).

Neon Teichos (*Νέον τεῖχος*) A fortified town (Xen. *An.* 7.5.8; *teichos*; Nep. *Alc.* 7.4; *castellum*), one of the strongholds of Alkibiades, listed with Bisanthe (no. 673) and Ganos as offered by Seuthes to Xenophon; situated on the Propontic coast between Ganos and Perinthos (no. 678) (Ps.-Skylax 67 lists it under the heading *τείχη τάδε*); identified with *Didymon Teichos in *ATL* i. 481–82, but cf. Robert (1948) 56 n. 1; Kahrstedt (1954) 21–24; Isaac (1986) 212). *Barr.* C.

Ornoi (*Ὀρνοί*) One of the forts in Alkibiades' possession (Lys. 14.26; Nep. *Alc.* 7.4; *castellum*; also attested in Hierocl. *Synekd.* 632.6 together with Panion and Ganos; cf. *ATL* i. 475; Isaac (1986) 212). On the possibly related cult of Zeus Orneos, cf. Robert (1974*b*); *BE* (1976) 467. *Barr.* C?

Panion, Paniai Proposed emended form of *Ganiiai* (*Γανίαι*) in Ps.-Skylax 67, allegedly the "Greek name of Bisanthe" (no. 673), equated with Byzantine Panion/modern Panados/Baniado; now Barbaros (*ATL* i. 475; cf. Isaac (1986) 213 and Sayar (1992) 188–89 with bibliography and references; cf. more recently Sayar (1998) 62). *Barr.* C.

Sauthaba (*Σαύθαβα*) Epigraphically attested on C4f silver vessels in the treasure of Rogozen, Bulgaria (*SEG* 37 618); possibly identical with *Sauada* (*Σάυαδα*) listed in Hierocl. *Synekd.* 47.4*b*. Not in *Barr.*

T(e)iristasis (*Τειρίστασις*) One of the Thracian *teiche* on the coast of the Propontis, between Leuke Akte and Herakleia (Ps.-Skylax 67). Together with Krobyle exposed to *andrapodismos* by the Athenian general Diopeithes in 341 (Dem. 12.3; cf. Dem. 8 *hypoth.* 2–3). Identified with mediaeval *Peristasis* = modern Peristeri = present-day Sharkeui (schol. Dem. 12.3; cf. *ATL* i. 558 with references; Isaac (1986) 203–4). Tentatively identified with Tyrodiza (no. 681) in *Barr.*, see 922. *Barr.* C.

2. Unidentified Settlements

Archaeological remains of Roman date, including inscriptions, have been found in several, mostly unidentified

locations along the northern Propontic coast and in the adjacent hinterland, mainly along the line of well-known Roman roads. Substantial archaeological remains of Classical to Hellenistic date have been found only in the following two unidentified sites in the area of Perinthos (no. 678).

Aytepe-Altintarla Coastal settlement of Classical–Hellenistic date, 14 km west-north-west of Perinthos (no. 678), tentatively identified with Heraion Teichos (no. 676); cf. Sayar (1998) 64 with n. 64; cf. no. 288: C5 epitaph. Not in *Barr.*

Değirmenaltı Sayar (1992) 188. *Barr.* A.

II. The *Poleis*

673. Bisanthe (Bisantenos) Map 52. Lat. 41.00, long. 27.30. Size of territory: 2. Type: B.a. The toponym is *Βισάνθη, ἡ* (Hdt. 7.137.3; Xen. *An.* 7.2.38; *IG* 1³ 77.iv.10). The city-ethnic is *Βισανθηνός* (C3f coins: Head, *HN*² 266; Schönert-Geiss (1975) 1–11). The only explicit reference to Bisanthe as a *polis* is in Steph. Byz. 171.3; cf. *oppidum* in Plin. *HN* 4.11.43. But *polis* status in the Classical period can be inferred from the attestation of Bisanthe in the Athenian assessment decree of 422/1 (*infra*), combined with the Hellenistic evidence (C3f coins, attestation in the C3l Delphic *theorodokoi* list (*BCH* 45 (1921) III.96); cf. Robert (1948) 54–55). The internal and collective form of the city-ethnic appears on Hellenistic coins (*supra*). The external and individual use is attested in Hellenistic inscriptions (*IG* XII.9 1126 (C?), from Chalkis; *F.Delphes* III.4 133 1.18, II.27–28 (208)).

Bisanthe was situated on the Thracian coast of the Propontis and, on the evidence of Ptol. *Geog.* 3.11.4, it is usually identified with mediaeval Rhaidestos = modern Tekirdag. However, Sayar (1992) 187–89 and (1998) 62–63 has recently defended the alternative equation of Bisanthe with Paniai in Ps.-Skylax 67, a conjecture of MS *Γανίαι* = Byzantine *Panion* and modern Panados/Baniado/Barbaros (*ATL* i. 475–76; cf. Isaac (1986) 213). The identification with Tekirdag seems preferable.

Bisanthe was a colony founded by the Samians (no. 864) (Steph. Byz. 171.3; *ἄποικος Σαμίων*; Pompon. 2.24; *Bisanthe Samiorum*). It may initially have belonged to the extended territory of Perinthos (no. 678) as a dependent *polis*, like Tyrodiza (no. 681), whose fate it must have shared during C6l and C5e. However, it is usually believed to have fallen under Odrysian rule in 430, when a Peloponnesian

embassy on its way to meet the Persian king was treacherously arrested by Sitalkes and Nymphodoros in Bisanthe and extradited to the Athenians (Hdt. 7.137.2–3; cf. Thuc. 2.67).

Bisanthe is indisputably listed as a member of the Delian League in the assessment decree of 422/1 (*IG*¹ 77.IV.10) and as belonging to the Hellespontine district, and the toponym is restored in the assessment decrees of 425/4 (*IG*¹ 71.III.20) and 410/9 (*IG*¹ 100.III.9). It is recorded alongside Paktye, Ornoi and Neon Teichos as one of the strongholds (*teiche*) held soon after 410 by Alkibiades, who appears to have closely collaborated with the Thracian kings Medokos and Seuthes (Plut. *Alc.* 30.10 (r408), 36.3–5; *Lys.* 10.4; Diod. 13.105.3–4; *Nep. Alc.* 7.4; cf. *Lys.* 14.26). A few years later (400–399), Bisanthe—the fairest of Seuthes' possessions on the coast—was repeatedly offered to Xenophon by the Thracian dynast Seuthes II (*Xen. An.* 7.2.38; cf. 5.8).

For the sparse remains—including C61 Archaic sculpture, a C5e inscription, an undated weight bearing the inscription *Βισαν[θηνώων] μὴν* seen in the archaeological collection of Rhaidestos—brought to light in neighbouring locations, cf. *ATL* i. 475; Kahrstedt (1954) 21ff; Loukopoulou (1989) 150, 161–63; more recently, Sayar (1992) 187–89, with bibliography.

674. Byzantion (Byzantios) Map 52. Lat. 41.00, long. 28.55. Size of territory: 5. Type: A:a. The toponym is *Βυζάντιον*, τό (Thuc. 8.80.3; *Xen. Hell.* 1.1.3.14; *Xen. An.* 7.1.7; *IG*¹ 1162.49 (C5m)). The city-ethnic is *Βυζάντιος* (*SEG* 32 412.7–8 (C5e); *IG* VII 2418.9 (C4m); *Xen. Hell.* 1.3.19; Dem. 15.3). Byzantion is called a *polis* both in the urban sense (Hdt. 4.87.2; *Xen. Hell.* 1.3.17–19; *An.* 7.1.17–19; Dem. 18.87; Arcestratos fr. 39.8, Olson and Sens) and in the political sense (Hdt. 5.103.2; *Xen. An.* 7.1.27; Dem. 8.15; *IByz.* 4.3 (C4) = *IvO* 45 and 9.3 (C4)). *Polites* and *astos* are used synonymously at Arist. *Oec.* 1346^a27–29. The collective use of the city-ethnic (abbreviated as BY) is found internally on C5–C4 coins (*infra*) and externally in inscriptions (*IG*¹ 1144.118 (C5f); *IG* II² 43.83 (378/7)) and in literature (*Xen. Hell.* 1.3.16; Isoc. 14.28; Dem. 15.3; Arist. *Pol.* 1303^a33). The individual and external use of the ethnic is attested in inscriptions (*SEG* 32.412, Olympia (C5f); *SEG* 18.180, Delphi (C4s); *IG* II² 8434–35, Athens (C4)) and in literature (Hdt. 4.138.1; Dem. 20.61).

The city of Byzantion occupied the head of the promontory between the Golden Horn, the Bosporos and the Propontis. Its favourable geographical position from both a military and an economic point of view is frequently noted

in our sources and contrasted with the less favourable position of Kalchedon (no. 743) (Hdt. 4.144.2; Polyb. 4.38.1; Strabo 7.6.2; Dio Cass. 75.10.1). Except from the west, the city was protected by the sea and, to the south-east, by a precipitous shoreline. A particular conjunction of currents and winds forced all ships coming from the Black Sea to sail close to the fortifications of Byzantion, which meant that the city could control all navigation from the north through the Bosporos (Polyb. 4.44.3–11). For the same reason, large shoals of spawning mackerel and tuna migrated from the Black Sea to the Mediterranean Sea near the west shore of the Bosporos and provided the Byzantians with great quantities of easily obtainable food (Arcestratos fr. 38; Arist. *Pol.* 1291^b23).

The territory of Byzantion comprised the eastern part of the Thracian peninsula between the Black Sea to the north, the Bosporos to the east and the Propontis to the south. It covered an area of some 1,500 km². The western frontier stretched overland from a point west of the Derkos (Delkos) Sea in the north to the river Athyras (Kara Su), and then along it to the Athyras (Büyükcekmeçe) Sea in the south (Strabo 7 fr. 56; Plin. *HN* 4.46; Pompon. 2.24). It encompassed to the north a locality called Phileas or Philia situated on a promontory of the same name stretching into the Black Sea (Ps.-Skymnos 722–23). To the north, Byzantion bordered on the domain of Thracian dynasts (Polyb. 4.45.1). To the south Byzantion bordered on Selymbria (no. 679) (Dem. 15.26). On the other hand, the possession of the sanctuary of Zeus Ourios on the east side of the Bosporos opposite the entrance to the Black Sea was a bone of contention between Byzantion and Kalchedon (Diod. 20.111.3 (r302); Polyb. 4.50.3).

According to some sources, Byzantion was a colony of Megara (no. 225) (Ps.-Skymnos 717; Philostr. *VS* 24). Vell. Pat. 2.7.7, however, lists Byzantion along with Kyzikos (no. 747) as foundations of Miletos (no. 854). Late authors of local history as a rule point to Megara as the founder of Byzantion, but they also mention Sparta (no. 345), Argos (no. 347), Corinth (no. 227), Mykenai (no. 353), Karystos (no. 373), Boiotia and Athens (no. 361) (Dion. Byzant. *Anapl. Bosp.*, *passim*; Lydus, *Mag.* 3.70; Hsch. *Patria* 3–5; Const. Porphyry. *De them.* II p. 46, Bonn). Probably, the majority of colonists came from Megara, while some contingents were supplied by their immediate neighbours, especially Argos, Corinth and Boiotia. Such a scenario is confirmed by Aristotle's report of a *stasis* between the original colonists and a later contingent of different stock, resulting in the expulsion of the newcomers (*Pol.* 1303^a25, 32–33). The

incident is probably to be dated to the Archaic period (Gehrke, *Stasis* 34). The Megarian majority came to dominate Byzantion, as attested by its Doric dialect, its cults, its onomastics and its institutions (division of the civic body into *hekatostyes* and a *hieromnamon* as the eponymous official).

According to a well-known anecdote (Hdt. 4.144.2), Byzantion was founded seventeen years after Kalchedon. As the foundation year Euseb. *Chron.* versus Arm. records Olymp. 30.1 = 660/59 (Schoene II 86), and the Hieronymus adaptation Olymp. 30.2 = 659/8 (94b, Helm) or, in another manuscript, Olymp. 30.3 = 658/7 (Schoene II 87). The year of the foundation of Kalchedon as indicated by the Hieronymus adaptation is Olymp. 23.4 = 685/4 (93b, Helm). The difference between the sources amounts to only nine years, and we may assume that the foundation of Byzantion took place around 660. From the foundation onwards the Byzantians were involved in constant warfare with neighbouring Thracian tribes (Polyb. 4.45.1; Diod. 14.12.2 (1403)).

Byzantion joined the Ionian Revolt in 499–494 and, after its suppression by Persia, the Byzantians and the Kalchedonians fled to the Pontic region and settled down in Mesambria (no. 687) (Hdt. 6.33.2), reinforcing the original contingent of colonists from Megara and Kalchedon (*infra* 935).

Byzantion was a member of the Delian League, and was probably among the original members (*ATL* iii. 206). In the early years of the Delian League Byzantion supplied ships rather than paying tribute. Thus, an Athenian casualty list of c.465 records names of Byzantians killed in a naval battle near Sigeion (*IG* I³ 1144.118–28). Byzantion belonged to the Hellenes district (*IG* I³ 269.II.26) and is registered in the tribute lists from 454/3 (*IG* I³ 259.III.7) to 428/7 (*IG* I³ 283.39, completely but plausibly restored) a total of fourteen times, three times completely restored, paying a *phoros* of 15 tal. in 450/49 (*IG* I³ 263.v.16), surpassed only by the 30 tal. paid by Aigina (no. 358). The tribute was raised to 15 tal., 4,300 dr. in 443/2 (*IG* I³ 269.II.26) and to 18 tal., 1,800 dr. in 433/2 (*IG* I³ 279.II.32). In 430/29 Byzantion paid a *phoros* of 21 tal. and 3,420 dr. (*IG* I³ 281.III.18) in addition to 855 dr. for special measures taken by Athens in the Hellenes and Bosphoros regions (*IG* I³ 281.III.49). Byzantion was possibly assessed for tribute in 425/4 (*IG* I³ 71.II.175, completely restored). Byzantion revolted in 441/0, supporting Samos (no. 864) in her conflict with Athens (Thuc. 1.115.5), but was recovered in spring or early summer 439 after the subjugation of Samos (Thuc. 1.117.3). Byzantion defected from the League once again in 411 after the Sicilian disaster (Thuc.

8.80.3; cf. Diod. 13.34.2). A Spartan garrison under a harmost was placed in the city (Xen. *Hell.* 1.3.15), but it was expelled in 408 when the city was betrayed to the Athenians under Alkibiades (Xen. *Hell.* 1.3.20–22; cf. Losada (1972) 22). Thereafter Byzantion remained loyal to Athens until after the battle of Aigos potamoi (Xen. *Hell.* 2.2.1).

In C4e Byzantion formed an alliance together with Kyzikos (no. 747), Ephesos (no. 844), Samos (no. 864), Iasos (no. 891), Knidos (no. 903), Rhodos (no. 1000) and possibly Lampsakos (no. 748), Thebes (no. 221), Kroton (no. 56) and Zakynthos (no. 141). This alliance is known only through a series of silver coins weighing c.11 g (tridrachm of Rhodian standard or didrachm of Aiginetan standard), and all with the same *obv.* type: infant Herakles strangling snakes and the legend ΣΥΝ(μᾶχια); on the *rev.* each of the allied cities placed its emblem, i.e. in the case of Byzantion a bull above a dolphin. The purpose of the alliance was to oppose Sparta (no. 345), and it was formed either in 394 after the battle of Knidos or in 387/6 after the King's Peace (Karwiese (1980); Schönert-Geiss (1970) 31–35).

Alongside Chios (no. 840), Rhodos (no. 1000) and Mytilene (no. 798), Byzantion was a founding member of the Second Athenian Naval League. A separate treaty between Athens and Byzantion was concluded in the autumn of 378 (*IG* II² 41 = *Staatsverträge* 256), and Byzantion is listed among the allies in the so-called Charter of the League (*IG* II² 43.83 = *Staatsverträge* 257). At the instigation of Epameinondas, Byzantion may briefly have left the League in 364 (Diod. 15.79.1; Isoc. 5.53; but see Buckler (1980) 170–72; Hornblower (1982) 200). If so, it rejoined the League (*Staatsverträge* 305) until—in collusion with Mausolos (Dem. 15.3; Hornblower (1982) 209)—Byzantion, Chios, Rhodos and Kos (no. 497) revolted against Athens in 357 and started the so-called Social War (Dem. 15.3; Diod. 16.7.3–4). When peace was concluded in 355, Athens had to accept Byzantion's secession from the League (Isoc. 8.16, 15.63–64; Diod. 16.22.2; *Staatsverträge* 313).

In 352/1 or later, a treaty was concluded between Byzantion and Philip of Makedon (Dem. 9.34, 11.3, 18.87 and 93; *Staatsverträge* 318), but when in 340 Philip attacked and besieged Byzantion a new treaty with Athens was concluded (Dem. 18.87–89).

Byzantine envoys are attested in 378/7 in connection with the treaty with Athens (*IG* II² 41) and in 355 in connection with Byzantion's financial contribution to Thebes (no. 221) during the Third Sacred War (*IG* VII 2418.12). Demosthenes served as envoy to Byzantion in 341 (Dem. 18.244; Aeschin. 3.256). From the Classical period, only one grant of proxeny

is attested: *viz.* to the Spartan harmost Klearchos in 409/8 (Xen. *Hell.* 1.1.35). Citizens of Byzantion received proxeny from Athens (Dem. 20.60–63 (after 389); *IG* II² 76 (before 378/7); *IG* II² 235 (340/39)), from Thebes (*IG* VII 2408 (364/3)); from Kos (no. 497) (*ICos* ED 40.5 (C4)) and from Olbia (no. 690) (*IGDOP* 18 (340–330)).

The original constitution of Byzantion is unknown. In the time of Dareios' campaign to Skythia the city was ruled by a tyrant (Hdt. 4.138.1). It is often assumed that Byzantion became a democracy when it joined the Delian League (Gehrke, *Stasis* 35) but we have no information. In the period 411–408 Sparta had a harmost and a garrison in the city (Xen. *Hell.* 1.3.15, 20–22). In 408 an Athenian garrison took over but left the city after the defeat at Aigos potamoi in 405 (Xen. *Hell.* 2.2.1). After their victory, the Spartans introduced an oligarchic constitution supervised by a Spartan harmost (Xen. *An.* 6.2.13, 7.2.5–12) perhaps heading a dekarchy (Gehrke, *Stasis* 36). *Stasis* between factions of citizens is attested for the following period (Xen. *An.* 7.1.39; Diod. 14.12.2–3). In 390/89, with the help of the leaders of the democratic faction (Dem. 20.60), the Athenians under Thrasybulos were admitted to the city and had the constitution replaced by a democracy (Xen. *Hell.* 4.8.270), which seems to have remained in force for the rest of the Classical period (Theopomp. fr. 62; Arist. *Pol.* 1291^b23); in 354/3 or slightly later, Byzantion intervened in Kalchedon (no. 743) and introduced a democratic constitution there (Dem. 15.26).

Under the democracy, citizenship was confined to those whose parents were both citizens. During a financial crisis, however, it was decreed that citizenship could be bought for 30 minas (Arist. *Oec.* 1346^b26–29). The civic body was organised into *hekatostyes*. The oldest attestation is in an honorary decree for Eudamos of Seleukeia of c.175–170 (*IByz.* 1.60–61). But the presence of *hekatostyes* in other Megarian colonies in the Black Sea area (Kalchedon (no. 743), Herakleia (no. 715) and Chersonesos (no. 695)) and in the mother city itself indicates that the institution goes back to the foundation of Byzantion (Jones, *POAG* 284–85). The number of *hekatostyes* is unknown. At Arist. *Oec.* 1346^b15 there is a stray reference to other civic subdivisions, *viz.* *thiasoi* and *patrai*, which, however, may have been private associations. Free non-citizens living in Byzantion are called *metoikoi* and were barred from owning landed property (Arist. *Oec.* 1347^a1–3). In 390/89 there were a large number of Athenians living in the city (Xen. *Hell.* 4.8.27).

The eponymous official of Byzantion, as of its mother city Megara before the Hellenistic period, was the *hieromnamon*

(epichoric form always with the long Doric *a*) (*IByz.* 2.1 (C2m); cf. Polyb. 4.52.4). The legends *EIII KAEΩ* and *EIII NE* on coins of C4m probably refer to *hieromnamones* (Schönert-Geiss (1970) 131–32 nos. 954–78). The only known public enactment of the Classical period is an honorary decree (*psephisma*) for the Athenians passed by the Byzantians in 341/0 and read out to the Athenian Assembly (Dem. 18.89). The document inserted in Demosthenes' text 90–91, however, is a spurious composition of, probably, C2 (Wankel (1976) 497–98).

The patron deity of Byzantion may have been Apollo, as in the mother city Megara and in other Megarian colonies (Hanell (1934) 164–70). In Hellenistic and later inscriptions, public enactments were set up in his sanctuary (*IByz.* 1.48–49, 63–64), and Apollo's head occurs on coins of C4 (Schönert-Geiss (1970) nos. 951–953). Games may be deduced from an Archaic inscription mentioning a *stadion*-runner (*IByz.* 42.3). In later times there was a festival called Bosporia devoted to Artemis Phosphoros—identified with the Thracian Bendis—during which a torch-race was held (*IByz.* p. 40).

Very little is known from contemporary sources about the cult places of Byzantion in the Archaic and Classical periods. Hdt. 4.87.2 mentions an altar of Artemis Orthosia (a typically Megarian epithet), a temple of Dionysos and a *hieron* at the entrance to the Black Sea (apparently not to be identified with the well-known *hieron* of Zeus Ourios on the east side of Bosporos but rather with its counterpart on the west side, called Sarapieion by Polyb. 4.39.6). Two cult places are mentioned in a Classical context by Dion. Byzant. *Anapl. Bosp.* 6.6–10, Güngerich: the temple of Hera which is said to have been destroyed by the Persians and the temple of Plouton demolished by Philip of Makedon. Furthermore, the temple of Poseidon on the promontory is described as being old (5.1–2). For a list of cult places, some of which may have originated in the Classical period, see Miller (1899) 1146–47.

Byzantion possessed a treasury in Olympia (Paus. 6.19.9; Ath. 480A), and a C5e dedication of Pythion of Byzantion at Olympia may commemorate a victory in the Olympic Games (*SEG* 32 412).

Names of the months are attested in late sources only (*IByz.* 2, 30, 31, 33), but they resemble those of the other Megarian colonies: Kalchedon (no. 743), Herakleia Pontike (no. 715), Kallatis (no. 686) and Chersonesos (no. 695), and a Megarian origin for the calendar can be presumed (Hanell (1934) 190–204; Trümpy, *Monat.* 147–55).

The citadel of Byzantion is called *akra* at Xen. *An.* 7.1.19 and *akropolis* at 7.1.20. It was situated on the north-eastern

tip of the promontory between the Golden Horn and the Propontis. It is completely covered by the Topkapi Saray of the Turkish sultans, and there are no physical remains.

Byzantion had a defence circuit which, according to later local tradition, had been erected in connection with the foundation of the colony (Hsch. *Patria* 12). The walls were renowned for their strength (Paus. 4.31.5), and the description at Dio Cass. 75.10.3–6, 14.5–6 is at least to some extent valid for the Classical period. The walls with numerous interval towers and gates (Xen. *An.* 7.1.12, 15–17, 36; *Hell.* 1.3.20) were particularly strong on the landward side to the west; the sections towards the sea were considerably lower and protected against breakers by a mole (Xen. *An.* 7.1.17). During the siege in 340 part of the fortifications were strengthened with tombstones and was thereafter called *τυμβασύνη* (Hsch. *Patria* 27). The original fortifications of Byzantion were destroyed by Septimius Severus (Dio Cass. 75.14.4–5); no traces of them have been found. Byzantion was besieged in 478/7 by the Greeks (Thuc. 1.94.2), in 409/8 by the Athenians (Xen. *Hell.* 1.3.14–20), in 357/6 by the Athenians (Diod. 16.21.3) and in 340 by Philip of Makedon (Dem. 8.14, 18.71, 93; Diod. 16.76.4, 77.2–3; Plut. *Phoc.* 14.4–7). The city also possessed within its walls a vast uninhabited area called Thrakion (Xen. *Hell.* 1.3.20; *An.* 7.1.24), most likely intended as a place where the rural population could have been accommodated during a war.

There are no remains of public architecture of the Archaic and Classical periods, and the written sources are silent apart from a reference to a *gymnasion* at Arist. *Oec.* 1346^b19. The context indicates that it was situated within the city walls. The existence of the *stadium* may be deduced from an Archaic inscription mentioning a *stadion*-runner (*IByz.* 42).

Byzantion's important commercial activities were centred on an agora, a *limen* and an *emporion* (Theopomp. fr. 62; Arist. *Oec.* 1346^b18–19; Xen. *An.* 7.1.19). Byzantion controlled all navigation through the Bosphoros (*supra*); it sometimes seized ships belonging to other *poleis* (Arist. *Oec.* 1346^b30–31; Dem. 50.6), and during the Peloponnesian War the Athenians (or the Delian League) exacted dues from grain ships passing through the Bosphoros (*IG* 1³ 61.34–40 (426/5); cf. Rubel (2001)).

That the Byzantians struck coins of iron in C5s is suggested in old Attic comedies (Ar. *Nub.* 248 with schol.; Plato Com. fr. 103, *PCG*; Poll. 9.78; Hsch. s.v. *σιδάρεος*; cf. *LSAG* p. 366). Not a single specimen has survived. The minting of silver coins started c.411. From 411 until c.387/6, drachms and hemidrachms were struck on the Persian standard, and from c.387/86 until c.340/39 tetradrachms, drachms and

hemidrachms were struck on the Rhodian standard. The *obv.* type is invariably a bull above a dolphin, legend: BY in Archaic script with a Corinthian B; *rev.* types: incuse square punch, or trident (on drachms of Rhodian standard). In the same period Byzantion also struck some small denominations in silver with the same types—probably trihemioibols and hemioibols on the Persian standard—and six series of bronze coins with various types. Some have *obv.* head of Athena, or Demeter, or Apollo. One issue has the *rev.* legend *ΕΠΙ ΚΛΕΩ* or *ΕΠΙ ΝΕ*, presumably denoting the eponymous magistrate (*supra*). The animal of the *bovidae* family frequently occurring on the coins of Byzantion and designated here as a bull is sometimes identified as a cow and connected with the myth of Io (Schönert (1966)). For the alliance coinage, inscribed *ΣΥΝ*, see *supra* (Schönert-Geiss (1970); *SNG Cop. Thrace* 475–85).

675. Daminon Teichos (Daminoteichites) Map 52. Lat. 41.05, long. 28.05. Size of territory: 1. Type: B:a? The toponym is *Δαμνῶν τεῖχος* (Ps.-Skylax 67) or *Δαύνιον τεῖχος* (Steph. Byz. 222.2) or **Δάμνιον τεῖχος* (reconstructed from the city-ethnic). The city-ethnic is *Δαυν[οτε]λιχίτης* (*IG* 1³ 271.1.27) or *Δαμνιοτελιχίτης* (*IG* 1³ 272.1.38). The only explicit reference to Daminon Teichos as a *polis* is in Steph. Byz. 222.2. It is here considered a *polis*—undoubtedly a fortified *teichos*—on the evidence of its being a member of the Athenian League (Hellespontine district).

In Ps.-Skylax 67, Daminon Teichos is listed between Perinthos (no. 678) and Selymbria (no. 679). It has been tentatively identified with *Baunnae*, a *mutatio* situated 12 miles east of Perinthos-Herakleia (*It. Burd.* 572), and hypothetically located at Eski Ereğli = modern Gümüşyaka (*ATL* i. 480; cf. Isaac (1986) 208 n. 294; Sayar (1998) 64).

Daminon Teichos was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.111.11–12) to 418/17 (*IG* 1³ 287.11.20) a total of seventeen times, once completely restored, paying a *phoros* of 1,000 dr. down to 433/2 (*IG* 1³ 279.1.104), raised to 2 tal., 4,000 dr. in 430/29 (*IG* 1³ 281.111.21), and still 2 tal. in 421/0 (*IG* 1³ 285.11.84).

676. Heraion, Heraion Teichos (Heraites) Map 52. Lat. 41.00, long. 27.40 (in *Barr.* 27.45). Size of territory: 1 or 2. Type: A:a. The toponym *Ἡραῖον, τό* (Hdt. 4.90.2; Steph. Byz. 303.13) is plausibly identified with *Ἡραίων τεῖχος* (Dem. 3.4; *F.Delphes* 111.3 207.3 (C3m)). The city-ethnic is *Ἡραῖῆς* (*IGBulg.* 1² 43.4, Odessos (C1)) or *Ἡραῖῆς* (ibid. 26) or *Ἡραεῖῆς* (Sayar (1992) 190 (C21–C1e)). Heraion is called a *polis* in the urban sense by Hdt. 4.90.2 and in the confused

entry of Steph. Byz. 303.13–15, who seems to record a *polis* and a *teichos* bearing the same name. The collective and internal use of the city-ethnic is attested in a C2l–C1e dedication to Hermes Agoraios from the area of Rhaidestos/Tekir Dag (Sayar (1992) 190–95). The individual and external use is found in a C3m decree from Delphi (no. 177) awarding *proxenia* to two of its citizens (*F.Delphes* III.3 207.3) and in a C1 honorary decree from Odessos (no. 689) (*IGBulg.* I² 43).

It seems quite arbitrary with *ATL* I. 482 to identify Heraion Teichos with Neon Teichos (no. 824) and Didymon Teichos (no. 741); see also Isaac (1986) 203 and Sayar (1992) 191–92. Heraion was situated on the northern coast of the Propontis, near Perinthos (no. 678), at one end of the road to the sources of the river Tearos and thence to Apollonia Pontike (no. 682)—a total of four days' march (Hdt. 4.90.2). It is probably to be identified with the Roman *mutatio Aerea* (*It. Burd.* 601.6) located at a distance of 16 miles from Herakleia (Perinthos) and 12 miles from Registo (= Rhaidestos); cf. Hiero in the *Tab. Peut.*; Anon. Rav. 4.6: Ereon. The data recorded in the Roman *Itineraria* fit an ancient settlement with remains of Classical, Hellenistic and Roman date—including a C4 inscription—situated east of the mouth of the stream Chitemblik, in the bay of Karaevlialti, c.24 km west of Perinthos (Loukopoulou (1989) 100–2; Sayar (1992) 192 and (1998) 62). In *Barr.* Heraion Teichos is identified with the prehistoric/Classical settlement near the tumulus of Aytepe, c.12 km north-west of Perinthos.

According to Harp. *H15* and *Etym. Magn.* 436.39–40, Heraion Teichos was a colony of Samos (no. 864). Alternatively, it has been suggested (Loukopoulou (1989) 56, 100–2) that Heraion was a secondary colony, i.e. a sanctuary of the Samian Hera founded by the Samian colonists of Perinthos (no. 678) in the *chora* of the latter city; but, for fear of barbarian incursions, it later developed into a self-governing and strongly fortified settlement. Heraion Teichos is not attested in the Athenian tribute lists, but in C4m it is mentioned as an important stronghold under Kersebleptes' rule, successfully besieged by Philip II in 352 (Dem. 3.4).

677. Neapolis (Neopolites) Map 52. Lat. 40.40, long. 27.10. Size of territory: 1. Type: B:a. The toponym is *Νεάπολις* (*IG* I³ 270.II.25), specifically qualified as *ἀπ' Ἀθηναίων* (*IG* I³ 272.I.29), presumably also as *παρὰ Χερρόνε[σον]* (*IG* I³ 71.III.105–6). The city-ethnic is *Νεοπολίται* (*IG* I³ 71.III.105–6).

Neapolis was a member of the Delian League, and the tribute lists and assessment decree (Hellespontine district) constitute the only sources for this community. It belonged

to the Hellespontine district and is recorded in the tribute lists from 442/1 (*IG* I³ 270.II.25) to 430/29 (*IG* I³ 281.III.36) a total of six times, three times completely but at least once plausibly restored, paying 300 dr. in all years (*IG* I³ 272.I.29). A location in the vicinity of the Thracian Chersonesos has been inferred from the qualifying epithet *παρὰ Χερρόνε[σον]*, and the epithet *ἀπ' Ἀθηναίων* indicates that it was an Athenian foundation. For its possible connection with the Athenian klerouchy settled c.450 in Tyrodiza (no. 681), see Kahrstedt (1954) 22 and Isaac (1986) 204. Neapolis was further equated, without positive evidence, with Herakleia, one of the Thracian *teiche* listed by Ps.-Skylax (67; cf. Ptol. *Geog.* 3.11.7) on the Propontic shore, between Paktye and Perinthos (no. 678) and located at modern Heraklitsa (Erikli; cf. *ATL* I. 475 and 525).

678. Perinthos (Perinthios) Map 52. Lat. 41.00, long. 28.00. Size of territory 5. Type: A:a. The toponym is *Πέρινθος*, *ἡ* (Hdt. 5.2.2; Arist. *Gen. an.* 773^a27), after Perinthos of Epidauros, the associate of Orestes (Steph. Byz. 517.18) or one of Herakles' lovers (schol. Ap. Rhod. 1.1207b, Wendel). In the third or fourth century AD, Perinthos' name was changed to Herakleia, after Herakles, its mythical *ktistes* (Amm. Marc. 22.8.6; see Sayar (1998) 171, EZ1; Leschhorn (1984) 370). The city-ethnic is *Περίνθιος* (Xen. *Hell.* 1.1.21; *SEG* 12 391, Samos (C6f)). Perinthos is called a *polis* in the urban sense by Ps.-Skylax 67; see also Hdt. 6.33.1: *αἰδέε* (sc. *πόλεις*) and Diod. 16.74–76 (r340). The political sense is attested in *IG* II² 43.78 and 84, where Perinthos under the heading *πόλεις* is listed as one of the members of the Second Athenian Naval League. Perinthos is called *asty* at Xen. *Hell.* 1.1.21. The term *politai* for Perinthians is used in Arist. *Oec.* 1351^a (rC4f). The collective use of the city-ethnic in its full form is attested internally on C4m bronze coins (*infra*) and externally in the *ATL* and on the *stele* listing the members of the Second Naval League (*infra*). The individual ethnic is used externally in a C4–C3 comedy by Lynceus (fr. 1.2, *PCG*) and in a Delphic inscription (*F.Delphes* III.3 207.3 (252/1)).

The name of Herakleia survives in modern Marmara Ereğlisi, the town now occupying the site of ancient Perinthos-Herakleia (Sayar (1998) 59–62). Situated at a distance of 630 stadia west of Byzantion according to Artemidoros (600 according to Demetrios of Skepsis in Strabo 7 fr. 56), it was situated west of Selymbria (no. 679) (Ps.-Skymnos 714–15) between Neon Teichos and Daminon Teichos (no. 675) (Ps.-Skylax 67). For the identification of Perinthos with Marmara Ereğlisi, see Robert (1974a) and, more recently, Sayar (1998).

The territory of Perinthos was rigidly demarcated to the east by the rival presence of the Megarian colonies of Selymbria (no. 679) and Byzantion (no. 674) (Loukopoulou (1989) 53–61); a plausible natural frontier line has been sought in the region of Kinaliköprü (Sayar (1998) 64). From C5m, an independent settlement—Daminon Teichos (no. 675)—is recorded between Perinthos and Selymbria. Moreover, at least during the period of Persian occupation in C5e, but probably also from the start, the territory of Perinthos was significantly extended westwards, since it appears to have included not only Tyrodiza (no. 681) (Hdt. 7.25 (r480)) but presumably also Heraion [Teichos] (no. 676) and Bisanthe (no. 673); see Hdt. 6.33.1 where Perinthos, Selymbria and Byzantion are the only *poleis* listed along the northern Propontic shore, and Perinthos is associated with τὰ τείχῃα τὰ ἐπὶ Θρηίκης (Kahrstedt (1954) 9–10). Subsequently, however, when Perinthos was a member of the Delian League, its territory must have been restricted to the immediate hinterland and have bordered on that of Heraion Teichos (Kahrstedt (1954) 21; Sayar (1998) 62–64). To the north, the springs of the river Degirmen are believed to have constituted a plausible border (Sayar (1998) 63).

Perinthos was a colony of Samos (no. 864) (Ps.-Skymnos 714–15; Strabo 7 fr. 56; Plut. *Mor.* 303E) and was founded in 602 (Hieron. *Chron.* 98b, Helm) on the northern—Thracian—coast of the Propontis (Hdt. 5.1.1–2, 6.33.1; Ps.-Skylax 67). The names of three of the old Ionic *phylai* are attested in an undated list of names, probably of ephebes (SGDI 5723; cf. Jones, *POAG* 286). During its early years (c.570–560), Samian Perinthos faced deadly attacks both from invading Paionian hordes (Hdt. 5.1; Strabo 7 fr. 41) and from its rival Megarian neighbours, who attempted to monopolise the Propontic coast but were repulsed with the assistance of forces from the mother city (Plut. *Mor.* 303E–304A; cf. Loukopoulou (1989) 54–56). Following Dareios' Skythian expedition, Perinthos was subdued by the Persians under Megabazos (Hdt. 5.1–2); after the Ionian Revolt, it fell under Persian rule (Hdt. 6.33.1). Following the expulsion of the Persians from Thrace, Perinthos became a member of the Delian League. It belonged to the Hellenistic district and is recorded in the tribute lists from 452/1 (*IG* 1³ 261.v.3) to 418/17 (*IG* 1³ 287.ii.22) a total of twelve times, twice completely restored, paying a *phoros* of 10 tal. (*IG* 1³ 269.ii.25), perhaps less in 418/17. In 411 it probably joined the revolt of Byzantion (no. 674), only to be forced back into the League by Alkibiades in 410 (Xen. *Hell.* 1.1.21). Perinthian cavalry forces seem to be indicated by Xen. *An.* 7.2.8. Perinthos joined the Second Athenian Naval League in

377 (*IG* 1² 43.84); it fell temporarily under the rule of Ariobarzanes, and suffered variously under the pressure of the expansionist ambitions of Kotys, the Odrysian king (Dem. 23.142; cf. Arist. *Oec.* 1351^a; cf. Isaac (1986) 207). The inability of Athens to provide effective protection against the renewed Thracian oppression under Kotys' successor Kersebleptes and the general Charidemos (Dem. 23.165, 168), in 352/1 drove Perinthos, together with Byzantion and Amadokos, to conclude an alliance with Philip II (*Staatsverträge* 318; schol. Aeschin. 2.81; cf. Sayar (1998) 72 with nn. 145–46). After the defeat of Kersebleptes, Perinthos and Byzantion are believed to have established a *sympoliteia* (Polyb. 18.2.3–5; cf. Loukopoulou (1989) 147–48; Sayar (1998) 72 with n. 147). A few years later (340), when the two cities refused to support the Makedonian king's anti-Athenian operations in the Chersonesos area, first Perinthos and subsequently Selymbria and Byzantion were unsuccessfully besieged by the Makedonian army (Theopomp. fr. 217, 292; Philoch. fr. 162 (cf. fr. 54); Ephor. T 10; Diod. 16.74–76; for a complete list of testimonia, cf. Sayar (1998) 51–79). Perinthos joined Byzantion in voting unprecedented honours for Athens in gratitude for her decisive support on this occasion (Dem. 18.89–91). The alliance with Philip was eventually renewed after the defeat of Athens at Chaironeia, and in 337 Perinthos joined the Makedonian king's Hellenic League together with the rest of the Greek cities in Thrace (Sayar (1998) 73).

The probable predominance of the cult of Hera (Polias?) is attested by epigraphical evidence of the persistent devotion of the early colonists to the Hera of Samos (*SEG* 12 391; cf. Loukopoulou (1989) 97–100), by the existence of a Heraion (= Heraion Teichos) in the neighbourhood of Perinthos—initially probably on Perinthian territory itself—(cf. Loukopoulou (1989) 100–2), and by Perinthian coin types of Roman date (Schönert (1965) 134 nos. 255–58; cf. Loukopoulou (1989) 102–3 and the recent publication of a C1–C2 inscribed votive *stèle*: Sayar (1998) no. 289). The cults of other Greek divinities, such as Zeus, Athena, Apollo, Artemis, Dionysos, Demeter, Isis/Sarapis and Kybele, are presumed from archaeological evidence and numismatic iconography (Schönert (1965) 55–57; cf. Robert (1967) 106ff; Loukopoulou (1989) 103; Sayar (1998) 65). The calendar of Perinthos, preserved through lexicographic tradition, indicates a close connection with the calendar of metropolitan Samos, at least in its presumed Archaic form, supporting the hypothesis of a direct implantation in the colony of the religious life of Samos as well (Samuel (1972) 88–89; Trümpy, *Monat.* 81ff); cf. Loukopoulou (1989) 96–103).

Perinthos occupied a headland 1,200 m long and 50 m high, linked to the Thracian mainland by an isthmus *c.*200 m = 1 stadion wide (Diod. 16.76; cf. Plin. *HN* 4.47) and projecting eastwards to form a well-protected harbour (cf. *πόλις καὶ λιμὴν* in Ps.-Skylax 67). Its naturally fortified position was enhanced by strong defensive walls with towers (Diod. 16.74) capable of withstanding a prolonged siege (Xen. *An.* 7.2.10; Diod. 16.74ff, following Ephor. (r340/39). The area enclosed by the walls measured *c.*75 ha. According to Hdt. 5.1.2, there was a *προάστειον*, a term that probably signifies the area immediately outside the city wall, east of the neck of the peninsula. The urban centre (called an *asty* in Xen. *Hell.* 1.1.21), with closely packed, exceptionally tall houses, overtopping one another along the hill slope and separated by narrow alley-ways, had the appearance of a theatre (Diod. 16.76.2). Moreover, the privileged location of Perinthos at the intersection of important land and sea routes accounts for its importance as a market (Xen. *An.* 7.4.2, 6.24).

Archaeological investigation in Marmara Ereğlisi has identified the location of two ancient harbours, to the north-east and west of the isthmus of the peninsula, with traces of ancient breakwaters; the western harbour is now completely silted up by alluvial deposits from the Baglar stream (Oberhammer (1938) 803–4; Sayar (1998) 59). Visible remains of the fortification system, dated as early as C5, have also been identified, protecting the acropolis (located on the higher, western part of the peninsula), as well as the lower city, mainly from the north and west (Sayar (1998) 60, with refs.). The *cavea* of the theatre (diameter 140 m) can be seen on the southern slope of the acropolis, and there are traces of the *stadion* (240 m long, undated) on the west slope of the acropolis (ibid. with refs.). The cemetery extended over 3–5 km to the north and west of the city walls (Sayar (1998) 60–61, with refs.).

In C4m, Perinthos struck coins of silver and bronze on the Persian standard. Silver issues included didrachms, hemidrachms and obols. Types: *obv.* head of Zeus, or Demeter; *rev.* foreparts of two horses joined back to back; legend: ΠΕΡΙΝ or ΠΕ, sometimes also the first letters of, probably, a mint magistrate's name, e.g. ΚΙΣ. The bronze coins have the legend ΠΕΡΙΝΘΙΩΝ (Head, *HN*² 270; Schönert-Geiss (1965), (1973); *SNG Cop. Thrace* 721–22).

679. Selymbria (Selymbrianos) Map 52. Lat. 41.05, long. 28.15. Size of territory: 4. Type: A:a. The toponym is Σηλυμβρία, ἡ (Xen. *An.* 7.5.15; cf. Hdt. 6.33.1) or Σηλυβρία (Polyb. 18.49.2) or Σαλυβρία (*IG*¹³ 1154B.5 (460–450)). The

toponym is allegedly derived from Σήλυς and βρία, the Thracian word for *polis* (Strabo 7.6.1). The city-ethnic is Σηλυμβριανός (Pl. *Prt.* 316D) or Σελυμβριανός (*IG*¹³ 118.13 (408)) or Σηλυβριανός (Arist. *Oec.* 1348^b33) or Σαλυπριανός (*IG* II² 10261a (C4m)). Selymbria is called a *polis* in the urban sense by Ps.-Skylax 67; see also Hdt. 6.33.1: αἰθε (sc. πόλις). The political sense is attested in Dem. 15.26; Arist. *Oec.* 1348^b35 and *IG* II² 43.78 and B29, where Selymbria under the heading πόλις is listed as one of the members of the Second Athenian Naval League. The *politeia* of the Selymbrians is mentioned in the treaty with the Athenians of 408 (*IG*¹³ 118.10–11). Epigraphic evidence indicates that Selymbria had become a *kome* of Byzantion or of Perinthos in the Roman period (Robert (1946)); its absence from the list of Delphic *theorodokoi* in C3l being a probable *terminus ante quem*, Selymbria may have lost its autonomy at the time of the formation of the *sympoliteia* between Byzantion (no. 674) and Perinthos (no. 678), tentatively dated to the period of Philip II's unsuccessful efforts in 340 to bring the area under Makedonian control. The collective use of the city-ethnic (abbreviated as ΣΑΛΥ) is attested internally on C5 coins (*infra*) and externally in the treaty with Athens (*IG*¹³ 118.30) and in Pl. *Prt.* 316D. The individual ethnic is used externally in the C5l settlement with Athens (*IG*¹³ 118.42) and in a C5m epigram commemorating Pythagoras, son of Dionysios, a Selymbrian *proxenos* of Athens (*IG*¹³ 1154). *Patris* is found in *IG*¹³ 1154B (C5m).

Selymbria is mentioned at Hdt. 6.33.1 as a *polis* east of Perinthos and the Thracian *teiche*, and west of Byzantion, and in Ps.-Skylax 67 it is recorded as a *polis* and a *limen* situated 500 stadia from the mouth of the Black Sea. Selymbria is identified with modern Silivri, which preserves a variant form of the ancient name. For sparse antiquities collected locally mostly during the nineteenth century, see Seure (1912) and Loukopoulou (1989) 27–38 with refs. Literary sources attest the existence of fortifications from C5l (Diod. 13.66.4, 14.12.7; Plut. *Alc.* 30.2) to C4m (Dem. 18.77, for which see *infra*).

According to Ps.-Skymnos 715–16, Selymbria was founded by Megara (no. 225) “before Byzantion”, some time in the second quarter of C7 (Isaac (1986) 210; Loukopoulou (1989) 51–53). The exact limits of its territory remain unidentified; it bordered the territory of Daminon Teichos (no. 675) to the west, that of Byzantion (no. 674) to the east—with two rivers, Athyras and Bathynias, mentioned in the border area (Strabo 7 fr. 56; cf. Plin. *HN* 4.47). Selymbria was conquered by the Persians after the Ionian Revolt (Hdt. 6.33.1). Following the expulsion of the Persians from Thrace,

Selymbria became a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 454/3 (IG I³ 259.III.16) to 418/17 (IG I³ 287.II.17) a total of sixteen times, twice completely but convincingly restored, paying a *phoros* of 9 tal. in 454/3 (IG I³ 259.II.16), 6 tal. from 450/49 (IG I³ 263.IV.8) to 447/6 (IG I³ 265.I.57), 5 tal. from 443/2 (IG I³ 269.II.9) to 439/8 (IG I³ 273.II.23), 900 dr. from 435/4 (IG I³ 277.V.12) to 432/1 (IG I³ 280.II.33) and 9 tal. again in 430/29 (IG I³ 281.III.19). The reduction to 900 drachmas was presumably connected with the growing pressure of the Odrysians (ATL iii. 310–12). Selymbria joined the revolt of Perinthos (no. 678) by 410, and members of the pro-Athenian faction were exiled (*Staatsverträge* 207.12 = IG I³ 118; cf. Gehrke, *Stasis* 145–46); the city refused to admit Alkibiades, but paid him money (Xen. *Hell.* 1.1.21). Selymbria was recaptured by Alkibiades in 408; the city was torn by *stasis*, and its fortifications betrayed to Alkibiades by the pro-Athenian faction; it was forced to pay indemnity, to accept an Athenian garrison (Plut. *Alc.* 30.2–5; Xen. *Hell.* 1.3.10; Diod. 13.66.4; Gehrke, *Stasis* 145–46), and probably also to give hostages. The ensuing settlement in 408 (IG I³ 118; ML 87) mentions guarantees (ll. 1–31) of Selymbrian autonomy, restoration of hostages and political refugees (*Staatsverträge* 207.12), cancellation of Athenian and allied claims to property lost in Selymbria except for real property (presumably indicating the existence of Athenian and allied landownership in Selymbria). The settlement was ratified in 407 by the Athenian *ekklesia* on the motion of Alkibiades (ll. 31–47). A member of the Second Athenian Naval League since 377 (IG II² 43B.29), Selymbria joined the revolt of Byzantion in 357 (Dem. 15.26). According to the decree quoted at Dem. 18.77, Selymbria was besieged by Philip in 340. The decree is spurious, but the information it contains may be correct, and, like Perinthos and Byzantion, Selymbria must have been besieged by Philip II in 340.

The civic institutions of Selymbria are unattested, except for the probable mention of *aisimnatai* in a C₄ inscription (SGDI 3068: [αἰ]σῖμνῶν[τες]; cf. Hanell (1934) 149) but are believed to have reproduced the pattern better known for other colonies of Megarian origin (Hanell (1934) 132ff; cf. Loukopoulou (1989) 142–47). Arist. *Oec.* 1348^b mentions a law forbidding the export of corn in times of shortage.

Apollo (Pythios), probably to be restored in line 28 of the agreement between Athens and Selymbria of 407, seems to have been the protective deity of Selymbria, with public documents being published in his sanctuary (IG I³ 118.26–28; cf. Hanell (1934) 166; Loukopoulou (1989) 104–5 with reference to BCH 36 (1912) 558, *pace* ML 87).

Selymbria issued two series of silver coins: (a) from 492/0 to 473/0 and (b) from 425/0 to 411/10, presumably on the Thrako-Makedonian standard and apparently for local use. Denominations: octobols down to hemiobols: *obv.* cock; *rev.* incuse square (a) or ear of corn (b). Legend: ΣΑ or ΣΑΛΥ (Head, HN² 271; Schönert-Geiss (1975) 35–49; SNG *Cop. Thrace* 789–90).

680. Ser(re)ion Teichos (Ser(re)ioteachites) Map 52. Lat. 40.45, long. 27.00. Size of territory: 1. Type: C:a? The toponym is Σέρριον (Steph. Byz. 642.18) or Σέρριον τεῖχος (Aeschin. 3.82; Dem. 7.37) or Σέρρειον τεῖχος (Dem. 9.15; Harp. Σ4). The city-ethnic is Σερριοειχίτης (IG I³ 283.II.19). Serrion Teichos is not called a *polis* in any source, but *polis* status is indicated by its membership of the Delian League. The collective and external use of the city-ethnic is attested in the tribute lists (*infra*) and is restored in the assessment decree of 425/4 (IG I³ 71.III.104).

The identification of Serrion Teichos with Ganos (ATL i. 545; Kahrstedt (1954) 21 followed by *Barr.*) is unconvincing (Isaac (1986) 211) and contradicted by the explicit distinction between the two sites in Aeschin. 3.82 followed by Harp. Γ3 and Σ4; see Ganos, *supra* 913. Propontic Serrion Teichos is clearly to be distinguished from Serrion on the Aegean coast of Thrace (*supra* 872).

Serrion Teichos was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists of 428/7 (IG I³ 283.II.19), 421/0 (IG I³ 285.II.87) and 418/17 (IG I³ 287.II.18), contributing unknown sums. It was one of the fortresses conquered by Philip II in 346 (Aeschin. 3.82; Dem. 7.37, 9.15).

681. Tyrodiza (Tyrodizenos) Map 52. Lat. 40.35, long. 27.05. Size of territory: 5. Type: B:?. The toponym is Τυρόδιζα, ἡ (Hdt. 7.25.2; IG I³ 71.III.108) or, once, Τυρόδιζαι (IG I³ 261.4.30) or, once, Τυρόριζα (Hellan. fr. 62). The city-ethnic is Τυροδιζηνός (Krateros (FGH Hist 342) fr. 3 = IG I³ 100). The only source to call Tyrodiza a *polis* is Steph. Byz. 642.18. According to Herodotos, it belonged to the Perinthians (no. 678) (Hdt. 7.25: εἰς Τυρόδιζαν τῆν Περυνθίων), implying that it was a possession of Perinthos (ATL i. 558); It could, however, mean “a colony or foundation of the Perinthians” (see e.g. Thuc. 2.30.1, 4.49.1). It is here considered to be a *polis*, at least in C_{5s}, on the evidence of the Athenian tribute lists, where it is recorded among paying members of the League. Only the collective and external use of the city-ethnic is attested (*supra*).

Tyrodiza is usually identified with Teiristasis, one of the Thracian *teiche* recorded by Ps.-Skylax 67 on the north-west

shore of the Propontis, between the isthmus of the Chersonesos and Perinthos (cf. Dem. 12.3; schol. Dem. 12.1.1), which is plausibly identified with mediaeval Peristasis = modern Peristeri = present-day Sharkeui (*ATL* i. 558; but see Isaac (1986) 203–4). According to Steph. Byz. 642.18, Tyrodiza was situated “after” (i.e. east of) Serrion.

Tyrodiza is recorded as one of the supply bases of Xerxes’ army in 480 (Hdt 7.25). Tyrodiza was a member of the Delian League. It belonged to the Hellespontine district and is recorded by toponym in the tribute lists of 452/1 (*IG* 1³ 261.IV.30), 446/5 (*IG* 1³ 266.I.22) and 445/4 (*IG* 1³ 267.I.30),

paying 1,000 dr. the first year, a sum reduced to 500 dr. in 446/5 and 445/4 (*IG* 1³ 266.I.22; 267.I.30), presumably following the establishment of Athenian klerouchs shortly before 450 (cf. *IG* 1³ 417.9: ἐν Τυροδίτζ[αι] (448/7)). For a possible relation with the Athenian klerouchy settled c.450 in Neapolis (no. 677), see *ATL* iii. 205; Kahrstedt (1954) 22 and Isaac (1986) 204. Tyrodiza appears again in the assessment decree of 425/4 (*IG* 1³ 71.III.108; cf. Krateros fr. 3 (*IG* 1³ 100)). If the identification with Teiristasis is correct, Tyrodiza and its neighbour Krobyle were exposed to *andrapodismos* by the Athenian general Diopeithes in 341 (Dem. 12.3; cf. Dem. 8 *hypoth.* 2–3), see *supra* 913.

THE BLACK SEA AREA

ALEXANDRU AVRAM, JOHN HIND, GOCHA TSETSKHLADZE

I. The Region

The ancient name for the Black Sea, *Πόντος Εὐξείνιος* (Hdt. 1.72.3), often transliterated as “Euxine Pontos”, has all the hallmarks of a hybrid name, part Greek, part Iranian. The Greeks themselves took it to be Hellenic in both parts, “the hospitable (εὐξείνιος) sea (πόντος)” (Hdt. 4.95.1), but they also recognised an earlier form, which they took to mean its opposite, “inhospitable” (ἄξεινιος, Eur. *IT* 253; Ps.-Skymnos 735–37, Diller; Strabo 7.3.6). In the twentieth century, since the studies of Vasmer (1923) and Boisacq (1924), it has become generally accepted that *axenos* was itself a borrowing into Greek from an Iranian root *axšaēna* meaning “dark”. This gives a consistent naming principle for the Black Sea in a number of different languages, including Russian *Chernoie Mor'e* and Turkish *Kara Deniz* (see further discussion by Moorhouse, Allen, Yelnitskij and Georgiev, summarised in Danoff (1962) 950–54).

The region was regarded as a unitary one by many Greeks of the homeland and Aegean area, who referred to it by such expressions as *Ἑλλήνων οἱ Πόντον οἰκέοντες* (Hdt. 4.8.1), *οἱ τὸν Ἑλλήσποντον καὶ Πόντον οἰκέοντες Ἕλληνες* (cf. the rubric [πόλεις] ἐκ τοῦ Εὐ[χσεῖνο] in *IG* 1³ 71.1v.126). However, within the Euxine certain cities were especially close geographically and by reason of a common barbarian hinterland, while others were linked by regular sea routes along coastlines, or across from shore to shore (Arnaud (1992)). Strabo 2.5.22 divided the sea into “left-hand” and “right-hand” regions, i.e. those of Thrace to the left, and those of Bithynia, Paphlagonia and Kappadokia to the right, on entering from the Bosphoros. We may divide the whole of its circuit into four sub-regions, already treated separately by Strabo: (1) the coasts of Thrace and Getike (Strabo 7.6.1); (2) of Skythia, Taurike and Sindike (Strabo 7.3.14–4.8, 11.2.1–11); (3) of the Caucasus and Kolchian lowlands (Strabo 11.2.12–19); and (4) of the Mariandynoi, Paphlagonians and Kappadokes (Strabo 12.3.2–17). The Inventory of *poleis* is presented in these four regions, while the introduction treats the Black Sea area as a whole.

So much for the regions and shores of the Euxine; it should be noted that the Pontos could also be regarded as virtually two seas (*διθάλαττος πόντος*, Strabo 2.5.22), with a narrow waist between the central part of the Turkish coast and the southern tip of the Crimean Peninsula, creating the conditions for a convenient and much-used cross-sea route (Maximova (1956) 145–68; Gajdukevič (1969)).

The planting of Greek *poleis* around the shores of the Black Sea is largely a tale of two mother cities, Miletos (no. 854) and Megara (no. 225). A very few other (east Greek) states took subsidiary roles, and an occasional party of settlers (e.g. Boiotians) from elsewhere joined the founding, main group of colonists. These minor participants tended to be forgotten after a short time except in local tradition; even Megara’s colonising activity, well attested as it was in Classical and Hellenistic times, could be obscured as time went on by Miletos’ greater fame as a coloniser and by her higher profile as a city in Roman times (Robert (1937) 247–48). There was the expectation that a Greek colony in the Propontis and Pontos areas *would* be Milesian (Strabo 14.1.6). There were also, by the first century AD, much-inflated estimates of Milesian colony numbers, seventy-five according to Seneca (*Helv.* 7.2), or the ninety reported by Plin. *HN* 5.112. Lists have not been preserved for us, but they would have included sub-colonies of Sinope (no. 729) and many places labelled *poleis* by the geographers in a region generally thought of as a “Milesian lake”. This increasing tendency to assume that a colony here was Milesian is probably also responsible for some of the more glaring individual errors (see Strabo 12.3.4 on Herakleia (no. 715); Pompon. 2.22 on Kallatis (no. 686)).

Another feature of the historiographical tradition is the tendency to move away from giving foundation dates of colonies in the form of chronology relative to another Greek or Near Eastern event, or a king (Hdt. 4.144 on Kalchedon (no. 743)/Byzantion (no. 674); Ps.-Skymnos 730ff, on a string of Pontic colonies), and towards the practice of using Olympiads and their four-yearly cycle. Eventually, in the Christian writers of the later Roman Empire, the era of

Abraham was added as well. The dates in Eusebius and Jerome have an aura of exactness about them that is misleading (*Chron.* 95b), being based on a chain of previous pagan traditions that was very late in finding its final tabular form. For colonies within the Pontos three dates have gained common acceptance: Istros in 657, Olbia in 647, Sinope in 631. But these should be regarded as dates arrived at by being put belatedly into tabular form, and not as a canon, sanctified by the Christian Fathers (Hind (1999a)). A fourth date, found in the Armenian version of Eusebios, relating to Trapezous (757, *ann. Abr.* 1260) is to be discounted as a mistake, referring to the city of Kyzikos (no. 747) in the Propontis (Hind (1988) 213–14; Huxley (1990) 199; Ivantchik (1998) 314–18). Setting aside the exaggerated numbers of Milesian colonies and the (misleading) seeming exactitude of the few colonial dates provided by the chronographers, we may now turn to the distribution, character and development of the *poleis* in the Pontic region.

The Pontos amazed the Greeks by its vast emptiness; according to Hdt. 4.85, it impressed even the Persian Great King Dareios. It was particularly marked by a lack of islands, except for very small offshore islets. Huge stretches of varied coastline surrounded it. Hills and harbourless coast at first in Salmydessian Thrace; bays and headlands beyond; then marshy delta, treeless steppe, the high mountains of Taurike, the Caucasus and Eastern Anatolia, the Kolchian lowlands and marshy Phasian shoreline. Pouring into the Pontos are the great rivers then called Istros, Tyras, Hypanis, Borysthenes, Tanais and the Kimmerian Bosporos, the outflow from Lake Maiotis. They formed main arteries by which the products of the steppe peoples might be traded in the Greek *emporía*—hides, furs, slaves. The rivers spawned huge stocks of fish at their mouths or deltas, and saltings were conveniently present (Baladié (1994)). Sturgeon abounded in the river estuaries (Hdt. 4.53; Strabo 7.3.18, 11.2.4), herring in the east Crimean shallows, and tunny at various points along the east Pontic shore from the Kimmerian to the Thracian Bosporos (Strabo 7.6.2, 12.3.11, 19). These were probably the first resources to be exploited by Greeks in the Euxine, and the eventual size of the industry was considerable (Strabo 7.4.6; Danoff (1962) 955–85). The grain trade seems to have developed more slowly and, exploiting their territories, Olbia (no. 690) and later (and on a larger scale) the Bosporan Kingdom helped to feed the more populous cities of the Aegean area in C51 and C4 (Shcheglov (1990)). The metal resources of the region were, perhaps, a secondary attraction, though there was abundant copper in the Strandzha Mountains of Thrace and silver in

the coastal Pontic Mountains. Copper in the west and north-west Pontic region and some gold in the streams of Kolchis show up in the archaeological record (but only from C5) and in the Argonaut myth (Tsetskhladze (1995)). Since many native peoples were treated as commodities, it was probably the slave trade (Paphlagonians, Thracians, Getai, Kolchoi and Skythians) that was most consistently lucrative—organised at cities like Sinope (no. 729), Apollonia (no. 682), Istros (no. 685) and Olbia (no. 690).

The variety of the peoples around the Pontos arose from that of the lands—Mariandynoi, Kappadokians, Tauroi, Caucasian tribes with languages more numerous even than Milesian colonies (seventy according to Strabo 11.2.16, or, as he disbelieves, 300). These included the many small peoples listed by Ps.-Skylax (82–89) on the coast east of Sinope (no. 729) and Amisos (no. 712). These, and Herakleia (no. 715), were under the direct, or indirect, control of the great Asian power, Persia, after c.545 through its satraps at Daskyleion and in Kappadokia, and through the kings of Paphlagonia. The southern Thracians formed a sort of satrapy in Europe (*Skudra*) from c.512 to 478, while the Kolchoi were tribute-payers on Persia's northern fringe. Most curious in their way of life seemed to be these Phasian-Kolchoi, delta-dwellers with timber towns, and the nomad, wagon-dwelling Skythians (Hippoc. *Aer.*), who knew how to frustrate the greatest invasions with their strategy of retreat into the steppe. If Greeks wished for an ally against the Persian colossus, they thought of their own cultural antithesis—nomads with only royal burials to defend and the mobility to invade both Asia and Europe south of the Danube (Hdt. 4.46, 122–27, 6.84).

There were in Archaic and Classical times some thirty *poleis* with full credentials around the shores of the Euxine Pontos, and a further twenty or so which were dependent communities or doubtfully Greek, some being mentioned in dubious contexts or in plain error (Hind (1994) 481–86; Tsetskhladze (1994a), (1998b)); see also the relevant entries in the Inventory below). Three primary colonies were planted along the southern shore: Sinope (I c.700–690; II c.630–600) by Milesians, Amisos by Phokaians and/or Milesians (c.560–550), and Herakleia by Megarians and Boiotians (c.550). (Herakleia was, according to Xen. *An.* 6.4.2, the first Greek *polis* one met having passed the Bosporos and turned east.) The Greek cities here were well spaced out, and there is little or no friction recorded between them. To the east of Sinope were three of her own daughter colonies, dependent and tribute-paying by C51: Kotyora (no. 722), Kerasous (no. 719) and Trapezous (no. 734). Between Herakleia and Sinope

were four small settlements, described as *poleis* or *katoikiai*—Tieion (no. 733), Kromna (no. 723), Sesamos (no. 728) and Kytoros (no. 724)—which achieved some strength in union (*koinonia*) under the name Amastris on the site of Sesamos only c.300–290.

On the western shore, south of the Danube, the Milesians founded three early *apoikiai*: Istros (no. 685), c.650–625; Apollonia (no. 682) by c.600 or earlier, with some Rhodians? or Phokaians; and Odessos (no. 689) c.590–575. Megarians founded two, but, as these were sub-colonies of Byzantion (no. 674) and Herakleia (no. 715), they came much later—Mesambria (no. 687) c.513/12–494 and Kallatis (no. 686) in C6l at the earliest: its date is set by some in C6l, but, perhaps more likely is c.400–375 (Hind (1998); Saprykin (1998); Ivantchik (1998) 321–22).

Further north, on the fringes of Skythian lands, the Milesians had a near monopoly in colonial activity, apart from Herakleia's late colony at Chersonesos (no. 695), c.425–375. Olbia (no. 690) was in place on the Berezan peninsula by c.625–600, and transferred to the mainland site at Parutino some 40 km further inside the estuary within a generation or so, where it became a substantial *polis* and *emporion*. Karkinitis (no. 698) in west Crimea was settled by C6l, to be taken over by Chersonesos (no. 695) c.350. The Tyrantai at Ophioussa and Nikonion also existed by C6l; they were combined in C4 at Tyras (no. 694, at the site of Akkerman/Belgorod).

The *poleis* east of the Tauric part of the Chersonesos were also mainly Milesian: Theodosia (no. 707) and Pantikapaion (no. 705) on the Kerch Peninsula (the western side of the Bosporos), both left undated by literary sources but placed by archaeological finds c.600–575 (Tsetskhladze (1997b) 39–69). The eastern side of the Bosporos, the Sindian islands and delta of the river Kuban seem to have attracted some of the earliest *poleis*, not merely Milesian Kepoi (no. 699), c.580–560, but Hermonassa (no. 697), probably an *apoikia* from Aiolian Mytilene (no. 798), also c.580–560. Phanagoria (no. 706) came later, founded by men from Ionian Teos (no. 868)—these last in flight from the Persians (c.545–540). The western side of the Kimmerian Bosporos may have been subject to threatening Skythian movements, including raids and tribute exaction. In time, however, Pantikapaion (no. 705) became the chief market for the Skythians and eventually the capital of an expanding Bosporan state under Archaianaktid dynasts (480–437) and “archons” of mixed Thracian and Greek origin, the Spartokidai (437–109) (Hind (1994) 486–501). Of the small towns here, Nymphaion (no. 704) and, more

doubtfully, Myrmekeion (no. 703) qualified as *poleis*, while numerous other lesser *polichnia*, *komai* and *phrouria*, developed in the two geographical halves, European and Asiatic (Tsetskhladze (1997b) 70–81). Under Satyros I (433/2–389/8) and Leukon I (389/8–349/8), the Spartokidai expanded to include not just these cities, but some settled Skythians in the eastern part of the Kerch Peninsula and also the Sindoi and numerous Maiotian tribes who inhabited the river system of the river Antikeites (Kuban) and the east side of Lake Maiotis.

In the furthest reaches east of the Euxine were some small towns on the North Caucasus coast, Bata/Patous and Torikos. These can be seen to have been relatively late and mixed in character, and are attested as *poleis* only by Ps.-Skylax (*infra*). In the Kolchian lowlands (Tsetskhladze (1998a)) the Phasianoi seem to have developed towns of their own, partly through contact with Media and Persia, and partly under the stimulus of trade with Milesians, perhaps mostly Sinopean merchants. These were Phasis (no. 711), Dioskouris (no. 709), Gyenos (no. 710) on the coast, and Aia and Sourion up the river Phasis; however, the sites of the first two towns, barbarian or Hellenic, have yet to be found. Whether any of these was a Greek *polis* proper in the Classical period is a much debated question, but not one of them is ever attested in the literary record as a community doing anything diplomatic or political; nor has a citizen of any of them ever turned up in an inscription as a visitor or resident of any city of the Black Sea or elsewhere (see Phasis (no. 711) and Dioskouris (no. 709)). These, perhaps small, and certainly elusive, settlements were possibly *katoikiai* of miscellaneous Greeks, and one an *emporion* of the Phasianoi, servicing merchants. We may well think of them as dependent on Sinope (no. 729) for access by sea from the west and on the Phasian Kolkhoi for the trade with the hinterland. A string of such sites lay between Sinope and Phasis, at Batumi, Tsikhizdziri and Pichvnari, where a considerable Greek presence has been revealed in a C5–C4 cemetery (Tsetskhladze (1999) 43–50, 74–81).

The Pontos offered great resources, but was fraught with what seemed initially an inhospitable climate—stormy seas and biting winters. There were tough opponents in the small local Thracian tribes, and stronger and stranger ones still in the steppeland Skythians and Sarmatians. It was dire necessity at home that drove Greeks out to found these *apoikiai* beyond the Hellespont and Bosporos. There was loss of land at home to near neighbours, to Lydians inland from Miletos (no. 854), to Corinthians and Athenians around Megara (no. 225). But there were also plague, famine, *stasis* and the exile

of losers in it. Raids by the Kimmerians into western Asia Minor had some temporary effect, but they probably also brought in their wake new information about the far north-east. It was probably also the policy of the Milesian tyrants Thrasyboulos (c.600) and Thoas and Damasenor (c.580–560) to promote the sending out of *apoikiai*, just as Gyges, king of Lydia, seems to have done from his position of attempted overlordship (see on Abydos, Strabo 13.1.22). Gradually the Black Sea came to seem more inviting—with colonies settled in the softer target areas: Sinope (no. 729), Herakleia (no. 715), Olbia (no. 690) and Kepoi (no. 699) among the Sindoi. Its coasts were now known and negotiable, its currents familiar and followed, its smaller, poorly organised and ill-equipped peoples able to be defeated by immigrant hoplites. Every city founded—Apollonia (no. 682), Istros (no. 685), Pantikapaion (no. 705), Kallatis (no. 686), Chersonesos (no. 695)—made the Pontos more sailor- and settler-friendly.

Initially, and for generations, the *poleis* were in the ascendant; some, like Herakleia (no. 715), subdued their neighbours (Mariandynoi); perhaps Chersonesos (no. 695) repeated this pattern later among the Tauroi. The Milesians drove out from Sinope the weakened Leukosyroi, after a period of occupation by the Kimmerians. Sinope (no. 729) conquered land from the natives to the east for her colonists. Milesians were believed to have expelled some Skythians in founding Pantikapaion (no. 705). But this dominance did not stay unchallenged beyond C5e. Major powers evolved in Thrace (the Odrysai) and in Skythia (Royal Skythians ranging from the Danube to the Don), and they held the individual Greek *poleis* (Istros (no. 685), Olbia (no. 690)) as valued channels of trade within their sphere of control. Even the Paphlagonian and Kappadokian vassals of Persia occasionally pressed on their coastal *poleis*, Sinope and Amisos (no. 712). On the Kimmerian Bosporos, the Spartokid state was able to withstand the Skythians and Sarmatians throughout C5 and C4 by creating a “proto-Hellenistic” state out of several cities, and incorporating the extensive lands of the Sindoi and Maiotai. In the second half of C5, perhaps c.439/6–411/405, Athens extended her thalassocracy into the Euxine Sea, using as her chief footholds the cities of Sinope (no. 729) and, less certainly, Nymphaion (no. 704), while drawing Apollonia (no. 682) and Herakleia (no. 715) into her *arche*.

In constitutional and religious matters the colonists predictably seem to have held to practices prevalent in their mother cities: Milesian and Megarian magistracies, councils, assemblies, calendars and cults, the latter sometimes

taking on a native element from a deity deemed to be the equivalent of the Greek (Bilabel (1920); Hanell (1934); Ehrhardt (1988); Saprykin (1997)). Internal troubles followed, with some delay, the pattern of those noticed in Megara (no. 225) or Ionia: increased inequalities of wealth, formation of new aristocracies out of the first colonial families, relative overpopulation, *tyrannis*, and *stasis* between the *aristoi* and the *demos*. The major *poleis* of the Pontic region in the Classical period were relatively few: Sinope (no. 729), Herakleia (no. 715), Apollonia (no. 682), Mesambria (no. 687), Istros (no. 685), Olbia (no. 690), Chersonesos (no. 695), Pantikapaion (no. 705) and Phanagoria (no. 706). They all struck coinage by the late fifth century (in the case of Chersonesos by the early fourth). Another city, Hermonassa (no. 697), had some early importance, but declined, or was incorporated in Bosporos, too early to issue coinage. Most had cross-Pontic economic links, now traced by proxeny decrees and burial *stelai* of foreigners in the cities’ cemeteries. Several had a considerable export trade in wine, olive oil, salted fish and their pottery containers, the bulk-carrying amphoras. Warfare broke out between some—Sinope (no. 729) with Sestos (no. 672), and Herakleia (no. 715) with Bosporos (no. 705) in the early fourth century. Nearly all had agoras, temples and *temene* and a variety of public buildings. These have been found especially in the cities on the territories of present-day Bulgaria, Romania, Ukraine and Russia, where excavation, in some areas going back a century, has provided fullest evidence. Nearly all of them had territories, inland and around them, and lesser communities within them—dependent *poleis*, *polichnia*, *katoikiai*, *choria*, *phrouria*. A few had an *emporion* quarter, or had so developed as ports of trade that they could loosely be termed *emporion* in recognition of their general character.

Three ancient sources for the period and region may be looked at in some detail, for all purport to provide toponyms, or parts of names, for the Pontic *poleis*. Of these the first is Hekataios of Miletos (c.500), who has left some 175 references to *poleis*, mainly through the medium of the *Ethnika* of Stephanos of Byzantion (Hansen (1997a) 17). Among these are twelve located in the Euxine Pontos. They include three certain Greek *poleis*—Hermonassa (no. 697) (fr. 208), Karkinitis (no. 698) (fr. 184) and Phanagoria (no. 706) (fr. 212)—but also one temple (*hieron*): Apatouron (fr. 211), near Phanagoria (no. 706) (see also Kepoi (no. 699)). His remaining *poleis* are said to be barbarian, or are left unspecified: Patrasys (fr. 214: πόλις Ποντική (= Patraieus)); Krossa (fr. 213: πόλις πρὸς τῷ Πόντῳ

(= Kromna?)); Boryza (fr. 166: πόλις Πέρσεων); Kardessos (fr. 188: πόλις Σκυθίας); Orgame (no. 692; fr. 172: πόλις ἐπὶ τῷ Ἰστρῳ); Stamene (fr. 202: πόλις Χαλύβων); Stephanis (fr. 198: πόλις Μαρνανδυνῶν); Teiria (fr. 201: πόλις Λευκοσύρων (= Pteria, s.v. Sinope)); Chadisia (fr. 200: πόλις Λευκοσύρων); Choirades (fr. 204: πόλις Μοσσυνοίκων). Clearly about half of these *poleis* were centres of the native peoples, rather akin to the nameless *polis* and *metropolis* mentioned by Xenophon as being met with on his troops' line of march (Xen. *An.* 4.7.19: *Skythinoi*; 5.4.15: *Mossynoikoi*).

The second source is the section of the Athenian tribute assessment decree of the year 425/24 headed [πόλις] ἐκ τῆς Εὐχραεῖνο (ATL i. A9.IV.126ff = IG¹ 71.IV.126ff). This portion of the inscription is said to have space for up to forty *poleis*, although the boldest restorations have sought to provide about fifteen (ATL i. pp. 527–39; Meiggs (1972) 328–29). Most acceptable are Herakleia (no. 715) and Apollonia (no. 682) in the nearest south-western corner of the Pontos; then in declining order of conviction, Κερασός (iv.169); Νικ[ονία] (iv.167); Τύ[ρας] (iv.163); Κά[λλατις] or Κα[ρκωνίτις] (iv.165); Τα[μυράκε] (iv.164); Ὀ[λβία] or Ὀ[ργάμε] (iv.162); Κιμ[μερικόν] (iv.166); Πατ[ραιεύς] or Πάτ[ραυς] (iv.168); Νί[φσα?] (iv.143); Δα[υδάκε] (iv.170); [Κάρο]σα (iv.129); T[?] (iv.160); M[?] (iv.161). No widespread Pontic thalassocracy of Athens should be deduced from individual initials, though Sinope (no. 729) was drawn well into Athens' net (on Plutarch's authority: *Per.* 20), and the intervention at Herakleia (no. 715) is accepted (on the authority of Thuc. 4.75.2). A fragment of a casualty list is now once more interpreted to read “at Sinope”, reinforcing the account of Plutarch (IG¹ 1180; Clairmont (1979) 123–26); the longer reach of Athens is illustrated by the case of Gylon, the ancestor of Demosthenes, said to have held Nymphaion (no. 704) on the Bosporos in Athens' interest (Aeschin. 3.171). The story is reinforced by Krateros Harpokration (*FGrHist* 342) fr. 8, who says that “Nymphaion paid one talent” (Meiggs (1972) 329 n. 5).

The third and last apparent provider of Pontic *poleis* is Ps.-Skylax; dating to c.340–330 this text produces a prolific list of *poleis*, many of them said to be *Hellenides*, presumably in the topographic, urban, sense (Flensted-Jensen and Hansen (1996)). Of the forty or so places around the Black Sea, described as Greek *poleis*, nineteen are cities well known from other sources relating to the Archaic and Classical periods. But there are many omissions and misdescriptions as well. The omissions are concentrated particularly in the west and north-west. Istros (no. 685) and Olbia (no. 690) do

not appear, nor do Tomis (no. 693) or Dionysopolis (no. 684). Kromna (no. 723) and Kotyora (no. 722) on the southern shore are missing, as is Hermonassa (no. 697) on the Kimmerian Bosporos. Chersonesos (no. 695) figures as *emporion* (68), not *polis*. Sometimes *poleis* are left without the adjective *Hellenis* (Dioskouris (81), Limne (83)); one toponym, Aia (81), is described as “a great barbarian city 180 stades up the river Phasis” (possibly Kutaisi). But another twenty or so *poleis Hellenides* listed by Ps.-Skylax are completely unattested in other sources. These appear mainly on the eastern (72–74, 81–83) and southern shores (86, 89–90) of the Euxine, where not only small settlements are elevated, but even rivers and promontories are transmuted, into cities (e.g. the river Lykastos (89: πόλις Ἑλληνίς), Cape Karambis (90: πόλις Ἑλληνίς), Cape Jasonia (88: ἀκρόπολις Ἑλληνίς)). Sometimes a town, said by Hekataios to be native (e.g. Choirades (fr. 204)), is made into a *polis Hellenis* by Ps.-Skylax (86). As later geographers have no such burgeoning of *poleis* on these shores, it is clear that these idiosyncratic entries should not be trusted. But it is possible that the numbers implied in this text contributed to the notion, mentioned above, that Miletos (no. 854) founded seventy-five or ninety colonies in the region.

Apart from the doubtful cases of *poleis* mentioned above, a number of other settlements are mentioned by name by Classical authors or, with retrospective reference, by Hellenistic or Roman writers as e.g. *polichnia*, *emporía*, *katoikiai*, *teiche*, *phrouria*, *hiera* or *komai*.

1. Pre-Hellenistic Settlements not Attested as Poleis

Akonai (Ἀκόναϊ) A *kome* of the Mariandynoi (Theophr. *Hist. pl.* 9.16.4), or a *polichnion*, according to Steph. Byz. 61.4; its location is unknown, and while Plin. *HN* 6.4 describes it as a port east of Herakleia (no. 715), Steph. Byz. simply says *πλησίον Ἡρακλείας* (61.4). *Barr.* 86, unlocated and dated HR, but Theophr. *Hist. pl.* 9.16.4 suggests C.

Alopekia (νησος Ἀλωπεκία) Perhaps Elizavetovskoye in the Don delta. According to Strabo 11.2.3, it was a “*katoikia* of mixed people”. Shelov (1970) 69–75 argued in some detail that Elizavetovskoye, a large fortified site occupied in C5–C3, was Strabo's Alopekia, on an island in front of the Tanais (Don). *Barr.* 84 dates it C but treats it as unlocated (Elizavetovskoye?).

Anchiale (Ἀγχιάλη) Paleokastro/Pomorye, south of the Gulf of Burgas, Bulgaria. A *πολίχμιον Ἀπολλωνιατῶν*

(Strabo 7.6.1). The salt production at Anchiale has been studied (by Khrischer *et al.* (1982)). This resource is likely to have been used from an early date. *Barr.* 22, C.

Antheia (*Ἄνθεια*) Probably the peninsula of Atiya on the Bay of Burgas west of Apollonia (no. 682). According to Plin. *HN* 4.45, Antheia was a former name of Apollonia in the territory of the Astai. Steph. Byz. 96.3 makes it a separate colony of Milesians and Phokaiaans. Archaic sculpture and numerous pieces of bronze arrow money have been found there (Isaac (1986) 240–46). Not in *Barr.*

Anthemousis limne (*Ἄνθεμουσίς λίμνη*) Steph. Byz. 96.9 mentions an *Ἄνθεμουσίς λίμνη Μαρνανδυνῶν*, presumably somewhere in the territory of Herakleia (no. 715). *Barr.* 86: coast near Heraclea, H.

Apatouron (*Ἀπάτουρον*) A temple on the Taman Peninsula, on the east side of Kimmerian Bosphoros. A sanctuary of Aphrodite Apatouria, outside Phanagoria (no. 706), near Kepoi (no. 699) or Hermonassa (no. 697) (Strabo 11.2.10). An inscription from a rural sanctuary east of Kepoi mentions an Aphrodite Ourania and dates it to C4 (Tokhtasyev (1983) 111–17, (1986) 140; Tsetskhladze and Kuznetsov (2000)). *Barr.* 87, unlocated (Taman?), HR.

Arkiroessa (*Ἄρκιρόεσσα*) Steph. Byz. 121.9 has *Ἄρκιρόεσσα, πόλις ἐν Πόντῳ, Ἡρακλείας ὑποτελής* = Domitios Kallistratos (*FGrHist* 433) fr. 6. *Barr.* 86, unlocated, H.

Aulaiouteichos, Agathopolis (*Ἀυλαίου τεῖχος, Ἄγαθόπολις*) Akhtopol, on the Bulgarian coast south of the Bay of Burgas. *Aulaiouteichos* appears in Roman sources (Arr. *Peripl. M. Eux.* 36). *Agathopolis* has been supposed to be a late Roman/Byzantine renaming. Recently, however, two inscriptions and bronze coins of C4–C3e have been used to argue for the existence of Agathopolis much earlier (Velkov (1994); Jurukova (1994); Stancomb (1998)); but it is now argued (Avram (2002)) that these two inscriptions are actually of Apollonia (no. 682), moved to Akhtopol only in post-Classical times. *Barr.* 22, RL.

Harmene (*Ἄρμηνη*) Akliman, to the west of Sinope (no. 729). A harbour in the territory of Sinope (Xen. *An.* 6.1.15, 17). According to Ps.-Skylax 89, it was a *polis Hellenis* (actually a harbour of Sinope with accompanying buildings?); see Flensted-Jensen and Hansen (1996) 149. By Strabo's time it was a *kome* with walls, about which he quotes local opinion that they were “the work of people who had nothing better to do” (12.3.10). *Barr.* 86, C.

***Hermesion** (*Hermisium*) On the European side of the Kimmerian Bosphoros, unlocated; Pompon. 2.3; Plin. *HN* 4.87. A place lost or re-named by C1 to first century AD. *Barr.* 87 inset: unlocated, R.

Hieron Achilleos (*Ἱερόν Ἀχιλλέως*) Leuke Island, Phidonisi, Zmejnjij Island, lying to the north-east of the Danube delta. The centre of a cult of Achilles Pontarches with a temple. It seems to have been known already by Alkaios (fr. 354, LP), Pind. *Nem.* 4.48–50 and Ps.-Skylax 68, and by many Hellenistic and Roman writers. Archaeological finds from C6 onwards are discussed by Okhotnikov and Ostroverkhov (1996) and in their monograph on Leuke (1993). *Barr.* 23, AC.

Hieron Demetros (*Ἱερόν Δήμητρος*) Cape Stanislav, between the rivers Hypanis and Borysthenes (Bug and Dnieper). A shrine of Demeter on a cape called Hippoleos, lying across the estuary of the Bug from Olbia (no. 690) (Hdt. 4.53.6). Site not located. *Barr.* 23, C (Stanislavskoye).

Hieron Dios Ouriou (*Ἱερόν Διὸς Οὐρίου*) Anadolu Kavaği on the north coast of Turkey near the entrance to the Black Sea. The temple of Zeus Ourios (“Zeus favourable to sailing”) at the entrance to the Euxine Pontos (Polyb. 4.39.6). Hdt. 4.85, 87 mentions it as a good place from which to admire the sea, as did Dareios in 513/12. It was a collecting point for ships in large-scale convoys and merchant fleets (Didymos 10.54–11.7). The C4 Olbian decree about the exchange rate of their coinage was found there (*IOSPE* 1² 24 = Dubois (1996) 14). *Barr.* 53, HRL.

Kieros (*Κίερος*) A settlement of unknown status (called *πόλις Ἡρακλεωτῶν* in Memnon (*FGrHist* 434) fr. 27 (rHell.)), probably Mariandynian in origin. By C4l it was incorporated in the territory of Herakleia (no. 715) (Memnon (*FGrHist* 434) fr. 16, 27); by early Hellenistic times it was renamed Prusias-ad-Hypium (Memnon (*FGrHist* 434) fr. 27). It has been suggested that it had some earlier independent existence as a *polis*, which might be the case if a brief coin issue of C4e can be attributed to Kieros (E. S. G. Robinson (1921) 3–7; Burstein (1976) 108 n. 52). *Barr.* 86, R.

Korokondame (*Κοροκονδάμη*) Settlement on a lake in the Taman Peninsula, on the Asiatic side of the Kimmerian Bosphoros. By Strabo's time it was a *kome* (11.2.8 and 14). The Tuzlinskij cemetery (Sorokina (1957)) may have belonged to this settlement, in which case it was of considerable

importance in C6. *Barr.* 87 inset, C, but A would be attested if the cemetery (*supra*) belongs to Korokondame.

Kremnoi (*Κρημνοί*) *Emporion* of the Royal Skythians on the north-western side of the Sea of Azov, or at Pantikapaion (no. 705) (Hdt. 4.20, 110). For the latter location, see Hind (1997) 111–15. *Barr.* 87 inset, unlocated, AC.

Naulochos (*Ναύλοχος*) Obzor, north of the Bay of Burgas, Bulgaria. A minor town (*polichnion*) belonging to the Mesambrians (no. 687) (Strabo 7.6.1). It is not known how early it became such. *Barr.* 22, HR.

Ordessos (*Ὀρδησσός*) A *polis*, probably of mixed population, if this is the same as *Καρδησσός* (*καὶ Ὀρδησσός*?), a *polis* of Skythia, according to Hecat. fr. 188; perhaps Kosharskoye on the right bank of Tiligul. Kosharskoye has produced a considerable amount of Greek imported pottery of C5–C4 (M. J. Treister and Vinogradov (1993) 533). *Barr.* 23, unlocated, HR, but Hecat. fr. 188 may indicate A.

Panelos (*Πάνελος*) According to Steph. Byz. 500.5–7, a *πόλις* *περὶ τὸν Πόντον*, named after a Herakleiot originating from Boiotia, and so presumably an early venture, but nothing is known of the place (Burstein (1976) 25).

Porthmion (*Πορθμίον*) Situated in the European part of the Kimmerian Bosphoros. The toponym is *Πορθμίον* (Steph. Byz. 533.4; Anon. *Peripl. M. Eux.* 50) or *Παρθένιον* (Strabo 7.4.5, 11.2.6; Hdn. 111.1 360.17). The site lies at a strategic point on the north-west coast of the Kerch Strait, not far from Pantikapaion (no. 705), and the town controlled the crossing of the strait (Strabo 7.4.5). No source classifies Porthmion as a *polis*, and the site-classification found in the late sources quoted above is *kome*. The only source for a city-ethnic is Stephanos. Thus, it may have been a mere *teichos* (cf. *IOSPE* 1² 401 = *Syll.*³ 360; Tsetskhladze (1997b) 68–69). Porthmion was founded most probably by Pantikapaion in C6, and thus it was dependent on Pantikapaion from the beginning (ibid. 62, 68, 79). The first walls of Porthmion were erected in C6l/C5e (Vakhtina (1995)). The west wall, a tower and new gates were built in C3e (Y. A. Vinogradov (1995a) 157 n. 35; Tolstikov (1997) 209, 223–26). Stone and mudbrick buildings date from C6l. The town was regularly planned as twelve blocks, separated by streets, following the major points of the compass. The blocks were 42 m long by 11 m wide, except for the two central blocks of the eastern half, which were 63.5 m long (Koshelenko *et al.* (1984) 69–70; Hind (1983–84) 87). *Barr.* 87 inset, C.

Priola (*Πρίολα*) A *πόλις* *πλησίον Ἡρακλείας*, otherwise unknown (Steph. Byz. 535.9). *Barr.* 86, unlocated, H.

***Stratokleia** (*Stratoclia*) An unlocated town on the Asiatic side of the Kimmerian Bosphoros. Mentioned by Plin. *HN* 6.18, it may have been a renamed earlier settlement of C5–C4. *Barr.* 87 inset, unlocated, C?H?R?

Tamyrake (*Ταμυράκη*) Named as a gulf and cape (Strabo 7.3.19). Some rare silver and bronze coins with the legend *TAM* are of a *polis* of Tamyrake C5–C4 according to Kutajsov (1996) 299–301. But no such city has yet been found, nor is one mentioned by the ancient sources. *Barr.* 23.

Tirizis (*Τίριζις*) Cape Kali Akra, coast of Bulgaria. A promontory used as a stronghold/treasury by Lysimachos, but probably existing earlier (Strabo 7.6.1). *Barr.* 22, HRL.

Torikos (*Τορικός*) On Gelendzhik Bay, perhaps Tonky Mys, North Caucasus. Torikos has been identified with remains, including a large stone building of c.500, found at Tonky Mys (Onajko (1980)). In literary sources Torikos is mentioned by Ps.-Skylax 74, but his many *poleis* in this region are of doubtful status (see *supra*). *Barr.* 84, AC.

These *poleis* and lesser settlements, after a tentative false start at Sinope probably in C8l, really got under way in C7s and continued to be founded, especially at times of stress in the homeland, at various times in C6. Sub-colonies of C5 and C4e filled up the gaps in exploitation of land or trade. The shores of the Euxine Pontos were thus linked together for the first time, and were tied into an Aegean and East Mediterranean network of communications. In the Hellenistic and Roman period more and more “towns” in the urban sense claimed the title *polis* if they were possessed of local autonomy within a king’s or the Empire’s rule. In an earlier age many of these might have been *komai* or *katoikiai* of “Mixed Folk”, like Herodotos’ Kallippidai near Olbia (4.17: *ἔοντες Ἕλληνες Σκύθαι*), or of those settlers at Alopekia in the Don delta. An interesting case of “*polis* inflation” in these later times is Abonouteichos (Inebolu on the western half of the north coast of Turkey). From being the “Fort of Abonos” in the time of Mithridates VI (Head, *HN*² 505), it progressed to claiming the name “Ionopolis” (now Inebolu) under M. Aurelius, thus hinting at an origin in the days of Milesian colonisation—perhaps wishing to be on a par with those four cities that had made up the *koinonia* of

Amastris. As we have already seen, at some disputed date between the fourth and fifth centuries AD the town of Aulaiouteichos on the Bulgarian coast effected its name change to Agathopolis.

II. The *Poleis*

1. *The Coasts of Thrace, Getike and Western Skythia*

682. Apollonia (Apolloniatas) Map 22. Lat. 42.25, long. 27.40. Size of territory: 5. Type: A:a. The toponym is invariably *Ἀπολλωνία*, -ίη, ἡ (Hdt. 4.90.2, 93.1; Arist. *Pol.* 1306^a9); *ATL* i. A9 = *IG* 1³ 71.IV.128 has been restored [*Ἀπολλωνία*]. For supplementary precision ancient writers usually add ἡ ἐν τῷ (*Ἐὐξείνῳ*) *Πόντῳ* (e.g. Hdt. 4.90.2; Arist. *Pol.* 1306^a9). The city-ethnic is *Ἀπολλωνιάτης* (Arist. *Pol.* 1303^a36–37 and Aen. *Tact.* 20.4, both adding ἐν τῷ [*Ἐὐξείνῳ*] *Πόντῳ*).

Apollonia is called a *polis* in the urban sense by Aen. *Tact.* 20.4, and in Ps.-Skylax 67 it is the first toponym listed after the heading πόλεις Ἑλληνίδες αἰδε. For the political sense, see Arist. *Pol.* 1303^a26 and 36–37, where Apollonia is one of eight examples subsumed under the heading *polis*. Strabo 7.6.1 retrospectively describes it as *ἄποικος* and *κτίσμα*.

The collective use of the city-ethnic is attested internally in abbreviated form on C5s coins (*infra*) and externally at Aen. *Tact.* 20.4 and Arist. *Pol.* 1303^a36–37 (cf. the inscription from Pistiros (Vetren) *SEG* 43 486.32 (C4s)). The external and individual use is found in an inscription from Vetren (*IGBulg.* III.1 1068 (C4–C3)) and in later documents.

Apollonia is located at modern Sozopol (Bulgaria), partially on a peninsula (cf. Hind (1983–84) fig. 3). The earliest archaeological finds are of C71 (*ibid.* 72; Panayotova (1998) 97; for the earliest finds in the cemetery, see T. Ivanov in I. Venedikov *et al.* (1963) nos. 780–81; cf. for new material (Wild Goat style and related East Greek pottery) Reho (1986)). The earliest stone inscription is C6: *IGBulg.* I² 404. For some rural settlements, see Hind (1992–93) 85.

Apollonia was colonised by Miletos (no. 854) 50 years before the reign of Kyros (i.e. c.610); Ps.-Skymnos 730–33; cf. Anon. *Peripl. M. Eux.* 85–86, Diller. The possibility that Rhodians joined the Milesians in founding Apollonia (Steph. Byz. 160.2) is to be rejected. According to Ael. *VH* 3.17, the founder was Anaximander the philosopher, but

Anaximander was 64 years old in Ol. 58.2 (i.e. 547; cf. Diog. Laert. 2.2), so he was born c.611 and he can hardly have been the *oikistes* of Apollonia if we accept the traditional dating (strongly supported by the archaeological evidence). Steph. Byz. 96.2–4 also mentions *Ἀνθεια καὶ τοῦ Πόντου πόλις πρὸς τῇ Θράκῃ, Μιλησίων καὶ Φωκαέων ἄποικος, ἧς μὲμνηνται πολλοὶ καὶ Φιλέας* (cf. Plin. *HN* 4.11.45: *Astice regio habuit oppidum Anthium; nunc est Apollonia*). It might have been a minor Milesian foundation identified with a settlement on the Atiya peninsula (Antheia > Atiya) which produced early Greek material (Hind (1983–84) 73). See also the *astakos* (crayfish) symbol on C5m–C4 coins of Apollonia, which may be a pun on the region, Astike (Hind (1985a)).

Apollonia was a member of the Delian League; at least, it was assessed for tribute in 425/4 (*IG* 1³ 71.IV.128). Athenian influence is attested in the calendar, which includes the specifically Athenian month Mounychion (*IGBulg.* I² 469 *bis*), dated C3–C2 but perhaps introduced in C5 (Trümpy, *Monat.* 91). In 341 Apollonia had a treaty with Philip II of Makedon (Just. *Epit.* 9.2.1), perhaps in a subordinate position, and in 313 it probably joined the alliance with Kallatis (no. 686), Istros (no. 685) and other west Pontic cities against Lysimachos (Diod. 19.73).

Apollonia originally (C6) had an oligarchic constitution; cf. Arist. *Pol.* 1305^b39–1306^a6–9, where a *stasis* is mentioned in a discussion of how oligarchies change. At *Pol.* 1303^a36–38 Aristotle mentions that “the people of Apollonia on the Euxine Sea after bringing in additional settlers (*ἐποίκους*) fell into faction (*ἔστασίασαν*)”. These references probably refer to two different moments: the affair of the *epoikoi* suggests an Archaic context, close to the foundation, while the change in oligarchy seems to indicate rather elaborate institutions (Danov (1976) 210; Gehrke, *Stasis* 24, 255).

An extra-urban sanctuary of Apollo Ietros on St Cyriacus (Svet Kirik) island (known from Hellenistic inscriptions) is indirectly attested for C5, in so far as the statue of Apollo captured in 72 by the Romans (Plin. *HN* 4.13, 34.7; App. *Ill.* 30) was a work of Kalamis (Strabo 7.6.1), whose activity falls c.475–450. The sanctuary is surely as old as the city itself. In C5–C4 a *megaron* of Ge *Chthonia* is also mentioned (*IGBulg.* I² 398). Other attested cults are those of Artemis Pytheia of Milesian origin (graffito in *SEG* 3 557 (C6)) and Aphrodite (Archaic terracottas; cf. Hoddinott (1975) 38).

Aen. *Tact.* 20.4 refers to *pylai* at Apollonia in C4m and thus to the existence of fortification walls. The two harbours are attested only in the Hellenistic period.

Apollonia struck silver coins on the Attic standard from C5m onwards. Denominations: tetradrachm, drachm, diobol and fractions of obol. (1) C5; type: *obv.* anchor (and crayfish l. or r.); legend: *A* or ΑΠΟΛΛΩΝ; *rev.* swastika in incuse or Gorgoneion in concave field. (2) C4; *obv.* head of Apollo laur.; *rev.* anchor (and crayfish l. or r.); legend: *A* and magistrate's name (Head, *HN*² 277–78; Price (1993) pl. VI nos. 148–63; Zaginajlo (1974) 49–50 for the weight standards). Before the coinage of silver drachms Apollonia seems to have struck bronze arrowhead money (Balabanov (1986); Preda (1991)).

683. Bizone (Bizonites) Map 22. Lat. 43.25, long. 28.20. Size of territory: 2. Type: C:a. The toponym is Βιζώνη, ἡ (*I.Histriae* 15.26 (C3l); Ps.-Skymnos fr. 3, Marcotte). In its only occurrence the city-ethnic is Βιζωνίτης (*I.Iasos* 408 (post 167)); the forms recorded by Steph. Byz. 169.15–16 (*Βιζωναῖος* or *Βιζώνιος*) are not attested elsewhere. A possible further mention rC4 depends on acceptance of the conjecture suggested by Iliescu (1969), (1971) *apud* Clem. Al. *Strom.* 5.5 p. 240: Βιζωνιτῶν δῆμῳ instead of Βυζαντίων δῆμῳ (*contra* Pippidi (1984) 153 n. 12).

Bizone is called a *polichnion* by Anon. *Peripl. M. Eux.* 75 = Ps.-Skymnos fr. 3. However, it was a C6 colony (*infra*) and presumably founded as a *polis*. The territory of Bizone is called *chora* in an external inscription (Istros: *I.Histriae* 15.26 (C3l)). In the neighbouring area *μιγάδες Ἑλληνες* are attested (Ps.-Skymnos fr. 2b, Marcotte), i.e. Greeks, (Thracian) Krobyzians and Skythians. The city was destroyed by an earthquake (Strabo 1.3.10, 7.6.1; Pompon. 2.2.22; Plin. *HN* 4.11.44) in C1s and then refounded in the Imperial period.

Bizone is located at modern Kavarna (Bulgaria), Chirakman promontory. A few archaeological remains date to the beginning of C6 (East Greek banded ware: Salkin (1986)), but the bulk of the pottery is of late C5 to C3 (Hind (1992–93) 87). Hence, Bizone was colonised possibly in C6. Although Ps.-Skymnos fr. 3 knew a tradition that it was founded by a barbarian people, whereas according to another it was a colony of Mesambria (no. 687), both traditions are suspect: the Greek character of the city is beyond doubt, but the few later inscriptions do not confirm that the city was Dorian. Rather, Bizone was founded by Miletos (no. 854) or by one of the west Pontic Milesian colonies.

684. Dionysopolis (Dionysopolites) Map 22. Lat. 43.25, long. 28.10. Size of territory: 4. Type: B:a. The toponym is Διονυσόπολις, ἡ (Ps.-Skymnos fr. 2, Marcotte), Διονύσου πόλις (Steph. Byz. 233.1). According to the ancient tradition,

the original name was *Κρουνοί*, which was changed to Dionysopolis after the discovery of a statue of Dionysos in the sea (Ps.-Skymnos fr. 2b, Marcotte; Steph. Byz. 233.3–5). Strabo 7.6.1 still uses Krounoi, and not Dionysopolis. The city-ethnic is Διονυσοπολίτης (*I.Kallatis* 14 (C3) and Hellenistic coins (Head, *HN*² 274: ΔΙΟΝΥΣΟΠΟΛΙΤΩΝ)).

Dionysopolis is implicitly called a *polis* in all the sources, in so far as *polis* is part of the composite toponym, but none is pre-Hellenistic; Hellenistic inscriptions give some *polis* cognates: *politai* (*IGBulg.* r² 13 *ter* (C3)) and *politeia* in proxeny decrees (*infra*, C3). The earliest attestations of the city-ethnic are Hellenistic (*IGBulg.* r² 13 *bis* (C3 if not C4l); *I.Kallatis* 14 (C3)).

Dionysopolis is located at modern Balchik; no archaeological remains are pre-Roman (Hind (1983–84) 74), but the earliest inscriptions are C4 (*IGBulg.* r² 19 *bis*, 25–27).

Dionysopolis was possibly colonised by Miletos (no. 854), perhaps not directly, but the *metropolis* is never mentioned (cf. Ehrhardt (1988) 65–66; Avram (1996) 294, 298–99). The probable existence of the Ionian *phylai* points to a C6l–C5 date for the foundation; there is no proper foundation myth, but the tradition about the statue of Dionysos may suggest a refoundation in C4l.

Grants of proxeny are attested only in C3 (*IGBulg.* r² 13 *bis*, for a citizen of Odessos (no. 689), and 13 *ter*, for a citizen of Kallatis (no. 686)). A citizen of Dionysopolis received proxeny from Kallatis: *I.Kallatis* 14 (C3).

The seven *phylai* mentioned in *IGBulg.* r² 15 *ter* = 30 (Roman period) “are probably identical with the seven *phylai* of Odessos, viz. the traditional sixfold Ionian division plus the later addition, the ‘Romans’” (Jones, *POAG* 276). The oldest attested public enactments are the two proxeny decrees of C3 (*IGBulg.* r² 13 *bis*, which also mentions *ἐγγείων ἔγκτησις*, and 13 *ter*). The eponymous magistrate was in the Hellenistic period the priest of Dionysos (*IGBulg.* r² 22 (C2)), but there is no evidence for the Classical period. The earliest mentions of the *boule* and of the assembly (*demos*) are from C3 (*IGBulg.* r² 13 *ter*) and C1m (*IGBulg.* r² 13).

685. Istros (Istrianos) Map 22. Lat. 44.35, long. 28.45. Size of territory: 5. Type: A:a. The toponym is Ἰστρή (Hdt. 2.33.4) or Ἰστρος (Dubois (1996) 58.3 (C5f); Arist. *Pol.* 1305^b5). The city-ethnic is Ἰστριηνός (Hdt. 4.78.1) or Ἰστριανός (*I.Olbia* 7 = Dubois (1996) 19; Athens: *SEG* 24 258; *IG* r² 8940 (all C4)).

It is called a *polis* in the urban sense by Ps.-Skymnos (fr. 6, Marcotte, referring to the time of foundation) and in the political sense by Arist. *Pol.* 1305^b5–6 and, retrospectively, Diod. 19.73.2 (r313). The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in Diod. 19.73.2 (r313). The individual and external use is found in *IG* II² 8940; *SEG* 24 258 (Athens); and *I.Olbia* 7 (all C4). Istros is called *patra* (= *patris*) in *I.Histriae* 171 (C4) (cf. *CEG* II 882).

Istros was founded by Miletos (no. 854) (Hdt. 2.33; Ps.-Skymnos fr. 6, Marcotte) in 657 (Euseb. *Chron.* 95b) or some time later (Ps.-Skymnos fr. 6); archaeological evidence favours the earlier dating (Alexandrescu (1978a) 19–21, (1990) 50–51). Istros itself founded Ἰστριανῶν λιμῆν north of the Dniester (Arr. *Peripl. M. Eux.* 20; Anon. *Peripl. M. Eux.* 61, Diller) and perhaps Nikonion (no. 688), in the same region. Orgame (no. 692) was probably also an Istrian foundation.

Istros was perhaps a member of the Delian League, though there is no positive evidence. In 313 it was allied with Kallatis (no. 686) against Lysimachos (Diod. 19.73.2–4). At the end of C4 an *isopoliteia* with Miletos (no. 854) is attested (*I.Histriae* 62). The earliest proxeny decree is from C5/C4e (Avram (1999a)); a grant of proxeny to a citizen of Istros is found at Olbia (no. 690) in C4f (*I.Olbia* 7 = Dubois (1996) 19).

The evidence for civic subdivisions from the Late Hellenistic and Imperial period (four attested Milesian *phylai*) undoubtedly indicates an earlier existence: Aigikoreis (*I.Histriae* 333 (third century AD)); Argadeis (*I.Histriae* 334 (third century AD)); Boreis (*I.Histriae* 97 (C1), 3191 (early first century AD)); Geleontes (*SEG* 30 849 (Roman)). The original oligarchic constitution was replaced through a *stasis* by a democratic regime (Arist. *Pol.* 1305^b1–12), possibly as a consequence of Perikles' expedition in the Black Sea and the progress of Athenian influence (Plut. *Per.* 20; cf. Alexandrescu (1990) 70–74).

Several officials are attested in the Hellenistic period, but their Milesian origin indicates an earlier existence. The eponymous official was the priest of Apollo Ietros (implicitly *I.Histriae* 169 (C4e), 144 (C4)), attested explicitly only from C1s (*I.Histriae* 54) onwards.

Istros is located near the village of Istria, Romania. The acropolis (with the *temenos*), an Archaic city wall (C6s, destroyed at the end of C6) and a Classical city wall (C5–C4, possibly destroyed by Lysimachos in 313; cf. Diod. 19.73.4) have been identified through excavations. The early city walls enclosed an area of 60 ha distributed between the

temenos on the acropolis and the civil settlement on the west side of the city (Alexandrescu (1978b), (1990) 51–52; Dupont *et al.* (1999)).

Local inscriptions mention the agora (from C3f onwards: *I.Histriae* 1, 3, 8, etc.). The sanctuary of Apollo Ietros is attested only from C3f onwards (*I.Histriae* 6, 65, etc.), but it may originate in C6. For the temple of Zeus Polieus with altar (*I.Histriae* 8 (C3)) and the temple of Aphrodite there is archaeological evidence from C6m (Pippidi (1962); Zimmermann (1981); Alexandrescu (1990) 56–57). A theatre is mentioned in C3f (*I.Histriae* 65).

The main attested cults are those of Zeus Polieus (*I.Histriae* 8 (C3), etc.), Apollo Ietros (*I.Histriae* 169 (C4e), 314A (C4), 104, 144 (C4–C3), etc.; cf. Apollo Φωλευτήριος *I.Histriae* 105 (C3)); Leto (*I.Histriae* 170 (C4)); Aphrodite (*I.Histriae* 101 (C6m), 108 (C4), 113 (C3), etc.). The festivals of Thargelia (*I.Histriae* 65 (C3f)) and Taurea (*I.Histriae* 60 (C2); cf. 61 (C2)) are also attested in the Hellenistic period but they might be very old. The early Milesian calendar is suggested by the mention of the months Taureon (*I.Histriae* 26; cf. the festival of Taurea), Thargelion (cf. the festival of Thargelia), Anthesterion (*I.Histriae* 58 (C2)) and Artemeision (*I.Histriae* 54 (C1)) (Trümper, *Monat.* 89).

Istros struck coins from c.480 onwards. Its earliest coins are silver drachms; later denominations are trihemiobols and obols. Types: *obv.* two young heads tête-bêche, C5 issues with incuse square, C4 issues without; *rev.* sea-eagle on dolphin l.; legend: *ΙΣΤΡΙΑΗ*. C4 cast bronze coins have *obv.* wheel with four spokes; *rev.* *ΙΣΤ* (Head, *HN*² 274–75; Preda (1973) 19–37, (1975); Price (1993) pl. IX nos. 220–58; *SNG Cop. Thrace* 191–201). For different interpretations concerning the two opposite heads of the obverse of silver coins, see Hommel (1969) 261–62; Hind (1970); Alekseev (1982); Karyshkovskij (1982); Hind (1992–93) 90 and (1999b). About the weight standards of silver coins: Zaginajlo (1974) 51–54. Before the silver and bronze coinage Istros seems to have cast bronze arrowhead money (Preda (1991) 20–27). That *ΙΣΤΡΙΑΗ* is an abbreviated form of the city-ethnic is indicated by the full form, *ΙΣΤΡΙΑΗΝΩΝ*, on late coins (*SNG Cop. Thrace* 202–4, *Suppl.* 88).

686. Kallatis (Kallatianos) Map 22. Lat. 43.50, long. 28.35. Size of territory: 5. Type: [A]:a. The usual toponym is *Κάλλατις*, -ω, -ιδος, ἡ (Ps.-Skylax 67; Strabo 12.3.6; *IOSPE* I² 27.6 (C3)), *Κάλατις* (Anon. *Peripl. M. Eux.* 73, Diller); *Καλλατία* also occurs (Diod. 20.112.2 (r302/1)). Pliny's isolated report (*HN* 4.11.44) that *Callatis antea uocabatur Cerbatis* (MSS differ in this respect: *Ceruatis*, *Aceruatis*)

found a spectacular confirmation through the inscription *IGBulg.* v 5011 (Dionysopolis (early first century AD)); however, *Καρβατις* seems to be a river rather than a toponym (cf. Avram (1991) 106). The city-ethnic is *Καλλατιανός* (C4 coins, *infra*; Arr. *Anab.* 6.23.5 (r325/4)) or *Καλλαντιανός* (Diod. 19.73.1, 4–6, 20.25.1, in all passages in the plural).

In Ps.-Skylax 67 Kallatis is the fourth toponym listed after the heading *πόλεις Ἑλληνίδες αἶδε* (cf. Diod. 19.73.5 (r313)); *politai* and *politeia* occur in proxeny decrees *passim* from C41 onwards. It is called *ἄποικία* by Ps.-Skymnos fr. 4, Marcotte, and described as *ἄποικος* by Strabo 7.6.1.

The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and in C3 inscriptions (*SGDI* 3089 = *I.Kallatis* 7, etc.) and externally in Diod. 19.73.4–6 (r313). The individual and external use is found in Arr. *Anab.* 6.23.5 (r325/4); *I.Sinope* 3 (Sinope (C4)); and *CIG* 3317 = *I.Smyrna* 147 (C4–C3). It is called *patra* (= *patris*) in *CEG* II 731 = *I.Kallatis* 130 (C4).

Kallatis was colonised by Herakleia (no. 715): Ps.-Skymnos fr. 4, Marcotte; cf. Strabo 7.6.1; Memnon (*FGrHist* 434) fr. 13 (21), etc. Pompon. 2.2.22 (*Milesiis deducta Callatis*) must be a mistake. The dating depends on the identification of Amyntas (I or III), to whom the source of Ps.-Skymnos (Demetrios of Kallatis) refers. It is possible that Demetrios of Kallatis had Amyntas I (c.540–498) in mind, so that Kallatis may have been founded at the end of C6. But for this early dating there is no archaeological evidence (Hind (1992–93) 89).

Kallatis was probably a member of the Delian League, although in the assessment decree of 425/4 the attractive restoration *Κάλλατις* is not certain (Pippidi (1971) 63–64 = *SEG* 22 9 versus *Κα[ρκωνίτις]* in *IG* I³ 71.IV.165). Around 313 Kallatis led a *symmachia* with Istros (no. 685) and other west Pontic cities against Lysimachos (Diod. 19.73.2–4). After the conquest of Kallatis by Lysimachos, refugees from Kallatis were settled by the Bosporan king Eumelos in *Ψόα*: Diod. 20.25.1.

The first attested grant of proxeny is from c.311/10 (*I.Kallatis* 2), while the first known received proxeny is presumably by Sinope (no. 729) in C4 (*I.Sinope* 3, which is probably a grant of proxeny and other privileges, though the fragmentary text preserves only a grant of citizenship). The oldest attested public enactment is the proxeny decree from c.311/10, and the same inscription also records the *boula*. The eponymous official was, as in Megara (no. 225), the *basileus*, attested from C3 onwards: *I.Kallatis* 3; *SGDI* 3089 = *I.Kallatis* 7, etc. The same inscriptions as well as *I.Kallatis* 4 mention *probouloi* for each month. The

president of the assembly was the *proaisymnon* (*pr(o)aisimnon*): Avram (1994) 170–75 (from C3 onwards). More officials are mentioned in Hellenistic inscriptions.

Kallatis is located at modern Mangalia (Romania). The earliest ceramic finds are C4e. Some public buildings attested through Hellenistic inscriptions could be older: a *bouleuterion* (*I.Kallatis* 49 (C2)), a *prytaneion* (*I.Kallatis* 3; *SGDI* 3089 = *I.Kallatis* 7 (C3)), a *theatre* (*I.Kallatis* 3 (C3)). The earliest city wall was erected in C4f (Preda (1968) 22 and recent unpublished excavations); its existence is also suggested by Diod. 19.73 and 20.25.1 (r313/12 and 309–307?), the two sieges under Lysimachos.

The evidence for cults is mostly Hellenistic, but in some cases one may suspect an early Megarian origin. Attested patron deities are Zeus Polieus (*I.Kallatis* 22), Zeus Soter (*I.Kallatis* 254 (C4e)) and Athena Polias (*I.Kallatis* 76 (C4)). A typical communal cult of Megarian origin is that of Dionysos Patroos and Dasyllios, attested through a list of deities from C4 (*I.Kallatis* 48A). The same list also mentions Aphrodite Pandamos, Peitho, Kronos and (Damater) Chthonia. Among the attested festivals, the Dionysia *τὰ ξενικά* (*I.Kallatis* 3 (C3)) may be of earlier origin. Eight attested months from the local calendar indicate a Megarian origin (Avram (1999b), complete restoration of the calendar). Evidence for oracle consultation is first given by Ps.-Skymnos fr. 4, referring to the foundation of Kallatis *κατὰ χρησμόν* (the oracle of Delphi), and by a series of oracular inscriptions from C4–C2 (*I.Kallatis* 48–50).

Kallatis struck silver coins from C4s onwards; the earliest coins are drachms and hemidrachms. *Obv.* head of young Herakles r. in lion skin; *rev.* corn-ear, club and bow-case; legend: *ΚΑΛΛΑΤΙ* or *ΚΑΛΛΑ*. Possibly also some types of bronze coinage (Pick (1898) nos. 196–204; Head, *HN*² 273–74; Price (1993) pl. VII nos. 203–4). That *ΚΑΛΛΑΤΙ* is an abbreviated form of the city-ethnic is indicated by the form, *ΚΑΛΛΑΤΙΑ(ΝΩΝ)* on C3 coins (*SNG Cop. Thrace* 176).

687. Mesambria (Mesambrianos) Map 22. Lat. 42.40, long. 27.45. Size of territory: 5. Type: A:a. The toponym is Dorian *Μεσ(σ)αμβρία* or *Μεταμβρία* (derived from coin legend), Ionian *Μεσσαμβρή* (Hdt. 4.93, 6.33.2), *koiné* *Μεσημβρία* (e.g. Ps.-Skylax 67); *Μεσεμβρία* occurs only once (*IGBulg.* I² 345, a *carmen epigraphicum*); cf. Velkov (1969) 27–28, with an exhaustive list of the attested forms. Of the corresponding city-ethnics, *Μεσσαμβριανός* is found in *IGBulg.* I² 307.17 (C3f); *META* on C5 coins is probably an abbreviation of *Μεταμβριανών*, found unabridged on later

coins; and *Μεσημβριανός* is found in *IOSPE* 1² 20.5 = *Syll.*³ 219 = Dubois (1996) 15 (C4f).

Mesambria is called a *polis* in the urban sense at Hdt. 4.93.1, and in Ps.-Skylax 67 Mesambria is the second toponym listed under the heading *πόλεις Ἑλληνίδες αἰδέε*. *Polis* in the political sense is attested at Hdt. 6.33.2, as well as in local inscriptions of C3f (e.g. *IGBulg.* 1² 307). The cognates *politai* and *politeia* occur in the local proxeny decrees (*infra*). The city is also poetically called *patris* (*IGBulg.* 1² 345). It is described as *ἄποικος* by Strabo 7.6.1 and as *κτίσμα* by Eust. 803 (*GGM* II 356–57).

The collective use of the city-ethnic is found internally in abbreviated form on C5 coins (*supra*) and in inscriptions of C3 (*IGBulg.* 1² 307, 309, 317) and externally in Polyb. 25.2.14 and *IGBulg.* 1² 388 *bis* (C2). The external individual use is found in *IG* II² 9338 (C4m) and *Syll.*³ 219 = *IOSPE* 1² 20 (Olbia, C4f).

Mesambria is located at modern Nesebär (“a classical peninsula site”: Hind (1983–84) 73). “For the classical period, an estimate of the population of Mesambria has been made at 3,000–4,000 inhabitants (of whom about 700–800 might be hoplites), disposing of a city area of about 300 ha, and with a capability of launching up to 50 ships” (*ibid.* 74); but cf. Hind (1992–93) 86: “revised estimates of the size of the ancient city suggest that to the present peninsula should be added areas to the north and the south now under water, giving an area of some 40 hectares”.

Mesambria was colonised by Kalchedon (no. 743) and Megara (no. 225) at the time of Dareios’ campaign against the Skythians (c.513/12: Ps.-Skymnos 739–42, Diller; cf. Anon. *Peripl. M. Eux.* 83–84, Diller) or by refugees from Kalchedon (no. 743) and Byzantion (no. 674): Hdt. 4.93 (Mesambria mentioned as toponym while relating the campaign of Dareios) and 6.33 (about its “foundation”, which would fall in 493); cf. Eust. 803 (*GGM* II 356–57). The first dating (C6l) is more likely to be correct (Ehrhardt (1987) 92; Avram (1996) 290–92). Mena as *κτίστῆς* is recorded by the source of Strabo 7.6.1 in an attempt to explain the etymology of the name (cf. Plin. *HN* 4.11.45). See also the epigram *IGBulg.* 1² 345.4: *Μεσεμβρία (sic) δέ μν (sic) πατρὶς ἀπὸ [Μ]έλσα καὶ βρία, bria* being the Thracian word for *polis* (Steph. Byz. 446.15–16, citing Nic. Dam.; Strabo 7.6.1; *IGBulg.* 1² 345 comm.).

Mesambria founded Naulochos (modern Obzor, north of Nesebär) at an unknown date: Strabo 7.6.1: *Μεσημβριανῶν πολίχνηον* (cf. 9.5.19; Plin. *HN* 4.11.45). Ps.-Skymnos (fr. 3, Marcotte) reports a tradition that Mesambria founded Bizone (no. 683), but since Bizone does not appear to be Dorian, the tradition is questionable.

Mesambria probably joined the Delian League—at least, it was probably assessed for tribute in 425/4 (*IG* I³ 71.iv.161, where *M*[—] may refer to Mesambria). In C4 it had, perhaps as subordinate, treaties with some Thracian kings: *IGBulg.* 1² 307 = v 5086 (rC3f). In 313 it was probably allied with Kallatis (no. 686), Istros (no. 685) and other west Pontic cities against Lysimachos (cf. Diod. 19.73).

Citizens of Mesambria received proxenies from Olbia (no. 690) (*Syll.*³ 219 = *IOSPE* 1² 20 = Dubois (1996) 15 (c.375–350)) and Oropos (no. 214) (*IG* VII 281 = *I.Oropos* 50 (C3s)). The proxeny decree and the treaty concluded with the Thracian king Sadalas (*IGBulg.* 1² 307 (C3f)) are the earliest attested public enactments. The eponymous official was, as in Megara (no. 225), the *basileus* (*IGBulg.* 1² 322 *bis* (C3)).

Evidence for public architecture is also Hellenistic, but the theatre (*IGBulg.* 1² 307, 308 *bis*, 308 *ter* (C3)) and the sanctuaries of Apollo (*IGBulg.* 1² 307, 307 *bis*, 308 *bis* (C3), etc.) and Dionysos (*IGBulg.* 1² 308 *ter* (C3)) may be earlier than their first attestation.

For the city walls (C5 or C4e) (pseudo-isodomic and isodomic work) there is only scanty archaeological evidence, since they were destroyed by the construction of the late Roman and Byzantine citadel (Velkov (1969) 31–37).

Some of the cults attested in Mesambria in the Hellenistic period are certainly or possibly of Megarian origin and so ought to be early: Zeus Hyperdexios (*IGBulg.* 1² 322 *bis* (C3)) and Athena Soteira (*IGBulg.* 1² 326 (C1)) as patron deities, Apollo (*supra*, about his sanctuary), Dionysos (sanctuary: *IGBulg.* 1² 308 *ter* (C3)); Eleuthereus: *IGBulg.* 1² 324 (C1); festival of the Dionysia: *IGBulg.* 1² 307, 308 *bis*, 308 *ter* (C3)), (Damater) Malophoros (*IGBulg.* 1² 370 *bis* (Imperial period)), the Dioskouroi (festival of the Dioskouria: *IGBulg.* 1² 308 *septies* (C3)), etc.

Mesambria struck coins from C5m onwards. The earliest coins are silver drachms. Types: *obv.* crested Corinthian helmet facing or head of Athena; *rev.* incuse square; legend: *META* in a spoked wheel (Head, *HN*² 278–79; Price (1993) pl. X nos. 265–71; Zaginajlo (1974) 50–51 for the weight standards; Karayotov (1994) 18–19).

688. Nikonion Map 23. Lat. 26.10, long. 30.25. Size of territory: 3. Type: A:a. The toponym is *Νικώνιον*, *τό* (Ps.-Skylax 68) or *Νικωνία*, *ἡ* (Strabo 7.3.16) or *Νικόνιον* (Anon. *Peripl. M. Eux.* 61, Diller) or *Νικώνιον* (Y. G. Vinogradov (1999) (C3f)). Apart from Steph. Byz. 476.2 there is no attestation of a city-ethnic.

Nikonion is called a *polis* in the urban sense by Ps.-Skylax 68. That it was a *polis* in the political sense too is indicated by its registration in the Athenian assessment decree of 425/4 as a member of the Delian League (*IG* 1³ 71.1v. 167).

Nikonion was colonised in C6l directly by Miletos (no. 854) or, more probably, by Istros (no. 685); cf. the numismatic evidence and the role of Istros in refounding Nikonion (Y. G. Vinogradov (1999)). Nikonion was under the protectorate of the Skythian king Skyles (C5m, *infra*) and then joined the Delian League; at least, it was assessed for tribute in 425/4 (*IG* 1³ 71.1v.167: Νικ[ονία] or rather Νικ[όνειον]; cf. Avram (1995) 197). C.331 it was destroyed by Zopyrion (Y. G. Vinogradov (1997) 323) and then refounded (C3f) by Tyras (no. 694) with the support of Istros (Y. G. Vinogradov (1999)).

Nikonion is located at modern Roksolanskoye *gorodishche* (Ukraine), on the left bank of the estuary of the Dniester. The site had a defensive wall, uncovered in the north-western part of the upper terrace (c.475–450). No inscriptions on stone have been found, while ceramic material (including graffiti) suggests the *floruit* of the site in C6l–C5 (Sekerskaya (1989); Zaginajlo and Sekerskaya (1997)). Some of the minor settlements identified in the lower Dniester River region (Okhotnikov (1990)) may belong to the territory of Nikonion.

In C5f–m Nikonion cast bronze coins imitating the Olbian and Istrian coins. *Obv.* owl; legend: ΣΚ, ΣΚΥ or ΣΚΥΑ; *rev.* wheel with four spokes. These coins were formerly attributed to Olbia (no. 690), but their concentration in the area at Roksolanskoye *gorodishche* suggests that they were issues of Nikonion (Zaginajlo and Karyshkovskij (1990); Y. G. Vinogradov (1997) 35, 209). On the other hand, their legend indicates that the Skythian king Skyles exercised a protectorate over Nikonion. In addition to its own issues, Nikonion regularly used Istrian silver and bronze coins (Karyshkovskij (1966); Preda (1973) 33).

689. Odessos (Odess(e)ites) Map 22. Lat. 43.15, long. 27.55. Size of territory: 5. Type: [A]:a. The toponym is Ὀδησ(σ)ός, ἡ (Hippoc. *Prorrhicon* 1.72.3; Ps.-Skymnos fr. 1, Marcotte; Diod. 19.73.3, 20.112.2; *IGBulg.* 1² 222.7), the Doric being Ὀδασός (*IG* XII.1 147 = *GVI* 1257 (c.200)); or Ὀδησσόπολις (e.g. Ps.-Skylax 67). The city-ethnic is Ὀδησ(σε)ίτης (cf. *IGBulg.* 1² pp. 79–80; *SEG* 38 114.v.128 (C2s)) or Ὀδασσίτα[ς] (*I.Rhod.Per.* 267 (C4)).

In Ps.-Skylax 67, Odessos (Ὀδησσόπολις) is the third toponym listed after the heading πόλεις Ἑλληνίδες αἰδέε, where *polis* is used in the urban sense; in the political sense,

polis is used retrospectively by Diod. 19.73.3 (r313). Strabo 7.6.1 describes it as ἄπαικος.

The collective use of the city-ethnic is attested internally on Hellenistic coins (Head, *HN*² 276) and in C3 inscriptions, the earliest possible instance being *IGBulg.* 1² 37, restored (C3). The external individual use is attested by *I.Rhod.Per.* 267 (Ὀδασσίτα[ς] (*sic*) (C4)); *IOSPE* II 295 = *CIRB* 237 (Pantikapaion, C4l/C3e); *IGBulg.* 1² 13 *bis* (Dionysopolis, C3).

Odessos was colonised by Miletos (no. 854) at the time of Astyages' reign in Media (Ps.-Skymnos fr. 1, Marcotte; c.593/587 as the beginning of his reign); cf. Strabo 7.6.1 (Plin. *HN* 4.11.45). Scholars assume a date of c.585–570 (Hoddinott (1975) 49) or c.560 (Danov (1976) 209). The earliest archaeological finds are from the second quarter of C6: Toncheva (1967) 157–60; cf. Hind (1983–84) 74.

Despite the lack of positive evidence, Odessos is considered to have joined the Delian League (G. Mihailov, *IGBulg.* 1² p. 80). About C4m it was subjected to the Getai; it was liberated in 341 by Philip II of Makedon and concluded a subordinate treaty with him (Jord. *Get.* 10.65; cf. Theopomp. fr. 217). In 313 it was allied with Kallatis (no. 686), Istros (no. 685) “and the other neighbouring cities” against Lysimachos (Diod. 19.73.2–3).

The seven *phylai* mentioned explicitly in *IGBulg.* 1² 47 *bis* (Roman period) have names which “except for the later addition, *Romaioi*, presumably descended from the foundation in the sixth century” (Jones, *POAG* 275).

The Milesian cult of Apollo is attested in C5 through a dedication (Hind (1983–84) 74), and a marble head of the god (Hoddinott (1975) 51 and pl. 22 (C5?)). Three attested months (*IGBulg.* 1² 39: Artemision; 47: Boedromion; 50: Apatoureon) indicate the use of the Milesian calendar.

Odessos is located at modern Varna (Bulgaria). There is no archaeological evidence for early city walls (but cf. Jord. *Get.* 10.65 for gates in the time of Philip II, and Diod. 19.73.3 for a *poliorkia* in 313) or urbanisation of Odessos. The city struck coins from C3l onwards; its earliest coins are gold staters and tetradrachms of Alexandrine or Lysimachian types (cf. Head, *HN*² 276–77).

690. Olbia (Olbiopolites)/**Borysthenes** (Borysthenites) Map 23. Lat. 46.50, long. 32.00. Size of territory: 5. Type: A:a. There are two toponyms: (a) Βορυσθένης and (b) Ὀλβία, ἡ (with variants); and two corresponding city-ethnics: (c) Βορυσθεν(ε)ίτης and (d) Ὀλβιοπολίτης. Their use depends on the date, the topographical meaning, internal versus external use, and on other criteria.

(a) *Borysthenes* is found in *SEG* 36 693 = Dubois (1996) 90 (c.550–525); *SEG* 48 1024.1 (c.530–510); and *Syll.*³ 218.1 (C4f): [εἰς Βο]ρυσσθένη εἰσπλεῖν At 4.24.1 Herodotos refers to *Βορυσθένης ἐμπόριον* (cf. *Βορυσθενεῖτέων ἐμπόριον* at 4.17.1); at 4.78.5 he has ἐν *Βορυσθενεῖ*, and the context suggests that the reference is to the city in the urban sense (cf. *Βορυσθενεῖτέων ἄστυ* at 4.78.3, and οἱ ἐν *Βορυσθενεῖτέων τῇ πόλι* at 4.79.2).

(b) *Olbia*. *OABIH* is found on C4e coins (*infra*), in *IOSPE* 1² 164 (C5f: Ὀλ[βίης], restored Y. G. Vinogradov (1989) 111 n. 124) and seems to be an abbreviation of the full form Ὀλβίη πόλις attested in inscriptions from the city itself (Rusyaeva (1986) 26 = Dubois (1996) 93 (C6s); *DGE* 735.2, 24 (c.330)); Ὀλβία is found in *DGE* 735.15; Ὀλβιόπολις is found in *IOSPE* 1² 325 (c.330–320, restored Y. G. Vinogradov (1989) 165).

(c) *Borysthen(e)ites* is found in Hdt. (e.g.) 4.17.1, 4.54, 4.78.3, 4.79.2, 4, and *CEG* 11 723 = *SEG* 39 568 (C4) (Amphipolis, individual use).

(d) *Olbiopolites* is found in Hdt. 4.18.1; *IOSPE* 1² 20.2 (C5l/C4e), 21.2 (C4); and *OABIO(-)* occurs on coins from C4f onwards.

It is generally assumed that the first Greek (surely Milesian) settlement (C7m) was on the island of Berezan (*infra*), that the beginning of the site on the mainland dates to c.600 or some time later, and that the latter included Berezan in the community later known basically as Olbia. Some scholars assume that the *emporion* and the *polis* (*asty*), originally called *Βορυσθένης*, were identical, while some others distinguish between the *asty* and the *emporion*. The latter differ in more points. Some of them distinguish between *Βορυσθενεῖτέων ἐμπόριον* and *Βορυσθένης ἐμπόριον*, at Hdt. 4.17.1 (*emporion* belonging to the community of the citizens called *Borysthenitai*) versus Hdt. 4.21.1 (*emporion* as a city with flourishing trade activities) (Y. G. Vinogradov (1997) 133–45), while others assume that both records indicate a section of the city (e.g. Hind (1985b) 105–9, (1995–96) 116, (1997) 107–11). On the other hand, even if one accepts that the *emporion* was (at least in Herodotos' time) only a part of the city (for this particular meaning of *emporion*, see Hansen (1997c) 86–87, 100–1), views differ on the question of its location: the earliest settlement at Berezan (Y. G. Vinogradov (1997) 133–45) or the harbour of the “lower town” (Hind (1997) 111; Hansen (1997c) 102). The toponym *Βορυσθένης* occurs on a bone chip with a graffito (Dubois (1996) 90 (C6m)) found at Berezan which may support the equation Berezan = *Borysthenes*.

None the less, the fine distinction between *Borysthenes* and *Olbia* remains subject to dispute. Quasi equivalence is suggested by the local coin law from C4f: *Syll.*³ 218.1 = Dubois (1996) 14 line 1: [Βο]ρυσσθένης and 15–16: τὸ ἀργύριο[ν τὸ] Ὀλβιοπολιτικόν. Further testimony is given (retrospectively) by Strabo 7.3.17; cf. Steph. Byz. 176.14–16. Ps.-Skymnos fr. 10, Marcotte, seems to have contaminated more sources, and is rather puzzling; cf. Dubois (1996) p. 3.

It has also been assumed that after the mainland community absorbed Berezan, the inhabitants called themselves *Olbiopolitai* and their city *Olbia*, while *Borysthenes* and *Borysthenitai* were used by non-native Greeks (Y. G. Vinogradov (1997) 143). This might have been true in C5 (no external inscriptions), but at least from C4 onwards it is not only *Βορυσθενίτης* (e.g. *CEG* 11 723; cf. Y. G. Vinogradov (1997) 31, Amphipolis; *IG* 11² 8423, Athens; *F.Delphes* 111.3 207.4 (C3f); Maiuri, *Nuova silloge* 95, Rhodos (Hell.)) which occurs, but also [Ὀλ]βιοπολίτας (*IOSPE* 1² 345, Chersonesos (C4l); cf. Y. G. Vinogradov (1997) 491), Ὀλβιοπολίται (*SovArch* (1960) 4, 173–79, Tyras (C3f)), Ὀλ[β]ιοπολίτης (*I.Kallatis* 166 (C2)), Ὀλβία (*I.Tomis* 5 (C2l)), etc., and not only in inscriptions from Pontic cities, whose vicinity could suggest the influence of the internal use, but also in Asia Minor (Klaros: Ὀλβιοπολιτῶν τῶν καὶ Βωροσθενειτῶν (*sic*); Robert (1980) 85). The restored [Ὀλβιανὸς τῶν πρὸς] Ὑπανν (*I.Kalchedon* 4.13) is in many respects suspect; Ὀλβιοπολίτης should be expected (Ehrhardt (1988) 355 n. 591).

Olbia is called a *polis* both in the urban sense (Dubois (1996) 23.12 (C6s); Hdt. 4.79.2; *SEG* 42 711 (C4s)) and in the political sense (Dubois (1996) 14.15 (C4f) = *Syll.*³ 218; *SEG* 32 794.3 (C4s)). A C6l graffito: πόλεως, may be an example of the political use as well (*SEG* 42 719). The territorial sense is presumably a connotation in a C5f funerary epigram (*IOSPE* 1² 270 = Dubois (1996) 44.1 = *CEG* 1 173). *Politeia* occurs in proxeny decrees (*infra*); *polietai* is found in *SEG* 31 701 (C5m). The ἄστυ and the προάστειον (“Vorstadt”) are mentioned at Hdt. 4.78.3. Strabo 7.3.17 describes the former as a κτίσμα (for the problem of the ἐμπόριον, *supra*). [πάτρ]α has been restored in *SEG* 39 568 (C4), and *patris* is found in *SEG* 46 949 (cf. *SEG* 31 702; *CEG* 11 884; see Lebedev (1996) and Raaflaub (2000) 261–65). *Olbia* (*Borysthenes*) is called an *asty* by Hdt. 4.78.3.

The internal collective use of the city-ethnic is attested in *SEG* 31 701 (C5m) and in several decrees of C4 (e.g. *IOSPE* 1² 20; *I.Olbia* 3, 4, 9) and is abbreviated *OABIO(-)* on C5l coins (*infra*); it is also found in an *isopoliteia* between the

city and Miletos (no. 854) (*Staatsverträge* 408). The internal individual use is found in Dubois (1996) nos. 58.4 (C5f) and 49.2 (C4f). (For the external individual and collective use of the city-ethnic, see the discussion of *Olbiopolitai/Borysthenitai* above.)

Olbia is located at modern Parutino, in the confluence area of the rivers Bug (Hypanis) and Dnieper (Borysthenes). Some 38 km south-west from Parutino and 2 km from the mainland is situated the island of Berezan, a former peninsula jutting south at Viktorovka (near Ochakov). It is assumed that it became an island after the first Greek settlement (Solovyov (1999) 1–113).

The earliest among the more than 100 rural settlements around Olbia that have been surveyed produced archaeological materials from C6f. A large *chora* bordering basically on the right bank of the river Bug is attested in C6 (Kryzhitskij *et al.* (1989)). It was laid waste by the Skythians in C5e and then repopulated from C4e to C3m (Ruban (1985) 30–36).

Olbia was founded by Miletos (no. 854) (Hdt. 4.78.3; Ps.-Skymnos 813–14, Diller; Steph. Byz. 176.15). The foundation year (647/6) given by Euseb. *Chron.* 95b surely refers to Berezan, where the earliest archaeological materials are from C7s (a few sherds are from the second quarter of C7: Kopejkina (1973)). The earliest finds in Olbia are from C6e (Y. G. Vinogradov (1997) 377–84), with the exception of two sherds of C7s (Kopejkina (1976) 138–39; Rusaeva (1986) 42 and n. 85). This would correspond to the synchronism suggested by Ps.-Skymnos with the “power of the Medians”, so Olbia may have been founded c.600 (Kopejkina (1976) 139; Y. G. Vinogradov (1997) 383) or some time later (Kryzhitskij (1985) 57). *Epoikoi* from the *metropolis* and inhabitants from Berezan installed the new centre on the mainland (Y. G. Vinogradov (1989) 33–39; Y. G. Vinogradov *et al.* (1990); cf. Ehrhardt (1988) 74–78).

It is assumed that Olbia joined the Delian League after 437 (Karyshkovskij (1959); Y. G. Vinogradov (1989) 126–34; *contra* Brashinskij (1963) 70–85). It had c.389–380 a *homologia* with the Bosporan king Leukon I (389/8–349/8) (Y. G. Vinogradov (1997) 515–25). An *isopoliteia* with the *metropolis* Miletos is attested through *Syll.*³ 286 = *Staatsverträge* 408 (c.329).

In C4 proxenies were granted by Olbia to citizens from Tauric Chersonesos (no. 695) (*I.Olbia* 3 = Dubois (1996) 15 (C4e)), Arkadian Orchomenos (no. 286) (*I.Olbia* 4 = Dubois (1996) 17 (C4e)), Mesambria (no. 687) (*Syll.*³ 219 = *IOSPE* I² 20 = Dubois (1996) 15 (c.375–350)), Istros (no. 685) (*I.Olbia* 7 = Dubois (1996) 19 (C4f)), Herakleia

(no. 715) (*I.Olbia* 6 = Dubois (1996) 20 (c.340–330)), Byzantion (no. 674) (*I.Olbia* 9 = Dubois (1996) 18 (c.340–330)), Athens (no. 361) (*I.Olbia* 5 = Dubois (1996) 21 (c.340–330); cf. Y. G. Vinogradov (1997) 484–92), ?The[bes] or ?The[ssaly] (*I.Olbia* 14; cf. Y. G. Vinogradov (1997) 31 (C4)). Received proxenies occur only from C4l onwards: *IOSPE* I² 345 (Chersonesos) (cf. Y. G. Vinogradov (1997) 491 n. 38). A grant of citizenship is attested early through a [*dogm*]a for the previous tyrant of Sinope (no. 729) and his brother who fled to Olbia in 437 (Y. G. Vinogradov (1997) 165–94 = *SEG* 31 701 = Dubois (1996) 5), later through a public decision for Satyros I (433/2–389/8), archon of Bosporos (Y. G. Vinogradov (1997) 515–25 (c.392–389)). In 331, when the city was besieged by Zopyrion, citizenship was granted to foreign residents (Macrob. *Sat.* 1.11.33: *dataque ciuitate peregrinis*; cf. Y. G. Vinogradov (1997) 276–322 = Y. G. Vinogradov (1989) 153–63; *SEG* 32 794).

It is assumed that the original aristocratic constitution (Y. G. Vinogradov (1989) 69–80) was replaced c.480 by a tyranny (ibid. 109–26); cf. the name of a certain Paus(anias) on coins and the *aisymnetes* of the *Molpoi*. Hdt. 4.78–80 and the numismatic evidence suggest that in C5m a kind of protectorate over Olbia was exercised by the Skythian king Skyles (Y. G. Vinogradov (1989) 90–109), as in Nikonion (no. 688) or Karkinitis (no. 698) (*SEG* 40 625; cf. *BE* (1989) 478, (1990) 566). In C4e the tyranny and the Skythian protectorate had been abolished (Y. G. Vinogradov (1989) 135–50, (1997) 229). Some numismatic evidence and the emergence of a new formula in the local decrees indicate the rise of a moderate democratic constitution (Y. G. Vinogradov (1989) 146–50); more democratic reforms (naturalisation of foreign residents, abolition of debts, etc.) were accomplished in 331 (Macrob. *Sat.* 1.11.33; *SEG* 32 794; *supra*).

The earliest public enactments are revealed by some graffiti with *ΠΟ, ΠΟΛΕ, ΠΟΛΕΩΣ* (Y. G. Vinogradov (1989) 62–63 and fig. 4 (C6l/C5e); cf. *SEG* 42 719). The earliest decree is a grant of *ateleia* to a Sinopean (*I.Olbia* 1 = Dubois (1996) 1 (C5f)), followed by the grant of citizenship, *ateleia* and *enktesis ges kai oikies* to the previous tyrant of Sinope and his brother (*supra*), and by the grant of citizenship and *ateleia* to Satyros I (433/2–389/8), archon of Bosporos (Y. G. Vinogradov (1997) 515–25 (c.392–389)). A possible grant of *ateleia* seems to be attested through *I.Olbia* 2A (cf. Y. G. Vinogradov (1997) 188 n. 86 (C5s)). Through the *isopoliteia* from c.329 (*Syll.*³ 286 = *Staatsverträge* 408), *ateleia* was also granted to Milesians.

The original eponymous magistrate was the *aisymnetes* of the *Molpoi* (*I.Olbia* 58 restored by Graf (1974) 210) and, from

C4 onwards, the priest of Apollo Delphinios (Karyshkovskij (1978)). The council (*boule*) and the assembly (*demoi*) are attested from C4f onwards (Dubois (1996) 14.2–3; *IOSPE* 1² 26; *IOSPE* 1² 325; *SEG* 32 794). Other officials are the *agoranomoi* (Y. G. Vinogradov and Kryzhitskij (1995) 92, from C5 onwards) and the commission of five *τειχοποιοί* (*SEG* 32 795 = Dubois (1996) 13 (C4m)).

There is a rich epigraphical and archaeological documentation for Olbian patron deities, especially for Apollo. Apollo Delphinios (first dedications from C5m onwards: *I.Olbia* 55–59), whose sanctuary was the central *temenos*, became the main deity from C6l onwards. His cult was observed by the *Molpoi* (whose *aisymnetes* was the eponymous official: *SEG* 28 647; see also *I.Olbia* 55, 56, 167) and the *Numeniastai* (Dubois (1996) 96). Apollo Ietros (Y. G. Vinogradov (1997) 80; Ehrhardt (1988) 145–46; but cf. Ehrhardt (1989)), whose sanctuary was the western *temenos* (see especially the *kalypter* with the graffito *IHTPOON*: Rusyaeva (1986) 45 fig. 4.7, 3.6 = Dubois (1996) 59 (C6s)), is attested through graffiti from C6f onwards (*LSAG* 2 416 pl. 72 no. 61; Graf (1974); Rusyaeva (1986)). The earliest dedications are from C5f (*IOSPE* 1² 164 (cf. *SEG* 28 657); Rusyaeva (1992) 35 fig. 9; *I.Olbia* 167, restored). A graffito on a skyphos (Y. G. Vinogradov and Rusyaeva (1980) 25 = Dubois (1996) 99 (C5m)) mentions Apollo Delphinios, Ietros, Thargelios and Lykeios. Artemis is attested as Delphinia (Y. G. Vinogradov and Rusyaeva (1980) 29), Pythia (Y. G. Vinogradov (1997) 78) and Ephesia (*SEG* 32 741). Zeus and Athena are *entemenioi theoi* in the central *temenos* (Levi (1964) 141; see also the dedications to Athena and Zeus (*I.Olbia* 64 (C6l/C5e), and 106 (C5s), restored by Y. G. Vinogradov (1997) 374). Zeus, attested through graffiti from C6l onwards (Levi (1964) 151, etc.), is later known as Eleutherios after the abolition of the tyranny (C4e) (cf. Y. G. Vinogradov (1997) 212–15) and as Soter (Dubois (1996) 11 (C4l)), while Athena is represented on the earliest Olbian *aes* (*infra*). Notable among other communal cults is that of Dionysos Bakcheios, Bakchos and Iakchos (from C6l onwards: Rusyaeva (1979) 83, (1992) 96–100; Yajlenko (1982) 290 no. 104, etc.). Mysteries are recorded at Hdt. 4.78–80, while some bone chips (C5) attest the existence of Orphics (Rusyaeva (1978) = Dubois (1996) 94; cf. M. L. West (1982); Ehrhardt (1987) 116–17; Zhmud (1992); Y. G. Vinogradov (1997) 242–49). Aphrodite Apatoura, Patroia, Syria is attested through graffiti (Yajlenko (1982) 288–89 nos. 91, 92, 94; cf. Rusyaeva (1992) 100–6) from C6l onwards. Graffiti from C5f and C4f mention *ἄβαρα* (pl.) of Aphrodite in the western *temenos* (*SEG* 30 975; Dubois (1996) 71a–b). Aphrodite and

Hermes (attested through graffiti from C6 onwards (Tolstoj (1953) 24, 44; *SEG* 30 878, 909; cf. Hermes Patroios: Yajlenko (1982) 291 no. 110; priest of Hermes: *SEG* 34 770 (C5e); oracle: *SEG* 34 771 (C5), etc.) were lords of the western *temenos* (Y. G. Vinogradov and Rusyaeva (1980) = *SEG* 30 972–74). Other attested cults are those of Demeter and Kore-Persephone, Kybele, the Kabiroi, the Dioskouroi, Hekate, Themis (Y. G. Vinogradov and Kryzhitskij (1995) 114–16) and Achilles (from C6 onwards: Rusyaeva (1992) 70–83; Hommel (1980); Ehrhardt (1988) 179–80; Hedreen (1991)), whose sanctuary was on the island of Leuke, protected by Olbia (cf. *IOSPE* 1² 325).

All twelve months of the Milesian calendar used in Olbia are named by a graffito on a skyphos (Y. G. Vinogradov and Rusyaeva (1980) 25 = Dubois (1996) 99 (C5m)).

Early ties (C6s) with the oracle from Didyma are attested by a graffito from Berezan (Rusyaeva (1986) 26 = Dubois (1996) 93; Burkert (1990)). The only attested communal dedication is to Zeus Soter (Dubois (1996) 11 (C4l)).

Olbia is topographically distributed between two terraces: the upper town (acropolis) with the agora and the two *temene* divided by a street running north–south, including an area of c.16.5 ha (Y. G. Vinogradov and Kryzhitskij (1995) 28); and the lower town (urbanised from C5f onwards) with a harbour (whose early existence is suggested by the privilege of *εἰσπλους καὶ ἐκπλους* conceded by proxeny decrees from C5f onwards) which seems to be now under water. The early walls, towers and gates (cf. Hdt. 4.78–79) have not been discovered; they were repaired through the five *teichopoiai* (Dubois (1996) 13 (C4m)). The first archaeologically attested walls (“Lehmziegelmauern”) are those identified in the area of the Hellenistic West Gate, restored in C4l/C3e (Kryzhitskij (1985) 88–93). In C5f the two parts of the city included an area of c.44–47 ha (Y. G. Vinogradov and Kryzhitskij (1995) 33). Early traces of urbanisation (C6s) are also attested on the island of Berezan.

Public buildings are attested by both inscriptions and archaeological finds (cf. Y. G. Vinogradov and Kryzhitskij (1995) 27–41): an *ekklesiasterion* (Dubois (1996) 14.9–10 (C4m)), a *dikasterion* (rebuilt in C4l/C3e), a *gymnasion* (located south-west of the agora, c.475, then rebuilt in C4l/C3e), a theatre (*SEG* 32 794; cf. Y. G. Vinogradov (1997) 390 n. 44 (C4); cf. *TGR* iii. 538), possibly also a *hestiatorion* (C6l, located on the place of the later *gymnasion*; cf. Y. G. Vinogradov (1989) 62). The earliest archaeological evidence for the agora is of C6. A 30–35 m deep fountain has been excavated south of the *gymnasion* (Karasyov (1972)

40–44), and several drains have been identified. Olbia had two *temene*: the central (or the eastern) *temenos* (from c.530 onwards; cults of Apollo Delphinios, Athena and Zeus) containing the main altar and the temple *in antis* of Apollo Delphinios (Karasyov (1964) 49–97; Pichikyan (1984) 178–84 (C5e)), a treasure house (Kryzhitskij (1985) 64–65) and some minor buildings; and the western *temenos* (from C6m onwards; cults of Apollo Ietros, later also Hermes, Aphrodite and Kybele; cf. Rusaeva (1986), (1994)) containing the temple of Apollo Ietros dating from C6l/C5e (Kryzhitskij (1997)), more altars, possibly also a second temple. In the western *temenos* a stoa has been identified (Kryzhitskij (1985) 74–75).

The earliest Olbian coinage is represented by C6f bronze arrowhead money (Ruban (1982)), C6s bronze dolphins (Zograph (1977) pl. XXX 1–2, 7–11; Ruban (1982)); add some bronze weights with signs of arrows and dolphins (Grakov (1971)). In C5 the local mints produced not only bronze dolphins (Price (1993) pl. XIII nos. 359–68), sometimes with legends: *APIXO* (Price (1993) pl. XIV nos. 374–76) and *ΘΥ* (Price (1993) pl. XIII nos. 368–73) but also cast *aes* of different standards: (1) *obv.* head of Athena in Attic helmet r., to l. dolphin; *rev.* wheel, in which, later, ΠΑΥΣ (the earliest ones: Price (1993) pl. XIV nos. 377–78); (2) *obv.* Gorgoneion; *rev.* sea eagle flying r. on dolphin; legend: *APIX* (Zograph (1977) pl. XXXI 1; Price (1993) pls. XIV–XVI nos. 379–84); *obv.* Gorgoneion; *rev.* wheel; legend: *APIX* (Zograph (1977) pl. XXXI 2–3; Price (1993) pl. XVI nos. 385–89); the small *aes* (C5l): *obv.* Gorgoneion; *rev.* sea eagle r. on dolphin; legend: *OABIH* (Price (1993) pl. XVIII nos. 394–99). For a short time (C5l) Olbia also issued silver staters: *obv.* Herakles stringing bow r.; legend: *EMINAKO*; *rev.* studed wheel; around, four dolphins (Anokhin (1989) 15, 104 no. 11; Price (1993) pl. XIII no. 358). In C4f Olbia cast the heavy *aes* with *obv.* Demeter facing; *rev.* sea eagle l. or r. on dolphin; legend: *OABIH* (Price (1993) pls. XVII–XVIII nos. 390–93) and also struck the first copper coins, later also silver and gold coins: *obv.* Demeter l.; *rev.* sea eagle flying l. on dolphin; legend: *OABIO* (Zograph (1977) pl. XXXII 2–3). Foreign currency is also documented: by the coinage decree of Kanobos (*Syll.*³ 218 = Dubois (1996) 14 (C4m)) staters from Kyzikos (no. 747) must be exchanged for Olbian copper and silver coins (Y. G. Vinogradov and Karyshkovskij (1976) = Y. G. Vinogradov (1997) 250–75). *SNG Cop. Thrace* 66–74.

691. Ophiousa Map 23. Unlocated. In *Barr.* identified with Tyras (no. 694). Type: A:a. Called πόλις (‘Ελληνίς, by

implication) in Ps.-Skylax 68. Possibly absorbed by Tyras at an unknown date.

692. Orgame (= Lat. **Argamum* (*Argamēnos*)) Map 22. Lat. 44.55, long. 28.50. Size of territory: 1. Type: C:a. The only attestation of the Greek toponym is ‘*Οργάμη* (Hecat. fr. 172 = fr. 83, G. Nenci (Steph. Byz. 494.16)). **Argamum* has been derived from *Argamenses* in *I.Histriae* 67–68 (Istros) and *Argamo* (Procop. *Aed.* 4.11.20).

No Archaic or Classical source calls Orgame a *polis* (πόλις in Steph. Byz. 494.16, quoting Hecat. fr. 172, need not have been in Hekataios’ original; cf. Hansen (1997a) 17–18), and the only reason to include it as a type C here is the possibility that it may have been assessed for tribute in 425/4 as a member of the Delian League (*IG* I³ 71.IV.162, where ‘*O*[—]’ has been restored ‘*O*[ργάμη]; cf. Avram (1995) 197). It is, however, also possible that Orgame was merely a dependent community in the territory of Istros (no. 685).

Orgame is located at Cap Dolojman, near the village of Jurilovca (Romania). Archaeological excavations (Coja (1972); Mănuțu Adameșteanu (1985), (1992), (2000)) brought to light a fortification on an acropolis and a part of the city wall (perhaps of C4). The urban remains of C6–C4 are poor, because the early levels were destroyed by the Late Roman citadel, but the tumular cemetery produced archaeological remains from C7m to C4 (Lungu (2000)). Orgame was founded directly by Miletos (no. 854) or rather by Istros (no. 685) in C7m, according to the archaeological evidence (Middle Wild Goat style ware, etc.).

693. Tomis (Tomites) Map 22. Lat. 44.10, long. 28.40. Size of territory: 4. Type: C:a. The toponym is *Τομέοι* (Ps.-Skymnos fr. 5, Marcotte) or *Τόμοι* (Apollod. *Bibl.* 1.9.24) or *Τόμυς* (Memnon (*FGrHist* 434) fr. 13 (21); Strabo 7.6.1) or *Τομεύς* (Arr. *Peripl. M. Eux.* 24.2; Anon. *Peripl. M. Eux.* 71, Diller; *I.Histriae* 4 (C3m)). The city-ethnic is *Τομ(ε)ίτης* but it is not attested until C2 (e.g. *I.Histriae* 38, 48); the plural city-ethnic *Τομέοι* is attested at Anon. *Peripl. M. Eux.* 72, Diller.

Tomis is called a *polis* in late sources only (Anon. *Peripl. M. Eux.* 71; Steph. Byz. 628.6). Strabo 7.6.1 describes it as a *polichnion*, and it is called *patris* in the local inscription (*I.Tomis* 2 (C2l)). Memnon (*FGrHist* 434) fr. 13 (21) calls it an *emporion* (rC3m), and the same historian mentions (implicitly) the territory of Tomis as bordering on that of Kallatis (no. 686); however, the best evidence that it was a *polis* in the Classical period would be membership of the Delian League, but it is uncertain whether *T*[—] in *IG* I³ 71.IV.160 should be restored *T*[όμοι].

Tomis is located at modern Constanța (Romania), on a peninsula. It was colonised by Miletos (no. 854) (Ps.-Skymnos 764, Diller), possibly through Istros (no. 685) (Avram (1996) 297–98); archaeological evidence points to a foundation in C6.

All the original Milesian *phylai* are mentioned, but, except for Argadeis (*I.Tomis* 35 (C1e)), only in inscriptions from the Imperial period: Ai(gi)koreis (*I.Tomis* 164, 251–53); Argadeis (*I.Tomis* 52, 179); Boreis (*I.Tomis* 122); Geleontes (*I.Tomis* 300, 301); Oinopeis (*I.Tomis* 255, 375); Hopletes (*I.Tomis* 123, 254); cf. Doruțiu Boilă (1970); Jones, *POAG* 276–78. The earliest attested public enactments (C2l) are a sacred regulation (*I.Tomis* 1 = *LSCG* 87) and a decree concerning the city defences (*I.Tomis* 2 = *Syll.*³ 731).

Several officials are mentioned in the late Hellenistic period. The eponymous official was the priest of Apollo, first attested c.100 (*I.Tomis* 2 and 5) but surely of Milesian origin.

All the evidence for deities is late, but Milesian origin is not in doubt for the cult of Apollo (*I.Tomis* 2 and 5 (c.100)). The calendar is surely Milesian, although only one month is attested: [Ἀπατου]ρεώνος or [Ταυ]ρεώνος (*I.Tomis* 1b (C2l)).

694. Tyras (Tyranos) Map 23. Lat. 46.10, long. 30.20. Size of territory: 5. Type: B:a. The toponym is *Τύρας*, ὁ (Ps.-Skymnos fr. 9, Marcotte; Steph. Byz. 642.4–5). The city-ethnic is *Τυρανός* (*I.Kallatis* 10 (C3s); Alex. Polyh. (*FGRHist* 273) fr. 138), attested on C4 coins (*infra*). *Τυρῆται* at Hdt. 4.51 could simply mean “men of the river Tyras” and not “citizens of the city of Tyras”.

Tyras is called a *polis* only in late sources (Ps.-Skymnos fr. 9; Steph. Byz. 642.4; Ptol. 3.10.8), but its status as a *polis* in the Classical period is indicated by its presumed membership of the Delian League (*infra*) and by its C4m coinage (*infra*). The internal collective use of the city-ethnic is found on C4m coins (*infra*). The external and individual use is found in *SEG* 30 923 (C3) and *I.Kallatis* 10 (C3s), and later.

Tyras was colonised by Miletos (no. 854) (Ps.-Skymnos 799–800, Diller; cf. Anon. *Peripl. M. Eux.* 62, Diller). The foundation year is not known, but some archaeological finds (East Greek ware) suggest a date in C6. Connected with the foundation is the problem of Ophioussa, a site first mentioned by Ps.-Skylax (68: Ὀφιοῦσσα πόλις, listed under the heading πόλεις . . . Ἑλληνίδες αἶδε), then by Strabo 7.3.16 (as a *polis*), by Plin. *HN* 4.12(26).82 (*Tyra* . . . *ubi antea Ophioussa dicebatur*), by Ptol. *Geog.* 3.10.8 (toponym), and by Steph. Byz. 642.7–8 (*Τύρας* . . . ἔκαλεῖτο δὲ Ὀφιοῦσσα). The name *Ophioussa* suggests that the settlement was of

Milesian origin (cf. *Teichiousa* in Miletos’ territory), but its location remains unknown. It has been tentatively located on an island at the mouth of the Dniester; if correct, it is possible that, as at Berezan/Olbia (cf. no. 690), the mainland community (Tyras) absorbed Ophioussa (Ehrhardt (1988) 73), a suggestion which would explain the tradition that the name was at one point in use for Tyras itself (Steph. Byz.). The *terminus ante quem* of this synoecism depends on the date of the source of the C4 text of Ps.-Skylax. Ἐρμώνακτος κώμη was probably a rural settlement in the χώρα (Strabo 7.3.16; Ptol. *Geog.* 3.10.7).

Tyras joined the Delian League; at least, it was assessed for tribute in 425/4 (*IG* I³ 71.IV.163: *Τύ[ρας]* or, alternatively: *Τυ[ρανοί]*). The earliest public enactments are the honorific decrees *Dacia* 3–4 (1927–32) 566–69 no. 2 (C4l–C3); *SovArch* (1960) 4, 173–79 (C3f) (cf. Y. G. Vinogradov (1997) 220 n. 251); and Y. G. Vinogradov (1999) (C3f). The same inscriptions attest for the first time the *boule* and the assembly called *demos*.

Among the deities mentioned in Hellenistic inscriptions, only Apollo Iatros (*Dacia* 3–4 (1927–32) 564–66 (C3)) can be confidently assumed to be early (the patron deity). The three attested months (Kalamaion: Y. G. Vinogradov (1999) (C3f); Artemeision: *IOSPE* I² 2 (AD 181); Leneon: *IOSPE* I² 4 (AD 201)) suggest the original use of the Milesian calendar.

Tyras is located at modern Belgorod Dnestrovskij (Turkish Akkerman, Romanian Cetatea Albă), Ukraine, c.19 km up the estuary of the river Dniester (*Τύρας*; *Τύρις* (Ps.-Skylax 68) was perhaps the original form). The Archaic and Classical site was destroyed by the mediaeval citadel. There is very little evidence for the urbanisation of Tyras in C6–C4: excavations (Karyshkovskij and Klejman (1985); Samojlova (1988)) have brought to light some remains of a defensive wall (C4), which was replaced in the Hellenistic period by a more extensive one.

Tyras struck silver drachms from C4m onwards. Types: *obv.* head of Demeter facing, veiled and wearing wreath of corn-ears; *rev.* bull butting l.; legend: *TYPAN* and *TYPANΩΝ*; also *TYPΑ* on struck bronze (Zograph (1977) 172–73; Price (1993) pl. XII nos. 334–36; cf. Zaginajlo (1974) 54–55 for the weight standards).

2. *The Coasts of Skythia, Taurike and Sindike*

695. Chersonesos (Chersonesites) Map 23. Lat. 44.35, long. 33.30. Size of territory: 5 by C4l. Type: A:a. The local,

Doric form of the toponym was *Χερσόνασος*, ἄ (*IOSPE* 1² 401.6 = *Syll.*³ 360, in *DGE* 173 dated C4l/C3e). For the Ionic form *Χερρόνησος*, see Ps.-Skylax 68. The city-ethnic is found in a restored C4 proxeny decree of Olbia, [*Χερσο*]νησίτης (*I.Olbia* 3 = Dubois (1996) 16). The city was defined in various ways geographically: “Chersonesos by Taurika” (*Χερσόνασος ἄ ποτὶ τῆ Ταυρικῆ*, *IOSPE* 1⁴ 71, 72); “Chersonasitai from the Pontos” (*Χερσονασίται οἱ ἐκ τοῦ Πόντου*, *Syll.*³ 585, 604); “Chersonasitai in Skythia” (*τοὺς ἐν Σκυθίᾳ Χερσονασίτας*, Memnon (*FGrHist* 434) fr. 34.3).

The earliest literary reference calls it *emporion*, not *polis* (Ps.-Skylax 68), leading to a suggestion that it was a trading settlement dependent on Herakleia (no. 715) during the first two generations of its existence (Kats (1990)); but the site-classifications of Ps.-Skylax in this part of his work are not to be trusted (see introduction). Moreover, the classification of Chersonesos as an *emporion* is fully compatible with its being a *polis* as well (Hansen (1997c) 87–91). In the famous citizen’s oath of C4l/C3e (*IOSPE* 1² 401 = *Syll.*³ 360) Chersonesos is called a *polis* both in the urban sense (l. 3) and in the political sense (l. 6). The collective and internal use of the city-ethnic is attested in the citizen’s oath (ll. 4–5) and (abbreviated as *XEP*) on coins (*infra*). For the external use, see *CID* II 5.1.9–10 (358). The individual use is attested externally in C4 sepulchral inscriptions from Pantikapaion (*IOSPE* II 302–3 = *CIRB* 194–95).

By C4m Chersonesos commanded a “near territory” of 120 km² on the “Herakleian Peninsula” (the supposed isthmus being a line from Inkerman to Balaklava). The native Tauri had been evicted from their settlements and incorporated in the city or on farms, or had been pushed out to a series of villages at its eastern edge along the Sapun Gora ridge (Savelya (1979); Shcheglov (1981)). Some “Kizyl-Koba” type pottery (Senatorov (1987)) and crouched burials from the north-east part of the city and the north cemetery may represent this native element (Belov (1950); Saprykin (1998) 232), though some scholars argue that the latter were Greek (Kadeyev (1973)). The lack of pre-colony (C5l) imported objects in Taurian settlements (Savelya (1979) 170–71) suggested to those who studied them that no significant or long-lived trading settlement preceded the Herakleiot colony. By c.350 approximately 11,000 ha of this home territory were parcelled out into 400 main lots, each having six subdivisions, producing 2,400 small allotments, mainly put to viticulture, fruit trees, etc. (Strzheletskij (1961) 14–116; Y. G. Vinogradov and Shcheglov (1990) 312–14; Saprykin (1997) 11–105; Zhrebtsov (1994)). Some Chersonasitai seem

to have settled and carried out burials in the Upper Quarantine Valley before this full exploitation of the Herakleian Peninsula (Strzheletskij (1948a)). A recent suggestion is that the 4,000 ha along its northern coast were among the earliest allotments laid out (Nikolaenko (2001)). By C4m–l Chersonesos also had a mini-empire in north-western Crimea, including Karkinitis (no. 698), Kalos Limen and a series of forts (τὰ τείχη) which may well have been detached from earlier Olbian influence (Y. G. Vinogradov and Shcheglov (1990) 311–14).

The sole specific account of the first foundation of Chersonesos is to be found in Ps.-Skymnos (822–30, Diller): Chersonesos was founded by Herakleia (no. 715) within the Euxine Sea along with Delians (no. 478) in accordance with an oracle, reasonably assumed to be that of Delphi. Some scholars have emended Delioi, repeated twice, to Delphians (no. 177) or Teians (no. 868), as the co-colonisers. A majority view emerged after the Second World War to accept the view of Schneiderwirth and Tyumenev that the Herakleiot and Delians may have collaborated in a colony, if only temporarily, in 424–422 (Tyumenev (1938); Saprykin (1998)). Most recently this consensus can be seen to be crumbling. Y. G. Vinogradov and Zolotaryov (1999) 118–19, 124 suggest a foundation by Herakleiot and Delians in 528, the last year of Peisistratos’ rule at Athens. By contrast, C5l or C4e is adhered to in another suggestion in which Delieis from Delion, the area of Boiotia from which some Herakleiot came (i.e. Tanagra (no. 220)—coastal Boiotia) are proposed as the originals of the co-colonists, only later misunderstood by Ps.-Skymnos or his source (Hind (1998) 141–48) for the better-known Delioi.

In the citizen’s oath Chersonesos is described as a democracy (*IOSPE* 1² 401.14 = *Syll.*³ 360), and some forty-five inscribed *ostraka* from C5 may attest to the institution of ostracism and a vigorous democracy throughout C5 (*BE* (2000) no. 487). Magistrates attested are *basileus* (*IOSPE* 1² 186–87); *aisymnatai* (Belov (1948) 69); *damiorgoi* (*IOSPE* 1² 402, 424, 429); *nomophylakes* (*IOSPE* 1² 351, 359); *astynomoi* (Kats (1994) *passim* (C3e)); *agoranomoi* (ibid. 88 no. 16 (C3e); Monakhov (1999) 28–29). The council had twenty-four members, and the citizen body was organised in *hekatostyes*. On the council were the magistrates, five *archontes*, a *prodikos*, a *grammateus*, a *hiereus*, three *nomophylakes* (Solomonik (1976); Saprykin (1991), (1994) 139–42). The calendar was Megarian, similar to those at Byzantion (no. 674), Kalchedon (no. 743) and Kallatis (no. 686): Kadeyev (1996) 141–48; Trümpy, *Monat.* 149; Avram (1999b).

Proxeny decrees of C4 are rare, and they are from neighbour states to the west and the east of Chersonesos (*I.Olbia* I.3 = Dubois (1996) 16 (Olbia); *IOSPE* II 302–3 = *CIRB* 173, 195 (Bosporos)). From Chersonesos itself comes a copy of a C4 Olbian decree for a Chersonesite (*IOSPE* I² 21).

The city's main deities—Zeus, Gè, Helios, Parthenos and the other Olympians—are mentioned in the preamble to the citizen's oath (*IOSPE* I² 401). Dionysos and Herakles protected the end bastions of the isthmus wall of the “old [Strabo's] Chersonesos” (*infra*).

The city stood for over 1,700 years down to the fourteenth century AD on a blunt headland, jutting north-eastward into Quarantine Bay, some 3 km west of Sebastopol. The earliest structural remains are of C5I/C4e, found in the north-east part of the later city over an area of some 12 ha, around which several cemetery areas were grouped to the south-west, the south and the south-east (Belov (1948) 155ff, (1950) 272ff, (1977); Zedgenidze and Savelya (1980)). A stretch of the southern city wall has been found (Grinevich (1927), (1959) 115–17). Red-figure pottery occurs from C4e, increasing in amount in C4m–I (Grinevich (1959); Zedgenidze (1978)). Of C4 is the small Doric temple and possible altar (restored from fragments) once in the public square, with a statue base dedicated to Athena (*IOSPE* I² 406; Zolotaryov and Bujskikh (1994)). The mass of Classical material from Chersonesos (pottery, sculptural elements, building remains, burials and coins) has been determined as being of C4m–I, with a small amount of pottery being of C5 (Zedgenidze (1979), restated with further detail (1993)). The significance of the relatively small amounts of C5 material (red-figure vases, striped Ionic ware, Chiot and Samian trade amphoras, and black-glazed and other sherds, some forty-five with graffiti *ostraka*) has still to be assessed as to amount, provenance and dating by pot form and lettering. It is not yet clear whether it represents a *polis*, or some lesser settlement in touch with the Tauroi before the Herakleiot colony. Zedgenidze (1993) has refuted in detail the view that the pottery and other evidence is sufficient for a *polis* of C5 on the Quarantine site (sectors VI and VII). Her view has not yet been acknowledged, still less answered by the supporters of a C6I/C5e Chersonesos (Y. G. Vinogradov and Zolotaryov (1990), (1999)).

A separate *polis* is mentioned by Strabo, “the Old Chersonesos in Ruins” (ἡ παλαιὰ Χερρόνησος κατεσκαμμένη, 7.4.2). It lay 100 stades from the (Quarantine Bay) city, and nearby was Cape Parthenion with a temple of Parthenos, and an early statue (*xoanon*) of the goddess. The temple has disappeared, some placing it on

Cape Fiolent to the west, others on the tip of Cape Chersonesos near the lighthouse. Excavations and surveys (in 1899, 1903, 1986) have proved the existence of a “town” on the isthmus, defended by two parallel walls across it, some 900 m long and enclosing an area of 18 ha. The walls had interval towers, and towers at the ends, one dedicated to Herakles and the other having a small shrine to Dionysos. The peninsula itself leads off northwards to Mayachny (Lighthouse, also Fanari) Point, and comprises some 380 ha. These were divided into twenty-five major allotments, each subdivided into four, resulting in 100 plots on a different alignment, which is usually assumed to be earlier, from those on the larger “peninsula”. All the small allotments were about 4–4.5 ha in area. Nestling behind the double walls on the isthmus, they were protected on the landward side by fortification of some of the highest ground overlooking that peninsula to the east. This “Old Chersonesos”, or “Strabo's Chersonesos”, is 10 km west of the long-lived city on Quarantine Bay. It occupied some 18 ha on the isthmus of the only true Chersonesos (peninsula) in south-western Crimea; it was protected by the two parallel walls: in turn it guarded the 100 earliest allotments, and held the oldest cult statue of the *polis*. It is tempting to suggest that the isthmus site and land behind it (Mayachny Peninsula) was the earliest area of the Herakleiot colony (Hind (1998) 146–52; Saprykin (1998) 242–44; Y. G. Vinogradov and Zolotaryov (1999) 117), though other suggestions have been made that it was an early fort, subsidiary to the main city (Chtcheglov (1992) 228), or a protection for the ancient lighthouse (Nikolaenko (2001)). A small amount of pottery (red-figured) of C5I/C4e and a relief sculpture depicting Herakles and the horses of Diomedes, from an altar of C4, tend to confirm the early, if not primary, position of this isthmus settlement in the overall sequence of settlements (Blavatskij (1953) 26–27, 40–44; Zedgenidze (1996); Strzheletskij (1948b)). After a decade or two, when the Quarantine Bay *polis* was already established, it perhaps became a *chorion* or *phourion* in the near territory of the city, perhaps that obscurely referred to as the *saster* in the citizen's oath (ll. 24–25) as one of the places or institutions they vowed to protect (Hind (1996a)).

Chersonesos struck coins of silver and bronze from C4e, the silver on the Rhodian standard. (1) Silver: denominations: tetradrachm, drachm, triobol, diobol and obol. Types: *obv.* head of Parthenos I.; *rev.* fish and club; legend: *XEP* below, representing the abbreviated city-ethnic. (2) Bronze: similar and with other types. Legend: *XEP*. (3) Silver: didrachm: *obv.* Parthenos head I.; *rev.* bull butting I., club

below; legend: *XEP*. (4) Bronze: *obv.* Parthenos riding a four-horse chariot and holding a torch *r.*; *rev.* warrior armed with spear and oval shield, crouching *l.*; legend: *XEP* below. This last issue is thought to celebrate a victory, leading to expansion in the north-western Crimea (Anokhin (1980) pl. 1ff; Grandmezon (1982) 34–36, (1990); Price (1993) pls. XXVIII–IX).

696. Gorgipp(e)ia (Gorgippeus) Map 84. Lat. 44.55, long. 37.20. Size of territory: 1. Type: B:β. Gorgippia was situated in the Asiatic part of the Kimmerian Bosporos (Strabo 11.2.10). The toponym is *Γοργίππεια* (Steph. Byz. 211.7), *Γοργίππία* (Strabo 11.2.10) or, earlier?, *Σινδικὸς λιμὴν* (Ps.-Skylax 72; Ps.-Skymnos 888; Strabo 11.2.14), *Σινδική* (Arr. *Peripl. M. Eux.* 18.4–19.1). The city-ethnic is *Γοργιππέως* (C2–C1 coins, *infra*).

At Ps.-Skylax 72 *Σινδικὸς λιμὴν* is one of the toponyms listed after the heading *πόλεις δὲ Ἑλληνίδες αἴδε*, where the term *polis* is used in the urban sense (cf. Strabo 11.2.14). The earliest explicit reference to a *πόλις Γοργιππέων* is in a letter of AD 16 (*SovArch* (1965) 197A). The internal and collective sense of the city-ethnic (*ΓΟΡΓΙΠΠΕΩΝ*) is found on C2–C1 coins (Price (1993) 986) and in an inscription of the first century AD (*CIRB* 1118; Boltunova (1986) 46–48).

The location of Gorgippia and Sindike/Sindikos harbour is a matter of scholarly debate (latest discussion in Alekseeva (1991) 3–7). They were situated in the territory inhabited by the indigenous population, the Sindoi (for the people, *Σίνδοι*, see *CIRB* 8; Hdt. 4.28.1; Ps.-Skylax 72; for the territory, ἡ *Σινδική*, see *SEG* 34 774, restored; Hdt. 4.86.2; Strabo 11.2.12). Strabo's passage (11.2.10) about the location of Gorgippia provides grounds for different interpretations. Some scholars interpret Strabo's information to mean that Gorgippia was the capital of the Sindoi. The most widespread opinion is that Sindike/Sindikos harbour/Gorgippia were the same place, but with different names in use at different times. Sindike/Sindikos harbour was renamed Gorgippia some time in C4f, when the territory of the Sindoi was incorporated into the Bosporan Kingdom by Leukon I (389/8–349/8) (latest discussion in Alekseeva (1997) 37–82). The city was named after a member of the Spartokid dynasty, Gorgippos (ruling together with his brother Leukon I (389/8–349/8)), who was probably installed as a local governor of the city. This interpretation is supported by the “royal” tiles of C4, which carry the stamp: *ΓΟΡΓΙΠΠΙΟΥ* (Alekseeva (1997) 39).

Sindike/Sindikos harbour was established by Greeks in C6 as a trading centre in the territory of the indigenous

population, the Sindoi (Alekseeva (1991) 7–27, (1997) 11–36). From C4e the city was part of the Bosporan Kingdom and dependent on Pantikapaion (no. 705) (*CIRB* 6, 6a, 8, etc.; Hind (1994) 484–86; Tsetskhladze (1997b) 66, 68–80). According to Ps.-Skymnos 887–89, Diller, it was settled by Greeks from the neighbouring places.

A study of the rural settlements in the territory of Gorgippia is at an early stage. About fifteen settlements have been surveyed or partly excavated, mainly those of C4. Very few date to the late Archaic period (Alekseeva (1991) 28–50).

Sindike and its successor Gorgippia are located beneath modern-day Anapa. The location of Gorgippia is firmly documented thanks to coins and inscriptions found in Anapa. It is possible that a settlement here had appeared even earlier (C7l). A fragment of a Rhodo-Ionian cup with bird decoration has been found at the Alekseevskoe settlement not far from Anapa (Kharaldina and Novichikhin (1996) 349–50 fig. 2). Much firmer evidence is needed than one single fragment of pottery in order to postulate the existence of a C7l settlement (Tsetskhladze (1997b) 42 n. 4). The first settlers lived in semi-dug-outs (Alekseeva (1991) 7–27, (1997) 11–36). One funerary inscription of C5e shows the presence of a Peloponnesian from Helike (Boltunova (1986) 60–61), thus suggesting the presence of free non-citizens. Archaeological investigation has yielded the remains of stone buildings, fortification walls and towers, streets, etc. dating from C4, the period when the town was renamed Gorgippia (Koshelenko *et al.* (1984) 82–83; Alekseeva (1997) 83–148). Aphrodite, Herakles and Demeter were the main civic cults (Alekseeva (1997) 213–50). Fragments of monumental buildings may be remains of temples dedicated to these and other divinities (*ibid.* 100–48).

There are fairly numerous silver coins with the inscription *ΣΙΝΔΩΝ* dating from c.440–400 (Stolba (1998) 603–4). These coins may have been minted in Sindikos Limen (before it was renamed Gorgippia) on behalf of the local Sindoi (Shelov (1981); Price (1993) 1008–9; cf. Strabo 11.2.10). Alternatively, they were minted by the Sindoi, proving the existence of a Sindic kingdom (Krushkol (1971) 80–90). Recently, a third interpretation has been advanced: that the coins were an “alliance” issue of the Greek cities situated on the Taman Peninsula (since this area was known as Sindike, after the local population—the Sindoi) who had united against the aggression of the Spartokids (Zavojkin and Boldyrev (1994); Tokhtasyev (2001) 68–79). The city-ethnic *Γοργιππέων* is found only on Gorgippian coins of C2l–C1 (Price (1993) 986).

697. Hermonassa (Hermonaseites) Map 87. Lat. 45.15, long. 36.45. Size of territory: 1. Type: A:a. Hermonassa was situated on a small island (Ps.-Skymnos 886–91; Steph. Byz. 278.10) in the Asiatic part of the Kimmerian Bosporos (Strabo 11.2.10). The toponym is Ἑρμόνασσα (Hecat. fr. 208; Ps.-Skymnos 886). The city-ethnic is Ἑρμωνασαίτης (IOSPE IV 334 = CIRB 495 (first century AD)).

Hecat. fr. 208 and Theopomp. fr. 370 call it a *polis*, Hekataios probably in the urban sense (cf. Steph. Byz. 278.10–15 with Hansen (1997a) 23). The external and individual use of the city-ethnic is attested in a sepulchral inscription of the first century AD, found at Kerch (Pantikapaion; IOSPE IV 334 = CIRB 495).

The foundation of Hermonassa is dated archaeologically to about 580–570 (Kuznetsov (1991b) 34). In the written sources the origin of the colonists is confused. Arrian (*Bith.* fr. 55, Roos = *FGrHist* 156, fr. 71) links the foundation to Hermonassa, the wife of a certain Semandros from Aiolian Mytilene (no. 798). Citing Dionysios and Ps.-Skymnos, Stephanos of Byzantion calls it an Ionian colony (278.11–12). Eustathios (*GGM* II 324) informs us that the *oikistes* of Hermonassa was a certain Hermon and that Hermonassa had been colonised by Ionians. Some scholars have attempted to resolve the contradiction found in the written sources as follows: Arrian's mention of Aiolians should be explained by the fact that certain Aiolians, in particular inhabitants of Mytilene, had also been involved in the founding of Hermonassa side by side with the Ionians. One name in an Archaic graffito (Y. G. Vinogradov (1983) 369 n. 20) is of Aiolian origin (or influence), but in C4, according to an inscription (CIRB 1056), the population of the city was mainly Ionian. From C5e the city was part of the Bosporan Kingdom and dependent on Pantikapaion (no. 705) (Hind (1994) 484; Tsitskhladze (1997b) 55–57, 68–80).

The *chora* of Hermonassa was not seriously studied until 1996. Excavations by the State Hermitage Museum yielded a rural settlement established in the late Archaic period (Solovyov and Butyagin (1998a)).

The Archaic and Classical levels of the town have not been studied extensively because those levels of the city lie at a depth of 12 m and the Greek and Roman levels at 6 to 7 m. The rest are Byzantine-mediaeval. Some Archaic pits have been discovered, and the remains of Classical stone and mudbrick buildings (Koshelenko *et al.* (1984) 81–82; Korovina (1992)). Although architectural remains of the Archaic period are scanty, other categories of archaeological material provide evidence of intense economic and cultural activity at Hermonassa in C6l/C5e (Zeest (1961), (1968),

(1974)). The most interesting material includes dedicatory inscriptions of C5–C4, to Apollo Ietros (Pichikyan (1984) 152), the Ephesian Artemis (a temple probably existed here; cf. M. J. Treister and Vinogradov (1993) 559 fig. 26), Apollo Prostates (CIRB 1034, 1044) and Apollo Delphinios (CIRB 1038). Probably this temple and the walls existed in the Classical period.

Important finds are two measures bearing the name of an *agoranomos* by the name of Apollodoros (Hind (1983–84) 90). One graffito of the third quarter of C6 from the site indicates the presence of a craftsman from Eleutherna in Crete (M. J. Treister and Shelov-Kovedyaev (1989)).

698. Karkinitis (Kerkinites) Map 23. Lat. 45.10, long. 33.10. Size of territory: 2. Type: A:a. The toponym is Καρκινίτις, -ιδος (Hecat. fr. 153; Hdt. 4.55, 99.2), from c.300 Κερκινίτις (IOSPE I² 401, 453; Arr. *Peripl. M. Eux.* 30). The city-ethnic is Κερκινίτης (IG II² 1008.IV.114 (C2l)).

Karkinitis was listed in Hekataios' *Periodos* and may in this work have been classified as a πόλις Σκυθική ((*FGrHist* 1) fr. 184 = Steph. Byz. 360.1), which ought to mean geographically within Skythia. Karkinitis is called a *polis* (sc. "Greek") in the urban sense by Hdt. 4.55, 99.2. The internal collective use of the city-ethnic is presumably attested in abbreviated form on C5–C4 coins (*infra*).

Hdt. 4.99.2 locates Karkinitis in ἀρχαίη Σκυθίη, toward mountainous Taurica, east of Ὑλαίη ("Woodland") and near the joint mouths of two of his Scythian rivers, Hypakiris and Gerrhos, where Skythian Nomades ranged the interior. Strabo (7.3.18, 4.2) mentions two "gulfs", one Tamyrake, near the isthmus of the Crimea (Perekop), and a second, Karkinitis, which "comes next and is very large", though he also gives both names to one gulf. Arrian's *Periplus* (30) gives the important information that Karkinitis was 600 stades from Chersonesos, which directs us to Eupatoria. These sources have prompted some scholars to posit a Karkinitis/Carcine and a quite separate Karkinitis (Minns (1913) 490; Rybakov (1979) 50; *Barr.* Map 22). But the Greek settlement found on the Quarantine headland, just west of Eupatoria, dating from C6l and fortified from C5m, seems to fit the description in our earlier and better-informed sources (Nalivkina (1963); Kutajsov (1990) 15–18, 48–55).

Pottery of C6l–C5 has been found (1950s, 1980s), as well as early pit shelters and a C5 defensive wall (Kutajsov (1990) 35–39, 40–55). The original area is said to have been some 3.5 ha, but was by C4 over 5 ha. Some 270–90 households are estimated to have dwelt within, and an external *chora* to the

west of about 1,400 ha was divided on the Chersonesite model into allotments of 4.5 ha (*ibid.* 150). Dating to C4 is a letter written on an amphora sherd from one Apatourios to a Neomenios, concerning tribute owed to the Skythians (Solomonik (1987); Y. G. Vinogradov (1997) 21).

The sole inscription on stone is a stele for *Ἀμβατίας τᾶς Ἡροδότο* IOSPE I² 339, of C4 and in Doric dialect. The suggestion that Karkinitis was a member of the Delian League rests on a massive restoration of the name from the first two letters *Ka[ρκινίτις]* (IG I³ 71.IV.165). An alternative conjecture is Kallatis (no. 686) (Pippidi (1971) 63–64 = SEG 22 9 and *supra*). It has been suggested that north-western Crimea was, in C5 and until C4m, under the political influence of Olbia (no. 690), but was then appropriated by Chersonesos (no. 695) in unknown circumstances (Rusyaeva (1986) 57; Zolotaryov (1986) 92). But it is preferable to see Karkinitis as an independent *polis*, though one in a general cultural relationship with its more flourishing fellow Ionian city (Kutajsov (1990) 153–57). By C4m it was a part of the Chersonesite *polis*, and included in the citizen's oath of C4l/C3e (IOSPE I² 401.8, 20 = Syll.³ 360). The attestation of the city-ethnic in an Athenian list of *epheboi* (IG I² 1008.IV.114) of C2l indicates that it had become a dependent *polis* rather than just a civic subdivision of Chersonesos.

The earliest struck coins of Karkinitis are of bronze and date to c.350 (according to Stolba (1996) 236–37 they were issued for only a few years, c.345–340). Types: (1) *obv.* Nike walking; legend: *KAPK*; *rev.* lion attacking bull. (2) *Obv.* head of goddess in turreted crown l.; *rev.* rider to r. with raised r. hand; legend: *KAPK*. (3) *Obv.* head of Herakles in lion skin r.; *rev.* eagle on thunderbolt l.; legend: *KAPKINI*. Types and style betray a close relationship with the mint of Chersonesos (no. 695) (Medvedeva (1984); Price (1993) nos. 693–95). Cast bronze arrowheads and fish money, on the pattern of those current at Olbia (no. 690), but of local types, and some round cast bronze coins with the legend *KA* or *K*, circulated at Karkinitis earlier in C5–C4 (Kutajsov (1995)).

699. Kepoi (Kepites) Map 87. Lat. 45.20, long. 37.00. Size of territory: 1 (*infra*). Type: [A]:a. Kepoi was situated on what was once an island in the Asiatic part of the Kimmerian Bosporos (Ps.-Skylax 72; Strabo 11.2.10). The toponym is *Κῆποι* (Aeschin. 1.171; Ps.-Skylax 72). The city-ethnic is *Κηπίτης* (CIRB 188 (C4m)).

At Ps.-Skylax 72 Kepoi is one of the toponyms listed after the heading *πόλεις δὲ Ἑλληνίδες αἰδε*, where the term *polis* is used in the urban sense. See also Harp. s.v. *Κῆπος*.

The external and individual use of the city-ethnic is found in a burial inscription of C4m from Pantikapaion (CIRB 188).

According to Plin. *HN* 6.18 and Ps.-Skymnos 899, Diller, Kepoi was founded by Miletos (no. 854). Several dozen fragments of East Greek pottery date the foundation to about 580–570 (Kuznetsov (1991a), (1991b) 34). From C5e the city was part of the Bosporan Kingdom and dependent on Pantikapaion (no. 705) (Aeschin. 3.171; Hind (1994) 484; Tsetskhladze (1997b) 57, 68–80).

It is believed that Kepoi was situated some 3 km east of Phanagoria (no. 706), and that its area was 20 ha. The site is so damaged by quarry workings that it is very difficult to be certain that the site really is Kepoi. So far, no inscriptions have been found on the site to confirm its location. The Archaic and Classical levels were destroyed in Antiquity, first of all in C6l by a levelling of the area after a fire. Furthermore, in the Hellenistic period the whole area was terraced. Excavation reveals scant remains of stone and mudbrick dwellings of C6l/C5e. Several Archaic pits contained large amounts of pottery. Fragments of a *kouros* and of marble sculptures of Aphrodite were also found (Sokolskij (1963); Koshelenko *et al.* (1984) 84–86; Kuznetsov (1991a), (1992)). Most probably two temples of Aphrodite existed in Kepoi, one situated on the north-west edge of the city and the other on the south-east edge (Tsetskhladze and Kuznetsov (2000)). The cult of Aphrodite is attested by dedicatory inscriptions of the Classical period (*ibid.* (2000) 353 with refs.; cf. SEG 45 990). Strabo 11.2.10 mentions a “sanctuary of Aphrodite, called Apatouron” in the Taman Peninsula (the Asiatic part of the Bosporan Kingdom). Some scholars think that Apatouron was situated in Kepoi (Tsetskhladze and Kuznetsov (2000) 353 with refs.). No fortification walls or local coinage are known so far. The view of Tokhtasyev (1986) that Apatouron was a separate site in Taman is preferable.

700. Kimmerikon Map 87. Lat. 45.00, long. 36.10. Size of territory: 1. Type: C:a. Kimmerikon was situated in the European part of Bosporos (Strabo 11.2.5, but at 11.2.4 he mentions Kimmerikon as a *kome* in the Taman Peninsula (Asiatic Bosporos) as well). The location is a matter of scholarly dispute (cf. Ps.-Skymnos 896–99; Usacheva and Koshelenko (1994); Zavojkin (1997), (1999a), (1999b)). The toponym is *Κιμμερικόν* (Strabo 11.2.5; Anon. *Peripl. M. Eux.* 76). Strabo classifies the place as a *polichnion* (7.4.5) but says that it had once been a *polis* (11.2.5).

As pottery finds suggest (Gorlov and Lopanov (1997) 141), Kimmerikon had some east Greek settlers by C6m. It has

been suggested that the place was a member of the Delian League, but this is based on an uncertain restoration of the name *Κίμ[μερικόν]* (*IG* 1³ 71.iv.166 has *Κίμ[---]*) (cf. Avram (1995) 195; Tsetskhladze (1997a) 462–65). From C5e the city was part of the Bosporean Kingdom and dependent on Pantikapaion (no. 705) (Tsetskhladze (1997b) 64, 68–71).

The site has not been well studied. The first walls with towers were erected in C5l/C4e (Gorlov and Lopanov (1995), (1997) 141). The walls enclose an area of 2 km². The city was situated on terraces. Early Greek pottery dates from C6m. All architectural remains date from the Hellenistic and Roman periods (Koshelenko *et al.* (1984) 71–72; Gorlov and Lopanov (1997)). According to Ps.-Skymnos 895–7, Diller, Kimmeris (*sic*) was a foundation of the Bosporean rulers.

701. Kytaia Map 87. Lat. 45.05, long. 36.25. Size of territory: 1. Type: [A]:a. Kytaia was situated in the European part of Bosporos (Ps.-Skylax 68; Plin. *HN* 4. 86; Anon. *Peripl. M. Eux.* 50; Ptol. *Geog.* 3.6.5). The toponym is *Κύταια* (Ps.-Skylax 68; Lycoph. *Alex.* 1312). At Ps.-Skylax 68 Kytaia is one of the toponyms listed after the heading *πόλεις δὲ Ἑλληνίδες αἰδε*, where the term *polis* is used in the urban sense.

Kytaia was already occupied by east Greeks by C5e (Molev (1985) 59). From C5e the city was part of the Bosporean Kingdom and dependent on Pantikapaion (no. 705) (Tsetskhladze (1997b) 64, 68–80).

A defensive wall was erected in C4e. Its destruction dates from C3–C2, after which the wall was strengthened from a width of about 3 m to nearly 3.5 m (Molev (1985); Koshelenko *et al.* (1984) 71). The city had stone buildings from C5, but their state of preservation and the small scale of excavations do not allow us to establish the character of these buildings and the plan of the city (Molev (1985)). The excavator proposed a location of the agora in excavation trench no. V (Molev (1985) 59). Excavation of the site produced a shrine/cultic ash mound (*eskharā*) (Moleva (1997)). Aphrodite, Apollo, Herakles, Demeter, Zeus, Artemis were objects of communal cults (Moleva (1997); Semicheva (1997)).

702. *Labrys or, rather, **Labryta** Map 84. Lat. 45.10, long. 37.35. Size of territory: ? Type: A:γ. The only source for this *polis* is a C4e versified dedication to Apollo-in-Labry[—] set up by Leukon, the *archon* of Bosporos and Theodosia, in celebration of his victory over Oktamasades, the king of the Sindoi (*SEG* 48 1027, an improved republication of *SEG* 43

515). The inscription was found in Semibratnee, c.35 km north of Gorgippia. The name of the *polis* is attested in lines 2–3: *Ἀπόλλωνι . . . τῶι ἐν Λ[αβρυ-?] τῆσδε πόλεισ μεδέοντι Λαβρυτων*. The toponym *Labrys is derived from what is commonly believed to be the city-ethnic: the gen. plur. *Λαβρυτών*, in nom. sing. *Λαβρύτης*. The problem is that names in the genitive governed by *μεδέων* are always toponyms and never ethnics; cf. e.g. *IOSPE* II 23 and *IG* XII.5 893.1. It follows that *Λαβρύτων* is probably the genitive of the toponym *Λάβρυτα*, *τά* (cf. *Βούχετα*, *τά*, Dem. 7.32) whereas the city-ethnic is unattested. Labryta is called a *polis* both in the political sense (l. 3) and in the urban sense (l. 7). It appears from the dedication that Apollo was the patron divinity of the city. There is no other evidence of Hellenisation, and Labryta was presumably a predominantly barbarian site.

703. Myrmekeion Map 87. Lat. 45.20, long. 36.30. Size of territory: 1. Type: [A]:a. Myrmekeion was situated in the European part of the Kimmerian Bosporos (Ps.-Skylax 68; Strabo 7.4.5, 11.2.6). The toponym is *Μυρμήκειον* (Ps.-Skylax 68); later authors have *Μυρμήκιον* (Strabo 7.4.5; Steph. Byz. 464.1).

At Ps.-Skylax 68 Myrmekeion is one of the toponyms listed after the heading *πόλεις δὲ Ἑλληνίδες αἰδε*, where the term *polis* is used in the urban sense; there is no evidence that Myrmekeion was ever an independent *polis* (Y. A. Vinogradov (1993), (1995a) 159–60, (2000)).

Pottery finds indicate Ionian settlers from c.580–560 (Kuznetsov (1991b) 33). The city's armed forces are possibly mentioned in one very fragmented inscription of C4 (*CIRB* 869). From C5e the city was part of the Bosporean Kingdom (Y. A. Vinogradov (1993); Tsetskhladze (1997b) 61–62, 68–71).

Myrmekeion had an acropolis protected by a wall of C6l/C5e (Y. A. Vinogradov and Tokhtasyev (1994); Y. A. Vinogradov (1995b)). The city covered an area of 6 ha (Tsetskhladze (1997b) 62) and had a defence circuit erected in C4e (Koshelenko *et al.* (1984) 66); the north fortification wall with tower was built in C4e. The first inhabitants lived in dug-outs. Stone architecture dates from C6l/C5e after the city was attacked by Skythians. From C5 the city had a rectangular plan and temples (Gajdukevič (1987) 5–36; Y. A. Vinogradov (1991), (1993); Y. A. Vinogradov and Tokhtasyev (1994); Tsetskhladze (1997b) 61–62).

The patron deity was Apollo Ietros (Y. A. Vinogradov and Tokhtasyev (1998) 25–29). Other communal cults include those of Herakles, Aphrodite, Zeus and the Nymphs (*SEG* 27

437; graffiti of C6e–C5e; *BE* (1990) 587, all C5m–C5l; Denisova (1981) 116; Y. A. Vinogradov and Tokhtasyev (1998)). Remains of a shrine of Aphrodite and an ash mound (*eskhara*) of C5f–C4e have been found on the acropolis (Gajdukevič (1971) 182, (1987) 66–70; Y. A. Vinogradov and Tokhtasyev (1994) 57).

Previously it was thought that silver coins with the obverse type of an ant were minted by Myrmekeion, but their minting is now connected with Pantikapaion (no. 705) (Shelov (1956) 28–30; Frolova (1992) 205–7).

704. Nymphaion (Nymphatos/Nymphaites) Map 87. Lat. 45.15, long. 36.25. Size of territory: 1. Type: [A]:β. Nymphaion was situated in the European part of the Kimmerian Bosporos (Ps.-Skylax 68; Strabo 7.4.4). The toponym is *Nύμφαιον* (Aeschin. 3.171); Ps.-Skylax 68 has *Nυμφαία*. The city-ethnic is *Nύμφατος* (*IOSPE* II.201 (C4?) now lost) or *Nυμφαίτης* (*Syll.*³ 1126 (C21)).

At Ps.-Skylax 68 Nymphaia is one of the toponyms listed after the heading *πόλεις δὲ Ἑλληνίδες αἰθε*, where the term *polis* is used in the urban sense. The external and individual use of the city-ethnic is found in two inscriptions: a tombstone from Pantikapaion (*IOSPE* II 201) and a dedication from Delos (*Syll.*³ 1126). The internal and collective sense is probably attested on coins (*infra*).

Nymphaion, it has recently been suggested, may have been established by Milesians in the 560s (Kuznetsov (1991b) 33), but this is unproven. Until 1983, when inscriptions with the names of the months of an east Greek calendar were discovered (Y. A. Vinogradov and Tokhtasyev (1994)), pottery finds had led some scholars to assume that the *metropolis* of Nymphaion must have been Samos (no. 864) (Gajdukevič (1949) 175). None of the written sources mentions the name of the *metropolis*.

Nymphaion was a member of the Delian League and was assessed to pay a tribute of 1 tal. (Krateros (*FGrHist* 242) fr. 8 = *IG* I³ 100; Tsetskhladze (1997a)). But *Nύ[μφαιον]* at *IG* I³ 63.190 has been changed into *[Ἄρ]γί[λοι]* at *IG* I³ 71.III.176. Nymphaion was lost c.410–405 (Aeschin. 3.171; *ATL* i. 527–28) and incorporated into the Bosporan Kingdom by Satyros I (433/2–389/8) (Shelov-Kovedyaev (1985) 90–91; Zavoikin (1995) 92). Hereafter Nymphaion was a dependency of Pantikapaion (no. 705) (*SEG* 45 996 (389–349); Hind (1994) 498; Tsetskhladze (1997b) 78–80).

C3 inscriptions on a wall record, *inter al.*, the months of the year Thargelion, Taureon, Kalamaion, indicating the use of the Milesian calendar in Nymphaion (Y. A. Vinogradov and Tokhtasyev (1994); Trümpy, *Monat.* 93).

In the Archaic period the *chora* of Nymphaion was small, and only a few rural settlements are known; the Classical and Hellenistic settlements number a few hundred. In 1993–97 a joint Russian–Ukrainian–Polish team surveyed the *chora* of Nymphaion (Scholl and Zinko (1999)). Before this joint project, which included excavation of a limited number of rural settlements and burial sites, as well as a survey (Wasowicz (1994); Solovyov and Zinko (1994); Zinko (1996), (1998); Vlasova and Solovyov (1998)), the question of the overall area of the *chora* and the ethnic composition of its population were far from clear and subject to heated debate.

The city walls of Nymphaion were probably erected in C5e (Tolstikov (1997) 209) and the acropolis was fortified in C5l/C4e (Chistov (1998a)). The first colonists lived in dug-outs (Butyagin (1997); cf. Solovyov and Butyagin (1998b)). After C6m stone and mudbrick buildings appear and a shrine dedicated to Demeter was constructed (cf. Tsetskhladze (1997b) 50 n. 29) in a *temenos* which in C5 had a walled area of 60 m². The shrine was destroyed by fire in C6l. In C5–C4, monumental buildings (some in the Ionic style) began to be constructed in the city: an acropolis, streets and a new temple to Demeter and Aphrodite. In C4e the city was destroyed, but was soon rebuilt with a new fortification system and monumental, richly decorated buildings. The discovery of a pottery kiln and wine-making complexes shows the city to have been a craft and agricultural centre in C6–C4 (Koshelenko *et al.* (1984) 63–64; Grach (1989); Sokolova (1997); Chistov (1998b); Boriskovskaya (1999)). Strabo 7.4.4 stresses the city's good harbour, the location of which is problematic (Belenkij (1998)).

As studies of the Nymphaion cemetery (Grach (1999); Vlasova and Solovyov (1998)) demonstrate, the population of the city had close connections with the Skythians (cf. Grach (1981); Butyagin (1998)). Finds of hand-made pottery, jewellery and rich tombs with Skythian burial customs (Vickers (1979); Grach (1999)) show that the Skythian nobility probably participated in the life of the city.

In C5l Nymphaion struck coins of silver (very rare drachms, diobols and hemiobols). *Obv.* head of nymph l. with hair bound up; *rev.* bunch of grapes; legend: *NYN* or *NY* in C5l (Anokhin (1986) 15, 29, 138). The mysterious mint issuing coins briefly (*obv.* head of nymph r.; *rev.* head of lion r. in incuse; legend: *ΣΑΜΜΑ*) has recently been suggested to be Nymphaion (Stolba (1998)); Sammas is supposed to have been a refugee and tyrant at Nymphaion c.439–436.

705. Pantikapaion (Pantikapaïtes)/**Bosporos** (Bosporites) Map 87. Lat. 45.20, long. 36.30. Size of territory: 3/4. Type: [A]:β. Pantikapaion was situated in the European part of the Kimmerian Bosporos (Strabo 11.2.10). The toponym is *Παντικάπαιον, τό* (Dem. 35.31–34; Ps.-Skylax 68) or, alternatively, *Βόσπορος, ὁ* (CIRB 6; Dem. 34.36). In the opinion of some scholars the early name for the city was Kremnoi, mentioned by Hdt. 4.20.1 as an *emporion* (Hind (1997) 111–15). The city-ethnic is *Παντικαπαίωνης* (CIRB 37 (c.370)) or, later, *Παντικαπαιεύς* (Syll.³ 585 (197–75)) or *Παντικαπαιεύτης* (RPh 63 (1937) 325–33 (C4)) or *Βοσπορίτης* (IG II² 8429 (C4s)).

At Ps.-Skylax 68 Pantikapaion is one of the toponyms listed after the heading *πόλεις δὲ Ἑλληνίδες αἴδε*, where the term *polis* is used in the urban sense; cf. also Anon. *Peripl. M. Eux.* 50. At Dem. 20.33 and 34.34 Bosporos (= Pantikapaion) is described as an *emporion*.

The external and individual use of the city-ethnic (*Παντικαπαίωνης*) is found in a fragmentary decree of c.370 found at Pantikapaion, a copy of an honorific decree for Leukon I (389/8–349/8) passed by the Arkadian Federation (CIRB 37). The internal collective use is found in abbreviated form on coins (Price (1993) 918–58; Frolova (1996) 152–53). For proxeny decrees issued by the Bosporan kings, see CIRB 1–5; twelve such decrees are now known (M. J. Treister and Vinogradov (1993) 545). A citizen of Pantikapaion was awarded *proxenia* by Chios (no. 840) in C4 (PEP Chios 50.20 = RPh 63 (1937) 325–33).

Pantikapaion was founded c.575. Written sources attest that it was Milesian (Strabo 7.4.4; Plin. *HN* 4.86; Amm. Marc. 22.8.36), and archaeological evidence agrees (Kuznetsov (1991b) 33).

C.480 (Diod. 12.31.1) Pantikapaion became the capital of the Bosporan Kingdom (Ephor. fr. 158), created primarily by the need to withstand Skythian pressure on the Greek cities situated on the Kerch and Taman peninsulas, i.e. the Kimmerian Bosporos (Gajdukevič (1971); Y. G. Vinogradov (1997) 100–32; Hind (1994); *contra*, for a later date of creation of the Bosporan Kingdom, Vasilyev (1992); Zavojkin (1994)). Thus, the Greek *poleis* of the Kimmerian Bosporos (except Theodosia (no. 707), Nymphaion (no. 704) and possibly Phanagoria (no. 706)) were united under the auspices of Pantikapaion (Blavatskij (1964) 24–93).

The Bosporan Kingdom was first ruled over by the Archaianaktidai (probably of Milesian origin), a clan of *tyrannoi* whose power lasted for 42 years (Diod. 12.31.1). All cities were self-governing *poleis*, but all were dependent on Pantikapaion. None of the other cities possessed a separate

coinage until 450–425; and C4 rulers spent much time keeping the cities within their kingdom. At the same time the Pantikapaion tyrants started to establish new towns (Tsetskhladze (1997b) 79 with refs.). A new dynasty, the Spartokids (of Thracian origin) came to power in 438/7, and the creation of the Bosporan state was nearly complete (Y. G. Vinogradov (1997) 115–16, 129–30). This dynasty ruled for more than 300 years (until 109). Its rulers called themselves “*Archon* of Bosporos and Theodosia and King of the Sindoi, Toretai, Dandarioi and Pssosoi” or of “the Sindoi and Maiotai” (CIRB 6, 8–11, 37, 113, 972, 1013–15, 1037–40, 1111; Hind (1994) 495–502). From the outset the main aim of the new dynasty was to incorporate Theodosia (no. 707), Nymphaion (no. 704) and possibly Phanagoria (no. 706) into the Bosporan Kingdom by force, these three independent *poleis* being opposed to the rulers of Pantikapaion. Several dynasts were preoccupied with this: Satyros I (433/2–389/8), Leukon I (389/8–349/8), Spartokos II (349/8–344/3) and Pairisades I (344/3–311/10) (Hind (1994)). From C5m it was the policy first of the Archaianaktidai and then of the Spartokidai to incorporate the local population of the Taman Peninsula (Asiatic Bosporos) into the kingdom through the establishment of Bosporan *emporia* in their settlements (Tsetskhladze (1997b) 60–71). This task was virtually completed by Leukon I (389/8–349/8), and the Sindoi and others were incorporated peacefully. In the time of Pairisades I (344/3–311/10) Bosporan territory reached its maximum extent, stretching from the Tauroi to the Caucasus. For a C4e treaty of *symmachia* between Leukon I (389/8–349/8) and Olbia (no. 690), see SEG 45 1000.

In the Archaic period the territory of Pantikapaion was small. In C6 the towns of Myrmekeion (no. 703), Tyritake (no. 708) and Porthmion were established by Pantikapaion, probably as dependent *poleis* (the first two) and a *teichos* (the last) to protect its territory from the local population (mainly Skythians) (Tsetskhladze (1997b) 68–69, 72). For C6 six rural settlements are recorded; for C5 about twenty; and more than 200 from C4 (Tsetskhladze (1997b) 72). To establish the exact extent of the territory of Pantikapaion is very difficult, because, after the creation of the Bosporan Kingdom, three types of land ownership were established: civic community land, royal land (Isoc. 17.3; Dem. 20.31) and temple land (Maslennikov (1998a) 26–36; Tsetskhladze (1998b) 39). Excavations during the last decade have yielded several dozen very rich farmhouses in the eastern Crimea (Maslennikov (1998a), (1998b); Vinokurov (1998)). They probably belonged to the royal family and to rich citizens of Pantikapaion.

The town of Pantikapaion can be traced back to c.575 (pottery finds: Kuznetsov (1991*b*) 33) and was built on the site of an earlier local settlement, *Pantikapa* (Strabo 7.4.4; Plin. *HN* 4. 26; Blavatskij (1964) 9–23). The city walls were erected in C5e (Tolstikov (1997) 214–26). The fortification walls of the acropolis date from C5l/C4f (Tolstikov (1984*b*)). The city occupied the summit and slopes of Mt. Mithridates and a lower seaside terrace in modern-day Kerch. For a description of the city, see Strabo 7.4.4. In C4 the city covered c.10 ha (Koshelenko *et al.* (1984) 125). Archaeological excavation has demonstrated that the first Greeks lived in dug-outs (Tolstikov (1992), (1996)). The beginning of stone architecture dates from the third quarter of C6, and the appearance of streets, monumental buildings and town planning to the last quarter of C6. To this latter period is dated the building of a *tholos*. All of this indicates the transformation of Pantikapaion into a typical Greek *polis* (Tolstikov (1996)). It is thought that in C6s there was a sanctuary for Apollo on the upper plateau of Mt. Mithridates (Tolstikov (1992) 62–66). In C6l/C5e dug-out constructions again appear, a phenomenon that some scholars connect with the difficult political situation (Skythian pressure) on the Kimmerian Bosphoros. In C5m comes a period in which monumental stone architecture is a characteristic type of construction. In C5m a huge temple to Apollo was erected in the *temenos/acropolis* of the city (Pichikyan (1984) 156–65). C4 was a period of prosperity that saw many grand public buildings (some with mosaic floors: so-called “*andron* with pebble mosaic of C5l–C4e”) and temples constructed, and the acropolis (the western part of whose fortification system was built in C4e: Tolstikov and Zhuravlyov (1998) 25) enlarged. By C4l/C3e the royal palace was built there. Finds of architectural details, sculptures, etc. show that the buildings were richly decorated (Koshelenko *et al.* (1984) 59–63; Tolstikov (1987), (1992) 78–94; M. J. Treister and Vinogradov (1993) 544–46). Epigraphic evidence and dedicatory inscriptions indicate that from about 540 there was a temple on the upper plateau of Mt. Mithridates dedicated to Ephesian Artemis (M. Y. Treister (1990)). From at least C4e there were temples, altars and shrines on the acropolis dedicated to Apollo Prostates (*CIRB* 6, 10, 25; Tolstikov (1992) 95 n. 9), Artemis (*CIRB* 64), Zeus (Tolstikov (1992) 95 n. 11), Aphrodite (Tolstikov (1992) 95 n. 12) and Demeter (*CIRB* 8). From C6, Pantikapaion became a centre for crafts and trade. Workshops for metal working were found on the northern slope of Mt. Mithridates, and on the western plateau, where the earliest dug-outs of the first settlers were discovered (M. Y. Treister (1987), (1992), (1998)). From C6l the city

produced also painted pottery, clay weights, terracotta figurines, etc. (Koshelenko *et al.* (1984) 59–63).

Pantikapaion struck coins of silver from C5e onwards and of gold in C4. (1) Silver and bronze C5e onwards: denominations: drachm, hemidrachm, diobol. Types: *obv.* lion's scalp facing; *rev.* incuse square with symbol; legend: *ΠΑΝ* or *ΠΑΝΤ* or *ΠΑΝΤΙ*, on some *ΑΠ* or *ΑΠΟΑ*. (2) Silver and bronze C4: *obv.* head of Pan or satyr; *rev.* head of bull, or griffin, or lion, or lion with spear in mouth; legend: *ΠΑΝ* or *ΠΑΝΤ* or *ΠΑΝΤΙ*. (3) Gold in C4: denominations: stater, hemistater. Types: *obv.* bearded head of Pan or satyr; *rev.* griffin with spear in mouth standing on ear of corn; legend: *ΠΑΝ* (Frolova (1992); Price (1993) 836–917; *SNG Cop. Thrace* 17–24). The full form of the city-ethnic, *ΠΑΝΤΙΚΑΠΑΙΤΩΝ*, appears on coins of C3 and later (*SNG Cop. Thrace* 27). Coins of c.460–440 with the inscription *ΑΠΟΑ* (as well as *ΠΑ/ΑΠ*) cause problems. The prevailing view is that these coins were struck at the mint of the temple of Apollo in Pantikapaion (built in the second quarter of C5) as an “alliance” issue of the cities of the Kimmerian Bosphoros. These coins were not minted for long—until the last quarter of C5, when the need for the confederation of Bosphoran cities had passed (Y. G. Vinogradov (1997) 22–23; Tolstikov (1984*a*) 47–48 n. 47; Frolova (1995)).

706. Phanagoria (Phanagorites) Map 87. Lat. 45.15, long. 37.00. Size of territory: 4. Type: A:a. The city was situated in the Asiatic part of the Kimmerian Bosphoros (Strabo 11.2.10). The toponyms are *Φαναγόρια*, *Φαναγόρεια*, *Φαναγόρειον* (Ps.-Skymnos 886–89; Strabo 11.2.10). The city-ethnic is *Φαναγορίτης* (*SEG* 41 625 (C1)).

Phanagoria is called a *polis Hellenis* by Ps.-Skylax 72, using *polis* in the urban sense; quoting Hecat. fr. 212, Steph. Byz. (657.8) lists Phanagoria as a *polis*, but it is uncertain whether the site-classification stems from Hekataios (Hansen (1997*a*) 17–18). *Polis* status, however, is strongly indicated by a fragmentary C4 proxeny decree from the site mentioning the rights of *enktesis* and *politeia* (Hind (1983–84) 90).

ΦΑ, attested on measuring vessels of C3, and *ΦΑΝΑ* or *ΦΑ*, attested on coins of C5l/C4f, are probably abbreviated forms of the city-ethnic used in the internal and collective sense. The full form, *ΦΑΝΑΓΟΠΙΤΩΝ*, is found only on C2l–C1 coins (Price (1993) 995–1007) whereas the external and individual use appears in App. *Mith.* 108.

Phanagoria was founded by Teians (no. 868) (Ps.-Skymnos 886) and, according to Arrian, the *oikistes* was Phanagoras of Teos, who had sought refuge from Persian

influence ((*FGrHist* 156) fr. 71). Thus, Phanagoria must have been founded c. 545–540, a date confirmed by excavation in the upper city of Ionian pottery, some belonging to the late stage of the late Wild Goat style and of contemporary Attic pottery (Kuznetsov (1998) 9; Arafat and Morgan (2000)). Most probably Phanagoria was forced to join the Bosporan Kingdom either by Leukon I (389/8–349/8) contemporaneously with Theodosia (no. 707), or by Spartokos II (349/8–344/3) and was thereafter a *polis* depending on Pantikapaion (no. 705) (*Syll.*³ 214–16; *SEG* 45 1016, all found in Phanagoria; Gorlov (1986); Hind (1994) 498).

The *chora* of Phanagoria is completely unknown, as are those of the other Greek colonies in the Taman Peninsula. A survey of the whole Taman Peninsula established that there are about 237 rural settlements of the Graeco-Roman and mediaeval periods, more than 500 barrows, and 150 km of ancient roads (Paromov (1990), (1992), (1997), (1998)). At the present level of knowledge it is impossible to identify which rural settlements belonged to which *poleis* (Tsatskhladze (1997b) 72–73 and (1998b) 38–39, both with refs.). Two very rich farms near Phanagoria may have been situated in its *chora* (Savostina (1987), (1998)).

The first defensive walls of Phanagoria were erected in C5l (Gorlov (1986) 136). The city was situated on two plateaux on the coast of the Gulf of Taman in the Taman Peninsula. The city covered c. 75 ha, but c. 25 ha of the site is now under water. The city is surrounded by hills on which three large cemeteries are situated (Tsatskhladze (1997b) 51–55 with refs.). In C6 Phanagoria was situated on the upper plateau and had a rectangular plan of approximately 440–450 × 500 m (20–22.5 ha). Remains of C6 include dwelling houses built of mudbrick without any stone foundation and streets. Twelve houses built of either wattle or mudbrick were found, dating from 630–620 to 500–480. In C5e the city was extended towards the south. In the cultural level of C5m to C4 were remains of workshops. In C6l houses on the upper plateau were destroyed, and the destruction level bears traces of fire. In C5e a large amount of construction work was undertaken. In the south-west part of the city the remains of the city gates were found. The houses were built from mudbrick, sometimes on stone foundations. During C5 the city spread on to a number of terraces and filled up the area between the upper and lower plateaux. Finds of, e.g., Ionic and Doric capitals point to monumental architecture. In C4 the city grew towards the east. The old fortification walls were destroyed in C4e as a result of a siege; afterwards large (re)construction works began, and the houses were built of limestone and other stones rather than

mudbrick. The city had several shrines and temples, including “a notable temple of Aphrodite Apatouros” (Strabo 11.2.10). In C6l there was a wooden shrine which was destroyed by fire in C5e. Terracotta figurines of Demeter, Artemis and Aphrodite have been found in a shrine not far from the city. Inscriptions were found in or near the agora or nearby; there was a temple of Aphrodite Ourania (Apatouron; *CIRB* 971–72), located on a hill not far from the city (*CIRB* 1111 = Tod 115C). According to Tokhtasyev (1986), the Apatouron was a separate shrine on the Taman Peninsula.

From the outset, Phanagoria was a very important city with its own diversified economy and craft production. Local painted pottery dates from C6l–C5; pottery kilns date from C4. There were workshops for the production of architectural terracottas, bronze and iron objects, and life-size bronze statues. Study of fragments of stone sculptures and gravestones confirms the existence of local sculptors. Finds of imported tableware, amphoras and foreign coins show that Phanagoria was a trading centre (Smirnov (1956); Kobylina (1983), (1989); Koshelenko *et al.* (1984) 77–81; Dolgorukov (1990); Dolgorukov and Kolesnikov (1993); Paromov (1993); Kuznetsov (1998), (1999) 555–58).

The city struck silver coins in C5l/C4e. Diobol: *obv.* beardless or more rarely a bearded head of a Kabyros (?) l. wearing high-crowned *pilos*, sometimes with laurel wreath; *rev.* bull, or forepart of bull l.; to r. an ear of corn; legend: ΦA . Trihemiobol: *obv.* same, but with more conical *pilos*; *rev.* forepart of bull l., ear of corn to r.; legend: ΦANA . Tetartermorion?: *obv.* beardless head left; *rev.* grain of corn; legend: ΦA (Shelov (1956) 49–51; Price (1993) 987–94; Zavojkin (1995)). Phanagoria resumed its minting in C3l.

707. Theodosia (Theudosieus) Map 87. Lat. 45.00, long. 35.25. Size of territory: 1. Type: [A]; β . Theodosia lay to the W. of the European part of the Kimmerian Bosporos (Ps.-Skylax 68; Strabo 7.4.4; Arr. *Peripl. M. Eux.* 19.3). The toponym is $\Theta\epsilon\upsilon\delta\omicron\sigma\acute{\iota}\alpha$ (Ps.-Skylax 68; Dem. 20.33). The city-ethnic is $\Theta\epsilon\upsilon\delta\omicron\sigma\iota\epsilon\acute{\upsilon}\varsigma$ (*CIRB* 231 (C4f)); C5s–C4e coins (*infra*) are inscribed $\Theta E O \Delta E O$ or $\Theta E O \Delta E \Omega$, which presumably abbreviates an unknown form of the city-ethnic.

At Ps.-Skylax 68 Theodosia is the first toponym listed after the heading $\pi\acute{o}\lambda\epsilon\iota\varsigma \delta\grave{\epsilon} \textit{Ἑλληνίδες αἰῖδες}$, where the term *polis* is used in the urban sense. At Dem. 20.33 Theodosia is called an *emporion*. The internal collective use of the city-ethnic is attested on coins (*infra*). The external and individual use is attested on a grave stele from Pantikapaion (*CIRB* 231 (C4f)).

Theodosia was founded by Miletos (no. 854) (Arr. *Peripl. M. Eux.* 19.3; Anon. *Peripl. M. Eux.* 51) c.570 (pottery find: Kuznetsov (1991b) 33). From the beginning the city was hostile to Pantikapaion (no. 705), opposing its tyrants during C5 and not joining the Bosporan Kingdom (Petrova (1991)). It was aided by Chersonesos (no. 695) and Herakleia (no. 715) against the encroaching *archontes* of the Bosporan Kingdom (Saprykin (1997) 91–98). C.370 Leukon I (389/8–349/8) conquered Theodosia and made it part of the Bosporan Kingdom, and thus it became dependent on Pantikapaion (no. 705) (Strabo 7.4.6 (rC4f)). In contemporary inscriptions C4 kings are described as “*archon* of Bosporos and Theodosia” (CIRB 6, 6a, 8, 1014, 1037, 1111 (Syll.³ 214); cf. Burstein (1974); Petrova (1991); Hind (1994) 498; Saprykin (1997) 91–98; Hansen (1997c) 90). Anon. *Peripl. M. Eux.* 77 mentions some refugees from “Bosporos” in Theodosia. It is believed that this information goes back to C5, and that the refugees were from Pantikapaion, people who did not support the new dynasty, the Spartokids, who came to power in 438/7 (Gajdukevič (1971); Petrova (1991) 98–99).

Dem. 20.33 and Strabo 7.4.4 underline the city’s fine harbour and fertile land, and the export of its grain to Athens. Archaeologically the city is not well known. During small-scale excavations a stone and mudbrick building dating from C5 overlaid by one of C4–C3 was uncovered (Peters and Golentsov (1981); Koshelenko *et al.* (1984) 63; Hind (1983–84) 85, (1992–93) 100). The *chora* is not well known. Minor settlements and a fortified farm of C4 have been excavated to the south and the west of Theodosia; the *chora* was populated both by Greeks and local people (Petrova (1996) 146–50; Beysens *et al.* (1997)).

Theodosia struck coins of silver, probably in the 430s, and bronze C4e. *Obv.* helmeted head of Athena; *rev.* bull’s head facing; legend: ΘΕΟΔΕΟ, ΘΕΟΔΕΩ. Minting stopped most probably c.370 when the city was conquered by the Bosporan king Leukon I (389/8–349/8) and resumed in C4 (Anokhin (1989) 15–16, 29–30, 57–58, 138–39, 141; Stolba (1996) 235; Hansen (1997c) 90).

708. Tyritake Map 87. Lat. 45.15, long. 36.25. Size of territory: ? Type: C:a. Tyritake was situated in the European part of the Kimmerian Bosporos (Ptol. *Geog.* 3. 6. 3; Anon. *Peripl. M. Eux.* 50). The toponym is *Τυριτάκη* (Steph. Byz. 642.12; variant spellings at Ptol. *Geog.* and Anon. *Peripl. M. Eux.*). The only sources to list Tyritake as a *polis* are Steph. Byz. and Anon. *Peripl. M. Eux.*

Tyritake was established in 580–560 by Ionians (? from Miletos (no. 854)) as is documented by pottery finds

(Kuznetsov (1991b) 33). The settlement was probably a secondary one from the start, dependent on Pantikapaion (no. 705) (Tsetskhladze (1997b) 62, 68–80).

City walls were erected in C5e (Tolstikov (1997) 209). The Archaic and Classical city is not well studied. Stone houses appear in C6s (remains of only two buildings have been excavated; cf. Koshelenko *et al.* (1984) 67–68). Aphrodite and Demeter were amongst communal cults (Denisova (1981) 83–88). The Tyritake rampart—a boundary line for strategic defence—stretches for a distance of over 25 km and was built to protect the *chora* of the European Bosporos in C5 from the local population (Tolstikov (1997) 209).

3. *The Coasts of the Caucasus and Kolchian Lowlands*

709. Dioskouris Map 87. Lat. 43.00, long. 41.00. Size of territory: 4. Type: A:a. Dioskouris was situated in Kolchis, Eastern Black Sea (Ps.-Skylax 81; Strabo 11.2.16; Arr. *Peripl. M. Eux.* 10.4). The toponym is *Διοσκουρίς* in Ps.-Skylax 81, but *Διοσκουριάς* in later sources (Strabo 1.3.2; Steph. Byz. 233.15). The city is called *polis* by Ps.-Skylax 81 using *polis* in the urban sense, and repeatedly in a fragmentary bronze inscription of C4l/C3e found in Eshera, not far from Dioskouris. Here *polis* is presumably used both in the political and in the urban sense (Y. G. Vinogradov (1997) 596–601; Tsetskhladze (1998a) 23–24).

Amphora handles of C3 produced by Dioskouris are stamped with ΔΙΟΣΚΟΥ, an abbreviation of either the toponym or, more likely, the city-ethnic used in the internal and collective sense (Tsetskhladze (1991) 362–63, 377). The bronze inscription from Eshera mentions events possibly linked with some military operations (Y. G. Vinogradov (1997) 596–601).

According to Arr. *Peripl. M. Eux.* 10.4, Dioskouris was founded by Miletos (no. 854) (Tsetskhladze (1998b) 16–19), and modern writers suppose it to date to C6m. Other writers relate foundation myths set in the epic period and which are poetic in nature (App. *Mithr.* 101; Luc. 3.3.269; Paus. 3.19.7, 24.7; cf. Braund (1994) 31–33).

The *chora* of the city spread up to a 10 km radius around the city. Eshera, the largest settlement in the area, was probably part of the *chora*. Finds of helmets may mark the edge of the *chora* of Dioskouris: the local population of north-eastern Kolchis was engaged in piracy and used to attack the coastal cities including Dioskouris (Diod. 20.25; Strabo 11.2.12, 16, 19, 11.3.6; Plin. *HN* 6.15–16; cf. Shamba (1980); Voronov (1991); Tsetskhladze (1998a) 15–25).

There has been no large-scale archaeological investigation of the city (modern-day Sukhumi in Abkhazia, north-western Georgia). Part of the city site is under water, and the remainder is covered by the modern city. Rescue excavations demonstrate that the city had monumental stone buildings from at least C4. Material shedding light on the early history of the city has not been found apart from a few fragments of C6l–C5 pottery and a Greek marble burial stele dated to 430–420 (Lordkipanidze (1968); Voronov (1980); Nikonov (1996); Tsetsckhladze (1998a) 15–25). The patron deities seem to have been the Dioskouroi (inference from the toponym). Another communal cult was that of Demeter (Tsetsckhladze (1998a) 16–17).

710. Gyenos Map 87. Lat. 42.45, long. 41.25. Size of territory: 1 (Shamba (1988) 7). Type: A:β. The toponym is *Γυηνός* (Ps.-Skylax 81); possibly *Cygnus* in Pompon. 1.110 (Inadze (1968) 124; Lordkipanidze (1979) 130–31; Shamba (1988) 6; Braund (1994) 103; Tsetsckhladze (1998a) 12–13). It was situated in Kolchis, eastern Black Sea (Ps.-Skylax 81). Gyenos is called a *polis Hellenis* by Ps.-Skylax 81, using *polis* in the urban sense.

Gyenos was settled by some east Greeks including merchants in C6m (Tsetsckhladze (1998a) 12–15). Pompon. 1.110 relates the city's foundation myth (Braund (1994) 103). Gyenos was probably a mixed Hellenic–barbarian *polis*: material culture shows both Greek and local Kolchian features (Shamba (1988); Tsetsckhladze (1998a) 12–15).

Ancient Gyenos has been located in an area near the modern city of Ochamchire (Abkhazia, north-western Georgia). According to the survey carried out on the site of the supposed ancient city, its area measured 65 ha (Shamba (1988) 7). It is difficult to accept this because of doubts as to the actual location and the very poor preservation of the site itself. The settlement ranged across three artificial hills and the surrounding plain on the left bank of the river Dzhikimur where it joins the sea. Only the edge of one hill (C) has been partly excavated; the other two hills have been completely destroyed by modern construction work. Two Archaic wooden dwellings have been well preserved. They had straw roofs. In the Archaic level East Greek pottery accounts for 28.5 per cent of the total pottery finds. By C4e habitation on hill C came to an end and was replaced with burials of horses' heads, equipped in Skythian fashion (Shamba (1988)).

711. Phasis (Phasianos) Map 87. Lat. 42.05, long. 41.45. Size of territory? Type: A:β. The city was situated in Kolchis, eastern Black Sea (Ps.-Skylax 81; Strabo 11.2.17, 12.3.17). The

toponym is *Φάσις* (Hdt. 4.86.2; SEG 44 1298 (C5l)). The city-ethnic is *Φασιανός* (Heracl. Lemb. 46).

Phasis is called a *polis Hellenis* by Ps.-Skylax 81, using *polis* in the urban sense; Hippoc. *Aer.* 15 calls Phasis an *emporion*. It had its own constitution, included in the Aristotelian corpus of 158 *politeiai* (Heracl. Lemb. 46; Arist. no. 141, Gigon). The external and collective use of the city-ethnic *Φασιανός* is attested at Xen. *An.* 5.6.36–37; Heracl. Lemb. 46; cf. Hind (1996b) 209–11; Braund (1994) 96.

Phasis is said to have been founded by Milesians (Heracl. Lemb. 46; Pompon. 1.108; Steph. Byz. 661.1), and some date the foundation to C6m, others to a much later date (Lordkipanidze (1985) 22–34; Tsetsckhladze (1998a) 7–12). The *oikistes'* name is given as Themistagoras of Miletos (Pompon. 1.108; cf. Steph. Byz. 661.1: *ἐκτίσθη δὲ ὑπὸ Μιλησίων*), a name found both at Miletos (no. 854) and Sinope (no. 729). Phasis was probably a mixed Hellenic–barbarian *polis* (Tsetsckhladze (1994b) 211–12), and the *emporion* served merchants visiting there at least from C5l/C4e (Hippoc. *Aer.* 15; Hind (1996b) 209–11). Lordkipanidze (2000) has restated the case for the existence of a Greek *apoikial polis* at Phasis in the Archaic and Classical periods; however, his treatment of the literary evidence is uneven, and that of Herodotos incorrect. The discussion of the Kolchian/Phasian coin types is also selective and unconvincing; see further Hind (2002).

Phasis has not been located. According to Arrian, the old fortifications of Phasis consisted of an earth rampart with wooden towers, in the Roman period replaced with walls of burnt brick (Arr. *Peripl. M. Eux.* 9). The patron deity seems to have been Apollo Hegemon (SEG 44 1298 (C5l); Tsetsckhladze (1994b)). Late writers mention the goddess of Phasis (Rhea or Artemis?) (Arr. *Peripl. M. Eux.* 9; Zos. *Historia Nova* 1.28). Literary and epigraphic evidence suggest that temples to these deities existed in the city (Zubov inscription on phiale (C5l); Tsetsckhladze (1994b); Arr. *Peripl. M. Eux.* 9; Zos. *Historia Nova* 1.28).

It has been suggested that silver coins “Kolkhidki” (Dundua (1987) 9–32) were minted by Phasis or the Phasians between C5e and C3. Tetradrachms have on *obv.* lion's head which may derive from the lion of Miletos (no. 854). A small percentage of type B hemidrachms are inscribed with Greek letters (initials for the names of magistrates?; cf. Dundua (1987) 9–32; Tsetsckhladze (1993) 236–40; Hind (1996b) 204–9). Hind studied the exceptional variety of C5m–l coin types, and suggested that Milesian die-makers may have been working for the Phasian *skeptouchoi* in Kolchis (Hind (1996b) 204–9).

4. *The Coasts of the Mariandynoi, Paphlagones and Kappadokes*

712. Amisos (Amisenos)/**Peiraieus** (Peiraieus) Map 87. Lat. 41.20, long. 36.20. Size of territory: ? Type: B.a. The toponym is Ἀμισός ὀ/ῆ (Hecat. fr. 199 *apud* Strabo 12.3.25; Ephor. fr. 162.12; Arist. *Hist. an.* 554^b15), to which corresponds the city-ethnic Ἀμισσηνός (*SEG* 28 725 (c.300)); the city was renamed Πειραιεύς in C5s (Strabo 12.3.14; cf. *infra*); the corresponding city-ethnic Πειραεύς or Πειραιεύς is found in a C4 inscription from Pantikapaion (*CIRB* 1 = *Syll.*³ 217; note, however, that *LGPN* II Διονύσιος no. 622 treats this man as an Athenian from the deme of Peiraieus) and on coins (Head, *HN*² 496; Malloy (1970)); it reverted to its former name by C3e. The territory was size 5 by Hellenistic times; earlier probably much smaller.

According to Ps.-Skymnos 957, Diller, Amisos was an *apoikia* of the Phokaians (no. 859), hence probably a *polis* in the political sense (date retrospectively given as c.560); Theopomp. fr. 389 *apud* Strabo 12.3.14 considered it a Milesian foundation originally. Probably c.436, in connection with the Pontic expedition of Perikles (Plut. *Per.* 20), it received a contingent of Athenian settlers led by Athenokles, and its name was changed to Peiraieus (Theopomp. fr. 389: ὑπ' Ἀθηνοκλέους καὶ Ἀθηναίων ἐποικισθεῖσαν Πειραιᾶ μετονομασθήναι; cf. *infra* and Sinope (no. 729)).

The internal collective use of the city-ethnic *Peira(i)eus* is found on C4 coins (*infra*). The external individual use of the city-ethnic *Amisenos* is found in *CIRB* 249–50 (C4l/C3e); *SEG* 28 725 (c.300); and *IG* II² 8062, 8072 (C3); this use of *Peiraieus* is found in *CIRB* 1 = *Syll.*³ 217, a C4m record of a *proxenos* of Pantikapaion (no. 705). The external collective use of the city-ethnic is not attested until the Hellenistic period (e.g. Strabo 12.3.13).

The *chora* of Amisos included Saramene, and reached the river Halys to the west, and Themiskyra and Sidene to the east. The native peoples were variously known as Syroi (Hdt. 2.104), Assyrioi (Ps.-Skylax 89), Leukosyroi (Ps.-Skymnos 956, Diller; Strabo 12.3.12, 25) or Kappadokes (Strabo 12.3.9).

Amisos (present-day Samsun) lies 165 km east of Sinope (no. 729), on the flat top and eastern slopes of a plateau headland (Kara, Eski Samsun) to the west of the town of Samsun (Maximova (1956) 52–54; Atasoy (1997) 25ff). It possessed no fine natural harbour; nor was it near the mouth of any major river (Wilson (1976a)). Its main assets were the “Amisene” iron, probably traded from the Chalybes (Arist. *Mir. ausc.* 833^b33), its lands productive of olives (Strabo 2.1.15, 12.3.30), some local silver from the Pontic Mountains,

and the overland route across the so-called isthmus of Asia which led to Tarsos via Amaseia, Zela and Kaisareia (Hdt. 1.72, 2.33; Ps.-Skymnos 961–62, Diller; Strabo 12.1.3). The sea routes along the coast and across the Euxine to the mouth of the Danube, southern Crimea and the Kimmerian Bosphoros were largely in the sphere of Sinope. It has been supposed that Amisos was in competition with Sinope (Magie (1950) 184), though it was probably not powerful enough to be so down to the end of the Classical period. Maximova (1956) 82–83 sees it as having, rather, a junior collaborative role. Two points tend to uphold this view. First, the colonisation by Athenokles and the party of Athenians at Amisos (Theopomp. fr. 389 *apud* Strabo 12.3.14) may well have taken place at about the same time and in the same sort of circumstances as Perikles' reported intervention at Sinope and dispatch of 600 colonists there (Plut. *Per.* 20). Secondly, the silver coinage of both cities displays somewhat similar reverse types (birds of prey with outstretched wings). The smaller denominations of Sinope in particular have their eagle *en face* with outstretched wings, as though to acknowledge the facing owl of Amisos.

From the time of the Athenian settlement, democracy lasted for a while until the Persians gained Amisos (App. *Mith.* 83; Polyae. 7.21.1). The satrap Datames had designs on it, wishing to use it as a mint (Polyae. 7.21.1), c.370. From C3m it lost its autonomy and became part of the Pontic kingdom under Mithridates II or Ariobarzanes.

There have been no planned excavations at Kara Samsun (Atasoy (1997) 109), the plateau being occupied by an American radar station. In the nineteenth and early part of the twentieth century, activity in the cemetery brought to light much jewellery, some of C5–C4 (Marshall (1911) pl. 31 nos. 1706, 1808, 1816), a grave *stèle* of C4 (Mendel (1912) no. 7), a bronze decoration from below the handle of a C4 *hydria* (Wiegand (1923); Züchner (1942) 175). There is also a small amount of imported pottery of C6–C4 (Atasoy (1997) 39). Contacts with Greek cities in the form of Amisenes abroad in the Classical and Hellenistic periods spread fairly widely (Maximova (1956) 89; Debord (1990); Atasoy (1997) 86).

About 18 km south-west of Samsun is Ak Alan, a fortified hill-top settlement, probably the centre of a Kappadokian chieftain. Here were found, in addition to native pottery, some terracotta architectural ornaments (*simae*, friezes) in a north Ionic or Aiolic Greek style, and pottery fragments from one or more Wild Goat style *oinochoai* of c.625–600 (Macridy (1907); Cummer (1976)).

These early contacts of Greeks with the Kappadokians and knowledge of the route to Tarsos were, perhaps, initiated by

Milesians from Sinope even before the foundation of Amisos. Hdt. 1.76–78 mentions Pteria, the strongest place, east of the river Halys, where the major battle between Kroisos and Kyros took place. This site is said to have been inland, on a line with Sinope on the Black Sea. Some have sought to identify Pteria with Ak Alan, but Pteria is now persuasively argued to have been at the huge IA fortification at Kerkenes Dağ (Mitchell (1999) 187–88).

Some Greeks (Hecat. fr. 199; Zenodotos *apud* Strabo 12.3.25) took Amisos to be the Enete of Hom. *Il.* 2.352, and there is also the connection of Themiskyra and the Thermodon area with “Amazons” (tale of the origin of the Sarmatians, Hdt. 4.110). These “barbarians” of legend may reflect a historical situation, which kept out Greek colonists until a relatively late date. The foundation story, as given by Ps.-Skymnos (956–57, Diller) makes Amisos a Phokaiian ἀποικία . . . Ἰωνικῆ κτίσις, which was founded 4 years before Herakleia (no. 715). In the defective line (957), there may be room for “Milesians and” as well as “Phokaians”; Theopompos (*apud* Strabo 12.3.4) mentions “Milesians”, then occurs a break in the text, leading to “Kappadokians”, and “Athenokles and the Athenians” (Lasserre (1978); Descat (1990) 540). However these variants in the two texts and the vicissitudes in the events of the *ktisissage* are to be explained, Amisos was clearly a *polis* in the political sense from c.564, though perhaps a *polis* dependent on Sinope, and briefly, from c.436, on Athens. No colonies of Amisos are known. Sinope seems to have monopolised that practice in the region.

Amisos struck silver coins on the Persian standard from C51 to c.330. Types: *obv.* head of nymph, or Hera in *stephane* or turreted crown; *rev.* owl facing with wings outstretched, standing on shield; legend: ΠΕΙΡΑ or ΠΕΙΡΑΙ or ΠΕΙΡΑΕ or ΠΕΙΡΑΙΩΝ. The trading activity of Peiraieus can be traced through finds of these coins singly and in hoards (*IGCH* 395) in Asia (Newell (1931)) and on the Black Sea shores (Maximova (1956) 89; Malloy (1970); Atasoy (1997) 86; Head, *HN*² 496; Price (1993) pls. XL, XLI; *SNG Cop. Pontus* 120–28).

713. Becheirias Map 87. Not in *Barr.* Type: A:a. The toponym is Βεχειριάς (Ps.-Skylax 84). It was a *polis Hellenis* according to Ps.-Skylax 84. It had a harbour and lay east of Trapezous (no. 734) in the territory of the Becheirioi (a native town?).

714. Choirades Map 87. Unlocated. Size of territory: ? Type: A:a. The toponym is Χοιράδες (Hecat. fr. 204). It is called a *polis* among the Mossynoikoi by Hecat. fr. 204 and a

polis Hellenis by Ps.-Skylax 86 (cf. Hansen (1997a) 22). Perhaps this was the site later refounded as Pharnakia (see Kerasous (no. 719)) by Pharnakes I of Pontos.

715. Herakleia (Herakle(i)otes) Map 86. Lat. 41.15; long. 31.25. Size of territory: 5. Type: A:a. The toponym is Ἡράκλεια, ἡ (*I.Sinope* 1.3 (353/2–346/5); Xen. *An.* 5.6.10; Arist. *Pol.* 1306^a37), to which is often added ἡ ἐν τῷ Πόντῳ (e.g. Arist. *Mete.* 367^a); Ποντιαῖς Ἡράκλεια is found in the epigram in *IG VII* 2531 (C4). The full name appears on the reverses of the earliest coins of C51/C4e (Price (1993) pl. LVII). The city-ethnic is Ἡρακλε(ι)ώτης (Xen. *An.* 6.4.23; C41 coins; *CID II* 4.III.17, etc.).

Herakleia is called *polis* in the urban sense at Xen. *An.* 6.2.1, 18 and Ps.-Skylax 91, and in the political sense at Xen. *An.* 5.6.21; Aen. *Tact.* 12.5; and Arist. *Pol.* 1327^b14. *Polites* occurs at Isoc. *Ep.* 7.2, and *patris* is found in *IG VII* 2531 (C4). The collective use of the city-ethnic is found internally on C41 coins (*infra*), and externally in Xen. *An.* 5.6.19; Aen. *Tact.* 12.5; and *IG I*³ 71.IV.127 (425/4). The individual and external use is found in *IG I*³ 74 (424/3) and *IG II*² 408 (c.330), Dem. 52.6 and *I.Olbia* 6 = Dubois (1996) 20 (C4s).

The *chora* (mentioned in *I.Sinope* 1.4 (353/2–346/5)) Ἡρακλεῶτις (Thuc. 4.75.2; Xen. *An.* 6.2.19)—described as situated ἐν τῇ Μαρνανδυνῶν χώρᾳ, Xen. *An.* 6.2.1—in C5 stretched to the Kales and to the river Kallichoros to the west, and to the south-east to the area between the rivers Lykos and Billaios. Eventually, Herakleia’s coastal influence reached out westwards beyond the river Hypios to the major river Sangarios, via an *emporion* at Elaious, and beyond it to Thynias Island (Dörner and Hoepfner (1962) 583–93; Hoepfner (1966) 19; Burstein (1976)). The city was strategically situated one long day’s sail (210 km) from the entrance to the Pontos (Xen. *An.* 6.4.2), with no city in that direction, only an uninhabited peninsula, Kalpe, which Xenophon fleetingly hoped to colonise, at the halfway stage (Xen. *An.* 6.3.1, 4.1.6). To the east was Sinope (no. 729), almost twice the distance (two days’ sail and 350 km; Xen. *An.* 6.2.1), but Cape Karambis, and the shortest crossing of the Pontos, lay between. Nearer to Herakleia lay four minor Milesian *poleis* or *katoikiai*, in one case an *emporion* of Sinope (see Tieion (no. 733), Kromna (no. 723), Sesamos (no. 728) and Kytoros (no. 724)). None of these could be much of a threat to Herakleia until they were synoecised under the name Amastris c.300–290 (see Sesamos (no. 728)). Herakleia, however, was well placed to let or hinder shipping from outside the Black Sea, going west or east along its southern shore, and across it to, or from, the Crimea and South Russia.

The isolated statement of Strabo 12.3.4 that Herakleia was a Milesian colony is an error (*contra* Asheri (1972) 14), compounded by attributing the first subjection of the Mariandynoi to them and ignoring Megarians totally. All other sources attribute the settlement of Herakleia to Megara (no. 225) (Xen. *An.* 6.2.11) or to Megarians with Boiotian participation (Ps.-Skymnos 1016–17, Diller; Ephor. fr. 44b). According to Ap. Rhod. 2.846, Nisaioi (i.e. from east coast Megara) were the colonists along with Boiotians. Paus. 5.26.7 says the Boiotians were from Tanagra (no. 220), an important coastal state in C6 (Buck (1979) 99). *Suda* s.v. *Ἡρακλείδης Εὐφρονος*, makes them Thebans (no. 221). The *oikistes* was Gnesiochos, a Megarian (Euphorion fr. 90, Scheidewin; Ephor. fr. 44b; *Collectanea Alexandrina* (Oxford, 1925) fr. 177). It has also been suggested that Thessalians took part (Asheri (1972) 14). The Boiotians' plight, leading to their sending out colonists after two oracles from Delphi, was due to plague and to Phokian raids (Just. *Epit.* 16.3.8). The foundation date is given by correlation with Persian/Median history, "the Boiotians and Megarians founded it (κτίζουσι) within the Kyaneai Rocks about the time when Kyros captured Media" (Ps.-Skymnos 1017–19, Diller). This ought to mean c.550, at any rate before the collapse of Lydia in 547; Megara's reason was pressure from Athens (Hind (1998) 134).

Local historians of Herakleia were concerned to give their city a "pre-history"—a connection with Herakles, or with the Argonaut Idmon, or with a Mariandynian hero, Agamestor (Herodotos (*FGrHist* 31) fr. 51; Nymphis (*FGrHist* 432) fr. 3; Promathidas (*FGrHist* 430) fr. 3). Agamestor (or Idmon) was *poliouchos*, with an old olive tree in his honour on show in the agora (Ap. Rhod. 2.841–50). At least in Roman times Herakles was claimed as *ktistes* on coins (Head, *HN*² 516). The celebration of *Dionysia* is attested in Diod. 16.36.3 (r353).

Herakleia founded colonies across the Pontos at Kallatis (no. 686) and Chersonesos (no. 695) perhaps during the troubles of C5/C4e, though some date them to C6l or C5e (Hind (1998) 139–52; Saprykin (1998) 236; Ivantchik (1998) 322 n. 77). Her wars with Bosporos ensued c.390–370 (Burstein (1974); Hind (1994) 498). A small settlement of Herakleiot also existed on Thynias Island (νήσος Θυνιάς (οἰκοῦσι δὲ αὐτὴν Ἡρακλεῶται), Ps.-Skylax 92; *Ἡρακλεωτῶν ἄποικος*, Ps.-Skymnos 1026, Diller) towards the entrance to the Black Sea. This island is called Apollonia and Daphnousia by writers of Roman date, and the Herakleiot settlement is named Thunias (Plin. *HN* 6.32; Ptol. *Geog.* 5.1.3; Anon. *Peripl. M. Eux.* 18).

A number of early wars with the local population are referred to at Just. *Epit.* 16.3.7–8; the citizen levy is referred to at Polyæn. 2.30.3. According to Arist. *Pol.* 1327^b14–15, the Herakleiot entertained a large navy (πολλὰς ἐκπληροῦσι τριήρεις; cf. Polyæn. 6.9.4), and Arist. *Oec.* 1347^b3 refers to a navy of forty ships (rC4f); Aen. Tact. 12.5 attests to the hiring of a substantial mercenary army by the city. *Strategoî* are referred to at Arist. *Oec.* 1347^b13 (rC4f).

In C5m Athens sought to make Herakleia a tribute-paying city, and the city's name appears more reliably than most in the tribute assessment decree of 425/4: [heρ]ακλειῶτα[ι] (*IG* I³ 71.IV.127). Athens' general, Lamachos, seems to have been attempting to assert her control over the near region when he lost his contingent of ships in a flash-flood in the river Kales (Thuc. 4.75.2). At this time, in general, some leaders at Herakleia seem to have favoured dependence on Persia and declined to pay a monetary contribution to Athens (Just. *Epit.* 16.2.8). Others were prepared to help the stranded Athenians out of trouble on this or a later occasion (e.g. Sotimos, A. B. West (1935) 74–75; cf. *IG* I³ 74 (424/3)). After the passing of Athens' brief hegemony in (at least parts of) the Pontos, Herakleia continued to be in a position to interfere with shipping going between Bosporos and the Aegean (e.g. in 360 and 330; cf. *IG* II² 117.20–23, 360.35–40). On the other hand, Herakleiot merchants were honoured at Athens for services rendered (*IG* II² 408).

Politically Herakleia is said to have been a "democracy" (Arist. *Pol.* 1304^b31–34; Aen. Tact. 11.10; cf. E. W. Robinson (1997) 111–13)—perhaps rather a settlement of relatively poor allotment-holders led by an *oikistes* together with a group of refugees from Boiotia (Just. *Epit.* 16.3). Passage of time, growth, prosperity, war with, and subjection of, the local people, Mariandynoi, brought inequalities, and these led to *stasis* (Burstein (1976); Saprykin (1981); Gehrke, *Stasis* 70–72). There were perhaps two leaders described as "tyrants" (Eurytion, Arist. *Pol.* 1306^a39–40; Euopios, *Suda* s.v. *Κλεάρχος*). The nobles were driven out by "demagogues", but returned to overthrow the "many" (Arist. *Pol.* 1304^b31–33). The oligarchic restriction of citizenship to heads of families was apparently dropped, and the number of those having full privileges under the oligarchy was raised to 600 in C5l (Arist. *Pol.* 1305^b2–13). These troubles probably occupied the late C5 and early decades of C4 (civic unrest are also referred to by Aen. Tact. 11.10, 12.5). In 364 Klearchos founded a "tyrant" dynasty that lasted more than 70 years: Klearchos (364–c.353/2); Satyros (c.353/2–345); Timotheos (c.345–337); Dionysios (345–305); Amastris, wife of Dionysios, later of Lysimachos (305–290) (Apel (1910);

Burstein (1972), (1976); Frolov (1974); Saprykin (1997)). *I.Sinope*¹ (353/2–346/5) is a treaty of *symmachia* between, on the one hand, Sinope (no. 729) and, on the other, “Satyros and the sons of Klearchos”. It is a mutual defensive pact by which both contracting parties undertake to support the other in case of attack on the territory or on the city, excepting aggression by the Great King or aggression by a third party sanctioned by the Great King: such aggression is to be negotiated by envoys sent to the king by the parties involved; if the aggressor is unwilling to conduct such negotiations, then he may be attacked by the two contracting parties who thus explicitly recognise the suzerainty of the Great King. The *poleis* of Kromna (no. 723) and Sesamos (no. 728) may, if they wish, be included in the alliance. In addition to such alliance arrangements, the treaty includes stipulations to the effect that (a) Sinopean and Herakleian exiles may remain ἐν ταῖς πόλεσ[ι]; it is, however, not clear exactly what is meant here: it may mean that Herakleian exiles are allowed to remain at Sinope, and vice versa; or it may mean that exiles are allowed to remain in any *polis* to which they had fled (as suggested by the editor); this would imply that Herakleia and Sinope could conclude a treaty whose stipulations were valid for other (dependent) *poleis*, and in fact Sinope is known to have ruled its colonies as dependent *poleis* (Gschnitzer (1958) 18–19; Nielsen (2000) 135; cf. Kerasous (no. 719), Kotyora (no. 722), and Trapezous (no. 734)); (b) that full support is to be given in the case of attempts to overthrow the existing constitutions of Sinope and Herakleia.

Pace Jacoby (*FGrHist* III 435 p. 368) and Gigon, fr. 501.56, there is no direct evidence that the *politeia* of Herakleia was described by Aristotle. Magistrates: *basileus* and *aisymmatai* are assumed for Herakleia, as derivative offices are known at her colonies, Kallatis (no. 686) and Chersonesos (no. 695) (Hanell (1934) 12ff, 135ff). The council was of 300 members (Polyaen. 2.302). The calendar was Megarian, like those of Byzantion (no. 674), Kallatis (no. 686) and Chersonesos (no. 695) (Avram (1999b); Trümpy, *Monat.* 150). *Nomophylakes* and *prodikoi*, from their presence at Chersonesos (*IOSPE* I² 342, 343, 359), are assumed to have existed also at Herakleia. *Agoranomoi* are taken to be represented on amphora stamps (*infra*). *Dikasteria* are attested during the democracy of C5I (Arist. *Pol.* 1305^b34).

Relations with other *poleis* are attested in *IG* I³ 74 (424/3), a grant of proxeny by Athens (no. 361) to Sotimos of Herakleia; a C4 *proxenos* at Athens is attested by Dem. 52.5 and *IG* II² 408 (c.330) is an honorific decree for two Herakleiot. A *proxenos* at Argos (no. 347) is attested by

Dem. 52.10. *IG* II² 117.19–22 and 360.35ff record Athenian decisions to send envoys to Herakleia. Herakleia entered into negotiations with Xenophon’s army (*An.* 5.6.21, 6.2.7) and was of logistic assistance in various ways (*An.* 5.6.35, 6.2.3) though relations were uneasy (*An.* 6.2.8).

The citizens were divided into the three Doric tribes, and each tribe seems to have been subdivided into four *hekatostyes* (making a total of twelve) until a politically motivated increase to sixty *hekatostyes* gave the democratic faction greater political participation (Aen. Tact. 11.10). For alternative interpretations of the two-tier system, see Jones, *POAG* 281–83. At this stage the adult male citizen population can be accepted at some 6,000 (Beloch *apud* Burstein (1976) 115 n. 61).

The native Mariandynoi are said to have ceded some of the territory to the colonists in return for support against the neighbouring Kaukones, and then to have lost more in warfare against their protectors. In 480 they were still an independent tribe, sending troops to Xerxes as their overlord (Hdt. 3.90, 7.72). Later they were in group subjection to the Herakleiot, tied to the land and bound to row in the fleet, but safe from sale overseas (Strabo 12.3.4). Different terms are used, and two groups of dependants may be intended, *perioikoi* and *georgountes* (Arist. *Pol.* 1327^b11–12), and a third, *dorophoroi*, indicating tributary status (Poll. 3.83). The class was a famous case of Dorian subjection of men within their state (Arist. *Pol.* 1327^b11–15; Paus. 5.26.7; Ath. 6.263C–D). It brought prosperity, but also political strains and excesses (Just. *Epit.* 16.3.8; Frolov (1981); Saprykin (1981); Avram (1984)).

Products of the area were tunny fish, walnuts and timber, but especially wine and the associated pottery products (trade amphoras). The trade amphoras of Herakleia are found widely in the Black Sea area, characterised by so-called englyphic stamps. They are numerous on sites of c.400 through C4 and beyond (Grakov (1926); Balabanov (1982); Brashinskij (1984)). The cross-Pontic interests of Herakleia show up in the C4 proxeny decrees at Olbia (no. 690) (*I.Olbia* 2 and 6 = Dubois (1996) 20) and grave *stelai* at Nymphaion on the Bosphoros (*CIRB* 923, 925). Influence of Herakleia has been detected on the coin types of Theodosia (no. 707), Phanagoria (no. 706) and the Sindoi (*Sindikos Limen*), and also on those of her own colonies, Chersonesos (no. 695) and Kallatis (no. 686), these types being a butting bull and the head or the club of Herakles.

By C5s Herakleia was a fortified city (Xen. *An.* 6.2.8); at Themistius 20.239c, Dindorff, is a reference to a *proasteion* where the C4 Athenian politician Anytos was buried;

Theopomp. fr. 181 refers to private houses. Diog. Laert. 5.91 has a reference to a theatre in a C4 context, and Polyæn. 2.30.2 has one to a *bouleuterion* during Klearchos' rule (364–352) (cf. Hansen and Fischer-Hansen (1994) 39). The town was grid-planned, perhaps already in the Classical period (Hoepfner and Schwandner (1986) 3–4), but there are few archaeological traces of the Classical period at Herakleia: a late Archaic head in east Greek style (Akurgal (1986)), and coins of the tyrant dynasty (Franke (1966)). But Herakleiot commissioned several works in Greek sanctuaries, a statue group of Herakles' deeds, to commemorate the repulse of the native Mariandynoi, at Olympia (Paus. 5.26.7), and a statue of Apollo at Delphi (Paus. 10.51.1).

Herakleia possessed no natural harbour or major river estuary, but a bay with a projecting headland (Baba burun) to the north-east. Ancient moles, perhaps Hellenistic and Roman, improved protection for shipping (Lehmann-Hartleben (1923) 13; Wilson (1976b)). The headland was Acherosias, where the small river Acheron (Soonantes) flowed and was said to descend deep into Hades (Xen. *An.* 6.2.2). Beyond the bay to the south-west, some 5 km distant, was the river Lykos, and further again at 15 km the small river Kales, scene of the Athenian naval losses and an *emporion* of the Herakleiotai (Dörner and Hoepfner (1962) 579).

Herakleiot silver coinage (on a standard similar to the Aiginetan used at Sinope (no. 729)) began in C5l. Denominations: tetradrachm, drachm, hemidrachm, tetrobol, diobol, obol. Types: (1) *Obv.* Herakles wrestling with lion; *rev.* quartered square; legend: *HPAK* or *HPAKΛEIA*; (2) *Obv.* head of Herakles; *rev.* bull butting; legend: *HPAK* or *HPAKΛEIA*; (3) *Obv.* same; *rev.* club; legend: *HPAK* or *HPAKΛEIA*. (4) *Obv.* same; *rev.* head of Hera wearing *stephane*; legend: *HPAK* or *HPAKΛEIA*. A change of type occurs with Timotheos and Dionysios (c.345). *Obv.* head of Dionysos with thyrsos; *rev.* Herakles holding a lion skin and erecting a trophy; legend: *TIMOΘEOY ΔΙΟΝΥΣΙΟΥ*. The full city-ethnic *HPAKΛEΩΤAN* appears on coins from C4l onwards (Price (1993) pls. LVII–LVIII; *SNG Cop. Bithynia* 405–23).

716. Iasonia Map 87. Lat. 41.10, long. 37.40 (promontory). Size of territory: ? Type: A:a. The toponym is *Ἰασονία* in Ps.-Skylax 88, where it is described as an *akropolis Hellenis* in the territory of the Chalybes. Xen. *An.* 6.2.1 calls it *akte*, whereas other writers make it a promontory, *akra/akron* (e.g. Strabo 12.3.17). Perhaps Ps.-Skylax has here combined *Iasonia akra* with a *polis Side/Polemonium* (cf. Müller *GGM* I 65 note ad § 88).

717. Karambis Map 86. Lat. 42.00, long. 33.20 (promontory). Size of territory: ? Type: A:a. The toponym is *Κάραμβις* in Ps.-Skylax 90, where it is called a *polis Hellenis*. In all other sources (e.g. Ps.-Skymnos 998, Diller; Strabo 12.3.10), except Plin. *HN* 6.2.6 (*oppidum*), Karambis is a cape or promontory.

718. Karoussa Map 87. Lat. 41.50, long. 35.10. Size of territory: ? Type: A:a. The toponym is *Κάρουσσα* in Ps.-Skylax 89, where it is called *polis Hellenis*. It lay close to, and was probably a *limen* and *emporion* of, Sinope (no. 729) (Anon. *Peripl. M. Eux.* 24). It has been suggested that the place was a member of the Delian League, but this is based on an unconvincing restoration of the name [*Κάρο*]σα (*IG* I³ 71.IV.166).

719. Kerasous (Kerasountios) Map 87. Lat. 40.55, long. 38.20. Size of territory: ? Type: A:a. The toponym is *Κερασούς* (Xen. *An.* 5.3.2; Ps.-Skylax 89). The city-ethnic is *Κερασούντιος* (Xen. *An.* 5.7.17).

Kerasous is called *polis* in the urban sense at Xen. *An.* 5.3.2 and Ps.-Skylax 89 (cf. Diod. 14.30.5); it was certainly also a *polis* in the political sense: the collective use of the city-ethnic is found several times in Xen. *An.* (5.5.10, 7.13, 20, 22, 24, 31); like Trapezous (no. 734) (Xen. *An.* 4.8.22) and Kotyora (no. 722) (Xen. *An.* 5.5.3), it is described as a colony of Sinope (no. 729), and since both Trapezous (Xen. *An.* 5.5.15) and Kotyora (Xen. *An.* 5.5.7) were *poleis* in the political sense, so should Kerasous be. Finally, both Trapezous and Kotyora paid tribute to Sinope, and so did Kerasous (Xen. *An.* 5.5.10); the inference is that Kerasous was a *polis* in the political sense, though, like Trapezous and Kotyora, it must have been a dependent *polis*, i.e. a colony dependent on its *metropolis* (Hansen (1997b) 33; Nielsen (2000) 135).

Kerasous was situated among the Kolchoi, some 3 days' march west of Trapezous (Xen. *An.* 5.3.2, 7.13–30). The army of Xenophon's men in retreat from Kounaxa (400) was counted there, 8,600 remaining. They stayed at the city and used an external market for 10 days, but then caused disturbance and offence when leaving. The city was a colony and dependency of Sinope (*supra*), which had driven the natives out and protected the citizens, who in turn paid a tax (*δασμός*, Xen. *An.* 5.3.2, 10). During Athens' brief exercise of sea power in the Black Sea, Kerasous was probably, along with Apollonia (no. 682) and Herakleia (no. 715), a tribute-paying member of the Euxine section of the Delian League (*Κερα[ασός]* in *IG* I³ 71.IV.169, one of the more plausible restorations in the assessment list of 425/4).

The Classical site was probably at Fol Bazar (Giresun Dere Su). Pharnakes I of Pontos moved the population to a new

site at Pharnakia, which was perhaps previously called Choirades, near the Isle of Ares (Kerasun Ada). Ps.-Skylax 86 calls this Choirades a *polis Hellenis*. A Kerasous is placed by Ps.-Skylax 89 west of Sinope, but this appears to be a misplaced reference to the Kerasous east of Sinope, i.e. the present one, perhaps to be located at Fol Bazar.

720. Kinolis Map 86. Lat. 42.00, long. 34.10. Size of territory: ? Type: A:a. The toponym is *Κίνωλις* in Ps.-Skylax 90, where it is called a *polis Hellenis*, on the coast of Paphlagonia.

721. Koloussa Map 86. Lat. 41.55, long. 34.15. Size of territory: ? Type: A:a. The toponym is *Κόλουσσα* in Ps.-Skylax 90, where it is called a *polis Hellenis*, on the coast of Paphlagonia.

722. Kotyora (Kotyorites) Map 87. Lat. 41.00, long. 37.50. Size of territory: ? Type: A:a. The toponym is *Κοτύωρα* (Xen. *An.* 5.5.3), spelled *Κύτωρος* by Strabo 12.3.17, probably in confusion with *Κύτωρον* west of Sinope. The city-ethnic is *Κοτυωρίτης* (Xen. *An.* 5.5.10).

Kotyora is called a *polis* in the urban sense at Xen. *An.* 5.5.3, 11, and in the political sense at Xen. *An.* 5.5.7. The city-ethnic *Κοτυωρίτης* is repeatedly given in the plural by Xenophon (Xen. *An.* 5.5.10ff). By C5J Kotyora had walls and could provide a market; private houses are mentioned at Xen. *An.* 5.5.11. Kotyora excluded the troops of Xenophon's army because of their riotous behaviour on leaving the sister town Kerasous (no. 719) (Xen. *An.* 5.7.18–30). The troops spent 45 days outside Kotyora, waiting for the merchants of Sinope and Herakleia to gather transport ships to take the army westward (Xen. *An.* 5.5.3).

The territory of Kotyora is termed *χώρα* at Xen. *An.* 5.5.7; it was in the territory of the Tibarenoi (Xen. *An.* 5.5.3). The *chora* was apparently won for it by the Sinopeans, for which it paid a tax (*δασμός*) to them, and was administered by a governor (*ἀρμοστής*) appointed by them (Xen. *An.* 5.5.10, 20). It was a colony of Sinope (no. 729), and a dependency at least in C5J/C4e (Xen. *An.* 5.5.3).

Kotyora (modern Ordu) lay 300 km east of Sinope. It was at least partially depopulated by Pharnakes I of Pontos to make up his new *polis* of Pharnakia in C2e. By the time of Strabo (12.3.17) it was a *πολίχνη*.

723. Kromna (Kromnites) Map 86. Lat. 41.50, long. 32.40. Size of territory: ? Type: B:a. The toponym is *Κρώμνα*, ἡ (Hom. *Il.* 2.855, cf. Strabo 12.3.5); the legend *KPΩMNA* is found on C4 coins. The city-ethnic is *Κρωμνίτης* (CIRB 199 (C4f); *I.Sinope* 1.24 (353/2–346/5)).

According to Strabo 12.3.10, Kromna was one of four *katoikiai* which were drawn into a now unified *polis*,

Amastris, c.300–290. The synoecised communities are called *poleis* and attributed to Miletos (no. 854) by Ps.-Skymnos 1005, Diller, probably referring to the time of foundation, which is, however, unknown. The external collective use of the city-ethnic is found in *I.Sinope* 1.24 (353/2–346/5), and the external individual use in CIRB 199 (C4f), IG 11² 9094 (365–340) and SEG 22 219, though the latter two could conceivably refer to Lakedaimonian Kromnos (no. 334).

Kromna lay at modern Korse-Silé between Sesamos and Tieion, and was the second most westerly of the four towns. See further the entries for Kytoros (no. 724), Sesamos (no. 728) and Tieion (no. 733).

The treaty of *symmachia* between Sinope (no. 729) and “Satyros and the sons of Klearchos” of Herakleia (no. 715) (*I.Sinope* 1.23–24 (353/2–346/5), on which see 957, 961) stipulates that the Kromnites may, if they wish, be included in the alliance.

Kromna struck coins of silver and bronze in C4. (1) Silver: drachms on the Rhodian standard. Types: *obv.* head of Zeus; *rev.* head of Hera; legend: *KPΩMNA*. (2) Bronze. *obv.* Hera wearing turreted stephanos; *rev.* amphora; legend: *KPΩM* (Price (1993) pl. XLIX; *SNG Cop. Paphlagonia* 261–67).

724. Kytoros Map 86. Lat. 41.55, long. 32.55. Size of territory: ? Type: A:a. The toponym is *Κύτωρος* (Hom. *Il.* 2.853), ἡ (*Etym. Magn.* 541.35) or ὁ (Ap. Rhod. 2.942) or *Κύτωρις* (Ps.-Skylax 90; *Suda* K2792) or *Κύτωρα*, τὰ (Theophr. *Hist. pl.* 3.15.5) or *Κύτωρον*, τό (Strabo 12.3.10 = Ephor. fr. 185). The city-ethnic is not attested in Greek, but appears in Latin as *Cytorius* (Catull. 4.11).

Ps.-Skylax 90 calls Kytoros a *polis Hellenis*, but he is very lavish with this term (*supra* 928). Strabo 12.3.10 describes it as one of four *katoikiai*, synoecised into one city at Amastris; this ought to have taken place c.300–290. The synoecised communities are called *poleis* and attributed to Miletos (no. 854) by Ps.-Skymnos 1005, Diller, probably referring to the time of foundation. According to Strabo 12.3.10, Kytoros was once an *emporion* of Sinope (no. 729). Perhaps Kytoros was a *polis* in the urban sense depending on Sinope (Hansen (2000) 193 with n. 41).

A major resource of the area was boxwood, perhaps also slaves, as it was an *emporion*. The town lay at modern Kidros, some 20 km west of Cape Karambis (the southern end of the shortest crossing of the Black Sea). It clearly lay athwart the coastal route to Sinope, but also that to the Crimea. See further the entries for Kromna (no. 723), Sesamos (no. 728) and Tieion (no. 733).

725. Limne Map 87. Not in *Barr.* Size of territory: ? Type: A:γ. The toponym is *Λίμνη, ἡ*, a *polis*, not specified as *Hellenis*, located east of Trapezous (no. 734) in the territory of the Ekecheireis (Ps.-Skylax 83).

726. Lykastos Map 87. Lat. 41.05–20, long. 36.00–20 (river). Size of territory: ? Type: A:a. The toponym is *Λύκαστος, ἡ* (Ps.-Skylax 89; Eust. *Il.* 2.647, quoting Steph. Byz.). According to Ps.-Skylax, Lykastos is the name of both a river and a *polis Hellenis*. Same information in Plin. *HN* 6.9. Steph. Byz. classifies Lykastos as a settlement, probably a *polis*. According to Pompon. 1.105, *Lycastos* was an *urbs*. Anon. *Peripl. M. Eux.* records only the river Lykastos.

727. Odeinios Map 87. Lat. 41.00, long. 40.45 (river). Size of territory: ? Type: A:a. The toponym is *Ὀδείνιος* in Ps.-Skylax 83, where it is called *polis Hellenis*, in the territory of the Ekecheireis. This is almost certainly the river *Adienos* of Arr. *Peripl. M. Eux.* 8 and Anon. *Peripl. M. Eux.* 39. A native *polis* then?

728. Sesamos (Sesamenes)/Amastris (Amastrianos) Map 86. Lat. 41.45, long. 32.25. Size of territory: unknown in C6–C4. Type: A:a. The toponym is *Σήσαμος, ἡ* (Hom. *Il.* 2.853, discussed by Strabo 12.3.10; Ps.-Skylax 90). The city-ethnic is *Σησαμηνός* (*I.Sinope* 1.24 (353/2–346/5)).

At Ps.-Skylax 90, Sesamos is one of the many places labelled *πόλις Ἑλληνίς* (cf. 928). C.300–290 Sesamos became the centre of the newly synoecised city Amastris, which was formed by Queen Amastris, formerly wife of Dionysios of Herakleia and latterly wife of Lysimachos, out of four pre-existing *katoikiai* (Strabo 12.3.10). The synoecised communities are called *poleis* and attributed to Miletos (no. 854) by Ps.-Skymnos 1005, Diller, probably referring to the time of foundation which is, however, unknown. The internal collective use of the city-ethnic is found abbreviated on C4s coins (*infra*); the external collective use is found in *I.Sinope* 1.24 (353/2–346/5).

The treaty of *symmachia* between Sinope (no. 729) and “Satyros and the sons of Klearchos” of Herakleia (no. 715) (*I.Sinope* 1.23–34 (353/2–346/5), on which see 957) stipulates that the Sesamenes may, if they wish, be included in the alliance. Enmity between Sesamos and the Persian satrap Datames is alluded to at Polyæn. 7.21.2. In Hellenistic and Roman times it became a large and beautiful city on a peninsula and with two harbours (Lehmann-Hartleben (1923) 13–22; Wilson (1976a)). The *koinonia* of C4l/C3e propelled the city into new prominence. It was near, but not on, the large river Parthenios, at the modern Turkish town of

Amasra. See further Kromna (no. 723), Kytoros (no. 724) and Tieion (no. 733).

Sesamos struck coins of silver and bronze in C4s. (1) Silver on the Rhodian standard: denominations: tetrobol, diobol. Types: *obv.* head of Zeus; *rev.* head of Demeter r. with corn-ear in hair; legend: *ΣΗΣΑΜ* or *ΣΗΣΑΜΗ*. (2) Bronze: *obv.* head of Zeus, or Apollo; *rev.* head of Demeter(?), or Kantharos; legend: *ΣΗΣΑ* (Head, *HN*² 507; Price (1993) pl. IV). Later silver of Amastris was struck on a local Herakleiot standard and has legends *ΒΑΣΙΛΙΣΣΗΣ ΑΜΑΣΤΡΙΟΣ* or *ΑΜΑΣΤΡΙΗΝΩΝ* (Price (1993) pl. XLVIII).

729. Sinope (Sinopeus) Map 87. Lat. 42.00, long. 35.10. Size of territory: 5. Type: A:a. The toponym is *Σινώπη, ἡ* (*I.Sinope* 1.10 (353/2–346/5); Hdt. 1.76.1; Xen. *An.* 5.5.7), *Σινώπια* in Doric (*I.Cos* 20.21 (C4l)). The city-ethnic is *Σινωπέυς* (*I.Olbia* 1 = Dubois (1996) 1 (C5f); *I.Sinope* 1.2; Xen. *An.* 5.5.8; Aen. Tact. 40.4).

Sinope is called a *polis* both in the urban sense (Hdt. 4.12.2; Xen. *An.* 5.5.23; Ps.-Skylax 89) and in the political sense (*I.Sinope* 5.5 (C4); Xen. *An.* 5.5.8). A C4l decree from Kos refers to the *δᾶμος ὁ Σινωπέων* (*I.Cos* 20); cf. *I.Sinope* 3 = *SEG* 35 1356 (C4) which also grants *politeia*. *Patris* is found in AG Appendix Epigr. Sepulchr. 254.3 and *patra* in 709.5. Sinope’s *politeia* was among those described by Aristotle (Arist. fr. 599).

The collective use of the city-ethnic is found internally in *I.Sinope* 1.2 (353/2–346/5) and 5.4–5 (C4) and may also be attested in abbreviated form on coins (*infra*); externally it is found at Xen. *An.* 5.5.8, 13; Aen. Tact. 40.4; and *I.Cos* 20 (C4l). The external individual use of the city-ethnic is found in *I.Olbia* 1 (C5f); *IG* 11² 10327 (C4f), 10334/5 (C4m), 10343 (C4f), 10345 (C4f), etc.; *I.Oropos* 520.25 (329–325); *RPH* 63 (1937) 325–32 A.14 (C4, Chios); *CIRB* 208 (C4, Pantikapaion), and *SEG* 28 725 (c.300, Eretria).

All are agreed that Sinope was a colony of Miletos (no. 854), but the complex foundation story is found in only one source (Ps.-Skymnos 981–97, Diller). This comes in four parts. First, an Amazon Sinope was its eponym (in some perhaps earlier versions Sinope was a nymph, daughter of Asopos). At this stage the Leukosyroi lived there, but they were driven out by the Thessalian heroes Autolykos, Phlogios and Deileon, who had been followers of either Herakles against the Amazons (Plut. *Luc.* 23) or Jason (Strabo 12.3.11). Then Habron (Habrondas) came, a Milesian by birth, but seemingly he was killed by the Kimmerians. Then after the Kimmerians came Koos and Kretines, who were exiled from Miletos; these men jointly refounded it when the host of the

Kimmerians overran Asia. The first stage is aetiological, attempting to explain a difficult name, which was perhaps Kappadokian, but ancients sought to link it with a Thracian origin in the meaning “drunken”. The conversion of Sinope from nymph (Eumelos (*FGrHist* 451) fr. 5) to Amazon was probably brought about by the absence of a significant river at Sinope and by the proximity of “Amazon” country to the east. The episode of the Thessalian heroes was taken seriously at Sinope, where an oracle of Autolykos existed, and he was venerated as *oikistes* and a god (Strabo 12.3.11); but this was probably intended to lay down a claim for Sinope as a participant in Jason’s voyage to Kolchis. A cult statue of Autolykos, the work of a C4 sculptor, Sthennis, was carried off by Lucullus after he took the city. According to Plut. *Luc.* 23, these heroes had taken the area from the Syroi. The two references to Milesian colonies (one brought to an end with the death of its oecist Habron/Habrondas, and the other a refoundation by Milesian exiles) have the look of genuine local tradition. The one may have taken place late in C8l or C7e, just before the Kimmerian irruption into Asia Minor, and the other in the last quarter of C7, when the Kimmerians were already a much weakened force (Hind (1988); Ivantchik (1998) 326–30). Ps.-Skymnos’ account supplements in a very circumstantial way the brief comment in Hdt. 4.12 that the Kimmerians had settled where Sinope *polis* stood in his own day, and the summary of Strabo (12.1.11): “the Milesians, seeing the natural advantages of the place and the weakness of its inhabitants, took possession of it, sending out further colonists”. The Eusebian date for Sinope (*Ol.* 37.4) is a tabular form, giving misleading precision, of the information given in the local tradition and transmitted in the Hellenistic sources in the style given by Ps.-Skymnos (synchronisation with Near Eastern dynasties and events). Sinope herself founded at least three colonies on the 500 km stretch of coast eastwards among the Tibarenoi (Kotyora (no. 722)), Chalybes (Kerasous (no. 719)) and Kolchoi (Trapezous (no. 734)), and had facilities for her traders still further east, probably at Pichvnari and Phasis (Tsetskhladze (1998a) 76ff). Kytoros (no. 724) west of Sinope had at one stage been an *emporion* of Sinope (Strabo 12.3.10). This activity clearly contributed to the idea that Milesians founded no fewer than seventy-five (Sen. *Helv.* 7.2) or ninety colonies (Plin. *HN* 122), and appropriated to themselves the Black Sea and its approaches (Ath. 12.523E). Daughter cities of Sinope clearly contributed considerably to these inflated lists.

When Xenophon’s troops sailed past Sinope to nearby Harmene in 400, it was already a powerful city, could muster many ships (possession of a fleet is attested by Polyae. 7.21.2

(rC4f)), and had three colonies on the coast eastward to Phasis (Xen. *An.* 4.8.22, 5.3.2, 5.4–8). Xenophon adds that the Sinopeans were themselves colonists of the Milesians (Xen. *An.* 6.1.15, followed by Diod. 14.31.2, and confirmed by Strabo 12.3.11). “Having built a naval port she ruled over the sea that side of the Kyaneoi Rocks and participated in many of the struggles of the Greeks even outside them” (i.e. outside the Euxine Sea), says Strabo 12.3.11. Little is known of Sinope after the colonisation until c.C5m, when it was under a tyrant, Timesileos, who was driven out c.436 by Athenian intervention under Perikles (Plut. *Per.* 20). A contingent of 600 men was sent there to consolidate Athenian influence and democracy, but it is likely to have departed from there by 405 if not by 411/10, as the *arche* of Athens progressively crumbled (Tsetskhladze (1997a)). One view is that Timesileos fled to Olbia (no. 690) and became *tyrannos* there for a time, but this rests on a very bold restoration of an inscription from Olbia (Y. G. Vinogradov (1989) 109ff, (1997) 165–94 = Dubois (1996) 5; *contra* Graham (1983); Yajlenko (1996)). Sinope entered into negotiations with the army of Xenophon (Xen. *An.* 5.5.7) to protect its colony Kotyora (no. 722).

Even in the period of her autonomy Sinope had occasionally to bow to the demands of the great power Persia; she probably was among those providing the thirty pentekonters for the satrap Ariaramnes to take across the Black Sea (before the expedition of Dareios into Skythia? Ktesias (*FGrHist* 688) fr. 13.(20)). Similarly some of the eighty ships from the Hellespont and Pontos will have been provided for Xerxes’ fleet by Sinope (Diod. 11.3.8). *I.Sinope* 1 (353/2–346/5) is a treaty of *symmachia* between, on the one hand, Sinope and, on the other, “Satyros and the sons of Klearchos”, for which see further *supra* 957, 959.

By the 370s her maritime interests brought Sinope into conflict with Sestos (no. 672), which was perhaps interfering with her shipping on its way to the Aegean (Polyae. 7.21.2), and towards the end of the century (309–304) Eumelos of Bosphoros was said to have greatly aided Sinope and Byzantion (no. 674) in their wider Black Sea interests (Diod. 20.25). Sinope increasingly came under threat from the peoples and rulers inland: Korylas (Xen. *An.* 5.6.8), Otis of the Paphlagonians (*Hell.* 4.1.1; *Ages.* 3.4), and the Persian satrap Datames (384–c.362), who besieged the city (Polyae. 7.21.2, 5; cf. Aen. *Tact.* 40.4). The latter (with legends in Greek) and the satrap Ariobarzanes (in Aramaic lettering) issued silver coins of Sinopean type, showing by imitation her commercial success (Price (1993) pl. LIII; *SNG Cop. Paphlagonia* 290).

The constitution was described in the lost Aristotelian *Politeia* (Arist. fr. 599). In C₄, it was a democracy: *I.Sinope* 1.27–28 (353/2–346/5) describes the constitution as *demos* = democracy, and *I.Sinope* 3.1 (C₄) uses the enactment formula $\xi\delta\omicron\xi\epsilon\ \tau\tilde{\omega}\ \delta\acute{\eta}\mu\omega$.

At least from the period of Athenian influence it had a *boule* and an *ekklesia* (D. Robinson (1905) no. 40); a bronze heliast's ticket has been found there, inscribed $\Delta\ \Sigma\ \tau\alpha\ \sigma\iota\alpha\ \iota\alpha\ \epsilon\omega\ \varsigma\ \Delta\ \alpha\ \mu\epsilon\omicron\varsigma$ (Robert (1937) 296ff no. 13). Magistrates were *prytaneis* and *agoranomoi* (Ehrhardt (1988) 207); *strategoí* are mentioned as movers of a decree in *I.Sinope* 3 = SEG 35 1356 (C₄). *I.Sinope* 7 (C_{4s}) attests a *nomophylakos* and a *boules epistates* and *grammateus*. State cults typical of Miletos (no. 854) were Apollo Ietros, Delphinios (deduced from personal names (Ehrhardt (1988) 142, 144)) and Poseidon Helikonios (ibid. 171–72). Unique to Sinope was Zeus/Dis as a supposed prototype for Sarapis (Tac. *Hist.* 4.83), and the oracle cult of Autolykos, the legendary founder. He had a C₄ statue in the city made by Sthennis (Strabo 12.3.11), which was carried off by Lucullus. *I.Sinope* 7 (C_{4s}) is a dedication by a board of *prytaneis* to Hestia Prytaneia (which presumably means that there was a *prytaneion* at Sinope).

I.Sinope 5 (C₄) is a grant of proxeny by Sinope to a citizen of Kos (no. 497); *I.Sinope* 3 is a fragmentary C₄ grant of citizenship (and presumably other privileges) to a citizen of Kallatis (no. 686), and *I.Sinope* 6 (C₄) likewise preserves a grant of citizenship; *I.Sinope* 4 (C₄) is a fragmentary decree for an unknown man who in the preserved text is granted $\acute{\alpha}\tau\epsilon\lambda\epsilon\iota\alpha\ \acute{\epsilon}\kappa\alpha\tau\tilde{\omega}\nu\ \sigma\tau\alpha\tau\acute{\eta}\rho\omega\nu\ \chi\rho\upsilon\sigma\tilde{\omega}\tilde{\upsilon}$ (“exemption from all taxes up to 100 gold staters” (editor)) as well as the right to enter and leave the harbour $\acute{\alpha}\sigma\upsilon\lambda\epsilon\ \kappa\alpha\iota\ \acute{\alpha}\sigma\pi\omicron\nu\delta\epsilon$ (“inviolably and without treaty” (editor)). A C_{5f} proxeny decree for a Sinopean is known from Olbia (no. 690; *I.Olbia* 1 = Dubois (1996) 1), and a C₄ grant is known from Chios (*RPh* 63 (1937) 325–33 A.14). Burial *stelai* of Sinopeans of the period are well represented at Athens (Osborne and Byrne (1996) 289–93), and one comes from Pantikapaion (*CIRB* 208). A citizen of Sinope achieved a victory in the *pankratíon* at the Amphiararaia at Oropos in C_{4s} (*IG VII* 414.25 = *I.Oropos* 520 (329/8 or 325/4); SEG 30 1456 is a C_{5f} bronze prize *hydria* from the Hekatombaian Games of Hera Argeia, found in a grave at Sinope, and suggests that a Sinopean was victorious in these games.

The nearer *chora* of Sinope lay on the peninsula, which the ancients likened to a steering oar ($\pi\eta\delta\acute{\alpha}\lambda\iota\omicron\nu$, Plut. *Luc.* 23); some moderns have imagined that it resembles a boar's head (Maximova (1956) 32 n. 1, quoting D. Robinson with

approval). It is termed $\chi\acute{\omega}\rho\alpha$ in *I.Sinope* 1.6 (353/2–346/5) and at Xen. *An.* 5.6.11, and called $\Sigma\iota\nu\omicron\pi\iota\kappa\acute{\eta}\ \gamma\eta$ (Strabo 3.2.6), while at Xen. *An.* 6.1.5 the toponym $\Sigma\iota\nu\omicron\pi\eta$ presumably designates the territory. Above the town were many garden allotments and suburbs, and the fertile peninsula's shores were protected by cliffs and sharp rock formations at and below sea level (Strabo 12.3.11). Her coastal region stretched westward to Harmene (walled townlet), which served as a harbour, at which to keep Xenophon's army quarantined from the city (Xen. *An.* 6.1.15), and eastward via Karousa to the river Halys. On the landward side Sinope seems to have been confined to the coastal strip, partly by the natural lay of the mountains, and partly by the Paphlagonian or Kappadokian (Pontic) kings. The resources from the coastal strip were olives, maple and box-tree, shipbuilding and furniture timber, nuts and cherries (Strabo 12.3.12). Her colonies to the east—Kotyora (no. 722), Kerasous (no. 719) and Trapezous (no. 734)—were, by the time of Xenophon, dependent *poleis*, colonies of Sinope (Kotyora (no. 722) paid a *dasmos* to Sinope: Xen. *An.* 5.5.10). They gave her access to the silver, iron and slaves—resources of the coastal Kolchoi, Chalybes and Tibarenoi. As “Paphlago” was regarded as a typical slave-name in Classical Greece it is likely that Sinope traded profitably in Paphlagonians too. From inland came the Kappadokian ruddle called *Sinopis* (red earth for rendering ships watertight (Theophr. *De lapidibus* 52)) and there was the long-range overland journey across Asia, from Amisos (no. 712) to the eastern Mediterranean at Tarsos, in which Sinope seems to have had a strong interest. But above all, the *métier* of Sinope seems to have been the sea: her catch of tunny fish was famous (Strabo 12.3.11), and her site on the peninsula, opposite the southern tip of the Crimea (Strabo 12.3.10), not far from a recognised crossing to Sindike on the Asiatic side of the Kimmerian Bosphoros opposite Bata (Strabo 11.2.13) on the Caucasus coast, made her the ideal harbour on which to converge from all shores of the Black Sea. The matchless virtues of its site on the long Turkish coast have already been remarked on. Clearly the sea was, in a real sense, her territory even more than the *Pedalíon* (the peninsula), the narrow stretch of *Sinopitis*, and the vulnerable lands around her colonies.

Sinope receives two detailed descriptions in ancient literature (Polyb. 4.56; Strabo 12.3.11). It lay on an isthmus 400 m wide at its narrowest and on part of the peninsula (modern Ince Burun), pushing eastward from the mainland of Turkey. It was a little more than halfway (560 km) along the coast from the entrance to the Black Sea. It was three days'

sail on to the river Phasis and Kolchis, and a day-and-night's sail (from Cape Karambis) to the southern tip of the Crimea. Sinope possessed harbours to the north and south of the isthmus; that to the south is the finest natural harbour on the whole 900 km stretch of the modern Turkish Black Sea coast (Maximova (1956) 37, map of the eighteenth century; Akurgal (1976)). Local Pontic tradition speaks of three harbours, July, August and Sinop, ensuring safety for ships!

Archaeological material from Sinope consists of chance finds from the cemetery to the west of the town, made during the building of a match factory in the 1920s and sporadically from the 1930s to 1980s. There were excavations in 1951–53, during which a Hellenistic temple and altar (to Sarapis?) were brought to light and left conserved in the public park (Akurgal and Budde (1956) 27–41). The earliest pottery found dates from C7l and C6e (Boysal (1959) 8–9). Sculptured grave *stelai*, in what seems local work of C5s, were found in 1925 (Akurgal (1948) 581–88), and there are more standard types of *stelai* of C5l–C4. A number of simple column *stelai* of C4–C3 have been published recently, bearing such Milesian theophoric names as Delphinios and Molpagoras (Jones (1988); French (1990)). Two bronze *hydriai* from the cemetery give some idea of wealth in C4 (Akurgal and Budde (1956) 12–16; Uygur (1989) 209–11). Finds of deposits of Sinopean olive oil and wine trade amphoras (French (1985)), and most recently of kilns for their production (at Zeytinlik on Sinope's southern bay and at Demirai 15 km away) are recent indicators of Sinope's most prominent branch of production (Kassab-Tezgör (1996)). From c.360–350 Sinope produced bulk-carrying amphoras for her olive oil and perhaps some wine, which were exported all over the Black Sea region until c.200/183 (Grakov (1929); Tsekhmistrenko (1958) 56ff; Brashinskij (1962); Monakhov (1993); Conovici (1998) 21–51). It appears from Aen. Tact. 40.4 that Sinope was fortified by c.370 (cf. Whitehead (1990) *ad loc.*).

The earliest coinage of Sinope dates from before the Athenian colony, perhaps c.480–460 when silver coins were struck on the Aiginetan standard. Denomination: drachm. Types: *obv.* head of eagle, below a small dolphin, on many examples the head is very crude, on some very fine; *rev.* incuse, opposed lozenges with dots or finely stippled (Hind (1976); Kraay and Moorey (1981); Price (1993) pl. LI; *SNG Cop. Paphlagonia* 272–73). A change of type comes in C4, perhaps after the departure of the Athenian colonists: *obv.* head of nymph Sinope, sometimes in a ring of dots; *rev.* eagle flying, apparently clutching a small dolphin; legend: ΣΙΝΩ. Smaller denominations (hemi- or quarter-drachms

and obols) have the eagle facing with wings outstretched, perhaps hinting at a connection with Amisos (no. 712) (Price (1993) pls. LI–LIV; *SNG Cop. Paphlagonia* 274–89). The theme of the eagle on dolphin, repeated with variants at Istros (no. 685) and Olbia (no. 690), suggests that this may be an “alliance type” such as noted in Ionia and Hellespont, and at Byzantion (no. 674)/Kalchedon (no. 743) at roughly the same time, taking the cult of Zeus Ourios as its patron (Hind (1999b)). An alternative view is that all three cities adopted symbols of Zeus (eagle) and Apollo (dolphin) to advertise their civic cults (Karyshkovskij (1982)). The legend on the reverses of the silver coins of c.410–300 is ΣΙΝΩ, which could be an abbreviated form of the toponym or the collective city-ethnic. That it is the city-ethnic is indicated by the Aramaic inscription on the C4s coins (“people of Sinope”). That it is the toponym is indicated by the later Hellenistic coins inscribed ΣΙΝΩΙΤΗΣ (*SNG Cop. Paphlagonia* 302–13).

730. Stameneia Map 87. Lat. 41.05, long. 37.45. Size of territory: ? Type: A:a. The toponym is Σταμάνεια (Ps.-Skylax 88, conj. for MS Ἀμάνεια). According to Ps.-Skylax, a *polis Hellenis* in the territory of the Chalybes, located east of Amisos (no. 712). *Stamene (sic)* is mentioned by Hecat. fr. 196 = Steph. Byz. 584.18: πόλις Χαλύβων. Therefore a barbarian *polis*?

731. Tetrakis Map 86. Unlocated. Size of territory: ? Type: A:a. The toponym is Τετράκις in Ps.-Skylax 89, where it is called a *polis Hellenis*. It is otherwise unknown, but placed by Ps.-Skylax west of Sinope (no. 729) and Harmene in the lands of the *Assyrioi* (= *Leukosyroi*).

732. Themiskyra Map 87. Lat. 41.15, long. 37.00. Size of territory: ? Type: A:a. The toponym is Θεμισκύρα, ἡ (Ps.-Skylax 89) or Θεμισκύρη, ἡ (Hdt. 4.86.3; Steph. Byz. 677.4). Ps.-Skylax calls it a *polis Hellenis*. According to most authors (e.g. Hdt. 4.86.3; Pompon. 1.105), it was a former city of the Amazons or of the *Leukosyroi*, situated by the river Thermodon. By Strabo's time it was a “plain and former abode of the Amazons” (12.3.14–15; cf. Steph. Byz. 677.4).

733. Tieion (Tianos) Map 86. Lat. 41.35, long. 32.00. Size of territory: ? Type: A:a. The toponym is Τίειον, τό (Ps.-Skylax 90; Strabo 12.3.10 (conj.), 4.7). Alternative forms are Τίος, ἡ (Memnon (*FGrHist* 434) 15.19; Pompon. 1.104) or Τίον, τό (Ael. *NA* 15.5; Ptol. *Geog.* 5.1.3). The city-ethnic *Τιανός* is found on C4/C3e coins (*infra*).

Tieion is called a *polis Hellenis* in the urban sense at Ps.-Skylax 90; it was one of four settlements (*katoikiai*) brought

together in the new foundation Amastris, by the former wife of Dionysios, tyrant of Herakleia and latterly wife of Lysimachos c.300–290 (Strabo 12.3.10). The synoecised communities are called *poleis* and attributed to Miletos (no. 854) by Ps.-Skymnos 1005, Diller, probably referring to the time of foundation, which is, however, unknown; Pompon. 1.104 also says that Tieion was Milesian. The collective city-ethnic is attested internally on coins (*infra*); the external individual use is found in three sepulchral inscriptions from Athens (IG II² 10488 (*Τιανή*, C4m), 10449 (C4m) and 10450 (C5l)).

Soon after the synoecism, Tieion became independent again from the *koinonia* (Strabo 12.3.10). Bronze coinage of C4l/C3e, inscribed *ΕΛΕΥΘΕΡΙΑ*, reflects these events (*infra*).

Tieion (Hisarenu) lay at the mouth of the river Billaios (Filyos-Çayı) in the territory of the Kaukones (Strabo 12.3.5). To the west lay Bithynia and, to the east, Paphlagonia—with the river Parthenios some 20 km distant.

Nothing of Classical date is known from the site, except for its general layout (Bean (1976)). Foundation legends search for heroic connection; Dionysos is *κτίστης* on coins of Roman date (Head, *HN*² 518); Tios, a Milesian priest, was the founder, according to Philon *apud* Steph. Byz. 624.20–21; one Pataros took the land of Paphlagonia and named it *Δία ἐκ τοῦ τιμᾶν τὸν Δία* (Demosthenes' *Bithyniaka apud* Steph. Byz. 624.21–23). See also Kromna (no. 723), Kytoros (no. 724) and Sesamos (no. 728).

Tieion struck bronze coins in C4l/C3e. Types: *obv.* head of Zeus; *rev.* eagle; legend: *ΤΙΑΝΩΝ*, or: *obv.* female head in *stephane* and *sphendone*; legend: *ΤΙΑΝΟΣ*; *rev.* Eleutheria seated; legend: *ΕΛΕΥΘΕΡΙΑ* (Head, *HN*² 518; Price (1993) pl. LIX).

734. Trapezous (Trapezountios) Map 87. Lat. 41.00, long. 39.45. Size of territory in C5–C4? Type: A:a. The toponym is *Τραπεζοῦς*, -ντος, ἡ (Xen. *An.* 4.8.22; Ael. *NA* 5.42; Ps.-Skylax 85). The city-ethnic is *Τραπεζοῦντιος* (Xen. *An.* 5.4.1).

Trapezous is called *polis* both in the urban sense (Xen. *An.* 4.8.22; Ps.-Skylax 85: *πόλις Ἑλληνίς*) and in the political sense (Xen. *An.* 5.5.15). The collective use of the city-ethnic may be attested internally in abbreviated form on C5l/C4e coins (*infra*) and is attested externally in several passages of the *Anabasis*, e.g. 4.8.23, 5.1.11. The external individual use is found at Xen. *An.* 5.4.2: *Τιμησίθεος ὁ Τραπεζοῦντιος* who was *proxenos* of the Mossynoikoi.

According to Xenophon, Trapezous was a colony (*apoikia*) of Sinope (no. 729) in the land of the Kolchoi, who lived in *komai* in its territory (Xen. *An.* 4.8.22; Hansen (1995) 79–80). The Armenian version of Eusebios provides a date for Trapezous that is precise but wrong (*ann. Abr.* 1260 = 757/6),¹ which is almost certainly a confusion with the entry for Kyzikos (no. 747) in the Latin of Jerome (Hind (1988) 213–14; Huxley (1990) 199; Ivantchik (1998) 314–18). This unreliable tabular date apart, there is no trace of a colonisation date for Trapezous.

The army of Xenophon borrowed from the Trapezountians two ships, one *pentekonter* and one *trikonter*, with which to commandeer transport ships (which were sailing past to Phasis and back) in order to convey the troops westward (Xen. *An.* 5.1.11, 3.11). Some Arkadians from Trapezous (no. 303) in Arkadia are said to have joined this colony after refusing to join the synoecism of Megalopolis (Paus. 8.27.6); if historical, the many Arkadians in the army of the Ten Thousand may have provided information to their fellows about the city with the same name in the Pontos that had been so welcoming to Greeks (Xen. *An.* 4.8.23, 5.1.14, 2.2). At the end of C5 Trapezous was a dependent *polis*, paying tribute (*dasmos*) to Sinope (no. 729) (Xen. *An.* 5.5.10).

Trapezous (modern Trabzon) lies 460 km east of Sinope. It profited from the coastal route east to Phasis, and from a route inland to the south. It had supplies of timber and silver in the hills. Its greatest period of glory was in Roman and Byzantine times, when it outlasted Byzantium itself by eight years, succumbing to the Ottomans in 1461.

Trapezous struck silver coins on the Persic standard in C5l–C4e. Denominations: drachm and quarter. Types: *obv.* head of young man with short, stubbly beard; *rev.* table with pile of coins; legend: *ΤΡΑ*. The reverse type, a money-changer's table = *τράπεζα*, seems to be a clear case of a punning type (Head, *HN*² 499; Price (1993) pl. XLVIII). That the legend is an abbreviated form of the city-ethnic is indicated by the attestation of the full form of the ethnic on coins of the Imperial period.

THE PROPONTIC COAST OF ASIA MINOR

ALEXANDRU AVRAM

I. The Region

It is difficult to define the frontiers of the regions of north-western Asia Minor between the entrance to the Black Sea (the *hieron* of Zeus Ourios) and the Hellespont. Different toponyms are used by different ancient writers: Bithynia, Mysia, Phrygia, Troas, Propontis, Hellespontos, and they denote different regions in different contexts. Modern scholars allow for a certain “mobility” of the frontiers; cf., e.g., the *Archaeological Reports*, where the evidence concerning the Asian coast of the Sea of Marmara is grouped under the headings “Mysia and the Propontis” (Mitchell (1985) 74), “Bithynia, Mysia and the Propontis” (Mitchell (1990) 89) and “Bithynia and the Propontis” (Mitchell (1999) 129).

It is generally assumed that the Propontis includes both the European and the Asian shores of the Sea of Marmara, whereas the geographical term *Hellespontos* (discussed by Leaf (1923) 50–52) is used for the region of the Dardanelles. However, there has never been agreement about where to draw the line between the Propontis and the Hellespont. This problem is explicitly summarised by Strabo 7 fr. 58: *καλοῦσιν Ἑλλησποντον . . . οἱ μὲν τὸ ἀπὸ Σιγείου ἐπὶ Λάμψακον καὶ Κύζικον ἢ Πάριον ἢ Πρίαπον*. For Strabo himself, Parion (no. 756) is a city in the Propontis (10.5.7); for Herodotos (4.138.1) and Steph. Byz. 505.13 it is in the Hellespont, while Eustathios wavers between the Propontis (*Comm. Dionys. Per.* 517) and the Hellespont (*Od.* 5.125).

Again, confusion reigns about how to subdivide north-western Asia Minor. There are four main sources: (1) Herodotos describes the administrative organisation of the Persian Empire under Dareios I (3.90–97; cf. Debord (1999) 72–82); (2) from 443/2 the members of the Delian League were grouped into districts, one of which was called the Hellespontine; (3) Ps.-Skylax 92–94 describes the coastline of north-western Asia Minor; (4) Strabo repeatedly discusses conflicting opinions found in the sources he used.

In the view of Ps.-Skylax, Bithynia (92) begins with the *ἱερόν ἐν τῷ στόματι τοῦ Πόντου* (the *hieron* of Zeus Ourios; see Kalchedon (no. 743)) and continues to the Gulf of İzmit, called *ὁ κόλπος ὁ Ὀλβιανός* (see Astakos (no. 737) and Olbia (no. 753)); Mysia (93), described as a peninsula (*ἀκτῆ*), continues from the left side of the same gulf as far as the Kian Gulf and includes Kios (no. 745), while Phrygia (94) includes the coastal cities of Priapos (no. 758), Parion (no. 756), Lampsakos (no. 748), Perkote (no. 788), Abydos (no. 765) and *τὸ στόμα κατὰ Σηστόν τῆς Προποντίδος* as well as the islands of Bysbikos (Besbikos), Prokonnesos and Elaphonnesos. Now it is generally assumed that Mysia was bordered by Mt. Ida (north-west) and Mt. Olympos (north-east), and that the territory of Kios belonged to Mysia (Hdt. 5.122; Xen. *Hell.* 1.4.7; *Hell. Oxy.* 17.37), which invites us to follow Ps.-Skylax and allow Mysia to have a coastline (Debord (1999) 75, 92, 150).

No less fluctuating are the frontiers between Phrygia/Mysia and the Troad. The different views are summarised by Strabo 13.1.4: for Eudoxos of Kyzikos the Troad begins at Priapos (no. 758), for Damastes of Sigeion at Parion (no. 756), and for Charon of Lampsakos (*FGrHist* 262 fr. 13) at the river Praktios. Given the authority of Charon, who excludes his own polity from the Troad, we have preferred to extend Phrygia, if not as far as Abydos as recorded in Ps.-Skylax, then at least to include Lampsakos (no. 748). One has to impose conventional subdivisions, since it seems impossible to harmonise the contradictory pieces of information found in the sources. Ancient geographers seem sometimes to have combined different traditions, like Ptol. *Geog.* 5.2.2, for whom e.g. Parion and Lampsakos are *ἐν Προποντίδι Μυσίας Μικρᾶς τῆς ἐφ’ Ἑλλησπόντῳ*.

By and large, this chapter follows Ps.-Skylax and assigns to Bithynia the *poleis* of Kalchedon (Kadıköy), Astakos and Olbia (in the area of the Gulf of İzmit), all situated on the coast. To Mysia belong, on the coast, Kios (Gemlik) and the unlocated city Kallipolis (no. 744) (between Astakos and

Kios) and, inland, Pythopolis (no. 760) (= Sölöz?, near Kios) and Zeleia (no. 764) (= Sari Köy). The enigmatic Mysia (not considered to be a *polis* here, cf. *infra*) remains unlocated, and *Helikore* too is excluded; cf. the list of non-*polis* settlements *infra*.

All the other *poleis* of the Inventory are to be assigned to Phrygia. Myrleia (no. 752) (= Mudanya), Tereia (no. 763) (παρὰ [Bp]ύλλιον: *IG* 1³ 71.III.111–12), Daskyleion (no. 740) (= Eskel Limanı), the unlocated Plakia (no. 757) (= Kurşunlu?) and Skylake (no. 761), then Artake (no. 736) (Erdek, near Kyzikos), Kyzikos (no. 747) (Balkız), Harpagion (no. 742) (near the mouth of the river Granikos), Priapos (Karabiga), Parion (Kemer), Paisos (no. 755) (= Fanous?), Lampsakos (no. 748) (= Lapseki) were (or must be looked for) on the coast. Further inland were situated, on the river Rhyndakos, Miletoupolis (no. 750) (Melde), Miletouteichos (no. 751), perhaps Artaiou Teichos (no. 735) and Didymon Teichos (no. 741), probably situated on the river Granikos. Finally, there are the *poleis* on the islands of Bysbikos (no. 738) (= İmralı Adası) and Prokonnesos (no. 759) (= Mermaradası) and there are the unlocated *poleis* of Kolonai (no. 746) (in the area of Lampsakos) and Metropolis (no. 749) (near Priapos).

Three *poleis* remain without any location: (1) Dar(i)ëion (no. 739) described at *IG* 1³ 71.III.109–10 as a community παρὰ τῆμ Μυσίαν and at Steph. Byz. 291.11 as a πόλις τῆς Φρυγίας; (2) the community called *Otlenoi* (no. 754) which is recorded among the Hellespontine *poleis* in the Athenian assessment decree of 422/1 (*IG* 1³ 77.IV.6); and (3) Sombia (no. 762), whose location on the south coast of the Propontis, though very likely, is not certain.

Other settlements recorded by *Barr.* are excluded from this Inventory. For Hellenistic Prusa (Bursa), Koerte (1899) 412 n. 1 and, more recently, Corsten (1993) 22–25 suggested a foundation in C6, citing Strabo 12.4.3 followed by Steph. Byz. 537.5–10, who name as founder a certain Prusias who fought a war against Kroisos. However, taking into account that there is no evidence antedating Strabo and that the first local coinage is dated to C1, it is hard to believe in the historicity of this rather contaminated version of a foundation myth.

Apollonia on the Rhyndakos (Gölyazı) is also attested in Hellenistic sources only. The first testimony is an inscription found in the Delphinion at Miletos (*Milet.* 1.3 155 (C2m)) concerning an embassy claiming a Milesian origin for Apollonia. This tradition was accepted by Bilabel (1920) 45–46, 143–44 and especially by L. Robert (1979) 292–93 (cf. L. Robert (1980) 89–98, (1983) 501 n. 18), while Seibert (1963)

197–200, Moretti (1979) and Ehrhardt (1988) 47 contested its historicity with various arguments. An attractive solution is the one suggested by Schwertheim (1983) 88–89 and Abmeier (1990) 9–11, who prudently take into account the possible identity between the later Apollonia and Miletouteichos (no. 751).

In the Athenian tribute list of 454/3 are recorded some *Μυσοί* paying a tribute of 2,000 dr. (*IG* 1³ 259.v.15), and in the assessment decree of 425/4, among the Hellespontine members, we find a community called *Μυσοί*[οὐχοί] ἐ[ν] τ[ῆ]ι Χ[ερρονέσσοι] (*IG* 1³ 71.III.69–70). Now, *Μυσός* is usually a regional ethnic denoting all inhabitants of the region of Mysia (Hdt. 1.171.6; Xen. *An.* 1.9.14). Thus, the Kians were Mysians (Ps.-Skylax 93), but in the tribute lists they are called by their city-ethnic. Also, the small amount paid shows that the *Mysoi* in question must have been the inhabitants of a fairly small community, probably situated somewhere in Mysia. Now, the peninsula north of Kios, the central part of Mysia, is called ἀκτὴ at Ps.-Skylax 93 and could be described as a *Χερρόνησος* as well (*ATL* i. 523–24). At the eastern end of the peninsula flows the river Kios and, according to schol. Ap. Rhod. 1.1177, it “encircles Mysia”, τῆν *Μυσίαν περιρρέων*. Here Mysia possibly denotes a settlement rather than a region. Wendel suggested inserting πόλιν after *Μυσίαν*. His conjecture makes perfect sense, but is probably superfluous. If this interpretation is on the right lines, Mysia was a nucleated settlement inhabited by the *Mysoi*, i.e. *Μυσός* is in this context a city-ethnic and not a regional ethnic. It was situated in the Mysian peninsula and near the river Kios. As a parallel one can adduce Ἡλῆς, both a city and a region, and Ἡλείος, both a city-ethnic and a regional ethnic (see *supra* 495). Alternatively, Mysia may have been situated north of Mt. Olympos; cf. Strabo 12.4.10: οἱ περὶ τὸν Ὀλυμπον *Μυσοί*, οὓς Ὀλυμπηνοὺς καλοῦσιν τινες, οἱ δ’ Ἐλλησποντίους compared with *Μυσός* Ἐλλησπόντιος in some ephebic lists from Pergamon (L. Robert (1962) 81). *Μυσῶν πόλις* in Soph. fr. 377, Nauck, is probably a reference to the whole of Mysia, undoubtedly in a mythological context, rather than to a specific *polis* inhabited by Mysians (Hansen (1998) 129, 131). It cannot be excluded that the *Mysoi* of the tribute lists is a city-ethnic denoting a *polis*. However, as the evidence stands, it is preferable to mention the *Mysoi* in the introduction rather than include them in the Inventory.

“Northern Mysia is still a Cinderella area hardly touched by archaeologists” (Mitchell (1985) 74), and “there is still little archaeological activity in north-western Turkey outside the Troad” (Mitchell (1999) 129). This explains why more

settlements recorded by written sources remain unlocated and why it is so difficult to attain certainty about many of the cities discussed below. It also explains why so few non-*polis* settlements of the Archaic and Classical periods are known. Almost all attested second-order settlements are Hellenistic or Roman. In the eastern part of the region the only one that reaches back beyond the Hellenistic period is Helikore, a predecessor of Nikaia, the city founded by Lysimachos. A few more second-order settlements are found in the westernmost part of the region in the territories of Parion and Lampsakos. The evidence is as follows.

1. Pre-Hellenistic Settlements not Attested as Poleis

Abarnis (*Ἀβαρνίς* or *Ἀβαρνός*) Hecat. fr. 220 (*Λαμφάκου ἄκρα*); Xen. *Hell.* 2.1.29 (*Λαμφάκου ἄκρα*) Ephor. fr. 46 named after a *polis* in the territory of Phokaia (cf. Hsch. A80). Steph. Byz. 4.4 (*πόλις καὶ χώρα <καὶ> ἄκρα τῆς Παριανῆς*). Ap. Rhod. *Argon.* 932 (*Ἀβαρνίδος ἡμαθέσσαν ἡύονα*). Tentatively located c.8 km. north of Lampsakos (no. 748), at Çardak Burnu (Leaf (1923) 93). *Barr. C.*

Adrasteia (*Ἀδράστεια*) The Homeric *Adrasteia* (*Il.* 2.828) is mentioned by Strabo 13.1.13 as a *polis* between Priapos and Parion (cf. Steph. Byz. 28.4; Eust. *Il.* 2 556.9ff, van der Valk). Plin. *HN* 5.141 notwithstanding, *Adrasteia* cannot be the former name of Parion (Olshausen (1970) 983). Leaf (1912) 184 suggested that Homer's *Adrasteia* was the plain on the lower Granikos and located the homonymous town at Örtülüçe, c.12 km south-east of Parion. *Barr. C.*

Helikore (*Ἑλικώρη* or *Ἀγκώρη*) Steph. Byz. 474.17–18 has *Νίκαϊα πόλις Βιθυνίας . . . ἐκαλεῖτο δὲ πρότερον Ἀγκώρη*. Probably following Arrian's *Bithyniaka*, the very late Byzantine *Notitia episcopatum* has *Νίκαϊα . . . ἐκαλεῖτο δὲ πρότερον Ἑλικώρη*. Merkelbach (1985) suggested reading *Ἑλικώρη* for MSS *Ἀγκώρη* in Steph. Byz. However, even accepting this emendation, the evidence is insufficient to assume the early existence of a *polis* called Helikore prior to its (re)foundation as Nikaia under Lysimachos, but Helikore may have been a village transformed into the *polis* Nikaia. *Barr. C.*

Hermaiton (*Ἑρμαῖον*) Mentioned as the frontier town between Parion and Lampsakos after the C51–C4m integration of Paisos into Lampsakos (Polyaen. 6.24), it has been located at Otlukdere, c.10 km south of Parion, and identified with *Hermoton* (Arr. *Anab.* 1.12.6) by Leaf (1923) 100–1;

contra Ruge (1942*b*) 2436; Frisch (1978) 105 n. 5, (1983) 49; Olshausen (1970) 983 rejects the historicity of this record. *Barr. C.*

Linon (*Λίνων* or *-ος*) Strabo 13.1.15 records Linon (or Linos) as a *χωρίον ἐπὶ θαλάττῃ* between Parion and Priapos. *Barr. H.*

Pitya (*Πίτυα*) Strabo 13.1.15: *Πίτυα δ' ἐστὶν ἐν Πιτυοῦντι τῆς Παριανῆς*, i.e. lying between Parion and Priapos. Ap. Rhod. *Argon.* 1.933. This Pitya may have been different from *Πιτύεια*, which, according to the Homeric tradition, would have been the earlier name of Lampsakos (Leaf (1912) 185–87, (1923) 87–88); R. Kiepert tentatively located it at Aksaz, in the middle of the gulf between Parion and Priapos (Philippson (1910) map 1; Frisch (1983) 51–52). Not in *Barr.*

II. The Poleis

735. Artaïou Teichos (Artaïoteichites) Map 52. Lat. 40.20, long. 28.30. Size of territory: ? Type: C: β. The toponym is *Ἀρταίου τεῖχος, τό* (*IG* I³ 71.III.114, 77.IV.4–5). According to Steph. Byz. 127.12, quoting Krateros, the city-ethnic is *Ἀρταιοτεῖχίτης* (cf. *IG* I³ 100. fr. 7 = Krateros (*FGrHist* 342) fr. 6). In spite of the text printed in *IG* I³ we have no guarantee that the city-ethnic stems from Krateros, and thus from the tribute lists. [*Ἀρταιοτε*] *ιχί(ται)* at *IG* I³ 283 II.10 lends some support to the ethnic reported by Stephanos, but is heavily restored.

Stephanos' note at 127.10–12 suggests the ephemeral existence of a *polis* in the region of the river Rhyndakos: *ἐστὶ καὶ Ἀρταίου τεῖχος πολίχμιον ἐπὶ τῷ Ῥυνδάκῳ ποταμῷ, ὡς Κράτερος ἐνάτω περὶ ψηφισμάτων. τὸ ἐθνικὸν Ἀρταιοτεῖχίτης*. The name shows that Artaïou Teichos was a fortified settlement, and its attestation in an Athenian assessment decree and, possibly, tribute lists shows that it was a political community. Stephanos' classification of the community as a *polichmion* carries no weight; but Artaïou Teichos may have been a small *polis* as indicated by the assessment of 1,000 dr. in 422/1 (*IG* I³ 77.IV.4–5). The name is obviously of Persian origin, since the Persians called themselves *Ἀρταίοι* (Hdt. 7.61.2; cf. 7.22.2 and 66.2). Hirschfeld (1895*a*) cautiously identified Artaïou Teichos with Ariace, inserted at Plin. *HN* 5.142 between Plakia (no. 757) and Skylake (no. 761), but Ariace is more likely to be identified with Artake (no. 736). A preferable location on the lower Rhyndakos is suggested by *ATL* i. 471.

736. Artake (Artakenos) Map 52. Lat. 40.25, long. 27.50. Size of territory: 1 or 2. Type: A. The toponym is Ἄρτάκη, ἡ (Hdt. 4.14.2, 6.33.2; Ps.-Skylax 94). The city-ethnic is Ἄρτακηνός (IG I³ 261.1.14) or Ἄρτακεύς (Soph. fr. 917, Radt; cf. Steph. Byz. 127.19). Artake is called a *polis* in the urban sense at Hdt. 4.14.2, and in Ps.-Skylax 94 Artake is one of the toponyms listed after the heading πόλεις Ἑλληνίδες αἰδε. For the collective and external use of the city-ethnic, see IG I³ 261.1.14.

Artake was located on the island of Kyzikos facing Priapos (no. 758) (Strabo 13.1.4), near Kyzikos (no. 747) (Hdt. 4.14.2) and the *isthmus* (Ps.-Skylax 94), and has been identified with modern (Turkish) Erdek c.7–8 km west of Kyzikos. The modern toponym derives from Greek *Artaki* (Hirschfeld (1895b) 1304). For descriptions of the site, see Texier (1862) 164–65; Philippon (1910) 52–53; and L. Robert (1955) 131–33, using Radet's survey from 1887. Of the few archaeological remains, the most important is an Archaic *kouros* (Laubscher (1963–64) 73ff).

Artake was colonised by Miletos (no. 854) (Anaximenes of Lampsakos (FGrHist 72) fr. 26; cf. Steph. Byz. 127.13; schol. Ap. Rhod. 1.955). Artake took part in the Ionian Revolt and was burnt by the Persians in 493 (Hdt. 6.33.2). Later it joined the Delian League. It belonged to the Hellespontine district and is recorded from 454/3 (IG I³ 259.vi.8) to 418/17 (IG I³ 287.ii.11) a total of sixteen times, twice completely restored, paying a tribute of 2,000 dr. (IG I³ 261.1.14), raised to 4,000 dr. in 418/17 (IG I³ 287.ii.11). It was assessed for tribute in 425/4 (IG I³ 71.iii.82). Coinage is not attested, which may suggest a rather early incorporation of Artake into Kyzikos, perhaps simultaneously with Prokonnesos (no. 759), i.e. in C4 (Ehrhardt (1988) 38 with n. 244). Strabo 13.1.4 speaks only of a mountain, an island and, in another context, a *chorion*, while Plin. HN 5.141 mentions the harbour and writes that the city had disappeared: *Artace portus ubi oppidum fuit*; but cf. HN 5.151: *Artacaen cum oppido*. The toponym does not occur in Pomponius Mela.

737. Astakos (Astakenos) Map 52. Lat. 40.45, long. 29.55. Size of territory: ? Type: B:a. The toponym is Ἄστακός, ἡ (Strabo 12.4.2) or, once, Ὀστακος, ἡ (Charon of Lampsakos (FGrHist 262) fr. 6). The city-ethnic is Ἄστακηνός, attested in the Athenian tribute lists in its collective and external use (IG I³ 259.iii.27). Astakos is not attested as a *polis* in sources of the Archaic and Classical periods, but deserves inclusion as a *polis* type B since (1) it had a mint (*infra*); (2) it was a member of the Delian League (*infra*); and (3) it is retrospectively classified as a *polis* in later sources (Diod. 19.60.3 (r315); Polyae. 2.30.3 (r363–352)).

The ancient site must have been somewhere on the south coast of the Gulf of İzmit called κόλπος Ἄστακηνός (Strabo 10.2.21, 12.4.2; Steph. Byz. 238.17) or κόλπος Ὀλβιανός (Ps.-Skylax 92; Pompon. 1.100). Astakos may have been situated near modern Yuvacık (Ruge (1896) 1774), but a location closer to the sea, at “Baş İskele, dans la zone du port militaire de Gölcük”, seems more likely, since this site produced some Archaic (?) and Classical pottery (BE (1974) 574 summarising Şahin (1974) 66–83). The territory of Astakos is described by Polyae. 2.30.3 as a marshy χώρα inhabited by Ἰσθακες (perhaps Bithynian “helots”: Burstein (1976) 130 n. 64). A πολίχμιον Μεγαρικόν (Arr. (FGrHist 156) fr. 18 = Plin. HN 5.148: *Megarice oppidum*) tentatively located by R. Kiepert at Cape Çatal Burun (Ruge (1931)) clearly indicates colonisation by Megara (no. 225).

According to Charon of Lampsakos (FGrHist 262 fr. 6), Astakos was founded by the Kalchedonians (no. 743). But other sources mention Megara (no. 225) as the *metropolis* (Strabo 12.4.2; Pompon. 1.100; Memnon (FGrHist 434) fr. 12 (20), whose source was Nymphis of Herakleia (C4–C3); cf. Toepffer (1896) 126). Both Memnon and Strabo mention the later Athenian colony (*infra*) and local Bithynian settlers as well. Combining the sources, we may infer that Astakos was founded by Kalchedonians (Merkelbach (1980) 91) but possibly reinforced by Megarians, since a πολίχμιον Μεγαρικόν is attested in the territory of Astakos (Hanell (1934) 120; Loukopoulou (1989) 51, 53). The foundation year of 712/11, given by Memnon ((FGrHist 434) fr. 12 (20)) and by Euseb. Chron. 91, Helm, is too early, since Kalchedon itself was founded about 685. Scholars generally assume a date in C7 (Hanell (1934) 120; Merkelbach (1980) 91). According to Memnon, the oecist was Astakos, a descendant of the Spartans from Thebes, while for Arrian (FGrHist 156 fr. 26) Astakos was son of Poseidon and the nymph Olbia (cf. Asheri (1978)).

Astakos was a member of the Delian League. It is recorded from 454/3 (IG I³ 259.iii.27) to 444/3 (IG I³ 268.i.33, almost completely restored) a total of five times, paying a tribute of 3,000 dr. in 454/3–453/2 (IG I³ 259.iii.27, 260.viii.18), reduced to 1,000 dr. in 450/49 (IG I³ 263.iv.16). It is absent from the full panel of 442/1 (IG I³ 270.i.35–ii.30). Accepting Niese's attractive emendation of Diod. 12.3.5 (Ἄστακόν for MSS Λέτανον), we can infer that the Athenians in 435/4 placed a colony at Astakos (Meiggs (1972) 198; Schuller (1974) 30–31, 155; cf. Strabo 12.4.2 and Memnon (FGrHist 434) fr. 12 (20)). Astakos was unsuccessfully besieged c.363–352 by Klearchos, the tyrant of Herakleia Pontike (no. 715) (Polyae. 2.30.3; cf. Burstein (1976) 55–56), and in 315 by

Zipoites (Diod. 19.60.3). Both references to sieges show that the city was fortified. In 281, however, Astakos was destroyed and replaced by Nikomedia, settled *inter alios* with the inhabitants of Astakos (Strabo 12.4.2; Paus. 5.12.7).

Astakos struck silver coins in C5 on the Persian standard. Denominations: drachms and smaller fractions. Types: *obv.* lobster or crayfish, i.e. an *ἄστακός*, a pun on the toponym; *rev.* female head, first of Archaic style (c.500–435), later of Classical style (c.435–400), incuse square, swastika; legend: ΑΣ (Head, *HN*² 510).

Brylleion (Brylleanos) See no. 752: **Myrleia** (Myrleanos).

738. Bysbikos (Bysbikenos) Map 52. Lat. 40.35, long. 28.30. Size of territory: 1 (10 km²). Type: [A]:? The toponym is *Βύσβικος* (*IG* 1³ 278.vi.34) or *Βέσβικος* (Ps.-Skylax 94; Agathokles (*FGrHist* 472) fr. 2 (in both cases explicitly denoting the island)). The city-ethnic is *Βυσβικενός* (*IG* 1³ 287.ii.13: [*Βυσβ*]ικενοί).

Bysbikos was a member of the Delian League. It belonged to the Hellespontine district and is recorded from 434/3 (*IG* 1³ 278.vi.34) to 418/17 (*IG* 1³ 287.ii.13) a total of four times, once completely restored. The tribute list for the year 434/3 records Bysbikos under the heading *πόλεις ἡδὲ οἱ ἰδιόται ἐνέγραψαν φόρον φέρειν* (where *polis* is used in the political sense) with a tribute of 3,000 dr. (*IG* 1³ 278.vi.34); thereafter the city is listed as having been assessed by the *boule* and a *dikasterion* in 430/29 (restored in *IG* 1³ 281.iii.65) and in 429/8 (*IG* 1³ 282.ii.48). It was assessed for tribute in 425/4 (*IG* 1³ 71.iii.80).

The Bysbikenians inhabited the island of *Βέσβικος* situated in the Sea of Marmara outside the mouth of the river Rhyndakos (Ps.-Skylax 94; Plin. *HN* 5.151: circumference 18 Roman miles) and probably to be identified with modern İmralı Adası (Hasluck (1910) 53–55), which, however, has a circumference of no more than 13 Roman miles. For a different identification, see the garbled passage at Strabo 12.8.11 and Amm. Marc. 22.8.6. If we can trust some of Strabo's garbled account, Besbikos was a dependency of Kyzikos (no. 747), a piece of information which may be linked to the tradition that Kore (whose worship is attested in Kyzikos by coins from C4 onwards) played an important role in the battle of the Giants (cf. L. Robert (1987) 166).

Quoting Agathokles of Kyzikos ((*FGrHist* 472) fr. 2 (C3)), Steph. Byz. 165.10–166.5 says that the island originally was a stone thrown by the Giant Besbikos and transformed into an island by his opponent, the goddess Kore. Agathokles also reports what must be a rival foundation myth according to which Besbikos was a Pelasgian (Tümpel (1897)).

So far no remains of an ancient town have been found on the island, but its classification by Agathokles as a *κτίσιμα* indicates some kind of nucleated settlement.

739. Dar(i)eion Map 52. Unlocated, not in *Barr.* Type: B:? The toponym is *Δαρείον* (*IG* 1³ 71.iii.109) or *Δαρίειον* (Steph. Byz. 291.11). In the assessment decree of 425/4, among the Hellespontine members is recorded a *Δαρείον παρὰ τὸν Μυσίαν*. The tribute is assessed at 400 dr. minimum. The only other source is Steph. Byz., who describes Darieion as a *πόλις τῆς Φρυγίας* without quoting any source (Bürchner (1901); *ATL* i. 479).

740. Daskyleion (Daskyleianos) Map 52. Lat. 40.25, long. 28.40. Size of territory: ? Type: B:a. The toponym is *Δασκύλειον* (*IG* 1³ 278.iv.7–8). The city-ethnic is *Δασκυλειανός* (*IG* 1³ 278.iv.9). The only author to call Daskyleion a *polis* is Strabo at 12.8.10, but the reference is to his own time.

Among the five homonymous sites recorded by Steph. Byz. s.v. Daskyleion (220.9–17), two have sometimes been confused by ancient sources (e.g. Strabo 12.8.10) and modern authors (e.g. Ruge (1901)): . . . *τετάρτη* [*sc. πόλει*] *περὶ Βιθυνίαν* [i.e. the *polis* Daskyleion]. *πέμπτη τῆς Αἰολίδος καὶ Φρυγίας* [i.e. the seat of the Persian satrapy]. Recent excavations (reported in Mitchell (1990) 89 and (1999) 130) have finally confirmed the identification of the satrap's residence with the mound called Hisartepe near Ergili, on the south-western shore of the Manyas Gölü, consequently to be identified with the *Δασκυλῆτις λίμνη* recorded by Strabo 12.8.10, 11 (Akurgal (1976a) 259 and map 5). Preserving its ancient name in Byzantine sources, ancient Greek Daskyleion was easily identified with modern (Turkish) Eskel Limanı, on a peninsula jutting into the Sea of Marmara. This was presumably the harbour, while the main site has been found in the area of the village Esence (former Eskel or Eskel köy) lying c.2 km inland (Corsten (1988) 54–57 with figs. 1–3). The site was not excavated, but the field surveys yielded ceramics of C4 as the earliest material (Bittel (1953) 6), and some late inscriptions have been found by chance (Corsten (1988) 72–77 nos. 1–6, (1990) 43–46 nos. 7–10).

In spite of the lack of positive evidence, one may suppose that Daskyleion was colonised by Miletos (no. 854). According to Nikolaos of Damaskos (*FGrHist* 90) fr. 63, a certain Miletos, probably a Milesian, was married into the Lydian royal family but went into exile and came first to Daskyleion, later to Prokonnesos. If we can trust these late sources, Daskyleion was a Milesian foundation (Ehrhardt (1988) 47; Corsten (1988) 63–64).

Daskyleion was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.vi.16–17) to, possibly, 429/8 (*IG* I³ 282.iii.37) a total of seven times, twice completely restored, paying in all years a *phoros* of 500 dr. (*IG* I³ 281.iii.23). It is absent from the full panel of 442/1 (*IG* I³ 270.i.35–ii.30) but was assessed for tribute in 425/4 (*IG* I³ 71.iii.75).

741. *Didymon Teichos (Didymoteichites) Map 52. Lat. 40.15, long. 27.15. Size of territory: ? Type: B:? The toponym *Δίδυμον τεῖχος* is reconstructed from the ethnic *Διδυμοτειχῖται*, recorded in the Athenian tribute lists next to the *Δαυνοτειχῖται* in the years from 443/2 (*IG* I³ 269.ii.3–4) to 418/17 (*IG* I³ 287.ii.19–20). Taking the juxtaposition of the two *teiche* to indicate geographical proximity, *ATL* i. 481–82 located Didymon Teichos next to Daunoteichos on the northern coast of the Propontis. But following L. Robert (1937) 195, *Barr.* identifies *Δίδυμον τεῖχος* with the *Δίδυμα τεῖχη* mentioned at Polyb. 5.77.8 and located at Dimetoka on the river Granikos; see also Isaac (1986) 204 and Sayar (1998).

Didymon Teichos was a member of the Delian League. It belonged to the Hellespontine district and is recorded from 454/3 (*IG* I³ 259.iv.17–18) to 418/17 (*IG* I³ 287.ii.19) a total of sixteen times; down to 430/29 it paid a *phoros* of 1,000 dr. (*IG* I³ 278.iii.22), but in 420/19 a higher sum, probably 2 tal. (*IG* I³ 287.ii.19). It was assessed for tribute in 425/4 (*IG* I³ 71.iii.95).

742. Harpagion (Harpagianos) Map 52. Lat. 40.20, long. 27.25. Size of territory: ? Type: B:α? The toponym is *Ἄρπάγιον* (Thuc. 8.107.1). The city-ethnic is *Ἄρπάγιος* (*IG* I³ 267.i.23) or *Ἄρπαγιανός* (*IG* I³ 270.ii.4).

According to Strabo 13.1.11, Harpagion (τὰ Ἄρπάγια) was situated between Kyzikos (no. 747) and Priapos (no. 758). It has not been convincingly located (Olshausen (1974) 483), but a position near the mouth of the river Granikos was suggested in *ATL* i. 470.

Harpagion was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 448/7 (*IG* I³ 264.iii.37) to 429/8 (*IG* I³ 282.iii.36) a total of fourteen times, twice completely restored, paying in all years a *phoros* of 300 dr. (*IG* I³ 264.iii.37). It was perhaps assessed for tribute in 425/4 (*IG* I³ 71.iii.68, completely restored). Harpagion is not mentioned in later historical sources, and one may assume that it was incorporated, possibly in C4l, into either Priapos (no. 758) or Kyzikos (no. 747). In C4, before the incorporation,

Harpagion struck bronze coins. Types: *obv.* nymph, head turreted; *rev.* fish, below corn-ear; legend: *ΑΡΠΑΓΙ* (Fritze (1913) 14 no. 597).

743. Kalchedon (Kalchedonios) Map 52. Lat. 41.00, long. 29.00. Size of territory: 5. Type: A:α. The toponym is *Καλχηδών*, ἡ (Thuc. 4.75.2; Xen. *Hell.* 1.3.4; *I.Histriae* I 5 (C3)) or in Doric *Καλχαδών*, ἡ (*SEG* 28 1661 (C3); *I.Kalchedon* 33.9 (undated)) or *Χαλκηδών*, ἡ (Ps.-Skylax 92; Dem. 15.26; Diod. 13.66.1; *I.Kalchedon* 22.8 (fifth century AD)). The city-ethnic is *Καλχηδόνιος* (*IG* I³ 285.ii.83; Hdt. 4.144.1) or in Doric *Καλχαδόνιος* (coins, *infra*; *IG* II² 8949 (C4s); *SEG* 31 1062 (undated)) or *Χαλκηδόνιος* (Aen. *Tact.* 12.3; Arist. *Pol.* 1266^a39) or *Χαλχηδόνιος* (*IG* I³ 263.v.17; *I.Kalchedon* 101.1 (Imperial)). Kalchedon is attested as a *polis* both in the urban sense (Xen. *Hell.* 1.3.5–6; Ps.-Skylax 92; Arist. *Oec.* 1347^b20) and in the political sense (Xen. *Hell.* 4.8.31; Aen. *Tact.* 12.2, 4; Arist. *Oec.* 1347^b20, 23, 29; *Orat.* Adespotia fr. 8, Sauppe). The collective use of the city-ethnic is attested internally in abbreviated form on C4 coins (*infra*) and externally in e.g. *IG* I³ 263.v.17 and 285.ii.83. The individual and external use is attested by Plato's mention of *Θρασύμαχος ὁ Καλχηδόνιος* (*Resp.* 328B) and Aristotle's of *Φαλέας ὁ Χαλκηδόνιος* (*Pol.* 1266^a39). The territory of Kalchedon (*χώρα*: Hdt. 6.33.2) is called *Καλχηδονία* (Hdt. 4.85.1; Xen. *Hell.* 1.1.22, *An.* 6.6.38). *Patris* is found in Thrasymachos T8, DK.

According to Euseb. *Chron.* 93b, Helm, Kalchedon was founded in 685. Hdt. 4.144.1 reports that the city was founded seventeen years before Byzantion (no. 674) and that the colonisers were said to have been “blind” because they had not realised the advantages of the European shore of the Bosphoros (the later Byzantion); cf. *Caecorum oppidum* (Plin. *HN* 5.149). All sources agree that Megara (no. 225) was the *metropolis* (Thuc. 4.75.2). Pompon. 1.101 calls the oecist (*auctor*) Archias *Megarensium princeps*. The city's history is blank down to C6l. In 514/13 Dareios crossed the Bosphoros at Kalchedon (Hdt. 4.85.1, 87.2), but when the king returned to Asia after the failed Scythian expedition, he destroyed the city because the Kalchedonians allegedly had intended to demolish the bridge (Ktesias (*FGrHist* 688) fr. 13.21; Polyae. 7.11.5, see Merle (1916) 11; Merkelbach (1980) 92, 120; Loukopoulou (1989) 88–89). The main source for these events (Hdt. 4.143.1) indicates the Hellespont for Dareios' retreat, but Loukopoulou argues that Dareios first punished Kalchedon and then for security reasons chose the Hellespontine route. Some years later Kalchedon was taken by the satrap Otanes (Hdt. 5.26). The regime established by

the Persians may have induced the Kalchedonians to join the Ionian Revolt. This is only suggested by Hdt. 5.103.2 (*Βυζάντιόν τε καὶ τὰς ἄλλας πόλεις πάσας τὰς ταύτην*), but Kalchedonian participation in the Revolt is securely established by the fact that in 493 some of the Kalchedonians fled to Mesambria on the Pontos Euxeinos when the city was attacked by a Persian–Phoenician fleet (see Mesambria (no. 687) and *infra*). Pausanias' conquest of Byzantion in 478 (Thuc. 1.94.2) probably marks the end of Persian supremacy over Kalchedon (Merkelbach (1980) 92).

At an unknown date Kalchedon joined the Delian League. It belonged to the Hellespontine district and is recorded from 453/2 (*IG* 1³ 260.vii.12) to 418/17 (*IG* 1³ 287.ii.16) a total of nineteen times, once completely restored, paying a *phoros* of 7½ tal. (452/1), 3 tal. (450/49), 9 tal. (448–438) and 6 tal. (434–429). It was perhaps assessed for tribute in 425/4 (*IG* 1³ 71.iii.61, completely restored). Kalchedon fought with Athens in 424 (Thuc. 4.75.2), but in 412 or 411 it was occupied by a Spartan garrison under a *harmostes* (Plut. *Alc.* 29.6; Diod. 13.66.2). Except for a short break in 409 (Xen. *Hell.* 1.3.1–12) Kalchedon remained under Spartan occupation (Xen. *Hell.* 2.2.1 (r405)) until 389, when Thrasyboulos restored Athenian control (Xen. *Hell.* 4.8.27–28). In 387 it was conquered once again by Sparta (no. 345) (Xen. *Hell.* 5.1.25; Polyæn. 2.24). By the King's Peace of 387/6 Kalchedon fell to Persia, and in 357 it was conquered by Byzantion (Dem. 15.26; Theopomp. fr. 62). In 362 Kalchedon, Byzantion and Kyzikos (no. 747) had been allied with Thebes (no. 221) and captured Athenian merchantmen (Dem. 50.6, 17; cf. Arist. *Oec.* 1347^b20–30). However, a crown dedicated to Athena in Athens by the Kalchedonian state indicates friendly relations with Athens in 354/3 (*IG* 11² 1437.16). At an unknown date in C4f, perhaps the 360s, Kalchedon was besieged and assisted by a contingent of Kyzikene soldiers (Aen. *Tact.* 12.3; cf. *P Oxy.* 303) and so was probably allied to Kyzikos. In C4l Kalchedon joined the *κοινὸν τῶν Ἰλιέων* (L. Robert (1966) 31, 39).

The only thing we know about the type of constitution is that, as a result of the conquest of Kalchedon by Byzantion in 357, a moderate form of constitution was changed into a radical democracy (Theopomp. fr. 62). Civic subdivisions are attested in Hellenistic sources only (especially *I.Kalchedon* 6 and 7), but since they are of Megarian origin, they may go back to the foundation of Kalchedon in C7e. The citizen body was subdivided into, probably, hundreds (*ἑκατοστῦες*; cf. Jones, *POAG* 283–84; Loukopoulou (1989) 141–42). The names of several of the hundreds are attested as sub-ethnics in Hellenistic dedications, e.g. *Βύριχος*

Αἰσχηΐδα Ἰππωνήας (*I.Kalchedon* 7.11). The presence of metics is attested in Arist. *Oec.* 1347^b20–30.

Some of the known officials are common for all (or some) Megarian foundations; consequently the Hellenistic sources can be interpreted retrospectively. This applies to the eponymous magistrate, called *basileus* (*I.Kalchedon* 7.1, 8.1). A *hieromnamon* (*I.Kalchedon* 4.5, 7, 42) is not attested at Megara (no. 225); at Byzantion he was the eponymous magistrate; while at Kalchedon he clearly accompanied the *basileus* (Hanell (1934) 151) and indicates a Kalchedonian origin for the Byzantine *hieromnamon* (Loukopoulou (1989) 145–46). Also of Megarian origin were the *aisymnatai*. Like the Athenian *prytaneis*, they were perhaps members of the Council (*I.Kalchedon* 10.10) selected by lot every month (*I.Kalchedon* 6.1–2). One of them seems to have been the *ἀγεμῶν βουλᾶς* (*I.Kalchedon* 7.8; see Hanell (1934) 150; Loukopoulou (1989) 145). The council itself (*βουλά*), as well as the assembly (*δᾶμος*), is attested in *I.Kalchedon* 1 (C2e) and 10 (C3–C2). A board of *strategoí* (*I.Kalchedon* 1.73–74) may also go back to the Archaic and Classical periods. Since Kalchedon was a Megarian colony, a number of attested civic subdivisions may be evidence of *hekatostyes* (*I.Kalchedon* 6 and 7; see *supra*). Citizens of Kalchedon were granted *proxenia* by Karthaia (no. 492) (*IG* xii.5 542.10 (C4m)) and Pantikapaion (no. 705) (*IOSPE* II 2 = *CIRB* 2 (C4s)).

Kalchedon is located on the promontory Kadıköy, on the Asiatic shore of modern Istanbul. The ancient topography is imperfectly known (see a plan at Merkelbach (1980) 143). However, mediaeval testimonies attest remains of a harbour between Kadıköy and Haidar Paşa (Ruge (1919a) 1558); a cemetery has been identified (Asgari and Firatlı (1978)); and some inscriptions and architectural or sculptural remains have been found by chance or through minor excavations (see also Müller-Wiener (1977)). City walls are explicitly mentioned by Polyæn. 7.11.5 (r513) and can be inferred from the numerous sieges of Kalchedon (Xen. *Hell.* 1.3.4 (409); Polyæn. 2.24 (r387); Aen. *Tact.* 12.3 (360s?); Diod. 19.60.3 (r315)). Evidence for public architecture is late, and the lack of excavations does not allow a closer examination of the literary and epigraphic testimonies. The town had two harbours, one on each side of the peninsula (Dionysios of Byzantion 111 p. 33, Güngerich), but the most important seems to have been the unlocated *Φρίξου λιμῆν* (Diod. 18.72.4 (r318); Dionysios of Byzantion 99 p. 31, Güngerich; Steph. Byz. 672.15, quoting Nymphis of Herakleia (C4–C3)). Oberhummer (1897) 753 suggests that the Phrixos harbour was located at Kanlıçe at the far end of the Bosphoros.

The most important and best-attested settlement in the territory of Kalchedon is Chrysopolis, located at Üsküdar (former Skutari) (Xen. *Hell.* 1.1.22, 1.3.12, *An.* 6.6.38; Diod. 14.31.4 (r400); *P Oxy.* 303). In 410/9 it was fortified by Alkibiades (Xen. *Hell.* 1.1.22; cf. Diod. 13.64.2–3). Another settlement (ἑμποικία) called Ἀμυκος is mentioned in schol. Ap. Rhod. 2.159b, quoting Androitias of Tenedos (C4–C3).

Of sanctuaries in Chalkedon's territory, the most famous was the *hieron* (Dem. 20.36, 35.10, 50.17 and 58; Ps.-Skylax 67 and 92) at the Euxine end of the Bosphoros (located at Anadolu Kavaği-Yenimahalle). According to the tradition, Jason sacrificed here when he returned from Kolchis (Pind. *Pyth.* 4.203–7; Polyb. 4.39.6) and various testimonies record a sanctuary of Ζεὺς Οὐρίος (Arr. *Peripl. M. Eux.* 12, 25) and the Twelve Gods (Polyb. 4.39.6, 50.2) with an altar *Syll.*³ 1010 = (*I.Kalchedon* 13 (C3)). Diod. 20.111.3 (r302) shows that the sanctuary belonged to Kalchedon, though it was repeatedly claimed (and sometimes also occupied) by Byzantion (no. 674) (Polyb. 4.50.2–3). An extra-urban sanctuary of Herakles remains unlocated (Xen. *Hell.* 1.3.7 (r409)). His priest is attested at *Syll.*³ 1011 = *I.Kalchedon* 10.4 and 11 (C3–C2). There is no early evidence for the sanctuary of Artemis (Ptol. *Geog.* 5.2) located more likely at Phrixos (Hanell (1934) 184; Avram (1998–2000)) than at Chrysopolis (Merkelbach (1980) 131).

As in the *metropolis* Megara (no. 225), the patron deity of Kalchedon was Apollo Pythios or Chresterios (*I.Kalchedon* 5.5), whose priest (προφήτας) is mentioned in inscriptions side by side with the highest city officials: the *basileus* and the *hieromnamon* (*I.Kalchedon* 7.3). His sanctuary was the oldest in the city (Luc. *Pseudomantis* 10; Dionysios of Byzantion 111 p. 35, Güngerich; see also *SEG* 4 720) and was declared ἄσυλος by Delphi (*Syll.*³ 550 (C21)). An attempt to reconstruct the local calendar, based on comparison with the other Megarian colonies, is proposed by Avram (1999) 30.

The first silver coins of Kalchedon were minted c.387/6–340 on the Rhodian standard. Types: *obv.* bearded head l.; *rev.* wheel in which ΚΑΛΧ (drachms); *obv.* young head l.; *rev.* wheel in which ΚΑΛΧ (hemidrachms); *obv.* bull on corn-ear l., above ΚΑΛΧ; *rev.* quadripartite stippled incuse square (tetradrachms and drachms); *obv.* bull forepart on corn-ear l., above ΚΑ; *rev.* three corn-ears (hemidrachms) (Price (1993) pl. IV 84–111; *SNG Cop. Bosphorus-Bithynia* 346–56). These issues are followed c.340–320 by the coinage on the Persian standard. Denominations: *sigloi*, fifths and tenths. Types: *obv.* bull l. on corn-ear, above ΚΑΛΧ, sometimes ΚΑ; *rev.* quadripartite mill-sail incuse square (Price (1993) pl. V 112–26). For the

chronology, see Le Rider (1963) 44–50. The close relationship to Byzantion is illustrated by the fact that the types of these series are quite similar to Byzantine types; they “differ only in one respect, viz. that the bull on the money of Byzantium stands upon a dolphin, while at Calchedon he stands upon an ear of corn” (Head, *HN*² 512). The *sympoliteia* with Byzantion of 357 is attested in the C3–C2 bronze coins with the legend ΒΥΖΑΝ ΚΑΛΧΑΔΩ (Schönert-Geiss (1970) 78–80 nos. 1252–1301 pl. 59–62; Price (1993) pl. IV 80; *SNG Cop. Thrace* 531).

Kalchedon was involved in three colonial foundations, but only one of them can be considered a purely Kalchedonian colony, viz. (1) Astakos (no. 737), founded in C7 according to Charon of Lampsakos (*FGrHist* 262) fr. 6. (2) Kalchedonian participation in the foundation of Byzantion (no. 674) is indicated by Hesychios of Miletos (*FGrHist* 390) fr. 20–23; cf. Hanell (1934) 123–28) and by the existence of the office of *hieromnamon* both at Kalchedon and Byzantion compared with its absence at Megara (no. 225) (Loukopoulou (1989) 146). Nevertheless, the idea of a direct foundation of Byzantion by Kalchedon (Loukopoulou (1989) 52, 146) remains a hypothesis. (3) Jointly with Megara (no. 225), Kalchedon founded Mesambria in C61, at the time of Dareios' campaign against the Scythians (Ps.-Skymnos 739–42; cf. Anon. *Peripl. M. Eux.* 83–84, Diller), and in 493 the colonists were reinforced by refugees from Byzantion and Kalchedon (Hdt. 6.33); see Mesambria (no. 687) and Avram (1996) 290–92.

744. Kallipolis (Kallipolites) Map 52. Unlocated, not in *Barr.* Type: A:a. The toponym is Καλλιπόλις (Ps.-Skylax 93). Kallipolis is classified as a *polis* in the urban sense at Ps.-Skylax 93; Καλλιπόλις καὶ λιμῆν, with πόλις understood before καί (Flensted-Jensen and Hansen (1996) 142) and listed under the heading πόλεις Ἑλληνίδες αἴδε. The political sense is attested in the Athenian tribute lists, where the Kallipolitai are recorded under the heading πόλις (*IG*¹³ 278.vi.5–6, 12, though see *infra*). The settlement was presumably situated between Astakos (no. 737) and Kios (no. 745), but the exact location is not known (Ruge (1919b)). The scarce evidence suggests that at an early date it was integrated into one of the neighbouring cities. In Ps.-Skylax 93 this Kallipolis is situated in Mysia and is accordingly different from (a) the Kallipolis situated on the Chersonese north of Sestos (no. 672) (Ptol. *Geog.* 3.11.9) and opposite Lampsakos (no. 748) (Strabo 13.1.18); (b) the Kallipolis situated on the Thracian side of the Bosphoros at the so-called Anaplous (Steph. Byz. 349.16). All three cities were located in the

Hellespontine district of the Delian League. In the assessment decree of 425/4 and in some of the tribute lists is recorded a community called *Καλλιπολίται*. As the evidence stands, it is impossible to decide with which of the three cities the following information should be connected.

Kallipolitai are attested in the tribute lists from 434/3 (*IG* 1³ 278.vi.12) to, possibly, 418/17 (*IG* 1³ 287.ii.29: *Κ[αλλιπολίται]*) a total of six times, twice completely restored, paying in all years a *phoros* of 1,000 dr. (*IG* 1³ 279.ii.87). In the years from 434/3 to 431/30 Kallipolis is listed under the heading *πόλες ἀπ'αὐτῶν φόρον ταχσάμεναι* (*IG* 1³ 278.vi.5–6 and 12, 279.ii.76–77, 87, 280.ii.68–70, restored). In 430/29 and 429/8 it is recorded as having been assessed by the *taktai* (*IG* 1³ 280.ii.74, 281.iii.54–55, 56, 282.ii.34–36, 37). In the assessment decree of 425/4 (*IG* 1³ 71.iii.96) and possibly in the list of 418/17 (*IG* 1³ 287.ii.29) Kallipolis is listed among the Hellespontine members.

745. Kios (Kianos) Map 52. Lat. 40.25, long. 29.10. Size of territory: 4. Type: A:a. From the foundation of the city until its destruction in 202 the toponym is *Κίος*, ἡ (*Hdt.* 5.122.1; *Hell. Oxy.* 25.3; *SEG* 23 189 ii.14 (C4s)). The city-ethnic is *Κιανός* (*I.Kios* 2.5 (C4m) = *Tod* 149). Kios is called a *polis* both in the political sense (*I.Kios* 1–2 (C4); tentatively restored in *SEG* 45 208.5 (C4l)) and in the urban sense (*Ps.-Skylax* 93, where *Κίος πόλις* is listed under the heading *πόλεις Ἑλληνίδες αἰθε*). The collective and internal use of the city-ethnic is attested in an honorific decree of C4m (*I.Kios* 2.5) and on C4 coins (*infra*). The external use is found in the Athenian tribute lists (*IG* 1³ 259.vi.7). For the individual and external use, see the C4 Athenian tombstone set over two men and four women from Kios (*Agora* xvii 519).

Kios is located at modern (Turkish) Gemlik, where, in 1835, Texier could see remains of ancient walls and scattered architectural fragments (Texier (1862) 113). Its territory was presumably bordered towards the north by the mountains Karlı-Dağı, towards the east by the Askanian lake (İznik Gölü), towards the south-east by Mt. Kurban-Dağı, perhaps halfway between Kios and Prusa, in the area of the villages of Dürdane, Selçukgazi and Seçköy, and towards the south by the territory of Myrleia (no. 752) (= the later Apameia), in the region between the villages Kurşunlu (belonging to Apameia) and Tuzlaçiftliği (Corsten (1985) 9–10). Pythopolis (no. 760), in C4 a Kian *kome* near the Askanian lake 120 stades from Kios (*Arist. Mir. ausc.* 834^b34), has been identified with modern Sölöz, on the south shore of the İznik Gölü (Corsten (1987) 148–49) and thus indicates the limit of the Kian territory in this direction.

According to Euseb. *Chron.* 97b, Helm, Kios was founded in 626/5. A Milesian origin is invoked as a reason for the *isopoliteia* between Miletos (no. 854) and Kios *c.*228 (*Milet.* 1.3 141.6–7; cf. *Plin. HN* 5.144), and foundation by Miletos is further indicated by a *phiale* which the Kians dedicated to Apollo of Didyma in 276/5 (*infra*). Also, the two attested months—*Ἀνθεστηριών* (*I.Kios* 1.1) and *Αθηναίων* (*I.Kios* 27)—suggest a Milesian origin (Samuel (1972) 117). According to Aristotle (*Arist. fr.* 519.1–2), first a Mysian and then a Karian colony preceded the Milesian foundation of Kios. Aristotle mentions the hero Kios as the oecist of the Milesian foundation, and this tradition can be traced back to an Attic documentary relief (*IG* 1³ 124; Lawton (1995) no. 9) dated 406/5 and representing a man called *ΚΙΟΣ* shaking hands with the helmeted Athena (Ehrhardt (1995) 31–33). According to a different tradition, Kios was founded by the Argonaut Polyphemos with Herakles' approval. This version of the foundation myth is known from *Ap. Rhod.* 1.1321ff, 1345–57 and 4.1467ff, but its earlier origin is attested by *schol. Ap. Rhod.* 4.1470, which quotes the C4 historian Nymphodoros of Syracuse (*FGrHist* 572) *fr.* 16 *bis, ter*). Nothing is known about the city's early history. Kios was under Persian domination from 547/6 onwards. It took part in the Ionian Revolt and was conquered by Hymaies in 497 (*Hdt.* 5.122.1).

At an unknown date Kios joined the Delian League. It belonged to the Hellespontine district and is recorded from 454/3 (*IG* 1³ 259.vi.7) to 418/17 (*IG* 1³ 287.ii.12) a total of twelve times, twice completely restored, paying a *phoros* of 1,000 dr. (*IG* 1³ 265.ii.48). It was assessed for tribute in 425/4 (*IG* 1³ 71.iii.89, heavily restored). Before 408 (*Xen. Hell.* 1.4.7) Kios came under Persian control. It may have joined the Delian League once again in 406/5 after the Athenian victory at Arginusai (Attic relief: *IG* 1³ 124 = Meyer (1989) 272 A 22 = Lawton (1995) no. 9; Ehrhardt (1995) 31–33). But after 404 Kios was certainly under Persian domination (Corsten (1985) 25).

The Aristotelian collection of constitutions included a *Κιανών πολιτεία* (*Arist. fr.* 519). Two honorific decrees, both of C4m (*I.Kios* 1, 2), testify to democratic institutions: a popular assembly (*[κυρία] ἐκκλησία*) presided over by a *prytanis*, passing bills moved by boards of *archontes* and *strategoï*, and to be published in a sanctuary of Athena. The eponymous magistrate was a *φρουρός* (*I.Kios* 1.1, 2.1; cf. Corsten (1985) 50–51). A board of *hieropoioi* (*I.Kios* 1.15) and a board of, probably, *synedroi* (*I.Kios* 2.3 (C4m)) are also attested. The Kianoi granted *proxenia* to a citizen of Sigeion (no. 791) (*I.Kios* 1 (C4)), and some citizens of Kios were

awarded *proxenia* by Karthaia (no. 492) (*IG* XII.5 542.58 (C4m)). From 337 to 302 Kios was ruled by Mithridates II (Diod. 20.111.4; cf. Corsten (1985) 30; Debord (1999) 101–2). C.330 a *theorodokos* was appointed to host *theoroi* from Argos (no. 347) (*SEG* 23 189.11.14).

Given the Milesian origin of the city, Apollo was presumably the patron deity of Kios. The god is represented on coins (*infra*) and his cult is implicitly attested by the communal dedication of a *φιάλη παρὰ Κιανῶν* to Apollo from Didyma in 276/5 (*I.Didyma* no. 427.6–7).

Kios struck coins from C4m: (1) silver drachms on the Rhodian standard, followed by (2) gold staters on the Attic standard, and (3) silver drachms, hemidrachms and quarter-drachms on the Persian standard. Types: *obv.* head of Apollo, r.; *rev.* prow ornamented with star. Legend: (1) ΚΙΑΝΩΝ, (2) signature of official, e.g. ΣΩΣΑΝΔΡΟΣ, (3) ΚΙΑ and signature of official. References: (1) Reinach (1908) no. 27 with pl. XLIX; Babelon, *Traité* ii.2 no. 2957, dated to c.350–345 (Le Rider (1963) 31–32). (2) Head, *HN*² 513, dated to c.345/340–320/315 (Le Rider (1963) 32–39). (3) *SNG Cop. Bosphorus-Bithynia* 369–79, dated to c.335–320/315 (Le Rider (1963) 37–39). The circulation of all the Kian coin series of C4s seems to have been rather limited (*ibid.* 60–61).

746. Kolonai (Koloneus?) Map 51. Lat. 40.20, long. 26.55, but not securely located, see *infra*. Type: B:?. The toponym is *Κολωναί, αἱ* (Strabo 13.1.19; Arr. *Anab.* 1.12.6) and the city-ethnic [Κολο]νῆς was tentatively restored in the assessment decree of 425/4 (*IG* I³ 71.III.87). At Arr. *Anab.* 1.12.6 (r334) Kolonai is called a *polis* in the urban sense. Strabo locates Kolonai in the territory of Lampsakos (no. 748) and considers it to be a Milesian colony founded inland. The settlement has been hypothetically located at Çataltepe, c.18 km east-south-east of Lampsakos or, alternatively, at Arabakanaği, more towards the south-east (Bürchner (1921); Leaf (1923) 101–2; Frisch (1978) 106 n. 6) and is to be distinguished from Kolonai at Alexandria Troas, on the coast (Cook (1973) 216–21). Strabo is probably wrong about Miletos (no. 854) as the *metropolis* of Kolonai, and it seems preferable to assume foundation by Lampsakos (Ehrhardt (1988) 35–36) followed by a later reintegration into the *metropolis* (Jones (1971) 86). For a parallel, see Paisos (no. 755).

747. Kyzikos (Kyzikenos) Map 52. Lat. 40.25, long. 27.55. Size of territory: 5. Type: A:a. The toponym is *Κύζικος, ἡ* (Hdt. 4.14.1; Thuc. 8.107.1; Xen. *An.* 7.2.5; *Milet.* 1.3 137 = *Staatsverträge* 409.16 = Gawantka (1975) no. 19 (shortly after 334)). The toponym is used about both the island and the city (Strabo 12.8.11). The city-ethnic is *Κυζικηνός*

(*Milet.* 1.3 137.4, 8–9, 14, 16). Kyzikos is called a *polis* in the urban sense at Eupolis, *Poleis* fr. 233 and Xen. *Hell.* 1.1.20; in Ps.-Skylax 94 Kyzikos is one of the toponyms listed after the heading πόλεις Ἑλληνίδες αἰδε. For *polis* in the political sense, see Hdt. 4.15.1; *Syll.*³ 4A.1, B.1 (C61); and *SEG* 36 116.A12, B8 (C4). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the C4 *isopoliteia* treaty with Miletos (no. 854) (*Milet.* 1.3 137.4) and in Aen. Tact. 12.3; Dem. 50.6. The individual and external use is found in a C4 dedication on Samos (*SGDI* 5526) and in Herodotos' mention at 4.138.1 of Ἀρισταγόρης Κυζικηνός, the tyrant of Kyzikos in c.513. *Patra* (= *patris*) is found in *CEG* II 850 (345–335).

The ancient city is located at Balkız (Turkish name), on the isthmus of the Kapu Dağı peninsula (ancient Arktonnesos) jutting out from the south-west coast of the Sea of Marmara. Ps.-Skylax 94 mentions that Kyzikos was lying ἐν τῷ ἰσθμῷ ἐμφράττουσα τὸν ἰσθμὸν, while Anaximenes of Lampsakos ((*FGrHist* 72) fr. 26) writes about a νήσος (cf. Strabo 2.5.23). The confusion persists in later writers: Diod. 18.51.2 (r319): χερρόνησος (cf. Steph. Byz. s.v. *Κύζικος*), Plin. *HN* 5.142 (relating that Alexander the Great *insulam continenti iunxit* in 334). The island of Arktonnesos became a peninsula through the construction of two parallel dykes and accumulations of sand. It is assumed that the isthmus had been connected with the mainland shortly before the first testimonies, but that the insular tradition was so strong that some writers continued to describe Kyzikos as an island (cf. Philippson (1910) 50; Ruge (1924) 228; Akurgal (1976b) 473).

The main contribution to the topography of Kyzikos has been produced by Hasluck (1902) and (1910); for supplements see especially L. Robert (1955) 124 n. 7; Schwertheim (1978) 227–28; Vian (1978), while some archaeological excavations (Akurgal (1956) 15–20) brought to light orientalisating ceramics from C71/C6e. Unfortunately, Kyzikos remains “the least studied of the great cities of Asia” (Mitchell (1999) 130) and “its history is only illuminated by stray finds” (Mitchell (1985) 74), as, for example Archaic sculptural and architectural marbles from C6s (Akurgal (1965); Koenigs (1981)). Moreover, there is no complete *corpus* of the huge number of inscriptions (list at Hasluck (1910) 263–95; funerary inscriptions at Schwertheim (1980); cf. *BE* (1980) 389–423), and only the Hellenistic and Roman funerary *stelae* have been brought together (Cremer (1991)).

Kyzikos controlled a large territory inhabited by the indigenous Δολιόνες (Hecat. fr. 219; Strabo 14.5.29, quoting Alexandros of Aitolia (C4–C3); schol. Ap. Rhod. 1.943, 961,

1024, 1037). Originally, the territory did not comprise the whole island, since at least Artake (no. 736) was a *polis* with its own territory; but Kyzikos later absorbed many other settlements which are known to have been *poleis*: Prokonnesos (no. 759) (shortly after 362/1: Dem. 50.5; Paus. 8.46.4), Artake (no. 736) (perhaps about the same time), Plakia (no. 757) (towards the end of C4), Skylake (no. 761), Tereia (no. 763) and the island of Bysbikos (no. 738) (at latest in C4) and the satrap's residence of Daskyleion (at latest in the early Hellenistic period: Robert and Robert (1976) 231 with n. 321, 232–35). At an unknown date the western limit between the territories of Kyzikos and Priapos (no. 758) was at the unlocated τὰ Ἀρπάγια τόπος (Strabo 13.1.11; see Harpagion (no. 742)). More toponyms are recorded by Steph. Byz. s.v. Μέλισσα (442.16–17), Ποιμανηρόν (530.9–10), and Σκύρμος (579.14). Poimanenon is surely late (first mention c.80: Kaufmann and Stauber (1992) 45) and so may the other settlements be. For later extensions of the territory of Kyzikos, see Jones (1971) 86–88, 94.

Kyzikos was founded by Miletos (no. 854) (Anaximenes of Lampsakos (*FGrHist* 72) fr. 26). Two dates are given for the foundation year: 756 (Euseb. *Chron.* 88b, Helm) and 679 (ibid. 93b). Assuming a “double colonisation”, some scholars have accepted the earlier date (Graham (1958) 32, (1971) 39–42, (1983) 107), but the archaeological record supports only the second (Akurgal (1956) 15, 19, (1976b) 474; Laubscher (1963–64) 74; Kiechle (1959–60) 96; Ehrhardt (1988) 42, 49–50; Cremer (1991) 9). Thus Kyzikos—together with Prokonnesos, the earliest colony in the Propontis—must have been founded c.680. Alföldi (1991) 137 suggests an overland expedition from Miletos to Kyzikos.

Kyzikos came under Persian domination after 547 and was included in the third satrapy ruled from Daskyleion. A failed attempt to establish a tyranny is recorded under Kyros (Ath. 1.30A), while about 514/13 Aristagoras of Kyzikos is mentioned among the Hellespontine tyrants (Hdt. 4.138.1). Kyzikos took part in the Ionian Revolt but was subjected by Oinobares, the satrap in Daskyleion (Hdt. 6.33.3). About 478 it joined the Delian League. It belonged to the Hellespontine district and is recorded from 452/1 (*IG* 1³ 261.v.30) to 418/17 (*IG* 1³ 287.ii.10) a total of thirteen times, once completely restored, paying a *phoros* of 4,320 dr. in 447/6 (*IG* 1³ 265.1.95), but 9 tal. from 443/2 on (*IG* 1³ 269.ii.23).

A change of the constitution towards democracy is to be assumed thanks to Athenian influence (see the *prytanies* of the *phylai*). The change may perhaps be connected with the story told at Arist. *Oec.* 1347^b30–34: after a *stasis* the demo-

cratic faction got the upper hand over the oligarchs; but instead of killing their opponents, they exacted a ransom and had them exiled. In 411 Kyzikos defected from Athens (Thuc. 8.107.1), but was soon reconquered (Xen. *Hell.* 1.11, 14, 16–18). After the Peloponnesian War Kyzikos was allied with or perhaps even controlled by Sparta (no. 345) (Xen. *Hell.* 3.4.10, *An.* 7.2.5) and took part in the *symmachia* with Rhodes (no. 1000), Knidos (no. 903), Iasos (no. 891), Ephesos (no. 844), Samos (no. 864), Byzantion (no. 674) and Lampsakos (no. 748) (Karwiese (1980), but cf. Debord (1999) 273–77 for a date post-394). In consequence of the King's Peace, Kyzikos may have been subject to Persia for a short time after 387/6. If we can trust schol. Dem. 21.173 (586, Dilts), Kyzikos seems to have joined the Second Athenian Naval League, and in 364 Timotheos assisted Kyzikos when besieged by, probably, a Persian satrap (Diod. 15.81.5; Nep. *Timoth.* 1.2). Shortly afterwards, in 362, Kyzikos, like Kalchedon (no. 743) and Byzantion (no. 674), captured Athenian merchantmen (Dem. 50.6). During the Social War (357–355) the Athenians captured Kyzikos' merchantmen (Dem. 21.173); Kyzikos then broke with Athens (schol. Dem. 21.173).

An alliance with Kalchedon at an unknown date in C4f, perhaps in the 360s, is attested by the fact that Kyzikene soldiers assisted the city of Kalchedon during a siege (Aen. *Tact.* 12.3; *P Oxy.* 303, perhaps also Arist. *Oec.* 1347^b20–30). At the beginning of Alexander's campaign Kyzikos was unsuccessfully besieged by the satrap Memnon (Diod. 17.7.3; Polyae. 5.44.5).

An isopolity treaty with Miletos (no. 854) (*Milet.* 1.3 137 = Gawantka (1975) no. 19) is attested shortly after 334 (Ehrhardt (1987) 114–16) but may go back to C5 or even earlier (Graham (1983) 117, cf. 107–8; Ehrhardt (1988) 235–38). Citizens of Kyzikos were awarded *proxenia* by Karthaia (no. 492) (*IG* XII.5 542.54–55 (C4m)) and Chios (no. 840) (*PEP Chios* 50.12 (C4)).

Local inscriptions (starting with Michel 533.1 (c.390)) produce evidence for all the six Milesian *phylai*: Geleontes, Aigikoreis, Argadeis, Hopletes, Boreis, Oinopes (Jones, *POAG* 287–90; Ehrhardt (1988) 384 n. 24) and for the six *φύλαρχοι* (Michel 596.3; Hasluck (1910) 250–51; Bilabel (1920) 120–21; Ehrhardt (1988) 107–9).

A popular assembly (*δημος*) and a council (*βουλή*) are attested in a probouleutic decree of C4 (*BCH* 13 (1889) 514–18). Assembly and council were presided over by monthly shifting *prytaneis* belonging to one of the six tribes, so that each tribe must have been in *prytany* twice during a year (Michel 533 (c.390); Hasluck (1910) 251–52 and 266 with

the list of inscriptions). There was a *prytanarch*. Meetings of the *demos* were chaired by a daily *epistates* assisted by a *grammateus* (Michel 533; cf. Ehrhardt (1988) 100; Rhodes, *DGS* 415–17). The original eponymous magistrate may have been a *πρύτανις* (unattested, but highly probable by reason of the Milesian model: Ehrhardt (1988) 194–95). In C4f the eponymous magistrate was an *archon* (*SGDI* 5523, perhaps attesting some passing Athenian influence; see Ehrhardt (1988) 195). From about C4m he was replaced by a *ἱππάρχης* (Michel 596), perhaps in connection with the conquest of neighbouring communities (Hasluck (1910) 254–55, cf. 304–5: list of the attested eponyms). Other officials are a board of *strategoí* (Michel 596.2 (C4f)) and *hieromnemes* (*SGDI* 5523.3 (C4m)).

Kyzikos had no walls in 410 when the city was attacked by Athens (Thuc. 8.107.1; Diod. 13.40), but the Athenians presumably fortified the city since it was taken by the Spartans and Persians in 410 “after a siege” (*πολιορκεῖν*, Diod. 13.49.4). Defensive walls are attested in a building inscription of C4f (Michel 596) and their existence can be inferred from the account of the siege of Kyzikos in 364 (Diod. 15.81.5; Nep. *Timoth.* 1.2).

The evidence of public architecture is remarkably rich. A *prytaneion* is mentioned in a dedication of C6l (*Syll.*³ 4.5–6). An honorific decree of C3e (Michel 534) refers to a theatre (12, 21; *TGR* iii. 390), an agora (14), and a Doric stoa (24: *πρὸ τῆς στοᾶς τῆς Δωρικῆς*), which indicates that these monuments existed at least in C4l if not earlier. A temple (*νεώς*) is attested by an inscription of C6 recording the building of its roof by means of the income produced by the sacred lands and the sale of the skin of sacrificed animals (Robert and Robert (1950) 78–80). At Kyzikos was located “the earliest sanctuary in Asia” for Athena (*Anth. Pal.* 6.342.5–6), which is perhaps to be identified with the *ὄρος Ἀθηνᾶς* (cf. Hasluck (1910) 236) and with the *τέμενος τῆς Ἀ[θηνᾶς τῆς Πολιάδος]* (*SEG* 28 953.79; for the restoration, see Sève (1979) 359 n. 189).

Strabo 12.8.11 records two harbours, one on either side of the two bridges that connected the island with the mainland (Lehmann-Hartleben (1923) 63–64, 262–63; L. Robert (1955) 122–25 with pls. XXI no. 2, XXII nos. 1–2). The channels between the bridges formed a kind of “third” harbour (Philipsson (1910) 50), presumably identical with the *λιμὴν* mentioned at schol. Ap. Rhod. 1.940 and the *λιμὴν* recorded by *Syll.*³ 799.11.2 (Sève (1979) 349–51). For the topography, see Hasluck (1902) pl. XI: plan by R. de Rustajaell; cf. L. Robert (1955) 122–25. The western harbour has been identified (Sève (1979) 351) with the *Χυτὸς λιμὴν* recorded

at schol. Ap. Rhod. 1.987a (quoting the local writer Deiochos). Minor harbours belonging to the Kyzikene territory were at Panormos (schol. Ap. Rhod. 1.954: *Πάνορμος λιμὴν τῆς Κυζίκου*), located at modern Bandırma (Lehmann-Hartleben (1923) 293 n. 4) and Bathys Limen, which could be sought at Artake (no. 736) or on the north coast of the island, in the area of the village of Kerek (Greek Vathy): cf. L. Robert (1955) 128–31; Sève (1979) 351 n. 132.

Kyzikos’ patron deity was Apollo (Hecat. fr. 217; *SNG Cop. Mysia* 43, 57; cf. Hasluck (1910) 228–32; Ehrhardt (1988) 135). In addition to Athena Polias (*supra*), there is evidence for an Athena called *ΣΩΤΕΙΠΑ* on a coin (Imhoof-Blumer (1890) 614 no. 168), and her worship is also attested by Ap. Rhod. 1.955. A very popular civic cult, at least from C4 onwards, was that of Kore with the epithet *soteira* (App. *Mithr.* 75) attested on C4 coins (*SNG Cop. Mysia* 53–56, 58–62, *infra*). Other communal cults are attested by various sources: *Γῆ Καρ[ποφόρος]* (Delphic oracle for Kyzikos: *SGDI* 2970; Hasluck (1910) 221 and 301.4–5; perhaps also on coins from C5: *SNG Deutschland. Nachträge* II 7320); Poseidon (with various *epikleseis* in Hellenistic and later inscriptions summarised by Ehrhardt (1988) 475 n. 886; depicted on coins from c.450 to C4, e.g. *SNG Deutschland. Nachträge* II no. 7310); Kybele (Hdt. 4.76.2–3); Pan (Michel 533 = Hasluck (1910) 264 no. 4 (c.390); on coins from c.450 to C4 (*SNG Deutschland. Nachträge* II 7319)); the hero Herakles (Archaic relief: Akurgal (1961) 239). There is also evidence for some civic festivals: a festival for Kybele (Hdt. 4.76.3) and the *Anthesteria* for Dionysos (Michel 534 = Hasluck (1910) 264 no. 5.20, 27; *SEG* 28 953.52–53).

Through Ap. Rhod. 1.936ff a foundation myth can be traced back to the local writer Deiochos (C5l–C4f). He tells the story of Kyzikos, the young king of the Doliones who was killed by a terrible mistake by Jason. The hero Kyzikos can be recognised on electrum coins of C5f (*BMC Mysia* 21 no. 23). On the other hand, a Milesian origin of the city is also attested in the Classical period (Anaximenes of Lampsakos (*FGrHist* 72) fr. 26 and Kyzikos’ isopolity treaty with Miletos).

The Kyzikene calendar was identical with the Milesian (Samuel (1972) 116; cf. Ehrhardt (1988) 116) apart from the month Boudion = Milesian Boedromion (Schwertheim (1986) 13–14 (C4); cf. Knoepfler (1997) 359, 412 n. 56). Outside Kyzikos Boudion is attested only at Apollonia on the Rhyndakos (Abmeier (1990) 5).

Kyzikos possessed a practical monopoly of coining the so-called Kyzikenes. From C6f to C4, they were the most

important currency in the area from Troy to Ionia, in the Propontis, in Bithynia and in the Black Sea regions (Alföldi (1991) 129–34). Kyzikos struck electrum staters weighing c.16 g from c.550 (Mildenberg (1993–94) 7) until after 322/1 (Touratsoglou (1999) 353, 356–57). Denominations: electrum staters, one-sixth staters and a few smaller fractions (Head, *HN*² 522). On the exchange rate of the Kyzikenes, see Bogaert (1977). Types: *obv.* c.240 different types (Jenkins and Castro Hipolitò (1989) 61), perhaps changing every year (Mildenberg (1993–94) 3, 7), but all with the tunny fish as the main type or later as an adjunct type (Head, *HN*² 523; Kiechle (1959–60) 97); *rev.* quadripartite incuse square (*SNG Cop. Mysia* 35–44). Kyzikos also struck silver coins from c.550–530 onwards (Mannspenger (1989) nos. 2206–8, pl. 80) and bronze coins from c.400 (Fritze (1917)). Denominations: obols and their divisions in C6–C5, tetradrachms on the Rhodian weight standard in C4, small fractions in bronze. C5 types: *obv.* forepart of boar, behind, tunny; *rev.* lion's head in incuse square; legend: on some *K* reversed. C4: *obv.* Kore Soteira; legend: *ΣΩΤΕΙΡΑ*; *rev.* various types all with a tunny; legend: *KYZI*.

Strabo 13.1.12 records a tradition that Kyzikos founded Priapos (no. 758). Taking a strange coincidence revealed by the calendars into consideration (*supra*), another Kyzikene foundation might have been Apollonia on the Rhyndakos (*supra* 975). In both cases primary Milesian foundation is the alternative (and perhaps more likely) explanation.

748. Lampsakos (Lampsakenos) Map 51. Lat. 40.10, long. 26.20. Size of territory: 4. Type: A:a. The toponym is *Λάμψακος*, ἡ (*LSAG* p. 367 no. 47; Hecat. fr. 220; Dem. 50.19). Before the colonisation of Lampsakos in C7m the toponym seems to have been *Πιτυόεσσα* (Charon of Lampsakos (*FGrHist* 262) fr. 7a) or *Πιτύεια* (Hom. *Il.* 2.829; schol. Ap. Rhod. 1.933; Steph. Byz. 410.18, quoting Deiochos of Kyzikos (C5–C4)). It is possible that the Homeric *Πιτύεια* existed before the proper foundation of Lampsakos (*infra*). The city-ethnic is *Λαμψακηγός* (*I.Lampsakos* 1.20 (c.300)). Lampsakos is called a *polis* both in the urban sense (Hdt. 5.117.1; Xen. *Hell.* 2.1.19; in Ps.-Skylax 94 Lampsakos is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες αἰθε*) and in the political sense (*I.Lampsakos* 1.20 (c.300), 8.2–4 (C4?); Arist. *Oec.* 1347^b1; Hdt. 4.137.2, 138.1, list of tyrants with the heading: *ἕκαστος αὐτῶν τυραννεύει πόλιος*). The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and in inscriptions (*I.Lampsakos* 1.20) and externally at Hdt. 6.37–38; Thuc. 8.62.2; Xen. *An.* 7.8.1; *IG* 1³ 269.11.10.

For the individual and external use, see Hdt. 4.138.1; Thuc. 6.59.3; Aeschin. 2.83. The citizens are referred to as *politai* (Arist. *Oec.* 1351^b4). *Patris* is found in Dem. 23.142.

Lampsakos is located at modern Lapseki (Turkish name), which has preserved the ancient toponym. Some testimonies of the eighteenth century attest walls and architectural remains (but Texier (1862) 174–76 reported that he found no ancient monument in 1835), while various objects continue to be found occasionally: Leaf (1923) 93–97; Büchner (1924b) 591; MacKay (1976) 480 and map 7; Mitchell (1999) 142. The best evidence is produced by inscriptions (Frisch (1978)), but almost all are of the Hellenistic and Roman periods.

The territory of Lampsakos was originally called *Βεβρυκία* after the name of the native *Βεβρυκες* (Charon (*FGrHist* 262) fr. 8; cf. fr. 7a). The countryside was renowned for its vineyards (Thuc. 1.138.5; Diod. 11.57.7 (r464)). The territory (Büchner (1924a); Frisch (1978) 105–7) was bordered to the west by Perkote (no. 788) (= modern Umurbey) situated c.12 km from Lampsakos, and to the north-east by Paisos, c.12 km from Lampsakos and incorporated after 425/4 (see Paisos (no. 755)). According to an anecdote told by Polyæn. 6.24 the frontier between Lampsakos and Parion (no. 756) was placed at Hermaion = modern Otlukdere, c.10 km south of Parion, according to Leaf (1923) 100–1 to be identified with *Herмотon* (Arr. *Anab.* 1.12.6); *contra* Ruge (1942b) 2436; Frisch (1978) 105 n. 5.

There is evidence of a number of settlements in the territory of Lampsakos. *Κολωναί* was probably a dependent *polis* (Arr. *Anab.* 1.12.6 (r334); Strabo 13.1.19) and perhaps a secondary colony founded by Lampsakos (see no. 746). *Μυρμισσός* (Steph. Byz. 164.8–9, quoting Polemon: *πόλις περὶ Λάμψακον*) and *Ἰωλκός* (schol. Eur. *Med.* 484) were perhaps situated close to Lampsakos. *Ἄβαρνος* or *Ἄβαρνίς* was a settlement near the homonymous promontory (Hecat. fr. 220; Xen. *Hell.* 2.1.29; Ephor. fr. 46), tentatively located c.8 km north of Lampsakos, at Çardak Burnu (Leaf (1923) 93); according to Steph. Byz. 4.4, it was a *polis*. Other settlements are attested only in late sources.

Lampsakos was founded in 654/3 (Euseb. *Chron.* 95d, Helm; Synkellos 213b, p. 402, Dindorf) by colonists from Phokaia (no. 859) (Charon of Lampsakos (*FGrHist* 262) fr. 7a and b; Polyæn. 8.37; Steph. Byz. 4.13–14, quoting Ephor. fr. 46). That Phokaia was the *metropolis* is confirmed by the tradition that the citizens of Lampsakos called themselves brothers of the *Massaliotai* (cf. Massalia (no. 3), so a Phokaian colony; *I.Lampsakos* 4.26), and by the name of the month Heraion, attested both in Lampsakos (*I.Lampsakos*

8.5) and Phokaia (Samuel (1972) 125, 131). Strabo 13.1.19 erroneously states that Lampsakos was colonised from Miletos (no. 854).

In C6m Lampsakos was a dependency of Lydia, and when the Lampsakenes had captured Miltiades, the Athenian tyrant of the Chersonese, they were forced by Kroisos to set him free (Hdt. 5.37–38). After the fall of Lydia in 547, Lampsakos came under Persia; in 499 the city joined the Ionian cities in their Revolt, and the winged horse on Lampsakos' coins was used by the Ionian *koinon* on some of their issues (Meiggs (1972) 27); but Lampsakos was conquered by Daurises in 498 or 497 (Hdt. 5.117). Lampsakos remained under Persian domination, and in 464 it was given by King Artaxerxes to the exiled Themistokles (Thuc. 1.138; Plut. *Them.* 27.1, 29.11). At an unknown date Lampsakos joined the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 453/2 (*IG* 1³ 260.v.17: [*Λαμφσακ*]ενοι) to 428/7 (*IG* 1³ 283 *pars aversa* 37) a total of thirteen times, three times completely restored, paying in most years a *phoros* of 15 tal. (*IG* 1³ 262.iv.5), in 447/6 reduced to 3,600 dr. (*IG* 1³ 265.ii.59) and in 442/1 to 9 tal. (*IG* 1³ 270.ii.6). It was perhaps assessed for tribute in 425/4 (*IG* 1³ 71.ii.176, completely restored). The quota of 12 tal. would suggest that the income from the gold mines was taken into account (Ruschenbusch (1983) 143). After 430/29 the citizens of Paisos (no. 755) were moved to Lampsakos (Strabo 13.1.19: οἱ δὲ Παισηνοὶ μετώκησαν εἰς Λάμφακον), and Kolonai (no. 746) may have suffered a similar fate.

Lampsakos supported Athens during the first stages of the Peloponnesian War, then went over to the Persians (who were allies of the Spartans); but in 411 the city was conquered by the Athenian *strategos* Strombichides (Thuc. 8.62) and continued to be allied with Athens (Xen. *Hell.* 2.1.18). It was conquered by Lysandros in 405 shortly before Aigos potamoi (no. 658) (Xen. *Hell.* 2.1.18–21, 30 and 2.2.1). The city remained under Spartan hegemony until the mid-390s (Xen. *Hell.* 3.2.2–5). Some Lampsakene gold staters (*obv.* Herakles strangling the serpents, *infra*) indicate that Lampsakos in 394 presumably joined the so-called Herakles Coinage Alliance between Rhodes (no. 1000), Knidos (no. 903), Iasos (no. 891), Ephesos (no. 844), Samos (no. 864), Byzantion (no. 674) and Kyzikos (no. 747) (Seltman (1933) pl. 32.12; Cawkwell (1956); Karwiese (1980), dating the alliance to the last years of the Peloponnesian War; Frisch (1978) 122; Debord (1999) 273–77).

Like all other cities of Asia Minor, Lampsakos fell to Persia by the King's Peace of 387/6. Together with other

Hellespontine cities, it belonged to the satrapy ruled from Daskyleion, conceded by Ariobarzanes to the *hyparchos* Philiskos of Abydos, who was killed by two citizens of Lampsakos (Dem. 23.142). During the Social War (357–355) Lampsakos was conquered by the Athenian *strategos* Chares (Dem. 2.28; schol. Dem. *Olynth.* 3.31), and in the 340s it was ruled by Memnon of Rhodes (Arist. *Oec.* 2.1351^b1; cf. Frisch (1978) 127). From c.310 onwards Lampsakos was a member of the *κοινὸν τῶν Ἰλιέων* (L. Robert (1966) 18–46). Moreover, a kind of *sympoliteia* with Ilion (no. 779) is probably attested by a unique silver tridrachm: *obv.* head of Athena wearing Corinthian helmet, r.; *rev.* winged horse r. under the horse: ΛΑΜ(ΨΑΚΗΝΩΝ), above it: ΙΛ(ΙΕΩΝ) (Frisch (1975) XV, (1978) 129–30 (c.300)).

A tradition that Lampsakos was originally ruled by kings is reported by Charon of Lampsakos ((*FGrHist* 262) fr. 7ab). After the Persian conquest, c.513, Lampsakos was ruled by a tyrant, Hippoklos (Hdt. 4.138.1). His son Aiantides married Archedike, the daughter of Hippias, the tyrant of Athens (Thuc. 6.59.3), and the epigram on Archedike's gravestone (Thuc. 6.59.3 = *I.Lampsakos* 24a (C5e)) testifies to a third generation of tyrants (Frisch (1978) 113–14). We have no further information about the constitution of Lampsakos until C4f, when we hear about another tyrant, Astyanax, who was overturned and killed (Aen. *Tact.* 31.33, tentatively dated to c.355 by Berve (1967) 313). A few years later a pupil of Plato, Euaion, held the acropolis as security for a public debt. He attempted to set up a tyranny, but was eventually paid off and expelled (Ath. 508F; cf. Berve (1967) 312–13). Inscriptions attesting democratic institutions all belong in the Hellenistic period; see especially *I.Lampsakos* 4.34. Only *I.Lampsakos* 1 and 8 may perhaps be dated as early as C4 (for the date of 8, see Wilhelm (1974) 46–48). In these inscriptions we learn about a popular assembly called *demos*; cf. the statue of Anaximenes of Lampsakos set up in Olympia by τῶν Λαμφακηνῶν τοῦ δήμου (Paus. 6.18.2 (rC4s)). Furthermore, the inscriptions mention a council (*boule*), a *tamias*, a board called οἱ ἐπὶ τῇ διοικήσει, and an envoy elected by a show of hands (Rhodes, *DGS* 412–14). In 346 a citizen of Lampsakos was sent by the Odrysian dynast Kersobleptes to Athens (Aeschin. 2.83). Citizens of Lampsakos became *proxenoi* at Chios (no. 840) (Vanseveren (1937) 325 A.10–11 (C4m)), at Epidauros (no. 348) (*IG* iv².1 51 (C4)) and at Athens (no. 361) (*IG* ii² 205 (351/50)). In C4s Lampsakos had a *theorodokos* to host *theoroi* from Nemea (*SEG* 36 331.B.26 (331/30–313)).

The acropolis of Lampsakos is mentioned at Ath. 508F (r350). The city was not yet fortified when it was conquered

by the Athenians in 411 (Thuc. 8.62.2), and the first defence circuit was erected by the Athenians under Thrasyllus and Alkibiades in 409 (Xen. *Hell.* 1.2.14; cf. Diod. 13.66). These walls are also mentioned by Plut. *Lys.* 9.5 in connection with the conquest of the city by the Spartan commander in 405. The city also had a harbour (Strabo 13.1.18).

The patron deity was Priapos (Paus. 9.31.2; cf. the testimonies collected by Frisch (1978) 150–52). A cult of Dionysos is attested through the mention of a sanctuary for Dionysos in *I.Lampsakos* 8.6–7; cf. 34.34–35. A local *agon* is known from a C5 bronze hydria inscribed *ἄθλον ἐγ Λαμφάκω* (LSAG² 367 no. 47).

The earliest coins of Lampsakos (Head, *HN*² 529–30) are electrum staters of c.525–500. Types: *obv.* forepart of winged horse (Pegasus), above, acanthus; *rev.* quadripartite incuse square. After an interruption, Lampsakos started again from c.450 to strike electrum staters of two main types (1) *obv.* forepart of winged horse, sometimes in vine wreath; *rev.* quadripartite incuse square; (2) *obv.* Janiform female head of Archaic style; *rev.* head of Athena in incuse square. Between the two series there was an issue of lighter standard, interpreted as a local coinage connected with the Ionian Revolt (Baldwin (1914); Gaebler (1922); for the coinage of the Ionian Revolt: Gardner (1911), (1918) 91–103; Meiggs (1972) 441–42; cf. *IGCH* no. 1167). The later series of electrum staters is also mentioned in the Athenian accounts of the Parthenon as *χρυσὸ στατήρες Λαμφσακενοί* (*IG* I³ 436–49 (447/6–433/2)). The local gold mines mentioned in Polyaeus. 2.1.26 (1396) must have provided the metal for the gold staters struck c.390–330 on the Persian standard. *Obv.* different types; one is the infant Herakles strangling the serpents (cf. *supra*); Baldwin (1920) and, for the chronology, Baldwin (1924); *rev.* forepart of a winged horse in incuse square (Head, *HN*² 529–30). The C4 gold staters, referred to as *χρυσίω Λαμφακανῶ στα[ατέ]ραι* (*IG* VII 2418.9 = *Syll.*³ 201) became almost an “international” currency (Baldwin (1924); Regling (1924) 590; *SNG Cop. Mysia* 187). Furthermore, from C61 to C4 (and later) Lampsakos struck silver staters and smaller fractions sometimes on the Persian, sometimes on the Attic standard (Gaebler (1923); cf. Le Rider (1963) 51, 55). Bronze coins were struck in C4. *Obv.* heads of different deities; *rev.* mostly forepart of winged horse; legend: *ΛΑΜ* or *ΛΑΜΨΑ* (*SNG Cop. Mysia* 180–86, 188–98).

749. Metropolis Map 52. Unlocated. Not in *Barr.* Type: B:a. The toponym is *Μητρόπολις* (*IG* I³ 77.1v.8–9). Our only source for this community is the Athenian assessment

decree of 422/1 in which Metropolis is recorded among the Hellespontine members (*IG* I³ 77.1v.8–9: *Μετρόπολις παρὰ Πρίαπον*). Thus, the Athenians claimed that the community was a member of the Delian League and had it assessed for a tribute of 1 tal. The Greek name suggests that it was a colonial foundation and a *polis*. It was situated on the south coast of the Propontis near Priapos (no. 758).

750. Miletoupolis (Miletopolites) Map 52. Lat. 40.05, long. 28.20. Size of territory: ? Type: B:a. The toponym is *Μιλητούπολις*, ἡ (Strabo 12.8.10; *Suda* M 1061). The city-ethnic is *Μιλητοπολίτης* (*SNG Cop. Mysia* 249) or *Μιλητοπόλιος* (*I.Kyzikos* II 64 (second century AD)). The earliest attestation of Miletoupolis as a *polis* comes from a decree of the first century AD (*I.Kyzikos* II 25.2). But *polis* status in the Archaic and Classical periods is strongly indicated by (1) the toponym, (2) the C4 mint, and (3) the cult of Zeus Polieus. The collective and internal use of the city-ethnic is attested on C4 coins (*infra*). For the individual and external use, see an Athenian sepulchral inscription of C4f (*SEG* 18 120) and a C3 Milesian citizenship decree (*Milet.* 1.3 67.7).

Combining Strabo 12.8.10 with the evidence of coin finds, it is now generally assumed that Miletoupolis was at modern Melde (Turkish name), c.5 km north-west of Mustafakemalpaşa (formerly Kirmasti) (Schwertheim (1983) 89–92). Some excavations took place in 1975, but only Roman monuments were found (*ibid.* 90, 127–28). The Turkish name Melde derives from Miletos, through Meletos (L. Robert (1962) 192).

The territory of the city was bordered to the north by the mountains Kara Dağları (including Lake Miletopolitis which belonged to the city (Strabo 12.8.10)), to the west by the hills situated east of Lake Daskylitis, to the south by the Rhyndakos valley, and to the east by Lake Apolloniatis, which belonged to the later Apollonia on the Rhyndakos (L. Robert (1980) 97–98; Schwertheim (1983) 100–1). At the western end of this lake lay Miletou Teichos (no. 751), a fortified settlement (*Hell. Oxy.* 25.3) and in C4 probably a dependency of Miletoupolis.

The foundation of Miletoupolis is not mentioned in any source. Some late coins inscribed *ΜΕΙΛΗΤΟΣ ΚΤΙΣΤΗΣ* indicate that the city was named after a hero founder called Miletos (Schwertheim (1983) 81 nos. 28–29). According to Nikolaos of Damaskos (*FGrHist* 90) fr. 63, this Miletos, probably a Milesian, married into the Lydian royal family but went into exile and came first to Daskyleion (no. 740), later to Prokonnesos (no. 759). If we can trust these late sources, Miletoupolis was a Milesian colony and probably

founded in C7/C6e (Schwertheim (1983) 102–6). The types used for the coins, the calendar used by the Miletopolitai (*infra*), as well as a late sepulchral inscription referring to “Attic blood” (*I.Kyzikos* II 64 (second century AD)) testify to close ties with Athens.

A C4 festival calendar (*I.Kyzikos* II 1; cf. Schwertheim (1983) 107–12) mentions cults of Hermes, Aphrodite, Zeus Polieus, Olympios and Agoraios, Apollo Karneios, Herakles, (Herakles) Alexikakos, Eirene and Ilithyia (midwife goddess). However, the possibility remains that the stone is a *pierre errante* recording the calendar of an Attic deme (Habicht (1999) 26–29). The calendar records sacrifices in the month of Skirophorion, elsewhere attested only in Athens and Iasos (Trümper, *Monat.* 294) and thus points to Athenian influence. The head of Athena on the earliest coins (*infra*) may indicate a cult of Athena.

Miletoupolis struck bronze coins from C4 onwards (Head, *HN²* 531; Schwertheim (1983) 78 nos. 1–6 and 8). Types: *obv.* head of Athena, or young male, r.; *rev.* bull, or owl; legend: *ΜΙΑΗ*, *ΜΙΑΗΤΟ* or *ΜΙΑΗΤΟΠΟΛΕΙΤΩΝ* (*BMC Mysia* 91 nos. 1–5; *SNG Cop. Mysia* 246–47).

751. Miletouteichos (Miletoteichites) Map 52. Lat. 40.15, long. 28.25. Size of territory: ? Type: B:a. The toponym is *Μιλητουτειχος* (*Hell. Oxy.* 25.3; *SEG* 23 189.II.16 (c.330)). The city-ethnic is, possibly, *Μιλητοτειχίτης* (*IG* I³ 100.III.5 (410/9)); see *infra*. There is no reference to Miletouteichos as a *polis* in any source, but *polis* status in the Classical period is indicated by membership of the Delian League and the attestation in C4s of a *theorodokos*.

Miletouteichos was completely unknown until the discovery first of the *Hell. Oxy.* and then of the C4s list of Argive *theorodokoi* (*SEG* 23 189). In *Hell. Oxy.* 25.3, Chambers, we learn that Agesilaos in 395 on his march from Kios (no. 745) to Phrygia attacked a place called Miletou Teichos, but failed to take it and then marched along the river Rhyndakos to Daskyleion (no. 740). In the Argive *theorodokoi* list of c.330 Miletouteichos is listed after Kios and Brylleion (= Myrleia) and before Iasos (*SEG* 23 189.II.16). These two sources are still the only ones we have, but a third can be added if, in the Athenian assessment decree of 410/9 (*IG* I³ 100.III.5), we accept the restoration *Μιλητο[τειχίται]* instead of *Μιλητο[πολίται]* in the *editio princeps*: *Hesperia* 5 (1936) 387 (see Schwertheim (1983) 107).

The relationship between the two toponyms Miletoupolis and Miletouteichos is a moot point. Some scholars have assumed identity between Miletouteichos and Miletoupolis (Charneux (1966) 217–18; Ehrhardt (1988) 43;

Debord (1999) 250). That the two toponyms denote different sites has been argued forcefully by Schwertheim (1983) 95–99, followed by Barr., Map 52. Miletouteichos should be placed north-west of Lake Apolloniatis, according to Barr. at modern Uluabat, a location which fits the description of Agesilaos' march route in *Hell. Oxy.* Schwertheim (1983) 98–99 prefers to identify Miletouteichos with the later Apollonia on the Rhyndakos = modern Gölyazi.

A possible reconstruction of our sources is that, after Alkibiades' naval victory at Kyzikos in 410, Miletouteichos was founded as an Athenian colony and incorporated into the Delian League (Meiggs (1972) 369, 438–39; Schwertheim (1983) 107; Ehrhardt (1988) 43). It was probably an Athenian settlement and, at first, independent of the neighbouring *poleis*. In C4, on the other hand, the fortified settlement may have become a dependency of neighbouring Miletoupolis (no. 750); and the Athenian influence on Miletoupolis' coinage and calendar indicates a fusion of the population of the two settlements. Since the appointment of a *theorodokos* was an act of a *polis* rather than of a fortress (Perlman (2000) 45–60), the presence of a *theorodokos* in Miletouteichos c.330 indicates that Miletouteichos was a (dependent) *polis* and not just a fortress lying in the territory of Miletoupolis. For the *polis* status of a *teichos*, cf. e.g. Neon Teichos (no. 824), one of the eleven Aiolian *poleis* (Hdt. 1.149.1, 150.2).

752. Myrleia (Myrleanos) Map 52. Lat. 40.20, long. 28.55. Size of territory: ? Type: [A]:a. The toponym is either *Βρύλλειον* (*IG* I³ 71.III.112; *SEG* 23 189.II.15) or, later, *Μύρλεια*, ἡ (Ps.-Skylax 94; Strabo 12.3.22). The corresponding city-ethnics are *Βρυλλεανός* (*IG* I³ 280.II.18) and *Μυρλεανός* (on coins, *infra*). Both Brylleion (*SEG* 23 189.II.15) and Myrleia (Strabo 12.4.3) are attested as neighbours of Kios (no. 745). Stephanos (187.13–14) quotes Ephor. fr. 45 for the view that Brylleion is identical with Kios: *Ἐφορος δὲ ἐν τῷ ἐΐ Κίον ἀπὸ τῆν φησιν εἶναι*. The error disappears if one for *Κίον* reads *Κίον*: “Ephoros says that it (Brylleion) belongs to Kios”; that Brylleion/Myrleia in C4 was a dependency of Kios is stated at Diod. 20.III.4, if one accepts Post's conjecture *Μυρλείας* for *Μαρίνης* (see Corsten (1987) 8 with n. 4). The identification of Brylleion and Myrleia as successive names of the same settlement is based on two observations: (1) all references to Brylleion concern C5–C4, whereas attestations of Myrleia belong in C4s–C2; (2) both names are variants of the same (barbarian?) toponym: change of β into μ, and *metathesis* ρυ > υρ (Corsten (1987) 4–6). Since the first coins, of C4s, have the legend *ΜΥΡΛΑ*, Corsten assumes that Myrleia became the

official name shortly after c.330. In 202 Myrleia was destroyed by Philip V of Makedonia and refounded as Apameia (Strabo 12.4.3).

In Ps.-Skylax 94 Myrleia is the first toponym listed after the heading πόλεις 'Ἑλληνίδες αἶδε where *polis* is used in the urban sense. That Myrleia was a *polis* in the political sense too is strongly indicated by its coinage and its membership of the Delian League. The collective and internal use of the city-ethnic is attested on the coins (*infra*), the external use is attested in an Attic decree of 304/3 (*IG* 11² 703.10). For the individual and external use, see the numerous references to Ἀσκληπιάδης ὁ Μυρλεανός (C3–C2) (Ath. 50D).

Myrleia is located at Mudanya (Turkish name), c.20 km west of Kios (for some earlier descriptions, see Texier (1862) 113–15; Perrot (1872) 12–14). According to Ps.-Skylax 94, Myrleia belonged to Phrygia; later it was part of Bithynia.

Myrleia was colonised by Kolophon (no. 848). The testimonies are late but leave no doubt: Pompon. 1.99; Plin. *HN* 5.143; Steph. Byz. 463.18. The foundation year is not attested.

Brylleion was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 433/2 (*IG* 1³ 279.11.18) to 418/17 (*IG* 1³ 287.11.23) a total of four times, paying a *phoros* of 3,000 dr. (*IG* 1³ 279.11.18). It is absent from the full panel of 442/1 (*IG* 1³ 270.1.35–11.30).

From 337 to 302 both Kios and Myrleia were ruled by Mithridates II (Diod. 20.111.4, as emended by Post). From C41 to C3 Myrleia (Bryllion) belonged for a short time to the κοινόν of the sanctuary of Athena Ilias (L. Robert (1966) 31–33, 39). C.330 a *theorodokos* was appointed to host *theoroi* from Argos (no. 347) (*SEG* 23 189.11.15).

The first coins were minted at a time when the official name of the city was Myrleia, i.e. C4–C3. Reinach (1908) 247–49 distinguished twenty-seven types: *obv.* heads of different gods, also wheel, humped bull, horseman, lyre, corn wreath, etc.; *rev.* legend: ΜΥΡΑΕΑ, ΜΥΡΑΕΑΝΩΝ or ΜΥΡΑ, sometimes with monograms (names of magistrates?); cf. Head, *HN*² 510.

753. Olbia Map 52. Unlocated. Type: [A]:a. The toponym is Ὀλβία (Ps.-Skylax 93; cf. Ptol. *Geog.* 5.1.2 and Steph. Byz. 475.16, 489.5). Olbia is classified as a *polis* in the urban sense at Ps.-Skylax 93: Ὀλβία καὶ λιμὴν, with πόλις understood before καὶ (Flensted-Jensen and Hansen (1996) 142) and listed under the heading πόλεις 'Ἑλληνίδες αἶδε. Ps.-Skylax includes Olbia among the *poleis* in Mysia, whereas Steph. Byz. 489.5 describes Olbia as a πόλις Βιθυνίας.

Some scholars argue that Olbia should be identified with Astakos (no. 737) and that the change of name from Astakos

to Olbia took place in 435 in connection with an Athenian settlement (Ruge (1896) 1774; but cf. Ruge (1937); Jacoby, *FGrHist* 11 D pp. 565–66). Olbia is identified with Nikomedia by Steph. Byz. 475.15–16, followed by Tschirikower (1927) 46; Hanell (1934) 121; Marek (1993) 15. Both identifications, however, are contradicted by Ptol. *Geog.* 5.1.2, which lists Astakos, Olbia and Nikomedia side by side. The preferable view seems to be that Olbia was a settlement in the territory of first Astakos, later Nikomedia. Whatever the position of Olbia, the settlement had some importance, as the Gulf of Astakos was also called Ὀλβιανός (Ps.-Skylax 92; Pompon. 1.100).

Nothing is known about the history of the city. Olbia seems at an early date to have been incorporated into, probably, Astakos. In spite of the lack of evidence, Olbia might have been founded by Megara (no. 225), since the whole neighbouring region belonged to the area of Megarian colonisation.

754. (Otlanoi) Map 52. Unlocated, not in *Barr.* Type: C:?. The city-ethnic is Ὀτλενός. The only explicit evidence concerns the ethnic and comes from the Athenian tribute lists. In the assessment decree of 422/1, among the Hellespontine members is recorded a community called *Otlanoi* paying a tribute of 2,000 dr. (*IG* 1³ 77.1v.6). On the basis of this entry [Ὀτλενοί] has been restored in the assessment decree of 425/4 (*IG* 1³ 71.111.116) and [Ὀτλενοί] in the tribute list of 415/14 (*IG* 1³ 290.111.1). Nothing more is known about the community (Ruge (1942a); *ATL* i. 529).

755. Paisos (Paisenos) Map 51. Lat. 40.25, long. 26.50. Size of territory: presumably 1 or 2. Type: A:a. The toponym is Παισός (Hdt. 5.117), ἡ (Eust. *Il.* 1 558.8–9). The city-ethnic is Παισηνός (*IG* 1³ 272.1.32). Paisos is called a *polis* in the urban sense at Hdt. 5.117. The external and collective use of the city-ethnic is attested in the Athenian tribute lists.

Paisos has tentatively been located at Fanous (Turkish name Fanar on R. Kiepert's map), c.12 km east-north-east of Lampsakos (no. 748), at the extreme north point of the coast, c.30 km west of Parion (no. 756) (Leaf (1923) 99–100 and photo pl. V A; Ruge (1939) 559, (1942b) 2435; Frisch (1978) 105 n. 4). The river Paisos could be modern Bairam Çayı (Karaly Dere on Kiepert's map; Ruge (1939) 559). The relationship with Homer's Παισός (*Il.* 2.828, 5.612) remains obscure (Strabo 13.1.10, 19; Steph. Byz. 102.16; Eust. *Il.* 1 558.8–9).

Paisos was colonised by Miletos (no. 854) (Anaximenes of Lampsakos (*FGrHist* 72) fr. 26), presumably in C7 like the other Milesian colonies in the Propontis. In 499 Paisos

joined the Ionian cities in their revolt against Persia and was subjected by Daurises in 498 or 497 (Hdt. 5.117). The city was a member of the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 453/2 (*IG*¹ 260.viii.5) to 430/29 (*IG*¹ 281.iii.28) a total of twelve times, once completely restored, paying in all years a *phoros* of 1,000 dr. (*IG*¹ 260.viii.5). It was presumably assessed for tribute in 425/4 (*IG*¹ 71.iii.90).

According to Strabo, Paisos was destroyed and the citizens moved to Lampsakos (Strabo 13.1.19: *κατέσπασται ἡ πόλις. οἱ δὲ Παισηνοὶ μετόκησαν εἰς Λάμψακον*). The destruction of Paisos can be dated to the period c.425–350: in the tribute lists Paisos is not recorded later than 430/29 and is missing from the full (?) list of 429/8 (*IG*¹ 282). But so is Priapos (no. 758), and if the [*Παισε*]νοί are correctly restored in *IG*¹ 71.iii.5, the *terminus post quem* must be 425/4. The fact that Paisos is not mentioned between Parion and Lampsakos in the list of Hellespontine *poleis* in Ps.-Skylax 94 indicates a *terminus ante quem* of C4m. Leaf (1923) 100 suggests that Paisos fell to Lampsakos after the competition between Parion and Lampsakos reported in Polyaeus. 6.24 (rC4).

756. Parion (Parianos) Map 52. Lat. 40.25, long. 27.00. Size of territory: 5. Type: A:a. The toponym is *Πάριον*, *τό* (Archestratos fr. 7.2, Olson and Sens; *IG*¹ 71.iii.98; Xen. *An.* 7.2.7). The city-ethnic is *Παριανός* (*CID* II 5.ii.2 (358)). Parion is called a *polis* in the urban sense at Hdt. 5.117.1, and in Ps.-Skylax 94 Parion is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες αἰδε*. For the political sense, see Hdt. 4.138.1: *Ἡρόφαντος Παριηνός* in a list of tyrants with the heading: *ἕκαστος αὐτῶν τυραννεύει πόλιος* (4.137.2). The earliest explicit attestation of Parion as a *polis* in the political sense is at Diod. 20.111.3 (r302). The collective and internal use of the city-ethnic is attested on coins (*infra*). The external use is attested in the Athenian tribute lists (*IG*¹ 260.x.4) and in Xen. *An.* 7.3.16. For the individual and external use, see the C5m Athenian proxeny decree for one or more citizens of Parion (*IG*¹ 18) and the C4m sepulchral monument (*IG* II² 10045 (C4m)).

Parion is located at modern Kemer (Turkish name), north-east of the mouth of the river Kemer Dere. Here some ancient remains were found in 1801 by P. Hunt and J. D. Carlyle (Walpole (1818) 87–88; Ewers (1822) 427–30), in 1835 by Texier ((1862) 174), and in 1978 marble blocks including uninscribed *stelae* were found on the acropolis (Frisch (1983) 54).

Since Asia Minor was never clearly subdivided into political and/or geographical regions, Parion is variously placed

in Phrygia (Ps.-Skylax 94), in the Troas (Strabo 13.1.4, quoting Eudoxos of Kyzikos, Damastes of Sigeion and Charon of Lampsakos), in Mysia (Ptol. *Geog.* 5.2.2), in the Propontis (Strabo 10.5.7; Eust. *Comm. Dionys. Per.* 517), in the Hellespont (Hdt. 4.138.1; Steph. Byz. 505.13) and in the Hellespont or the Propontis (Strabo 7 fr. 58).

The territory of Parion was called *Παριανή* (Anaximenes (*FGH* Hist 72) fr. 25). It was bordered to the west by Paisos (no. 755) but after the integration of this city into Lampsakos (no. 748) in C5I–C4m Parion and Lampsakos became neighbours, with the frontier between the two cities at *Ἐρμαίων*, 70 stades from Parion and 200 stades from Lampsakos (Polyaeus. 6.24; see *supra* 976). To the east Parion bordered on Priapos (no. 758).

According to Euseb. *Chron.* 91b, Helm, Parion was founded in 709; cf. Ath. 116A–D. The sources disagree about the *metropolis*: Erythrai (no. 845) and “Ionia” (Paus. 9.27.1); Thasos (no. 526) (Eust. *Comm. Dionys. Per.* 517); Paros (no. 509) (Strabo 10.5.7); Miletos (no. 854), Erythrai and Paros (Strabo 13.1.14). Since the toponym Parion is obviously derived from Paros, there can be no doubt that Paros was the main coloniser (Frisch (1983) 60), while the version concerning Thasos may be explained by the fact that Thasos was a foundation of Paros; but in that case the foundation year 709 must be lowered, because Thasos itself was founded c.710–680 (Pouilloux (1954) 24; Frisch (1983) 59). Erythraian participation is supported by the officials called *ἔξετασταί* (*I.Parion* 1.22) attested also in Erythrai (*I.Erythrai* 201c.46), but not at Miletos and Paros (Bilabel (1920) 49; Frisch (1983) 59). Ehrhardt (1988) 36 also adduces the name Damalis as an onomastic link between the two cities. Strabo’s error about the foundation of Lampsakos discredits his information about Parion. For an attempt to harmonise all these traditions, see Burn (1935) 132 with n. 7.

Parion must have come under Persian domination after 547, and in reference to c.514/13 Herophantos of Parion is mentioned among the Hellespontine tyrants by Hdt. 4.138.1. Parion took part in the Ionian Revolt (Hdt. 5.103), but by chance it escaped being conquered by Daurises in 497 (Hdt. 5.117.1). Parion joined the Delian League, perhaps in 478/7. It belonged to the Hellespontine district and is recorded in the tribute lists from 454/3 (*IG*¹ 259.vi.15) to 418/17 (*IG*¹ 287.ii.15) a total of fourteen times, twice completely restored, paying a *phoros* of first 1 tal. (*IG*¹ 259.vi.15), reduced to 2,000 dr. in, probably, 443/2 (*IG*¹ 269.ii.19), but raised again to 1 tal. in 435/4 (*IG*¹ 277.v.4). It was presumably assessed for tribute in 425/4 (*IG*¹ 71.iii.71). During the Peloponnesian War Parion supported Athens (*ATL*; Xen.

Hell. 1.1.13). The Attic proxeny decree for Phanokritos of Parion, who revealed the plans of the Spartan fleet to the Athenians (387/6), suggests that Parion continued to be an ally of Athens during the Corinthian War (*IG* II² 3822 = *Syll.*³ 137). Parian envoys to the Odrysian king Medokos are mentioned by Xen. *An.* 7.3.16 (r400). By the King's Peace of 387/6 Parion fell to Persia, and c.360 it was besieged and conquered by Iphiades of Abydos (*Aen. Tact.* 28.6–7).

City walls (τείχη) and their gates (πύλαι) are attested by *Aen. Tact.* 28.6–7 in his account of the conquest of Parion by Iphiades of Abydos (c.360). In 1801 the walls of Parion still stood, and were built of large blocks of squared marble without mortar (Hunt and Carlyle quoted by Frisch (1983) 54). The existence of a harbour is implicitly suggested by Xen. *Hell.* 1.1.13 (r410) and explicitly mentioned by Strabo 13.1.14. There is no evidence about public architecture in Parion with the exception of an extra-urban oracular sanctuary (μαντεῖον) of Apollo Aktaios and Artemis at Adrasteia. Possibly in C4 it was demolished, and the marble was reused for the altar of Apollo Aktaios at Parion, a work of Hermokreon (Strabo 13.1.13; cf. 10.5.7 and bronze coins of c.350–300, *infra*; cf. Leaf (1923) 84–85; L. Robert (1966) 43–44.

The most important god of the city was Apollo Aktaios, whose position as the protective deity of Parion is later attested by a silver tetradrachm of c.150 bearing the legend ΑΠΟΛΛΩΝΟΣ ΑΚΤΑΙΟΥ ΠΑΡΙΑΝΩΝ; cf. Seyrig (1958) 611–12; L. Robert (1966) 43; Price and Trell (1977) 121. Of other communal cults attested in later sources, there is evidence for pre-Hellenistic worship of Eros (Paus. 9.27.1), because his statue was made by Praxiteles (Plin. *HN* 36.22) before 354 (Wolters (1913); Mirone (1921); L. Robert (1966) 43–44; Bonacasa (1976)), and for Priapos, of Lampsakene origin and very popular in the whole region (Robert and Robert (1950) 80–93), who acquired a local *epiklesis* in Parion (Hsch. s.v. Παριανός, ἐξ ἐπιθέτου Πρίαπος).

Parion struck electrum coins of the Gorgoneion type from C5e (Head, *HN*² 531; Babelon (1950) 42, with a too early date). In C5e the city also started to strike silver coins. Types: *obv.* Gorgoneion; *rev.* incuse square containing a cruciform pattern: e.g. *BMC Mysia* pl. 21.6, dated to c.500–475 (Price and Waggoner (1975) 84; *SNG Cop. Mysia* 256). C.350–300 (Le Rider (1963) 53–55) Parion struck silver hemidrachms on the Persian standard. Types: *obv.* bull looking back, with various symbols; legend: ΠΑ ΠΙ; *rev.* Gorgoneion (*SNG Cop. Mysia* 257–67). A series of bronze coins may be dated to c.350–300 or later. Types: *obv.* bull; *rev.* the great altar of

Parion built by Hermokreon (*supra*) (Head, *HN*² 531; *SNG Cop. Mysia* 270–71).

757. Plakia (Plakianos) Map 52. Lat. 40.25, long. 28.15. Size of territory: ? Type: A:β. The toponym is Πλακία (Ps.-Skylax 94). The city-ethnic is Πλακία(νός) (*SNG Cop. Mysia* 545), in Ionian Πλακηνός (Hdt. 1.57.3). Plakia is called a *polis* in the urban sense by Ps.-Skylax 94. The collective use of the city-ethnic is attested internally in abbreviated form on C4 coins (*infra*) and externally by Hdt. 1.57.3.

Plakia is placed in Phrygia by Ps.-Skylax 94, in the Hellespontine region by Steph. Byz. 525.14. Describing the coast from west to east, Pompon. 1.98 and Plin. *HN* 5.142 mention Plakia as an *oppidum* after Kyzikos (no. 747) and before the river Rhyndakos, and they also write that the Mt. Olympos was behind it (*a tergo*). Consequently, Plakia has tentatively been located at Kurşunlu (Turkish name), halfway between the isthmus of Kyzikos and the mouth of the river Rhyndakos (Philippson (1913) map 3; Schmidt (1950)).

Plakia is described by Herodotos as a semi-barbarian community in which Pelasgians lived side by side with Athenians (1.57.2) (cf. Dion. Hal. *Ant. Rom.* 1.29). In Ps.-Skylax 94 Plakia is listed under the heading πόλεις Ἑλληνίδες *αἰδε*. Herodotos' account implies that Plakia, in so far as it was a Hellenic community, was an Athenian foundation. Plakia may have been incorporated into Kyzikos, the end of the local coinage being a *terminus post quem*.

Plakia introduced into the region the worship of Kybele under the name of Μήτηρ Πλακισιανή. The head of the goddess, sometimes turreted, appears on the obverse of the small bronze coins dated to C4. The reverse has the legend ΠΛΑΚΙΑ or ΠΛΑΚΙ or ΠΛΑ and a lion to r., or a lion's head, or a walking bull (Imhoof-Blumer (1871) 375–76; Head, *HN*² 537; *SNG Cop. Mysia* 543–45).

758. Priapos (Priapenos) Map 52. Lat. 40.25, long. 27.20. Size of territory: probably 2 or 3. Type: A:a. The toponym is Πρίαπος (Thuc. 8.107.1; *IG* I³ 77.IV.9), ὁ (Strabo 13.1.4, 11) or ἡ (Strabo 13.1.14; Steph. Byz. 535.3). The city-ethnic is either Πριαπηνός (*SNG Cop. Mysia* 548 (C3); *IG* XII.8 184.5 (C1)) or Πριαπέυς (*IG* I³ 261.IV.11). Priapos is called a *polis* in the urban sense at Ps.-Skylax 94, where πόλις ἐστὶ Πρίαπος is listed under the heading πόλεις Ἑλληνίδες *αἰδε*. The only attestation of *polis* in the political sense is at Arr. *Anab.* 1.12.7 (r334). The collective use of the city-ethnic is attested internally on coins (*SNG Cop. Mysia* 548 (C3)) and externally in the Athenian tribute lists (*IG* I³ 261.IV.11). The only attestation of the individual and external use is in a C1 list of *mystai* from Samothrake (*IG* XII.8 184.5).

Ps.-Skylax 94 lists Priapos among the *poleis* in Phrygia, whereas Strabo 13.1.4, quoting Eudoxos, states that the region of Troas begins at Priapos. Priapos is located at modern Karabiga (Turkish name), north-west of the mouth of the river Granikos = modern Kocabaş Çayı. Lehmann-Haupt (1918) 429–31 and Leaf (1923) 73–75 reported some ancient remains, especially traces of a harbour at Kale Burun, to be identified with the harbour of Priapos mentioned at Strabo 13.1.12 and 14. Some late inscriptions have been found by chance: Le Bas and Waddington (1870) nos. 1750–51; Legrand (1893) 549–50 no. 45; Lehmann-Haupt (1918) 430; *BE* (1972) 362 (to add some of the monuments belonging to Priapos but included in the Kyzikene *corpus* by Schwertheim (1980): nos. 337, 426, 444, 458; cf. *BE* (1980) 395). The territory was originally contiguous with the territories of Parion (no. 756) and Lampsakos (no. 748) (Strabo 13.1.11) to the west, and to Kyzikos (no. 747) to the east (Strabo 12.4.6; cf. 13.1.11).

According to the traditions paraphrased by Strabo 13.1.12, Priapos was founded either by the Milesians (no. 854) contemporaneously with Abydos (no. 765) and Prokonnesos (no. 759), or by Kyzikos (no. 747). The synchronism with Abydos and Prokonnesos suggests a date of C7e.

Priapos joined the Delian League, presumably from the beginning. It belonged to the Hellespontine district and is recorded in the tribute lists from 454/3 (*IG* 1³ 259.11.13) to 428/7 (*IG* 1³ 283.11.17–18) a total of thirteen times, once completely restored, paying in all years a *phoros* of 500 dr. (*IG* 1³ 266.1.18). It was presumably assessed for tribute in 425/4 (*IG* 1³ 71.111.97). It is recorded sometimes by toponym (*IG* 1³ 266.1.18) and sometimes by city-ethnic (*IG* 1³ 261.1v.11). Priapos was involved in some war operations at sea in 411 (Thuc. 8.107.1). It fell to Persia by the King's Peace of 386/7, and in 334 it willingly opened its gates to Alexander the Great (Arr. *Anab.* 1.12.7).

The city is called after its patron divinity Priapos (Strabo 13.1.12), whose cult was originally limited to the Propontis (Herter (1954) 1914; L. Robert (1979) 263–64), and Priapos constitutes a rare case of the toponym being identical with, and not derived from, the name of the god (Herter (1954) 1915).

759. Prokonnesos (Prokonnesios) Map 52. Lat. 40.35–40, long. 27.30–45. Size of territory: 3 (110 km²). Type: A:a. The toponym is *Προκόνησος*, ἡ (Hdt. 4.14.2; Dem. 18.302; *IG* 11² 10113 (C4)), the name of the city being identical with that of the island (Ps.-Skylax 94). The city-ethnic is *Προκοννήσιος* (*IG* 1³ 1508.4 (C6m) from Sigeion; *I.Lampsakos* 26.2 (C4)).

Prokonnesos is attested as a *polis* both in the political sense (Hdt. 4.15.1) and in the urban sense (Hdt. 4.14.2; Ps.-Skylax 94, where πόλις *Προκόνησος* is listed under the heading πόλεις *Ἑλληνίδες αἰδε*). For the political sense, see also Hdt. 4.138.1: *Μητροδώρος Προκοννήσιος* in a list of tyrants with the heading ἕκαστος αὐτῶν τυραννεύει πόλιος (4.137.2). The collective use of the city-ethnic is attested internally on the coins (*infra*) and externally in a reference to the Prokonnesioi as Athenian allies (Dem. 50.6). For the individual and external use, see the Ionian–Attic monument from Sigeion (*IG* 1³ 1508.4 (C6m)) and the Prokonnesian attested in the Karthaian list of *proxenoi* (*IG* 11.5 542.57 (C4m)).

The city is located on Marmara island (Mermeradası in Turkish), north-west of the Kyzikene peninsula. Strabo 13.1.16 makes a distinction between ancient Prokonnesos (which could be the island of Halone, in front of Kyzikos: Frisch (1983) 50) and contemporary Prokonnesos. The ancient urban centre (not recorded in *Barr.*) was in the south-west part of the island (Danoff (1974) 560).

The territory of Prokonnesos comprised the whole island (Gedeon (1895); Hasluck (1909) 9–13; Danoff (1974) 560; L. Robert (1978) 327–28) and was famous for its marble (Strabo 7 fr. 55, 13.1.16). The remains of the quarries—described by Texier (1862) 161–62, Hasluck (1909) 11–13 and Holbach (1909)—are now meticulously researched by N. Asgari (Mitchell (1990) 88–89, (1999) 129–30). In C4f Prokonnesos controlled a neighbouring island called Elaphonnesos (Ps.-Skylax 94). According to later authors, Elaphonnesos and Prokonnesos were the same island (Danoff (1974) 560).

Prokonnesos was founded by the Milesians (no. 854) contemporaneously with Priapos (no. 758) and Abydos (no. 765) (Strabo 13.1.12). For various etymologies of the toponym, see schol. Ap. Rhod. 2.279. Prokonnesos may indeed belong to the first stage of Milesian colonisation of the Propontis together with Abydos and Priapos, both founded c.670 (Loukopoulou (1989) 46, 48; Ehrhardt (1988) 38 suggests a date close to that of Kyzikos' foundation, C7e).

Under Persian control after 547, Prokonnesos was in c.513 ruled by Metrodoros, recorded among the Hellespontine tyrants at Hdt. 4.138.1. The city took part in the Ionian Revolt and was burnt by the Phoinikian fleet in 493 (Hdt. 6.33.2). At an unknown date it joined the Delian League. It belonged to the Hellespontine district and is recorded in the tribute lists from 452/1 (*IG* 1³ 261.1v.17) to 418/17 (*IG* 1³ 287.11.14) a total of fourteen times, paying in all years a *phoros* of 3 tal. (*IG* 1³ 271.1.33). It was perhaps assessed for tribute in 425/4 (*IG* 1³

71.III.103, completely restored). Prokonnesos remained loyal to Athens during the Peloponnesian War, and in 410 Alkibiades used its harbour as his base for the operations leading to the battle of Kyzikos (Xen. *Hell.* 1.1.13, 18–20). Persian domination after the King's Peace in 387/6 is to be assumed, but in 362 the Prokonnesians are once again attested as allied with Athens (Dem. 50.5). After a war with Kyzikos (no. 747) in 362/1, Prokonnesos was conquered, and some citizens were moved to Kyzikos (Dem. 50.5; Paus. 8.46.4; cf. Moggi, *Sin.* 341–44), but Prokonnesos was not destroyed (L. Robert (1967) 17–18), and in 340 it appears as an ally of Athens in the war against Philip of Makedonia (Dem. 18.302). Also *Προκοννήσιοι*, i.e. citizens of Prokonnesos, are attested in the Hellenistic period (*SEG* 30 551.3, 34 604 (C3); see L. Robert (1967) 19–21). Prokonnesos was probably allowed to persist as a dependency of Kyzikos, i.e. as a dependent *polis*. A citizen of Prokonnesos was appointed *proxenos* by Karthaia (no. 492) in C4m (*IG* XII.5 542.57).

Some names derived from Apollo may suggest that the patron deity was Apollo, as in other Milesian colonies (Ehrhardt (1988) 40). The cult of Kybele is attested by Paus. 8.46.4: having conquered Prokonnesos, the Kyzikenes moved the cult statue (*ἄγαλμα*) of Mother *Dindymene* (i.e. Kybele) from Prokonnesos to Kyzikos.

The coinage of Prokonnesos (Head, *HN*² 537–38) has been redated by Thompson (1965) and subdivided into four series. (1) C.450–425, denomination: silver hemiobols on the Persian standard. Types: *obv.* forepart of a horse; *rev.* oinochoe within an incuse square. (2) C.411–387/6, denomination: silver hemidrachms on the Persian standard. Types: *obv.* different types of female head to l, presumably Aphrodite; *rev.* oinochoe; legend: *ΠΠΟΚΟΝ*. (3)–(4) After c.387/6 on the Rhodian standard. (3) Denominations: tetradrachms, drachms and fractions; small fractions in bronze. Types: *obv.* female head, r.; *rev.* stag or stag's forepart (silver), or oinochoe, or dove; legend: *ΠΠΟΚΟΝ*, names of magistrates except on smaller bronze coins. (4) Denominations: hemidrachms, trihemiobols and small bronzes of the same basic types, but without names and subsidiary symbols. The date of the last coinage is given by the incorporation of Prokonnesos into Kyzikos (*SNG Cop. Mysia* 551–58).

760. Pythopolis (Pythopolites) Map 52. Lat. 40.25, long. 29.25. Size of territory: ? Type: B:? The toponym is *Πυθόπολις* (Arist. *Mir. ausc.* 834^b34; Menekrates (*FGrHist* 701) fr. 1). The city-ethnic is *Πυθοπολίτης* (*IG* I³ 77.IV.7).

The toponym as well as the membership of the Delian League suggest that Pythopolis was originally a *polis*, but at Arist. *Mir. ausc.* 834^b34 it is classified as a *kome*. The presumption is that the *polis* Pythopolis was subdued by Kios (no. 745) and turned into a civic subdivision.

Ps.-Aristotle locates Pythopolis on the Askanian lake (= İznik Gölü), 120 stades from Kios, and considers it a “village”, apparently a second-order settlement in the territory of Kios. According to Menekrates (*FGrHist* 701) fr. 1, it was close to the river Soloeis. A combination of these two sources suggests a location at the village of Sölöz, on the south shore of İznik Gölü (Corsten (1987) 148–49).

The Pythopolitai are recorded among the Hellespontine members in the Athenian assessment decree of 422/1 (*IG* I³ 77.IV.7), and the city-ethnic is restored in the assessment decree of 425/4 (*IG* I³ 71.III.117). Thus, the Athenians claimed that they were members of the Delian League.

According to Menekrates (*FGrHist* 701) fr. 1, Pythopolis had been founded by Theseus and named after the Pythian Apollo.

761. Skylake Map 52. Lat. 40.25, long. 28.25. Size of territory: ? Type: C:β. The toponym is *Σκυλάκη* (Hecat. fr. 218; Hdt. 1.57.2). The only attestation of a city-ethnic is at Steph. Byz. 579.4. Quoting Hekataios, Steph. Byz. 579.3–4 states that Skylake was a *polis* near Kyzikos: *Σκυλάκη. πόλις περι Κύζικον. Ἐκαταῖος Ἰσίδ.* There is no reason to doubt the location, but we have no guarantee that the site-classification stems from Hekataios (Hansen (1997) 17–18). Thus, the main reason for including Skylake in this Inventory of *poleis* is the analogy with Plakia (no. 757): like Plakia, Skylake is described by Hdt. 1.57.2 as a semi-barbarian community in which Pelasgians lived side by side with Athenians. Herodotos' account implies that Skylake, in so far as it was a Hellenic community, was an Athenian foundation.

From the information provided by Steph. Byz. 579.3–4, Pompon. 1.98, Plin. *HN* 5.142, and Valerius Flaccus, *Argonautica* 3.34–36, we must presume that Skylake was situated near Plakia at the mouth of the river Rhyndakos (Lolling (1882) 152 n. 2). Philippson (1913) map 2 located Skylake at Yeni Köy, on the coast, c.12 km west of the mouth of the Rhyndakos. The city seems to have disappeared very early (Bürchner (1927)), and was presumably integrated into Kyzikos (no. 747).

762. Sombia Map 52. Unlocated. Not in *Barr.* Type: B:? The toponym is *Σομβία, ἡ* (*IG* I³ 285.II.86).

Sombia was a member of the Delian League. It belonged to the Hellespontine district (*IG* I³ 287.II.21) and is recorded

in the tribute lists in 428/7 (*IG* 1³ 283.ii.23), in 421/0 (*IG* 1³ 285.ii.86) and in 418/17 (*IG* 1³ 287.ii.21), paying a *phoros* of 4,000 dr. (*IG* 1³ 285.ii.86, amount partly restored). It was assessed for tribute in 425/4 (*IG* 1³ 71.iii.113, partly restored) and in 422/1 (*IG* 1³ 77.iv.3) for 4,000 dr.

The position of Sombia in the lists strongly suggests that, within the Hellespontine district, it was located somewhere in the Propontis, rather than in Troas or Chersonesos. Further specification is impossible. In the assessment decrees Sombia is listed together with communities lying on the south coast (Tereia (no. 763), Artaiou Teichos (no. 735), Otenoi (no. 754)), but in the tribute lists it is placed among communities, some of which were on the north coast (Daunion Teichos, Serrion Teichos and Perinthos) and some on the south coast (Myrleia and, probably, Didymon Teichos). The evidence slightly favours a position on the south coast, but is—strictly speaking—inconclusive. So a location on the north coast is equally possible.

763. Tereia Map 52. c.Lat. 40.25, long. 28.45, unlocated in *Barr.* Size of territory: ? Type: C: ? *Τηρεία* is recorded among the Hellespontine members in the Athenian assessment decree of 425/4 (*IG* 1³ 71.iii.111–12: [*Τ*]ερεία παρὰ [*Βρ*]ύλλιον), and the toponym is restored in the assessment decree of 422/1 (*IG* 1³ 77.iv.1–2). Thus, the Athenians claimed that Tereia was a member of the Delian League. According to the evidence of the assessment decree, Tereia was situated east of Kyzikos near Myrleia and must accordingly be different from the Tereia mentioned by Strabo at 12.4.6 as lying west of Kyzikos (*ATL* i. 476; Charneux (1966) 211–12).

764. Zeleia (Zeleites) Map 52. Lat. 40.15, long. 27.35. Size of territory: ? Type: A: ? The toponym is *Ζέλεια* (*Il.* 2.824; Dem. 9.43; *IG* 1³ 271.ii.38). The city-ethnic is *Ζελείτης* (*IG* 11² 8526.1 (C48)). Zeleia is called a *polis* in the urban sense in the local decree *SGDI* 5532 = *Syll.*³ 279.25, and in the political sense in the same inscription (15, 19, 39) and in *SGDI* 5533a–b, d–e (both from c.334). In both inscriptions are attested the cognate terms *politai* (*Syll.*³ 279.3, 7, 28) and *politeia* (*SGDI* 5533a–d). The collective and internal use of the city-ethnic is attested on coins (*infra*), the external sense in Arr. *Anab.* 1.17.2 (r334). For the individual and external use, see the references to Ἀρθμιος Πυθώνακτος Ζελείτης (Dem. 9.42–43; Aeschin. 3.258; Din. 2.24; cf. Meiggs (1972) 508–12).

Strabo locates Zeleia 190 stades from Kyzikos and 80 stades from the sea (13.1.10), at the foot of Mt. Ida (13.1.5, 33), which was for him rather a mountain range separating Troy

from Mysia (Texier (1862) 41). The site has been identified with Sari Köy (Turkish name), on the Sari Çayı, a left-bank tributary of the river Aisepos (= Gönen Çayı): Philippon (1910) map 1; Hasluck (1910) 101–3; Leaf (1923) 66–67; *ATL* i. 488.

No reliable reconstruction of the extent of Zeleia's territory can be obtained from Strabo's contradictory accounts at 12.4.6, 13.1.10, 17, 45. For an attempt, see Haussoullier (1902) 107–8.

Nothing certain is known about the foundation of Zeleia. It was not a Milesian colony (Bilabel (1920) 47–49; Ehrhardt (1988) 38). Early Ionian Hellenisation of a pre-existing settlement is sometimes presumed (Bilabel (1920) 49; cf. L. Robert (1967) 122; Herrmann (1981) 17 n. 48). At an unknown date in C5 Zeleia began to collaborate with Athens, at least through one of its citizens (Meiggs (1972) 508–12), and in 441/40 the city occurs once in the tribute lists among the Hellespontine members ([*Ζέ*]λεια: *IG* 1³ 271.ii.38). The toponym is completely restored in the assessment decree of 425/4 (*IG* 1³ 71.iii.102). Under Persian domination from, at latest, the King's Peace of 387/6, Zeleia supported the Persians against Alexander the Great in 334 but obtained an amnesty from the conqueror (Arr. *Anab.* 1.17.2). Some decrees passed in the wake of the battle of Granikos testify to a democratic constitution (*infra*). Finally, like many other settlements in the region, Zeleia was eventually subdued by Kyzikos (no. 747) (Strabo 13.1.5; cf. 12.4.6, 13.1.10) and, probably, turned into a fort (*φρούριον*) in the Kyzikene territory (cf. Steph. Byz. 295.7).

Almost all information about institutions, officials, cults and calendar stems from two inscriptions (*SGDI* 5532 = *Syll.*³ 279 = Michel 530 and *SGDI* 5533 = Michel 531) connected with the establishment of a democratic regime after 334 (cf. Lolling (1881), (1884) 58–60). They attest a popular assembly called *δήμος* (5532.1, 5533b–f), an *ἐπιστάτης* (5532.1, 5533b–e), the “officials” (*ἄρχοντες*: 5532.22, 33, 38), *δικασταί* and *σ[υ]νήγοροι* (5532.27, 30–32; see also *ψήφισμα*: 11, 26, 34; *γνώμη*: 13). *SGDI* 5532 and 5533f concern the regulation of the possession of public land (cf. *δημόσια χωρία*: 5532 *passim*). The reference to land belonging to exiles testifies to a *stasis* in connection with the change of constitution (*τὰς γέας τῶμ φυγάδων*: 5533f). The decrees *SGDI* 5533a–c grant *politeia*, *ateleia* and *proedria* to foreigners; 5533d grants *politeia*, land, *ateleia* and *proedria* to an inhabitant of Zeleia; while 5533e grants land (as above), *ateleia* and *proedria* to a Zeleian citizen. Of the foreigners honoured, one is a *proxenos* of Zeleia in Eresos (no. 796) (5533c) and one is from Thourioi (no. 74) (5533b).

SGDI 5532 mentions the acropolis of the city (6–7), the sanctuary of Apollo Pythios (36–37) as well as other public sanctuaries (38). Strabo 13.1.13 mentions that there had once been an oracle (*μαντείον*) in Zeleia, probably to be connected with the cult of Apollo Pythios. A public oath invoking Artemis (*SGDI* 5532.10, 32) as well as coin types (*infra*) testify to a cult of Artemis. From *SGDI* 5532.17, 23–24 are known

the names of three months of the local calendar: *Ἡραῖος*, *Κεκρωπώσι[ι]ος* and *Ἀκάταλλος* (Samuel (1972) 131). The two last are not known from other *poleis*.

Zeleia struck bronze coins in C4s. *Obv.* head of Artemis, wearing *stephanos*; *rev.* stag standing or symbol; legend: *ZEAE* (Head, *HN*² 550; *SNG Cop. Troas* 501–4).

TROAS

STEPHEN MITCHELL

I. The Region

The *Troas* is the name given by modern scholars to the north-west region of Asia Minor. It is called ἡ Τρωάς (Hdt. 5.26.1), but this name was also applied to the city of Alexandria, which was founded at the end of C4 from a synoecism of the communities of Kolonai, Larisa, Chrysa, Hamaxitos, Neandreaia, Kebren and Skepsis (*I.Alexandria Troas* 4–8). So Phaidimos, an Olympic victor of 200 from Alexandria, was referred to as Αἰολεὺς ἐκ πόλεως Τρωάδος (Paus. 5.8.11), a designation which combined a mention of his ethnic origin with that of his place of residence. The ethnic Τρωαδεὺς was applied in particular to inhabitants of this city (*I.Alexandria Troas* 3–4). In Antiquity the boundaries of the Troad were not firmly fixed, and the ancient authorities give varying information about its geographical extent. Strabo 13.1.4 summarises earlier opinions. According to Hom. *Il.* 2.825, the eastern boundary was the river Aisepos, while Eudoxos of Knidos (fr. 7–8, Gissinger) set this limit at Priapos (modern Karabiga) and Artake (modern Erdek). Damastes (*FGrHist* 5) fr. 9 reckoned that the territory extended from Parion to Cape Lekton, while Charon of Lampsakos (*FGrHist* 262) fr. 13 placed the limits at the river Praktios and at Adramyttion. Skylax, cited by Strabo and followed by Ps.-Skylax 95, indicated that the Troad began at Abydos, but extended only as far as Hamaxitos, while the southern coastline as far as Antandros belonged to Aiolis (Ps.-Skylax 96). Xenophon in *An.* 5.6.23 also assigned the inland cities of Kebren, Skepsis and Neandreaia to Aiolis, and in *Hell.* 3.1.15–18 deemed Gergis, Ilion and Kokylion to be Aiolic, but it is clear that this is partly for the reason that these places belonged to the Persian satrapy of Aiolis, controlled by Pharnabazos (*Hell.* 3.1.10; cf. Winter (1994) 4–6). Ephor. fr. 163 indeed reckoned the entire coastline from Abydos to Kyme to be part of Aiolis. Herodotos, on the other hand, described Antandros as being in the Troad (5.26.1). The term Aiolic may be applied to settlements in north-west Asia Minor not on narrowly geographical grounds, or with reference to the

political conditions of the Persian Empire, but in recognition of the ethnic or tribal origins of the inhabitants (Ruge (1939) 526). Thus the label of Aiolic city was given even to Ilion, located at the actual site of ancient Troy (Xen. *Hell.* 3.1.16). Modern scholarship has tended to follow the definition set by Charon of Lampsakos, and assign to the Troad the coastal cities of the Hellespontos, of the Aegean coast from the Sigeion promontory to Cape Lekton, and along the north side of the Gulf of Adramyttion as far as Antandros and Astyra. The Troad also included the inland communities within this geographical definition, especially in the basin of the river Skamandros north of Mt. Ida.

The sources make clear that the Troad had an indigenous population, some of whose settlements were clearly identified as such by Greek writers. These include Antandros, which Hdt. 7.42.1 calls Pelasgian: Ἀντανδρος ἡ Πελασγίς. Homer mentions the tribes of the Pelasgians that inhabited Trojan Larisa (*Il.* 2.841). Assos and Gargara were occupied by Lelegians. Gergis or Gergithe seems effectively to have been a barbarian *polis*, inhabited by what Hdt. 5.122.2 refers to as οἱ ὑπολειφθέντες τῶν ἀρχαίων Τευκρῶν, the descendants of the ancient people of Troy. A passage of Xenophon implies that the population of Skepsis also included an indigenous element, who were incorporated as free citizens within the *polis* (Xen. *Hell.* 3.1.21).

The Troad received Greek colonies. Several of its cities are said to have been colonised from the island of Lesbos: Tenedos was settled from Lesbos (Hdt. 1.151.1–2), Achilleion specifically from Mytilene (Strabo 13.1.39), and Assos probably from Methymna (Strabo 13.1.58). There is probably no truth in the supposition that Arisbe was connected with the homonymous settlement on the island of Lesbos, since it is more reliably identified as a Milesian foundation (Strabo 14.1.6). Assos in turn created a sub-colony at Gargara (Strabo 13.1.58). Ilion, Kolonai, Lamponia, Neandreaia and Antandros are simply said to be Aiolic cities, but Kebren was founded specifically by Kyme. Abydos (Thuc. 8.62.1) and Arisbe, which was incorporated into Abydan territory (Polyb. 5.111.5), were Milesian foundations, probably of C7.

Dardanos (settlers unknown) and Rhoiteion, founded by Dorians from Astypalaia (Strabo 13.1.42), were other new coastal settlements of C7–C6. Sigeion is reported to have been established by the Athenian Physkon at the end of C7 (Strabo 13.1.38). Athenian control was contested by the Mytilenians in early C6 but was consolidated under the Peisistratid tyrants.

There were twenty-nine attested *poleis* of the Archaic and Classical periods in the region of the Troad. The sites of only five of these—Abydos, Assos, Dardanos, Ilion and Sigeion—are guaranteed by the firmest criterion, the discovery of an inscription naming the city at the site itself. All the other cities listed in the Inventory below have been identified by other less certain arguments with appropriate archaeological sites, but the location of several, notably Gentinos and Berytis, should be reckoned as highly uncertain.

1. Pre-Hellenistic Settlements not Attested as Poleis

At least thirteen further named settlements existed in the Troad during this period, and in each case there are some grounds for believing that they may have been recognised as *poleis*. Of these only Achaiion and Palaiperkote have been identified with reasonable confidence, while the other locations are at best tentative. These other settlements are as follows.

Achaiion (Ἀχαιίον) Ps.-Skylax 95 identifies an ἀκρωτήριον Ἀχαιίον. This reading derives from an emendation by Leaf (1911–12) 299 of the MS κρατήρες Ἀχαιίον. Strabo 13.1.46 calls the place τὸ Ἀχαιίον and refers to it as a πόλισμα (13.1.47). The site, called Han Tepe (Cook (1973) 196), has been located at Kum Burnu (“sandy promontory”) by Leaf (1923) 168. Achaiion was part of the Tenedian *peraia* (Strabo 13.1.44, 46, 47), adjoining Achilleion on the north and Larisa on the south. It was next to the city of Alexandria. The ethnic Ἀχαιτῶν is attested on C2 bronze coins: *obv.* head of Zeus, or Artemis the huntress; legend: Ἀχαιτῶν or Ἀχαιτ(ῶν); or *obv.* head of Apollo; *rev.* tripod; legend: ΑΧΑΙ arranged in a square. Imhoof-Blümer (1915) 103–4 attributed these coins to Achaiion and suggested that the C4 bronze coins with the monogram ΑΧ, normally attributed to Achilleion, might also have been issued by the city (cf. L. Robert (1951) 8–9 n. 2). *Barr.* AC.

Aianteion (Αἰαντεῖον) A harbour settlement called Aianteion is reported by Plin. *HN* 5.125 to have been founded by the Rhodians at the site where the hero Aias was

buried. An Athenian inscription of c.375 mentions an Athenian expedition in the area commanded by Chabrias: [οἱ στρατιῶται οἱ ἐν τῷ Αἰ]αντε[ί]ω τῷ ἐν Ἑλλησπό]ντω σ[υμμαχ]εσά[μενοι] (Burnett and Edmonson (1961) 80). The harbour existed in the Roman Imperial period up to AD 324 (Philostr. *VA* 4.13; Zos. 2.23–24). The site has been located at Tek Top by Cook (1973) 86–87. *Barr.* 56, C.

Chrysa (Χρύση) Plin. *HN* 5.132 mentions Chrysa as a *civitas* which had once existed in the area where the Sminthion still stood. A C2(?) Hellenistic inscription set up in the Sminthion implies the presence of a garrison and mentions [τοὺς] ἐν Χρύσηι πολέϊτας (*I. Alexandria Troas* 4), but we should understand that these were citizens not of Chrysa as an independent *polis*, but of Alexandria Troas. No pre-Hellenistic remains have been noted at the site, and it may have succeeded Hamaxitos, which was occupied until the end of C4 (Cook (1988) 15). *Barr.* AC.

Kremaste (Κρεμαστή) According to Xen. *Hell.* 4.8.37, this place lay beside a plain in the territory of Abydos and was associated with gold mines. Cook (1973) 290 argues that it was located at Gavrur Hisar, in the valley of the river Rhodios. *Barr.* 51, C.

Marpessos (Μάρπησος) Paus. 10.12.3 mentions the former *polis* Μάρπησος ἐν τῇ Ἰδῆ τῇ Τρωικῇ, which has tentatively been located at Damkale (Zerdalılık) by Cook (1973) 281–82. In Pausanias’ time there were sixty inhabitants in its ruins. Lactantius (*Div. inst.* 1.6.12) says that it was a *vicus* of Gergis. It was the legendary home of the sibyl Herophile, whose cult was adopted by the city of Gergitha, to which Marpessos belonged (C. Robert (1887) 454ff). See Leaf (1923) 106; Cook (1973) 280–82. *Barr.* C.

Miletos Plin. *HN* 5.122 mentions Miletos as an extinct settlement in Mysia (see Ruge (1932)). It has been located in the neighbourhood of Adramyttion, possibly at the crossing of the river Euenos. It may therefore belong to Aiolis, not the Troad. *Barr.* 56, AC.

Palamedium, Polymedia (Πολυμήδειον) Plin. *HN* 5.132 names an *oppidum Palamedium* and a *civitas* called Polymedia as settlements in the Troad. They may be identical with one another, and Polymedia is certainly to be identified with Polymedeion, a *chorion* which Strabo situated between Lekton and Assos (13.1.51). On the basis of this information editors have restored the name Π[αλαμέδειον] in the

Athenian tribute assessment document of 424/3 (*IG* 1³ 71.III.136). *Barr.* 56, AC.

Pedasos (*Πήδασος*) Strabo 13.1.59 refers to a *polis* called Pedasos, which had once been inhabited by the Leleges in the region of Assos and Gargara, but which was now abandoned. This may, however, be an alternative or previous name for the settlement of Assos itself. *Barr.* unlocated, only H.

Pityeia (*Πιτυεία*) One of the toponyms listed in Ps.-Skylax 97 after the heading *Αιολίδες πόλεις . . . ἐπὶ θαλάττῃ*, with Kebren, Neandria and Skepsis (MS *πετίεια*, conj. Voss). Strabo 13.1.44 refers to places called Zeleia and Pityeia, apparently in the mountain country north-east of Skepsis. The place is not to be identified with Pitya, which Strabo 13.1.15 says was in the territory of Parion, between Parion and Priapos (Ruge (1939) 560). Not in *Barr.*

Polion, Polisma (*Πόλιον, Πόλισμα*) People of Astypalaia, from their new settlement of Rhoiteion on the Hellespontos, founded a further colony called *Πόλιον*, which was renamed *Πόλισμα* in Strabo's day. This was destroyed soon after its foundation and the land assigned to Rhoiteion or Sigeion, but it was resettled in C6 under the Lydians and recovered its territory. It possessed a sanctuary, but Strabo denies that it was a city, although its population gradually increased thereafter (Strabo 13.1.42). Not in *Barr.*

Skamandra (*Σκάμανδρα*) Plin. *HN* 5.124 refers to a place called *Scamandria*, and an inscription from Ilion may refer to its inhabitants as οἱ ἐν Σκαμάνδροις (*I. Ilion* 63.3, 5, 25 (C2–C1)). Steph. Byz. 573.12 has *Σκάμανδρος, ποταμὸς Τροίας, ἀπὸ Σκαμάνδρου* and provides the ethnics *Σκαμάνδριος, Σκαμανδριανός, Σκαμανδριήνος*. Since the phrase *ἀπὸ Σκαμάνδρου* should refer to the famous river, the previously mentioned *Σκάμανδρος* cannot itself be the river, and the word *ποταμὸς* in this entry is surely a mistake for *πόλις*. This inference is also implied by the assortment of ethnics. In the Hellenistic period it may have been a *polis*, since its inhabitants were parties to a treaty with Ilion. Coins of Skamandria were identified by Imhoof-Blümer (1901) 42–44; cf. Head, *HN*² 548. But it is uncertain whether these coins attributed to Skamandra in fact belong to Skepsis; see L. Robert (1966) 98–103. The bronze types which have been attributed to Skamandra are the following. (1) C4: *obv.* nymph, *ΙΔΗ*; *rev.* fir tree, pine cone; legend: *ΣΚΑ*. (2) C3: *obv.* head of Apollo; *rev.* naked Apollo with bow, boar's head, or fir tree; legend: *ΣΚΑ*. See further Cook (1973) 254–56. *Barr.* C.

Sminthion (*Σμίνθιον*) The sanctuary of Apollo Smintheus, which lay close to the site of Chrysa on the territory of Hamaxitos (Strabo 13.1.48). The cult of Apollo Smintheus is mentioned by Homer (*Il.* 1.37–39) and is widely attested on coins of cities in the Troad. The great temple of Apollo Smintheus, whose foundations have been excavated, dates to the middle Hellenistic period (Rumscheid (1995)), but it doubtless stood above an earlier structure. A terracotta antefix of C5 is reported from the site (Mitchell (1999) 139). *Barr.* 56.

Thymbra (*Θύμβρα*) Hom. *Il.* 10.430 refers to *Θύμβρη*; compare *Θύμβρα πόλις Τρωάδος, Δαρδάνου κτίσμα* in Steph. Byz. 319.17; Strabo 13.1.35 mentions *τὸ πεδίον ἢ Θύμβρα* and the ethnics *Θυμβραῖος* (applied to the cult of Apollo Thymbraios, Strabo 13.1.35) and *Θύμβριος* (applied to the river). No city site has been certainly located, but Strabo's Thymbrian plain was south of Ilion, around the confluence of the Thymbrios and the Skamandros, which was the site of the sanctuary of Apollo Thymbraios. Cook (1973) 117–23 reports in detail on local finds around the now deserted village of Akça Köy. The presence of an important Archaic and Classical cemetery is consistent with the location of a *polis* here. Thymbra was supposedly assessed for tribute to the Delian League in 425/4 on the basis of a doubtful reading of the initial letter of the name (*IG* 1³ 71.III.134). Head, *HN*² 550 attributed to Thymbra C4 bronze coins. Types: *obv.* head of Zeus Ammon, or Athena; *rev.* rays of star, or torch in olive wreath; legend: *ΘΥ*. Cook (1973) 117–23 suggested that these coins may have been issued by a community in southern Aiolis. *Barr.* AC.

All of these cities may have been *poleis* in the Archaic and Classical periods.

II. The *Poleis*

765. Abydos (Abydenos) Map 51. Lat. 40.10, long. 23.15. Size of territory: 4. Type: A:a. The toponym is *Ἄβυδος, ἦ* (Hdt. 9.114.2; Thuc. 8.62.3; *I. Knidos* 603.12 (C4f)); the city-ethnic is *Ἄβυθενός* (*IG* 1³ 264.IV.10), or *Ἄβυδηνός* (Hdt. 7.44; *I. Knidos* 603.4; Head *HN*² 538–39).

Abydos was founded in C7e from Miletos (Thuc. 8.61.1). It is called a *polis* in the urban sense by Hdt. 5.117.1 and Xen. *Hell.* 4.8.5, and in the political sense by Xen. *Hell.* 4.8.36. In Ps.-Skylax 94 Abydos is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες αἰδε*. By implication Abydos is

called a *polis* in the territorial sense at Hdt. 7.43.2, and is called an *asty* by Xenophon at *Hell.* 4.8.39.

The earliest collective external use of the city-ethnic is in the Athenian tribute lists between 454/3 and 429/8 (*infra*) and the earliest collective internal use is on C5f coins (*infra*). The external individual use is found in Hdt. 4.138.1; *IG* I³ 1340 (425–400); *IG* II² 49 (C4e).

The name of territory was ἡ τῶν Ἀβυδηνῶν χώρα (*Xen. Hell.* 4.8.6; cf. Hdt. 7.95.2) or ἡ Ἀβυδηνή (*Xen. Hell.* 4.8.35). It included gold mines mentioned by Kallisthenes ((*FGrHist* 124) fr. 54.12); *Xen. Hell.* 4.8.37 implies that these were in the plain near Kremaste. Xerxes mustered his troops along πάσας τὰς ἄκτας καὶ τὰ τῶν Ἀβυδηνῶν πεδία (Hdt. 7.45). The territory extended to Dardanos on the south-west (Hdt. 7.43.2) and as far as Astyra, which by Strabo's day was incorporated (Strabo 13.1.23). Abydos was a member of the Delian League. It belonged to the Hellespontine district and is registered from 454/3 (*IG* I³ 259.II.29, restored) to 418/17 (*IG* I³ 287.II.25) a total of eighteen times, twice completely restored, paying a *phoros* of sometimes 4 tal. (*IG* I³ 271.II.29), sometimes 6 tal. (*IG* I³ 279.II.17) and sometimes other amounts. It was assessed for tribute in 425/4 (*IG* I³ 71.III.62, restored). It defected from the Delian League in 411 (Thuc. 8.62.1), and Xenophon mentions the presence of a Spartan harmost at Abydos in *Hell.* 3.1.9, 4.8.3, 5 and 32. In *Hell.* 2.1.8 he refers to foot-soldiers of Abydos, and in 4.8.33 to 200 hoplites, 50 of whom were later killed (4.8.39).

Abydos was under the control of a pro-Persian tyrant, Daphnis, in the 520s (Hdt. 4.138.1), and it was one of the Hellespontine cities destroyed by fire by Dareios after his Skythian expedition (Strabo 13.1.22). Five men of Abydos are recorded as *proxenoi* of Athens in *IG* II² 49 (C4e); and Iphiades of Abydos was appointed *proxenos* by Knidos in C4f (*I.Knidos* 603).

Arist. *Pol.* 1305^b33 classes the constitution of Abydos as an oligarchy, in which the magistrates were still chosen by the hoplites and the people. As such it was unstable and liable to upheaval: ἀλλ' αἱ μὲν ἀρχαὶ ἐκ τιμημάτων μεγάλων εἰς τὴν ἑταιριῶν, αἰροῦνται δὲ οἱ ὀπλίται καὶ ὁ δῆμος, ὅπερ ἐν Ἀβύδῳ συνέβαιεν . . . κινῶνται δ' αἱ ὀλιγαρχίαι ἐξ αὐτῶν καὶ διὰ φιλονεικίαν δημαγωγούντων. This oligarchy may be dated to the period after Abydos' defection from Athens in 411. C.360, after a period of *stasis*, the oligarchy was replaced by a new tyranny under Iphiades (Arist. *Pol.* 1306^a26–31; *I.Knidos* 603). The same *stasis*, or another period of *stasis*, is referred to at Arist. *Oec.* 1349^a3–8: a *stasiasmos* led to the land being left uncultivated, and to resident foreigners (μέτοικοι) refusing to

make loans until they had been paid for existing debts. A decree was passed (ἐψηφίσαντο) allowing anyone who wished to provide loans to the farmers, who were to repay their creditors from the first yield of their harvests.

There are few remains of the city. Arist. *Mir. ausc.* 832^b17 mentions a theatre, and the accounts of sieges in C5l and C4 imply that it was fortified (Thuc. 8.62.3; *Xen. Hell.* 4.8.4, 5.1.7).

Abydos struck coins from C6l to C3e. (1) Electrum coinage doubtfully attributed to Abydos, c.500: *obv.* eagle (on hare), dolphin; *rev.* incuse square. (2) Silver, c.480–450, on the Persian standard: denominations: drachm, obol, tritemorion: *obv.* eagle; legend: *ABY* or *ABYΔHNON*; *rev.* Gorgoneion. (3) Gold and silver, 411–387 (under Spartan control): denominations: gold stater, silver tetradrachm, stater, drachm, trihemiobol: *obv.* Nike, or Artemis, or Apollo; *rev.* eagle; legend: *ABY* and magistrates' names. (4) Bronze, c.320–280: *obv.* Apollo, or Artemis; *rev.* eagle; legend: *ABY* (Head, *HN*² 538–39; Robert (1966) 23–25; *SNG Cop. Troas* 1–53).

An external communal dedication at Delphi is recorded in *F.Delphes* III.4 215 (C4l/C3e).

766. Achilleion Map 56. Lat. 39.55, long. 26.10. Size of territory: 1. Type: A: *a.* The toponym is Ἀχιλλήιον, πό (Hdt. 5.94.2) or Ἀχιλλεῖον (MS *Αἰγιαλεῖον*) (Ps.-Skylax 95). The city-ethnics Ἀχιλλεῖωτης and Ἀχιλλεῖτης are recorded by Steph. Byz. 152.14–15, in general of places called Ἀχιλλεῖον.

Achilleion is called a *polis* in the urban sense by Hdt. 5.94.2, when it was used as a base by Mytilenians involved in conflict with the Athenians based in its northern neighbour, Sigeion. In Ps.-Skylax 95 Achilleion is one of the toponyms listed after the heading πόλεις Ἑλληνίδες . . . αἰδε. The name has been restored in the assessment lists of the Delian League in 425/4 (*IG* I³ 71.III.137) and 421 (*IG* I³ 77.IV.23), where it is found in lists of *Aktaiai poleis* that use *polis* in the political sense.

The city walls were reputedly built by the Mytilenians with stones from the ruins of Ilion (Strabo 13.1.39). The site at Beşika Burnu was identified with Achilleion by Cook (1973) 186–88 (accepted by Barr.); at Beşika Burnu are remains of a fortification wall securely dated to C6f (Cook (1973) 186–88; Korfmann (1988) 394–95; Schulz (2000) 11–12).

Achilleion probably minted bronze coins c.350–300; for the attribution, see Imhoof-Blümer (1901) 33–34. However, L. Robert (1951) 8–9 n. 2 pointed out that these coins might also be attributed to Achaiion. *Obv.* helmet, or helmeted

head of Athena; *rev.* the same in wreath; legend: *AX*, monogram (Head, *HN*² 540; *SNG Cop. Troas* 64).

767. Antandros (Antandrios) Map 56. Lat. 39.35, long. 26.50. Size of territory: 4? Type: A:β. The toponym is Ἄντανδρος, ἡ (Thuc. 4.52.3, 75.1; Xen. *Hell.* 1.1.25, *IG* I³ 77.IV.15), Ἄντανδρος ἡ ἐν Τρωάδι γῆ (Hdt. 5.26), Ἄντανδρος ἡ Πελασγίς (Hdt. 7.42.1). The city-ethnic is Ἄντάνδριος (Thuc. 8.108.4; *SEG* 22 191 (C4s)).

Alkaios calls it a *polis* in the political sense (*PLFZ*13), and it is listed, also in the political sense, as one of the *Aktaiai poleis* in *IG* I³ 77.IV.15. At Thuc. 4.52.3 Antandros is called a *polis* twice, first in the urban, then in the political sense; and it is called a *polis* in the urban sense by Thuc. 8.108.4. Xen. *Hell.* 1.1.26 has *politeia*. It is called *πατρίς* by Diod. 13.42.4 (r411). The collective use of the city-ethnic is attested externally by Thuc. 8.108.4, Xen. *Hell.* 1.1.26 and an inscription of C2 (Michel 542), and internally by C5s coins (*infra*). The external individual use of the city-ethnic is found in *SEG* 22 191 (C4s).

Its territory was called ἡ Ἄντανδρία by Arist. *Hist. an.* 519^a16 and later sources. It included shipyards at Aspaneus and a sanctuary of Artemis at Astyra, which is called a *polis* in Ps.-Skylax 98, a *kome* in Strabo 13.1.51, and a *polichne* in Strabo 13.1.65. It belonged to the Troad (Hdt. 5.26), and its tribal affiliation was Aiolic.

Antandros was founded by Aiolians (Thuc. 8.108.4), although later sources alleged a link with Andros, on a spurious etymological basis (Pomponius Mela 1.18; Servius on Verg. *Aen.* 3.6). There are also references to the indigenous population. Hdt. 7.42.1 calls it Ἄντανδρος ἡ Πελασγίς; Alkaios (D. L. Page, *Lyrica Graeca Selecta* fr. 156 *apud* Strabo 13.1.51) refers to a community of Leleges; and Demetrios of Skepsis *apud* Strabo 13.1.51 to a community of Kilikes. It is also said to have been previously occupied by Thracian Edonoi and Kimmerioi (Arist. fr. 483.1).

The city was captured by Otanes, the Persian satrap of the Hellespontine area, c.512 (Hdt. 5.26). It became a member of the Delian League after the Mytilene Revolt from 427, but was betrayed to Mytilenian refugees, who occupied the city before it was recovered in summer 425 (Thuc. 4.52.3, 75.1–2). The toponym is recorded among the *Aktaiai poleis* in the tribute lists of 425/4 (*IG* I³ 71.III.125, restored) and 421 (*IG* I³ 77.IV.15), and Antandros was reckoned to be one of the Ἀκταῖαι πόλεις (Thuc. 4.52.3). In 411/10 it ejected a Persian garrison (Thuc. 8.108.4–5). There is evidence for *sympoliteia* with the Syracusans, who were given *politeia* by the Antandrians in thanks for benefits received in 409 (Xen.

Hell. 1.1.26). It was on the route of the Delphic *theorodokoi* around 200 (Plassart (1921) 8; Cook (1988) 12). In C2 Antandros sent foreign judges to Peltai in Phrygia (Michel 668).

The acropolis is mentioned by Thuc. 8.108.5, and the walls were repaired with Syracusan help in 409 (Xen. *Hell.* 1.1.26). Cults of Antandros include Apollo, who appears as a contributor in a list of *stephanephoroi* of C1 (Michel 668), and Artemis Astyrene, who appears on the coinage.

Antandros struck coins of silver and bronze, c.440–400 and c.400–284. Denominations: triobol, trihemibol, tritemorion. (1) Silver, 440–400: *obv.* Artemis Astyrene; *rev.* goat; legend: *ANTAN*. (2) Bronze, c.440–400: *obv.* Artemis Astyrene; *rev.* lion's head; legend: *ANTAN* or *ANT*. (3) Bronze, c.400–284: *obv.* Apollo; *rev.* lion's head; legend: *ANTAN* (Head, *HN*² 541–42; *SNG Cop. Troas* 213–19).

768. Arisbe (Arisbaios) Map 51. Lat. 40.10, long 26.30, but the exact site has not been localised. Type: B:a. The toponym is Ἀρίσβη, ἡ (Hom. *Il.* 2.836, 6.13, 21.43); Diod. 14.38.3 has Ἀρίσβα. The city-ethnic is Ἀρισβαῖος (*IG* I³ 271.I.23). Arisbe is called a *polis* in the urban sense by Diod. 14.38.3 (r399). Plin. *HN* 5.125 calls Arisbe an *oppidum*, which was still inhabited in his day. By 216 it was part of the territory of Abydos (Polyb. 5.111.5). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* I³ 281.III.38).

The founder of Arisbe was Miletos (Strabo 14.1.6). Steph. Byz. 119.9 reports a foundation story from Ephor. fr. 164 that Arisbe was a Mytilenian foundation, but this seems to be a false inference from the existence of the homonymous Arisba on Lesbos (Strabo 13.1.21; Hdt. 1.151.2). It is not mentioned by Herodotos, Thucydides or Xenophon, although their narratives concern the cities of this region (see Tenger (1994) 147). Arisbe was a member of the Delian League. It belonged to the Hellespontine district and is registered from 453/2 (*IG* I³ 260.IV.16, restored) to 430/29 (*IG* I³ 281.III.38) a total of five times, paying a *phoros* of 2 tal. (*IG* I³ 271.I.23). It was assessed for tribute in 425/4 (*IG* I³ 71.III.63, restored).

769. Assos (Assios) Map 56. Lat. 39.30; long. 26.20. Size of territory: 4. Type: B:a. The toponym is Ἄσσός, ἡ (Xen. *Ages.* 2.26; Ephor. fr. 47). The following forms of the city-ethnic are attested: Ἄσσιος (C5 coins, *infra*; *OGIS* 221.2 (274)), Ἄσσοος (C5 coins), Ἄσσεύς (Steph. Byz. 137.2), Ἐσσιος (*IG* I³ 284.20), ἡέσσιος (*IG* I³ 283.III.16), Ἡσσιος (Krateros fr. 23, Krech).

Assos is not called a *polis* by Archaic or Classical sources, but Steph. Byz. 136.7 retrospectively (and erroneously) calls

it a πόλις *Λυδίας*. This passage, which does not identify his source, refers to Assos as a *polis* in an urban sense, and in a political sense as the second city of Aiolis. That Assos was a *polis* at least in the Classical period is indicated by its membership of the Delian League and its coinage (*infra*).

The collective use of the city-ethnic is attested externally by the tribute lists of the Delian League (*infra*) and internally by C5s coins (*infra*). Individually, the external city-ethnic is attested in *OGIS* 221 (274), and it is used for the Stoic Kleantes (born 331) in, e.g., Plut. *De exil.* 599A and Diog. Laert. 7.168.

The territory of Assos may have included the *poleis* of Gargara and Lamponeion (Leaf (1923) 253–57), the former having been founded by Assians (Strabo 13.1.58).

According to Hellan. fr. 160, Assos was founded from Lesbos by Aiolians, and according to Myrsilos ((*FGrHist* 477) fr. 17) by Methymna (both *apud* Strabo 13.1.58); Alexander Polyhistor. fr. 137 (*FGrHist* 118, fr. 96), in a commentary on Alkman, referred to Assos as an *ἄποικος Μιτυληναίων* (Steph. Byz. 136.12). It retained the character of an Aiolic city, as is shown by the survival of the cult in imperial times of Zeus Homoloios, which is common in Boiotia (*IGR* IV 256; see *RE* viii. 2263–64 and xa. 244). A prior Lelegian population is referred to in Hom. *Il.* 10.429, noted by Strabo 13.1.58.

Assos was a member of the Delian League. It belonged to the Ionian district and is registered from 454/3 (*IG* I³ 259.IV.9) to 427/6 or 426/5 (*IG* I³ 284.20) a total of eight times, twice completely restored, paying a *phoros* of 1 tal. (*IG* I³ 259.IV.9). It was presumably assessed for tribute in 410/9 (Krateros fr. 23, Krech = *IG* I³ 100).

Assos was ruled by the tyrants Euboulos, c.360, and his eunuch/slave Hermias, who died in 344 and was based at Atarneus in Aiolis (Strabo 13.1.57; see Leaf (1923) 295–97). In C4m the tyrant *Ἐρμίας* with his associates was an equal partner in a treaty with Erythrai (*I.Erythrai* 9). Hermias was resident at Assos from 348 to 345 (see the sources in Leaf (1923) 299).

The Archaic city temple on the acropolis, rebuilt in C4, was probably dedicated to Athena Polias; see coin types and *I.Assos* 14.III: ἡ τῆς Πολιάδος Ἀθηνᾶς ἱερεία (first century AD). It was Doric, with six by thirteen columns, pronaos in antis, and an enclosed cella. The architraves and metopes were decorated with scenes from the Herakles cycle (Westcoat (1987); Stüpperich (1996)).

Fortifications built from polygonal masonry of the Archaic(?) period were succeeded by well-preserved ashlar

walls of C4(?); Lang (1996) 223; Schulz (2000) 16. These contained two main gateways with square towers, seven smaller gates, one round and numerous square towers, and enclosed an area of a little more than 55 ha (*PECS*). The acropolis was separately fortified. The city was besieged by the Persian satraps Autophradates and Mausolus in 365 (Xen. *Ages.* 2.26).

A cemetery with burials dating between C6 and C4 has been excavated on either side of a paved street outside the west gate (Stüpperich (1994)). Domestic housing of C6–C5 is also recorded. Other public buildings, including an agora with stoas, a *bouleuterion*, a theatre (destroyed in the nineteenth century), as well as fountain houses and drainage systems date mostly to the Hellenistic period (*PECS*).

Three periods can be distinguished when Assos minted coins. (1) Silver, c.479–450: *obv.* griffin; *rev.* lion's head. (2) Silver, c.450–400: *obv.* head of Athena, wearing helmet; *rev.* lion's head, or Archaic statue of Athena with spear and fillets; legend: *ΑΣΣΙΟΝ* or *ΑΣΣΟΟΝ* (*sic*) or *ΑΣΣΙ*. (3) Silver and bronze, c.400–241: *obv.* head of Athena; *rev.* various types; legend: *ΑΣΣΙ* or *ΑΣΣΙΟΝ* (Head, *HN*² 542; *SNG Cop. Troas* 226–44).

770. Astyra (Astyrenos) Map 56. Lat. 39.35, long. 26.55. Size of territory: 1? Type: [A]:a. The toponym is *Ἄστυρα Μύσια, τὰ* (*IG* I³ 273.1.25–26; Ps.-Skylax 98). The city-ethnic is *Ἄστυρηνοὶ Μύσοι* (*IG* I³ 272.II.9). Ps.-Skylax assigns it to Lydia, while the tribute lists of the Delian League and Strabo make it part of Mysia (13.1.65). It was probably situated at Kilisetepe Kaplıcaları. In Ps.-Skylax 98 Astyra is the first toponym listed after the heading πόλεις Ἑλληνίδες . . . αἰδε. Strabo describes it as a *κώμη* (13.1.51; cf. Steph. Byz. 140.16) but formerly a *πολίχνη* dependent on Antandros (13.1.65). The “city-ethnic” is applied to Artemis by Xen. *Hell.* 4.1.41, and collectively and externally it is used in the Athenian tribute lists.

Astyra was a member of the Delian League, usually recorded by city/city-ethnic but once by toponym (*IG* I³ 273.1.25–26). It belonged to the Ionian district and is registered from 454/3 (*IG* I³ 259.III.6) to 438/7 (*IG* I³ 274.III.3) a total of eight times, twice completely restored, paying a *phoros* of 500 dr. (*IG* I³ 272.II.9).

The community housed the sanctuary of Artemis Astyrene (Xen. *Hell.* 4.1.41; Ps.-Skylax 98), which was also reckoned to belong to Antandros.

Astyra struck coins of silver and bronze in C5–C4. (A) Bronze, c.400–395: *obv.* bearded head of Tissaphernes; legend: *ΤΙΣΣΑ*; *rev.* facing cult image of Artemis Astyrene;

legend: *AΣΤΥΡΗ*. (B) Silver and bronze coins of C₅–C₄, previously ascribed to an Astyra in Karia (Steph. Byz. 140.17–18), are now believed to have been minted by Astyra in Mysia. (1) Silver, C₅: *obv.* amphora, or oinochoe, or rose; *rev.* oinochoe, and/or square incuse; legend: *A* or *AΣΤΥ*. (2) Silver, C₅: *obv.* head of Artemis?; *rev.* rose; legend: *AΣΤΥΡΑ*. (3) Bronze, C₄: *obv.* head of Helios; *rev.* amphora and various symbols, or bow; legend: *AΣΤΥ* or *AΣΤΥΡΑ*. (4) Bronze, C₄: *obv.* head of Aphrodite; legend: *AΣΤΥ* (Stäuber (1996) II.252–60; *SNG Cop. Caria* 158; *Suppl.* 298).

771. Astyra Troika Map 51. Lat. 40.05, long. 26.40. Size of territory: ? Type: C:? The toponym is Ἄστυρα Τροϊκά, τὰ (IG I³ 71.III.86; Strabo 13.1.23). Strabo describes this Astyra as a πόλις κατεσκαμμένη, situated in Troas and now belonging to Abydos, but in earlier times independent and in possession of gold mines, now exhausted. The date of its destruction is unknown. It was claimed to be a member of the Delian League; attested by the name [Ἄστ]υρα Τροϊκά in the assessment of 425/4 (IG I³ 71.III.86). See Leaf (1923) 133; *ATL* i. 472; Stäuber (1996).

772. Azeia (Azeieus) Unlocated. Not in *Barr.* Type: C:β? The toponym may have been Ἀζεία (suggested by Steph. Byz. 32.4). The ethnic is Ἀζειεύς (Ἀζειῆς, IG I³ 279.I.106) or Ἀζειός (Ἀζειοί, IG I³ 261.IV.28) or Ἀζειώτης (Hellan. fr. 58).

The Azeians were members of the Delian League. They belonged to the Hellespontine district (IG I³ 270.II.26) and are recorded from 452/1 (IG I³ 261.IV.28) to 415/14 (IG I³ 290.III.3, ethnic heavily restored) a total of seven times, once completely restored, paying a *phoros* of 400 dr. (IG I³ 261.IV.28). They were perhaps assessed for tribute in 425/4 (IG I³ 71.III.67: [Ἀζει]ι[ῆς]). Since the Azeians are recorded in the tribute lists by ethnic only and never by toponym, and since we have no other source, we do not know whether they were settled in a *polis* town or were a people living dispersed or settled in small villages. Being recorded in the tribute lists, the Azeians must have been a political community, and possibly a *polis*, but we have no proof.

In the Athenian tribute lists the Ἀζειεῖς belong to the Hellespontine district, whereas the Ἀζειώται are classified by Steph. Byz.—quoting Hellanikos—as an ἔθνος τῆς Τρωάδος. If the Azeians were the same as the Azeiotans, they must have lived in northern Asia Minor, and presumably in Troas. In *ATL* i. 463–64 the Azeians are connected with Azeus, grandfather of the Minyan leaders at Troy (Hom. *Il.* 2.513) and placed in the Troad.

773. Birytis (Berysios) Map 56. Lat. 39.55, long. 26.20, but this location, at Mersinoba (Cook (1973) 114, 357), is not beyond doubt. Type: B:? The toponym is Βέρυτις, Τρωικὴ πόλις (Steph. Byz. 165.8) or Βήρυθος, πόλις Τρωικὴ (Steph. Byz. 167.6). The city-ethnic Βερύ[σιοι] ὑπὸ τῆ[ι Τδ]εῖ is recorded in the Athenian tribute lists (IG I³ 261.III.2), but C₄l coins (*infra*) have the form *BIPY*; Steph. Byz. 165.8 records the city-ethnic Βερυτίτης, but there is no other authority for this.

No Archaic or Classical source calls Berytis a *polis*, and the retrospective mentions in Steph. Byz. do not indicate a source. However, the community issued its own coinage in C₄l (*infra*). The external collective city-ethnic is recorded in the Athenian tribute lists (*infra*), and the internal by coins of C₄/C₃ (*infra*).

Birytis was a member of the Delian League. It presumably belonged to the Hellespontine district (IG I³ 71.III.91, restored) and is recorded from 454/3 (IG I³ 259.VI.11–12) to 446/5 (IG I³ 266.I.25) a total of six times, once completely restored, paying a *phoros* of 1,000 dr. (IG I³ 259.VI.11). It was assessed for tribute in 425/4 (IG I³ 71.III.91, restored). However, it is not completely certain that the Berysioi are to be identified as the inhabitants of the *polis* mentioned by Steph. Byz. 165.8–9; see *ATL* i. 246–47, 475.

Birytis struck coins of silver and bronze in C₄/C₃e. (1) Silver: *obv.* head of Herakles; *rev.* head of beardless Kabeiros wearing pilos between two stars. (2) Bronze: *obv.* head of beardless Kabeiros wearing pilos; *rev.* club, or triskeles; legend: *BIPY* (Head, *HN*² 542; see Fritze (1904); L. Robert (1951) 25–31, *SNG Cop. Troas* 247–53).

774. Dardanos (Dardaneus) Map 51. Lat. 40.05, long. 26.25. Size of territory: 2. Type: A:a. The toponym is Δάρδανος, ἡ (Hdt. 5.117.1; Thuc. 8.104.2). The city-ethnic is Δαρδανεύς (IG I³ 267.I.24; Xen. *Hell.* 3.1.10, *An.* 3.1.47); Δαρδανίς is found at Xen. *Hell.* 3.1.10; Steph. Byz. 219.3 has Δαρδανίδης. The ktetic form Δαρδανικὴ is applied to the territory (Strabo 13.1.44).

Dardanos is called a *polis* in the urban sense by Herodotos 5.117.1 and 7.43.2, where the territorial sense is a connotation. In Ps.-Skylax 95 Dardanos is the first toponym listed after the heading πόλεις Ἑλληνίδες . . . αἰθε. It is called *polis* in the political sense by Xen. *An.* 5.6.21 and 23 and an early Hellenistic inscription (Taşlıklioğlu (1971) 187 no. 2). Furthermore, *polis* is used retrospectively by Dion. Hal. *Ant. Rom.* 1.46.1, who draws his information from Hellan. fr. 31. The collective use of the city-ethnic is attested externally by IG I³ 267.I.24 and 268.II.31, and internally in the genitive

plural on coins of the Roman period (*SNG Cop. Troas* 307–11), in abbreviated forms on coins of the Classical period (*infra*). The external individual use of the city-ethnic is attested in Xen. *Hell.* 3.1.10 and An. 5.6.21. The city territory is referred to in Mnaseas ((*FHG III*) 154 fr. 28 = Steph. Byz. 219.1–2) as ἡ Δαρδανία, ἡ Τευκρίς πρότερον ἐκαλεῖτο. For the few archaeological remains of the settlement (mostly sherds), see Cook (1973) 57–60.

Referring to an uncertain period between C4 and C1, Strabo described Dardanos as an ancient foundation, whose inhabitants were often transferred to Abydos by Hellenistic kings, but then returned to the ancient foundation, κτίσμα ἀρχαῖον, οὕτω δ' εὐκαταφρόνητος, ὥστε πολλάκις οἱ βασιλεῖς οἱ μὲν μετώκιζον ἀπ' αὐτῆν εἰς Ἄβυδον, οἱ δὲ ἀνώκιζον πάλιν εἰς τὸ ἀρχαῖον κτίσμα (Strabo 13.1.28). This passage may imply that it was an early, perhaps C7 Greek colonial settlement, but the colonists are unknown.

Dardanos was a member of the Delian League. It belonged to the Hellespontine district and is recorded from 451/50 (*IG I³* 262.IV.10) to 429/8 (*IG I³* 282B.I.3) a total of fifteen times, twice completely restored, paying mostly a *phoros* of 1 tal. (*IG I³* 270.II.3). It was assessed for tribute in 425/4 (*IG I³* 71.III.72, restored). It may have been controlled by the satrap of Aiolis, Ζῆνις Δαρδανεύς, in 399 (Xen. *Hell.* 3.1.10). An early Hellenistic city decree (*psephisma*) mentions a *boule* (Taslıklioğlu (1971) 187 no. 2). *IG II²* 78 (before 378) is possibly a honorary decree for citizens of Dardanos (l. 8: Δα[ρδανέ]ς).

Dardanos struck coins of electrum, silver and bronze from C6/C5 to C4. Almost all the coin types show fighting cocks. (1) (?) Electrum stater, minted in Lydia, of C6/C5: *obv.* cock; *rev.* quadripartite incuse square. (2) Silver issues on the Persian standard, C5: *obv.* horseman; *rev.* cock(s); legend: ΔΑΡ ΖΗ (a possible reference to Ζῆνις Δαρδανεύς, satrap of Aiolis in 399, Xen. *Hell.* 3.1.10). (3) Silver and bronze, C4: similar types. Legend: ΔΑΡ or ΔΑΡΔΑΝ (Head, *HN²* 544; *SNG Cop. Troas* 282–304).

775. Gargara (Gargareus) Map 56. Lat. 39.35, long. 26.30. Size of territory: 2. Type: A:β. The toponym is Γάργαρος, ἡ (Hom. *Il.* 8.48, 15.151; Alkman *apud* Steph. Byz. 198.22), or Γάργαρα, τὰ (Ephor. fr. 47; Strabo 13.1.5); according to Steph. Byz. 199, Hellan. fr. 158 used the form Γάργασος, but Stephanos states: οἴομαι δὲ σφάλμα εἶναι. The presumed forerunner of the coastal site is called Παλαιὰ Γάργαρος (*Etym. Magn.* 221.30), or Παλαιγάργαρος (Steph. Byz. 128.21). The city-ethnic is Γαργαρεύς (*IG I³* 270.I.34; Michel 522.22).

Gargara is called a *polis* in the urban sense by Ephor. fr. 47 and is implied to be a *polis* in the political sense in the inscription for Malousios of Gargara of 306 (*I.Ilion* 1.4–5, 17, 22, etc.). The collective city-ethnic is attested internally on C5s coins (*infra*) and externally on C5 and C4 inscriptions (*IG I³* 270.I.34; Michel 522.22). The external individual use of the city-ethnic is found in a Chian C4 list of *proxenoi* (*PEP Chios* 50.12) and in the inscription of Ilios for Malousios (Michel 522.3, etc.). The name became the butt of jokes in the later C5. Alkaios *comicus* fr. 19, Kock, refers to γάργαρ' ἀνθρώπων, and Ar. *Ach.* 3 to ψαμμακοσιογάργαρα (Leaf (1923) 263).

The city territory was known as ἡ Γαργαρίς (Strabo 13.1.58) and was proverbial for its fertility (Verg. *G.* 1.103; Sen. *Phoen.* 608; Macrobian *Sat.* v.20.15–16; cf. Tenger (1994) 150 n. 91).

Gargara was a πόλις Αἰολική (Strabo 13.1.5; cf. Steph. Byz. 128.22, who also cites Hecat. fr. 224), founded from Assos (Strabo 13.1.58), although the indigenous population was Lelegian (Strabo 13.1.58, interpreting Hom. *Il.* 10.428). Gargara was a member of the Delian League. It belonged to the Ionian district and is recorded from 452/1 (*IG I³* 261.V.22) to 428/7 (*IG I³* 283.III.22) a total of eight times, twice completely restored, paying a *phoros* of either 4,500 dr. (*IG I³* 261.V.22) or 4,660 dr. (*IG I³* 270.I.34). It was assessed for tribute in 410/9 (*IG I³* 100.II.6). In C4 it was a member of the confederation of Athena Ilios (Michel 522). The site was relocated from Palaigargara on a mountain peak to a coastal site at an unspecified period, either before C5 (so *ATL* i. 477) or in the Hellenistic period later than the composition of the epigram of Aratos (*Anth. Pal.* 9.437; so Leaf (1923) 262). Demetrios of Skepsis *apud* Strabo 13.1.58 reports that colonists were brought from Miletoupolis by the kings, so that the population became semi-barbarous rather than Aiolic. This was presumably in the Hellenistic period.

The mountain-top site was defended by fortification walls of the Archaic period (Stüpperich (1995); cf. Schulz (2000) 28), and included a walled acropolis area with foundations of a temple. Hom. *Il.* 8.48 reports a cult of Zeus at the summit. Architectural remains include an Aiolic capital and a mid-C6 relief of an armed warrior, which may have served as a column (Stüpperich (1995), correcting and adding to Cook (1973) 255–61). It was on the route of the Delphic *theorodokoi* c.200 (Plassart (1921) 8; Cook (1988) 15). A citizen of Gargara is listed in a C4 list of *proxenoi* from Chios (*RPh* (1937) 325–32 no. 6A.12).

Gargara minted silver and bronze coins. (1) Silver, c.420–400: denominations: tetrobol, diobol, hemiobol,

tritartemoron: *obv.* male head (Apollo?); *rev.* bull grazing, or galloping horse, or ram's head, or spokes of wheel. (2) Silver and bronze, c.400–284; denominations: tetrobol and small fractions: *obv.* Apollo laureate; *rev.* same types as (1), no wheel. Legend: ΓΑΡΓ or ΓΑΡ expanded to ΓΑΡΓΑΡΕΩΝ on imperial coins (Head, *HN*² 545; *SNG Cop. Troas* 314–31).

776. Gentinos (Gentinios) Map 56. Lat. 39.55, long. 26.15. Size of territory: 1 or 2. Type: B? The toponym is Γεντίνος (Steph. Byz. 203.3); the city-ethnic is Γεντίνιος (*IG*¹³ 261.1.8; Steph. Byz. 203.4).

Gentinos is called a *polis* only by Steph. Byz. 203.3, who cites no earlier source. Steph. Byz. 203.3 also reports that it was founded by one of the sons of Aineias. However, the collective use of the city-ethnic is attested internally by C4 coins (*infra*) and externally by the Athenian tribute lists (*infra*). The city presumably controlled a small territory in the Skamandros basin between Ilion and Skamandra.

Gentinos was a member of the Delian League. It is recorded from 452/1 (*IG*¹³ 261.1.8) to 444/3 (*IG*¹³ 268.1.31) a total of seven times, paying a *phoros* of 500 dr. (*IG*¹³ 261.1.8). It was assessed for tribute in 425/4 (*IG*¹³ 71.III.64, restored in the Hellenistic district; cf. Tenger (1994) 155–56).

The acropolis of the site on Ballı Dağ measures 190 × 100 m and has fortifications of rough masonry combined with more even work, including an arched entrance datable to C4 (Cook (1973) 134–40). An agora with stone seats and a small Archaic/Classical temple are reported, but occupation did not spread beyond the hill-top, and the site was small.

Gentinos minted bronze coins in C4: *obv.* female head (Artemis, nymph?); *rev.* bee; legend: ΓΕΝ or ΓΕΝΤΙ (Head, *HN*² 545; *SNG Cop. Troas* 335–36).

777. Gergis (Gergithios) Map 56. Lat. 39.55; long. 26.35. Size of territory: 4? Type: A:γ. The toponym is Γέργισ, ἦ (Xen. *Hell.* 3.1.15; Steph. Byz. 203.21) or Γέργιθος, ἦ (Steph. Byz. 203.21–22) or Γεργιθία (Welles (1934) no. 10 (275)); Strabo 13.1.19 reports the toponym in the plural feminine form αἱ Γέργιθες. Various forms of the city-ethnic are recorded: ἡ τῶν Γεργιθίων πόλις (Xen. *Hell.* 3.1.22); Γέργιθες Τευκροί (Hdt. 5.122.2, 7.43.2); Γεργιθιεύς (*IG*¹³ 261.1.27 (c.270)).

Xen. *Hell.* 3.1.15, 21 describes it as a *polis* in the urban sense; at 3.1.22 the political sense is probably a connotation. The collective use of the city-ethnic is attested externally by Xen. *Hell.* 3.1.22 and internally by C4 coins (*infra*). The individual use of the ethnic is recorded c.270 on an inscription of the Aitolians (*IG*¹³ 261.1.27).

The name of the territory was τὸ Γεργίθιον, ἡ Γεργιθία (*sc. χώρα*; Welles (1934) no. 10 (275): ἀπὸ τῆς ὁμορρούσης τῆι Γεργιθίαι ἢ τῆ Σκηψίαι). It was the inland region to the east of the route followed by Xerxes to Abydos in 481 (Hdt. 7.43.2), and included Marpossos, home of the sibyl Herophile, whose image is shown on coins of Gergis (Paus. 10.12.4; Head, *HN*² 543). The Gergithes, described by Hdt. 5.122.2 as οἱ ὑπολειφθέντες τῶν ἀρχαίων Τευκρῶν, were an indigenous non-Greek people occupying the interior of the Troad north of the river Skamandros; see Leaf (1923) 102–6. This passage and Hdt. 7.43.2 indicate that Gergis was effectively a barbarian *polis*, in contrast to its neighbours on the coast of the Troad. The *polis* was controlled by the pro-Persian “satrap” Zenis of Dardanos (or “the Dardanian”) and then by his widow, Mania, in 399, and eventually by her son-in-law, Meidias of Skepsis (Xen. *Hell.* 3.1.15–22; see Winter (1994)).

Some of its inhabitants were transplanted by metoecism to a new settlement called Gergitha near the springs of the river Kaikos by Attalos I (Strabo 13.1.70). After 188 its territory was attached by synoecism to Ilion (Livy 38.39). One of its citizens, Νικόστρατος Ἀριστάρχου Γεργιθιεύς, was honoured in an Aitolian proxeny decree of c.270 (*IG*¹³ 261.1.27).

Xen. *Hell.* 3.1.15–22 implies that it was a fortified site, and specifically mentions gates and towers at 3.1.22.

Gergis struck coins of silver and bronze c.400–350 and c.350–241: *obv.* head of sibyl Herophile; *rev.* seated sphinx; legend: ΓΕΡ. The coin type with sibyl and sphinx was mentioned by Phlegon of Tralles, cited in Steph. Byz. 204.1–2. (Head, *HN*² 545–46; *SNG Cop. Troas* 337–40; Sear (1979) no. 4097, silver hemiobol).

778. Hamaxitos (Hamaxiteus) Map 56. Lat. 39.05, long. 26.05. Size of territory: 1 or 2. Type: A:a. The toponym is h[αμαχ]σιτός (*IG*¹³ 77.IV.18) or Ἄμαξιτός, ἦ (Thuc. 8.101.3; Xen. *Hell.* 3.1.13, 16; *BCH* 45 (1921) 8; Strabo 13.1.47). The city-ethnic is Ἄμαξιτεύς (*Ischr. Cos* 6e ED 71 3.8.6 (C4)); Strabo 13.1.51; Steph. Byz. 83.11, without citing an authority), or Ἄμαξιτηνός (Apollodoros, *FGrHist* 244, fr. 10 *apud* Steph. Byz.).

It is called a *polis* in the political and urban senses combined by Xen. *Hell.* 3.1.13, 16 (cf. Hansen (2000) 175). In Ps.-Skylax 95 Hamaxitos is one of the toponyms listed after the heading πόλεις Ἑλληνίδες . . . αἰδε. The political sense is attested in a restored inscription from Kos dating between 321 and 306 (*Ischr. Cos* 63 ED 71g.B.6), and its name has been restored ([Ἄμαχ]σιτός) at *IG*¹³ 77.IV.18 in a list of

Aktaiai poleis which uses *polis* in the political sense. The internal collective use of the city-ethnic is attested on C4 coins (*infra*); the external collective use in *Iscr. Cos* 63 ED 71g.B.6.

The name of the territory was ἡ Ἀμαξιτία (Strabo 10.3.21). It contained the temple of Apollo Smintheus at Gülpınar and two other places called Sminthia, also the salt pans at Tragasai (Strabo 13.1.48). However, the salt pans are said by Ath. 2.43A to be on the territory of Larisa.

Hamaxitos was one of the Ἀκταῖαι πόλεις in the Delian League and was assessed for tribute of 4 tal. in 425/4 (*IG* 1³ 71.III.124, 129, toponym restored) and for an unknown amount in 422/1 (*IG* 1³ 77.IV.14, 18). Schwertheim (1988) (*SEG* 38 1251) published an inscribed fragment purporting to be part of a treaty between Athens and Hamaxitos. Lewis (1993) (*SEG* 43 877) suggested that this was part of an Athenian imperial decree, and questioned the restoration which assigned the text to Hamaxitos. On Kos has been found a C41 decree of Hamaxitos, granting *proxenia* and *politeia* to a citizen of Kos (*Iscr. Cos* 63 ED 71g.B.6.; cf. *LGPN* 1, Nikomedes no. 12). Kos was on the route of the Delphic *theorodokoi* c.200 (*BCH* 45 (1921) 8; Cook (1988) 15). Xen. *Hell.* 3.1.13 (Ἀμαξιτόν . . . τοῖς τείχεσιν) suggests that the city possessed a circuit wall in C4e.

Hamaxitos was absorbed into the newly founded city of Alexandria in 310 (Strabo 13.1.47), and thereafter its territory was part of the *chora* of Alexandria Troas (Strabo 10.3.21). It participated in the cult of Apollo Smintheus (Strabo 13.1.48).

Hamaxitos struck bronze coins c.400–310: *obv.* head of Apollo; *rev.* lyre, or Apollo Smintheus; legend: ΑΜΑΞΙΤΙ (Head, *HN*² 546; *SNG Cop. Troas* 341–45).

779. Ilion (Ilios) Map 56. Lat. 39.55, long. 26.15. Size of territory: 3 or 4. Type: A:a. The toponym is Ἴλιον, ἶός (Xen. *Hell.* 1.1.5; Aen. *Tact.* 24.11). The city-ethnic is Ἰλιεύς (Xen. *Hell.* 3.1.16; Tod 148 (359) = Michel 523 = *I.Ilion* 23) or Ἰλιάς (Ἀθηναίη τῆς Ἰλιάδος, Hdt. 7.40). According to Hdt. 7.40, at Ilion Athena had the epiklesis Ἰλιάς, which same form is also used to denote Ilion territory at Hdt. 5.94.2 and 7.42.

Ilion is called a *polis* in the urban sense by Aen. *Tact.* 24.12, 14 (cf. Aen. *Tact.* 24.8 where it is called πόλισμα). In Ps.-Skylax 95 Ilion is the third toponym listed after the heading πόλεις Ἑλληνίδες . . . αἴδε. Ilion is called a *polis* in the urban and political senses combined by Xen. *Hell.* 3.1.16 and in an early Hellenistic inscription (*I.Ilion* 25; cf. also Hellan. fr. 25b). Its name has been restored (Ἰ[λιον]) at *IG* 1³ 71.III.132 in a list of *Aktaiai poleis* which uses *polis* in the

political sense. Strabo 13.1.27, referring to the period before 189, calls it a κομόπολις. The collective use of the ethnic is attested internally by a decree of Ilion of 359 (Tod 148 = *I.Ilion* 23) and by C41 coins (Head, *HN*² 546), and externally by Xen. *Hell.* 3.1.16. The external individual use of the ethnic is found in *IG* 11² 505.8 (302/1).

Strabo refers to a period when Ilion was a *kome*: τὴν δὲ τῶν Ἰλιέων πόλιν τῶν νῦν τέως μὲν κόμην εἶναί φασι, τὸ ἱερόν ἔχουσιν τῆς Ἀθηναίας μικρόν καὶ εὐτελές (Strabo 13.1.16). The name of the territory was ἡ Ἰλιάς γῆ (Hdt. 7.42), ἡ Ἰλιάς χώρα (Hdt. 5.94.2), or simply ἡ Ἰλιάς (Hdt. 5.122.2).

Ilion was one of the Aiolic settlements of the Troas (Xen. *Hell.* 3.1.16). If the toponym is correctly restored in *IG* 1³ 71 and 77, it was one of the Ἀκταῖαι πόλεις in the Delian League and was assessed for tribute in 425/4 (*IG* 1³ 71.III.124, 132, Ἰ[λιον], 2 tal.) and in 422/1 (*IG* 1³ 77.IV.14 21, amount not preserved, toponym completely restored). Ilion awarded *proxenia* to Menelaos, son of Arrhibaios of Athens, in C4 (Tod 148 = *I.Ilion* 23). A kind of *sympoliteia* with Lampsakos (no. 748) is probably attested by a unique silver *tridrachm*: *obv.* head of Athena with Corinthian helmet, r.; *rev.* winged horse, r., under the horse: ΛΑΜ(ΨΑΚΗΝΩΝ), above it: ΙΛ(ΙΕΩΝ) (Frisch (1975) XV, (1978) 129–30 (c.300)).

In the early Hellenistic period it was democratic, as is shown by a lengthy law which was devised against tyrants and oligarchies (Michel 524 = *I.Ilion* 25). This text also implies that the chief magistrate was a *strategos*, an office that could only be held once; there was also a *tamias*, and the magistracies were collectively known as *archai*. A citizenship decree of c.300 testifies to the organisation of the citizens into *phylai* (*I.Ilion* 24.13). The city buildings included a *prytaneion* (*I.Ilion* 24.20, 25.25) and a *dikasterion* (*I.Ilion* 25.78, perhaps a lawcourt rather than a court room).

Aen. *Tact.* 24.4–13 refers repeatedly to *πύλαι*, thus indicating that the city was fortified in C4f (cf. Xen. *Hell.* 3.1.16), but there are virtually no monumental traces of the pre-Hellenistic city, although the remains suggest that the settlement was more prosperous in C7–C6 than in C5–C4 (*PECS*). Recent excavations show almost continuous occupation of the site after the fall of Troy VII.2 in the late Bronze Age. Archaic finds include bronze fibulae of c.700 and an Aiolic capital (Mitchell (1999) 138). Recent excavations have revealed a sanctuary of C8–C6, but no further building in the Classical period (Rose (2000) 284). The city wall, attributed by Strabo 13.1.26 to Lysimachos, in fact appears to have been built c.275–250 (Rose (1997) 93–101). Ilion was refounded at the end of C4, probably by Lysimachos (Strabo 13.1.26,

the interpretation of this passage is very controversial; see Leaf (1923) 142–43, who attributes the embellishment to Alexandria; but see L. Robert (1951) 7–8). A *prytaneion* is mentioned in the pro-democratic law against tyrants and oligarchies, probably of C3e (Michel 524A.25–26 = *I.Ilion* 25), and Michel 522.11 (c.306) refers to a theatre. The most important cult was that of Athena Ilias (Hdt. 7.43.1–2; Xen. *Hell.* 1.1.5). The most recent study of the sculpted reliefs from the temple argues that it was not early Hellenistic, but constructed in C2–C1 (Schmidt-Dounas (1991)).

Ilion issued a little silver and bronze coinage between C4l and c.240: *obv.* Athena; *rev.* sometimes vase, mostly Athena Ilias wearing kalathos and chiton with symbol (thunderbolt, owl); legend: *ΛΙΙ* (Head, *HN*² 546; *SNG Cop. Troas* 346–61). For an issue struck in collaboration with Lampsakos (no. 748) see *supra*.

780. Kebren (Kebrenios) Map 56. Lat. 39.45, long. 26.35. Size of territory; 5. Type: A:β. The toponym is *Κεβρήν* (Xen. *Hell.* 3.1.17; Dem. 23.154; *I.Assos* 4 (C2)) or *Κεβρήνη* (Strabo 13.1.47) or *Κεβρημία* (Diod. 14.38.3 (r399)). The city-ethnic is *Κεβρένιος* (*IG* 1³ 263.11.33), *Κεβρήνιος* (Xen. *Hell.* 3.1.18) or *ΚΕΒΡΕΝΕ*, probably for *Κεβρενεύς* (C6 coins, *infra*). The forms *Κεβρήνιος*, *Κεβρηνός* and *Κεβρηνεύς* are all found in Strabo (13.1.51, 33).

In Ps.-Skylax 96 Kebren is the first toponym listed after the heading *Αιολίδες δὲ πόλεις . . . αἴδε* and it is called a *polis* in the urban sense by Xen. *Hell.* 3.1.17, but a *polisma* by Strabo 13.1.47, referring to the period after it was incorporated into Alexandria. The collective use of the ethnic is attested internally on C6 coins (Head, *HN*² 543) and externally in the Athenian tribute lists (*infra*) and Xen. *Hell.* 3.1.18. The external individual use of the ethnic is attested on a C5 inscription from Gergis (Cook (1973) 401 no. 18).

The name of the territory was *Κεβρημία* (Strabo 13.1.33). Strabo observes that Kebrenia was parallel to and south of ancient Dardania, and that it was divided from the territory of Skepsis by the river Skamandros. It was regarded by Ephor. fr. 22, as *πρὸς τῇ Ἰδῆ*. Steph. Byz. 371.3 calls *Κεβρημία* a *χώρα* τῆς *Τρωάδος*.

The city was founded from Kyme in Aiolis (Ephor. fr. 10; *Homeri vita Herodotea* c.20, Allen). Xen. *Hell.* 3.1.18 implies that the *Ἕλληνες* in the city were to be distinguished from a non-Greek element.

Kebren was a member of the Delian League. It belonged to the Hellespontine district and is recorded from 454/3 (*IG* 1³ 259.IV.26) to 447/6 (*IG* 1³ 265.II.9) a total of five times, twice restored, paying a *phoros* of 3 tal. in 454/3 (*IG* 1³

259.IV.26) and 8,700 dr. in 450/49 (*IG* 1³ 263.II.33). It was assessed for tribute in 425/4 (*IG* 1³ 71.III.99).

In 310 it was incorporated into the new city of Antigoneia, later Alexandria. In late C3 a decree probably of the Kebrenians was set up in Assos in honour of a troop of soldiers and their commander for coming to their assistance (*I.Assos* 4; cf. L. Robert (1951) 33).

Kebren had imposing fortifications sited in *μάλα ἰσχυρῶ χωρίῳ* (Xen. *Hell.* 3.1.17), with walls (*ibid.* 18) and gates (*ibid.* 19). The existing walls are dated to C5l or earlier (Cook (1973) 330). They measure 5 km in circumference and enclose an area of c.90 ha; they were reported to survive over 10 feet high and are 8–10 feet thick (Leaf (1923) 171–73, citing Calvert; Judeich (1898b) 539; Cook (1973) 328–31). On the citadel are a few remains of a separate acropolis wall (Cook (1973) 334). Numerous ancient building remains have been noted on the site.

Kebren minted in the Archaic and Classical periods. (1) Silver, C6: *obv.* head of ram; *rev.* incuse square. (2) Silver, C5: denominations: diobol, trihemiobol, obol, tritartemorion, tetartemorion: *obv.* head of ram; legend: *ΚΕΒΡΕΝΕ* or *ΚΕΒΡΕ*; *rev.* incuse square. (3) Silver, c.400–310: denomination: obol: *obv.* two rams' heads; legend: *ΚΕΒΡΗΝΙ*; *rev.* incuse square. (4) bronze, c.400–310: *obv.* male head in Persian head-dress, or Apollo; *rev.* monogram, or ram's head, or ram's head and eagle; legend: *ΚΕ*, *Κ* (Head, *HN*² 542–43).

L. Robert (1951) 17–36 argued that Kebren was refounded under the name Antiocheia in the early Hellenistic period and underwent synoecism with Biryti between 280 and 270. This has been contested by Cook (1988) 17–19.

781. *Kokylion (Kokylites) Map 56. Lat. 39.40, long. 26.25. Size of territory: ? Type: A:a. The toponym is **Κοκύλιον*; cf. Cocylion at Plin. *HN* 5 122.2. The city-ethnic *Κοκυλίτης* is attested at Xen. *Hell.* 3.1.16, where the city and its inhabitants are described as one of three Aiolian *poleis* which were persuaded to join Derkyliidas in 399. In this passage, our only source, *polis* is used in the urban and political senses combined. Xen. *Hell.* 3.1.16 (*εἰς τὰ τεῖχη δέχεσθαι . . . Κοκυλίται ἐπειθοντο*) suggests that the city may have been fortified in C4e.

782. Kolonai (Kolonaeus) Map 56. Lat. 39.40, long. 26.10. Size of territory: 2? Type: A:a. The toponym is *Κολωναί*, *αἱ* (Thuc. 1.131.2; Xen. *Hell.* 3.1.13, 16; *IG* 1³ 71.III.135; *Κ[ολωνέ]*) and the city-ethnic is *Κολωναεύς* (C4 coins, *infra*; Strabo 13.1.62).

Kolonai is called a *polis* in the political and urban senses combined by Xen. *Hell.* 3.1.13, 16 (cf. Hansen (2000) 175). In

Ps.-Skylax 95 Kolonai is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες . . . αἰδε*. It is called a *polis* in the political sense by Xen. *Hell.* 3.1.13; its name has also been restored (*Κ[ολόνει]*) at *IG* 1³ 71.III.135 in a list of *Aktaiai poleis* which uses *polis* in the political sense. It was one of the *πολίσιματα* that were incorporated by synoecism into *Alexandreia* in 310 (Strabo 13.1.47). The collective use of the city-ethnic is attested internally by C4 coins (*infra*). The individual city-ethnic is used externally by Strabo 13.1.62 in reference to the local historian Daes, who should be dated not later than C4l (Schwartz, *RE* iv. 1982).

It belonged to the region of the Troad and was called *Κολωναί αἱ Τρωάδαι* by Thuc. 1.131.1 (but this may be a reference to the homonymous place in the territory of Lampsakos). The territory was formerly part of the Tenedian Peraia (Strabo 13.1.47).

The settlement was founded by Aiolians (Strabo 13.1.62) and was reputed to be the home of the Thracian king Kyknos, killed by Achilles, in a story told in post-Homeric epic (Leaf (1923) 219).

If the toponym is correctly restored in *IG* 1³ 71, Kolonai was one of the *Ἀκταίαι πόλεις* in the Delian League and was assessed for tribute in 425/4 (*IG* 1³ 71.III.124 and 135 (*Κ[ολόνει]*, 1,000 dr.).

The Spartan regent Pausanias took refuge here and made contact with the Persian king after leaving Byzantion in 478 (Thuc. 1.131.1, unless this passage refers to the Kolonai in the interior of the territory of Lampsakos).

The city possessed a sanctuary of Apollo Killaios introduced by Aiolians (Strabo 13.1.62). The site extends “720 by 230 paces” on a hill-top, with a possible acropolis area at the south end about 200 paces across (Leaf (1923) 223–24). Xen. *Hell.* 3.1.13 (*Κολωνάς . . . τοῖς τείχεσιν*) suggests that the city possessed a circuit wall in C4e.

The city minted bronze coins between c.400 and 310: *obv.* head of Athena; *rev.* *ΚΟΛΩΝΑΩΝ* in rays of star (Head, *HN*² 543; *SNG Cop. Troas* 276–81).

783. Lamponia (Lamponeus) Map 56. Lat. 39.32, long. 26.25. Size of territory: 2? Type: B? The toponym is *Λαμπώνιον*, τό (Hdt. 5.26; Hellan. fr. 159) or *Λαμπώνεια* (Hecat. fr. 223; *IG* 1³ 267.1.28 (445/4)) or *Λαμπωνία*, ἡ (Strabo 13.1.58). The city-ethnic is *Λαμπωνεύς* (Hecat. fr. 223; *IG* 1³ 262.IV.23 (451/0)) or *Λαμπωνιεύς* (Hellan. fr. 159) or *Λαμπονειεύς* (*IG* 1³ 270.1.38 (442/1)).

Lamponia was an Aiolic settlement (Strabo 13.1.58). It is called a *polis* in the political sense (*πόλις Τρωάδος*) in Steph. Byz. 410.11, derived from Hecat. fr. 223, but we cannot

be certain that the site-classification stems from Hekataios (Hansen (1997) 17–18). The collective use of the city-ethnic is attested internally by C4 coins (*infra*), and externally by the Athenian tribute lists (*infra*).

Lamponia was captured by Otanes, the Persian satrap of the Hellespontine area, c.512 (Hdt. 5.26). It is thought to have been an original member of the Delian League since 478/7 (*ATL* iii. 206). It belonged to the Hellespontine district and is recorded either by toponym (*IG* 1³ 267.1.28) or by city-ethnic (*IG* 1³ 270.1.38) from 454/3 (*IG* 1³ 259.IV.11) to 430/29 (*IG* 1³ 281.III.16) a total of fourteen times, twice completely restored, paying a *phoros* of 1,000 dr. (*IG* 1³ 259.IV.11), but 1,400 dr. in 430/29 (*IG* 1³ 281.III.16). It was assessed for tribute in 425/4 (*IG* 1³ 71.III.85).

In the Archaic period (?) it received a fortification wall which enclosed an area of about 27 ha (Cook (1973) 262).

Lamponia struck coins of silver and bronze from C5l to C4m. (1) Silver c.420–400: denominations: drachm, hemidrachm, obol: *obv.* head of Dionysos; *rev.* bull’s head; legend: *ΛΑΜ*. (2) Bronze, c.400–350: *obv.* Dionysos; *rev.* bull’s head, above kantharos or grapes; legend: *ΛΑΜ* (Head, *HN*² 547; *SNG Cop. Troas* 444–45).

784. Larisa (Larisaios) Map 56. Lat. 39.35, long. 26.10. Size of territory: 2? Type: A:a. The toponym is *Λάρισα*, ἡ (Xen. *Hell.* 3.1.13, 16), *Λάρισσα* (Ps.-Skylax 95), *Λ[άρισα]*, [*Λάρι*]*σα* (*IG* 1³ 71.III.130, 77.IV.19). Steph. Byz. 413.5–6, referring to all the Larisas, indicates that the city-ethnic for persons was *Λαρισαῖος*, and for divinities *Λαρισεύς*. It is *Λαρισαῖος* in Strabo 13.1.48.

Hom. *Il.* 2.840–41 says that Larisa was inhabited by *φύλα Πελασγῶν*. Larisa is called a *polis* in the political and urban senses combined by Xen. *Hell.* 3.1.13, 16 (cf. Hansen (2000) 175). In Ps.-Skylax 95 Larisa is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες . . . αἰδε*, and its name has been restored (*[Λάρι]σα*) at *IG* 1³ 77.IV.19 in a list of *Aktaiai poleis* which uses *polis* in the political sense. It was one of the *πολίσιματα* that were incorporated by synoecism into *Alexandreia Troas* in 310 (Strabo 13.1.47).

The name of the territory was ἡ *Λαρισαῖα* (Strabo 13.1.48). It included the hot salt springs of Tragasai (Ath. 2.43A). Hom. *Il.* 2.840–41 and 17.301 refers to the fertility of the land, *Λάρισαν ἐριβόλακα*.

If the toponym is correctly restored in *IG* 1³ 71 and 77 (*supra*), it was one of the *Ἀκταίαι πόλεις* in the Delian League and was assessed for tribute of 3 tal. in 425/4 (*IG* 1³ 71.III.124, 130) and in 422/1 for an unknown amount (*IG* 1³ 77.IV.14, 19).

It is located ἐν τῇ Τρωικῇ by Ath. 2.43A, and according to Strabo 13.1.47 was formerly a city of the Tenedian *peraia*. Larisa was one of the places visited by the Delphic *theorodokoi* c.200 (Plassart (1921) 8; Cook (1988) 12). It may have sent *theoroi* to Samothrake (Cook (1962) 100, (1973) 221).

The site on a low hill measuring “320 × 350 paces”, extending north from the base of the hill to the harbour; with building foundations and BG pottery (Leaf (1923) 225); Archaic and Classical sherds are reported (Cook (1988) 14). See also Akalin (1991). Xen. *Hell.* 3.1.13 (Ἀρίσαν . . . τοῖς τείχεσιν) suggests that the city possessed a circuit wall in C4e.

785. Neandreia (Neandrius) Map 56. Lat. 39.45, long. 26.15. Size of territory: 4. Type: A:a. The toponym is attested in the forms *Νεάνδρεια* (IG I³ 259.IV.10 (454/3)) or *Νεάνδρεια* (IG I³ 272.I.30 (440/39)) or *Νεάνδρειον*, τό (Theopomp. fr. 374 *apud* Steph. Byz. 471.5) or *Νεανδρία*, ἡ (Strabo 13.1.47). The city-ethnics are *Νεανδρειεύς* (IG I³ 280.II.12 (432/1)) or *Νεανδριεύς* (Xen. *Hell.* 3.1.18; Strabo 13.1.51; cf. Cook (1988) 14 n. 23).

Neandreia was one of the Aiolic cities of the Troas (Xen. *Hell.* 3.1.16). In Ps.-Skylax 96 Neandreia is the third toponym listed after the heading *Αἰολίδες δὲ πόλεις . . . αἴδε*. It is called a *polis* in the urban and political senses combined by Xen. *Hell.* 3.1.16. The collective city-ethnic is used internally on C5–C4 coins (*infra*) and externally on the Athenian tribute lists (*infra*). The name of the territory was ἡ *Νεανδρίς* (Strabo 10.3.20, following Demetrios of Skepsis). It included the Samonion plain, which was probably to the east of the city in the Skamandros valley (Cook (1973) 315). It overlooked and presumably adjoined Hamaxitos on the west (Strabo 13.1.51).

A foundation story is recorded in Dictys Cretensis, which may originate with C5 or C4 sources, before the foundation of Alexandria Troas (Schwertheim (1994) 21–24). Neandreia was a member of the Delian League. It belonged to the Hellespontine district and is recorded first by toponym (IG I³ 263.II.34), later by city-ethnic (IG I³ 280.II.12), from 454/3 (IG I³ 259.IV.10) to 430/29 (IG I³ 281.III.37) a total of twelve times, twice completely restored, paying a *phoros* of 2,000 dr. (IG I³ 259.IV.10) in all years. It was assessed for tribute in 425/4 (IG I³ 71.III.81) and in 410/9 (IG I³ 100.III.4). It was one of the cities incorporated in Alexandria Troas in 310.

The origin of the civic centre (temple, agora, stoa) dates to the Archaic period, including a C6 temple, perhaps dedicated to Apollo (Wiegartz (1994)), an agora and stoa, possible remains of a theatre (Trunk (1994)), extensive housing

and a complex internal drainage system. The western section of the housing area was built on a rectangular organised grid dating to C4 (Maischatz (1994)). There was a fortified area at the west end of the site, arguably protected by the earliest fortifications of C6. These were built from 2–2.5 m-thick rough polygonal masonry, not laid in horizontal or even courses; they had five entrances. New walls were built in late C5 or early C4. They were 3.2 km long and 2.9 m thick, made from granite ashlar blocks. There were eight gates and eleven rectangular towers, two with interior courtyards (Schulz (1994), (2000)). These walls may be indirectly referred to at Xen. *Hell.* 3.1.16 (εἰς τὰ τείχη δέχεσθαι . . . *Νεανδρείς* . . . ἐπιείθοντο).

The city minted silver and bronze issues from c.430–310: denominations: drachm, hemidrachm, obol, hemiobol: *obv.* head of Apollo, or helmet; *rev.* altar and laurel tree, or ram, or horse, or triskeles, or ear of corn; legend: *NEAN* or *NEA* (Head, *HN*² 547; cf. Pohl (1994) 157–61; *SNG Cop. Troas* 446–54).

786. Ophryneion (Ophryneus) Map 56. Lat. 40.00, long. 26.20. Size of territory: 1 or 2. Type: [A]:a. The toponym is *᾽Οφρύνειον*, τό (Hdt. 7.43.2; Dem. 33.20; note *᾽Οφρυνεῖοι* (dat.) in IG I³ 430.11 (414/13)); restored at IG I³ 71.III.131, 77.IV.20); *᾽Οφρύνιον*, τό is recorded by Xen. *An.* 7.8.5. The city-ethnic is *᾽Οφρυνεύς* (C4s coins, *infra*).

Ophryneion is called a *polis* in the urban sense at Hdt. 7.43.2, and in the political sense retrospectively by Dion. Hal. *Ant. Rom.* 1.47.2, who draws on Hellan. fr. 31. Its name has been restored ([*᾽Οφρύνειον*) at IG I³ 77.IV.20 in a list of *Aktaiiai poleis* which uses *polis* in the political sense. The collective internal use of the city-ethnic is attested by C4s coins (*infra*).

If the toponym is correctly restored in IG I³ 71 and 77, it was one of the *Ἀκταῖαι πόλεις* in the Delian League and was assessed for tribute of 5 tal. in 425/4 (IG I³ 71.III.124, 131: *᾽Ο[φρύνειον]*) and for an unknown amount in 422/1 (IG I³ 77.IV.14, 20: [*᾽Οφρύνειον*]).

An Athenian inscription listing confiscated goods being offered for public sale (IG I³ 430.11 (414/13)) refers to *ἐπικαρπία τῆς γῆς τῆς ἐν ᾽Οφρυνεῖοι*. This implies land-ownership by Athenian citizens. Dem. 33.20 mentions that Parmenon lived here in exile from Byzantium, losing his wife and children when their house was destroyed by an earthquake.

Ophryneion was the reputed burial place of Hektor (schol. Hom. *Il.* 13.1). Strabo 13.1.30 reports that the grove of Hektor occupied a conspicuous site, and Hektor appears on the coins.

The site occupies a prominent hill some 100 m high, forming a conspicuous headland with a steep brow, giving the site its name. Walls (undated) enclosed the whole acropolis and are reported as 2 m thick without mortar; the upper part of the acropolis is separated by a deep trench and embankment (Leaf (1923) 153–54, citing Calvert's description). Many buildings are reported on the acropolis and the slopes to the west and north-west.

Ophryneion minted silver and bronze c.350–300; denominations: hemidrachm, trihemiobol: *obv.* head of Hektor, or Zeus; *rev.* mounted naked youth, or Dionysos, or Hektor; legend: *ΟΦΡΥΝΕΩΝ* or *ΟΦΡΥ* (Head, *HN*² 547; *SNG Cop. Troas* 455–60).

787. *Palaiperkote (Palaiperkosios) Map 51. Lat. 40.15, long. 26.40. Size of territory: ? Type C:?. The toponym is **Παλαιπερκώτη*, reconstructed from *ἡ πάλαι Περκώτη* (Strabo 13.1.20, *infra*) and the city-ethnic *Παλαιπερκόσιος* (*IG*¹³ 272.1.28).

The Palaiperkosioi were members of the Delian League. They belonged to the Hellespontine district and are recorded from 451/50 (*IG*¹³ 262.11.14) to 421/20 (*IG*¹³ 285.11.80) a total of fourteen times, twice completely restored, paying a *phoros* of 500 dr. (*IG*¹³ 265.11.39) in all years. They were linked with the *Perkosioi* in 433/2 (*IG*¹³ 279.11.19–20, completely restored) and probably assessed in 425/4 (*IG*¹³ 71.111.100, partly restored). In a passage that is certainly corrupt, Strabo (13.1.20) made some observation about a change of name (*ἡ πάλαι Περκώτη μετωνομάσθη, ὁ τόπος*). The change of name, however, seems to be that attested from Perkote to Perkope (see entry for Perkote), and it is not clear whether this passage refers to Palaiperkote at all. The site was probably located at Erdağ, where a large Archaic (?) fortification wall has been reported (Judeich (1898b) 546; cf. Schulz (2000) 23).

788. Perkote (Perkosios) Map 51. Lat. 40.15, long. 26.35. Size of territory: 1 or 2? Type: A:a. The toponym is *Περκώτη*, *ἡ* (Hom. *Il.* 2.835, 11.229, 15.548; Hdt. 5.117; Xen. *Hell.* 5.1.25; Arr. *Anab.* 1.12.6), rendered as *Περκότε* in the Athenian tribute lists (*ATL* i. 374). The form *Περκώπη* occurs in lesser MSS of these authors and was current after the Hellenistic period; see Eust. *Il.* 840.46 on *Il.* 11.229; Ath. 1.29F, discussion by Ruge (1938). The city-ethnic was *Περκώσιος* (Hom. *Il.* 6.30) or *Περκόσιος* (*IG*¹³ 272.1.33).

Perkote is called a *polis* in the urban sense by Hdt. 5.117.1. In Ps.-Skylax 94 Perkote is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες αἰῶδε*. The city-ethnic was used in its collective sense externally by the Athenian tribute

lists (*infra*). Perkote was a member of the Delian League. It belonged to the Hellespontine district and is recorded either by toponym (*IG*¹³ 266.1.21) or by city-ethnic (*IG*¹³ 272.1.33) from 454/3 (*IG*¹³ 259.11.17, partly restored) to 430/29 (*IG*¹³ 281.111.26) a total of thirteen times, twice completely restored, paying a *phoros* of 1,000 dr. (*IG*¹³ 266.1.21) in all years. It was assessed for tribute in 425/4 (*IG*¹³ 71.111.88, partly restored). Perhaps the Perkosioi were jointly listed with Palaiperkosioi in 433/2 (*IG*¹³ 279.11.19–20, both ethnics completely restored). In 387/6 Antalkidas brought his fleet to anchor at Perkote (Xen. *Hell.* 5.1.25). According to later sources, Perkote provided Themistokles with his bed linen (Plut. *Them.* 29; schol. Ar. *Eq.* 84; Ath. 1.54).

789. Polichna (Polichnaioi) Map 56. Unlocated. Type: C:?. The toponym is *Πολίχνα*, *ἡ* (Strabo 13.1.45). The city-ethnic is probably *Πολιχνίτης* (*IG*¹³ 71.111.76) or *Πολιχναῖος* as reported by Steph. Byz. 532.4 and confirmed by the form *Polichnaei* (Plin. *HN* 5.30). Its location is uncertain (Leaf (1923) 210).

At 13.1.45 Strabo refers to a fortified settlement (*τειχῆρες χωρίον*) called *Πολίχνα* or *Πολίχνη* on the territory of Skepsis. The toponym is possibly to be connected with the (restored) ethnic [*Πολι*]χνίται, a community in the Hellespontine district assessed for tribute in 425/4 (*IG*¹³ 71.111.76), thus *ATL* i. 541. The common alternation Polichnaioi/Polichnitai is attested in the case of the Erythraian Polichnitai/aioi (no. 860). If the restoration and the identification are accepted, Polichna was presumably a *polis* and perhaps a dependency of Skepsis already in C5.

790. Rhoiteion (Rhoiteus) Map 56. Lat. 40.00, long. 26.20. Size of territory: 2. Type: A:a. The toponym is *Ῥοίτειον*, *τό* (Hdt. 7.43; Thuc. 4.52.2; Xen. *Hell.* 1.1.3; *IG*¹³ 77.1V.16). The city-ethnic is *Ῥοίτειεύς* (Strabo 13.1.30; Steph. Byz. 557.8) or *Ῥοίτεύς* (*IG* XI.4 582; *IG* XI.2 163.B.g.18 (both C3f)).

Rhoiteion is called a *polis* in the urban sense by Hdt. 7.43.2, and in Ps.-Skylax 95 Rhoiteion is the second toponym listed after the heading *πόλεις Ἑλληνίδες . . . αἰῶδε*. It was one of the *Aktaiai poleis* mentioned by Thuc. 4.52.2 and *IG*¹³ 77.1V.16, where *polis* is used in the political sense. The collective city-ethnic is attested internally by C4s coins (*infra*); the individual city-ethnic is attested externally by C3f inscriptions (*IG* XI.4 582; *IG* XI.2 163.B.g.18), but *SEG* 12 88 (332/1) has been interpreted as a grant of proxeny to a Rhoiteius. The name of the territory was *τὸ Ῥοίτειον* (Leaf (1923) 157). It probably extended west and south to the river

Simois, and east to Ophryneion. It included the burial tumulus of Ajax (whose statue was returned to the Rhoiteians by Augustus (Strabo 13.1.30), and an unlocated colony called *Πόλιον*, which was renamed *Πόλισμα* in Strabo's day (Strabo 13.1.42).

Rhoiteion was founded by Dorians from Astypalaia, who also founded the undefended colony of Polion, in C7/C6, which was demolished soon afterwards (Strabo 13.1.42).

Rhoiteion was one of the *Ἀκταῖαι πόλεις* in the Delian League and was assessed for tribute of 8 tal. in 425/4 (*IG* 1³ 71.III.124, 126, toponym restored) and for an unknown amount in 422/1 (*IG* 1³ 77.IV.14 and 16). In 424 it was briefly seized by refugees from Mytilene and other refugees from Lesbos, but returned on payment of 2,000 Phokaian stateres (Thuc. 4.52.2). *Μοιρίας Αντιφάνου Ποιτεύς* was honoured in a C3f proxy decree of Delos (*IG* XI.4 582). It was absorbed by Ilion in a synoecism after 189 (Livy 38.37).

The acropolis is reported to be fortified on three sides with two towers (undated); the fourth side was precipitous. There were buildings within the acropolis, while the lower town extends to the south (Cook (1973) 77–90).

The city minted silver coins c.350–300: denomination: tetrobol: *obv.* head of Apollo; *rev.* triskeles; legend: *POITEI* (Head, *HN*² 548).

791. Sigeion (Sigeius) Map 56. Lat. 40.00, long. 26.10. Size of territory: 2. Type A:a. The toponym is *Σίγειον*, *τό* (*IG* 1³ 1144.A.II.a.32 (464); Hdt. 5.65.3; Thuc. 6.59.3; Arist. *Hist. an.* 547^a5); also *Σίγη*, *ἡ* (Hecat. fr. 221; Ps.-Skylax 95). For the identification of *Σίγη* with *Σίγειον*, see Büchner (1923) 2276. The city-ethnic is *Συκεεύς* (*Syll.*³ 2.A = *LSAG*² pl. 71 43–44 (C6)) or *Σιγευεύς* (*Syll.*³ 2.B (C5)) or *Σιγειεύς* (*Syll.*³ 2.B (C5); *IG* 1³ 272.I.35) or *Σιγεύς* (*I.Kios* 1.4 (C4)). Sigeion is described as a *polis* in the urban sense at Hdt. 5.94.2 and in Ps.-Skylax 95 Sige (Sigeion) is one of the toponyms listed after the heading *πόλεις Ἑλληνίδες . . . αἰῶδε*. Other references to Sigeion as a *polis* are late: Harp. Σ11 and Strabo 13.1.31 (*κατεσπασμένη πόλις*). The collective city-ethnic is attested internally in C6 by *Syll.*³ 1.2, and externally in C5 by the Athenian tribute lists (*infra*) and *IG* 1³ 17 (C5m/s), which is a decree granting privileges to the city. Individually, the city-ethnic is applied externally in *I.Kios* 1 (C4) and by later sources to the C5 historian from the city, Damastes (= *FGrHist* 5; cf. Test. 1, 2, 4).

Its territory is termed *χώρη* by Hdt. 5.94.2. Sigeion and Rhoiteion included the former territory of Ilion, until that city was refounded (Strabo 13.1.42). In the early C6 control of Sigeion was contested between Athenians and

Mytilenians; the latter's base was the neighbouring *polis* of Achilleion (Hdt. 5.94.2). The oecist may have been the Athenian, Physkon, in C7l, when virtually the entire rest of the Troad was controlled by Lesbos (Strabo 13.1.8).

Sigeion was a member of the Delian League. It belonged to the Hellespontine district and is recorded from 450/49 (*IG* 1³ 263.IV.25) to 418/17 (*IG* 1³ 287.II.9) a total of fifteen times, once completely restored, paying a *phoros* of 1,000 dr. (*IG* 1³ 263.IV.25) down to 418/17, when it paid 1 tal. (*IG* 1³ 287.II.9). It was assessed for tribute in 425/4 (*IG* 1³ 71.III.93). In C4, Tenedos claimed control over Sigeion (Arist. *Rh.* 1375^b31; *Anon. in Arist. Artem Rhet.* 81.12). Strabo 13.1.39 (cf. 13.1.31) says that the city was demolished (*κατέσκαπται*) by the people of Ilion on account of its disobedience. The date must fall between c.334 and Strabo's own time.

Sigeion was usually ruled by an autocrat or a tyrant: Physkon, Athenian Olympic victor, in late C7 (Strabo 13.1.38); Hegesistratos, son of Peisistratos, in 520s, and perhaps Hippias in 510 (Hdt. 5.94.1); Chares son of Theochares between c.355 and 334 (Theopomp. fr. 105 *apud* Ath. 12.532B; Arr. 1.12.1; schol. Dem. 3.21). A public decree of C2 has been recorded (Daux (1956); cf. *BE* (1958) 410).

A *prytaneion* is mentioned in C6 (*Syll.*³ 2A). The city walls were reputed to have been built with stones from Ilion by Archianax of Mytilene in C6 (Strabo 13.1.38). There was a C6 dedication of crater, base and stand by Phanodikos of Prokonnesos (*Syll.*³ 2). A C4 decree of Kios gave proxy status and minor privileges to *Ἄδολος Ἀδόλου Σιγεύς* (*I.Kios* 1).

Silver and bronze coins were minted in C4, probably when Sigeion was controlled by Chares, c.355–334. Denomination: hemidrachm: *obv.* head of Athena, or head of Zeus; *rev.* owl, crescent behind; legend: *ΣΙΓΕ* (Head, *HN*² 549; Six (1894) 306–7).

792. Skepsis (Skapsios) Map 56. Lat. 39.50, long. 26.40. Size of territory: 5. Type A:a. The toponym is *Σκήψις*, *ἡ* (Xen. *Hell.* 3.1.15; *F.Delphes* III.1 288 (C2)); *Παλαισκήψις* (Strabo 13.1.51). The city-ethnic is *Σκάψιος* (C5 coins, *infra*), *Σκάψιος* (*IG* 1³ 261.IV.27), *Σκήψιος* (*IG* 1³ 100.III.3; *IG* II² 10364 (C3); *F.Delphes* III.1 288 (C2)), *Σκήψιος* (coins, *infra*; Xen. *Hell.* 3.1.21), *Σκέμφιος* (Krateros fr. 24, Krech (454/3)).

It is called a *polis* in the urban sense by Xen. *Hell.* 3.1.15. In Ps.-Skylax 96 Skepsis is the second toponym listed after the heading *Αἰολίδες δὲ πόλεις . . . αἰῶδε*. In the political sense *polis* is used by Xen. *Hell.* 3.1.21. Skepsis is repeatedly referred to as a *polis* in the political sense in a decree of 311 (*OGIS* 6.2,

4, 11, 15). The acropolis is mentioned by Xen. *Hell.* 3.1.21 (ἐν τῇ τῶν Σκηψίων ἀκροπόλει). Xen. *Hell.* 3.1.21 also refers to its inhabitants as citizens in emphatic terms: παραδοὺς δὲ τοῖς πολίταις τὴν πόλιν, καὶ παρακελευσάμενος ὥσπερ Ἑλλήνας καὶ ἑλευθέρους χρῆ, οὕτω πολιτεύειν. This passage, however, also implies that the population was mixed. Xen. *Hell.* 3.1.28 also employs the term *patris* in relation to the city. The collective city-ethnic is used internally on coins (*infra*) and externally on the Athenian tribute lists (*infra*); the external individual use is attested in a C₃ epitaph from Athens (*Agora* xvii 666).

The name of the territory was ἡ Σκηψία (Strabo 13.1.33), and the city lay ἐν δὲ τῇ μεσογαίᾳ τῆς Τρωάδος (Strabo 14.1.6). Its extent must have been large, but the topography remains extremely obscure. According to Strabo 13.1.45, it included a walled settlement called Πολίχνα (possibly itself a small *polis*), and it was separated from the territory of Kebren by the river Skamandros (Strabo 13.1.33). The site of Palaiskepsis was said to be above Kebren in the highest parts of Mt. Ida near Polichna (*sic*) (Strabo 13.1.52). Strabo 13.1.51 describes the early but undated *metoikesis* from Palaiskepsis to Skepsis as follows: ὕστερον κατωτέρω σταδίοις ἑξήκοντα μετωκισθῆναι ὑπὸ Σκαμάνδρου τοῦ Ἐκτορος καὶ Ἀσκανίου τοῦ Αἰνείου παιδός. The figure of 60 stades was emended to 260 by Leaf (1923) 270–71, who was guided by Strabo's indications that Skepsis lay in the river basin of the Skamandros, while Palaiskepsis was in that of the Aisepos. Following this, Strabo 13.1.52 refers to the arrival of Milesian settlers to be joined in a *sympoliteia* at Skepsis, perhaps after the sack of Miletos in 494, ἔτα Μιλήσιοι συνεπολιτεύθησαν αὐτοῖς. C₅ coins have the city-ethnic ΣΚΗ(Α)ΨΙΟΝ ΝΕ(ΟΝ) which may refer to the refoundation of Skepsis at this time. After 310 Skepsis was synoecised with Alexandria by Antigonos, but restored to independence by Lysimachos (Strabo 13.1.52).

Skepsis was originally an Aiolic city (implied by use of form ΣΚΑΨΙΟΝ on C₅ coins, *infra*); but there was a secondary foundation by Milesians after 494 (Leaf (1923) 272–73). The original oecists, according to Strabo 13.1.52–53, following Demetrios of Skepsis, were Skamandrios and Askanios.

Skepsis was a member of the Delian League. It belonged to the Hellespontine district and is recorded in 453/2 (*IG*¹³ 260.viii.4, partly restored), in 452/1 (*IG*¹³ 261.iv.27) and in 441/0 (*IG*¹³ 271.ii.31), paying a *phoros* of 1 tal. It was assessed for tribute possibly in 454/3 (Krateros fr. 24, Krech) and in 425/4 (*IG*¹³ 71.iii.65, completely restored), probably in 410/9 (*IG*¹³ 100.iii.4, partly restored).

Strabo 13.1.52 records a progression in its constitution from kingship (descendants of Skamandrios and Askanios), through oligarchy, to democracy (after the *sympoliteia* of Milesian settlers). Imhoof-Blümer (1901) 45 suggests that a coin with the legend *ANTHNOPOΣ* is evidence for a dynast of that name in C₂ or C₁; but this may simply be an allusion to the legend of the Antenoridai, current at the city (Leaf (1923) 275–80). The magistrates included a βασιλεύς (Strabo 13.1.52). The city received a letter from Antigonos in 311 (*OGIS* 5), and the *demos* responded by passing a decree in the king's honour. The Skepsians resolved to set up a sanctuary and altar for Antigonos and to found an annual festival, which would feature a *thysia*, an *agon*, a *stephanephoria* and a *panegyris*. Among the city magistrates the text mentions a *tamias*, who was responsible for expenditure on the festival, and a *grammateus*, who was to supervise the erection of the stele inscribed with the decree in the sanctuary of Athena (*OGIS* 6). An early Hellenistic citizenship decree testifies to the organisation of the citizens into *phylai* (Judeich (1898a)). Xen. *Hell.* 3.1.15 implies that Skepsis was a fortified site.

Derkyildas conducted a sacrifice to Athena on the acropolis in 399 (Xen. *Hell.* 3.1.21; cf. *OGIS* 6.40–41), perhaps suggesting a cult of Athena Polias. There was also a communal cult of Dionysos (coins, inscription of C₄/C₃; *SEG* 26 1337 (regulations for priesthood of Dionysos Bambouleios, probably dating to C₂)). The city used the Ionic calendar, and the month Lenaion is attested (*SEG* 26 1337).

Skepsis minted silver and bronze coinage in C₅ and C₄. (1) Silver, 460–400: denominations: drachm, triobol, trihemiobol, hemiobol: *obv.* horse (Pegasos); legend: ΣΚΑΨΙΟΝ or ΣΚΗΨΙΟΝ or ΣΚΗΨΙ; *rev.* fir-tree; legend: Ν or ΝΕ (presumably νεών). (2) Bronze, c.460–400: *obv.* fir-tree, or horse (Pegasos); *rev.* symbol, or fir-tree in incuse square. (3) Silver, 400–310: denominations: tetrobol, trihemiobol: *obv.* Pegasos, or Dionysos; *rev.* fir-tree; legend: ΣΚΗΨΙΩΝ or ΣΚΗ or ΣΚ. (4) Bronze, 400–310: *obv.* Pegasos; *rev.* fir-tree; legend: ΣΚΗΨΙΩΝ or ΣΚΗ (Head, *HN*² 548; *SNG Cop. Troas* 469–87).

793. Tenedos (Tenedios) Map 56. Lat. 39.50, long. 26.05. Size of territory: 2. Type: A:a. The toponym is Τένεδος, ἡ (*IG*¹³ 265.ii.109; Hdt. 1.151.2; Thuc. 3.35.1). The city-ethnic is Τενέδιος (Hdt. 1.151.3; *IG*¹³ 261.1.6). Tenedos is called a *polis* in the urban sense by Hdt. 1.151.2 and implicitly in Ps.-Skylax 95 (Flensted-Jensen and Hansen (1996) 142). It is included among the *poleis* in the political sense mentioned at Hdt. 1.151.3 and is explicitly called *polis* in the political sense in *IG*

II² 232 (340/39). *IG* II² 233.6–7 (340/39) refers to the *demoi* of the Tenedians. *πατρις* is found in *SEG* 36 697 (C4/C3) and *CEG* II 717 (C4/C3e), and *πάτρα* in Pind. *Nem.* 11.20. The collective city-ethnic is used internally on C5m–C4 coins (*infra*) and externally by Hdt. 1.151.3, Thuc. 3.2.3 and, e.g., *IG* I³ 261.1.6 (452/1). The individual city-ethnic is used externally on funerary inscriptions from Athens (*Agora* XVII 672–73 (C4)) and in *IG* VII 2418.14 (355–346).

Ps.-Skylax 95 mentions the island and its harbour, *καὶ νήσος κατὰ ταῦτα κείται Τένεδος καὶ λιμὴν*, while Strabo 13.1.46 mentions two harbours. There was a single *polis* on the island of Tenedos (Hdt. 1.151.2), which also had territory on the *peraia* (Strabo 13.1.32); Xen. *Hell.* 5.1.7 uses *χώρα* about the island. Strabo 13.1.44 shows that Tenedian territory included Achaïion, while 13.1.46 indicates that it began at Sigeion and Achilleion, and included Achaïion. Strabo 13.1.47, a corrupt passage, is usually restored to show that Larisa and Kolonai were previously parts of the Tenedian *peraia* (*ἦν δὲ τῷ Ἀχαΐῳ συνεχῆς ἢ τε Λάρισα καὶ Κολωναί, τῆς <Τενεδίων περι>αίας οὔσαι πρότερον*). However, Cook (1973) 197–98 proposes restoring *ἦν δὲ τῷ Ἀχαΐῳ συνεχῆς ἢ τε Λάρισα καὶ Κολωναί, τῆς <Λεσβίων περι>αίας οὔσαι πρότερον* at this point, and this also makes good sense. Arist. *Rh.* 1375^b31 with *Anon. in Arist. Artem Rhet.* 81.12 indicates that Tenedos claimed control over Sigeion some time in C4.

Tenedos was an Aiolic settlement founded from Lesbos (Hdt. 1.151.1–2; Strabo 13.1.46). Tenedos was a member of the Delian League. It belonged to the Hellespontine district and is recorded from 452/1 (*IG* I³ 261.1.6) to 429/8 (*IG* I³ 282.III.30) a total of fifteen times, twice completely restored, usually paying a *phoros* of 2 tal., 5,280 dr. (*IG* I³ 269.II.8) but sometimes 4 tal., 3,000 dr. (*IG* I³ 267.I.29). It was assessed for

tribute in 425/4 (*IG* I³ 71.II.180, partly restored). Contributions *ἔς Τένεδον* are recorded in 447/6 (*IG* I³ 265.II.108–9). Thuc. 7.57.5 describes the Tenedians as *ὑποτελεῖς*. The Athenian general Paches placed a group of pro-Spartan Mytilenians in temporary custody on Tenedos in 427 (Thuc. 3.28.2; cf. 35.1); Tenedos had been at odds with Lesbos during the Revolt of 428/7 and had not joined them (Thuc. 3.2.3). Tenedos was also a member of the Second Athenian Naval League (*IG* II² 43.A.II.79). A Tenedian *proxenos* of the Boiotians is mentioned in *IG* VII 2418 (355–346).

There was an Aristotelian Constitution of the Tenedians (Arist. fr. 610–11); a fragment in Steph. Byz. 616.3ff refers to a law concerning adulterers established by a king who was obliged to punish his own son with death by beheading according to its harsh terms. In fact, this is an aetiological story to explain the coin types of Tenedos with the double axe motif and has little historical value. C.330 an Argive *therodokos* resided at Tenedos (*SEG* 23 189.II.19).

The site includes evidence of grid planning of the ancient city, cemeteries dating from C8 to C4, and the remains of a theatre of uncertain date at Yeni Kale Tepe (Mitchell (1999) 142). A *prytaneion* is mentioned at Pind. *Nem.* 11.1–3. There was a public cult of Apollo Smintheus (Strabo 13.1.46, quoting Hom. *Il.* 1.38).

Tenedos minted silver coinage. (1) Silver, c.550–470: denominations: tetradrachm, didrachm, hemidrachm, obol: *obv.* Janus head (male and female); *rev.* incuse square, or double axe, or head of Athena; legend: *TENE* or *TENEΔΙΟΝ* or *TENEΔΕΟΝ*. (2) Silver, c.450–387: denominations: tetradrachm, drachm, hemidrachm: *obv.* Janus head (male and female), or Artemis; *rev.* double axe, usually with bunch of grapes; legend: *TE* or *TENE* or *TENEΔΙΟΝ*. (Head, *HN*² 550; *SNG Cop. Troas* 505–22).

LESBOS

MOGENS HERMAN HANSEN, NIGEL SPENCER, HECTOR WILLIAMS

I. The Island

The name of the island is *Λέσβος*, ἡ (Hom. *Il.* 9.129; Anac. fr. 13.6, *PMC*; Thuc. 1.116.1; Arist. *Hist. an.* 621^b22; *IG* 1³ 18.18 (C5m)); *F.Delphes* III.1 497.9 (C4l–C3e)). The ethnic is *Λέσβιος* (Archil. fr. 98.11; Alc. fr. 129.1, Lobel and Page; Hdt. 1.24.8; *IG* 1³ 1352 *bis*; *SEG* 28 24.2 (428/7)). In Tod 196.16 *Λεσ[βώιοι]ς* is an unconvincing conjecture (Brun (1993) 188, followed by RO 96).

Lesbos covers 1,614 km² (Labarre (1996) 191). It was settled by the Aiolian Greeks, probably over an extended period from the later Bronze Age to the early Iron Age. However, the continuity of many traditions in the material culture across the Bronze Age/Iron Age divide, lasting in some cases until the Archaic period, makes it almost impossible to pin down precisely in the archaeological record when the “Aiolian” element in the population in Lesbos arrived (Spencer (1995*b*) 275–77, 293–303). The Aiolian dialect, related to Thessalian and Boiotian, is the principal clue to the question of the identity of the new population elements in Lesbos (Thumb and Scherer (1959) 84–85; Cook (1975) 776–79). The written sources are late and are infected with mythological speculations (Bérard (1959) 22–28).

According to Herodotos (1.151.2) there were in C5m five *poleis* on Lesbos, but there had once been six until the *polis* of Arisba was destroyed by an *andrapodismos*. A century later, Ps.-Skylax (97) reported that Lesbos had five *poleis*: Methymna, Antissa, Eresos, Pyrrha and Mytilene. This neat picture of the *poleis* of Lesbos is disturbed by Steph. Byz., who, in addition to the six *poleis* above, lists seven further *poleis* on Lesbos: Geren (205.3), Ira (337.2), Issa (339.14), Metaon (448.10), Nape (469.4), Xanthos (480.17) and Penthile (516.18). These seven toponyms, or some of them, may have been names of Archaic *poleis*. Furthermore, some rare billon coins of C5f have with good reason (confirmed

by T. Buttrey) been assigned to Lesbos because of the metal as well as the *obv.* type: two boars’ heads, face to face. The coins are inscribed *KIΘI* or, perhaps, *KIOI* (see *infra*). They may testify to the existence of an otherwise unknown *polis*. It is true that Herodotos’ account at 1.151.2 conveys the impression that there had never been more than six Lesbian *poleis*. But in the same part of book 1 he reports that there were eleven Aiolian and twelve Ionian *poleis*, whereas we know from other sources that, in C5m, there were more than thirty *poleis* in Aiolis and some thirty in Ionia. On the other hand, Stephanos does not in any of the seven cases cite a source for his site-classification, and we know from other regions that some doubtful and spurious settlements are recorded as *poleis* in Stephanos’ treatise. There are no other written sources or material remains to back up Stephanos’ site-classifications, and not all of the locations can even be securely located topographically. Furthermore, the inscribed letters on the coins do not readily fit with any otherwise attested toponym or ethnic. Future discoveries may show that the community that struck these coins and some of the *poleis* listed in Steph. Byz. were in fact Archaic *poleis*, but, as the evidence stands, it seems preferable to place them all in the list of non-*polis* settlements.

In addition to the six *poleis*, *Barr.* records seventeen sites as settlements of the Archaic and/or Classical periods, and the list of unlocated toponyms includes four which have been recorded below. However, as the evidence stands, only two of the seventeen deserve to be classified as settlements, *viz.* Issa and Petra, and even they can be classified as settlements of the Archaic and Classical periods only with some hesitation. Lesbos was dotted with a large number of towers and forts, many of them in Lesbian masonry and dating from the Archaic period (Spencer (1994), (1995*a*) 53–64, (1995*c*); Schaus and Spencer (1994)). There has been significant extensive survey work carried out on the island, but the lack of any intensive survey in any region of the island means that currently there is very little evidence of proper non-*polis* settlements. In short, at the time of writing, it is difficult to answer questions about the settlement pattern,

The description of the remains of the six urban *polis* centres is by Hector Williams and Nigel Spencer. The remainder of the text is by Mogens Herman Hansen with the assistance of Nigel Spencer for the data relating to non-*polis* settlements.

and to decide whether Lesbians who were not settled in the urban centres of the *poleis* lived either dispersed in the countryside or in second-order towns or villages. This will become clear only when further fieldwork is carried out in the hinterland of the known urban centres.

What we know about the history of Lesbos in the early Archaic period concerns the colonisation of Chersonesos, Troas and Aiolis (Strabo 13.2.1; Mason (1993) 226–29). Specific information is known for a few *poleis* only: in C7 Lesbians colonised Madytos (no. 669) and Sestos (no. 672). Tenedos (no. 793) was colonised at an unknown date. For colonies founded by Methymna and Mytilene, see *infra*.

At some point in C6s Lesbos came under Persian rule. A Lesbian fleet was defeated by Polykrates, and Lesbian prisoners worked on the fortifications of Samos (Hdt. 3.39.4). Mytilenaian ships served in Kambyses' fleet when he invaded Egypt in 525 (Hdt. 3.13–14), and Lesbian ships in Otanes' fleet when he conquered Lemnos and Imbros c.512 (Hdt. 5.26). The Lesbians joined the Ionian Revolt, and seventy Lesbian ships fought at Lade in 494 (Hdt. 6.8.1–2, 14.3). After the defeat, the entire island of Lesbos was systematically ravaged by the Persians (Hdt. 6.31.1), and all five *poleis* seem to have been exposed to *andrapodismos*. Lesbos joined the Greeks in 479 (Hdt. 9.106.4).

All five Lesbian *poleis* were members of the Delian League, but none is recorded in the tribute lists, not even after the Revolt of 428/7. The Lesbians were among the original members of the League (Plut. *Arist.* 23.4; cf. Thuc. 3.10.2–4); they continued to provide ships and did not shift to paying *phoros* (Thuc. 1.19; Arist. *Ath. Pol.* 24.2). They provided ships for the suppression of the revolt of Samos in 440/39 (Thuc. 1.116.2, 117.2) and for the Athenian naval expedition round the Peloponnese in 430 (Thuc. 2.56.2). The Lesbian *poleis* remained *autonomoi* and *eleutheroi* (Thuc. 3.10.5), but were nevertheless under pressure from Athens (Arist. *Pol.* 1284^a38–40). In 428 the Lesbian *poleis* revolted, except Methymna (Thuc. 3.2.1; Quinn (1981) 33–38). After the Athenians had quenched the Revolt, these *poleis* were forced to accept Athenian *klerouchs*, but did not have to pay *phoros* (Thuc. 3.50.2). Methymna, however, remained an *autonomos* member of the League and provided ships presumably against Melos in 416 (Thuc. 5.84.1) and certainly for the Sicilian campaign in 415–413 (Thuc. 6.85.2, 7.57.5). Methymna, Mytilene and Pyrrha revolted once again in 412, but were soon recovered (Thuc. 8.22.2–23.6, 100.2–3). In 405, after the Spartan victory at Aigos potamoi, Lysander put an end to the Athenian domination of Lesbos (Xen. *Hell.* 2.2.5).

In 390/89 the Lesbian *poleis* were allied with Lakedaimon,

except Mytilene, and there was a Spartan harmost on Lesbos (Xen. *Hell.* 4.8.28). All five Lesbian *poleis* were members of the Second Athenian Naval League, and this time they are recorded individually, Mytilene and Methymna among the founding members (*IG* 11² 43.80–81); Antissa and Eresos joined the League in, probably, 375 (B.20–21), Pyrrha is attested as a member in *IG* 11² 107.29 (368/7).

At Messon (*IG* 11¹ suppl. 136.a.5 (C2f)) north of Pyrrha (Spencer (1995a) 103) was a shrine which in the Archaic period was shared by all Lesbians and consecrated to three divinities: Zeus, the Aiolian mother goddess (either Hera or Kybele) and Dionysos (Alc fr. 129; cf. Robert (1969) 816–31). In the Classical period the sanctuary was situated at the edge of the territory of Pyrrha (Labarre (1996) 197). For the C4–C3 pseudodipteral Ionic temple, see Pyrrha (no. 799) *infra*. From the temple at Messon Louis Robert inferred that there was a Lesbian federation from C7l onwards (Robert (1969) 818, 825). Further evidence of co-operation between the *poleis* is the “Lesbian” coinage (*infra*). But neither the coins nor the existence of a sanctuary shared by all *poleis* in a region or a multipolate island is enough to support the inference that there was a federal organisation with common political institutions for all the *poleis*. There can be no doubt, however, that Antissa, Eresos and Pyrrha were controlled by Mytilene in the years before the Revolt of 428. They were dependent *poleis* and what triggered the Revolt in 428 was presumably the Mytilenaian attempt by a *synoikismos* to transform Lesbos into one single *polis* (Thuc. 3.2.1–3.1 with schol.; cf. Moggi, *Sin.* 189–97). Thucydides conveys the impression that the synoecism was planned to include Methymna as well as the other three *poleis*.

There was no common Lesbian calendar. The names of some months are known for Eresos, Methymna and Mytilene, and most names differ from *polis* to *polis* apart from the month Apollonios (shared by Eresos and Methymna) and Pantheios (shared by Methymna and Mytilene); see Trümpy, *Monat.* 246–48. The evidence is Hellenistic or later, but if there were different calendars in the later periods we can infer *a fortiori* that each *polis* must have had its own calendar in the Archaic and Classical periods.

Several series of coins struck in billon or electrum are classified as a “Lesbian” coinage. The common view is that these coins were struck for general use in Lesbos, some of them in Mytilene, some perhaps in Methymna. (1) Billon coins struck on the Phoenician or Persic standard from before C6m to after C5m: denominations: stater, *hekte* and fractions. Types: *obv.* a great variety of types, some connected with Mytilene (e.g. two calves' heads face to face), some

with Methymna (e.g. two boars' heads face to face); *rev.* incuse square; legend: *ΑΕΣ* or *M* (on a few); on one a monogram, interpreted as *AN*, standing for Antissa (Babelon, *Traité* ii.1. 349 no. 568). (2) Electrum coins struck on the Phokaic standard c.485–350: denominations: stater and *hekte*. Types: *obv.* a great variety of types (head of animal, e.g. lion or ram; later, head of a god, e.g. Apollo or Hermes); *rev.* a great variety of types (e.g. panther or serpent or silenos in incuse square); legend: *ΑΕ* or *M* (on a few), see 1029 *infra* (Head, *HN*² 557–59; Kraay (1976) 38–39, 266; *SNG Cop. Lesbos* 284–330).

1. Pre-Hellenistic Settlements not Attested as Poleis

Aigeiros (*Αἰγείρος*) Strabo 13.2.2 (*κώμη τῆς Μηθυμναίης*). In *Barr.* identified with Kabakli, but both Mason (1993) 240–43 and Spencer (1995a) no. 243 dispute the identification. In *Barr.* classified as a settlement; but even if the identification is accepted, there is no evidence that Aigeiros (or Kabakli) was a settlement in the Archaic and Classical periods (Spencer (1995a) no. 243). For the erroneous attribution of an Archaic coin to Aigeiros (Head, *HN*² 559), see Mason (1993) 243. *Barr.* AC.

Geren (*Γέρην*) Steph. Byz. 205.3 (*πόλις ἢ κώμη Λέσβου*). *Barr.* Unlocated, undated.

Hiera? (*Ἱερά, Hiera*) Alc. fr. 69.3–4, Lobel and Page: Ἱρ [---] ἔς πόλιν is sometimes restored as Ἱρ[α] ἔς πόλιν. If correct, the restoration testifies to the existence of a seventh *polis* on Lesbos in the Archaic period; but it seems preferable to restore Ἱρ[αν] ἔς πόλιν or to leave the text unrestored. Steph. Byz. 337.2 (*Ἱρά . . . ἔστι καὶ πόλις Λέσβου*); Plin. *HN* 5.139 (Hiera). In *Barr.* Hiera is identified with a site near modern Perama (Spencer (1995a) no. 54), but remains in the area are all later than C1 (HW¹; Spencer (1995a) no. 54) and the identification with the historically attested Hiera cannot be proved from current finds in the area. *Barr.* C.

Issa (*Ἴσσα*) Steph. Byz. 339.14 (*πόλις ἐν Λέσβῳ*). In *Barr.* identified with a fortified hill-top settlement near modern Parakoila (Spencer (1995a) no. 123), where finds of an apparently substantial enclosure wall and a building complex were noted initially in the nineteenth century by Koldewey (1890) and more recently by Axioitis (1992). Both felt unable

to date the structure from the associated ceramic scatter, although Kontes suggested that “pre-Hellenistic” ceramics had been found here. Near this site (lying to the north-east) is the Lesbian masonry enclosure at Xerokastrine (Spencer (1995a) no. 122), probably to be classified as a fort rather than a settlement in Antiquity. *Barr.* AC.

Kith[---] (*Κιθ[---]*) Some rare billon coins of C5f have with good reason been assigned to Lesbos because of the *obv.* type: two boars' heads, face to face; legend: *KIΘI* or, perhaps, *KIOI*; *rev.* incuse square and, on one, boar's head (Babelon, *Traité* ii.1. 347–49 nos. 559–61; *NC* (1905) 326 n.4; Head, *HN*² 560). Accepting the Lesbian origin of the coins, Büchner (1924) 2127 included a *Κίθος*(?) among the towns on Lesbos. *Barr.* Unlocated, undated.

Maleia (*Μαλεία*) *IG* XII.2 74.b.16, a C3 register of landed property in the territory of Mytilene. According to Strabo 13.2.2, *Μαλία* was the southernmost promontory on Lesbos. In *Barr.* identified with Akhliia. There are a number of archaeological remains reported in the area south of Mytilene on this promontory (Spencer (1995a) nos. 38–43), the most substantial of which were structural and architectural finds dating back to C5 in a rescue excavation near the modern airport. Intriguingly, more finds of a more votive nature, including Archaic ceramics, were reported by Koldewey in the nineteenth century near the tip of the promontory (Spencer (1995a) nos. 38–43). *Barr.* C.

Metaon (*Μέταον*) Steph. Byz. 448.10 (*πόλις Λέσβου*), citing Hellan. fr. 92. If this toponym is correctly identified with the remains near the village of Plagia (Spencer (1995a) no. 62), there are no remains antedating the Hellenistic period. *Barr.* AC.

***Myrsinia** No ancient source mentions a **Μυρσινία* on Lesbos. *Barr.* marks Myrsinia near/at Spencer (1995a) no. 60 (NS), but no ancient remains are reported apart from an altar of the Hellenistic or Roman periods (which could well have been removed from its original location). *Barr.* C.

Nape (*Νάπη*) Strabo 9.4.5; Steph. Byz. 469.4 (*πόλις Λέσβου*); by Hellan. fr. 35b called *Λάπη*, erroneously according to Strabo 9.4.5. In *Barr.* identified with modern Klopedi, the location of the Aiolic-style temple (Spencer (1995a) no. 111); see *infra*. The remains do not warrant *Barr.*'s classification of the site as a settlement. *Barr.* AC.

Penthile (*Πενθίλη*) Steph. Byz. 516.18 (*πόλις Λέσβου*). The toponym is associated with the location 2 km south of Agiasos known as “Pitsilia”, but no ancient remains have

¹ HW or NS indicates information obtained from Hector Williams or Nigel Spencer by e-mail.

ever been located at the spot (Spencer (1995a) no. 71). *Barr.* Unlocated, undated.

Petra The only Πέτρα(α) on Lesbos mentioned in the sources (*IG XII.2* 76.h.9) is a Roman village south of Methymna (Spencer (1995a) nos. 207–8), and there is still a modern-day village bearing this name on the coast in this area. No ancient source mentions a Petra near Prophitis Elias (Spencer (1995a) no. 121) on the west side of the Arisba plain, where “traces of a substantial enclosure wall of polygonal masonry are visible” and “a scatter of amphora, pithos and other sherds lie on the slopes below the summit outside the enclosure wall, and on the peak or the hill are traces of foundations and a dense scatter of ceramics”. According to Kontes (1978) 291, a “fort”, but could also be a settlement of the Archaic period (Spencer (1995a) fig. 8). *Barr.* AC.

Sigrion (Σίγριον) Steph. Byz. 565.1; cf. 101.1, 474.11 (Λιμῆν). Strabo 13.2.4. (Steph. Byz. 101.1). *Barr.* has Sigron, but all the sources have Sigrion. In *Barr.* classified as a settlement, but the extensive settlement remains reported appear to date only from the Roman period. In terms of ancient remains nearby, there are towers in isodomic masonry (Spencer (1995a) nos. 149, 151). According to Spencer (1995a) no. 148, Sigrion as a site is dated Roman and later. *Barr.* indicates that it is both A and C.

Therma? (Θέρμα) *IG XII.2* 14.4 (C3e) (ἐχ Θέρμα[as]). In *Barr.* identified with modern Thermi (Kontes (1978) 234–35 = Spencer (1995a) no. 8). The most extensive ancient remains near the modern village are those of the long-lived cult of Artemis Thermia focused on the hot springs near the small harbour of Loutra Thermis. The cult dates from C5, but hardly warrant *Barr.*'s classification of the site as a settlement. *Barr.* C.

Xanthos (Ξάνθος) Steph. Byz. 480.17 (πόλις ἐν Λέσβῳ). *Barr.* Unlocated, C. This date is probably based on the erroneous assumption that ὁ πολίτης Ξάνθιος ὡς Εὐρυπίδης (487.17–18 = Eur. fr. 1102, Nauck) belongs with Xanthos on Lesbos and not with Xanthos in Lykia.

2. Unidentified Settlements

Ag. Georgios According to Kontes (1978) 239 a “significant settlement”, but so far there is no corroboration of the extent or precise nature of the remains here, including those reported nearby by Koldewey in the nineteenth century (Spencer (1995a) nos. 41–42). *Barr.* AC.

Ag. Nikolaos A cave with rich deposits of a votive nature (Spencer (1995a) no. 25) dating back to the Archaic period. However, the other remains hardly warrant *Barr.*'s classification of the site as a settlement, at least in Antiquity. *Barr.* C?

Damandri According to Spencer (1995a) no. 89, all remains are Hellenistic or later. *Barr.* C.

Garbias See Spencer (1995a) no. 80, but the precise material remains at the site still require corroboration and as yet are insufficient to warrant *Barr.*'s classification of the site as a settlement. *Barr.* C.

Larsos Kontes reported a site at the location, but this report remains to be corroborated. *Barr.* C.

Parakoila Classical–Hellenistic ceramics and some associated structural remains were located near the modern village of Parakoila by Axiotis (Spencer (1995a) nos. 124–26). However, there is no definite proof of settlement in the Archaic and Classical periods. *Barr.* AC?

Trianta The remains at the location of Classical date are only of tombs (Spencer (1995a) no. 120), and the classification of the site as a settlement appears unwarranted on current evidence. *Barr.* C.

II. The *Poleis*

794. Antissa (Antissaios) Map 56. Lat. 39.15, long. 26.00. Size of territory: 4. Type: A. The toponym is Ἀντισσα, ἡ (Thuc. 3.18.1–2; Dem. 23.132). The city-ethnic is Ἀντισσαῖος (Thuc. 3.18.2; *IG II²* 43B.20). Antissa is called a *polis* both in the urban sense (Ps.-Skylax 97; cf. Hdt. 1.151.2) and in the political sense (Arist. *Oec.* 1347^a25). At Thuc. 3.18.1 *polis* is found in both senses simultaneously. The collective and external use of the city-ethnic is attested in inscriptions (*IG II²* 107.29 (368/7)) and in literature (Arist. *Pol.* 1303^a34). For the individual and external use, see Σωσίπολις Ἀντισσαῖος at Arist. *Oec.* 1347^a25. Antissa is implicitly called *patris* in Xen. *Hell.* 4.8.28.

The territory of Antissa covered c.250 km². To the south its neighbouring *polis* was Eresos, and their frontier was probably in the high upland between the two *poleis*, with sites such as the polygonal masonry tower Kourouklos (Spencer (1995a) no. 178) representing the border area. To the northeast it bordered on Methymna, and the frontier was probably between the forts at Selles (*ibid.* no. 205) and Ametelle (*ibid.* no. 202), both belonging to Methymna, and the forts at

Koutlougouni (ibid. no. 190), Koja Dag (ibid. no. 193) and Skoteino (ibid. no. 201), all belonging to Antissa. According to Kontes (1978) 127–28, 312–13, Antissa possessed Issa and its territory reached the Gulf of Kalloni. However, the upland topography to the south and east of Antissa argues against the suggestion that their territory extended so far in this direction, and Kontes' views have also been criticised by Labarre (1996) 199–200. Issa could have belonged to Methymna.

The Antissaian members of the Delian League. They are unattested in the Athenian tribute lists which show that, like the other Lesbian *poleis*, the Antissaian provided ships instead of paying *phoros* (Thuc. 1.116.2, 117.2). In 428 they joined the Mytilenaian in defecting from Athens (Thuc. 3.2.1). They were involved in the Mytilenaian attempt to synoecise Lesbos, and before the Athenian siege of Mytilene began, the Mytilenaian secured their position in Antissa, Pyrrha and Eresos and reinforced the fortifications of the three cities (3.18.1). A Methymnaian attack on Antissa was repelled (3.18.2). After Mytilene's surrender in 427, the Athenians sent a squadron against Antissa and conquered the city (3.28.3). The territory, or at least a part of it, was surrendered to Athenian *klerouchs* (3.50.2).

In 412 Antissa seems to have followed Chios and Mytilene and seceded from Athens once again (Thuc. 8.22.2). In any case, the juxtaposition at Thuc. 8.23.4 of Antissa and Methymna, which had revolted against Athens, indicates that Antissa had revolted too, and now sheltered some anti-Athenian exiles from Chios (Diod. 13 65.3; cf. Gehrke, *Stasis* 23, 45); but *stasis* between the two different ethnic groups led to civil war and the forceful expulsion of the exiles (Arist. *Pol.* 1303^a25–28, 34–35).

In C4e Antissa was allied with Lakedaimon, but in 390/89 Thrasyboulos imposed a settlement by which the city joined the Athenians (Diod. 14.94.4). The settlement undoubtedly included the repatriation of some exiles to Mytilene (Xen. *Hell.* 4.8.28). Antissa was a member of the Second Athenian Naval League, but, by contrast with Mytilene, it was not among the founding members. It joined the alliance in, probably, 375 (*IG* 11² 43B.20; Brun (1988) 377), and Antissaian representatives in the allied *synedrion* are attested for the year 368/7 (*IG* 11² 107.29).

Antissa joined the Corinthian League, probably in 337, and was then ruled by a tyrant (Dem. 17.7; Bosworth (1980) 179). In 333 the city was taken by the Persian admiral Memnon, alongside the other Lesbian *poleis* (Diod. 17.29.2; Arr. *Anab.* 2.1.1), but the Makedonians reconquered Antissa in the following year (Arr. *Anab.* 3.2.6; Curt. 4.5.22) and deposed the tyrant (Dem. 17.7).

At the coastal site of Antissa, on the promontory of Ovriokastro, are few visible remains earlier than mediaeval, but in the 1930s limited excavations revealed Geometric/Archaic structures and graves on the landward side. The earlier of two superimposed apsidal buildings appears to be of Geometric date, the later successor building dating to the early Archaic period (Lamb (1931–32)). The end of a late Classical stoa was also uncovered, and an Archaic street; references for all finds are collected in Spencer (1995a) no. 161, (1995b) 285–87. In one of the cemeteries there is evidence of a small *temenos* and tomb cult (Spencer 1995d; for the link of the cult to the region of Antissa, see Harisis *et al.* (2002a), (2002b)). We know from Thuc. 3.18.1 that Antissa was walled in 428/7 and that the fortifications were reinforced in that year. There are stretches of a large-scale wall on the south side of the acropolis recorded by Lamb during fieldwork in the 1930s (Spencer (1995a) 62–63), but whether these were part of a circuit wall, and its precise dating, are still unclear. As reconstructed by Koldewey (1890) pl. 6, the walls enclosed an area of c.18 ha.

One of the so-called Lesbian coins (*supra*) has a monogram which has been interpreted as *AN*, standing for Antissa (Babelon, *Traité* ii.1. 349–50 no. 568).

795. Arisba Map 56. Lat. 39.15, long. 26.15. Size of territory: probably 1 or 2. Type: A. The toponym is Ἀρίσβα, ἡ (Hdt. 1.151.2) or, in the Attic-Ionic dialect, Ἀρίσβη (Steph. Byz. 3, 8–9). Arisba is described by Herodotus as the sixth *polis* on Lesbos, where *polis* is used in the urban and the political senses simultaneously. Before C5m and probably in C6, the city was conquered by Methymna; its population was exposed to *andrapodismos* (Hdt. 1.151.2); and the territory was incorporated into that of Methymna (Strabo 13.1.21).

The site of Arisba is probably to be identified with the ancient remains on the low acropolis of “Palaeokastro” near the modern village of that name near Kalloni, and has been known since the nineteenth century. There are extensive traces of a polygonal masonry fortification wall around the acropolis, and along the northern side of the plateau. As reconstructed by Koldewey (1890) pl. 13, the walls may have enclosed an area of c.8 ha. There are remains of megaron-like houses on the hill, but the precise dating of both walls and houses is unclear and could not be clarified even through excavation by the local archaeological ephoreia. (Koldewey (1890) pls. 13, 14; Kontes (1978) fig. 48; other references collected in Spencer (1995a) no. 116; see also Spencer (1995b) 287–88 and fig. 7).

796. Eresos (Eresios) Map 56. Lat. 39.10; long. 25.55. Size of territory: 4. Type: A. The toponym is *Ἐρεσος*, ἡ (Thuc. 8.100.3; Dem. 17.7; Archedstratos fr. 5.5, Olson and Sens; Arcadius 75.20) or *Ἐρεσός* (Ps.-Skylax 97; *IG XII.2* 533.1–2 (C3/C2)) or *Ἐρεσσός* (Arist. fr. 655, Rose; Diod. 17.29.2). The city-ethnic is *Ἐρέσιος* (*IG I³* 94.4 (C51); *IG XII.2* 526.C.31 (C41); Thuc. 8.23.4). Eresos is called a *polis* in the urban sense (*IG XII.2* 526.A8, 11, B2, 11 (C41); Thuc. 3.35.1; Ps.-Skylax 97; cf. Hdt. 1.151.2), in the territorial sense (*IG XII.2* 526.D7, 28, 30, 37), and in the political sense (*IG XII.2* 526.A27, B30, C3, D21). The collective use of the city-ethnic is attested internally in abbreviated form on coins of C4/C3 (*infra*) and externally in inscriptions (*IG II²* 107.29; *IG XI.2* 137.11 (C41)) and in literature (Thuc. 8.23.4). For the individual and external use, see *Θεόφραστος ὁ Ἐρέσιος* (Ath. 387B) and *Μῦς Πρωτῆα Ἐρέσιος* in a C41 proxeny decree from Megara (*IG VII* 4.2). Eresos is implicitly called *patris* in Xen. *Hell.* 4.8.28.

The territory of Eresos probably covered c.225 km². Already in the Archaic period it was marked by a line of installations in Lesbian masonry (Schaus and Spencer (1994) 414–20), of which five have been identified: Spilios (Spencer (1995a) no. 141), Megalos Lakkos (ibid. no. 175), Bigla tou Aetou (ibid. no. 187, some 8 km west of the Gulf of Kalloni, but in *Barr.* placed near the coast), Apotheke (ibid. no. 130) and Makara (ibid. no. 131). To the north it may have included Sigriion (although there are no remains antedating the Roman period known at this site, *supra*). The frontier towards Antissa was probably the high upland area including Mount Ordymnos between the two *poleis* (see the description of the territory of Antissa, *supra*). Along the north coast of the Gulf of Kalloni the frontier lay north of Apotheke (*infra*) but presumably south of what appears to be a fort at Issa (*supra*): Labarre (1996) 199.

The Eresians were members of the Delian League. They are unattested in the Athenian tribute lists, which shows that, like the other Lesbian *poleis*, the Eresians provided ships instead of paying *phoros* (Thuc. 1.116.2, 117.2). In 428 they joined the Mytilenaians in defecting from Athens (Thuc. 3.2.1). They were involved in the Mytilenaiian attempt to synoecise Lesbos, and before the Athenian siege of Mytilene began, the Mytilenaiians secured their position in Antissa, Pyrrha and Eresos and reinforced the fortifications of the three cities (3.18.1). The Athenians gained possession of Pyrrha and Eresos only after Mytilene's surrender in 427 (3.35.1), and the territory, or at least a part of it, was surrendered to Athenian klerouchs (3.50.2). Eresos revolted against Athens once again in 412 (8.23.4), but was soon recaptured

by the Athenians (8.23.5). In 411, however, exiled Methymnian oligarchs provoked a new defection (8.100.3), and this time Eresos withstood the Athenians' attempt to take the city by siege (8.100.4–5, 101.1, 103.2).

In C4e Eresos was allied with Lakedaimon, but in 390/89 Thrasyboulos imposed a settlement by which the city joined the Athenians (Diod. 14.94.4). The settlement undoubtedly included the repatriation of some exiles to Mytilene (Xen. *Hell.* 4.8.28). Eresos was a member of the Second Athenian Naval League, but, by contrast with Mytilene, it was not among the founding members. It joined the alliance in, probably, 375 (*IG II²* 43B.21; Brun (1988) 377), and Eresian representatives in the allied *synedrion* are attested for the year 368/7 (*IG II²* 107.29).

Eresos joined the Corinthian League, probably in 337, and was then a tyranny (Dem. 17.7; Bosworth (1980) 179) ruled by Hermon, Heraios and Apollodoros (*IG XII.2* 526D.18–21; Lott (1996)), but in 333 the city was taken by the Persian admiral Memnon (Diod. 17.29.2; Arr. *Anab.* 2.1.1), and other tyrants were installed; *viz.* Agonippos (*IG XII.2* 526A.1–32, D12) and Eurysilaos (*IG XII.2* 526B.1–33, D12). The Makedonians reconquered Lesbos in the following year (Arr. *Anab.* 3.2.6) and deposed the tyrants (Dem. 17.7). They were handed over to the Eresians, who had them sentenced to death and executed (*IG XII.2* 526, see *infra*).

Almost all we know about the political organisation of Eresos stems from a dossier of documents, all related to trials against (1) the tyrants Agonippos and Eurysilaos, and (2) the descendants of the former tyrants (*IG XII.2* 526 = *Rec. Inscr. Jur. Gr.* 27 = Tod 191 = Heisserer (1980) 27–78; cf. the analysis in Koch (2001)). One decree reports the trial and conviction of Agonippos (A.1–32), another the trial and conviction of Eurysilaos (B.1–34), a third one the trial of the descendants of the former tyrants (A.33–41, C.1–20), followed by letters from Philip Arrhidaios and Antigonos (C.21–D.3) and, finally, a C41 decree of the Eresian people confirming all former verdicts (D.4–39).

Eresos was probably a democracy when the trials of the tyrants were heard. A *prytanis* served as the eponymous official (*πρότανις*, C.29; cf. the list of *πρυτάνεις Ἐρεσιῶν* drawn up by Phanias, the C4s pupil of Aristotle (fr. 17–19, Wehrli)). Decrees (*ψαφίσματα*, D.33–34) were passed in a general assembly (*ἐκκλησία*, A.26) by the people (*δᾶμος*, A.33, 41) or by the council (*βόλλα*, C.31, D.4) and the people in accordance with a probouleumatic procedure (*[πρ]οεβώλλε[υσε]*, D.4). It was the people (*δᾶμος*) who in both cases decided to appoint a court (*δικαστήριον*, D.13–15, 24) to hear the trial of the tyrants, and speakers for the prose-

cution (συνήγοροι, C.28–34) were appointed by the *polis* (C.30). It is unknown whether the *dikasterion* was coextensive with the *ekklēsia*. The trials were warranted by a law against tyrants and their descendants (A.24–26, D.16–17, 31–32). At the trial Agonippos was found guilty and sentenced to death by 876 votes to 7 (A.30–32); Eurysilaos was sentenced to death too (D.14–15), and at the trial of the descendants of the former tyrants the Eresians confirmed the earlier sentence of exile (C.22–28). The number of votes cast, altogether 883, points to a total of at least 1,000 adult male citizens and a population of at least 4,000 citizens plus foreigners and slaves.

Eresos sent envoys to Alexander the Great c.332 (IG XII.2 526A.33) and received envoys from Athens in 368/7 (IG II² 107.31–34).

Eresian citizens received *proxenia* from Delphi (F.Delphes III.4 395 (c.360–320)), Megara (IG VII 4 (C4)) and Zeleia (Michel 531 (C4)).

Only limited excavations and surveys have taken place on the site of Lesbos' westernmost *polis*, and discoveries have been mainly Roman or early Christian in date (Koldewey (1890) pls. 8, 9; Kontes (1978) figs. 56, 57; Schaus and Spencer (1994); references to finds at the site are collected in Spencer (1995a) no. 135, (1995b) 288 and fig. 8). Some remains of a fortification wall in Lesbian-style masonry, probably Archaic, survive on the acropolis (Koldewey (1890) pl. 9). As reconstructed by Koldewey (1890) pl. 6, the walls enclosed an area of c.5 ha. An Archaic Aiolic capital (probably either from a votive column or temple) was dredged up out of the harbour and is now in the museum at Mytilene (Spencer (1995a) no. 135 and n. 61 (p. 30); Archontidhou (1999) 28). An Archaic relief of a seated Kybele in naiskos from the site suggests a sanctuary (Spencer (1995a) no. 138; Archontidhou (1999) 93). At the site of Apotheke near the entrance to the Gulf of Kalloni stands the best-preserved structure in Lesbian-style masonry on the island, a large Late Archaic temple platform (Koldewey (1890) pl. 15; Schaus and Spencer (1994) 416–17 and fig. 3; Spencer (1995a) no. 130, (2000) 72). We know from Thucydides that Eresos was walled in 428/7, that the fortifications were reinforced in that year (3.18.1), and that the city was besieged in 412 (8.100.4–5).

Eresos struck bronze coins in C4/C3. The most frequent types are: *obv.* head of Hermes wearing petasos; *rev.* corn-ear, or caduceus; legend: ΕΡΕΣΙ or ΕΡΕ (Head, HN² 560; SNG Cop. Lesbos 339–43; for the C4 date of the earliest coins, see IGCH no. 1227).

797. Methymna (Methymnaios) Map 56. Lat. 39.20; long. 26.10. Size of territory: probably 3, later 4. Type: A. The

toponym is *Μήθυμνα*, ἡ (Thuc. 8.100.2; Xen. *Hell.* 1.6.38; Dem. 44.9). The epichoric form of the city-ethnic is *Μαθυμναίος* (coins, *infra*), the Attic-Ionic form is *Μηθυμναίος* (IG I³ 353.66 (420/19); Hdt. 1.23.1). Methymna is called a *polis* both in the urban sense (Xen. *Hell.* 1.6.13; Ps.-Skylax 97; cf. Hdt. 1.151.2) and in the political sense (IG II² 40.23 (378/7); Hdt. 1.151.2, 3; Xen. *Hell.* 4.8.28; Isoc. *Ep.* 7.9). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in inscriptions (IG I³ 353.66 (420/19)) and in literature (Hdt. 1.151.1; Thuc. 3.2.3). For the individual and external use, see *Ἀρίων ὁ Μηθυμναίος* (Hdt. 1.23). Methymna is implicitly called *patris* in Xen. *Hell.* 4.8.28.

The territory was called ἡ *Μηθυμναία* (Ant. 5.21) and may originally have covered less than 200 km² (Mason (1993) 229), but after the conquest of Arisba probably measured more than 400 km². To the west it bordered on Antissa, and the frontier probably lay along the forts at Selles (Spencer (1995a) no. 205) and Ametelle (*ibid.* no. 202), both belonging to Methymna, and the forts at Koutlougouni (*ibid.* no. 190), Kōja Dag (*ibid.* no. 193) and Skoteino (*ibid.* no. 201), all belonging to Antissa. On the east coast of Lesbos Methymna bordered on Mytilene, and its territory may have included Aigeiros (Labarre (1996) 194), although the location of the latter site is still unclear; see the list of non-*polis* sites *supra*. The frontier between Methymna and Mytilene may have been as far north as Cape Tsakmák (Mason (1993) 231–48), but this suggestion remains to be proved. Towards the Gulf of Kalloni, after the disappearance of Arisba, Methymna bordered on Pyrrha to the south-east, and the frontier was probably at Messon, the common shrine for all of Lesbos (Mason (1993) 231–32). Further to the west Methymna's territory at the Gulf of Kalloni may have extended to the site of Issa and bordered on Eresos somewhere north of Apotheke (see *supra*).

The only historical event antedating the Classical period is Herodotos' piece of information that Methymna conquered Arisba, the sixth *polis* on Lesbos, and exposed its population to *andrapodismos* (Hdt. 1.151.1, *supra*).

Methymna was a member of the Delian League. The Lesbians were among those who in 478 encouraged the Athenians to replace Sparta as the hegemon in the war against Persia (Plut. *Arist.* 23.4), and the Methymnians must have been among the original members of the League. In spite of Mytilenaian collaboration with an anti-Athenian faction in Methymna (Thuc. 3.18.1), the Methymnians remained loyal to Athens when the rest of Lesbos revolted in 428 (Thuc. 3.2.1, 5.1, 50.2), and they maintained their status

as *autonomoi* allies who, instead of paying *phoros*, took part in the campaigns with their armed forces (Thuc. 6.85.2, 7.57.5). Accordingly, they are not recorded in the Athenian tribute lists. In 412 Methymna was the first Lesbian *polis* that revolted from Athens (Thuc. 8.22.2, 23.4), but the city was soon recovered by the Athenians (8.23.6, 100.2). In 411 a group of oligarchic exiles made a vain attempt to win the city (Thuc. 8.100.3). Methymna remained in Athenian hands (Xen. *Hell.* 1.2.12) until 406, when the city was betrayed by a pro-Lakedaimonian faction to a Peloponnesian force under Kallikratides (Xen. *Hell.* 1.6.12–15, 38; Diod. 13.76.5). The Methymnaians were still allied with Sparta in 390/89 (Xen. *Hell.* 4.8.28) when, supported by pro-Athenian exiles settled in Mytilene, Thrasyboulos launched an attack on Methymna. He won a battle and ravaged the territory but could not conquer the city (Xen. *Hell.* 4.8.28–30; Diod. 14.94.4).

A decade later Methymna had changed sides. It was one of the founding members of the Second Athenian Naval League. A separate treaty between Athens and Methymna was concluded in the autumn of 378 (*IG* II² 42), and Mytilene is listed among the allies in the so-called Charter of the League (*IG* II² 43.81 = *Staatsverträge* 257), and their representatives in the allied *synedrion* are attested for the year 368/7 (*IG* II² 107.28). Methymna sent envoys to Athens in 378/7 (*IG* II² 40.24–25), and Athens sent envoys to Methymna (*IG* II² 107.31–34 (368/7)).

In 333 Methymna was taken by the Persian admiral Memnon alongside the other Lesbian *poleis* (Diod. 17.29.2; Arr. *Anab.* 2.1.1), but by a peaceful agreement the Makedonians regained the small cities on Lesbos in the following year (Arr. *Anab.* 3.2.6).

The group of oligarchic exiles attested in 411 (Thuc. 8.100.3) may indicate that, at that point, Methymna was a democracy; but otherwise next to nothing is known about the type of constitution until C4m, when it seems to have been an oligarchy (Theopomp. fr. 227; Gehrke, *Stasis* 113). From C4m Methymna was ruled by a series of tyrants (Berve (1967) 337; Bosworth (1980) 179–80). The first was Kleommis, who restored law and order to Methymna (Theopomp. fr. 227, where he is called *Κλεομένης*), recalled the exiles, and issued all citizens with hoplite weapons (Isoc. *Ep.* 7.8–9). He was loyal to Athens and was awarded *proxenia* by the Athenians (*IG* II² 284). He was succeeded by Aristonymos, a friend of Memnon (Polyaen. *Strat.* 5.44.3). The next tyrant, Aristonikos, was deposed in 332 and, on Alexander's orders, handed over to the Methymnians, who had him tortured and executed (Arr. *Anab.* 3.2.4–7; Curt. 4.5.19–21, 8.11).

Only surveys and salvage excavations have been carried out at Methymna, the second in size of the *poleis* of the island; but a comprehensive study including a presentation of the remains visible up to the 1970s has appeared (Buchholz (1975); cf. Koldewey (1890); Kontes (1978); Spencer (1995a) no. 217, (1995b) 283–85 and fig. 5).

The extent of the ancient city with its acropolis (occupied by a small Genoese castle) and harbour (undated ancient harbour works are visible beside and under modern constructions) is apparent, and scattered finds suggest stages of expansion from Archaic to Hellenistic. The earliest historical structural remains may be those south of the Kastro, where an Archaic street and housing complex is underlain by earlier structural remains of Geometric and possibly Protogeometric date (Spencer (1995b) 283 and n. 94. The no longer visible theatre (*TGR* ii. 253) under the village school may be C4 in date (Buchholz (1975)); a second theatral building nearby (*bouleuterion* or *odeion*?) is also said to have once been visible (Dr. Peter Green, pers. comm.). Graves of C6 and C5 have been uncovered to the west and north of the acropolis (Buchholz (1975) pl. 10d; Spencer (1995b); Archontidou (1999)). The site of the largest Aiolic temple on the island (probably to Apollo) has been known near the village of Napi since the late nineteenth century, but no complete study has yet appeared; it probably dates to C6l (Evangelidis (1926), (1927); Koldewey (1890) pl. 16; Betancourt (1977); Spencer (1995a) no. 111, (1995b) 299–300). A smaller structure of similar date beside it has not been identified, but it is probably a second temple (the same refs. as above). Recent new excavations (1999) by the Archaeological Service may reveal more precise information once they have been published. There is also possible evidence for an Archaic silver mine in its south-eastern territory near the village of Argenna (Davies (1932) 985). At various places in the modern town are remains of a C6(?) polygonal city wall (Koldewey (1890) pl. 16, table 4ab; Lang (1996) 247). As reconstructed by Koldewey, the area enclosed by the walls measured c.30 ha. Furthermore, it appears from Thuc. 3.18.1 that Methymna was walled in 428/7 and that the fortifications were reinforced in that year; a siege of the city in 406 is reported at Diod. 13.76.5.

Methymna struck coins of electrum and silver from c.550 until c.375. (1) Electrum, c.550–375: *hektai* on the Phokaic standard. Types usually connected with Methymna are: *obv.* boar or, perhaps, Gorgoneion; *rev.* lion's head. (2) Silver, from before 500 to c.450: denominations: didrachm, tetradrachm, diobol. Types: *obv.* mostly boar or Gorgoneion; *rev.* mostly head of Athena; legend: on some

ΜΑΘΥΜΝΑΙΟΣ. (3) Silver, c.420–c.375. Denominations: didrachm, drachm, triobol, obol. Types: *obv.* head of Athena; *rev.* lion's head, or lyre, or kantharos; legend: *ΜΑΘΥΜΝΑΙΟΝ*, often abbreviated *ΜΑ* or *ΜΑΘ* (Head, *HN*² 558, 560–61; Kraay (1976) 39; *SNG Cop. Lesbos* 345–51).

Methymna colonised Assos (no. 769) (Myrsilos (*FGrHist* 477) fr. 17 = Strabo 13.1.58).

798. Mytilene (Mytilenaios) Map 56. Lat. 39.05, long. 26.35. Size of territory: 4. Type: A. The epichoric form of the toponym is *Μυτιλήνα*, *ἄ* (*IG XII.2* 1.7 (C5s)). In the Attic–Ionic dialect it is *Μυτιλήνη*, *ῆ* (Hdt. 1.160.1; Ar. *Eq.* 834; Ant. 5.20), later *Μιτυλήνη* (*Syll.*³ 344.30 (C4l)). The toponym usually denotes the town (Ant. 5.23; Thuc. 3.18.4; Ps.-Skylax 97), but sometimes the town plus its hinterland (*SEG* 36 750.17 (C4s)) and sometimes the political community (Hdt. 5.11.2; Dem. 40.37). The city-ethnic is *Μυτιληνᾶος* (coins and *IG XII.2* 1.18, 12.3) or *Μυτιληναῖος* (*IG XII.2* 3.2 (C4?); *IG II²* 40.19 (378/7)).

Mytilene is called a *polis* in the urban sense (*IG XII.2* 4.7, 17 + suppl. p. 2 (C4m); Thuc. 3.3.3; Xen. *Hell.* 1.6.19), in the political sense (Alc. fr. 348; *IG XII.2* 95.3 (C4) = *SEG* 28 690; Ant. 5.77; Thuc. 3.13.7; Dem. 40.37) and in the territorial sense (Ant. 5.76; *IG XII.2* 6 *passim*; *SEG* 36 750.2–3, 15, 19 (C4s)). The collective use of the city-ethnic is attested internally on coins (*infra*) and in inscriptions (*IG XII.2* 4.5 (C4m); *SEG* 36 750.9 (C4s)) and externally in inscriptions (*IG II²* 213.7 (347/6); *F.Delphes* III.4 400.3 (C4/C3e)) and in literary sources (Ant. 5.76; Thuc. 3.2.3; Arist. *Pol.* 1285^a35). For the individual and external use, see *Πιττακὸς ὁ Μυτιληναῖος* at Pl. *Prt.* 343A and *Ἡραεὺς Μυτιληναῖος* in a C4s healing inscription from Epidauros (*IG IV²*.1 121.122). *Patris* is found in Antiph. 5.62 and 79.

The territory of Mytilene may have covered c.450–500 km² (Kontes (1978) figs. 19–22). To the north it bordered on Methymna, and the frontier may have been as far north as Cape Tsakmák (Mason (1993) 231–48). According to Labarre (1996) 194, it ran south of Aigeiros, but see *supra* regarding the problems in identification of this site. To the west Mytilene bordered on Pyrrha and was separated from this *polis* by the “pine-covered Pyrrhaian mountain” (Theophr. *Hist. pl.* 3.9.5) on the slopes of Mt. Olympos. There is no evidence of ancient settlements in this large area, and the forest may have been a no man's land separating Mytilene from Pyrrha (Spencer (1996)). The presumption is that the region east and south of the forest belonged to Mytilene.

By the Classical period, it appears that Mytilene's territory was not fertile enough to feed its population, and imports

from Bosporos are attested in 428 (Thuc. 3.2.2). In C4m Leukon of Bosporos granted Mytilene a reduction in export duty. As restored, the inscription implies that the Mytilenaians' annual import exceeded 100,000 *medimnoi* (*IG XII* suppl. 3 = Tod 163 (C4m)), enough to feed a population of c.20,000 persons.

Mytilene was the greatest of the Aiolian *poleis*, and in the Archaic period had significant involvement in events outside the island. In this respect it appears largely set apart from the other Lesbian *poleis*, and Mytilene's focus beyond events in the island may well have exacerbated its infamous social *stasis* at this time (Spencer (2000) and *infra*). In the C7s Mytilene acquired a *peraia* in the Troas, with Sigeion and Achilleion as the two most prominent centres. C.620, however, Athenian settlers under Phrynon took Sigeion. In the following war between Mytilene and Athens, the Mytilenaians were defeated in a battle in which the poet Alkaios lost his shield, but they then regained Sigeion, allegedly after a duel that Pittakos won against Phrynon. The war ended with an arbitration by Periander, the tyrant of Corinth, whereby the Athenians were awarded Sigeion. They probably lost it again, since, in the end, it was Peisistratos who seized Sigeion from Mytilene (Strabo 13.2.38; Hdt. 5.94–95, where Hdt. has mixed up and misdated some of the events; cf. Schachermeyr (1950) 1867–68). In the same period the Mytilenaians, as the only Aiolians, were co-colonisers of Naukratis in the reign of Amasis (Hdt. 2.178.2; see Spencer (2000) 75–76).

At some point in C6s Mytilene came under Persian rule, and Mytilenaiian ships served in Kambyses' fleet when he invaded Egypt in 525 (Hdt. 3.13–14). Mytilene took part in the Ionian Revolt in 499 (Hdt. 6.5.2) and must have provided the majority of the seventy Lesbian ships which fought at Lade in 494 (Hdt. 6.8.2). After the defeat, the entire island of Lesbos was systematically ravaged by the Persians (Hdt. 6.31.1). The Mytilenaiians must have fought on the Persian side in 480/79 (Hdt. 8.85), but Lesbos joined the Greeks in 479 (Hdt. 9.106.4).

The Mytilenaiians were members of the Delian League. The Lesbians were among those who in 478 encouraged the Athenians to replace Sparta as the hegemon in the war against Persia, and the Mytilenaiians were among the original members of the League (Thuc. 3.10.2–4; Plut. *Arist.* 23.4). They remained *autonomoi* and *eleutheroi* until their revolt in 428, and instead of paying *phoros*, they took part in the campaigns with their armed forces (Thuc. 3.10.5, 11.1.3, 39.2; Arist. *Ath. Pol.* 24.2). The Lesbians, including Mytilene, provided ships against Samos in 440/39 (Thuc. 1.116.2, 117.2; Diod. 12.27.4, 28.2) and against the Lakedaimonians and

their allies during the first years of the Peloponnesian War (Thuc. 2.9.5, 56.2, 3.3.4). Accordingly, they are not recorded in the Athenian tribute lists.

In 428 Mytilene and the other Lesbian *poleis* except Methymna defected from Athens (Thuc. 3.2–18, 25, 27–50; Diod. 12.55, derived from Thuc.). Behind the revolt, planned already before the outbreak of the Peloponnesian War (Thuc. 3.2.1–2), was the Mytilenaians' attempt to go through with a synoecism of Lesbos, their success in winning the control of Antissa, Eresos and Pyrrha, and the Athenians' opposition to the synoecism (Thuc. 2.3, 3.1, 5.1, 18.1; Moggi, *Sin.* 189–97). The Athenians sent a fleet to Mytilene (Thuc. 3.2), and after an abortive armistice (4.4) the harbours of Mytilene were blockaded by the Athenian squadron (6.1). At a meeting held in Olympia Mytilenaiian envoys obtained an alliance with the Peloponnesian League (3.8–15). Reinforced by 1,000 hoplites, the Athenians built a blockading wall and besieged Mytilene (18.3–4). A Peloponnesian army invaded Attika in 427, but the relieving squadron under a Spartan nauarch never reached Mytilene (3.26.1, 29–33). The Mytilenaiians were starved into unconditional surrender (3.28.1); and the members of the oligarchic faction were sent to Athens (3.35.1). The Athenians decided first to expose Mytilene to an *andrapodismos* (3.36.2), but went back on this decision the following day (3.49.1) and concluded peace on the following terms: the oligarchs sent to Athens, over 1,000 men, were held responsible for the revolt and executed; the other Mytilenaiians were forced to pull down their walls, to surrender their fleet, to cede their possessions in the *peraia* to Athens, and to have their hinterland divided into 3,000 *kleroi*, of which 300 were made sacred property and 2,700 were given to Athenian *klerouchs* (3.50) (Figueira (1991) 8–10, 251–53). Mytilene became a dependent *polis* deprived of its hinterland, but not of its urban centre. Thus, there is no basis for Hampl's view ((1939) 1–2) that it became a *polis* without territory (Hansen (1998) 55). Shortly afterwards, however, perhaps already in 427/6, the Mytilenaiians recovered their *autonomia* (IG¹³ 66.12) and the possession of their hinterland (IG¹³ 66.11–12, 18, 67.3–4; Mattingly (1996) 136–37); but see Hornblower (1991) 440–41). In 412 Mytilene followed Chios and revolted against Athens once again (Thuc. 8.22.2), but was almost immediately recovered by the Athenians (23.2, 100.3), and it remained loyal to Athens (Diod. 13.73.5; Xen. *Hell.* 1.6.35, 38) until it was taken by Lysander in 405 (Xen. *Hell.* 2.2.5).

In 394 the Mytilenaiians joined the coalition organised by Konon (Diod. 14.84.3), and with his help they succeeded in 389 in expelling the Lakedaimonians from Eresos and

Antissa (Diod. 14.94.3–4; Xen. *Hell.* 4.8.28–29). Alongside Chios, Rhodos and Byzantion, Mytilene was a founding member of the Second Athenian Naval League. A separate treaty between Athens and Mytilene was concluded in the autumn of 378 (IG¹¹² 40), and Mytilene is listed among the allies in the so-called Charter of the League (IG¹¹² 43.80 = *Staatsverträge* 257). The Mytilenaiians fought beside the Athenians in the war against the Peloponnesian League (IG¹¹² 107; Isoc. 14.28) and approved of an Athenian garrison placed in Mytilene in, probably, 375 (SEG 19 204; Dreher (1995) 28). When Kammys became tyrant of Mytilene in C4m, the city seceded from the League (Dem. 40.37), but it was readmitted through a new alliance concluded in 347/6 (IG¹¹² 213; Cargill (1980) 95). Mytilene was allied with Alexander the Great (Arr. *Anab.* 2.1.4; Curt. 4.8.13), but was not necessarily a member of the Corinthian League (Bosworth (1980) 181). The city was besieged and conquered by the Persian fleet in 333 (Diod. 17.29.2; Arr. *Anab.* 2.1.2–4), but reconquered by the Makedonians in the following year (Arr. *Anab.* 3.2.6; Curt. 4.5.22).

The constitutional history of Mytilene bristles with revolutions caused by discord between factions (*stasis*) (Gehrke, *Stasis* 117–23; Spencer (2000)). In C7 the city was ruled by the house of the Penthelidai, described by Aristotle as a βασιλικὴ δυναστεία (Pol. 1311^b26), which may indicate that Mytilene originally was a hereditary kingdom (Carlier (1984) 451; Schüttrumpf and Gehrke (1996) 561). Because of their tyrannical behaviour, they were overturned by a certain Megakles; but later in the century Mytilene was once again ruled by a member of the family, Penthilos, who was murdered by Smerdes (Pol. 1311^b27–30; Alc. fr. 75). His son-in-law was Pittakos (Diog. Laert 1.81; Alc. fr. 70), who at some point ruled Mytilene together with Myrsilos (Alc. fr. 70.7; Strabo 12.2.3). A faction led by Alkaïos and his two brothers made an abortive attempt to overthrow Myrsilos, and Alkaïos had to go into exile to Pyrrha (*P Berol.* 9569). Myrsilos died (Alc. fr. 332), and after a period of civil war (Alc. fr. 70.11) Pittakos was elected *aisymnetes* by the Mytilenaiians; according to Alkaïos (fr. 348), however, he was elected *tyrannos* (Arist. Pol. 1285^a35–b1). Pittakos was later remembered as having given the Mytilenaiians new laws (*nomoi*), but not a new constitution (*politeia*) (Arist. Pol. 1274^b18–23). Under his rule the *basileis* are attested as a board of officials (Theophr. fr. 650). According to Apollodoros ((*FGrHist* 244) fr. 27), Pittakos was elected c.600 and held power for ten years and then resigned his post (Schachermeyr (1950) 1865–67 (*stasis*), 1868–70 (*aisymnetes*), 1870–72 (chronology)). Thereafter Mytilene was

probably an oligarchy, but in c.512 a new tyrant, Koes, was installed by Dareios as tyrant of Mytilene (Hdt. 5.11). At the beginning of the Ionian Revolt he was handed over to the Mytilenaian people and stoned to death (Hdt. 5.37–38).

In 428 Mytilene was an oligarchy (Thuc. 3.39.6), apparently with a ruling class of more than 1,000 citizens (Thuc. 3.50.1). One of the factors behind the defection from Athens seems to have been a dispute about succession to property among some of the *euporoi* (Arist. *Pol.* 1304^a4–10), and when the *dynatoi* issued the *demos* with hoplite equipment, the commoners opposed the government and forced the surrender (Thuc. 3.27.3; Gillis (1971)).

In the years after 405 Mytilene was probably ruled by a Spartan harmost and a Board of Ten (Xen. *Hell.* 2.2.5; Paus. 8.52.4), but in 390/89, when they and their Mytilenaian supporters were expelled (Xen. *Hell.* 4.8.28–29), Mytilene seems to have become a democracy (IG XII.2 4.3 (C4m), see *infra*; IG II² 107; Gehrke, *Stasis* 121). By 353/2, however, the democracy had been abolished (Dem. 13.8) and replaced with an oligarchy (Dem. 15.19; Isoc. *Ep.* 8). Shortly afterwards Mytilene was ruled by a tyrant, Kammys (Dem. 40.37; Brun (1988) 381–82), but he was already deposed in 347/6 (IG II² 213). When the Persians had conquered Mytilene in 333, one of the exiles, Diogenes, was set up as tyrant of Mytilene (Arr. *Anab.* 2.1.5), but in the following year democracy was restored and a group of exiles readmitted to Mytilene (SEG 36 750.3; *δαμοκρατία*; SEG 36 752 = IG XII.2 6; cf. Heisserer (1980) 118–41; SEG 40 673).

Under democracy decrees (*ψαφίσματα*) were passed by the council (*βόλλα*) and the people (*δᾶμος*) in accordance with a probouleumatic procedure (IG XII.2 5 + suppl.; SEG 36 750, 752; cf. Rhodes, *DGS* 256–58). The eponymous official was a *prytanis* (SEG 36 750.18; Theophr. fr. 650), and a *prytaneion* is mentioned in a paraphrase of Sappho's poems (Ath. 425A); cf. *πρυτανεῖον* at *P Oxy.* 3711. fr. 1. col. 1.4, a late commentary on Alkaios. Other magistrates were boards of kings (*βασιλῆες*), generals (*στρόταγοι*) and some called *περίδρομοι* and *δικάσκοποι* (IG XII.2 6.6–14). A treasurer (*ταμίης*) is also attested (IG XII.2 5.17), and we know from Ant. 5.77 that some of the public expenditure was defrayed through liturgies. The Mytilenaians sent envoys to Olympia (Thuc. 3.9–14) and to Athens (IG II² 107.21–22) and received envoys from Athens (IG II² 107.31–34). Mytilene granted *proxenia* to citizens of Magnesia on the Maeander (SEG 26 909 (C41)) and to a citizen of an unknown *polis* (IG XII.2 5.5 + suppl. (C45)). Mytilenaian citizens received *proxenia* from Athens (Dem. 40.36; Arist. *Pol.* 1304^a9–10) and Delphi (*F.Delphes* III.4 400 (C41/C3e)).

Apart from one Olympic victor in 476 (*P Oxy.* 222.1.7; *Olympionikai* 209), the only known Mytilenaian victor in Panhellenic games was a *periodonike* who was active c.300 and, thus, is too late for our investigation (*IvO* 173; Paus. 6.15.1).

The city occupied an offshore island and the adjacent mainland from C10, probably focused around what later became known as the city's "North Harbour" at Epano Skala (Spencer (1995a) no. 27, (1995b) fig. 3a); settlement activity of the third millennium has been found on the Classical acropolis of Mytilene (Lambrianides and Spencer (1997) 86–87 and fig. 5), and another settlement of the same date has been found on the coast just south of the Classical city. Sporadic Mycenaean sherds have been reported in the area of the modern town, where there are also finds of the Protogeometric, Geometric and Archaic periods (Spencer (1995b) 279–81 and fig. 3, (2000) 74–75 fig. 4.5). However, most of the surviving ancient remains are Hellenistic and later. Unpublished excavations in the early 1980s have revealed at least one of the stone bridges over the intervening channel (silted up in mediaeval times) mentioned by Longus (*Daphnis and Chloe*1); it is probably Roman in date. According to Vitruvius (1.6.1), the town was laid out on a grid plan, but poorly orientated to the prevailing winds; some evidence of the orthogonal plan survives in the alignment of various structures excavated throughout the city. Archaeological excavations began in a modest way in the late nineteenth century with the work of Robert Koldewey and his colleagues at Mytilene and elsewhere on the island (Koldewey (1890)), but apart from the theatre, whose date is uncertain, large-scale work did not begin until the 1960s, and even then involved mostly salvage excavations, rarely published in any detail and only occasionally touching on Archaic and Classical levels. Later Roman, mediaeval and Ottoman buildings destroyed or covered most earlier remains and only occasionally is a "window" possible back to the city's early history. Several Greek publications summarise much of what was known about Mytilene up to the early 1970s (Kontes (1973), (1978)); for a complete collection of all relevant references, see Spencer (1995b) no. 27), and recent excavations by the Canadian Archaeological Institute at Athens and K' Ephoreia of the Greek Archaeological Service have added substantially to our knowledge of certain areas (H. Williams (1984); Williams and Williams (1985), (1986), (1987), (1988), (1989), (1990), (1991); Archontidhou (1986–95)).

Possibly Archaic, certainly Classical and Late Classical sections of fortifications have been uncovered in different

areas of the city, especially on the north-western side where they are still well preserved and seem to be of late Lesbian-style masonry (Koldewey (1890) pls. 1, 2, 5, 6; Kontes (1978) figs. 35, 39; Mason (2001)). It is probable that the city expanded from its original focus around the north harbour further west on to the mainland in C5, perhaps just before the revolt of 428 (Diod. 13.79; Thuc. 3.2.1). A relatively well-preserved stretch some 50 m long was uncovered near the north harbour and seems to date from C4m; it probably defended the island portion of the city (Williams and Williams (1991) 180 fig. 2). Some 100 m to the north-west, excavations in 1999–2000 uncovered an apparently matching wall defending the mainland side of the city east of the modern IKA building. A 33 m stretch of probably C4 fortification wall was uncovered in 1973 near the public swimming pool at the edge of the modern south harbour (Khatzi (1973) 509–10). Smaller sections of city walls have been found, mostly on the north and south sides of town, in various salvage excavations, and seem to be late Classical in date. According to Koldewey (1890) pls. 11–12 the walls enclosed an area of 140 ha. In connection with the revolt in 428 Thucydides reports that walls were being constructed (3.2.2, 5). The city was besieged by the Athenians in 428 (3.18.4–5), and the walls were demolished after the conquest in 427 (3.50.1); however, walls are attested in 406 by Xen. *Hell.* 1.6.17 (τεῖχος) and in 333 by Diod. 17.29.2.

Mytilene had two harbours (Thuc. 3.6.1; Ps.-Skylax 97; Strabo 13.2.2). Strabo says that the south harbour of the city housed Mytilene's triremes, but the modern harbour works have obliterated any remains; the east and west moles of the commercial north harbour (*supra*), however, survive just below modern sea level. Probably Roman in their present form, they may well go back to at least the Classical period, and as noted above, this harbour appears to have been the focus of the earliest post-prehistoric settlement. Immediately adjacent to the south side of the north harbour are the remains of a long substantial stoa of C4 or C3, known since the 1920s but not completely excavated until 2000–1 (Coulton (1977)). A long stretch of a well-built C4 aqueduct has also been uncovered (Khatzi (1972), (1973)) on the south side of town. The theatre (*TGR* ii. 252) on the sloping hill-sides to the west of the town has been excavated on several occasions, but only brief preliminary reports have appeared; it is probably late Classical or early Hellenistic in date (Evangelidis (1927); cf. Plut. *Pomp.* 42.9 (rC4m)).

Remains of at least three Archaic/Late Classical sanctuaries have been found in different areas of the city. A C7 sanctuary, possibly to Kybele (a crude small statue of the goddess

appeared in the excavations along with much Archaic bucchero), with an apsidal building in Lesbian-style masonry appeared during building operations behind the former insane asylum near the north harbour; it has been published only in a brief preliminary form (Khatzi (1973) 515–17 fig. 10; Spencer (1995*b*) 296–99 fig. 11). A Late Classical/Hellenistic sanctuary to Demeter and Kore and Kybele has been excavated on the acropolis inside the mediaeval castle; it consisted of a series of at least five altars in a row north–south with a rectangular two-room building behind and two semicircular ashpits for burned remains of piglets (Williams and Williams (1991)). A sanctuary to Aphrodite was uncovered during building operations on the south slopes of the acropolis (Archontidou (1986–95)) and there is some evidence for a sanctuary of Asklepios near the west side of the south harbour (Khatzi). The sanctuary of Apollo Maloies near the north harbour is still elusive (Thuc. 3.3.3). For a general account of local cults based mostly on literary and epigraphic evidence, see Shields (1917). A cult of Zeus Homonoios and Homonoia was invoked in connection with the restoration of the democracy in 332 (*SEG* 36 750.7–8; cf. Thériault (1996) 19–29). Cults of the Twelve Gods, of Zeus Basileus and Zeus Herais were also invoked.

At least some C6 graves seem to have been found in what became the expanded C5 city (Kontes (1978) 216; Spencer (1995*b*) 295). Extensive late Classical/early Hellenistic cemeteries have been found north and south of the city, although there have only been short preliminary publications of them to date. Graves varied from simple interments cut in the bedrock to tile-covered, to stone-lined cists, to limestone sarcophagi, some in funerary precincts surrounded by a wall (Khatzi (1972), (1973); Spencer (1995*b*); autopsy on highway north of Mytilene in 2001).

Mytilene struck coins of electrum, silver, billon and bronze from C5f on. (1) Electrum, C5f/C4s: *hektai* on the Phokaic standard, with a great variety of types: *obv.* ram's head, or lion's head, or Apollo laureate, or young Dionysos, etc.; *rev.* panther, or sphinx, or Persephone, etc., all in incuse square; legend (on one coin only): *MYTI*. In C5s Phokaia and Mytilene concluded a treaty that the two *poleis* should take turns and strike identical electrum coins in alternating years (*IG* XII.2 1 = *SEG* 34 849). (2) Billon, c.480–450, on the Phoenician and Persic standard: denominations: fractions of stater down to a twenty-fourth, with a variety of types: *obv.* head of calf, or lion, or Negro, etc.; *rev.* incuse square, sometimes with eye, or amphora, etc.; legend: on a few *ΛΕΣ* or *Μ* or *ΜΥ*. (3) Silver, C5f/C4s: denominations: stater, drachm, hemidrachm, diobol, trihemibol, obol; types: *obv.*

head of Apollo or of Nymph Mytilene; *rev.* various types: head of nymph Mytilene, or goat's head, or lyre, etc.; legend: *MYTI*, once *MYTIAENAQN*. (4) Bronze, C4: types: *obv.* Apollo laureate; *rev.* bull's head; legend: *MY* or *MYTI* (Head, *HN*² 558–59, 561–62; Bodenstedt (1973); *SNG Cop. Lesbos* 284–99 (billon), 300–30 (electrum), 364–69 (silver), 370–74 (bronze)).

Mytilene colonised Achilleion in Troas (no. 766) (Strabo 13.1.39), Sigeion in Troas (no. 791) (Hdt. 5.94.1), Ainos in Thrace (no. 641) (Ephor. fr. 39), and Hermonassa in the Pontic region (no. 697) (Arr. *Bith.* fr. 55 = (*FGrHist* 156) fr. 71).

In addition to its hinterland, Mytilene possessed a sizeable *peraia* in Troas and northern Aiolis (Strabo 13.1.38; Livy 37.21.4), although at what date all parts of this *peraia* were acquired, and whether all were simultaneously held, is not clear. The *terminus ante quem* for Mytilene's acquisition of at least part of its *peraia* is the dispute between Mytilene and Athens over Sigeion in C7l–C6e (Hdt. 5.95.2; Strabo 13.1.38; Diog. Laert. 1.74). The precise extent of the *peraia* is unknown, but it included the so-called Aktaiai *poleis* (Thuc. 4.52.2–3): i.e. Achilleion (no. 766), Antandros (no. 767), Hamaxitos (no. 778), Larisa (no. 784), Ophryneion (no. 786), Ilion (no. 779), Pordoselene (no. 831), Rhoiteion (no. 790), plus some others (*IG* I³ 71.III.122–40, 77.IV.14–27; see Hansen (1997) 32). Mytilene had to surrender its *peraia* to Athens in 427 (Thuc. 3.50.3). Some of the Aktaiai *poleis* were reconquered in 424 by exiled Mytilenaians (Thuc. 4.52.3), but at least Antandros was lost again soon after (Thuc. 4.75.1). By C4m Mytilene had recovered part of its *peraia* in the Gulf of Adramytteion (Ps.-Skylax 98), and had it extended by a gift from Alexander in 331 (Curt. 4.8.13). For the extent of the *peraia*, see Kontes (1978) figs. 18ff; Stauber (1996) 163–65).

799. Pyrrha (Pyrrhaios) Map 56. Lat. 39.10, long. 26.15. Size of territory: 3. Type: A. The toponym is Πύρρα, ἡ (Thuc. 3.35.1; Theophr. *Hist. pl.* 2.2.5). The city-ethnic is Πυρραῖος (*IG* II² 107.29 (368/7); Arist. *Hist. an.* 548^a10; Theophr. *Hist. pl.* 3.9.5). Pyrrha is called a *polis* in the urban sense at Ps.-Skylax 97 (cf. Hdt. 1.151.2), and at Thuc. 3.18.1 *polis* is used about Pyrrha in the urban and political senses simultaneously. The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in inscriptions (*IG* II² 107.29 (368/7)) and in literature (Arist. *Hist. an.* 548^a10). The individual and external use is attested in a Delphic proxeny decree for Μενέδημος Ἐδνίκου Πυρραῖος (*BCH* (1940/1) 94.4 (330/29)). Pyrrha is implicitly called *patris* in Xen. *Hell.* 4.8.28.

The territory of Pyrrha seems to have comprised the south coast of the Gulf of Kalloni, in the sources called ὁ Πυρραῖος εὐρυπιος (Arist. *Part. an.* 680^a36–b1) as well as the region south of the Gulf. It may have covered c.250 km² (Kontes (1978) figs. 19–22). Pyrrha bordered on Methymna to the north, near Messon. To the east Pyrrha bordered on Mytilene and was separated from this *polis* by the “pine-covered Pyrrhaian mountain” (Theophr. *Hist. pl.* 3.9.5) on the slopes of Mt. Olympos (see no. 798 *supra*).

The only thing we learn about the history of Pyrrha in the Archaic period is that Alkaios found shelter in the city when he had been exiled from Mytilene (*P Berol.* 9569).

The Pyrrhaians were members of the Delian League. They are unattested in the Athenian tribute lists, which shows that, like the other Lesbian *poleis*, the Pyrrhaians provided ships instead of paying *phoros* (Thuc. 1.116.2, 117.2). In 428 they joined the Mytilenaians in defecting from Athens (Thuc. 3.2.1, 25.1). They were involved in the Mytilenaiian attempt to synoecise Lesbos, and before the Athenian siege of Mytilene began, the Mytilenaians secured their position in Antissa, Pyrrha and Eresos and reinforced the fortifications of the three cities (3.18.1). The Athenians gained possession of Pyrrha and Eresos only after Mytilene's surrender in 427 (3.35.1), and the territory, or at least a part of it, was surrendered to Athenian klerouchs (3.50.2). In 412 Pyrrha followed Chios and Mytilene and seceded from Athens once again (Thuc. 8.23.2). It was recovered by Athens soon after (8.23.6), but Pyrrha was allied with Sparta once again in 406 (Diod. 13.100.5).

In C4e Pyrrha was allied with Lakedaimon, but in 390/89 Thrasymboulos seems to have forced the city to join the Athenians (Diod. 14.94.3–4; Lys. fr. 119, Sauppe). The settlement undoubtedly included the repatriation of some exiles to Mytilene (Xen. *Hell.* 4.8.28). Pyrrha was a member of the Second Athenian Naval League. In the list of members appended to the so-called Charter of the League, Pyrrha is restored either in line 90: Π[υρραῖοι] or in B1: [Πυρ]ραίων [ὁ δ]ήμος (Dreher (1995) 198 n. 105; cf. *SEG* 38 55). In any case, Pyrrha joined the League after Mytilene and Methymna (80–81), but before Antissa and Eresos (B.20–21). Pyrrhaian representatives in the allied *synedria* are attested for the year 368/7 (*IG* II² 107.29).

In C4f Menedemos of Pyrrha, a member of Plato's Academy (Philoch. fr. 224; Epikrates fr. 10, *PCG*), was sent back to his mother city to advise the Pyrrhaians about their constitution (Plut. *Mor.* 1126C). In 330/29 he became *proxenos* of Delphi (*BCH* (1940/1) 94.4).

In 333 Pyrrha was taken by the Persian admiral Memnon alongside the other Lesbian *poleis* (Diod. 17.29.2; Arr. *Anab.*

2.1.1), but by a peaceful agreement the Makedonians regained the small cities on Lesbos in the following year (Arr. *Anab.* 3.2.6).

The acropolis and possibly the lower town exhibit traces of settlement, fortification walls and tombs dating from the end of C10 (Koldewey (1890) pl. 11; Kontes (1978) fig. 60; Paraskevaidis (1963); Spencer (1995*a*) no. 99, (1995*b*) 281–83, fig. 4). As reconstructed by Koldewey (1890) 7–28 and pl. 11, the walls enclosed an area of 9.5 ha. Small-scale excavations nearly a hundred years ago carried out by Bohlau at Pyrrha uncovered a C8 apsidal building, probably a sanctuary (Schiering (1989)), and salvage excavations have opened numerous late Classical/Hellenistic graves (Kontes (1973); Archontidhou (1999) 74–75 for finds); rising sea levels have covered some buildings by the shore, including several identified as ship sheds of unknown date. The date of the large pseudodipteral Ionic temple at the Hellenistic pan-Lesbian site of Messon near the head of the Gulf of Kalloni in a

marsh is debated, but is probably late Classical/early Hellenistic (Koldewey (1890) pls. 18–20; Petrakos (1967); Plommer (1981) suggests C5–C4; Pfrommer (1989) suggests first half of C3 on the basis of architectural decor). After Pyrrha's destruction, probably by the earthquake of 231, the site became part of Mytilene's territory. Recent work, including drilled cores by the Archaeological Service, is in the course of publication. A sanctuary at the south-west tip of Lesbos, Cape Phokas, perhaps of Archaic date, possibly to Dionysos or to Hera, etc. (Quinn (1961)) is known from limited excavations (Spencer (1995*a*) no. 74). We know from Thuc. 3.18.1 that Pyrrha was walled in 428/7, and that the fortifications were reinforced in that year. The harbour is mentioned by Ps.-Skylax 97.

Pyrrha struck bronze coins in C4, perhaps starting c.370. Types: *obv.* head of nymph Pyrrha wearing sphenodone; *rev.* goat; legend: ΠΥΡ or ΠΥΡΡ, on some also ΑΘΕ (Head, *HN*² 563; Paraskevaidis (1963) 1412; *SNG Lesbos* 428).

AIOLIS AND SOUTH-WESTERN MYSIA

LENE RUBINSTEIN

I. The Region

The name of the region is *Αἰολίς, -ἴδος, ἡ* (Hdt. 5.123). There is no ethnic specifically associated with the region, however, for the designation *Αἰολεὺς* indicated a wider ethnic identity (“Aiolian”) and was also applied to the inhabitants of Aiolian settlements in Troas and the Aegean Islands, most notably Lesbos (Hdt. 2.178.2, 6.8.1). In the Hellenistic period *Αἰολεὺς* was used as a “regional ethnic” by the citizens of the Aiolian settlements in the Troad as well as by the inhabitants of the Aiolian *poleis* around the Elaitic Gulf.¹ The extent of Aiolis as a region was disputed already in Antiquity, and the area covered in this chapter does not correspond to any of the ancient definitions of Aiolis as a geographical entity. The area discussed here corresponds roughly to the area treated in the first half of Ps.-Skylax 98, stretching along the coast of Asia Minor from Adramyttion and the plain of Thebe in the north to the Gulf of Smyrna in the south, including some inland settlements, particularly in the plains of the rivers Kaikos, Titnaios and Hermos. Ps.-Skylax, who appears to follow the Persian administrative divisions, calls the entire area north of the river Maiandros “Lydia”, but points out that the northern part from Antandros in the north to Teuthrania in the south-east was formerly Mysian.

The communities in this part of Asia Minor are relatively poorly documented in the extant Archaic and Classical authors and inscriptions, and archaeological evidence for the settlements in our period is sparse. Only a few sites have been excavated,² and most of the architectural remains observed by travellers and archaeologists in the nineteenth and twentieth centuries date from the Roman period. A large earthquake that hit part of the region in AD 17 led to extensive rebuilding, and this meant, for example, that the

team who surveyed the urban centre of Aigai in 1886 recorded hardly any remains of the pre-Roman settlement.

The question of the extent to which each individual community was Hellenised in the Archaic and Classical period is extremely difficult to answer, particularly with regard to the inland settlements. Only three communities in the area covered in this chapter are designated as *poleis Hellenides* by Ps.-Skylax,³ and other Classical authors are equally unhelpful. No doubt much interaction between Greek and non-Greek inhabitants took place along the rivers throughout the period with which we are concerned. It is further suggested by fourth-century inscriptions and coins that some of the coastal settlements that were originally non-Greek communities had undergone a process of considerable assimilation by the end of the Classical period.⁴ The same appears to be true of some inland settlements such as Pergamon, Teuthrania, Halisarna and Gambriion, all of which were controlled by the descendants of the Medising Greeks Gongylos of Eretria and Demaratos of Sparta. But the numismatic evidence, which constitutes the most important pre-Hellenistic source for six of the small communities in the area,⁵ yields only limited information about the degree of Hellenisation of the people who issued the coins. Likewise, while finds of Greek pottery and artefacts may be regarded as good evidence for a lively exchange between Greek and non-Greek communities, such finds do not actually permit a classification of a particular settlement as “Greek” or “Hellenised”.

² Excavations have taken place at Myrina, Larisa Phrikonis, Pergamon and Kyme.

³ This is the case for Astyra and Adramyttion (subsumed under a general heading of *poleis Hellenides*), and Aigai. For Astyra, see the Inventory of *poleis* in the Troad, *supra*.

⁴ See e.g. the entries Adramyttion, Atarneus and Leukai in the list of *poleis* below. In the case of Kyllene, however, the ethnic composition of the population is not known. Xenophon characterises the community as a *polis* still inhabited by the descendants of Egyptian mercenaries settled there by Kyros the Great.

⁵ The communities for which coins constitute the primary pre-Hellenistic evidence are, in alphabetical order, Autokane, Boione, Chalkis, Iolla, Perperene, Thebe and Tisna.

¹ The designation was used, e.g., by citizens of Alexandria Troas (*BCH* 59: 55, 2.13 (C2)) and Assos (*Syll.*³ 585.314 (197–175)) as well as by citizens of Kyme (*IG* v11 3196 (C1)), Myrina (*IG* v11 420.44) and Pitane (*F.Delphes* 111.3 410.4 (319)).

When deciding which communities to include and which to exclude on ethnic criteria, I prefer to play safe by including some settlements that cannot be said with certainty to have been Greek or Hellenised. If a community has left inscriptions in Greek during the Classical period, it is treated as a whole as “Hellenised”, although it may in reality have contained a considerable number of members who did not speak Greek or consider themselves as “Hellenes”.⁶ Also included are communities that are known to have struck coins on a Greek model, provided that the community in question identifies itself by means of a Greek-style collective city-ethnic (sometimes in an abbreviated form). More doubtful are those inland communities of which we know only that contemporary Greek observers (primarily Xenophon) chose to characterise them as *poleis*.⁷ Here it has seemed safest to list such settlements in the Inventory, but to issue a general warning here that serious doubt must remain as to whether these *poleis* had undergone a process of Hellenisation at all by the end of the period with which we are concerned.

The earliest extant definition of the “region” called Aiolis is the one found in Herodotos’ account of the Aiolian *dodekapolis* (Hdt. 1.149–51), later reduced to a group of eleven *poleis* after the conquest of Smyrna by Kolophonian exiles who forced out the original Aiolian inhabitants. Not all the *poleis* on Herodotos’ list can be localised (Killa, Notion and Aigirossa have not yet been securely connected with any known sites);⁸ but the area concerned seems to have stretched from Smyrna in the south to Pitane on the northern shore of the Elaitic Gulf, the easternmost settlements being Temnos and Aigai.

Herodotos’ story of Smyrna’s change of population and of the shift of ethnic and regional affiliation (1.150.1–2) from Aiolis to Ionia shows that ethnicity was an important criterion for Herodotos’ definition of the region. Yet, that Herodotos regarded Aiolis as a geographical entity, rather than just the totality of ethnically Aiolian settlements in Asia Minor, is indicated by 5.123, in which he relates the military expedition of Artaphrenes and Otanes against “Ionia and the neighbouring Aiolis”. This indicates a perceived southern boundary of the region which was more than just

a vague differentiation between communities that were ethnically (and dialectally) Aiolian and those that were regarded as Ionian. The northern boundary of Aiolis at Pitane, according to Herodotos’ description, coincides with the southern boundary of the Chian *peraia* as indicated by Ps.-Skylax 98.⁹ As for the Aiolian *poleis* in the north around Mt. Ida in the Troad, Herodotos appears to have regarded them as a separate group (1.151.1). His reason for excluding these northern mainland settlements from his list may be that he regards them as part of the Troad, in which he locates Antandros in 5.26; but it may also be due to the fact that the southern *poleis* were operating as a loose political entity in the Archaic and Classical periods (see *infra*), and not least that the two groups belonged to two different satrapies in Herodotos’ day.¹⁰

The broadest definition of Aiolis as a region is that provided by Ephoros fr. 163b, who claimed that Aiolis stretched from Abydos in the north to Kyme in the south. For Ephoros and others, the existence of ethnically Aiolian *poleis* in the north was probably one important reason for extending the concept of Aiolis as far as this.¹¹ Although Strabo appears to be dismissive of Ephoros’ claim, Ephoros was in fact not the only Classical author to have employed a wider geographical definition than that proposed by Herodotos. Aeneas Tacticus 24.3 refers to Ilion as part of Aiolis when describing how Charidemus of Oreos captured the city in 360. For Xenophon “Aiolis” meant first and foremost the ethnically Aiolian *poleis* controlled by Pharnabazos in the north, i.e. the settlements on the coast south of Ilion (3.1.16–18, 2.1). This is paralleled also in Isoc. 4.144, where Isokrates recounts Derkylidas’ success in “Aiolis”, which undoubtedly relates to Derkylidas’ conquest of *poleis* in Pharnabazos’ satrapy. However, in *Hell.* 3.1.10 the expression “This Aiolis

⁹ A border dispute between Mytilene and Pitane was subjected to arbitration in 138 (*IG* XII suppl. 142C). It has been suggested, most recently by Stauber (1996a) 1.163–64, that the Chian *peraia* was added to the mainland territory of Mytilene as a result of a grant from Alexander the Great. It can in any case be inferred from this inscription that the boundary between Pitane as the northernmost *polis* of Aiolis and the territory occupied by the islands was quite stable over time.

¹⁰ He ends his list by the statement *αὐται μὲν νῦν αἱ ἡπειρώτιδες Αἰολίδες πόλεις, ἔξω τῶν ἐν τῇ Τῶν οἰκηθέντων. κενωρίζονται γὰρ αὐταί* (Hdt. 1.151.1). It is most likely that the *γὰρ* clause serves to explain why the northern Aiolian *poleis* have been excluded from his account of the mainland communities, rather than to explain the separate listing of Aiolian settlements on the islands off the Asian coast.

¹¹ Already Herodotos recounts a dispute between the Athenians and the Mytilenaians over the area around Ilion to which the Mytilenaians laid claim (Hdt. 5.94.2). The Athenian response was that the Mytilenaians had no better claim to dominance than all the other Greeks who had participated in the expedition against Troy. There is little doubt that it was the Aiolian identity of the settlements in the Troad (which were claimed as Lesbian *apokikiai*), that formed the basis of Mytilene’s claim.

⁶ An example is the community of the Melanpagitai, of which we know only that they marked their border with the neighbouring community of Herakleia with a Greek graffito (*ῶρια Μελανπαγιτῶν*, *Syll.*³ 934 (C5)).

⁷ See e.g. the entries Palaigambriou and Parthenion.

⁸ Killa is probably *not* identical with the Homeric Killa in the Troad (Stauber (1996a) 1.31), and it is uncertain if Notion is to be identified with the harbour town of Kolophon in Ionia (the identification has become conventional, however, and *BAR* contains no separate entry for the Aiolian Notion).

was the possession of Pharnabazos . . .” (ἡ δὲ Αἰολίς αὐτῆ ἦν μὲν Φαρναβάζου) implies that Xenophon operated with more than one geographical entity of that name, one of which overlapped with the Troad and probably also comprised the settlements around Mt. Ida. The other Aiolis may then have been identical with the southern Aiolis of Herodotos’ account, although this region is never referred to explicitly as “Aiolis” by Xenophon.¹²

Thus Herodotos’ and Xenophon’s accounts both suggest that there were two separate regions on the mainland that could be referred to as “Aiolis”. As mentioned above, this may reflect the fact that the two main groups of Aiolian settlements in Asia Minor belonged to different administrative units within the Persian Empire, the southern area having been part of the kingdom of Lydia and later of the same satrapy as the Ionian *poleis*, with which the *poleis* of southern Aiolis had close political connections in the Classical period. The long history of joint Persian administration of the southern Aiolian and the Ionian *poleis* on the mainland may in turn have influenced the Athenian administration of the area for tribute purposes: the Aiolian cities on the coast from Pitane in the north to Kyme in the south are all listed as part of the Ionian district in the tribute lists,¹³ and the Aiolian *poleis* also seem to have been regarded as part of Ionia for other purposes (the type of partial *atimia*, for example, that consisted in a ban on travelling to “Ionia”

undoubtedly included the *poleis* of southern Aiolis as well).¹⁴

The Persian administrative divisions may also account for the very narrow definition of Aiolis offered by Ps.-Skylax (98), who describes “Aiolis” exclusively as the *poleis* around Mt. Ida before proceeding to list the Greek settlements in Lydia along the entire coastline from Antandros in the north to the river Maiandros in the south. The only regional distinction made in this text is between the area from Antandros to Teuthrania, which Ps.-Skylax designates as “formerly Mysia, but now Lydia” and Lydia proper; but within the latter region there is no attempt by Ps.-Skylax to distinguish the southern region, Aiolis, from that of Ionia.

There is some evidence from the Archaic and Classical periods that suggests that the *poleis* of southern Aiolis cooperated politically and militarily on a regular basis. The existence of particular common political institutions on an inter-*polis* level is not directly attested in our sources, but it is highly likely that there was some kind of Aiolian parallel to the joint political and religious institutions of the Ionian *dodekapolis* that were centred on the Panionion. Herodotos reports that after the capture of Smyrna by Kolophonian exiles, the other eleven Aiolian *poleis* jointly made terms with the Kolophonians, whereby the Smyrnaians were allowed to leave with their movable possessions. The Smyrnaians were subsequently distributed among the eleven *poleis* and given citizenship there (Hdt. 1.150.1–2). This account is very likely anachronistic, at least as far as the organised resettling of the original Smyrnaians is concerned.

More plausible is the claim in Hdt. 1.151.3 that the Aiolian *poleis* on the mainland “made a joint decision to follow the Ionians wherever they led” when confronted with the threat posed by Kyros in 546. Herodotos’ wording strongly suggests a hegemonic, multilateral alliance between the eleven Aiolian *poleis* as a united group and the twelve Ionian ones, with the Ionians taking the lead. The creation of this alliance was allegedly followed by a joint Aiolian and Ionian embassy to Sparta (Hdt. 1.152.1–2). The Ionian–Aiolian joint venture may have been short-lived, however, for the Aiolian *poleis* on the mainland are not reported to have provided any military support for the Ionian Revolt in the 490s. On the other hand, a late C4 inscription, *I.Erythrai* 16, recording a joint decision made by the Ionians and Aiolians (l. 6), confirms not only that there was collaboration among the Aiolian *poleis* internally; it also indicates that the kind of

¹² This is further suggested by the previous paragraph (*Hell.* 3.1.10) in which Xenophon reports that Derkyllidas “differed so much from Thibron in his leadership that he led the army through friendly territory to the Aiolis of Pharnabazos without harming the allies in any way” (ὥστε παρήγαγε τὸ στρατεύμα διὰ τῆς φιλίας χώρας μέχρι τῆς Φαρναβάζου Αἰολίδος οὐδὲν βλάβης τοῖς συμμάχοις). Note that in *An.* 5.6.24 Timasion reassures his troops that he is familiar with “Aiolis, Phrygia, Troas and the entire fiefdom of Pharnabazos”, thus implying a differentiation between Aiolis and the Troad; the context suggests, however, that Timasion is still referring to an Aiolis in the north rather than to the settlements around and south of the Elaitic Gulf.

¹³ The only settlement on the coast north of Pitane that may have been included in the *Ionikos Phoros* is Karene (Krateros (*FGrHist* 342) fr. 2). The absence from the Athenian tribute lists of other settlements on the coast between Pitane and the Theban plain is perhaps due to the fact that these *poleis* belonged to the Chian and Lesbian *peraiiai*. The Chians (and presumably their dependent *poleis*) never paid tribute at all. As for the *poleis* in the so-called Lesbian *peraiia*, their absence from the tribute assessment lists after the fall of Mytilene may indicate that, in C5, the Lesbian *peraiia* south of Adramyttion did not belong to Mytilene alone. Methymna, which did not join in the Lesbian Revolt, remained *autonomos*, and any possessions that the Methymnaians may have had were undoubtedly exempt from tribute as well. There is no firm evidence for the Lesbian *peraiia* north of the Elaitic Gulf as a specifically *Mytilenaian* possession earlier than the reign of Alexander the Great. Theopompos’ report (*FGrHist* 115) fr. 291) that the Chians and the Mytilenaian had asked Hermias to be *prostates* of their territories on the mainland may refer to the Mytilenaian possessions in the north, the so-called *Aktaiai poleis*, which included Assos, Hermias’ residence in the period 348–345. Assos is explicitly mentioned in the Theopompos passage.

¹⁴ For the type of partial *atimia* that consisted in a ban on travelling to “Ionia”, see *Andoc.* 1.76.

Ionian–Aiolian alliance suggested by Herodotos may have been based on historical fact.

In the Classical period there was clearly a perception that most of the original Aiolian *poleis* had a common origin as cities founded from the Greek mainland; but there seems to have been more than one tradition. According to Pherekydes of Athens ((*FGrHist* 3) fr. 155), the Aiolian cities were founded by Androklos, the son of King Kodros, after he had initiated the settlement of Greeks in Ionia. Hellan. fr. 32 appears to have represented a rival Lesbian tradition, according to which the settlement of Aiolis was initiated by Orestes and Peisandros of Sparta. These two rival traditions may well reflect a contemporary C5 tension between Athens and Mytilene, both of which claimed the right of domination over the Aiolian *poleis* in the Troad as reported in Hdt. 5.94.

In addition to the thirty-six settlements that are listed in the Inventory of *poleis* there are sixteen locations attested in Archaic or Classical sources for which the evidence is not sufficient to warrant their inclusion in the Inventory. They are as follows.

1. Pre-Hellenistic Settlements not Attested as Poleis

Achaion Limen (Ἀχαιῶν λιμὴν) Ps.-Skylax (98) is the only Classical author to mention this harbour. According to Strabo 13.3.5, it was located between Myrina and Gryneion on the shore of the Elaitic Gulf and contained an altar of the Twelve Gods. *Barr.* HR, but C also attested.

Apollonia (Ἀπολλωνία) This settlement is mentioned in Xen. *An.* 7.8.15. It was located in the vicinity of Pergamon, close to the base of the Persian nobleman Asidates. Asidates received military assistance from Itamenes, who had recruited some of his troops from Apollonia and Parthenion (see no. 827). Strabo 13.4.4 describes Apollonia as situated on an elevated site on the plain to the east of Pergamon. *Barr.* C.

Ardynion (Ἀρδύνιον) The toponym Ardynion is attested in Xanthos of Lydia (*FGrHist* 324) fr. 17 in the second book of his *Lydiaka* (C5). Steph. Byz. 116 classifies the settlement as “a polis in the Theban Plain”. Nikolaos of Damascus ((*FGrHist* 90) fr. 47, 6 (C1)) also refers to Ardynion as a polis founded by the Mysian king Arnossos (. . . ὄστις πόλιν Ἀρδύνιον ἔκτισεν ἐν Θήβῃ πεδίῳ), whose daughter married the Lydian king Sadyattes (= Kandaules?, *RE* s.v. Sadyattes 1). It is possible, but far from certain, that Nikolaos based his account directly on Xanthos, in which case the site-

classification must be regarded as a genuine Classical one. *Barr.* A, but C also attested.

Arginoussai (Ἀργινοῦσαι) The toponym is attested in Thuc. 8.101.2 (as Ἀργινοῦσαι τῆς ἠπείρου) and in Xen. *Hell.* 1.6.27. According to Strabo 13.2.2, these were three islands close to Mt. Kanai on the mainland, one of which was probably the Biga peninsula, as suggested by Stauber (1996a) i.285, while the other two may be identified with the islands Garip Adasi and Kalemadası. Stauber and his team found no Classical remains during their exploration of the islands and the peninsula. However, Diod. 13.97.3 states that at the time of the famous sea battle in 406 the islands were inhabited and contained a small Aioloan *polis*, claimed by schol. Ar. *Ran.* 33 to be a πόλις τῆς Αἰολίδος. *Barr.* C.

Blakeia (Βλακεία) This settlement is known only from references to Aristotle’s *Kymaion Politeia* (fr. 90, 531, 1–2, Gigon). It was located in the territory of Kyme, and the stupidity of its inhabitants allegedly gave rise to the expressions βλάξ and βλακικά (“naive”, “stupid”, “useless”). Not in *Barr.*

Chryse (Χρῦση) The settlement of Chryse close to Thebe mentioned by Strabo 13.1.63 is conventionally identified with the Homeric town of that name. Stauber (1996a) i.37–38 locates it tentatively at Magara Tepe, where some Aiolian grey ceramic has been found in the context of a pre-historic settlement (3–2 millennium BC). There is no literary or epigraphical evidence from the Archaic or Classical period pertaining to a contemporary Chryse in this location. *Barr.* AC (but location is queried).

Itone (Ἰτώνη) The toponym of this settlement in Lydia is known only from Steph. Byz. 342. It was tentatively located near Mt. Tmolos by Robert (1962) 314. There is no contemporary Archaic or Classical evidence for this community. *Barr.* C?

Kertonon (Κερτωνόν) The toponym *Κερτωνόν* is attested in Xen. *An.* 7.8.8 in the account of his route across Mt. Ida to Pergamon through the Theban plain and through the territories of Adramyttion and Kertonon. Stauber (1996a) i.330–32 refers to earlier suggestions of Assar Tepe at Çamavlu as a possible location, but he also points out that there are only a few ancient remains at that site. It has been suggested that Kertonon was in fact identical with the settlement Kytonion mentioned by Theopomp. fr. 17. *Barr.* C.

Kytonion (Κυτώνιον) The toponym is attested only in Theopomp. fr. 17, cited in Steph. Byz. 399. The site-

classification given here as πόλις μεταξύ Μυσίας καὶ Λυδίας cannot be attributed to Theopompos with certainty. *Barr. C* (but regarded as identical with Kertonon).

Lyrnessos (Λύρνησος) The most important attestations of the toponym Λύρνησος are Hom. *Il.* 19.295 (the home of Briseis) and Strabo 13.1.61. The location of the Homeric Lyrnessos was disputed already in Antiquity (see Stauber (1996a) i.67–71); but schol. Eur. *Andr.* 1 reports that some authors located the settlement in the plain of Thebe. Stauber (1996a) argues for a location of Lyrnessos on the south-eastern edge of the plain of Thebe at Ala Dag. Here there are impressive remains of a prehistoric settlement, including large fortification walls dating from the third millennium, and there were also ceramic finds from the Classical, Hellenistic and Roman periods (Stauber (1996a) i.102–8). *Barr. AC*.

Malene (Μαλήνη) The toponym is attested in Hdt. 6.29 as a location in the territory of Atarneus, in which Histiaios was captured by Harpagos in 493. Dörpfeld (1928) 131–36 suggested that it was identical with the location Μαλέα attested in Thuc. 3.4.5 and 3.6.2, arguing that Thucydides' description points to a location on the mainland rather than on the island of Lesbos. See, however, Wilson (1981) 154–56 for a solution to the topographical problems posed by Thucydides in these passages in favour of the conventional location of Malea on Lesbos. Other scholars have suggested that Μαλήνη was identical with Καρήνη, but Stauber (1996a) i.242 rejects this on the grounds that Herodotos mentioned both of these locations, both in the same area. According to Stauber, this would hardly have escaped textual emendation already in Antiquity, unless Herodotos was in fact referring to two different settlements. Lambrianides (1996) 196 agrees with previous attempts to locate Malene near Makaronia, while this is disputed by Stauber (1996a) i.242 and 244, who prefers to locate the settlement of Attea here. He does not suggest any alternative location of Malene. *Barr. C*.

Passanda (Passandeus) (Πάσσανδα, Πασσανδεύς) The toponym is attested only in Steph. Byz. 509, who classifies it as a *chorion* close to the *poleis* of Adramyttion and Kisthene. The collective use of the ethnic Πασσανδεύς is attested in Ephor. fr. 235, a passage quoted directly by Stephanos. Nothing further is known about this community, and Stauber (1996a) i. 157 proposes no location for the site, except that it must have been situated somewhere on the coast between Ayvalık and Gömeç. *Barr. C*.

Pedaion (Πήδαιον) This is attested only as a Homeric community (*Il.* 13.172), governed by King Imbrios. Stauber (1996a) argues that it must be sought in the vicinity of Thebe, but does not attempt a more precise location. There is no evidence for a settlement by that name in Archaic or Classical times. *Barr. A*.

Pioniai (Πιονίαι) The earliest reference to the toponym is found in Paus. 9.18.4, who reports that it was located in Mysia beyond the Kaikos, and that, according to its inhabitants, it was founded by Pionis, a descendant of Herakles. Unless Pioniai was located at modern Gömeniç (as assumed in *Barr.*), where some pre-Hellenistic remains have been found (Stauber (1996a) i.95–96), there is no further evidence for a settlement of that name in the Archaic or Classical periods. The identification of Pioniai with the settlement on Gömeniç is rejected by Stauber (1996a) i.91–97. *Barr. C*.

Thyessos (Θυεσσός) The toponym has been suggested as an earlier name for the settlement Hermokapeleia on the basis of the account of Nikolaos of Damascus (*FGrHist* 90) fr. 44, 9 (C1, rC6). According to this account, it was a trading settlement founded by the merchant Thyessos, which was given freedom from taxation by the Lydian king Ardys. Steph. Byz. 319 classifies it as a *polis Lydias* and indicates the same origin of the settlement as Nikolaos. The identification made by Keil of Thyessos with the later Hermokapeleion has been accepted as plausible, but not certain, by Zgusta (1984) 187–88. *Barr. C?*

Thymbrara (Θύμβραρα, Θύβαρνα) The toponym is mentioned in Xen. *Cyr.* 6.2.11, as a place in which the Persian king held assemblies of his non-Greek troops from the southern satrapies even in Xenophon's own day (cf. *Cyr.* 7.1.45). The settlement is mentioned by Hanfmann and Waldbaum (1975). It has been suggested that it was identical with the location Thybarna mentioned by Diod. 14.80.2 quite close to Sardis, but see Zgusta (1984), s.v., who regards the identification as "possible but not necessary". There is no evidence that the settlement underwent a process of Hellenisation during the period with which we are concerned. *Barr. C*.

2. Unidentified Settlements

Belkahve See the site list in the introduction to the region of Ionia.

II. The *Poleis*

800. Adramyttion (Adramytenos) Map 56. Lat. 39.30, long. 26.55. Size of territory: ? Type A:β. The toponym is Ἀδραμύττ(ε)ιον, τό (Hdt. 7.42.1; Xen. *An.* 7.8.8; Kratinos fr. 508, *PCG*) or Ἀτραμύττιον, τό (Thuc. 5.1.1, 8.108.4). The city-ethnic is Ἀδραμυττηνός (*IG* II² 7941 (C3)) or, once, Ἀδραμου[ττανόν] (*IG* VII 2860 (C4); cf. Fossey (1994) 37). Adramyttion is called a *polis* in the urban sense by Herodotos 7.42.1, and Ps.-Skylax 98 mentions Adramyttion under the heading πόλεις... Ἑλληνίδες αἰῶε. That it was a *polis* in the political sense too is indicated by Aristotle's inclusion of Adramyttion in his collection of *politeiai* (Arist. fr. 473). The collective and internal use of the city-ethnic is attested on Hellenistic coins, in abbreviated forms on coins of the Classical period (*infra*). The external and individual use is attested in a federal *proxenia* decree of Boiotia, presumably passed in C4 (*IG* VII 2860).

Adramyttion probably was not a member of the Delian League: the restoration Ἀ[τραμυτ]ενοί in *IG* I² 192.III.13 has been rejected in *IG* I³ 260.IV.16, where the editor now reads Ἀ[ρυσβαῖοι]. According to Thucydides 5.1.1 and 8.108.4, Persia retained firm control of Adramyttion in C5: Pharnakes, the satrap of Hellespontine Phrygia, allowed refugees from Delos, who had been driven out by the Athenians in 422, to settle at Adramyttion, where they seem to have remained until they were allowed to return home in 421/0 (Thuc. 5.32.1). Perhaps some of them stayed on: if the massacre of the Delians in Adramyttion by Arsakes (Thuc. 8.108.4) is to be placed in 411, as proposed e.g. by Stauber (1996a) i.133, this might suggest Delian settlement of a more permanent nature. On the problems related to Arsakes' murder of some of the Delians and Arsakes' connections with Tissaphernes and Pharnakes, see Gomme *et al.* (1981) 356–57, who follow the conventional view that the massacre took place c.421, and Hornblower (1996) 423–24. Presumably the *polis* remained under Persian control during most of C4 as well, although in Ps.-Skylax 98 it is described as a *polis Hellenis* and the region as being under Lesbos, perhaps in the period 404–386. It is conceivable that one of the Lesbian *poleis*, which had control of significant territory on the mainland, may also have controlled Adramyttion as a dependent *polis*.

The first epigraphical attestation of Adramyttion's relations with the rest of the Greek world is *IG* VII 2860 (C4), bestowing *proxenia* and other privileges on the Adramyttian honorand. However, a number of jugs “from Adramyttion” are recorded in a Delian inventory of 364/3 (*I.Delos* 104.12).

Silver and bronze coins were struck in Adramyttion by Orontas c.357–352 or perhaps in 362/1 in connection with the satrap's revolt (Troxell (1981); *contra* Moysey (1989)). For the “autonomous bronze coinage” struck in C4f with the legend of Adramyttion, see the catalogue in Stauber (1996a) ii.193–96 nos. 11–26. Types: *obv.* head of Zeus; *rev.* forepart of winged horse; legend: *ΑΔΡΑ* or *ΑΔΡΑΜΥ*. The full form of the ethnic (*ΑΔΡΑΜΥΤΗΝΩΝ*) is attested on coins of C2 and later: *ibid.* nos. 27ff.

As for the ethnic composition of the population of Adramyttion, the *polis* must have been sufficiently Hellenised in C4s to merit inclusion in Aristotle's collection of *politeiai*, but it may well have contained an ethnically mixed citizen body throughout the Classical period and even later. Later tradition largely agrees in regarding Adramyttion as a Lydian foundation. Aristotle (fr. 473, Gigon) claims that the *polis* was founded by Adramyτος, the son of Alyattes and brother of Kroisos. Rival traditions are all later.

801. Aigai(ai) (Aigaieus) Map 56. Lat. 38.50, long. 27.10. Size of territory: ? Type A:a. The toponym is Αἰγαῖαι (Hdt. 1.149.1), Αἰγαί, αἰ (Ps.-Skylax 98; Strabo 13.3.5) or Αἰγαεῖς (Xen. *Hell.* 4.8.5, probably corrupt). The city-ethnic is Αἰγαεὺς (Michel 13.11 (C4); Head, *HN*² 552 (C3)) or Αἰγαεῖς (Head, *HN*² 552 (C3); Polyb. 5.77.4). Suda Σ1898 notes the form Αἰγυεῖς. As part of the original Aiolian *dodekapolis* Aigaiaia is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2 and in a C4 inscription (Malay (1994) no. 515B l. 2). The collective use of the city-ethnic is attested internally in *Staatsverträge* 456.12 (C4–C3). The earliest external attestations are Hellenistic (collective use: Polyb. 5.77.4; individual use: *SEG* 32 1322 (C3), Cyprus; *IG* XI.4 1042 (C3), Delos).

Little is known about the extent of Aigai's territory in the Archaic and Classical periods. However, a C4l treaty between Aigai and the community of the Olympeioi (*Staatsverträge* 456) was set up at a small ancient settlement near Yenice Köy, located c.5 km north-west of the urban centre of Aigai. Reinach (1891) 272 inferred from the inscription that the village was dependent on Aigai; but more evidence is needed to corroborate Reinach's interpretation.

Herodotos lists Aigai among the twelve original Aiolian *poleis* in 1.149.1, and Malay (1994) no. 515 is indeed written in the Aiolic dialect. The *polis* was not a member of the Delian League, and it may be assumed that the Persians maintained at least nominal control over the *polis* during C5 and C4. However, according to Xen. *Hell.* 4.8.5, in 394 Derkylidias claimed, presumably exaggerating, that even in Asia Minor itself there were *poleis* such as Temnos and Aigai where it would be possible to live without being subjected (*ὑπήκοου*) to the Persian king.

Only one Aigaian treaty survives from the Classical period, viz. *Staatsverträge* 456, concluded between Aigai and the Olympenoï regulating the seasonal transhumance of flocks. Malay (1994) no. 515 is a public enactment (*ψάφισμα*), which mentions officials (*ἀρχαί*, A.3) and a priest (*ἱερεὺς*, A.5).

Bohn and Schuchhardt (1889) describe the visible remains of the urban centre of Aigai, which had been completely rebuilt after an earthquake in AD 17. Of older remains, only the inner city wall may be pre-Hellenistic (*ibid.* 10), and a second, larger, city wall may be dated with reasonable certainty to the reign of Eumenes II. The pre-Hellenistic wall is constructed in rough polygonal masonry and had a circumference of no more than 1 km, enclosing an area of triangular shape (*ibid.* 8–9), and this points to an urban centre of a modest size. Radt (1991) discusses remains of monumental architecture and argues in favour of connecting a C6 Aiolian capital with the site of Aigai.

The earliest coinage of Aigai dates from C3 (Head, *HN*² 552), although Head (1875) 293 tentatively assigned a number of electrum coins from 600–550 to Aigai.

802. Aigirossa Unlocated. Type: A:α. The toponym is *Αἰγυρόεσσα* (Hdt. 1.149.1). The *polis* is attested only in Herodotos, who lists it as one of the twelve original Aiolian *poleis*. It is called a *polis* in the urban sense at 1.149.1, with the territorial sense as a possible connotation, and in the political sense at 1.150.2. It has been suggested by Stein (1883) 173 n. 3 that Aigirossa is an earlier name of Elaia, which is not mentioned by Herodotos in his listing of Aiolian *poleis*. However, coins from Elaia with the legend *ΕΛΑΙΑ* are attested as far back as C5m (Head, *HN*² 554). Cook (1958–59) 4, 17 attempts to locate Aigirossa at the site of Belkahve in Smyrnaian territory.

803. Atarneus (Artaneites) Map 56. Lat. 39.05, long. 26.55. Size of territory: ? Type: A:β. The toponym is *Ἄταρνεύς*, ὄ (Hdt. 6.28.2, 8.106.1; Arist. *Pol.* 1267^a32; Isoc. 4.144; Xen. *Hell.* 3.2.11; Theopomp. fr. 291; Tod 165.32 = *I.Erythrai u. Klazomenai* 9 (C4m)). The city-ethnic is *Ἄταρν(ε)ίτης* (Hdt.

6.4.1; *IG XII* suppl. 142.117 (C2m); Callim. *Epigr.* 1.1; Strabo 13.1.60; Paus. 7.2.11). Atarneus is called *polis* in the urban sense in Ps.-Skylax 98. That it was a *polis* in the political sense too may, up to a point, be inferred from the treaty between Hermias of Atarneus and Erythrai of C4m (*infra*). The legend *ATAP* on C4 coins is presumably the collective and internal use of the city-ethnic (*infra*). The external use of the city-ethnic is attested collectively in *IG XII* suppl. 142.117 (C2m) and individually in Hdt. 6.4.1 and Callim. *Epigr.* 1.1. The territory is called *Ἄταρνέιτις χώρα* (Hdt. 6.29.1) and comprised the location Malene (for the problems related to the identification of Malene, see Stauber (1996a) i.241–42).

According to Hdt. 1.160.4, the Chians gained possession of Atarneus in return for handing over Paktyes to Kyros in 547/6; see also Hdt. 8.106.1, who refers to Atarneus as in “Mysian territory” and occupied by Chians. However, Xen. *Hell.* 3.2.11 describes Atarneus as occupied by refugees from Chios, which may indicate that at that time it had turned into some kind of splinter community over which the Chians had lost control (compare, e.g., the relationship between Anaia and Samos during the Peloponnesian War). See also Diod. 13.65.4, mentioning how exiled Chian democrats used Atarneus as a base for their raids against the island in 409. Even during the tyranny of Hermias from c.355, it is clear that the Chians still maintained some interest in and had a claim to the site (Theopomp. fr. 291).

Tod 165 may be regarded as a treaty entered into by Atarneus with Erythrai in so far as the treaty concerned Atarneus as a community, if only indirectly, and was to be publicised in the sanctuary of Atarneus (Tod 165.32–33). On the other hand, the party to the treaty is Hermias rather than the *polis* as a whole, and it is significant that the delegates appointed to take the oath on behalf of Hermias and his associates are *not* referred to as representatives of the *polis* of Atarneus.

Atarneus is described as a city in Mysia (Hdt. 1.160.4; Isoc. 4.144). The site of Atarneus has been located on Kale Tepe, on which there are substantial remains of C4 buildings and a large preserved section of Atarneus’ city wall dating from C5 or C4 (Stauber (1996a) i.269–72). The city wall is also attested in Xen. *Hell.* 3.2.11 and Arist. *Pol.* 1267^a32, both of which relate to sieges of Atarneus, in 398/7 and c.350 respectively. The site in Kale Tepe has yielded a considerable amount of surface finds from C4, pottery as well as tiles (Stauber (1996a) i.271), which suggests occupation of a relatively high density. A sanctuary (*ἱερόν τοῦ Ἄταρνέως*) is designated as a site in which the treaty between Hermias and Erythrai is to be displayed (Tod 165.32).

Atarneus struck coins in silver and bronze from c.400 onwards: *obv.* head of Apollo, or head of goddess; *rev.* coiled snake; legend: *ATA* or *ATAP* (Stauber (1996a) ii.270–79, cat. nos. 1–33; *SNG Cop. Mysia* 21–27).

The ethnic composition of the population cannot be determined with certainty. When the Chians “bought” Atarneus from Kyros in return for handing over the refugee Paktyes (Hdt. 1.160.4), there may have been a non-Greek population already dwelling there, and we do not know if they were expelled by the Chian settlers. But Himerius (*Orat.* 40.6–7 = Arist. fr. 675, Rose) suggests, for what it is worth, that the process of Hellenisation may not have been complete even in Aristotle’s day. Himerius, who calls Atarneus a *πόλις Μυσῶν*, does not indicate the origin of this anecdote.

804. Autokane (Autokanaios?) Unlocated, unless identical with Kane. Map 56. Lat. 39.00, long. 26.50. Size of territory: ? Type: B:?. The toponym is *Ἀυτοκάνη* (*Hymn. Hom. Ap.* 35). The legend *Ἀυτοκάνη* on C4 coins (*infra*) may be the toponym, but is perhaps better interpreted as an abbreviated form of the city-ethnic *Ἀυτοκάνη(ων)*. In the Homeric Hymn the toponym designates a mountain, but on the coins it must designate a homonymous settlement. The city-ethnic is unattested, unless the legend on the C4 coins is an abbreviated form. Also, *οἱ Καναῖοι* mentioned in a Thessalian inscription of C2 (*IG IX.2 1105a*) may perhaps be the citizens of Aiolian (Auto)kane. The status of Autokane is uncertain. Apart from the numismatic evidence we have no information about this settlement; but we know that the mountain Autokane (referred to as *Κάνη* in Hdt. 7.42.1) was adjacent to the *polis* of Kane/Kanai, which had two harbours (Schuchhardt (1887) 1209 and Tomascheck (1891) 25). One of these may have been Autokane. Other scholars have suggested that Autokane and Kanai were identical (*Barr.*). This hypothesis may be supported by the fact that we have no numismatic evidence for Kanai, which is otherwise quite well attested: it is recorded, e.g., in a C2 Delphian list of *theorodokoi* (*BCH* 45 (1921) 1 ID(a) 10). For a summary of this discussion, see Stauber (1996a) ii.274–77. If Autokane is to be identified with Kane, it must have contained a sanctuary of Artemis Orthosia: *I.Adramytteion* 47 (C4 or C3e) found at Bademli (Kane) is either a *horos* of her *temenos* or an inscribed altar.

Autokane struck bronze coins from C4m on: *obv.* laureate head of Zeus, or of Asklepios, or of Apollo; *rev.* head of Athena wearing Attic helmet, or head of Dionysos with wreath, or female head, or olive wreath; legend:

ΑΥΤΟΚΑΝΑ or abbreviations down to *ΑΥΤ* (Stauber (1996a) ii.266–68, cat. nos. 1–18; *SNG Cop. Aeolis* 26–27).

805. *Boione Unlocated. Type: C:?. The toponym is unattested, but may be reconstructed tentatively from the legend *ΒΟΙΩΝΙΤΙΚΟΝ* on late Classical/early Hellenistic coins. Most bronze coins have been found in the Hermos river valley (Imhoof-Blumer (1890) 631; Babelon, *Traité* ii.2. 1177–78), and the coin types and craftsmanship resemble the coins struck in Larisa Phrikonis. A different location in Lydia was suggested by Leake (1856) 145. Although most coins are conventionally dated to C3, bronze coinage dated to C4 is described by Wroth in *BMC Troas* 101. Types: *obv.* female head l., wearing ear-ring and necklace; *rev.* bull standing; legend: *ΒΟΙΩΝΙΤΙΚΟΝ* or *ΒΟΙΩΝΙΤΙΚΟΣ* (*SNG Cop. Aeolis* 28–29, giving 310 as the *terminus post quem*).

806. Chalkis (Chalkideus) Map 56. Lat. 39.15, long. 26.35 (but note that the identification of Chalkis with modern Çiplakada is not entirely certain). Size of territory: 1. Type: C:?. The toponym *Χαλκίς* and the city-ethnic *Χαλκιδεύς* are known only from Steph. Byz. 685.1, who does not cite his source. The legend *ΧΑ* on C4 coins is presumably an abbreviated form of the city-ethnic (*infra*). If the identification of Chalkis with modern Çiplakada is correct, the territory of this community was c.2.5 km². Çiplakada belongs to a group of twenty-three islands known as *Hekatonnesoi*, first mentioned by Herodotos (1.151.2), who reports on one Aiolian *polis* there (no. 823). It is very unlikely that he has the settlement at Çiplakada in mind, however: the larger *polis* Pordoselene/Nasos is a far more plausible candidate. The island has yet to be excavated, but Stauber and his team have reported substantial surface finds that point to a sizeable Hellenistic–Roman settlement. They also observed a fortification wall, the lower courses of which appear to be quite old (Stauber (1996a) i.228), and find it highly plausible that the island contained a settlement in the Classical period (C5/C4). Stauber ((1996a) ii.280–82) ascribes C4 bronze coinage to this community, but with caution. Types: *obv.* female head r. (Artemis?); *rev.* spearhead; legend: *ΧΑ*. For a summary of the discussion, see Stauber (1996a) ii.282, who concurs with the majority of numismatists in regarding a Carian origin (Chalketor) for these coins as utterly implausible.

807. Elaia (Elaiites) Map 56. Lat. 38.55, long. 27.05. Size of territory: 2 or 3. Type: [A]:a. The toponym is *Ἐλαία*, ἡ (*IG I³ 268.II.28*; Ps.-Skylax 98; Polyb. 21.10.2) or *Ἐλαιέα* (*IG I³ 266.I.17*). The city-ethnic is *Ἐλαίτης* (*I.Délos* 103.34 (C4f);

Paus. 5.24.6) or Ἐλαίτης (*IG* 1³ 261.III.4; *PEP Chios* 53.9 (no date)). According to Steph. Byz. 263.9–10, the community was also known by another toponym, *Κιδανίς*. In Ps.-Skylax 98 Elaia is one of the toponyms listed after the heading πόλεις ... Ἑλληνίδες ... αἰθε. Elaia is called a *polis* in the political sense in Plut. *Phokion* 18.7 in a retrospective C4 context, referring to instructions given by Alexander the Great to Krateros to capture the city and hand over control to Phokion, a plan which did not succeed. The collective use of the city-ethnic is attested internally on Hellenistic coins (*SNG Cop. Aeolis* 177ff), in abbreviated forms on coins of the Classical period (*infra*), and externally in the Athenian tribute lists (*infra*); the individual use is attested externally in *IG* XII.6 23 (C4).

Very little is known about the history of Elaia. Herodotos does not mention it in his list of original Aiolian foundations (1.149.1), and the hypothesis that Elaia was originally known as the otherwise unattested Aigiroessa in Herodotos' list is not supported by any available evidence. The alternative explanation offered by Büchner (1905), that Elaia was founded as an Athenian colony and therefore was never counted as a member of the Aiolian *dodekapolis*, rests primarily on the tradition that names Menestheus with his Athenian troops as its founder (Strabo 13.3.5; but note that in 13.1.67 he refers to Elaia as a *polis Aioliike*).

Elaia was a member of the Delian League. It belonged to the Ionian district and is recorded in the tribute lists sometimes by toponym (*IG* 1³ 266.I.17), while in other lists the entries are by the collective form of the city-ethnic (*IG* 1³ 261.III.4). It is recorded from 454/3 (*IG* 1³ 259.I.16, restored) to 421/20 (*IG* 1³ 285.II.8–9) a total of fifteen times, once completely restored, paying in all years a *phoros* of 1,000 dr. (*IG* 1³ 261.III.4).

In C4, Horismos Damasistratou of Elaia received *proxenia* and citizenship from Samos after the restoration of the Samians to their island (*IG* XII.6 23). The Elaians made a communal dedication of a beardless image of Zeus at Olympia (Paus. 5.24.6, who does not give a date).

The site was described by Büchner (1905). The oldest city wall (probably C3) enclosed an area of c.6 ha. An acropolis was located on the hill Maltepe (Bean (1966) 112–14).

Elaia struck silver coins c.460–400 and bronze coins after c.340. (1) Silver: types: *obv.* head of Athena, wearing close-fitting crested helmet; *rev.* olive wreath, the whole in incuse square; legend: *ΕΛΑΙ* (r. to l.). (2) Bronze: types: *obv.* head of Athena l. wearing close-fitting or Corinthian crested helmet; *rev.* corn-grain between two olive branches or in olive wreath, or horseman in olive wreath; legend: *ΕΛ*,

sometimes *ΕΛΑΙ* (Babelon, *Traité* ii.2. 29; *BMC Troas* p. 125; *SNG Cop. Aeolis* 164–76).

808. Gambriion (Gambreiotēs) Map 56. Lat. 39.05, long. 27.20. Size of territory: ? Type: A:?. The toponym is *Γάμβριον*, τό (Xen. *Hell.* 3.1.6). The full form of the city-ethnic, *Γαμβρειώτης*, is not attested earlier than C31 (*Syll.*³ 1219.4 = Michel 520 = *LSAM* 16), but the legend *ΓΑΜ* on the C4 coins is presumably an abbreviated form. Gambriion is called a *polis* in Xen. *Hell.* 3.1.6, where *polis* is used in the urban and political senses combined. It was a town captured by Thibron, but it is also described as a personal fief which had been given by the Persian king to Gongylos of Eretria in C5, whose descendants were still in control in early C4. Thus, *polis* is used in the political sense too, denoting Gambriion as well as its surrounding territory from which troops could be recruited and taxes levied. For a discussion of such fiefdoms, see e.g. Briant (1985). The community must have been under Persian control throughout the Classical period, presumably as part of the satrapy of Lydia. An inscription of 326/5, found in Gambriion, records a gift of land, house and garden by Krateuas (presumably a Makedonian) to Aristomenes (*Syll.*³ 302 = Guarducci (1974) 310–11). In the preamble (4–5) it gives the name of Menander (*Μενάνδ[ρ]ου σατραπεύοντος*), who was given the Lydian satrapy by Alexander the Great. An eponymous official (*πρύτανις*) is mentioned; but it is suggestive that there is no mention of any Gambriian decision-making body. The inscription suggests that the Makedonians may have controlled land-ownership directly. The extent to which Gambriion had undergone a process of Hellenisation during the Classical period is unknown.

Gambriion struck coins of silver and bronze throughout C4. (1) Silver: types: *obv.* laureate head of Apollo; *rev.* forepart of butting bull; legend: *ΓΑΜ*. (2) Bronze: *obv.* head of Apollo; *rev.* forepart of bull, or star, or tripod; legend: *ΓΑΜ*. (*BMC Mysia* p. 62; *SNG von Aulock* 1085–89 and *SNG Cop. Mysia* 144–63. See also Babelon, *Traité* ii.2. 18–19.)

809. Gryneion/Gryneia (Gryneieus) Map 56. Lat. 38.55, long. 27.05. Size of territory: 1 or 2. Type: A:a. The toponym is *Γρύνεια*, ἡ (Hecat. fr. 225; Hdt. 1.149.1) or *Γρύνειον*, τό (Ps.-Skylax 98; Xen. *Hell.* 3.1.6; Bean (1974–75) 85–87 no. 21 (C2)) or *Γρύνιον* (Diod. 17.7.9) or *Γρύνεια*, τὰ (Steph. Byz. 213.15). The city-ethnic is *Γρυνειεύς* (*IG* 1³ 265.I.17) or *Γρυνεύς* (Krateros (*FGrHist* 342) fr. 2; cf. *IG* 1³ 266.I.3, restored) or *Γυρνεύς* (*SNG Cop. Aeolis* 202–7 (C3)). As part of the original Aiolian *dodekapolis* Gryneion is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as

a possible connotation, and in the political sense at Hdt. 1.150.2 and in a C41 inscription (*Iscr. Cos* ED 71 B.3). At Xen. *Hell.* 3.1.6 *polis* is used in the urban and political senses combined, denoting a dependent *polis* (*infra*). In Ps.-Skylax 98 Gryneion is one of the toponyms listed after the heading *πόλεις ... Ἑλληνίδες ... αἰῶδες*. In *Iscr. Cos* ED 71 B.5 *politeia* is used in the sense of citizenship. The collective use of the city-ethnic is attested internally in *Iscr. Cos* ED 71 B.4 and on C3 coins (*SNG Cop. Aiolis* 202–7) and externally in the Athenian tribute lists (*IG* 1³ 265.1.17).

Xenophon refers to Gryneion as one of the personal fiefs which had been given to Gongylos by the Persian king in C5, and which were still controlled by his descendants in C4e (*Hell.* 3.1.6; see also Briant (1985)). Yet Gryneion was a member of the Delian League. It belonged to the Ionian district and is recorded from 453/2 (*IG* 1³ 260.VII.16) to 428/7 (*IG* 1³ 283.III.18) a total of thirteen times, three times completely restored, paying a *phoros* of first 1,000 dr. but from 433/2, 2,000 dr. (*IG* 1³ 279.1.59). This suggests that the Persian king (and probably also Gongylos and his family) did not exercise control over Gryneion at least during C5s. In 335/4 Gryneion was captured by Parmenion, who subjected its population to *andrapodismos* (Diod. 17.7.9); but the attested C3 coinage (*SNG Cop. Aeolis* 202–7) along with Segre *Iscr. Cos* ED 71 B (C41) shows that resettlement must have happened soon afterwards.

The earliest detailed information about the political institutions is found in *Iscr. Cos* ED 71 B (C41). The decree, passed by *boule* (βόλλα) and assembly (δάμος), bestows citizenship, *proxenia*, *egktesis ges kai oikias*, and privileged access to the courts on the Koan honorand. The grant of citizenship, *egktesis*, and *dikai prodikoi* is to be ratified by vote in the assembly (ll. 4–7). Diplomatic relations through embassies are also attested in this decree.

Gryneion contained a sanctuary and oracle of Apollo Gryneieus (*I.Delos* 104 (8) B (C4m)), which was still operating as late as C1 (Bean (1974–75) 85–87 no. 21 and discussion of the oracle and sanctuary in Ragone (1990)). Recent excavations have uncovered a cemetery with graves of C7–C4 (Mitchell (1999) 143).

810. Halisarna Map 56. Lat. 39.05, long. 27.05. Size of territory: ? Type: A:?. The toponym is Ἀλίσαρνα, ἡ (Xen. *Hell.* 3.1.6; An. 7.8.17). Halisarna is called a *polis* in Xen. *Hell.* 3.1.6, where *polis* is used in the urban and political senses combined. It is a town captured by Thibron, but it is also reported that Halisarna was ruled, presumably as a tyranny (ἡρχον), by Prokles and Eurysthenes, descendants of

Demaratos of Lakedaimon (see also An. 7.8.17, indicating that Halisarna was ruled by Prokles). For Demaratos, who was given “land and cities” (γῆν τε καὶ πόλιος) by the Persian king in 486, see Hdt. 6.70. See also Briant (1985). In Xen. *Hell.* 3.1.6, Halisarna is mentioned together with the *poleis* Pergamon and Teuthrania, all of which were given to Demaratos: Xenophon’s phrasing αὔτη ἡ χώρα suggests that the territories of the three cities were not far apart.

There is a possible solution to the conflict between Xenophon and Steph. Byz. 75.9–10, which places Halisarna in the Troad: the Stephanos entry has τὸ ἐθνικὸν ὁ αὐτὸς Ἀλίσαρναίος. This is a strong indication that the original entry may have referred to two or more sites of the same name, and that the epitomiser has left out references to the community mentioned by Xenophon. Nothing is known about the ethnic composition of Halisarna’s citizen body.

811. Herakleia(?) (Herakleotas) Map 56. Lat. 38.45, long. 27.10. Size of territory: ? Type: B:?. The toponym may be attested in Steph. Byz. 303.17 (γ’ Λυδίας); see the discussion in Robert (1937) 115–16, who also dismisses the identification of this Herakleia with the κ’ πόλις πρὸς τῇ Κυμαία τῆς Αἰολίδος in Steph. Byz. 304.1. The city-ethnic Ἡρακλεώτης is attested in *Syll.*³ 934 (C5), where the collective use of the city-ethnic is attested externally. This inscription is a boundary stone marking the frontier between the territory of the Herakleotai and that of the Melampagitai. The collective and internal use is presumably attested in abbreviated form on C4 coins (*infra*). Ramsay (1881) 297 argued in favour of locating Herakleia at a site near the station at Emir Aalem where he observed “a grass-grown tumulus, and a little beyond it is a hill, with remains of a small fortified town. The walls could be traced all round the hill, sometimes appearing above the ground, sometimes showing only a slight elevation in the grassy hill. The style of building was not apparent, but was certainly not the finer kind of Greek work.” Keil (1913) 163–64 adopted a more cautious position, pointing out that there were remains of many ancient settlements in the area, none of which can be identified with Herakleia with any certainty.

Herakleia struck silver coins in C5: types: *obv.* head of eagle and traces of letters; *rev.* square incuse; legend: ΗΡΑΚ. The similarity between the Herakleian coins and the coins minted by C5 Kyme is noted by Mørkholm (1964) 77.

812. Iolla (Iolleus) Map 56. Unlocated, but probably near Adramyttion. Size of territory: ? Type: C:?. The toponym is ΙΟΛΛΑ, the city-ethnic is ΙΟΛΛΑΕΩΝ (of Ἴολλεύς), both attested only on coins (*infra*). The location of Iolla

remains conjectural: see most recently Stauber (1996*b*) 106, who suggests Fughla Tepe near Boirazlı/Kızıklı. Robert (1937) 167–68 suggested that the river Ollius mentioned by Pliny, *HN* 5.121–23 is a distortion of the name Iolla, and that the community may have adopted the name of the river.

Iolla struck bronze coins throughout C4. (1) C.400: *obv.* head of Hermes; *rev.* forepart of Pegasus; legend: *IOΛΛΑ*. (2) C.350: *obv.* head of Zeus; *rev.* forepart of Pegasus; legend: *IOΛΛΕΩΝ* or, sometimes, *IOΛΛΑ* (Stauber (1996*a*) ii.248–49 nos. 1–8).

Nothing is known about the ethnic composition of Iolla's citizen body.

813. Karene (Karenaioi) Map 56. Lat. 39.10, long. 26.50. Size of territory: ? Type: A:?. The toponym is *Καρήνη*, ἡ (Hdt. 7.42). The city-ethnic is *Καρηναῖος* (Krateros (*FGrHist* 342) fr. 2). The site cannot be located with precision: see Stauber (1996*a*) i.241–46, who suggests the hill Ag. Ilias (Gökçeagıl) as a possibility. Karene is called a *polis* in Hdt. 7.42.1, principally in the territorial sense. That it was a *polis* in the political sense too is indicated by its membership of the Delian League (*infra*). The collective use of the city-ethnic is found externally in Krateros fr. 2, a direct quotation from his *On Psephismata* book 3: *Γρυνεῖς, Πιταναῖοι, Καρηναῖοι*. This quotation may suggest that Karene was recorded as a member of the Delian League in the assessment list of 454/3, although the city-ethnic is not found in any of the surviving Athenian tribute lists or tribute assessments, as argued by Meritt (*ATL* i. 495–96). Their proposition that Karene belonged to the Lesbian or Chian *peraiiai* in the Classical period is plausible, but cannot be verified. According to Ephor. fr. 126, a contingent of citizens of Karene settled in Ephesos in connection with a *stasis* shortly after the foundation of Ephesos and gave their name to one of the five Ephesian *phylai*.

814. Killa Map 56. Unlocated. Type: A:a. The toponym is *Κίλλα*, ἡ (Hdt. 1.149.1; Strabo 13.1.62). The city-ethnic is not attested. As part of the original Aiolian *dodekapolis* Killa is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. This Killa, situated somewhere near Antandros (Strabo. 13.1.62), is probably not identical with the “Homeric” Killa in the Troad (Hom. *Il* 1.38, 452; see Stauber (1996*a*) i.31–33).

815. Kisthene Map 56. Lat. 39.25, long. 26.50. Size of territory: ? Type: B:γ. The toponym is *Κισθήνη*, ἡ (Isoc. 4.153). The full form of the city-ethnic is not attested, but the

legend *ΚΙΣΘΗ* on C4 coins is presumably an abbreviated form (*infra*). Kisthene has been located (with some caution) at Gömeç by Stauber (1996*a*) i.159–62. According to Isoc. 4.153, Kisthene was conquered by Agesilaos and his troops in 397, and the soldiers were rewarded with 100 tal. This piece of information must be taken with a grain of salt; but if this figure is anywhere near the truth, it is an important indication of the prosperity of Kisthene.

Kisthene struck coins in C4. (1) Silver and bronze issued by Orontas c.357–352 (or perhaps in 362/1: for this dispute, see Troxell (1981); *contra* Moysey (1989)). Types: *obv.* hoplite, or head of Orontas; legend: sometimes *Κ*; *rev.* forepart of winged boar, or horseman; legend: *ΟΡΟΝΤΑ* or *ΚΙΣ* or *ΚΙΣΘΑ*. (2) Bronze coins, C4s: *obv.* head of Demeter; *rev.* horseman with bee or dolphin; legend: *ΚΙΣ* or *ΚΙΣΘΗ* (Stauber (1996*a*) ii.261–64, cat. nos. 1–5 (1), nos. 6–7 (2); *SNG Cop. Ionia* 26 (1)).

816. Kyllene Map 56. Lat. 38.45, long. 26.50. Size of territory: 1 or 2. Type: A:γ. The toponym is *Κυλλήνη*, ἡ (Xen. *Cyr.* 7.1.45). Kyllene is called a *polis* in Xen. *Cyr.* 7.1.45 in a retrospective C6 context, describing how Kyros gave Kyllene and Larisa to his Egyptian troops in 546. Presumably *polis* is used here in its territorial sense, denoting Kyllene's urban centre and its hinterland. But the reference to the Egyptians' unflinching loyalty indicates that the political sense is a connotation. Xenophon claims that in his day the *polis* is still inhabited by the descendants of the Egyptians. It is not known what proportion (if any) of its citizen body would be perceived as Greek.

817. Kyme (Kymaios) Map 56. Lat. 38.45, long. 26.55. Size of territory: 2 or 3. Type: A:a. The toponym is *Κύμη*, ἡ (Hes. *Op.* 636; Hdt. 1.149.1; Thuc. 3.31.1; Ps.-Skylax 98; *SEG* 23 189.11.18 (c.330)). The city-ethnic is *Κυμαῖος* (Hdt. 1.158, 4.138; *IG* 1³ 71.1.124). According to Steph. Byz. 80.23–25, Hecat. fr. 226 provided an alternative toponym, *Ἀμαζόνιον*, and at 1.149.1 Herodotos has *Κύμη ἡ Φρικωνῆς καλεομένη* (according to Strabo 13.1.3, called Phrikonis after Mt. Phrikion in Lokris). As part of the original Aiolian *dodekapolis* Kyme is called a *polis* in the urban sense at Hdt. 1.149.1 and 5.123.1, in both cases with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. The urban sense is also attested at Thuc. 3.31.1 and Ps.-Skylax 98, and the political sense at Hdt. 4.137.2, 138.2 and 5.37.2–38.1, where Kyme is listed under the heading *polis* among a number of tyrannically governed communities. Aristotle included Kyme among his *politeiai*: *Κυμαίων πολιτεία* = no. 90 fr. 530–31; Heracl. Lemb. 36–39. The

word *astos* is used about the citizens of Kyme in Hdt. 1.158.2. The collective and internal use of the city-ethnic is attested on Hellenistic coins (*SNG Cop. Aeolis* 103–15), in abbreviated forms on coins of the Classical period (*infra*); the external use is attested in literary sources (Hdt. 1.157.3) and in the Athenian tribute lists (*IG* 1³ 261.v.2). The individual use is attested externally in Hdt. 4.138.2, 5.37.1 and *IG* 1² 9116 (C4).

The territory was called *Κυμαία*, ἡ (Thuc. 8.101.2), and it comprised a settlement called Blakeia (Arist. fr. 531.1–2). Idil (1989) 529 reported on the existence of two harbours, both of which were probably used for military purposes in C5 and C4. Ps.-Skylax 98 mentions only one (see map in Bean (1966) 104 fig 15).

Kyme was a dependent *polis* in the Persian Empire: Hdt. 7.194.1 mentions a Sandokes son of Thamasios, ὁ ἀπὸ τῆς Κύμης τῆς Αἰολίδος ὑπαρχος, who served as general in Xerxes' fleet. We do not know if Kyme participated in the Ionian Revolt: the only Aiolians mentioned specifically by Herodotos are the Lesbians, and from his account it appears that there was no Kymaian naval contingent present at the battle of Lade. In C5 Kyme was a member of the Delian League. It belonged to the Ionian district and is recorded from 452/1 (*IG* 1³ 261.v.2) to 421/20 (*IG* 1³ 285.ii.10) a total of thirteen times, twice completely restored. In the first years it paid 12 tal., from 448/7 reduced to 9 tal. (*IG* 1³ 264.i.13). It was assessed for tribute in 425/4 (*IG* 1³ 71.i.124). In 411 Kyme supplied a contingent of fifty hoplites to help the Spartans and Methymnians against the Athenians and the Mytilenians (Thuc. 8.100.3). In 408 the Kymaians sent an embassy to Athens to complain of Alkibiades' conduct (Diod. 13.73.6). Kymaians appointed *theorodokoi* to host *theoroi* from Argos (*SEG* 23 189.ii.18 (330–324)), and to host *theoroi* from Nemea (*SEG* 36 331.ii.34–35 (331/30–313)).

Little is known about the constitutional history of Kyme. Herakleides (*Polit.* 10.16) reports that Pheidon and later Prometheus legislated in order to enfranchise more citizens (perhaps after 700). According to Pheidon's law, the franchise was given to citizens who could breed at least one horse. Later Prometheus included another thousand citizens in the constitution. The constitution was replaced by a tyranny at the bidding of Kyros (Herakleides, *Polit.* 11.5: *Κῦρος δὲ καταλύσας τὴν πολιτείαν μοναρχεῖσθαι αὐτὸς ἐποίησεν*). According to Arist. fr. 530, 1–2, the official title of the tyrant was *αἰσυμνήτης*. C.512 the tyrant of Kyme was Aristagoras, son of Herakleides (Hdt. 4.138.2), who was deposed in 500/499, but not killed by the Kymaians (Hdt. 5.37–38). Later (perhaps much later) the *polis* had a democratic constitution which, again, was replaced by an

oligarchy on the instigation of a certain Thrasymachos, who is characterised as a “demagogos” (Arist. *Pol.* 1304^b41–5^a1, probably referring to Aiolic Kyme; cf. Aubonnet in the Budé edn. p. 171 n. 2). The *stasis* was triggered by the democrats using their power to soak the rich (^b20–24). One of Plutarch's *Quaestiones Graecae*—presumably derived from the Aristotelian collection of *politeiai*—concerns Kyme, probably Aiolian Kyme, and mentions a *boule*, a board of *basileis* and a magistrate in charge of the *desmoterion* (Plut. *Mor.* 291E–92A). So far, the only surviving public enactment antedating 306 is *L.Kyme* 1, a C4 honorary decree passed by the *demos*. Arist. *Pol.* 1268^b–1269^a refers to legislation (*nomos*) on homicide. Free non-citizens appear to have been resident in Kyme: a funerary inscription found at Kyme near the sanctuary of Isis and datable to C4 commemorates a citizen of Lampsakos (*BCH* 51 (1927) p. 386 no. 7). The inscription *SEG* 47 1663 (c.500) mentions two foreigners, one from Paros and one from Samos.

In 546 the Kymaians sent *θεοπρόποι* to the oracle in Branchidai (Hdt. 1.157–60). According to Diod. 15.18.2, Kyme and Klazomenai consulted the oracle in Delphi in 383, shortly after the death of Tachos, in connection with their dispute over Leukai, which contained an Apollo sanctuary (Fontenrose (1978) H15).

Until now few remains of Archaic and Classical public architecture have been excavated. An Isis temple, excavated by Salac in 1925, may have dated back to C4, perhaps originally dedicated to a different goddess (Kybele/Artemis, later also Aphrodite, as suggested by Idil (1989) 527). Akurgal (1956) 12 reported on a C4 capital. Schäfer and Schläger (1962) 52 describe a pier, in part from C6. Recent deep soundings have revealed a late Archaic building on one of Kyme's two acropolises (Gates (1997)). Kyme was probably fortified as early as C6 (Hdt. 1.160.1, who reports on the reluctance by the citizens of Kyme to incur the risk of a siege in 546). Recently, Archaic walls have been discovered beneath the Hellenistic fortifications (Gates (1994) 275). The city was besieged by Tissaphernes c.400 (Diod. 14.35.7).

Kyme struck coins of silver and bronze from C71 onwards. Denominations: stater, hemidrachm, hemiobol. (1) Silver, C71: *obv.* forepart of horse, beneath, monogram (?); *rev.* incuse square containing ornamented star, beside it (as countermark) smaller incuse square containing a star of different design. (2) Silver, c.480–450: *obv.* eagle's head; legend: *KY*; *rev.* incuse square of mill-sail pattern. (3) Silver, c.350–320: *obv.* forepart of horse, or eagle standing; legend: *KY*; *rev.* forepart of horse, or rosette; legend: *KY* or magistrate's name. (4) Bronze, c.350–320: *obv.* eagle standing, or forepart

of horse; legend: magistrate's name and/or *KY*; *rev.* vase with one handle; legend: *KY*. (Babelon, *Traité* ii.2. 1169–72 nos. 2058–63, (1930) 28; *BMC Troas* 104–5; *SNG Cop. Aeolis* 30–86.)

According to Ephor. fr. 114, Kyme was founded by Amazons. Kyme reportedly colonised (or participated in the colonisations of) (1) Kebren in the Troad (Ephor. fr. 10); (2) Ainos in Thrace, which was first founded by Alopekonesioi and later received *epoikoi* from Mytilene and Kyme (Ephor. fr. 39); and (3) Side in Pamphylia (Ps.-Skylax 101; Arr. *Anab.* 1.26; Strabo 14.4.2).

818. Larisa (Larisaïos) Map 56. Lat. 38.40, long. 27.00. Size of territory: ? Type: A:β. The toponym is *Λήρισαι*, *αἱ* (Hdt. 1.149.1) or *Λάρισα*, *ἡ* (Xen. *Hell.* 3.1.7), sometimes distinguished from other towns called Larisa by the epithets *Φρικωνίς* (Strabo 13.3.4, explained at 13.1.3; cf. *supra* 1043) or *Αἰγυπτιᾶ* (Xen. *Hell.* 3.1.7). The city-ethnic is *Λαρισαῖος* (Xen. *Hell.* 3.1.7) or *Ληρισαῖος* (*IG*¹³ 71.1.152, but see *infra*). The legend *ΛΑΡΙΣΑΙ* on C4 coins is presumably an abbreviated form of the city-ethnic rather than the toponym (*infra*). As part of the original Aiolian *dodekapolis* Larisa is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. Larisa is called a *polis* in Xen. *Cyr.* 7.1.45 in a retrospective C6 context, describing how Kyros gave Kyllene and Larisa to his Egyptian troops in 546. Presumably *polis* is used here in its topographical sense, denoting Larisa's urban centre and its hinterland. But the reference to the Egyptians' unflinching loyalty indicates that the political sense is a connotation. The collective use of the city-ethnic is presumably attested internally on coins (*infra*). It is attested externally at Xen. *Hell.* 3.1.7 and possibly in the Athenian assessment decree of 425/4 (*IG*¹³ 71.1.152). The toponym is restored in the assessment decree of 422/1 (*IG*¹³ 77.IV.19). Larisa was perhaps claimed by the Athenians as a member of the Delian League: the city-ethnic *Λερισαῖοι* in *IG*¹³ 71.1.152 is listed in the Ionian district immediately after *Πυγελῆς*, which might indicate that the reference is to the other Larisa at Ephesos. However, it is impossible to draw any firm geographical conclusion on the basis of the sequence of *poleis* in the Athenian lists, and the city-ethnic of Ephesian Larisa attested in inscriptions of the Roman period (e.g. *I.Ephesos* 3272 and 3274) is *Λαρισηνός*, which indicates that the Larisa in the assessment decree is in fact the one in Aiolis.

There is no epigraphical attestation of Larisa's diplomatic relations with the outside world before the early Hellenistic period (Fraser, *Samothece* II.1 no. 23 1–2 (C3l/C2e), which mentions *theoroi*).

Schefold (1933) 145–48 reports on stoas from the Archaic and Classical periods (C6f and C5). In his publication he also reported that on the acropolis, three-quarters of which had been excavated, he had found remains of a road, walls, towers, gates, an altar and temple, a palace and wells, all of which seemed to date from the Archaic period. The fortifications, however, have later been dated to C5 (Lang (1996) 228–29). Lang's account ((1996) 224) mentions a pre-Greek cult site, on top of which a small C6 temple was built, followed by a much larger temple c.530. The palace, of the *bit-hilani* type, was constructed in three phases in C6, with later work of rebuilding c.400 (Boehlau and Schefold (1940) 27–30). For a very useful summary of the remains of Archaic Larisa, see Lang (1996) 224–31. Water was supplied to the fortified city by pipes (Xen. *Hell.* 3.1.7). Schefold (1933) 148 described two cisterns and a well of polygonal masonry next to a large building complex from C5. The building may have been used for public administration.

Larisa was walled in C4 (Xen. *Hell.* 3.1.7), and the remains of the C4 fortification of both the acropolis and the town are described in Boehlau and Schefold (1940) 52–56.

The coinage of Larisa Phrikonis has generated a good deal of controversy. The coins in question are C4 issues of silver and bronze. (1) Silver: *obv.* female head wearing sphendone; *rev.* amphora; legend: *ΛΑΡΙΣΑΙ*. (2) Bronze: *obv.* bearded head; *rev.* amphora between corn-gain, r. and *ΛΑΡΙΣΑΙ*, l. (3) Bronze: *obv.* female head l.; *rev.* amphora; above, bunch of grapes; on l., caduceus; on r., ear of corn; legend: *ΛΑΡΙ*. (4) Bronze: *obv.* horned river-god three-quarters facing to r.; *rev.* Apollo laureate; legend: *ΛΑ*. (5) Bronze: *obv.* head of river-god; *rev.* head of bull; legend: *ΛΑ*. All five issues are ascribed to Larisa Phrikonis by Head, *HN*² 555. *SNG Cop. Aeolis* 208–12 ascribe (3) and (4) to Larisa Phrikonis. In *BMC Troas* p. 134 (3) and (4) are ascribed to Larisa in Troas. On the problem relating to the attribution of coins to each of the three Asian *poleis* called Larisa, see Imhoof-Blumer (1901–2) 1171–76 nos. 2064–70 and Robert (1951) 47–64, who wants the amphora types (1)–(4), with both male and female heads, to be ascribed to Larisa in the Troad, while the “bull-types” (5) should be assigned to Larisa Phrikonis on the grounds that a similar type was minted in Boione, which presumably was located nearby in the Hermos valley; cf. also Robert (1982).

In 546 Kyros gave Larisa to his Egyptian troops, whose descendants were still inhabiting the *polis* in Xenophon's day (Xen. *Cyr.* 7.1.45). The presence of a non-Greek element may explain the existence of a palace. However, the presence of an Archaic Aiolian population is confirmed by C7 and C6

graffiti at the temple of Athena (Boehlau and Schefold (1943) 123 and 183). It is conceivable that they made up a considerable proportion of the citizen body of Larisa in the Classical period, and that the *polis* was considered Greek.

819. Leukai (Leokates) Map 56. Lat. 38.35, long. 26.50. Size of territory: ? Type: A:β. The toponym is *Λεύκαι, αἱ* (Ps.-Skylax 98; Strabo 14.1.38) or *Λεύκη, ἡ* (Diod. 15.18.1–2). The city-ethnic is *Λεοκάτης* (Babelon, *Traité* ii.2. 2046) or *Λευκαίεύς* (ibid. 2047, after Alexander the Great). Leukai is implicitly called a *polis* in the urban sense by Ps.-Skylax. 98 (cf. Flensted-Jensen and Hansen (1996) 142) and retrospectively by Diodorus at 15.92.1 (r362/1) (urban sense) and 15.18.1–2 (rC4) (political sense). The collective use of the city-ethnic is attested internally on coins (*infra*).

The name and extent of its territory are not attested for the Classical period; but according to Ps.-Skylax 98, it contained more than one harbour (*Λεύκαι καὶ λιμῆνες*). Leukai was situated on the coast (Diod. 15.18.1) between Smyrna and Phokaia (Strabo 14.1.38). In *Barr.* it is represented as an island c.10 km south of the coast of Asia Minor. The only authority for this is Plin. *HN* 5.119: *oppidum Leucae in promonturio, quod insula fuit*. If this piece of information carries any weight, it must relate to the Archaic period or before. In the Classical, Hellenistic, Roman and Late Roman periods Leukai must have been a coastal city.

Leukai was founded by Tachos after the death of Glos c.383/2 (Diod. 15.18.1; see Stylianou (1997) 208). Later, both Kyme and Klazomenai wanted to gain control of Leukai and consulted the oracle in Delphi, who responded that the *polis* that first managed to make a sacrifice at Leukai at a specified date should be the winner of the dispute (Diod. 15.18.2; see Fontenrose (1978) H15). Since it was stipulated that representatives from the two *poleis* should depart at dawn on the day specified for the sacrifice, the Klazomenians founded a *polis* close to Leukai and thus won the contest. This event was commemorated by a festival called *Prophthaseia* (Diod. 15.18.3–4, but without any indication of whether the festival was held at Klazomenai or Leukai). C.362 Leukai served as a naval base for the Egyptian fleet commanded by Reomithres (Diod. 15.92.1). Leukai possessed a sanctuary of Apollo (Diod. 15.18.1).

Leukai struck coins in silver and bronze in C4s. Denominations: obol, hemiobol and small fractions in bronze. (1) Silver obol: types: *obv.* head of Aphrodite or Artemis, crescent; legend: *Α*; *rev.* swan, crescent; legend: *Α*. (2) Silver hemiobol: *obv.* head of Zeus; legend: *ΑΕΥ*; *rev.* forepart or head of boar; legend: *ΑΕΥ*. (3) Bronze: *obv.*

head of Apollo; *rev.* swan; legend: *ΛΕΟΚΑΤΩΝ* or *ΛΕΟ*. (4) Bronze: *obv.* head of Athena; *rev.* lion standing; legend: *ΑΕΥ*. (5) Bronze: *obv.* head of Apollo; *rev.* swan or swan before tripod; legend: *ΑΕΥΚΑΙΕΩΝ* or *ΑΕΥ* and magistrate's name (Babelon, *Traité* ii.2. 1159–62 nos. 2041–48; Head, *HN*² 581; *SNG Cop. Ionia* 799–801). According to Babelon (*Traité* II.2.1159–60), the striking similarity between the coins of Klazomenai and those of Leuke suggests that Leuke was a *polis* dependent on Klazomenai.

The ethnic composition of the population of Leukai is not known; but it may have contained a non-Greek element, given the history of its foundation, even after it became a Klazomenian dependency.

820. Magnesia (Magnes) Map 56. Lat. 38.35, long. 27.25. Size of territory: ? Type: C:? The toponym is *Μαγνησίη, ἡ* (Hellan. fr. 191). The city-ethnic is *Μάγνης* (*infra*). The only pre-Hellenistic attestation of the city-ethnic is external, individual and admittedly uncertain: a C6 graffito from Abydos has been restored as [*Μάγν*]ης ἡλθ' [ἐ]νθάδε *Κάϊκος* (Ihnken (1978) 160 T13 = Jeffery (1990) 361 no. 2). Neither Ihnken nor Jeffery explains why this heavily restored ethnic is to be connected with Magnesia on Mt. Sipylos rather than with Magnesia on the Maiandros, or with Magnesia at all. Nothing further is known about Magnesia in the Archaic and Classical periods.

821. *Melanpagos? (Melanpagitas) Map 56. Lat. 38.35, long. 27.10. Size of territory: ? Type: B:? There is no attestation of the toponym. The city-ethnic is *Μελανπαγίτης* (*Syll.*³ 934). The collective use of the city-ethnic is attested in an internal context in C5: a graffito *ὄρια Μελανπαγιτῶν Ἡρακλεωτῶν* marked the common boundary between the territory of the Melanpagitai and the neighbouring Herakleotai. The settlement was located near Gökkaya by Ramsay (1881) 296–97. Keil (1913) 166–68 reported on an intricate network of walls which can only be explained satisfactorily by a proper excavation. However, a wall of rough polygonal masonry on the eastern side of the hill-top was tentatively identified as a fortification wall enclosing the settlement. Keil also noted the similarity between the retaining walls of the settlement and those found at the acropolis of Neon Teichos.

822. Myrina (Myrinaios) Map 56. Lat. 38.50, long. 27.00. Size of territory: 1 or 2. Type: A:a. The toponym is *Μύρινα, ἡ* (Hdt. 1.149.1; Xen. *Hell.* 3.1.6). The city-ethnic is *Μυριναῖος* (IG I³ 71.1.179–80). As part of the original Aiolian *dodekapolis* Myrina is called a *polis* in the urban sense at Hdt.

1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. In C4 it is called *polis* in the urban sense in Ps.-Skylax 98. At Xen. *Hell.* 3.1.6 *polis* is used in the urban and political senses combined, denoting a dependent *polis* (*infra*). Xenophon mentions Myrina as one of the personal fiefs given by the Persian king to Gongylos, whose descendants were still in control in the early C4. The collective use of the city-ethnic is attested internally on Hellenistic coins (*SNG Cop. Aeolis* 221ff), in abbreviated forms on coins of the Classical period (*infra*), and externally in the Athenian tribute lists (*IG* 1³ 265.1.11). The individual and external use is attested in Hellenistic inscriptions, e.g. *Δαμόθεος Μυριναῖος*, a metic living in Iasos (*I.Iasos* 192.7).

Myrina was allegedly founded by Amazons (Strabo 13.3.6), but a tradition recorded in Euseb. VII 1.69.12c and VII 2.183c claims that Myrina was founded in 1046 by Aiolians. Myrina was a member of the Delian League. It belonged to the Ionian district and is recorded in the Athenian tribute lists by toponym (*IG* 1³ 266.1.14) or by city-ethnic (*IG* 1³ 265.1.11). It is recorded from 453/2 (*IG* 1³ 260.VIII.11) to 415/14 (*IG* 1³ 290.1.18) a total of eighteen times, three times completely restored, and in one case Myrina on Lemnos is an alternative, paying a *phoros* of 1 tal. (*IG* 1³ 266.1.14). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.179–80).

Pottier and Reinach, who excavated the cemetery of Myrina, noted a hill resembling an acropolis with remains of ancient fortifications, and a city wall of polygonal masonry of varying quality (1882) 201; cf. Bean (1966) 106–10).

Myrina struck coins of silver in C4 and of bronze in C4–C3. (1) Silver hemidrachms: types: *obv.* head of Athena wearing Corinthian helmet; *rev.* bust of Artemis facing; legend: *MY*. (2) Bronze: *obv.* head of Athena wearing Attic helmet; *rev.* amphora; legend: *MY* or *ΜΥΠΙ* (Head, *HN*² 555 (C4); *SNG von Aulock* no. 1659 (C4–C3); *SNG Cop. Aeolis* 213–20).

823. Nasos (Nasiotas) Map 56. Lat. 39.20, long. 26.40. Size of territory: 1 (c.15 km²). Type: A:a. The toponym, *Νῆσος*, *ῆ* or Aiolic *Νᾶσος*, is attested only in the entry *Νῆσος Πορδοσελένε* in *IG* 1³ 77.IV.17. The city-ethnic is *Νασιώτας* (*I.Adramytteion* 34A.40 (C4I)). The Aiolian *polis* (in the urban/topographical sense) in the Hekatonnesoi mentioned in Hdt. 1.151.1 probably refers to this community. Nasos is called *polis* in the personal/political sense in *I.Adramytteion* 34A.9, 14, 19, 24–25, 33 (319–317); and in the same inscription the word *polites* is used in the plural of its citizens (34A.22). Nesos Pordoselene is recorded in the assessment decree *IG* 1³ 77.IV.17 under the heading *Aktaioi*

poleis. The collective use of the city-ethnic is attested internally in abbreviated form on C4 coins (*infra*) and in a C4I inscription (*I.Adramytteion* 34A.40). Nasos was located on the island of Alibey Adası, and was probably identical with the community known as Pordoselene (see Stauber (1996a) i.198–209 and the entry *Pordoselene*).

The community was entered by toponym in the assessment decree *IG* 1³ 77.IV.17 as one of the *Aktaioi poleis*, but we cannot be sure that it was ever a paying member of the Delian League. The toponym is completely restored in the assessment decree of 425/4 (*IG* 1³ 71.III.127–28), and it does not appear in any of the surviving Athenian tribute lists. The fact that it was entered as one of the *Aktaioi poleis* may suggest that it was a *polis* dependent on Lesbos, presumably Mytilene (no. 798).

One *psephisma* passed by the assembly of the Nasiotai survives: *I.Adramytteion* 34 (319–317), which is referred to as a *ψάφισμα* on face A, lines 46 and 50. On face B.55–56 there is a reference to a *nomos* concerning the offence of overthrowing the democracy ([π]ερὶ τῶν καλλ[λυ]όντων τὸν δᾶ[μον], 55–58). Fines and *atimia* are imposed in the entrenchment clause to this decree (B.45–52). The *boule* (*βόλλα*) is mentioned (B.15–16), and other magistrates mentioned in this inscription are the *χοροστάτας* (A.36), *ταμίαι* (A.45), *ἐξετασταί* (B.2–3, 60–61), and an *ἐπιμήμιος* (B.38). The assembly is referred to in several places in this decree, and there is specific reference to a *κυρία ἐκκλησία* (B.22–23). A *prytaneion* is attested (A.32–33); but so far monumental architecture from the Classical period has not been recorded (Stauber (1996a) i.208–12). Taxes were levied on the community by Antipatros, presumably in the 320s (A.9–14). *I.Adramytteion* 36 (C4I) may also have been passed by Nasos/Pordoselene; but since it cannot be ascribed to this *polis* with certainty, it will not be used in the present context.

Nasos struck coins of silver (hemidrachm) and bronze in C4. Types: *obv.* head of Apollo; *rev.* panther with various symbols: head of ram or club, etc.; legend: *ΝΑΣΙ* or *ΝΑΣ* or *ΝΑ* (Stauber (1996a) ii.283–96; *SNG Cop. Aeolis* 429–31).

824. Neon Teichos Map 56. Lat. 38.40, long. 27.00. Size of territory: ? Type: A:a. The toponym is *Νέον Τείχος*, *τό* (Hdt. 1.149.1). As part of the original Aiolian *dodekapolis* Neon Teichos is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. Xen. *An.* 7.5.8 simply designates it *τείχος*.

According to Ps. Her. *vit. Hom.* 9, Neon Teichos was a foundation from Kyme, founded 8 years after that city. If the

identification of the ruins at Yanık Köy with ancient Neon Teichos is correct, then the settlement was walled (Ramsay (1881) 281); but the precise location of Neon Teichos is still controversial. According to a tradition recorded in Strabo 13.3.3, Neon Teichos was founded by Lokrians whose ultimate aim was to capture Larisa Phrikonis.

825. Notion Unlocated. Type A:*a*. The toponym is *Νότιον*, *τό* (Hdt. 1.149.1). As part of the original Aiolian *dodekapolis* Notion is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. Unless this Notion is in fact identical with Notion near Kolophon (a conventional but unwarranted equation, for which see most recently Hoepfner *et al.* (1999) 280 n. 247), nothing further is known about this community.

826. Palaigambriion Unlocated, not in *Barr*. Type: A:?. The toponym is *Παλαιγάμβριον*, *τό* (Xen. *Hell.* 3.1.6). Palaigambriion is called a *polis* in Xen. *Hell.* 3.1.6, where *polis* is used in the urban and political senses combined. It was a town captured by Thibron, but it is also described as a personal fief which had been given by the Persian king to Gongylos of Eretria in C₅, whose descendants were still in control in C_{4e}. Thus, *polis* is used in the political sense too, denoting Palaigambriion as well as its surrounding territory as a place from which troops could be recruited and taxes levied.

827. Parthenion. Map 56. Lat. 39.15, long. 27.20. Size of territory: ? Type: B:?. The toponym is *Παρθένιον*, *τό* (Xen. *An.* 7.8.15, 23). There is no attestation of the city-ethnic. The settlement is referred to as a *polisma* in Xen. *An.* 7.8.21. In Xen. *An.* 7.8.15 we hear about an unsuccessful Greek raid on the property of the Persian Asidates, who was defended by Itamenes and his troops, some of whom were recruited from Parthenion. The ethnic composition of this community is not known.

828. Pergamon (Pergamēnos) Map 56. Lat. 39.10, long. 27.10. Size of territory: ? Type: A:β. The toponym is *Πέργαμον*, *τό* (Xen. *Hell.* 3.1.6; *An.* 7.8.8, 23). The city-ethnic is *Περγαμηνός* (*Staatsverträge* 555 (C_{3e})). Pergamon is called a *polis* in Xen. *Hell.* 3.1.6, where *polis* is used in the urban and political senses combined. It was a town captured by Thibron, but it is also reported that Pergamon was ruled, presumably as a tyranny (*ἡρχον*), by Prokles and Eurysthenes, descendants of Demaratos of Lakēdaimon (see also *An.* 7.8.17). For Demaratos, who was given “land and cities” (*γῆν τε καὶ πόλιαν*) by the Persian king in 486, see

Hdt. 6.70. See also Briant (1985). The collective use of the city-ethnic is presumably attested internally in abbreviated form on coins (*infra*). The individual and external use is found in an Epidaurian proxeny decree of C_{4l}/C_{3e} (*IAEpid* 42 xiii).

The constitutional history in the Archaic and Classical periods is unknown: in C₄ it may still have been controlled by the descendants of Gongylos, who may have received the city as a fief from the Persian king.

For a full description of the Archaic and Classical city walls, see Radt (1992). He discusses two walls, one of which (Wall I) may date from C₇ or even earlier, while the other (Wall II) probably dates from C₅ and covers an area of 18 ha (Radt (1994) 64). The article also contains extensive discussion of pottery found in the context of the walls; cf. also Radt (1999).

Pergamon struck coins of silver and bronze from C_{5m} to C_{4e}. (1) Silver: types: *obv.* laureate head of Apollo; *rev.* bearded male head (“Satrapenkopf”: *SNG von Aulock* no. 1347) in Persian head-dress, or head and neck of bull, all within incuse square; legend: *ΠΕΡΓ* or *ΠΕΡΓΑ*. (2) Bronze: *obv.* laureate head of Apollo; *rev.* two bulls’ heads; legend: *ΠΕΡΓ* or *ΠΕΡΓΑ*; or *obv.* female head; *rev.* boar’s head, or two boars’ heads; legend: *ΠΕΡ* or *ΠΕΡΓ*. Date: C_{5m}–C_{4e}: *SNG Cop. Mysia* 313–16. *BMC Mysia* p. 110 includes silver coinage from 420–400; see also Babelon, *Traité* ii.2. 86–89 nos. 43–46. *SNG von Aulock* no. 1348 ascribes the bronze coins to C_{4f}.

Despite Radt’s discovery of significant amounts of Aiolian grey ware, the ethnic composition of Pergamon’s population in the Archaic and Classical periods still remains uncertain. In Xen. *An.* 7.8.8 Xenophon is entertained by a woman called ‘*Ἑλλάς*, wife of Gongylos of Eretria and mother of Gorgion and Gongylos. Ironically, her name may bear witness to her non-Greek origins or, at the very least, to the ethnically mixed nature of the community in which she lived. The name is rare, and the entries in *LPGN* suggest that, in the Greek world in the Classical period, it was borne predominantly by slaves. Her two sons controlled four cities in Mysia and Aiolis (Gambriion, Palaigambriion, Myrina and Gryneion) which the Persian king had given as fiefs to their ancestor in return for his loyalty as a mediser (Xen. *Hell.* 3.1.6).

829. Perperene (Perperēnios) Map 56. Lat. 39.15, long. 27.00. Size of territory: ? Type: C:?. The toponym is *Περπερήνα*, *ἡ* (Galen, *De Victu Attenuante* 102; *De Rebus Boni Malique Suci* 6) or *Παρπάρων* (Apollodoros (*FGrHist*

244) fr. 7 *apud* Steph. Byz. 508.11–13). The city-ethnic is recorded as *Παρπαρωνιώτης* (Androtrion (*FGrHist* 324) fr. 15 *apud* Steph. Byz. 508.15–16), but the three attested epigraphical (albeit Hell./Rom.) sources for the city-ethnic suggest that the normal version was *Περπερήμιος* (*I.Smyrna* 447.4, 469.2–3, 689.11.23–24). This is confirmed by C4 coin legends *ΠΕΡΠΕ* (*infra*). Perperene is not called a *polis* by any extant Classical source; Galen, *De Victu Attenuante* 102 provides the earliest attestation. The collective use of the city-ethnic is presumably attested internally in abbreviated form on coins (*infra*) and is attested externally in Androtrion (*FGrHist* 324) fr. 15.

Perperene was probably located 1 km north of the modern village of Aşağbey, where substantial ruins may be identified as ancient Perperene, although according to Kaufmann and Stauber (1994) 41, there is no direct evidence to confirm this identification; see also Stauber (1996a) i.296. Although no Archaic or Classical remains have been found on this site, Stauber (1996a) i.303 points out that the visible buildings may have been erected on top of an older settlement. Only excavation may reveal the age of the original settlement.

Perperene struck bronze coins in C4. Types: *obv.* laureate head of Apollo; *rev.* bunch of grapes, branch and leaves in wreath; legend: *ΠΕ* or *ΠΕΡ* or *ΠΕΡΠ* or *ΠΕΡΠΕ* (Stauber (1996a) ii.309–25, cat. nos. 1–11).

830. Pitane (Pitanaïos) Map 56. Lat. 38.55, long. 26.55. Size of territory: 1 or 2. Type: A:*a*. The toponym is *Πιτάνη*, ἡ (Hdt. 1.149.1). The city-ethnic is *Πιταναίος* (*IG* 1³ 262.III.24; Krateros (*FGrHist* 342) fr. 2 *apud* Steph. Byz. 358.15–16; *AJP* 56 (1935) 358–79 1.147 (C4)). As part of the original Aiolian *dodekapolis* Pitane is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. In C4, however, Ps.-Skylax 98 refers to Pitane as a *limen* only. The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (*IG* 1³ 262.III.24). In C4 the individual use of the city-ethnic is attested externally in *AJP* 56 (1935) 358–79 1.147 (C4) and *F.Delphes* III.1 410 (319), adding *Aioleus* as an indication of regional affiliation: *Ἡρακλείτω Λυσιστράτου Αἰολεὶ ἐκ Πιτάνης*.

Nothing is known explicitly about the extent of Pitane's territory in the Archaic and Classical periods. But since it bordered on Mt. Kane to the west, Elea to the east, and Teuthrania to the north, it is unlikely to have exceeded 100 km². The information that may be gleaned from Hellenistic

sources cannot be used retrospectively (on territorial changes and consolidations in this area in the Hellenistic period, see most recently Savalli-Lestrade (1992)).

In C5 Pitane was a member of the Delian League. It belonged to the Ionian district and is recorded from 453/2 (*IG* 1³ 260.VII.17) to 433/2 (*IG* 1³ 279.I.56–58, restored in 430/29 (*IG* 1³ 281.I.41)) a total of fifteen times, but five times completely restored, and paid 1,000 dr. in all years. Pitane received *proxenia* from Delphi in 319 (*F.Delphes* III.1 410), and another grant of *proxenia* given to a citizen of Pitane is recorded in an undated (C3?) decree passed by an unknown *polis* located in Aiolis, most likely Kyme (*SEG* 47 1659).

Pitane had city walls in C4, and probably also earlier. In 335/4 it was besieged by Parmenion, who was forced to lift the siege by Memnon (Diod. 17.7.9). Remains of the ancient fortifications of the peninsula of Çandarlı were described by Schuchhardt in Conze *et al.* (1912–13) 99–100.

Pitane struck bronze coins in C4. Types: *obv.* head of Zeus Ammon; *rev.* pentagram; legend: *ΠΙΤΑ* or *ΠΙΤΑΝΑ* or *ΠΙΤΑΝΑΙΩΝ*; or *obv.* Silenus; *rev.* omphalos entwined by serpent; legend: *ΠΙΤΑΝΑΙΩΝ* (*Fitz. Mus. Cat.* III.72; *BMC Mysia* 171–72; *SNG Cop. Mysia* 530–35).

831. Pordoselene Map 56. Lat. 39.20, long. 26.40, but see *infra*. Size of territory: 1? Type: A:? The toponym is *Πορδοσελήνη* (Ps.-Skylax 97; Arist. *Hist. an.* 605^b29–30). In C4 Pordoselene is called a *polis* in the urban sense by Ps.-Skylax 97. If Nasos and Pordoselene were identical (see *infra*) then this community was probably the one referred to as an Aiolian *polis* in the political sense by Hdt. 1.151.1. The full form of the city-ethnic is unattested, but the collective and internal use is presumably attested in abbreviated form on coins: *ΠΟΡΔΟΣΙΑ* (*infra*).

Pordoselene was entered by the toponym *Νέσος Πορδοσελένε* on the tribute assessment list *IG* 1³ 77.IV.17 (422/1), but it is not clear whether it was ever a paying member of the Delian League. It does not reappear in any surviving tribute list. The community is listed along with other *Aktaioi poleis*, suggesting that Nesos/Pordoselene was a Lesbian dependency in C5.

Pordoselene struck coins of silver and bronze from C51 to C41. (1) Silver (drachms): types: *obv.* head of Apollo; *rev.* lyre, or panther, or crab or other symbol in incuse square; legend: *ΠΟΡ* or *ΠΟΡΔ* or *ΠΟΡΔΟΣΙΑ*. (2) Bronze: *obv.* head of silenus; *rev.* dolphin; legend: *ΠΟΡ* (Stauber (1996a) ii.297–307). On the unfounded *a priori* assumption that only independent communities struck coins, Stauber (1996a) i.199 assumes that the earliest coins minted by

Pordoselene are evidence that it gained independence from Mytilene in 427.

Problems arise in connection with any attempt to locate the site of Pordoselene, the most vexing of which is the question whether Pordoselene was identical with the *polis* of the Nasiotai, an identification that may be suggested by the joint entry *Nesos Pordoselene* in *IG¹ 77.iv.17*. It may also be significant that Hdt. 1.151.1 mentions only one *polis* on the islands known as Hekatonnesoi (however, the present Inventory does in itself indicate that Herodotos' enumerations of communities in various regions of the Greek world cannot be trusted to have been in any way comprehensive). The debate is summed up by Stauber (1996a) i.198–208: *communis opinio* has been that Nasos and Pordoselene were two different *poleis*; Nasos on the island now known as Alibey Adası and Pordoselene on the smaller island of Maden Adası. Stauber objects (ibid. 205–7) that Maden Adası, being an infertile island of tuff, could not have supported a community in Antiquity: indeed, when surveying the island he found no evidence at all for an ancient settlement. Stauber is inclined to conclude that there was indeed only one community, which was located on Alibey Adası, and that Nasos/Nasiotes temporarily replaced the toponym and city-ethnic of Pordoselene because the name containing the word “fart” was perceived as an embarrassment. If Stauber's view is correct, then the information set out s.v. *Nesos* in the present Inventory applies to Pordoselene as well.

832. Temnos (Temnites) Map 56. Lat. 38.40, long. 27.10. Size of territory: ? Type: A:a. The toponym is *Τήμνος* (Hdt. 1.149.1), *ὄ* (*Suda* E3024, conjectured at Strabo 13.1.70) or *ή* (Strabo 13.3.5). The city-ethnic is *Τημνίτης* (Xen. *An.* 4.4.15). The Aiolic forms *Tāμνος/Tαμνίτας* are attested on C4 coins (*infra*) and in Hellenistic inscriptions (*I.Perg.* 5 = *Staatsverträge* 555 (C3e)). As part of the original Aiolian *dodekapolis* Temnos is called a *polis* in the urban sense at Hdt. 1.149.1, with the territorial sense as a possible connotation, and in the political sense at Hdt. 1.150.2. Xenophon refers to it as a *polis* in the urban sense, indicating that the community was small (*Hell.* 4.8.5: *οὐ μεγάλη πόλις*). The collective and internal use of the city-ethnic is presumably attested in abbreviated form on C4 coins (*infra*), the external use is found in a C3e decree (*I.Perg.* 5.2). For the individual and external use, see Xen. *An.* 4.4.15: *Δημοκράτης Τημνίτης*.

Although Temnos is attested as a flourishing community in the Hellenistic period (e.g. Herrmann (1979)), next to nothing is known about the political and constitutional

history of Temnos in the Archaic and Classical periods. The community may have been dependent on the Persian king (it was never a member of the Delian League, at any rate); in 394, however, according to Xen. *Hell.* 4.8.5, Derkylidas mentioned Temnos as a *polis* where it would be possible to live without being subjected (*ὑπήκοος*) to the Persian king. On this remark, which perhaps should not be taken too seriously, see the entry for Aigai *supra*.

Temnos struck bronze coins in C4. Types: *obv.* head of Dionysos, bearded, wreathed with ivy; *rev.* bunch of grapes with vine leaves and tendrils, the whole in slight circular incuse; legend: *TA* (*BMC Troas* 142; *SNG Cop. Mysia* 246–49).

833. Teuthrania Map 56. Lat. 39.00, long. 27.05. Size of territory: ? Type: A:? The toponym is *Τευθρανίη, ή* (Hdt. 2.10.1) or *Τευθρανία* (Ps.-Skylax 98; Xen. *Hell.* 3.1.6; *An.* 2.1.3, 7.8.17). The full form of the city-ethnic is unattested, but the collective and internal use is presumably attested in abbreviated form on coins: *TEY* (*infra*). Teuthrania is called a *polis* in Xen. *Hell.* 3.1.6, where *polis* is used in the urban and political senses combined. It was a town captured by Thibron, but it is also reported that Teuthrania was ruled, presumably as a tyranny (*ἥρχον*), by Prokles and Eurysthenes, descendants of Demaratos of Lakedaimon. In *An.* 2.1.3 Prokles is referred to as *ὁ Τευθρανίας ἄρχων*. For Demaratos, who was given “land and cities” (*γῆν τε καὶ πόλιαις*) by the Persian king in 486, see Hdt. 6.70. See also Briant (1985).

Teuthrania struck coins of silver and bronze c.400. Types: *obv.* head of Apollo, with long hair; *rev.* beardless head of young dynast Prokles wearing Persian tiara; legend: *TEY* (Babelon, *Traité* ii.2 nos. 41–42; Head, *HN²* 538; *SNG Cop. Mysia* 549).

Nothing is known about the ethnic composition of Teuthrania's population.

834. Thebe Map 56. Lat. 39.35, long. 27.00, but location disputed; Stauber (1996a) i.45 and (1996b) suggests Küçük Çal-Tepe. Type: B:? The toponym is (*Υποπλάκιος*) *Θήβη* (Dikaiarchos fr. 53a, Wehrli), *Θήβη* (Hom. *Il.* 1.366), *Θήβαι* (Hom. *Il.* 22.477) or *Θήβα Πλακία* (Sappho, fr. 44 l. 6). The only Archaic/Classical attestations of Thebe as a *polis* are connected with the Homeric tradition (Hom. *Il.* 1.366, 6.414–15; Eur. *Andr.* 1). Curtius Rufus, however, refers to Thebe as an “urbs” in a retrospective C4 context (*Hist. Alex.* 3.4.10).

Thebe struck bronze coins in C4m. Types: *obv.* head of Demeter with wreath, hair in sakkos; *rev.* three crescents forming triskeles, or forepart of winged horse; legend: *ΘHB* or *ΘHBA* (Stauber (1996a) ii.243 cat. nos. 1–3; *SNG Cop. Mysia* 550).

835. *Tisna (Tisnaios) Map 56. Lat. 38.45, long. 27.05, but see *infra*. Type: C.? The toponym Tisna can be reconstructed from the city-ethnic attested by C4 coin legends (*infra*). Presumably the community took its name from the river Tisna, a personification of which was depicted on Tisna's coins.

Tisna struck bronze coins in C4. Types: *obv.* beardless male head l., horned (river-god Tisnaios); *rev.* one-handled vase, or spearhead, or sword in sheath; legend: *TIENAI* or *TIENAIIO* or *TIENAIOS* or *TIENAIION* (Imhoof-Blumer (1883) 275 nos. 241–42; Head, *HN*² 557; Robert (1937) 169; *BMC Troas* 149; *SNG Cop. Aeolis* 283).

IONIA

LENE RUBINSTEIN

(with the collaboration of Alan Greaves)

I. The Region

The name of the region is *Ἰωνίη*, ἡ (Hdt. 1.6.3) or *Ἰωνία*, ἡ (Thuc. 1.2.6). There is no ethnic specifically associated with the region, for the designation *Ἴωνες* (alternatively *Ἰάονες*) indicated a wider ethnic identity (*Hymn. Hom. Ap.* 147, 152; Hdt. 1.143.2–3). The broad definition of Ionian ethnicity on the basis of criteria relating to common cult practice and common ancestry is found in e.g. Hdt. 1.147.2, where Herodotos offers a definition of “Ionians” as all people who traced their origins to Athens and who celebrated the Apatouria (cf. Thuc. 2.15.4, who claims that the Ionians who have kinship ties with the Athenians celebrate the more ancient Dionysia in the month Anthesterion). In Classical sources generally the ethnic sometimes, but not always, implied kinship ties with the Athenians (Thuc. 1.6.3, 12.4, 95.1; Eur. *Ion* 69–75; Isocr. *Paneg.* 122), who could themselves be referred to as Ionians (Hdt. 1.56.2; Bacchyl. *Dithyramb* 3.3; cf. Hall (1997) 52–53). It has been argued by some modern scholars (see e.g. the references to the debate in Alty (1982) 2 n. 9) that the definition that stressed the Ionian connection with Athens was a direct result of successful Athenian attempts to promote the Delian League as an essentially Ionian alliance, with an emphasis on Athens’ status as the mother city of the island *poleis* and of the Ionian *poleis* in Asia Minor. However, there is some evidence which suggests that some of the foundation myths of the Ionian *poleis* in Asia Minor incorporated an Athenian dimension quite early on, perhaps as early as C7 and certainly earlier than the foundation of the Delian League (e.g. Alty (1982) 13–14; Herda (1998)).

As has been pointed out e.g. by Alty (1982), the designation *Ἴωνες* or *Ἰάονες* could also be used more narrowly

about the Greek population of Asia Minor (Aesch. *Pers.* 178; Hdt. 4.97; Thuc. 6.4.5, 77.1), and more specifically about the citizens of the Ionian *dodekapolis* as distinguished from the Asiatic Aioleans and Dorians (e.g. Hdt. 1.6.2, 26.3, 3.1.1, 4.89.1; Thuc. 3.104.3, referring to the Ionians who celebrated the Ephesia, a festival which, according to Hornblower (1991) 527–29, had temporarily replaced the Panionia). These two narrower applications of the ethnic are attested in literary and epigraphical sources from C5 onwards, but not at all in the extant sources from the Archaic period.

Unlike the ethnic of the neighbouring region Aiolis (*Αἰολεύς*), which was sometimes used to identify the regional affiliation of individuals, *Ἴωνες* is found only as a collective regional ethnic, never as an individual designation and never as a supplement to a city-ethnic proper. The closest parallel to a genuine regional ethnic is the prepositional phrase *ἀπ’ Ἰωνίας*, which could be used after an individual’s city-ethnic (e.g. *IG* II 9973, a tombstone commemorating *Λεοφρονίδης Ἡροστράτου Μνησία ἀπ’ Ἰωνίας* (c.300)). For the use of *ἀπ’ Ἰωνίας* as a supplement to a collective city-ethnic, see *CID* II 6.2 (*[Ἄν]αῖται ἀπ’ Ἰωνί[ας]* (359–357)). The examples of the regional designation are few, and most of them date from the Hellenistic period or later.

Herodotos is our earliest extant source for the regional toponym *Ἰωνίη*. In Solon fr. 4a.2, West, *Ἰαονίη* refers to the land inhabited by Ionians, of which Attika is the most ancient part. In the Classical period, however, Ionia was clearly regarded as a geographical entity in Asia Minor (e.g. Hdt. 1.142.2; Xen. *An.* 3.5.15; Andoc. 1.76; Aen. Tact. 18.13), although its extent and definition were disputed to some degree.¹

Alan Greaves has assisted with literature in Turkish and is responsible for the treatment of the archaeology of Miletos and its territory. The remainder of the text is by Lene Rubinstein.

¹ Some of our Athenian sources include the Aiolean settlements on the coast in “Ionia” (Thuc. 2.9.4; Xen. *Hell.* 2.1.17), probably reflecting the Athenian tribute arrangements which amalgamated Ionia and Aiolis into a single district (cf. Hornblower (1991) 248).

The toponym was sometimes used to denote the sum of the twelve Ionian *poleis* in Asia Minor that made up the Ionian *dodekapolis*, and as such it could be used both in a topographical sense (Thuc. 3.33.2: ἀπειχίστου γὰρ οὐσῆς τῆς Ἰωνίας, which probably indicated that the urban centres in the region were unfortified) and in a political sense (Hdt. 5.65.5, 98.2: νῦν γὰρ Ἰωνίῃ πᾶσα ἀπέστηκε ἀπὸ βασιλέως). This use of the toponym (which may have a parallel in [Lys.] 6.6) indicates that Ionia could be regarded as a political entity as well as a geographical area. This undoubtedly reflects the existence of common Ionian political institutions at a regional level in the Archaic and Classical periods, which will be further discussed below.

Hdt. 5.123 reports that Artaphrenes and Otanes were ordered to attack “Ionia and neighbouring Aiolis”, which presupposes a perceived northern boundary of the region. Indeed, it can be inferred from Hdt. 7.194 that c.480 Aiolis had its own governor (ὁ ἀπὸ Κύμης τῆς Αἰολίδος ὑπαρχος; cf. Debord (1999) 170). Even so, the boundary between Aiolis and Ionia was far from neatly defined: Phokaia (no. 859), the northernmost Ionian *polis* according to Herodotos’ definition (1.142.3, 163.1), was in effect an Ionian enclave within Aiolis. Its nearest neighbour towards the south-east was the Aiolian *polis* of Neon Teichos (no. 824); to the north-east it may have shared a boundary with Kyllene (no. 816). Further south, Smyrna (no. 867) was originally an Aiolian settlement, which later became an Ionian *polis* when, according to Hdt. 1.149.1–50.2, its Aiolian inhabitants were driven out by a group of Kolophonian exiles and distributed among the remaining eleven Aiolian *poleis*. Herodotos also reports (1.143.3) that the citizens of Ionian Smyrna applied for permission to participate in the festival celebrated at the Panionion; but it is not entirely clear if their application was successful.² It is only in the Hellenistic period that we find firm evidence for Smyrnaian membership of the Ionian *koinon*.³

The definition of the southern boundary of Ionia also presents some problems. In 1.170.3 Herodotos relates Thales’ proposal that the Ionians should establish a single common

bouleuterion at Teos (no. 868), because Teos was located “in the middle of Ionia”, a statement that presupposes boundaries of the region to the south as well as to the north. However, unlike Xenophon (*Hell.* 3.2.14; *Ages.* 1.15, 29) Herodotos does not operate with the river Maiandros as the southern boundary of the region; nor does he recognise the river as the conventional boundary between Karia and Lydia (contrast Ps.-Skylax 99). In 1.142.3–4 he lists ten Ionian *poleis* on the Asian coast, starting from Miletos (no. 854) in the south and ending with Phokaia (no. 859) in the north, to which he adds the islands of Samos (no. 864) and Chios (no. 840) to the west. In his list he distinguishes between *poleis* located in Karia (Miletos, Myous and Priene, of which the latter two were located north of the river Maiandros) and those in Lydia (Ephesos, Kolophon, Lebedos, Teos, Erythrai, Klazomenai and Phokaia). Herodotos is unique among Archaic and Classical authors in locating Myous and Priene in Karia, but his location of Miletos in Karia has parallels elsewhere (Hecat. fr. 240; Ps.-Skylax 99). In other passages, however, Herodotos refers to Miletos as situated in Ionia (5.28, 37.2; 6.7, 28.1), and this is paralleled in other literary sources (Pherekydes (*FGrHist* 3) fr. 155; Thuc. 8.26.3). The Athenian tribute quota lists (e.g. *IG*¹ 270.C.1.31, 272.D.II.11) likewise list Miletos in the Ionian panel while including its neighbour Latmos (no. 910), directly to the east, in the Karian panel (e.g. *IG*¹ 270.C.IV.27, 271.D.II.78, 272.D.II.86). The Athenian decision to register Latmos separately undoubtedly rested on criteria of ethnicity, and it is clear that, to some extent, the definition of the region as a geographical entity was informed by these criteria. That may be one of the most important reasons for the fuzzy boundaries of Ionia to the north and south.

Although Herodotos draws attention to dialectal differences between individual Ionian *poleis* (1.142.3–4)⁴ and is aware of differences between the Ionian and Dorian dialects (1.139), the Ionian dialect plays only a marginal role in his definition both of regional ethnic identity and of the region itself. Herodotos’ narrow definition of the Asiatic Ionians includes only the inhabitants of the Ionian *dodekapolis* (1.142.3–4, 145–46.1). Thus, he excludes not only the *poleis* of Magnesia on the Maiandros (no. 852) to the east, and Iasos (no. 891) and Halikarnassos (no. 886) to the south, all of which contained Ionian-speaking populations, but also

² There are only two indications that Smyrna obtained membership earlier than the Hellenistic period. One is schol. Pl. *Th.* 153C, according to which the expression *κολοφών* about a decisive vote is due to the privilege of Kolophon (no. 848) as a member of the Ionian *Koinon* to cast an extra vote on behalf of Smyrna whenever the votes were tied. If this is true, the privilege may have been established after the destruction of Smyrna in 585. Paus. 5.8.7 reports that when Onomastos of Smyrna won the boxing contest at Olympia in 688, Smyrna was already contributing to the Ionian organisation (*συντελοῦσης ἡδὴ τημικαῦτα ἐς Ἰωνίαν*).

³ *I.Smyrna* 575.15–19 (C3m), 577 (292–288).

⁴ In Herodotos’ list of Ionian *poleis* Erythrai (no. 845) is separated from the *poleis* on the mainland and grouped with Samos (no. 864) and Chios (no. 840) on the grounds that the Erythraian dialect resembles that of the Chians. The dialect spoken in these two *poleis* in fact contains some Aiolic features, which distinguish it from the Ionian spoken in other Asian *poleis* (Buck (1955) 143).

thirteen communities on the coast, all of which are included in the present Inventory as Greek *poleis* that are attested as types A or B in the Classical period.⁵ All of these were located within the geographical area that he identifies as *Ἰωνίη* elsewhere (e.g. 1.170.3).

There can be little doubt that Herodotos' exclusion of the inhabitants of Magnesia, Iasos and Halikarnassos rested on criteria of ethnicity, some of which may be reflected in the different foundation myths of the *poleis*. In Hdt. 3.90.1 the Magnesians in Asia (presumably the citizens of Magnesia on the Maiandros) are listed separately as an ethnic group, alongside the Aiolians and Ionians and others who belonged to the first Persian tax district. Halikarnassos had originally belonged to the Dorian *hexapolis* and claimed to have been founded from Troizen (no. 357) (Hdt. 7.99.1); while Iasos, which is not mentioned at all by Herodotos, claimed originally to have been an Argive foundation (Polyb. 16.12.2). As for the Greek *poleis* that were located within Ionia, but not mentioned by Herodotos in his definition of the region, their exclusion may be ascribed to either of two possible causes. One explanation may be that all of them were dependencies of the twelve *poleis* listed by Herodotos.⁶ As such they may have been indirectly represented in the Ionian *koinon*, just as a number of *poleis* in Boiotia were only indirectly represented at the federal level (436–37). In that connection it is interesting to note that the Athenians in C5 appear in most cases to have preferred to deal directly with each of the dependencies in matters relating to tribute, rather than indirectly through negotiation with each of the local hegemonic powers.⁷ Another explanation for

Herodotos' exclusion of them from his list of Ionian *poleis* may be that his list was informed first and foremost by criteria related to a narrow definition of Ionian ethnicity which applied only to the Ionian *dodekapolis*, to the exclusion of other Greek communities in the area.

The case for regarding the *dodekapolis* as a narrowly defined ethnic group on the basis of the description offered by Herodotos is, in fact, a strong one. The definition of the group conforms to all of the six criteria of ethnicity applied to Arkadia by Nielsen (1999): *viz.* a collective name, a myth of common descent, a shared history, a distinctive shared culture, an association with a specific territory—that is, a “homeland”—and a sense of solidarity.

According to Herodotos, all of the twelve *poleis* claimed pure Ionian descent, a claim that is ridiculed at length in Hdt. 1.146.1–47.2. As for their collective name, Herodotos claims that the citizens of the *dodekapolis* were the only ones to acknowledge the designation “Ionians”, which in itself distinguishes them from other groups (1.143.3). All of the twelve *poleis* traced their origins to a single homeland, *viz.* Achaia, the twelve *mere* of which constituted the origin of the twelve Ionian *poleis*, and Herodotos believes that this is the reason why the Ionians refused to admit more members into the Panionion (1.145). The Ionians were driven out of their homeland, having been defeated by the Achaians (Hdt. 1.145, 7.94). They subsequently founded their own exclusive sanctuary of Poseidon Helikonios on Mt. Mykale and established the Panionia festival (Hdt. 1.143.3, 148.1). A sense of solidarity became apparent in the face of an external threat, although Herodotos is quick to point out the failure of the Ionian *poleis* to present a consistently united front (1.141.1–4, 6.6–17). On the other hand, Herodotos also reports the proposal by Bias of Priene that the Ionians should vacate Asia and found a *polis* of “all the Ionians” in Sardinia (1.170.1–2), as well as Thales' suggestion that the Ionians should establish a common *bouleuterion* at Teos and reduce the political status of each of the *poleis* to that of a deme. Although neither proposal was carried, it is clear that Herodotos here concedes that there was a considerable cohesion of the region as a whole. To sum up, in spite of the fact that Herodotos pours scorn on the Ionian claim to exclusivity as an ethnic group, he has to accept the foundations on which that claim was made by the members of the *dodekapolis*.

That some of these features were indeed part of the self-definition of the *dodekapolis* is suggested e.g. by the account in Diod. 15.49.1–4, in which it is reported that in 373/2 representatives of the nine Ionian *poleis* that formed part of

⁵ The thirteen communities that are not included in Herodotos' list are, type A: Achilleion (no. 836), Airai (no. 837), Leukophrys (no. 851), Pygela (no. 863) and Sidoussa (no. 866); type B: Boutheia (no. 839), Dios Hieron (no. 842), Elaioussa (no. 843), Larisa (no. 818), Myonnesos (no. 855), Polichne (no. 860), Pteleon (no. 862) and Thebai (no. 869). Two further communities that are included as type B in the Inventory but not mentioned by Hdt. are Notion (no. 858) and Naulochos (no. 857), but in the period to which Herodotos refers, both were presumably just harbour towns belonging to Kolophon and Priene respectively. His omission of these two communities is therefore not surprising.

⁶ The following communities are attested as dependent *poleis* in the Classical period: Boutheia (no. 839), Elaioussa (no. 843), Polichne (no. 860) and Pteleon (no. 862) = dependencies of Erythrai (no. 845), Dios Hieron (no. 842) = dependency of Kolophon (no. 848); Myonnesos (no. 855) = dependency of Teos (no. 868); and Thebai (869) = dependency of Miletos (no. 854). Most of the other *poleis* listed in n. 5 may have been dependencies as well, but the evidence does not allow us to conclude this with certainty for the Classical period. Some of them are clearly attested as dependencies in the Hellenistic period.

⁷ Only one of the Ionian *poleis*, *viz.* Erythrai (no. 845), appears to have been organised with its dependencies in a syntely. Of the communities listed in n. 5, Airai, Pygela, Dios Hieron, Notion and possibly Larisa have their own entries in the Athenian lists, as do the type C communities Isinda (no. 846) and Marathesion (no. 853)—the latter probably an Ephesian dependency in C5—along with Leros (no. 504) and Teichioussa (the inhabitants of the latter two appear to have been fully integrated into the community of Miletos in C5).

the *koinon* in C4⁸ petitioned the Achaians to allow them to copy their ancestral altars at the Poseidon sanctuary at Helike (no. 235) in Achaia in connection with a reorganisation of the Panionia. Furthermore, the role played by the Kodridai in the foundation of the Ionian *poleis* after the expulsion of the Ionians from Achaia is attested in a number of Classical sources, viz. Pherekydes ((*FGrHist* 3) fr. 155 (Ephesos)); Hdt. 9.97 (Miletos); Hellan. fr. 48 (Erythrai); and Ephor. fr. 25 (Klazomenai). Only for one member of the *dodekapolis*, Chios, do we know that its foundation myth in the Classical period definitely did not link it with the Kodridai: Ion of Chios (*FGrHist* 392) fr. 1 explains that Chios, a Euboian foundation, successfully applied for membership of the Panionion at the behest of the Chian *basileus* Hektor.

As far as the other *poleis* on the Ionian coast are concerned, we know that at least one of them, Pygela (no. 863), operated with a foundation myth that set it apart from the *dodekapolis* already in the Classical period. According to Theopomp. fr. 59, it claimed to have been founded by some of Agamemnon's troops who were prevented from travelling on because of disease. This myth is probably reflected in the name of one of its civic subdivisions, the *phyle* Agamemnonis (*I.Ephesos* 311.8–9 (C4)). There is no evidence for Pygela's participation in its own right in the Panionia, not even in the period in C4 when the community was not a dependency of any member of the *dodekapolis*. It is thus a distinct possibility that the narrow definition of an Ionian ethnic identity applying only to the *dodekapolis*, as propagated by the Ionians themselves, was one of the reasons why other Greek *poleis* on the Ionian coast were not represented in the Panionion, just as it may account for the exclusion of the *poleis* Magnesia and Iasos from Herodotos' definition of the region.

The early history of the Panionion itself and of the political institutions that were connected with the association is obscure. The tradition that the twelve Ionian *poleis* united c.700 against a thirteenth *polis*, Melie, is not attested earlier than the Hellenistic period, and its historicity is dismissed, e.g. by Hommel in Kleiner *et al.* (1967) 91, who prefers

⁸ The reduction of the number to nine members in Diodorus' account may be due to the effects of the King's Peace, the terms of which may have separated the islands of Chios and Samos from the *poleis* on the mainland, and possibly also to the temporary disappearance of Priene. Tod 113 (391–388) mentions five *poleis* as participants in the arbitration between Myous and Miletos (Erythrai, Chios, Klazomenai, Lebedos and Ephesos), and Tod assumes that the inscription originally recorded delegates from the rest of the Ionian *poleis* (including Priene). Other scholars (e.g. Debord (1999) 254 n. 167) note that it seems impossible to fit all the remaining members into the lacuna in ll. 11–15.

instead to assume that the war was waged by a smaller coalition of Melie's neighbours. The first reliable attestation of the Panionion as a centre for political and military activity at a regional level is provided by Hdt. 1.76.3 and 1.141.1–4, which relate to Kyros' conquest of Lydia. According to Herodotos, envoys were sent from Kyros to the Ionians prior to his victory in order to persuade the Ionian *poleis* to back him against Kroisos. Later the Ionians and the Aiolians sent a joint delegation to Sardis in order to negotiate terms with the Persians after Kroisos' defeat. There can be little doubt that these negotiations were conducted through the political institutions connected with the Panionion. After Kyros had turned down their request, the Ionians (with the exception of Miletos) assembled at the Panionion and decided to send a joint embassy to Sparta (Hdt. 1.141.4), in which representatives of the Aiolian *poleis* also took part. It appears from Hdt. 1.151.3–152.1 that a hegemonic alliance had been established between the *poleis* in Ionia and Aiolis, with the Ionians as the leading partner. The alliance may have been relatively short-lived, for there is no information to suggest that the Aiolians offered military assistance to the Ionians in the latter's last stand against the Persians in 494. However, we know from *I.Erythrai* 16 (C4), a joint decision by the Aiolians and Ionians, that the collaboration reported by Herodotos between the two groups is entirely plausible.

The Panionion was also the centre of joint Ionian opposition to the Persians in connection with the Ionian Revolt. In 497 the Ionians had made a joint decision to send military aid to Onesilos of Cyprus (Hdt. 5.108.2–109.3); according to Herodotos, the decision was made by τὸ κοινὸν τῶν Ἰώνων. Finally, when faced by an attack by the Persians in 494, the Ionians sent delegates (πρόβουλοι) to the Panionion (Hdt. 6.7), who decided to counter the Persian threat by assembling a joint navy at Lade.

After the Ionian defeat at Lade, the Persians may have used the existing Ionian organisation as a means of controlling the region. They imposed obligations on the Ionians to resolve their internal disputes by legal means rather than by war (Hdt. 6.42.1), and the political institutions connected with the Panionion may well have provided the framework for these dispute resolutions (e.g. Debord (1999) 176–77).

In C5 our sources for the common Ionian political institutions dry up. It is assumed by some scholars (e.g. Hornblower (1982a) 58 with n. 48) that the *koinon* was not functioning under the Athenian Empire, except for its purely religious activities celebrated under the name of τὰ Ἐφέσια, presumably because the Athenians would have

regarded a continued Ionian alliance as a potential threat. However, as early as 391–388 the Persians seem again to have used some Panionian political structures for exercising control over the region and ensuring internal peace, as indicated by Tod 113. This inscription records an arbitration process between Miletos (no. 854) and Myous (no. 856), conducted by representatives of the Ionian *poleis* at the request of Strouses, who is designated in the inscription (l. 42) as satrap of Ionia.

The Panionia festival and with it presumably also the political institutions connected with the Panionion were moved from Ephesos back to Mykale during C4f (see most recently Debord (1999) 177). There is archaeological evidence for a *bouleuterion* on Mt. Mykale dating to C4m (Müller-Wiener in Kleiner *et al.* (1967) 35–37). *I.Priene* 139 (365–335) confirms the existence of an Ionian *boule*, while another inscription (*PEP Priene* 11 (350–323)) regulates sacrifices to Zeus Boulaios at the Panionion. The inscription mentions a *prytanis* (l. 21, presumably presiding over the Panionian *boule*, so Hommel in Kleiner *et al.* (1967) 61) as well as sceptre-carrying *basileis* (l. 17), who presumably acted as representatives of each of the *polis* members of the *koinon* (Hommel in Kleiner *et al.* (1967) 59–61). The *basileus* of Ephesos is singled out for special mention in l. 22, perhaps reflecting Ephesos' claim to the "kingship of the Ionians", as attested in Pherekydes (*FGrHist* 3) fr. 155, on the grounds that Androklos, a son of Kodros and the *ktistes* of Ephesos, was the leader of the colonisation of Ionia.

As will become clear from the individual *polis* entries in the Inventory, a considerable number of the communities in Ionia were dependent *poleis* under the control of their larger neighbours.⁹ But even the latter *poleis* were themselves dependencies, for, as a region, Ionia experienced more than two centuries of almost uninterrupted dependency on external powers. At least as early as C6m, all the Greek *poleis* in Ionia were part of the kingdom of Lydia. When Kroisos came to the Lydian throne c.560, he completed the subjugation of the Greeks that had been started by Gyges (680–645) and carried on by his successors (Hdt. 1.26.1–28). According to Hdt. 1.6.1–3, Kroisos was the first to levy tribute on the Greeks, and he regards Kroisos' conquests as marking the end of Greek freedom. After the conquest of Lydia by Kyros the Great (546), the Ionian *poleis* were brought under the control of the Persians (Hdt. 1.169.1–2). Herodotos claims that no fixed tribute was imposed by either Kyros or

Kambyses (3.89.1–3); when Dareios created his twenty *nomoi* ("tax districts"), the Ionians, together with the Magnesians, Aiolians, Karians, Lykians, Milyans and Pamphylians, but separately from the Mysians and Lydians, formed part of the first *nomos*. After the Ionian Revolt, the Persians reasserted their control over the *poleis*, and the tribute assessments carried out by Artaphernes, *hyparchos* of Sardis, in the aftermath of the Revolt were, according to Hdt. 6.42.1, still in force in Herodotos' own day. This passage may be taken to indicate, with Thuc. 8.5.5, that the Persians kept maintaining their claim to tribute from the region throughout C5, although the Athenians effectively prevented the satraps from collecting it.¹⁰ From 479 to 412 the *poleis* were dependent on Athens, which is attested as interfering in a very heavy-handed way in the internal affairs of several of the *poleis* at least as early as C5m.¹¹

After 412 many of the *poleis* in the region went over to Sparta, and from 412 to the King's Peace in 386, which reaffirmed the Persian king's claim to the *poleis* in the region, the Ionians could to some degree play off rival external powers (Sparta, various Persian potentates and, from 394, Athens) against each other, although for the most part the cities appear to have been little more than pawns in a much larger power struggle.¹² In this period, the status of the Ionian *poleis* as *autonomoi* communities appears to have been a bone of contention, which to some extent affected especially the relationship between the Spartans and the Persians in the first half of the 390s.¹³

The history of Ionia as a part of the Persian Empire is complex, and it is outside the scope of this chapter to engage with the question of the status of Ionia as an administrative area within the Empire. One of the most important modern controversies, which has still not been settled decisively, focuses on the question whether Ionia was a satrapy separate from Lydia in C5 and C4 (see Debord (1999) 116–30 for a

⁹ e.g. Lewis (1977) 87; Gomme *et al.* (1981) 16–17; Debord (1999) 121–23.

¹¹ See e.g. Erythrai (no. 845), Miletos (no. 854) and Samos (no. 865).

¹² In 401 the Ionian *poleis* (with the exception of Miletos) decided to back Kyros against Tissaphernes (Xen. *Hell.* 3.1.3; *An.* 1.1.6–8); after Kyros' death the *poleis* seem to have had some influence on the direction of Spartan foreign policy in relation to the Persians (see e.g. Lewis (1977) 136–47). In the early 380s there is evidence of considerable Athenian involvement with Klazomenai (*I.Erythrai* 502) and Erythrai (*SEG* 26 1282), the latter having sided with Konon and Pharnabazos against the Spartans (Diod. 14.84.3) after the battle of Knidos in 394. Other Ionian *poleis* that had sided with Konon were, according to Diodoros, Teos, Ephesos and Chios. It is widely agreed that the Athenian decrees mark a return to some of the methods by which the Athenians had kept their allies under control in C5 (e.g. Debord (1999) 261–63 and Badian (1995) 85–86).

¹³ Xen. *Hell.* 3.1.3, 2.20, 4.25–26.

⁹ Some of these are listed in n. 6, which includes only communities of type A and type B.

discussion and references to the debate¹⁴). Perhaps the most important conclusion drawn by Debord (1999) 199–200 in this respect is that the internal organisation of the Persian Empire kept evolving throughout the Classical period, and that the satrapies should not be seen as static, rigidly defined administrative units. What should be noted here is that, whatever the status of the region within the Persian administrative system at any one time, the *poleis* on the mainland never seem to have been formally split up and distributed between several different districts, although we have attestations of gifts of the revenue from individual *poleis* to favoured subjects of the king, gifts that have parallels also in Aiolis and elsewhere.¹⁵ It should also be noted that, from at least as early as the 350s, some of the Ionian *poleis* came under the influence of the Hekatomnids (see generally Hornblower (1982a) esp. 107–12), who extended their control as far north as the island of Chios and the *polis* of Erythrai.

The King's Peace in 386 had at least one important consequence for the region as a geographical entity: *viz.* the separation of Samos and Chios from the rest of the *dodekapolis*. It is uncertain to what extent the treaty meant the complete severance of ties between these islands and their *peraiai* (see Debord (1999) 264 for references to the modern controversy); but there can be little doubt that the King's Peace marks a change in the formal relations between the *poleis* on the mainland and the island communities of Samos and Chios, to which the Persian king did not lay claim. Chios entered into an alliance with Athens in 384/3 (Tod 118), and it was a member of the Second Athenian Naval League (Tod 123.24) until its defection in 357 (Dem. 15.3; Diod. 16.7.3). Samos, on the other hand, appears to have held aloof from the alliance, but when the Persians had introduced garrisons on the island, the Athenians responded in 365 by setting up a klerouchy that effectively eliminated the Samian *polis* for more than four decades (see no. 865).

¹⁴ Debord (1999) 118 argues that, between the death of Oroites, the satrap of Sardis, who controlled the provinces of Phrygia, Lydia and Ionia, and the Athenian victory at Salamis, Ionia was probably a distinct administrative unit within the Persian Empire, although it was sometimes under military control from Sardis. He further argues (ibid. 128) that the satrapy of Ionia was recreated as part of a major reorganisation of the Persian Empire in 392/1, but perhaps brought back under the control of Sardis under Tiribazos. The (probably short-lived) existence of an Ionian satrapy under Strouthas in C4 may be confirmed by Tod 113. Note, however, Lewis' suggestion ((1977) 118–19 n. 75) that Strouthas had more extensive powers, but that Ionia alone is mentioned in the inscription, because "only his position as satrap of Ionia is relevant to this arbitration".

¹⁵ The most famous example of a Greek beneficiary is Themistokles, who received revenue from Magnesia and Myous, as well as from Lampsakos (Thuc. 1.138.5).

The present Inventory comprises the *poleis* attested both in Ionia proper and in the south-western part of Lydia. Although the majority of the *poleis* in the Inventory are referred to as "Hellenic", it must be noted here, as a general caveat, that the population of each of them is likely to have contained a significant non-Greek element (see e.g. Priene (no. 861)), and that non-Greek cultural influences on the *poleis*, including those situated on the coast, were probably strong throughout our period.

In addition to the thirty-four settlements that are described in the Inventory of *poleis* below, there are fifty-eight locations attested in Archaic or Classical sources for which the evidence is not sufficient to warrant their inclusion in the Inventory or about which we know that they were second-order settlements; in addition, there are seventeen unidentified settlements.¹⁶

1. Pre-Hellenistic Settlements not Attested as Poleis

Akele (Ἀκέλη) Attested in Hellan. fr. 112 (*apud* Steph. Byz. 58.12–14), who referred to the city as a *polis* founded by Akelos, son of Malis and Herakles. There is no other Archaic or Classical evidence for this community, and it is not clear whether it was considered Greek. The location of it is uncertain: the designation of it as a *polis* in Lydia is due to an emendation of Steph. Byz. 58.12, where it is referred to as a *polis* in Lykia by the MSS. Not in *Barr.*

Assesos (Ἄσσησός) Hdt. 1.19.3 (χώρης τῆς Μιλησίδης ἐν Ἄσσησῶ); Theopomp. fr. 123 (*apud* Steph. Byz. 136.4–5: πόλις Μιλησίας γῆς). It was a settlement with an Athena sanctuary in the territory of Miletos. Not in *Barr.*, but A is attested, see s.v. Miletos (no. 854).

Athymbra (Ἄθυμβρα) The earlier name of the Hellenistic *polis* Nysa according to Steph. Byz. 35.18–20 (without source

¹⁶ The following settlements have not been included in the site list, because the evidence currently available is late and because there is currently no archaeological or epigraphical material suggesting Greek occupation of the sites earlier than the Hellenistic or Roman periods: Almoura (SEG 31.949) or Almyra (SEG 29 1151); Apateira (SEG 29.1115); Boukolion (SEG 29.1151); Chesion (Apollodoros, *Chron.* fr. 49); Erythras Limen (Strabo 14.1.32); Galliesion (Parthenios fr. 629); Ioniapolis (Peschlow-Bindokat (1977) 100, (1977–78)); Karnia (Nikolaos (FGH Hist 90) fr. 27); the harbour Kasystes (Strabo 14.1.32); Kotheira (SEG 29.115.8–9); Kyrbissos (Robert, *OMS* 5: 304–8); Metropolis and Panormos in Ephesian territory (Strabo 14.1.20); Pentakoma (SEG 29.1115); Pyrrha (Strabo 14.1.9–10); Sillyos (Steph. Byz. 569 and Radet (1893) 323; *Barr.* classifies it as a late settlement); Stena (SEG 39.1244.23 (after 120/19); Theyira (Meriç et al. (1979)).

reference); however, according to Strabo 14.1.46, Nysa was created by a synoecism of Athymbra and two other settlements, seemingly accepted by *Barr. Barr. 61, C.*

Babrantion (*Βαβράντιον*) Polyb. 16.40.1 (*apud* Steph. Byz. 154.9–10), where apparently Babrantion was recorded as a *topos* in Chios (no. 840). It has been identified with the modern site of Daskalopetra and classified as a settlement in *Barr. 56, A?C?*.

Boliskos (*Βόλισκος*) Thuc. 8.24.3; Ephor. fr. 103; Androtion (*FGrHist* 324) fr. 64; Steph. Byz. 174.16–22 (*πόλις, πολισμάτιον*). Located on the island of Chios (cf. no. 840). *Barr. 56, C.*

Chalkideon limen (*ὁ Χαλκιδέων λιμὴν*) The name of the harbour is attested in *I.Erythrai* 151.40 (c.340). It was located in the territory of Erythrai (no. 845). Not in *Barr.*

Charadrous (*Χαραδρούς*) The only attestation of this site is Ps.-Skylax 98, who locates it near Mt. Mykale. Not in *Barr.*

Daphnous (*Δαφνούς*) Thuc. 8.23.6, 31.2; *I.Erythrai* 501.5 = *IG* 1³ 119.5 (407). Located in the territory of Klazomenai (no. 847). Not in *Barr.*

Delion(?) (*Δήλιον* or *Δήλιος*) *PEP Chios* 76 (475–450). Located on the island of Chios (cf. no. 840). It is not certain if Delion was a settlement or simply a sanctuary. Not in *Barr.*

Delphinion (*Δελφίνιον*) Thuc. 8.38.2 (*χωρίον . . . λιμένας ἔχον* and in *PEP Chios* 75.a8 (C4m)). It was located on the island of Chios (cf. no. 840) and was fortified by the Athenians in 412/11. Traces of the C5 fortification on the top of a small acropolis were reported by Boardman (1956) 41–49. *Barr. 56, C.*

Didyma (*Δίδυμα*) Hdt. 6.19.2–3; an alternative toponym *Βραγχίδαί*, presumably derived from the name of the priestly family who controlled the sanctuary, is attested in Hdt. 1.46.2. Didyma was an important sanctuary and settlement in the territory of Miletos (no. 854). It has been suggested by Tuchelt (1988) that it may have been politically independent of Miletos in the Archaic period; but see Ehrhardt (1998). *Barr. 61, AC.*

Drymoussa (*Δρυμοῦσσα*) Thuc. 8.31.3 (*νησος*). In C5 the island Drymoussa belonged to Klazomenai (no. 847), when, according to Thuc. 8.31.3, the Klazomenians deposited property there for safe keeping. *Barr. 56, C.*

Drys (*Δρῦς*) Arist. *Σαμίων πολιτεία* (= no. 129) (fr. 583.1); *I.Priene* 37+38.105–6 (C2). Drys was located in the territory of Priene (no. 861), close to the Samian *peraia*. It was the site of a famous battle between Priene and Miletos (no. 854) in the Archaic period. Kleiner *et al.* (1967) 82 n. 234 suggest that Drys may have been situated in the vicinity of the fortress Karion in territory that was repeatedly disputed by Priene and Samos (no. 864) in the Hellenistic and Roman periods. *Barr. 61, C.*

Embaton, Embata (*Ἐμβατον, Ἐμβατα*) Thuc. 3.29.2 (*Ἐμβατον τῆς Ἐρυθραίας*); Theopomp. fr. 14 *apud* Steph. Byz. 270.8–9 (*τόπος τῆς Ἐρυθραίας*); Polyæn. 3.9.29. It has not been located (*pace Barr.*) with certainty but was somewhere on the coast in the territory of Erythrai (no. 845). The name simply means “landing place”, and we have no firm evidence for a settlement there. On the basis of a restoration of *I.Erythrai* 201c.61 (C3), it has been assumed that Embaton contained an Aphrodite sanctuary, but that restoration is now universally rejected. *Barr. 56, C* (Agrilya).

Glauke (*Γλαύκη*) Thuc. 8.79.2. Glauke was located on Mt. Mykale, and it appears to have contained a sizeable harbour: according to Thuc. 8.79.2, eighty-two Athenian ships were anchored there in 410. Glauke presumably belonged to the Samian *peraia* at that time. *Barr. 61, C.*

Helos (*Ἥλος*) *Barr.* includes this as a possible Classical site in Erythraian territory; however, the only evidence for the toponym is found in Plin. *HN* 5.31.117, a passage mentioning three *oppida* (Pteleon, Helos and Dorion) and widely regarded as suspicious (e.g. Keil (1910) 22). *RE* s.v. Polichne (9) accepts the Pliny passage and regards the location of Denizgeren as probable simply on the grounds that the area used to contain a swamp. It is this location that has been accepted by *Barr.* It appears to have been a sizeable harbour in C5 (Keil (1910) 16). *Barr. 56, C?*

Hermonossa (*Ἐρμόνοσσα*) *PEP Chios* 76.c2–3 (475–450). Located on the island of Chios (no. 840). Not in *Barr.*

Kalamoi (*Κάλαμοι*) Hdt. 9.96.1. Located on the coast of Samos (no. 864), but it is not certain if Kalamoi contained an actual settlement. Shipley (1987) 280. *Barr. 61, C.*

Kardamyle (*Καρδαμύλη*) Thuc. 8.24.3. Located on the island of Chios (no. 840), directly on the sea, perhaps at modern Marmaron. *Barr. 56, AC* (Marmaron).

Karides (*Κάριδες*) Attested in Ephor. fr. 11, who designates Karides as a *polis* founded by the survivors of the flood in the time of Deukalion, and claimed that there was still a location of that name in his day on Chios (no. 840). *Barr.* 56, AC.

Karion (*Κάριον*) *I.Priene* 37+38a.1.9–10 (*φρούριον* (C2)). It was located on Mt. Mykale in territory disputed between Samos (no. 864) and Priene (no. 861) throughout the Hellenistic period. Kleiner *et al.* (1967) 94–95 and 126–27 argue that the fortress was built on top of the remains of Melie (*Barr.* equates it with Melie), the fortifications of which were strengthened and extended towards the end of C7. There is archaeological attestation of continuous activity on the mountain throughout the Archaic, Classical and Hellenistic periods, but according to Kleiner *et al.* (1967) 126–27 the site was occupied only intermittently for garrison use. *Barr.* 61, A for Melie and H for Karion, but see *supra* for C.

Karteriois, Limen en (*ὁ ἐν Καρτερίοις λιμὴν*) Thuc. 8.101.2; the harbour belonged to Phokaia (no. 859); according to Plin. *HN* 5.138, Karteria was an island, but it cannot be located with certainty. Not in *Barr.*

Kaukasa (*Καύκασα*) Hdt. 5.33.1. Located on Chios (no. 840), perhaps at modern Volissos. *Barr.* 56, C.

Kenchreus (*Κέγχρευς*) *I.Erythrai* 151.7, 11 (c.340). Located in the territory of Erythrai (no. 845) and possibly a settlement. Not in *Barr.*

Klamadai (*Κλαμάδαι*) Attested in *IG* 1³ 96.5 (412/11) as the site of the estate of Kleomedes. It is uncertain whether Klamadai was a settlement or a region on Samos (no. 864). Shipley (1987) 280. *Barr.* 61, C.

Kleai (*Κλέαι*) *I.Erythrai* 151.2 (c.340). Located in the territory of Erythrai (no. 845) and possibly a settlement. Not in *Barr.*

Kolonai (*Κολωναί, Κολώνη*) Anaximenes (*FGHist* 72) fr. 25 *apud* Strabo 13.1.19; *I.Erythrai* 151.21 (c.340). Located in the territory of Erythrai (no. 845). *Barr.* 56, C.

Koloura (*Κόλουρα*) Attested in Hecat. fr. 234, who refers to it as a place *ἵνα Πρ<ι>ηνῆς ἔζοντο*. According to Steph. Byz. 37.18–19, it was located *περὶ Πριήνην*, but nothing further is known about it. Not in *Barr.*

Koressos (*Κορησ(σ)ός*) Hdt. 5.100 (*Κορησός τῆς Ἐφεσίδης*); Xen. *Hell.* 1.2.7–10; *Hell. Oxy.* 1.1 (*λιμὴν*

(Chambers)). Located in the territory of Ephesos (no. 844). Not in *Barr.*

Kybeleia (*Κυβέλλ(λ)εῖα*) Hecat. fr. 230 *apud* Steph. Byz. 389.9–12 (*πόλις Ἰωνίας*); *I.Erythrai* 151 + *EA* 9 (1987) 138 no. 4 II.1 (c.340), a list of public roads in the territory of Erythrai (no. 845). According to Strabo 14.1.33, Kybeleia was situated on Mt. Mimas, just south of the promontory called Melaina, and was in his day a *kome*. *Barr.* 56, AC.

Lade (*Λάδη*) Hdt. 6.7; Thuc. 8.17.3 (*νησος*). Lade was a small island off the coast close to the urban centre of Miletos (no. 854); it was the scene of a major naval battle in 496 during the Ionian Revolt (Hdt. 6.7ff); it provided an anchoring place for nineteen Athenian ships in 412 (Thuc. 8.17.3) and for 160 ships under the command of Nikanor in 334 (*Arr. Anab.* 1.18.4–5). There are no archaeological remains on the island that might point to habitation in the Archaic or Classical periods (Greaves (2002) 3). *Barr.* 61, AC.

Lampsos (*Λάμψος*) Ephor. fr. 25 *apud* Steph. Byz. According to Steph. Byz. 410.25–411.1, paraphrasing Ephoros, Lampsos was a part of the territory of Klazomenai (*μοῖρα τῆς Κλαζομενίων χώρας*) and named after Lampsos, a descendant of Kodros. There is no firm evidence for an actual settlement there. Not in *Barr.*

Leros (*Λέρος*) This island belonged to Miletos (no. 854) throughout the Classical period and possibly also for most of the Archaic period. The main settlement on the island is most likely to have been located at Ag. Marina, where there is evidence for habitation from C7 to the Byzantine period (Bean and Cook (1957) 134–35). Cf. Leros (no. 504) and *infra* s.v. Miletos (no. 854). *Barr.* 61, AC.

Leukonia (*Λευκωνία*) Attested only in Plut. *Mor.* 244F–245A as a place settled by the Chians after the murder of their king, Hippoklos. The anecdote (repeated by Polyae. 8.66) relates how the Erythraians later appropriated the settlement; this suggests that Leukonia was located on the Asiatic mainland, perhaps on the Mimas peninsula. *Barr.* 56, A (“mainland (not on Khios)”).

Leukonion (*Λευκώνιον*) Thuc. 8.24.3 mentions Leukonion as a place where the Athenians fought and defeated the Chians in 412. Leukonion was presumably located on the east coast of Chios (no. 840), but the site has not been identified. *Barr.* 56, unlocated.

Maiandrioi (*Μαιάνδριοι*) No toponym is known for this community, which is known from the Athenian tribute quota lists (*IG* 1³ 71.1.133, 259.III.29, 267.V.19). *Barr.* 61, C.

Malyeie (*Μαλυεΐη*) *I.Erythrai* 151.1 (c.340). Located in the territory of Erythrai (no. 845) and possibly a settlement. Not in *Barr.*

Marathon epi thalassan (*Μαράθων ἐπὶ θάλασ[σαν]*) *I.Erythrai* 151.26 (c.340). Located in the territory of Erythrai (no. 845) and possibly a settlement. Not in *Barr.*

Marathoussa (*Μαραθοῦσσα*) Thuc. 8.31.3 (*νησος*). In C5 the island of Marathoussa belonged to Klazomenai (no. 847), when, according to Thuc. 8.31.3, the Klazomenians deposited property there for safe keeping. *Barr.* 56, C.

Melie See **Karion** *supra*.

Myrsinoussa (*Μυρσινοῦσσα*) Attested in *I.Priene* 1.9 (c.334), from which it appears that it was a *kome* in the territory of Priene (no. 861). Not in *Barr.*

Nais (*Ναΐς*) *IGR* 1v 713 (Imperial); an ethnic (*Ναεΐς*) is attested in Içten and Engelmann (1995) 90 no. 3, a C4 communal dedication by the Naeis. It is uncertain if the Naeis were a Greek community or a barbarian one. It cannot be ruled out that Nais was in fact a Greek *polis*. Not in *Barr.*

Oie (*Οἶη*) *I.Erythrai* 151.27 (c.340). Located in the territory of Erythrai (no. 845) and possibly a settlement. Not in *Barr.*

Oion (*Οἶον* or *Οἶος*) The toponym is attested in *PEP Chios* 76.a11–12 (475–450). Located on Chios (no. 840) and possibly a settlement. Not in *Barr.*

Oroanna (*Ὀροάννα*) Attested in a list of *theorodokoi* published by Robert, *BCH* 70 (1946) = *OMS* I.342–44 (C2); the ethnic is *Ὀροαννεΐς* (*I.Smyrna* 128). The community is not attested in any Archaic or Classical sources, but ceramic finds on the modern site of Karatepe between Teos (no. 868) and Kolophon (no. 848), identified as Oroanna by R. Meriç, date from the period C5 to the first century AD (see Mitchell (1990) 98). It is highly doubtful if Oroanna had undergone Hellenisation earlier than the Hellenistic period. *Barr.* 56, H (N Colophon), but see *supra*.

Panormos (*Πάνορμος*) Attested in *Hdt.* 1.157.3, where the site is designated as a *λιμὴν* in the territory of Miletos (no. 854), and in Thuc. 8.24.1. *Barr.* 61, C (Kovela Limani).

Pele (*Πήλη*) Thuc. 8.31.3 (*νησος*). In C5 the island of Pele belonged to Klazomenai (no. 847), when, according to Thuc. 8.31.3, the Klazomenians deposited property there for safe keeping. *Barr.* 56, C.

Phanai (*Φάναι*) Thuc. 8.24.3. Located on Chios (no. 840) at the modern site of Kato Phana. *Barr.* 56, AC.

Phoinikous (*Φοινικοῦς*) Thuc. 8.34 (*λιμὴν*). Keil (1910) 20 tentatively accepts the identification made by H. and R. Kiepert of this harbour with the modern site Eğri Liman, while it is queried in *RE* s.v. Polichne 9. Here the Gulf of Çesme or the Gulf of Agrilia are suggested as potential alternative locations. *Barr.* 56, C (Eğri Liman).

Phokaia on Mt. Mykale (*Φώκαια*) Ps.-Skylax 98 provides the only Classical evidence for a Phokaia located on Mt. Mykale. His statement is supported by Steph. Byz. 675.23–24. Nothing further is known about this site. Not in *Barr.*

Polichna (*Πολίχνα*) Thuc. 8.14.3, 23.6. Polichna was controlled by Klazomenai (no. 847) and was fortified by it in 412 after its decision to revolt against Athens (Thuc. 8.14.3). The Klazomenian Polichna has not been located with certainty. *Barr.* suggests Balikhlova?, dated C.

Polichne (*Πολίχνη*) *Hdt.* 6.26.2 (*Πολίχνη ἡ Χίων*). Polichne belonged to Chios (no. 840) and was used as a base for military operations by Histiaios during his attack on the island in 494. Polichne has not been identified with any modern site; it is generally assumed that Polichne was located on the island of Chios itself, and that it was not identical with the Polichne on the mainland that contributed to the Erythraian syntely (no. 860) in C5. *Barr.* 56, unlocated (“on Khios”), A.

Prineus (*Πρινεΐς*) *I.Erythrai* 151.20 (c.340). Located in the territory of Erythrai (no. 845) and possibly a settlement. Not in *Barr.*

Sidele (*Σιδήλη*) The toponym is attested in *Hecat. fr.* 236 *apud* Steph. Byz. 565.18–19 (*πόλις Ἰωνίας*). There are no other attestations of this site. Not in *Barr.*

Skolopoeis (*Σκολοπούεις*) *Hdt.* 9.97. The site was located on the coast south of Mt. Mykale and contained a Demeter sanctuary (*Hdt.* 9.97). A possible location was suggested by Wiegand and Schrader (1904) 17. *Barr.* 61, C.

Skyphia (*Σκυφία*) Attested in *Ephor. fr.* 26 *apud* Steph. Byz. 580.5–6 (*πολίχνηιον*), and it is clear from the *verbatim* quotation of Ephoros in Steph. Byz. 580.6 (“ἐν Σκυφία κατῶκει”) that Skyphia was a settlement. According to Steph. Byz., Skyphia belonged to Klazomenai (no. 847). Nothing further is known about this community. Not in *Barr.*

Skyppion (Σκύππιον or Σκύππιος) Attested in Paus. 7.3.8 (referring to the time of the Ionian immigration) as a place in the territory of Kolophon (no. 848), founded from Kolophon by a group of Ionian invaders who later went on to found Klazomenai. There is no other evidence for a community of that name. Not in *Barr.*

Smyrna in Ephesos (Σμύρνα) Hipponax fr. 50.1, West; it was probably a suburb of Ephesos (no. 844). Not in *Barr.*

Teichioussa (Τειχιούσσα) *I.Didyma* 6.1; Thuc. 8.26.3, 28.1. Located in the territory of Miletos (no. 854). *Barr.* 61, C.

2. Unidentified Settlements

Amades Identified as a possible Classical settlement on Chios (no. 840) by Yalouris (1986) 156 on the basis of house terraces, ceramic evidence and tiles. *Barr.* 56, C.

Armolia Identified as a possible Classical settlement on Chios (no. 840) by Yalouris (1986) 150 on the basis of architectural fragments and ceramic finds. Not in *Barr.*

Avgonema Identified as a Classical settlement on Chios (no. 840) by Yalouris (1986) 151 on the basis of foundations and ceramic evidence. *Barr.* 56, C.

Belkahve Settlement in the territory of Smyrna (no. 867) with an Archaic wall and ceramic evidence from C4 and later. Bean (1955). *Barr.* 56, AC.

Çatalkaya Fortified Archaic site in the territory of Smyrna (no. 867), with what appear to be housing terraces surrounded by a fortification wall. The ceramics found on the site are predominantly Archaic and Hellenistic. Tuna (1984) and Meriç and Nollé (1988) 225–26. Not in *Barr.*

Çobanpınarı Settlement in the territory of Smyrna (no. 867) which has yielded ceramic finds from the Classical period. Bean (1955). Not in *Barr.*

Elinta Identified as a Classical settlement on Chios (no. 840) by Yalouris (1986) 151 on the basis of ceramic evidence, tiles and building stones. *Barr.* 56, C.

Emporio Archaic settlement on Chios (no. 840) containing a walled acropolis dating from C7 (Boardman (1967) 4–5), a harbour, at least two sanctuaries, and a residential area on the hill of Prophitis Elias. *Barr.* 56, A.

Erina Early Bronze Age settlement on Chios (no. 840) which has also produced Archaic and Classical sherds in abundance (Yalouris (1986) 150). Not in *Barr.*

Kastri tou Psellou Identified by Yalouris (1986) 146 as a possible settlement on Chios (no. 840), with ceramic evidence from the Classical period as well as a possibly Classical defensive wall. Not in *Barr.*

Kontari Identified as a possible Archaic settlement on Chios (no. 840) by Yalouris (1986) 144, but there is no firm evidence for occupation prior to the Hellenistic and Roman periods. *Barr.* 56, HR.

Lithi Identified as a possible Archaic settlement on Chios (no. 840) by Yalouris (1986) 151 on the basis of alleged Archaic tombs on the site. *Barr.* 56, A?

Managros Identified as a possible Archaic and Classical settlement on Chios (no. 840) by Yalouris (1986) 146 on the basis of architectural and ceramic finds on the site. *Barr.* 56, A?

Methochi Identified as a possible Archaic and Classical settlement on Chios (no. 840) by Yalouris (1986) 146. *Barr.* 56, C.

Milingos Identified as a Classical settlement on Chios (no. 840) by Yalouris (1986) 157–58 on the basis of possible house and cultivation terraces, building stones, early walls, tiles and ceramic evidence. *Barr.* 56, C.

Neo Karlovasi Identified as a settlement on Samos (no. 864) by Shipley (1987) 255–56, who records a stretch of a late Classical wall, possibly a circuit wall. *Barr.* 61, C.

Neokhorion Identified as a small Archaic and Classical settlement on Samos (no. 864) by Shipley (1987) 259 on the basis of tiles and ceramic finds. *Barr.* 61, AC.

II. The *Poleis*

836. Achilleion Map 61. Not in *Barr.* Unlocated. Type: A. The toponym is Ἀχιλλεῖον, τό (Xen. *Hell.* 3.2.17, 4.8.17). In C4 Achilleion is called a *polis* in the urban sense by a single source: Xen. *Hell.* 4.8.17, where it is reported that Thibron used Achilleion as a base for his raids against the territory of the Persian king. Achilleion was situated in the Maiandros valley (Xen. *Hell.* 4.8.17), and thus it cannot be identical with the *phrourion* near Smyrna referred to in Steph. Byz. 158.12 (*pace* Hirschfeld (1894)). According to Xen. *Hell.* 3.2.17, in 398 Achilleion was in a position to supply contingents of armed forces. Nothing further is known about this community.

837. Airai (Airaios) Map 56. Lat. 38.10, long. 26.40. Size of territory: unknown but probably 1 or 2. Type: A. The toponym is *Αἰραί*, *αἰ* (Thuc. 8.20.2). Note that at Thuc. 8.19.4 *Αἰράς* in OCT is an emendation of MSS *Ἐράς* (without any indication of the MSS reading in the *app. crit.*). At Ps.-Skylax 98 *Αἰραί* is a possible conjecture of MSS *Ἄγρα*, but the text is too corrupt to allow firm conclusions. The city-ethnic is *Αἰραιεύς* (*PEP Teos* 235 = *BCH* 4 (1880) 175–76 no. 35 (undated); *IG* I³ 270.I.13 (442/1)) or *hairaiεύς* (*IG* I³ 282.IV.44–45 (429/8)) or *hairaiός* (*IG* I³ 260.IX.2 (453/2)) or *Αἰραῖος* (*IG* I³ 259.III.25 (454/3); Imhoof-Blumer (1902) 512). Airai is called a *polis* both in the urban sense (Thuc. 8.20.2) and in the political sense (*PEP Teos* 268.7 = *BPW* (1892) 739 no. 11 (C4)). The collective use of the city-ethnic is attested internally in a Teian inscription (*PEP Teos* 235 = *BCH* 4 (1880) 175–76 no. 35 (undated)), and on C4 coins (*infra*) and externally in the Athenian tribute lists and assessment decrees (*infra*).

Airai was undoubtedly a community that was predominantly Greek. We possess no information relating to its foundation; but Wilamowitz-Möllendorff (1908) 617 inferred from the Greek name of the settlement (presumably from the weed *αἶρα*, *ζιζάνιον*) that Airai was a relatively recent foundation.

Airai was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* I³ 259.III.25) to 427/6 or 426/5 (*IG* I³ 284.5) a total of fifteen times, paying a *phoros* of 3 tal. down to 447/6 (*IG* I³ 265.II.52) and thereafter 1 tal. (*IG* I³ 266.I.12). It was assessed for tribute in 425/4 (*IG* I³ 71.I.136). It revolted in 411 (Thuc. 8.19.4), and an Athenian attempt to reconquer the city failed (Thuc. 8.20.2). Although Airai was a Teian dependency in Strabo's day (14.1.32), there is no information relating to its status in the Classical period.

Two surviving public enactments were passed by Airai: *PEP Teos* 28 = *ÖJhBeibl* 15 (1912) 75–76 no. 15 may be a fragment of a C5 honorific decree, while *PEP Teos* 268 is an honorific decree passed in C4 and our most important source for the political institutions of Airai in C4: the honorand is granted privileged access to the courts (*[δίκη]ς προδίκους*) and access (*ἔφοδον*) to the *ekklesia* (ll. 2–3), and he and his descendants are given dining rights in the *prytaneion* on public festival days (ll. 9–12). The inscription may also provide evidence that there were free non-citizens resident in Airai in C4 (ll. 4–5), and that ownership of real property was restricted to the citizens of Airai (7–9).

Meriç (1987) 303 with plan 2 on p. 306 reports on a survey at the site (Urla). The surface pottery is said to date from late

Geometric to C4e, and there was a fortification wall around the peninsular site.

Airai struck bronze coins in C4. Types: *obv.* Apollo with wreath; *rev.* owl; legend: *AIPAIΩΝ* (Imhoof-Blumer (1902) 512).

838. Anaia (Anaites) Map 61. Lat. 37.50, long. 27.15. Size of territory: unknown but probably 1 or 2. Type: C. The toponym is *Ἄναια*, *τά* (Thuc. 4.75.1; Ps.-Skylax 98; *IG* XII.6 43.11 (C4)), *Ἄναία*, *ἡ* (Paus. 7.4.3). The city-ethnic(?) is *Ἄναίτης* (Thuc. 3.19). For possible *polis* status, see *infra*. The collective use of the city-ethnic is attested externally in Thuc. 3.19.2 (428/7) and allegedly in *CID* II 6.2 (*[Ἄν]αῖται ἀπ' Ἰωνί[ας]* (358); see *infra*).

According to Maiandros of Miletos (*FGrHist* 491) fr. 1, Samos (no. 864) received Anaia as a dependency from Kolophon (no. 848) in the wake of the Meliac War (c.700), and it remained a part of the Samian *peraia* in the Classical and Hellenistic periods (Ps.-Skylax 98). It is hard to decide if Anaia was a dependent *polis* whose citizens had a communal identity distinct from that of the Samians. At 3.19.2 Thucydides uses the collective city-ethnic in a reference to a military action by the Anaiitai (*ἐπιθεμένων τῶν Καρῶν καὶ Ἀναιτῶν*). Conventionally the Anaiitai of Thuc. 3.19.2 are identified with the exiled Samian oligarchs who supported the Peloponnesians from their base at Anaia (e.g. Robert (1959) 21; Shipley (1987) 35; Hornblower (1991) 405). There can be little doubt that this splinter community would still perceive itself as Samian (Thuc. 3.32.2, 4.75.1). The same probably applies to Thucydides' mention of an Anaiitan warship in 8.61.2 (*μία Ἀναίτης*), which assisted Leon of Sparta at the battle of Chios in 411. The ship was presumably provided by the Samian exiles, and Thucydides may have used the adjective in order to avoid the possible misunderstanding that the ship was provided by the Samians on the island. Barron identifies two Samian silver coin types that were probably struck at Anaia during this period. One type carries the legend *Α*, which, as Barron suggests (1966) 93, may be the initial of *Α(ΝΑΙΙΤΩΝ)*, while the other has the legend *ΕΙΙΙ ΒΑΤΙΟΣ*. According to Barron (1966) 92, Batis may have been either the leader of the oligarchic faction or an overseer appointed by Pissouthnes.

By the terms of the Peace of Antalkidas in 386, Samos was outside the sphere of influence of the Persian king, while her *peraia* was defined as part of Persian territory. The implications for the political relationship between Samos and the settlements on the mainland cannot be ascertained. If the

Persians insisted on control of the former *peraia* of Samos for taxation purposes only, this may not have prevented Samos from maintaining political ties with its former possessions. A continuation of Samian involvement on the mainland may explain how the Samians could settle at Anaia after their expulsion from their island by the Athenians in 365 (see most recently Hallof and Habicht (1995)).

It has been suggested by Fantasia (1986), primarily on the basis of *CID* II 6A.1: [Ἄν]αῖται ἄπ' Ἰωνί[ας], that the inhabitants of Anaia from 365 to 322/1 no longer regarded themselves as Samian citizens. However, an alternative reading of *CID* II 6 is [Ἐλ]αῖται (i.e. the city-ethnic of Elaia (no. 807) in Aiolis), if ἄπ' Ἰωνί[ας] was used in the general sense of "Asia Minor" rather than in the narrow sense of "Ionia". The fragile connection between Samos and its *peraia* seems to be a recurrent theme in the history of the island. See most recently Hallof and Mileta (1997) and Schuler (1998) 177–79 for the Hellenistic period.

839. Boutheia (Boutheieus) Map 56. Lat. 38.20, long. 26.20. Size of territory: ? Type: B. The toponym is *Βούθεια*, ἦ (*IG* I³ 270.I.27 (442/1)) or *Βουθία* (Steph. Byz. 180.17). The city-ethnic is *Βουθειεύς* (*IG* I³ 259.v.19 (454/3)). Boutheia is called a *χωρὶον* by Theopomp. fr. 369, but this designation does not rule out that Boutheia was indeed a *polis*, as its membership of the Delian League suggests that it was. The collective and external use of the city-ethnic is attested in the Athenian tribute lists (*infra*).

Boutheia cannot be located with precision, and several sites in the Erythraia have been suggested as likely candidates. Now that the existence of an Archaic temple of Athena (part of which can be dated back to C8) has been confirmed at Ildir, the site of Classical Erythrai, the hypothesis that the site at Ilica contained Archaic Erythrai must be abandoned (Mitchell (1985) 83). Ilica, then, must be another potential location of Archaic and Classical Boutheia; but it may equally well have housed one of the four other sites known to have formed part of the Erythraian syntely (cf. Erythrai (no. 845)). Only numismatic and/or epigraphical evidence found *in situ* can provide a conclusive answer.

Boutheia was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* I³ 259.v.19) to 427/6 or 426/5 (*IG* I³ 284.1) a total of fourteen times, five times completely but plausibly restored. In 430/29 Boutheia is explicitly recorded as a dependency of Erythrai (*IG* I³ 281.I.20: [Βουθει]ῆς Ἐρυθραίων). In 453/2 the

Boutheieis paid 3 tal. (*IG* I³ 260.x.5). In 450/49, 448/7 and 447/6 they paid alongside the other dependencies of Erythrai; they all formed a syntely, but the Boutheieis paid on their own behalf (*IG* I³ 259.v.19, 260.x.5, 263.II.17, 264.III.30, 265.I.62). In later years their payment is recorded separately from that of the other Erythraian dependencies, and they seem in all years to have paid 1,000 dr. (*IG* I³ 272.II.17, 283.III.29).

840. Chios (Chios) Map 56. Lat. 38.25, long. 26.10. Size of territory: 5 (the island itself is 826.5 km², to which the Chian *peraia* and the Oinoussai islands should be added). Type: A. The toponym is *Χίος*, ἦ (Hdt. 5.98.4; Aen. Tact. 11.3). The city-ethnic is *Χίος* (Hdt. 1.18.3; *IG* II² 43A.24 (378/7)). Chios is called a *polis* in the urban sense (Hecat. fr. 141; Hdt. 6.27.2; Xen. *Hell.* 2.1.3; *PEP Chios* 76 = Koerner (1993) 62.B.10–12 (C5), as opposed to *chora*; Aen. Tact. 11.4) and in the political sense (Hdt. 6.27.1; Thuc. 8.6.4; Ar. *Pax* 171; Aeschin. 3.42; Aen. Tact. 11.4; *SEG* 35 923.a.2, b.16 (C5); *PEP Chios* 76 = Koerner (1993) 62.A.13, C.3 (C5); *PEP Chios* 78.11 (C5); Tod 118.36 (384/3), 192.11 (332/1)). *Polis* in the territorial sense is attested in Kritias fr. 2.7, DK, and Tod 192.16 (332/1). *Polites* is applied to the citizens in Isoc. 8.98. *Politeia* is used in the sense of citizenship in *PEP Chios* 12.27 (c.320), and in the sense of constitution in *Ath. Pol.* 2.4.2 (rC5). The word *politeuma* in the sense of constitution is used in Tod 192.3 (332/1), in which Alexander the Great prescribes that the Chian constitution is to be democratic. The *asty* of Chios is referred to in *I.Délos* 9.3 = *SEG* 19 510, 33.633 (C6) and *PEP Chios* 78.2 (C4); and in Hdt. 6.15.1 the citizens are called *astoi*. In *IG* II² 10510.7 (cf. *CEG* II 606 (C4)) Chios is the *patris* of Symmachos, son of Simon. The collective use of the city-ethnic is attested internally in *PEP Chios* 12.23 (c.320) and externally in literature (Thuc. 7.57.4; Arist. *Pol.* 1303a34) and in inscriptions (Tod 118.16–17 (384); *IG* II² 43A.24 (378/7)). The individual use is found externally in *IG* II³ 683 (C6); Hipponax fr. 30.2, West (C6–C5); Simon. fr. 19.1, West; *SEG* 36 50.2 (490–480); and *IG* IV².1 123.117 (C4). There is also one internal attestation of the individual use of the city-ethnic (*PEP Chios* 266.2 (C3/C2e)).

The territory of Chios is referred to as ἦ *Χίη* *χώρη* in Hdt. 6.26.1. The names of several locations, some of which may have been second-order settlements in C5, are known from epigraphical and literary sources: Koila, which according to Hdt. 6.26.1 contained a Chian garrison in 494; Kardamyle (Thuc. 8.24.3); Boliskos (Thuc. 8.24.3; Ephor. fr. 103); Phanai (Thuc. 8.24.3); and Leukonion (Thuc. 8.24.3). Delphinion, a site with more than one harbour on the coast

just north of the urban centre of Chios, was fortified by the Athenians in 412/11 (Thuc. 8.38.2), and traces of the C5 fortification on the top of a small acropolis were reported by Boardman (1956) 41–49. The site is also mentioned in *PEP Chios* 75 = *BCH* 3 (1879) 242–55 a8 (C5–C4). *PEP Chios* 76 = *BCH* 3 (1879) 230–41 (475–450) mentions *Ἐρμῶνοσσα* (c.2, 4), *Δήλιον*(?) (c.6), *Δοφίτις* (c.9), [*E*] *ὑάδαϊ* (d.17–18), *Καμινήη* (*sic!*) (d.20), *Μελαίνα Ἀκτῆ* (d.22–23) and *Οἶον* (a.11–12). Section c of the inscription is concerned with the definition and preservation of official boundaries of the area *Δοφίτις*. It is clear from c.9–15 that the *polis* took an active interest in the preservation of these boundaries, but the nature of *Δοφίτις* as a locality is not quite clear. *PEP Chios* 75 = *BCH* 3 (1879) 242–55 of C5–C4 provides some more names: *Ἀκταί* (a.22, 32, a sanctuary is located here), and *Πάρβας* (a.34, 36–37: an area that contained a swamp and a lake). For a more comprehensive overview of second-order settlements on the island, see further the gazetteer in Yalouris (1986) 143–59. The community at modern Emporio (which cannot be securely associated with any ancient toponym; see Boardman (1967) 254–56) was a sizeable one. The Archaic settlement contained a walled acropolis dating from C7 (ibid. 4–5), a harbour, at least two sanctuaries, and a residential area on the hill of Prophitis Elias of considerable density, estimated by Boardman to number more than fifty houses in an area of less than 0.04 km². The houses appear to have been abandoned in C7, but there is evidence of Classical and Hellenistic occupation on the hill to the west of the Archaic settlement (ibid. 35).

In addition to their territory on Chios itself, the Chians also controlled the islands of Oinoussai (Hecat. fr. 142; Hdt. 1.165.1; Thuc. 8.24.2). After Harpagos' attack on Phokaia (no. 859) c.546, the Phokaians approached the Chians with a view to purchasing and resettling in these islands; but according to Hdt. 1.165.1, the Chians refused to sell because they feared the establishment of a rival *emporion* that might cut off their own island from trade. In 412, the Athenians used the islands as a naval base for raids against Chios after the latter's secession from the Delian League. In Hdt. 6.26.2 a *πολίχνη Χίω* is mentioned, but it is not clear from the context if this site was located on Chios itself or if it was identical with Polichne on the Mimas peninsula, a settlement that had become an Erythraian dependency by C5m. In C6 Chios gained control of Atarneus (no. 803) in Aiolis in exchange for handing over the refugee Paktyes to the Persian king (Hdt. 1.160.3–5). Chios still possessed Atarneus as part of its *peraiia* as late as 398/7 (Xen. *Hell.* 3.2.11); however, at that time

the site was used as a base by Chian exiles. It is probable, though far from certain, that Chios lost its Asian *peraiia* as a result of the King's Peace (Debord (1999) 264–72). Chios appears to have lost control completely by the 360s at the latest, when Atarneus had been taken over by Euboulos (Arist. *Pol.* 1267^a31–37), who was succeeded by Hermias as ruler of the place (note, however, Theopomp. fr. 291, which may indicate that Hermias was originally installed by the Chians and the Mytilenaians (no. 798) as *episkopos* of the Chian and Lesbian *peraiiai*, probably including Atarneus and its surroundings).

All calculations of the size of the Chian citizen population are based on the size of the Chian fleet (*infra*) combined with very varying assumptions about the number of Chian citizens on board each ship (Roebuck (1986) 81; Walter (1993) 97 n. 37). See Thuc. 8.15.2 for evidence that the Chian slaves formed part of the crews in 412 (cf. Hunt (1998) 46, 86). Chios is referred to by Thuc. 8.15.1 as being the largest of all the *poleis* that remained in the Athenian alliance in 412, and in Thuc. 8.45.4 Alkibiades claims that the Chians were the wealthiest of all the Greeks.

Chios appears to have been a strong naval power from very early on. Its contribution of 100 ships to the combined Ionian fleet in 494 was larger than that of any other *polis* involved, and there were forty picked citizen troops on board each ship (Hdt. 6.15.1). In 440/39 Chios and Lesbos together provided twenty-five ships for the Athenian war against Samos (no. 864) (Thuc. 1.116.2), while in 430 there were fifty Chian and Lesbian ships involved in the raids on the Peloponnese (Thuc. 2.56.2). Chian ships participated in the Pylos campaign in 425 (Thuc. 4.13.2), in the attack on Melos (no. 505) in 416/15 (Thuc. 5.84.1), and in the Sicilian expedition in 415–413 (Thuc. 6.43, 7.20.2). It may be inferred, e.g. from Thuc. 8.15.2, that normally the Chians would themselves supply the crews for the ships participating in Athenian campaigns: after Chios' open revolt in 412, the seven ships previously provided to Athens as a token of good faith (Thuc. 8.9.2) were no longer held to be trustworthy, and the free men on board (presumably Chians) were imprisoned, while the slave members of the crews were set free. When the Chians made their approach to the Spartans in 412, they claimed to have at least sixty ships to contribute to their new alliance. The calculation of ship numbers in Gomme *et al.* (1981) 27–32 suggests that the Chians may not have exaggerated.

In C5l/C4e the organisation of the Chian armed forces comprised units called *dekades*: two inscriptions (*PEP Chios* 61 and 62) record slaves enrolled in these units, and, in *PEP*

Chios 62, slaves who had been granted their freedom by the *polis*. Three Chian military commanders who had assisted the Spartans at Aigos Potamoi were honoured with statues at Delphi (Paus. 10.9).

Chios was part of the Ionian *dodekapolis* (Hdt. 1.142.2), and Chian citizens participated in the Ionian arbitration between Myous (no. 856) and Miletos (no. 854) arranged by Strouzes (Tod 113.17 (391–388)). In Thuc. 8.40.1 the Chians are made to characterise themselves as the “largest of the allied *poleis* in Ionia”. Yet, perhaps because the Chians themselves regarded their city as a Euboian foundation quite separate from the other Ionian foundations on the Asiatic mainland, Chios’ regional affiliation does not seem to have been self-explanatory in Antiquity. In his work *Χίου Κτίσις* Ion of Chios (*FGrHist* 392) fr. 1 relates how the Chian *basileus* Hektor, the great-grandson of Amphiklos of Histiaia, took the initiative to persuade the Chians to participate in the Panionia. Paus. 7.4.8, having cited the passage, adds that Ion failed to explain why Chios was counted among the Ionian *poleis* (cf. Thuc. 8.6.2: ἐς τὴν Ἰωνίαν καὶ Χίον).

Ion of Chios (*FGrHist* 392) fr. 1 is our earliest source for the Chian version of its foundation by Oinopion, Melas and others, with a second wave of settlers under the leadership of Amphiklos of Histiaia in Euboia. That the foundation myth had an early origin is indicated by the designation of Chios as *Μέλα[ν]ος Πατρώιον ἄστυ* in *I.Délos* 9.3 (550–500).

In the Archaic period, Chios and Miletos supported each other as allies in at least two wars: Miletos backed Chios in its war against Erythrai (no. 845) (*terminus ante quem*: c.600), while the Chians returned the favour by aiding the Milesians against Alyattes of Lydia (Hdt. 1.18.3 (c.600)). Chios appears to have escaped conquest by the Lydians and later the Persians right up until the aftermath of the Ionian Revolt in 493, when the Persians attacked the island. An *andrapodismos* may be indicated in the account of how the Chians were “netted” by the Persians (Hdt. 6.31.1–2). According to Herodotos, the Chians had previously established a treaty of *xenie* with Kroisos (Hdt. 1.27.5), perhaps implying that Chios was not a dependent *polis* as such, although it probably operated under considerable political constraint from Lydia. After the Persian conquest of Lydia, the islands off the Ionian coast “gave themselves up” to Kyros without a fight (Hdt. 1.169.2), and Chios probably continued as a dependent *polis* within the Persian Empire from this point. It is not known, however, if Chios was subject to the same Persian demands for tribute and troops as the Ionian *poleis* on the mainland (see e.g. Roebuck (1986) 86). From at least as early

as 513 to 480/79, Chios was ruled by the pro-Persian tyrant Strattis (Hdt. 4.138.2, 8.132.2).

Chios was one of the first *poleis* to join the Delian League after the battle of Mykale (Hdt. 9.106.4). As a contributor of ships rather than money, Chios remained *autonomos* (Thuc. 3.10.5, 6.85.2, 7.57.4), *de jure* at any rate, although Arist. *Pol.* 1284^a39–41 suggests that the *de facto* relationship was heavily dominated by Athens, to the extent that the terms of their alliance were actually broken by the Athenians. A bilateral treaty concerning access to judicial procedures in Athens between Chios and Athens, presumably with Chios as a subordinate party, may have been in force in C5m (*IG* 1² 10.10–11, but the restoration is very uncertain). Chios went over to the Peloponnesian side in 412, and the Spartans established a military presence on the island as early as 412/11, led by the Spartan nauarch Pedaritos (Thuc. 8.17.1, 38.3–4). Thuc. 8.38.3–4, along with the very fragmentary *Hell. Oxy.* 5, Chambers, suggests that Pedaritos was heavy-handed in his interference in internal Chian affairs. That the Spartan involvement in Chios continued to compromise Chian autonomy is indicated by the report in Diod. 13.65.3–4 that the Spartan commander Kratesippidas restored Chian oligarchic exiles to the island and occupied the acropolis in 409/8. Sparta’s direct involvement in Chios continued for nearly a decade after the end of the Peloponnesian War, until the Chians expelled the Spartan garrison after the Athenian victory in the battle of Knidos in 394 (Diod. 14.84.3).

Chios entered into alliance with Athens in 384/3 (Tod 118). The treaty appears to have been on equal terms, and Chian *eleutheria* and *autonomia* are guaranteed (ll. 19–24). Although Diod. 15.26.3 may suggest that the Spartans managed to re-establish temporary control over the island after that point, this cannot be substantiated by any other evidence. In any case, Chios was a founding member of the Second Athenian Naval League from 378/7 (*IG* 11² 43.24 and 79 = Tod 123). In 363 Epameinondas succeeded in winning over the Chians; but, according to Diod. 15.79.1, his death shortly afterwards prevented the Thebans (no. 221) from consolidating their influence. Chios seceded from Athens again in 357 (Dem. 15.3; Diod. 16.7.3), when it formed an anti-Athenian alliance with Kos (no. 497), Byzantion (no. 674) and Rhodos (no. 1000), with further backing from Maussolos. From at least as early as 346 Chios fell within the Hekatomnid sphere of power. It is likely that a permanent Karian garrison was established by Idrieus, if not even earlier by Maussolos (Dem. 5.25; for a recent discussion of the numismatic evidence, on the basis of which it has been argued that the Karian presence was established already in

the reign of Maussolos, see Debord (1999) 382–83). A Makedonian garrison, maintained from Chian funds, was imposed by Alexander the Great (*PEP Chios* 32 = *SEG* 35 925 (334–330)), along with a demand for twenty manned triremes paid for by the Chians.

As noted above, there were numerous second-order settlements on Chios, and some of them were of considerable size. It has been argued that the formation of a centralised Chian *polis* with Chios town as its urban centre happened relatively late. ML 8 = *PEP Chios* 23 (600–550) forms an important part of the argument. On the assumption that the text is indeed Chian, one interpretation of the *boule demosie* in ll. C.5–6, manned by fifty representatives from each *phyle* (the number of which is unknown), is that the council served the purpose of uniting the different local communities in a single administrative and political structure (see recently Walter (1993) 94 and *Nomima* I 264–66 with references to previous discussions). It cannot be ruled out that the peaceful abandonment of the settlement at Emporio c.600 (Boardman (1967) 37–38) was directly related to a process of centralisation, of which ML 8 may then represent a later stage. We may thus be dealing with an early form of synoecism. However, Yalouris' gazetteer (1986) contains at least eight second-order settlements with continued occupation during the Archaic and Classical periods (III.8–9, 20, IV.5–6, V.1, 4, VI.4), so it is likely that a considerable part of the Chian population continued to reside outside the urban centre. Continuous occupation of the Chian urban centre up to modern times has prevented systematic excavation, which means that the process and level of Archaic/Classical urbanisation cannot be assessed on the basis of archaeological evidence.

The modern reconstruction of early Chian political institutions is based on the inscription *PEP Chios* 23 = ML 8 (600–550); but doubts concerning the origins of the inscription have been raised, and it cannot be ruled out that the inscription pertains to Erythrai (no. 845) (for a parallel example, see *I.Erythrai* 15 = *PEP Chios* 25 (C4m)). The text itself points to a constitution in which the assembly had a function as a legislative body (A.1–2), and it may also have had some judicial capacity (A.7). The council (*boule demosie*, C.5–6) appears to have had a probouleutic function in addition to a judicial one (C.9–14). There were ways of calling senior officials (*demarchoi* and *basileis*) to account (A.3–6), although the procedural details are not clear.

The constitutional arrangements of Archaic Chios were probably disrupted by the ascent of the tyrant Strattis (before 513 to 480/79). In C5 until 412, Chios appears to have

had a moderate constitution which is not easily labelled as either a democracy or an oligarchy (O'Neill (1978–79)). There is no direct evidence for a Chian assembly in C5, although Thuc. 8.9.3 may indicate that it did exist. *PEP Chios* 76 (475–450) attests a board of officials called “the Fifteen” who report to the *boule* (B.1–5). The Fifteen have the authority to impose fines on other officials (here the *horophylakes*, B.15–19). There is mention of a dicastic panel consisting of 300 unbribed men (B.21–25). The official designated *basileus* has as part of his task the pronouncing of public curses (D.7–9). It is not known if eligibility to serve as *bouleutes*, as an official, or as a judge was restricted by a property census or by other criteria in this period. Thucydides' account of the Chian revolt from Athens in 412 suggests that the *boule* had considerable scope for independent action: negotiations with the Peloponnesians had evidently been conducted without the consent of the broader population (8.9.3), and the citizens who were involved in planning the revolt were in a position to arrange that a meeting of the Chian *boule* would be in progress when the Spartans made their surprise arrival on the island (8.14.1–2).

The moderate Chian constitution was then replaced by a much narrower oligarchic one (Thuc. 8.38.4). Opposition to the new regime was crushed (Thuc. 8.24.6, 38.3), and this constitution probably continued until 394, except perhaps for a brief period between 410 and 409/8 (Piérart (1995) 268–69). *PEP Chios* 2 (C5I/C4e) is a public enactment with the heading *boules gnome* (l. 2), while *SEG* 35 923.B.13–26 (C5–C4) is a law passed by the *boule* presided over by the *basileis*. There is no mention of an assembly in either inscription.

There are no Chian public enactments that can be securely dated to the period between 394 and 355, and we know very little about its political institutions (Tod 118.33–34 (384) probably referred to Chios' *boule* in addition to unspecified *archai*). There is no decisive evidence to prove that the Chians reintroduced democracy in connection with their alliance with Athens (*pace* Gehrke, *Stasis* 46). By 355 the Chian constitution was definitely oligarchic (Dem. 15.19), but it is not clear whether this was the result of a recent *stasis*. The abolition of an extreme oligarchic government in Chios, mentioned in Arist. *Pol.* 1306^b3–5, may refer to the period around 394 or to constitutional upheavals in C4m, as argued by Gehrke, *Stasis* 46. However, constitutional continuity may be suggested by the fact that the eponymous official is the *prytanis* throughout the Classical period (*PEP Chios* 2.1 (C5–C4), 75.A.20 (C4m), 80.23–24 (C4s), 32.1 (334–330)); whereas the single *prytanis* had been replaced by

a board of *prytaneis* by c.320, perhaps on an Athenian model (*PEP Chios* 12.A.30). The restoration of the heading [*πρυτάνεων γνῶμη*] in *SEG* 35 923.A.1 (c.400) is disputed (Rhodes, *DGS* 230).

When Alexander the Great decreed in 334–330 that the Chian constitution was to be democratic, a fundamental revision of Chian legislation (*nomoi*, *PEP Chios* 32.5) was deemed necessary (*PEP Chios* 32.4–6). The institutions attested in *PEP Chios* 12 (c.320) were undoubtedly the result of these reforms. The *psephisma* (A.43) was passed by a popular assembly (A.1: ἔδοξε τῶι δήμῳ), and the magistrates mentioned in the decree, with the exception of the *agonothetes* (A.29), were serving as members of boards (*prytaneis*, A.30; *tamiai*, A.33; *exetastai*, A.37).

The best evidence for the judicial system in C5 is provided by *PEP Chios* 76 (475–450). Impending court cases (perhaps concerning disputed property) were to be announced by *kerykes* in the countryside as well as the urban centre (B.5–20), and the penalties of fines and *atimia* are also attested here (C.14–15). The *polis* appears to have assumed responsibility for conducting cases on behalf of individuals who have been evicted from their property (D.1–5). *Dikai prodikoi* are granted to two teams of foreign judges in *PEP Chios* 12 A.16–17 (c.320).

Taxes payable to the *polis* and to a local settlement (*Oῖη*) are attested in *PEP Chios* 75 B.45–46 (C4m). Total *ateleia* is granted to a priestess in *PEP Chios* 6.11–12 (C4), while limited *ateleia* from import and export taxes is granted in *PEP Chios* 12 A.17–18 (c.320). Free foreigners are subject to special charges in connection with the sacrifices regulated in *PEP Chios* 78.12–13 (C4). For a list of free foreigners attested epigraphically, see Sarikakis (1986) 130–31.

Chian envoys were sent to Lakedaimon (no. 345) in 413/12 (Thuc. 8.4–6.1), to Astyochoi in 412/11 (Thuc. 8.40.1) and to Athens (no. 361) in 384/3 (Tod 118.13). Chian citizens received *proxenia* from Athens (*IG* II² 23 (388/7)) and Anaphe (no. 474) (Michel 662.17–18 (C4)). Chios bestowed *proxenia* and citizenship on a group of foreign judges from Naxos (no. 507) and Andros (no. 475) (*PEP Chios* 12.17–19, 27). *PEP Chios* 50 is conventionally interpreted as a C4m list of Chios' *proxenoi* in different communities (at least fifteen); cf. *PEP Chios* 12 = *SEG* 12 390.31–32: τὴν στῆλην τὴν προξενικήν. Chian *theorodokoi* hosted *theoroi* from Argos (no. 347) c.330–324 (*SEG* 23 189.11.4) and *theoroi* announcing the Nemean Games (*SEG* 36 331.11.46–49 (323/2)). The Chians were given *promanteia* in Delphi (*F.Delphes* III.3 213 (C4–C3)); and in C5e they sent a chorus of 100 young men (Hdt. 6.27.2). For the altar of Apollo dedicated by the

Chians, see Hdt. 2.135.4 and *F.Delphes* III.3 212 (after 480). Xenopeithes of Chios was victorious at Olympia in 480 (Moretti (1970) 296).

The system of civic subdivisions underwent more than one radical reform during the Classical period. There was a *phyle* structure attested perhaps as early as C6f (assuming that *PEP Chios* 23.C.8–9 = ML 8 relates to Chios); but there is as yet no attestation of the traditional six Ionian *phylai* (Piérart (1985) 182). Jones, *POAG* 191–93 argues for a three-tier structure in C5–C4e, tentatively identifying the groups as *phylai*, phratries (*PEP Chios* 80.28 (C4m)) and *gene* (*PEP Chios* 7.2 (C4m)). It was assumed by Forrest (1960), followed by Jones, *POAG* 194 and Piérart (1985) 181–82, that the three-tier structure was replaced by a more complex system with four tiers in C4s. In this system the *phylai* consisted of numbered subdivisions (*πρώτοι, δεύτεροι, τρίτοι*). These subdivisions were in turn further subdivided into units designated by numbers (*A, B, Γ*, etc.), each of which were subdivided into groups designated by a “patronymic”. While the groups designated by numbers and “patronymic” are well attested in C4l (*PEP Chios* 71, 72, 73 (c.315)) and occupy an uncontroversial place in the hierarchy of subdivisions, it is more problematic to identify the named subdivisions in C5 and C4f as either *phylai*, phratries or *gene*. Some groups, such as the *Kaukaseis* (*PEP Chios* 8 (450–425)) and the *Klytidai* (*PEP Chios* 75 (C4m)), had complex administrative and political structures; but it is still uncertain if these groups belonged in the uppermost tier as *phylai* or at a lower level as phratries. The mention of Zeus Patroios in a decree passed by the *Klytidai* (*PEP Chios* 80.35 (C4s)) has led some to suggest that the group was indeed a phratry (for a summary of the debate, see Graf (1985) 36–37); but nothing can be concluded with certainty. It may be suggested on the basis of *PEP Chios* 75.11–12 and 29 that the *Klytidai* had originally been a territorially based unit, perhaps centred on a second-order settlement (45–46: *Oῖη*), not unlike the Kleisthenic demes. The same may be true of the *Kaukaseis* (Hdt. 5.33.1 mentions *Καύκασα*, a location on the coast). For this interpretation, see Graf (1985) 35 *pace* Forrest (1960) 188, who believed that the *Kaukaseis* derived their name from *Kaukasos*, the companion of Chios' mythical founder *Oinopion*. *PEP Chios* 9 (C4–C3) allows the interpretation that admission of the next generation of Chians to the citizen body was controlled locally in the civic subdivisions. The text is a list of members of the *Totteidai* (perhaps a phratry) who have been admitted to the *agogaia*.

Chios was exposed to numerous outbreaks of *stasis* and, consequently, exiles are frequently mentioned in the

sources. Arist. *Pol.* 1303^a34–35 refers to Chian exiles in Antissa (no. 794) in Lesbos, who were later expelled by the Antissaians because of the threat that they posed. Unfortunately the event cannot be dated. Hdt. 8.132.2 relates how six conspirators against the tyrant Strattis fled the island in 480/79 after their assassination plans had been revealed. The defection of Chios from Athens in 412 was the result of rivalry between οἱ πολλοί and οἱ ὀλίγοι (Thuc. 8.9.3, 14.2), and we hear of Chian exiles once again after the Chians had sided with the Peloponnesians. A party of pro-Spartan oligarchic exiles was restored to the island by the Spartan commander Kratesippidas in 409/8 (Diod. 13.65.3–4). If Piérart's (1995) interpretation and dating of SEG 39 370 are correct, the exiles mentioned in the inscription as "friends of Sparta" are identical with the exiles in Diod. 13.65.3–4. According to Piérart, the members of the extreme oligarchic regime set up by Pedaritos were expelled by the Chians, who were taking advantage of the reversal of Spartan fortunes after the Athenian victory at Kyzikos in 410. When Kratesippidas had succeeded in bringing the pro-Spartan exiles back to the island, they in turn exiled 600 of their opponents, and the latter set up base at Atarneus. According to Xen. *Hell.* 3.2.11, the second group of exiles still occupied the Chian *peraia* in 398. The letter of Alexander the Great to the Chians (*PEP Chios* 32 = SEG 35 925 (334–330)) stipulated that Chian exiles were to be allowed to return (l. 2): these exiles were undoubtedly of democratic or anti-Persian orientation (or both), and may have been forced out in the wake of constitutional upheavals in C4m (see Dem. 15.19). In the same letter Alexander instructed the Chians to impose exile on Medising citizens (ll. 11–12).

Although excavations of individual plots in Chios town have uncovered parts of the ancient agora, we depend almost exclusively on literary evidence for the identification of major civic structures in the urban centre. Ps.-Skylax 99 mentions the harbour. Aen. Tact. 11.3–5 provides evidence for dockyards, a stoa and a tower near the harbour, but the date of the event related in this passage is uncertain. A sanctuary of Athena Poliouchos is attested in Hdt. 1.160.3 (rC6). Aen. Tact. 17.5 refers to the Chian agora (C4). A festival of Dionysos is attested in Aen. Tact. 17.5 and *PEP Chios* 12 A22 (c.320), which involved a procession to his altar, perhaps located in the agora. For a comprehensive discussion of cults and cult sites on the island, see Graf (1985) 22–146.

The Chian calendar included some Attic months, e.g. Posideon (*PEP Chios* 80.23 (C4)), but also the month Leukatheon (*PEP Chios* 75 A25 (C5–C4)), which is peculiar

to the Ionian cities in Asia Minor (Graf (1985) 18–21; Trümpy, *Monat.* 102–5).

In 425/4 the Athenians ordered the Chians to tear down their new wall in order to deter them from revolting (Thuc. 4.51); it is not clear whether this wall was just an addition to existing fortifications or whether Chios had been unfortified before this time. In 412/11 the Athenians besieged its urban centre in vain, and it is highly likely that it was protected by walls (Thuc. 8.38.3, 40.1, 56.1, 61.3). Aen. Tact. 11.6 provides further evidence for city walls, but the date cannot be ascertained.

Chios struck coins on the Chian standard (15.6 g) from c.550. The earliest attested issue is an electrum *hekte*. Types: *obv.* sphinx; *rev.* four-part incuse square (anepigraphic). There was simultaneous minting of silver and electrum staters 525–510. Hardwick (1993) 213 suggests that the silver staters were issued c.525–493, and that the series may have been discontinued after the Persian attack on the island in 493. A second series of silver staters was issued c.490–435: *obv.* sphinx and amphora; *rev.* four-part incuse square (anepigraphic). From 435–425: *obv.* sphinx, amphora and grapes; *rev.* four-part incuse square (anepigraphic). Hardwick (1993) 216 argues for a break in the minting of silver staters 425–412. A unique electrum stater is dated by Hardwick to the period immediately after the revolt of 412: *obv.* sphinx, amphora and wreath; *rev.* four-part incuse square (anepigraphic). There is a corresponding silver tetradrachm to which Hardwick assigns the same date. From the last decade of C5 to c.330 silver tetradrachms and fractions were issued continuously: *obv.* sphinx and amphora; *rev.* four-part incuse square; legend: sometimes magistrate's name or anepigraphic. Chios also struck bronze coins in C4: *obv.* sphinx and grapes; *rev.* amphora; legend: *XIOΣ* and magistrate's name (Hardwick (1993); *SNG Cop. Ionia* 1539–55).

The Chians are named as the founders of Maroneia (no. 646) in Thrace by Ps.-Skymnos 676. They also participated in the foundation of the Hellenion at Naukratis (no. 1023) (Hdt. 2.178.2).

841. Chyton Map 56. Lat. 38.20, long. 26.45. Unlocated. Size of territory: unknown but probably 1 or 2. Type: C. The toponym is *Χυτόν*, τό (*I.Erythrai* 502.9–10 = Tod 114 (387/6); Ephor. fr. 78). Chyton is probably identical with the Chytron mentioned by Arist. *Pol.* 1303^b9, and *Χυτῶ* is an almost universally accepted conjecture for MSS *χύτρω*. The reason for recording Chyton in this Inventory is Aristotle's information that Chyton and Klazomenai (no. 847) tended

to break up into two political communities like Kolophon (no. 848) and Notion (no. 858), which in some periods were split up into two *poleis*.

According to Strabo 14.1.36, Chyton was located on the site of Old Klazomenai, which was later moved to an island connected with the mainland by a causeway. It is perfectly conceivable that habitation may have continued on the site of Klazomenai's former urban centre. Recent excavations conducted by G. Bakır and his team show that the C6 mainland site was indeed abandoned after 494, but that habitation resumed around 400 (Mellink (1984)). The results of later excavations placed the date of abandonment of the Archaic settlement further back, in the 550s and 540s (Mellink (1992) 142). Excavation of C4 houses on the mainland site revealed two phases: the first from c.400 to 380–370, when these houses were ruined; the second phase from c.370–330 (Mellink (1987) 23). The chronology of the mainland settlement corresponds quite well to the little that can be gleaned from literary and epigraphical sources for the history of Chyton in C4; and Strabo's identification of this settlement with Old Klazomenai thus seems to be confirmed.

Chyton presents problems akin to those relating to Anaia (no. 838). Although part of Klazomenian territory, it constituted a considerable "nuisance factor" like other *peraiiai* (Hornblower (1991) 405) in that it provided a haven for citizens dissatisfied with the constitutional set-up of their city (Gehrke, *Stasis* 78–79). The decree *I.Erythrai* 502 = Tod 114, passed by Athens in 387, promised Athenian non-intervention in a conflict between the Klazomenians and *τοὺς ἐπὶ Χυτῶ* (l. 9). The Klazomenians were given full authority in matters regarding a peace settlement with the people at Chyton (ll. 8–9), some of whom were held as hostages by the Klazomenians (ll. 9–10). It is perhaps significant that no city-ethnic derived from the name of the locality Chyton is used in this document: the conflict is viewed as an internal conflict within the community of Klazomenai rather than a war between two *poleis*. We do not know how the people of Chyton would have preferred to represent themselves; but it should be noted that Arist. *Pol.* 1303^b9 uses the same expression as the decree (*οἱ ἐπὶ Χυτῶ*).

842. Dios Hieron (Diosirites) Map 61. Lat. 38.00, long. 27.05. Size of territory: probably 1 or 2. Type: B. The toponym is *Διὸς Ἱερόν, τό* (Thuc. 8.19.2; *IG* 1³ 65.12 (427/6)). The city-ethnic is *Διοσιρίτης* (*IG* 1³ 37.27 (C5)) or *Διοσερίτης* (*IG* 1³ 289.1.42). Dios Hieron is not attested as a *polis* in any Archaic or Classical source, but the collective use

of the city-ethnic is attested in an external context in *IG* 1³ 37.27 (C5) and in the Athenian tribute lists (*infra*).

Dios Hieron was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* 1³ 259.III.23) to 416/15 (*IG* 1³ 289.1.42) a total of fourteen times, paying a *phoros* first of 1,000 dr. (*IG* 1³ 259.III.23) from 442/1 of 500 dr. (*IG* 1³ 270.1.4). It is often listed together with Kolophon (no. 848) (five times) and/or Notion (no. 858) (six times) (*IG* 1³ 259.III.21–23, 289.1.40–42; Piérart (1984) 171 n. 49). An Athenian decree of 427/6 honouring a citizen of Kolophon indicates that at this point Dios Hieron (called a *chorion*) was dependent on Kolophon (*IG* 1³ 65.11–14). However, as dated and restored, another decree of C5 mentions the citizens of Dios Hieron on a par with the citizens of Kolophon and Lebedos (no. 850), and all three cities are to cover the travelling costs and daily expenses of five elected *oikistai* to be sent out from Athens (*IG* 1³ 37.27). So far, we have no evidence for Dios Hieron in C4; but its reappearance as a community in its own right in the Hellenistic period (*SEG* 39 1244.1.22; Head, *HN*² 650) may serve as an indication in favour of its continued existence as a *polis* in C4.

843. (Elaiousioi) Map 56. Unlocated. Type: B. The toponym is not attested in the Classical period; but it was probably *Ἐλαιούσσα*, derived from the city-ethnic *Ἐλαιόσιοι*, attested in the Athenian tribute lists. Engelmann and Merkelbach (1972) 37, followed by *Barr.*, reject the identification with the island *Ἐλεούσσα* mentioned by Strabo 13.1.67 and note that many Greek communities derived their name from their olive trees.

The Elaiousioi were members of the Delian League. They belonged to the Ionian district and are recorded from 448/7 (*IG* 1³ 264.III.30) to 427/6 or 426/5 (*IG* 1³ 284.2–3) a total of eleven times, five times completely but plausibly restored. Elaios is explicitly recorded as a dependency of Erythrai (*Ἐλαιόσιοι Ἐρυθραίων*) in two lists (*IG* 1³ 281.1.22, 284.2) and in the assessment of 425/4 (*IG* 1³ 71.II.151–52). In 448/7 and 447/6 they paid alongside the other dependencies of Erythrai (no. 845); they all formed a syntely, but the Elaiousioi paid on their own behalf (*IG* 1³ 264.III.30, 265.1.63). In later years their payment is recorded separately from that of the other Erythraian dependencies. They paid 100 dr. (*IG* 1³ 268.1.28) and were assessed at a *phoros* of 100 dr. in 425/4 (*IG* 1³ 71.II.151–52).

844. Ephesos (Ephesios) Map 61. Lat. 37.55, long. 27.15. Size of territory: 5. Type: A. The toponym is *Ἐφεσος, ἡ* (Hdt. 1.142.3; Thuc. 1.137.2; Xen. *Hell.* 3.4.16; Ps.-Skylax 98).

The city-ethnic is *Ἐφεσίος* (Hdt. 1.147.2; *I.Ephesos* 2.9 (C4)). In C6 Ephesos is called a *polis* as citadel (*akropolis*) in *I.Ephesos* 1A.1, and in the urban sense in C6–C5 (Hipponax fr. 50.1, West). In C5 it is called a *polis* in the urban sense (Hdt. 1.26.2 (rC6)) and in the political sense (Hdt. 1.141.4, 142.3–4, 143.3; Herakleitos fr. 121, DK). In C4 it is called *polis* in the urban sense (*Hell. Oxy.* 1.2, Chambers; Xen. *Hell.* 1.2.7–8) and in the territorial sense in *I.Ephesos* 1420.4 (C4), in which citizenship is granted on the condition that the honorands remain ἐν τῇ πόλει. For *polis* in the political sense, see *IG* 11² 8523.4; *I.Ephesos* 2.4 (C4); *SEG* 39 1151.2. The urban centre is called *polisma* by Kreophylos of Ephesos (*FGrHist* 417) fr. 1 (c.400?). The *polis* cognate *polites* is applied to the citizens of Ephesos in *I.Ephesos* 1419.3 and 1420.4 (both C4). The word *politeia* is used in the sense of citizenship in Xen. *Hell.* 1.2.10; *I.Ephesos* 1421.3 (C4). Ephesos was the *patris* of Pythokles, who was brought up and lived in Athens, and who was commemorated by a funerary epigram (*IG* 11² 8523.4 (C4e); cf. *CEG* 11 485). The collective use of the city-ethnic is attested externally in Hdt. 1.147.2; *IG* 11² 1.48 = Tod 97.8 (403/2); *IG* 11² 1485.11.9 (C41), and internally in *I.Ephesos* 2.9 and 1427.2 (both C4). The individual use of the city-ethnic is attested externally in Hdt. 9.84.2; *ML* 95e (405); *SEG* 17 111 (C4).

The name of the territory is *Ἐφεσίη* (Hdt. 5.100, 6.16.2; *I.Priene* 3.13 (probably C3)) or *Ἐφεσία* (Xen. *Hell.* 3.2.14). It included the location Koressos on the coast (Hdt. 5.100); cf. *infra*. There was a suburb called Smyrna “behind the *polis*” (ὀπισθε τῆς πόλιος), as mentioned by Hipponax fr. 50.1, West, cf. *infra*. Priene (no. 861) had a common border with Ephesos, presumably to the north-west (*I.Priene* 3.12–14). In Xen. *Hell.* 1.5.12, 15 there are references to an unspecified λιμῆν τῶν Ἐφεσίων (presumably the city harbour is meant). The location of the harbour Panormos mentioned in Strabo 14.1.20 cannot be determined with certainty (Meriç (1985)).

Ephesian Smyrna has been located beneath the agora of the Lysimachean city by Langmann (1993), whose identification has been accepted e.g. by Engelmann (1990) 281–82. The houses excavated on this site date from C8 and C7 (Karwiese *et al.* (1996) 12). Langmann (1993) suggests that the site was inhabited by Smyrnaian merchants.

Koressos is mentioned in Hdt. 5.100 and Xen. *Hell.* 1.2.7–10; and it is referred to as a λιμῆν in *Hell. Oxy.* 1.1, Chambers. Xen. *Hell.* 1.2.7 reports that Thrasylos landed his hoplite forces πρὸς τὸν Κορησσόν and that it was located on the opposite side of Ephesos’ urban centre from

the swamp. Robert (1960) 139–44 argued, partly *e silentio*, that Koressos was an integral part of Ephesos rather than a *polis* in its own right. He dismissed the identification of this Koressos with the community that passed the C3 honorific decree published in *ibid.* 132–34. For the problems related to the precise location of Koressos, see Kribbe (1998) 76.

According to Ephor. fr. 126, Ephesos was founded by Proklos. Shortly after its foundation it became involved in a war against Priene in which most of the Ephesian citizens were killed. In connection with a rebellion against the descendants of Androklos, the remaining Ephesians invited citizens from Karene (no. 813) and Teos (no. 868) to settle at Ephesos, and the newcomers gave their names to two of the Ephesian *phylai*. C.555–550 Ephesos entered into a treaty with Kroisos, presumably as a subordinate party (Polyaen. 6.50; Ael. *VH* 3.26; *Staatsverträge* 107). Ephesos belonged to the Ionian *dodekapolis* (Hdt. 1.142.3) and its citizens participated as judges in the arbitration between Miletos (no. 854) and Myous (no. 856) in 391–388 (Tod 113.29).

Ephesos was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* 1³ 259.1.22, restored) to 415/14 (*IG* 1³ 290.1.26) a total of sixteen times, paying a *phoros* of 7½ tal. (*IG* 1³ 260.vi.13), from 445/4 reduced to 6 tal. (*IG* 1³ 267.v.17), but in 433/2 raised to 7½ tal. once again (*IG* 1³ 279.1.65). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.125). Ephesos revolted against the Athenians during the Ionian War or, at any rate, not earlier than 414 (Piérart (1995) 258), after which the Ephesians supported the Peloponnesian War effort (*SEG* 39 370.23). After the Peloponnesian War Samian exiles were given asylum at Ephesos (Tod 97.8 (403/2)). In 395 Agesilaos trained his army in the urban centre of Ephesos (Xen. *Hell.* 3.4.16); but it subsequently joined Konon after the battle of Knidos in 394 (Diod. 14.84.3). In 336 Ephesos sided with Parmenion and Attalos, but changed course again in 334 when citizens with oligarchic leanings joined forces with Memnon (Gehrke, *Stasis* 59–60).

For a survey of the history of the Ephesian constitution, see Gehrke, *Stasis* 57–60. The Aristotelian collection of constitutions included one of the Ephesians (Heracl. Lemb. 66; Arist. no. 49). *Suda* A3894 relates how Aristarchos of Athens was called to Ephesos to serve as ruler, and Gehrke, *Stasis* 57 suggests tentatively that he may have introduced a constitution resembling that of Solon’s constitution at Athens. After a succession of pro-Persian tyrants, a democratic constitution was introduced in 492 (Herakleitos fr. 121, DK), perhaps a radicalisation of a constitutional arrangement introduced by Mardonios in 494. Hermodoros, a friend of Herakleitos,

was exiled after the introduction of the constitutional change in 492 (Gehrke, *Stasis* 57–58). Gehrke notes (*Stasis* 58) that there is no evidence for any constitutional changes during the rest of C5 and most of C4: the Ephesian revolt against the Athenians in C51 (*SEG* 39 370.23) does not necessarily imply that the Ephesians had replaced their democracy with an oligarchic constitution (Piérart (1995) 258 thinks it unlikely that the Ephesians revolted any earlier than 414/13). Gehrke, *Stasis* 39 suggests that the regime following the King's Peace was of an oligarchic leaning, and that the Ephesian support of the Makedonians in 336 was driven primarily by democratic forces within the city. An oligarchic countermove occurred in 334, when Memnon managed to gain control of Ephesos, replacing the democratic constitution with an oligarchy that lasted only until Alexander's victory at Granikos later in the same year (Arr. *Anab.* 1.17.10). The reintroduction of democracy was accompanied by a massacre of the oligarchs (Arr. *Anab.* 1.17.11–12).

Public enactments passed by the *boule* and the assembly are, e.g., *SEG* 39 1151 (326/5–324/3); *I.Ephesos* 1419 and 1420 (both C4). A sacred law (*νόμος ὁ πάτριος*) is mentioned in *I.Ephesos* 2.5–6 (C4). In *I.Ephesos* 1420.1–3 there is reference to a *nomos* which appears to be the budget of the city, designating sums to be spent on public works. *I.Ephesos* 2 records death sentences passed on between forty-four and forty-six persons who had molested a board of Ephesian *theoroi* sent to the sanctuary of Artemis at Sardis. The case was conducted by *προήγοροι* on behalf of the goddess Artemis (2.1). It is not clear from the text who had actually judged the case, and it has even been suggested that it was heard at Sardis (e.g. Masson (1987) 228–29). The indictment which formed the basis of the trial is cited in the decree.

In C4 the eponymous official was the *πρότανις* (*I.Ephesos* 1421.3–4, 1425.2, 1426.2 (all C4)). The *boule* is attested in a probouleutic capacity in the preambles to numerous C4 decrees (e.g. *I.Ephesos* 1419.2 (C4)), and was in charge of certain public works (*I.Ephesos* 1420.5 (C4)). The *πρόεδροι* (*I.Ephesos* 1438.3 (C4)) were responsible for assigning new citizens to *phyle* and *chiliastys* by lot. Other officials are the board of *ἑσσηνες* (*I.Ephesos* 1443 (C4e)), the *ἀγωνοθέτης* (*I.Ephesos* 1440.11 (C4l)) and the board of *νεωποῖαι* (*I.Ephesos* 1440.7 (C4l)). For the *neokoros* of the Ephesian Artemis, see Xen. *An.* 5.3.6. The Ephesian assembly is attested in *I.Ephesos* 1389.1, 1419.2, 1420.3, etc. (all C4). For Ephesian commanders and troops (hoplites), see *Hell. Oxy.* 2.1, Chambers.

Ephesian citizenship grants are attested in Xen. *Hell.* 1.2.10 (a block grant of citizenship given to the Selinuntians (no.

44) after successful defence of Ephesos against an Athenian attack in 409); and for C4 in *I.Ephesos* 1389, 1408–45 (mostly C4, some C3), and *SEG* 39 1151.4 (326/5–324/3).

The civic subdivisions of Ephesos are known primarily from citizenship decrees, in which it is stipulated that the honorand be assigned to a *phyle* and a *chiliastys*: *I.Ephesos* 1421.6 (C4): *ἔλαχε φυλὴν Τήϊος, χιλιαστὴν Ἐχέπολέμειος*. According to Ephor. fr. 126, there were five *phylai* at Ephesos: Bennaioi, Teioi, Karenaioi, Euonymoi and Ephesioi. Bennaioi is undoubtedly a false rendering of Bembineis. The *phyle* *Ἐύωνυμείς* is attested in *I.Ephesos* 1419.4, *Βεμβινείς* in *I.Ephesos* 1427.4, *Ἐφεσεῖς* in *I.Ephesos* 1420.5, *Τήϊοι* in *I.Ephesos* 1421.6, and *Καρρηναῖοι* in *I.Ephesos* 1415.17 (all C4, 1415 as late as c.300 (Rhodes, *DGS* 358)). The epigraphical record provides the names and *phyle* affiliation of some fifty *chiliastyes*; see Jones, *POAG* 312.

Ephesian embassies are attested epigraphically in *I.Ephesos* 1436.1 (C4) and *I.Ephesos* 1437.2 (before 321). In C4 the city granted *proxenia* to a citizen of Kyrene (no. 1028) (*I.Ephesos* 1389 (C4)) and to a Makedonian (*I.Ephesos* 1433.2–3). Between 325 and 275, Monounios, son of Sophokles of Ephesos, was appointed *proxenos* by Delphi (no. 177). For a grant of *enktesis*, see *I.Ephesos* 1389 (C4). Ephesian *theoroi* are attested in *I.Ephesos* 2.3–4, 10 = *SEG* 36 1011 (c.350–300); for *theorodokoi* to host *theoroi* from Argos (no. 347), see *SEG* 23 189.11.8 (330–324).

Although Hdt. 1.26.2 may suggest that the urban centre of Ephesos was moved at some point during C6 or C5, this is not at all certain (see Özyigit (1988) 94–96). Herodotos need not imply any more than that the urban centre had expanded considerably since C6 and that the Artemision thus was no longer situated 7 stades outside the city walls.

So far, very little of the monumental architecture of Archaic and Classical Ephesos has been excavated. In addition to a temple of *Meter Theon* and a structure which was probably an Apollo sanctuary, the Artemision, perhaps the most important monument in the whole of Ephesos, has been uncovered and described (Bammer and Muss (1996)). According to Hdt. 1.26.2 (rC6), the Artemis temple was situated 7 stades from the walls of the old urban centre. The foundation of the earliest temple has been dated to C8. On the fire of the Archaic Artemision in C4m, see Knibbe (1998) 89. He rejects the tradition of the mad pyromaniac Herostratos and offers a more plausible explanation: *viz.* that the foundations of the temple had been causing problems since the days of Kroisos and were slowly sinking. In addition the ground level was constantly rising because of alluvial deposits from the river Kaystros. The fire con-

veniently made it possible to construct the late Classical Artemision on higher ground than its predecessor. For an account of C7–C6 finds in the Artemision, see Wiplinger and Wlach (1995) 107–8. τὸ ἱερόν τῆς Ἀρτέμιδος is mentioned in *I.Ephesos* 1438.4 (C4), from which it appears that citizenship grants were displayed in the temple. Other temples or cult sites are attested epigraphically: *I.Ephesos* 101 (C5) mentions a *hieron* of Zeus Patroios and a *hieron* of Apollo Patroios, as does *I.Ephesos* 102 (c.300). The *hieron* of Zeus Patroios is also attested in *I.Ephesos* 104 (C5). *I.Ephesos* 107 is a C4 private dedication to Μητῆρ Ὀρέη.

The preserved theatre (*TGR* iii. 494–96) dates from the Hellenistic period, but an inscription of C4 (*I.Ephesos* 1440.10) stipulates that the honours bestowed on Sostratos are to be proclaimed in the theatre at the festival of Dionysos. According to Xen. *Hell.* 3.4.18 and *Ages.* 1.25, Ephesos had several *gymnasia* in C4. That Ephesos was fortified in C6f is apparent from Herodotos' account of a siege by Kroisos (1.26.2; cf. 1.141.4). So far, a C6f city wall has not been confirmed archaeologically, but a stretch of polygonal wall on the north slope of the Panayırdağ hill is dated by ceramic evidence to c.500 and is probably part of a city wall (Scherrer (2001) 60 figs. 3 no. 4 and 3 no. 9).

Of Ephesian festivals, the Thesmophoria are mentioned in Hdt. 6.16.2, and the Dionysia in *I.Ephesos* 1440.10 (C4). For the Artemisia and the Ephesia and the question as to whether these two names refer to one festival or two, see Hornblower (1991) 527–29 with references to the general discussion. A communal dedication by the Ephesians to Athena is recorded in *IG* II² 1486.5–6 (C4).

For the Ephesian calendar, see Trümpy, *Monat.* 96–99 §84. At least six months were identical with the Athenian months.

Ephesian citizens are attested as victors in the Olympic Games (*Olympionikai* 398 (380), 431 (356) and 438 (352)), in the Isthmian Games (*I.Ephesos* 1416.20 (C4)) and in the Nemean Games (*I.Ephesos* 1415.6, 1416.20–21 (c.300)).

Ephesos struck coins from C7l. (I) Electrum C7l–C6: denominations: stater and fractions down to forty-eighth. (1) Types: *obv.* stag to r. with head lowered, legend: ΦΑΕΝΟΣ ΕΜΙ ΣΗΜΑ; *rev.* three incuse sinkings. (2) *Obv.* bee in linear square; *rev.* oblong incuse divided into two squares, or *obv.* forepart of stag, head turned back; *rev.* incuse square. (II) Silver: denominations: tetradrachm, didrachm, drachm, hemidrachm, diobol, trihemiobol, obol, hemiobol. (1) C5: *obv.* bee; *rev.* quadripartite incuse square; legend: ΕΦ or ΕΦΕΣΣΙΟΝ. (2) C4: *obv.* bee; legend:

ΕΦ; *rev.* forepart of kneeling stag, head turned back, palm tree and magistrate's name. (III) Bronze, C4: *obv.* bee, legend: ΕΦ; *rev.* forepart of kneeling stag, head turned back, astragalus and magistrate's name. Head, *HN*² 571–74; for C7l and C6 electrum coinage, see Jenkins (1990) 13 and Kraay (1976) 21–22. *SNG Cop. Ionia* 206–56.

845. Erythrai (Erythraios) Map 56. Lat. 38.25, long. 26.30. Size of territory: 5, including several dependent *poleis*, for which see *infra*. Type: A. The toponym is Ἐρυθραί, αἱ (Hdt. 1.142.4; *SEG* 23 189.II.3 (c.330)). The city-ethnic is Ἐρυθραῖος (Hdt. 1.142.4; *IG* I³ 14.4 (C5)). According to Steph. Byz. 280.8–9, an alternative toponym was Κνωπούπολις, for which his authority may have been Hecat. fr. 228. In C5 the urban centre of Erythrai is called a *polis* by Hdt. 1.142.4 and in C4 in *SEG* 26 1282.5–6. *Polis* in the political sense is used about Erythrai in Hdt. 1.141.4, 142.4, 143.3; *I.Erythrai* 8.4–6 = Tod 155 (c.357–355); *I.Erythrai* 9.23 = Tod 165 (C4s); *SEG* 31 969.8 (351–344). The *polis* cognate *polites* is used in *SEG* 31 969.15–16 (351–344) and *SEG* 36 1039.12 (c.400). *Politeia* is applied to the Constitution of Erythrai in Arist. *Pol.* 1305^b20–22. The collective use of the city-ethnic is attested internally in *SEG* 36 1039.5 (c.400); *I.Erythrai* 6.3 (394); and externally in Hipponax fr. 12, West (C6–C5); Hdt. 1.18.3; Dem. 8.24; *IG* I³ 14.4, 8, 22; and *SEG* 26 1282.11 (c.387). For the individual and external use, see *PEP Phokaia* 20 (undated).

The name of the territory is Ἐρυθραία, ἡ (Thuc. 3.29.2, 8.24.2, 33.2). Its size is likely to have varied considerably over time. In the Athenian tribute lists five communities are entered as part of the Erythraian *synteleia*, some or all of which may have been fully integrated into the Erythraian *polis* in C4 when our sources for them dry up. But it is highly likely that they had been dependent *poleis* in their own right in the Archaic period and C5; see *infra*. The settlement pattern on the Mimas peninsula is very complex, and the communities mentioned in the tribute quota lists have not even been securely located. In C5 Erythraia comprised Κώρυκος, probably a settlement as well as a mountain (Thuc. 8.33.2) and the harbour Ἐμβατον (Thuc. 3.29.2). The borders of Erythrai with the *poleis* on the isthmus and perhaps with Chios (no. 840)—whose *peraia* may have included territory on the Mimas peninsula—cannot be established for the Archaic and Classical periods. The most important evidence concerning the territory of Erythrai in C4 is *I.Erythrai* 151 (c.340), which contains a list of roads linking a number of locations in the territory of the city. The following toponyms—all unlocated—are listed in the text:

Μαλυεΐη (l. 1), *Κλέαι* (l. 2), *Κεγκρεύς* (ll. 7, 11), *Πρωεύς* (l. 20), *Κολώνη* (l. 21), *Εύμαΐς* (l. 22), *Μαραθούς ἐπὶ θάλασ[σαν]* (l. 26), *Οἴη* (l. 27), ὁ *Χαλκιδέων Λιμῆν* (l. 40). *SEG* 37 917 (C51/C4e) concerns sale of land and mentions other locations, presumably within Erythraian territory. The locations mentioned are ἐν *Ἀργαδεῦσιν* (A7), ἐν *Ἀὐλικοῖς* (A9, 12), ἐν *Ἄγροισι* (A 16).

According to *Hellan. fr.* 48, Erythrai was one of the *poleis* founded by Neleus, son of Kodros. Erythrai belonged to the Ionian *dodekapolis* (*Hdt.* 1.142.4) and contributed eight ships for the battle of Lade (*Hdt.* 6.8.2). In 391–388 Erythrai sent representatives who participated as judges in the arbitration between Miletos (no. 854) and Myous (no. 856) (*Tod* 113.15).

In C5 Erythrai was a member of the Delian League, from which it defected, perhaps in the 450s, but see Gehrke, *Stasis* 66 n. 4. Athens managed to win back Erythrai shortly afterwards (the conventional date is 452: the most important evidence for Athens' imposing her will is *IG* 1³ 14 = *ML* 40 and *IG* 1³ 15, both mentioning a garrison and Athenian *episkopoi*). Erythrai belonged to the Ionian district and is recorded as a paying member from 450/49 (*IG* 1³ 263.11.13, v.13) to 415/14 (*IG* 1³ 290.1.29) a total of sixteen times, paying a *phoros* of often 7 tal. (*IG* 1³ 268.11.27) but sometimes higher amounts, e.g. 9 tal. (*IG* 1³ 264.111.28) or 12 tal. (*IG* 1³ 283.111.28). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.126). In 412 Erythrai joined forces with the Peloponnesians (*Thuc.* 8.14.2), and Erythraian infantry assisted the Lakedaimonians (*Thuc.* 8.16.1).

Five communities are recorded in the Athenian tribute lists together with Erythrai as Erythraian dependencies: *viz.* the *Βουθειεῖς*, the *Ἐλαιόσιοι*, the *Πολιχναῖοι* (-ῖται), the *Πτελεόσιοι* and the *Σιδόσιοι*. With one possible exception (*IG* 1³ 274.111.11, completely restored), the Erythraioi are recorded as the first of the six communities, and the presumption is that the five others were dependencies dominated by Erythrai. In the years 450/49 to 447/6 the six communities formed a *synteleia* (*IG* 1³ 263.11.13–18, 264.111.28–30, 265.1.58–64, 268.1.27–28, 268.11.27); from 443/2 to 438/7 they paid individually (269.1.20–25, 270.1.22–27, 271.1.18–20, 272.11.16–21, 273.1.32–11.6, 274.111.6–11). In 433/2 the tribute was paid by the *Ἐρρυθραῖοι καὶ Χ[συντελῆς]* (*IG* 1³ 279.1.48–49); and in 430/29 the five small communities are recorded after Erythrai but as communities belonging to Erythrai: *Ἐρρυθραῖοι, Βουθειεῖς Ἐρρυθραίων*, etc. (*IG* 1³ 281A.19–24), but later in the same inscription (61–66) they are recorded with their own ethnic without any mention of their dependent status. In later tribute lists and in the assess-

ment decree of 425/4 we meet the *Βουθειεῖς* (*IG* 1³ 282.1V.38, 283.111.29, 284.11.1), the *Ἐλαιόσιοι* (*IG* 1³ 284.11.2–3, 71.11.151), the *Πολιχναῖοι* (*IG* 1³ 283.111.30, 71.1.145) and the *Πτελεόσιοι* (*IG* 1³ 71.11.93), sometimes recorded as belonging to Erythrai; yet—and no doubt accidentally—there is no further reference to the *Σιδόσιοι*. Syntelies were usually formed by grouping *poleis* together and not by severing civic subdivisions from a *polis* to which they formerly belonged (*Schuller* (1974) 58–60). Thus, the presumption is that the five small communities listed after the Erythraioi in the tribute lists were small *poleis* dependent on Erythrai (see the individual entries).

After the battle of Knidos in 394, Erythrai entered into an alliance with Athens (*Diod.* 14.83.3). Diplomatic relations, perhaps in the form of a treaty, are attested in *IG* 11² 108 (366/5). *I.Erythrai* 9 = *Tod* 165 (after 350) concerns an alliance with promise of mutual military assistance between Erythrai and the tyrant Hermias at Atarneus (ll. 15–30).

The earliest attested constitution seems to have been a narrow oligarchy controlled by the Basilidai (*Arist. Pol.* 1305^b18–22), followed by a moderate democracy or a moderate oligarchy in which eligibility for being a *dikastes* was restricted by a census of thirty staters. Cases are initiated by a volunteer prosecutor (*ho boulomenos*), introduced by the *prytaneis*, and heard by a *dikasterion* composed of nine men from each *phyle* (*I.Erythrai* 2A): i.e. twenty-seven *dikastai* altogether if there were three *phylai* (*infra*). No explicit qualifications are prescribed for active participation as a prosecutor in public actions. The decree may have permitted even those who were not full citizens but children of freedmen or foreigners to act as prosecutors (B.14–24 as interpreted by Engelmann and Merkelbach (1972) 28–29), and certain magistrates were presumably selected by lot (2B.25–32; Engelmann and Merkelbach (1972) 29). In, probably, 453/2 a democratic constitution was enforced by Athens by a decree (*IG* 1³ 14) which stipulates that the 120 members of the *boule* are to be selected by lot (ll. 8–9).

Immediately before the Athenians passed their regulations for Erythrai, in response to the defection of that city from the Delian League, the city must have been ruled by a pro-Persian, oligarchic faction, perhaps for as limited a period as that which separates the two inscriptions *I.Erythrai* 2 and *IG* 1³ 14. This may be inferred from the Athenian regulations for Erythrai (*IG* 1³ 14), in which the previous regime in Erythrai is referred to as *tyrannoi* (l. 33). It is not known to what extent the regulations of *IG* 1³ 14 were implemented. In the beginning of C4 there was a

democracy in place in Erythrai (Tod 106 = *I.Erythrai* 6); but an Athenian decree of c.387 testifies to a *stasis*, probably between oligarchs who control the city and democrats in control of the territory. The decree anticipates the democrats' conquest of the town (*SEG* 26 1282; see Gehrke, *Stasis* 68). An oligarchic constitution can be assumed for C4l: no assembly is attested in a C4m citizenship decree (*I.Erythrai* 8 = Tod 155), and a decree is passed by the *boule* on the proposal of *strategoí*, *prytaneis* and *epimeneioi* (*SEG* 31 969 (351–344)). An undated decree (*I.Erythrai* 10) providing for amnesty between Erythraians in the city and exiles (presumably democrats) is normally placed in the context of the reintroduction of democracy by Alexander the Great (Gehrke, *Stasis* 69).

The eponymous official in C5 Erythrai was the *ἑροποιοῦς* (*I.Erythrai* 1.16–17; *IG* 1³ 14.5; *SEG* 36 1039.29 (c.400)). The assembly is attested in *SEG* 36 1039.7 (c.400); *I.Erythrai* 6.2 = Tod 106 (394) and *I.Erythrai* 21.1 (334–332). *IG* 1³ 14.13–14 suggests that the Erythraians already had a *boule* when the Athenian decree was passed; cf. *I.Erythrai* 2 A20. For the *boule* in C4, see *SEG* 36 1039.6 (c.400); *I.Erythrai* 6.1 (394); Tod 155 = *I.Erythrai* 8.1 (350s); *I.Erythrai* 21.1, 10 (334–332). Among other officials we find the *γραμματεὺς* (*I.Erythrai* 1.2, 3–5, 9, 19 (C5–C4)); a board of *ἐξετασταί* (*I.Erythrai* 1.14 (C5–C4); *I.Erythrai* 21.2–3 (334–332)); a *ταμίης* (*I.Erythrai* 1.7 (C5–C4)); *πρυτάνεις* (*I.Erythrai* 2.29 (C5)); *ἐπιμήνιοι* (*SEG* 31 969.3); *στρατηγοί* (*I.Erythrai* 9.19–21, 21.2 (334–332)); an *ἀγωνοθέτης* (*I.Erythrai* 21.16 (334–332)); and a *ἑροκῆρυξ* (*SEG* 36 1039.9–10 (c.400)). The epigraphic evidence includes several C5–C4 lists recording sales of real estate (*I.Erythrai* 153–54; *SEG* 37 917–19). It is uncertain whether the decree on trade, *I.Erythrai* 15 (C4), was passed by Chios (no. 840) or by Erythrai.

Erythrai granted *proxenia* and citizenship to Konon of Athens and his descendants in 394 (*I.Erythrai* 6.10–13 = Tod 106) and to Maussolos of Mylasa (no. 913) and his descendants in the 350s (*I.Erythrai* 8.6). In C4 *proxenia* was received from Kolophon (no. 848) (*AJP* 56 (1935) 358–79 iv.6). Erythraian *theorodokoi* to host *theoroi* from Argos (no. 347) are attested in *SEG* 23 189.11.3 (330–324).

The civic subdivisions of Erythrai were *phylai* (*I.Erythrai* 2.14 (C5), 14.2 (C4)), *gene* (*SEG* 31 969.16) and presumably also *chiliastyes* (*I.Erythrai* 17 from C5 is interpreted as a decree concerning the local affairs of the *chiliastys* of the Pepronioi; the earliest designation of this local group as a *chiliastys* is *I.Erythrai* 81.14 (C1)). There may have been three *phylai* (Jones, *POAG* 304). For free non-citizens,

see *I.Erythrai* 2B.23–24 (C5), with a distinction between emancipated slaves and “foreigners” and *SEG* 36 1039.12 (c.400).

Athena Polias is mentioned in *I.Erythrai* 208.8–9 (C4e) and 210.1 (C5–C4e). Other communal cults are those of Zeus Agoraios (*I.Erythrai* 2B.8–10), and Apollo and Asklepios (*I.Erythrai* 205 (380–360)). In *I.Erythrai* 21.14 (334–332) the Dionysia are mentioned as an occasion where public honours are to be proclaimed. A festival for Apollo and Asklepios is mentioned in *I.Erythrai* 205.28 (380–360). *SEG* 36 1039.3–4 (c.400) contains evidence for *theopropoi*. *IG* 1³ 14.3–5 suggests a significant Erythraian presence at the festival of the Panathenaia.

Some of Erythrai's public architecture is attested epigraphically: the *prytaneion* (*I.Erythrai* 21.17 (334–332)), the agora (*I.Erythrai* 8.12–13, 10.16 (C4), 151.2, 3, 6, 8, 14 (c.340)) and a stoa (*I.Erythrai* 10.12–13). The earliest phase of the monumental temple of Athena dates back to C8, with rebuilding work in C6 and destruction in c.545. The temple was rebuilt soon after, in the 530s (Mitchell (1985) 83). It is attested epigraphically (*I.Erythrai* 8.14 (350s), 21.20 (334–332)), as are the Herakleion (*I.Erythrai* 21.20–21) and a number of other cult sites mentioned in *I.Erythrai* 151 (c.340), including sanctuaries of Athena (12), Apollo (25), Artemis (34) and Achilles (36). *SEG* 36 1039 (c.400) concerns the construction of a new temple for Aphrodite Pandemos. A theatre is attested from C4l (*TGR* iii. 451), which was apparently still under construction in C3 (*I.Erythrai* 24.32 (277–275)). As for the involvement of the Erythraian government in matters relating to infrastructure, see *I.Erythrai* 151 (c.340): water reservoirs, [ἵ]δρο[δόχεια], may be referred to in l. 1, and an extensive network of public roads through Erythraian territory is attested in this inscription. There are two categories of road: *ὁδὸς δημοσίη* and *ὁδὸς ἀνδροβασμῶς* (Engelmann and Merkelbach (1972) 247). The acropolis is mentioned in *IG* 1³ 15.44 (c.450); and *I.Erythrai* 21 (C4) mentions demolition of the acropolis, to which the honorand Phanes Mnesitheou has contributed. In 1966 there were excavations of Tempelschutt on the acropolis dating from c.670–545 (Mellink (1967) 169). The city walls of Erythrai enclose an area of 135 ha and are dated to C4l, and *I.Erythrai* 22 relates to their construction (Migeotte (1992) 211–13 no. 68; McNicoll (1986) 310 with fig. 156); cf. *Diod.* 19.60.4 for a siege of the city in 315.

Erythrai struck silver and bronze coins in C6–C4. (1) Silver on the Milesian standard, before 480: denominations: didrachm, trihemidrachm, tetrobol, diobol. Types:

obv. naked horseman; *rev.* incuse square containing rosette. (2) Silver, c.480–400: denominations: drachm, trihemiobol, obol, tetartemorion: *obv.* naked man holding horse, or Pegasos, or bull's head; *rev.* incuse square containing rosette; legend: *EPYΘ*. (3) Bronze, C5: *obv.* head of Herakles in lion's skin; *rev.* various types; legend: *EPY*. (4) Silver and bronze, C4: denominations: tetradrachm, drachm, fractions in bronze: *obv.* head of Herakles in lion's skin; *rev.* various types; legend: *EPY* and magistrate's name. (Babelon, *Traité* ii.1. 302–6, ii.2. 1135–42; *BMC Ionia* pp. 116–27; *SNG Cop. Ionia* 554–617). According to Babelon, Erythrai stopped minting coins, as did Chios (no. 840), in 356 and resumed only in the Hellenistic period.

846. Isinda (Isindios) Map 61. Unlocated. Not in *Barr*. Type: C. The toponym, known only from Steph. Byz. 338.14–16, is *Ἰσινδος* or *Ἰσινδα*. However, the name of the site *Ἰσινδα* close to Ephesos captured by Thibron in 391/90 as reported by Diod. 14.99.1 may be due to corruption of the text and may in fact have read *Ἰσινδα* originally (*ATL* i. 493; cf. French (1994) 85–86). The city-ethnic is *Ἰσινδιος*, the collective use of which is attested externally in the Athenian tribute quota lists (*IG* I³ 269.1.30). Isinda was a member of the Delian League. It belonged to the Ionian district and is recorded from 445/4 (*IG* I³ 267.v.16, almost completely restored) to 416/15 (*IG* I³ 289.1.44) a total of nine times, once completely restored, paying a *phoros* of 1,000 dr. (*IG* I³ 280.1.44).

847. Klazomenai (Klazomenios) Map 56. Lat. 38.20, long. 26.45. Size of territory: ? Type: A. The toponym is *Κλαζομεναί, αἱ* (Hdt. 1.142.3; *IG* XII.5 444 no. 27 (C3)). The city-ethnic is *Κλαζομένιος* (*SEG* 28 697.8 = Ager (1996) no. 15 (C4); *IG* II² 9038 (C4)). In C5 Klazomenai is called a *polis* in the urban sense in Hdt. 1.142.3 and Thuc. 8.23.6, and in the political sense in Hdt. 1.141.4, 142.3, 143.3. In C4 it is called a *polis* in the urban sense in Aen. Tact. 28.5, and in the political sense in Tod 113.21 and 38 (391–388) and *SEG* 28 696.3 (C4). The *polis* cognate *polites* is used in Aen. Tact. 28.5. The collective use of the city-ethnic is attested internally on C4 coins (*infra*) and externally in Hipponax fr. 1, West (C6–C5); Hdt. 1.51.2; *IG* I³ 261.1.11, 262.11.17, etc.; Thuc. 8.14.3; Tod 114 = *I.Erythrai* 502.4 (387). For the individual and external use, see Pl. *Ap.* 26D: *Ἀναξαγόρον τοῦ Κλαζομενίου*; Isoc. 4.235 (rC5); *I.Erythrai* 16.10 (C4); *IG* II² 9038 (C4).

The name of the territory was *Κλαζομενία* in *SEG* 28 697.10 = Ager (1996) no. 15; this inscription is an arbitration concerning the territory of Klazomenai and its neigh-

bour(s) carried out by judges from Kos (no. 497) towards the end of C4. It has been suggested by Ager (1991) that Teos (no. 868) is one of the cities which was involved in the dispute. She suggests that, in the inscription, the entire territories of Teos and Klazomenai are defined, starting from the border of Kolophononia (L. 11) in the east and moving westwards on to the isthmus of the Mimas peninsula.

It may be inferred from Ephor. fr. 25 that a location called *Λάμψος* was part of Klazomenian territory; and another settlement, *Σκυφία*, is mentioned in Ephor. fr. 26 = Steph. Byz. 580.5–6. Steph. Byz. calls Skyphia a *πολίχμιον Κλαζομενίων*, but it is uncertain whether this site-classification stems from Ephoros. In Thuc. 8.14.3 and 8.23.6 we are informed that the Klazomenians fortified *Πολίχνα* on the mainland. We do not know if this Polichna was identical with the Erythraian dependency known as Polichne (see *infra* and Gomme *et al.* (1981) 35). At 8.23.6 Thucydides reports that those Klazomenians who had been responsible for the rebellion against Athens retired to *Δαφνούς* after the Athenian conquest of Polichna (see also Thuc. 8.31.2; *IG* I³ 119.5 (407), and *infra*). From Thuc. 8.31.3–4 it appears that the Klazomenians also controlled three neighbouring islands: Drymoussa, Pele and Marathoussa. These islands were used for safe keeping of property.

According to Paus. 7.3.9, the Klazomenians moved their urban centre from the mainland to the adjacent island because of their vulnerability to attacks in the Archaic period (see also Strabo 14.1.36). This is now confirmed by the finds at the site of Chyton (no. 841), identified as the Archaic urban centre of Klazomenai, which show that the settlement was abandoned in C6m.

Klazomenai belonged to the Ionian *dodekapolis* (Hdt. 1.142.3), and Klazomenian representatives acted as judges in the arbitration between Myous (no. 856) and Miletos (no. 854) in 391–388 (Tod 113.21–25). Klazomenai was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* I³ 259.IV.21) to 416/15 (*IG* I³ 289.1.39) a total of eighteen times, once completely restored, paying a *phoros* of first 1½ tal. (*IG* I³ 261.1.11), raised to 5 tal., 2,000 dr. in 427/6 or 426/5 (*IG* I³ 284.6) and to 15 tal. in 416/15 (*IG* I³ 289.1.39). It was assessed for tribute in 425/4 (*IG* I³ 71.1.147) and possibly also in 410/9 (*IG* I³ 100.7: [*Κλαζομ*]ένοι[οι]). Klazomenai defected from the League in 412 and moved the urban centre from the island to Polichna on the mainland (Thuc. 8.14.3); but it was won back by Athens later in the same year. The bulk of the population was moved back to the island, while the anti-Athenian faction fled to Daphnous (Thuc. 8.23.6). A Spartan attempt to

conquer the island failed (Thuc. 8.31.2–3), and the Klazomenians were still allied to Athens in 410 (Xen. *Hell.* 1.1.10–11). A protracted *stasis* between the pro-Spartan and probably oligarchic faction in Daphnous and the pro-Athenian and probably democratic faction in the urban centre on the island (Thuc. 8.31.2–3) was provisionally ended in 407 by a treaty between the Athenians and the faction in Daphnous (IG¹ 119.5 = *I.Erythrai* 501), but the *stasis* continued (Diod. 13.79.1); see Gehrke, *Stasis* 78.

In 387/6 there seems to have been a democratic government in place in Klazomenai, and a treaty with Athens was concluded in 387/6 (Tod 114 = *I.Erythrai* 502) with Klazomenai as a subordinate party. But it is also clear that a *stasis* of some kind had preceded this decree. *Stasis* appears to have been endemic at Klazomenai in C4 (Arist. *Pol.* 1303^b9 and, perhaps, Aen. Tact. 28.5–6). In the King's Peace of 386 Klazomenai is explicitly mentioned as an island belonging to Persia (Xen. *Hell.* 5.1.31), but, *pace* Gehrke, *Stasis* 79, there is no compelling evidence that a tyranny or a narrow oligarchy was set up by Python when he conquered Klazomenai in C4m (Aen. Tact. 28.5–6). The only unquestionably attested public enactment is a *psephisma* of C4l: SEG 28 696.6, moved by a board of *timouchoi* (l. 1) and implying that the Klazomenians levied taxes on imports and exports (l. 5).

Hierokleides of Klazomenai received *proxenia* from Athens (no. 361) in 424/3 (IG¹ 13 227). Klazomenian *theorodokoi* to host *theoroi* from Argos (no. 347) are attested in SEG 23 189.II.1 (330–324). A cult of Athena Polias may be attested for Klazomenai: Oikonomos (1921) 74 reported on an inscription which he found in a sanctuary on the island. He did not give a transcript of the text, but his description suggests that the goddess worshipped on the small acropolis on the island may have been Athena Polias.

There was a Klazomenian treasury in Delphi (Hdt. 1.51.2). According to Diod. 15.18.2, Kyme (no. 817) and Klazomenai consulted the oracle at Delphi in 383, shortly after the death of Tachos, in connection with their dispute over Leukai (no. 819), which contained an Apollo sanctuary. An Olympian victor, Herodotos of Klazomenai, is attested in Paus. 6.17.2 (C4 according to RE s.v. Herodotos 1, but not in *Olympionikai*). For a Klazomenian victor in the Pythia, see SEG 18 214 (C4–C3). SEG 18 214 is a communal dedication by the Klazomenians at Delphi (C4–C3).

Like other Ionian cities, Klazomenai may have been walled in the Archaic period (Hdt. 1.162.2). On the mainland site that housed the urban centre of Archaic Klazomenai there are C6 walls around the acropolis (Mellink (1983) 440).

The island settlement was unfortified in 411 (Thuc. 8.31.3). Aen. Tact. 28.5–6 describes a stratagem by which Python of Klazomenai gained control over the city by making wagons stop in the gates, thereby allowing his forces to enter. The episode may belong in C4 after the King's Peace (Gehrke, *Stasis* 79; Whitehead (1990) 179). Cook (1953–54) 151 described the walls of the island settlement as of massive square masonry with backing containing plenty of black glazed pottery of the early and middle C4. Both the mainland site and the island settlement have been under excavation during the 1980s and 1990s, but so far most finds await publication.

Klazomenai minted coins of electrum, silver and bronze from C6 to C4. A silver drachm was found in the Asyut coin hoard, dating from 499–494 (Price and Waggoner (1975) 85). (1) Electrum and silver on the Phoenician standard, C6–C5; denominations: didrachm, drachm, diobol. Types: *obv.* forepart of winged boar; *rev.* quadripartite incuse square. (2) Silver on the Attic standard, C5; denominations: hemidrachm, diobol: *obv.* forepart of winged boar, or head of Athena; *rev.* incuse square with Gorgoneion, or ram's head; legend: *KΛΑ*. (3) Silver on the Attic standard, C4; denominations: drachm, hemidrachm: *obv.* head of Apollo slightly facing; *rev.* swan; legend: *KΛΑ* or *KΛΑΖΟ* and magistrate's name. (4) Bronze, C4: *obv.* head of Athena (or occasionally head of Apollo); *rev.* ram, or swan; legend: most have magistrate's name, some also *KΛΑ*, *KΛΑΖΟ* or *KΛΑΖΟΜΕΝΙΩΝ*. (5) The satrap Orontas, c.362: *obv.* bearded head in satrapal tiara; legend: *K*; *rev.* forepart of winged boar; legend: *ΟΡΟΝΤΑ*. (Head, *HN*² 567–68; *BMC Ionia* 17–26; *SNG Cop. Ionia* 1–91. For the controversy surrounding the coin hoard of electrum stateres at Klazomenai in a sealed jar in a 580s context, see Le Rider (1994)).

The Klazomenians were the original colonisers of Abdera (no. 640), according to Hdt. 1.168; they were also co-colonisers of Naukratis (no. 1023) in the reign of Amasis (Hdt. 2.178).

848. Kolophon (Kolophonios) Map 61. Lat. 38.05, long. 27.10. Size of territory: unknown but, including Notion (no. 858), at least 4. Type: A. The toponym is *Κολοφών* (IG¹ 37.9 (c.425) (cf. *infra*); *PEP Kolophon* 5.35 (311–306)) either ἡ (Mimnermos fr. 9, West) or ὀ (Strabo 14.1.28). The city-ethnic is *Κολοφώνιος* (IG¹ 266.1.10; Xen. *Hell.* 1.2.3) or *Κολοφωνίτης* (IG¹ 261.v.10). The mercenary's signature from Abu Simbel has *φολοφώνιος* (ML 7f (591)). In C5 Kolophon is called a *polis* in the urban sense in Thuc. 3.34.1,

2, and in the political sense in Hdt. 1.141.4, 142.3–4, 143.3. In C4 it is called a *polis* in the urban sense in *PEP Kolophon* 6.1.9, 19 (311–306), and in the political sense in *PEP Kolophon* 4.29, 82, 86 (311–306). The *polis* cognate *polites* is used in *PEP Kolophon* 1.5, 6.28 (311–306). A *Κολοφωνίων πολιτεία* was included among the 158 Aristotelian constitutions (fr. 520.1–2). The verb *πολιτεύειν* is found in Thuc. 3.34.2. Hdt. 1.14.4 applies the word *asty* to the urban centre of Kolophon. The word *patris* is used of Kolophon in Hdt. 1.150.1 and *SEG* 35 1125.3 (c.300). The collective use of the city-ethnic is attested internally in *PEP Kolophon* 6.9 (311–306) and on C5 coins (*infra*) and externally in Hdt 1.147.2; Thuc. 3.34.1; Xen. *Hell.* 1.2.3; *PEP Kolophon* 16 (a C4 inscription found in Byzantion, perhaps commemorating a public slave of Kolophon). The individual and external use of the city-ethnic is attested in ML 7f (591); Pind. fr. 188, Bergk; *IG* 1³ 65.9 (427/6) and 1347 (C5 tombstone set up at Athens).

The name of the territory is *Κολοφωνία* (*SEG* 28 697.10 = *Ischr. Cos* ED 174). This text may relate to an arbitration between Teos (no. 868) and Klazomenai (Ager (1991)); and if Ager's interpretation is accepted, this inscription shows that Kolophonian territory bordered on the territories of Teos and Klazomenai (no. 847) in the west (see also Ager (1996) 67–69 no. 15). The northern and eastern boundaries of Kolophonian territory in the Archaic and Classical periods are unknown. In *PEP Kolophon* 6 (C4) the territory (*chora*) and urban centre (*polis*) are mentioned. The territory of Kolophon contained Klaros with its Apollo sanctuary and the harbour town Notion (Thuc. 3.34.1: *Νότιον τὸ Κολοφωνίων*); see Notion (no. 858).

The history of Kolophon begins c.700 with a *stasis* between two factions. One of the factions emigrated to Smyrna, then an Aeolian city, but subsequently the Kolophonians expelled the Smyrnaians and had Smyrna turned into an Ionian city (Hdt. 1.16.2, 150.1–2; see Smyrna (no. 867)). C.660 Kolophon was conquered by Gyges of Lydia (Hdt. 1.14.4). According to Arist. fr. 601 and Timaios (*FGrHist* 556) fr. 56, Siris (no. 69) in southern Italy was founded by colonists from Kolophon, and a combination of the sources has led to the view that these colonists left Kolophon because of Gyges' conquest (Demand (1990) 31–33; *supra* 293). *Theognidea* 1103, West, suggests that Kolophon was destroyed in a way similar to Smyrna (no. 867) and Magnesia (no. 852). It is uncertain whether the destruction of Kolophon was connected with Gyges' conquest or should rather be connected, e.g., with the story that Alyattes of Lydia had all the Kolophonian knights killed (Polyaen. 7.2.2). Kolophon

belonged to the Ionian *dodekapolis* (Hdt. 1.142.3) and must have been under Persian rule from the 540s.

In C5 Kolophon was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* 1³ 259.III.21) to 416/15 (*IG* 1³ 289.I.40) a total of sixteen times, four times completely restored, paying a *phoros* of first 3 tal. (*IG* 1³ 259.III.21), reduced to 1½ tal. in 446/5 (*IG* 1³ 266.I.10), raised to 3 tal. in 432/1 (*IG* 1³ 280.I.38) and reduced to 500 dr. in 428/7 (*IG* 1³ 283.III.24). It was assessed for tribute in 425/4 (*IG* 1³ 71.I.135).

In 430 Kolophon was conquered by the Persians in consequence of a *stasis* between the citizens. The Kolophonians living in the city fled and settled in Notion (no. 858). The *stasis* flared up again, and the city of Notion was divided into two sections separated by a wall. One part, described as a *teichos*, was inhabited by Medising Kolophonians and Notieis who now united and formed a political community. The other part of the city was inhabited by the opposite faction of Kolophonian immigrants (and, undoubtedly, some Notieis). In 427 they invited an Athenian squadron under Paches. The Athenians conquered the *teichos*, expelled the Medising Kolophonians, gave Notion to the other Kolophonians, and later sent a contingent of Athenian colonists supplemented with Kolophonians from all *poleis* (Thuc. 3.34.1–4). This incident is reflected in the Athenian tribute lists, where the *phoros* paid by Kolophon is reduced from 3 tal. in 432/1 to 500 dr. paid in 428/7 and the following years down to 416/15 (*supra*). For corresponding variations in Notion's payments, see *infra* 1089. An undated C5 treaty between Athens and Kolophon with Kolophon as a subordinate party (*IG* 1³ 37, cf. 42–43) must belong in this context too, since it regulates the relations between the Kolophonians and the Athenian colonists (ll. 20, 23, 42). In the following period Notion and Kolophon are both listed side by side as members of the Delian League, *viz.* in 428/7 (*IG* 1³ 283.III.23–24), 421/0 (*IG* 1³ 285.I.40–41) and 416/15 (*IG* 1³ 289.I.40–41). Thus, both persisted as separate political communities, but inland Kolophon was still in Persian hands and was not reconquered by the Athenians until 409 (Xen. *Hell.* 1.2.4). It is unknown whether, from 427 to 409, the communities of the Kolophonians and Notieis were both centred on Notion, or whether a New Kolophon-at-Sea was founded, a community that remained distinct from the community of the Notieis who occupied the harbour of Notion; see Piérart (1984) 168–71, pointing out that the Kolophon mentioned in *IG* 1³ 37.9 is probably the New Kolophon, inhabited by the Kolophonians and the Athenian colonists. Following Mattingly (1966) 210–12 = (1996)

174–78, 372–74, Piérart prefers a low dating of *IG* 1³ 37, 42–43, *contra* *IG* 1³ pp. 40–41 followed by Gehrke, *Stasis* 80.

According to Arist. *Pol.* 1290^b14–17, Kolophon had been an oligarchy before their war against the Lydians; but the oligarchy was of a peculiar kind, in so far as those citizens who met the property qualifications outnumbered those who did not. It is normally assumed that Kolophon continued as an oligarchy well into C5m (Gehrke, *Stasis* 80). The “New Kolophon” founded by Athenian colonists and Kolophonians in the 420s was democratic (*IG* 1³ 37.47–49; Thuc. 3.34.4). Very little is known about Kolophon’s history in C4. Gehrke, *Stasis* 81–82 assumes that it had an oligarchic constitution, introduced after the King’s Peace and replaced with a democracy by Alexander (*PEP Kolophon* 6 (311–306)).

Civic subdivisions of Kolophon in the Archaic and Classical periods are unattested apart from *gene*, for which see Robert (1936) 163–64, who discusses the use of *gene* designations in *PEP Kolophon* 6 (311–306).

A νόμος Κολοφονίων is referred to in the heavily restored inscription *IG* 1³ 37.43 (447/6). In C4 the eponymous official of Kolophon was the πρύτανις (*PEP Kolophon* 6). Evidence of the assembly is found in *PEP Kolophon* 1 (a C4l probouleumatic decree) and 6, with mention of an ἐκκλησία κυρία (l. 32). The Kolophonian *boule* is attested in *PEP Kolophon* 1 and 6. Officials connected with council and assembly are the ἐπιμήνιοι (*PEP Kolophon* 4 (311–306)) and the πρόεδροι (*PEP Kolophon* 8 (C4–C3)); see Rhodes, *DGS* 357. Other officials attested epigraphically are the καρπολόγος (*PEP Kolophon* 6) and the board of πωλήται (*PEP Kolophon* 4). For a Kolophonian embassy, see *IG* 11² 456.22–28 (307/6). In C4l the Kolophonians bestowed *proxenia* and citizenship on two citizens of Erythrai (no. 845) (*AJP* 56 (1935) 358–79 iv.5–6 = *PEP Kolophon* 1). Kolophonian *theoroi* may be attested in *IG* 1³ 43.14 and 22 (435–427).

Kolophon controlled ownership of land, as evidenced in the citizenship decree *PEP Kolophon* 5 (311–306), mentioning γῆς ἔγκτησιν καὶ οἰκίας. The same decree contains evidence for liturgies and *eisphora*, also levied on metics (ll. 12–15). The verb μετοικεῖν is used in ll. 10–11. Other evidence for free non-citizens resident in Kolophon is provided by *PEP Kolophon* 6 (311–306), in which responsibility is placed on ten commissioners for raising funds from foreigners, χρήματα ξενικά. The list of individual contributors to the wall-building programme testifies to a large number of free foreigners residing at Kolophon, some registered with their city-ethnic (*Abderites*, etc.) or other ethnic (*Makedon*, etc.) (see also Robert (1936) 162 n. 2), some just

called *metoikoi* (372–73, etc.), perhaps manumitted slaves who were perceived differently from those immigrants who insisted on keeping their original civic identity.

The cult of Athena Polias is attested in *PEP Kolophon* 6. Public festivals are attested in *PEP Kolophon* 1 (C4l), in which the honorands receive the privilege of προεδρίαν ἐν τοῖς ἀγῶσιν. For the Kolophonian calendar, see Trümper, *Monat.* 99–100 §86.

Hermesianax of Kolophon was a victor in the Olympic Games in 320 (*SEG* 35 1125.3 with Paus. 6.17.4 = *Olympionikai* no. 475.). A Kolophonian victor in the Oropian Games is attested for C4 (probably between 366 and 338) in *IG* VII.414.16. *IG* 11² 456 b.4–8 records a dedication of a wreath to Athena by the *demos* of Kolophon (307/6).

The remains of Kolophon excavated by Holland and published in 1944 are not easy to interpret; see Hoepfner and Osthus in Hoepfner *et al.* (1999) 280–91. C.311–306 the “old” Kolophon was merged with a new and larger urban centre (*PEP Kolophon* 6). It appears that, in connection with the joining together of the two urban centres, the buildings in the old centre were to be either privatised or demolished along with the old agora (l. 26). It may be inferred from the participle καταβάντας (l. 14) that the old city was located at a lower level than the C4 settlement; but its precise location cannot be determined. Holland found evidence for C7 structures close to a C4 stoa and another structure, also C4, which he interpreted as the Metroon. The Metroon is also attested epigraphically (*PEP Kolophon* 5). Miller (1978) 109–12, 127–28 classifies the building as a *prytaneion* annex. Hoepfner and Osthus (in Hoepfner *et al.* (1999)) conclude that the Archaic city must have been located on the slope of the acropolis, *pace* e.g. Migeotte (1992) 217, who follows Holland’s (1944) suggestion that the old city was located in the plain to the north-east of the acropolis. In *PEP Kolophon* 6 temples in the old city are referred to generally, and in 16–18 there is specific reference to altars for Zeus Soter, Poseidon Asphaleios, Apollo Klarios, Meter Antaie, Athena Polias and “the other gods and heroes”.

PEP Kolophon 6 concerns a great project of fortification which served in part to reunite the site of current habitation with the old (and apparently abandoned) urban centre of Kolophon (Migeotte (1992) 214–23 no. 69). Some fortificatory structures were clearly already in existence (22–23); but it is not clear if these fortifications enclosed the old or the new settlement; see de la Genière (1994). The circuit of “New” Kolophon encloses an area of 80+ ha (Hoepfner *et al.* (1999) 284).

Urbanisation may have taken place quite early at Kolophon: Hdt. 1.15.1 refers to Gyges' conquest of the *asty* of Kolophon in C7. Remains of an early Archaic settlement (C7) have been found on the slope of the acropolis (Holland (1944)).

Kolophon struck coins of silver and bronze from C61 throughout C5 and C4. The earliest silver types: (1) c.525–490 on the Persian standard: denominations: hemiobol, trihemitetartemorion, tetartemorion: *obv.* head of Apollo facing; *rev.* incuse square; legend: *HM, TPI, TE* indicating denomination. (2) C5 on the Persian standard: denominations: drachm, trihemiobol, quarterobol: *obv.* Artemis laureate, or Apollo laureate; legend: *KO* or *KOΛΟΦΩΝΙΟΝ* or *KOΛΟΦΩΝΙΩΝ*; *rev.* lyre within incuse square; legend sometimes on *rev.* Silver and bronze, c.389–330 on the Rhodian standard: denominations: tetradrachm, drachm, hemidrachm, diobol and fractions in bronze: *obv.* head of Apollo laureate; *rev.* lyre, or tripod; legend: *KOΛΟ* or *KOΛΟΦΩ* or *KOΛΟΦΩΝΙΟΝ* and magistrate's name (Head, *HN*² 569–70; *BMC Ionia* 36–40; *SNG Cop. Ionia* 133–48).

For the Kolophonian foundation of Siris (no. 69) in southern Italy, see *supra* 1078.

849. Korykos (Korykaios) Map 56. Lat. 38.10, long. 26.35. Size of territory: unknown but probably 1 or 2. Type: C. The toponym *Κώρυκος*, ὄ (Thuc. 8.14.1, 33.2, 34) designates primarily the mountain in the southern part of the territory of Erythrai (no. 845) (Thuc. 8.33.2; Hecat. fr. 231) but also a homonymous community, described by Ephor. fr. 27 as a *polismation* (Barr. records the mountain but not the settlement). The city-ethnic is *Κωρυκαῖος* (Ephor. fr. 27; Strabo 14.1.32). Korykos was located in Erythraian territory (Thuc. 8.33.2), and it had another small community, Myonnesos (no. 855), as its neighbour (Ephor. fr. 27). On the coast along the foot of the mountain were a row of small harbours, which were all nests of pirates (Ephor. fr. 27; Strabo 14.1.32). Korykos seems to have been one of them. The collective use of the city-ethnic is attested in an external context in Ephor. fr. 27 and in a proverb quoted by Strabo 14.1.32. A controversy surrounds some Imperial coins which may or may not have been minted by this community (see Imhoof-Blumer (1902) 463 versus von Aulock (1968) versus Robert (1981) 352 n. 42).

850. Lebedos (Lebedios) Map 61. Lat. 38.05, long. 27.00. Size of territory: probably 2 or 3. Type: A. The toponym is *Λέβεδος*, ἦ (Thuc. 8.19.4; Strabo 14.1.29). The city-ethnic is *Λεβέδιος* (Michel 484.2–3 (C41)). Lebedos is attested as a

polis both in the urban sense (Hdt. 1.142.3) and in the political sense (Hdt. 1.141.4, 142.3, 143.3; Tod 113.26, 39 (391–388); *Syll.*³ 344.19 (c.303)). The collective use of the city-ethnic is attested internally on C2 coins (Head, *HN*² 580) and externally in *IG* I³ 71.1.138, 263.11.6, 266.1.13; Tod 113.26 (391–388); *Syll.*³ 344.6 (c.303). Lebedos belonged to the Ionian *dodekapolis* (Hdt. 1.142.3), and its representatives participated in the C4 arbitration between Miletos (no. 854) and Myous (no. 856) (Tod 113.26). It is also clear from Michel 484 that in C41 the Lebedians were part of the Ionian association, presumably with representatives in the common Ionian *boule*.

Lebedos was a member of the Delian League. It belonged to the Ionian district and is recorded from 451/50 (*IG* I³ 262.11.32) to 430/29 (*IG* I³ 281.1.42, mostly restored) a total of eleven times, four times completely restored, paying a *phoros* of 3 tal. down to, probably, 447/6 (*IG* I³ 265.1.33) and thereafter 1 tal. (*IG* I³ 266.1.13). It was assessed for tribute in 425/4 (*IG* I³ 71.1.138). It revolted in 411 (Thuc. 8.19.4).

The most important evidence for Lebedos is *Syll.*³ 344, which contains Antigonos I's instructions concerning the synoecism of Lebedos (c.303). The decree is difficult to use retrospectively, but it can be inferred from l. 21 that Lebedos had issued grants of *proxenia*. *Theorodokoi* of Lebedos to host *theoroi* from Argos (no. 347) are attested in *SEG* 23 189.11.6 (330–324).

Michel 484.1–9 refers to a lawsuit concerning the priesthood of Zeus Boulaios and Hera, in which the Lebedians were involved. It is possibly an inter-*polis* dispute over a common Ionian priesthood.

In Antigonos I's instructions on the proposed synoecism of Teos and Lebedos, *Syll.*³ 344.24–26 (c.303), it is assumed that *symbolaia* exist between the two cities, and that each of them has its own laws.

The eponymous office of *πρύτανης* mentioned in Michel 484.1 and 10 may have pertained to Lebedos, as argued by Magnetto (1997) 63, rather than to Priene (no. 861), as has normally been assumed.

The walls of Lebedos were described by G. Weber (1904) 229, who did not attempt to date the fortification. It is presumably Hellenistic.

851. Leukophrys Map 61. Lat. 37.50, long. 27.30, but see *infra*. Size of territory: ? Type: A. The toponym is *Λεύκοφρυς* (Xen. *Hell.* 3.2.19). This community, which, in Classical sources, is attested only in two passages in Xen. *Hell.*, is called a *polis* in the urban sense at 4.8.17. It was located in the Maiandros valley, and contained a

famous sanctuary of Artemis (3.2.19). It may have been situated at the site of the refounded Magnesia on the Maiandros (thus *Barr.*), but this cannot be determined with certainty.

852. Magnesia (Magnes) Map 61. Location before 399 unknown, after 399: lat. 37.50, long. 27.30. Size of territory: ? Type: A. The toponym is *Μαγνησίη*, ἡ (Hdt. 1.161, 3.122.1, 125.2) or *Μαγνησία* ἡ *Ἀσιανή* (Thuc. 1.138.5, 8.50.3). The city-ethnic is *Μάγνης* (*IG XII.6 35.3* (C4l); cf. Shipley (1987) 163), to which Hdt. 3.90.1 adds *ὁ ἐν τῇ Ἀσίῃ*. In C4 Magnesia is called a *polis* both in the urban sense (Ps.-Skylax 98: *πόλις Ἑλληνίς*; cf. also Diod. 14.36.3 (r400)) and in the political sense (*SEG 14 459.7* (C4l/C3e)). The collective use of the city-ethnic is attested both externally (Archil. fr. 20, West; *Theognidea* 603, 1103, West) and internally on C4m coins (*infra*) and in inscriptions (*I.Magnesia 2.13* (C4l)). The individual and external use of the city-ethnic is attested in *IG XII.6 35.3* (C4l) and *CEG II 855* (C4l/C3e), which also uses *patris* about the community.

In Hdt. 3.90.1, the Magnesians of Asia are mentioned alongside the Ionians and Aioliens, and they seem to have been regarded as a group apart. According to *SEG 14 459.7–9* (= *CEG II 855* (C4l/C3e)), Magnesia was founded from Thessaly. Presumably in C7, Magnesia waged war against Ephesos (no. 844) (Kallinos fr. 3, West). A physical destruction of Magnesia by the Kimmerians in C7 is related by Strabo 14.1.39–40, who cites Archilochos (fr. 20, West) as corroboration. He also claims that Miletos (no. 854) annexed the site, but it is not known for how long the Milesians were left in control. Hdt. 1.161 shows that the city had been rebuilt by 547/6, when it was plundered by Mazares and subjected to Persia.

The city remained under Persian control even after the establishment of the Delian League: the Persian king granted tax-levying rights at Magnesia to Themistokles during the latter's exile (Thuc. 1.138.5). When Astyochos approached Tissaphernes in connection with Alkibiades' intrigues in 411, Tissaphernes was apparently based in Magnesia (Thuc. 8.50.3). The city was under the control of Tissaphernes in 400 when it was captured by Thibron. When Thibron failed to take Tralleis, he returned to Magnesia, and because the city was unfortified, he decided to relocate it to a mountain nearby called Thorax (Diod. 14.36.2–4).

Very little is known about the constitution of Magnesia. The Aristotelian collection of constitutions included a *Magneton politeia* (Heracl. Lemb. 50; Arist. no. 106), and at

Pol. 1289^b38–40 Aristotle mentions the importance of the cavalry of Archaic Magnesia as an illustration of his claim that communities dependent on such forces tended to have an oligarchic constitution. But Magnesia was evidently a democracy in late C4 (*I.Magnesia 1* and 2).

I.Magnesia 1 (C4) and 2 (C4l) are both public enactments passed by the Magnesian assembly (2.8–9: *ἔδοξε τῇ βουλῇ καὶ τῶι δήμῳ*). The eponymous official of Magnesia in C4l was the *πρότανις* (2.2–3). The Magnesian *boule* is attested in *I.Magnesia 2.8* (cited *supra*) in a probouleutic capacity. A *grammateus* (of the *boule*?) is attested in 2.7. A Magnesian *theorodokos* to host *theoroi* from Argos (no. 347) is attested in *SEG 23 189.II.11* (330–324). The months *Ἀγνητιῶν* (*I.Magnesia 1.3*) and *Παλλειῶν* (*I.Magnesia 2.3*) are attested for C4. Both are untypical of Ionian calendars (Trümper, *Monat.* 110–11 §94). A Magnesian victor in the Olympic Games is attested in C5l (*Olympionikai* 329), another in 344 (*Olympionikai* 449), and one in the Pythian Games is attested in C4–C3 (*SEG 14 459*).

The citizen body of Magnesia was subdivided into *phylai* in C4 (*I.Magnesia 2.4*). The names of five *phylai* are attested in inscriptions of C3f (*I.Magnesia 2.5, 6, 9, 11*), and all five are named after the Olympian gods (Ares, Aphrodite, Hermes, Hestia and Zeus). Thus, Magnesia may already in the Classical period have had all twelve *phylai* named after the twelve Olympian gods (Jones, *POAG* 315–17). *Proxenia* and probably also citizenship were given to the Makedonian Apollonophanes (*I.Magnesia 2* (C4l)). A grant of *enktesis* is given in *I.Magnesia 2.15*, and Magnesian tax-levying powers may be inferred from the grant of *ateleia* in *I.Magnesia 2.15–16*. Resident free non-citizens are attested in the C4 funerary monuments *I.Magnesia 258* (*Ἀχαιός*) and 259 (*Σαμίη*).

The agora of C5 Magnesia is attested in Thuc. 1.138.5. The sanctuary of Artemis Leukophryene (Xen. *Hell.* 3.2.19) presumably lay within the urban centre of the relocated Magnesia (*supra*). Foundations dating back to C6e have been discovered beneath the Hellenistic Artemision.

The earliest attested coinage is a C5m silver didrachm on the Attic standard bearing the name Themistokles (*BMC Ionia* 158). Types: *obv.* Apollo standing, holding olive branch; legend: *ΘΕΜΙΣΤ[ΟΚ]ΑΕΟΣ*; *rev.* eagle with spread wings, border square of dots; legend: MA. From C4m Magnesia struck coins of silver and bronze. (1) Silver: denominations: tetradrachm, didrachm, drachm and fractions down to obol: *obv.* horseman holding spear; *rev.* humped bull; legend: magistrate's name and *ΜΑΓΝ* or,

sometimes, *ΜΑΓΝΗΤΩΝ*, all in maeander pattern. (2) Bronze: *obv.* Apollo laureate; *rev.* maeander pattern; legend: magistrate's name and *ΜΑΓ*. (Head, *HN*² 381–82; Babelon (1930) 45; *SNG Cop. Ionia* 802–43.)

853. Marathesion (Marathesios) Map 56. Lat. 37.50, long. 27.15. Size of territory: probably 1. Type: C. The toponym is *Μαραθήσιον*, *τό* (Ps.-Skylax 98). The city-ethnic is *Μαραθήσιος* (*IG* I³ 270.1.6 (442/1)). In the Archaic and Classical periods this community is attested only in the Athenian tribute lists and in Ps.-Skylax 98, who unfortunately offers no site-classification.

From *I.Priene* 37.57–58 (C2) it appears that Samos (no. 864) claimed to have received Marathesion from Miletos (no. 854) after the Meliac War (c.700), and according to Strabo 14.1.20 Ephesos (no. 844) later received Marathesion from the Samians in return for Anaia (no. 838). The date of this transfer cannot be determined. Thus, Marathesion seems to have been a dependent *polis* first under Miletos, then under Samos, and finally under Ephesos.

Marathesion was a member of the Delian League. It belonged to the Ionian district and is recorded from 443/2 (*IG* I³ 269.1.5, completely restored) to 415/14 (*IG* I³ 290.1.28) a total of seven times, twice completely restored, paying a *phoros* of first 3,000 dr. (*IG* I³ 270.1.6), but 2,000 dr. from 433/2 on (*IG* I³ 279.1.16).

854. Miletos (Milesios) Map 61. Lat. 37.35, long. 27.15. Size of territory: 5. Type: A. The toponym is *Μίλητος*, *ή* (Hecat. fr. 240; Thuc. 8.27.6; *Syll.*³ 273.8 (C4s)). The city-ethnic is *Μιλήσιος* (Hdt. 2.179.1; *Syll.*³ 273.5 (C4s)). The earliest reference to Miletos as a *polis* is in *Hymn. Hom. Ap.* 180 (*Μίλητων ἔχρεις ἔναλον πόλιν* (C8–C6?)), where *polis* is used in the urban sense. In C5 Miletos is called a *polis* both in the urban sense (Hdt. 6.20; Thuc. 8.25.4) and in the political sense (Hdt. 5.29.2; *Milet.* vi.1 187.7 = ML 43). In C4 again, both the urban sense (*OGIS* 213.10 (c.300)) and the political sense (Xen. *An.* 1.1.6; *Syll.*³ 1002.5 = *LSAM* 44 (c.400)) are attested. *Polisma* is found at Hdt. 6.6; for the idiom used, see Hansen (1995) 61 n. 154. The *polis* cognate *politeia* (citizenship) is used in *SEG* 38 1193.8 (330–320), in which there may also be an attestation of the word *polites* (pl.) in l. 5. The Aristotelian collection of constitutions may have included a *Milesion politeia* (Arist. no. 116), but the evidence adduced by Gigon is rather slim. The word *asty* is used about the urban centre of Miletos in Hdt. 5.29.2 and 5.92.ζ.2; and Hdt. 5.99.2 uses *astos* about the citizens. The collective use of the city-ethnic is attested internally in *Milet.* 1.3 135.5 = *Syll.*³ 273

(C4) and externally in Demodokos fr. 1.1, West (C6?); Hdt. 4.137.2; Xen. *An.* 1.1.11; *IG* I³ 21.67; and Tod 195.1 (c.330). The individual use of the city-ethnic is attested externally in Hdt. 4.137.1; Xen. *Hell.* 2.1.30; *IG* I³ 1356 (C5); and *SEG* 35 942 (Chios (C4)).

The name of the territory is *ή Μιλησίη* (-a) (Hdt. 1.17.2; Thuc. 8.26.3). It was large and diverse and may have been as much as 2,000 km² (Burford (1993) 19; Lohmann (1995), (1997), (1999); cf. Mitchell (1999) 154 for a summary). There were four distinct parts: Milesia itself (the limestone peninsula on which the city was situated on the northern side); Mt. Grion (the upland area to the east of Milesia); the lower Maiandros valley (then on the opposite shore of the Gulf of Latmos, controlled by Miletos perhaps as far as Magnesia); and the Milesian islands (Leros, Patmos, Lade, Pharmakoussa and probably also Lepsia). The physical distinction between different parts of Milesian territory may be reflected in Hdt. 6.20 (*τῆς δὲ Μιλησίων χώρας . . . τὰ περὶ τὴν πόλιν καὶ τὸ πεδίον, τὰ δὲ ὑπεράκρια*). The territory comprised a number of named locations: Assesos (Hdt. 1.19.1), Didyma/Branchidai (Hdt. 1.46.2, 157.3) and the harbour Panormos (Hdt. 1.157.3). The city also controlled some areas in the Maiandros valley (Hdt. 1.18.1). As for Milesian state control of Didyma, see Hdt. 5.36.3; the scholar Hekataios reportedly suggested fund raising for the revolt against the Persian king by appropriating the temple treasures donated by Kroisos. Discussing the Archaic period, Tuchelt (1988) 433 n. 55 distinguishes—somewhat anachronistically—between zones of Milesian influence, directly controlled areas, and communities that belonged to a Milesian “federation” (*Staatsverband*).

Assesos (modern Mengerevtepe; Lohmann (1995) 311) is known from Herodotos' account of the destruction of the sanctuary of Athena Assessia by Alyattes (1.19–21). The location of the sanctuary is epigraphically attested by a C6 dedication (Herrmann (1995) 288–92; cf. Wachter (1998)). Lohmann (1995) 313–14 reports that sondages in the temple carried out by von Graeve in 1993 confirm the report of Hdt. 1.19.1 of the destruction of the temple in the twelfth year of Alyattes' reign (608 or 598 or 594), and a further sondage revealed layers pointing to a second destruction by the Persians in 494. The sanctuary seems to have lost its significance after the second destruction. Assesos was surrounded by a C5s wall (2 m wide) with three towers and a gate protecting not only the settlement itself, but also the coastal part of the Milesian *chora* as a whole (Lohmann (1995) 314–21).

Teichioussa: the toponym is *Τειχιόση* (*I.Didyma* 6.1) or *Τειχιούσσα* (Thuc. 8.26.3, 28.1; *IG* I³ 71.1.122). The only pos-

itive indication pointing to Teichioussa as a proper (dependent?) *polis* is *I.Didyma* 6.1, in which a *Τειχιόσης ἀρχός* is attested. However, he may have been a Milesian official who was in charge of the settlement. The *polis* status of Teichioussa in the Archaic period cannot be ascertained (see Gehrke (1980) 30 n. 78, who leaves open the possibility that Teichioussa became fully integrated into Milesian territory only after the return of the democrats who had formed a splinter community there in C5). It is clear that if Teichioussa had ever been a *polis* in its own right in the Archaic period, it certainly was not a member of the Delian League in its own right: in 454/3 Teichioussa provided a temporary home to Milesian democrats loyal to Athens (*IG* I³ 259.vi.21–22: [Μι]λέσιοι [ἐκ Τ]ειχιόσσε[ς]). In later years Leros and Teichioussa are recorded by toponym after the Milesioi, and the payment recorded for all three amounts to 10 tal. (*IG* I³ 284.15–17 (427/6 or 426/5), 285.1.88–90 (421/0) and 489.1.36–38 (416/15)). In 411 Teichioussa was definitely part of Milesian territory (Thuc. 8.26.3: *Τειχιούσσαν τῆς Μιλησίας*). Voigtländer (1986) 627 describes remains of fortifications and housing complexes dating from between 750 and 550. He also reports on the remains of an Archaic city wall, and he concludes on the basis of finds of Attic ceramic that the site was inhabited in C5m (ibid. 629–30). In a C4 source Teichioussa is explicitly classified as a *kome* (Archestratos fr. 42).

Leros: the toponym is *Λέρος*, ἡ (Hdt. 5.125; Thuc. 8.26.1, 27.1; *IG* I³ 284.16). There is also an attestation of the collective and individual use of what may have been a city-ethnic, *Λέριος* (Demodokos fr. 1–2, West (C6?). In 454/3, like Teichioussa, Leros provided a temporary home to Milesian democrats loyal to Athens and paid a *phoros* of 3 tal. (*IG* I³ 259.vi.21–22: *Μιλέσιοι ἔχς Λέρο*). In later years Leros and Teichioussa are recorded by toponym after the Milesioi, and the *phoros* recorded for all three amounts to 10 tal. (*IG* I³ 284.15–17 (427/6 or 426/5), 285.1.88–90 (421/0) and 489.1.36–38 (416/15)). According to Hdt. 5.125, Hekataios reportedly advised the Milesian *epitropos* to construct a fortress (*teichos*) on the island, apparently under Milesian control, and wait there for an opportunity to return safely to Miletos. In a C4s honorific decree (Manganaro (1963–64) no. 1), the inhabitants of the island refer to themselves as *τοὺς ἐν τῇ νήσῳ κατοικοῦντας τῶν πολιτῶν* (4, 9–10) or as *τῶν οἰκητόρων τῶν ἐλ Λέρωι* (6), and it is clear that by that time the inhabitants of the island represented themselves as Milesian citizens. Their assembly, *ἐκκλησία* (5), may have been roughly similar to the assembly of an Athenian deme. See further no. 504.

Ionia Polis (modern Mersinet Iskelesi). There is no evidence pertaining to the Archaic or Classical periods, and Peschlow-Bindokat's assumption that the place existed as a quarry and harbour already in the Archaic period rests entirely on evidence from the Apollo temple at Didyma ((1977) 100, (1977–78)).

Didyma, alternatively *Branchidai* (Hdt. 1.46.2, 92.2, 157.3, with Ehrhardt (1998)), was located in Milesian territory already in the Archaic period (Hdt. 1.46.2). However, its status in the Archaic and early Classical periods is problematic: Tuchelt (1988) 430–31 suggests that Didyma was in fact an independent unit rather than just an extra-urban Milesian sanctuary (see esp. 433), but Ehrhardt (1998) counters that all evidence, including the Sacred Way along with an Archaic sacred law, points to an early connection between the cult site and the *polis* of Miletos. In C4m the sanctuary minted its own bronze coins. Types: *obv.* head of Apollo Didymeus, laureate, facing three-quarters l.; *rev.* lion standing l., looking back at star; legend: *ΕΤ ΔΙΔΥΜΩΝ ΙΕΡΗ* (Head, *HN*² 585; *BMC Ionia* 189).

As far as the territory of Classical Miletos is concerned, Lohmann (1997) 310 concludes that the minimum size of Milesia proper must have been at least 400 km². He reckons that the mountain range south of the Gulf of Akbuk provided a natural boundary to the south, but notes that there are still problems connected with fixing the eastern boundary of the territory (ibid. 290). Apart from the marble quarries on the eastern Gulf of Latmos, the region lacks any important mineral resources. Good soils exist only on the northern side of Milesia, on a plain between Miletos and Assesos, and around the coasts. The islands, Mt. Grien and most of Milesia are hilly and have poor soils, unsuitable for arable cultivation. However, the deep rich lacustrine soil of the Maiandros valley is extremely fertile and retains moisture well, making it ideal for cereal production (Braun (1995) 32–33), and it was replenished annually by the flooding of the river Maiandros. This, in addition to probably quite extensive wool production on the uplands, made the territory of Miletos agriculturally productive; and Milesian possessions in the Maiandros valley were the object of several disputes; cf. the C4e arbitration between Miletos and Myous (no. 856) concerning territory in the Maiandros valley (Tod 113).

The size of the Milesian population was undoubtedly considerable already in the Archaic period, although it cannot be calculated with precision. It has been estimated that the early Archaic town may have had about 4,000 houses (Gates (1995) 238), undoubtedly an exaggerated figure

(Hansen (2000) 179 n. 208). But the eighty Milesian ships at Lade in 494 (Hdt. 6.8.1) and the 2,000 hoplites in 424 (Thuc. 4.54.1) testify to a large population.

According to a tradition that may go back as early as C7, Miletos was founded by Neileus (Hdt. 9.97), whose heroon may have been located just outside the Holy Gate (Herda (1998)). Archaeological evidence points to the existence of a (probably) Ionian Greek settlement from c.1050, and there are architectural remains of the Archaic urban centre dating from c.700 (Greaves (2002) 75–79). Relatively little is known about the history of Miletos in the early Archaic period, and most of our literary and epigraphical sources are late and unreliable. It is widely assumed that Miletos was ruled by an oligarchy in the period prior to the ascent of the tyrant Thrasyboulos in the last quarter of C7 (e.g. Gorman (2001) 101–21), but the accounts of the rivalries between different aristocratic families during C8 and C7 all date from the late Hellenistic and Roman periods.

According to Hdt. 1.142.3, Miletos belonged to the Ionian *dodekapolis*. During the Archaic period Miletos' relationships with other Greek *poleis* in the region appear to have been determined to some extent by its enduring hostility towards Samos (no. 864), its most significant commercial rival. Hdt. 5.99.1 implies that Miletos offered military assistance to Eretria (no. 370) in Euboea in its war against Chalkis (no. 365), mainly on the grounds that Samos was aiding the latter in the so-called Lelantine War (on which see, e.g., Tausend (1992) 137–45). Miletos formed an alliance with Mytilene (no. 798) and perhaps other *poleis* on Lesbos (Hdt. 3.39.4), from which it received assistance against Samos during the reign of Polykrates, probably c.530 (see e.g. Tausend (1992) 86–87). There is also evidence of Milesian engagement in other regional conflicts. In its attempts to resist the invasions of Alyattes in C7, it was assisted by Chios (no. 840), allegedly in return for the help that Miletos had given to Chios in its war against its main rival Erythrai (no. 845) (Hdt. 1.18.3). Tausend (1992) 74–78, 83–85 discusses the evidence for two further Milesian alliances in the Archaic period: one with Erythrai against Naxos (no. 507), perhaps in the first half of C7, and the other with Samos against Priene (no. 861) in the first half of C6. During C7 Miletos suffered repeated attacks by the Lydians during the successive reigns of Gyges, Ardys, Sadyattes and Alyattes (Hdt. 1.14.4–22.4). According to Hdt. 1.18.1–22.4, the troops of Alyattes invaded Milesian territory for twelve consecutive years, until a treaty of *xenia* and *symmachia* was eventually concluded between Alyattes and the Milesian tyrant Thrasyboulos in the twelfth year of

Alyattes' reign (608 or 598 or 594). Herodotos' account of the accidental destruction by fire of the temple of Athena in Assesos (modern Mengerevtepe), which ultimately led Alyattes to end the war on terms favourable to the Milesians, is confirmed by archaeological evidence from the temple site (Lohmann (1995) 313–14). The treaty may have been upheld by Alyattes' successor Kroisos, but this has been disputed (cf. e.g. Tausend (1992) 95–96; Gorman (2001) 123–24). After the Persian conquest of Lydia, Kyros is reported (Hdt. 1.141.4) to have granted the Milesians the same terms as they had previously had with the Lydians, and Herodotos seems to assume that the treaty originally contracted between Alyattes and Thrasyboulos had still been in force during Kroisos' reign. The granting of favourable terms to Miletos by the Lydians and subsequently by the Persians presumably served the purpose of driving a wedge between Miletos with its considerable military strength and the other Ionian *poleis*. If this was indeed the Lydian and, later, the Persian strategy, it seems to have worked (Hdt. 1.141.4): Miletos held aloof from the Ionian attempt to form a united front against the Persians after 546.

It is widely assumed that Thrasyboulos' reign was followed first by the rule of two further tyrants, Thoas and Damasenor (Plut. *Mor.* 298C–D), or by a narrow oligarchy and then by a period of *stasis* between two factions called “the Ainautai” and “the Cheiromachai” respectively. The *stasis* referred to by Plutarch is normally identified with the *stasis* reported in Hdt. 5.28–29, which was ultimately resolved by an arbitration process conducted by a panel from Paros (no. 509). The Parians set up an oligarchy (Hdt. 5.28–29). According to Hdt. 5.28, the *stasis* lasted for two generations, but he gives no precise date for its resolution. It has been suggested that archaeological evidence indicating a decline in Milesian exports in the period 600–590 may have been directly linked to civil unrest (Greaves (2002) 96). It is normally held that the introduction of the new constitution after the arbitration coincided with the first recorded *aisymnetes* as a Milesian eponymous official (*Milet.* 1.3 122; see Gorman (2001) 112–13 for a summary of the traditional scholarly position). However, Gorman (2001) 113–15 advocates c.540 rather than the traditional date of 525 as the starting point of the *aisymnetes* list. She rightly points out that there may well be a gap in the list, reflecting the 15 years separating the Persian sack of Miletos in 494 and the reconstruction of the *polis* in 479. However, her argument that the Parian arbitration must be separated from the creation of the office of *aisymnetes* and instead be

moved back to C7 or even C8 rests primarily on the assumptions (1) that the Persians would not have permitted the resolution of the *stasis* by the intervention of another Greek *polis*, and (2) that a period of a maximum of 25 years between the introduction of the new constitution and the ascent of the tyrant Histiaios before 513 would not have been sufficient to restore Milesian prosperity (ibid. 115–21). Her first premise, at least, must be regarded as debatable: (i) the Milesians may have had more room for regulating their own internal affairs than other Ionian *poleis* thanks to their favourable treaty with Kyros; (ii) the Persians are later known to have allowed internal conflicts in the Ionian region to be resolved by a process of arbitration conducted by other Greek states (Tod 113).

From Hdt. 4.137–39 it is clear that the Milesian oligarchy must have been replaced with the Persian-backed tyranny of Histiaios by 513, when Milesian troops under Histiaios' command assisted the Persians in their Skythian campaign. In return for his services during this campaign Histiaios was granted control of Myrkinos (no. 633) by Dareios (Hdt. 5.11.1–2), and it appears from Herodotos' account that he first settled there. Later he was called to Susa as adviser to the Great King (5.24.2–25.2), leaving his cousin and brother-in-law Aristagoras to rule Miletos in his absence (Hdt. 5.30.2). Aristagoras (in secret collaboration with Histiaios, who was detained at Susa) was an important instigator of the Ionian Revolt in 499, according to Herodotos because he had fallen foul of the Persians as a result of the failed expedition against Naxos (no. 507) in 500 and was fearing for his position within Miletos (5.35–36.1). He subsequently stepped down (at least nominally, *λόγῳ*) as ruler of Miletos and introduced *isonomie* (Hdt. 5.37.2). This may have amounted to some kind of democracy (but see Gorman (2001) 136). Shortly before the Ionian Revolt was quashed by the Persians in 494, Aristagoras went into exile, and Histiaios, who attempted to re-establish his position in Miletos, was refused access to the *polis* (Hdt. 6.5.1–2).

After the Ionian defeat at the battle of Lade, to which the Milesians had contributed eighty ships (Hdt. 6.8), the Persians subjected the *polis* to *andrapodismos* and physical destruction of its urban centre (Hdt. 6.18–20). According to Herodotos, most men were killed, and women and children enslaved. The people who were spared were resettled in Ampe on the Red Sea. The territory around the city and the plain were occupied by Persians, while the rest was settled by Karians. However, Herodotos' claim that Miletos "was emptied of Milesians" may either be exaggerated or may refer more narrowly to Miletos' urban centre (*contra* Gorman

(2001) 145–47). In any case, Milesian troops were present among the Persian forces just before the battle of Mykale (Hdt. 9.99.3, 104). The physical destruction of Miletos city in 494, on the other hand, appears to have been almost total (but see Voigtländer (1984) 156–58). Archaeologically, continuity of occupation at the site in C5f cannot be proved or disproved.

After the defeat of the Persians at Mykale, Miletos became a member of the Delian League in 478. It is recorded in the list from 454/3 (*IG* I³ 259 III.19; Piérart (1974)), where Milesioi from Leros and from Teichioussa are also recorded as payers (*IG* I³ 259.vi.19–22). Then the Milesioi are recorded from 452/1 (*IG* I³ 261.II.28) to 430/29 (*IG* I³ 281.I.14) paying first 10 tal. (*IG* I³ 263.v.18) and from 443/2 5 tal. (*IG* I³ 269.I.33). From 427/6 (*IG* I³ 284.15–17) to 416/15 (*IG* I³ 289.I.36–38) the Milesians are recorded with Leros and Teichioussa paying 10 tal., and in 415/14 the Milesians are recorded alone paying 10 tal. (*IG* I³ 290.I.9). The Milesians were assessed for tribute in 425/4 alongside Leros and Teichioussa (*IG* I³ 71.I.125). As a member of the Delian League Miletos provided an army contingent for the Athenian expedition against Corinth (no. 227) in 425/4 (Thuc. 4.42), and the Athenians had at their disposal more than 2,000 Milesian hoplites in 424 (Thuc. 4.54.1). Milesian troops also participated in the Sicilian expedition (Thuc. 7.57.4).

There is no secure evidence for the constitution of Miletos in the period between 479 and c.450, but it is normally held that the form of constitution was an oligarchy (perhaps moderate, so Gehrke, *Stasis* 114). The Milesian banishment decree (*Milet.* 1.6 187 = ML 43), traditionally dated 470–440, banishes a number of prominent Milesians and contains provisions for rewarding anyone who kills them. Although it cannot be ruled out completely that the decree was passed after a *stasis* that may have brought Milesian democrats to power, and that it was directed against leading oligarchic figures, the board of officials referred to as the *epimenioi* is normally taken to be a feature of Milesian oligarchy (e.g. ML 43; Koerner (1993) 311; Gorman (2001) 232–34). It is possible that the provisions of the decree were directed by an established oligarchy against Medising members of the Milesian élite.

It is clear, however, that Miletos experienced a period of civil unrest in the middle of C5, and that the Athenians intervened on at least one occasion. [Xen]. *Ath. Pol.* 3.11 refers to a situation in which the Athenians chose to back the Milesian oligarchy against the *demos*; the oligarchs subsequently revolted and massacred the *demos*. It is

impossible to date the incident from [Xen.]’s text alone, but it may be connected with the passing of *IG* 1³ 21 (conventionally dated to 450/49), which contains Athenian regulations for Miletos. An Athenian garrison was imposed on Miletos, but it cannot be determined if democracy was also imposed (Gorman (2001) 227–30, *contra*, e.g., Hornblower (1991) 188–89). *IG* 1³ 21 is normally interpreted as an Athenian attempt to prop up an existing oligarchy, which may later have revolted and instigated the massacre that led to further Athenian intervention and the imposition of democracy.

A *terminus ante quem* for the introduction of democracy at Miletos is provided by *Klio* 52 (1970) 165–73 (dated to the 430s), which contains regulations for the sanctuary of Poseidon Helikionios, and which carries a preamble indicating the existence of political institutions on an Athenian model (see e.g. Rhodes, *DGS* 379). Gorman (2001) 236 argues for the likelihood that a democracy was already in place when the Athenians chose to back Miletos in its conflict with Samos “over Priene” in 441/0 (Thuc. 1.115.2).

In 412 the Milesians revolted against Athens (Thuc. 8.17.1–4), but the democratic constitution remained in place until 405, when it was replaced by an oligarchy (Diod. 13.104.5; Plut. *Lys.* 8). In 411 the Milesians countered an Athenian attack on their city with a force consisting of 800 hoplites (Thuc. 8.25.2), and further assisted the Peloponnesians with ships (Thuc. 8.61.2) and infantry (Thuc. 8.79.4). In 405 the Spartans helped the Milesian oligarchs to overthrow the democracy, and more than 1,000 democrats fled from Miletos and were resettled in Blaundos in Lydia by the Persian satrap Pharnabazos (Diod. 13.104.6: *Βλαῦδα*). Xen. *An.* 1.1.7 reports that Tissaphernes attacked the pro-Spartan party in the city because he feared that they might support Kyros, killing and exiling most of them. From *LSAM* 45 (= *SGDI* 5496 (380/79)) it may be inferred that the rule of the pro-Spartan oligarchs was replaced by a democracy possibly as a result of Tissaphernes’ interference. The preamble of the law shows that by 380/79 the Milesian political institutions were set up on an Athenian model (Rhodes, *DGS* 379).

In C4m Miletos was probably ruled by the Karian dynasts, as is indicated by Milesian coins with the legends *EKA* (Hekatomnos) and *MA* (Maussolos) (Gehrke, *Stasis* 116 n. 12), and by statues of the Hekatomnids Ada and Idrieus set up at Delphi by the Milesians (Tod 161B). Many of these changes of constitution took place as a consequence of *stasis* between opposing factions, thus in 452, 405 and 402 (Gehrke, *Stasis* 113–17).

Depending on the restorations proposed for the preambles of the decrees *Klio* 52 (1970) 165–73 (C5) and *LSAM* 45 = *SDGI* 5496 (380/79), the *boule* at Miletos seems to have resembled that of Athens in its designations of *phylai* presiding in each prytany. In *LSAM* 45, the *boule* seems to have a probouleumatic function. Hdt. 5.29 refers to a *ἀλίη* (C6), and a Milesian assembly was convened by the Spartan general Kallikratidas in 406 (Xen. *Hell.* 1.6.8). The assembly is also attested in a number of C5 and C4 enactments: *Klio* 52 (1970) 165–73 is a C5 decree (*psephisma*) passed by the city of Miletos concerning the cult of Poseidon Helikionios. *LSAM* 45 = *SDGI* 5496 (380/79), a *psephisma* containing regulations for the cult of Artemis, has in the preamble: *Κεκροπίς ἐπρυτάνευεν, Φιλίννης ἐπεστάτει, ἔδοξεν τῇ βουλῇ καὶ τῶι δήμῳ, Ἡράκλειτος εἶπεν* (1–5). Both decrees show very strong Athenian influence (Rhodes, *DGS* 379). There is evidence for homicide legislation in *Milet.* vi.1 187.2–3 = ML 43 (C5m).

Milet. 1.3 122 lists officials under the heading *οἷδε μολπῶν ἡσύμνησαν*. These officials (*aisymnetai*, also called *stephanophoroi*) were clearly eponymous, and the list went back to 525 (Sherk (1992) 229–32; *supra*). Other officials are *στρατηγοί* (*Milet.* 1.3 135.36–37 = *Syll.*³ 273 (C4); *τειχοποιοί* (*Milet.* 1.3 135.30–31 (C4)); *ταμίαι* (*Milet.* 1.3 135.31); *ἐπιμήνιοι* (*Milet.* vi.1 187.5 = ML 43 (C5m)); *πράκτορες* (*LSAM* 45.11 = *SDGI* 5496 (380/79)); and a *γραμματεὺς*, perhaps of the *boule* (*Klio* 52 (1970) 165–73 (435/4)).

The Milesian citizen population was subdivided into two different sets of *phylai*. Of the six old Attic-Ionic *phylai*, four are attested in C5 sources: the Oinopes, the Hopletes, the Boreis and the Argadeis (*Syll.*³ 57.1–3; *PEP Miletos* 419, 420), and the existence of the Geleontes and Aigikoreis can be presumed (Jones, *POAG* 321). A different system of at least nine and possibly twelve *phylai* is attested in sources, some of which date from C4 and one even from 437/6 (Herrmann (1970)). At least seven *phylai* duplicate the Kleisthenic ones: Aiantis, Akamantis, Erechtheis, Kekropis, Leontis, Oineis and Pandionis. The two other known *phylai* are Asopis and Theseis (Jones, *POAG* 322–23). Inscriptions of C3–C1 testify to at least five and perhaps seven demes, of which three are the Argaseis, the Lerioi and the Teichisseis (*supra* 1083; Jones, *POAG* 323–25).

Milesian embassies are attested in Thuc. 1.115.2 (to Athens, 441/40) and Thuc. 8.85.4 (to Sparta, 411). *Proxenia* was received from Knidos (no. 903) (*I.Knidos* 1.1–3 (400–350)) and from Tanagra (no. 220) (*IG* vii 524 (C4/C3e)). Citizenship was given to an individual from

Mylasa (no. 913) (*SEG* 38 1193 (330–320)), and in C4 Miletos also entered into mutual arrangements of *isopoliteia* with other states: Olbia (no. 690) (Gawantka (1975) no. 18 = Tod 195 (before 323)); Kyzikos (no. 747) (Gawantka (1975) no. 19 (before 323)) and Pygela (no. 863) (Gawantka (1975) no. 21). Milesian *theorodokoi* to host *theoroi* from Argos (no. 347) are attested in *SEG* 23 189.11.12 (330–324).

Since the Geometric period, Kalabaktepe, a 57 m-high hill to the south of Miletos, was defended and acted as an acropolis for the city (*Milet.* 1.8; von Graeve (1986), (1987), (1990), (1991), (1992), (1995), (1997), (1999)). Kaletpe (the Theatre Hill) has also been suggested as a possible acropolis for the ancient city, but here the archaeological evidence has been obscured by a Byzantine castle. Following the destruction of the city in 494 there was significant rebuilding on Kalabaktepe, but it was later abandoned as the city never grew to regain its former size, and the focus of settlement shifted towards the harbours.

In connection with his report of Alyattes' attack on Miletos (C7), Hdt. 1.17 comments that, because of Miletos' control of the sea, a proper siege could not be undertaken by an army. The Persian siege of Miletos after the battle of Lade was from land *and* sea (Hdt. 6.18). The city walls are mentioned in Hdt. 6.7 and 6.18. Their extent in the Archaic period is much debated (*Milet.* 1.8, 11.3; and Cobet (1997)); but Kalabaktepe appears to have been encircled with walls, and on its summit a second, inner wall has recently been found (Senff *et al.* (1997)). Whether the Archaic walls extended on to the plain below Kalabaktepe to enclose the whole peninsula is not yet clear (Cobet (1997)). Excavation of the area between Kalabaktepe and the Sacred Gate area is hampered by the great depth of deposits that overlie the ancient remains. Some or all of the lower city may have been enclosed within the city walls to defend the harbour area and secure its sea power (Lang (1996) 199–201); the city was besieged and taken by Alexander the Great in 334 (Diod. 17.22.1–4).

In Hdt. 1.17 and 1.21 the *asty* is referred to explicitly. According to Hdt. 1.17.2, there was also significant settlement outside the Archaic urban centre. Archaic Miletos appears to have covered a very large area, perhaps as much as 110 ha (Müller-Wiener (1986) 98), but this area cannot have been covered by contiguous urban settlement. Trial trenching on the plains between Kalabaktepe and the temple of Athena found limited evidence for Archaic settlement here (*Milet.* 1.8 39ff), and the archaeology in other parts of the city is obscured by later buildings. Thus, the estimate of about 4,000 houses in the early Archaic town (Gates (1995)

238) must be an exaggeration (Hansen (2000) 179 n. 208). The period 494 to 479 is virtually unattested in the archaeological record; but when the town was rebuilt, the walls were probably planned on the same scale and in the same location as the original Archaic city to enclose the city peninsula and Kalabaktepe. The new city was grid-planned and is presumed to have covered most of the area between Kalabaktepe and Humeitepe (Hoepfner and Schwandner (1994) 17–19).

A Milesian agora is attested in Hdt. 1.21 (rC7–C6) and Diod. 13.104.5 (r405). *Milet.* 1.3 135.29–30 mentions a sanctuary of Apollo. In a decree passed by the city of Miletos concerning the cult of Poseidon Helikionios, there is mention of the *temenos* (*Klio* 52 (1970) 165–73, ll. 31–32). The Athena temple in the western part of the peninsula dates back to C7, with rebuilding work in C6, and there is evidence that Delphinion near the Lion Bay had been situated there since the Archaic period. A C4 Dionysos temple had a C6 predecessor. A summary of the finds relating to the public architecture of Archaic Miletos is provided by Lang (1996) 198–99.

There is no Archaic or Classical evidence for a cult of Athena Polias, but Herrmann (1971) 293–94 infers from an inscription of the second or third century AD mentioning Athena Polias that she was identical with the goddess worshipped in the Athena temple, attested without epithet already in the Archaic period. In a decree of C5 the assembly regulates the cult of Poseidon Helikionios (*Klio* 52 (1970) 165–73). An oracular response of c.500 very likely records a communal Milesian consultation at the oracle at Didyma (*Milet.* 1.3 178; Somolinos (1991); Herrmann (1992) 116–17). The oracle of Apollo at Didyma was presumably involved in the Milesian foundation of Olbia (no. 690); cf. the bone tablet of c.525–500 found at Berezan (*SEG* 36 694), face B of which contains the inscription: Ἀπόλλωνι Δίδυ(μαίω) Μιλησίω (Rusayeva (1986)).

For the Milesian calendar, see Trümpy, *Monat.* 89–93. Five months are identical with the Athenian. Two of the Milesian months are attested in Classical sources: Taureon (*Klio* 52 (1970) 165–73, l. 31 (C5)) and Artemision (*LSAM* 45 = *SDGI* 5496 (380/79)).

Milesian victors in the Olympic Games are *Olympionikai* 79 (596), 225 (472) and 385; Antipater (388), according to Paus. 6.2.6, was the first of the Ionians to have dedicated a statue at Olympia.

Miletos struck coins in C6–C4 of electrum, silver and bronze. (1) Electrum, C6: types: *obv.* mostly (head of) lion; *rev.* incuse(s). (2) Silver, C6–C5: *obv.* forepart of lion; *rev.*

floral pattern within incuse square. (3) Silver, C5: *obv.* lion; *rev.* floral ornament. (4) Silver, C4: *obv.* Apollo laureate; *rev.* lion; legend: *MI* monogram and magistrate's name. (5) Bronze, C4: *obv.* lion walking, monogram; *rev.* star; legend: magistrate's name; or *obv.* Apollo laureate; *rev.* lion and star; legend: *MI* as monogram or *ΜΙΑΗΣΙΩΝ* and magistrate's name. Milesian silver obols dating from 510–494 were found in the Asyut hoard (Price and Waggoner (1975) 86; Jenkins (1990) 16). In *BMC Ionia* 183–91 and Babelon, *Traité* ii.2. 1047 it is assumed that there is a gap in the minting of silver and electrum coinage between 494 and 478, but this seems to rest entirely on the assumption that no coins were minted in the first decade and a half after the destruction of the city (Babelon, *Traité* ii.1. 11–54, 266–71, ii.2. 1047–55; Head, *HN*² 584–86; *SNG Cop. Ionia* 943–77).

Miletos was exceptionally active as a coloniser, and is reported or assumed to have been involved in the foundation or refoundation of the following colonies: Leros (no. 504) in C6?; Ikaros at an unknown date (see p. 740); Therma (no. 481) at an unknown date; Myrkinos (no. 633) in 497; Kardia (no. 665) in collaboration with Klazomenai (no. 847) at an unknown date; Limnai (no. 668) at an unknown date; Apollonia (no. 682) c.610; Bizone (no. 683) in C6; Dionysopolis (no. 684) in C6l–C5; Istros (no. 685) in 657; Odessos (no. 689) in 585–575; Olbia (no. 690) in 647/6; Tomoi (no. 693) in C6; Tyras (no. 694) in C6; Kepoi (no. 699) in 580–570; Nymphaion (no. 704) in 560s; Pantikapaion (no. 705) in 575; Theodosia (no. 707) c.570; Dioskourias (no. 709) in C6m; Phasis (no. 711) in C6–C5; Amisos (no. 712) c.560 (possibly with Phokaia (no. 859)); Kromna (no. 723) at an unknown date; Kytoros (no. 724) at an unknown date; Sesamos (no. 728) at an unknown date; Sinope (no. 729) in C7l; Tieion (no. 733) at an unknown date; Artake (no. 736) in C6?; Daskyleion (no. 740) at an unknown date; Kios (no. 736) in 626/5; Kyzikos (no. 747) in 679; Miletoupolis (no. 750) in C7l/C6e; Paisos (no. 755) in C7; Priapos (no. 758) in C7e; Prokonnesos (no. 759) in C7e; Abydos (no. 765) in C7e; Arisbe (no. 768) at an unknown date; Skepsis (no. 792) in C5e. See also Ehrhardt (1983) and Gorman (2001) 243–58. In C4 the citizens of Olbia were granted *ateleia* in Miletos by mutual arrangement (Tod 195.21–22; cf. Graham (1964) 99–103).

855. Myonnesos (Myon(n)esios) Map 56. Lat. 38.05, long. 26.50. Size of territory: 1. Type: A. The toponym is *Μυόννησος*, ἡ (Hecat. fr. 232; Thuc. 3.32.1) or *Μυόνησος* (Ephor. fr. 27). The city-ethnic is *Μυονήσιος* (Ephor. fr. 27; *IG VII* 556 (undated)). Myonnesos was probably recorded as

a *polis* in the urban sense in Hekataios' work (fr. 232), quoted by Steph. Byz. 462.11–13: *πόλις μεταξὺ Τέω καὶ Λεβέδου. Ἑκαταίος Ἀσία. Ἀρτεμίδωρος δὲ χωρίον αὐτὴν φησι*. The quotation indicates that Hekataios did actually offer a site-classification that was later contradicted by Artemidoros. The collective use of the city-ethnic is attested in an external context in Ephor. fr. 27 (*verbatim* quotation).

Myonnesos was located between Teos (no. 868) and Lebedos (no. 850) (Strabo 14.1.29), and was, according to Thuc. 3.32.1, a Teian possession. The island is very small (c.1 km²), but Myonnesos may have controlled some of the *peraiā*. The island—or peninsula—settlement of Myonnesos was too small to support a town (Bean (1966) 146–49). It must have been the equivalent of an acropolis, with the main settlement on the mainland. Like Korykos (no. 849), it was a nest of pirates (Ephor. fr. 27). The settlement on the small island that formed part of Myonnesos, and which was joined to the mainland by a causeway, contains remains of an early cyclopean wall.

856. Myous (Myes(s)ios) Map 61. Lat. 37.35, long. 27.25. Size of territory: unknown but probably 2 or 3. Type: A. The toponym is *Μύης* (Hecat. fr. 235) or *Μυοῦς*, -ντος, ὁ (Hdt. 1.142.3, 5.36.4; schol. Thuc. 1.138); the city-ethnic is *Μυήσιος* (Hdt. 6.8.1; Tod 113.33) or *Μυήσσιος* (*IG I³* 71.1.153 (425/4)). At *IG I³* 263.v.20, *Μυέβιοι* “is clearly a cutter's error” (*ATL* i. 522). On the (unhistorical) variant *Μυούσιος*, see Robert (1946) 71. Myous is called a *polis* both in the urban sense (Hdt. 1.142.3) and in the political sense (Hdt. 1.141.4, 142.3, 143.3; *SEG* 45 1619.4, 12–13 (C4l/C3e)), in which the use of the *polis* cognate *polites* is also found (12). The collective use of the city-ethnic is attested internally in abbreviated form on C4 coins (*infra*) and in *SEG* 45 1619.3 (C4l/C3e), and externally in literary sources (Hdt. 6.8.1) and in inscriptions (*IG I³* 71.1.153; Tod 113.33 (391–388)). The individual and external use is attested on a late Classical funerary monument set up at Athens (*IG II²* 9973).

Not much is known about the extent of Myesian territory in the Classical period. The only piece of evidence is Tod 113 (391–388), recording an arbitration concerning land in the Maiandros valley to which Miletos (no. 854) and Myous had both laid claim. The Myesians lost the case by default.

In 494 Myous provided three ships for the battle of Lade (Hdt. 6.8.1), and it seems to have been under Persian control even after the establishment of the Delian League: the Persian king granted tax-levying rights at Myous to Themistokles during the latter's exile (Thuc. 1.138.5).

Myous was a member of the Delian League. It belonged to the Ionian district and is recorded from 452/1 (*IG* 1³ 261.ii.30) to 430/29 (*IG* 1³ 281.i.15, mostly restored) a total of eleven times, twice completely restored, paying a *phoros* of 1 tal. (*IG* 1³ 272.ii.12, restored in all other lists) but 1½ tal. in 452/1 (*IG* 1³ 261.ii.30, conj.) and in 432/1 (*IG* 1³ 280.i.62). It was assessed for tribute in 425/4 (*IG* 1³ 71.i.138).

A C4/C3e grant of *proxenia* and of citizenship is attested in *SEG* 45 1619, the sole surviving public enactment (*ψήφισμα*, ll. 16–17) passed by the *boule* and *demos* of Myous (ll. 10–11). This decree also contains a grant of *ateleia* (ll. 5–6).

Because of the absorption of Myous into Miletos (no. 854) in the Hellenistic period, very little remains on the site, the ruins of which may have been used as a quarry after the *polis* had ceased to exist (Bean (1966) 246). The site was surveyed by H. Weber in 1964 and 1966. Weber (1965) reports on two temples, an “upper” and a “lower”, of which he assumed that the upper temple was the older one, dating from C6m. A sanctuary of Apollo is attested in *SEG* 45 1619.18.

Myous struck coins of silver and bronze in C4. (1) Silver hemiobol on the Attic standard: types: *obv.* head of Apollo laureate, facing r.; *rev.* lion with raised paw; legend: *MY*. (2) Bronze: *obv.* Poseidon laureate; *rev.* goose, or bow and arrow, or dolphin and trident; legend: *MY* or *MYH* (Babelon, *Traité* ii.2. 1057–60, no. 1773; Head, *HN*² 587; *SNG von Aulock* nos. 2114–15; *SNG Cop. Ionia* 1022).

857. Naulochon Map 61. Lat. 37.40, long. 27.15. Size of territory: unknown but probably 1 or 2. Type: probably A (*infra*). The toponym is *Ναύλοχον, τό* (*I.Priene* 1 = Tod 185.2 (334); *SEG* 23 189.ii.10 (330–324)). A city-ethnic may be attested in abbreviated form on the C4 coins (*NAY, infra*). Naulochon is probably called a *polis* in the urban sense in *I.Priene* 1.6 (van Berchem (1970) 200–1; Hornblower (1982a) 327); but the interpretation of this inscription is open to debate (Heisserer (1980) 162). Likewise, the dedication to the hero Naulochos as “protector of the *polis*” (*πόλειως φύλακος* in *CEG* II 854.5 = *I.Priene* 196 (C4m)) may be an attestation of Naulochon (and not Priene (no. 861)) as a *polis* in the political sense.

Naulochon was the port of Priene and seems to have existed as a separate community during part of C4. However, the edict of Alexander the Great seems to equate the Greek inhabitants of Naulochon with the *Πριηνεῖς*, suggesting that there was no separate Naulochean communal identity. Depending on how the text is restored, the decree may also be interpreted to the effect that some of the

inhabitants were not Greek at all (Heisserer (1980) 156; Botermann (1994)). If it is accepted that Priene had ceased to exist at some point after 391/0, to be revived as a community only after the refoundation of the city, then Naulochon may have served as a temporary urban and political centre of the Prienians (van Berchem (1970) 200–1; Hornblower (1982a) 327). However, the numismatic evidence points to Prienic coins having been minted simultaneously with coins minted by Naulochon, a problem not solved satisfactorily by van Berchem’s argument. *Theorodokoi* to host *theoroi* from Argos (no. 347) are attested for Naulochon in *SEG* 23 189.ii.10 (330–324).

Naulochon struck bronze coins in C4m. Types: *obv.* head of Athena r.; *rev.* dolphin r., surrounded by maeander pattern; legend: *NAY* (Babelon, *Traité* ii.2. 1059–60 no. 1776; Head, *HN*² 587; for one contemporary silver coin with the same types but inscribed *IIP*, see Regling (1927) 47).

858. Notion (Notieus) Map 56. Lat. 38.00, long. 27.10. Size of territory: 1 or 2. Type: A. The toponym is *Νότιον, τό* (Hecat. fr. 233; Thuc. 3.34.1; Xen. *Hell.* 1.5.12–14; *Hell. Oxy.* 8.4, Chambers; Ps.-Skylax 98). The city-ethnic is *Νοτιεύς* (*IG* 1³ 261.v.11 (452/1)). Notion is called a *polis* in the urban sense, explicitly at *Hell. Oxy.* 8.4, unless the reference is to Kolophon (no. 848) (see Bruce (1967) 44), and implicitly at Ps.-Skylax 98: *Νότιον καὶ λιμῆν* (see Flensted-Jensen and Hansen (1996) 142. At Arist. *Pol.* 1303^b7–10 Notion is listed as an example of a community which was sometimes a separate *polis*. The collective and external use of the city-ethnic is attested in Attic inscriptions (the tribute lists and *IG* II² 1.48 = Tod 97 (403/2)).

Although it cannot be ruled out completely that Notion in Ionia was in fact identical with the Aiolic Notion (“Southern”) mentioned in *Hdt.* 1.149.1, its history was inextricably bound up with that of Kolophon (no. 848), for which it served as a harbour town. Thus, the preferable view is that Aiolic and Ionian Notion were different communities.

Notion was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG* 1³ 259.iii.22) to 416/15 (*IG* 1³ 289.i.41) a total of eighteen times, four times completely restored, paying a *phoros* of 2,000 dr. in all years, except in 428/7 when it paid only 100 dr. (*IG* 1³ 283.iii.23). It was assessed for tribute in 425/4 (*IG* 1³ 71.ii.107, toponym mostly restored). It is recorded once by toponym (*IG* 1³ 285.i.95), and otherwise by city-ethnic. In some years Notion and Kolophon are listed side by side (454/3–452/1 and 433/2–416/15), but in the period 451/0–440/39 the two

communities are separated by two entries (*IG* 1³ 270.1.8 and 11) or four entries (*IG* 1³ 262.iv.6 and 12) or five entries (*IG* 1³ 266.1.4 and 10) or even more.

Thuc. 3.34.1 refers to Notion in unambiguous terms as a Kolophonian dependency in 428/7 (εἰς Νότιον τὸ Κολοφωνίων). But in the Athenian decree for the Samians of 403/2, the Notieis are honoured by Athens along with the people of Ephesos (no. 844) for having given asylum to Samian refugees (*IG* II² 1.48). This points to Notion as a state in its own right (in that case a dependent *polis*), at least at the turn of the century. Status as a separate community is also indicated by the much later attestation of *theorodokoi* in Notion, one to host *theoroi* announcing the festival for Argive Hera (*SEG* 23 189.11.7 (330–324)) and one to host *theoroi* announcing the Nemean Games (*SEG* 36 331.11.44–45 (323/2)). Finally, at *Pol.* 1303^{b7–10} Aristotle notes that problems with the nature of the territory resulted in *stasis* between the Kolophonians and the Notieis and made it difficult to keep the *polis* united. Aristotle's use of ethnics indicates that Kolophon and Notion were sometimes united, sometimes separate communities. For the problem relating to the Athenian foundation of a New Kolophon at Notion, see 1078 *supra*. Even if New Kolophon was founded on the actual site of Notion, the community of Notieis must have retained a communal identity distinct from that of the Kolophonian settlers, as pointed out by Piérart (1984) 168–71. During their excavation of Notion, Demangel and Laumonier (1923) recorded some C4 architectural fragments which may have belonged to the Athena sanctuary. A fortificatory wall (*diateichisma*) is mentioned in Thuc. 3.34.2; but this may have been only of a temporary nature. There is so far no evidence for Classical city walls. Recent Turkish excavations, reported by Mitchell (1999) 148, produced no further evidence for the pre-Hellenistic settlement.

859. Phokaia (Phokaieus) Map 56. Lat. 38.40, long. 26.45. Size of territory: probably 3. Type: A. The toponym is Φώκαια, ἡ (Hdt. 1.142.3, 2.178.2; Xen. *Hell.* 1.3.1) or Φωκαίη (Hdt. 1.80.1) or, in the Aiolic dialect, Φώκα (Tod 112.9–10 = *SEG* 34 849 (C5–C4)). The city-ethnic is Φωκαϊεύς (Hdt. 4.138.2; Thuc. 1.13.6; *IG* 1³ 261.v.4) or Φωκαεύς (C4 bronze coins, *infra*). Phokaia is called a *polis* both in the urban sense (Hdt. 1.162.2–163.1; Ps.-Skylax 98) and in the political sense (Hdt. 2.172.2; Tod 112.6, 17; Arist. *Oec.* 1348^{b4}). A Φωκαίων πολιτεία was included among the 158 Aristotelian constitutions (fr. 616). The word *astos* is used about the citizens of Phokaia in Hdt. 1.165, and *patris* is

used in Hdt. 1.169. The collective use of the city-ethnic is attested internally on C4 coins (*infra*) and externally in Hdt. 6.8.2; Thuc. 1.13.6; Isoc. 6.84; *IG* 1³ 261.v.4. For the individual and external use, see Hdt. 6.11.1; *CID* II 4.111.13 (C4m) and *IG* II² 2421.2 (C4).

The name of the territory was Φωκαῖς (Thuc. 8.101.2). It included an island with a harbour called δ' ἐν Καρτερίοις λιμῆν (Thuc. 8.101.2) (a harbour is mentioned also at Ps.-Skylax 98). Karteria was most likely (a group of) island(s), and it is interesting to note that even islands could be described as part of Phokaia. At Hdt. 1.165.3 the term χῶρη is used about Phokaia's territory as a whole.

The colonisation of Massalia (no. 3) by Phokaians in c.600 is the first thing we know about Phokaia (*supra* 162, 165), and according to Thuc. 1.13.6, Phokaia then possessed a strong naval force. After the Persian conquest of the Lydian kingdom, the Phokaians decided to relocate their city and, according to Hdt. 1.164, the majority of the citizens left c.546. He also relates that many of them became homesick soon after and returned to Phokaia in spite of their solemn oath never to come back. The abandonment and destruction of Phokaia in 546 now seems to be confirmed archaeologically (Mitchell (1999) 143).

Phokaia belonged to the Ionian *dodekapolis* (Hdt. 1.142.3) and provided three ships for the battle of Lade (Hdt. 6.8.2) as well as the general of the whole fleet, Dionysios (Hdt. 6.11.1). *Andrapodismos* of Phokaia as a consequence of the defeat at Lade may be implied in Hdt. 6.17 in his account of the general Dionysios' decision not to return home.

Phokaia was a member of the Delian League. It belonged to the Ionian district and is recorded from 453/2 (*IG* 1³ 260.viii.7–8, 9) to 430/29 (*IG* 1³ 281.i.49, mostly restored) a total of twelve times, twice completely restored, paying a *phoros* of 3 tal. down to, probably, 447/6 (*IG* 1³ 265.ii.38), then 1 tal., 5,250 dr. (*IG* 1³ 266.1.11) and from, perhaps, 443/2 (*IG* 1³ 269.i.14) 2 tal. (*IG* 1³ 270.i.12). It was assessed for tribute in 425/4 (*IG* 1³ 71.i.139). In 453/2 the tribute is split up into one payment of 3,000 dr. and one of 2 tal., 3,000 dr.

The only public enactment attested earlier than C3 is Tod 112 (C5l/C4e). Lines 6–18 of this decree also provide evidence for *dikasterion*, death penalty and fines. The eponymous official is recorded as πρύταυις (Tod 112.19–21), and other officials are referred to as ἀρχαί generally in ll. 9–10. A Phokaian grant of *ateleia* may be attested in *Iscr. Cos* ED 71B.15–17 (C4l). *Proxenia* was received from Chios (no. 840) (*RPhil* (1937) 325–32 no. 6A.2 = *PEP Chios* 50 (C4)). On the C5s coinage treaty (Tod 112) with Mytilene (no. 798), see *infra*.

Hdt. 1.162–64 (r546) recounts how the Phokaians fortified their settlement with financial assistance from Arphanthionios, king of Tartessos, and describes the city wall as several stades long and constructed from large blocks of stone. In 1990, part of the city wall was found near the new city hall of Foça (Mellink (1993) 131). For the results of excavations of the Archaic city wall, see Özyigit (1994). They seem to have enclosed an area of c.50 ha. The archaeological evidence in general appears to confirm Herodotos' account, including a burnt city gate and C6 debris which suggest an attack c.540. In Xen. *Hell.* 1.5.11 the text suggests that the Athenians attempted to fortify Phokaia in 406, and the text need not be emended (Krentz (1989) 139).

Old Phokaia is currently under excavation, and remains of public architecture have been discovered. An Archaic temple of Athena is thought to have been located on a rock platform at the tip of the peninsula (Mellink (1955) 236, (1956) 382; E. Akurgal (1956) 6–8). It is assumed that this temple was destroyed by Harpagos and perhaps repaired shortly afterwards. The ceramic record runs from late Geometric throughout the Classical period. In Xen. *Hell.* 1.3.1 it is reported that the temple of Athena burned in 409/8. The temple appears to have been rebuilt in the Hellenistic period. Archaic walls of a Cybele sanctuary were discovered by Özyigit (Gates (1996) 325). A C4e–m theatre is currently under excavation (Mitchell (1999) 143).

Phokaia struck coins of electrum, silver and bronze. (1) Electrum, C6–C4; denominations: stater, hekte. Types: *obv.* a variety of types with seal above or below; *rev.* quadripartite incuse square. (2) Silver on the Phoenician standard, C6–C4; denominations: tetradrachm, didrachm, drachm and fractions down to hemiobol: *obv.* variety of types with seal above or below; *rev.* mostly quadripartite incuse square; legend: sometimes $\Phi\Omega$. (3) Bronze: *obv.* female head; *rev.* griffin; only a few C4 bronze coins carry the legend $\Phi\Omega\text{KAE}\Omega\text{N}$. In, probably, C5s, Phokaia and Mytilene (no. 798) concluded a treaty that the two *poleis* should take turns and strike identical electrum coins in alternating years (*IG* XII.2.1). In C4 the staters and hektai struck in consequence of this treaty became the principal local currency of the *poleis* of western Asia Minor (Tod 112 = *SEG* 34 849; Head, *HN*² 587–89; Jenkins (1990) 18–19; Bodenstedt (1977–78a), (1977–78b) with Kraay (1982); *BMC Ionia* 203–16; *SNG Cop. Ionia* 1023–33).

Phokaia was an active coloniser, founding Lampsakos (no. 748) in 654/3, Massalia (no. 3) in C6f, Alalie (no. 1) in C6m, and Hyele (no. 54) c.540 after the failure at Alalie. It may also have founded Emporion (no. 2) c.600, possibly in

collaboration with Massalia, and Amisos (no. 712), possibly in collaboration with Miletos (no. 854).

860. (Polichnitai) Map 56. Lat. 38.25, long. 26.35, but cf. *infra*. Size of territory: ? Type: B. No toponym is recorded. The city-ethnic is either *Πολιχναῖος* (*IG* I³ 264.III.29, 265.1.60) or *Πολιχνίτης* (*IG* I³ 283.III.30), to be distinguished from the *Πολιχνῖται* of Chalkidike (no. 596) and the *Πολιχνῖται* (no. 789) in the Hellespontine district (i.e. Troas).

The location of *Polichne is uncertain, but the community was undoubtedly situated on the Mimas peninsula. Wilamowitz-Möllendorff's attempt (1908) 617 to identify this Polichne with that of Thuc. 8.14.3 was disputed by Kirsten (1952); Cook (1953–54) 157 with n. 3; and Gomme *et al.* (1981) 34–35.

The Polichnitai were members of the Delian League. They belonged to the Ionian district and are recorded from 450/49 (*IG* I³ 263.II.14) to 428/7 (*IG* I³ 283.III.30) a total of twelve times, once completely but plausibly restored. In 448/7 (*IG* I³ 264.III.30), 444/3 (*IG* I³ 268.I.27), 430/29 (*IG* I³ 281.I.23) and 425/4 (*IG* I³ 71.I.144–45) the Polichnitai are explicitly recorded as a dependency of Erythrai (no. 845). In 450/49 (*IG* I³ 263.II.14) they paid alongside the other Erythraian dependencies; but in 448/7 (*IG* I³ 264.III.30) and in 447/6 (*IG* I³ 265.I.60) the other dependencies paid on their behalf. In later years their payment is recorded separately from that of the other Erythraian dependencies, and the Polichnitai paid 4,000 dr. (*IG* I³ 271.I.18) but in 428/7 1 tal., 3,000 dr. (*IG* I³ 283.III.30).

861. Priene (Prieneus) Map 61. From C4s, lat. 37.40, long. 27.20; if relocated (cf. *infra*), the precise location of the Archaic and Classical urban centre is unknown. Size of territory: unknown but probably 3 or 4. Type: A. The toponym is *Πριήνη*, ἡ (Thuc. 1.115.2; Xen. *Hell.* 3.2.17; *I.Priene* 5.8 (C4s)). The city-ethnic is *Πριηνεύς* (Hecat. fr. 233; *IG* I³ 269.I.28 (443/2); *I.Priene* 1.7 (334), 2.4 = Tod 186.4 (334)) or *Πριανεύς* (*IG* I³ 260.x.8 (453/2)). Priene is called a *polis* both in the urban sense (Xen. *Hell.* 4.8.17; Ps.-Skylax 98) and in the political sense (Hdt. 1.141.4, 142.3, 143.3; *I.Priene* 1.14–15 (334), 2.7 (334)). The *polis* cognate *polites* is attested in *I.Priene* 10.7 (C4), and *politeia* in *I.Priene* 2.8 (334) denoting Prienian citizenship. The collective use of the city-ethnic is attested internally in decrees (*I.Priene* 2.4, 7, 13–14) or in abbreviated form on C4m coins (*infra*), and externally in Hecat. fr. 234; Hdt. 1.15; *IG* I³ 260.x.8. For the individual and external use, see Hipponax fr. 123, West

(C6–C5); Hdt. 1.27.2; and Pl. *Prt.* 343A, all referring to Bias of Priene.

In C4 the territory of Priene had common borders with the territory of Ephesos (no. 844; *I.Priene* 3.13 (C4–C3e)) and with the territory of Thebes (no. 869) on Mt. Mykale (*I.Priene* 363.24–25 (C4m)). Ps.-Skylax 98 refers to Priene as a *polis* with two harbours, one of which was *kleistos*.

Priene was part of the Ionian *dodekapolis* (Hdt. 1.142.3) and was traditionally in charge of the Panionian festival located in its territory on Mt. Mykale (*I.Priene* 139.1 with Hiller von Gaertringen's comment and Strabo 14.1.20). The Panionia were moved from Mt. Mykale to the territory of Ephesos (no. 844), perhaps as a result of an early(?) war between Samos (no. 864) and Miletos (no. 854) over Prienian territory (Hornblower (1982*b*), (1991) 527–29), but were probably transferred back into Prienian control in C4 (*I.Priene* 139 (C4m) and *PEP Priene* 11 (C4m)). Stylianou (1983) 248 suggested that the move back to Mt. Mykale was initiated in 373. According to Aeschin. 2.116, Priene filled one of the two Ionian seats in the Amphiktyonic Council, alternating with Eretria (no. 370); but see Lefèvre (1998) 60.

Priene underwent *andrapodismos* in 546 (Hdt. 1.161), but had been re-established as a community by 495/4 at the latest, when it contributed twelve ships to the battle of Lade (Hdt. 6.8.1). Priene was a member of the Delian League. It belonged to the Ionian district and is recorded from 454/3 (*IG*¹ 259.II.11) to 442/1 (*IG*¹ 270.I.21, completely restored) a total of eight times, once completely restored, paying a *phoros* of 1 tal. (*IG*¹ 263.v.22). It is absent from the full panel of 440/39 (*IG*¹ 272.I–II.7–25). It was assessed for tribute in 425/4 (*IG*¹ 71.I.149). The *polis* may have been regarded as a potential dependency by both Miletos and Samos, whose fight for domination gave rise to a war and subsequent Athenian intervention on Samos in 440/39 (Thuc. 1.115.2). In 398/7 troops from Priene assisted Derkyllidas in his campaign in the Maiandros plain (Xen. *Hell.* 3.2.17), and the latest secure reference to the urban centre of Priene is found in Xen. *Hell.* 4.8.17, referring to Thibron's movements in the Maiandros plain in 391/90.

It is normally assumed that after this point the Prienian citizens abandoned their original (and still unlocated) urban centre in favour of the harbour town of Naulochon until the refoundation of Hellenistic Priene (Hiller von Gaertringen (1906) xi). The question of refoundation and urban relocation, however, is subject to continuous debate. The dates suggested for the refoundation of Priene vary from C4m (implying Athenian or Hekatomnid involve-

ment) to 334 (van Berchem (1970); Hornblower (1982*a*) 326–28; Schipporeit (1998)). On *a priori* topographical grounds it would be very surprising if Archaic and Classical Priene was not located on the same site as the Hellenistic city. If there was a separate site, one would have expected some trace of it to have been identified or noticed. Demand (1990) 140–46 presents important arguments against a relocation and maintains that there is evidence for continuous occupation throughout C4 on the site of Hellenistic Priene. Botermann (1994) 165 has refuted some of Demand's arguments, assuming a refoundation by Alexander the Great while still following Demand in suggesting that the urban centre was not necessarily relocated. Botermann's argument rests primarily on the lack of epigraphical material antedating 334; but this point could be made for most of the Aiolic and Ionian *poleis* of Asia Minor and thus is not conclusive. Schipporeit (1998) adduced further arguments in favour of Demand's position by drawing attention to remains of older constructions at the site of the Demeter sanctuary, the orientation of which does not agree with that of the late Classical temple ((1998) 195–96). Furthermore, as Schipporeit points out (*ibid.* 202–3), only about a third of Priene has been excavated so far, and this supports Demand's warning against arguments from silence regarding the existence of an earlier settlement on the site.

Naulochon (no. 857) rather than Priene figures in a list of *theorodokoi* to host *theoroi* from Argos (no. 347) (*SEG* 23 189.II.10 (330–324)); but the date of the inscription *after* Alexander's instructions regarding Naulochon (*I.Priene* 1) weakens the text as evidence against the existence of Priene in C4e–m. *I.Priene* 5.10–13 (before 326/5, and so roughly contemporary with the list of *theorodokoi*) prescribes that *theoroi* elected by the Prienian *demos* are to be dispatched to Athens in connection with the Panathenaia.

Nothing is known about the constitution of Priene before 334, and *I.Priene* 3, 4, 6, 7 and 8 are insecurely dated and may belong in C3e (Crowther (1996)). During the last three decades of C4 Priene appears to have been governed by some form of democracy. The decree *I.Priene* 2.3 (334) mentions an assembly meeting (*κυρίου συλλόγου*). *I.Priene* 9.4 (C4) mentions the *boule*, and its probouleumatic function is securely attested in *I.Priene* 4.52 (*δεδοχθαι τῆι βουλῇ[ι] κ[α]ἰ [τῶ]ι δήμῳ* (332–324)), but the other attestations of this function in C4 inscriptions (*I.Priene* 2.1 and 5.1) are entirely due to Hiller von Gaertringen's not very reliable restorations. The eponymous official is designated *prytanis* in *I.Priene* 2.4 (334). For the title of *stephanephoros* in *I.Priene* 4 (332–324), see

Crowther (1996) 205–6. The following types of official are attested epigraphically: a *grammateus* elected by the assembly (*I.Priene* 4.6, commending the 20-year tenure of this position by Apellis and thus going back at least as far as the last two decades of C4) and a board of *timouchoi* (*I.Priene* 10.24). *I.Priene* 10 refers to the Prienian administration of justice, which provided for public actions brought by volunteer prosecutors (l. 33). A grant of *proxenia* bestowed on Antigonos of Makedonia, who is also given citizenship, is attested in *I.Priene* 2 (334). Shortly before 322 Priene renewed a block grant of citizenship bestowed on the Athenians (*I.Priene* 5.7–8; see also *IG* II² 566.7–8, presumably referring to the earlier grant).

A grant of *enktesis ges kai oikias* is bestowed on Antigonos of Makedonia in *I.Priene* 2.9. A distinction between real property owned by the citizens of Priene and property owned by resident non-Prienians in Prienian territory is made in *I.Priene* 1.8–13, with a view to taxation imposed by Alexander the Great. Import and export taxes are mentioned in *I.Priene* 2.9–11, as well as a general grant of *ateleia*, but excepting taxes on land, which will still have to be paid by the honorand. On personal taxation in Priene, see Gauthier (1991), who relies on Hiller von Gaertringen's early dates for *I.Priene* 4, and whose other Prienian evidence all belongs to C3 or later. Maronitai resident in Priene are mentioned in *I.Priene* 10.21, a C4 decree bestowing various judicial privileges on citizens of Maroneia (no. 646). Evidence for a group of land-owning, permanent non-Prienian residents designated *Pedieis* is found in *I.Priene* 1.7–13 and later in *I.Priene* 3 (C3e according to Crowther). There is a possibility that *Pedieis* refers to non-Greek residents in Prienian territory (Corsaro (1984)); but this proposition has been questioned by Schuler (1998) 205.

The urban centre of Priene was surrounded by walls which can be dated to C4, although their precise date is disputed (Wiegand and Schrader (1904) 35ff; Lawrence (1979) 119, 478); they enclosed an area of 37 ha, of which 15 ha was suitable for habitation (Hoepfner and Schwandner (1994) 193) and accommodated c.500 houses (ibid. (1994) 190). The agora of C4 Priene is currently under investigation (Gates (1994) 269). The main sanctuary was that of Athena Polias (*I.Priene* 156: Βασιλεὺς Ἀλέξανδρος ἀνέθηκε τὸν ναὸν Ἀθηναίῃ Πολιάδι (c.334, but the date is disputed; see Carter (1988) 133 n. 59) and Botermann (1994) 162)). The C4 temple of Athena was probably not completed until C3 (Mellink (1993) 126–27); there can be no doubt, however, that the construction of the temple was begun in the 330s at

the latest. The Demeter sanctuary, which may contain remains predating the refoundation of the city, is discussed by Schipporeit (1998). For the date of the theatre (*TGR* iii. 441–42), see Gogos (1998), who argues for a date not earlier than C3 for the entire structure. With Crowther's redating of *I.Priene* 4 to C3e, the only written evidence for a C4 theatre disappears (32). This is also true of the references to a *prytaneion* in *I.Priene* 3.16 and 4.35–36. A grid plan is attested from at least C4 (Hoepfner and Schwandner (1994) 188–222).

The Prienian calendar shows close affinities with that of Miletos (no. 854) and two of the Attic months are attested in C4 inscriptions: Metageitnion in *I.Priene* 2.2 and Boedromion in *I.Priene* 10.1–2 (Trümpy, *Monat.* 94–96 § 83).

Prienian bronze coinage is known from at least as early as C4m. (1) Types: *obv.* Athena wearing helmet; *rev.* maeander pattern; legend: ΠΠΙΗ. (2) *Obv.* head of Athena, l.; *rev.* dolphin in circle formed by maeander pattern; legend: ΠΠ. Head, *HN*² 590 drew attention to the similarity between (2) and the types minted by Naulochon (no. 857). Regling's (1927) reluctance to date any Prienian issues to the period before C4m has been questioned by Schipporeit (1998). *SNG von Aulock* 2151 and *SNG Cop. Ionia* 1076 (bronze) are dated to 340–334. Coins of C2 have the full form of the city-ethnic: ΠΠΙΗΝΕΩΝ (*SNG Cop. Ionia* 1100).

862. Pteleon (Pteleousios) Map 56. Lat. 38.30, long. 26.25. Size of territory: unknown but probably 1 or 2. Type: B. The toponym is Πτελεόν, τό (Thuc. 8.24.2, 31.2). The city-ethnic is Πτελεούσιος (*IG* I³ 264.III.30 (448/7); Eust. *Il.* 297.28). The settlement is designated as a *teichos* in Thuc. 8.24.2, but this designation does not rule out that Pteleon was a *polis*. The collective and external use of the city-ethnic is attested in the Athenian tribute lists.

Pteleon was a member of the Delian League. It belonged to the Ionian district and is recorded from 450/49 (*IG* I³ 263.II.16) to 430/29 (*IG* I³ 281.I.21) a total of ten times, three times completely but plausibly restored. In 430/29 Pteleon is explicitly recorded as a dependency of Erythrai (*IG* I³ 281.I.20). In 450/49, 448/7 and 447/6 Pteleon paid alongside the other dependencies of Erythrai (no. 845); they all formed a syntely, but the Pteleousioi paid on their own behalf (*IG* I³ 263.II.16, 264.III.30, 265.I.64). In later years their payment is recorded separately from that of the other Erythraian dependencies, and they seem in all years to have paid 100 dr. (*IG* I³ 272.II.20). In 425/4 Pteleon was assessed for tribute separately from Erythrai and the other Erythraian dependencies (*IG* I³ 71.II.93).

The community was located in Erythraian territory and was undoubtedly an Erythraian dependency (Thuc. 8.24.2: ἐν τῇ Ἐρυθραίᾳ; IG I³ 281.1.21: [Πτελεό]σιοι Ἐρυθραίων), but the Athenians maintained control over the site during Erythrai's revolt in 412. The designation τεῖχος in Thuc. 8.24.2 indicates that Pteleon was walled; see also Thucydides' report at 8.31.2 of Astyochos' failure to capture the site.

863. Pygela (Pygeleus) Map 61. Lat. 37.50, long. 27.15. Size of territory: 1 or 2. Type: A. The toponym is Πύγελα, τὰ (Hipponax fr. 92.15, West; Xen. *Hell.* 1.2.2; SEG 23 189.II.9 (330–324)) or Φύγελα (*I.Ephesos* 3110.6 (C4l)). The city-ethnic is Πυγελεύς (Xen. *Hell.* 1.2.2) or Πυγαλεύς (IG I³ 266.1.7 (446/5)) or Φυγελεύς (*I.Ephesos* 3110.3 (C4l)). Pygela is attested as a *polis* in the political sense in *I.Ephesos* 3110 (C4), and retrospectively in the sense of town by Polyaeon. 7.23.2 (rC4). The *polis* cognates *polites* and *politeia* in the sense of citizenship are attested in *I.Ephesos* 3110. The collective use of the city-ethnic is attested internally on C4 coins (*infra*) and externally in Xen. *Hell.* 1.2.2; IG I³ 269.1.29 (443/2); *I.Ephesos* 3110 (C4). For the individual and external use of the city-ethnic, see *IGBulg.* 416 (C5–C4) and Dion. Hal. *Thuc.* 5 (rC5) (referring to Thucydides' predecessor Δημοκλῆς ὁ Φυγελεύς).

The χώρα of Pygela is mentioned in Xen. *Hell.* 1.2.2 (r409). *I.Ephesos* 3111.11–13 (c.310) records that a grant of citizenship was passed with 350 votes (Gauthier (1990) 91–92).

Pygela was a member of the Delian League. It belonged to the Ionian district and is recorded from 446/5 (IG I³ 266.1.7) to 415/14 (IG I³ 290.1.24) a total of eleven times, twice completely restored, paying a *phoros* of 1 tal. in 440/39 (IG I³ 272.II.13) and 1 tal., 3,000 dr. in 432/1 (IG I³ 280.I.47). It was assessed for tribute in 425/4 (IG I³ 71.1.151).

In C4l Pygela entered into an *isopoliteia* agreement with Miletos (no. 854) (*I.Ephesos* 3110) in which Pygelean envoys to Miletos are honoured (2). Prior to the *isopoliteia* agreement Milesian citizens resident at Pygela appear to have enjoyed some form of limited citizenship, perhaps bestowed on them by a block grant. Likewise, Pygelean citizens resident at Miletos seem to have had some privileges. The treaty itself may have extended the civic rights of resident Pygeleans in Miletos: the end of the decree stipulates that the Pygeleans are to be assigned to *phylai* by lot by the *prytaneis* (ll. 17–18). *I.Ephesos* 3111 (C4l) shows that in C4 the Pygelean assembly controlled the admission of new citizens by decree (*psēphisma*, l. 4).

The independence of Pygela seems to have been under constant threat from its more powerful neighbours, especially Samos (no. 864) and Ephesos (no. 844). The latter clearly had absorbed Pygela in the early Hellenistic period, when the inhabitants of Pygela were referred to as Ephesian citizens (*I.Ephesos* 1408.2, 4–5).

The civic subdivisions of Pygela were *phylai* and *gene*. The *phyle* Ἀγαμεμνονίς and the *genos* Εὐρίδαι are attested, and a board of *prytaneis* are given responsibility for assigning naturalised citizens to civic subdivisions by lot and, together with the *tamias*, for having the citizenship decree inscribed on stone (*I.Ephesos* 3111.7–9).

Pygela was fortified in 409 (Xen. *Hell.* 1.2.2). During excavations of the site between Ephesos and Kuşadası, Gürçay and Akurgal cleared 40 m of the city walls. Sherds dating from C4 were found during this operation (Mellink (1976) 280). A sanctuary of Artemis is attested epigraphically (*I.Ephesos* 3111.5–6). Pygelean *theorodokoi* to host *theoroi* from Argos (no. 347) are attested in SEG 23 189.II.9 (330–324).

Pygela struck coins of silver and bronze throughout C4. (1) Silver, C4m: denomination: tetradrachm. Types: *obv.* head of Artemis Munychia, facing; *rev.* butting bull; legend: ΦΥΓΑΛΕΩΝ and magistrate's name. (2) Bronze, C4: *obv.* head of Artemis Munychia wearing stephane, r. or facing; *rev.* butting bull; legend: ΦΥΓ (Babelon, *Traité* ii.2 nos. 1856–63; Head, *HN*² 590; Regling (1922); *BMC Ionia* p. 228; *SNG Cop. Ionia* 1072–75).

864. Samos (Samios) (to 365) Map 61. Lat. 37.40, long. 26.55. Size of territory: 4 (468.3 km²), but probably 5 including the Samian *peraia*. Type: A. The toponym is Σάμος, ἡ (Aesch. *Pers.* 882; Hdt. 3.48.2), denoting both the island (Hdt. 3.120.3) and the city (Hdt. 3.54.1). The city-ethnic is Σάμιος (*I.Ephesos* 115 (C6); *F.Delphes* III.4 455 (C5e); Hdt. 1.51.3). In C5 Samos is called a *polis* both in the urban sense (Hdt. 3.54.1; Thuc. 1.116.2) and in the political sense (Hdt. 3.139.1; Thuc. 8.21); the territorial sense is sometimes a connotation (Thuc. 4.75.1). In C4 again, both the urban sense (Ps.-Skylax 98; Isoc. 15.107.8) and the political sense (Xen. *Hell.* 2.3.7; Arist. *Pol.* 1287^a37–38) are attested. Samos is called *asty* at Anac. fr. 353 and 448, Page. The designation *polites* is applied to citizens of Samos in Hdt. 3.45.4 (rC6) and Xen. *Hell.* 2.3.7, while the Samian *politeia* in the sense of constitution is mentioned in Thuc. 1.115.2; IG I³ 127.19–20 (405); and [Arist.] *Ath. Pol.* 24.2 (rC5). A Σαμίων πολιτεία was included among the 158 Aristotelian constitutions (fr. 591.1; cf. fr. 588–95). The verb *politeuein/poli-*

teuesthai is used in Thuc. 8.73.6 and *IG* 1³ 127.13 = ML 94.13 (405). In Hdt. 3.44.2, 142.2 and 143.1 Samian citizens are referred to as *astoi*. For *patris* referring to Samos, see Hdt. 3.140.5 and *SEG* 22 483.1 (C4f). The collective use of the city-ethnic is attested internally in a C5e dedication quoted at Hdt. 4.88.2 and in abbreviated form on C5l–C4 coins (*infra*), and externally in *IG* 1³ 1365A.1.1 (C6); Thuc. 7.57.4 (C5); and Arist. *Oec.* 1350^b6. The individual and external use of the city-ethnic is attested in *I.Ephesos* 115 (C6) and *IG* 1³ 1366 (C6–C5). In the collective grant of citizenship by Athens in 405, the honorands are classified as both Samians and Athenians (*IG* 1³ 127.12). The collective form of the city-ethnic is used retrospectively in a number of Samian honorific decrees bestowed on the benefactors of the exiled Samian *demos* (*IG* XII.6 17.5–6, 24.6–7).

The Samian territory in its entirety is referred to as *χώρα* in Hdt. 6.22.1, and it is designated *Σαμῶν* in Hdt. 9.96.1. A study of the settlement pattern of ancient Samos is given by Shipley (1987) 231–68. Apart from Samos itself, *Barr.* records only four settlements of the Archaic and Classical periods: Kazania (*Barr.*, AC), Manolates (*Barr.*, A), Neo Karlovasi (*Barr.*, C) and Neokhorion (*Barr.*, AC), plus one fort at Ag. Ioannis (*Barr.*, AC).

The size of the Samian citizen population cannot be ascertained. From the number of Samian ships at Lade in 494 and in the navy in action in 440, Shipley (1987) 12–15 suggests a population figure of 30,000–50,000, including women, resident aliens and slaves.

According to Hdt. 5.99.1, Samos supported the Chalkidian side in the so-called Lelantine War (C8?), and Samian forces also assisted the Spartans in a war against the Messenians (Hdt. 3.47.1), presumably the Second Messenian War (C7). In C6 Samian troops distinguished themselves in the battle at Salamis in Cyprus against Persian and Phoinikian forces (Hdt. 5.112.1). Around 517 the conquest of Samos was allegedly completed successfully by Otanes; the entire population was allegedly killed and the Persians handed over “an empty island” to Syloson (Hdt. 3.147–49); but Otanes repopulated the island soon afterwards.

Samos belonged to the Ionian *dodekapolis* (Hdt. 1.142.4), and the Samians took part in the Ionian Revolt in 499 and provided sixty triremes at the battle of Lade in 494 (Hdt. 6.8.2). After the failure of the Ionian Revolt, which led to the reinstatement of Aiakes II as tyrant with Persian backing, many wealthy Samians went into exile and settled at Zankle (no. 51), driving out the Zanklaians (Hdt. 6.22–24; Arist. *Pol.* 1303^a35–36). The Samians fought on the Persian side in 480/79 (Hdt. 8.85) but joined the Greeks before the battle of

Mykale (Hdt. 9.90–92) and were accepted as members of the Hellenic League after the battle (Hdt. 9.106.4). Samos was among the earliest members of the Delian League (Hdt. 9.106.4) and, alongside Chios (no. 840) and Lesbos, the Samians maintained their status as an *autonomos* ally of Athens (Arist. *Ath. Pol.* 24.2, but see *Pol.* 1284^a39–40). Yet, in 441/0 they revolted after Athenian interference in their war against Miletos (no. 854) and their installation of a democratic government on the island (Thuc. 1.115.2–3). After a protracted siege (Thuc. 1.115.4–117.2) the Samians were forced back into the alliance and had to pull down their walls, surrender their fleet, and pay a large war indemnity (Thuc. 1.117.3; *IG* 1³ 48 = *Staatsverträge* 159). The oligarchs who had left Samos in 441/0 during the democratic regime but had returned and instigated the Revolt in 440 (Thuc. 1.115.4) went into exile once again, and many of them settled in Anaia (no. 838) (Thuc. 3.32.2, 4.75.1; see Gehrke, *Stasis* 143–44). Samos was now perceived as a tribute-paying member of the alliance (Thuc. 7.57.4), although it is never attested in the Athenian tribute lists. Samos remained a member for the duration of the Peloponnesian War, in spite of two attempted secessions in 412 and 411 staged by the Samian élite, both of which were prevented at the eleventh hour (Thuc. 8.21 and 8.63.3). In 412 Samos regained its status as an *autonomos* member of the League (Thuc. 8.21). After the Athenian defeat at Aigos potamoi, the Samians massacred their oligarchs (Xen. *Hell.* 2.2.6) and sent envoys to Athens (*IG* 1³ 127.7–8). Athenian citizenship was conferred on all Samians, but their *autonomia* was guaranteed (*IG* 1³ 127.11–18). After the end of the Peloponnesian War, a decarchy was imposed on Samos by Lysandros after the expulsion of Samian citizens and the return of oligarchic exiles (Xen. *Hell.* 2.3.6–7; Diod. 14.3.4–5; Shipley (1987) 131–33). Some of the exiled Samian democrats settled in Notion (no. 858) and Ephesos (no. 844) (*IG* II² 1.48–49 = Tod 97 (403/2)). The Samians displayed their loyalty by dedicating a statue of Lysandros at Olympia (Paus. 6.3.15). Samos presumably remained a Spartan ally until Konon’s victory in the battle of Knidos in 394 (Paus. 6.3.16), but Samos was subsequently forced back into an alliance with Sparta in 391 (Diod. 14.97.3). In 366/5 Samos was conquered by Timotheos (Isoc. 15.111; Dem. 15.9) and turned into an Athenian klerouchy (no. 865).

Samos was renowned as a hegemonic sea power during the reign of Polykrates (Hdt. 3.39.3–4, 122.2; Thuc. 1.13.6), who allegedly had 100 *pentekonteres* and 1,000 archers at his disposal (Hdt. 3.39.3), and Samos deployed sixty triremes at the battle of Lade (Hdt. 6.8.2, 14.2). In 440–439 the Samians

had a considerable naval force engaged in their rebellion against the Athenians (Thuc. 1.116.1, 117.1–2). They were compelled to hand over their fleet after their defeat, but in 406 ten Samian ships under a Samian commander fought in the battle of Arginousai (Xen. *Hell.* 1.6.25, 29). A contingent of Samian troops participated in the Sicilian expedition (Thuc. 7.57.4), and Samian *strategoí* are honoured in *IG* I³ 127.8.

The constitutional history of Samos before Polykrates is obscure. A *C6 basileus*, Amphikrates (Hdt. 3.59.4), may have been an eponymous official rather than a king (Shipley (1987) 37). On the basis of Plutarch's rather late and anecdotal account at *Mor.* 303E–304C, it is normally assumed that Samos from *C7* was ruled by an oligarchy of wealthy landowners (the *geomoroi*), that the rule of the *geomoroi* followed after the murder of the monarch Demoteles, and that the oligarchy remained in place until a successful Samian intervention in a war between the Megarians (no. 225) and Perinthians (no. 678), when the Samian *demos* staged a *coup* and “liberated” the *polis* (Shipley (1987) 39–41). Demoteles may have been a tyrant whose rule represented an interruption of the oligarchy of the *geomoroi* (ibid. 49). However, Thucydides at least confirms that the Samian aristocracy was still referred to as *geomoroi* as late as 412, when a ban on intermarriage between the *geomoroi* and the rest of the Samians was instituted (8.21).

The period of tyranny at Samos started in the 590s with the alleged *coup* of Syloson I, known only from Polyaeus. 6.45. For a reconstruction of the succession of tyrants from Syloson I to Polykrates, see Shipley (1987) 70–72. Polykrates ruled as tyrant of Samos from, probably, the 540s (ibid. 74–80) until 522, when he was crucified by Oroites (Hdt. 3.125.2–3). He first ruled jointly with his two brothers, Syloson II and Pantagnotos, but soon killed Pantagnotos and exiled Syloson II (Hdt. 3.39.2). After Polykrates' death, Maiandrios offered the Samians *isonomie* (Hdt. 1.142.3; Raaflaub (1985) 130–31), but *stasis* soon broke out, and Syloson II was subsequently installed as tyrant with Persian backing. Aiakes II, the son of Syloson II, had succeeded his father as tyrant by 514 (Hdt. 4.138.2), but he was ousted from the tyranny in 499, allegedly at the instigation of Aristagoras of Miletos (Hdt. 6.13.2). It is not known what type of regime was set up after his fall, but he was reinstated as tyrant by the Persians again immediately after the Ionian defeat in 494 and presumably ruled until 492 when, allegedly, *demokratia* was imposed on the Ionian *poleis* by Mardonios (Hdt. 6.43.3). The last Samian tyrant was Theomestor, who had power handed to him by the Persians

in return for his loyalty in the battle of Salamis (Hdt. 8.85.3). The constitution of Samos after the Persian defeat at Mykale was probably oligarchic and may have remained so until replaced by an Athenian-backed democracy in 441 (Thuc. 1.115.2–3; *Ath. Pol.* 24.2). The view that oligarchy was introduced only in 454/3 (Barron (1966) 89) is countered by Gehrke, *Stasis* 140 n. 3. Samos probably remained democratic until the end of the Peloponnesian War (Hornblower (1991) 192–93), in spite of the oligarchic threat in 412 and 411 (Thuc. 8.21, 73.2). Oligarchy was imposed on Samos by Lysandros after the Athenian defeat in 404 (Xen. *Hell.* 2.3.6–7), and it may have remained oligarchic even after the battle of Knidos in 394 (Gehrke, *Stasis* 144–45), and right down to 365, when the Athenians set up their *klerouchy* on the island.

The Samian political institutions are poorly known since, so far, not one single public enactment antedating 365 has been found. A Samian *boule* is attested in *IG* I³ 127.8 (405), while a Samian assembly (*ekklesie*) was allegedly convened by Maiandrios after Polykrates' death in 522 (Hdt. 3.142.2). An honorific decree passed by the *koínon* of the Samians and set up in the Samian agora after the battle of Lade is mentioned in Hdt. 6.14.3, and Samian *nomoi* are referred to in *IG* I³ 127.15. In *IG* XII.6 478 (C5) Telesandros and Demagores are attested as elected supervisors of a public construction of a bridge. A board of *gynaikonómoi* is attested in *IG* XII.6 461 (C4f).

The only thing known about civic subdivisions is that the citizens of Perinthos (no. 678), a Samian colony, were subdivided into the six Ionian *phylai*. It seems reasonable to presume that the system was taken over from the *metropolis* (Jones, *POAG* 195–97). The well-attested subdivision of the citizen body into *phylai*, *chiliastyes*, *hekatostyes* and *gene* (*IG* XII.6 18.21–23 (C4l)) was introduced after the expulsion of the Athenian *klerouchs* in 322/1 (Jones, *POAG* 195–97; Shipley (1987) 284–92 suggests an earlier date). In C4l the Samians granted *proxenia* to a citizen of Gela (no. 17) (*IG* XII.6 33), and a grant of *proxenia* was received from Athens (no. 361) by *Pronos Thyionos Samios* (*SEG* 37 70 = *IG* II² 64 + 425 + 293 (375–350)). A block grant of Athenian citizenship was received by the entire Samian population in 405 (*IG* I³ 127). The earliest recorded Samian grants of *proxenia* and/or citizenship date from the period after 322. The following funerary monuments commemorate non-citizens who were presumably buried in Samos in the period before the Athenian *klerouchy*: *PEP Samos* 521 (Miletos (C5)); *PEP Samos* 548 (Kolophon (C5)); and *PEP Samos* 571 (Kyzikos (C5)).

The Samian acropolis, which was apparently fortified in C6, is attested in Hdt. 3.143.1, 144 and 146.2. An Archaic city wall is attested in Herodotus' account of Polykrates (3.39.4) and the Spartan siege of Samos in 524 (3.54.1–2). The urban centre of Samos may well have remained fortified until the Athenians forced the Samians to demolish their walls in 439/8 (Thuc. 1.117.3). Samos was still *ateichistos* in 411 (Thuc. 8.51.2), when the Athenians had to fortify the city in a hurry in the face of an (allegedly) impending attack by Peloponnesian forces (Thuc. 8.51.2). Samos was also fortified in C4f (Arist. *Oec.* 1350^b; Diod. 16.21.2). Kienast (1978) 94–103 identifies three building phases for the walls: the first in polygonal masonry (the Archaic wall), the second in ashlar masonry (presumably C4e and at any rate earlier than 290), and the third in pseudo-polygonal masonry. The city wall encompassed an area of c.103 ha.

A Samian agora is mentioned in Hdt. 3.42.2 (rC6s) (probably anecdotal) and Hdt. 6.14.3. A *proasteion* is mentioned in Hdt. 3.54.1 and 142.2. The mole in the harbour of Samos, attributed to Polykrates by Hdt. 3.60.3, has been located through underwater surveys in 1988 (*BCH* 113 (1989) 673). Other large-scale public works assigned to Polykrates' reign are ship sheds (Hdt. 3.45.4) and the famous Eupalinos tunnel (Hdt. 3.60.1–2; Kienast (1995)). A *bouleuterion* is mentioned by Plut. *Mor.* 304B in connection with the Samian people's *coup* against the ruling oligarchs c.700. An Archaic fountain house was published in Tölle-Kastenbein (1975) 212 (see further Giannouli (1996)). A theatre is mentioned in a C4l honorific decree (*IG* XII.6 150.3).

Of sanctuaries the most famous was the Heraion, located outside the urban centre. The first Heraion can be dated as early as C8, and it was replaced by a C7 structure. The construction of the so-called Rhoikos temple began c.575 but was soon replaced by the monumental Heraion praised in Hdt. 3.6.4. Construction appears to have begun during the last three decades of C6, and it was apparently not finished earlier than the end of C6 (Kyrieleis (1981); Klose (1999) 361–63). An Artemis sanctuary is attested in Hdt. 3.48.3 (rC6) and on the C5–C4 *horos* *IG* XII.6 266. Hdt. 3.142.2 contains an account of the construction of an altar and *temenos* for Zeus Eleutherios by Maiandrios (rC6); but see Raaflaub (1985) 139–40, but see Thuc. 2.74.1). According to Paus. 2.31.6 and Diod. 1.98.5–6, Samos also contained a sanctuary of the Pythian Apollo. *IG* XII.6 238–44 are C5 *horoi* of the sanctuary of *Athena Athenon medeoussa*, while *IG* XII.6 245–46 are C5 *horoi* of the sanctuary of *Ion Athenethen*. *IG* XII.6 527 and 528 are C5–C4 altars of Apollo Nymphetes.

According to Hdt. 3.48.3, the Samians instituted a festival for Artemis after their successful attempt to rescue a number of children from Korkyra whom Kypselos was exporting to Sardis. Another important festival was the Heraia, temporarily renamed the Lysandreia after the end of the Peloponnesian War (Douris (*FGrHist* 76) fr. 26, 71). Three Olympian victors from Samos are known: *Olympionikai* 123 (532), 399 (380) and Skaios, son of Duris, who apparently participated during the Samians' period in exile from their island (Paus. 6.13.5). *SEG* 22 483 (C4f) may commemorate a Samian victor in the Pythian Games (but *ἐκ Σαμῆος* is restored). The Samians set up a statue in honour of Lysandros in Olympia (Paus. 6.3.14–15 (rC5l)), while *F.Delphes* III.4 455 (C5e) is a communal dedication by the Samians to Apollo at Delphi. A C6 *kerykeion* was found in the Heraion (*AM* (1972) 138–39), and two others are listed in the inventory of the treasurers of the Heraion of 346/5 (*IG* XII.6 261.53).

Samos struck coins of electrum, silver and bronze, c.600–365. (1) Electrum coins on the Euboic standard, c.600–525: denominations: stater and fractions down to sixth. Types: *obv.* no recognisable type; *rev.* incuse square and on coins of higher denominations one or two parallel incuse rectangles (Barron (1966) 15–16). According to Hdt. 3.56.2, Polykrates bribed Spartan forces to lift their siege of the island in 525 or 524 with lead coins plated with gold. Some of these fake coins have survived (Barron (1966) 17–18; Kraay (1976) nos. 68–69). (2) Silver coins first on the Euboic and later on the Lydo-Milesian standard, c.530–439: denominations: drachm, triobol, diobol. *Obv.* forepart of winged boar; *rev.* lion's head or scalp. (3) Silver coins, c.479–439: denomination: tetradrachm. *Obv.* lion's scalp; *rev.* head and neck of bull; legend: *ΣΑ*. (3) Silver coins, c.439–408: denominations: tetradrachm, trihemiobol. *Obv.* lion's head or scalp; *rev.* forepart of bull and olive branch, or ram's head and olive branch. (4) Silver, 408–365: denominations: tetradrachm, drachm, hemidrachm, diobol, obol. *Obv.* lion's scalp; *rev.* forepart of bull and olive branch, or prow of Samian galley; legend: *ΣΑ* or *ΣΑΜΙ* and monogram or magistrate's name. (4) Bronze coins, 394–365: *obv.* Hera wearing stephane; *rev.* lion's scalp; legend: *ΣΑ* (Barron (1966); *SNG Cop. Ionia* 1673–96).

The Samians were active colonisers, founding Kelenderis (no. 1008) in C8l, Nagidos (no. 1010) at an unknown date, Perinthos (no. 678) in 602, and Bisanthe (no. 673) in C6(?). In the reign of Amasis Samians took part as co-colonisers of Naukratis (no. 1023), where they had their own sanctuary of Hera (Hdt. 2.178.3); another Samian settlement in Egypt was

Oasis (no. 1024), founded at an unknown date. Samian exiles, including Polykrates' brother Syloson, participated in a refoundation of Kydonia (no. 968) in Crete in C6l. Other foundations probably or possibly of Samian origin are Samothrake (no. 515), c.700; Dikaia (no. 643), C6; Nymphaion (no. 704), 560s; and the three *poleis* on Amorgos: Aigiale (no. 471), Arkesine (no. 472) and Minoa (no. 473), founded at an unknown date.

865. Samos (the klerouchy of 365–322) In 366/5 an Athenian squadron under Timotheos conquered Samos after a siege of eight months (Isoc. 15.11; Dem. 15.9). The Samians were expelled (Diod. 18.18.9; Heracl. Lemb. 35; Arist. no. 129; Habicht in Hallof and Habicht (1995); *IG XII.6* 42.10–30). Subsequently three contingents of Athenian klerouchs were sent to the island: in 366/5 (Diod. 18.18.9; Arist. fr. 143.1 no. 35), in 361/0 (Aeschin. 1.53 with schol.) and in 352/1 (Philoch. fr. 154). One of the three contingents alone numbered 2,000 klerouchs (Arist. fr. 143.1; Strabo 14.1.18; see Cargill (1995) 17–21; Habicht in Hallof and Habicht (1995) 286–88 (301–303)). The exiled Samians settled in different *poleis* all over the Aegean, and some undoubtedly set up home on the former Samian *peraiia*, especially at Anaia (*IG XII.6* 42, 43). A series of honorific decrees passed by the Samian *demos* after their return to the island in 322 provide some information about communities that allowed the Samians to settle in their territory: Iasos (no. 891) (*IG XII.6* 17.18), Rhodos (no. 1000) (*IG XII.6* 149) and Ephesos (no. 844) (*IG XII.6* 39)). Some may even have settled as far away as Herakleia (no. 20) in Sicily (*IG XII.6* 38 (C4l) with Kebric (1975), (1977) and Shipley (1987) 164).

During the period of Athenian occupation the Athenian settlement on Samos shared many of the characteristics of a *polis*, although it is not referred to as *polis* in the personal/political sense in any contemporary source (Demades (fr. 4) purportedly characterised Samos as a fragment broken off from the Athenian *polis* (ἀπόρρωγα τῆς πόλεως)). The klerouchy is, on the other hand, described as *patris* in *IG II²* 11169.5 (C4m) (δισσαί δ' αὐ πατρίδες σ' ἡ μὲν φύσει, ἡ δὲ νόμοισιν); the Dionysios of this epigram is commonly identified with Διονύσιος Ἀλφίνου Κολλυτέυς (*LSAG II* no. 414), who is attested as klerouch on Samos in Michel 832.2. Accordingly, the two *patrides* mentioned in the text should be Athens (*patris* by *physis*) and the Athenian klerouchy on Samos (*patris* by *nomos*). The community of Athenians in Samos seems in many respects to have functioned independently of Athens and can in that respect be compared to a dependent *polis*; cf. *IG II²*

1443.II.89–91, which records a wreath bestowed in 346/5 on the Athenian *demos* by the *demos* in Samos (not the Samian *demos*). *IG XII.6* 253 (C4m) refers to the assembly (*demos*) of Athenians in Samos, and to their *boule* in a probouleutic capacity. *IG XII.6* 262 is a list of *bouleutai* and other officials in Samos (c.352–347). The *boule* numbered 250 *bouleutai*, and on that basis it has been suggested that the number of Athenian citizens was roughly half that of Athens itself in C4 (Habicht in Hallof and Habicht (1995)). The other officials mentioned in *IG XII.6* 262 are the nine *archontes* (XI.1–10), a *grammateus* (XI.11–12), five *strategoí* (XI.13–18), a *grammateus demou* (XI.19–20), a *grammateus boules* (XI.21–22), an official *epi tois nomois* (XI.23–24), a *keryx demou* (XI.25–26) and an *antigraphus* (XI.27–28). *IG XII.6* 261 is an inventory of the treasurers of the Heraion of 346/5. The Athenians in Samos had their own eponymous archon (*IG XII.6* 261 (346/5)). *IG XII.6* 260 is part of a sacred law passed in C4m. A *bouleuterionis* attested in *IG XII.6* 257.3. *IG XII.6* 252 has been interpreted by Hallof (2003) as a citizenship decree passed in Samos, by which the honorand is made an Athenian citizen (17–19). It is not known if this would also give the honorand the right to enrol as a citizen in Athens proper, should he wish to settle there. That some kind of dual citizenship of the klerouchy and Athens proper was in operation is indicated by the status of the philosopher Epikouros: he was born in Samos, but was enrolled as an ephebe in Athens (Strabo 14.1.18; Diog. Laert. 10.1).

The civic subdivisions in the klerouchy were the same as the Athenian ones, and nine of the ten Kleisthenic *phylai* are attested in *IG XII.6* 262. *IG XII.6* 253.12 mentions envoys, which may indicate that the Athenians in Samos maintained their own diplomatic relations with the outside world; *IG XII.6* 263 and 264 are communal dedications set up by the Athenian *demos* in Samos to Apollo in Delphi in c.340 and 334/3 respectively, again an indication of the separate communal identity of the klerouchy.

In addition to local institutions manned by klerouchs, Athenian officials were sent from Athens to Samos (Arist. *Ath. Pol.* 62.2), in particular a *strategos* (στρατηγὸς ἐς Σάμον: *IG II²* 1628.17–18, 28; 109–10, 119; *I.Priene* 6.6; *IG XII.6* 42.4–5; cf. Kroll and Mitchel (1980) 91–92).

The Athenian klerouchs were expelled in 322/1, and the island given back to the Samians (Diod. 18.18.9; Diog. Laert. 10.1; *IG XII.6* 43.8–14 (C4l)).

866. Sidousa (Sidousios) Map 56. Lat. 38.40, long. 26.30, but see *infra*. Size of territory: ? Type: A. The toponym is Σιδούσση, ἡ (Thuc. 8.24.2) or Σίδουσα (Hecat. fr. 229). The

city-ethnic is *Σιδούσιος* (*IG* 1³ 265.1.61 (447/6)). Sidousa is called a *polis* in the urban sense by Hecat. fr. 229 (Hansen (1997) 24–25). Thuc. 8.24.2 refers to the settlement as a *teichos* located in the territory of Erythrai (no. 845), perhaps on the Mimas peninsula; although Plin. *HN* 5.137 believed that Sidousa was an island. The collective use of the city-ethnic is attested externally in the Athenian tribute quota lists (*IG* 1³ 265.1.61).

Sidousa was a member of the Delian League. It belonged to the Ionian district and is recorded from 450/49 (*IG* 1³ 263.11.15) to 430/29 (*IG* 1³ 281.1.24) a total of ten times, three times completely but plausibly restored. In 430/29 Sidousa is explicitly registered as a dependency of Erythrai (*IG* 1³ 281.1.24). In 450/49, 448/7 and 447/6 it paid alongside the other dependencies of Erythrai (no. 845); they all formed a *syntely*, but the Sidousioi paid on their own behalf (*IG* 1³ 263.11.15, 264.11.30, 265.1.61). In later years their payment is recorded separately from that of the other Erythraian dependencies, and they seem in all years to have paid 500 dr. (*IG* 1³ 271.1.19).

The community was located in Erythraian territory and was undoubtedly an Erythraian dependency (Thuc. 8.24.2: ἐν τῇ Ἐρυθραίᾳ; *IG* 1³ 281.1.21: [Σιδόσιοι] ἐρυθραίων), but the Athenians maintained control over the site during Erythrai's revolt in 412. The designation *τεῖχος* in Thuc. 8.24.2 indicates that Sidousa was walled.

867. Smyrna (Smyrnaïos) Map 56. Lat. 38.25, long. 27.10. Size of territory: ? Type: A. The toponym is *Σμύρνη*, ἡ (Mimnermos fr. 9.6, West; Hdt. 1.16.2) or *Σμύρνα* (Ps.-Skylax 98) or, later, *Ζμύρνα* (*F.Delphes* III.3 145.21 (C31)). The city-ethnic is *Σμυρναῖος* (Pind. fr. 204, Maehler; Hdt. 1.143.3) or, later, *Ζμυρναῖος* (*F.Delphes* III.3 145.3 (C31)). Smyrna is called a *polis* both in the urban sense (Hdt. 1.150.1) and in the political sense (Hdt. 1.149.1). A possible C4f attestation of Smyrna as a *polis* in the political or territorial sense may be found in *IG* II² 28.19 = Tod 114 (387), but only if the very doubtful restoration of [τῶμ *π*όλ*ε*ω]ν in ll. 17–18 is accepted. The designation *asty* is applied to the urban centre of Smyrna in Pind. fr. 204, but the context may be historical. The collective use of the city-ethnic is attested internally on a C4f coin (*infra*) and externally in Kallinos fr. 2, West (C7); Pind. fr. 204, Maehler; Hdt. 1.143.4. For the individual and external use, see *IG* II² 10369, an Attic C4s sepulchral inscription, and Ephor. fr. 1, referring to a contemporary Smyrnaian teacher.

Smyrna was originally an Aiolic foundation from which the settlers were driven out by Ionian exiles from Kolophon

(no. 848) (Mimnermos fr. 9, West; Hdt. 1.149.1–150.2). This probably happened prior to 688 (the date of the Smyrnaian Onomastos' victory in the Olympic Games), when Smyrna was considered Ionian (Paus. 5.1.7). Hdt. 1.16.2 refers to Smyrna as “founded from Kolophon”, which probably relates to the Kolophonian take-over. The most likely interpretation of Hdt. 1.143.3 is that the Smyrnaians subsequently asked to participate in the Panionia, but were refused. There is no evidence for Smyrnaian participation in the Archaic or Classical periods, nor for Smyrna's interaction with other Greek states.

According to Strabo 14.1.37, Smyrna was inhabited *kome-don* for about 400 years, dating from the Lydian conquest of the *polis* c.585 (Hdt. 1.16.2). The physical destruction of Smyrna's urban centre may also be alluded to in Theognis fr. 1104, West. However, archaeological evidence points to a later date for the destruction, *viz.* 545, connected with the Persian conquest of Ionia (Meriç and Nollé (1988) 230–32). Strabo's claim that the Smyrnaian *διοικισμος* lasted until the refoundation of Smyrna by Alexander the Great or his successors may also have to be modified. E. Akurgal (1983) 56–58 discusses architectural remains from C4 on the site of Archaic Smyrna. See further Mellink (1985) 563 and Gates (1994) for results of later excavations of C5 and C4 structures. Bingöl (1976–77) dated a number of roof tiles found in the harbour area to C4, before the refoundation. On the other hand, numerous second-order settlements scattered all over Smyrnaian territory, some of them fortified, may be dated to the period after the *διοικισμος*. Some of these are discussed by Bean (1955). The locations mentioned are Belkahve (6 m-thick Archaic wall, ceramics from C4 and later), Adatepe (presumed by Bean to be a Hellenistic installation), Akçakaya (described by Weber in *AM* 10 (1885)), also believed by Bean to be Hellenistic in origin, Akkaya (for which Bean ventures no date), Yamanlar road site (no date), Çobanpınarı (*terminus post quem* C5 on the basis of ceramic surface finds). Meriç and Nollé (1988) 225–26 discuss a fortified site on Çatalkaya in Smyrnaian territory. The ceramics found on the site are predominantly Archaic and Hellenistic.

According to Hdt. 1.150.2, the Aiolians who had been thrown out of Smyrna by the Kolophonians were received and given citizenship by the remaining eleven Aiolic *poleis*; but this may very well be anachronistic. The same may be true of his allegation (1.150.2) that a treaty was made between the Kolophonians and the combined forces of the Aiolian *poleis*, who had aided the original Smyrnaians, according to which the Smyrnaians were allowed to take their movable property with them into their exile.

As far as the public architecture of Smyrna is concerned, an open square with wells was identified and dated to C4 by E. Akurgal (1983) 56. For a comprehensive discussion of the Athena temple, see Cook and Nicholls (1998), who regard the structure Temple III A–B (C7) “as the local beginnings of wholly monumental temple architecture” ((1998) 198). A late C7 fountain house was identified and published by M. Akurgal (1996). According to him, the well seems to have been in continuous use down to the middle of C4. Another well, dating from 630–600, was excavated and described by Nicholls (1958–59) 58–64. E. Akurgal identified what he called the “high street” of Old Smyrna, the so-called “Athenastrasse”, about 4 m wide. He connected this with the “Orientalizing settlement” (E. Akurgal (1983) 45). He also discussed a number of smaller streets dating to the same period (ibid. 46). For a summary of the discussion of the street plan of Old Smyrna, see Lang (1996) 241–43. E. Akurgal (1983) 14 estimated that there were c.500–600 houses in the urban centre of Old Smyrna in the period 630–545, and that the settlement housed c.3,000 inhabitants.

The only written attestation of the city wall of Smyrna is found in Hdt. 1.150.1 in his account of how the Kolophonians took advantage of a Smyrnaian Dionysos festival outside the walls, which the Smyrnaians were attending. The Kolophonians took possession of the urban centre and locked the gates. The archaeological evidence points to a date of the first city wall at least as early as 750 (Wall II); but the even earlier remains of Wall I were interpreted as remains of a city wall by Cook and Nicholls, who dated this to c.850. This date was later accepted by E. Akurgal (1983) 25–26, who argued that a fire in a building complex dated by him to 875–825 affected the neighbouring city wall. For the problems surrounding the interpretation of Wall I, see Lang (1996) 241, who prefers to interpret it as a terrace wall. Wall II appears to have been destroyed by an earthquake c.700 and was replaced by city wall III in C7l. Akurgal argued for considerable damage having been inflicted on city wall III under Alyattes, and for the city’s being unfortified in C6 ((1983) 54).

The occupation of the urban centre of Smyrna goes back at least as far as 1050, according to E. Akurgal (1983) 15–59, who argues for an Aiolic phase running from 1050 to 1000 on the basis of ceramic finds (Aiolian grey ware), found together with Protogeometric and Geometric decorated sherds. In contexts of the late Geometric period, the amount of grey ware increases (ibid. 15). There are very few architectural remains dating from this phase, but Akurgal mentions a

number of square buildings (ibid. 22). The next phase is the Protogeometric settlement, running from 1000 to 875. An “Ovalhaus” is dated to 925–900 on the basis of ceramic finds (ibid. 17–18). Early Protogeometric ceramic is interpreted as evidence for an Ionian take-over of Smyrna (ibid. 10–21). The third phase, the early and middle Geometric settlement, runs from 875 to 825 (ibid. 22–27). Akurgal interprets rich architectural remains from this period as part of a large housing complex (ibid. 24–25). Phase four, the late Geometric settlement, runs from 750 to 675/650. Architectural finds include a *tholos* (ibid. 28), a large building complex (ibid. 29) and a house with two rooms and an ante-room. Not much evidence, apart from ceramic finds, remains from what Akurgal designates the sub-Geometric settlement, 675–640 (ibid. 34), but finds increase in the next stratum, the Orientalising settlement (640–600), summarised ibid. 35–50. Architectural finds include a double *megaron* building, the oinochoe house, perhaps with towers. Another building complex included a bath dating from the last third of C7 (ibid. 39–40). The Archaic settlement (C6) follows (ibid. 50–56) with a number of architectural remains, along with attested repairs to older large buildings, such as the *megaron* house. For a summary and some critical remarks on Akurgal’s reconstruction; see Lang (1996) 241–43. There can be little doubt, however, that the urbanisation of Smyrna was very early (C8 at the latest: Lang (1996) 242–43).

There was not much C5 material available in 1983 (E. Akurgal (1983) 53); but this may have been due to incomplete excavation, rather than to absence of habitation in this period. Akurgal notes plenty of ceramic finds. There are considerable architectural remains from C4 (ibid. 56–58). In the 1990s excavations uncovered a quite dense C4 settlement (see the reports in Gates (1994), (1996)). The city seems to have been abandoned at the end of C4 (E. Akurgal (1983) 58), but Cook and Nicholls (1998) 183 note that a small settlement west of the tell seems to have had continued occupation into the Hellenistic period.

Apart from the Dionysia mentioned by Hdt. 1.150.1, nothing is known of Smyrnaian festivals. In addition to Onomastos mentioned above, a further Smyrnaian victor at the Olympic Games, allegedly the first of the Ionians, is mentioned in Paus. 6.13.6 (*Olympionikai* 29).

Smyrna struck electrum coins in C6f. Denominations: stater, hekte and fractions down to one-forty-eighth. Types: *obv.* lion’s head; *rev.* rough incuse square (Babelon, *Traité* ii.1 nos. 177–89; Head, *HN*² 591; *BMC Ionia* 236). A unique silver tetradrachm on the Rhodian standard has been dated to

C4f: *obv.* head of Apollo, laureate; *rev.* lyre in slightly concave field; legend: ΣΜΥΡΝΑΙΩΝ. Head, *HN*² 592 interpreted the coin as evidence for the existence of Smyrna prior to its late C4 refoundation and relocation, an assumption that now seems to be confirmed by the archaeological evidence for the C4 settlement.

868. Teos (Teios) Map 56. Lat. 38.05, long. 26.45. Size of territory: unknown but probably 3 or 4. Type: A. The toponym is *Τέως*, ἡ (Hdt. 1.142.3; Thuc. 8.16.1; Ps.-Skylax 98). An alternative toponym, *Ἀθαμαντίς*, is attested in Anac. fr. 142, Gentili. The city-ethnic is *Τήϊος* (ML 7b (C6e); *PEP Teos* 39 = *SEG* 2 579.1 (C4l); Hdt. 1.168) or *Τέϊος* (*IG* 1³ 71.1.127 (425/4)). Teos is called a *polis* both in the urban sense (ML 30.B.12–13 (c.470); Thuc. 8.16.3; Aen. Tact. 18.15, 19; Ps.-Skylax 98) and in the political sense (*SEG* 31 985.18 (C5f) = *Nomima* I 105; Hdt. 2.178.2; Aen. Tact. 18.13). The designation *patris* is applied to Teos in Hdt. 1.169.1. The collective use of the city-ethnic is attested internally on C4 coins (*infra*) and in inscriptions (ML 30.2–3 (c.470); *SEG* 2 579.1 (C4l)) and externally in Hdt. 6.8.1; Thuc. 8.16.3; and *IG* 1³ 71.1.127. For the individual and external use, see ML 7b (C6e); *IG* 1³ 1372 (C5); Hdt. 3.121; Ar. *Thesm.* 161; *Carm. Anac.* 1.2, West.

The territory is referred to as γῆ ἡ Τηϊή in ML 30.B9–10. If Ager's (1991) interpretation of *SEG* 28 697.10 (C4l) is followed (= Ager (1996) no. 15), this inscription defined the entire territories of Teos and Klazomenai (no. 847), starting from the border of Kolophononia in the east and moving westwards on to the isthmus of the Mimas peninsula to the territory of Erythrai (no. 845). For some objections, see Brixhe, *BE* (1992) 498–99. *PEP Teos* 135 (Classical) may be a *horos* demarcating Teian territory: οὐρος Τε[ῶν?] (cf. *SEG* 2 598).

In C4l there were 600 wealthy Teian citizens (*euporountes*) subject to *proeisphora* (*Syll.*³ 344.116), and Gauthier (1990) 86 infers that the total number of citizens must have come to at least 2,000–3,000.

According to Pherekydes (*FGrHist* 3) fr. 102, Teos was founded by Athamas. It was part of the Ionian *dodekapolis* (Hdt. 1.142.3) and was considered the central point of Ionia (Hdt. 1.170.3). When the city was conquered by the Persians c.544, all Teians left for Thrace and founded Abdera (no. 640) (Hdt. 1.168; Ps.-Skymnos 670–71; *SEG* 47 1646B.1–2 (C2); Strabo 14.1.30; see Demand (1990) 39), but some returned later (Strabo 14.1.30), and the public imprecation of 480–450 found in the territory of Teos (*SEG* 31 985) indicates that, to some extent, Teos and Abdera remained two parts of one *polis*.

Teos joined the Ionian Revolt in 499 and provided seventeen ships for the battle of Lade (Hdt. 6.8.1). Teos was a member of the Delian League. It belonged to the Ionian district and is recorded from 451/50 (*IG* 1³ 262.11.12) to 430/29 (*IG* 1³ 281.1.50, mostly restored) a total of thirteen times, twice completely restored, paying a *phoros* of 6 tal. It was assessed for tribute in 425/4 (*IG* 1³ 71.1.127). In 412, she grudgingly let in the forces of Erythrai (no. 845) and Klazomenai (no. 847), at this point pro-Peloponnesian (Thuc. 8.16.3); but the Athenians seem to have regained control before 406, when Teos was sacked by Kallikratidas (Diod. 13.76.4; cf. Xen. *Hell.* 1.5.15, if the emendation of Ῥιόνα to Τέων is accepted). After 406 Teos appears to have remained a Peloponnesian ally until induced to secede by Pharnabazos and Konon in 394 (Diod. 14.84.3, perhaps corrupt).

On the basis of *SEG* 31 985.16–17 = *Nomima* I 105 it was argued by Lewis (1982) that the constitution of C5 Teos must have been a democracy. The passage requires a quorum of, presumably, 200 for any decision on penalties involving confiscation of property, imprisonment or death made by a court or assembly, a figure that Lewis regarded as relatively high. See, however, Gauthier's note of caution (1990) 85–86. "The law of the *polis*" is referred to in *SEG* 31 985.A19. The instruction on synoecism with Lebedos (no. 850) of 303 mentions Teian laws in existence (*Syll.*³ 344.56–57). In C4l the eponymous official was the *πρύτανις* (*SEG* 2 579.21–22 = *PEP Teos* 39). In C5 the following officials are attested: *aisymnetes* (ML 30.B.3); a board of *timouchoi* (ML 30.B.29; *SEG* 31 985.D.11), *tamias* (*SEG* 31 985.D.11) and a *phoinikographeus* (*SEG* 31 985.D.19–20). Most interpretations regard the *aisymnetes* as an office which had been abolished on the grounds that previous office-holders had used their position to exercise tyrannical power (Koerner (1993) 298–99). A Teian *strategos* is attested in Aen. Tact. 18.16. The *phyle* of the Geleontes is known from two inscriptions (*PEP Teos* 121 and 132). Both are undated, but since the Geleontes was one of the old Ionian *phylai*, the presumption is that its existence in Teos goes back a long way.

SEG 2 579 = *PEP Teos* 39 contains detailed information on taxation levied internally in Teos. Not only did a number of liturgies fall on citizens (and presumably also resident aliens); but taxes were also levied on the rearing of sheep and pigs, and on a number of other commercial activities, including wood, medicine and sale of wool and clothes.

Teian grants of *proxenia* are attested in *Syll.*³ 344.23–24 (c.303), and *SEG* 2 579 = *PEP Teos* 39 (C4l) is conventionally

interpreted as a grant of *ateleia* for a period of ten years to recently naturalised citizens of Teos. A grant of citizenship by Ephesos (no. 844) to a Teian is found in *I.Ephesos* 1437 (322/1); Teian *theorodokoi* to host *theoroi* from Argos (no. 347) are attested in *SEG* 23.189.11.5 (330–324).

The following festivals are attested for C5: Anthesteria, Herakleia and a festival of Zeus (ML 30.B.31–35). As for the Teian calendar, only two months are attested for the Archaic and Classical periods: *Λευκαθεών* (*SEG* 2.579.21 (C4)) and *Ποσιδηίων* (Anac. fr. 362, *PMG* Page), both attested in other Ionian *poleis* (Trümper, *Monat.* 105–6 §90).

The Teian acropolis was fortified, and remains of Archaic public architecture were described by Béquignon and Laumonier (1925) 284. Tuna's recent survey revealed the foundations of a long building of massive ashlar blocks, measuring 38.46 × 7.30 m. The city walls surrounding the urban centre of Teos in C6 are mentioned in *Hdt.* 1.168. This wall must have been pulled down, perhaps in 494, but was rebuilt by the Athenians (Thuc. 8.16.3), only to be demolished once again in 411 (Thuc. 8.16.3, 20.2). From the description in *Aen. Tact.* 18.13–19 of the stratagem used by Temenos of Rhodos, it can be inferred that the city had substantial fortifications again in C4, and Tuna's survey of Teos recorded remains of the Classical or early Hellenistic city wall which seems to have enclosed an area of c.80 ha (McNicholl (1997) 159–60; Mitchell (1999) 148). Ps.-Skylax 98 refers to the harbour of Teos.

Teos struck electrum coins in C6f and silver coins on the Aiginetan standard in C6s–C5 and on the Phoenician standard in C4. A few gold coins were struck in C4. (1) Electrum, C6f: denominations: stater, twenty-fourth. Types: *obv.* griffin's head; *rev.* square punch. (2) Silver, C6–C5: denominations: stater, drachm, hemidrachm, trihemiobol, obol, hemiobol. *Obv.* griffin seated, l. forepaw raised; legend: sometimes *TEION*; *rev.* quadripartite incuse square. (3) Gold, C4: *obv.* griffin seated; *rev.* circular incuse; legend: *THI* and magistrate's name. (4) Silver, C4: denomination: drachm. *Obv.* griffin seated, l. forepaw raised, or head of young Dionysos; *rev.* quadripartite incuse square, or kantharos; legend: *THI* or *THION* and magistrate's name. A Teian silver drachm and a number of silver staters were found in the Asyut hoard, dating from 499–494 (Price and Waggoner (1975) 85). Babelon, *Traité* ii.2 nos. 1930–55, (1930) 53–54; Head, *HN*² 595; Balcer (1968); Sear (1979) 322; *BMC Ionia* 309–13; *SNG Cop. Ionia* 1433–43.

Teos participated in the colonisation of Naukratis (no. 1023) (*Hdt.* 2.178.2), and founded Phanagoria (no. 706) on the Black Sea in 544 and Abdera (no. 640) in c.540, a founda-

tion with which Teos maintained very close ties in the Classical period (ML 30; *SEG* 31.985), to the extent that regulations passed at Teos were to be enforced also at Abdera.

869. Thebai (Thebaios) Map 61. Lat. 37.40, long. 27.10. Size of territory: 1 or 2. Type: B. The toponym is *Θῆβαι*, *αἱ* (*I.Priene* 37.57; Theopomp. fr. 23). The city-ethnic is *Θηβαῖος* (*I.Priene* 361.4 (C4m)) attesting to the collective and, probably, external use). Thebai was located on Mt. Mykale.

The strongest indications that Thebes was at some point a *polis* are the attestations of an altar of Zeus Polieus located in the sanctuary of Athena (*I.Priene* 364.12–14 (C3!)) and of the collective, internal use of the city-ethnic (*I.Priene* 361.4 (C4m), 362.26 (C4m)), with the clear implication in *I.Priene* 362.26 that the Thebans retained a communal identity distinct from that of the citizens of Miletos (no. 854), and of a clearly demarcated Theban territory. The latter had common borders with the territory of Priene (no. 861) (*I.Priene* 363.24–25). By C3, however, the community had the status of a Milesian deme (*I.Priene* 364.8; for grants of *ateleia* at deme level, see Whitehead (1986) 82 on Eleusis). According to *I.Priene* 37.57–58, it was given to Samos (no. 864) by Miletos, who had received it after the Meliac War (cf. Theopomp. fr. 23). However, on Hiller von Gaertringen's interpretation (1906) 185, Miletos received Thebes from Samos in return for another site. In any case, *I.Priene* 363.22–23 shows that Thebai was no longer part of the Samian *peraia* in C4m; but that does not necessarily confirm von Gaertringen's interpretation, for it is highly doubtful whether the Athenian settlers in Samos from 365 to 322 exercised any control at all over its former *peraia*. The designation of the boundaries of Theban territory was carried out by an individual appointed to the task by election (*I.Priene* 361.1–2), but we do not know which community was responsible for the appointment. The *stephanephoros* in *I.Priene* 364.1 (C3!) was very likely Milesian rather than Theban. *I.Priene* 365 (C4) was set up by the phrourarch Ameinias, son of Themistokles. Hiller von Gaertringen assumed that he was a Milesian official (for which the archon of Teichioussa may provide a parallel, *supra* 1083), and that Thebes itself was a Milesian *phrourion* in C4.

The city wall of Thebes was dated on stylistic grounds to the Archaic period by Wiegand and Schrader (1904) 474, whose excavations also uncovered two temples and a habitation area. The bronze coins found on the site were predominantly Milesian, dating from the early Hellenistic period.

Several cult sites are attested epigraphically. In addition to the Athena sanctuary, Theban territory contained cult sites of Hermes Ktenites (*I.Priene* 361.4 and 362.9), Mykale (*I.Priene* 362.7), Nymphs (*I.Priene* 362.7), Maiandros (*I.Priene* 362.11) and Hekate (*I.Priene* 363.20–21). *I.Priene* 362.8 mentions the festival Targelia (*sic*). The names of the

months Kyanopasion (*I.Priene* 362.2) and Ta[u]reon (*I.Priene* 362.6) in the Theban calendar are attested both in Samos (Trümpy, *Monat.* 78), Miletos (Trümpy, *Monat.* 89–93) and Priene (Trümpy, *Monat.* 94–96), and Milesian control of Thebes did not necessarily imply that the latter's calendar was changed (Trümpy, *Monat.* 94).

KARIA

PERNILLE FLENSTED-JENSEN

I. The Region

The name of the region was *Καρία*, *ἡ* (Ar. Eq. 173) or, in Ionic, *Καρίη*, *ἡ* (Hdt. 1.142.3). The corresponding ethnic denoting the non-Greek population was *Κάρ* (Hom. *Il.* 10.428; Hdt. 1.171.2). The traditional border between Karia and Ionia was the Maiandros river (Strabo 12.8.15, 14.2.29), although Tralleis (no. 941) north of the border was also considered Karian (Xen. *Hell.* 3.2.19, *pace* Diod. 14.36.2). Miletos (no. 854), Myous (no. 856) and Priene (no. 861) did not belong to Karia despite Hdt. 1.142.3 (Blümel (1998*b*) 164). To the east the border between Karia and Phrygia was at Tabai (Strabo 12.7.2). To the south, the border between Karia and Lycia was at Telemessos (no. 936) (Ps.-Skylax 100). Ancient writers sometimes distinguish between *Καρία ἡ ἐπὶ θαλάσση* (Thuc. 2.9.4) and *ἡ ἄνω Καρία* (Paus. 1.29.7). In ancient sources a distinction is often made between Karians and Lelegians, as the original population of Karia, as opposed to Greeks. Modern archaeologists have argued that some settlements and buildings can be classified as “Lelegian”, but new studies have shown that the peculiarities of certain buildings are probably due to the quality of the building material (Carstens and Flensted-Jensen (2004)).

The communities of Karia constitute a mixture of Karian settlements (possibly city-states) in the hinterland and Greek settlements, which were mainly situated on the coast. The majority of the Karian sites were probably not Hellenised until C4, but they were clearly in contact with the Greek world from the Geometric period onwards, as evidenced by the presence of Greek pottery (see e.g. Keramos (no. 900) and Labraunda (no. 913)). Diod. 17.24.1 (r334) clearly distinguishes between Greek and Karian *poleis*. Few places are specified as Karian or mixed in the sources, but in addition to the fact that several toponyms—such as Karyanda and Koranza—are Karian, Karian names of invid-

uals are attested at Alabanda, Armelitai, Halikarnassos, Kyblisseis, Hydaieis, Kasolabeis, Kaunos, Keramos, Killareis, Koliyergeis, Koranza, Ouranion, Pladasa and Syangela. Inscriptions in Karian have been found at Chalketor, Iasos (graffiti), Kaunos, Killareis and Kindye. Mylasa must have been a Karian city, too, but no systematic excavation has taken place there, which accounts for the lack of Karian inscriptions (Blümel (1998*b*) 170). On the other hand, in C5 a great number of settlements were members of the Delian League, and in C4 a number of Greek political institutions are attested.

The Karian settlements were ruled by dynasts. In C5 dynasts are attested at Alabanda (Hdt. 7.195), Killareis (*IG* 1³ 71.11.96–97; cf. Bean and Cook (1957) 99–100), Kindye (*IG* 1³ 71.1.155–56; an earlier one: Hdt. 5.118.2), Mylasa and Syangela (*IG* 1³ 284.7–8). Hekatomnos of Mylasa and his family ruled Karia as Persian satraps from the 390s. The most famous member of the Hekatomnid dynasty was Mausolos, who was satrap 377–353. C.370 Mausolos moved the capital of the dynasty from Mylasa to Halikarnassos and enlarged the city by synoecising some smaller settlements into it (Moggi, *Sin.* 263–71; Hornblower (1982) 82; Demand (1990) 123). Strabo, on the authority of the C4 historian Kallisthenes of Olynthos, explains that Mausolos “united” (*συνήγαγεν*) six of the former “Lelegian” *poleis* into Halikarnassos. He does not supply the names of the settlements, but says that Myndos and Syangela did not participate (13.1.59). Pliny claims that the synoecism was initiated by Alexander and that the *oppida* in question were “Theangela, Side, Medmassa, Uranium, Pedasum, Telmisum”. In his words, the *oppida* “contributed to” Halikarnassos (*HN* 5.107). Since Theangela/Syangela was one of the cities which, according to Strabo, did not participate, it is generally thought that “Termera” should be substituted for “Theangela” (Hornblower (1982) 82 n. 27). These are the only written sources referring to the synoecism. Little is known about the urban organisation of Halikarnassos, and although the extensive city walls there are generally believed to have been built by Mausolos, it is impossible to say what kind of

I should like to thank Prof. Wolfgang Blümel for valuable comments on this inventory.

synoecism took place, except of course that the six *poleis* did not form a new *polis*, but supplied an already existing one with new citizens.

Stephanos of Byzantion cites the *Periegesis* of Hekataios of Miletos for five Karian toponyms which are otherwise unknown. A typical citation runs: *Τνύσσοσ, πόλισ Καρίας. Ἐκαταΐοσ Ἄσιᾶ* (= Hecat. fr. 254). In such cases the term *polis* cannot be securely attributed to Hekataios (Hansen (1997) 17–18), and it is, accordingly, uncertain whether these toponyms denote *poleis*, and indeed whether they denote settlements at all. The five toponyms are:

Hipponesos (Ἰππώνησος): Hecat. fr. 245.

Krade (Κράδη): fr. 249.

Laeia (Λάεια): fr. 251.

Tnyssos (Τνύσσοσ): fr. 254.

Xylos (Ξύλοσ): fr. 253.

In addition to these toponyms and the seventy-two *poleis* described in the Inventory below,¹ the following Archaic–Classical settlements (or communities) are known, but were in all probability not *poleis* or cannot be shown conclusively to have been so.

1. Pre-Hellenistic Settlements not Attested as Poleis

***Amnistos** (Ἀμνίστιοσ) *Tit. Cam.* 112a.c1 (C3m): Ἀμνίστιοσ; *Tit. Cam.* 159a.8 (C2): Ἀμνιστ[ί]ων [κ]οι[όν] (Bean and Cook (1957) 75 no. 2 (Hell.: Ἀμνίστιοσ)). At modern Söğüt are remains of an imposing C5l–C4e fortification with some later restorations (Pimouguet (1994) 251–55). In the Hellenistic period Amnistos was a Rhodian deme (Bean and Cook (1957) 61). *Barr.* 61, H, but C also attested.

Chrysaoris (Χρυσαιορίσ) *Steph. Byz.* 696.9: πόλισ Καρίας ἢ ὕστερον Ἰδριαὺσ ὀνομασθεΐσα; *Paus.* 5.21.10, referring to Stratonikeia: τὰ δὲ παλαιότερα ἢ τε χώρα καὶ ἡ πόλισ ἐκαλεῖτο Χρυσαιορίσ. Perhaps to be identified with a classical site (Şahinler) north-east of Stratonikeia (Marchese (1986) 97). *Barr.* C.

¹ In the following cases the location is not beyond dispute: Amynanda, Hydai/Kydai, Karpasyanda, Karyanda, Lepsimandos, Madnasa/Medmasos, Naxia, Oula (Oulaieus), Parpariotai, Pedasa, Pyrnos, Taramptos, Tel(e)messos, Termera, Thasthareis (Blümel *per litt.*). Not included are (1) [Κ]αρυ[εις], [Κ]ροσει[ς], Τυμν[εσσαίς]: unconvincingly restored in *ATL*; (2) Ἰμβριοι, Κάσιοι: treated by Reger no. 483, no. 490; (3) Μνέσσιοι: treated by Rubinstein no. 856.

Harpasa (Ἄρπασα) *Steph. Byz.* 125.1; *Ptol. Geog.* 5.2.19. The occupation of Harpasa goes back to C8 as evidenced by Archaic sherds, most importantly a Protogeometric sherd decorated with concentric circles (Varinlioğlu and Debord (1999) 135). Marchese describes Harpasa as a hill-top fortress of C6–C5: the walls are in ashlar masonry, headers and stretchers (Marchese (1989) 41). *Barr.* 61, RL, but AC also attested.

***Hiera kome** (*Ἱερά Κώμη) In a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) three *Hierokomitai*, one of them a *keryx*, are mentioned on a par with people who are certainly or probably representatives of *poleis* (*SEG* 40 992.8–9 (C4m); cf. *AE* 16 (1990) 36). *Barr.* 61, HR, but C also attested

Kallipolis (Καλλιπολις) Kallipolis was in all probability a *polis* in the Hellenistic period, and it has been argued that it was created as early as C4m as the result of a synoecism (Gabrielsen (2000) 140 n. 47). It is mentioned by Arrian, in reference to 334, on a par with Myndos (no. 914) and Kaunos (no. 898) (*Anab.* 2.5.7). The ethnic Καλλιπολί[της] is found in a C4l–C3e honorary decree (*I.Iasos* 59.9). At the possible site of Kallipolis is a fortification built in two phases, the first of which is probably C5, the second C4m. The exterior wall is built in polygonal masonry. Descat (1994b) 209 concludes that Kallipolis and Thera were fortresses commanding the inland route between Halikarnassos and Kaunos. *Barr.* 61, C.

***Kasara** (Κασαρεύς) The toponym is reconstructed from the ethnic Κασαρεύς, attested on tombstones found near modern Asardibi (*I.Rhod.Per.* 56 (C3–2), 58 (C3f) and on Rhodos (*IG* XII.1 273–82 (C3e to first century AD). In the Hellenistic period a deme of Rhodos in the Rhodian *peraia*. The physical remains of the settlement include Classical material. See *I.Rhod.Per.* pp. 21–27. *Barr.* C.

***Kastabos** (Καστάβειοσ) On the Karian Chersonese, about 10 km east of the isthmus that links the Knidian peninsula to the mainland, is the sanctuary of Hemitheia, referred to by Diod. 5.62–63. The sanctuary probably dates to C4s (Cook and Plommer (1966) 168), although the cult goes further back (*ibid.* 167). The theatre belonging to the sanctuary probably dates to C4l (*TGR* iii. 489). Although there is no other indication that it was ever more than a sanctuary, an ethnic is attested in C2 (*I.Rhod.Per.* 401.7: τοῖσ Κα[σ]ταβείοισ). *Barr.* 61, HR, but C4 also attested.

Loryma (Λώρυμα) Loryma is mentioned in several literary sources (e.g. Hecat. fr. 247 = *Steph. Byz.* 424.1 (πόλισ);

Thuc. 8.43.1). It is known from inscriptions of the Hellenistic period (*I.Lindos* 282.1.25; *JG* XII.1 928.III.2), and the finds show that the site was inhabited from C7 (*infra*); but it cannot be shown to have been a *polis* prior to the Hellenistic period. Thuc. 8.43.1 records that the Athenians attacked Loryma in 412/11 (*Λωρύμνους τοῖς ἐν τῇ ἡπείρῳ προσβαλόντες*); a Persian fleet of more than ninety triremes tarried at Loryma in 395 (Diod. 14.83.4–5: *διέτριβον δὲ περὶ Λόρυμμα ... τριήρεις ἔχοντες πλείους τῶν ἐνεθήκοντα*), and it thus seems reasonable to assume that there was a harbour there; in fact, Diod. 20.82.4 mentions a harbour there in reference to 305 (*τὸν ἐν Λωρύμοις λιμένα*). Surface finds show that the site of Loryma was inhabited from C7 to the Hellenistic period. The remains of the city wall clearly show that it was built in two phases. Very little is left of the older part, but it is in crude polygonal masonry and probably dates to C6. Much more is preserved of the later phase, and it is in much better condition; it dates to C5–C4. The masonry is trapezoidal to polygonal, tending to isodomic in some places. There are remains of towers and gates (Held (1999) 170–72). The acropolis wall is built in the same phases, but a tower belonging to a third phase must have been built around 300 (*ibid.* 173). Many of the houses inside the perimeter are probably from the late Hellenistic period, but some of them are very similar to those at Latmos (no. 910), and they may predate 300, at least in ground plan (*ibid.* 173–74). *Barr.* 61, C, but A also attested.

Phoinix (*Φοῖνιξ*) Strabo mentions a *phourion* Phoinix on top of a mountain on the peninsula of Loryma (14.2.4). At the site of Phoinix there are remains of a fortress in different types of masonry, possibly going back to C5 (Pimouguet (1994) 247). The earliest known inscriptions from Phoinix are C3 and mention a *damos* (*I.Rhod.Per.* 101.1), a *naos* of Dionysos (*ibid.* 1), a *prytaneus* (*I.Rhod.Per.* 103.1), and priests of Athena and Zeus Polieus (*ibid.* 5–6). *Barr.* 61, HRL, but C also attested.

Physkos (*Φύσκος*) Steph. Byz. 675.8–9 (*πόλις Καρίας*); Strabo 14.2.4 (*πολίχνη*), 14.2.29, 5.22 (*τῆς Ῥοδίων περαιῆς*). A Rhodian possession and a deme of Lindos already in C4 (*I.Lindos* 51C11.17: *Φυσκίων* (c.325)). *Barr.* C.

Side (*Side*) Plin. *HN* 5.107 (*oppidum*), one of the towns which were synoecised into Halikarnassos by Mausolos c.370, cf. Hornblower (1982) 82; Demand (1990) 123. *Barr.* C.

Temoessos (*Τεμοεσσος*) In a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) a district by name of Temoessos is mentioned: an envoy from Syangela is

described as *ἐς* (= *ἐξ*) *Τεμοεσσου* (*SEG* 40 991.14), so presumably Temoessos was in the vicinity of Syangela, in the Halikarnassian peninsula. Not in *Barr.*, but C is attested.

Thera (*Θύρα*) Gabrielsen (2000) 134–35 argues that Thera was a *polis* in the Hellenistic period, but it cannot be shown to have been one in the Classical period. At the site of Thera (identified by inscriptions, Fraser and Bean (1954) 72) there are the remains of a C4s fortress built in trapezoidal masonry with several towers. There are no traces of habitation (Descat (1994b) 206). *Barr.* 61, C.

Triopion (*Τριόπιον*) A promontory (Hdt. 4.38.2; Thuc. 8.35.2) and an adjacent settlement as attested at Ar. *Anab.* 2.5.7, where Triopion is mentioned alongside towns (e.g. Myndos) and islands (e.g. Kos) as a place won over by the Persian commander Orontobates; cf. Steph. Byz. 636.10 (*πόλις Καρίας*); Diod. 5.61.2. *Barr.* C. See Knidos (no. 903) *infra*.

2. Unidentified Settlements

Kavakli In the 1890s Paton saw a tower, a hill fortress and some remains of monumental architecture, and he reports that the site was “thickly strewn with pottery” (Paton (1900) 60). *Barr.* C.

Kuyruklu Kale A C4 fortress in the territory of Mylasa and a settlement in the Hellenistic period (but not earlier), see Hornblower (1982) 99. Thus, a Classical site, but not a Classical settlement. *Barr.* C.

Sarnic A large fortified site (Fraser and Bean (1954) 75–78). *Barr.* C.

II. The *Poleis*

870. Alabanda (Alabandus) Map 61. Lat. 37.35, long. 27.55. Size of territory: ? Type: C:γ. The toponym is *Ἀλάβανδα, τὰ* (Hdt. 7.195) or *Ἀλάβανδα, ἡ* (Strabo 14.2.22). The city-ethnic is *Ἀλαβανδέυς* (*SEG* 40 992.9 (C4m)) or *Ἀλαβαδέυς* (*I.Labraunda* 37.3 (c.200)). The collective use of the city-ethnic is attested externally in a treaty between Mylasa and Kindye of 354/3 (*SEG* 40 992.9).

A *keryx* from Alabanda is mentioned in the treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992.9–10 (354/3)); the names listed in this inscription suggest that there was a strong Karian element in the population of this community (Blümel (1990) 38–42 (= *SEG* 40

991–92)), and it is a moot point to what extent the Alabandeis can be considered a Hellenic *polis* in the Archaic and Classical periods.

During the Persian War Alabanda was apparently ruled by a Karian dynast (*τύραννος*), Aridolis (Hdt. 7.195).

A late Classical building has been excavated 1 km south of Alabanda (AR 45 (1998–99) 156). The circuit wall of Alabanda encloses an area of 75 ha and is dated to C4 (Marchese (1989) 147; McNicoll (1997) 31–38).

871. Alinda (Alindeus). Map 61. Lat. 37.35, long. 27.50. Size of territory: ? Type: B:γ. The toponym is Ἀλινδα, τὰ (Arr. *Anab.* 1.23.8; Robert and Robert (1983) no. 15.11, 13 (201)). The city-ethnic is Ἀλινδεύς (IG I³ 262.v.21, restored: Ἀλ[ινδεύς]; C2 coins (*infra*)). The collective use of the city-ethnic is attested internally on C2 coins (ΑΑΙΝΔΕΩΝ, *SNG Cop. Caria* 17–18), and externally in the Athenian tribute lists (IG I³ 262.v.21). The earliest reference to Alinda as a *polis* is in Strabo (14.2.17 (r334)).

Alinda was possibly a member of the Delian League in C5m. It is registered perhaps twice in the tribute lists, in 453/2 (IG I³ 260.i.3, completely restored) and in 451/0 (IG I³ 262.v.21: Ἀλ[ινδεύς]), paying a *phoros* of 1 tal. and ? dr. It is absent from the full panel of 441/0 (IG I³ 271.i–ii.63–86).

Alinda is described as a strongly fortified place (*χωρίον*) at the time of Alexander (Arr. *Anab.* 1.23.8; cf. Strabo 14.2.17). Possessed by the Hekatomnid Queen Ada, sister and wife of Idrieus, from 340, Alinda was offered to Alexander by her in 334 (cf. Strabo 14.2.17); cf. Bean (1971) 190–98).

The city wall, in isodomic ashlar masonry, headers and stretchers, was perhaps built by Mausolos. The acropolis lay outside the city and was separately fortified. The acropolis wall encloses an area of 2 ha, that of the town an area of 20 + ha. There are remains of altogether nineteen rectangular towers (McNicoll (1997) 26–31; *PECS* s.v.; cf. Bean (1971) 192). The site of the town is described by Robert and Robert (1983) 5–17; see also Bean (1971) 192–98 with a town plan (fig. 29) and the two citadels (figs. 29, 30). Strabo 14.2.17 calls the town “double” (*διττή*). Most of the buildings are post-Classical. C.150 m from the site of the town is a hill-top enclosure which could be the ruins of Queen Ada’s palace (Lawrence (1979) 138–40).

872. Amos (Amios) Map 61. Lat. 36.45, long. 28.15. Size of territory: ? Type: [A]:β? The toponym is Ἄμιος (Steph. Byz. 87.1) or Ἄμμος, ἡ (Aeschin. *Ep.* 9.1). The city-ethnic is Ἄμιος (IG I³ 283.iii.33; *I.Rhod.Per.* 354A2 (C3–C2)). In the Athenian tribute lists the Amioi are once recorded under the heading *haίδε τὸν πόλεον* (IG I³ 283.iii.31–33). The collec-

tive use of the city-ethnic is used externally in the Athenian tribute lists (IG I³ 283.iii.33). The individual city-ethnic is used externally in a C3–C2 grave inscription from Loryma (*I.Rhod.Per.* 42.2).

Amos was a member of the Delian League, but is registered in the tribute lists only once, in 428/7, paying a *phoros* of 2,250 dr. (IG I³ 283.iii.33).

A C6 grave inscription from Amos is inscribed in the Knidian alphabet (*I.Rhod.Per.* 351). All other inscriptions from Amos are post-Classical.

The C4l fortification wall on the acropolis is in polygonal masonry (*PECS* s.v.). The city wall is built in different types of masonry: pseudo-isodomic, regular polygonal and crude polygonal tending to ashlar. Pimouguet argues that it seems reasonable to conclude that the wall was built in the course of C4 and strengthened or repaired later (Pimouguet (1994) 249–51). The C4 date is supported by Saner (1994), who also mentions five towers in a 400 m stretch of the wall. Only the northern and western parts of the wall are preserved, but the enclosed area must have been over 10 ha.

873. (Amynandeis) Map 61. Lat. 37.00, long. 27.40. Size of territory: 1 or 2. Type: C:β. A toponym is not attested. The city-ethnic is Ἀμυνανδεύς (IG I³ 260.i.15). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (IG I³ 260.i.15).

The Amynandeis were members of the Delian League. They are registered from 453/2 (IG I³ 260.i.15) to 444/3 (IG I³ 268.iv.26) a total of three times, paying a *phoros* of 3,000 dr. (IG I³ 260.i.15). In 446/5 they paid 4,500 dr. in syntely with Syangela (IG I³ 266.iii.21–22). Their payment was probably included in that of Syangela in the remaining years (*ATL* i.468); thus they are absent from the full panel of 440/39 (IG I³ 271.i–ii.63–86) but were assessed for tribute in 425/4 (IG I³ 71.i.112, almost completely restored).

Bean and Cook (1955) 165 assume that the Amynandeis may have lived on the coast, either at Kargıcık or Alâkilise. At Kargıcık there are some ancient remains of an oblong perimeter constructed of great blocks, apparently with three towers and a gate to the north (*ibid.* 134).

874. Amyzon (Amyzoneus) Map 61. Lat. 37.35, long. 27.40. Size of territory: ? Type: B:β. The toponym is Ἀμύζονα, τὰ (Robert and Robert (1983) no. 2.3) or *Μυδών* (IG I³ 267.iii.29, mostly restored), later Ἀμυζών, ἡ (*I.Priene* 51.3 (C2); cf. Strabo 14.2.22). The city-ethnic is *Μυδονεύς* (IG I³ 264.ii.4), later Ἀμυζονεύς (Robert and Robert (1983) no. 2.7–8 (321/0); *I.Priene* 51.1 (C2)). The collective use of the city-ethnic is attested internally in Robert and Robert (1983)

no. 2.8, and externally in the Athenian tribute lists (*IG* 1³ 264.11.4).

In 321/0 the Iranian Bagadates and his son, Ariarames, were granted *politeia* by Amyzon, at the instigation of the satrap Asandros (Robert and Robert (1983) no. 2, inscription and comm. 97–118; cf. Hornblower (1982) 73). In l. 4 a *prostates* is mentioned, in ll. 4–5 three *archontes*, in l. 5 an *orophylakos*, in l. 6 a *tamieus*, in l. 7 a *synepimeletes* and in l. 8 *ekklesia kyrria*.

Amyzon was a member of the Delian League. It belonged to the Karian district and is recorded (as *Μυδονῆς*; see Hornblower (1982) 278; cf. Robert and Robert (1983) 36) from 454/3 (*IG* 1³ 259.vi.6) to 440/39 (*IG* 1³ 272.i.84) a total of eleven times, five times completely restored, paying 1,500 dr. (*IG* 1³ 261.i.5).

In a honorary decree of 321/0 the month name *Μαροσύλλιος* (a *hapax*) occurs (Robert and Robert (1983) no. 2.2), which indicates the existence of a local calendar which was later replaced by an Ionian calendar, although Macedonian month names are also attested (Trümpy, *Monat.* 277–78).

At the site of Amyzon there are remains of fortification walls in ashlar masonry, probably dating to C4 (Marchese (1986) 105). Moreover, on two large terraced areas, enclosed by walls, are preserved the remains of a Doric temple dedicated to Apollo and Artemis with C6 terracottas. A temple of Artemis is mentioned in an inscription of 321/0 (Robert and Robert (1983) no. 2). Most of the other buildings date to C4. One of the terraces was entered through a *propylon* dedicated by Idrieus in C4m (*OGIS* 235; Marchese (1986) 107 with fig. 41. See also Robert and Robert (1983); Hornblower (1982) 278, 292, 313.

875. Arlissos (Arlisseus) Unlocated, not in *Barr.* (cf. Blümel (1998a) 165). Type: B:γ. The toponym is *Ἀρλισσός* (*IG* 1³ 267.111.31). The city-ethnic is *Ἀρλισσεύς* (*SEG* 40 992.3 (C4m); *ILabraunda* 67.16). The collective use of the city-ethnic is attested externally in a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992.3) and in a C4m name list from Labraunda (*ILabraunda* 67.16). Crampa assumed that the Arlisseis were “in all probability a social group named after an individual *Ἀρλισσις*” (comm. to *ILabraunda* 67.16), but Blümel argues that the fact that the Arlisseis are listed in the fragmentary treaty between Mylasa and Kindye on a par with, e.g., the Kaunioi (no. 898) and the Koranzeis (no. 906) shows that the Arlisseis must have been a *polis* as well (Blümel (1990) 35 (= *SEG* 40 992)). Moreover, a *keryx* of the Arlisseis is mentioned in l. 4. The

names listed in this inscription (3–4) suggest that there was a strong Karian element in the population of this community (Blümel (1990) 38–42 (= *SEG* 40 992)), and it is a moot point to what extent Arlissos can be considered a Hellenic *polis* in the Archaic and Classical periods.

Arlissos was a member of the Delian League, but it is recorded only once, in 445/4 (*IG* 1³ 267.111.31), paying a *phoros* of, perhaps, 600 dr.

876. (Armelitai) Unlocated, not in *Barr.*, but Blümel (1998a) 165 suggests that the Armelitai may have lived near Keramos (no. 900) and Ouranion (no. 920). Type: C:γ. A toponym is not attested. The ethnic is *Ἀρμελίτης* (*SEG* 40 992.14 (C4m)); the collective and external use is attested in a C4m treaty (*SEG* 40 992.14).

The Armelitai are known solely from a fragmentary C4m treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992), but they are listed alongside well-known *poleis* such as Kaunos (no. 898), Koranza (no. 906) and Latmos (no. 910), which suggests that the Armelitai may have been a *polis* too. Moreover, a *keryx* from the Armelitai is mentioned in l. 16. On the other hand, the names listed in this inscription (ll. 14–15) suggest that there was a strong Karian element in the population of this community (Blümel (1990) 38–42 (= *SEG* 90 991–92)), and it is a moot point to what extent the Armelitai can be considered a Hellenic *polis* in the Archaic and Classical periods.

877. Aulai (Auliatas) Map 61. Lat. 36.45, long. 28.10. Size of territory: ? Type C:γ. The earliest attestation of the toponym *Ἀυλαί, αἶ* is in an honorary decree of C1 to the first century AD (*IRhod.Per.* 471.3). The city-ethnic is *Ἀυλιάτης* (*IG* 1³ 271.11.68), *Ἀυλιήτης* (*IG* 1³ 269.iv.2) or *Ἀυλεάτης* (*IG* 1³ 263.i.9) in the tribute lists, once misspelt *Οὐλιάτης* (*IG* 1³ 264.11.7), although Blümel claims that the toponym Aulai does not necessarily correspond to the ethnic *Ἀυλιάτης* in the tribute lists (*IRhod.Per.* 471.3 n.). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 271.11.68).

Aulai was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (*IG* 1³ 259.vi.13) to 415/4 (*IG* 1³ 290.i.3) a total of sixteen times, once completely restored, paying in all years a *phoros* of 500 dr.

878. Bargasa (Pargaseus) Map 61. Lat. 37.00, long. 27.45. Size of territory: ? Type: C:γ. The earliest attestation of the toponym *Βάργασα* is in Strabo 14.2.15. The city-ethnic is *Παργασεύς* (*IG* 1³ 263.111.36) or, later, *Βαργασηνός*

(Apollonius Aphrodisiensis (*FGrHist* 740) fr. 2 (C3?); Head, *HN*² 612 (Imperial)). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 263.iii.36).

Bargasa was a member of the Delian League. It is registered in the tribute lists from 450/49 (*IG* 1³ 263.iii.36) to 444/3 (*IG* 1³ 268.iii.22) a total of four times, twice completely restored, paying a *phoros* of 1,000 dr. in 450/49 and 500 dr. in the remaining three years. It is absent from the full panel of 441/0 (*IG* 1³ 271.i–ii.63–86).

There are few remains at the presumed site of Bargasa, but a fragmentary C2 decree found there does indicate that there was a *polis* at the site (Bean and Cook (1955) 142, no. 67). There is a small citadel with remains of a ring wall in very crude masonry. A few Archaic and Hellenistic sherds date the settlement (*ibid.* 135, 165).

879. Bargylia (Bargylieus) Map 61. Lat. 37.10, long. 27.35. Size of territory: 1 or 2. Type: B;β. The toponym is *Βαργυλία*, τὰ (Polyb. 16.24.1; *BCH* 45 (1921) 1C.3 (C31); *SEG* 39 1180.25 (C1)). The city-ethnic is *Βαργυλιεύς* (*IG* 1³ 260.x.10) or *Βαργυλιότης* (*IG* 1³ 272.ii.81). The form *Βαργυλιώτης* is also attested (*Iscr. Cos* ED231.B4 (C2)). The earliest attestation of *polis* used of Bargylia (here in the political sense) is found in an honorary decree of 270–261 (*I.Iasos* 608.5 *et passim*; cf. 610.4 (C3–C2)). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 260.x.10). The individual and external use is attested in an Athenian citizenship decree of 303/2 (*IG* 1² 496.23).

Bargylia was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 453/2 (*IG* 1³ 260.x.10) to 440/39 (*IG* 1³ 272.ii.81) a total of ten times, once completely restored, paying a *phoros* of 1,000 dr. (*IG* 1³ 260.x.10), but 4,000 dr. in 447/6 (*IG* 1³ 265.ii.41).

Apparently Bargylia had absorbed Kindye (no. 902) by the early Hellenistic period (Hornblower (1982) 100; cf. Bean and Cook (1957) 96). The majority of the archaeological remains dates to the post-Classical period, but an extant portion of the city wall seems to go back to C4 (Bean and Cook (1957) 96). The wall is built in a style which comes close to ashlar masonry (Hornblower (1982) 319). Small parts of the north-eastern and south-western walls are preserved, and the walls must have enclosed an area of 20+ ha (Bean (1971) 86). The occurrence of Bargylia in the Delphian list of *theorodokoi* shows that it was an urban centre in C31 (*BCH* 45 (1921) 1C.3).

880. Bolbai (Bolbaieis) Map 61, unlocated. Type: C:? The toponym is *Βόλβαι*, attested only in Steph. Byz. 174.8. The city-ethnic is *Βολβαιεύς* (*IG* 1³ 260.i.12). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 260.i.12).

Bolbai was a member of the Delian League. It is registered twice in the tribute lists, in 453/2 (*IG* 1³ 260.i.12) and in 446/5 (*IG* 1³ 266.v.13), paying a *phoros* of 1,000 dr. (*IG* 1³ 260.i.12).

881. Chalketor (Chalketoreus) Map 61. Lat. 37.20; long. 27.40. Size of territory: 1 or 2. Type: A;β. The toponym is *Χαλκήτωρ*, ὁ (Strabo 14.2.22) or *Χαλκήτορες* (Strabo 14.1.8; see *I.Mylasa* 11 p. 107). The city-ethnic is *Χαλκήτορεύς* (*IG* 1³ 267.v.30; *I.Mylasa* 912.5 (C3)) or, in the plural, *Χαλκήτορες* (Krateros (*FGrHist* 342) fr. 20). Chalketor is called a *polis* in the political sense in a fragmentary C4 decree (*I.Mylasa* 911.8–9: *περὶ τῆμ πόλιω τῆν Χαλκ]ητορείων*). The collective use of the city-ethnic is attested internally in the C4 decree (*supra*) and externally in the Athenian tribute lists (*IG* 1³ 267.v.30). The individual and external use is attested in a C5 proxeny decree (*SEG* 36 982A.1).

In C5 [...]ssos, son of Artaos, from Chalketor was granted proxeny by Iasos (no. 891). Furthermore, he was granted *asylia*, *proedria*, *isotelia* and *eisagoge/exagoge* (*SEG* 36 982A). In C4 Chalketor passed a decree granting proxeny and citizenship to a man from Koranza (no. 906) (*I.Mylasa* 911). In l. 3 the word *ekklesia* occurs (restored: [ἐκκ]λησίης [κυρ]ίης). A C4–C3e *lex sacra* (*I.Mylasa* 914) mentions *tamiai* (l. 1) and *demos* (l. 6).

Chalketor was a member of the Delian League. It belonged to the Karian district and is recorded from 451/0 (*IG* 1³ 262.v.24) to 440/39 (*IG* 1³ 272.ii.75, completely restored) a total of ten times, four times completely restored, paying a *phoros* of at first 2,000 dr. (*IG* 1³ 262.v.24), from 448/7 2,100 dr. (*IG* 1³ 264.ii.24). It was assessed for tribute in 425/4 (*IG* 1³ 71.ii.101) a minimum of 2 tal. In the assessment decree of 410/9 the ethnic is almost completely restored (*IG* 1³ 100.ii.8).

Some C4 coins inscribed with the legend *XA* could be attributed to Chalketor, although it is also possible that they were struck by the island of Chalke (no. 477). *Obv.* female head; *rev.* spearhead; legend: *XA* (*BMC* 18 [Caria and Islands] 79).

The wall around the acropolis is preserved. It is built of squared blocks in “Lelegian” masonry. In the territory of Chalketor were also two fortresses in dry rubble masonry (Bean (1971) 49).

A bilingual inscription (Karian and Greek), dating to C41–C3e (Neumann (1969) 152; cf. L. Robert (1950); Derooy (1955)), indicates that Chalketor was not completely Hellenised by the early Hellenistic period. The Greek inscription (= *I.Mylasa* 914) is a *lex sacra*.

882. Chersonesos (Chersonesios) Unlocated, not in *Barr.* Type: B:a. The toponym is *Χερρόνησος*, ἡ, attested only in Steph. Byz. 691.7. The city-ethnic is *Χερρονήσιος* (*IG* 1³ 265.1.18). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 265.1.18), and the abbreviated form *XEP* is attested internally on coins of c.500 (Cahn (1970) 200–11).

The Chersonesioi were members of the Delian League. They belonged to the Karian district and are registered in the tribute lists from 452/1 (*IG* 1³ 261.1v.9) to 429/8 (*IG* 1³ 282.1v.52) a total of twelve times, twice completely restored, paying a *phoros* of 3 tal. down to 447/6 (*IG* 1³ 265.1.18), then 2 tal., 4,200 dr. from 444/3 (*IG* 1³ 268.1v.20) to 441/0 (*IG* 1³ 271.1.79) and 3 tal. again from 433/2 (*IG* 1³ 279.1.22). They were assessed for tribute in 425/4 (*IG* 1³ 71.1.137).

The Chersonesioi struck coins around 500. The types on the coins are very similar to those on Knidian coins, and they are struck on the same standards as the Knidian coins: i.e. first the Milesian standard, then the Aiginetan. The earliest coins are Milesian tritetaemoria of c.530–520: *obv.* head of lion; *rev.* the front part of a bull in a square. After that the Chersonesioi struck coins on the Aiginetan standard until c.480: denominations: staters, drachms, obols, tri-hemiobols. *Obv.* front part of a lion (similar to Knidian type); *rev.* front part of a bull in a square along with the legend *XEP* in the Knidian alphabet (Cahn (1970) 200–11; *SNG Cop. Caria* 190).

883. Chios (Chios) Map 61, unlocated. Type: C:β. The toponym is *Χίος*, ἡ, attested only in Steph. Byz. 693.11. The city-ethnic is *Χίος* in the Athenian tribute lists, where the people once are qualified as being *Κάρεις* (*IG* 1³ 259.v.21). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 265.1.23).

Chios was a member of the Delian League. It belonged to the Karian district and is registered three times in the tribute lists, in 454/3 (*IG* 1³ 259.v.21), in 448/7 (*IG* 1³ 264.1.21) and in 447/6 (*IG* 1³ 265.1.23), paying a *phoros* of 2,000 dr. (*IG* 1³ 264.1.21). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.105) a minimum of 2 tal.

The identity of the Chioi is unknown, but it may be worth quoting Steph. Byz., who says: *ἔστι καὶ ἑτέρα πόλις Καρίας Χίος . . . κατὰ τὸ Τριόπιον κειμένη ἐν τῇ*

χερρονήσῳ (693.11–14), on the basis of which the editors of *ATL* suggest that “[t]he *Χίοι* must form an enclave in the Knidian territory, probably at its western end” (*ATL* i.565). However, on the basis of an investigation of the communities listed together with Chios in the tribute lists, Bresson (1990) concludes that the *Chioi* lived in the vicinity of Idyma (no. 893), Kedreai (no. 899) and the Chersonesioi (no. 882).

884. (Erineis) Map 61, unlocated. Type: C:?. A toponym is not attested. The city-ethnic is *Ἐρινεύς* (*IG* 1³ 266.111.24). The collective city-ethnic is used externally in the Athenian tribute lists (*IG* 1³ 266.111.24).

The Erineis were members of the Delian League. They belonged to the Karian district and are registered in the tribute lists from 453/2 (*IG* 1³ 260.1.14) to 444/3 (*IG* 1³ 268.1v.34) a total of four times, paying a *phoros* of first 4,130 dr., then 3,240 dr., and thereafter 1,000 dr. They were assessed for tribute in 425/4 (*IG* 1³ 71.1.99) 1 tal.

885. Euromos (Euromeus) Map 61. Lat. 37.25, long. 27.40. Size of territory: 1 or 2. Type: B:β. The toponym is *Ἐύρωμος* (Polyb. 18.44.4; Strabo 14.2.22); Steph. Byz. 287.14 has *Ἐύρωπος*. The city-ethnic is *ευρωμεύς* (*IG* 1³ 265.11.106; *SEG* 36 982.B4 (C5f)) or *Κυρωμεύς* (*IG* 1³ 71.11.143–44) or *Ἐυρωπεύς* (Hdt. 8.133; *I.Magnesia* 59.b27 (c.200); cf. *I.Labraunda* 84.9 (c.200)), later *Ἐύρωμεύς* (*SEG* 43 703.7 (C3e), 704.4 (C3)). Euromos is called *polis* in the political sense in a proxeny decree of 298–288 (*SEG* 43 703.6, 12–13). The collective use of the city-ethnic is attested internally in abbreviated form on a coin (*infra*) and in a proxeny decree of 298–288 (*SEG* 43 703.7), externally in the Athenian tribute lists (*IG* 1³ 265.11.106). The individual city-ethnic is attested externally in a C5f proxeny decree (*SEG* 36 982.B4).

Euromos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 450/49 (*IG* 1³ 263.v.30, completely restored) to 440/39 (*IG* 1³ 272.11.71, completely restored) a total of seven times, four times completely restored, paying a *phoros* of 2,500 dr. It was assessed for tribute in 425/4, once in a syntelic group with the Edrieis (no. 892) and the Hymisseis (no. 890), the whole group assessed at 6 tal. (*IG* 1³ 71.11.144), and once individually, assessed at 5 tal. (*IG* 1³ 71.11.100).

In C5f Arlissis, son of Idyssolos, from Euromos was granted proxeny by Iasos (no. 891). He was also granted *enktesis ges kai oikion, asyilia, proedria* and *dikai* (*SEG* 36 982.B4).

The town was situated on flat ground. The city wall is in ashlar masonry with towers, and dates to a period no later than 300 (Bean (1971) 47; *PECS* s.v.). The other remains at

Euromos (a theatre, a temple dedicated to Zeus, and two stoas) are all Hellenistic or later (Bean (1971) 46–48).

Euromos struck silver coins in C5l. Only a single specimen is known, presumably a tritartemorion. Type: *obv.* forepart of boar; *rev.* head of Zeus with laurels; legend: $\Upsilon\rho\Omega$ (*SNG von Aulock* no. 2521).

886. Halikarnassos (Halikarnasseus) Map 61. Lat. 37.05, long. 27.20. Size of territory: 2; with dependencies: 5. Type: A:β. The toponym is Ἀλικαρνασσός, ἡ (Thuc. 8.42.4; Arr. *Anab.* 1.21.3), Ἀλικαρνησσός (Hdt. 7.99.2). The city-ethnic is Ἀλικαρνασσεύς (*I.Milet.* vi.2 407 (C5); *IG* II² 142.9 (C4f)), Ἀλικαρνάσιος (Androtion (*FGrHist* 324) fr. 12), Ἀλικαρνησεύς (Hdt. 1.144.3), or the epichoric ἈλικαρναΤε[ύς] (*Syll.*³ 45.2 = ML 32). Halikarnassos is called a *polis* in the political sense by Hdt. 1.144.3 and in a C4l honorary decree (Michel 452.4), and in the urban sense in an inscription of c.400 (*SEG* 43 713.33, 37, 45). The individual ethnic is attested externally on a gravestone from Miletos (*I.Milet.* vi.2 407m (C5)). The collective city-ethnic is attested externally in the Athenian tribute lists (*IG* I³ 265.1.10), and internally on coins (*SNG Cop. Caria* 336–37).

Halikarnassos was a Dorian city, allegedly colonised by Troizen (no. 357) (Hdt. 7.99.3; cf. Paus. 2.30.9, 32.6; Strabo 14.2.16). On the connections between Halikarnassos and Troizen, see Jameson (2004). Halikarnassos was one of the Greek *poleis* to build the *Hellenion* in Naukratis (no. 1023) (Hdt. 2.178.2).

Halikarnassos was the capital of a dynasty which Hdt. 7.99.1 describes as a tyranny. The first tyrant was Lygdamis, succeeded by his daughter Artemisia (Hdt. 7.99.1–2; *Suda* H536). During Xerxes' invasion of Greece she was the commander of five ships from Halikarnassos, Kos (no. 499), Nisyros (no. 508) and Kalydna (no. 485) (Hdt. 7.99.2). Later in C5f Halikarnassos was ruled by another Lygdamis. In C5m a faction joined by Herodotos was exiled after an abortive attempt to overthrow Lygdamis (*Suda* H536).

Halikarnassos was a member of the Delian League. It belonged to the Karian district and is recorded in the tribute lists from 454/3 (*IG* I³ 259.IV.13) to 429/8 (*IG* I³ 282.IV.15) a total of sixteen times, twice completely restored, paying in most years a *phoros* of 1 tal., 4,000 dr. (*IG* I³ 259.IV.12–13), but in 447/6 a *phoros* of 2 tal. (*IG* I³ 265.1.10) and in 441/0 a *phoros* of 1 tal., 4,840 dr. (*IG* I³ 271.1.78). It was assessed for tribute in 425/4 (*IG* I³ 71.1.144).

C.370 Mausolos moved the capital of the dynasty from Mylasa (no. 913) to Halikarnassos and enlarged the city by synoecising some smaller settlements into it (Plin. *HN* 5.107;

Hornblower (1982) 82; Demand (1990) 123; *supra* 1108). The city seems now to have been laid out on a Hippodamian grid plan (Hoepfner and Schwandner (1994) 227).

A law of C5f mentions a *ἱερὴ ἀγορὴ* as the venue of the *sylogos* of the Halikarnassians and the Salmakians (no. 929) (*Syll.*³ 45.3 = ML 32). The law (called both *ἄδος* (19), and *νόμος* (32)) was passed by the *sylogos* and the tyrant Lygdamis and concerns property disputes. A number of magistrates are mentioned: *prytanis* (5–6), *mnemones* (8) and *dikastai* (20). A *keryx* from Halikarnassos is mentioned in a C4 treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 991.16).

Some citizens of Halikarnassos were appointed *proxenoi* by the Chians (no. 840) (*PEP Chios* 50.4 (C4m)). In 410/9 a decree was passed by the Athenians in honour of the Halikarnassian *polis* (restored) as *euergetis* of Athens (*IG* I³ 103). In C4l Zenodotos, son of Baukis, had been honoured by Troizen (no. 357), and therefore more honours were bestowed upon him (Michel 452); he was invited to the *prytaneion* at Halikarnassos (I. 11; cf. Miller (1978) no. 323). This measure (*psephisma*, l. 13) is decided by the *demos* (l. 12), after having been deliberated by the *boule* (l. 15). In 392 Phormion of Halikarnassos won a victory at Olympia (*Olympionikai* 378).

Seven month names are attested. They constitute a mixture of Ionian and non-Ionian names; see Trümper, *Monat.* 113–14.

The city wall is mentioned in a C5m inscription (*Syll.*³ 46.15 = ML 32). Under Mausolos, from 377/6 (Diod. 16.36.2), the city was enlarged by the inclusion of Salmakis (no. 929) and the land between the city proper and Salmakis. The city wall was replaced by a new 7 km wall which encircled the enlarged city, including the harbour; it enclosed an area of c.220 ha (Jeppesen (2000) 334). The wall is built in different types of masonry, which is probably due to the building materials, rather than different construction periods. It had two main gates, one towards Myndos, the other towards Mylasa (Arr. *Anab.* 1.20.4–5), of which only the Myndos gate has been located (Pedersen (1994)). Two smaller gates have been discovered, one on the southern side of the tower on the east, the other in connection with a gate complex on the north-eastern extension. This gate undoubtedly gave access to Pedasa to the north of Halikarnassos (Pedersen (2000) 288). There was a moat in front of the wall (Arr. *Anab.* 1.20.8; Diod. 17.24.4). Thirteen towers have been found, all in different types of masonry and material, but the drain system and the general coherence indicate that the wall and towers were planned and constructed at one time, with later repairs

(Pedersen (2000) 288–91). On the hill commanding the road to Mylasa is a free-standing tower built in large boulders in an almost “cyclopean” fashion. It is probably contemporary with the city wall (*ibid.* 291).

In the city of Halikarnassos a temple of Apollo is attested in a C5f inscription (*Syll.*³ 45.45 = ML 32). Fragments of early Classical Ionic columns found in the city may be associated with this temple. The few architectural remains show that the temple was influenced by the Polykrates temple in Samos (Jeppesen (2000) 333). Furthermore, the remains of a temple in Ionic style are generally interpreted as the temple of Ares mentioned by Vitruvius (2.8.11). Ares seems to have been the principal divinity worshipped by the Halikarnassians (Hornblower (1982) 302). The excavated but unpublished theatre is sometimes dated to C3e, but may go further back.

Diod. 15.90.3 (r362) says that Halikarnassos had a famous acropolis and was “the *basileia* of Karia”. At the time of Alexander, he describes it as the largest *polis* in Karia, endowed with several citadels (17.23.4). Diod. 17.25.5 mentions the walls of the acropolis. Alexander took and razed the city in 334 (Diod. 17.27.6; Arr. *Anab.* 1.20.2–23.6).

In C4 Halikarnassos was endowed with one of the most famous monuments of Antiquity: the tomb of Mausolos, the Mausoleum, or, more correctly, the *Maussolleion*, of which very little is left. In Antiquity, it ranked among the Seven Wonders of the World, and it existed until the fifteenth century, when it was destroyed by the Knights of Rhodes. Work on it was begun in 367, and it was finished after the death of Mausolos’ wife Artemisia in 351. The architect was Pythios of Priene in collaboration with another architect named Satyros. The famous sculptors Bryaxis, Leochares, Timotheos and Skopas were involved in the work. The monument consisted of three parts: thirty-six Ionic columns stood on a very tall rectangular base, 38.4 × 32 m. Upon the columns was a pyramidal structure with twenty-four steps, and the monument was crowned with a sculptured group imposed on a platform. The building was adorned with numerous sculptures and friezes (Lawrence (1996) 146–47; Jeppesen (1994) with refs.). So far no remains have been found of Mausolos’ palace, built on the Zephyrion promontory east of the harbour and mentioned at Vitruvius 2.8.10; cf. Jeppesen (2000) 338.

According to Ps.-Skylax 99 Halikarnassos had an enclosed harbour and one “by the island”. Diod. 15.90.3 (r363) calls Halikarnassos *ἐστία καὶ μητρόπολις*. In the C5m inscription which deals with purchase and sale of land

and houses in Halikarnassos, a number of districts or areas are mentioned (*SEG* 43 713).

Halikarnassos struck coins before 480, silver coins on the Rhodian standard in 400–367 (and again in 188–166). Staters are mentioned in a C5f law (*Syll.*³ 45.40 = ML 32). There are various types, and the legend is *ΑΛΙΚΑΡΝΑΣΣΕΩΝ* or abbreviations thereof (Head, *HN*² 617–19; *SNG Cop. Caria* 336–37).

Halikarnassos was a *polis* with a mixed population. The names listed in the C5m inscription concerning confiscation and resale of property (*SEG* 43 713) constitute a mixture of Greek and Karian names. In some cases, a man has a Greek name, but his father a Karian (*Ζηνόδορος Ἀρυάσιος*, l. 10, or *Διότιμος Σαρυσώλλο*, ll. 169–70), or even vice versa (*Πανύασσις Δημητρίο*, l. 50). Two of the Halikarnassians mentioned in the C4 treaty between Kindye and Mylasa have Karian names (*SEG* 40 991.15–16). There is no doubt that there was a strong Karian element in the population in the Classical period.

887. (Hybliseis) Map 61, unlocated, but Blümel (2000) 96 suggests a location south of Bargylia (no. 879); probably between Bargylia and Killareis. Type: [A]:γ. A toponym is not attested. The city-ethnic is *ἡυβλισεύς* (*IG* I³ 262.v.26), *Κυβλισσεύς* (*SEG* 40 991.8) or *Κυλβισσεύς* (*EA* 32 95.16 (C2e)). In a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) the Kyblisseis are among the city-ethnics listed after the heading *παρήσαν ἀπὸ πόλεων*, where *polis* is attested in the political sense (*SEG* 40 991.8). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* I³ 262.v.26) and in the C4m treaty (*SEG* 40 991.8).

The Kyblisseis were members of the Delian League, but they are recorded in the tribute lists only once, in 451/0 (*IG* I³ 262.v.26), paying a *phoros* of 1,000 dr. In the list of 453/2 (*IG* I³ 260.i.7) the city-ethnic is completely restored. They are absent from the full panel of 441/0 (*IG* I³ 271.i–ii.63–86), but were probably assessed for tribute in 425/4 (*IG* I³ 71.ii.108: [*ἡυβλι*]σ[σ[έ]ς]) a minimum of 2,000 dr.

A *keryx* from the Kyblisseis is mentioned in the C4m treaty between Mylasa and Kindye (*SEG* 40 991.9). The names listed in this inscription (8–9) suggest that there was a strong Karian element in the population of this community (Blümel (1990) 38–42 (= *SEG* 40 992)), and it is a moot point to what extent the Kyblisseis can be considered a Hellenic *polis* in the Archaic and Classical periods.

888. (Hydaieis) Map 61. Lat. 37.15; long. 27.40. Size of territory: 1 or 2. Type: B:γ. A toponym is not attested. The

city-ethnic is 'Υδαίεϋς (*IG* 1³ 71.11.150; *I.Mylasa* 901.9 (undated)); 'Υδαέϋς (*SEG* 40 992.4 (C4m); *I.Mylasa* 903.5 (C2f)), and *Κυδαίεϋς* (*IG* 1³ 262.v.25, restored: [*Κ*]υδαίεϋς with *IG* 1³ 264.11.22, restored: *Κυ*[δαίεϋς]). The Hydaieis are listed alongside well-known *poleis* such as Kaunos (no. 898) and Koranza (no. 906) in a C4m treaty (*SEG* 40 992.4), which suggests that they may have been a *polis* too. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 262.v.25) and in a C4m treaty between Kindye (no. 902) and Mylasa (no. 913) (*SEG* 40 992.4).

The Hydaieis were members of the Delian League. They are registered in the tribute lists from 454/3 (*IG* 1³ 259.11.150, heavily restored: *Κ*[υδαίεϋς]) to 447/6 (*IG* 1³ 265.11.12, completely restored) a total of six times, once completely restored. They were assessed for tribute in 425/4 (*IG* 1³ 71.11.150), 2,000 dr.).

A *keryx* from the Hydaieis is mentioned in a treaty of C4m (*SEG* 40 992.5). The names listed in this inscription (ll. 4–5) suggest that there was a strong Karian element in the population of the community (Blümel (1990) 38–42 (= *SEG* 40 991–92)), and it is a moot point to what extent it can be considered a Hellenic *polis* in the Archaic and Classical periods.

The acropolis was surrounded by a wall, now decrepit (Bean (1971) 50).

889. Hydisos (Hydisseus) Map 61. Lat. 37.10, long. 27.50. Size of territory: ? Type: B:?. The toponym is 'Υδισσός (Steph. Byz. 645.17). The earliest attestation of the toponym is in a C1 inscription (*I.Stratonikeia* 508.10 (c.81)): 'Υδισός, although it was mentioned by Apollonius Aphrodisiensis, whose *Καρυκά* may be dated to C3 (*FGrHist* 740 fr. 4). The city-ethnic is 'Υδισσεέϋς (*IG* 1³ 265.11.51; Apollonius Aphrodisiensis (*FGrHist* 740) fr. 4 (perhaps C3)) or 'Υδισεέϋς (*I.Mylasa* 401.8 (C2–C1)).

Hydisos was a member of the Delian League, but is registered only twice, in 448/7 (*IG* 1³ 264.111.21, restored: 'Υ[δισσεέϋς]) and 447/6 (*IG* 1³ 265.11.51, restored: 'Υδ[ισσεέϋς]), paying a *phoros* of 1 tal.

At the site of Hydisos there are remains of city walls and towers, probably of early Hellenistic date (L. Robert (1935) 339–40).

890. (Hymisseis) Map 61, unlocated, but possibly situated between Amyzon (no. 874) and Mylasa (no. 913) (Pontani (1997) 7; cf. L. Robert (1955) 226). Type: C:β. A toponym is not attested. The city-ethnic is 'Υμισσεέϋς (*IG* 1³ 262.1v.19; restored: [hυ]μισσεέϋς) or 'Υμεισσεέϋς (*IG* 1³ 71.11.143; *IG* XII suppl. 127.58 (C3)). The collective use of the city-ethnic is

attested externally in the tribute lists and in the assessment decree of 425/4 (*IG* 1³ 71.11.143).

The Hymisseis were members of the Delian League. They are recorded three times in the lists from 451/0 (*IG* 1³ 262.1v.19) to 447/6 (*IG* 1³ 265.11.50), paying a *phoros* of 1,200 dr. In the assessment decree of 425/4 they form a *syntely* with the Edrieis (no. 892) and Kyromeis, and the three together are assessed at 6 tal. (*IG* 1³ 71.11.143–44). A Hymisseus is recorded in a C3 list of *proxenoi* from Eresos (no. 796) (*IG* XII suppl. 127.58).

891. Iasos (Iaseus) Map 61. Lat. 37.15, long. 27.35. Size of territory: 2 or 3. Type: A:a. The toponym is 'Ιασος, ἡ (Thuc. 8.28.2; Arcestratos fr. 26.1, Olson and Sens) or 'Ιασός (*I.Iasos* 2.23; Steph. Byz. 322.18–19). The city-ethnic is 'Ιασεέϋς (*I.Iasos* 32.6 (C41); *IG* 11² 8931 (C48)). Iasos is called a *polis* both in the urban sense (*I.Iasos* 2.20, 33.3; Arcestratos fr. 26.1, Olson and Sens) and in the political sense (*I.Iasos* 1.3, 30.3 = Tod 190; Diod. 13.104.7 (r405)). The town is described as a *polisma* at Thuc. 8.28.4. *Politai* of Iasos are mentioned in a proxeny decree of 333–323 (*I.Iasos* 30.4). The collective use of the city-ethnic is attested internally in decrees (*I.Iasos* 32.6) and on coins (*infra*), and externally in the Athenian tribute lists (*IG* 1³ 279.1.69). The individual use is attested internally in a C2 dedication (*I.Iasos* 227.2) and externally in a C4s Attic funerary inscription (*IG* 11² 8931).

The names of two districts (?) in the territory of Iasos are known from *I.Iasos* 1 (*Bpιδας*, ll. 37 and 51, and *Τυεννεσσοσ*, ll. 31 and 34).

On the basis of the 800 adult males mentioned by Diod. 13.104.7 in 405, Bean and Cook (1957) 101 calculate that the urban population of Iasos must have numbered c.3,000 at the time.

Iasos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 450/49 (*IG* 1³ 263.v.21) to 415/14 (*IG* 1³ 290.1.12) a total of sixteen times, five times completely restored, paying a *phoros* of 1 tal. from 450/49 (*IG* 1³ 263.v.21) to 432/1 (*IG* 1³ 280.1.63), and 3 tal. from 421/0 (*IG* 1³ 285.1.91). In 412 Iasos was taken by the Spartans at the instigation of Tissaphernes (Thuc. 8.28.3); having pillaged the town and apparently exposed its population to an *andrapodismos*, the Spartans handed it over to Tissaphernes (Thuc. 8.28.4), who then left Iasos with a garrison (Thuc. 8.29.1); but the city must have joined the Athenians again, because it is called an Athenian ally in 405 by Diod. 13.104.7. Iasos was a member of a *symmachia* attested *exclusively* by the so-called ΣΥΝ coinage (whose legend abbreviates *synmachon*, *synmachikon* or *synmachia vel sim.*)

dating to C5l–C4e; the other *poleis* striking $\Sigma\Upsilon\text{N}$ coins were Byzantion (no. 674), Ephesos (no. 844), Knidos (no. 903), Kyzikos (no. 747), Lampsakos (no. 748), Rhodos (no. 1000) and Samos (no. 864) (Karwiese (1980); Debord (1999) 273–77).

Lysander took Iasos in 405, killed the male population of military age (800 men), sold women and children as slaves, and razed the city to the ground (Diod. 13.104.7; the MSS have $\Theta\acute{\alpha}\sigma\omicron\nu$ Καρίας , which Palmer has emended to Τασοῦ $\tauῆς$ Καρίας ; but cf. Xen. *Hell.* 2.1.15 and *infra* no. 899). In C4m Iasos belonged to the Hekatomnid Empire (*I.Iasos* 1 (367–354)).

Iasos had a *boule* and a *demos* (*I.Iasos* 32.4), called *ekklesia* (*SEG* 40 959.15 (c.330–325?)) which met once every month (*I.Iasos* 32.2) and the first-coming citizens were paid for attendance (*SEG* 40 959.4–6: *ekklesiastikon*). The meetings were presided over by an *epistates* (*I.Iasos* 32.2–3), and the proposals were moved mostly by a board of *prytaneis* (*I.Iasos* 52.3) in accordance with the probouleumatic procedure: $\xi\delta\omicron\xi\epsilon$ $\tauῆ$ $\beta\omicron\upsilon\lambda\eta$ $\kappa\alpha$ $\tau\acute{\omega}$ $\delta\acute{\upsilon}\mu\omega$ (*I.Iasos* 32.4; Rhodes, *DGS* 338). The eponymous official was a *stephanophoros* (*I.Iasos* 32.1). Public enactments were published by the *neopoiai*, sometimes in the sanctuary of Apollo (*I.Iasos* 42.8), sometimes in an *archeion* (*I.Iasos* 30.12). The fact that decrees (*pséphismata*, *I.Iasos* 42.8) were passed regularly by the *boule* and the *demos* and that citizens were paid for attendance indicates that Iasos had a democratic constitution (Hornblower (1982) 111; Rhodes, *DGS* 340). The Aristotelian collection of *politeiai* included one of Iasos (Heracl. Lemb. 73; cf. Gigon no. 66).

Copious information about officials is obtained from a decree of 367–354 which deals with plots against Mausolos and the *polis* of Iasos (*I.Iasos* 1). The property of the plotters is being sold, and it appears that the transactions were undertaken by four *archontes* (6–8), four *tamiai* (8–9), two *astynomoi* (10), four *synegoroi* (11–12), six *prytaneis* (12–14), eleven priests of Zeus Megistos (16–18) and, finally, a number of representatives of the *phylai*, i.e. citizens (18ff; Jones, *POAG* 333). Another decree, of c.330, mentions *prostatai* (*I.Iasos* 20.12). A *keryx* from Iasos is mentioned in the C4m treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 991.13).

The citizens were subdivided into *phylai* and *patriai* (*I.Iasos* 47.4 (C4l)). Each *phyle* seems to have been headed by an official called *neopoies* (*SEG* 40 959.14 and 17) and if the six names recorded in ll. 2–4 are those of the *neopoiai* (Gauthier (1990) 425–26), there must have been six *phylai* (Jones, *POAG* 333). Both grants of *proxenia* and citizenship

are attested in the C4 decrees (*I.Iasos* 32, 42; *SEG* 36 983, reinscribed in C3–C2 = *SEG* 38 1059). The three men granted proxeny by Iasos—Myrmex, Manes and Targelios, sons of Peldemis—may be identical with the three unnamed sons of Peldemos (the variations in spelling may be due to problems in transcribing) who were punished for plotting against Mausolos (*SEG* 36 983; cf. Blümel ((1998b) 171). Iasos is registered in the Argive list of *theorodokoi* of c.330 (*SEG* 23 189.17)

A cult and priest of Zeus Megistos attested in a C4 *lex sacra* (*LSAM* 59 = *I.Iasos* 220), and investigations inside the temple of Zeus and Hera have revealed sherds which show that the temple was in use at least from C6 to the Hellenistic period (Berti (1987) 33–34). A cult of Artemis Astias is attested in a C4 dedication (*I.Iasos* 259.3–4; also mentioned by Polyb. 16.12.4). For a sanctuary of Apollo where public enactments were set up, see *I.Iasos* 42.8. A grave connected to the so-called *heroon* dates to C5 (Berti (1995)).

In Antiquity Iasos was situated on a small island, which is now joined to the mainland by an isthmus. Harbours are mentioned in a decree of c.300 (*I.Iasos* 3.6, 14, 25). The city on the island was surrounded by a wall in isodomic ashlar masonry (Hornblower (1982) 317). The wall is c.2.4 km long (thus longer than the 1.8 km stated by Polyb. 16.12.2); it encloses an area of c.26 ha and is built in various types of masonry; it is now dated to the period after Alexander's conquest of Asia Minor (McNicoll (1997) 109–11). Dry rubble masonry on the acropolis dates from the Protogeometric or Geometric period (ibid. 111). On the mainland there is a massive wall the purpose of which has puzzled scholars. The date of the wall is also uncertain, but a C4l date seems plausible (Hornblower (1982) 317 with n. 184, but McNicoll (1997) 117 suggests the time of Philip V). The extant wall has a length of c.3.5 km and is built with crudely trimmed rectangular blocks. The wall has many jogs and towers (Winter (1971) 241–43; Lawrence (1979) 184–87). The function of the wall seems to be purely military; thus, there is general agreement that there were no buildings on the mainland (Winter (1971) 242–43).

Iasos struck alliance coins (silver staters) c.394. Type: *obv.* head of Apollo; *rev.* infant Herakles strangling serpents; legend: $\Sigma\Upsilon\text{N}$, interpreted as $\Sigma\Upsilon\text{NMAXIKON}$ or $\Sigma\Upsilon\text{NMAXQN}$ (*HN²* 621; Kraay (1976) 248); for the $\Sigma\Upsilon\text{N}$ coins, see Karwiese (1980)). Other coins, struck for Iasos alone, have *obv.* Apollo; *rev.* incuse square with lyre; legend: *ΙΑΣΕ* (*SNG Cop. Caria* 408).

Two Karian graffiti incised on C5s sherds have been found at Iasos. The letters are similar to those in the Karian inscrip-

tions from Killareis and Chalketor (Berti and Innocente (1998)). The c.100 names recorded in *I.Iasos* 1 are mostly Greek, which suggests that in C4m Iasos was a Hellenic community (Blümel (1990) 38–42 (= *SEG* 40 991–92)).

892. Idrias (Edrieus) Map 61. Lat. 37.15, long. 28.10. Size of territory: ? Type: C:β. The toponym is *Ἰδριάς*, attested only in Steph. Byz. at 326.18. The city-ethnic is *Ἰδριεύς* (*IG* 1³ 71.11.143). The collective city-ethnic is used externally in the tribute assessment list of 425/4 (*IG* 1³ 71.11.143). The territory, *Ἰδριάς χῶρη*, is mentioned by Hdt. 5.118.1.

The Edrieis may have been members of the Delian League. They were assessed for tribute in 425/4, in a syntelic group with Euromos (no. 885) and the Hymisseis (no. 890), the whole group assessed at 6 tal. (*IG* 1³ 71.11.143–44).

893. Idyma (Idymeus) Map 61. Lat. 37.05, long. 28.20. Size of territory: ? Type: B:β. The toponym is *Ἰδυμα*, *τά* (it is restored [T]δυμ[α] in the tribute assessment list of 425/4, *IG* 1³ 71.11.95) or *Ἰδυμος* (*I.Rhod.Per.* 601.6 (Hell.)). The city-ethnic is *Ἰδυμεύς* (*IG* 1³ 267.v.27; once spelled *Ἰδιμεύς*, *IG* 1³ 265.1.27), *Ἰδύμιος* (*I.Rhod.Per.* 603.9 (late Hell.)) or *Ἰδύμιος* (on a C5 coin (*SNG Cop. Caria* 419)). The collective use of the city-ethnic is attested externally in the tribute lists (*IG* 1³ 267.v.27), and internally on coins (Head, *HN*² 621, *ΙΔΥΜΙΟΝ*).

Idyma was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 453/2 (*IG* 1³ 260.1.16) to 442/1 (*IG* 1³ 270.v.13) a total of six times, once completely restored, paying a *phoros* of first 1 tal., 900 dr. (*IG* 1³ 260.1.16), then 5,200 dr. (*IG* 1³ 264.1.25), and thereafter 2,000 dr. (*IG* 1³ 267.v.27). It is absent from the full panel of 441/0 (*IG* 1³ 271.1–11.63–86) but is registered in the assessment decree of 425/4 (*IG* 1³ 71.1.140). It is usually registered by its city-ethnic, but once by its ruler: *Πακτύες Ἰδυμ[εύς]* (*IG* 1³ 260.1.16).

Idyma struck silver coins on the Phoenician standard in C5s and C4f. Denominations: drachms and smaller silver coins (Head, *HN*² 621). *Obv.* head of Pan, or female head; *rev.* fig leaf and the legend *ΙΔΥΜΙΟΝ*, all in incuse square. A few C4f bronze coins are also known (Head, *HN*² 621, *SNG Cop. Caria* 419–20).

Bean and Cook (1957) 144 say that there is a “large classical site” at Idyma; moreover that it was not a Greek, but a Karian site.

894. Kalynda (Kalyndeus) Map 65. Lat. 36.45, long. 28.50. Size of territory: ? Type: B:β. The toponym is *Κάλυνδα*, *τά* (Polyb. 31.5; *SEG* 37 1234.20 (second century AD)). The city-

ethnic is *Κλαυνδεύς* (*IG* 1³ 271.11.70) or *Καλυνδεύς* (Hdt. 8.87.2; *SEG* 12 473.24 (C2)). The earliest attestation of Kalynda as a *polis* is in Polyb. 31.5, who refers to events in 164/3. He calls Kalynda a *polis* in the political sense at 31.5.3 and in the urban sense at 31.5.4. The collective use of the city-ethnic is attested externally in the tribute lists (*IG* 1³ 271.11.70); the individual city-ethnic is used externally in a C2 list of donations (*SEG* 12 473.24).

Hdt. 8.87.2–3 explains how Artemisia, perhaps accidentally, rammed a Kalyndian ship commanded by Damasthymos, king of the Kalyndeis, although they were her allies.

Kalynda was a member of the Delian League. It is recorded in the tribute lists from 444/3 (*IG* 1³ 268.v.8) to 440/39 (*IG* 1³ 272.11.90, completely restored) a total of five times, once completely restored, paying a *phoros* of 1 tal. (*IG* 1³ 269.1v.8). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.131).

Kalynda was a neighbour of Kaunos (no. 898), and Hdt. 1.172.2 mentions the boundary between the two communities. It was probably situated c.10 km from the sea, where there are the remains of a ring wall in polygonal masonry. The wall is possibly early Hellenistic (Bean (1953) 26 n. 82).

895. *Karbasyanda (Karbasyandeus) Map 65. Lat. 36.50, long. 28.35. Size of territory: 1 or 2. Type: C:γ. The toponym is reconstructed from the city-ethnic *Καρβασσανδεύς* (*IG* 1³ 259.1v.23) or *Καρπασσανδεύς* (*SEG* 44 890.27 (C2)). However, at that time it was no longer a city-ethnic, but a sub-ethnic, Karbasyanda having become a civic subdivision of Kaunos (no. 898).

Karbasyanda was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (*IG* 1³ 259.1v.23) to 421/0 (*IG* 1³ 285.11.13–14) a total of nineteen times, once completely restored, paying a *phoros* of 1,000 dr. in all years (*IG* 1³ 260.v1.18).

The Karbasyandeis were neighbours of Kaunos (*IG* 1³ 271.1.68–69), and their city may have been located at a hill 1.6 km south-west of Kaunos. On the hill there are remains of a 65 × 20 m fort in isodomic ashlar masonry, and very scanty remains of a dry rubble wall apparently encircling the hill (Bean (1953) 15, 21, 24).

896. Karyanda (Karyandeus) Map 61. Lat. 37.10, long. 27.30. Size of territory: 1. Type: A:β. The toponym is *Καρύανδα*, *τά* (Hecat. fr. 242; Ps.-Skylax 99, emendation of MS *Κρηνήνδα*). The city-ethnic is *Καρυανδεύς* (*IG* 1³ 261.1.31; Hdt. 4.44.1). Ps.-Skylax 99 describes Karyanda as *νήσος καὶ πόλις καὶ λιμὴν (οἰστοὶ Κάρρες)*, using *polis* in

the urban sense. The collective use of the city-ethnic is attested internally in abbreviated form (*KAPY*) on coins (*infra*) and externally in the Athenian tribute lists (*IG* 1³ 272.1.76, 263.v.25). The individual city-ethnic is used externally on a C4m gravestone from Peiraeus (*IG* 11² 8963) and in a list of dedicators from Egypt (*CIG* 4702 (C4m)).

Karyanda was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 452/1 (*IG* 1³ 261.1.31) to 415/14 (*IG* 1³ 290.1.7), a total of eleven times, paying a *phoros* of 1,000 dr. in the first year and 500 dr. in the following years (*IG* 1³ 268.1v.27). It was assessed for tribute in 425/4 (*IG* 1³ 71.11.138).

It is clear from Ps.-Skylax that in C4m Karyanda was an island with a *polis* and a harbour. Later, and probably in the early Hellenistic period, the population moved to the mainland and settled near a lake somewhere between Bargylia and Myndos (Strabo 14.2.20; see Bean and Cook (1955) 155–60). In the island, which has tentatively been identified as the early site of Karyanda, there are considerable remains of a settlement. There is a 160 m wall, built in dry rubble, and remains of houses etc., probably dating to C4 (*PECS* s.v. Salihadasi).

A few bronze coins from Karyanda are known. Head dates them to C3 “or earlier” (Head, *HN*² 612). *Obv.* female head; *rev.* forepart of a bull; legend: *KAPY*.

897. Kasolaba (Kasolabeus) Map 61, unlocated, but Descat (1994a) suggests a location north of Halikarnassos. Type: [A]:γ. The toponym is *Κασωλάβα* (Hsch. *Κ1001* = Aesch. fr. 119, Mette). The city-ethnic is *Κασωλαβέυς* (*IG* 1³ 263.11.32; *SEG* 40 991.7). In a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) the Kasolabeis are among the city-ethnics listed after the heading *παρήσαν ἀπὸ πόλεων*, where *polis* is attested in the political sense (*SEG* 40 991.7). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 263.11.32) and in the C4m treaty (*SEG* 40 991.7).

The Kasolabeis were members of the Delian League. They are listed from 454/3 (*IG* 1³ 259.1v.27) to 447/6 (*IG* 1³ 265.1.44) a total of seven times, once completely restored, paying a *phoros* of 2,500 dr. They are absent from the full panel of 441/0 (*IG* 1³ 271.1–11.63–86) but were possibly assessed for tribute in 425/4 (*IG* 1³ 71.1.172: [*Κασολα*]β[ε][ς]).

A *keryx* from the Kasolabeis is mentioned in the C4m treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 991.7–8). The names listed in this inscription (7–9) suggest that there was a strong Karian element in the population of Kasolaba (Blümel (1990) 38–42 (= *SEG* 40 991–92)),

and it is a moot point to what extent Kasolaba can be considered a Hellenic *polis* in the Archaic and Classical periods.

898. Kaunos (Kaunios) Map 65. Lat. 36.50, long. 28.35. Size of territory: ? Type: A:γ. The toponym is *Καῦνος*, ἡ (Hdt. 5.103.2; Ps.-Skylax 99; *IG* 1³ 271.1.69). The city-ethnic is *Καῦνιος* (*IG* 1³ 260.v11.8). Kaunos is called a *polis* in the urban sense (*Hell. Oxy.* 23.3; Ps.-Skylax 99) and in a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) the Kaunians are listed after the heading *παρήσαν ἀπὸ πόλεων*, where *polis* is attested in the political sense (*SEG* 40 991.18 (354/3)). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 279.1.9) and in a treaty of 354/3 (*SEG* 40 992.5 (C4m)), and internally in the abbreviated form *KA* on C4 coins (Konuk (1998) 219). The individual and external use is attested in a decree from Iasos (*I.Iasos* 45.5 (C4–C3)).

Kaunos was taken by Harpagos in C6 (Hdt. 1.176.3). Around 497 it participated in the Ionian Revolt (Hdt. 5.103.2).

Kaunos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 453/2 (*IG* 1³ 260.v11.8) to 421/0 (*IG* 1³ 285.11.11) a total of fourteen times, three times completely restored, paying a *phoros* of 3,000 dr. in all years. It was assessed for tribute in 425/4 (*IG* 1³ 71.11.98) of 10 tal. Kaunos revolted, either c.440, or in the early 420s (Ktesias (*FGrHist* 688) fr. 14.45; cf. Hornblower (1982) 28 n. 176). The tribute lists show that Kaunos was back in the League by 421/0, but it seceded from Athens once again in 412/11 (Thuc. 8.39.3–4, 41.1, 42.2, 57.1). In 397/6 Konon had his headquarters at Kaunos (*Hell. Oxy.* 23) and was besieged by a Spartan squadron under Pharax (Diod. 14.79.5). Kaunos was taken by the Macedonians in 333 (Arr. *Anab.* 2.5.7). In C4l–C3e a citizen of Kaunos was granted *proxenia* by Iasos (no. 891) (*I.Iasos* 45).

Kaunos had a harbour (Ps.-Skylax 99; *λιμὴν κλειστός*), and Diod. 20.27.2 refers to two citadels in 309, one with a Herakleion, the other with a Persikon. Diod. 14.79.4 mentions a *phrourion*, Sassanda, 150 stadia from Kaunos. The early city was located on a small acropolis overlooking the harbour (Gates (1994) 266). Investigations of the fortifications seem to show that a major expansion took place in the Hekatomnid period (ibid.). Remains of city walls in various styles of masonry date from the Hellenistic period, although some parts of the wall may be dated to C4. The walls enclose an area of c.190 ha (Bean (1953); Hornblower (1982) 315–16; McNicoll (1997) 192–99). Diod. 14.79.4 mentions that Kaunos was besieged by the Spartan *nauarchos* Pharax in

396, so the city must have been walled by then. The earliest finds at Kaunos go back to c.700 (Gates (1994) 266).

According to some numismatic publications, Kaunos struck silver coins on the Aiginetan standard in C6, and bronze coins from C4m (Head, *HN²* 612–13; *SNG Cop. Caria* 179–83); but recently a group of C5 silver coins have been attributed to Kaunos (Troxell (1979); Meier-Brügge (1998); Konuk (1998)). Some of the coins belonging to this group bear a legend in Karian script, and thanks to the decipherment of the recently found bilingual inscription from Kaunos (Frei and Marek (1997)), it is now evident that the legend is the name of Kaunos in Karian. Incidentally, the name of Kaunos in Karian is χbid-, and the ethnic is χbidēfīni (ibid. 23). Thus the name “Kaunos” is not a transcription, but a Greek name. The types of the Archaic coins are *obv.* forepart of a lion; *rev.* incuse square divided into two oblong halves. The C5 coins have been found in the following denominations: staters, drachms, hemidrachms, tritartemoria, trihemitartermoria. *Obv.* winged Iris. *rev.* rectangular or triangular shape in an incuse square or griffin, sometimes a legend in Karian script (for the details of these coins, see Konuk (1998)). The types of the C4 coins are *obv.* forepart of a bull; *rev.* Sphinx along with the legend KA. These are the first Kaunian coins with Greek legends (see also Konuk (1998) 219).

According to Hdt. 1.172.1, the Kaunians were indigenous Karian-speaking people who, however, believed that they had come from Crete. In Ps.-Skylax 99 Kaunos is still classified as a Karian *polis*. Furthermore, *kerykes* from Kaunos are mentioned in the treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 991.18–19); the names listed in this inscription as well as the bilingual inscription (*supra*) suggest that there was still a strong Karian element in the population of this community (Blümel (1990) 38–42 (= *SEG* 40 991–92)). Only coins of C4 have legends in Greek, and it is a moot point to what extent Kaunos can be considered a Hellenic *polis* in the Archaic and Classical periods.

899. Kedreai (Kedreates) Map 61. Lat. 37.00, long. 28.10. Size of territory: ? Type: A:β. The toponym is *Κεδραί, αἱ* (Hecat. fr. 248; *I.Rhod.Per.* 553.9 (C2e)) or *Κεδραιαί* (Xen. *Hell.* 2.1.15). The city-ethnic is *Κεδριάτης* (*IG* 1³ 271.11.76), *Κεδριήτης* (*IG* 1³ 259.v.17), *Κεδρεάτας* (*I.Rhod.Per.* 561 (perhaps C4)), feminine *Κεδρεάτις* (*I.Rhod.Per.* 612 (C3–C2)). Kedreai is called a *polis* mainly in the urban, but probably also in the political sense by Xen. *Hell.* 2.1.15. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 271.11.76). The individual city-

ethnic is used internally in a grave inscription (*I.Rhod.Per.* 561 (perhaps C4)), and externally in a C3–C2 grave inscription from Idyma (*I.Rhod.Per.* 612, feminine).

Kedreai was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (*IG* 1³ 259.v.17) to 415/14 (*IG* 1³ 290.1.20) a total of sixteen times, once completely restored, paying a *phoros* of 3,000 dr. (*IG* 1³ 261.1.12) down to probably 440/39 (*IG* 1³ 272.1.80, amount restored), but 2,000 dr. in 432/1 (*IG* 1³ 280.1.69). It was still an Athenian ally in 405 (Xen. *Hell.* 2.1.15).

Kedreai suffered *andrapodismos* in 405 after an attack by Lysander in 405 (Xen. *Hell.* 2.1.15).

Remains of an early Hellenistic city wall at Kedreai have been found, generally in polygonal masonry (Bean (1971) 54–55; cf. Anabolu (1994)), although some parts are in rectangular isodomic masonry (Pimouguet (1994) 253–54). Furthermore, there are scanty remains of a temple, probably Archaic (Bean (1971) 55).

Xenophon states that Kedreai was a mixed settlement, *μξοβάρβαροι*, in 405 (Xen. *Hell.* 2.1.15).

900. Keramos (Kerameus) Map 61. Lat. 37.00, long. 28.00. Size of territory: ? Type: B:γ. The toponym is *Κέραμος, ἡ* (Strabo 14.2.15). The city-ethnic is *Κεραμεύς* (*IG* 1³ 265.1.8) or *Κεράμιος* (*IG* 1³ 267.v.25; *SEG* 40 992.13 (C4m)). The collective use of the city-ethnic is attested internally in a proxeny decree of C41 (*I.Keramos* 3.5) and externally in a treaty of 354/3 (*SEG* 40 992.13).

Keramos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (*IG* 1³ 259.v.18) to 415/14 (*IG* 1³ 290.i.25) a total of twelve times, twice completely restored, paying a *phoros* of 1 tal., 3,000 dr. in all years (*IG* 1³ 261.1.4).

A *keryx* from Keramos is mentioned in the treaty of 354/3 between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992.13).

In C41 Keramos granted *proxenia, politeia* and *enktesis ges kai oikias* to a certain [c.7]ον Μάρωνος (*I.Keramos* 3). Moreover, he was granted the right to participate in sacrifices (9–11). A *phyle, Τεβρεμμουν*, is mentioned in ll. 11–12.

The remains at Keramos have been described by Spanu (1997). Most of the buildings are post-Classical, but the city wall may be as early as C4m (Lawrence (1979) 258). Spanu, and Bean and Cook suggest a C41–C3e date for the wall (Spanu (1997) 82 n. 27; Bean and Cook (1957) 66), and McNicoll a C2 date between 168 and 133 (McNicoll (1997) 170). The acropolis walls are in Lesbian and polygonal

masonry (ibid. 161). The city walls are built in two different styles, undoubtedly contemporary: polygonal and pseudo-isodomic ashlar masonry (Spanu (1997) 61–91; Dornisch (1992) 145). Spanu reports that there are eight towers, seven gates and eight sally-ports (Spanu (1997) 61–91), whereas McNicoll states that although only thirteen towers—all rectangular—are visible today, the number of towers must have totalled at least eighteen. There were possibly three main gates and thirteen tower entrances and sally-ports (McNicoll (1997) 160–64); see also Dornisch (1992) 144–51). There were four grave areas around the city, and some of the graves date to C4s (Spanu (1997) 164–72).

Keramos is generally considered Karian in origin (*PECS* s.v.; Spanu (1997) 15). The name of the *phyle* *Τεββεμμουν* is clearly Karian (*I.Keramos* 3.12). An Archaic *kouros* has been found at Keramos (Richter (1960) 111 no. 130), as well as the torso of another (Gürmann (1977)), and while this shows both that Keramos existed as early as C6 and that there was some contact to the Greek world by C6, it does not of course show that Keramos was in any way Hellenised. The names of the *Keramioi* listed in the C4m treaty between Mylasa and Kindye (*SEG* 40 992) suggest that there was a strong Karian element in the Keramian population, and it is a moot point to what extent the community can be considered a Hellenic *polis* even in the Classical period.

Until recently it was believed that Keramos struck coins only from C2; but recently an isolated C4 issue of bronze coins has come to light. The coins bear the legend *KE*, and it has been suggested that they be attributed to Keramos, although nearby Kedreai (no. 899) is another possibility. *Obv.* bull standing to the right; *rev.* swimming dolphin and the legend *KE* (Ashton *et al.* (1998)).

901. (Killareis) Map 61. Lat. 37.10, long. 27.40. Size of territory: 1 or 2. Type: [A]:γ. A toponym is not attested. The city-ethnic is *Κιλλαρεύς* (*IG* 1³ 262.v.28; *EA* 32 95.13 (C2e)) or *Κιλδαραεύς* (*SEG* 40 991.11 (C4m)). In a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) the Killareis are among the city-ethnics listed after the heading *παρήσαν ἀπὸ πόλεων*, where *polis* is used in the political sense (*SEG* 40 991.11). The collective use of the city-ethnic is used externally in the Athenian tribute lists (*IG* 1³ 262.v.28) and in a C4m treaty between Mylasa and Kindye (*SEG* 40 991.11).

The Killareis were members of the Delian League, but they are recorded in the tribute lists only once, in 451/0 (*IG* 1³ 262.v.28), paying a *phoros* of 1,000 dr. In the list of 453/2 (*IG* 1³ 260.1.8) the city-ethnic is completely restored. Moreover, they may have been listed in the tribute assessment decree of

425/4 (*IG* 1³ 71.11.96–97), where we find [*Kι*]λλ[*α*ρῆς ἠὲ]ν Σα[--- ἄρ]χεται, which indicates that the Killareis were ruled by a dynast (Bean and Cook (1957) 99–100). The Killareis were assessed at 2 tal.

Around C4m the Killareis passed a decree, granting honours to Hyssollos, son of Samoos (*I.Mylasa* 961 = L. Robert (1950) 14 no. 11). In l. 1 the word *ekklesia* occurs. A *keryx* from the Killareis is mentioned in the C4m treaty between Mylasa and Kindye (*SEG* 40 991.12).

The remains of the site of the Killareis consist of C4 fortifications. There is an outer circuit in squared masonry with towers, and a citadel linked to the outer circuit on the northern side. Inside the citadel there are underground galleries which have been interpreted as cisterns (Bean and Cook (1957) 99). A C3m inscription mentions a harbour (although the site of the Killareis was located c.10 km inland (Blümel (1992) 128 D4 and comm. *ad. loc.*; cf. *SEG* 42 994.D4).

The stone which carries the C4 decree of the Killareis (see *supra*) is inscribed in Karian as well (Deroy (1955) 314), which indicates that there was a Karian element in the area at the time. The Karian text contains the city-ethnic, but not the personal names of the Greek text, so the inscription is not a bilingual one (Blümel (1992) 128; Blümel and Adiego (1993)). Similarly, the names listed in the treaty between Mylasa and Kindye suggest that there was a strong Karian element in the Killarian population (*SEG* 40 991.11–12; see Blümel (1990) 38–42 (= *SEG* 40 991–92)), and it is a moot point to what extent the community can be considered a Hellenic *polis* in the Archaic and Classical periods.

902. Kindye (Kindyeus) Map 61. Lat. 37.10, long. 27.40. Size of territory: 1 or 2. Type: B:β. The toponym is *Κυνδύη*, ἡ (Strabo 14.2.20) or *Κυνδύη* (*IG* 1³ 263.v.23). The city-ethnic is *Κυνδυεύς* (*IG* 1³ 272.1.69; *SEG* 40 991.6 (C4m); Hdt. 5.118.2). The collective use of the city-ethnic may be attested internally in abbreviated form on a coin (*infra*) and is attested externally in the Athenian tribute lists (*IG* 1³ 272.1.69) and in a C4m treaty (*SEG* 40 991.6). For the individual and external use, see Hdt. 5.118.2.

Kindye was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 453/2 (*IG* 1³ 260.x.9) to 440/39 (*IG* 1³ 272.1.69) a total of six times, once completely restored. It is recorded once by toponym (*IG* 1³ 263.v.23), and otherwise by city-ethnic, paying a *phoros* of 1 tal. (*IG* 1³ 272.1.69). It is absent from the full panel of 441/0 (*IG* 1³ 271.1–11.63–86) but is registered in the assessment decree of 425/4 (*IG* 1³ 71.1.155–56). It is restored

$\text{Κω}[\delta\upsilon\epsilon\varsigma \text{ h}\acute{o}\nu] \acute{\alpha}\rho[\chi\epsilon\iota\text{--}]$ which indicates that Kindye was ruled by a dynast at the time. Hdt. 5.118.2 mentions another dynast, a certain Pixodaros, son of Maussolos, probably an ancestor of the Hekatomnids (Hornblower (1982) 26).

A treaty of 354/3 between Mylasa (no. 913) and Kindye concerns the purchase of a land plot (*SEG* 40 991). Mylasa buys a piece of land from Kindye, and the borders are described. A *kome* is mentioned in l. 4.

At the site of Kindye there are remains of city walls (approximately 450 × 200 m) of the Classical period, with a citadel (c.120 m) built in dry rubble masonry, in places tending to polygonal. There are few remains of the temple of Artemis Kindyas, mentioned by Strabo at 14.2.20 and known from a c.200 *lex sacra* (*EA* 32 91) from Bargylia (no. 879) (cf. also Polyb. 16.12.3) (Bean and Cook (1957) 97–99). Apparently Bargylia (no. 879) had absorbed Kindye by the early Hellenistic period (Hornblower (1982) 100; cf. Bean and Cook (1957) 96).

Some coins mentioned by Bean and Cook (1957) 95 and thought to be coins of Pikres (of Syangela) have now been attributed to Kindye, because a later-published coin bears the legend *KI*. The coins are of the late Archaic period. Type: *Obv.* head of griffin; *rev.* diamond-shaped lattice frame encasing four-pointed star. One coin has the legend *KI* (Kagan and Kritt (1995)).

A fragmentary C4l (or possibly C3e) funerary distichon from Kindye carries some Karian letters as well, which suggests that there was still a Karian element at Kindye in the early Hellenistic period (L. Robert (1950) 10 no. 6 = Deroz (1955) no. 6; cf. Hornblower (1982) 342).

903. Knidos (Knidios) Map 61. Lat. 36.45, long. 27.40 until C4f; from C4m lat. 36.40, long. 27.20 (Berges (2000); see *infra*). Size of territory: 4 or 5. Type: A:a. The toponym is Κνίδος , η (*Hymn. Hom. Ap.* 43; Hdt. 2.178.2; Thuc. 8.35.3; *I.Knidos* 5.6 (C4f)). The city-ethnic is Κνίδιος (*I.Knidos* 501.2 (C6l); *IG*¹³ 261.IV.8). Knidos is called a *polis* both in the urban sense (Thuc. 8.35.3; Ps.-Skylax 99: *polis Hellenis*) and in the political sense (*I.Knidos* 5.4, 603.12; *SEG* 44 901 (C4f); Hdt. 1.144.3, 2.178.2). The word *politai* occurs in a C6l epigram (*I.Knidos* 501.1). Knidos is called *patris* on a C4 grave inscription (*I.Knidos* 625). The collective use of the city-ethnic is attested internally in C4 proxeny decrees (*I.Knidos* 1.7, 5.1, 603.6) and on coins (*infra*), and externally in the Athenian tribute lists (*IG*¹³ 261.IV.8) and in literary sources (Thuc. 3.88.2). For the individual and external use, see C4–C3 gravestones from Attika (*IG* II² 9039–43) and the Eleusinian accounts of 329/8 (*IG* II² 1672.191).

The site of the city of Knidos has been a matter of great dispute. Bean and Cook have argued that the political centre of Knidos was at one point moved from a site on the south coast of the Knidian peninsula to the tip of the peninsula (1952). No ancient source mentions such a move, and the argument was based solely on the fact that no archaeological remains at Tekir seem to antedate C4. The suggestion was followed notably by Robert and Robert (*BE* (1954) 168) and Hornblower ((1982) 101), and recently by Bresson (1999) and Berges ((1994), (2000)). Since the publication of Bean and Cook's article, excavations at Tekir have revealed remains that do go further back than C4 and that, along with the fact that no ancient source mentions a relocation have led others to argue that Knidos was located at Tekir from the outset (Love (1972); Demand (1989); Blümel (1991) 131–32). The latest suggestion, that of Bresson, is that that while there can be no doubt that there were two urban centres on the peninsula, the political centre was at Burgaz until C4l, when it was moved to Tekir.

The name of the territory of Knidos was Κνιδίη (Hdt. 1.174.2; Thuc. 8.35.2). The find of a C6 inscription in the Knidian alphabet (= *I.Rhod.Per.* 351) on the Loryma peninsula, supports, according to Blümel, Cook's suggestion that the Loryma peninsula was part of Knidian territory at the time, or at least an "Einflussgebiet" (Cook (1961a) 60; Blümel (1991); *pace* Held (1996) 166–67, who argues that it was independent of Knidos and Rhodos (no. 1000) before C4). Ps.-Skylax 99 indicates that in C4s some of the hinterland of Knidos was dominated by Rhodos.

According to Hdt. 1.174.2, the Knidians were colonists from Lakedaimon (no. 345) (cf. Malkin (1994) 81; Cartledge (2002) 93–94), whereas Strabo 14.2.6 says that they came from Megara (no. 225). Knidos was one of the original members of the Dorian *hexapolis*, and the common Dorian sanctuary at Triopion was probably situated on Knidian territory (*infra*). In C6e Knidos was one of the Dorian *poleis* behind the *Hellenion* at Naukratis (no. 1023) (Hdt. 2.178.2).

Knidos was a member of the Delian League. It belonged to the Karian district and is recorded in the tribute lists from 452/1 (*IG*¹³ 261.IV.8) to 427/6 or 426/5 (*IG*¹³ 284.13) a total of thirteen times, four times completely restored, paying a *phoros* of 3 tal. in 452/1 (*IG*¹³ 261.IV.8), 5 tal. from 450/49 *IG*¹³ 263.I.4), again 3 tal. from 444/3 (*IG*¹³ 268.IV.19), and 2 tal. from 428/7 (*IG*¹³ 283.III.20). It was assessed for tribute in 425/4 (*IG*¹³ 71.I.134). In 412 Knidos revolted against Athens at the instigation of Tissaphernes (Thuc. 8.35; cf. Debord (1999) 219 with n. 127), and at Delphi the statues of those who fought with Lysander at Aigos potamoi in 405 included

one of Theodamos of Knidos (Paus. 10.9.9). Knidos was a member of a *symmachia* attested *exclusively* by the so-called ΣΥΝ coinage (whose legend abbreviates *synmachon*, *synmachikon* or *symmachia vel sim.*) dating to C5–C4e; the other *poleis* striking ΣΥΝ coins were Byzantion (no. 674), Ephesos (no. 844), Iasos (no. 891), Kyzikos (no. 747), Lampsakos (no. 748), Rhodos (no. 1000) and Samos (no. 864) (Karwiese (1980); Debord (1999) 273–77).

Aristotle twice refers to the Knidian constitution: at *Pol.* 1305^b12 he states that the oligarchy at Knidos was overthrown by the *demos*, because *hoi gnorimoi* were split into two factions; at *Pol.* 1306^b5 he refers once again to the citizens overthrowing a despotic oligarchy at Knidos. Some have taken these passages to refer to two different revolutions, the first Archaic, the second perhaps C4 (Hornblower (1982) 117). A preferable view seems to be that they both refer to the same revolution (Gehrke, *Stasis* 79; Robinson (1997) 101–3) which, however, cannot be dated.

Oligarchic Knidos was ruled by a council of sixty *annemones* appointed for life from among the *aristoi* and acting as *probouloi* (Plut. *Mor.* 292A–B). The attestation of *probouloi* seems to match the observation by Rhodes, *DGS* 330: that any mention of a *boule* involved in the decision-making process is of the Roman period. The preserved C4 decrees are proposed by a board of *prostatai* and carried by “the Knidians”: ἔδοξε Κνιδ[ί]οις γνῶμα προ[στα]τᾶν (*I.Knidos* 603.1–3 (C4f)). Of two C4 Knidian dedications in Delphi, the older has Κνίδιοι (*Syll.*³ 140 (shortly after 386)), the other Κνιδίων ὁ δῆμος (*Syll.*³ 290 (c.332)). Hornblower (1982) 116 infers that an oligarchy of C4f was replaced by a democracy in the age of Alexander. From c.300 the coins of Knidos have on the obv. the head of Demokratia with the legend ΔΗΜΟΚΡΑΤΙΑ (Head, *HN*² 616; *SNG Cop. Caria* 305).

A tradition going back to Hermippos (fr. 16, Wehrli) reports that Eudoxos of Knidos (c.408–355) legislated for his home town of Knidos (Diog. Laert. 8.88; Plut. *Mor.* 1126B). Combining these sources, Hornblower (1982) 117–18 suggests that the C4f oligarchy was introduced by Eudoxos in concert with Mausolos, but was replaced by a democracy in consequence of Alexander’s conquest of Asia Minor.

Some *prostatai* of Knidos are mentioned in a C4s *lex sacra* (*I.Knidos* 160.2) and in a C4f proxy decree (*I.Knidos* 603.2–3; cf. *I.Knidos* 604.1). A citizen of Knidos was awarded *proxenia* by the Karthaians (no. 492) (*IG* XII.5 542.26 (C4m)). Envoys from Knidos are mentioned by Diod. 20.95.4 (r304). In C4f the Knidion granted Dionysios of Miletos (no. 854) proxy (*I.Knidos* 1), about the same time

proxeny was granted to Amphares of Athens (no. 361) (*I.Knidos* 5), and c.363 the Knidion granted Epameinondas of Thebes (no. 221) proxy (Blümel (1994) 157–58; on the significance of this decree, see Buckler (1998), (2000) 439).

A number of cults are attested at Knidos. According to Paus. 1.1.3 (r394 and earlier) the Knidion worshipped Aphrodite, and they had three temples dedicated to her, one for Aphrodite Doritis (the oldest), one for Aphrodite Akraia, and one for the Aphrodite called Knidia by most Greeks, and Euploia by the Knidion. There was a cult of Demeter and Kore at Knidos, as attested in a dedicatory epigram of C4l (*I.Knidos* 131; cf. *I.Knidos* 132), and cult of the Dioskouroi is attested in a C6f dedication (*I.Knidos* 601). Games in honour of Apollon Triopios were held there (Hdt. 1.144).

The Knidian peninsula was also the site of the sanctuary of the Dorian *hexapolis* at Triopion with a temple of Apollo (Thuc. 8.35.2; Diod. 5.61.2). The exact site of Triopion has also been the subject of debate: most scholars assume that it was located at Tekir, whereas Berges argues that the sanctuary of Triopion was situated at an extensive (c.100 × 80 m) terraced site c.15 km east of Burgaz. The site has not been thoroughly excavated (yet), but the remains of walls and (*inter alia*) a graffito with a *hieros gamos* scene clearly point to an Archaic (C7l–C6e) foundation date. There are remains of a small temple of the Hellenistic period, and some very large Doric drums which might be the remains of a temple of considerable dimensions (Berges (1995–96) esp. 114–19; cf. Berges and Tuna (1990)). While it seems certain that the place was a sanctuary, it is too early to tell whether it was the Triopion.

At modern Tekir there are remains of a stoa, built in two phases, of which the earliest is C4s in isodomic masonry (for this stoa, see Love (1972) 63–64). The Propylon which leads to the sanctuary of Apollo may date to c.300 (Bankel (1997) 68). A temple of Dionysos mentioned in a *lex sacra* of C4s (*I.Knidos* 160 = *LSAM* 55).

At modern Tekir there are remains of acropolis walls, the earliest parts of which date from C4m and are built in pseudo-isodomic and isodomic ashlar masonry (*AR* (1999)); they enclose an area of 20 ha (Bean (1971) 149). It is assumed that the habitation area was located on the small island which is now connected with the peninsula by a narrow isthmus, while the public buildings were located on the peninsula. No remains of the habitation area—assumed to have had a Hippodamian layout—have been found, whereas there are rich finds from the peninsula site. The majority of the remains, such as the theatre and the *bouleuterion*, are late.

According to Thuc. 8.35.3, Knidos did not have city walls in 412. At modern Burgaz there are remains of C5I fortification walls built in ashlar masonry (AR (1999); Gates (1995) 236, (1997) 282). Berges argues that these walls surrounded the acropolis (Berges (1995–96)).

At modern Burgaz there are traces of buildings and paved streets dating to the Archaic and Classical periods (AR (1999); Gates (1995) 236, (1997) 282). Sherds show that the site goes back to C8. The harbour has been located, and the moles date to C4. A C4 boundary stone (provenance: built into the mosque in Karaköy, not far from Burgaz) marked the harbour (*I.Knidos* 613; the inscription reads: Ὅρος λιμένος).

The Knidioi put up a treasury (Bommelaer (1991) pl. V no. 219) and several communal dedications at Delphi. The earliest dates to C6m (*I.Knidos* 211), and two more were put up in C4 (*I.Knidos* 212 (C4e), 213 (C4l); cf. Jacquemin (1999) nos. 113–18). Knidian C6m dedicatory graffiti are also found in the temple of Apollon Milasios at Naukratis (*I.Knidos* 214–15), and in the temple of Athena at Lindos (*I.Knidos* 217).

Knidos struck silver coins on, first, the Milesian and, then, the Aiginetan standard from the late Archaic period. Denominations: drachm, diobol, obol. Type: *obv.* forepart of lion; *rev.* incuse square with the head of Aphrodite; legend: sometimes *KNI* or *KNIDAION*, after 411 *KNIDAIQN*. After 387 also didrachm and hemidrachm, and the *obv.* and *rev.* types are reversed, with a magistrate's name sometimes added on the *rev.* (*HN*² 614–16; Cahn (1970); *SNG Cop. Caria* 199–331). In addition, Knidos was among the *poleis* which in C5I–C4e struck the so-called ΣΥΝ coins (for which see Karwiese (1980)).

The Knidioi founded a colony at Lipara (no. 34) (Thuc. 3.88.2; Paus. 10.11.3), along with the Rhodians (Diod. 5.9), c.580–576.

904. (Kodapeis) Map 61. Unlocated. Type: C:?. The toponym is not attested; the city-ethnic is *Κοδαπεύς* (*IG*¹³ 267.III.32). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG*¹³ 267.III.32).

The Kodapeis were members of the Delian League. They are registered in the Athenian tribute lists from 453/2 (*IG*¹³ 260.II.2) to 445/4 (*IG*¹³ 267.III.32) a total of five times, once completely restored, paying a *phoros* of 1,000 dr. (*IG*¹³ 262.I.29). They are absent from the full panel of 440/39 (*IG*¹³ 271.I–II.63–86) but were assessed for tribute in 425/4 (*IG*¹³ 71.II.103) a minimum of 2,000 dr.

905. (Koliyrgeis) Map 61. Lat. 37.20, long. 28.15. Type: C:γ. The toponym is *Κολιοργα* (*I.Stratonikeia* 289.6

(Roman)) or *Κολιεργα* (*I.Stratonikeia* 293.31 (Roman)). The ethnic is *Κολιυργεύς* (*SEG* 40 992.18 (C4m)); the collective and external use is attested in a C4m treaty (*SEG* 40 992.18).

The Koliyrgeis are mentioned in a fragmentary C4m treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992), and they are listed alongside well-known *poleis* such as Kaunos (no. 898), Koranza (no. 906) and Latmos (no. 910), which suggests that the Koliyrgeis may have been a *polis* too. The names listed in this inscription (ll. 17–18) suggest that there was a strong Karian element in the population of this community (Blümel (1990) 38–42 (= *SEG* 40 991–92)), and it is a moot point to what extent the Koliyrgeis can be considered a Hellenic *polis* in the Archaic and Classical periods.

906. Koranza (Koarendeus) Map 61, unlocated. Type: A:γ. The toponym is *Κώρανζα, τᾶ* (*I.Labraunda* III.2 42.2 (C3e)). The city-ethnic is *Κοαρενζεύς* (*SEG* 40 992.7 (C4m)), *Κοαρρενδεύς* (*I.Mylasa* 8.9 (C4)), *Κωρανζεύς* (*I.Stratonikeia* 502.2 (C4m)) or *Κοαρανζεύς* (*I.Stratonikeia* 503.9 (318)); cf. Blümel (1998a) 170. In later inscriptions (Hellenistic, Roman) only a form without *-ν-* (i.e. *-ραζ-*) is found; see Şahin (1973) 189 (cf. Blümel (1998a) 170), who presumes that the original name was *Κοάρρενδα* with the typically Karian ending *-νδα*. Koranza is called a *polis* in the political sense in an honorary decree from Lagina of 318 (*I.Stratonikeia* 503). The collective use of the city-ethnic is attested externally in a treaty of 354/53 (*SEG* 40 992.7), and internally in dedicatory inscription of c.350 (*I.Stratonikeia* 502). The individual city-ethnic is used externally in a proxy decree from Chalketor (*I.Mylasa* 911 (C4)).

In a dedicatory inscription of c.350 (*I.Stratonikeia* 502.10–16) a number of persons entrusted with the publication of the decree (*δόγμα*) are listed as coming *ἐξ Ἰθυβιρων, ἐκ Παταρουσων, Ἀγγωρέας, Λαγωνέας* and *Ἐνδρέας* respectively. Şahin presumes that *Ἰθυβιρα* and *Παταρουσα* are villages or districts belonging to Koranza, whereas *Ἀγγωρέας, Λαγωνεύς* and *Ἐνδρέας* are demotics (Şahin (1973) 191–92). In later times Koranza was itself a civic subdivision of Stratonikeia.

Envoys from Koranza are mentioned in a fragmentary C4 inscription from Mylasa (*I.Mylasa* 8.9), and a *keryx* is listed in a treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992.8).

In 367/6 Mausolos and the Koarendeis granted *ateleia* to a certain [...] *Ἰδι Ὀσαρηγύμου Μ[ά]νηι*, and in 318 the *polis* of Koranza granted *politeia* and *enktesis* to Konon, son of

Poseidippos (*I.Stratonikeia* 503). Apparently the Koarendeis met in an *ekklesia kyria* with some sacred *kerykes* (*I.Stratonikeia* 503.5–6; see Hornblower (1982) 71–72).

In C4 Chalketor (no. 881) passed a decree granting proxeny and citizenship to a man from Koranza (*I.Mylasa* 911).

Around 350 a man named Skoaranos and his wife dedicated a plot of land to Apollo and Artemis (*I.Stratonikeia* 502). Moreover, the Koranzeis granted exemption from slave taxes and other taxes except for the royal one to anyone who looked after Skoaranos' tomb (ll. 20–22).

Two archons are mentioned in a decree of 318 (*I.Stratonikeia* 503.3).

A month name, *Δῖος*, from Koranza is known from a decree of 318 (*I.Stratonikeia* 503.2).

The names of the archons in the decree of 318 (*I.Stratonikeia* 503) and the envoys from Koranza listed in *I.Mylasa* 8 and in *SEG* 40 992.7–8 suggest that there was a strong Karian element in the Koranzan population, and it is a moot point to what extent the community can be considered a Hellenic *polis* in the Classical period.

907. Krya (Kryeus) Map 65. Lat. 36.40, long. 28.50. Size of territory: probably 1 or 2. Type: C:?. The toponym is *Κρύα*, *τά* (Steph. Byz. 387.13; *Stadiasmus* 258–59). The city-ethnic is *Κρυεύς* (*IG* 1³ 263.1.6). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 270.1v.6).

Krya was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 453/2 (*IG* 1³ 260.vii.10) to 428/7 (*IG* 1³ 283.ii.28, partially restored) a total of fifteen times, twice completely restored, paying a *phoros* of 2,000 dr. It was assessed for tribute in 425/4 (*IG* 1³ 71.ii.155).

908. Kyllandos (Kyllandios) Map 61. Lat. 37.05, long. 28.25 (for another location, see *I.Rhod.Per.* p. 160). Size of territory: ? Type: C:?. The toponym is *Κύλλανδος*, attested only in Steph. Byz. 392.7, although it was clearly mentioned by Hekataios as well (fr. 250). The city-ethnic is *Κυλλάνδιος* (*IG* 1³ 259.v.20) or *Κυλλάντιος* (*IG* 1³ 262.1.32) or *Κυλάντιος* (*IG* 1³ 265.1.21). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 259.v.20). The district *ἡ Κυλλανδία* is mentioned in the so-called Nikagoras dossier of c.197 (*IG* xii 1 1036.10; cf. Bean and Cook (1957) 84; Blümel (1998a) 171; Gabrielsen (2000) 140, 153 ff).

Kyllandos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (*IG* 1³ 259.v.20) to 447/6 (*IG* 1³ 265.1.21) a

total of five times, paying a *phoros* of 2 tal. It was assessed for tribute in 425/4 (*IG* 1³ 71.1.141–42). It is usually registered by city-ethnic, but in the assessment decree by its ruler: *Τυμν--Κυλλ[άνδιος]*.

909. Kyrbissos (Kyrbisseus) Map 61, unlocated. Type: C:?. The toponym is *Κυρβισσός* (*IG* 1³ 259.iv.16). The city-ethnic is *Κυρβισσεύς* (*IG* 1³ 262.1.33).

Kyrbissos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (*IG* 1³ 259.iv.16) to 445/4 (*IG* 1³ 267.v.28) a total of eight times, paying a *phoros* of 2,000 dr. It was assessed for tribute in 425/4 (*IG* 1³ 71.ii.106), a minimum of 2,000 dr. It is registered sometimes by city-ethnic (*IG* 1³ 262.1.33) and sometimes by toponym (*IG* 1³ 259.iv.16).

910. Latmos (Latmios)/**Herakleia** (Herakleotes) Map 61. Lat. 37.30, long. 27.30. Size of territory: ? Type: A:β. The toponym is *Λάτμος*, *ἡ* (Hecat. fr. 239; *EA* 29 (1997) 137.7–8, 323–313), later *Ἡράκλεια*, *ἡ* (Ps.-Skylax 99; Strabo 14.1.8). According to Strabo 14.1.8, the town was originally called *Λάτμος*, and later the name was changed to *Ἡράκλεια* (*ἡ ὑπὸ Λάτμω*, to distinguish it from its homonyms). The latest attestation of the toponym *Λάτμος* is in the above-mentioned C4l inscription; the earliest attestation of *Ἡράκλεια* is that of Ps.-Skylax 99. The city-ethnic is *Λάτμιος* (*I.Didyma* 12 (C6s), restored: [*Λά*]τμιοι; *IG* 1³ 260.x.3; *EA* 29 (1997) 137.14). The earliest possible attestation of the city-ethnic *Ἡρακλεώτης* is on a Panathenaic amphora of C4m (*infra*); the earliest unquestionable attestation is in *I.Priene* 51.1 (C2s). Latmos/Herakleia is called a *polis* both in the urban sense (*EA* 29 (1997) 137.27–28; Ps.-Skylax 99: *polis Hellenis*) and in the political sense (*EA* 29 (1997) 137.3, 16–17, 18). The collective use of the city-ethnic (*Λάτμιοι*) is attested internally in the treaty with Pidasas (*EA* 29 (1997) 137.14 (C4l)) and externally in the Athenian tribute lists (*IG* 1³ 260.x.3) and in a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) (*SEG* 40 992.11 (C4m)).

Three “Lelegian” ring walls have been located in the territory of Latmos, two on Mt. Latmos and one on the southern bank of the Bafa Lake. They are all built in dry rubble masonry, and since there are no remains of buildings inside the perimeter, it is assumed that they were *Fluchtburge* (Peschow-Bindokat (1996) 22–23).

Latmos was a member of the Delian League. It belonged to the Karian district and is recorded in the tribute lists from 453/2 (*IG* 1³ 260.x.3) to 432/1 (*IG* 1³ 280.i.64) a total of fourteen times, twice completely restored, paying a *phoros* of 1 tal. (*IG* 1³ 261.ii.29).

The outstanding source for C4 Latmos is the treaty with Pidasa (EA 29 (1997) 137) about a physical and political amalgamation of the two *poleis*. The treaty was concluded in the period 323–313, but some of its information can be interpreted retrospectively to shed light on the social and political organisation of Latmos in the late Classical period: an agora (31–32) and a temple of Athena (35–36) are mentioned, and in the town of Latmos there is a publicly owned open space (*demosie*) where the Pidaseis can build their new houses (27–29). The oath is to be taken by 200 Latmioi (30), and the citizens were organised into an unknown number of *phylai* and *phratriai* (6–13; cf. Jones (1999)). A board of *timouchoi* are to make a sacrifice in order to ensure the *homonoia* of the *polis* (2–4).

Latmos was abandoned in C4 and refounded under the name Herakleia. The date of the move is uncertain: Ps-Skylax mentions Herakleia (99), but not Latmos, and since no chapter of the *Periplus* is likely to be dated later than c.330 (Flensted-Jensen and Hansen (1996) 137–38), it must be presumed that Herakleia existed already by then. Hornblower's suggestion ((1982) 320) that the move was initiated by Mausolos squares with Ps.-Skylax' account and with some fragments of a C4m Panathenaic amphora found at Labraunda and inscribed 'Ἡρακλεώτης. Hellström argues that the ethnic must be interpreted as referring to Herakleia under Latmos (Hellström (1965) 8). If so, it suggests that a citizen of Herakleia participated in the Panathenaic Games in C4m. However, both the toponym Latmos and the city-ethnic Latmios are attested in the treaty between Latmos and Pidasa concluded in the period 323–313 (EA 29 (1997), *supra*). The presumption is that, for a relatively short period of time, the two places existed simultaneously (already suggested by Hornblower) and that both city-ethnics could be used to designate a citizen of this community. The two sites are situated less than 1 km from each other (Peschlow-Bindokat (1996) 23, Abb. 23).

Latmos was unfortified until C4e, when the city wall was built and at the same time the city was enlarged. The city wall enclosed an area of c.90 ha; it had fourteen towers, and two gates can be seen today. The city wall and the buildings erected at the same time as the wall are built in the same building technique: isodomic ashlar, headers and stretchers (Peschlow (1994) 155). There is not much left of Latmos, since building material was to a large extent employed in the building of Herakleia. At Latmos remains of 100 houses have been revealed. They are of various sizes, 20–100 m², and almost invariably of quadrangular plan. In the centre of the city an agora has been identified (mentioned in EA 29 (1997)

31–32). Sherds found at Latmos date from C6–C5 (Peschlow-Bindokat (1996) 23–27).

The names of the Latmians listed in the treaty between Mylasa (no. 913) and Kindye (no. 902) (SEG 40 992.11) suggest that there was a strong Karian element in the population of Latmos (Blümel (1990) 38–42 (= SEG 40 991–92)).

911. Lepsimandos (Lepsimandeus) Map 61. Lat. 37.05, long. 27.05. Size of territory: 1. Type: C.?: The toponym is *Ληψίμανδος* (Steph. Byz. 414.8). The city-ethnic is *Ληψιμάνδιος* (IG I³ 260.1.13) or *Ληψιμανδεύς* (IG I³ 267.III.28) or *Ληψυανδεύς* (IG I³ 269.v.2); cf. Blümel (1998a).

Lepsimandos was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 453/2 (IG I³ 260.1.13) to 440/39 (IG I³ 272.II.77) a total of twelve times, paying a *phoros* of 1,000 dr. in 453/2 (IG I³ 260.1.13), 1,500 dr. from 452/1 (IG I³ 261.IV.25) and 1,000 dr. (IG I³ 267.III.28) from perhaps 446/5 (IG I³ 266.III.17, amount restored). It was assessed for tribute in 425/4 (IG I³ 71.II.102), a minimum of 2,000 dr., and in 410/9 (Krateros fr. 7 = IG I³ 100).

912. Medmasos (Madnaseus) Map 61. Lat. 37.05, long. 27.20. Size of territory: 1 or 2. Type: B;β. The toponym is *Μέδμασος* (Hecat. fr. 244 = Steph. Byz. 440.3, where Meineke prefers the conjecture *Μέδμασα*). The city-ethnic is *Μαδνασεύς* (IG I³ 261.1.32). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (IG I³ 261.1.32).

Medmasos was a member of the Delian League. It belonged to the Karian district and is recorded in the tribute lists from 454/3 (IG I³ 259.I.26) to 432/1 (IG I³ 280.1.13) a total of eleven times, twice completely restored, paying a *phoros* of 2 tal. in 454/3 (IG I³ 259.I.26) and 452/1 (IG I³ 261.1.32) and 1 tal. in the rest of the period (IG I³ 263.v.27).

Medmasos was one of the settlements which were synoecised into Halikarnassos (no. 886) by Mausolos c.370 (Plin. HN 5.107; Hornblower (1982) 82; Demand (1990) 123).

The site of Medmasos is c.300 m long and enclosed by a circuit wall built in dry rubble or polygonal masonry, with gates and towers. The walls have been dated to c.400 (Hornblower (1982) 96). There are house foundations and cisterns within the perimeter. Moreover, there is an inner perimeter with a tower built in ashlar masonry, enclosing a building complex. Sherds date the settlement to the Classical period (Bean and Cook (1955) 121–22, 155; cf. Hornblower (1982) 96).

913. Mylasa (Mylaseus) Map 61. Lat. 37.15, long. 27.50, later moved to lat. 37.20, long. 27.45 (Cook (1961) 98–101). Size of territory: ? Type: A:β. The toponym is *Μύλασα, τὰ* (Hdt. 1.171.6; Men. *Sicyonius* 6; *SEG* 33 872.3 (C4l)) or *Μύλασος* (Aesch. fr. 147, Mette). The city-ethnic is *Μυλασεύς* (*IG* 1³ 267.v.31; *I.Mylasa* 1.3 (367/6); Hdt. 5.121). Mylasa is called a *polis* both in the urban sense (Arist. *Oec.* 1348^a12) and in the political sense in a decree of 361/0 (*I.Mylasa* 2.7–9). The collective use of the city-ethnic is attested internally in the decree of 367/6 (*I.Mylasa* 1.3) and externally in the Athenian tribute lists (*IG* 1³ 267.v.31). The individual city-ethnic is attested externally in a C4m dedication from Labraunda (*I.Labraunda* 17) and in a C4 Attic sepulchral inscription (*Agora* xvii 519.7).

In the territory of Mylasa were several forts, one of which is described at length by Radt (1969–70). The fortification consists of a ring wall and, inside that, a fortified citadel. The whole complex is c.400 m long, and the oldest parts were built in the Archaio-Classical period with additions in the early Hellenistic period. In addition to the three fortifications already known, yet another one was discovered in 1995. The masonry is of the Classical period, and it overlooks the plain of Mylasa, but also Hydai to the west (Rumscheid (1996) 127).

The name of the district *Ἀρλαία* (or perhaps *Ἀρλαίθις*; see Blümel (1998a) 165 n. 9) in the territory of Mylasa is known from *I.Mylasa* 21.8 (c.317).

Mylasa was a member of the Delian League. It belonged to the Karian district and is recorded in the tribute lists from 450/49 (*IG* 1³ 263.1.12) to 440/39 (*IG* 1³ 272.11.76, completely restored) a total of eight times, twice completely restored. Mylasa paid 1 tal. down to 447/6 (*IG* 1³ 265.11.105) and 5,200 dr. from 446/5 on (*IG* 1³ 267.v.31).

Crampa argues that a very fragmentary C4l inscription concerns the democratic constitution of Mylasa (*I.Labraunda* 41; see other possible restorations and interpretations in Hornblower (1982) 70–71 with n. 128).

Nomoi patrioi are mentioned in *I.Mylasa* 1.11 (367/6).

A single Ionian month name is attested at Mylasa (*SEG* 40 991.2: *μηνὸς [Ἄρ]τεμισιώνος* (C4m)).

Three *phylai* are attested at Mylasa. A decree of 367/6 mentions *αἱ τρεῖς φυλαί* (*I.Mylasa* 1.4; cf. *I.Mylasa* 2.4, 3.13). The name of the *phyle* *Ῥοτωρκονδεῖς* is attested frequently from C2 (see e.g. *I.Mylasa* 106.2); *Ῥαρβεσῦται* is attested once, in C2 (*I.Mylasa* 301.3); and *Κονοδωρκονδεῖς* is attested once, in C2 (*I.Mylasa* 119.14).

In 357–355 Erythrai (no. 845) bestowed proxeny and other honours upon *Μαύσωλλος Ἐκατόμνω Μυλασεύς*

(Tod 155). In C4–C3 Delphi (no. 177) bestowed proxeny on *Μοσχίων Μυλασεύς* (*SEG* 23 307).

One inscription contains three decrees, dated to 367/6, 361/0 and 355/4 respectively, dealing with plots against Mausolos (Tod 138 = *I.Mylasa* 1–3). In the first case Arlissis, son of Thyssollos, had been sent as an envoy to the Persian king by the Karians and, while an envoy, had plotted against Mausolos and was subsequently executed on the king's orders. Moreover, the *polis* of Mylasa seized his property and handed it over to Mausolos. In the second case, the sons of Peldemos had damaged an image of Hekatomnos, father of Mausolos, thus wronging the sacred dedications, and the *polis* therefore confiscated their property and sold it. They may have sought refuge in Iasos (no. 891), because proxeny was granted in C4 to three men: Myrmex, Manes and Targelios, sons of Peldemis (*SEG* 36 983; cf. Blümel (1998b) 171). In the third case Manita, son of Paktyes, plotted against Mausolos during the annual offering and festival of Zeus Labrandeus. Manitas himself was killed immediately in hand-to-hand fighting, and the *polis* confiscated the property of Manitas and his accomplice Thyssos, son of Syskos, and sold their estates. In all three cases the decrees are passed by the assembly, with the ratification of the three *phylai*, and curses are invoked on anyone who puts a question to the vote or proposes something which would change these decisions.

Hdt. 1.171.6 mentions a sanctuary dedicated to Zeus Karios and calls it “ancient”. Zeus Karios was also worshipped by the Mysians and the Lydians (Hdt. 1.171.6). Remains survive of the wall surrounding the *temenos* of the temple of Zeus Osogos; it probably dates to C5 (Bean (1971) 42). A *temenos* of Hermes and Herakles is attested c.317 (*I.Mylasa* 21.13).

The cult centre of Mylasa was the sanctuary of Zeus at Labraunda, situated c.15 km north of Mylasa and connected to it by a sacred way. Annual sacrifices and a *panegyris* are mentioned at *I.Mylasa* 1.3.4–5. Strabo mentions the road and says that it measured 60 stades (10.8 km) (14.2.23). The road, of which parts have been preserved, was constructed in the Hekatomnid period (Westholm (1963) 9–10). The sanctuary consists of several buildings: the temple itself (for which see Hellström and Thieme (1982)), a peristyle, two *andrones*, two stoas and several other buildings (*PECS* s.v.). Although the majority of the remaining buildings at Labraunda were constructed in C4 as part of the Hekatomnid building project, there was activity at the site earlier, as evidenced by Archaic buildings on the temple terrace (Westholm (1963) 105) and by sherds dating to the Protogeometric period and

onwards (Jully (1981)). In the area surrounding the sanctuary there are several forts, which may have been part of a defence system and which probably date to Hekatomnid period (Westholm (1963) 13–15). The acropolis at Labraunda is also of Hekatomnid date (ibid. 15–19).

Strabo says that Mylasa used to be a *kome*, and on the basis of this, Radt assumes that Mylasa was not a conurbation in the Archaic and Classical periods but that it consisted of “*einzelne Flecken und Gehöfte*”, comparing it with the settlement pattern of the Halikarnassian peninsula before the Mausolan synoecism (Radt (1969–70) 167). However, Rumscheid argues that Mylasa probably existed already by C7f ((1995) 77–78, (1999) 206). In Arist. *Oec.* 1348^a12–13 Mylasa is described as *ateichistos* in the 360s. Accepting the account as historical, Rumscheid argues that Mylasa did not have a city wall, but that it was protected by a number of fortifications in the territory (Rumscheid (1999) with fig. 3). A *palaistra* and a *gymnasion* are mentioned in an inscription of c.317 (*I.Mylasa* 21.9, 12).

It is generally stated that Mylasa did not strike coins until C3l (Akarca (1959) 11; Head, *HN²* 622), except for the bronze coins struck by the dynast Eupolemos in his own name at the time of Alexander or a little later. *Obv.* three Makedonian shields; *rev.* sword in sheath; legend: *ΕΥΠΟΛΕΜΟΥ* (*HN²* 622). However, Hurter describes two Mylasian tetradrachms in the so-called Pixodaros hoard, which was deposited c.330 (Hurter (1998) 147–50). These two coins have *obv.* Zeus Labraundios, *rev.* Zeus Osogos (a combination of Zeus and Poseidon) holding a trident and an eagle.

914. Myndos (Myndios) Map 61. Lat. 37.05, long. 27.15. Size of territory: 1 or 2. Type: A: *a.* The toponym is *Μύνδος*, *ῆ* (Hecat. fr. 243; Diod. 20.37.1; Strabo 13.1.59). The city-ethnic is *Μύνδιος* (*IG I³* 71.11.141). Myndos is implicitly classified as a *polis Hellenis* in the urban sense by Ps.-Skylax 99; cf. Flensted-Jensen and Hansen (1996) 142, and it is retrospectively called a *polis* in the political sense by Arr. *Anab.* 1.20.6 (r334).

The collective use of the city-ethnic is attested internally on Hellenistic coins (*SNG Cop. Caria* 439–43; *ΜΥΝΔΙΩΝ* (C2–C1)) and externally in the Athenian tribute lists (*IG I³* 271.11.86). For the individual and external use, see Hdt. 5.33.3; *I.Knidos* 23.9–10 (C2).

Hdt. 5.33.2 mentions a Myndian ship in the fleet of Aristagoras c.500. Myndos was a member of the Delian League. It belonged to the Karian district and is recorded in the tribute lists from 453/2 (*IG I³* 260.vi.16) to 421/0 (*IG I³* 285.i.92–93) a total of nineteen times, four times completely

restored, paying a *phoros* of 500 dr., except in 421/0 when it paid 1,000 dr. It was assessed for tribute in 425/4 (*IG I³* 71.11.141), 1,000 dr. Myndos must have defected from Athens during the Dekeleian War, since at Delphi the statues of those who fought with Lysander at Aigos potamoi in 405 included one of Theopompos of Myndos (Paus. 10.9.10). In 334 Alexander attacked Myndos, which, however, resisted his assault because of the failure of a secret agreement between Alexander and a faction behind the walls (Arr. *Anab.* 1.20.5–7).

Citing the C4 historian Kallisthenes of Olynthos, Strabo says that when Mausolos synoecised some *poleis* into Halikarnassos (no. 886), Myndos was left as it was (Strabo 13.1.59; Callisthenes (*FGrHist* 124) fr. 25). The coastal site on the tip of the Halikarnassos peninsula does not go further back than the Mausolan period, so “old Myndos” must be sought elsewhere (cf. the distinction between Myndos and Palaimyndos, Plin. *HN* 5.107; Steph. Byz. 462.4). Bean and Cook identify “Lelegian” Myndos with a site not far from “new Myndos”. It is generally assumed that it was Mausolos who initiated the move (Hornblower (1982) 97). At the hill-top site of “old Myndos” very little remains. There are foundations of a tower in irregular masonry and a ring wall in loose polygonal or dry rubble masonry. Sherds seem to indicate that the site was abandoned in C4e (Bean and Cook (1955) 118). At the site of “new Myndos” there are remains of an outer circuit in ashlar masonry, which must have been c.3.5 km long and enclosed an area of c.45 ha. We know from Arr. *Anab.* 1.20.6 that Myndos was walled in 334. McNicoll suggests that the walls were erected after 367 and before 334 ((1997) 23). Furthermore, there is a so-called Lelegian wall, which is, however, too recent to be “Lelegian” and is of different masonry (Hornblower (1982) 305–6). McNicoll suggests that this wall was built after 334. It is in hammer-faced isodomic ashlar, whereas the tower to the north-east is in isodomic ashlar masonry with headers and stretchers (McNicoll (1997) 22–24). Nothing remains of the foundations of temples and the *stadion* seen by Newton ((1863) 575–77; cf. Bean and Cook (1955) 108–12, 118, 145). According to Ps.-Skylax 99, Myndos had a harbour (cf. Strabo 14.2.20).

915. (Narisbareis) Map 61. Unlocated. Type: C: A toponym is not attested. The city-ethnic is *Ναρισβαρεῖς* (*IG I³* 271.i.71). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG I³* 271.i.71).

The Narisbareis were members of the Delian League. They belonged to the Karian district and are recorded in the tribute lists from 454/3 (*IG I³* 259.vi.5) to 440/39 (*IG I³*

272.1.81, restored: [*Ναρισβαρ*]ῆς), a total of nine times, once completely restored, paying a *phoros* of 1,000 dr. (*IG* 1³ 260.vii.5).

916. Naryandos (Naryandeus) Map 61. Unlocated. Type: C:γ. Apart from Plin. *HN* 5.107 (*Nariandos*) the toponym is not attested. The city-ethnic is *Ναρνανδεύς* (*I.Mylasa* 8.8 (C4)). The collective use of the city-ethnic is attested externally in a C4 inscription from Mylasa (*I.Mylasa* 8.8). For the individual and external use, see *SEG* 44 890.55 (C2).

The Naryandeis are known from a fragmentary C4 list of *presbeis* in which the *Ναρνανδέων πρέσβεις* (*I.Mylasa* 8.8) are mentioned alongside *presbeis* from Koranza (no. 906) (l. 9), and thus presumably are the representatives of a *polis*.

A Demeter Naryandis is mentioned in an undated (probably Hellenistic) list of priests from Panamara (*I.Stratonikeia* 283.1–2).

917. Naxia (Naxiates) Map 61. Lat. 37.35, long. 27.40. Size of territory: presumably 1 or 2. Type: C:?. The toponym is *Ναξία* (*IG* 1³ 267.iii.29). The city-ethnic is *Ναξιάρης* (*IG* 1³ 261.v.8) or *Ναξιήτης* (*IG* 1³ 269.iv.23). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 261.v.8).

In *IG* 1³ 267.iii.29 Meritt's restoration: *Ναχσία παρὰ Μ[υδ](όνα)* is far from certain, but L. Robert's suggestion ((1978) 481 n. 32) that *Μ[...]* stands for Miletos or Myous is in conflict with the recording of Naxia in the Karian district (*IG* 1³ 271.i.73).

Naxia was a member of the Delian League. It belonged to the Karian district and is registered in the Athenian tribute lists from 454/3 (*IG* 1³ 259.i.25) to 432/1 (*IG* 1³ 280.i.32) a total of thirteen times, twice completely restored. It is recorded once by toponym (*IG* 1³ 267.iii.29), and otherwise by city-ethnic, paying a *phoros* of, first, 1,000 dr. (*IG* 1³ 259.i.25, partly restored), then 500 dr. from 448/7 on (*IG* 1³ 264.ii.2).

918. Olaieis Map 61. Lat. 37.05, long. 28.20. Size of territory: ? Type: C:?. A toponym is not attested. The city-ethnic is *Ὀλαιεύς* (*IG* 1³ 260.i.18). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 260.i.18).

The Olaieis were members of the Delian League, but they are registered in the Athenian tribute lists only once, in 453/2, paying a *phoros* of 1,000 dr. (*IG* 1³ 260.i.18).

919. Olymos (Hylimeus) Map 61. Lat. 37.25, long. 27.45. Size of territory: ? Type: C:β. The earliest attestations of the toponym *Ὀλυμος* or *Ὀλυμον* is from C2s (*I.Mylasa* 806.11). The city-ethnic is *ηλυμιεύς* (*IG* 1³ 263.ii.39), or, later,

Ὀλυμεύς (*EA* 32 (2000) 99 no. 1.2 (= *I.Mylasa* 868.2 (C3)); no. 2.2 (C3)). On the equation of the Hylimeis as the inhabitants of Olymos, see L. Robert (1955) 226–27. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 263.ii.39).

Olymos was a member of the Delian League. It is recorded for the first time in 450/49 (*IG* 1³ 263.ii.39), and then possibly in 448/7 (*IG* 1³ 264.iv.29: [*ηλυμιέ*]ς) and 447/6 (*IG* 1³ 265.i.86, completely restored). The amount paid by Olymos is unknown. It is absent from the full panel of 440/39 (*IG* 1³ 271.i–ii.63–86).

There are practically no archaeological remains left at the site of Olymos, but a large number of Hellenistic inscriptions bearing the toponym and the ethnic make the site identification certain (*I.Mylasa* ii pp. 29ff; Bean (1971) 48).

920. Ouranion (Ouranietes) Map 61. Lat. 37.05, long. 27.15 (for a different location, see Varinlioğlu *et al.* (1992)). Size of territory: 1 or 2. Type: B:γ. The toponym is *Ὀυράνιον*, *τό* (Diod. 5.53, referring to some period after the Trojan War). The city-ethnic is *Ὀυρανιήτης* (*IG* 1³ 260.i.17). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 260.i.17) and in a C4m treaty (*SEG* 40 992.16).

Ouranion was a member of the Delian League, but it is recorded only twice in the tribute lists, in 453/2 (*IG* 1³ 260.i.17), paying a *phoros* of 1,000 dr., and in 451/0 (*IG* 1³ 262.v.27), paying 500 dr. It is absent from the full panel of 440/39 (*IG* 1³ 271.i–ii.63–86) but was assessed for tribute in 425/4 (*IG* 1³ 71.i.117), paying in a syntelic group with some other Karian towns.

A *keryx* from Ouranion is mentioned in a C4m treaty (*SEG* 40 992.16).

Ouranion was one of the settlements which were synoecised into Halikarnassos (no. 886) by Mausolos c.370 (Plin. *HN* 5.107; Hornblower (1982) 82; Demand (1990) 123), but it seems likely that the place still functioned as a manned stronghold even after the civilian population had been moved (Hornblower (1982) 88).

At the site of Ouranion there are remains of a fortification which is c.50 m long and enclosed by a wall built in coursed masonry. The fortifications have vertical drafting at the edges, which points to a C4 date (Hornblower (1982) 95). There are remains of an outer perimeter in polygonal masonry. Sherds found at the site were of the Archaic and Classical periods (Bean and Cook (1955) 117–18).

According to Diod. 5.53, Ouranion was settled by Karians fleeing from the island of Syme because of drought, some-

time after the Trojan War. The names listed in in the C4m treaty mentioned above suggest that there was a strong Karian element in the population of Ouranion (Blümel (1990) 38–42 (= *SEG* 40 991–92)), and it is a moot point to what extent it can be considered a Hellenic *polis* in the Archaic and Classical periods.

921. (Parpariotai) Map 61. Lat. 37.35, long. 27.30 (although Marchese (1989) 39, 153 suggests a location in northern Karia). Size of territory: ? Type: C:? A toponym is not attested. The city-ethnic is *Παρπαριώτης* (*IG* 1³ 263.11.8). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 263.11.8).

The Parpariotai were members of the Delian League. They belonged to the Karian district and are recorded from 451/0 (*IG* 1³ 262.11.8) to 440/39 (*IG* 1³ 272.11.82) a total of eleven times, once completely restored, paying a *phoros* of 1,000 dr.

922. Passanda (Pasandeus) Map 65. Lat. 36.50, long. 28.35. Size of territory: ? Type: C:γ. The toponym is *Πάσσανδα* (Steph. Byz. 509.12) or *Πασάδα* (*Stadiasmus* 264–65). The city-ethnic is *Πασανδεύς* (*IG* 1³ 279.11.11). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 279.11.11). The individual city-ethnic is used externally in a list of contributors from Kaunos (*SEG* 12 473.13, before 190 or after 167; cf. *SEG* 44 890.90). However, at the time it was no longer a city-ethnic, but a sub-ethnic, Pasanda having become a civic subdivision of Kaunos (no. 898).

Passanda was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 451/0 (*IG* 1³ 262.11.23) to 421/0 (*IG* 1³ 285.11.12) a total of twelve times, thrice completely restored, paying a *phoros* 3,000 dr.

923. Pedasa (Pedaseus) Map 61. Lat. 37.05, long. 27.25. Size of territory: probably 1. Type: C:β. The toponym is *Πηδάσα, τὰ* (Strabo 13.1.59). The city-ethnic is *Πηδασεύς* (*Syll.*³ 46.140 (C5); Hdt. 1.175). Pedasa is described as a *polis* in the urban sense at Hdt. 8.104, but the passage is a repeat of a story told at 1.175 and is probably a late addendum. The external use of the city-ethnic is attested collectively at Hdt. 1.175 and individually at *Syll.*³ 46.140.

A cult of Athena is attested at Hdt. 1.175 in connection with the story that the priestess of Athena grew a beard when an evil threatened the city.

Pedasa was one of the settlements which were synoecised into Halikarnassos (no. 886) by Mausolos c.370 (Strabo

13.1.59; Plin. *HN* 5.107; Hornblower (1982) 81 n. 24; Demand (1990) 123).

The archaeological remains consist of a fortification, c.170 m long, built in irregular masonry, with towers in squared masonry on the southern side. The walls enclose an area of 2.5 ha (Bean (1971) 121). There are traces of buildings inside the perimeter. To the east and south there is an outer perimeter in dry rubble masonry (Bean and Cook (1955) 123–25; cf. Hornblower (1982) 308).

924. (Peleiatai) Unlocated, not in *Barr.* Type: C:? A toponym is not attested. The city-ethnic is *Πελειάτης* (*IG* 1³ 260.x.2). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 280.1.68).

The Peleiatai were members of the Delian League. They belonged to the Karian district and are registered in the tribute lists from 453/2 (*IG* 1³ 260.x.2) to 432/1 (*IG* 1³ 280.1.68) a total of thirteen times, twice completely restored, paying a *phoros* of 4,000 dr. in 453/2, reduced to 3,000 dr. in 450/49 (*IG* 1³ 263.v.28).

925. Pidasa (Pidaseus) Map 61. Lat. 37.25, long. 27.35. Size of territory: ? Type: A:? The toponym is *Πίδασα, τὰ* (Blümel (1997) 137 l. 8; *Milet.* 1 3 149.15 (C2f)). The city-ethnic is *Πεδασεύς* (*IG* 1³ 260.x.7) or *Πιδασεύς* (*EA* 29 (1997) 137.8). Pidasa is called a *polis* in the political sense in a C4l treaty with Latmos (no. 910) (*EA* 29 (1997) 137.16–18). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 260.x.7). For the individual and external use, see *Milet.* 1 3 41.111.4 (C2s).

The Pidaseis were members of the Delian League. They are recorded in the tribute lists from 453/2 (*IG* 1³ 259.111.5) to 447/6 (*IG* 1³ 265.1.14) a total of five times, once completely restored, paying a *phoros* of 2 tal. in 453/2 and 451/0 (*IG* 1³ 260.x.7), but 1 tal. in 447/6 (*IG* 1³ 265.1.14). They are absent from the full panel of 441/0 (*IG* 1³ 271.1–11.63–86) but were assessed for tribute in 425/4 (*IG* 1³ 71.11.149), 3 tal. The Pidaseis/Pedaseis of the tribute lists were not the Pedaseis in the Halikarnassian peninsula; see *ATL* i.535; cf. Blümel (1997) 139; *pace* Cook (1961b) 95).

A *psephisma* passed between 323 and 313 records a treaty between Pidasa and Latmos, called *politeuma* in the decree (41) (Blümel (1997); Habicht (1998); Jones (1999)). The treaty prescribes both a physical and a political amalgamation of the two *poleis*. Pidasa holds a subordinate position to that of Latmos and is in fact incorporated into Latmos: all Pidaseis, hitherto organised into their own *phylai* and *phratriai*, are to be inscribed either into a new *phyle* or into one of the Latmian *phylai* (4–10); a common financial administration

is set up (14–20), and some of the *Pidaseis* are supposed to move to Latmos (27–28). In the treaty with Latmos, 100 *Pidasian* citizens, selected by the *Latmioi*, are to swear to the treaty (29). It has been suggested that these 100 men constituted almost the whole number of citizens of *Pidasa* (Habicht (1998) 10), but the fact that the 100 citizens were selected by the *Latmioi* indicates that the total number of *Pidasian* citizens was considerably higher.

The site of *Pidasa* has been identified by Cook ((1961) 91–96; cf. L. Robert (1978)). The scanty remains consist of a fortification c.200 m long in coursed masonry. Tiles found inside the perimeter point to a C4–C3e date. At a distance of c.300 m is a watch-tower built with square blocks.

926. Pladasa (*Pladasieus*) Map 61. Lat. 37.05, long. 28.05. Size of territory: ? Type: A:γ. A toponym is not attested. The city-ethnic is *Πλαδασεύς* (*SEG* 40 996.7, 319/8 = *I.Rhod.Per.* 701) or *Πλατασεύς* (*I.Labraunda* III.2 42.5) or *Πλαδασιήτης* (*SEG* 40 992.12 (C4m)).

Pladasa is called a *polis* in the political sense in a proxeny decree of 319/8 (Varinlioglu *et al.* (1990) = *SEG* 40 996.6). The collective use of the city-ethnic is used internally in a proxeny decree of 319/18 (*SEG* 40 996.10) and externally in the Athenian tribute lists (*IG* 1³ 264.1.11) and in a C4m treaty between *Mylasa* (no. 913) and *Kindye* (no. 902) (*SEG* 40 992.12). The individual city-ethnic is used externally on an undated grave inscription from *Chalke* (*IG* XII.1 962b).

Pladasa was a member of the *Delian League*. It belonged to the *Karian* district and is registered in the tribute lists from 448/7 (*IG* 1³ 264.1.11) to 440/39 (*IG* 1³ 272.1.89) a total of five times, once completely restored, paying a *phoros* of 2,000 dr. (*IG* 1³ 265.1.13). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.150). It is absent from the full panel of 441/0 (*IG* 1³ 271.1–11.63–86).

An envoy from *Pladasa* is listed in a treaty from *Mylasa* of c.354/3 (*SEG* 40 992.13). In 319/18 *Pladasa* granted *proxenia*, *politeia* and *enktesis* to *Kratesippos*, son of *Polyon*, from *Plataiai* (*SEG* 40 996.15–17).

One month name from *Pladasa* is attested in the proxeny decree of 319/18. The name of the month is *Κοροβαλλισσις*, a *Karian* name (*SEG* 40 996.4).

The names listed in the treaty between *Mylasa* and *Kindye* (*SEG* 40 992.12–13) suggest that there was a strong *Karian* element in the *Pladasian* population, and it is a moot point to what extent the community can be considered a Hellenic *polis* in the Classical period.

927. Pyrindos (*Pyrindios*) Unlocated, not in *Barr.* Type: C:a. The toponym is *Πύρινδος* (Steph. Byz. 541.8) and

I.Knidos 255 (undated). The city-ethnic is *Πυρίνδιος* (*I.Knidos* 22.1).

Pyrindos is known from three sources only: viz. Steph. Byz. who calls it *πόλις Καρίας* (541.8), which has no value without a source reference; an undated fragment of an inscription in which only *Πυρίνδου* and *ΥΤΟ* can be read; and more interestingly, a C4s list of *Προστάται Πυρίνδιοι* (then follow nineteen names, all Greek: *I.Knidos* 22. The provenance of the inscription is unknown).

928. Purnos (*Purnios*) Map 61. Lat. 36.55, long. 28.25. Size of territory: ? Type: C:? The toponym is *Πύρνος* (Steph. Byz. 541.10; Plin. *HN* 5.104). The city-ethnic is *Πύρνιος* (*IG* 1³ 261.1v.10). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 262.1.17, 263.1.3).

Purnos was a member of the *Delian League*. It belonged to the *Karian* district and is registered in the tribute lists from 452/1 (*IG* 1³ 261.1v.10) to 433/2 (*IG* 1³ 279.1.23) a total of twelve times, three times completely restored, paying a *phoros* of 1,000 dr. (*IG* 1³ 263.1.3).

929. Salmakis (*Salmakites*) Not in *Barr.*, but from C4 part of *Halikarnassos* (no. 886). Type: C:? The toponym is *Σαλμακίς* (*SEG* 43 713.11, 13 (c.400)). The ethnic is *Σαλμακίτης* (*Syll.*³ 45.2 = ML 32 (C5f)). The collective ethnic is used internally in *Syll.*³ 45.2.

Strabo 14.16.1 describes *Salmakis* as a fountain. From *SEG* 43 713.11 and 13 it appears that it was a district or area in *Halikarnassos*. The site has been identified via an inscription found in 1995 (Isager (1998)). However, in C5f the *Salmakians* were clearly some kind of political community, passing a law with the *Halikarnassians* and the tyrant *Lygdamis*. The *Halikarnassians* and the *Salmakians* formed the *syllogos* of *Halikarnassos* (*Syll.*³ 45.1–2 = ML 32), and they may constitute what is referred to as *Ἁλικαρνασσεῖς σύμπαντες* (41–42). Moreover, the *Salmakians* had their own magistrates (13–15; *Σαλμακιτέων μνημονευόντων Μεγαβατέω . . . καὶ Φορμίωνος*). It is a possibility that they had *polis* status at the time, but were incorporated into *Halikarnassos* (no. 886) not too long after. See also Isager (1998) 10, comm. to l. 16.

930. (Silo) Map 61. Unlocated. Type: C:? The city-ethnic is *Σίλος* (*IG* 1³ 262.v.30). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 262.v.30). The *Siloi* were members of the *Delian League*, but they are recorded only once, in 451/0 (*IG* 1³ 262.v.30), paying a *phoros* of 1,500 dr. They are listed together with

some Karian communities, wherefore it has been argued that they too belong in the Karian district (ATL i.549). In the list of 453/2 (IG I³ 260.1.10) the city-ethnic is completely restored.

931. Syangela (Syangeleus)/**Theangela** (Theangeleus) Map 61. Lat. 37.05, long. 27.35. Size of territory: 2 or 3. Type: A:γ. The toponym is *Συάγγελα*, *τά* (Kallisthenes (FGrHist 124) fr. 25, quoted by Strabo 13.1.59; Kramer's emendation of *συναγέλα* (MSS CDx) and *σὺν ἀγέλα* (MSS hmowz), later *Θεάγγελα*, *τά* (Staatsverträge 429.25 (c.310); Steph. Byz. 308.6). The city-ethnic is *Συαγγελεύς* (IG I³ 284.7–8; SEG 40 991.13 (354/3); C4–C3 coins), later *Θεαγγελεύς* (IG I² 1956.11.98 (c.300); *I.Iasos* 50.4 (C4–C3)). In a treaty with Eupolemos of c.310 (Staatsverträge 429) Theangela is called a *polis* both in the urban sense (20) and in the political sense (24). In a C4m treaty between Mylasa (no. 913) and Kindye (no. 902) the Syangeleis are among the city-ethnics listed after the heading *παρήσαν ἀπὸ πόλεων*, where *polis* is used in the political sense (SEG 40 991.13). The collective use of the city-ethnic is attested internally on coins (ΣΥ (C4–C3), *infra*) and in the treaty with Eupolemos (Θεαγγελεύς, Staatsverträge 429.26) and externally in the Athenian tribute lists (IG I³ 284.7–8) and in the C4m treaty (SEG 40 991.13). The individual city-ethnic is used externally in the Athenian tribute lists (IG I³ 259.v.16) and in a C4–C3 proxeny decree (*I.Iasos* 50.4).

Syangela (at modern Kaplan (Radt (1970) 224 or Alázeytin (Blümel (1990) 37) and Theangela (at modern Etrim) were both pre-Hellenistic settlements, situated a few kilometers apart. The original centre of the *polis* was at Syangela. In, perhaps, C6m the centre was moved to the other site, but the name was kept. It was probably Mausolos who had the *polis* renamed Theangela, but for half a century the old toponym and city-ethnic were used alongside the new ones (Radt (1970); Hornblower (1982) 97–99; Franke (1984); Blümel (1990) 37). At the site of Theangela there are remains of a perimeter c.3 km long, with a rectangular fort with four towers, in different types of masonry; the wall encloses an area of 25 ha (Bean and Cook (1955) 112–16, (1957) 89–96).

Syangela was a member of the Delian League. It belonged to the Karian district and is registered in the tribute lists from 454/3 (IG I³ 259.v.16) to 427/6 or 426/5 (IG I³ 284.7–8) a total of fifteen times, four times completely restored, paying a *phoros* of 1 tal. (IG I³ 263.1.14–15). In 454/3 the community is recorded by its ruler: *Πίκρες Συαν[γελεύς]* (IG I³ 259.v.16); in 451/0 the entry is *Συ[αγγελεύς] ἡ[ὸν Πίκρες ἄρχει]* (IG I³ 263.1.14–15); the restoration is secured by the

similar entry in 427/6 or 426/5: *Συαγγελεύς ὄν ἄρχει Πίτρεις* (IG I³ 284.7–8), restored also in IG I³ 282.iv.48–49. In all other years the Syangeleis are recorded by city-ethnic alone. In 446/5 Syangela and Amynanda (no. 873) formed a syntely paying a *phoros* of 4,500 dr. (IG I³ 266.111.20–21), but in 444/3 the two communities paid 3,000 dr. each (IG I³ 268.iv.25–26). Syangela was possibly assessed for tribute in 425/4 (IG I³ 71.1.111, completely restored). In 454/3 Syangela is represented by Pikres Syangeleus, who appears again in 427/6 as *Συαγγελεύς ὄν ἄρχει Πίτρεις*, and this shows that Syangela was ruled by a local dynast.

Like Myndos (no. 914), Syangela (renamed Theangela) was kept out of the synoecism of Halikarnassos by Mausolos c.370 (Kallisthenes (FGrHist 124) fr. 25, *pace* Plin. HN 5.107; Hornblower (1982) 82; Demand (1990) 123). In C4l or C3e Menyllos Nossou Theangeleus was granted proxeny by Iasos (no. 891) (*I.Iasos* 50.4). A *keryx* from Syangela is mentioned in the C4m treaty between Mylasa and Kindye (SEG 40 991.15). The names listed in the treaty between Mylasa and Kindye suggest that there was a strong Karian element in the population of Syangela (SEG 40 991.13–15; see Blümel (1990) 38–42 (= SEG 40 992)), and it is a moot point to what extent the community can be considered a Hellenic *polis* in the Archaic and Classical periods.

Some coins inscribed with ΣΥ and formerly attributed to Syros (no. 523) and Syme (no. 522) respectively were in all probability struck by Syangela. Of eight coins one can be dated c.390. *Obv.* head of Dionysos; *rev.* kantharos and vine branches in incuse square, along with the legend ΣΥ. The remaining seven coins are dated to 300–250 (Yarkin (1975); cf. Yarkin (1977); and Hornblower (1982) 98 n. 154, *pace* Franke (1984) 200, who opts for a date between and 350 and 320). Franke (1984) assigns two more coins, one of which is a trihemiobol, to Syangela. He dates these two coins to C5l and argues on historical grounds that the silver coinage of Syangela must be dated to the period 413–391.

932. (Talagreis) Unlocated, not in *Barr.* Type: C: A toponym is not attested. The city-ethnic is *Ταλαγρεύς* (*I.Mylasa* 4.6 (C4e)). The collective use of the city-ethnic is attested externally in the decree from Mylasa. The Talagreis are attested in a fragmentary C4e decree from Mylasa. It seems that the Talagreis are mentioned on a par with Koranza (no. 906), which was a *polis* at the time, and therefore there is a possibility that the Talagreis could have been a *polis* too.

933. Taramptos Map 61. Lat. 37.10, long. 27.30. Size of territory: 1. Type: C: The toponym is *Ταράμπτος* (*Syll.*³

1044.18 (c.300)). The ethnic is not attested. The evidence for Taramptos is very scarce: in the tribute assessment list of 425/4 [Τ]άραμ[πτος] is restored (*IG* 1³ 71.1.115), and if the restoration is correct, it indicates that Taramptos was some sort of political community. The only other mention of Taramptos is in an inscription of c.300, mentioning rights of tillage ἐν Ταραμπτωί (*Syll.*³ 1044.18).

934. (Tarbaneis) Map 61. Unlocated. Type: C:? A toponym is not attested. The city-ethnic is Ταρβανεύς (*IG* 1³ 71.11.140). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG* 1³ 260.1.19).

The Tarbaneis were members of the Delian League. They belonged to the Karian district and are registered in 453/2 (*IG* 1³ 260.1.19) and 441/0 (*IG* 1³ 271.1.85, partly restored), paying a *phoros* of 1,000 dr. (*IG* 1³ 260.1.19). The city-ethnic is completely restored in the lists of 442/1 (*IG* 1³ 270.v.11) and 440/39 (*IG* 1³ 272.11.87). They were assessed for tribute in 425/4 (*IG* 1³ 71.11.140), 1,000 dr.

935. Telandros (Telandrios) Map 65. Lat. 36.40, long. 28.55. Size of territory: ? Type: C:? The toponym is Τήλανδρον, τό or Τηλάνδρεια, ἡ (Alex. Polyh. (*FGrHist* 273) fr. 54 = Steph. Byz. 620.10–12), whereas Steph. Byz. 620.10 lists Τήλανδρος as the name of a *polis* in Karia and Τηλανδρία as a promontory. Plin. *HN* 5.131 describes Telandria as an island with a deserted *oppidum*; but according to Quintus Smyrnaeus 4.7–11, the city of Telandros lay inland on the bank of the Glaukos river (Nif Çay). Following Philippson (1910–13) and followed by Barr., *ATL* i.555 argues that the *polis* of Telandros was situated on the island of Telandria, to be identified with Tersane. *ATL* also attaches the reference in Steph. Byz. to this island (almost certainly incorrectly). Heberdey (Map of Lycia in *TAM* I) identifies the island of Telandria with Avthoki, where there is a ruined watch-tower (Bean (1978) 36 (date?), and the *polis* of Telandros with the inland site of Nif Köy (following Arkwright (1895) 94). This is treated with scepticism by e.g. Ruge (1934) and L. Robert ((1980) 377–80, accepting the *ATL* identification), but Arkwright may be correct.

No matter whether the classical *polis* was situated inland or on the island, there can be no doubt that the city-ethnic is Τελάνδριος, recorded in the Athenian tribute lists as a member of the Delian League. It belonged to the Karian district (*IG* 1³ 269.IV.13), later incorporated into the Ionian district (*IG* 1³ 279.I.10). It is registered in the tribute lists from 453/2 (*IG* 1³ 260.1.11, completely restored) to 433/2 (*IG* 1³ 279.I.10) a total of ten times, twice completely restored, paying a *phoros* of 1 tal. (*IG* 1³ 262.v.31), reduced to 3,000 dr. in

448/7 (*IG* 1³ 264.II.5). It was assessed for tribute in 425/4 (*IG* 1³ 71.11.92).

936. Telemessos (Telemesseus) Map 61. Lat. 37.00, long. 27.20. Size of territory: 1 or 2. Type: B:β. The toponym is Τελεμεσσός (*Syll.*³ 1044.37 (c.300)) or Τελμησσός (Steph. Byz. 612.13, quoting Philon (*FGrHist* 790) fr. 48 and Τελμησσός (Strabo 14.3.4). The earliest attestation of the city-ethnic is Τελεμεσσεύς in *IG* XII.3 251.23–25 (C4) and Τελμεσσεύς in *Inscr. Cos* ED56.4 (C3), unless the Τελμησέες mentioned by Hdt. 1.78.2 and 1.84.3 are the inhabitants of Karian and not Lykian Telemessos. The earliest attestation of Telemessos as a *polis* in the political sense is in a C3 decree of Telemessos (*Inscr. Cos* ED56.4). The collective use of the city-ethnic is attested externally by Hdt. 1.78.2, 84.3, but see *supra*) and internally in a C3 decree (*Inscr. Cos* ED56.4).

An inscription of c.300 mentions a Telemessian Apollo giving an oracular response (*Syll.*³ 1044.8–9). A citizen of Telemessos was granted *proxenia* by Anaphe (no. 474) (*IG* XII.3 251.23–25 (C4)).

Telmissus was one of the towns which were synoecised into Halikarnassos (no. 886) by Mausolos c.370 (Plin. *HN* 5.107; Hornblower (1982) 82; Demand (1990) 123).

937. Termera (Termereus) Map 61. Lat. 37.00, long. 27.20. Size of territory: 1 or 2. Type: B:β. The toponym is Τέρμερα, τὰ (*IG* 1³ 263.II.12; *SEG* 43 713.D35 (425–350); Strabo 14.2.18 has Τέρμερον). The city-ethnic is Τερμερεύς (*IG* 1³ 271.II.77).

Termera was a member of the Delian League. It is recorded in the tribute lists from 454/3 (*IG* 1³ 259.IV.25) to 415/14 (*IG* 1³ 290.1.22, restored: [Τερ]με[ρῆς]) a total of twelve times, once completely restored, paying a *phoros* of 2 tal., 3,000 dr. from 454/3 to 447/6 (*IG* 1³ 265.1.26, amount completely restored), and from 443/2 (*IG* 1³ 269.v.8, amount completely restored) a *phoros* of 3,000 dr. (*IG* 1³ 271.II.77); for a possible explanation of this reduction, see Bean and Cook (1955) 116–18). Termera was assessed for tribute in 425/4 (*IG* 1³ 71.1.154).

Termera was one of the settlements which were synoecised into Halikarnassos (no. 886) by Mausolos c.370 (Plin. *HN* 5.107; Hornblower (1982) 82; Demand (1990) 123).

The archaeological remains at Termera consist of a citadel c.40 m long with remains of a wall in squared masonry. Inside the walls there are traces of buildings and a cistern, possibly of the Classical period. There seems to have been an outer circuit in polygonal masonry—in places the wall stands to a height of 5 m—probably dating from C5, and inside this circuit are traces of habitation, along with sherds of C5 and C4e (Bean and Cook (1955) 116–18).

Termera struck silver coins on the Persian standard in the late Archaic period. A unique drachm has *obv.* Herakles; legend: *TYMNO*; *rev.* lion's head in incuse square; legend: *ΤΕΡΜΕΠΙΚΟΝ*. A tetrobol has *obv.* Herakles; *rev.* lion's head in incuse square (Head, *HN*² 627; Cahn (1970) 120–21; Bean and Cook (1955) 147–49).

938. (Terssogasseis) Unlocated, not in *Barr.* Type: C:γ. A toponym is not attested. The city-ethnic is *Τερσσωγασσεύς* (*I.Mylasa* 8.7 (C4); 866.2 (C3)).

In C3 citizenship and other honours were bestowed upon Polites Thyssou Terssogasseus by Olymos (*I.Mylasa* 866.2 (C3)), and in a C4 list of envoys it has been suggested that [ωγασσέων be restored *Τερσσωγασσέων* (*I.Mylasa* 8.7, comm. *ad loc.*), in which case *presbeis* of the Terssogasseis would be attested and mentioned on a par with those of Koranza (no. 906).

939. (Thasthareis) Map 61. Lat. 37.35, long. 27.40. Size of territory: 1 or 2. Type: C:? A toponym is not attested, but the city-ethnic is *Θασθαρεύς* (*IG*¹³ 264.11.3). The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG*¹³ 271.1.72).

The Thasthareis were members of the Delian League. They belonged to the Karian district and are registered from 451/0 (*IG*¹³ 262.1v.29) to 440/39 (*IG*¹³ 272.1.83, completely restored) a total of seven times; twice completely restored, paying a *phoros* of 500 dr.

Theangela (Theangeleus) See **Syangela** (Syangeleus) (no. 931).

940. Thydonos Unlocated, not in *Barr.*, but Pliny lists it with Euromos, Herakleia and Amyzon (*HN* 5.109), so it may have been in northern Karia. Type: C:?. On the basis of Plin. *HN* 5.109 *Thydonos*, the toponym is restored *Θύδ[ονος]* (*IG*¹³ 262.v.29; see Meritt (1939) 189–90), but it seems more likely to restore an ethnic, e.g. *Θυδ[όνιοι]*.

Thydonos was a member of the Delian League, but is registered only once, in the tribute list of 451/0 (*IG*¹³ 262.v.29), paying a *phoros* of 1,000 dr. In the list of 453/2 (*IG*¹³ 260.1.9) the toponym (or city-ethnic) is completely restored.

941. Tralleis (Traldeus) Map 61. Lat. 37.50, long. 27.55. Size of territory: ? Type: B:β. The toponym is *Τράλλεις* (Xen. *Hell.* 3.2.19). The city-ethnic is *Τραλδεύς* (*I.Tralleis* 3.4–5), later *Τραλλιανός* (*I.Tralleis* 21.1 (C2m); Strabo 14.1.41). Tralleis is called a *polis* in the political sense at Arr. *Anab.* 1.18.1 and in the urban sense at Diod. 14.36.2 (r400). The collective city-ethnic is attested internally in a decree of C4m (*I.Tralleis* 3). The only known public enactment is the C4m decree (*supra*) which concerns a sanctuary of Dionysos. The principal divinity of Tralleis, however, was Zeus Larasios (bronze coins of C3e, Head, *HN*² 659; *I.Tralleis* 25.12 (C3)).

Xen. *Hell.* 3.2.19 says Tralleis is in Karia, whereas Diod. 14.36.2 calls it a *polis* in Ionia.

In 400 Tralleis was not walled, but occupied such a strong position that Thibron was unable to take it (Diod. 14.36.2; cf. Strabo 14.1.42). In 313, however, it was taken by Antigonos (Diod. 19.75.5).

LYKIA

ANTONY G. KEEN, MOGENS HERMAN HANSEN

I. The Region

The name of the region is ἡ Λυκία (Hom. *Il.* 2.877; Thuc. 2.69; Ps.-Skylax 100; *SEG* 27 942.1, 3 (337/6)). The regional ethnic is Λύκιος (Hdt. 1.173.1; *SEG* 42 1245.2, 6 (C4e)). The collective use of the ethnic is attested externally in Herodotos (1.28, 173.1) and internally in the epigram on the Inscribed Pillar (*SEG* 42 1245.2, 6). For the individual and external use, see Λύκιος Κόβερνις Κοσσίκα (Hdt. 7.98). Ps.-Skylax 100 calls the Lykian people an ἔθνος. For the foundation myth of Lykia, deriving its origins from Crete, see Hdt. 1.173.1–2, 7.92; Strabo 12.8.5, 14.1.6; Apollod. *Bibl.* 3.1.1; Paus. 7.3.7). Herodotos reports that some Ionian cities took kings allegedly descended from Glaukos, the commander of the Lykian force in the *Iliad* (1.147.1).

In the *Iliad* Lykia seems to be considered as the Xanthos valley alone (*Il.* 2.876–7; Bryce (1983) 32, (1986) 13, 100). In the Classical period, Lykia bordered on Karia in the west and Pamphylia in the east (Ps.-Skylax 99–101). The western border of Lykia was at Telemessos (Ps.-Skylax 100; cf. Arr. *Anab.* 1.24.4 (r334)). The eastern border was west of Phellos, according to Hekataios, who placed that location in Pamphylia ((*FGrHist* 1) fr. 258). Ps.-Skylax 100, however, placed the eastern border at Perge. By the time of Strabo (14.4.1), the eastern border was set near Phaselis, and had probably been around there for most of the Classical period. Ps.-Skylax's report may reflect a temporary extension of the command of the satrap of Lykia instituted by Alexander (see Keen (1997) 117 n. 50). The northern borders are never properly described in the Archaic and Classical periods, though it appears from Arrian (*Anab.* 3.6.6) that there was some area between the borders of Lykia and Mt. Tauros. Milyas was made part of Lykia by the Persians, having previously been part of Greater Phrygia (Arr. *Anab.* 1.24.5). Strabo (14.2.1, 3.9) implies that Lykia bordered on the Kibyris and Pisidia (Keen (1998) 17–19).

This is how the Greeks defined Lykia. According to Herodotos (3.90.1), Lykia was part of the first Persian satrapy; but how the region was delimited under Persian

rule is unknown until we reach the Hekatomnid period (c.360–334). The region does not seem to have constituted a separate administrative unit, but was always joined with at least one of the neighbouring regions. For Achaemenid influence in Lykia, see Zahle (1989, 1991). In 340–334 Pixodaros was satrap of Karia and Lykia (Neumann (1979) 320c, the Aramaic version of the trilingual inscription from Letoon close to Xanthos; cf. Hornblower (1982) 47); but in 333 Alexander made Nearchos satrap “of Lykia and of the adjacent region until Mount Tauros” (Arr. *Anab.* 3.6.6), i.e. of Lykia and western Pamphylia. In C5m there may have been a Lykian kingdom which was largely coterminous with the Lykian cultural area and a member of the Delian League in its own right (Keen (1998); cf. *infra*).

If we shift the focus from administration to civilisation, we get a different but very clear picture of the extent of the region. An investigation of the distribution of Lykian inscriptions and tombs and of the attested Lykian mints shows that the Lykian people inhabited the region from Telemessos in the west to Gagai in the east. West of Telemessos, a few Lykian monuments have been found in the Glaukos valley, which was presumably the hinterland of Telemessos. No traces of Lykian civilisation have been found east of Gagai. Towards the north, the Elmalı plateau was probably Lykian at least from C4 (Zahle (1980)).

It is clear from archaeological evidence that the Lykians had nucleated urban settlements quite early (Wurster (1978); Keen (1998) 28–29; Marksteiner (2002)). Some of the urban centres in Lykia can be traced back to the Archaic period, but the settlements were then much too small to be proper towns. A not insignificant urbanisation seems to have taken place in the course of the Classical period, starting in the first half of the fifth century. The main centres, principally known from excavations and surveys, are Xanthos, Limyra, Telemessos, Myra (?) and the site of Avşar Tepesi. All these settlements were fortified; their walls enclosed an area of between 10 and 25 ha. All seem to have been inhabited by some 1,000–1,500 persons, and in Xanthos perhaps as many as 2,500 (Marksteiner (1997),

(2002) 63–65). There may have been more urban settlements of the same type and size: e.g. Tlos, Pinara, Phellos and Apollonia, but the sites have not yet been surveyed or excavated (Wurster (1978); the ongoing Turkish excavations of Tlos and Patara have not yet been published). By far the best-known and best-excavated Lykian town is Avşar Tepesi, probably to be identified with Lykian Zagaba (Kolb and Tietz (2001)). So far, few public buildings have been found; but representations on Lykian reliefs may suggest that they were more common (Borchhardt (1993) 31–32). A number of sites (e.g. Arykanda, Kyaneai, Limyra and especially Avşar Tepesi) have produced evidence of domestic houses, but analysis of this evidence is still at a preliminary stage (Marksteiner (1997)). It has been widely observed since the nineteenth century, however, that the Lykian tombs preserve the aspect of wooden-framed Lykian houses, of types still found in the area (Mellink (1969); Kjeldsen and Zahle (1975); Zahle (1983)). Finally, it is worth observing that few Lykian cities are in locations that lend themselves to regular grid-pattern urban planning (Wurster (1978) 23).

In the course of the Hellenistic period Lykia became completely Hellenised, and eventually formed a federation of twenty-three *poleis* (Strabo 14.3.3; Larsen (1968) 240–63; Behrwald (2000)). But Hellenisation began before Alexander's conquest of Asia. The Lykian alphabet was an adaptation of the Greek (Bryce (1986) 54–63). To strike coins was something the Lykians learned from the Greeks. The legends are in the Lykian alphabet (Mørkholm and Neumann (1978)), but the types betray a strong Greek influence (Mørkholm and Zahle (1972), (1976)). Already in the Archaic period Greek pottery was widely used in some Lykian cities, especially in Xanthos (Metzger *et al.* (1972) 192–95). Is there a case for arguing that some of the Lykian cities had become Hellenic communities already in the Classical period? Or that they were mixed settlements with a sizeable contingent of Greek-speaking inhabitants and political institutions which show that they were proper *poleis*? Neither the written evidence nor the archaeological record can substantiate such a view (Marksteiner (2002) 68–71; Domingo Gyax (2001) 83, 85, 87, 89, 91–92). There is no evidence that any of the towns was a citizen community or had magistrates or a council, as virtually any *polis* had. There is no trace of a *prytaneion* or a *bouleuterion*, or a theatre or a stoa, all characteristic of the Greek *polis*, whereas in Xanthos remains have been found of what was probably the residence of the local dynast; again by contrast with the *polis*, where no remains of a “palace” can be found before the Hellenistic period, not even in *poleis* governed by a tyrant

(Hansen (2002) 10). In the major towns, moreover, are tombs that because of their size and sculptural decoration must be the tombs of dynasts (Zahle (1983)). Nor were there any monumental temples, another characteristic of a *polis*. The Lykian towns were self-governing dynastic centres; they were presumably city-states, and in the Dynastic period Lykia may have been an indigenous city-state culture (Marksteiner (2002); Hansen (2002) 8–10), but it was not a region settled with Hellenic *poleis* until the Hellenistic period.

To Herodotos and other Classical Greeks, the Lykians were *barbaroi* (Hdt. 1.173.1; Ephor. fr. 162; Men. *Aspis* 25). Admittedly, in C4 the Lykians themselves used the term *polis* in internal documents, first in the inscription honouring the dynast Arbinas (*SEG* 39 1414.24 (C4e)), then in an edict concerning exemption from commercial taxes (*SEG* 36 1216.4 (c.340–334)), and again in the trilingual inscription about the cult for Basileus Kaunios (Neumann (1979) N 320.b.12, 18 = *SEG* 27 942). All three documents come from the Letoon, close to Xanthos. Externally, *polis* is used by Ps.-Skylax 100 and, retrospectively, Diodoros 11.60.4. However, Menander (*Aspis* 30–32) talks of Lykia being settled in *κώμαι*. Arrian (*Anab.* 1.24.4 (r334)) characterises most western Lykian settlements as *polismata*, and the settlements of the *Λύκιοι οἱ κάτω* as *poleis* (1.24.5–6). But a *polis* is not necessarily a Hellenic community. The term is often used, mostly in the urban sense about non-Greek cities. It is noticeable too that Ps.-Skylax uses the heading *πόλεις ἐν αὐτῇ Ἑλληνίδες* ... αἰθε in the chapters on Lydia (98) and Karia (99), whereas the chapters on Lykia (100), Pamphylia (101), Kilikia (102) and Cyprus (103) are introduced with the heading *πόλεις ἐν αὐτῇ αἰθε*, combined with the occasional occurrence of *πόλις Ἑλληνίς* to describe an individual town as a Hellenic *polis*. However, by contrast with the first section of his treatise (1–33), Ps.-Skylax no longer shows the same consistency in the way he classifies individual settlements as either *polis* or *polis Hellenis*. And one of the towns recorded in the chapter on Lykia, *viz.* Phaselis, is classified as *πόλις καὶ λιμὴν* only, although it was undoubtedly a fully-fledged Hellenic *polis*.

Some of the Lykian cities were members of the Delian League. The Lykians as such appear in the tribute lists of 452/1 (*IG* 1³ 261.1.30), 451/0 (*IG* 1³ 262.v.33, restored) and 446/5 (*IG* 1³ 266.III.34), see *infra* 1141. The Telemessioi were members in 446/5 (*IG* 1³ 266.III.33), and the ethnic is restored twice in earlier lists (*IG* 1³ 261.1.29, 262.v.32). Iera (*IG* 1³ 71.II.153–54) and, probably, Tymnessos (*IG* 1³ 71.I.141) were assessed for tribute in 425/4. But membership of the Delian League was not

restricted to Greek *poleis*. The Lykian entries indicate that Hieria, Telemessos and Tymnessos were political communities of some kind, not that they were Hellenic *poleis*.

Two Lykian cities were claimed to have been founded by the Rhodians: *viz.* Gagai (*Etym. Magn.* 219.6–16) and Korydalla (Steph. Byz. 376.15). But in both cases the tradition is late and probably reflects Hellenistic attempts to link the Lykian cities to Greek civilisation. More important is Ps.-Skylax's note that Megiste was a Rhodian island (100: *κατὰ ταῦτα νῆσός ἐστι Ποδίων Μεγίστη*). This is in fact our earliest evidence for a Rhodian *peraia*, but it does not in itself show that Megiste was a Hellenic *polis*. Some C4 coins with Rhodian types and the legend ME were previously attributed to Megiste (Head, *HN*² 635), but the legend is now interpreted as a magistrate's name (Ashton (1990)).

Xanthos is in fact the only Lykian city for which there is some evidence that it had become a mixed Graeco-Lykian settlement before the Hellenistic period (Hornblower (1982) 119–22). Thus, it is the only Lykian community which deserves inclusion in this Inventory of Greek *poleis* in the Archaic and Classical periods. In all other cases *polis* formation seems to have postdated Alexander's conquest, and if it happened earlier, there is not (yet) any evidence to show it.

To sum up, this part of the Inventory includes no site list and only two descriptions of *poleis*, *viz.* Phaselis, not a Lykian community but a Greek colony lying in the region of Lykia as defined by the Greeks, and Xanthos, the only Lykian community for which there is some substantial evidence of Hellenisation antedating Alexander's conquest.

II. The *Poleis*

942. Phaselis (Phaselites) Map 65. Lat. 36.30, long. 30.35. Size of territory: ? Type: A:a. The toponym is *Φάσηλις*, *-ιδος*, *ή* (Hdt. 2.178.2; Thuc. 2.69.1, 8.88; Lycurg. *Leoc.* 73 (emended); Strabo 14.3.9) or *Φασηλῖς* (Ps.-Skylax 100; Pseudo-Aristotle 973^a8; Polyb. 30.9.4; Aristodemos (*FGrHist* 104) fr. 1.13.2 (rC5m)). The city-ethnic is *Φασηλίτης* (*IG* I³ 10.5, 8, 13, 17 (C5s); *TAM* II 1183.3, 4, 10 (C4m); Theodectas, *TrGF* 72 T 2 (epitaph of C4)). Phaselis is called a *polis* in the urban sense by Ps.-Skylax and in the political sense by Herodotos (2.178.2–3). The collective use of the city-ethnic is attested internally on coins of C5f and C4 (*infra*) and in a treaty with Mausolos of Karia (*TAM* II 1183.3, 4, 10), and externally in an Athenian decree regulating relations with Phaselis (*IG* I³ 10.5) and in literary sources (Dem. 35.1). The

individual use is attested externally both in inscriptions (*IG* I³ 1360; *CID* II 4.1.72–73; *IG* XII 6 32.4 (306–301)) and in literary sources (Theodectas (*TrGF* 72 T 2); Dem. 35.10).

Ps.-Skylax and Strabo place Phaselis in Lykia; Aristodemos and *Suda* (*Φ*11) place it in Pamphylia; it is in Solyma according to the *Lindos Temple Chronicle* (*FGrHist* 532) fr. c.24). That Phaselis possessed a territory is shown by the report of Kimon ravaging the *χώρα* c.469 (Plut. *Cim.* 12); it is also mentioned by Arrian (*Anab.* 1.24.6 (r334/3)). Lynnaiteia probably bordered on Phaselis ((Arist.) 973^a8). In the Peace of Kallias in 449 Phaselis is the boundary west of which Persian fleets were not allowed to sail (Diod. 12.4.5).

Phaselis was supposedly colonized from Lindos on Rhodes in 691/0 (Euseb. 93b.2, Helm; Blumenthal (1963)), and at Plut. *Cim.* 12.3 the people of Phaselis are recorded as Hellenes. The *oikistes* was supposedly Lakios (Aristainetos (*FGrHist* 771) fr. 1; Ath. 7.297E–298A), a native of either Lindos or Argos (Philostephanos *FHG* III 29), but he is possibly mythical; for the earliest attested version of the foundation myth, from C5/4, see Herophytos fr. 1. Phaselis is listed as one of the four Dorian *poleis* involved in the foundation of Naukratis (Hdt. 2.178.2).

Phaselis was a member of the Delian League. It belonged to the Karian district (*IG* I³ 269.iv.9), later incorporated into the Ionian district (*IG* I³ 279.i.46). It was forced to join the League c.469 (Plut. *Cim.* 12.3–4) and is registered in the tribute lists from 454/3 (*IG* I³ 259.iv.24) to 415/14 (*IG* I³ 290.i.17) a total of fifteen times, three times completely restored, paying a *phoros* of 6 tal. (*IG* I³ 259.iv.24), reduced to 3 tal. in 450/49 (*IG* I³ 263.ii.35), but changed again before 433/2 (*IG* I³ 272.i.90), either back to 6 tal. or further reduced to 2 tal. It was assessed for tribute in 425/4 (*IG* I³ 71.i.129). In 411 Phaselis had fallen into Persian hands and was occupied by a Spartan force (Thuc. 8.99). Phaselis also had a long-standing friendship with Chios (Plut. *Cim.* 12). Phaselis made a treaty with Mausolos in the 350s (*TAM* II 1183.3, 4, 10), apparently on equal terms. *Proxenia* and citizenship were received from Samos in 306–301 by Timophanes son of Archepolis (*IG* XII 6 32). Mutual legal arrangements (*ἐμβολαὶ αἱ δίκαι*) existed in C5 with Athens (*IG* I³ 10); disputes between Athenians and Phaselians were to be tried at Athens. For the close commercial relations in C4 between Phaselis and Athens, see Dem. 35.1 *et passim*.

Phaselis had a cult of Athena Polias (*TAM* II 1184, not later than C5). There was also an annual sacrifice to Kylabras, dating to the colony's foundation (Ath. 7.297E–298A, citing Herophytos (*FGrHist* 448) fr. 1 and Philostephanos (*FHG* III 29)). Phaselis was one of the cities responsible for building

the Hellenion at Naukratis in C6 (Hdt. 2.178.2–3), and made dedications to Athena on Lindos (Burn (1960) 48 n. 19).

The city was fortified c.469 (Plut. *Cim.* 12.3–4) and a few remains of the C5 fortifications are still extant. As rebuilt c.300, they enclosed an area of c.20 ha (Schäfer (1981) 49–86; for the dates, see 54, 58, 84, 164–66). A fortified settlement on a hill north of the city dates to the Hellenistic period (Schläger and Schafer (1971); Schäfer (1981) 125–35). An agora is mentioned in the context of 334/3 by Plutarch (*Alex.* 18.4). Ps.-Skylax notes Phaselis' *limen* (πόλις καὶ λιμῆν), which is archaeologically visible. The were in fact two harbours, one north and one south of the acropolis.

Phaselis struck silver coins on the Persian standard from before c.550. (1) Silver, c.550–C5e: denominations: stater and third. *Obv.* prow of galley, in shape of forepart of boar; *rev.* incuse of varying form. (2) Silver, C5e–C4l: denominations: stater, third, drachm, obol. *Obv.* prow of galley, in shape of forepart of boar; *rev.* stern of galley; legend: Φ or ΦΑ or ΦΑΣ or ΦΑΣΗ (sometimes on *obv.*) (Heipp-Tamer (1993); *SNG Cop. Lycia* 119–23).

943. Xanthos (Xanthios) Map 65. Lat. 36.20, long: 29.20. Size of territory: ? Type: A:β. The toponym is Ξάνθος, ἡ (Hdt. 1.176.3, denoting the city; Hecat. fr. 255, denoting the river). The city-ethnic is Ξάνθιος (Hdt. 1.176.2–3; *SEG* 36 1216.1.1, 8–9 (340–34)). Steph. Byz. 123.12–14 records an alternative toponym, Ἀρνα, derived from Lykian *Arīna* (Melchert (1993) 6).

Xanthos is called a *polis* in the urban sense on Erbbina's statue base (*SEG* 39 1414.24 (C4e)) and in a tax exemption decree from Xanthos issued by Pixodaros, *polis* in the urban sense refers to the inhabitants of Xanthos, as well as those of Tlos, Pinara and Kadyanda (*SEG* 36 1216.4 (340–334)). Finally Xanthos is called *polis* by Ps.-Skylax 100 (as restored by Müller). *Polis* in the political sense is attested on a trilingual cult inscription from the Letoön (Neumann (1979) N 320.b.18 = *SEG* 27 342 (337)), but the Greek text is a translation of the Lykian (Blomqvist (1982); Briant (1998) 307). The Lykian word rendered by *polis* is *teteri*, for which see Kolb and Tietz (2001) 395. Xanthos is called an ἄστυ by Herodotos (1.176.1) and on Erbbina's statue base (*SEG* 39 1414.5–6). The collective use of the city-ethnic is attested internally on the tax exemption edict of Pixodaros (*SEG* 36 1216.1.1–2, 8–9) and the trilingual cult inscription (*SEG* 27 942.5–6), and externally by Herodotos (1.176.2–3). The individual use of the city-ethnic is attested externally in a C3e bilingual epitaph from Kition (*SEG* 40 1355) and in literary sources (*Suda* Π2963 (rC4)).

Decrees of Xanthos set up at the Letoön (e.g. Neumann (1979) N 320) indicate that the sanctuary was part of the territory of Xanthos (Schweyer (1996) 28–29). Xanthos probably had upland estates, which is where those who escaped the destruction of the city in c.540 (Hdt. 1.176.3) were (Bean (1978) 50). Xanthos is placed in Lykia by Hekataios, Herodotos (1.176.3) and Ps.-Skylax (100).

The city was destroyed, and the mass of the population killed, in an act of mass suicide c.540 (Hdt. 1.176.1–2; App. *B Civ.* 4.10.80; Plut. *Brut.* 31.7) and subsequently resettled by ἐπήλυδες (Hdt. 1.176.3).

Xanthos may have been a member of the Delian League, if a reference to Xanthos is concealed in the entry Λύκιοι (*IG* I³ 261.I.30, 262.V.33) and Λύκιοι καὶ συν[τελ] (*IG* I³ 266.III.34; see Bean (1978) 25; Keen (1998) 40). In this case, it was included in the *Καρικὸς φόρος*, and the syntely paid 10 tal. of tribute in 446/5.

Menekrates of Xanthos ((*FGrHist* 769) fr. 1 = Steph. Byz. 129.3) mentions Xanthian *presbutai* in a mythological context; note also that Jacoby suggests a possible reading here of *πολύτας* instead of *προεσβύτας*.

A joint decree of Xanthians and *perioikoi* stipulates the foundation of a cult for Basileus Kaunios (*SEG* 27 942.5–6: ἔδοξε δὴ Ξανθίοις καὶ τοῖς περιόικοις, where *περιόικοι* is a translation of *epewēthmēi* in the Lykian original). The opposition has been interpreted as a purely geographical (Keen (1998) 55–56) or an institutionalised (Wörrle (1978) 238) distinction between the Xanthians settled in the city and those in the hinterland. In the latter case the two strata of population were probably hierarchically organised rather than equal; analogy with other perioikic populations suggests that they were usually dependent communities (Domingo Gygax (2001) 19–40). It should be added, however, that joint decisions made by *polis* and *perioikoi* are known from Lykia only, and probably reflect Lykian rather than Greek institutions. The trilingual inscription attests an *epimeletes* (*SEG* 27 942.4–5), probably appointed by the local satrap (Bryce (1986) 133), and a *hierous* of Basileus Kaunios and Arkesimas, appointed by the people of Xanthos (*SEG* 27 942.8). Lykian-language inscriptions (e.g. *TAM* I 36 (C5–C4)) mention officials called *miñti* (on which see Bryce (1986) 121–23).

SEG 42 1245.3 (c.400) identifies an agora, in which there was a *temenos* of the Lykian Twelve Gods (Tritsch (1942) 41–42; Picard (1951) 137–38; Martin (1951) 169–74). Menekrates fr. 2.3 records a *hieron* of Apollo. On the Lykian acropolis are a C6 sanctuary (Metzger *et al.* (1963) 29–36) and the foundations of a building with three cellas (12 × 10.3 m), a C5 sanctuary of a

divinity, perhaps Artemis (Metzger *et al.* (1963) 40–42; identified from a Hellenistic inscription). Appian (*B Civ.* 4.10.78–9) records a *Σαππηδόνειον*, probably to be identified with a C5 building on the acropolis (Keen (1992) 55–56, (1996)). Three temples are known from the Letoön, dated to the Classical period by Metzger *et al.* (1992) but probably Hellenistic (Erik Hansen, pers. comm.). For cults of Basileus Kaunios and Arkesimas, see Metzger *et al.* (1979)).

There is a dynastic residence on the acropolis (Metzger *et al.* (1963) 16–23; Bean (1978) 55). The Classical acropolis, mentioned by Herodotos (1.176.1), was the lower of two hills on the site, on which a c.475–50 polygonal wall survives (Metzger *et al.* (1963) 16–23; Bean (1978) 54). Further walls encompass the so-called Hellenistic acropolis; Herodotos (1.176) implies that the city was walled and capable of withstanding siege. The city had walls in the Hellenistic period (Plut. *Brut.* 30.8, 31.2, 4), of which much of the circuit and the south gate survive (Metzger *et al.* (1963) 9–10 for the circuit). There is an “early” polygonal wall at the Letoön (Bean (1978) 63). (On walls, see also Ritter (1859) 1020–21; Benndorf and Niemann (1884) 127, 138; Robert and Robert (1983) 124ff n. 4.)

Xanthos minted silver coins on the light Lykian standard c.450–370. There is a variety of types including *obv.* head of Athena wearing crested helmet (the characteristic *obv.* motive from c.425 in common with west Lykian cities); *rev.* head of Athena, or head of Apollo or eagle. All carry Lykian legends until c.370/60 when the autonomous Lykian coinage ended (*Arīnaha/Arīnahe* or abbreviation); most also carry a dynast’s name (Mørkholm and Neumann (1978) M 205a–b, 221–223c, 224a–b, 240a–d). In C5 Xanthian dynasts struck coins too on the heavy east Lykian standard and on the so-called middle standard (Mørkholm and Zahle (1972), (1976); Mørkholm and Neumann (1978); Vismara (1989–96); Kolb and Tietz (2001); *SNG Cop.* suppl. 445, 447–48, 455, 460, 496A).

It is a much debated problem to what extent Xanthos was a Hellenic community before the Hellenistic period.

The barbarian ethnicity of Xanthos is suggested by Herodotos’ considering it Lykian (1.176.3), since he considers the Lykians *barbaroi* (*supra*). All coins of the Classical period carry Lykian legends (*supra*). Also, most inscriptions of the Classical period are in Lykian (*TAM* 1 36–51 (C5–C4)) rather than Greek (cf. Bryce (1986) 211). The habit of striking coins, as well as Greek pottery found in Xanthos (Metzger *et al.* (1972)) are evidence of Greek contacts and Greek influence, but not of Greek settlers (Keen (1998) 61–70). In C4, however, the picture changes. The earliest bilingual inscription is a Greek epigram on the “inscribed pillar” of C51–C4e (*TAM* 1 44C = *ML* 93; cf. *SEG* 45 1827). The C4e inscription from Xanthos honouring the Lycian dynast Arbinas is in Greek without a parallel text in Lykian (*SEG* 39 1414 = *CEG* 2 888). The Irano-centric interpretation of the text by Herrenschildt (1985) has been countered by Levêque and Pleket (*SEG* 36 1215), emphasising Greek values. With the Hekatomnid domination of Lykia, Greek seems to have become an official language alongside Lykian (Le Roy (1987)), as is attested in Xanthos by Pixodaros’ trilingual edict concerning exemption from taxes (*SEG* 36 1216). The Hekatomnid Hellenisation of Karia (Hornblower (1982) 332–51) was presumably transferred to Lykia too, especially by Pixodaros. He was satrap of Lykia (*SEG* 27 942.1–2) from 340 to 334 (Diod. 16.74.2). Artemelis, his *epimeletes* in Xanthos, was a Karian, but Hieron and Apollodotos, his two *archontes* of Lykia, may have been Greeks (*SEG* 27 942.3–5). Furthermore, a local Greek historian, Menekrates of Xanthos, is commonly dated to C4 (*FGHHist* 769); he wrote a work entitled *Lykiaka* in two books in which he reports, or perhaps invents, Homeric foundation myths for the Lykian cities and suggests that Xanthos colonized Pinara and two other unnamed cities. Thus, in C4s there were sufficient elements of Hellenisation in Xanthos to justify the inclusion of that city in the Inventory as an example of a mixed community (Keen (1998) 66–69).

CRETE

PAULA PERLMAN

I. The Island

The name of the island is *Κρήτα*, ἡ (Eur. *Bacch.* 121; *I.Cret.* III.vi.7 (C3e)) or *Κρήτη* (Hom. *Il.* 2.649; Hdt. 3.44); cf. the plural *Κρήται*, αἱ (Hom. *Od.* 14.199). The ethnic is *Κρής* (Hom. *Il.* 2.645; *I.Cret.* IV 176 (C2e)) or *Κρηταίεός* (*I.Cret.* II.xxiii.21 (C2)). The ethnic in -εὺς was perhaps a creation of the Hellenistic Cretan *koinon* (Bile (1989–90)). The collective use of the ethnic *Κρής* is attested externally in a graffito from Abydos of a mercenary soldier in the army of Amyrtaios (ἐπὶ Ἀμυρταίου ἐπικόροιοι Κρήτες, *Memnonion* 405 (c.400)) and internally in public documents of the Hellenistic period (e.g. *πρεσβευταὶ Κρήτες*, *I.Cret.* III.iv.10 (C2l)). There are no examples of the individual use internally, but externally there are references to the *Gortynioi* *Βρόταρχος Γορτύνιος Κρής*, a merchant (Simon. *AP* 7.254 bis (C6s/C5e)), *Νικίας Γορτύνιος Κρής*, *proxenos* of Athens (Thuc. 2.85.5 (429)), and the grave *stele* of [Τιμ]οῦχος Κρής from Athens (*IG* II² 9090 (C4m)). The collective use of the ethnic *Κρηταίεός* is attested externally in Polybius (e.g. Polyb. 4.53.4–5) and internally in public documents of the Hellenistic period, principally in two expressions: τὸ κοινὸν τῶν Κρηταίων (e.g. *I.Cret.* II.iii.4C (c.159–138)) and πάντες Κρηταίεις (e.g. *I.Cret.* III.iv.9 (C2)). There are no examples of the use of *Κρηταίεός* as part of the personal name, but the ethnic does appear in private contexts (e.g. *I.Cret.* II.xxiii.21 (C2)), a grave epigram from Polyrrhen).

The island of Crete is surrounded by many small islands.¹ There is little early evidence, written or material, for their

Many scholars have contributed to the compilation of the Inventory of the Archaic and Classical *poleis* of Crete, sharing with me their views on various problems in Cretan history, their unpublished manuscripts and their specialised knowledge of particular sites. I am indebted to all those who have been so generous with their time, and in particular to John Bennet, Nicola Cucuzza, Elpida Hadjidaki, Charilambos Kritzas, Stavroula Markoulaki, Vanna Niniou-Kindeli, Leftheri Platon, Joseph and Maria Shaw, Manolis Stefanakis, Iannis Tsifopoulos, Loeta Tyree, and Maria Vlasaki. My gratitude to them in no way suggests their responsibility for any shortcomings which remain.

¹ For a list of 34 Cretan islets and a brief discussion of their environment and ecology, see Rackham and Moody (1996) 202–8.

settlement during the Archaic and Classical periods. The island of Dia, located 5 nautical miles north of Herakleion, is identified in the *Odyssey* as the place where Artemis killed Ariadne (*Od.* 11.325). Two settlements of the Classical period have been identified on the island of Ghavdos (ancient Kaudos), located in the Libyan sea 20 nautical miles south of Chora Sphakion, but nothing is known about their political status during the Classical period. Written sources of the Hellenistic and Roman periods indicate that Ghavdos and others of the small islands belonged in some fashion to one or another of the Cretan *poleis*. “Those who inhabited Kaudos” formed a dependent community, perhaps a dependent *polis*, of Gortyn (*I.Cret.* IV 184 (C3l–C2e); Chaniotis (1996) 160–68, 407–20), while Lipara (if indeed an island; cf. Guarducci (1939) 117) appears to have belonged to Kydonia (*I.Cret.* II.x.1 (C3)). Control of Leuke (modern Kouphonisi) was contested by a succession of east Cretan *poleis*, including Stalai, Praisos, Itanos and Hierapytna (Perlman (1999) 146–51). Several of the Hellenistic treaties and alliances between Cretan *poleis* guaranteed the security of islands (νησοὶ) belonging to them (*I.Cret.* III.vi.7 (C3e); *I.Cret.* I.xvi.17 (C2e), xvi.5 (C2l)). For the most part these islands were inhabited if at all only on a seasonal basis. We should imagine that the Cretan *poleis* laid claim to them when motivated to do so by economic and strategic concerns. The shores of Crete mark the geographical limits of this chapter.

Greek epic tradition identified Crete as a land of many cities, 100 in the *Iliad* (*Κρήτην ἑκατόμπολιν*, Hom. *Il.* 2.649) and ninety in the *Odyssey* (*ἐννήκοντα πόλεις*, Hom. *Od.* 19.174). The persistence of the epic tradition into the Roman period is instanced by the use of the epithet *ἑκατονταπολίται* in a funerary inscription of a Roman gladiator from Gortyn (*I.Cret.* IV 373). The survival of well over 100 toponyms of settlements of Graeco-Roman Crete is in part due to this tradition which encouraged the ancient geographers to compile lists of the fabled 100 *poleis* of Crete (Faure (1959), (1997)).

Written sources, including coin legends, provide us with the toponyms and city-ethnics of sixty-four Cretan

settlements of the Archaic and Classical periods.² Written sources from the Archaic and Classical periods survive for forty-five of these toponyms.³ The written sources for sixteen of the remaining nineteen toponyms are late, and the Archaic and Classical phases of these settlements are attested by the material evidence which in most cases consists of surface remains only.⁴ The locations of fifty-four of the sixty-four Cretan settlements of the Archaic and Classical periods have been identified beyond a reasonable doubt,⁵ the locations of the remaining ten with a certain amount of probability only.⁶ A further sixteen settlements with Archaic and Classical habitation phases have been identified with a certain amount of probability, with toponyms attested in

late sources only.⁷ Finally, the remains of twenty Archaic and Classical settlements cannot be convincingly matched with any of the toponyms found in the written sources.⁸ Thus, the written and archaeological records do indeed provide evidence for 100 Archaic and Classical settlements altogether. Forty-nine of these are described in the Inventory, which on current evidence comprises every settlement on the island of Crete that was either certainly (type A) or probably (type B) or possibly (type C) an Archaic or Classical polis. The remaining fifty-one settlements are listed below.⁹

1. Pre-Hellenistic Settlements not Attested as Poleis

Acharna (*Ἀχάρνα*) The toponym Acharna, which appears in the C5m agreement of Argos, Knosos and Tylisos (ML 42B, ll. 35–36: τὸν Ἀρχὸν τὸ τέμνος ἔχεν τὸν Ἀχάρνα), was probably located in the vicinity of the modern village of Archarnes. The agreement includes the sanctuary of Archos at Acharna among the features marking the border of Knosos and Tylisos (ML 42B, l. 27). Although the largely chance finds from the vicinity of Archarnes indicate occupation during the Archaic and Classical periods, on current evidence it is not possible to make any further claims about the nature of that occupation (Sakellarakis and Sapouna-Sakellaraki (1997) 38–41; Chaniotis (1994)). *Barr. C.*

Amyklaion (*Ἀμύκλαιον*) *I.Cret.* iv 72.III.7–8 (C5m): ἀπομόσαι τὰν Ἄρτεμιν παρ' Ἀμύκλαιον πὰρ τὰν Τοκσίαν; *I.Cret.* iv 172 (C3l): Ἀμυκλαῖοι; Steph. Byz. 88.3: πόλις. Probably located in the western Mesara, perhaps at Kommos. Shaw (1978) 150–54; Cucuzza (1997) 66–72. *Barr. H.*, but also C, see the C5m inscription *supra*.

⁷ Ancient names are italicised. Arvi (= ancient *Aria?); Ampelos, Koxare (= ancient *Kourtolia?); Avgousti, Ag. Georgios (= ancient *Eronos/*Erannos?); Kastellos, Varypetro (= ancient Lachania?); Kasteriotis, Melidochori (= ancient *Hyrtaiia?); Kastri, Farmakokefalo (= ancient Ampelos?); Kefala, Astritzi (= ancient *Detonnon?); Kontokyngi (= ancient Pelkis?); Phoinikias, Sellia (= ancient Phoinix?); Prophitis Elias, Kadros (= ancient Katre?); Prophitis Elias, Kato Chorio (= ancient Larisa?); Selli, Kissamos (= ancient Mykenai?); Troulli, Rokka (= ancient *Rokka?); Vathi (formerly Kouneni) (= ancient Ina?); Veni, Apostoloi (= ancient Ilattia?); Voulgari Armokastella, Melambes (= ancient Korion?).

⁸ Ag. Ioannis, Ghavdos; Ag. Giorgios Papoura, Pinakiano; Amnatos; Anavlochos, Vrachasi; Azoria, Kavousi; Charakas, Vainia; Ellinika, Zakros Gorge; Elliniko Kastello, Myrsini; Kastellos, Kalamafka; Kastri, Apodholou; Kastri, Keratokambos; Kastri, Pantanassa; Kastri, Tourloti; Kefala, Ligortynos; Koupos, Kroussonas; Papoura, Kera; Patela, Prinia; Patsianos Kefala; Skalia, Stavrochori; Vigla, Vizari. Oxa, Elounda, is perhaps to be identified as the acropolis or upper city of Olous. If not, we should include it in the list of unidentified Archaic and Classical settlements.

⁹ In the following lists, the final modern citation of each entry (in parentheses) provides a discussion of the material evidence.

² Toponyms preceded by the symbol (*) are not attested in the ancient sources and have been deduced from ethnics and other forms (e.g. adverbial) which are attested.

³ The early written sources may preserve two additional Cretan ethnics: *Περσισίδαι* (*BCH* 70 (1946) 588–90 no. 1 (C6)) and *Μαροβείτης* (*Suda* s.v. *Σωτάδης*), but the interpretation of the former as an ethnic (in *-ίδης*) is problematic, and the reading *Μαροβίνας*! (where *φ = ω/υ*) in an Archaic Eteocretan text from Praisos (*I.Cret.* III.vi.3, l. 7 (C6); Faure (1988–89) 103–5) is highly speculative (Perlman (1996) 256, 276 n. 77). The 45 Cretan settlements attested in early written sources are Acharna, Allaria, Amyklaion, Aptara, Arkades, Aulon, Axos, Chersonasos, Datala, Dreros, Eleutherna, Eltynia, Elyros, Gortyn, Hierapytna, Hyrtakina, Itanos, Keraia, Knosos, Kydonia, Kytaiion, Lappa, Latosion, Lebena, Lisos, Lykastos, Lyktos, Milatos, Olous, Osmida, *Pergamos, Phaiostos, Phalasarua, Polichne (Trypitos), Polichne (Vryses), Polyrhena, Praisos, Priansos, Rhaukos, Rhithymnos, *Rhitten, Rhytion, Sybrita, Tarrha, Tylisos.

⁴ Anopolis, Apellonia, Biannos, Bionnos, Herakleion, Istron, Lassoia, Lato, Malla, Matala, Minoa, Oleros, Pantomatrion, *Petra, Phalannai, Poikilasion. The locations of *Detonnon (Kefala, Astritzi?), Dragmos (Kastri, Koutsouloupetris?) and Stalai (Dasonari?) are uncertain.

⁵ With the following exceptions, locations follow those of Map 60 of the *Barrington Atlas of the Greek and Roman World* (*Barr.*), compiled by J. Bennet (ancient names are italicised). (1) Ampelos, Koxare = *Kourtolia? (*Barr.* does not include *Kourtolia in the catalogue and does not identify Ambelos, Koxare). (2) Kastellos, Varypetro = *Λοχαιία* (*Barr.* does not identify Kastellos, Varypetro and does not include Lachania in the catalogue). (3) *Barr.* does not include Latosion in the catalogue. (4) Prophitis Elias, Kato Chorio = Larisa?, Kastellos Kalamafka is not identified (*Barr.* locates Larisa at Kastellos Kalamafka and does not identify Prophitis Elias). (5) Veni, Apostoloi = Ilattia? (*Barr.* does not identify Veni and does not locate Ilattia). (6) Four entries *Barr.* includes are excluded here: Ag. Triada; Ag. Georgios, Gialos; Karphi; Lera. Evidence for occupation during the Archaic and Classical periods at Ag. Triada (La Rosa (1988–89)) and at Ag. Georgios, Gialos (M. S. F. Hood (1967) 49–50) is exiguous at best. Evidence for the Archaic period at Karphi occurs only in the vicinity of an open cult place at the spring of Vitzilovrysis. Occupation of the site ceased at the end of Late Minoan IIIC (Nowicki (2000) 157–64 no. 67). A sanctuary of Pan and the Nymphs was established in Lera cave on Akrotiri peninsula during the Archaic period (Guest-Papamanoli and Lambraki (1976)). There was never a settlement there. (7) *Barr.* does not include the following unidentified Archaic and/or Classical settlements: Azoria, Kavousi; Charakas, Vainia; Ellinika, Zakros Gorge; Elliniko Kastello, Myrsini; Kastri, Tourloti; Kastri; Kefala, Ligortynos; Papoura, Kera; Patsianos Kefala; Skalia, Stavrochori.

⁶ The ten toponyms located with a certain amount of probability only are Amyklaion, Datala, Dragmos, Kytaiion, Latosion, Osmida, *Pergamon, Polichne (Trypito), Stalai, *Rhitten.

Lassoia (*Λασσοία*) *Acta Apost.* 27.8: πόλις. Blackman and Branigan (1975) 28–32; Branigan (1979*b*). *Barr.* H and later, but C also attested.

Latosion (*Λατόσιον*) *I.Cret.* iv 58 and 78 (both C5). Settlement near Gortyn, perhaps in the vicinity of Mitropolis. Guarducci (1950) 79; van Effenterre and van Effenterre (1985) 187–88. Not in *Barr.*, but C attested.

Lykastos (*Λύκαστος*) *Il.* 2.647: ἀργινόεις; Polyb. 22.15: τὸ Λυκάστιον (sc. χῶρον); Strabo 10.4.14: κατασκάψαντες (Κносιοὶ) τὴν πόλιν καὶ τὴν χῶραν ἐνείμαντο; Steph. Byz. 421.1: πόλις; Mycenaean ru-ki-to? (McArthur (1993) 145–46). Sanders (1982) 154 (8/10); Nowicki (2000) 182–83 no. 82. *Barr.* H and later, but AC also attested.

Minoa (*Μινώα*) Plin. *HN* 4.12.59: oppidum insignis; Ptol. *Geog.* 3.15.4. Blackman (1976*b*). *Barr.* H and later, but AC also attested.

Oleros (*Ὀλερος*) Xenion (*FGrHist* 460) fr. 14: πόλις. Hayden (1995). *Barr.* C and later, but A also attested.

Pantomatron (*Παντομάτριον*) Steph. Byz. 502.4–6: πόλις; Ptol. *Geog.* 3.15.5; *Stadiasmus* 346: ἀπὸ ῥίθυμνας εἰς Παντομάτριον στάδιοι ρ' πόλις ἐστίν. ἔχει αἰγιαλὸν (Müller *GGM*). Bronze coins (C2) with types: *obv.* palm tree or female head; *rev.* palm; legend: ΠΑ (Faure (1993) 72; cf. Svoronos (1890) 251–52; Le Rider (1966) 248–50); Schiering (1982). *Barr.* C and later, but A also attested.

Phalannai (*Φάλανναι*) Steph. Byz. 655.20–22: πόλις. Platon (1954), (1956), (1955); Faure (1988) 86. *Barr.* AC.

Poikilasion (*Ποικιλάσιον*) *Stadiasmus* 330: Ποικιλασσόν· πόλις ἐστὶ καὶ ὄρμον ἔχει καὶ ὕδωρ. Nixon *et al.* (1989) 208. *Barr.* C.

Rhytion (*ῥύτιον*) Hom. *Il.* 2.648: Φαιστόν τε ῥύτιόν τε πόλεις ἐν ναιετοώσας; Strabo 10.4.14: Γορτυνίων δ' ἐστὶ καὶ τὸ ῥύτιον σὺν τῇ Φαιστῶ; Steph. Byz. 548.6–7: πόλις; *I.Cret.* i.xxix.1 (first half of second century AD): ῥυτσιασίων κώ[μης]. Spratt (1865) i.333–36; Sanders (1982) 150 (7/21); Nowicki (2000) 190–91 no. 88). *Barr.* AC.

2. Unidentified Settlements

Ag. Eirini Possibly *Pergamos (Gondiccas (1988) 280–85), under which name it is listed in the *Barr.* directory. Ps.-Skylax 47: τῆς χῶρας Περγαμίας; *I.Cret.* ii.xv.3 (C3): Σωσάρχου θυγάτηρ Πασμινάστα Περγαμία τὸ γένος; Plut. *Lyk.* 31: τῆς Περγαμίας περὶ τὴν ξενικὴν ὁδόν; Verg.

Aen. 3.131–34; Plin. *HN* 4.12.59; Vell. Pat. 1.1. Gondiccas (1988) 278. *Barr.* AC.

Ag. Giorgios Papoura Possibly *Δατάλα* (Watrous (1982) 40; cf. *Datala, infra*). Watrous (1982) 39–40. *Barr.* AC.

Ag. Ioannis Probably the principal settlement of the island Kaudos (modern Gavdos) in Antiquity (it is listed under Kaudos in the *Barr.* directory). Levi (1927–29). *Barr.* C, but A also attested.

Amnatos Branigan (1979*a*). *Barr.* C.

Ampelos Possibly *Kourtolia? (Perlman (1996) 247–48). The toponym is deduced from the ethnic *Κουρτολιαῖος* (*OGIS* 171 (C3)). *Barr.* C. Hood and Warren (1966) 180 no. 19.

Anavlokhos P. Demargne (1931); Nowicki (2000) 171–73 no. 72. *Barr.* A.

Arvi Possibly *Aria (Kitchell (1983)) under which it is listed in the *Barr.* directory. The toponym is deduced from the ethnics *Ἀριαῖοι* and *Ἄρβιος* (*ibid.*). *Milet.* 1.3 140 (c.259–250): the community of the *Ἀριαῖοι* identified as a *polis*. For the coins (C3s), see Le Rider (1966) 227–29. S. Hood *et al.* (1964) 89–92 (42.1). *Barr.* C.

Avgousti Possibly *Eronos/*Erannos? (Faure (1993) 69), under which it is listed in the *Barr.* directory. The toponyms are deduced from the ethnics *Ἐρώνιοι* (Michel 62; *I.Cret.* iv 179 (both C2f)) and *Ἐράνιοι* (Michel 62 (C2f)); in both texts the community of *Ἐρώνιοι* *Ἐράνιοι* is identified as a *polis*. Watrous (1982) 55–56. *Barr.* AC.

Azoria Nowicki (2000) 99–100 no. 32. Not in *Barr.*, but A is attested.

Charakas Nowicki (2000) 86–89 no. 25. Not in *Barr.*, but AC is attested.

Ellinika Nowicki (2000) 54–55 no. 7. Not in *Barr.*, but A is attested.

Elliniko Castello Nowicki (2000) 103–4 no. 35. Not in *Barr.*, but A is attested.

Kastellos (Cf. Faure (1963) 18 no. 48.) Faure, *loc. cit.*; Nowicki (2000) 127–28 no. 49. *Barr.* AC, s.v. Larisa? (cf. *infra*, Prophitis Elias, Kato Chorio).

Kastellos Possibly *Λαχανία* (Faure (1988) 90–91). *I.Cret.* ii.x.1 (C3): κώμη. *ArchDelt* 25 (1970) *Chron.* 468; Sanders (1982) 168 (18/9); Erickson (2000) 260. *Barr.* C and later, but A also attested.

- Kasteriotis* Possibly *Hyrtaiā (Faure (1960) 196–98, (1993) 70), under which it is listed in the *Barr.* directory. *Milet.* 1.3 140 (c.259–250): πόλις. The toponym is deduced from the city-ethnic Ὑρταῖος. Spratt (1865) i.319–26; Sanders (1982) 150 (7/5). *Barr.* C.
- Kastri* (Apodholou) *Barr.* C. S. Hood *et al.* (1964) 78–79 (32.4).
- Kastri* (Farmakokefalo) Possibly Ampelos (Guarducci (1942) 1), under which it is listed in the *Barr.* directory. Plin. *HN* 4.12.59: *oppidum insignis*; Ptol. *Geog.* 3.15.3: Ἀμπελος ἄκρα. *ArchDelt* 39 (1984) *Chron.* 304–6, 40 (1985) *Chron.* 300–1, 41 (1986) *Chron.* 231–32 (with fig. 2, p. 233). *Barr.* H and later, but C also attested.
- Kastri* (Keratokampos) S. Hood *et al.* (1964) 82–83 (34). *Barr.* AC.
- Kastri* (Pantanassa) Hood and Warren (1966) 188–89 no. 36. *Barr.* C.
- Kastri* (Tourloti (?)) Nowicki (2000) 104 no. 36. Not in *Barr.*, but A is attested.
- Kefala* Possibly *Detonnion? (Guarducci (1935) 46). The toponym is deduced from the ethnic Δητόννιος (*SEG* 26 1679 (C₃/C₂)); cf. Διατόνιον (Polyb. 22.15). Mariani (1895) 235–37; Nowicki (2000) 179 no. 78. *Barr.* s.v. Diatonion dates it H, but AC is also attested.
- Kefala* (Ligortynos(?)) Nowicki (2000) 185–86 no. 84. Not in *Barr.*, but AC is attested.
- Kefala* (Patsianos(?)) Nixon *et al.* (1990) 217; Nowicki (2000) 213–14 no. 103. Not in *Barr.*, but AC is attested.
- Kontokynigi* Possibly Πελκίς (and listed s.v. in the *Barr.* directory), attested only in *BCH* 45 (1921) III.104 (c.230–210) (Guarducci (1939) 84; Gondiccas (1988) 57–61, 63–66. *Barr.* C.
- Kroussonas* Sanders (1982) 154–55 (9/13); *ArchDelt* 38 (1983) *Chron.* 355–56, 42 (1987) *Chron.* 530–31; Nowicki (2000) 181–82 no. 81. *Barr.* AC.
- Monopari* Possibly Ὀσμίδα: Ps.-Skylax 47. Spratt (1865) ii.114–16; Sanders (1982) 163 (14/3). *Barr.* H.
- Oxa* Possibly “Upper” Olous (no. 978). Nowicki (2000) 173–74 no. 74. Not in *Barr.*, but AC attested.
- Papoura* Nowicki (2000) 167–70 no. 70. Not in *Barr.*, but A attested.
- Patela* (Cf. Guarducci (1935) 294, *Rhitten; Faure (1963) 16–17: Ἀπολλωνία.) Rizza (1991), (1995), (2000). *Barr.* AC.
- Phoinikias* Possibly Φοῖνιξ (Guarducci (1935) 192). *Barr.* (s.v. Phoinix?). Cf. Hood and Warren (1966) 184 no. 26.
- Prophitis Elias* Possibly Κάρρη (Gondiccas (1988) 49–51), under which it is listed in the *Barr.* directory; Steph. Byz. 368.5: πόλις. *Barr.* C. Gondiccas (1988) 26–31.
- Prophitis Elias* (Episkopi) Possibly Λάρισα (Watrous and Blitzer (1995); cf. *supra*, Kastellos, Kalamafka). Strabo 9.5.19: καὶ ἐν Κρήτῃ πόλις ἣ νῦν εἰς Ἱεράπυτταν συνοικισθεῖσα, ἀφ’ ἧς καὶ τὸ ὑποκείμενον πεδῖον νῦν Λαρίσιον καλεῖται. Nowicki (2000) 89–90 no. 27. *Barr.* AC.
- Selli* Possibly Μυκῆναι (Gondiccas (1988) 156), under which it is listed in the *Barr.* directory. Gondiccas (1988) 152–55; Nowicki (2000) 222 no. 12. *Barr.* AC.
- Skalia* Nowicki (2000) 218–19 no. 3. Not in *Barr.*, but AC attested.
- Troulli* Possibly *Rokka (Gondiccas (1988) 265–69), under which it is listed in the *Barr.* directory. The toponym is deduced from the epithet of Ἄρτεμις Ῥοκκαῖα (Ael. *NA* 14.20). Gondiccas (1988) 272–74; Nowicki (2000) 216–17 no. 105. *Barr.* C and later, but A also attested.
- Trypitos* Possibly Πολίχνη (Faure (1993) 67–68); listed as Polichna in the *Barr.* directory. (Κρητικὴ Ἔστία 2 (1988) ἀρχ. εἰδ. 335–36, 3 (1989–90) ἀρχ. εἰδ. 291–92, 4 (1991–93) ἀρχ. εἰδ. 302–3). *Barr.* C.
- Vathi* (formerly Kouneni) Possibly Ἴνα (Gondiccas (1988) 77–78); listed as Ina Chorion in the *Barr.* directory. Ptol. *Geog.* 3.15.2: χωρίον. Gondiccas (1988) 74. *Barr.* C.
- Veni* Possibly Ἰλαττία (Faure (1988) 84–85). Steph. Byz. 330.14: πόλις; Polyb. 13.10.5. S. Hood *et al.* (1964) 70 no. 21; Nowicki (2000) 197–99 no. 93. *Barr.* C, but A also attested.
- Vigla* S. Hood *et al.* (1964) 77 no. 30. *Barr.* C.
- Voulgari Armokastella* Possibly Κόριον (Manganaro (1974) 43–50; Kirsten (1974) 86–88) under which it is listed in the *Barr.* directory. Hood and Warren (1966) 169–70 no. 2. *Barr.* C.

The ancient record suggests that nineteen of these fifty-one communities were *poleis* at some point during the Hellenistic period. Indeed, the evidence for the political status of three members of this group—Larisa (Prophitis

Elias, Kato Chorio), Poikilasion and Polichne (Trypitos)—suggests that they may have been *poleis* already during the Classical period. Larisa joined with Hierapytna in a synoecism (Strabo 9.5.19). The synoecism must have taken place by the beginning of C₄, when the material record for the settlement on Prophitis Elias ceases (Watrous and Blitzer (1995); autopsy). Strabo indicates that Larisa possessed a hinterland, the *Λαρίσιον πεδίων* (Strabo 9.5.19). Both Strabo and Stephanos identify Larisa as a *polis* (Strabo 9.5.19; Steph. Byz. 413.3). If Larisa was a *polis*, as the evidence hints, it was one during the Classical period. Poikilasion is mentioned in an alliance between Magas of Cyrene and the federation of the *Oreioi*, whose member states swore by *τὸς ἐμ Ποικιλασίῳ θεὸς* to uphold its terms (*I.Cret.* II.xvii.1 (C3f)). The league dates to the period C₄–C₃. If Poikilasion was a member, the community was a *polis* and perhaps one already by the late Classical period. Polichne (Trypitos) is perhaps referred to by Herodotos in his account of the Cretan response to the messengers sent out to marshal the Greek resistance in advance of Xerxes' invasion (Hdt. 7.170). According to the story told by Herodotos, the *Praisioi* and the *Polichnites* did not accompany the other Cretans to Sicily to avenge the death of Minos (*πάντας πλὴν Πραισιῶν καὶ Πολιχνιτέων*). The context is mythical, but the story was current in C₅ and probably refers to a historical community. If Polichne (Trypitos) is a community distinct from the Polichne near Vryses, Herodotos' narrative suggests that it was a *polis*. An additional ten of the nineteen communities were either certainly¹⁰ or possibly¹¹ *poleis* during the Hellenistic period, and three others were perhaps dependent *poleis*.¹² The final four in this group of nineteen appointed *theorodokoi*, and so may have been *poleis* at some time, but were not

necessarily still *poleis* at the time of the appointment of the *theorodokoi* in C₃s.¹³

Thus, of the seventy-nine toponyms of Archaic and Classical settlements on Crete, sixty-eight (86 per cent) were *poleis* at some point during the Archaic, Classical and Hellenistic periods, and forty-nine (62 per cent) were *poleis* already in the Archaic and Classical periods. Almost nothing may be said about the status of the remaining Archaic and Classical settlements. Only one settlement attested in an early source, Latosion, seems on current evidence not to have been a *polis*, but rather a neighbourhood or district within the territory of Gortyn.¹⁴ Later sources provide a few terms which might reasonably be understood to refer to dependent communities of one sort or another (Perlman (1996) 239–44). Thus a Hellenistic inscription identifies Laxania as a *kome*, presumably of Kydonia (*I.Cret.* II.x.1 (C3)), and Ptolemy calls Ina a *chorion* (Ptol. *Geog.* 3.15.2). But in no case are there grounds to project such terms back into the Classical period or to suggest that the terms represent civic subdivisions of the *polis*. The only civic subdivisions attested for the Cretan *poleis* are the *phylai*, and these appear to have been personal. In so far as there is no evidence for the creation of new *phylai* following the end of the Classical period, *phylai* attested only in Hellenistic sources are most likely earlier, and so are included in the Inventory. In this case a retrospective interpretation of the sources seems justified. Thus, the only type of dependent community attested on Crete during the Archaic and Classical periods is the dependent *polis*, and the only *polis* known to have possessed such dependencies before the Hellenistic period is Gortyn: *viz.* *Rhitten and perhaps Aulos. Conversely, there is very little evidence for hyper-*polis* organisations such as federations or leagues on Crete prior to the Hellenistic period, with the exception of the *Oreioi*, a federation of small *poleis* (Elyros, Hyrtakina, Lisos, Tarrha and perhaps Poikilasion) in west Crete, which may date as early as the late Classical period.¹⁵ Attempts to retroject the origins of the Hellenistic Cretan *koimon* back into the

¹⁰ *Ἀραιῶι* (*Milet.* 1.3 140 (c.259–250)); *Ἐρώνιου/Ἐράννιου* (*I.Cret.* IV 179 (c.183); Michel 62); *Υῤῥαῖοι* (*Milet.* 1.3 140 (c.259–250)). In addition to these three Hellenistic *poleis* with evidence of earlier settlement phases, there is Araden, a Hellenistic *polis* (*I.Cret.* IV 179 (c.183)) for which there is no earlier material evidence.

¹¹ *Kourtolia (Perlman (1996) 247–48); *Ἀμύκλαιον* (*ibid.* 252, 258, 260–61); *Λύκαστος* (*ibid.* 249–50); *Παντομάτριον* (Faure (1993) 72; cf. Svoronos (1890) 251–52; Le Rider (1966) 248–50); *Ἰλαττία* (Polyb. 13.10.5); *Κόριον* (Perlman (1996) 243, 276 n. 79). Two communities may have minted coins for a brief time during the Hellenistic period: Tanos (Svoronos (1890) 319 no. 1; Seager (1924) pls. VI, VII) and the *Ainaei* (Varoucha-Christodouloupoulou (1968)). Neither community has been located with certainty.

¹² Dependent *poleis* of Gortyn: the community of “those living on Kaudos” (Chaniotis (1996) 161–66); Rhytion (Perlman (1996) 268–69); of Knosos: *Detonnon (*ibid.* 247, 250–52).

¹³ Dependent *poleis* of Gortyn: the community of “those living on Kaudos” (Chaniotis (1996) 161–66); Rhytion (Perlman (1996) 268–69); of Knosos: *Detonnon (*ibid.* 247, 250–52).

¹³ The four are *Πελεκίς* (*BCH* 45 (1921) III.104; Perlman (1995b) 139); *Λαασοία* (*BCH* 45 (1921) IV.9; Perlman (1995b) 136 (Lasaia)); *Ἰωλερος* (*BCH* 45 (1921) IV.3; Perlman (1995b) 138–39); *Φάλανναι* (*BCH* 45 (1921) III.117; Perlman (1995b) 139). For the political significance of the appointment of a *theorodokos*, see Perlman (1995b). One additional community, *Ψύχειον*, appointed a *theorodokos* (*BCH* 45 (1921) IV.12; Perlman (1995b) 139), but the material evidence for the settlement is no earlier than the Hellenistic period.

¹⁴ Perlman (1996) 254. Two other toponyms, *Πάδα* and *Κεσκόρα*, are attested in an early inscription from Gortyn, but it is impossible to determine whether these toponyms represent settlements (*I.Cret.* IV 43Ba (C5e); Perlman (1996) 242–43).

¹⁵ Van Effenterre (1948a) 119–26.

Classical period have been largely unconvincing.¹⁶

Research into the Archaic and Classical history of Crete presents special problems, chief among which is the fact that in contrast to the rich material and epigraphic record for the early Archaic and Hellenistic periods, the evidence for life on Crete tails off during the late Archaic period and does not begin to revive until the late Classical period. The precise chronological limits of this period of decline appear to vary across the island, yet the pattern of decline and growth within the late Archaic and Classical periods is evident island-wide.¹⁷ One of the symptoms of this pattern is the relatively minor, even incidental role which the *poleis* of Crete appear to have played in the life of the greater Greek world, as evidenced by the paucity of references to Crete and the Cretan *poleis* in the written sources of the Archaic and Classical periods. The archaeological investigation of post-Minoan Crete offers the greatest promise of illuminating this Cretan “Dark Age” as research, excavations and surveys currently in progress are continually adding to our understanding. Readers with a particular interest in the epigraphic and archaeological evidence for settlement on Crete during the Archaic and Classical periods are encouraged to consult the annual epigraphic and archaeological reviews for the most recent discoveries.¹⁸

The poverty of the record for late Archaic and Classical Crete has of course affected the compilation of the Inventory of the Archaic and Classical *poleis*. Four points deserve special comment.

(1) Coins dating to the period c.330–280/270 provide the earliest evidence for the *polis* status of thirteen communities.¹⁹ These communities may well have commenced striking coins only after the death of Alexander. Yet, it seems unlikely that they did not exist as *poleis* in the political sense already in the late Classical period. The Inventory catalogues these communities as probable *poleis* (type B).

(2) Four Cretan communities which were certainly *poleis* in the Hellenistic period are excluded from this study. The location of three of them is not known.²⁰ The location of the

fourth, Araden, is known, but Archaic and Classical material has not been identified there.²¹ Future archaeological research may well identify pre-Hellenistic habitation phases for at least some of these settlements.

(3) Greater attention is paid to the written sources of the Hellenistic period than is perhaps to be expected in a study of the Archaic and Classical *polis*.²² Such attention is perhaps justified by the observation that in general terms the organisation of settlement on Crete from the Geometric through the Hellenistic periods appears to favour consolidation rather than proliferation (van Effenterre (1991a)). Thus, one should not expect many new *poleis* to emerge during the Hellenistic period. Rather, first-time evidence for *polis* status in the Hellenistic period, particularly in the early part of the period, should be regarded in light of the general decline of evidence of all types during the Classical period.

(4) One Hellenistic document, *Milet.* 1.3 140, which preserves the texts of the agreements of three Cretan *poleis* (Knosos, Gortyn and Phaistos) with Miletos, deserves special comment. Twenty-five Cretan communities are listed as subscribers to these agreements. The heading of the document identifies all of these communities as *poleis*. The agreements have been dated to either c.293/2 or c.259–250.²³ They provide the earliest evidence of *polis* status for seven of the communities.²⁴ The Inventory adopts the later date, but in view of the chronological uncertainty, this document is regarded as good evidence for the *polis* status of the subscribers during the late Classical period if there is evidence for Archaic or Classical habitation of the site.

II. The *Poleis*

944. Allaria (Allariotas) Map 60. Lat. 35.25, long. 24.35. Size of territory: 2. Type: B. The toponym is Ἀλλαρία, ἡ (IG XII.3 328 (C3f)). The city-ethnic is Ἀλλαριώτας (coins, C4s–C3f; *infra*); cf. Ἀλλαριώτης (*I.Cret.* II.1.1 (from Teos) (C3l)); Ἀλλαριάτης (Polyb. 13.10 f. 4).

The earliest attestation of Allaria as a *polis* occurs in a Hellenistic *asylia* decree (*I.Cret.* II.1.1 (C3l) = Rigsby (1996)

¹⁶ Perlman (1992); cf. van Effenterre (1991b) 28–30.

¹⁷ Only at Knosos, however, is there a complete gap in the archaeological record during the period c.600–525. See Coldstream and Huxley (1999); Erickson (2000) 44–115, 127–54.

¹⁸ Two doctoral dissertations (Erickson (2000); Sjögren (2001)) are particularly helpful for the material record of C6 Crete.

¹⁹ Allaria, Aptara, Arkades, Chersonasos, Hierapytna, Keraia, Kytaion, Lappa, Olous, Polyrhén, Priansos, Rhaukos, Rhithymnos. The Cretan *poleis* did not mint bronze coins before the Hellenistic period. Knosos was perhaps the first Cretan *polis* to do so, c.320–300 (Jackson (1971)). Elsewhere on Crete bronze coins began c.C3m (M. Stefanakis, pers. comm.).

²⁰ *Aria (Ἀριαῖοι), *Eronos/*Erannos (Ἐρώνιοι/Ἐράνιοι), *Hyrtaia (Ἵρταῖοι).

²¹ Nixon *et al.* (1989) 207.

²² For the sake of consistency I have followed the dates in Chaniotis (1996) for all Hellenistic Cretan inter-state agreements.

²³ For the earlier date, see Mikroyannakis (1968); for the later, see e.g. Chaniotis (1996) 34–35.

²⁴ Apellonia, *Aria (Ἀριαῖοι), *Hyrtaia (Ἵρταῖοι), Istron, Matala, Milatos, *Petra.

no. 151). Allaria is included in the Inventory as a probable *polis* (type B) on the strength of the coins, which may be as early as c.330 (*infra*). The collective use of the city-ethnic occurs internally on the coins (*infra*) and externally in the *asylia* decree (*I.Cret.* II.1.1 (C31)). The individual use is attested in Polyb. 5.63.12, 65.7 (r220).

The location of Allaria is not certain, but is probably to be sought somewhere in west Crete near Eleutherna, perhaps at the eastern edge of the Rhythymno plain in the vicinity of the villages of Khamalevri and Stavromenos (Guarducci (1939) 1–3). Surface remains indicate that two ancient settlements, one just north of Khamalevri and the other on the coast at Palaiokastro, Stavromenos, were occupied during the Archaic and Classical periods (S. Hood *et al.* (1964) 62–66; Schiering (1982); Barr. only H and later). Excavations in the vicinity of Khamalevri, have revealed buildings of the late Classical–early Hellenistic periods (Gavrilaki and Tzifopoulos (1998) 343 n. 4). Allaria should perhaps be identified with the site at Khamalevri, and Pantomatrion with the one at Stavromenos (Faure (1988) 85–86, (1993) 72; cf. Andreadaki-Vlasaki (1995)).

Allaria struck coins (drachms) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 190, 198; but Manolis Stefanakis (pers. comm.) says C2e at the earliest). Types: *obv.* head of Athena; *rev.* Herakles standing; legend: ΑΛΛΑΡΙΑ(Ν), sometimes retrograde (Svoronos (1890) pl. I.1–2; SNG Cop. Aeg. Isl. 321).

945. Anopolis (Anopolites) Map 60. Lat. 35.15, long. 24.05. Size of territory: 2. Type: C. The toponym is Ἀνώπολις (BCH 45 (1921) III.109 (c.230–210); SEG 8 269 (C3)). The city-ethnic is Ἀνωπολίτας (unpublished proxeny decree of Lappa (C2)) or Ἀνωπολίτης (*I.Cret.* IV 179 (c.183)).

No ancient source calls Anopolis a *polis*. Stephanos identified Anopolis as another name for Araden: Ἀραδῆν· πόλις Κρήτης, ἣ καὶ Ἀνώπολις λέγεται διὰ τὸ ἄνω εἶναι (Steph. Byz. 108.8–9). This may reflect either the assimilation of Anopolis by Araden, both of which are included in the list of *theorodokoi* from Delphi (BCH 45 (1921) 1–85, III.108–10 (c.230–210)), or some confusion due to the proximity of the two communities (Guarducci (1939) 6; cf. Perlman (1995b) 135–36). Anopolis surely was a *polis* during the period C3s–C2—as is attested by the Delphic *theorodokos* (*supra*), by the proxeny decree from Lappa (*supra*) and by its C3 bronze coins (*infra*)—and this fact together with the material remains from the Classical period suggests that Anopolis was possibly a *polis* (type C) in the Classical period as well.

The collective use of the city-ethnic is attested externally in a C2e alliance (*I.Cret.* IV 179). For the individual use there is an unpublished proxeny decree of C2 from Lappa for an Ἀνωπολίτας and the grave *stèle* of Νεοσιμάδας Εὐπάμου Κρής Ἀνωπολίτης from Eretria (*IG XII.9* 819 (C1)).

The *polis* town of Anopolis was located on the summit and northern slopes of the coastal ridge north of Loutro (ancient Phoenix, the only winter harbour on Crete's south coast). The *polis* town was defended by a fortification wall with towers which may be no earlier than C31 (Nixon *et al.* (1989) 207). Parts of columns have been found on the ridge, but their date is uncertain (*ibid.* 208). Remains on the Anopolis plain to the north of the ridge represent isolated farms and small hamlets of several houses. Precise dates for these are not given, but in general the Classical and Hellenistic periods are better represented at Anopolis than is the Archaic period (*ibid.*). The western border of Anopolis (with Araden) probably followed the Araden gorge.

Anopolis struck bronze fractions after c.250 (Guarducci (1939) 7; Svoronos (1890) 5–6).

946. Apellonia (Apelloniatas) Map 60. Lat. 35.25, long. 25.00. Located at Ag. Pelagia on the north coast of Crete, c.20 km west of Herakleion (Alexiou (1984); cf. Faure (1963) 16–17, (1993) 70). Size of territory: 2. Type: C. The toponym is Ἀπελλωνία, ἣ (*I.Cret.* IV 182 (c.165)) or Ἀπολλωνία, ἣ (*I.Cret.* I.iii.1 (C31)). The city-ethnic is Ἀπελλωνιάτας (*I.Cret.* IV 182 (c.165)) or Ἀπολλωνιάτας (*Milet.* 1.3 140.37 (c.259–250)).

The earliest reference to Apellonia as a *polis* in the political sense occurs in a C3m agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ (*Milet.* 1.3 140.1, 37). Polybios provides the earliest reference to Apellonia as a *polis* in its urban sense (Polyb. 28.14 (1171/0)). Apellonia's unquestionable status as a *polis* during the Hellenistic period combined with the identification of a building at Ag. Pelagia (with phases in the Archaic period and in C4–C3) as a *prytaneion* (*infra*) recommend the inclusion of Apellonia in the Inventory as a possible *polis* (type C) of the Archaic and Classical periods.

The collective use of the city-ethnic is attested externally in the C3m agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ (*Milet.* 1.3 140.37). For the individual use of the city-ethnic there is Θαρσυφᾶς Κρής Ἀπολλωνίος, member of a *theoria* to Alexandria (*SEG* 24 1175 (233)).

The territory of Apellonia is called ἣ Ἀπελλωνία or ἣ χώρα ἣ τῶν Ἀπελλωνιατῶν (*I.Cret.* IV 181 (c.168), 182 (c.165)).

A large public building (15 m × 6.30 m) of C4–C3, oriented east–west, with two internal hearths, one at the east end and the other at the west, has been identified as a *prytaneion* (Alexiou (1975)). This building, which was destroyed in C2e, no doubt by the Kydonians (Polyb. 28.14 (r171/0)), overlies an Archaic (C6) structure with an *eschara*. The existence of a *prytaneion* at Apellonia in the Hellenistic period is indicated by the promise of state hospitality, presumably in the *prytaneion*, for visiting ambassadors, *ἐξενδοτροφήθεν δὲ καὶ οἱ πρειγυεταταὶ καθὼς καθέσταται* (*I.Cret.* 1.iii.1 (C3l)). The protecting deity of Apellonia was Apollo (Dekataphoros?) in whose sanctuary the public enactments of the *polis* were displayed (*I.Cret.* 1.iii.1 (C3l)). The discovery at Ag. Pelagia of two Archaic bronze *lebetes*, one inscribed with a dedication to Apollo (*SEG* 34 913 (c.500)), in a votive context may mark the location of this sanctuary (Karetsou (1978)).

947. Aptara (Aptaraïos) Map 60. Lat. 35.25, long. 24.10. Size of territory: 3. Type: B. The toponym is *Ἀπταρα*, *ἡ* (*SEG* 41 731 (C3e)) or *Ἀπτερα*, *ἡ* (*BCH* 45 (1921) III.113 (c.230–220)). The city ethnic is *Ἀπταραῖος* (*I.Cret.* I.xxii.4A.39 (C3f)) or *Ἀπτεραῖος* (*I.Cret.* II.iii.1 (C3l)). Both forms of the city-ethnic occur on the earliest coins (C4s/C3f; *infra*). The literary sources use only the forms in -ε- (Steph. Byz. 107.8, 15; Polyb. 4.55.4). Bile ((1988) 80) argues that the original forms were in -ε-, but forms with -ε- and with -α- appear in the earliest sources.

Pausanias refers indirectly to Aptara as a *polis*, presumably in the political sense, in his account of the Second Messenian War when the *Aptaraioi* sent archers to support the *Lakedaimonioi* (Paus. 4.19.4, with 4.20.8 (rC7l)). The first certain reference to Aptara as a *polis* in the political sense, however, occurs in the alliance of Aptara with Eleutherna (*SEG* 41 742 (C2e)). The earliest reference to Aptara as a *polis* in the topographical sense occurs in a C2f honorary decree (*I.Cret.* II.iii.4C). There is no proof that Aptara was a *polis* in the Classical period, but Pausanias' retrospective reference to the *Apteraioi*, the coins which may be as early as c.330 (*infra*) and the public buildings of C5 and C4 (*infra*) recommend the inclusion of Aptara in the Inventory as a probable *polis* (type B).

The collective use of the city-ethnic is attested internally on the coins of C4s–C3f (*infra*). For the collective use externally there is Pausanias' reference to *τοξόται Ἀπτεραίων* (Paus. 4.20.8 (rC7l)). For the individual use there is the *proxenos* of Olous, *Ἀντίοχος Φιλτίδα Ἀπταραῖος* (*I.Cret.* I.xxii.4A (C3f)).

The territory is called *ἡ Ἀπτεραία χώρα* (Ps.-Skylax 47). An honorary decree of C2m mentions harbours, *ἐν τοῖς λυμένοις* (*I.Cret.* II.iii.4C). One of these harbours was Kisamos (Strabo 10.4.13), perhaps to be identified with the ancient remains on the coast between Kalami, where an ancient mole has been identified, and Kalybes (Sanders (1982) 165 (17/1)).

Apart from the reference to *τοξόται Ἀπτεραίων* in Pausanias' account of the Second Messenian War (Paus. 4.20.8 (rC7l)), evidence for the history and political institutions of Aptara dates no earlier than the Hellenistic period.

The *polis* town of Aptara was located on a plateau (Palaiokastro, Megala Khoraphia, altitude 231 m) overlooking Suda Bay. Palaiokastro appears to have been continuously settled from C8 on (for a general description, see Blackman (1976a); for the settlement history, see AR 42 (1996) 47). Bronze Age a-pa-ta-wa (McArthur (1993) 127–28) was perhaps located c.6 km to the north at Stylos, where in addition to Bronze Age remains an important C7 building has been excavated (*KrEst* 7 (1999) 175–77). The Geometric, Classical and Hellenistic periods are represented in the cemetery, which was located outside the city wall in the saddle to the west, near the village of Megala Khoraphia (Drerup (1951a) 95; *CretChron* 12 (1958) 468–69; *KrEst* 5 (1997) 208). City walls (date?) c.4 km in length surround the entire plateau, enclosing an area of c.63 ha. The several masonry styles (west: iso- or pseudo-isodomic; east: polygonal) may suggest several phases of construction (Drerup (1951a) 90–92; Blackman (1976a); cf. Coutsinas (2001) 64–66). The plateau was certainly fortified at the time of the Lyktian War (Polyb. 4.55.4 (r221–219)). Possible traces of earlier walls have been noted at the eastern edge of the plateau (Blackman (1976a)). A section of paved road running north–south has been excavated towards the centre of the plateau (*KrEst* 5 (1997) 208–11). Several cult sites have been identified in this same area: (i) a small temple with a double *cella* of the Classical period (Drerup (1951b)); (ii) a Classical *peribolos* and small altar; (iii) a second Classical *peribolos* with a pyre and a large building (temple?) in an area which was in use from C8 (*KrEst* 5 (1997) 208–11). A Hellenistic inscription may refer to the *prytaneion* (*I.Cret.* II.iii.2 (C2f), inferred from the invitation *ἐπὶ ξένια . . . [ἐπὶ τ]ὰν κοινὴν ἐ[στ]ίαν*). If so, in so far as the *prytaneion* is attested elsewhere on Crete during the Classical period (see Lato, *infra*), it is possible that the one at Aptara was also pre-Hellenistic. The extent of the enclosed area indicates that not only the public buildings of the *polis* but also its residential districts

were intra-mural. The protecting deity of Aptara was Artemis Aptara, whose sanctuary is attested epigraphically (*I.Cret.* II.iii.2 (C2f)).

Aptara struck coins (staters, hemidrachms) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 190, 198). Types (stater): *obv.* head of a goddess (Guarducci (1939) 13, Artemis Aptara?; Delepierre (1972), Aphrodite?); legend: *ΑΠΤΑΡΑΙΩΝ* or *ΑΠΤΕΡΑΙΩΝ*; *rev.* warrior standing (Guarducci (1939) 13, the hero Apterōs?; Delepierre (1972), Aeneas?); legend: *ΠΤΟΛΙΟΙΚΟΣ* (Svoronos (1890) pl. I.7, 9–10); cf. *ΠΤΟΛΙΟΙΤΟΣ* (*ibid.* pl. I.8). Types (hemidrachm): *obv.* head of a goddess as on staters; *rev.* bow; legend: *ΑΠΤ ΑΡΑ* (Svoronos (1890) pl. I.11–12; *SNG Cop. Aeg. Isl.* 322).

948. Arkades (Arkas) Map 60. Lat. 35.05, long. 25.20. Size of territory: 3. Type: B. The toponym is *Ἀρκάδες, οἱ* (*I.Cret.* IV 171 (C3m); *BCH* 45 (1921) IV.4 (c.230–210)); cf. *Ἀρκαδία* (Demetrios of Skepsis? *apud* Steph. Byz. 119.15–16; Theophr. *apud* Sen. *QNat.* 3.11.5). The city-ethnic is *Ἀρκάς* (coins, C4s–C3f, *infra*); *I.Cret.* IV 171 (C3m)).

Seneca reports that according to Theophrastos, “circa Arcadium, quae urbs in Creta insula fuit, fontes et rivos substitisse” (Sen. *QNat.* 3.11.5). If Seneca’s translation of Theophrastos is accurate, this is our earliest reference to Arkades as a *polis*. The use is either political or topographical *qua asty*. The earliest certain reference to Arkades as a *polis* occurs in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* 1.3 140.1, 51 (c.259–250)), in which the Arkades are included as one of the *πόλεις αἱ ἐν Κρήτῃ*. The passage from Seneca and the coins of Arkades which may be as early as c.330 (*infra*) strongly indicate that Arkades was a *polis* in the political sense in C4. However, in so far as we cannot be certain whether Seneca was quoting rather than paraphrasing Theophrastos or whether the coins were struck in C4s, Arkades must remain a probable *polis* (type B).

The collective use of the city-ethnic is attested internally on the coins of C4s–C3f (*infra*) and externally in the C3m agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* 1.3 140.51). For the individual use of the city-ethnic there are *Τυχαμένης Ἀκουσίλας Ἀρκάς* and *Σώσα[ρχο]ς Ἀρήγ[ο]νος Ἀρκάς*, immigrants from Arkades to Miletos (*Milet.* 1.3 38x4, 38bb5 (C3s)).

Arkades was located to the south-west of Lasithi in the eparchy of Monofatsi, but the precise location of the *polis* town remains a subject of controversy. Levi suggested that the plural form of the name reflected the fact that the

community was settled *κωμηδόν*, with its principal centre during the Geometric and Archaic periods at modern Aphrati (Levi (1927–29) 15–23), but this important early settlement is perhaps to be identified as the *polis* town of ancient Datala (Viviers (1994) 234–41). The two inscriptions from Monofatsi which refer to Arkades by name (*I.Cret.* I.v.19A, 20A (both C2)) were found in the vicinity of modern Ini, which is situated in the plain to the south-west of Aphrati. On current evidence Ini seems the most likely location for the *polis* town of Arkades, despite the fact that there is very little surface evidence of habitation before the Roman period (Sanders (1982) 151 (7/25); Viviers (1994) 233–34).

Theophrastos relates that Arkades had been destroyed and resettled, although the passage as quoted by Seneca provides no indication of the date of the destruction or resettlement apart from the *floruit* of Theophrastos himself (Theophr. *apud* Sen. *QNat.* 3.11.5). Otherwise, the evidence for the history and political institutions of Arkades dates to the Hellenistic period.

Theophrastos mentions Arkades on account of her springs (Theophr. *apud* Sen. *QNat.* 3.11.5). A sanctuary of Asklepios, probably to be associated with these springs, and a festival, the Asklepieia, are attested epigraphically at Arkades (sanctuary: *I.Cret.* I.v.52 (C3l); festival: *IC* III.iii.1B (C3l)).

Arkades struck coins (drachms) on the Aiginetan standard during the period c.330–270. Types: *obv.* head of Zeus Ammon; *rev.* Athena standing and armed; legend: *ΑΡΚΑΔΩΝ* (Svoronos (1890) pl. II.16–18, with Le Rider (1966) 28, 190, 198; *SNG Cop. Aeg. Isl.* 345).

949. Aulon Map 60. Lat. 35.05, long. 25.00. Size of territory: 1. Type: C. The toponym is *Ἀφλόν* (*I.Cret.* IV 64 (C5e)), *Ἀυλόν* (Steph. Byz. 147.8). An ethnic is not attested. Stephanos is the only ancient source to call Aulon a *polis*, but he further identifies the toponym as a *τόπος* (*ibid.*).

Guarducci suggests that Aulon was a suburb of Gortyn, in part because one likely location for the community is Ag. Deká, just 2 km east of the heart of the Roman city (Guarducci (1950) 30–31). Others identify Aulon as a perioikic community of Gortyn (e.g. Larsen (1936) 16; Willetts (1955) 39; *Nomima* 152). An early honorary decree (*I.Cret.* IV 64 (C5e)) suggests that Aulon was a dependent *polis* of Gortyn, and so recommends the inclusion of Aulon in the Inventory as a possible *polis* (type C).

The decree is enacted by *Γόρτυνης ἐπίπανσα* and *οἱ ἐν Ἀφλῶνι Φοικίοντες*, the latter phrase presumably indicat-

ing the political body, perhaps the assembly, empowered to make public decisions on behalf of the community. From the text we learn the following about the community at Aulon: (i) the community consisted of an “urban” centre, a hinterland with recognised boundaries, and perhaps smaller settlements in the hinterland (Manganaro (1974) 54–56); (ii) οἱ ἐν ἈΨλονι Φοικίοντες were responsible for the disposition of real property within their community; (iii) they enjoyed their own laws regarding its disposition; and (iv) they, like the citizens of the other ὑπόβοικοι (dependent *poleis*) of Gortyn, were subject to judicial procedures pertaining to foreigners (κσενεία δίκαια) in Gortyn. On the other hand, Gortyn was able to dispose of property within the community and to grant its public benefactor the right to sue as a Gortynian citizen subject there to the procedures of *Φαστίαι δίκαια*, suits pertaining to citizens (Perlman (1996) 266–68).

950. Axos (Axios) Map 60. Lat. 35.20; long. 24.50. Size of territory: 2. Type: A. Within Crete the toponym is either *Φάξος* (*I.Cret.* II.v.20B (C3l)) or *Ἀξος* (*SEG* 23 563.14 (C3)). The city-ethnic is either *Φάξιος* (coins, C4, *infra*; *I.Cret.* II.v.17 (C3l)) or *Ἀξίος* (coins, c.330–270, *infra*; *SEG* 23 563.3 (C3)). Outside Crete the initial *F* is frequently represented with the *omikron*, e.g. *Ῥαξος*, ἦ (Hdt. 4.154.3; *BCH* 45 (1921) III.120 (c.230–210)) and *Ῥάξιος* (*IG* II² 9087 (C3)), but forms with initial *digamma* (*Φάξιος*, *IG* IX².1 6.11 (C3f)) and *alpha* (*Ἀξίος*, *IG* VII 3197 (C1e)) are also attested.

Herodotos refers to Axos as a *polis* in the political sense in his narration of the foundation of Cyrene (Hdt. 4.154.1 (rC7l)). The earliest contemporary references to Axos as a *polis* occur in an early public enactment (*I.Cret.* II.v.1 (C6–C5)). The term appears twice in the text, once in its political sense (6–7) and once where its meaning is ambiguous (10–11) and may be either political (“deposit with the *polis*”) or urban (“store in the *polis*”). For *polis* in the urban sense, see Ps.-Skylax 47, where Oaxos is listed under the heading πόλεις πολλὰ ἐν Κρήτῃ.

The collective use of the city-ethnic is attested internally first on the coins of C4 (*infra*) and later in several C3 inscriptions (e.g. *SEG* 23 563 (C3s); *I.Cret.* II.v.20B (C3l)). The collective use is first attested externally in C3 as well (e.g. *I.Cret.* IV 170). For the individual use there is the C3 grave *stèle* from Athens of *Θαρριάδης Φρονήμονος Κρήης Ὀάξιος* (*IG* II² 9087).

Axos probably shared borders with Tylisos and Knosos to the east, with Gortyn to the south-east, and with Eleutherna to the west. One of the Archaic inscriptions from Axos has been

identified as a treaty (*I.Cret.* II.v.6 (C6–C5)). If so, this is one of the few Archaic treaties from Crete. The borders of Axos (τὸν τῶν Φαξίων ὄρον) are mentioned in a description of the borders of Gortyn and Knosos (*I.Cret.* IV 182 (C2f)).

According to Herodotos, Axos was ruled by a βασιλεύς, Etearchos (Hdt. 4.154–55). Etearchos was the maternal grandfather of Battos, the *oikistes* of Kyrene, and so his *regnum*—if historical—should be placed in C8s or C7f. This is the only attestation of a post-Minoan king on Crete. The inscriptions of Axos refer to the βολά (*I.Cret.* II.v.9 (C6–C5)) and κόσμοι (e.g. *I.Cret.* II.v.6 (C6s), 9 (C6s); Bile (1988) 36–37.27 (C6l); *SEG* 23 565 (C5–C4)). The board of κόσμοι appears to consist of three (or four?) members in a *lex sacra* of C4l (*SEG* 23 566.11–12, with van Effenterre (1989) 6). The term ἀποκόσμος (“*kosmos* elect” or “*ex-kosmos*”) occurs in this same inscription (*SEG* 23 566.14; Bile (1988) 274). The term δοκέν occurs in one of the Archaic inscriptions (*I.Cret.* II.v.1.2 (C6s)), and what is perhaps part of an enactment formula occurs in the *lex sacra* of C4l, καὶ φυλαῖς Φαδόν “and (the following) decree pleased the tribes” (*SEG* 23 566.12–13, with van Effenterre (1989) 6–7); but the earliest fully preserved enactment formula is Hellenistic: ἔδοξεν Φαξίων τοῖς κόσμοις καὶ τῷ πόλι ψαφιξαμένοις κατὰ τὸν νόμον (*I.Cret.* II.v.17 (C3l)). Here πόλις refers to the assembly. The term ἐκκλησία occurs in this same inscription (6). The Archaic laws demonstrate that the *polis* had the authority to fine its magistrates (*I.Cret.* II.v.9 (C6s)) and to grant individuals tax exemption and sustenance at public expense (*I.Cret.* II.v.1.2–3, 14–15 (C6s)).

Free non-citizens, in this case citizens of another *polis*, may be indicated by the phrase χσένας ἢ ἀστάς (“foreigners or citizens”), which occurs in an uncertain context in the *lex sacra* of C4l (*SEG* 23 566.7). This same text preserves the terms φυλά and ἔταιρηία (*SEG* 23 566.12, 17). A Hellenistic inscription preserves part of the name of one of the tribes, [-]τιδᾶν (*I.Cret.* II.v.28 (C3l/C2e)). The name is clearly a patronymic, and as such is unparalleled elsewhere on Crete (Jones, *POAG* 223). The name of a second tribe or perhaps of another civic subdivision, *Κυδαντεῖοι*, occurs in an Archaic *lex sacra* (*I.Cret.* II.v.9 (C6s); cf. Guarducci (1939) 57, *sive festum sunt sive gens*).

The *polis* town occupied the hill above the modern village of Axos and extended north-east toward Livadhia. A residential district (Hellenistic) and a cemetery (some Archaic graves, but principally Hellenistic and Roman) lay to the south of the acropolis (*KrEst* 4 (1991–93) 266–68). The undated acropolis fortifications appear not to have formed a complete circuit, but rather to have been built where the

natural defences of the acropolis were inadequate (Taramelli (1899) 312). The masonry is polygonal. Two Archaic temples, one on the acropolis (Temple I) and a second below it to the east (Temple II), were excavated in 1899 (Levi (1930–31) 44–57). Some of the Archaic laws of Axos were probably inscribed on their walls (Guarducci (1939) 48; Jeffery (1949–50) 34–36). The protecting deity of Axos was probably Apollo, perhaps surnamed Axios (Hsch. Θ614: Θόαξος), whose son the eponymous ancestor of the *polis*, Oaxos, was said to have been (Guarducci (1939) 42–44). Temple I may have belonged to him (Perlman (2000) 73). Temple II has been attributed to Aphrodite on the basis of the votive figurine types (Levi (1930–31) 50; Rizza (1967–68) 291–93). Other public buildings include a large cistern located on the acropolis to the north-west of Temple I (Levi (1930–31) 48) and an *andreion* which is attested epigraphically (*I.Cret.* II.v.1 (C6s), 25 (C4–C3)). Part of a residential district (Archaic?) was excavated south-west of Temple I (Levi (1930–31)).

Axos struck coins (staters, drachms, hemidrachms, obols), on the Aiginetan standard during the period c.380/370–280/270. Earlier coins (c.380/370–330) have *obv.* head of Apollo; *rev.* tripod; legend (on some coins only): monogram *A* or *FAKΣION* written retrograde in the epichoric alphabet (Svoronos (1890) pl. II.30–34, with Le Rider (1966) 197). Later coins (c.330–280/270) have *obv.* head of Apollo; *rev.* tripod; legend: *FAEIQN* or *AEIQN* (Svoronos (1890) pls. II.38, III.1–3, with Le Rider (1966) 197).

951. *Biannos (Biannios) Map 60. Lat. 35.05, long. 25.25. Size of territory: 2. Type: C. The city-ethnic is *Βιάννιος* (*I.Cret.* I.vi.1 (C3l), 2 (C2m); *I.Cret.* IV 179 (c.183)). The toponym must have been the unattested **Βίαννος*. Stephanos preserves the spelling *Βίεννος* (Steph. Byz. 168.16), perhaps in confusion with the Roman port of this name which was located on the south-west coast of Crete (*Stadiasmus* 320).

No Archaic or Classical source calls *Biannos a *polis*. The earliest sources to do so are Hellenistic (*I.Cret.* I.vi.1 (C3l), 2 (C2m)). The term is used in its political sense in both inscriptions. In so far as *Biannos evidently was not a Hellenistic foundation, the evidence for its political status, albeit late, suggests that Biannos was a *polis* during the Classical period as well (for the possibility that Lyktos had absorbed *Biannos as it extended its territory south to the coast, see Viviers (1994) 255–56, whose argument largely depends upon taking the statement of Ps.-Skylax 47, ἐν μεσογείᾳ δὲ Λύκτος, καὶ διήκει αὐτῇ ἀμφοτέρωθεν, to mean “reached to either coast (north and south)”).

The collective use of the city-ethnic is attested internally in the *asylia* decree for Teos (*I.Cret.* I.vi.1 (C3l)) and in its renewal (*I.Cret.* I.vi.2 (C2m)), and externally in the alliance of *Biannos and the members of the Cretan *koinon* with Eumenes II (*I.Cret.* IV 179 (c.183)). The individual use of the city-ethnic is not attested.

The name of the territory is ἡ βιαννία (*I.Cret.* IV 174.32 (C3l/C2e)). *Biannos probably shared a border with Hierapytna to the east (*I.Cret.* IV 174 (C3l/C2e)). The *polis* town was located on a hill (Chorakia) immediately to the north-west of modern Vianno, where sherds of all periods from Orientalising through Roman have been reported (S. Hood *et al.* (1964) 83). A Hellenistic inscription refers to the *prytaneion* (*I.Cret.* I.vi.2 (C2m)). In so far as the *prytaneion* is attested elsewhere on Crete during the Classical period (see Lato, *infra*), it is possible that also at *Biannos the *prytaneion* was pre-Hellenistic. The *polis* town of *Biannos was the closest urban centre to the important sanctuary of Hermes and Aphrodite at Symi, and communications between the sanctuary and the town were relatively easy. These topographic considerations suggest that the sanctuary was located within the territory of *Biannos, but there is no explicit evidence for this, and the inscriptions, especially the dedications, from Symi suggest that the sanctuary was in some sense “pan-Cretan” (cf. Chaniotis (1988) 33–34). The protecting deity of the *polis* was probably Ares, to whom the *Biannioi* offered a sacrifice called the ἐκατομφόνια (Steph. Byz. 168.19–20) and in whose sanctuary the public enactments of the *polis* were displayed (*I.Cret.* I.vi.1 (C3l), 2 (C2m)).

Coins struck by *Biannos are all Hellenistic (Guarducci (1935) 29; Svoronos (1890) 43).

952. Bionnos Map 60. Lat. 35.10, long. 24.30. Size of territory: 1. Type: C. The toponym is *Βίωννος* (*BCH* 45 (1921) IV.13 (c.230–210)). The city-ethnic is not attested.

Bionnos is listed between Psycheion and Matala in the catalogue of *theorodokoi* from Delphi (*BCH* 45 (1921) IV.13 (c.230–210)). The toponym is perhaps to be identified with the remains of a fairly substantial settlement on the high ground (Pyrgos) and slope to the east (Kionia) above the sea 2 km south of the modern village of Kerame in Ag. Vasiliou eparchy (Guarducci (1939) 310; Hood and Warren (1966) 173–74 no. 8). The remains cover 1.5 ha and include a massive fortification wall with towers. Surface pottery is principally Classical and Hellenistic, with smaller amounts of Geometric and Archaic material (Hood and Warren (1966) 173–74; Coutsinas (2001) 62–63).

No ancient source refers to Bionnos as a *polis*. However, the discovery at Pyrgi of a fragment of a C4l/C3e treaty (*I.Cret.* II.xxx.1) suggests that Bionnos was perhaps a *polis* during the late Classical period. The appointment of a *theorodokos* c.230–210 to host the *theoroi* sent out from Delphi suggests the same for the Hellenistic period (*BCH* 45 (1921) IV.13; Perlman (1995*b*) 128–36). This evidence in combination with the observation that the settlement near Kerame was already established in the Classical period recommends the inclusion of Bionnos in the Inventory as a possible *polis* type C.

The C4l/C3e text from Pyrgi outlines judicial procedures (*I.Cret.* II.xxx.1). The *δικαστήριον* is mentioned, as are actions to collect debts (*πράξιψ[is]*), but the text is too fragmentary to draw any conclusions about the precise nature of the procedures described.

953. *Chersonasos (Chersonasios) Map 60. Lat. 35.20, long. 25.25. Size of territory: 1. Type: B. The toponym *Χερρόνησος* is attested only in late literary sources (Xenion (*FGH Hist* 460) fr. 14; Strabo 10.4.14; Paus. 6.16.5). The local spelling of the toponym was probably *Χερσόνασος* (Guarducci (1935) 33). The city-ethnic is *Χερσονάσιος* (coins, C4s–C3e, *infra*; *IvO* 276 (C4s); cf. *Χερρονήσιος/Χερρονησίται* at Steph. Byz. 692.6–7).

The earliest reference to *Chersonasos as a *polis* occurs in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* I.3 140.1, 36 (c.259–250)). The term *polis* is used in its topographical sense *qua* totality of territory of *Chersonasos in a treaty (alliance?) between *Chersonasos and Rhodos (*SEG* 41 768 (C3l)). The mint of *Chersonasos, which may have begun production as early as c.330 (*infra*), and the individual use of the city-ethnic around the same time (*IvO* 276 (C4s)) strongly suggest that *Chersonasos was a *polis* in the political sense by the late Classical period (Perlman (1996) 246–52). Late authors refer to *Chersonasos as a *πολισμάτιον* (*Stadiasmus* 349; Steph. Byz. 692.2–3).

The collective use of the city-ethnic is attested internally on the coins of C4s–C3f (*infra*), and in Hellenistic treaties (e.g. *SEG* 41 768 (C3l)). The collective use of the city-ethnic is attested externally in the agreement of Miletos *πρὸς τὰς πόλεις ἐν Κρήτῃ* (*Milet.* I.3 140.36 (c.259–250)). For the individual use of the city-ethnic there is *Φιλωνίδης Ζωῦτου Κρήης Χερσονάσιος*, *hemerodromos* and *bematistes* of Asia for Alexander (*IvO* 276 (C4s)).

The *polis* town of *Chersonasos was located to the south of a peninsula (Kastri) at the foot of what passes for an

acropolis (Sanders (1982) 144–46 (6/7)). Remains there date no earlier than C4, but two fragments of a C6 grave *stèle* were discovered 1 km south of the port near the village of Koutoulophari at a place called Hellenika (*LSAG* 316 no. 20). Little is known about the *polis* town of Chersonasos. A story preserved in Plutarch about the foundation of Lyktos suggests that the coastal region where the *polis* was located was called ἡ *Χερρόνησος* (Plut. *Mor.* 247D). Viviers argues that *Chersonasos was in some sense a dependency of Lyktos already in C6 (Viviers (1994) 252–54). If he is right, Lyktian control did not affect the political status of *Chersonasos, since it thereafter minted coins (*infra*) and joined in international agreements (e.g. *Milet.* I.3 140 (c.259–250)), and its citizens were appointed *proxenoi* by other Cretan *poleis* (*I.Cret.* IV 387 (C2); *I.Cret.* I.xix.3 (C2)). After its *sympoliteia* with Lyktos (*I.Cret.* I.xix.3A (c.183)), the two appear together (Lyktos and “Lyktos by the sea”) as signatories in interstate agreements (*SEG* 41 770 (C2s); *I.Cret.* I.xviii.9A (111/10)). For Strabo, *Chersonasos was the harbour of Lyktos: *Λύττου δὲ . . . ἐπίνειόν ἐστιν ἡ λεγομένη Χερρόνησος* (Strabo 10.4.14).

Although attested in a Hellenistic alliance of Olous and Lyktos (*SEG* 41 770 (C2l)), the tribal name *Δίφυλοι* is likely to be early, and so is mentioned here. Strabo mentions a sanctuary of Britomartis at Cherronesos (Strabo 10.14), and this goddess (or Artemis-Britomartis), if not the protecting deity of the *polis*, surely enjoyed a state cult there (coin types).

*Chersonasos struck two series of staters on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 197). Type 1: *obv.* head of a goddess (Svoronos (1890) 49, Artemis; Guarducci (1935) 34, Britomartis); *rev.* Apollo *kitharoidos* seated upon the *omphalos*, or Herakles striking with uplifted club; legend: *ΧΕΡΣΟ* written retrograde in the epichoric alphabet, or *ΧΕΡΣΟΝΑΣΙΟΝ/ΧΕΡΣΟΝΑΣΙΩΝ* (Svoronos (1890) pl. III.17–26; *SNG Cop. Aeg. Isl.* 360). Type 2: *obv.* head of Zeus; *rev.* Artemis standing drawing an arrow, or seated; legend: *ΧΕΡ* (Le Rider (1966) pl. XXXIV.13–15).

954. Datala (Datales) Map 60. Unlocated. Type: A. The toponym is not fully preserved in any ancient source. It has been restored *Δαττ[άλλα]* (*I.Cret.* I.xvi.5, l. 64 (C2l)), but is written *ΔΗΤΑΛΛΑ* in a facsimile edition of a lost copy of this treaty which was reported to have come from Kydonia (Chaniotis (1996) 367 no. 61.142). This same spelling has been restored *Δητ[άλλ(λ)α]* in an Archaic law from Lyktos (*SEG* 35 991B4 (C6)). The city-ethnic was written *Δαταλές*

(nom. sing.) (*Prakt* (1973) 191 (C6)), *Δαταλεύσι* (dat. pl.) (*SEG* 27 631 (C61)). These latter two inscriptions are likely to have been written in the dialect of Datala and so preserve the correct spelling without consonantal gemination.

Datala was located somewhere in north central Crete between Knossos and Lato, but the precise location remains unknown. Map 60 locates Datala in the Lasithi plain at Pinakiano (Ag. Giorgios Papoura). Viviers (1994) subsequently identified Datala with the remains of the substantial early settlement at Aphrati (Prophitis Elias). Viviers' case is a strong one, but on present evidence certainty is not possible.

The term *polis* occurs in the enactment formula of the Spensithios decree, *Θιοί· ἔφαδε Δαταλεύσι καὶ ἐσπένσαμες πόλις* (*SEG* 27 631 (C61)). Scholarly opinion remains divided as to whether (i) the *Dataleis* and the *polis* should be identified; (ii) the *Dataleis* represent a sub-unit of the *polis*, in which case the name of the *polis* is not known; or (iii) the *Dataleis* represent an altogether distinct community from the unnamed *polis* (Viviers (1994)). The first alternative, *viz.* the *polis* is Datala, is adopted here. The term is used in its political sense both in the enactment formula quoted above and in the phrase *ποινικάζεν καὶ μναμονεῦγεν πόλι*. Independent of the Spensithios decree, the identification of Datala as a *polis* in the political sense is supported by the individual use of the ethnic in the artist's signature *Δαμόθετος ἔποεσ' ὁ Δαταλές* (*Prakt* (1973) 191 (C6); Perlman (1996) 246–52). The collective use occurs in the Spensithios decree (*SEG* 27 631 (C61)).

During the Archaic period Datala perhaps shared a border with Lyktos (*SEG* 35 991B4 (C6); van Effenterre and van Effenterre (1985) 182–83). The *polis* of Datala disappears from the record following C6. It seems likely that the community was absorbed by a more powerful neighbour (Viviers (1994)). In C2 the toponym was apparently still in use to designate an area at the border of Lato and Lyktos, [*κῆς τ' ἂν Δαττ[άλλα]*] (*I.Cret.* I.xvi.5, l. 64; van Effenterre (1973) 35–37). Perhaps ἡ *Δαττάλλα* was the name of the territory of the *polis* during the Archaic period.

The Spensithios decree (*SEG* 27 631 (C61)) provides a good deal of information about the public institutions of Datala, but each detail has proved to be controversial (for a review of the scholarly interpretations of this text, see *Nomima* I 22). The enactment formula of the decree (*ἔφαδε Δαταλεύσι καὶ ἐσπένσαμες πόλις . . . ἀπὸ πυλᾶν πέντε ἀπ' ἐκάστας*) indicates that the assembly, identified by both the collective city-ethnic *Δαταλεύσι* and the term *πόλις*, perhaps together with a council consisting of five individuals from each of the *phylai* (*ἀπὸ πυλᾶν πέντε ἀπ'*

ἐκάστας), were responsible for ratifying the public enactments of the community. The *κόσμος* was apparently the chief official at Datala. He (or they, if the singular *κόσμος* is here used for a board) enjoyed unspecified procedural rights at law (*δίκαια*), which henceforth the *ποινικαστάς* was to share. The *ποινικαστάς* served as “recorder” and “remembrancer” for the *polis*, *πόλι ποινικάζεν καὶ μναμονεῦγεν*, and was responsible for performing *δαμόσια θύματα* if there was no priest. The authority of the *polis* was clearly recognised in several areas. Affairs of state, τὰ *δαμόσια*, included both sacred and secular matters. The *polis* was authorised to award individuals *ἀτέλεια*, and so, presumably, could impose and collect taxes, and judicial immunity (*ἀπλοπία*), and was able to guarantee protection against bodily seizure (*μῆδ' ἐπάγραν . . . μῆδε' ῥύτιον*). Finally, the citizens (presumably) of Datala belonged to *ἀνδρηία*, to which they were required to contribute food.

If the identification of Datala with the settlement at Aphrati (Prophitis Ilias) is correct, more may be said about the organisation of the *polis*. At the summit of the acropolis, fortifications with towers enclosed a small area, roughly trapezoidal in shape, supplied with water from a cistern (Levi (1927–29) 32–37). Excavations conducted by the Greek Archaeological Service (A. Lebessi) in 1968 and 1969 uncovered on the south-eastern slope of the acropolis what was in C7 a large one-room building (12 m × 6.8 m) with benches along its interior walls. A scatter of C6 material attests the continued use of the area in the Archaic period. The building is probably to be identified as a temple (*ArchDelt* 24 (1969) *Chron.* 415–18; *ArchDelt* 25 (1970) *Chron.* 455–60; cf. Viviers (1994) 244–49: *andreion* or *bouleuterion*). Residential districts were situated on the protected eastern slopes of the acropolis (Levi (1927–29) 38–57), where Lebessi uncovered a building complex (domestic?) of C6–C5 with a closed deposit of c.425–400 (*ArchDelt* 25 (1970) *Chron.* 458–60). Geometric and Orientalising cemeteries were located on the upper western slopes of Prophitis Ilias (Levi (1927–29) 78–400; for a sarcophagus of C6 from “Orthi Petres”, see *ArchDelt* 30 (1975) *Chron.* 341–42). The settlement may have been abandoned for much of C4 (Erickson (2000) 361–62). A magistral dedication from Aphrati indicates that the *κόσμοι* served as the eponymous officials for the community (*I.Cret.* I.v.4 (C5)). The dedication is to Athena, and the inference may be drawn that the goddess enjoyed a state cult there.

The alternative candidate for the site of Datala, Pinakiano (Ag. Giorgios Papoura), is located to the north of Lasithi on a ridge 70 m above the plain (Watrous (1982) 39–40).

Evidence for habitation dates from the Protogeometric through the Archaic period, when it was the largest settlement in this area. Remains of C₅ and C₄ (votive terracotta plaques and black glazed pottery) are concentrated on the south-east slope of the ridge and perhaps attest a shrine which survived the abandonment of the settlement.

955. Dragmos (Dragmios) Map 60. Lat. 35.10, long. 26.10. Size of territory: 1. Type: C. The toponym is Δράγμιος (Xenion (*FGrHist* 460) fr. 4). The city-ethnic is Δράγμιος (*I.Cret.* III.iv.9, lines 58, 68 (rC3f); *I.Cret.* III.iv.10, l. 12 (C2l)).

The only source to identify Dragmos as a *polis* is Steph. Byz. 238.6 quoting Xenion for the toponym ((*FGrHist* 460) fr. 4). It is uncertain whether the site-classification *polis* stems from Xenion's work. Dragmos possessed a territory (χώρα) and shared a border with Itanos which was defined in a treaty between the two communities. The border with Itanos followed the course of the river Sedamnos (modern Kokhklakies?, which empties into Karumes Bay about 5 km south of Palaikastro) (*I.Cret.* III.iv.9, 59–61 (rC3f); Faure (1963) 18). In so far as there is very little evidence on Crete for the existence of territorial sub-units of the *polis* (*kōmai vel sim.*), the fact that Dragmos had both a territory and borders and that it entered into a treaty in C3f demonstrates that the community was a *polis* in the political sense in the early Hellenistic period. The location of the *polis* town of Dragmos is not known. Map 60 identifies the *polis* town of Dragmos with the remains of a fortified settlement on Koutsouloupetres (Kastri). Visible remains include sherds from the Geometric through Hellenistic periods, fortification walls with towers, house walls, cisterns and tombs (*BCH* 79 (1955) *Chron.* 307–9; Faure (1963) 18; cf. Chaniotis (1996) 184, who prefers Epano Zakro on the grounds that Koutsouloupetres is too far north). If this identification is correct, the record of the settlement during the earlier periods suggests that Dragmos may already have been a *polis* in the political sense by the late Classical period. On the strength of this evidence, Dragmos is included in the Inventory as a possible *polis* (type C).

The collective use of the city-ethnic is attested in the arbitration of Magnesia for Itanos and Hierapytna (*I.Cret.* III.iv.9, ll. 58, 68 (rC3f)); the use is probably external.

Praios absorbed Dragmos (*I.Cret.* III.iv.9, ll. 61–65). The date of the absorption of Dragmos by Praios has as its *terminus post quem* perhaps the period 270–260 (Perlman (1995a) 165).

956. Dreros (Drerios) Map 60. Lat. 35.15, long. 25.40. Size of territory: 2. Type: A. The toponym Δρήρος appears only

in the grammarian Hdn. III.1 190.19. The city-ethnic is Δρήριος (*BCH* 60 (1936) 280–85 (C4/C3)).

The earliest references to Dreros as a *polis* in the political sense occur in the enactment formulas of two Archaic laws (ἔφαδε πόλι, *SEG* 27 620 = ML 2.1 (C7m), *Nomima* I 81 (C7m); πόλι ἔφαδε, *BCH* 70 (1946) 590–97 no. 2 (C7l) = *Nomima* I 64). For a possible Archaic use there is the “public record of the ancient Drerian land” (ὑπόμνημα τᾶς Δρηρίας χώρας τᾶς ἀρχαίας), which refers to the enmity of the *Milatioi* towards τᾶι πόλει τᾶι τῶν Δρηρίων (*I.Cret.* I.ix.1, ll. 147–48; for the date of the ὑπόμνημα, see *Nomima* I 48 (C6l); cf. Chaniotis (1996) 200 (c.220)). The term is perhaps used in the sense of *polis* town in the phrase κοῖ ἕκαδι οἱ τᾶς πόλιος, “the 20 of the city” (*Nomima* I 81 (C7m)).

The collective use of the city-ethnic occurs internally in the ὑπόμνημα quoted above (*I.Cret.* I.ix.1, ll. 147–48 (C6l or c.220)), and externally in the agreement between Knosos and Miletos which Dreros co-signed (*Milet.* I.3 140.38 (c.259–250)). For the individual use of the city-ethnic there is the immigrant from Dreros to Miletos, Εὔξειππο[ς Μ]άκ[ρ]ιδος Δρήριος (*Milet.* I.3 38p4 (C3s)).

One of the ὑπομνήματα of Dreros refers to the territory, χώρα, contested by Dreros and Milatos, her neighbour to the west (*I.Cret.* I.ix.1, ll. 149–52).

The term *πυλά* occurs in the enactment formula of an Archaic law, πόλι ἔφαδε διαλήσασι πυλάσι (*BCH* 70 (1946) 590–97 no. 2 (C7l) = *Nomima* I 64): “the *polis* decided after consultation with the *phylai*” or “the *polis* decided after dismissing the *phylai*” (for the derivation of the term διαλήσασι (pl. part.?) from *εἰλλω/ἴλλω, see van Effenterre (1946) 592). The names of two *phylai* are preserved in the dating formulas of public enactments: Δυμᾶνες (*BCH* 60 (1936) 280–85 (C4/C3)); Αἰθαλεῖς (*BCH* 61 (1937) 29–32 (C4/C3); *I.Cret.* I.ix.1, ll. 3–9 (c.220)). The eponymous κόσμοι were organised by *phylai*. One of the ὑπομνήματα of Dreros mentions the citizen ἀγέλαι (*I.Cret.* I.ix.1, l. 154 (C6l or c.220)), while the Hellenistic civic oath mentions the ἑταιρεῖαι (*I.Cret.* I.ix.1, ll. 124, 135 (c.220)). Both may be attested as well in an Archaic law (*SEG* 23 530 (C7l); but cf. *Nomima* II 89). An adult male citizen population of c.7,000 for C₃ Dreros has been suggested on the basis of the 180 ἀγέλαοι πανάξωστοι who swore the civic oath (*I.Cret.* I.ix.1, ll. 10–14 (C3l); Marinatos (1936); cf. Chaniotis (1996) 199; the 180 is a representative group only, and so is of little use in estimating the size of the population).

The public enactments of Dreros were ratified by the πόλις (*SEG* 27 620 (C7m); *BCH* 70 (1946) 590–97 no. 2 (C7l)). Whether πόλις in this context refers to the political

community or to the assembly cannot be determined. The term *δᾶμος* is used for the assembly in the enactment formula of a Hellenistic proxeny decree (*BCH* 60 (1936) 280–85 (C4/C3)). The *κόσμοι* appear to have been the chief officials of the Archaic *polis* and to have exercised both executive and judicial authority (*SEG* 27 620 (C7m)). The board of *κόσμοι* consisted of five members plus the *γραμματεὺς* in a public enactment of c.220 (*I.Cret.* 1.ix.1). Whatever the precise motive for the enactment of *SEG* 27 620 (fear of tyranny, demands on the part of the élite for equal representation, experience of judicial misconduct), the interest of the *polis* in controlling the authority of the *κόσμοι* is demonstrated by the harsh penalties, including *atimia* for life, which the *polis* imposed upon *κόσμοι* who disregarded the law. For other laws of C7, see *SEG* 23 530; *BCH* 70 (1946) 590–97 no. 2, 600–2 no. 4. During the Hellenistic period, and no doubt earlier as well, one member of the board of *κόσμοι* served as the eponymous magistrate for the *polis* (*BCH* 60 (1936) 280–85). In addition to the *κόσμοι*, the Archaic laws of Dreros preserve four terms which may denote public officials: (i) *δᾶμοι* (*SEG* 27 620 (C7m)), comptrollers (Ehrenberg (1943) 14), or citizen landowners (van Effenterre (1985) 394–96); (ii) *οἱ ἵκατι οἱ τᾶς πόλιος*, the twenty of the city (*SEG* 27 620 (C7m)), a council perhaps of the men of the city who were eligible to serve as *κόσμος* (*Nomima* 1 81: “dirigeants politiques de l’acropole”); (iii) *τοῖς ἰθυντᾶ[σι]*, “les redresseurs” (*Nomima* 1 27 (c.575); cf. Bile (1988) 359 n. 124: *τοῖσι θυστᾶσι* (priests)); and (iv) *ὁ ἀγρέτας*, assembler (*BCH* 70 (1946) 590–97 no. 2), either a political official who convened the assembly or a military officer who called out the troops (van Effenterre (1946) 590–97). The council (*βουλά*) is not attested before the Hellenistic period (*BCH* 60 (1936) 280–85 (C4/C3)).

The *polis* town of Dreros occupied a double acropolis and the connecting saddle. There were two circuit walls built in part of polygonal masonry; one protected the entire *polis* town (two peaks and the saddle), an area of c.28 ha, and a second the acropolis proper, *viz.* Ag. Antonios, the eastern summit (Marinatos (1936) 217–19; Demargne and van Effenterre (1937) 7). An altar and four cisterns were located on the summit of the Ag. Antonios (Marinatos (1936) 216; Demargne and van Effenterre (1937) 7). A large public building (24 m × 10 m), probably a temple, was excavated on the western summit (Xanthoudides (1918) 23–28; cf. Marinatos (1936) 254: the building is an *andreion*). Residential areas occupied the northern (and southern?) slopes of both acropolises (Xanthoudides (1918) 28–29; Marinatos (1936) 216–17). The public centre (agora with *plateia* and theatral

steps, cistern, temple of Apollo Delphinios, and possibly *prytaneion*) was located in the saddle (for the temple, see Marinatos (1936) 219–83; cf. Mazarakis Ainian (1997) 217–18: the temple was not free-standing but part of a building complex; for the agora, see Demargne and van Effenterre (1937) 10–32). The Archaic laws of Dreros were probably inscribed on the east wall of the temple, and would have been visible from the *plateia* and theatral steps below and to the east of the temple terrace. It has been suggested that these steps were used for meetings of a political institution (Hansen and Fischer-Hansen (1994) 62). The terracing and construction of the theatral steps of the agora and the construction of the temple appear to be contemporary (C8f: Demargne and van Effenterre (1937); cf. van Effenterre (1992a): the *plateia* and theatral steps were laid out in C6). The cistern was built c.220 (Demargne and van Effenterre (1937) 27–32; Chaniotis (1996) 195–201) and the “*prytaneion*” during C4s/C3f (Demargne and van Effenterre (1937) 15–18). A sub-Mycenaean Geometric cemetery was located to the north-east of the acropolis (van Effenterre (1948a) esp. 15–22).

Apollo Delphinios was probably the protecting deity of the *polis*.

957. Eleutherna (Eleuthernaïos) Map 60. Lat. 35.20, long. 24.40. Size of territory: 3. Type: A. The toponym is *Ἐλευθέρνα*, ἡ (*IG* 1x².1 17, ll. 87–88 (C3f)); cf. *Ἐλευθέρνα* (*SEG* 41 742 (C2f)); *Ἐλουθέρνα* (*I.Cret.* 11.xii.22 (C3s)). Ps.-Skylax 47 gives the plural *Ἐλευθέρραι*, αἱ. Stephanos identifies several toponyms as early names of Eleutherna: *Ἀπολλωνία* (Steph. Byz. 106.13–14), *Ἄωρος* (154.3–5), *Σάτρα* (557.16), *Σάωρος* (265.11–12). There is no further evidence for Apollonia as an early name of Eleutherna. *Ἄωρος*, *Σάτρα* and *Σάωρος* may all derive ultimately from the toponym preserved in Apollo’s cult title *Σασθραῖος* (*SEG* 41 743 (C3e); van Effenterre (1991b) 28). The city-ethnic is *Ἐλευθερναῖος* (coins, C4s–C3f, *infra*; *I.Cret.* 11.xii.20 (C3s)); cf. *Ἐλευθερναῖος* (coins, C4s–C3f, *infra*; *SEG* 41 741 (C3m)), *Ἐλουθερναῖος* (*I.Cret.* 11.xii.22 (C3l)). The earliest evidence for *-ρν-* is the legend *EAEYΘEP* on the C4m coins (*infra*). Later inscriptions and coins from Eleutherna suggest no pattern in the use of the assimilated versus unassimilated form of the group *-ρν-* (cf. Bile (1988) 121–22, which appeared before the publication of *SEG* 41 739–55).

The earliest attestations of the term *πόλις* in connection with Eleutherna occur in uncertain contexts in two Archaic laws (*I.Cret.* 11.xii.14a, with *κόσμος* in the following line; *I.Cret.* 11.xii.16Ab (both C6l)), but the earliest certain refer-

ence to Eleutherna as a *polis* in the political sense occurs in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* 1.3 140.1, 38 (c.259–250)), in which the *Eleuthernaioi* are included as one of the *πόλεις αἱ ἐν Κρήτῃ*. The term *πόλις* is paired with *ἀπαμία* in *I.Cret.* 11.xii.16Ab, *μηὶ ἢ ἀπαμία μ[ὴ]δ' ἢ πόλι,* “neither in the *apamia* nor in the *polis*”. The term *ἀπαμία* seems to refer to land in the *chora*, in which case *πόλις* here is used in the urban sense (*Nomima* 1 26; cf. Chaniotis (1996) 19–20: private land cultivated by serfs). For *polis* in the urban sense, see also Ps.-Skylax 47, where Eleuthernai is listed under the heading *πόλεις ἐν Κρήτῃ*.

The collective use of the city-ethnic is attested internally on the coins of C4m–C3f (*infra*), and externally in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* 1.3 140.1, 38 (c.259–250)). For the individual use of the city-ethnic, there is the proxy decree of Gortyn for *Κύρτος Ἀνδροσκύλω Ἐλευθεναίῳ* (*I.Cret.* 1v 206F (C3/C2)).

An Archaic law regulating the consumption of wine mentions symposiastic consumption on *Δίον ἄκρον* (*SEG* 41 739 (C61)). The toponym refers to a cape on the north coast of Crete between Pantomatrimon and Heraklion (Ptol. *Geog.* 3.15.5 (from west to east): Cape Lianos, Chondros, Korakias or Bali) which perhaps marked the eastern border of Eleutherna with Axos (van Effenterre (1991c) 18–20). Wherever its exact location, this inscription indicates that the territory of the Archaic *polis* extended to the north coast. The inland *asty* is likely to have been served by one or more harbours on the north coast. A coastal settlement (Archaic and later) has been identified at Stavromenos, 11 km east of Rethymnon (S. Hood *et al.* (1964) 62–66; Schiering (1982) 17–47). Coins with the legend *ΠΑ (rev.)* found (in some quantity?) there suggest that this might be ancient *Παντομάτριον* (Faure (1993) 72). The relatively large number of coins of Eleutherna found there indicate that it was frequented by Eleuthernians, and that it perhaps served as a port for the *polis* (Le Rider (1966) 252–54). Whether the settlement at Stavromenos was part of the *polis* of Eleutherna during the Archaic period cannot be determined. The *πολιτῆια* of the *Artemitai* (*I.Cret.* 11.xii.22 (C31)) may represent either a territorial civic subdivision of Eleutherna (Perlman (1996) 252–54) or a dependent community of Eleutherna (Chaniotis (1996) 402–6: non-citizens, possibly freedmen, settled near a sanctuary of Artemis).

The term *δρομεύς*, perhaps referring to citizens of the younger age-grades who enjoyed limited citizen rights, appears in the Archaic law concerning the consumption

of wine (*SEG* 41 740; Tzifopoulos (1998) 150–69). The compound *ἄλλοπολιάτας*, partially restored in an Archaic law (*I.Cret.* 11.xii.3 (C61)), has been understood to refer to resident aliens (Guarducci (1939) 148) or to expatriates of Eleutherna (van Effenterre and van Effenterre (1985) 187–88; *Nomima* 1 10). The partly preserved [---] *τὸ κσεν*[---] (*I.Cret.* 11.xii.4) most likely refers to foreigners or to officials or laws pertaining to foreigners. This same text may preserve a reference to *δάμος* or *δαμόσιος* (*vel sim.*) in line 1 ([---] *μηδὲ δα[μ]οσ[---]* or [---] *μηδὲ δά[μ]οσ[---]*). The term *ἀπαμία* (*I.Cret.* 11.xii.16Ab, l. 2), a category of land holding, implies that the community of Eleutherna identified certain of its members as *ἀφαμιῶται*, a term attested in literary sources (largely lexicographical), where it is defined as a Cretan term for an individual of dependent status (Athenaeus VI 263f; Hsch. s.v.; Strabo 15.1.34).

The *kosmate* is attested in what is perhaps a reference to the eponymous *kosmoi* of the current or of a previous year (*I.Cret.* 11.xii.9, l. 3): [--- κ]αὶ *Τίμαρκος ἐκόσμιον* “[in the year when ὁ *δεῖνος*] and Timarchos were *kosmoῖ*”). From this we may deduce that the *kosmate* was eponymous and was organised as a board (for the *kosmate*, see also *I.Cret.* 11.xii.14 (C61); *I.Cret.* 11.xii.20–22 (C3)). The Archaic laws preserve the terms *μολῆν* “to bring an action” (*I.Cret.* 11.xii.15a+b), *δικάζοντας* “adjudicate” (*I.Cret.* 11.xii.11), and *ποινικά[ζοντας]* “record (in writing)” (*ibid.*). Two of the laws refer to witnesses or to the act of testifying: [--- μ]αἰτυρ[---] (*I.Cret.* 11.xii.8); [--- μ]αἰτυραμένο or [--- μ]αἰτυρα μὲν ὁ (*I.Cret.* 11.xii.13). Others refer to oaths: the act of taking an oath (*κόρκον τιθέμεν*, *I.Cret.* 11.xii.3), denial by oath (*ἐκ<σ>ομνήη*, *SEG* 23 571; *ἀπομ*[---]?, *I.Cret.* 11.xii.17), and perhaps to the oath curse ([--- τοῖ δὲ ὄρκ]οι τὰν ἀρὰν ἰνήμε[ν], “the curse shall be included in the oath”, *I.Cret.* 11.xii.3). Two of the laws guarantee immunity from prosecution: *ἄπατον/ἀπάτος ἦμεν* (*I.Cret.* 11.xii.3, 11).

The only early documentary evidence for the foreign relations of Eleutherna is the reference to a *θιαρός* in an Archaic law (*I.Cret.* 11.xii.11 (C61), with *Nomima* 1 14). All other evidence for the foreign relations of Eleutherna dates to the Hellenistic period. The presence of pottery from Corinth (C7s–C6f), Lakonia and Argos (C6), Attika (from C61), Gortyn (C7–C4), Knosos (C6–C5), and possibly Kydonia and Aphrati (C6) attests to Eleutherna’s participation in intra-island and Mediterranean trading networks, but is not sufficient to demonstrate direct relations with any one of these places (Erickson (2000) 237–56).

Zeus Polioachos was worshipped by the *polis* (*SEG* 41 744 (C2s); coins, *infra*), but it is not clear that Zeus was the

protecting deity of Eleutherna (for the cults of Eleutherna, see Stavrianopoulou (1991), with Chaniotis (1996) 190–95).

The *polis* town of ancient Eleutherna was built on two neighbouring ridges: Pyrgi to the east (perhaps called Sasthra in Antiquity: van Effenterre (1991b) 28) and Nisi to the west (perhaps called Wilkon in Antiquity: *ibid.* 28–30). Pyrgi appears to have been the centre of the early settlement. Remains there include the Geometric–Classical cemetery at the western foot of Pyrgi and two (or perhaps three) sanctuaries. Another sanctuary was located on southern Nisi. During the Classical period a large *peribolos* (35 m × 50 m) with a Doric pentastyle propylon was built on Nisi in the location of the earlier sanctuary. Its function remains uncertain. Van Effenterre identifies the *peribolos* as the sanctuary of Apollo Wilkonios and the meeting place of the Cretan *koinon* (van Effenterre (1991b) 28–30). Fortifications of uncertain date are identified on Nisi to the north of the Classical *peribolos* and enclosing a Hellenistic residential district further to the north, and on the summit of Pyrgi to the south of Hellenistic buildings. A *terminus ante quem* for the fortifications of 221/0 is provided by Polyb. 4.55.4. For an overview of the settlement history of the *polis* town of Eleutherna, see Kalpaxis (1994) with plan 1; for the Geometric–Classical cemetery, see Stampolidis (1993); Erickson (2000) 156–228; for plans of the Classical *peribolos* on Nisi and the Hellenistic buildings on Pyrgi which show the provenance of SEG 41 739–55, see Kalpaxis (1991); for the Hellenistic residential district on northern Nisi, see Kalpaxis *et al.* (1994).

The term “stater” occurs in two inscriptions of C61 (SEG 2 12.13, 23 571). If the term refers to coinage rather than to a unit of weight, these inscriptions provide some of the earliest evidence for the use of coins on Crete. If so, the term most likely refers to Aiginetan staters. Eleutherna’s proximity to Kydonia, whence Aiginetan coinage is likely to have been introduced into the island during the final quarter of C6 (Stefanakis (1999)), makes this an attractive possibility. Eleutherna began to strike her own coins (staters) on the Aiginetan standard c.350 (Le Rider (1966) 197). Types: *obv.* Apollo holding a stone and a bow, with a dog and flanked by two trees (Svoronos (1890) 130, styrax trees?); *rev.* Artemis the huntress; legend: *EAEYΘEP* written retrograde in the epichoric alphabet (Svoronos (1890) pl. XI.4). Later coins (staters, drachms, hemidrachms, c.330–280/270) have *obv.* head of Apollo or head of Zeus; *rev.* Apollo standing; legend: *EAEYΘEPNAION* or *EAEYΘENNAION* and abbreviations down to *EAEY*, some retrograde (Svoronos (1890) pls. XI.5–6, 9–11, 14–17, 22, 24, 27–39; XII.1–2, with Le

Rider (1966) 197; SNG *Cop. Aeg. Isl.* 429). Obols of this period have *obv.* head of Apollo; *rev.* Apollo standing or E or EΛ in monogram (Svoronos (1890) pl. XI.12–13, 18–20, 25).

958. *Eltynia (Eltynieus) Map 60. Lat. 35.15, long. 25.10. Size of territory: 2. Type: A. The toponym is not attested, but must have been *Eltynia. The city-ethnic is *Ἐλτυνιεύς* (*I.Cret.* 1.x.2 (C5e), *Ἐλτυνιοῦσι* (*I.Cret.* 1v 206G (C3/C2); *Milet.* 1.3 140.36 (c.259–250)). For the early use on Crete of *-ov-* for *-ev-*, see Bile (1988) 111–12. Cf. also *Ἐλτυναιεύς* (*I.Cret.* 1v 179 (c.183)). In the Hellenistic period the form *Ἐλτύνιος* occurs in inscriptions from sites outside the island (*SB* 5273 (C3f); *I.Magnesia* 21 (C2e)).

The earliest reference to Eltynia as a *polis* in the political sense occurs in a law concerning damages for personal injury which requires that fines be paid *ἐς πόλιν* (*I.Cret.* 1.x.2 (C5e)).

The collective use of the city-ethnic is attested internally in the law concerning personal injury (*I.Cret.* 1.x.2 (C5e)), and externally in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* 1.3 140.36 (c.259–250)). For the individual use of the city-ethnic, there is the proxeny decree of Gortyn for *Πόλλος Φαισιόinna Ἐλτυνιεύς* (*I.Cret.* 1v 206G (C3/C2)).

The chief public official of Eltynia appears to have been the *κόσμος* (or board of *κόσμοι*), who served both executive (*πραδὲν τὰν ἐς πόλιν τιμάν*, “exact the fine for the *polis*”) and judicial (*γ[ι]γνώσκειν ὁμύνας*, “decide having sworn the oath”) functions (*I.Cret.* 1.x.2 (C5e)). The board perhaps consisted of just two members (*κόσμον... ὄτερον*, *I.Cret.* 1.x.2, l. 3, with Bile (1997) 116). Line 2 of this same text probably preserves part of an enactment formula: [*θίου· τὰδ’ ἐφαδε*] *τοῖς Ἐλτυνιοῦσι*. If so, *τοῖς Ἐλτυνιοῦσι* in this context refers to the assembly. The terms *πῆϊσκος* and *ἀγέλαος* occur in the law concerning bodily injury (*I.Cret.* 1.x.2 (C5e)) and refer to age-grades (“child” and “youth” respectively) of the citizen class of the *polis*.

Almost nothing is known archaeologically about Eltynia apart from the chance discovery of the *membra disiecta* (capital and wall blocks including the one bearing *I.Cret.* 1.x.2) of an Archaic? Doric temple (Xanthoudides (1920) 75–81). Four terms, probably referring to public areas in the *polis* town, occur in a provision of the law concerning personal injury, which details where the injury takes place (*ibid.* ll. 6–7 (C5e)): (i) *ἀνδρήιον*; (ii) *ἀγέλα*; (iii) *συνβολήτρα*, place where contracts are made (Bile (1988) 179) or “combat zone” or refectory (*Nomima* II 80); (iv) *κορός*, agora (Bile (1988) 344 n. 84) or dance floor (*Nomima* II 80). Certainly

the ἀνδρῆιον was defined architecturally. Whether or not the others were cannot be determined.

959. Elyros (Elyrios) Map 60. Lat. 35.15, long. 23.50. Size of territory: 2. Type: A. The toponym is Ἐλυρος (Ps.-Skylax 47). The city-ethnic is Ἐλύριος (coins, C4s–C3f, see *infra*; *I.Cret.* iv 185 (C3l/C2e)). There is one example each of the toponym and the city-ethnic spelled with initial *iota* (see Bile (1988) 86 n. 45): ἐν Ἰλύρωι (*BCH* 45 (1921) III.106 (c.230–210)); Ἰλυρίοις (*SEG* 9 2.54; cf. *SEG* 42 1663 (C4s)).

The earliest reference to Elyros as a *polis* occurs in Ps.-Skylax 47, who uses the term in its urban sense. The term is used in its political sense in the enactment formulas of Hellenistic proxeny decrees (e.g. *I.Cret.* II.xiii.1 (C3/C2)). There is little doubt that Elyros was a *polis* in the political sense in the late Classical period. The evidence for this is: (i) inclusion among the *poleis* given grain by Cyrene in the 320s (*SEG* 9 2); (ii) participation in the C4l federation of the *Oreioi* (*infra*); and (iii) striking coins as early as c.330 (*infra*). Grave *stelai* of C5/C4 indicate that the *polis* town was already settled during the Classical period (*CretChron* 9 (1955) *Chron.* 569; *Ergon* 1964 (1965) *Chron.* 150–51). It would seem probable, then, that Elyros was already a *polis* in the political sense by the end of the Classical period.

The collective use of the city-ethnic is attested internally on the coins (*infra*) and externally in the list of recipients of grain from Kyrene during the grain crisis of the 320s (*SEG* 9 2). For the individual use of the city-ethnic there is Σηρίων Δεξιῶ Ἐλύριος (*SEG* 45 1315 (Hellenistic)) from Lisos.

The territory of Elyros is called ἀ τῶν Ἐλυρίων χώρα (*I.Cret.* iv 185 (c.200–189)). Stephanos identifies Souïa as the harbour (ἐπίνειον) of Elyros (Steph. Byz. 590.8). This may mean nothing more than that Souïa was the most convenient harbour for Elyros (Perlman (1995b) 132–34); but some level of co-operation between the two communities is suggested by the aqueduct (date?) which brought water from a source near the village of Livadha to Elyros (c.4.5 km to the south-east) and thence to Souïa (Savignoni and de Sanctis (1901) 424).

Elyros was a member of the C4l–C3 federation οἱ Ὀρειοι (van Effenterre (1948a) 119–27; Chaniotis (1996) 106–8, 421–22; cf. Sekunda (2000) 337–38; league founded C3f).

Elyros is little known archaeologically, although there is no question that it was settled already in C5 if not earlier (see e.g. Baldwin Bowsky (1997) for C5l atticising grave *stelai* from Elyros). Cf. *Barr.* HRL only. The hill on which the *polis* town was built was protected by a circuit wall approximately 3 km long. The summit of the hill was perhaps fortified

with a second defence wall, and so may be regarded as the acropolis proper (Pashley (1837) ii.104–9). Early travellers report the remains of a theatre (Savignoni and de Sanctis (1901) 424) and a temple (Pashley (1837) ii.104–9) near the church of the Panaghia. There is no reason to identify this temple as that of Apollo (cf. Pashley (1837) ii.104–9), although Elyros did maintain particularly close ties with Delphi, appointing *theorodokoi* at home to entertain the *theorois* sent out from Delphi (*BCH* 45 (1921) III.106 (c.230–210)) and a *theorodokos* at Delphi to entertain her own *theoria* to the festival there (*I.Cret.* II.xiii.1A (C3/C2)). Pausanias describes a bronze goat dedicated by the *Elyrioi* to Apollo at Delphi (Paus. 10.16.5). The story which Pausanias tells concerning this dedication suggests that the mythic founders of Elyros were the twin sons of Apollo and the nymph Akakallis, Philandros and Philakides (Frost (1996)).

Elyros struck coins during the period c.330–280/270. Types: *obv.* goat (head or full); legend: ΕΛΥΡΙΟΝ; *rev.* bee (Svoronos (1890) pl. XII.9–13, with Le Rider (1966) 197–98; *SNG Cop. Aeg. Isl.* 437).

960. Gortyn(s) (Gortynios) Map 60. Lat. 35.05, long. 24.55. Size of territory: 4. Type: A. The toponym is Γόρτυ(ν)ς (Γόρτυς, *I.Cret.* iv 64 (C5e), coins, C5m, *infra*; Γόρτυς, *Il.* 2.646) or Γόρτυνα (Ps.-Skylax 47). Bile suggests that of the two inflections (theme in *-ν* and theme in *-α*), the theme in *-α* perhaps originated from the accusative of the theme in *-ν* (Bile (1988) 201–2). The city-ethnic is Γορτύνιος (*I.Cret.* iv 23 (C6s); coins, C5m, *infra*; Simon. *Anth. Pal.* 7.254 *bis* (C6/C5)).

Gortyn is called a *polis* in a fragment of an Archaic law, [---] ἢ πόλι πάνσαι πρᾶ [---] (*I.Cret.* iv 13e2 (C7l)), where the use is probably political (*Nomima* I 1). The earliest certain instances of the use of πόλις in the political sense occur in the enactment formula of an early decree: ἔδοκαν ἀ πόλις (*I.Cret.* iv 43Ba3 (C5e)) and in a provision of a law of the same period which requires that fines be paid “to the *polis*” (*I.Cret.* iv 78 (C5e)). For similar clauses in slightly later laws, see e.g. *I.Cret.* iv 41.iii.16–17 (C5f), *I.Cret.* iv 79 (C5m). Cf. also the law concerning mortuary practices, ἐν Φίδαι ἀ πόλις θύωνται (*I.Cret.* iv 146 (C5s–C4e)). *Polis* in the urban sense occurs in two provisions in the Gortyn Law Code which distinguish houses located in the *polis* from those in the *chora* (*I.Cret.* iv 72.iv.31–33, viii.1–2 (C5m)). For *polis* in the urban sense, see also Ps.-Skylax 47, where Gortyn is listed under the heading πόλεις πολλὰ ἐν Κρήτῃ. The broader topographical use of *polis* to mean the totality of territory occurs in two laws, the later perhaps a reformulation of the

earlier, which concern wages paid to non-citizens (metics and slaves) who live in the *polis*. In both examples, the relevant clauses are restored *τοῖς ἐμὲ πόλιι Φοικίονσι τοῖς τ' ἐλευθέροις καὶ τοῖς δόλοισι* (*I.Cret.* iv 79 (C5m), 144 (C5s/C4e)).

The collective use of the city-ethnic is first attested internally in an Archaic law (*I.Cret.* iv 23 (C6s)) and externally in a late Classical inscription (*SEG* 9 2.33 (C4s)) and in Ephor. fr. 149). For the individual use of the city-ethnic, there are the early epitaphs of the merchant *Βρόταρχος Γορτύνιος Κρήης* (Simon. *Anth. Pal.* 7.254 bis (C6/C5)) and the copper smelter *Σωσίνοσ Γορτύνιος* (*IG*¹³ 1349 bis (C5s)), and the reference to the *proxenos* of Athens, *Νικίας Γορτύνιος Κρήης* (Thuc. 2.85.5).

Little is known about the organisation of the *polis* town during the Archaic and Classical periods (for an overview, see Perlman (2000)). The inhabitants of three Geometric settlements, Ag. Ioannis, Prophitis Ilias and Charkia Pervoli, appear to have abandoned their hill-top villages around 700, most likely to resettle (*κατὰ κώμας* or in a single settlement?) at the foot of the ridge of hills which marks the northern edge of the Mesara (Allegro (1991); Di Vita (1991); La Torre (1988–89); Perlman (2000)). This resettlement probably marks an important step in the formation of the *polis* of Gortyn. Ag. Ioannis (275 m) probably served as the acropolis. In C7f (c.675–650) an open-air sanctuary on the acropolis was monumentalised by the construction of a temple, perhaps in part open-air (Scrinari (1968) 23–56). The form of the *cella* (tripartite?) has been understood to imply that the temple originally belonged to three deities, but votive figurine types indicate that by the Classical period the temple belonged to Athena (Rizza (1968) 191–93, 249–50), who is called Poliouchos in Hellenistic documents (*I.Cret.* iv 171 (C3), 183 (c.C3l/C2e)).

Archaeological exploration of Gortyn has to date yielded few other traces of the Archaic and Classical *polis* town. The most significant of these remains are the following. (i) The temple of Apollo Pythios (C7s) built on the plain 700 m south-east of the foot of the acropolis (Ricciardi (1986–87)), within which one or two generations after the construction of the Pythion (C7l–C6e), the Gortynians began to inscribe their laws upon its walls (*I.Cret.* iv 1–27, 29–38, 40; Perlman (2002)). (ii) The Gortyn Law Code (*I.Cret.* iv 72 (C5m)) was inscribed *boustrophedon* in columns on the inner face of the walls of a curved structure whose blocks were reused in the Roman Odeion located below Ag. Ioannis on the east bank of the river Metropolianos. (iii) A second group of similarly inscribed blocks (*I.Cret.* iv 41–49, 51 (C5f)) was reused in a

rectangular structure of the Hellenistic period (Guarducci (1950) 87–90). This Hellenistic building, parts of which were incorporated into the Odeion, has been interpreted as a *bouleuterion* (Meinel (1980) 597). Halbherr identified some Geometric material beneath the Odeion and traces of Archaic walls, perhaps belonging to a stoa, to its south-west (Pernier (1925–26)). It is assumed that the buildings on which the Great and Second Codes were inscribed were located in the same vicinity; but to date no suitable foundations have been found (Halbherr (1887); cf. Di Vita in Blackman (1997) 104). (iv) A third group of blocks bearing inscriptions dating to C5f were reused in the walls of the early Byzantine church at Mavropapas, located 200 m south-west of the Pythion. These blocks probably belong to a late Archaic building located in the vicinity of, if not directly under, the church (Halbherr (1897) 170–219; Perlman (2000) 61–62: blocks came from a public building associated with the *ἐσπράτται* “collectors of fines”?). (v) A sanctuary (C6l) was established about 700 m north-east of the Pythion (Di Vita (1984) 71: a sanctuary of Demeter and Kore?). Several public buildings (or open-air meeting places) are attested in early inscriptions: (i) agora (*I.Cret.* iv 43Bb (C6e); *I.Cret.* iv 80 (C5e); *I.Cret.* iv 72.vii.11, x.35–36, xi.10–14 (C5m); *I.Cret.* iv 75A, 81 (C5m); for the location of the agora in the vicinity of the later Roman Odeion, see Perlman (2000) 72–73); (ii) *ἀγορήιον* (*I.Cret.* iv 9a–b (C7l); Guarducci (1950) 32, 55: where the army assembled?; Koerner (1993) 367: where homicide trials took place?); (iii) *δικαστήριον* (*I.Cret.* iv 72.xi.15–16 (C5m); Guarducci (1950) 169: building used by the *δικασταί* in the agora? [or the institution?, ed.]). A stretch of wall contemporary with the early phases of the settlement on Ag. Ioannis (c.1190–970) has been identified as a defence wall (Hom. *Il.* 2.646: *Γόρτυς τευχίόεσσα*; Rizza and Scrinari (1968) 21–22; cf. Hayden (1988) 12–13), but Strabo’s claim that the *polis* was unfortified until Ptolemy (IV) paid for the construction of a circuit wall is supported archaeologically (Strabo 10.4.11; Allegro and Ricciardi (1988)). Two toponyms, Aulon and Latosion, have been identified as suburbs of the *polis* town of Gortyn. For Aulon, see *supra* no. 949. Guarducci suggests that Latosion *supra* 1146 was located in the vicinity of the modern village of Mitropolis, 1 km west of Gortyn, and that it was a district of the *polis* town where metics and freedmen were allowed to reside (Guarducci (1950) 181; Chaniotis (1996) 162–63; cf. van Effenterre and van Effenterre (1985) 187–88).

The name of the territory was *ἡ Γορτυνία* (Strabo 10.4.7). There is no evidence for territorial subdivisions, but Gortyn may have controlled dependent *poleis* from as early

as C5e (*infra*), whose citizens were called ὑπόβουκοι (Perlman (1996) 239–42). For settlement patterns in the Mesara during the first millennium, see La Torre (1988–89); Sanders (1976); Simpson *et al.* (1995); Watrous *et al.* (1993).

Gortyn's neighbour to the west was Phaistos. The two *poleis* were joined together in a *sympoliteia* during the period C5m–C4m (coins, *infra*; Cucuzza (1997)) and again in the Hellenistic period (*I.Cret.* iv 165; *SEG* 23 563 (both C3s); Chaniotis (1996) 104–8, 422–28). Amykalion, a dependent community (*polis*?) of Gortyn (*I.Cret.* iv 172 (C3l); Chaniotis (1996) 399; cf. Perlman (1996) 260–61), was probably located in the vicinity of modern Kommos (Cucuzza (1997) 66–72). If so, it would appear that Gortyn had extended her influence, if not her control, to the western Mesara by C5m (*I.Cret.* iv 72.iii.5–9 (C5m)). Mt. Ida formed the border of Gortyn to the north-west. Gortyn may have controlled the cave sanctuary of Zeus on Mt. Ida in the Classical period (*I.Cret.* iv 80 (C5e), 146 (C4f)). Patela Prinias commanded the principal north–south route east of Mt. Ida. The Archaic community there appears to have been abandoned c.550 (Rizza (1991)), perhaps a victim of Gortynian expansion to the north. Henceforth, Patela Prinias occupied the frontier between Gortyn and her northern neighbour(s). One of these neighbours was Rhaukos (modern Ag. Myron?). Gortyn and Knosos destroyed Rhaukos (C2m) and divided her territory between themselves. Thereafter they shared a border which appears to have cut through what had been the *polis* town of Rhaukos (Polyb. 30.23.1; *I.Cret.* iv 182 (C2m)). Pyranthos and Rhytion were perhaps dependent *poleis* located within the territory of Gortyn at the eastern edge of the Mesara (for Pyranthos, see Perlman (1996) 241, 268–70; for Rhytion, see *ibid.* 241, 256–57, 268–70). Further east were the *poleis* Arkades and Priansos. A Hellenistic alliance of Gortyn and Hierapytna with Priansos describes the Hellenistic border of Priansos and Gortyn (*I.Cret.* iv 174 (C3l)). Several small communities were located at the southern edge of the Mesara. The evidence for two of these, Boibe and Pyloros, is not sufficient to draw any conclusions concerning their political status (for Boibe, see Perlman (1996) 261–62, 268–70; for Pyloros, see *ibid.* 262, 269). *Rhitten may have been located in the southern Mesara (no. 988). The largely uninhabited Asterousia mountains separated the Mesara from several small communities located on the south coast of Crete (Faure (1965) 37–40). They are (from east to west) Einatos, the harbour of Priansos (no. 985); Lebena (no. 972); Lassoia (see *supra*); and Matala (no. 976). The toponyms Keskora and Pala occur together in a Gortynian decree concerning the lease of public lands

located ἐ[ν] Κεσκόραι καὶ ἐμ Πάλαι (*I.Cret.* iv 43Ba (C5e)). Keskora and Pala were probably located in the Mesara, but nothing further about them is known (Perlman (1996) 242–43).

The terms *πολιάτας* (“citizen”) and *πολιατεύειν* (“to exercise the rights of a citizen”) occur in the early laws of Gortyn (*πολιάτας*, *I.Cret.* iv 72.x.35–36, xi.14 (C5m); *πολιατεύειν*, *I.Cret.* iv 51 (C5f); *I.Cret.* iv 72.ix.31–33 (C5m); cf. Lévy (1997) 26: “s’il exerce effectivement ses droits de citoyen”, that is, “s’il est présent dans le pays”). Three other terms are associated with the status of citizen: (i) *ελεύθερος* (e.g. *I.Cret.* iv 72.i.1–7 (C5m)) “citizen” (Lévy (1997) 26–30) or “potential citizen” (Bile (1988) 343); (ii) *δρομεύς* (e.g. *I.Cret.* iv 72.v.40–42), new citizen who enjoys limited citizen rights (Tzifopoulos (1998) 150–69); (iii) *Φαστία* (*δίκαια*) (*I.Cret.* iv 64 (C5e)), legal procedures for citizens. Male citizens belonged to *hetaireiai* (*I.Cret.* iv 42B.11–14 (C5f), 72.x.37–39; cf. *ἀπέταιρος*, *infra*). The only civic subdivision attested is the *phyle* (*πυλά*) (*I.Cret.* iv 19, 104 (C7/C6); *I.Cret.* iv 72.vii.40–viii.36 (C5m)). The Gortynian *phylai* appear to have been personal rather than territorial organisations (Jones, *POAG* 224–25). The names of seven *phylai* are attested in the dating formulas of public texts (decrees, magistral dedications, manumissions): (i) *Αἰθαλεῖς* or *Αἰθελεῖς* (*I.Cret.* iv 72.v.5 (C5m); *I.Cret.* iv 142 (C5m/C4e)); (ii) *Αἰνάωνες* (*I.Cret.* iv 196 (C2f)); (iii) *Ἄπ[. . .]υμα[---]* (*I.Cret.* iv 236 (C4s/C3f)); (iv) *Ἀχρήια* (*I.Cret.* iv 186B + 187 (C3l/C2e)); (v) *Ἀδοτολήται* (*I.Cret.* iv 261 (C2s/C1f)); (vi) *Δεκ[---]* (*I.Cret.* iv 171 (C3f)); (vii) *Δυμᾶνες* (*I.Cret.* iv 197 (C2f)). Marriage within the *phyle* was recommended when possible (*I.Cret.* iv 72.vii.40–viii.36 (C5m); cf. Morris (1990)). The *σταρτός*, attested in the Gortyn Law Code (*I.Cret.* iv 72.v.5 (C5m)) and in the treaty of Gortyn and *Rhitten (*I.Cret.* iv 80 (C5e)), may represent a sub-unit of the *phyle*, perhaps the *γένος* (Willetts (1955) 111–13; cf. Guarducci (1950) 159, 185; Jones, *POAG* 225–26; *Nomima* 17). Terms for various categories of free non-citizens or that attest the presence of free non-citizens in the *polis* include (i) *κσένιος/κσήνιος* (*κόσμος*) (*I.Cret.* iv 14g–p.1–2 (C6), 30 (C6), 78 (C5e), 72.xi.16–17 (C5m)), official responsible for foreigners; *κσενεῖαι δίκαια* (*I.Cret.* iv 80 (C5e)), suits pertaining to foreigners; (iii) *ὑπόβουκος* (*I.Cret.* i.xvi.1 (C3l)), citizen of a dependent *polis* of Gortyn (Perlman (1996) 239–42); (iv) *ἀπέταιρος* (*I.Cret.* iv 72.ii.5 (C5m), 84 (C5)), a free man denied citizen status—bastard, disenfranchised citizen *vel sim.* (Willetts (1967) 103–9; Lévy (1997) 26–28); (v) *ἀπελεύ[θερο---]* (*I.Cret.* iv 78 (C5e)), manumitted slave (Guarducci (1950) 181; Chaniotis (1996) 162–63; cf. van

Effenterre and van Effenterre (1985) 187–88; *Nomima* 1 16: ἀπελευ[σαμένον --] *vel sim.* (“expatriate”). The terms δῶλος and Φοικεύς/Φοικέα (e.g. *I.Cret.* iv 72 *passim*) designate categories of the unfree (Lévy (1997) 30–40).

The public enactments of Gortyn use the collective city-ethnic οἱ Γορτύνιοι (e.g. θιοί. τὰδ’ ἔφαδε τοῖς Γορτυνίοις πασιπιδονσ[ι], *I.Cret.* iv 78 (C5e)) and the term πόλις (e.g. [τὰδ’ ἔφαδ]ε τᾶι πόλι[ψαφίδδονσι or ψαφίξανσι], *I.Cret.* iv 378C (C3)) to refer to the assembly. The legislative function of the assembly is attested first in C5e: τὰδ’ ἔφαδε τοῖς Γορτυνίοις πασιπιδονσ[ι] (*I.Cret.* iv 78). The term πλεθὺς may refer to the assembly in an early law or decree (*I.Cret.* iv 87 (C5m); *Nomima* 1 97). A quasi-judicial role as corporate witness is suggested by the requirement that both adoptions and the renunciation of adoptions be declared in the agora when the citizens are assembled, καταφελμένον τῶμ πολιατᾶν (*I.Cret.* iv 72.x.35, xi.14 (C5m)). The *boule* is not securely attested at Gortyn. *ΕΣΒΟΛΑΝ* occurs in an Archaic law and has been interpreted as either ἐς βολάν (“to the council) or ἐκβολή (“ejection, divorce”) (*I.Cret.* iv 23.4 (C6l); Bile (1988) 156 n. 356).

One member of the annual board of κόσμοι (also ῥόσμος/κόρμος) was eponymous (e.g. *I.Cret.* iv 72.v.6 (C5m), 142 (C5m/C4e), 236 (C4s/C3f)). The size of the board of κόσμοι is not known (cf. *I.Cret.* iv 259 (C2f): ten κόσμοι plus a *ιαροργός*). The kosmate was organised by tribe (*I.Cret.* iv 72.v.6 (C5m), 236 (C4s/C3f)). An Archaic law on iteration restricted service to once every three years (*I.Cret.* iv 14g–p (C6)). There is no reason to conclude that the κσένιος κόσμος (“kosmos for non-citizens”) was a member of the board of κόσμοι (*I.Cret.* iv 14g–p (C6), 30 (C5e), 78 (C5e), 79 (C5m)). Iteration was restricted to once every five years (*I.Cret.* iv 14g–p2 (C6)), and a special “recorder”, the *μνάμων* ὁ τῶ κσενίω, was attached to the office (*I.Cret.* iv 72.xi.6–23 (C5m)). Other public officials attested in the early inscriptions from Gortyn include (i) τίτας (*I.Cret.* iv 15a–b (C7l), 14g–p (C6), 78 (C5e), 79 (C5m)), “magistrate who fines” or “comptroller” (Bile (1988) 327). The term occurs in the plural in two inscriptions (*I.Cret.* iv 78 (C5e), 79 (C5m)). They were chiefly responsible for the collection of fines assessed by the *polis* against private individuals (*I.Cret.* iv 78 (C5e)) and officials (*I.Cret.* iv 79 (C5m)). (ii) γνόμων, “supervisor” *vel sim.* (*Nomima* 1 82) or “councillor” (Bile (1988) 339). Iteration was restricted to once every ten years (*I.Cret.* iv 14g–p (C6)). (iii) ἐσπράτται (*I.Cret.* iv 75D (C5m), 87 (C5m), 91 (C5m)), “collectors of fines”. The term is associated with the verb πράζω, “to pay” (Bile (1988) 327; *Nomima* 1 97), and occurs

only in the plural in conjunction with *δικασταί*. They seem to have been responsible primarily for the collection of fines assessed in judicial proceedings. A special *μνάμων τῶν ἐσπραττᾶν* was attached to the office (*I.Cret.* iv 87 (C5m)). (iv) ὁ ἐπόττας (*I.Cret.* iv 84 (C5)), “overseer”; “inspector”? (Guarducci (1950) 193). The function of this official is not known (Bile (1988) 331 n. 54: fiduciary official?). (v) καρποδαῖσται (*I.Cret.* iv 77 (C5e)) were probably responsible for the collection and redistribution of produce tithed for the *syssitia* (Guarducci (1950) 179; Willetts (1967); Bile (1988) 323; *Nomima* 1 49). (vi) *πρέγιστος*. The term occurs in two agreements of Gortyn and dependent communities: (1) for the dependent *polis* of *Rhitten (*I.Cret.* iv 80 (C5e)) and (2) for “those living on Kaudos” (*I.Cret.* iv 184 + *SEG* 23 589 (C3l/C2e)); for the political status of this community, see Chaniotis (1996) 411–17). This suggests that the Gortynian *πρέγιστος* was an official involved in the administration of dependent communities (cf. Guarducci (1950) 186–87; Chaniotis (1996) 419–20). (vii) *σταρταγέτας* (*I.Cret.* iv 80 (C5e)), “leader of the *startos*” (*supra*) or military commander? (Guarducci (1950) 185). (viii) *δικαστάς*. The term does not occur in the earliest laws of Gortyn (see Perlman (2001) 197), but is common in the inscriptions of C5 (*I.Cret.* iv 41 (C5f), 42B (C5f), 45 (C5f), 72 *passim* (C5m), 76 (C5m), 106 (C5m)). An unknown number of *δικασταί*, at least some of whom enjoyed specialised duties, served the *polis* (e.g. the *δικαστάς* for the *hetaireiai* and for cases concerning security deposits (*I.Cret.* iv 42B (C5f)); the *ὄρπανοδικασταί* (*I.Cret.* iv 72.xii.6–19 (C5m)); cf. *μολὲν ὁπὲ κ’ ἐπιβάλλει, πὰρ τῶι δικαστᾶι ἔ Φεκάστο ἔγρατται* (*I.Cret.* iv 72.vi.25–31, ix.18–24 (C5m)). The simple term always occurs in the singular (cf. the compound *ὄρπανοδικασταί*, *I.Cret.* iv 72.xii.6–19 (C5m)), and it seems likely that all cases were heard by a single *δικαστάς*. The *δικαστάς* either “applied the law”, *δικάζειω* (e.g. *I.Cret.* iv 72.iii.5–9, v.28–39, ix.43–54 (C5m)), or “determined the facts under oath”, *ὀμνύντα κρίνεν* (e.g. *I.Cret.* iv 42B (C5f), 72.ix.24–40, xi.46–55 (C5m)). Both procedures are described in a law from the Gortyn Law Code (*I.Cret.* iv 72.xi.26–31 (C5m)). A *μνάμων* sometimes assisted the *δικαστάς* when he “applied the law”. Decisions of the *δικαστάς* could not be appealed. Nothing is known about the qualifications, appointment, tenure or pay of the *δικασταί*. Citizenship may not have been a requirement for the *μνάμων* (*I.Cret.* iv 72.ix.24–40 (C5m); cf. Lévy (1997) 26). For the *δικαστάς*, see in general Willetts (1967) 127–34; Bile (1988) 348–51.

The legendary founder of Gortyn was Γόρτυς, the son of either Tegeates according to the Tegeans or Rhadamanthys

according to the Cretans (Paus. 8.53.4–5). Conon preserved a tradition that in the third generation after the conquest of Amyklai by Sparta (C8e), the Spartans Pollis and Delphos led a group of Imbrian and Lemnian immigrants from Lakonian Amyklai to Gortyn, where they settled together with some Cretan *perioikoi* (Conon (*FGrHist* 26) fr. 1.xxxv; Malkin (1994) 111–13). An early association with Sparta is suggested as well by the tradition concerning the Gortynian poet and lawgiver Thaletas, who taught Lykourgos and resided in Sparta for some time (Paus. 1.14.4; doubted by Arist. *Pol.* 2.9, 1274^a25–31). Plato's Cretan, Kleinias, however, identified the Gortynians as Argive in origin (Pl. *Leg.* 4.708A; Büchner (1912) 1667). For the ethnic composition of the early *polis*, see Perlman (2000).

The early inscriptions of Gortyn tell us very little about its foreign relations. According to Strabo, Gortyn and Lyktos temporarily superseded Knosos as the foremost cities of Crete (Strabo 10.4.7). If Strabo's account is historical, a likely time for the emergence of Gortyn as a leading power on the island is C6–C5 (Hood and Smyth (1981) 18–19). During the Archaic and Classical periods Gortyn may have formulated agreements with four *poleis* whose territories bordered the Mesara: (i) with Lebena (*I.Cret.* iv 63 (C6l/C5e)); (ii) with the dependent *polis* *Rhitten (*I.Cret.* iv 80 (C5e)); (iii) a *sympoliteia* or alliance with Phaistos (coins, *infra*); (iv) a *sympoliteia* or alliance with Sybrita? (coins, *infra*). For aspects of Gortyn's consolidation of the Mesara, see Perlman (1996) 258–70; Cucuzza (1997). The Cretan *polis* Polichne, located west of Kydonia (at Vryses?), may have been an ally of Gortyn. In 429 the Gortynian *Nukias*, *proxenos* of Athens, contriving to support Polichne, arranged for an Athenian naval squadron to attack Kydonia (Thuc. 2.85; Figueira (1988) 538–42; cf. Sekunda (2000) 327–37: *Polichnitai* was the name of a federation of small non-Dorian communities in west Crete). During the grain crisis of the 320s, Gortyn received 10,000 *medimnoi* of grain from Kyrene (*SEG* 9 2).

Gortyn struck coins on the Aiginetan standard from c.470 (Price (1981)). Types on the earliest staters (C5f–C4m) attest a *sympoliteia* or alliance with Phaistos (Le Rider (1966) 161). Types: *obv.* Europa riding the bull, facing r.; *rev.* lion's scalp (Le Rider (1966) pl. XI.8–19). The beginning of local coinage at Gortyn (staters and drachms with same types as above) is indicated by the legend (*rev.*) *ΓΟΡΤΥΝΟΣΤΟΠΑΙΜΑ* (*Γόρτυνος τὸ παίμα*) written retrograde in the epichoric alphabet (Svoronos (1890) pl. XII.21, 28) and somewhat later *ΓΟΡΤΥΝΙΟΝ* (Le Rider (1966) pl. XI.11–13). The earliest drachms, hemidrachms and obols have *obv.* recumbent

bull; *rev.* lion's scalp; legend (drachm *obv.*): *ΓΟΡΤΥΝΣ* written retrograde in the epichoric alphabet (Svoronos (1890) pl. XII.27–33; *SNG Cop. Aeg. Isl.* 439). Staters of C4s (c.360/350–300) have *obv.* female figure (Le Rider (1966) 14 n. 1, Europa or Britomartis?) seated in a tree; *rev.* standing bull; legend: *ΓΟΡΤΥΝΙΟΝ*, sometimes retrograde in the epichoric alphabet (Le Rider (1966) pls. XI.20–XVIII.18). Drachms and obols of this period (C4s) have: *obv.* head of a bull; *rev.* head of Europa? (Le Rider (1966) pls. XIX.11–26, XX.13–14). Sybrita minted coins with the same types in C4s and may have been joined with Gortyn in a *sympoliteia* or alliance (Le Rider (1966) 160–62). *SNG Cop. Aeg. Isl.* 438–45.

961. Herakleion (Herakleiotas) Map 60. Lat. 35.20, long. 25.10. Size of territory: 3 (Hellenistic period). Type: C. The toponym is *Ἡράκλειον, τό* (Strabo 10.4.7). The city-ethnic is *Ἡρακλειώτας* (*Milet.* 1.3 140.37 (c.259–250); *SB* 4272 (C3f)).

The earliest reference to Herakleion as a *polis* in the political sense occurs in a C3m agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτηι* (*Milet.* 1.3 140.1, 37). The *Stadiasmus* 348 refers to Herakleion as a *polis* in the urban sense, *Ἡράκλειον . . . πόλις ἐστίν. ἔχει λιμένα καὶ ὕδωρ*. The ancient city was located under the modern one; the combined evidence from chance finds and salvage excavations indicates the existence of a settlement there already in the Classical period, although continuous occupation since Antiquity has made it impossible to reconstruct its organisation (for remains from the Classical period, see e.g. Vallianou (1987); cf. *Barr.*, H only). The traces of Classical habitation and the fact that there is no doubt that Herakleion was a *polis* in the political sense during the Hellenistic period recommend its inclusion in the Inventory as a possible *polis* (type C).

For Strabo, Herakleion was the harbour of Knosos, *ἔχει δ' ἐπίνειον τὸ Ἡράκλειον ἢ Κνωσσός* (Strabo 10.4.7).

The collective use of the city-ethnic is attested externally in the C3m agreement between Knosos and Miletos (*Milet.* 1.3 140.37). For the individual use of the city-ethnic there is the graffito of Φιλίνος *Ἡρακλειώτας* (*SB* 4272 (C3f)) and the proxeny decree of Aptara for [Δα]μάτριος καὶ Ὀρβόννας *Εὐφρονος* [καὶ] *Νέαρχος* *Εὐνοΐδα* καὶ *Φίλων* *Παρμεν*[--- *Ἡρακλ*] *ειώται* (*I.Cret.* ii.iii.11C (C2)).

962. Hierapytna (Hierapytnios) Map 60. Lat. 35.00, long. 25.45. Size of territory: 4. Type: B. The toponym is *Ἱεράπυτνα, ἡ* (*I.Cret.* iii.iii.1B (C3l); *IG* xii.5 840 (C3m)). Stephanos records three earlier names: *ἡ πρότερον Κύρβα*,

εἶτα Πύτνα, εἶτα Κάμιρος (Steph. Byz. 328.4–5). For Κάμιρος, cf. the tribal name *Καμιρίς infra*. The city-ethnic is Ἱεραπύτνιος (*I.Cret.* III.iii.1A (C3s), iv.3 (C3e)).

Probably the earliest ancient sources to call Hierapytna a *polis* in the political sense are the decree of *isopoliteia* with Arkades (*I.Cret.* III.iii.1B 10 (C3l)) and the alliance between Hierapytna and Rhodos (*I.Cret.* III.iii.3A (C3l)). Hierapytna is included in the Inventory as a probable *polis* (type B) largely on the strength of its mint, which began to strike coins in C4f (*infra*).

The collective and internal use of the city-ethnic occurs in the alliance with Antigonos Doson (*I.Cret.* III.iii.1A (C3s)). For the individual use of the city-ethnic there is the decree of Lilaia in honour of Εὐρυκάρτης Ἀρισταγόρου Ἱεραπύτνιος (*FD* III.4 134 (C3l)).

The *polis*-town of Hierapytna was more than likely located in the vicinity of the modern city of Ierapetra. To date almost nothing from the Archaic and Classical periods has come to light (for a description of the Archaic and Classical material from these periods on display in the Archaeological Museum of Ierapetra, see Papadakis (1986) 77–80). On current evidence it would seem that Hierapytna was a foundation of C5f at the earliest. Several public buildings and open-air meeting places are attested epigraphically: *prytaneion* (*I.Cret.* III.iii.3C (C3l/C2e)); *χορός* (*I.Cret.* III.iv.1 (C3e)); τὸ ἀνδρῆιον (*I.Cret.* III.iii.4 (C3l/C2e)). In so far as these buildings/open-air meeting places are attested at other Cretan *poleis* during the Archaic and Classical periods (*prytaneion*: see Lato (no. 971); *choros*: see *Eltynia (no. 958) *supra*; Lyktos (no. 974); *andreion*: see Axos (no. 950), Datala (no. 954) and *Eltynia, no. 958), it is possible that also at Hierapytna (no. 962) they were pre-Hellenistic.

The protecting deity of the *polis* was probably Athene Polias, in whose sanctuary public enactments were displayed (*I.Cret.* III.iii.3C, ll. 9–10 (C3l/C2e), 4 ll. 78–79 (C3l/C2e), 5 ll. 5–6 (C2)).

Strabo indicates that the *polis* of Larisa (see Introduction) joined with Hierapytna in a synoecism (Strabo 9.5.19). Larisa has been identified with the substantial LMIII C-Classical settlement on Prophitis Elias (Watrous and Blitzer (1995)). Surface remains indicate that this settlement was abandoned by c.325. If the identification is correct, the settlement history of Larisa suggests that her synoecism with Hierapytna occurred late in the Classical period. The borders of Hierapytna are attested only in documents of the Hellenistic period (Hierapytna and Priansos: *I.Cret.* IV 174 ll. 30–32 (C3l/C2e); Hierapytna and Praisos: *I.Cret.* III.iv.9 ll. 65–67 (rC3l/C2f)). At some time before C2l Hierapytna may

have made the Archaic and Classical settlement at Oleros (see Introduction) a dependent *polis* whose territory either lay within or shared a border with the territory of Hierapytna (Perlman (1995b) 131–35, 138–39).

The names of three tribes, attested in the dating formulas of C2 magistral dedications but likely to be early and so included here, have been identified as Hierapytnian: *Δυμᾶνες* (*I.Cret.* III.iii.9), *Πάμφυλοι* (*I.Cret.* III.v.1 with Guarducci (1942) 133, from Oleros) and *Καμιρίς* (*I.Cret.* III.ii.1 with Jones, *POAG* 231: an unusual feminine adjectival form in -*ις* perhaps comprising a stratum of the population claiming descent from Rhodian colonists; from the sanctuary of Zeus Diktaios at Palaikastro).

Hierapytna struck coins (staters) on the Aiginetan standard from C4f. Types: *obv.* IP AIT Y between the limbs of a *triskeles*; *rev.* boar protome (Svoronos (1890) pl. XVII.6, with Head, *HN*² 468). Later issues (c.330–280/270) have *obv.* head of Zeus; *rev.* palm tree and eagle; legend: *IEPA* (Svoronos (1890) pl. XVII.7, with Le Rider (1966) 190, 197–98).

963. Hyrtakina (Hyrtakinios) Map 60. Lat. 35.15, long. 23.45. Size of territory: 2. Type: [A]. The toponym is preserved in literary sources, where it is variously spelled Ὑρτακίνα (Ps.-Skylax 47), Ὑρτακός (Steph. Byz. 652.20) and Ὑρτακῖνος (Steph. Byz. 652.20). The city-ethnic is either Ὑρτακῖνιος (*SEG* 9 2 (C4s); coins, C4s–C3f, *infra*; *I.Cret.* II.xv.2 (C2f)) or Ὑρτακῖνος (*Milet.* I.3 38.frg. II, 5–6 (C3s)).

In Ps.-Skylax 47, where *polis* is used in the urban sense, Hyrtakina is one of the toponyms listed under the heading πόλεις πολλὰ ἐν Κρήτη. The earliest explicit reference to Hyrtakina as a *polis*, and here in the political sense, occurs in the renewal of *asylia* for Teos (*I.Cret.* II.xv.2 (C2m)). There is little doubt that Hyrtakina was a *polis* in the political sense during the late Classical period. The evidence for this is: (i) striking coins as early as c.330 (*infra*); (ii) forming an alliance with Lisos in C4s/C3s (coins, see *infra*); (iii) inclusion among the communities given grain by Kyrene in the 320s (*SEG* 9 2.49); (iv) membership in the C4l–C3 federation of the *Oreioi* (van Effenterre (1948a) 119–27; Chaniotis (1996) 106–8, 421–22; cf. Sekunda (2000) 337–38: league founded C3f).

The collective use of the city-ethnic is attested internally on the coins (*infra*), and externally in the list of recipients of grain from Kyrene during the grain crisis of the 320s (*SEG* 9 2.49). For the individual use of the city-ethnic there is the grave *stèle* of Διόδοτος Πάτρωνος Ὑρτακῖνος from Sidon (*Rev. Bib.* (1904) 552 (C2)).

The *polis* town of Hyrtakina occupied a fortified hill (Kastri), but archaeological investigation of the settlement has been minimal. On current evidence the principal phases of occupation date to the Classical and Hellenistic periods. Early explorers describe two sectors of the city in some detail: (i) along the southern sector of the fortification wall, where there is a gate with a road which can be traced from the south (perhaps from Lisos, Niniou-Kindeli (1990)) leading into the city; and (ii) inside the city to the west near the fortification wall, where there is a large building and a public? cistern (Savignoni and de Sanctis (1901) 408–24). An open-air sanctuary of Pan (C4–C3) was located at the eastern edge of the acropolis (Theophanides (1942–44b)). The late Classical or Hellenistic circuit wall is built of polygonal masonry (Savignoni and de Sanctis (1901) 408–24). Tombs (C5–C4) are numerous on the southern and northern slopes of the acropolis and on the hill Ag. Ioannis to the east. The existence of a *prytaneion* called the *Δελφίνιον* may be inferred from the offer of *ξενία ἐπὶ τὰν κοινὰν ἐστίαν ἐς τὸ Δελφίνιον* (*I.Cret.* II.XV.2 (C2m)). If so, in so far as the *prytaneion* is attested elsewhere on Crete during the Classical period (see Lato (no. 971)), it is possible that also at Hyrtakina it was pre-Hellenistic.

Hyrtakina struck coins (drachms) during the period c.330–280/270. Types: *obv.* Goat's head, legend: *YP, YPTA* or *YPTAKINIΩΝ*; *rev.* bee (Svoronos (1890) pl. XVIII.7–11, with Le Rider (1966) 197–98). In C4s–C3f (cf. Sekunda (2000) 337, c.C3m), Lisos and Hyrtakina produced an alliance coinage of small denominations in silver and gold. Types: *obv./rev.* dove (or eagle?), or dolphin, or star; legend (*obv./rev.*): *Α-Υ, ΥΡ-ΑΙ* or *ΥΡ-ΑΙΣΙΩΝ* (Svoronos (1890) pl. XVIII.12–20; *SNG Cop. Aeg.Isl.* 469).

964. Istron (Istronios) Map 60. Lat. 35.10, long. 27.15. Size of territory: 2. Type: C. The toponym is *Ἰστρων* (*I.Cret.* I.xiv.1 (C3l)). The city-ethnic is *Ἰστρώνιος* (*Milet.* I.3 140.38 (c.259–250); *IG XII.5 suppl.* 304 (C3m)).

The earliest reference to Istron as a *polis* in the political sense occurs in an agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* I.3 140.1, 38 (c.259–250)). Istron was located in the vicinity of the modern village of Kalo Khorio on Mirabello Bay. The ancient settlement on the small promontory of Nisi Pandeileimon seems the most likely candidate for its urban centre. The surface remains are Archaic and later (Hayden *et al.* (1992) 298, 330–32, 343/NP1; cf. *Barr.* H and later). This and the fact that there is no doubt that Istron was a *polis* in the political sense during the Hellenistic

period recommend its inclusion in the Inventory as a possible *polis* (type C).

The collective use of the city-ethnic is attested externally in the agreement between Knosos and Miletos (*Milet.* I.3 140.38 (c.259–250)) and in an *asylia* decree for Teos (*I.Cret.* I.xiv.1 (C3l)). For the individual use of the city-ethnic there is the proxeny? decree for *Ἀπολλώνιος Νίκωνος Ἰστρώνιος* (*IG XII.5 suppl.* 304 (C3m)).

The largest buildings on Nisi Pandeileimon are on the south-eastern knob of the promontory and on its southern slopes. A stretch of circuit wall (c.1.5 m thick) is preserved just above sea level on the north-western side of the promontory (Hayden *et al.* (1992) 330–32, 343/NP1). In treaties of C2l the eastern border of Lato seems to encompass the territory of ancient Istron, suggesting that by then the *polis* had been absorbed by Lato (Faure (1967) 111; van Effenterre and Bougrat (1969) 38; Hayden *et al.* (1992) 299 with fig. 3).

The protecting deity of Istron was Athene Polias, in whose sanctuary the public enactments of the *polis* were displayed (*I.Cret.* I.xiv.1 (C3l)).

965. Itanos (Itanios) Map 60. Lat. 35.15, long. 26.15. Size of territory: 3. Type: A. The toponym is *Ἴτανος, ὁ* (Hdt. 4.151.2). The city-ethnic is *Ἴτάνιος* (*I.Cret.* III.vii.3 (C6?); coins, C4s–C3f, *infra*).

The earliest reference to Itanos as a *polis* in the urban sense occurs in Herodotos' narrative of the foundation of Kyrene (Hdt. 4.151.2 (rC7)). Messengers from Thera arrived *ἐς Ἴτανον πόλιν*. The earliest uses of the term in its political sense occur in Hellenistic inscriptions (*I.Cret.* III.iv.2–3 (c.266/5–263/2), 8 (C3f)).

The city-ethnic *ITANION* is attested in an Archaic rupestral inscription written *boustrophedon* in the epichoric alphabet (*I.Cret.* III.vii.3 (C6?)). It is unclear whether the use is individual or collective. The first certain example of the collective use of the city-ethnic internally occurs on the coins (C4s–C3f, *infra*) and externally in an Archaic law of Lyktos (*SEG* 35 991A (C6l); cf. Faure (1993) 69–70). For the individual use of the city-ethnic there is the signature of the sculptor *Δαμοκράτης Ἀριστομήδους Ἴτάνιος* (*I.Cret.* III.iii.31 (C3/C2)).

Apart from a possible reference to hostilities with Lyktos (*SEG* 35 991A (C6l); cf. Faure (1993) 69–70), all evidence for the foreign relations of Itanos is Hellenistic.

Apart from the story of the participation of the Itanian purple-fisher, Korobios, in Thera's colonisation of Kyrene (Hdt. 4.151–53 (rC7)) and the possible reference to hostilities

with Lyktos (*supra*), evidence for the foreign relations of Itanos is Hellenistic. The presence of pottery from Corinth (C7e–C6e), Attika (C6f–C4, but nothing from c.470–420), Ionia, Paros(?), Knosos (Orientalising and Hellenistic), Eleutherna (Orientalising and Hellenistic) and Aphrati attests Itanos' participation in intra-island and Mediterranean trading networks, but is not sufficient to demonstrate direct relations with any one of these places (Greco *et al.* (1999); Tsingarida (2001)).

The Itanians distinguished between their territory on Crete itself (χώρα) and several small islands which they claimed, the most important of which was Λεύκη (probably modern Kouphonisi) (*I.Cret.* III.iv.8 ll. 9–11 (C3f), 9 ll. 37–39 and *passim* (C2l)). The Magnesians' arbitration of the dispute between Itanos and Hierapytna describes the southern border of Itanos (*I.Cret.* III.iv.9 ll. 59–67 (C2l)). The sanctuary of Zeus Diktaios at Palaikastro was located near this border (Chaniotis (1988); cf. Perlman (1995a)). For the extent of the territory of Itanos (from the sanctuary of Zeus Diktaios in the south to the sanctuary of Athena Samonia on Cape Sideros to the north), see Kalpaxis *et al.* (1995).

The *polis* town of Itanos was built on two small acropolises, the eastern acropolis (altitude 24.35 m) and the western acropolis (altitude 17.45 m). A large hill (altitude 61 m) delimits the plain of Itanos to the south. Public buildings are likely to have been located on the two small acropolises. The east acropolis may have been fortified. A monumental terrace on the west acropolis was probably built to accommodate a temple. A rectangular basin of roughly 80–90 m (east–west) by 50–60 m (north–south), possibly an ancient harbour, has been identified immediately to the south of the two acropolises. The agora may have been just to the north of the harbour more or less between the two acropolises. The southern hill was protected by a fortification wall with towers. The western line of this fortification may have extended north beyond the hill to defend the harbour and the two acropolises. The *polis* town is estimated to have covered roughly 40 ha. A large, roughly trapezoidal building with a central hearth in the main room, tentatively identified as an *andreion*, was built in the Archaic period (abandoned C5f) in the area of a Geometric cemetery on a low hill to the north of the acropolises (Viviers (2001)). During the late Classical period a cemetery was established on a terrace east of the Archaic building. Apart from the Archaic building, all other walls in the *polis* town (fortification, building and terrace) appear to be Hellenistic and later, but pottery from the Archaic and Classical periods is reported from the east acropolis, the Hellenistic and later residential quarter in

the saddle between the two akropolises, and the rural sanctuary and temple (of Demeter?) at Βάμιες. See Gallett de Santerre (1951); Deshayes (1951); Kalpaxis *et al.* (1995); Greco *et al.* (1996), (1997), (1998a), (1998b), (1999).

Itanos began to strike coins on the Aiginetan standard c.380. Subsequent issues are sporadic (Le Rider (1966) 196; Kraay (1976) 53–54). The earliest coins (staters and obols, c.380–320) have *obv.* marine deity; *rev.* star (Svoronos (1890) pl. XVIII.21–36, with Le Rider (1966) 196; *SNG Cop. Aeg. Isl.* 470–71), later opposing sea monsters; legend: *ITA* (Svoronos (1890) pl. XVIII.37). Itanos continued to mint this latter type (*obv.* marine deity; *rev.* opposing sea monsters; legend: *ITANION* or *ITANIΩN*) during the period c.320–280/270 (Svoronos (1890) pl. XIX.1–9, with Le Rider (1966) 196) and introduced a new series with *obv.* head of Athena; *rev.* eagle or star; legend: *ITANION/ITANIΩN* (Svoronos (1890) pl. XIX.10–24, with Le Rider (1966) 196).

966. Keraia (Keraïtas) Map 60. Lat. 35.25, long. 24.00. Size of territory: 1. Type: C. The toponym is *Κεραία* (BCH 45 (1921) III.111 (c.230–210)). The city-ethnic is *Κεραϊτας* (coins, *infra*); cf. *Κεραϊται* (*I.Magnesia* 21 (C2e)), *Κερέται* (Polyb. 4.53.6), *Κερεάτης* (Steph. Byz. 167.4–5).

No ancient source identifies Keraia as a *polis*. But there is no question that Keraia was a *polis* in the political sense during the Hellenistic period (Polyb. 4.55.2; *I.Magnesia* 21 (C2e); *I.Cret.* IV 179 (c.183)). Keraia is included in the Inventory as a probable *polis* (type B) on the strength of its mint, which may have begun production as early as c.330 (*infra*).

The collective use of the city-ethnic is attested internally on the coins (*infra*), and externally in the alliance of Keraia and the members of the Cretan *koïnon* with Eumenes II (*I.Cret.* IV 179 (c.183)). For the individual use there is the proxeny decree of Gortyn for *Βωλαγόρας Νεοκούδιος Κεραϊτας* (*I.Cret.* IV 206K (C3/C2)).

The remains of the *polis* town at Meskla occupied at least two and possibly three hills: (i) *Τειχίδια* with stretches of fortification walls built of large blocks without mortar; (ii) *Πουλέ* with a C4 rampart and a bastion; and (iii) *Ζαργέ* or *Ζαγροπαπούρα* with Roman villas. Surface remains date from the Archaic through the Byzantine period. The southern frontier of Keraia was defended by a guard-post at *Βουσσαλόπορος*. A second guard-post was located to the south of Meskla at *Ἑλληνικό* (Faure (1962) 49–54).

Keraia struck coins (drachms) during the period c.330–280/270. Types: *obv.* head of Artemis wearing a crown of goat horns; *rev.* heads of a javeline and an arrow; legend:

KEPAITAN (Svoronos (1890) pl. IV.16–17, with Le Rider (1966) 197–98; *SNG Cop. Aeg. Isl.* 359).

967. Knosos (Knosios) Map 60. Lat. 35.20, long. 25.10. Size of territory: 4. Type: A. The toponym is *Κνωσός*, ἡ (Hom. *Il.* 2.646; Pl. *Leg.* 753A), in Linear B, ko-no-so (McArthur (1993) 21–23). According to Strabo, Knosos was formerly called *Καίρατος*, the ancient name (now revived) of the river and river valley wherein Knosos is located (Strabo 10.4.8). The city-ethnic is *Κνώσιος* (coins, C4f, see *infra*; *SEG* 9 2.31, 59 (C4s)). Literary sources use both these and geminated forms of the toponym (*Κνωσός*, Diod. 16.62.3) and the city-ethnic (*Κνώσιος*, Hdt. 3.122.2). Geminated forms do not appear in the inscriptions.

Knosos is called a *polis* in the political sense in the agreement of Knosos, Tyllisos and Argos which provides for the division of booty *αἰ δὲ συμπλέονες πόλεις... ἔλοιεν* (ML 42B.31–32 (C5m) = *Nomima* 1 54.11). It is most likely that Knosos should be understood as one of the *poleis*. In literary sources Knosos is called a *polis* both in the political sense (Pl. *Leg.* 702C, 752E) and in the urban sense (*Hymn. Hom. Ap.* 477; Bacchyl. 1.123, in both cases in a mythological context). The phrase *Κνωσία παῖτρα* occurs in Pind. *Ol.* 12.16.

The collective use of the city-ethnic is attested internally on the coins (*infra*) and externally in the agreement of Knosos, Tyllisos and Argos (ML 42B.8 (C5m)), in the proxeny decree of Mausolos and Artemisia for the Knosioi (*I.Labraunda* 40 (C4m)), and in the list of recipients of grain from Kyrene during the grain crisis of the 320s (*SEG* 9 2.31, 59). For the individual use there is the sculptor *Ἀμφίων Ἀκέστορος Κνώσιος* who made the statue of Battos and Libya riding in a chariot which Pausanias saw at Delphi (Paus. 10.15.7 (rC5)). The individual use is not attested epigraphically before C4 (*Γλυκέρα Ἀντιόχο Κνωσίο*, *IG* 11² 9044 (C4f)).

Very little is known about the Archaic and Classical (pre-C4m) history of Knosos. According to Strabo, in the time of Homer and for a long while thereafter Knosos was the most illustrious *polis* on Crete. She later lost her leading position to Gortyn and Lyktos, but managed to recover her former status as the metropolis of Crete (Strabo 10.4.7). Pindar indicates that Knosos suffered a period of stasis in C5e, which resulted in the exile or immigration to Himera of the long-distance runner *Ἐργοτέλης Φιλάνορος*, twice victor at the Pythian Games and once at the Olympian (Pind. *Ol.* 12.16 (C5f)). Knosos is not known to have produced other Panhellenic victors, but Knosos and Tyllisos agreed to dedicate jointly at Delphi a tithe of the booty they captured

together (ML 42B.7–10 (C5m)). Knosos and Tyllisos formed an alliance in C5m (ML 42). The assembly of Argos (*τὸ πλῆθος*) served as the mediator in the resolution of disputes between the two *poleis* concerning questions of war and peace (ML 42A.6–17; Merrill (1991); cf. ML: the text implies a federal structure with a federal assembly called *τὸ πλῆθος* which decided questions of war and peace; members included Knosos, Tyllisos and Argos, and perhaps other states as well (*συμπλέονες πόλεις*, ML 42B.31–32); cf. Gschnitzer (1958) 44–47: ML 42 is an alliance between Knosos and Argos; Tyllisos is a dependency of Argos). The border between Knosos and Tyllisos (*ὄροι τᾶς γᾶς*) is described in this alliance (26–29, *infra*), and regulations concerning property and trade are stipulated: (i) both *poleis* are prohibited from absorbing territory (*χόρα*) belonging to the other (25–26); (ii) *Knosioi* are prohibited from owning land in Tyllisos (*μὲ ἴπιπασκέσθω*), although a *Tyllisios* may own land in Knosos (23–25); (iii) export from Tyllisos to Knosos and from Knosos to Tyllisos is tax-free; (iv) *Tyllisioi* pay the same taxes as citizens of Knosos for trans-shipment from Knosos (11–14). After a gap in the historical record of almost a century, evidence for the history of Knosos resumes in C4m, when Mausolos and Artemisia issue a proxeny decree for the *Knosioi* (*I.Labraunda* 40 (c.357)), and Knosos hires mercenaries of Phalaikos for a campaign against Lyktos (Diod. 16.62 (346)), and honours the Athenians with a gold crown (*IG* 11² 1443.11.121–22 (345/4)).

The *κόσμοι* appear to have been the chief magistrates of the *polis* already in the Classical period. They were responsible for providing foreign envoys with *ξένια*. The *βολά* oversaw the *κόσμοι* (ML 42B.40–42 (C5m)). Although the *phylai* appear only in Hellenistic sources, they are likely to be early and so are mentioned here. Five tribal names are attested: (i) *Ἀρχήια* or *Ἀρχεία* (*I.Cret.* 1.viii.10 (C2e); *SEG* 33 729 (C1); cf. the sanctuary of the hero *Ἀρχός* at Archanes, ML 42B.27, 35–36 (C5m)); (ii) *Πάμφυλοι* (*I.Cret.* 1v 181 (C2f)); (iii) *E[---c.8---*] (*I.Cret.* 1v 182 (C2f)); (iv) *Αἰθαλεῖς* (*I.Cret.* 1v 197 (C2)); (v) *Ἰλλεῖς* (*SEG* 33 728 (C1)).

The territory of Knosos is called (in Argolic) *τὰ Κνωσία γὰ* (ML 42A.21–22 (C5m)). If the river mentioned in the C5m description of the border of Knosos and Tyllisos is the Platyperama (ML 42B.28), the territory of Knosos reached the north coast between Herakleion and Apellonia. To the east her territory encompassed the sanctuary of Zeus Thenatas at Amnisos (Chaniotis (1992)), while to the south it extended towards modern Archanes (ML 42B.2–4; see Huxley (1994) 126–27 for a brief discussion of the territory; cf. also *I.Cret.* 1.ix.1B.52 for a C3 reference to the borders

(*οὐρεία*) of Knosos, and *I.Cret.* iv 182 and Polyb. 22.15.1 for the C2f border of Knosos and Gortyn). Strabo identifies Herakleion and earlier (in the time of Minos) Amnisos as the harbours (*ἐπιλείων*) of Knosos (Strabo 10.4.7–8). The so-called cave of Eleithyia was located within the territory of Knosos (see e.g. Paus. 1.18.5; Strabo 10.4.8).

The *polis* town of Knosos seems to have enjoyed nearly continuous habitation from prehistoric times and always to have been settled as an urban centre with the important exception of the period c.630–525, when on current evidence the settlement appears to have been largely abandoned (Coldstream (1984); Coldstream and Huxley (1999)). Very little is known about the *polis* town of Archaic and Classical Knosos (for the Archaic and Classical remains within the urban centre of Knosos, see Hood and Smyth (1981); Coldstream and Macdonald (1997); Coldstream (1999), (2000)). According to Strabo, the circuit of the ancient city was 30 stadia (Strabo 10.4.7), but there is no archaeological evidence that a circuit wall protected the *polis* town. For a Classical fort (C4) on Kefala ridge north of the Minoan Palace, see Hood and Boardman (1957). The public centre of the *polis* town is suspected to have been in the region of the Roman Civil Basilica, c.0.5 km to the north-west of the Minoan palace, where architectural blocks bearing the text (painted) of a law were found (*I.Cret.* i.viii.5 (C3)). Three early sanctuaries have been excavated: (i) of Rhea? (C5 and earlier?) above the ruins of the South Propylaion of the Minoan palace (Evans (1928) 3–5; Coldstream (2000) 284–88); (ii) of Demeter (from C8 onwards) south of the Minoan palace on Lower Gipsades Hill (Coldstream (1973)); (iii) of Glaukos? (from c.500) west of the Minoan palace (Callaghan (1978)). Deposits of Archaic (with the C6 gap) and Classical material, but no architecture, have been found in the Stratigraphical Museum excavations (Warren (1984–85)), above the Unexplored Mansion (Sackett (1992) 6–8), to the south-west of the Minoan palace (Coldstream and Macdonald (1997)), and on both sides of the Royal Road (Coldstream (1973)). There is almost no burial evidence from Knosos later than c.630 (Coldstream and Huxley (1999) 294–96).

Knosos struck coins on the Aiginetan standard from c.C5m (Price (1981), c.450–425; Le Rider (1966) 175–80, 195, c.425). The earliest (c.C5m–C4m) coins (stators, drachms, hemidrachms) have *obv.* Minotaur; *rev.* labyrinth (cruciform), or rarely the head of a youth (Svoronos (1890) 66 no. 11: Theseus or Apollo?); obols have *obv.* Minotaur; *rev.* star; legend (on stators only): none at first, later *KNOΣ* written retrograde in the epichoric alphabet (Svoronos (1890) pl.

IV.23–32, with Le Rider (1966) 175; *SNG Cop. Aeg.Isl.* 368). The next series of stators (c.340/330–320) has *obv.* female head (Le Rider (1966) 15 n. 5: Pasiphaï, Britomartis or Ariadne?); *rev.* seated male figure (Zeus or Minos), or a bull's head within the labyrinth; legend: *ΚΝΩΣΙΩΝ*, or in one case *ΜΙΝΩΣ* (Svoronos (1890) pls. IV.33–35, V.1, with Le Rider (1966) 175–76). Stators struck during the period c.320–280/270 have: *obv.* head of Hera; *rev.* labyrinth. Drachms of this period have (i) *obv.* head of Hera; *rev.* labyrinth; (ii) head of Apollo; *rev.* Zeus Nikephoros seated inside the labyrinth. Hemidrachms and obols have *obv.* head of Apollo; *rev.* labyrinth (Svoronos (1890) pls. V.2–22, VI.1–9, 15–16, with Le Rider (1966) 176–80; *SNG Cop. Aeg.Isl.* 369–70, 373).

968. Kydonia (Kydoniatas) Map 60. Lat. 35.30, long. 24.00. Size of territory: 4. Type: A. The toponym is *Κυδωνία*, ἡ (Thuc. 2.85.5; *IG* II² 399 (C4s)), in Linear B, ku-do-ni-ja (McArthur (1993) 21–23). The city-ethnic is *Κυδωνιάτας* (*IG* IV 683 (C5m); Thuc. 2.85.5). On the assertion of Stephanos that *Κυδωνία* was formerly called *Ἀπολλωνία* (Steph. Byz. 390.17), see Guarducci (1939) 105.

The term *πόλις* occurs in a dedication to Apollo, Artemis and Lato from Chania (*SEG* 33 735; cf. *SEG* 40 775 = *CEG* 846 (C4f)). The *polis* in question is probably Kydonia, and the use of the term is probably political. *Polis* in the urban sense is attested in Ephor. fr. 29, in Ps.-Skylax 47 (*πόλις* implied; see Flensted-Jensen and Hansen (1996) 142), and in Diod. 16.63.3 (r343).

The collective use of the city-ethnic is attested internally in abbreviated form on coins C4s–C3e (*infra*), and externally in Thucydides' account of the Athenian expedition to Crete in 429 (Thuc. 2.85.5) and in the list of recipients of grain from Kyrene during the grain crisis of the 320s (*SEG* 9 2.26). For the individual use of the city-ethnic there are the two signatures of sculptors, *Ἀριστοκλῆς Κυδωνιάτης* from Olympia (Paus. 5.25.11 (rC6, not properly retrospective if Pausanias here quotes the inscription)) and *Κρησίλας Κυδωνιάτας* from Hermione (*IG* IV 683 (C5m)) and the graffito of *Ὀνάσανδρος Κυδωνιάτας* from Abydos (*IGA* 3 405 (C4)).

According to legend, Kydonia was founded by Minos or Kydas (*IG* XII.5 104.21–22; Diod. 5.78.2; Paus. 8.53.4). In light of the continuous settlement of Chania from C8s (*infra*), the story told by Herodotos about the foundation of Kydonia by Samian exiles (*αὐτοὶ* [Samians] *δὲ Κυδωνίην τὴν ἐν Κρήτῃ ἔκτισεν*) probably refers to a refoundation or resettlement of the *polis* (Hdt. 3.44.1, 59.1–3 (r524); for the

meaning of *κτίζω* in Herodotos, see Casewitz (1985)). The Samians remained there for five years, but in the sixth year (519), Aiginetans and Cretans defeated them in a sea battle, and the Aiginetans resettled Kydonia as a colony (Strabo 8.6.16; for the possible economic motives behind Samian and Aiginetan interest in Kydonia, see Stefanakis (1999) 250–57; for the identification of the *Κυδῶνες* as the descendants of the pre-Greek inhabitants of west Crete and for their fate following Aigina's colonisation of Kydonia, see Sekunda (2000) 330–37). In 429 the Athenians responded to the request of Nikias, the Gortynian *proxenos* of Athens, and ravaged the territory of Kydonia (Thuc. 2.85,5–86.1). The attack may have been motivated in part by pro-Spartan sympathies if not outright support for Sparta on the part of the descendants of the Aiginetan settlers, together perhaps with more recent arrivals from Aigina following the Athenian expulsions in 457/6 and 431 (Figueira (1988) 538–42). Phalaikos was killed during his unsuccessful siege of Kydonia in 343 (Diod. 16.63; Paus. 10.2.7).

The list of leases of land and houses to seven *proxenoi* (*I.Cret.* II.X.1 (C3)) provides precious information about the organisation of the territory of Kydonia. Combined with the archaeological evidence, it can be used retrospectively for the Archaic and Classical periods. The leases refer to vineyards ἐμ Μολοχάντι ἐν τῷ πεδίῳ, ἐν τῷ πεδίῳ κατὰ Βάθειαν, ἐν Μινώιαι ποῖ τῷ πόρῳ ἐσχάτῳ, ἐν τῷ νάσῳ (Marangou-Lerat (1995) 11–13; Akrotiri peninsula), ἐπὶ Λίπαραι, and ἐν Σχινούρι; houses ἐν τῷ Ἑραῖδι and ἐν τῷ Λαχανίαι κ(ώ)μαι; and fallow land ποῖ τῷ Κωμίκου. The κώμη Laxania has been identified with the substantial fortified site (Archaic through Byzantine) on Kastellos Varypetro about 7 km south-west of Chania (Faure (1988) 90; Erickson (2000) 260). Minoa has been identified with the remains (Archaic through Roman) of a large coastal settlement at modern Marathi on Akrotiri peninsula (Blackman (1976*d*)). The settlement possessed an important cult (of Diktyнна?) at Marathospelios (Faure (1964) 186–87) and territory extending north-west to the isthmus of the peninsula (Marangou-Lerat (1995) 10–13). Lipara has been identified with one of the small islands located in Souda Bay opposite Marathi (Guarducci (1939) 117). For a discussion of these toponyms, see Perlman (1996) 243–44, where I distinguish between two types of sub-unit of the *polis*: (i) villages like Laxania and Heraï which were not political units, and (ii) a second category of community of which Minoa, Molokas, Vatheia, Lipara and Schinouris are examples. These latter consisted of a settlement and agricultural lands, including some state-owned parcels, and

may have been political units dependent upon or part of Kydonia.

The continuous occupation of the city of Chania since C8, coupled with the building activity of the Venetians, who dismantled many of the earlier structures for building material to reuse in their own buildings, has made it difficult to reconstruct the organisation of the Greek *polis*. Rescue excavations have provided most of what is known archaeologically about the Archaic and Classical periods (see e.g. *KrEst* 7 (1999) 143–66, describing eighteen rescue excavations conducted in Chania during the period 1995–97). Late Geometric material from Kastelli Hill suggests that the Greek settlement was established there in C8 (Andreadaki-Vlasaki (1997) 239; for Archaic and Classical deposits on Kastelli, see Hallager *et al.* (1997) 202–4; Hahn (1997) 209; *ArchDelt* 45 (1990) *Chron.* 433–35). Kastelli perhaps served as the acropolis for the community. Literary testimonia indicate that the urban centre was fortified during the late Classical and Hellenistic periods (Diod. 16.63.3 (r343); Polyb. 4.55.4 (r220–219)). It is likely, though not certain, that these fortifications protected the acropolis. The extent of the Classical and Hellenistic urban centre is suggested by the location of graves dating to these periods within the limits of the modern city in the areas of Ag. Ioannis, the law courts, the public park and the stadium (Pologiorgi (1985)). No public buildings of the Greek *polis* have been discovered, although it seems likely that there was a temple near Plataia in 1866, where the fragment of an Archaic limestone frieze now on display in the Archaeological Museum of Chania (Inv. no. 92) was found (Theophanides (1956)). Herodotos records that the Samian exiles who refounded or resettled Kydonia built the temples which were still there in his day, as well as the temple of Diktyнна on Rhodopou Peninsula (τὰ ἱρὰ τὰ ἐν Κυδωνίῃ ἐόντα νῦν οδοῖ εἰσὶ οἱ ποιήσαντες καὶ τὸν τῆς Δικτύνης νηόν, Hdt. 3.59.1–3 (r524)). Onorio Belli reported having seen a temple with a Doric portico, a theatre and an aqueduct, although both the locations and the dates of these structures are today unknown (Falkener (1854) 27–28). It seems likely that the ancient harbour was in the same place as the Venetian harbour to the north of Kastelli, and that the Venetian mole was built on an earlier mole. Skylax reports that the harbour of Kydonia could be closed (Ps.-Skylax 47).

Kydonia struck pseudo-Aiginetan hemidrachms and obols (c.475–280), distinguished from Aiginetan coins by fabric, style and the frequent representation of a crescent on either obverse or reverse. Types: *obv.* tortoise; *rev.* incuse square (Robinson (1928); Le Rider (1966) 173; *SNG Cop. Aeg.Isl.* 402–5). During the period c.320–280/270, Kydonia

struck coins (staters, drachms, obols), also on the Aiginetan standard but with different types (Le Rider (1966) 194). Staters have *obv.* head of a nymph or goddess (Frost (1996): Akakallis?); *rev.* youthful naked archer stringing his bow, or hound suckling an infant (Kydon). Drachms have (i) *obv.* head of a nymph or goddess; *rev.* naked hunter, or dog feeding Kydon; (ii) *obv.* head of Athene; *rev.* dog feeding Kydon. Obols have (i) *obv.* head of a youth with horns; *rev.* dog; (ii) *obv.* head of a nymph or goddess; *rev.* head of a bull, or *K*, or dot within three crescent moons, or dot within three dotted crescent moons; (iii) *obv.* head of nymph or goddess; *rev.* amphora. Legend (on some coins of all denominations): *KYΔΩΝ* or further abbreviations down to *K* (Svoronos (1890) pl. IX.1–9, 13–18, 22–30; *SNG Cop. Aeg. Isl.* 406–11).

969. Kytaion Map 60. Lat. 35.25, long. 24.55. Size of territory: 1. Type: B. The toponym is *Κύταιον, τό* (Ptol. *Geog.* 3.17.6; Steph. Byz. 399.3). The collective use of the city-ethnic is attested internally in abbreviated form on the coins of C4m (*infra*). Ancient Kytaion has not been securely located. The ancient geographers place Kytaion to the west of Apellonia (Plin. *HN* 4.59; Ptol. *Geog.* 3.17.6). Stefanakis suggests a location on the small bay just north of the modern village of Sisses at Almyrida, where remains dating to the Neolithic, Minoan, Hellenistic and Roman periods have been identified as well as traces of an ancient harbour (Stefanakis (1998)). Alexiou identifies the settlement at Almyrida as an otherwise unattested ancient toponym *Sisa on the basis of the discovery there of an altar which bears the inscription *Σισαίων* (*ArchDelt* 21 (1966) *Chron.* 407–8; cf. Stefanakis (1998) 99–100: a tribal name or a neighbouring minor settlement).

The only ancient source to identify Kytaion as a *polis* is Stephanos (Steph. Byz. 399.3). Nonnos *Dion.* 13.238 calls Kytaion a town, *ἄστυα καλὰ Κυταίου*. A small issue (only three known examples) of overstruck silver staters dating to the period c.350–325 has been attributed to Kytaion (Hill (1927) 46 pl. VI.4, with Stefanakis (1998)). Types: *obv.* wreathed male head facing r.; *rev.* tripod; legend: *KY* (Hill (1927) 46 pl. VI.4). The coins, which may begin as early as c.350, suggest that Kytaion was a *polis* in the late Classical period and so recommend her inclusion in the Inventory as a probable *polis* (type B). They share the obverse and reverse types of Axos. Stefanakis interprets this as evidence of an alliance between the two *poleis* (*ibid.*). Almyrida provides the most convenient coastal access for Axos. If Kytaion was indeed located at Almyrida, it seems likely that not long after the minting of these coins Axos absorbed this small *polis* (*ibid.*).

970. Lappa (Lappaïos) Map 60. Lat. 35.15; long. 24.20. Size of territory: 3. Type: B. The toponym is *Λάππα, ἡ* (*BCH* 45 (1921) III.115 (c.230–210); *I.Cret.* IV 186B + 187 (C3l/C2e)). For the spelling *Λάμπη/Λάμπαι* in the geographers and lexicographers, see Guarducci (1939) 191. The city-ethnic is *Λαππαῖος* (coins, C4s–C3f, *infra*; *I.Cret.* II.xvi.2 (C3f)).

The earliest attestation of Lappa as a *polis* in the political sense occurs in an *asylia* decree of Lappa for Teos (*I.Cret.* II.xvi.3 (C3l)). For the earliest reference to Lappa as a *polis* in the topographical sense, see Polyb. 4.54.4–5 (r221–219). Lappa is included in the Inventory as a probable *polis* (type B) because (i) the earliest coins of Lappa may date to c.330 (*infra*), and (ii) there was a territory called *ἡ Λαππαία* already in C4 (Ps.-Skylax 47; Theophr. *Hist. pl.* 2.6.9).

The collective use of the city-ethnic is attested internally on the coins (*infra*), and externally in the *asylia* decree for Tenos (*I.Cret.* II.xvi.2 (C3f)). For the individual use, there is the decree of Tenos honouring *Ἀπελλῆς Ἀμφικλέους Λαππαῖος* and other Cretans (*IG XII.5 suppl.* 304 (C3m)).

A fragment of an Archaic inscription from Lappa may preserve the only documentary evidence from Crete for the *basileus*, *ΒΑΣΙΛΙ* [---] (*I.Cret.* II.xvi.1 (C5e)). Otherwise all evidence for the political institutions of Lappa is Hellenistic.

The territory of Lappa, the only *polis* situated at the narrow isthmus (18 km wide) of west Crete, may have extended from the north coast to the south coast, as suggested by Ps.-Skylax 47: *εἶτα ἡ Λαμπαία (sc. χώρα) καὶ διήκει αὐτῇ ἀμφοτέρωθεν*. Two settlements on the north coast probably lay within the territory of Lappa: (i) *Ἰδραμία*, probably located near the modern village of Dramia at the mouth of the river Mousella (Guarducci (1939) 183), and (ii) *Ἀμφίμαλα*, located in the vicinity of the modern village of Giorgioupoli at the mouth of the river Almyros (Guarducci (1939) 183). Stephanos (90.9–11), quoting Xenion ((*FGrHist* 460) fr. 12; cf. *Stadiasmus* 346) identified Amphimala as a *polis*, whereas Strabo called it a *κατοικία* (Strabo 10.4.3). According to Strabo, Phoinix was located within the territory of Lappa on the south coast of Crete (Strabo 10.4.3). Guarducci locates Phoinix a few kilometres to the west of modern Sellia (Guarducci (1939) 192). This Phoinix is not to be confused with the homonymous port at modern Loutro, some 26 km to the west. Finally, it is worth noting that the only freshwater lake on the island of Crete, Lake Kournas (the ancient *λίμνη Κορησία*), probably lay within the territory of Lappa (Steph. Byz. 374.12–15; Guarducci (1939) 192).

The archaeological remains of ancient Lappa extend chiefly over the hill that is bounded by the rivers Mousella and Petre, on the site of modern Argyropoli. The earliest

evidence of habitation dates to the early Geometric period. Apart from stretches of the pseudo-isodomic Hellenistic fortification walls, very little of the ancient settlement is visible today (Sanders (1982) 163 (14/1)). The *agora* may have been located at “Lephou”, where three marble statues of the Roman period were found (*ArchDelt* 15 (1933–35) 66–70).

Lappa struck coins (stater, drachms, obols) on the Aiginetan standard during the period c.330–280/270. Types (stater): *obv.* head of a nymph or goddess (Guarducci (1939) 194, Artemis?); legend: ΛΑΠΠΑΙΟΝ written retrograde; *rev.* Apollo *kitharodos*, seated; legend: ΑΠΟΛΛΑΙΟΝ (Brett (1974) no. 1282, with Le Rider (1966) 190, 198). Types (drachm and obol): *obv.* same as stater, or frontal bull’s head with one horn curving down; *rev.* frontal bull’s head with one horn curving down, or Λ (Svoronos (1890) pl. XIX.28–30, 33; *SNG Cop. Aeg.Isl.* 479). Early travellers to Crete noted the existence of silver mines (and gold and lead?) in the vicinity of Lappa, from which probably derives the name of the modern village on the site of ancient Lappa, Argyropoli or “Silverado” (Le Rider (1966) 260; cf. Markoe (1998) 238).

971. Lato (Latios) Map 60. Lat. 35.10, long. 25.40. Size of territory: 2. Type: B. The toponym is Λατώ (*I.Cret.* 1.xvi.1 (C3l)); Λατώως on the coins is genitive (Svoronos (1890) 220.5, 7). The city-ethnic Λάτιος (*Milet.* 1.3 140.38 (c.259–250)) suggests an alternative thematic stem for the toponym (Bile (1988) 202 n. 185). A second community of *Latios*, called Λάτιοι οἱ πρὸς/ἐπὶ Καμάραι, was established on the coast in the vicinity of Ag. Nikolaos by C3l (*I.Cret.* 1.xvi.15 (C3l), 19 (C2e)). The precise political nature of this community and its relationship to “upper” Lato, 5 km to the south-west, remain uncertain (Perlman (1995b) 133–35; Chaniotis (1996) 104–8, 428–29; *sympoliteia*). *I.Cret.* 1.xvi.15 and 1.xvi.2 seem to preserve identical *asylia* decrees for Teos save that the former has as its heading Λατίων τῶν πρὸς Καμάραι while the latter has Λατίων. *I.Cret.* 1.xvi.19 is too fragmentary to draw any conclusions about its contents. All other inscriptions pertaining to Lato refer only to οἱ Λάτιοι without drawing any distinction between two different groups of *Latios*. Stephanos provides an entry for Καμάρα but not for Λατώ (Steph. Byz. 351.1–2). Xenion, Stephanos’ source, identifies Καμάρα as a Cretan *polis* which was also called Lato, ἥτις Λατὼ ἐλεγέτω (Xenion (*FGrHist* 460) fr. 7).

The earliest reference to Lato as a *polis* in the political sense occurs in the first line of the agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτην (*Milet.* 1.3 140.1, 38

(259–250)). The *prytaneion* has been dated to C4s (*infra*), as have several other public buildings at Lato. This suggests that Lato should be numbered among the Classical, if not the Archaic, *poleis* (type B) of Crete despite the fact that the evidence for the political status of the community dates no earlier than C3.

The collective use of the city-ethnic is attested internally in the treaty between Lato and Hierapytna (*I.Cret.* 1.xvi.16 (C3l)) and externally in *Milet.* 1.3 140.38 (c.259–250). It is worth noting that the individual use of the city-ethnic is not attested for Lato, with the possible exception of an entry of Stephanos, who adduces Νέαρχος Ληταῖος, Alexander’s commander, as an example of the ethnic of Makedonian Λητή (Steph. Byz. 413.21). Nearchos was a Cretan (Arr. *Ind.* 10, 18.4), perhaps from Lato if we may so interpret the passage from Stephanos.

Although the *phylai* appear only in Hellenistic sources, they are likely to be early and so are mentioned here. Four tribal names are attested (all in inscriptions of C2s): (i) Αἰσχεῖς (*BCH* 62 (1938) 405–8 no. 4; *I.Cret.* 1.xvi.29, 30); (ii) Ἐχανορεῖς (*I.Cret.* 1.xvi.25, 31, 34); (iii) Συναεῖς (*BCH* 62 (1938) 390 no. 1); (iv) Ὑλλεῖς (*I.Cret.* 1.xvi.26, 32; *SEG* 32 895).

Several treaties (all C2l) describe the Hellenistic borders (a circuit of c.66 km) of Lato and her neighbours (*I.Cret.* 1.xvi.18; *REA* 44 (1942) 35–36C.49–56; *SEG* 26 1049.52–82; *I.Cret.* 1.xvi.5, 51–72; for discussion, see Faure (1972); van Effenterre and Bougrat (1969); for the context, see Chaniotis (1996) 318–32). The borders are twice described as “old” (*SEG* 26 1049.60–62: [κα]θὼς καὶ π[ά]λαι ἐπιγέ[γραπται]; *REA* 44 (1942) 35–36C.51–52: ὅπως αὐτοῖς οἱ ὄροι ἔσονται οἱ ἀρχαῖοι). One of the landmarks on the border between Lato and Olous was τὸ ἀρχαῖον Ἀφροδίσιον (*I.Cret.* 1.xvi.18. 7–8; *SEG* 26 1049.63–64; *I.Cret.* 1.xvi.5, 70), identified with the early sanctuary (Protogeometric?, Geometric?) at Sta Lenika (Bousquet (1938); Mazarakis Ainian (1997) 215–16).

The *polis* town of Lato was built on a double acropolis (300–400 m). Residential areas were located on the terraced slopes of both hills. The public buildings were located in the saddle between the two. This area has come to be called the *agora*, although the term is not attested epigraphically at Lato. In the centre of the *agora* at the lowest point of the saddle there is a cistern and a small shrine. A Doric stoa delimits the *agora* to the west, and a rectangular exedra marks the boundary to the south. A broad flight of steps to the north leads up to the *prytaneion* complex (Ducrey and Picard (1972)). The steps accommodate c.180 standing or c.80

seated persons and may have been used as, e.g., a *dikasterion* (Hansen and Fischer-Hansen (1994) 63). To the south-east of the central area and at a higher elevation there is a theatre or theatral area (Ducrey and Picard (1971)) accommodating c.350 persons and sometimes interpreted as an *ekklesiasterion* (cf. Hansen and Fischer-Hansen (1994) 65). The main temple of the *polis* town is located on a terrace above the theatral area (Ducrey and Picard (1970)). The identity of the deity worshipped there is not known. The protecting deity of Lato seems to have been Eleuthyia, in whose sanctuary public documents were displayed (e.g. *I.Cret.* i.xvi.2, 15 (C3l)). The location of her sanctuary is not known. The *polis* town was defended by the terrain, by defence walls and by “fortress-houses” (J. Demargne (1901); Hadjimichali (1971); Ducrey and Picard (1996)). Water was supplied by public and private cisterns (Hadjimichali (1971)). The principal entrance to the *polis* town was from the south-west, where a road passes through the main gate and then branches to the west and to the east. The eastern branch leads to the agora and then continues along the edge of the saddle to the north-east (Tiré and van Effenterre (1978)). The buildings described above appear to date to C4s–C3e. Evidence for earlier occupation includes the east terrace of the agora (C7), Archaic figurines from beneath the shrine in the agora, and a potter’s workshop (c.650–625) located beneath the terrace of the main temple (Ducrey and Picard (1969)). Also Archaic is the extra-urban sanctuary (C8m–C3) on Mt. Thilakas, located 1.5 km south-east of the *polis* town (Reinach (1913)). For general descriptions, see Tiré and van Effenterre (1978) 98–105; Ducrey and Picard (1976); Picard (1992); for a plan of the remains, see J. Demargne (1901) pl. XX. The settlement of *Λάτιοι πρὸς ἑπὶ Καμάραι* at Ag. Nikolaos remains largely unknown archaeologically save for its cemeteries (Davaras (1978)).

Lato struck coins on the Attic standard in C3l (Picard (1990); Guarducci (1935) 108; *SNG Cop. Aeg. Isl.* 484–86).

972. Lebena (Lebenaios) Map 60. Lat. 34.55, long. 24.55. Size of territory: 2. Type: C. The toponym was probably originally **Λεβήν* (Bile (1988) 167–68), later *Λεβήνα* (*BCH* 45 (1921) iv.8 (c.230–210)). The city-ethnic is *Λεβευαῖος* (*I.Cret.* iv 63 (C6l/C5e)), later *Λεβηναῖος* (*I.Cret.* ii.xvii.7 (C2)).

No ancient source identifies Lebena as a *polis*. According to Strabo 10.4.11, Lebena was the *emporion* of Gortyn, and we should perhaps understand Lebena as the *limen* held by the Gortynian *νεώτεροι* during the *stasis* which erupted in Gortyn at the time of the Lyktian War (Polyb. 4.55.6

(r221–219)). However, an Archaic inscription seems to preserve an agreement, perhaps a commercial agreement, between οἱ *Γορτύνιοι* and οἱ *Λεβευαῖοι* (*I.Cret.* iv 63 (C6l/C5e)). Not only is the collective use of the ethnic good evidence for *polis* status on Crete (Perlman (1996) 246–52), but there is no indication from what survives of the text that ὁ *Λεβευαῖος* was politically or legally inferior to ὁ *Γορτύνιος*. On the basis of this text, it seems possible that Lebena was a *polis* (type C) in the political sense in the late Archaic period.

The collective use of the city-ethnic is attested internally in a *lex sacra* (*I.Cret.* i.xvii.7 (C2)) and externally in the agreement between Gortyn and Lebena (*I.Cret.* iv 63 (C6l/C5e)). Lebena is the only Cretan community where the individual use of the city-ethnic occurs internally, in three cure inscriptions from the sanctuary of Asklepios (*I.Cret.* i.xvii.8, 9, 15 (C2–C1)). For the individual use of the city-ethnic externally, there is the Hellenistic graffito of the Cretan mercenary *Σωτάδας Λεβηναῖος*, who scratched his name on a noble’s tomb in the Thebaid (*Syringes* 816 (= Baillet (1920–26))).

Lebena is best known for her Asklepieion, the excavated remains of which are principally late Hellenistic and Roman (Bultrighini (1993) 81–99; Kritzas (1992–93)).

Apart from the *theorodokos* appointed by Lebena c.230–210 to entertain the Delphic *theoroi* (*BCH* 45 (1921) iv.8; Rigsby (1986) 353 n. 13), there is no evidence that after c.C5m Lebena had her own officials or the authority to pass public enactments. When and under what circumstances this came about and the nature of her political status and relationship with Gortyn thereafter remain uncertain. The personal use of the city-ethnic is a good indication of *polis* status on Crete (Perlman (1996) 250–52), and Lebena should perhaps be regarded as one of the dependent *poleis* of Gortyn during the late Classical and Hellenistic periods (ibid. 269–70).

973. Lisos (Lisios) Map 60. Lat. 35.15, long. 23.50. Size of territory: 2. Type: A. The toponym is *Λισός* (*I.Cret.* ii.xvii.1 (C3f); *BCH* 45 (1921) iii.105 (c.230–210)). For *Λίσσα* (Ps.-Skylax 47), see Guarducci (1939) 210. The city-ethnic is *Λισίος* (coins, *infra*; *SEG* 45 1314 (C3/C2)). A bronze fraction has the legend *ΛΙΣΣΙΤΑΝ* on the reverse (Svoronos (1890) pl. XX.34). Guarducci ((1939) 211) suggested *Λισσί(ων) ΤΑΝ*, with *ΤΑΝ* the first three letters of a magistrate’s name. Neither the city-ethnic *Λισσίτης* nor geminated forms are otherwise attested epigraphically (for the use of such forms by the geographers, see Guarducci (1939)

210). For a connection with Homeric *λισσή πέτρα* see Guarducci (1939) 110; Bile (1988) 181.

Ps.-Skylax 47 provides the earliest reference to Lisos as a *polis*, in this case in the urban sense. The earliest secure references to Lisos as a *polis* in the political sense occur in enactment formulas of the Hellenistic period (SEG 45 1314).

The collective use of the city-ethnic occurs internally on the C4s–C3f coins (*infra*) and in the enactment formulas of Hellenistic inscriptions (SEG 45 1314). For a possible example of the collective use externally ([Λισ(σ)?]ιοι, see *I.Cret.* iv 179.8 (c.183)). For a possible example of the individual use of the city-ethnic there is the *proxenos*? of Gortyn [Μ]ενοίτιος Τυχαμέουσις Λ[ίσσιος?] (*I.Cret.* iv 387 (C2)).

Lisos formed an alliance with Hyrtakina (coins, *infra*) and was a member of the C4l–C3 federation οἱ Ὀρειοί (van Effenterre (1948a) 119–27; Chaniotis (1996) 106–8, 421–22; cf. Sekunda (2000) 337–38: league founded C3f). Lisos may have been at one time the federation's capital (Guarducci (1939) 211) or its religious centre (Bultrighini (1993) 107–13).

The remains of the *polis* town of Lisos occupy the floor and slopes of a small valley on Ag. Kyrkos Bay. The earliest remains appear to date to C5l or C4f. Rock cuttings on the slopes to the east of the valley floor indicate the presence there of a residential quarter (personal observation). Terraces on these same slopes may be ancient. The Roman cemetery with its barrel-vaulted tombs was located on the western slopes above the valley floor (Sanders (1982) 42). The location of the earlier cemetery is unknown. The valley floor was most likely the location of the harbour. Tectonic uplift, probably in AD 438 (Thommeret *et al.* (1981)), raised this part of the Cretan coast. A sea wall protected the shore from marine erosion (observation of E. Hadjidaki). The protecting deity of Lisos was probably Diktynna (coins, C4s–C3f, *infra*; *I.Cret.* ii.xvii.1 (C3f)). Her sanctuary is attested epigraphically, but has not been located (*I.Cret.* ii.xvii.1 (C3f)). A sanctuary in honour of Asklepios and Hygieia (*peribolos* wall, Doric limestone temple and auxiliary buildings) was located near a spring below the cliffs to the north of the valley floor. The sanctuary was excavated during the period 1957–60 and appears to date primarily to the Hellenistic and Roman periods. For a brief overview with references to the interim excavation reports, see Platon (1992); for the cult, see Bultrighini (1993) 102–13. A small theatre (internal diameter of the cavea approximately 15 m) was located in the valley to the south-west of the sanctuary of Asklepios and Hygieia (Sanders (1982) 171–72 (19/18)). The visible remains are Roman. Traces of an ancient road

(communicating with Hyrtakina?) are visible on the western slopes above the valley floor (Niniou-Kindeli (1990)).

Lisos and Hyrtakina produced an alliance coinage of small denominations in silver and gold (C4s–C3f; cf. Sekunda (2000) 337: c.C3m). Types: *obv./rev.* dove (or eagle?), or dolphin, or star. Legend (*obv., rev.*): Λ-Y, YP-ΛΙ, or YP-ΛΙΣΙΩΝ (Svoronos (1890) pl. XVIII.12–20; *SNG Cop. Aeg.Isl.* 469). Lisos struck her own coinage (bronze) in C3s (Svoronos (1890) pl. XVIII.12–20).

974. Lyktos (Lyktios) Map 60. Lat. 35.15, long. 25.20. Size of territory: 4. Type: [A]. The toponym is Λύκτος (Hom. *Il.* 2.647, 17.611; Hes. *Th.* 477). The city-ethnic is Λύκτιος (*I.Cret.* i.xviii.4 (C6); SEG 35 991 (C6l)). The earliest coins have ΛΥΤΙΟΝ (C5s, *infra*). Later issues have at first ΛΥΚΤΙΟΝ and later the assimilated form ΛΥΤΤΙΟΝ (*infra*). Assimilated forms of both the toponym Λύττος and the city-ethnic Λύττιος begin to appear in the inscriptions from Crete in C3m (e.g. *I.Cret.* iii.vi.11–12; *I.Cret.* i.xviii.8) and outside Crete already in C5s (*I.Lindos* 13; cf. Bile (1988) 156 n. 345); but the unassimilated forms continue in use (e.g. Arist. *Pol.* 1271^b28).

Polybios claimed that Lyktos was the oldest of the Cretan *poleis* (Polyb. 4.54.6), but the earliest unquestionable attestations of Lyktos as a *polis* occur in the enactment formula of the alliance of Lyktos with Antiochos II (*I.Cret.* i.xviii.8.5 (C3m)) and in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* including Lyktos (*Milet.* 1.3 140.1 (c.259–250)). The use in both is political. For *polis* in the urban sense, see Ps.-Skylax 47, where Lyktos is listed under the heading *πόλεις πολλαὶ ἐν Κρήτῃ*. Diodoros calls Lyktos a *polis* in the urban sense in his account of the destruction of Lyktos in C4m (Diod. 16.62.3). There is no question that Lyktos was an Archaic and Classical *polis*, but without an early attestation of the term in reference to the community, Lyktos is included in the Inventory as a probable *polis* (type B).

The collective use of the city-ethnic occurs internally in three Archaic laws, once in an uncertain context in the singular (*I.Cret.* i.xviii.4.5–6 (C6l)) and twice in enactment formulas (SEG 35.991A.1 and B.1 (C6l/C5e)). It occurs externally in the treaty between Lyktos and Lindos (*I.Lindos* 13.1–2 (C5s)). For the individual use there are, e.g., the *proxenos* of Gortyn, Δαμόχαρις Φαλακρία Λύττιος (*I.Cret.* iv 206 (C3/C2)) and the mercenary Ἀνδροκάδης Χαίρωνίδος Κρήσις Λύττιος who died at Pagasai (*IG* ix 2 365 (C3)).

In Greek epic, Lyktos was the home of Koironos, the charioteer of Meriones (Hom. *Il.* 17.611). Later tradition, first

attested in Ephorus and Aristotle, maintained that the Spartans had colonised Lyktos (Ephor. fr. 147–49; Arist. *Pol.* 1271^b28–30; Malkin (1994) 73–83). Plutarch preserved a story which synchronised the colonisation of Lyktos with that of Melos in C8, and identified the Spartan oecist of Lyktos as Pollis (Plut. *Mor.* 247E). Archers from Lyktos fought with the Spartans in the Second Messenian War (Paus. 4.19.4 (rC7)). According to Spartan tradition, Lykourgos modelled his reforms on the laws of Minos, which were still used by the descendants of the pre-Spartan inhabitants of the region (Arist. *Pol.* 1271^b28–30; cf. Ephor. fr. 147–49; Perlman (1992)). Several Archaic public inscriptions of Lyktos (all laws?) survive (*I.Cret.* 1.xviii.1–6; *SEG* 35 991A, B (C6m–C5e)). According to Strabo, Lyktos and Gortyn for a time superseded Knosos as the foremost cities of Crete (Strabo 10.4.7). Both the late Archaic period (Viviers (1994) 252–59; Coldstream and Huxley (1999) 301–4) and C4e (Erickson (2000) 331–65) have been proposed as periods of Lyktian expansion. In C5 Lyktos and Lindos concluded a treaty, perhaps ending a period of hostilities (*I.Lindos* 13 (C5s)). Knosos twice conquered Lyktos: in C4m the Lyktians were expelled with the aid of the Phokian general Phalaikos (Diod. 16.62.3–4 (rC4m)); and the city was destroyed during the Lyktian War (Polyb. 4.53–54 (r221–219)). Lyktos was resettled both times, in the first instance with the help of King Archidamos of Sparta (Diod. 16.62.4).

Two of the Archaic laws of Lyktos preserve the enactment formula Ἐφαδε Λυκτίοισι (*SEG* 35 991A.1 and B.1 (C6l/C5e)). *SEG* 35 991A concerns the exclusion of ἀλοπολιάται, non-citizens, foreigners, or expatriates (van Effenterre and van Effenterre (1985) 179–88), and assesses fines against those who harbour them. The same term may be restored in another of the Archaic laws ([ἀλο]πολιάταν in *I.Cret.* 1.xviii.2 (C6l)); on the other hand, this text may preserve the term for citizen, πολιτάς. The only social status term that occurs in the early inscriptions from Lyktos is Φοικεύς (*I.Cret.* 1.xviii.5 (C6l)). The occurrence of the terms μαιτυρ[---] (“witness”) and [---ὀ]μομοτας (“co-swearer”) in the lines immediately preceding Φοικεύς indicate that the context of the reference is a law concerning judicial procedure. The kosmate is referred to in two laws (*I.Cret.* 1.xviii.2 (C6l); *SEG* 35 991A4–5 (C6l/C5e)); in neither case is the context certain. The term ἀπόκοσμος (for the meaning, “kosmos elect” or “ex-kosmos”, see Bile (1988) 274) occurs together with kosmos in *SEG* 35 991A. Other public officials mentioned in the Archaic laws, again in uncertain contexts, are δικασταί [--- δ]ικασταί, *I.Cret.* 1.xviii.3 (C6l) and οἱ ἐσζικαιωτῆρες (*SEG* 35 991A.8 (C6l/C5e)); van

Effenterre and van Effenterre (1985) 176: “supervisors”; Chadwick (1987) 332–33: officials who collect fines). The collective use of the city-ethnic in the Archaic enactment formula Ἐφαδε Λυκτίοισι probably refers to the assembly (*SEG* 35 991A.1 and B.1 (C6l/C5e)), as does the term πόλις in a Hellenistic enactment formula, δεδόχθαι Λυκτίων τοῖς κόσμοις καὶ τῇ πόλει (*I.Cret.* 1.xviii.8 (C3m)). The council (Φωλά) may be referred to in the Archaic law concerning ἀλοπολιάται and may have enjoyed legislative powers, [ὑπέ]ρ Φωλᾶς Φαδᾶς (*SEG* 35 991A.6 (C6l); Chadwick (1987) 331–32: “[on account of] the decree of the Council”; cf. van Effenterre and van Effenterre (1985) 167–68, 175: ἐ]ρ Φωλᾶς Φαδᾶς, “par l’application de la loi de exoulē”).

Although the *phylai* appear only in Hellenistic and later sources, they are likely to be early and so are mentioned here. Four tribal names are attested: (i) Ἀρχήια (*I.Cret.* 1.xviii.12 (Imperial)); (ii) Δίφυλοι (*IG* 11² 1135 (111/10)); (iii) Δυμᾶνες (*I.Cret.* 1.xviii.8 (C3m)); (iv) Λασύνθιοι (*I.Cret.* 1.xviii.13 (Imperial)). De Sanctis in Guarducci (1935) 192 restored [Υ]α(κ)ύνθιων, but the tribal name Λασύνθιοι is attested in a C2l inscription from the sanctuary of Hermes and Aphrodite at Kato Syme Biannou (Kritzas (2000)).

An Archaic decree of Lyktos describes the border of public(?) grazing lands within the *polis* of Lyktos (*SEG* 35 991B.4–14 (C6l/C5e)). This text has been understood to indicate the existence of state-owned livestock (van Effenterre and van Effenterre (1985) 182–85; cf. Chaniotis (1995) 46–48). Late in the Archaic period Lyktos perhaps shared a border with Datala (no. 954). A Hellenistic treaty between Hierapytna and Lato mentions an earlier written description of the ancient border between Lyktos and Lato, καθὼς καὶ πάλαι ἐπιγέγραπται (*SEG* 26 1049.60–62 (C3/C2)). *Chersonasos and Lyktos are known to have joined in a *sympoliteia* some time after c.183 (Chaniotis (1996) 104–8, 430–32). Henceforth the official name of *Chersonasos was “Lyktos by the sea”, to distinguish it from the upper (ἄνω) *polis* (e.g. *I.Cret.* 1.xix.3A (c.183)). A reference to “those up above” (ὄζοι ἄνωθεν) in an Archaic law from Lyktos (*I.Cret.* 1.xviii.1 (c.550–525)) has been understood to distinguish the upper city (Lyktos) from the coastal city (*Chersonasos) and so to indicate that the *sympoliteia* (or some other form of political arrangement) was much earlier (Viviers (1994) 252–54).

Lyktos is largely unknown archaeologically. The *polis* town occupied the summit of a ridge overlooking the upland plain of Padiadha (cf. van Effenterre and Gondiccas (1999): the Archaic and Classical *polis* did not have an urban centre but was settled κωμηδόν). The ridge has three peaks,

the tallest of which should perhaps be regarded as the acropolis. The earliest evidence for occupation seems to date to the late Geometric or early Archaic period. Buildings of the Archaic (C7l–C6e: *CretChron* 11 (1957) 336) and Classical (C5s: *CretChron* 23 (1971) 496–97) periods have been excavated, although later phases (Hellenistic and Roman) of Lyktos are better attested archaeologically. A substantial building, perhaps a temple, once occupied the summit of the acropolis. The protecting deity of Lyktos was probably Athene Polias (*I.Cret.* 111.iii.3B (C3l/C2e); *SEG* 33 638 (C2l)). The earlier of these two texts was to be displayed in the sanctuary of Athena ἐμ πόλει, perhaps a reference to the temple on the acropolis. A *choros* ([---]οι ῥοροι, dat. sing. or nom. pl.?) is attested epigraphically (*I.Cret.* 1.xviii.4 (C6l); Bile (1988) 344 n. 84: agora; Kritzas (1992–93) 282–89: dance floor). The theatre (date?), which was described and drawn by Onorio Belli in 1586, was probably located at the foot of the acropolis (Falkener (1854) 17–19; Branigan (1979c)). An Archaic cemetery has been partly excavated at “these Alonas” near the village of Xida (*ArchDelt* 41 (1986) *Chron.* 407). The extent of the *polis* town is estimated to have been c.100 ha (Rhethemiotaki (1984)).

Lyktos struck coins (staters, drachms, hemidrachms) on the Aiginetan standard from C5f onwards (Price (1981): c.470–450; cf. Le Rider (1966) 174, 195–96: c.425). All denominations use the same types: *obv.* eagle, flying or standing; *rev.* boar’s head within square frame; legend, in the epichoric alphabet until C4l: *ΛΥΤΙΟΝ*, *ΛΥΚΤΙΟΝ*, or *ΛΥΤΤΙΟΝ* (Svoronos (1890) pl. XXI.1–20; *SNG Cop. Aeg.Isl.* 489–97).

975. Malla (Mallaios) Map 60. Lat. 35.05, long. 25.35. Size of territory: 2. Type: C. The toponym is *Μάλλα* (*I.Cret.* 1.xix.1 (C3m)). The city-ethnic is *Μαλλαῖος* (*I.Cret.* 1.xix.1 (C3m); *IG XII* suppl. 304 (C3m)). It is worth noting that none of the ancient geographers or lexicographers mentions Malla.

The earliest attestation of Malla as a *polis* in the political sense occurs in the agreement between Malla and Lyktos, which provides that fines are to be paid τᾶι πόλιι (*I.Cret.* 1.xix.1 (C3m)). There is no doubt that Malla was a *polis* in the political sense during the Hellenistic period. Moreover, although the *polis* town of Malla has not been identified with certainty, it seems likely that it was located in the vicinity of modern Malles on the eastern slopes of Mt. Dikte, either “under the now deserted lower village . . . around the church of Ay. Georgios” (Sanders (1982) 138 (2/2)) or between the villages of Malles and Christos, close to the

spring of Ag. Paraskevi, with its rocky acropolis “Skistra” (Nowicki (2000) 134–35 no. 55: surface remains include Archaic and Classical (and earlier) material). Malla was thus an inland and upland settlement, and such settlements were for the most part established well before the end of C5. For these reasons, Malla is included in the Inventory as a possible *polis* (type C).

The collective use of the city-ethnic is attested internally in the agreement between Malla and Lyktos (*I.Cret.* 1.xix.1.6 (C3m)) and externally in the renewal of *asylia* for Teos (*I.Cret.* 1.xix.2.1 (C2f)). For the individual use of the city-ethnic there is the honorand of Tenos, Πύθεος Ἀθήνικος Μαλλαῖος (*IG XII* suppl. 304 (C3m)).

Although the *phylai* are attested only in Hellenistic sources, they are likely to be early and so are mentioned here. The tribal name *Αἰθαλεῖς* is preserved in the dating formula of a public enactment (*I.Cret.* 1.xix.3A (c.183)). Hellenistic inscriptions refer to the *prytaneion* (*I.Cret.* 1.xix.3A38 (c.183)) and the agora (*I.Cret.* 1.xix.3A 50–51 (c.183)). In so far as both are attested elsewhere on Crete during the Archaic and Classical periods (*prytaneion*: see Lato, *supra*; agora: see Gortyn, *supra*; Phaistos, *infra*), it is possible that also at Malla they are pre-Hellenistic.

The protecting deity of Malla was perhaps Zeus Monnitios (public enactments displayed in his sanctuary (*I.Cret.* 1.xix.2 (C2m)); coin types, *infra*). The location of his temple (*I.Cret.* 1.xix.1 (C3m)) is not known.

Malla struck a very limited bronze coinage during C3–C2. Types: *obv.* head of Zeus; *rev.* eagle or thunderbolt; legend: *ΜΑΛ* (Svoronos (1890) pl. XXII.18–19).

976. Matala (Matalios) Map 60. Lat. 35.00; long. 24.45. Size of territory: 1. Type: C. The toponym was *Μάταλα*, *τά* (*BCH* 45 (1921) IV.14 (c.230–210); *Stadiasmus* 323). Cf. *Μάταλον* (Strabo 10.4.11). The city-ethnic was *Ματάλιος* (*Milet.* 1.3 140.67 (259–250)).

The only reference to Matala as a *polis* in the political sense occurs in the agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ (*Milet.* 1.3 140.1, 67 (c.259–250)). Matala probably served as the harbour of Phaistos during the Hellenistic period (Polyb. 4.55.6 (r221–219); Cucuzza (1997) 85), although the political ramifications, if any, of this are unclear (Perlman (1995b) 132–35, 138).

Matala was clearly a *polis* in the political sense in the early Hellenistic period when it co-signed the treaty between Phaistos and Miletos (*Milet.* 1.3 140 (c.259–250)) and appointed at least one *theorodokos* to host *theoroi* from Delphi (*BCH* 45 (1921) IV.14 (c.230–210)). The archaeological evidence

indicates that settlement on Kastri was established during the Classical period (*infra*). Although no public buildings of the Classical period have been identified, the combined evidence of her Classical foundation and early Hellenistic political status warrants her inclusion in the *Inventory* as a possible *polis* (type C).

The collective use of the city-ethnic is attested externally in *Milet.* 1.3 140.67 (c.259–250). For the individual use there is the grave *stèle* from Hadra, Egypt, of Ἀρι<σ>τις Ματάλιος (SB 5860 + ZPE 14 (1974) 182 (C3)).

The *polis* town of ancient Matala was located on a small bay of the Gulf of Matala where the modern village of Matala is situated. The earliest evidence for occupation in the vicinity of the *polis* town, as well as in its hinterland, is Classical, although it is not until C3 that the ceramic evidence is plentiful (Simpson *et al.* (1995) 397–99). No public buildings of the Classical (or even Hellenistic) period have yet been identified in the *polis* town, which is estimated to have covered an area of at least 1 ha. A high limestone promontory (Kastri) to the south of the modern village served as the acropolis. It was fortified during the early Byzantine period. Ashlar blocks visible beneath the rubble and concrete construction of the Byzantine wall may belong to an earlier phase (*ibid.* 329, 335). Rock-cut cisterns (at least thirteen) and traces of walls on the acropolis may attest the presence of houses (*ibid.* 335–37). The discovery of a kiln (possibly one of several) on the acropolis, which produced good-quality trade amphoras, indicates commercial activity there as well (*ibid.* 336). A ship shed (38 m × 5.85 m), fish tanks and houses were carved into the cliffs on the south side of Matala Bay (Blackman (1973)). Sea-level changes indicate a *terminus ante quem* of C1 for the ship shed (Gifford (1995) 75–79). A large structure (21.40 m × 13.80 m) located c.3 km south-east of Matala at Orthes Petres may be a heroon of C4–C2 (Simpson *et al.* (1995) 342–43).

977. Milatos (Milatios) Map 59. Lat. 35.20; long. 25.35. Size of territory: 2. Type: C. The toponym is not attested epigraphically and not at all in Doric. In literary sources it is *Μίλητος* (Hom. *Il.* 2.647; Ephor. fr. 127). The city-ethnic was *Μιλάτιος* (BCH 70 (1946) 588–90 no. 1 (C6e); *I.Cret.* 1.ix.1.144–52 (C6l); cf. Chaniotis (1996) 200: c.220).

The earliest reference to Milatos as a *polis* in the political sense occurs in the first line of the agreement of Ionian Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτηι* (*Milet.* 1.3 140.1, 36 (c.259–250)). Strabo 10.4.14 described Milatos as a *polis* found in Homer (*Il.* 2.647) which no longer existed because Lyktos destroyed the *polis* (*κατασκάψαντες τὴν πόλιν*)

and occupied its *chora* (τὴν χώραν ἐνείμαντο) (Strabo 10.4.14). Here the use is probably urban.

Milatos is included in the *Inventory* as a possible *polis* (type C) principally on the strength of a (possibly) Archaic text embedded in the Hellenistic Drierian “oath of the 180 *panazostoi agelaoi*” that describes οἱ *Μιλάτιοι* as having waged war against Drieros (*I.Cret.* 1.ix.1.137–64 (C6l) = *Nomima* 1 48; cf. Chaniotis (1996) 200). For an earlier attestation of the collective use of the city-ethnic, also external, see BCH 70 (1946) 588–90 no. 1 (C6e). Both the context (border war) and the collective use of the city-ethnic suggest that Milatos was a *polis* (but cf. Perlman (1996) 252–58).

The *polis* town of Milatos was located on the peak and the steeply terraced west slopes of Kastellos, directly on the north coast 1.5 km north-east of the modern village of Milatos (Nowicki (2000) 170–71). According to a legend first attested in Ephor. fr. 127, colonists from Milatos founded Miletos in Asia Minor. During the Archaic period Milatos most likely shared a border with Drieros, with whom she perhaps contended for the possession of some territory (*I.Cret.* 1.ix.1.137–64 = *Nomima* 1 48 (C6l); cf. Chaniotis (1996) 200 (c.220)).

978. Olous (Olontios) Map 60. Lat. 35.15; long. 25.45. Size of territory: 3. Type: B. The toponym is Ὀλοῦς (Ps.-Skylax 47; *I.Cret.* 1.xvi.3.3 (C2)). The city-ethnic is Ὀλόνητιος (coins, C4s–C3f, *infra*; *I.Cret.* 1.xxii.4A.21–22 (C3m)). Forms with an initial *B-* (for *F-*) are common (e.g. *I.Cret.* 1.xviii.9.6 (C2l)); for the retention of *F-* before a short *-o-* on Crete, see Bile (1988) 115–16).

Ps.-Skylax 47 identifies Olous as a *λιμὴν*. Two inscriptions of C3m provide the earliest references to Olous as a *polis* in the political sense (*Milet.* 1.3 140.1, 38 (c.259–250); *I.Cret.* 1.xxii.4A ii, vii). The earliest attestation of the term in the urban sense occurs in SEG 23.547 (C3l/C2e). There is no doubt that Olous was a *polis* in the political sense by the early Hellenistic period. The archaeological evidence indicates that settlement on the isthmus of Poros was established perhaps as early as the Archaic period (*infra*). Although no public buildings of the Classical period have been identified, the combined evidence of her Archaic foundation, the possibility that her mint began to strike coins as early as c.330 and her status as a *polis* at the beginning of the Hellenistic period warrants her inclusion in the *Inventory* as a probable *polis* (type B).

The collective use of the city-ethnic occurs internally on the coins (*infra*) and in proxeny decrees (e.g. *I.Cret.*

i.xxii.4A.21–22 (C_{3m}). The earliest attestation of the collective use of the city-ethnic externally occurs in *Milet.* 1.3 140.38 (c.259–250). For the individual use of the city-ethnic there is the graffito of Δεῖνις Τιμαγένοῦς [᾽Ο]λόντιος from the Memnonion at Abydos (*Memnonion* 125, 298 (C₃)).

The Hellenistic borders of Olous are described in several treaties (all C_{2l}) between Olous and her neighbour Lato (*I.Cret.* 1.xvi.18; *RÉA* 44 (1942) 35–36C.51–56; *SEG* 26 1049.62–66; *I.Cret.* 1.xvi.5.69–72; for discussions of these descriptions, see Faure (1972); van Effenterre and Bougrat (1969); for the historical context, see Chaniotis (1996) 318–32). The border with Lato was described as “old” (*SEG* 26 1049.60–62: [κα]θὼς καὶ π[ά]λαι ἐπιγέ[γραπται]; *RÉA* 44 (1942) 35–36C.51–52: ὅπως αὐτοῖς οἱ ὄροι ἔσσονται οἱ ἀρχαῖοι). One of the landmarks on the border between Lato and Olous was τὸ ἀρχαῖον Ἀφροδίσιον (*I.Cret.* 1.xvi.18.7–8; *SEG* 26 1049.63–64; *I.Cret.* 1.xvi.5.70), identified with the early sanctuary (Protogeometric?, Geometric?) at Sta Lenika (Bousquet (1938); Mazarakis Ainian (1997) 215–16). The size of the territory of Olous in the Hellenistic period is estimated to have been c.26 km² (van Effenterre (1992b)).

The *polis* town of Olous, which was located on the isthmus of Poros (van Effenterre (1992b)); for a map of the region of Olous, see van Effenterre (1948c) pl. XXVIII), is today largely submerged. The earliest evidence for the settlement on the isthmus is Archaic (Favissa “votive pit” with Archaic and Classical terracotta figurines, van Effenterre (1992b)). A Submycenaean cemetery was excavated at stous Traphous to the south-west of Poros (van Effenterre (1948c)). A fort (φρούριον, *SEG* 23 548 (C₂); van Effenterre (1948b)) and the sanctuary of Britomartis (van Effenterre (1992b)) were probably situated to the east of Poros on the Spinalonga peninsula.

The protecting deity of Olous seems to have been Zeus Tallaios (coins, *infra*; oath god, e.g. *SEG* 23 547 (C_{3l}/C_{2e}); public enactments displayed in his sanctuary, e.g. *I.Cret.* 1.xxii.4C (C₂)). The location of this sanctuary and of the *prytaneion* (*I.Cret.* 1.xvi.5 (C_{2l})) are not known. In so far as a *prytaneion* is attested elsewhere on Crete during the Classical period (see Lato, *infra*), it is possible that also at Olous it was pre-Hellenistic. A single C₆ *tholos* tomb was found to the north of Poros at Ammoudoplaka (*ArchDelt* 21 (1966) *Chron.* 407), and tombs and grave *stelai* of C₄ and later have been found to the north-west of Poros in the vicinity of the village of Schisma (*ArchDelt* 33 (1978) *Chron.* 389–90; 43 (1988) *Chron.* 567–70) and at Chardaloupas (*ArchDelt* 38 (1978) *Chron.* 3376). Guard-posts (date?) pro-

tecting the urban centre of Olous from the west (direction of Dreros), the north (direction of Milatos) and south (direction of Lato) were located on the north slope and summit of Mt. Oxa and to the north at stis Pinès (van Effenterre (1948b)). Surface remains on the summit of Mt. Oxa (perhaps used as a place of refuge by the inhabitants of the *polis*?) indicate continuous human presence there from LMIIIc to the Byzantine period (Nowicki (2000) 173–74). A graffito at stis Pinès (date?) records that the spot is 28 stades from the *polis*, στάδια ἕκ πόλιος ΔΔΠΙΠΙ, the correct distance from the guard-post to the isthmus of Poros (van Effenterre (1948b); cf. *SEG* 45 1407 *bis*).

Although the *phylai* are attested only in Hellenistic sources, they are likely to be early and so are mentioned here. Two tribal names are preserved in the dating formulas of a public enactments: (i) Πάμφυλοι Π[αμφύλων] (*I.Cret.* 1.xxii.8 (C₂)); (ii) Δυμᾶνες (*SEG* 41 770 (C_{2l})).

Olous struck coins (staters, hemidrachms, obols) on the Aiginetan standard during the period c.330–280/270. Types: *obv.* (all denominations) head of Artemis; *rev.* (stater): Zeus *aetophoros*; (hemidrachm): *ΟΛ* inside a wreath; (obol): star or tripod. Legend (stater): *ΟΛΟΝΤΙΩΝ* (Svoronos (1890) pl. XXII.23–26, with Le Rider (1966) 179–80).

979. *Petra (Petraios) Map 60. Lat. 35.15; long. 26.00. Size of territory: 1. Type: C. The toponym is not attested. The city-ethnic is Πετραῖος (*Milet.* 1.3 140.37 (c.259–250)).

The urban centre of the community of the *Petraioi* has been identified with the fortified acropolis site (Archaic–Classical) on the north coast of Crete west of Siteia at Liopetra (Faure (1963) 20–21; for description, see Nowicki (2000) 101–2).

The only ancient reference to the community of the *Petraioi* as a *polis* occurs in the agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτην (*Milet.* 1.3 140.1, 37 (c.259–250)). The *Petraioi* are included in the Inventory as a possible *polis* (type C) on the strength of this reference—which assures that their community was a *polis* in the political sense in the early Hellenistic period—combined with the archaeological evidence for the Archaic–Classical settlement with its fortified acropolis.

The collective use of the city-ethnic is attested externally in *Milet.* 1.3 140.37. It is worth noting the Gortynian, Μοστυλίων Πετραῖω, who was made *proxenos* and *polites* of Olous (*I.Cret.* 1.xxii.4A (C_{3f})). His patronym may attest some association between his family and Petra.

Bronze coins (date?) with trident and dolphin have been attributed to the *Petraioi* (Faure (1963) 20–21).

980. Phaistos (Phaistios) Map. 60. Lat. 35.05, long. 24.50. Size of territory: 2. Type: [A]. The toponym is *Φαιστός* (Hom. *Il.* 2.648; Ps.-Skylax 47; *Milet.* 1.3 140 (c.259–250)), in Linear B, pa-i-to (McArthur (1993) 21–23). The city-ethnic is *Φαίστιος* (coins, from C5m, *infra*; the *ketikon ΠΑΙΣΤΙΚΟΝ*, written retrograde in epichoric script, occurs on staters of C4s (Le Rider (1966) 195 pl. XXI.7–10).

For *polis* in the urban sense, see Ps.-Skylax 47, where Phaistos is listed under the heading *πόλεις πολλαὶ ἐν Κρήτῃ*. The earliest reference to Phaistos as a *polis* in the political sense occurs in the agreement of Miletos *πρὸς τὰς πόλεις ἐν Κρήτῃ* (*Milet.* 1.3 140.1, 51 (c.259–250)). An Archaic law concerning the renunciation of an adoption (*SEG* 32 908 (C6)) and the mint, which commences C5f (*infra*), provide the best evidence that Phaistos was a *polis* in the political sense already in the Archaic and Classical periods.

The collective use of the city-ethnic is attested internally on the coins (*infra*) and externally in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* 1.3 140.51 (c.259–250)). For the individual use there are the two benefactors of Kydonia, *Θαμυκλῆς Φαίστιος* and *Φαινοκλῆς Φαίστιος* (*I.Cret.* 1.x.1 (C3)).

Phaistos shared a border with Gortyn to the east. The Asterousia mountains formed the frontier between Phaistos and the coastal community of Lassoia, probably a *polis* during the Hellenistic period (see Introduction), to the south. To the west, Kommos (perhaps ancient Amyklaion, see Introduction; s.v. Gortyn (no. 960)) may have served as a harbour for Phaistos, as did Matala (no. 976), at least during the Hellenistic period (Cucuzza (1997) 85). To the north lay Mt. Ida.

The earliest coinage of Phaistos and Gortyn indicates that the two *poleis* had arranged a *sympoliteia* by C5m (*infra*), as do Hellenistic references to Phaistos as the *κάτω πόλις* and Gortyn as the *ἄνω πόλις* (*I.Cret.* iv 165; *SEG* 23 563 (both C3s); Chaniotis (1996) 104–8, 422–28). *I.Cret.* iv 165, a law enacted by Phaistos and Gortyn (*τάδ' ἕαδε ταῖς πόλεσσι*), refers to Phaistos both by name and by the phrase *κάτω πόλις*. *SEG* 23 563, an alliance with Axos, refers to the two communities as *οἱ Γορτύνιοι ἂ ἄνω πόλι καὶ ἂ κάτω* (Phaistos is not referred to by name in what survives of the text). Gortyn destroyed Phaistos and incorporated her territory c.150 (Strabo 10.4.14; Cucuzza (1997) 87–90).

Apart from the Archaic law which requires that the renunciation of an adoption take place *ἐν ἀγορᾷ* (*SEG* 32 908 (C6l)), the remaining evidence for the political institutions of the *polis* is Hellenistic.

During C8–C7 a substantial settlement occupied the same ridge with its three low hills (from west to east: Christos Efendis, Middle Hill and Palace Hill) as the Minoan palace and town (Cucuzza (1998); La Rosa (1992); Levi (1964), (1967–68); Palermo (1992)). Remains of the Archaic and Classical periods are scanty (for the Archaic period, see La Rosa (1996)). It may be that early in C6 the settlement moved down from the hills on to the plain where no excavations have taken place. If so, Middle Hill, the highest of the three hills (altitude 110 m) and fortified during the Subminoan/Protogeometric–Geometric periods, probably served as the acropolis of the *polis* town. The only public building securely identified as Archaic is the C7l–C6 temple located near a Geometric residential district west of the Palace (La Rosa (1996) 68–82). The temple, traditionally assigned to Rhea or the “Magna Mater”, may have belonged to Leto (Cucuzza (1993)). The identification of a second C7–C6 building, located at Phalandra, 300 m to the west of the Minoan palace, as a temple remains uncertain (Levi (1961–62) 462–67; cf. Mazarakis Ainian (1997) 229–30). The phrase *ἐν ἀγορᾷ* [ἀι---] occurs in an Archaic law inscribed on a building block (*SEG* 32 908 (C6l)). If it refers to the meeting place, and not to the meeting, the location of its discovery in the plain 80 m west of Chalara may indicate where the public centre of the Archaic *polis* lay. For other Archaic remains from Phaistos (architectural fragments in poros, walls and deposits), see La Rosa (1996). A Hellenistic inscription mentions *τὸ δικαστήριον τὸ πολιτικόν* (the adjective suggesting more than one court at Phaistos?) and the *prytaneion* (*Milet.* 1.3 140.61–62, 66 (c.259–250); for the *prytaneion*, see Viviers (1994) 244). In so far as both terms are attested elsewhere on Crete during the Archaic and Classical periods (*dikasterion*: see Bionnos? (no. 952) and Gortyn (no. 960), *supra*; *prytaneion*: see Lato, *supra*) it is possible that also at Phaistos they were pre-Hellenistic.

Phaistos struck coins on the Aiginetan standard from c.470 (Price (1981)). Types on the earliest staters (C5f–C4m) attest a *sympoliteia* or alliance with Gortyn (Le Rider (1966) 161). Types: *obv.* Europa riding a bull, facing l; *rev.* lion's scalp (Le Rider (1966) pl. XX.19–24). The beginning of local coinage at Phaistos (stater with same types as above) is indicated by the legend (*rev.*) *ΠΑΙΣΤΙΟΝΤΟΠΑΙΜΑ* (*Φαιστίων τὸ παῖμα*) written retrograde in the epichoric alphabet (Svoronos (1890) pl. XXII.34; Wroth and Poole (1963) pl. XIV.14). A rarer early stater has *obv.* Europa riding a bull; *rev.* head of Hermes (Le Rider (1966) pl. XX.23). In the next phase (c.360–340/30) Phaistos adopts new types for its staters (no legend): (i) *obv.* seated Europa with bull; *rev.*

seated Hermes; (ii) *obv.* head of Europa; *rev.* bull protome (drachms also, Svoronos (1890) pl. XXIII.1); (iii) *obv.* winged Talos; *rev.* head of Europa; (iv) *obv.* winged Talos; *rev.* bull protome (Le Rider (1966) pls. XX.25–29, XXI.1–6). Staters of the following period (340/330–322) have *obv.* Herakles standing, holding his bow and club; *rev.* bull or a frontal bull's head; legend: ΠΑΙΣΤΙΚΟΝ written retrograde in the epichoric alphabet on some (Le Rider (1966) pls. XXI.7–25, XXII.1–19; *SNG Cop. Aeg. Isl.* 510–12). At the end of C4 (c.322–300) new types for the stater appear: (i) *obv.* Zeus Welchanos seated, with the legend ΦΕΛΞΑΝΟΣ, or Herakles (seated, or with a serpent, or attacking the hydra); *rev.* bull; legend (*obv.* or *rev.*): ΦΑΙΣ, ΦΑΙΣΤΙ or ΦΑΙΣΤΙΩΝ (Le Rider (1966) pls. XXII.20–31, XXIII.1–22; *SNG Cop. Aeg. Isl.* 515–18). Fractions (drachm, hemidrachm) of this period have *obv.* head of Herakles; *rev.* frontal bull's head (Le Rider (1966) pl. XXIV.5–23; *SNG Cop. Aeg. Isl.* 513–14, 519).

981. Phalasarna (Phalasarnios) Map 60. Lat. 35.30; long. 23.35. Size of territory: 3. Type: A. The toponym is Φαλάσαρνα, ἡ (Ps.-Skylax 47; *BCH* 45 (1921) III.102 (c.230–210)). The city-ethnic is Φαλασάρνιος (*I. Cret.* II.xi.1 (C3e)).

Ps.-Skylax 47 provides the earliest reference to Phalasarna as a *polis*, in this case in the urban sense. The earliest reference to Phalasarna as a *polis* in the political sense occurs in the agreement of Miletos πρὸς τὰς πόλεις τὰς ἐγὼ Κρήτην (*Milet.* 1.3 140.1, 39 (c.259–250)). The *Stadiasmus* describes Phalasarna as a πόλις παλαιά (336).

Phalasarna was clearly a *polis* in the early Hellenistic period. Ps.-Skylax's attestation of *polis* status in the urban sense is confirmed by the Archaic and Classical remains of the town (especially the temples and fortifications, *infra*), and that Phalasarna was a *polis* in the political sense as well can be inferred from her mint, which may have commenced as early as c.330 (*infra*).

The collective use of the city-ethnic is attested internally in a dedication of ἡ πόλις Φαλασαρνίων (*I. Cret.* II.xix.2 (C3s)), and externally in an enactment formula of the alliance between Phalasarna and Polyrrhen (*I. Cret.* II.xi.1 (C3e); Markoulaki (2000)). For the individual use of the city-ethnic there is the *proxenos* of Epidauros and *theorodokos* of Apollo and Asklepios Ἀνδροκλῆς Ἐπιγύνους Φαλασάρνιος (*IG IV²*.1 96.12–13 and *SB* 1368 (C3m)).

The territory of Phalasarna, ἡ γὰρ Φαλασαρνία (Markoulaki (2000) l. 21 (C3e)), included the Grambousa peninsula and the coastal plain known today as Livadhia.

The *polis* shared a border with Polyrrhen, with whom she fought in C41 or C3e. Copies of the C3e treaty of peace and alliance that concluded these hostilities were found at the sanctuary of Diktynna on the Rhodopou peninsula (*I. Cret.* II.xi.1) and at a sanctuary at Τύλιφος near Kaliviani (Markoulaki (2000)); the latter was perhaps located on the frontier between Phalasarna and Polyrrhen.

The *polis* town of Phalasarna was located on Cape Koutri (90 m) and in the plain to its east. The total area occupied by the *polis* town is estimated to have been c.60 ha (E. Hadjidaki (1992)). The east and north flanks of the acropolis were fortified, C5–C4 (Gondiccas (1988) 86–92; E. Hadjidaki (1992), (1996)). Public buildings, including at least two temples, were located on the summit of the acropolis (Gondiccas (1988) 86–92; E. Hadjidaki (1992), (1996)). One of the two temples probably belonged to the protecting deity of the *polis*, Artemis Diktynna (Dion. Calliphon., *GGM* I 119–22). Cisterns and house platforms cut into the rock on the slopes of the acropolis indicate the location of residential areas (Gondiccas (1988) 86–92; E. Hadjidaki (1992)). The fortifications of the closed harbour, ἀλιμῆν κλειστός (Ps.-Skylax 47; Dion. Calliphon., *GGM* I 118–21), located at the foot of the acropolis to the south-east, date to C4s (Frost and Hadjidaki (1990); E. Hadjidaki (1992), (1996)). An industrial area of the late Hellenistic period has been identified near the north-west corner of the harbour (E. Hadjidaki (1996)). The cemetery with pithos burials of C6e–C5m and Hellenistic cist graves has been partially excavated to the south-east of the harbour (Gondiccas (1988) 97–116). Quarries were located along the shore to the south of the cemetery (Gondiccas (1988) 95). Three rock-cut “thrones” (C5–C3e) located near the cemetery and the quarries may be Phoenician (or Punic); if so, they attest the participation of Phalasarna in the east–west trade of Phoenician mariners (Di Vita (1992–93)).

Phalasarna struck coins (staters) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 190, 198; *IGCH* no. 109). Types: *obv.* head of a female (Guarducci (1939) 220: Aphrodite or Phalasarne?); *rev.* trident-head; legend: ΦΑ (Svoronos (1890) pl. XXV.4–6; *SNG Cop. Aeg. Isl.* 522). Drachms and hemidrachms begin c.280 with the same types (Svoronos (1890) pl. XXV.7–9, 11, with Le Rider (1966) 188; *SNG Cop. Aeg. Isl.* 523–25).

982. Polichne (Polichnites) Map 60. Lat. 35.30, long. 23.55. Size of territory: 2. Type: C. Stephanos (532.4–5) lists a Cretan Πολίχνη, ἡ, but there may have been two Cretan communities with this name (Faure (1993) 67–68), and it cannot be

determined to which community the entry in Stephanos refers. The city-ethnic was *Πολιχνίτης* (Thuc. 2.85.5; cf. Sekunda (2000) 330–37: the term *Polichnitai* is not a city-ethnic but rather the name of a league of small communities of west Crete whose population consisted largely of the descendants of the pre-Greek *Κυδῶνες*). The identification of the toponym Polichne with the ancient remains near the modern village of Vryses, Kydonia (Faure (1988) 91; cf. Guarducci (1939) 233: Polichna was located at Meskla) is supported by (i) bronze coins with reverse types similar to those of Kydonia which bear the legend *ΠΟ* (*infra*), and (ii) the story related by Thucydides which suggests that Polichne and Kydonia were neighbours (Thuc. 2.85.5).

Polichne is included in the Inventory as a possible *polis* (type C) chiefly on the evidence of Thucydides (2.85.5–86.1). In 429 the Athenians responded to a request of Nikias, the Gortynian *proxenos* of Athens, and ravaged the territory of Kydonia. Nikias hoped in this way to win for Gortyn the gratitude of the *Polichnitai* (Figueira (1988) 538–42). The context and the collective use of the city-ethnic suggest that Polichne was a political community, rather than a sub-unit of another *polis* (cf. Perlman (1996) 252–58). The passage further suggests that the relations between Polichne and Kydonia were at times hostile and that other Cretan *poleis*, in this case Gortyn, took advantage of this. The reverse type (dog) on the bronze coins of Polichne which resembles the reverse type of a series of bronze fractions from Kydonia suggests that Kydonia and Polichne were allies at the time (Stefanakis (1996)).

The ancient settlement south of the modern village of Vryses, Kydonia, extends across the two peaks of Ag. Giorgios to the west and Kastellos to the east. Excavations on a modest scale and chance finds suggest that the area was continuously occupied since the Middle Minoan period. The ancient road up to the double acropolis followed a ravine from the north. A wall along the saddle between the two peaks protected the community from the south (Faure (1958) 499–501, (1963) 21–22, (1988) 91; Zoīs (1976); Nowicki (2000) 214–15). An Archaic–Classical sanctuary (of Demeter?, Diktyнна?, a nymph?) was located on the southern slope of Kastellos (Mortzos (1985)).

Polichne produced a small issue of bronze fractions (Svoronos (1890) pl. II.7, with Stefanakis (1996) (C2e)). Types: *obv.* head of a woman (Diktyнна?); *rev.* dog; legend: *ΠΟ*.

983. Polyrrhen (Polyrrhenios) Map 60. Lat. 35.30, long. 23.40. Size of territory: 3. Type: [A]. The toponym is either

Πολυρήν or *Πολυρρήνια*. The athematic form (in *-ην*) is attested epigraphically (*BCH* 45 (1921) III.103 (c.230–210); *I.Cret.* II.xxiii.2 (C3); *IG* II² 844 (C3s)); the thematic form (in *-α*) occurs in the geographers (e.g. Ps.-Skylax 47). On the athematic toponyms in *-ην* and their recharacterisation as feminine nouns in *-α*, see Bile (1988) 167–68. The city-ethnic was *Πολυρήνιος* (coins, C4s–C3f, *infra*; *I.Cret.* II.xi.1 (C3e)) or *Πολυρρήνιος* (*SEG* II 414.8 (C3s); *I.Cret.* II.xxiii.4 (C2)). As was recognised in Antiquity, the name means “rich in lambs” (Steph. Byz. 532.13–14).

The earliest reference to Polyrrhen as a *polis* in the political sense occurs in the dedication of *ἡ πόλις ἡ Πολυρρηνίων* to King Areus of Sparta (*I.Cret.* II.xxiii.12A (C3f)). Cf. the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* I.3 140.1, 67 (c.259–250)). For *polis* in the urban sense, see Ps.-Skylax 47, where Polyrrhen is listed under the heading *πόλεις πολλαὶ ἐν Κρήτῃ*. Polyrrhen was certainly a *polis* in the political sense by the early Hellenistic period. That it was a *polis* in the late Classical period too is indicated by the mint, which may be as early as c.330 (*infra*).

The collective use of the city-ethnic occurs internally on the coins (*infra*) and in the dedication in honour of King Areus of Sparta (*I.Cret.* II.xxiii.12A (C3f)), and externally in the agreement with Miletos (*Milet.* I.3 140.67 (c.259–250)). For the individual use there is the *proxenos* of Oropos *Πασίνος [Θ]αρ[σύ]νοντος Πολυρρήνιος* (*IG* VII 307 (C3s)).

Little is known about the history of the *polis* prior to the Hellenistic period. According to Strabo 10.4.13, Polyrrhen was originally settled in villages (*κωμηθῶν δ' ἕκουιν*); Achaeans and Lakonians subsequently fortified the acropolis at Polyrrhen and synoecised the villages (Gondiccas (1988) 222–24). Malkin, who does not dismiss *a priori* the tradition of Spartan involvement in the foundation of Polyrrhen, argues for a period of Spartan colonisation in C8 (Malkin (1994) 73–83). Apart from traces of LHIII pottery, the earliest material at Polyrrhen appears to be C6I/C5e (Blackman (1976c); Gondiccas (1988) 208).

Ps.-Skylax recorded that the territory of Polyrrhen extended from the north toward the south, *διήκει ἀπὸ βορέου πρὸς νότον* (Ps.-Skylax 47). Gondiccas defines the territory of Polyrrhen, *ἡ γὰρ ἡ Πολυρρηνία* (Markoulaki (2000) I. 20 (C3e)) as follows: west to the Mesogheia mountains, north to the coast and the port at Kissamos (itself a dependency of Polyrrhen, Gondiccas (1988) 169–70), south to the mountains Kytroulès and Kolymbos (with the small communities beyond the Typhlos gorge—Kantanos, Katre, Pelkis—friendly, but politically insignificant and geographically

remote), and east to the Rhodopou peninsula including Pergamon (ibid. 277–85) and the sanctuary of Diktynna on Rhodopou peninsula (ibid. 224–31). Polyrrhen shared borders with Kydonia to the east and Phalasarua to the west (Strabo 10.4.13) and fought with the latter in C4l or C3e. Copies of the treaty of peace and alliance that concluded these hostilities were found at the sanctuary of Diktynna (*I.Cret.* II.xi.1 (C3e)) and at a sanctuary at *Τύλιφος*, near Kaliviani (Markoulaki (2000)); the latter was perhaps located on the frontier between Polyrrhen and Phalasarua.

The *polis* town of Polyrrhen was built on the summit and slopes of a steep hill in the mountain range of Prophitis Elias, with the lower town to the south-west of the acropolis (418 m). The remains of the *polis* town cover an area of roughly 30 ha, including the cemetery (C4 and later) to the north-west (Niniou-Kindeli (1992)). Both the lower town and the acropolis were fortified. Ancient walls (C4l/C3e) are traceable on the north and north-west sides of the acropolis and on the north-west (with two towers) and south-east (with gate) sides of the lower town (Blackman (1976c); Gondiccas (1988) 175–77; Markoulaki (1988)). Two rock-cut aqueducts supplied water to the city (Blackman (1976c)). Cisterns on the acropolis and in the lower city may be no earlier than the second Byzantine period (ibid.). Apart from a small extra-mural temple (C3) located at sto Yero Kolympo in the gorge to the east of the *polis* town (Gondiccas (1988) 183–85) and the cemetery, all remaining traces of the community are intramural (ibid. 173–83). Walls of the early Hellenistic period attributed to a monumental temple with an altar or stoa along its north side were excavated within the fortification walls in the centre of the lower town, just north of the Church of the Ninety-nine Fathers (Theophanides (1942–44a); Gondiccas (1988) 178–82). Traces of walls and rock cuttings on the south and south-east slopes of the hill and in the village indicate the location of residential areas (Gondiccas (1988) 182–83; Markoulaki (1996)).

Polyrrhen minted coins (staters) on the Aiginetan standard during the period c.330–280/270. Types: *obv.* head of Zeus; *rev.* filleted frontal bull's head; legend: ΠΟΛΥΡΡΗΝΙΟΝ (Svoronos (1890) pl. XXV.21–25, 28–30, with Le Rider (1966) 190, 198; *IGCH* no. 109; *SNG Cop. Aeg. Isl.* 528). Smaller denominations in silver (drachm, hemidrachm, obol) began c.280 (Le Rider (1966) 188).

984. Praisos (Praisios) Map 60. Lat. 35.10, long. 26.05. Size of territory: 3. Type: [A]. The toponym is Πραισός (*I.Cret.* III.iv.1 (C3e)). The city-ethnic is Πραισίσιος (coins,

C4s–C3f, *infra*; *I.Cret.* III.iv.1 (C3e)). For Πρᾶσος/Πραισίσιος, see Guarducci (1942) 135.

In Ps.-Skylax 47, where *polis* is used in the urban sense, Praisos is one of the toponyms listed under the heading πόλεις πολλαὶ ἐν Κρήτῃ. The earliest explicit uses of the term πόλις for Praisos occur in Hellenistic documents (*I.Cret.* III.iv.1 (C3e), vi.7 (C3f)). Although there is no explicit Archaic or Classical reference to Praisos as a *polis*, her mint, which perhaps began as early as c.350, strongly suggests her inclusion in the Inventory as a *polis*.

The collective use of the city-ethnic is attested internally on the coins (*infra*) and in a decree of Praisos for the *Stalitai* (*I.Cret.* III.vi.7 (C4s–C3f, C3f)). The collective use is attested externally in Herodotos' account of the expedition of Minos to Sicily (Hdt. 7.170.1).

The *Praisioi* maintained that they were descendants of the autochthonous Eteocretans (Hdt. 7.170–71; Staphylos (*FGrHist* 269) fr. 12; Whitley (1998)). The tradition is supported by the discovery at Praisos of five Eteocretan inscriptions, the earliest of which (*I.Cret.* III.vi.1; cf. 4) may date to C6 (Jeffery (1990) 316 nos. 19a and b (550–525?)). If so, it considerably antedates the earliest identifiably Greek inscription from Praisos (*I.Cret.* III.vi.7 (C3e); Guarducci (1942) 137; Duhoux (1982) 63–85). Apart from the role of the *Praisioi* in the Cretan refusal to join the Greek cause against Xerxes, which is suggested by the narrative of Herodotos (Hdt. 7.170–71), our evidence for the history of the *polis* is Hellenistic.

The phrase ὄς κα ἡ ἐνφυλος was used to denote a citizen (*I.Cret.* III.iv.1 (C3e)). The name of one *phyle*, Φαρκαρίς, preserved in the dating formula of an honorary decree (*I.Cret.* III.vi.8 (C3)), is a rare feminine adjectival form of unknown derivation (Jones, *POAG* 231).

The territory of Praisos was called ἡ Πραισία (χώρα) (Theophr. *Hist. pl.* 3.3.4; *I.Cret.* III.iv.1 (C3e)). The statement of Ps.-Skylax 47 that “Praisos reached in both directions” (Πραισὸς διήκει ἀμφοτέρωθεν) has been understood to mean to the north and the south coasts (e.g. Whitley (1998)). Such an interpretation is supported by the decree of Praisos for the *Stalitai* (and *Setaetai*) which suggests that these two coastal communities (the *Stalitai* on the south coast and *Setaetai* on the north coast) were dependencies of Praisos during the Hellenistic period (*I.Cret.* III.vi.7 (C3f); Chaniotis (1996) 385–94; Perlman (1996) 257–58).

The *polis* town of Praisos was built on three acropolises (First Acropolis, Second Acropolis and Third Acropolis or Altar Hill) and covered an area of roughly 24 ha. Settlement began there (on First and Second Acropolises) already in

LMIII C and continued through C2s. The main period of occupation was C5l–C2m (Whitley *et al.* (1995) 428). An early shrine (Geometric–Hellenistic) was located on the summit of Third Acropolis, and a temple (Classical–Hellenistic) on the summit of First Acropolis. Staphylos records the existence of a temple of Zeus Diktaios at Praisos (Staphylos (*FGrHist* 269) fr. 12). The question remains open whether this temple should be identified with the one on First Acropolis or with the temple and sanctuary of Zeus Diktaios at Palaikastro on the east coast of Crete (Perlman (1995a)). Extra-urban spring sanctuaries were located to the south of the urban centre at Vavelli (Orientalising–Hellenistic) and Mesamvrysi (Geometric–Archaic and possibly later). A third extra-urban sanctuary (Orientalising–Hellenistic) with an associated C6s kiln has been identified on the summit of Prophitis Elias, 2.5 km south-east of the *polis* town (Whitley *et al.* (1999) 249–51; cf. Erickson (2000) 318–27). Residential areas are indicated by rock-cut features on the slopes of First and Second Acropolises. A multi-room structure of the Hellenistic period identified as a house or an *andreion* was located in the saddle between First and Second Acropolis. If this structure was an *andreion* (for the identification of the structure as a public building, see Bosanquet (1902) 259–70), the organisation of Praisos paralleled that of other Cretan *poleis* whose public buildings occupied the saddle connecting a double acropolis. The main cemetery (Late Geometric–Hellenistic) was located on the south-eastern slopes of Third Akropolis. For a description of the remains, see Whitley *et al.* (1995), (1999).

Praisos struck coins (staters, drachms, hemidrachms) on the Aiginetan standard from C4m (Le Rider (1966) 197 (c.350–325)). Staters have types: *obv.* Gorgoneion, or quadruped suckling a human infant, or Herakles kneeling; *rev.* (with Gorgoneion and quadruped): Herakles kneeling; *rev.* (with Herakles): eagle; legend: ΠΠΑΙ, ΠΠΑΙΣ or ΠΠΑΙΣΙ. Drachms have: *obv.* male figure; *rev.* Herakles kneeling. Hemidrachms have *obv.* Herakles kneeling; *rev.* eagle (Svoronos (1890) pl. XXVII.1–10; *SNG Cop. Aeg. Isl.* 539). Staters of C4l–C3e (Le Rider (1966) 197) have: (i) *obv.* head of a goddess (Guarducci (1942) 137: Demeter or Persephone?); *rev.* bull; (ii) *obv.* Zeus *aetophoros*; *rev.* Herakles standing, or goat protome; (iii) *obv.* head of Apollo; *rev.* goat protome (Svoronos (1890) pls. XXVII.11–28; XXVIII.1–19; *SNG Cop. Aeg. Isl.* 540). Drachms, hemidrachms and obols of C4l–C3e have (i) *obv.* head of a goddess; *rev.* bull's head (Svoronos (1890) pl. XXVII.13–20); or (ii) *obv.* head of Apollo; *rev.* Herakles standing, or a goat

protome, or head of a goat, or a bee (Svoronos (1890) pl. XXVIII.2, 5–11); or (iii) *obv.* head of a goddess; *rev.* bull's head, or a bee; or (4) *obv.* Zeus *aetophoros*; *rev.* goat protome, or Herakles standing (Svoronos (1890) pls. XXVII.28, XXVIII.1; *SNG Cop. Aeg. Isl.* 541–43). Legend on some coins (all denominations) of C4l–C3e (usually on *rev.*): ΠΠΑΙΣΙΟΝ/ΠΠΑΙΣΙΩΝ or abbreviations down to ΠΠΑΙ.

985. Priansos (Priansieus) Map. 60. Lat. 35.05, long. 25.15. Size of territory: 3. Type: B. The toponym is Πριάνσος, ὄ (*I.Cret.* iv 174 (C3l/C2e)). The city-ethnic is either Πριανσιεύς (coins, C4s–C3f, *infra*; *I.Cret.* iii.iii.4 (C3l/C2e)) or Πριάνσιος (*I.Cret.* iii.iii.4 (C3l/C2e)). For the extra-Cretan form of the toponym Πριαμφός (Delphi, *BCH* 45 (1921) iv.6 (c.230–210)) and of the city-ethnic Πριάσιος (Miletos, *Milet.* 1.3 38 o, q (C3s)), see Bile (1988) 153 n. 328. Another extra-Cretan inscription preserves the city-ethnic Πριάνσικος (Pagasai, *Thess. Mnem.* no. 83 (C3l/C2f)).

The earliest reference to Priansos as a *polis* (in the political sense) occurs in the agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτηι (*Milet.* 1.3 140.1, 37 (c.259–250)). The observation that Priansos may have been minting coins as early as c.330 (*infra*) suggests that the community was a *polis* in the political sense already in the late Classical period.

The collective use of the city-ethnic is attested internally on the coins (*infra*) and externally in Hellenistic treaties (*I.Cret.* iii.iii.4 (C3l/C2e); *I.Cret.* iv 174 (C3l/C2e)). For the individual use of the city-ethnic there are the immigrants from Priansos to Miletos, Ὀρθοκλήης Ἀρίστωνος Πριάσιος, Αἴσιμος Αἰσίμου Πριάσιος and Πυργίας Καλλιδόκου Πριάσιος (*Milet.* 1.3 38 o, q (C3s)) and Ἐρασιπτόλεμος [Πρ]επάνδρω Πριάνσιος *proxenos* of Gortyn (no. 960) (*I.Cret.* iv 208 (C3/C2)) and *theorodokos* for Delphi (*BCH* 45 (1921) iv.6 (c.230–210)).

The territory is called ἡ Πριανσία (*I.Cret.* iii.iii.4, ll. 18–21 (C3l/C2e)). The Hellenistic borders of Priansos are described in the alliance of Priansos with Hierapytna and Gortyn (*I.Cret.* iv 174, ll. 16–30 (C3l/C2e)). The description of the border with Gortyn begins at the south coast, so it seems likely that the Geometric–Roman cave sanctuary of *Εἰλείθυια Βνωπία* at Tsoutsouros (ancient Einatos) was located within her territory (*I.Cret.* iv 174.60–61, 76; Faure (1996) 75–77). Einatos (in Linear B wi-na-to, McArthur (1993) 152) may have served as a port for Priansos. Coin types (*infra*) suggest that Priansos was oriented to the sea. The mouth of the river Mintris would seem the likely place to look for an ancient harbour, but no ancient harbour facil-

ities are visible today. This may be due to several geological factors, including coastal uplift and riverine silting (personal observation).

Nothing is known about the urban centre of Priansos, which was probably located in the vicinity of Kastelliana. A Hellenistic inscription refers to an *andreion* at Priansos (*I.Cret.* III.iii.4.38–40 (C3l/C2e)). In so far as *andreia* are attested elsewhere on Crete during the Archaic and Classical periods (see Axos, Datala and Eltynia, *supra*), it is possible that also at Priansos it was pre-Hellenistic. Athena Polias, in whose sanctuary public enactments were displayed, was probably the protecting deity of the *polis* (*I.Cret.* III.iii.4.79–80 (C3l/C2e)).

Priansos struck coins (staters, drachms, hemidrachms) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 190, 198; *IGCH* no. 109). Staters have *obv.* seated goddess with serpent (Svoronos (1890) 295: Hygieia?); *rev.* Poseidon standing holding his trident, or goat protome (Svoronos (1890) pl. XXVIII.21–23; *SNG Cop. Aeg. Isl.* 544–45). Drachms and hemidrachms have *obv.* head of a goddess (Guarducci (1935) 280: Artemis?); *rev.* trident (drachms only), or palm (Svoronos (1890) pl. XXVI-II.24–28; *SNG Cop. Aeg. Isl.* 546–47). Legend (all denominations): ΠΡΙΑΝΣΙΕΩΝ or abbreviations down to ΠΠΙ.

986. Rhaukos (Rhaukios) Map 60. Lat. 35.15, long. 25.00. Size of territory: 2. Type: [A]. The toponym is *Ῥαυκος* (Ps.-Skylax 47; Polyb. 30.23.1). The city-ethnic is *Ῥαυκίος* (coins, C4s–C3f, *infra*; *Milet.* I.3 140.36 (c.259–250)). For *Ῥωκίους* (acc. pl.), which occurs in the *asylia* decree of Rhaukos for Teos (*I.Cret.* I.xxvii.1 (C3l)), see Bile (1988) 111.

In Ps.-Skylax 47, where *polis* is used in the urban sense, Rhaukos is one of the toponyms listed under the heading *πόλεις πολλὰ ἐν Κρήτῃ*. The earliest explicit reference to Rhaukos as a *polis*, and here in the political sense, occurs in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* I.3 140.1, 36 (c.259–250)). Rhaukos was certainly a *polis* in the political sense during the early Hellenistic period. The coins, which perhaps began as early as c.330 (*infra*), suggest that this was already the case in the late Classical period.

The collective use of the city-ethnic occurs internally on the C4s–C3f coins (*infra*), and externally in the agreement of Miletos *πρὸς τὰς πόλεις τὰς ἐν Κρήτῃ* (*Milet.* I.3 140.36 (c.259–250)). For the individual use of the city-ethnic, there are the *proxenoi* of Iasos, *Θεόδωρος Σωτάδα Κρής Ῥαυκίος* (*I.Iasos* 53 (C4l/C3e)), and of Gortyn, *Λύγδαμυς Μιττυρίωνος Ῥαυκίος* (*I.Cret.* IV 206 (C3l/C2)).

The *polis* town of Rhaukos (modern Ag. Myronas) is almost unknown archaeologically (Pendlebury *et al.* (1932–33) 91–92; Sanders (1982) 154 (9/12)), but a Hellenistic inscription recording the border of Gortyn and Knosos most likely refers to the agora of Rhaukos and to the *prytaneion* in the agora (*I.Cret.* IV 182.3–4 (c.167/6); Chaniotis (1996) 296–300). In so far as both terms are attested elsewhere on Crete during the Archaic and Classical periods (agora: see Gortyn (no. 960) and Phaistos (no. 980); *prytaneion*: see Lato (no. 971)), it is possible that also at Rhaukos the agora and the *prytaneion* are pre-Hellenistic.

Rhaukos struck coins (staters, drachms, hemidrachms) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 197; *IGCH* no. 109). Staters have *obv.* Poseidon *hippios*; *rev.* trident-head, within an incuse square on the earliest issues (Svoronos (1890) pl. XXIX.6–7, 11–16, 23–24; *SNG Cop. Aeg. Isl.* 551). Drachms and hemidrachms have (i) *obv.* head of Poseidon?; *rev.* two dolphins (drachm); trident (hemidrachm) (Svoronos (1890) pl. XXIX.8–9; *SNG Cop. Aeg. Isl.* 552–53); (ii) *obv.* head of Poseidon; *rev.* trident (drachm), or two dolphins (hemidrachm) (Svoronos (1890) pl. XXIX.17, 25–26). Obols have *obv.* head of a goddess; *rev.* trident (Svoronos (1890) pl. XXIX.27). Legend (all denominations): ΠΑΥΚΙΟΝ.

987. Rhithymnos (Rhithymnios) Map 60. Lat. 35.20, long. 24.30. Size of territory: 3. Type: C. The toponym is not attested in the inscriptions from Crete. Inscriptions from elsewhere and literary sources spell the toponym *Ῥίθυμνος* (Arkesine, *IG XII.7 7A.3* (C4l–C3e)), *Ῥίθυμνα* (Delphi, *BCH* 45 (1921) III.116 (c.230–210)), and *Ῥιθυμνία* (Steph. Byz. 545.7). Rhithymnos may have been renamed Arsinoë during the period C3l–C2e (Le Rider (1966) 242–45; reign of Ptolemy IV). The city-ethnic is *Ῥιθύμνιος* (*I.Cret.* I.xxii.4A (C3f)).

Steph. Byz. 545.7 is the only source to identify Rhithymnos as a *polis*. Aelian called Rhithymnos a *κώμη* (Ael. *NA* 14.20). That Rhithymnos was a *polis* in the political sense during the late Classical and early Hellenistic periods is suggested by her mint, which may have begun as early as c.330 (*infra*), by a proxeny decree of C4l–C3e in which a citizen of Rhithymnos is granted *proxenia* by Arkesine (*IG XII.7 7A* (C4l–C3e)), and by the personal use of the city-ethnic (Perlman (1996) 246–52; *infra*).

The collective use of the city-ethnic is not attested, but is undoubtedly to be recognised in the legend *ΠΙ* which appears on the reverse of the coins (*infra*). For the individual and external use there is the funerary columella of *Σώτερρα Δαμαρέτου Ῥιθυμνία* (*IG II²* 10135 (C4l/C3)) and the

proxenoi of Olous, *Κλεωναίος* [Δα]μοκράτους 'Ριθύμνιος (*I.Cret.* i.xxii.4A (C3f)), and of Gortyn, [---, son of ---] οδόκω 'Ριθύμνιος (*I.Cret.* iv 207 (C3)).

The evidence for the history and institutions of Rhithymnos dates to the Hellenistic period. The remains of ancient Rhithymnos lie concealed beneath those of the Venetian city. For a brief survey of ancient remains in the modern city, see Stratidakis (1995) 326–27. The acropolis was more than likely located on the high promontory where the Venetians later built their fort (Fortetsa). The town and harbour were probably to the east of the promontory; rock-cut slipways and a fish tank have been identified to the west of Fortetsa (Blackman (1976d)). Onorio Belli describes the remains of a square temple with a portico upon a hill in the vicinity of Rhithymnos, but the location of this building is unknown (Falkener (1854) 25).

Rhithymnos struck coins (staters, drachms, hemidrachms) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 190, 198). Her output was small. Staters have *obv.* head of Apollo; *rev.* Apollo *lithophoros* (Svoronos (1890) pl. XXX.1). Drachms and hemidrachms have *obv.* head of Athena; *rev.* trident-head and dolphins (Svoronos (1890) pls. XXXIX.33, XXX.3; *SNG Cop. Aeg. Isl.* 555). Legend (all denominations): *PI*.

988. *Rhitten (Rhittenios) Map 60. Lat. 35.00, long. 24.55. Size of territory: 1. Type: B. The adverbial 'Ριττενάδε, which occurs in the agreement between the *Rhittenioi* and Gortyn (*I.Cret.* iv 80 (C5e)), indicates that the toponym was either 'Ριττέν or 'Ριζέν (Bile (1988) 145, 168). The form 'Ριζηνία occurs in Stephanos (Steph. Byz. 544.20) and has been restored in two inscriptions: (i) a fragment of an Archaic epichoric inscription from Patela Prinias (*I.Cret.* i.xxviii.2 (C6)) and (ii) an agreement between Gortyn and Knosos (*I.Cret.* iv 182 (C2)). In both cases, the restorations of the toponym are problematic (Faure (1993) 70). The city-ethnic was 'Ριττένιος (*I.Cret.* iv 80 (C5e)).

Only Stephanos refers to *Rhitten (Rhizenia) as a *polis* (Steph. Byz. 544.21). The agreement of Gortyn for *Rhitten recognised that the *Rhittenioi* were *αυτόνομοι* and *αυτόδικοι* (*I.Cret.* iv 80 (C5e)). From this same text we learn further that the *Rhittenioi* enjoyed their own assembly (τὸ κοινὸν οἱ 'Ριττένιοι, ἀγορὰ Φευμένα), council (πρεΐγιστοι; for the meaning of the term, see Davaras (1980); Bile (1988) 341), and public officials (κόσμοι, κάρυκς). On the other hand, certain delicts fell under the joint jurisdiction of Gortyn and *Rhitten (4–12), and certain complaints against Gortyn and individual *Gortynioi* were

heard in Gortyn (12–15). Furthermore, Gortyn owned at least some territory which was occupied by *Rhittenioi*, and it was within the jurisdiction of Gortyn to determine the rights of those occupants to its use (3–4). On balance the evidence suggests that *Rhitten was a *polis* with her own laws, courts, magistrates, council and assembly, but a dependent *polis* of Gortyn (which controlled land within the territory of *Rhitten and could under certain circumstances abrogate the judicial and executive authority of the state (Perlman (1996) 265–66)).

The collective use of the city-ethnic occurs externally in the agreement of Gortyn and *Rhitten (*I.Cret.* iv 80 (C5e)).

The location of ancient *Rhitten has been the subject of controversy. Guarducci identified ancient *Rhitten with the remains of the important settlement at Patela Prinias c.11 km north of Gortyn, and the majority of scholars have followed her lead (Guarducci (1935) 294; van Effenterre (1993); cf. *Nomima* 1 7). Faure has long championed an alternative location for ancient *Rhitten south of the Mesara in the Asterousia mountains near Apesokari at the foot of a chain of hills called ἡ Κάτω 'Ρίζα (Faure (1963) 22–24, (1993) 70). Faure's arguments against the *opinio communis* are convincing. His arguments in favour of ἡ Κάτω 'Ρίζα are somewhat less compelling (Perlman (1996) 262–63). The ancient site near Apesokari has not been explored, and all that may be said about it is that the surface remains date to the Classical and Hellenistic periods (Faure (1963) 24). The settlement on Patela Prinias, a high triangular-shaped plateau, c.11.5 ha in area, located at the junction of two valleys which connect the northern and southern coasts, was established in C13 and continued until C6m. Defensive walls have been identified below Patela Prinias restricting access through the valleys and up to the plateau. Residential districts that attest a degree of town-planning have been excavated at the northern edge of the plateau and to the south-east in the vicinity of the two large buildings, Temple A (C7) and "Temple B" (Subminoan/Protogeometric–C7l). Mazarakis Ainian suggests that "Temple B" was not, in fact, a temple but a public building with some other function, perhaps e.g. a *prytaneion*, during its final (C7) phase (Mazarakis Ainian (1997) 224–26). The cemetery (also C13–C6m) was 500 m north-west of Patela at Siderospilia. A potters' quarter (C8l/C7e–C6m) was located near Mandra di Gipari on a hillock opposite the west side of the plateau. During the late Classical and Hellenistic periods Patela Prinias served as a fortified guard-post. For the remains of the settlement at Patela Prinias, see Rizza (1978), (1991), (1995), (2000); Rizza and Rizzo (1985); Rizza *et al.* (1994).

989. Stalai (Stalites) Map 60. Lat. 35.05, long. 26.00. Size of territory: 1. Type: C. The toponym is attested only in the late form $\Sigma\tau\eta\lambda\alpha\iota$ (Steph. Byz. 585.12). The city-ethnic is $\Sigma\tau\alpha\lambda\acute{\iota}\tau\eta\varsigma$ (*I.Cret.* III.vi.7 (C3f); cf. $\Sigma\tau\eta\lambda\acute{\iota}\tau\eta\varsigma$, *I.Cret.* III.iv.9, l. 123 (C2l)).

Stalai is identified as a *polis* in two ancient sources: (i) the decree of Praisos concerning the *Stalitai*, which secures for the *Stalitai* the enjoyment of their *chora* and *polis* (*I.Cret.* III.vi.7 (C3f)); and (ii) Stephanos (Steph. Byz. 585.12). The meaning of the term in the decree of Praisos is urban. This decree indicates that the *Stalitai* possessed several of the defining characteristics of the *polis*, viz. an urban centre (*πόλις*), a hinterland (*χώρα*) with recognised borders, the authority to levy harbour taxes (*ἐλλιμένιος*) and perhaps to tax the purple-dye and fishing industries, and so, presumably, the public officials required to levy the taxes and spend or distribute the proceeds. We do not know whether or not in other respects the *Stalitai* were self-governing and self-regulating, *autonomoi* and *autodikai*. On present evidence, Stalai appears to have been a dependent community of Praisos, perhaps a dependent *polis*, at the time of the decree (Chaniotis (1996) 161–68, 383–93; Perlman (1996) 257–58; cf. Gschnitzer (1975)). The decree dates to C3f, and one of its provisions specifies that the *Stalitai* shall give to Praisos a share of the revenue from the fishing industry as they did in the past (*καθάπερ καὶ πρότερον*). If this revenue was indeed the product of taxation, we may infer that for some time the community exercised public authority in this area. It is not possible to fix precisely for how long this had been the case, but the surface remains of the ancient settlement on Dasonari, which is the most likely location of Stalai (Schachermeyer (1938) 479; Chaniotis (1996) 386), date to the Archaic and Classical periods (autopsy). The evidence suggests that Stalai may have been a *polis*, albeit perhaps a dependent *polis*, in the late Classical period, so it is included in the Inventory as a possible *polis* (type C).

The collective use of the city-ethnic occurs externally in the decree of Praisos for the *Stalitai* (*I.Cret.* III.vi.7 (C3f)) and in the arbitration of Magnesia for Itanos and Hierapytna (*I.Cret.* III.iv.9.123 (C2l)).

990. Sybrita (Sybritios) Map 60. Lat. 35.15, long. 24.40. Size of territory: 2. Type: [A]. The toponym is $\Sigma\upsilon\beta\acute{\rho}\iota\tau\alpha$ (Ps.-Skylax 47) and is probably attested in Linear A and B as *suki-ri-ta* (Scafa (1994)). The toponym means “town of the wild boar” (ibid.). Non-Cretan and late sources transpose *υ*/*ι*, $\Sigma\upsilon\beta\acute{\rho}\upsilon\tau\omicron\varsigma$ (BCH 45 (1921) III.118 (c.230–210); Guarducci (1939) 289). The city-ethnic is $\Sigma\upsilon\beta\acute{\rho}\iota\tau\omicron\varsigma$ (coins, C4f, *infra*; *I.Cret.* IV 183 (C3l/C2e)).

In Ps.-Skylax 47, where *polis* is used in the urban sense, Sybrita is one of the toponyms listed under the heading $\pi\acute{o}\lambda\epsilon\iota\varsigma\ \pi\omicron\lambda\lambda\alpha\acute{\iota}\ \acute{\epsilon}\nu\ \text{Κρήτη}$. The *asylia* decree of Sybrita for Teos provides the earliest reference to Sybrita as a *polis* in the political sense (*I.Cret.* II.xxvi.1 (C3l)).

The collective use of the city-ethnic occurs internally on the coins (C4s, *infra*) and externally in a treaty with Gortyn (*I.Cret.* IV 183 (C3l/C2e)) and in the *asylia* decree for Teos (*I.Cret.* II.xxvi.1 (C3l)). For the individual use there is [---] $\pi\omicron\iota\upsilon\nu\ \text{Ἀριστοφῶω}\ \Sigma\upsilon\beta\acute{\rho}\iota\tau\omicron\varsigma$, *proxenos* of Aptara (*I.Cret.* II.iii.5B (C2f)).

Very little is known about the history of Sybrita. During the Hellenistic period Sybrita and Gortyn arranged an alliance (*I.Cret.* IV 183; Chaniotis (1996) 267–70 (C3l/C2e)). Shared coin types have been understood to indicate that these two *poleis* may have earlier (C4s) joined together in a *sympoliteia* (*infra*).

The acropolis of the *polis* town of Sybrita, Kephala (500–618 m), appears to have been continuously inhabited from LMIII C (Prokopiou (1991); D’Agata (1999); Rocchetti and D’Agata (1999)). Its commanding position dominated the Amari valley, a principal line of communication between the Mesara and the north coast of the island. The construction in C9s of a monumental building (Edificio A1, c.7 m × 7 m) on the southern plateau of Kephala has been understood to reflect a new political organisation of the community, and perhaps the emergence of the *polis* (Rocchetti and D’Agata (1999); D’Agata (2000)). At its greatest extent (in the Hellenistic period) the *polis* town of Sybrita extended from the acropolis south-west to the villages of Yenna and Ag. Photini and north-east towards the village of Klisidhi. Stretches of defence walls of the Archaic, Hellenistic and later periods have been identified on the summit and slopes of the acropolis (Kirsten (1951); Belgiorno (1994)), with gates located on its north-eastern slope (Belgiorno (1994) 217.13) and on the south-western slope at Lagou Kharakou (ibid. 218.17). A temple (Hellenistic?), perhaps of Dionysos, may be located beneath the small chapel Ekklesia tou Christou on the south-western slope of the acropolis (ibid. 215.8). The principal residential districts appear to have been situated on the southern and south-western slopes of the acropolis. Three cemeteries have been located: two to the south-west of Kephala near Yenna and a third to the north of Kephala at ta Ellenika. A sanctuary of Hermes Kraniaios (LM I–Roman, with gaps) located at Patsos c.5 km to the south-west of Kephala probably lay within the territory of Sybrita (Kourou and Karetsou (1994)). The Amari valley is very well watered, and there are

many springs, cisterns, fountains and artesian wells in the vicinity of ancient Sybrita (Belgiorno (1994) 224–25). For a survey of material remains in the vicinity of Sybrita, see Belgiorno (1994); for the Greek–Italian excavations at Thronos Kephala (1987–99), see Rocchetti (1994a); D’Agata (1999); Rocchetti and D’Agata (1999); D’Agata (forthcoming, *non vidi*).

Sybrita struck coins (all denominations) on the Aiginetan standard intermittently during the period c.380–280/270 (Le Rider (1966) 196; Kraay (1976) 53). The earliest coins (staters, c.380) have *obv.* Hermes seated; *rev.* hippocamp within an incuse square; legend: ΣΥΒΡΙΤΙΟΝ written retrograde in the epichoric alphabet (Le Rider (1966) pl. XXXIV.19 with p. 196). For a short time (c.360/350–340/330) Sybrita minted coins (staters, drachms, hemidrachms) with Gortynian types, perhaps reflecting a *sympoliteia* or alliance between the two *poleis* (Le Rider (1966) 160–62). Staters have: *obv.* Europa seated in a tree; legend: ΣΥΒΡΙΤΙ written retrograde in the epichoric alphabet on some; *rev.* bull; legend: ΣΥΒΡΙ written retrograde in the epichoric alphabet on some. Drachms and hemidrachms have *obv.* head of Europa; *rev.* head of bull; legend: ΣΥ (Le Rider (1966) pl. XXVII.7–19). Later issues of c.330–280/270 (staters, drachms, obols) have *obv.* Dionysus (full or head only); *rev.* Hermes (full or head only); legend (stater): ΣΥΒΡΙΤΙΟΝ or ΣΥΒΡΙΤΙΟΝ (Svoronos (1890) pl. XXX.12–18; *SNG Cop. Aeg. Isl.* 560). See *SNG Cop. Aeg. Isl.* 559 for an obol (date?) with *obv.* goat’s head; *rev.* bunch of grapes; legend: ΣΥ.

991. Tarrha (Tarrhaïos) Map 60. Lat. 35.15, long. 24.00. Size of territory: 2. Type: B. The toponym is Τάρρα (BCH 45 (1921) III.107 (c.230–210)). The city-ethnic is Ταρραῖος (*I. Cret.* IV 179 (c.183)).

Although Tarrha is called a *polis* in late sources only (Paus. 10.16.5; Steph. Byz. 604.6–8), it clearly was a *polis* in the political sense during the Hellenistic period, and there is little doubt that the same was true during the Classical period and perhaps even the Archaic. The evidence for this, which includes (i) participation in the C4l–C3 federation οἱ Ὀρειοὶ (van Effenterre (1948a) 119–27; Chaniotis (1996) 106–8, 421–22; cf. Sekunda (2000) 337–38: league founded C3f), (ii) striking coins as early as c.330 (*infra*), and (iii) the individual use of the city-ethnic (Perlman (1996) 246–52), recommends its inclusion in the Inventory as a probable *polis* (type B).

The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*), and externally in the

alliance of the members of the Cretan *koinon* with Eumenes II (*I. Cret.* IV 179.8 (c.183)). For the individual use there is the dedication of Πανίδας Ταρραῖ[ος] from the sanctuary of Orthia in Sparta (*IG* v.1 252 (C6); but cf. *BSA* 12 (1906) 353.1). Tarrha was a member of the C4l–C3 federation οἱ Ὀρειοὶ (*supra*).

The hillside west of upper Ag. Roumeli at the mouth of the river Tarrhaïos and the Samaria Gorge was the site of the main Classical–Hellenistic settlement of Tarrha (Nixon *et al.* (1990) 217). The location afforded Tarrha little arable land (Rackham (1990) 108–9), and it is likely that her inhabitants relied for their livelihood upon the mountains and the sea (for the economic exploitation of Crete’s mountains, see Chaniotis (1999); for bee-keeping and shepherding at Tarrha, see the coin types, *infra*; for cedar forests in the mountains around Tarrha, see Theophr. *Hist. pl.* II.ii.2; for their exploitation, Perlman (1999) 146). The Church of the Panaghia west of the river is very likely the site of a temple, perhaps that of Apollo, who was probably the protecting deity of the *polis* (Guarducci (1939) 305–6; Weinberg (1960)). Archaic (and earlier?) and Classical burials have been found to the west of the river near the modern village (Tzedakis (1971)). On the coast to the east of the river are the remains of a cemetery (C5l and later) and of a Roman sea-wall (Nixon *et al.* (1990) 218).

Tarrha struck coins (drachms) during the period c.330–280/270. Types: *obv.* head of a goat; legend: ΤΑΡ; *rev.* bee (Svoronos (1890) pl. XXX.27, with Le Rider (1966) 197–98).

992. Tyllisos (Tyllisios) Map 60. Lat. 35.20, long. 25.00. Size of territory: 2. Type: A. The toponym is Τύλλισος (ML 42 (C5m)), in Linear B tu-ri-so (McArthur (1993) 21–23). The city-ethnic is Τυλλίσιος (ML 42 (C5m); coins, C4s–C3f, *infra*; *Milet.* I.3 140.36 (c.259–250)).

The agreement of Knosos, Tyllisos and Argos provides for the division of booty αἰ δὲ συμπλέονες πόλεις . . . ἔλοιεν (ML 42B.31–32 (C5m) = *Nomima* I 54.11). It is likely that Tyllisos should be understood as one of the *poleis*. The term is used in its political sense. The earliest certain reference to Tyllisos as a *polis* occurs in the agreement of Miletos πρὸς τὰς πόλεις τὰς ἐν Κρήτηνι (*Milet.* I.3 140.1, 36 (c.259–250)).

The collective use of the city-ethnic is attested internally on the coins (C4s–C3f, *infra*), and externally in the agreement of Knosos, Tyllisos and Argos (ML 42 (C5m); ML 42A (from Tyllisos) and B (from Argos) are written in Argolic, and so are treated here as external). For the individual use of the city-ethnic there are Ὀρθότιμος Κελαίθου Τυλλίσιος, *proxenos* of Phokis (Daulis?) and Atrax, Thessaly (*IG* IX.1,

33.3 (C3s); *SEG* 29 502 (C3s)), and "Ἐρμων Τυλίσιος, *proxenos* of Kydonia (*I.Cret.* II.X.1 (C3)).

The neighbours of Tylosos were Knosos to the east and Axos to the west. During the Classical period Tylosos and Knosos formed an alliance (ML 42 (C5m)). The assembly of Argos (τὸ πᾶθος) served as the mediator in the resolution of disputes between the two *poleis* concerning questions of war and peace (ML 42A.6–17; Merrill (1991); cf. ML 42: the text implies a federal structure with a federal assembly called τὸ πᾶθος which decided questions of war and peace; members included Tylosos, Knosos and Argos and perhaps other states as well (συμπλέοντες πολίεις, ML 42B.31–32); cf. Gschnitzer (1958) 44–47: ML 42 is an alliance between Knosos and Argos; Tylosos is a dependency of Argos). The border between Knosos and Tylosos (ὄροι τᾶς γᾶς) is described in this alliance (B26–29), and regulations concerning property and trade are provided: (i) both *poleis* are prohibited from absorbing territory (χώρα) belonging to the other (B25–26); (ii) *Knosioi* are prohibited from owning

land in Tylosos (μὲ ἑνπιπασκέσθο), although a *Tylosios* may own land in Knosos (B23–25); (iii) export from Tylosos to Knosos and from Knosos to Tylosos is tax-free; (iv) *Tylosioi* pay the same taxes as citizens of Knosos for trans-shipment from Knosos (B11–14). The *κόσμοι* appear as the chief magistrates of the *polis* and were responsible for providing foreign envoys with *ξένια*. The *βολά* oversaw the *κόσμοι* (ML 42B.40–42 (C5m)).

The *polis* town of Tylosos was presumably in the vicinity of the Minoan town, but all that remain of the later settlement are a monumental altar and *temenos* wall north-west of Building Γ (J. Hadjidaki (1934) 66–68).

Tylosos struck coins (staters) on the Aiginetan standard during the period c.330–280/270 (Le Rider (1966) 197; *IGCH* no. 109). *obv.* head of Hera; *rev.* Apollo standing, holding in one hand a goat's head or a phiale and in the other his bow; legend: ΤΥΛΙΣΙΟΝ/ΤΥΛΙΣΙΩΝ retrograde on some (Svoronos (1890) pls. XXX.29–32, XXXI.1–4, 6; *SNG Cop. Aeg.Isl.* 562).

RHODOS

THOMAS HEINE NIELSEN, VINCENT GABRIELSEN

I. The Island

The name of the island was *Ῥόδος*, ῆ (Hom. *Il.* 2.655; Pind. *Ol.* 7.56; Hdt. 1.174.3; Thuc. 8.44.1; *SEG* 27 481 (450–400); *IG* 1³ 281.1.11 (430/29)), and a rose appears as the *rev.* type of coins struck by the unified state of Rhodos (no. 1000) from C5l onwards, on C5f coins of Ialysos (no. 995) and as the *obv.* on some coins struck by Kamiros (no. 996). From the foundation of the city of Rhodos in 408/7 (Diod. 13.75.1), the toponym serves also to designate this city (Ps.-Skylax 99: *Ῥόδος . . . νῆσος καὶ πόλις*). The corresponding ethnic is *Ῥόδιος* (Hom. *Il.* 2.654; Simon. 37, Page; Thuc. 3.8.2; *IG* 1³ 1454A.30 (445–430)). The internal collective use of the ethnic is found in *I.Lindos* 16 (traditionally dated c.411–408, though it could be slightly earlier or later: Gabrielsen (2000b) 179–80); the external collective use is found in *IG* 1³ 1454A.30 (445–430) and Thuc. 8.44.2–3; the external individual use is found in Bernand, *Le Delta égyptien* 707, 659.1 (C6–C5); *IvO* 151–52 (C5); and Thuc. 3.8.1.

In the Homeric Catalogue of Ships (*Il.* 2.654–56), the Rhodians are described as inhabiting three cities: Lindos, Ialysos and Kamiros; Pind. *Ol.* 7.18 describes Rhodos as a *tripolis nasos*, thus confirming the existence of the three cities; and Ps.-Skylax 99 states that the *tripolis archaia* consisted of the *poleis* Ialysos (no. 995), Lindos (no. 997) and Kamiros (no. 996). These three cities are all described in the Inventory below. In addition, the Athenian tribute lists register four other Rhodian contributors of *phoros*: the Brikindarioi (*Βρικινδάριοι*), the Diakrioi on Rhodos (*Διάκριοι ἐν Ῥόδῳ*), the Lindian Oiiatai (*Λινδίων Οἰᾶται*) and the Pedieis in Lindos (*Πεδιεῖς ἐν Λίνδῳ*); exactly what status these communities had is unknown, but brief descriptions of each are given below. In 408/7, according to Diod. 13.75.1, the

three old major *poleis* created a new city, Rhodos, by metoecism of population, a process described as synoecism by Strabo 14.2.10; this, however, did not mean that the three old major *poleis* ceased to exist: they continued to function as *poleis* (Gabrielsen (2000b) 192–95), and it has been aptly pointed out that “the synoikism of Rhodes was unusual in the degree to which the synoikised cities had a continued physical and political existence” (Demand (1990) 93; cf. Papachristodoulou (1999b) 30). But Rhodos was itself a *polis* and is described in the Inventory below, which, accordingly, describes eight communities that were certainly or possibly *poleis* throughout the Archaic and Classical periods or at least for some time within this period.¹

In C4 and the Hellenistic period, Rhodos acted on the international scene as a single *polis* (e.g. *IG* 11² 43.82; Gabrielsen (2000b) 190–91), and it is widely assumed that this unified state was created by the synoecism of 408/7 (Berthold (1980) 32; Demand (1990) 89–94; Papachristodoulou (1999b) 27, 29). However, as pointed out by Gabrielsen (2000b) 180–87, there are various indications of Rhodian unity prior to 408/7: (1) even prior to 408/7, references to Rhodos and Rhodians are more numerous than references to the three major *poleis*; (2) the three *poleis* were connected by a common myth of origin which traced their foundations back to eponymous heroes who were grandsons of Helios, thus indicating a pan-Rhodian importance for this divinity even prior to 408/7 (cf. *SEG* 27 481 (C5s)); (3) the sanctuary of Athena Lindia had an island-wide significance (cf. Momigliano (1936) 49–51); (4) at least one tradition made the foundation of Gela (no. 17) in C7e a pan-Rhodian collaboration with Cretans (cf. Momigliano (1936) 49–50, suggesting pan-Rhodian reinforcement of Kyrene (no. 1028) in C6f; on foundations claimed to be Rhodian, see further van Gelder (1900) 66–69); (5) the

The chapter is by Thomas Heine Nielsen with the assistance of Vincent Gabrielsen. The authors would like to thank Prof. T. Buttrey and Prof. M. Amandry for numismatic assistance, and the staff of the Archaeological Institute of the Dodecanese at Rhodos for their hospitality and archaeological assistance during a week of work in the splendid library there. Special thanks are due to Rune Frederiksen for discussions of fortifications.

¹ The present chapter does not consider the Rhodian *peraia*, though it was established before the end of the Classical period (cf. Ps.-Skylax 99 with Gabrielsen (2000a) 149); the communities situated in the *peraia* are treated in the chapters dealing with the regions of their geographical positions; the Rhodian islands are treated by Reger in 732–93.

obverses of some coins struck by the three major *poleis* after 479 share a type depicting the forepart of a horse (cf. entries); (6) Olympic victors from the island were invariably described by the ethnic *Rhodos* and not by their local city-ethnics; (7) Hdt. 2.178 lists Rhodos, not the individual cities, among the *poleis* which founded the Hellenion at Naukratis, and this suggests two things: that some kind of Rhodian unity may go back to C6f, and that at the time he was writing Herodotos found it appropriate to include Rhodos under the label of *poleis*; (8) an inscription of 445–430 refers to the *Rhodiōi*, not, as the tribute lists do, to the individual cities, as allies of Athens (*IG* 1³ 1454); the same document, moreover, describes an individual by the city-ethnic *Lindios*; (9) a decree (*I.Lindos* 16) appointing a man *proxenos* “of all Rhodians” (*Πο[δ]ίων πάντων*) may predate 411–408/7, in which case it is of the utmost importance that it attests to the existence of a pan-Rhodian council and magistrates.

This evidence clearly proves that throughout C6 and C5 there was a general development in the direction of pan-Rhodian (political) unity. The synoecism in 408/7 may reasonably be seen as a decisive step in this unifying development. Though there are problems of interpretation, nos. (7) and (8) above render it probable that a unified state existed prior to the foundation of the city of Rhodos. The *polis* of Rhodos (no. 1000) came to monopolise such important functions as, e.g., foreign policy, military organisation and minting. However, the three old major *poleis* continued to function as *poleis*, and although they primarily fulfilled internal and cultic functions (Papachristodoulou (1999b) 30) and constituted subsections of the *polis* of Rhodos, they must be regarded as *poleis*, i.e. as dependent *poleis* inside the *polis* of Rhodos. For example, in C5m, when Herodotos composed the first book of his *Histories*, the Dorian *pentapolis* consisted of Lindos (no. 997), Ialysos (no. 995), Kamiros (no. 996), Kos (no. 499) and Knidos (no. 903), and there is no mention in this connection of a Rhodian *polis* (Hdt. 1.144.1 and 3). It is, moreover, apparent from Thuc. 8.44.2 that in 411 the *poleis* of Kamiros, Lindos and Ialysos were still important political units of the island.

The Rhodians may possibly have been subjects of Persia prior to their entry into the Delian League: Aesch. *Pers.* 888 mentions Rhodos among the islands overpowered by Dareios, and Diod. 11.3.8 (r480) mentions Rhodian ships in Xerxes’ navy (cf. van Gelder (1900) 71–72 and Berthold (1984) 19). However, the historicity of Rhodos’ subjection is seriously questioned by the fact that Herodotos does not refer to Rhodian involvement in the invasion of Greece.

In addition to the *poleis* described in the Inventory below,

there were on Archaic and Classical Rhodos the following settlements.

1. Pre-Hellenistic Settlements not Attested as Poleis

***Kattabia** (*Καττάβιοι*) In the territory of Lindos (no. 997). *RE* suppl. iv. 881; Sørensen (1992) 100. *Barr.* AC.

***Kymisala** (*Κυμισαλείς*) In the territory of Kamiros (no. 996). Maiuri (1916) 285–98; Hope Simpson and Lazenby (1973) 146–47; Sørensen (1992) 124–25. *Barr.* C.

Kyrbe (*Κύρβη*) Unlocated settlement mentioned by Diod. 5.57.8 in a mythological context and possibly not historical. *RE* xii. 134. *Barr.* A.

Netteia (*Νεττεία*) Settlement with a sanctuary of Zeus (*IG* xii.1 890.24 (C2)), in the territory of Lindos (no. 997). *RE* suppl. v. 746–47. *Barr.* C.

Phagai (*Φαγαί*) In the territory of Ialysos (no. 995) (*I.Lindos* 860.4 (c.200)). Papachristodoulou (1989) 142–44. *Barr.* C.

2. Unidentified Settlements

Ampelia Settlement in the territory of Lindos (no. 997). Hope Simpson and Lazenby (1973) 151. *Barr.* A.

Daphne Hill (near Ialysos) A Classical settlement is surmised on the basis of ceramic surface evidence (Inglieri (1936) *foglio nord* p. 27 no. 20; *ASAtene* 6–7 (1923–24) 326). The site may have formed a part of Ialysos (no. 995) proper. Not in *Barr.*

Gennadi Unidentified settlement, in the territory of Lindos (no. 997). Hope Simpson and Lazenby (1973) 149–50. *Barr.* C.

Kalogeros Settlement in the territory of Lindos (no. 997). Sørensen (1992) 114–18. *Barr.* AC.

Kassaros Settlement in the territory of Lindos (no. 997). Sørensen (1992) 121–23. *Barr.* AC.

Kiotari Archaic settlement in the territory of Lindos (no. 997). Konstantinopoulos (1972) 24–25. Not in *Barr.*

Makri Longoni (near Kamiros) A coastal settlement is inferred from 260 graves of C7 to C6; see Jacopi (1929–30) esp. 10 and fig. 3; Gates (1983) 21–22. This site may have formed a part of Kamiros (no. 996) proper. Not in *Barr.*

Mantra Voutouriou Settlement in the territory of Ialysos (no. 995). Papachristodoulou (1989) 130. *Barr.* C?

Mitropoliti Settlement in the territory of Ialysos (no. 995). Papachristodoulou (1989) 120. *Barr.* A, though the Dodecanesian ephorate has informed us that there are no certain Archaic or Classical remains.

Phanes In the territory of Kamiros (no. 996). Hope Simpson and Lazenby (1973) 141. *Barr.* C.

Steno Settlement in the territory of Lindos (no. 997). Sørensen (1992) 100–5. *Barr.* AC.

Syra Settlement in the territory of Ialysos (no. 995). Papachristodoulou (1989) 134. *Barr.* AC.

Vroulia Settlement in the territory of Lindos (no. 997), abandoned C6e (Kinch (1914); Drerup (1969) 51–52; Melander (1988); Morris (1992) 174–99; Sørensen (2002)). *Barr.* A.

Nothing at all is known about the status which such settlements enjoyed; if the deme structures of the three old major *poleis* existed prior to their first appearance c.325 (*IG* XII.1 671; *I.Lindos* 51), they may possibly have been demes, but this is conjectural.

II. The *Poleis*

993. Brikindera (Brikindarios) Map 60. Lat. 36.20, long. 28.10. Size of territory: ? Type: C. The toponym is *Βρικύνδηρα*, *τά* (Herod. 2.57); on the basis of Rhodian Hellenistic inscriptions such as e.g. *SEG* 39 808 (C2) giving the demotic *Βρυγινδάριος*, the toponym *Βρυγίνδαρα* may be assumed. The city-ethnic is *Βρικυνδάριος* (*IG* I³ 290.1.15 (415/14)). Our only source for this community are the Athenian tribute lists in which the *Βρικυνδάριοι* are recorded thrice: in 429/8 (*IG* I³ 282.IV.13), amount lost, in 421/20 (*IG* I³ 285.1.103–4), 1 tal., and in 415/14 (*IG* I³ 290.1.15), amount lost. The Brikindarioi must have been the inhabitants of *Βρυγίνδαρα*, a place in the territory of Ialysos (no. 995) (Papachristodoulou (1989) 124–31, (1999b) 37). The fact that it paid individually may suggest that it was a dependent *polis* inside the territory of Ialysos (cf. Hansen (1997) 31), or—considering the sporadic nature of its payments—may suggest civic disorder at Ialysos. Alternatively, the appearance of the Brikindarioi may indicate an arrangement imposed by the Athenians in order to weaken a powerful ally, as all three major *poleis* must have been. See also Diakrioi (no. 994), Oiai (no. 998) and Pedies (no. 999).

994. (Diakrioi) Map 60. Unlocated. Type: C. The Athenian tribute lists from 430/29 to 415/14 four times register a payment by a group called *Διάκριοι ἐρ* ‘*Πό[δοι]*’ (*IG* I³ 281.1.11, 284.22–23, 285.1.101–2, 290.1.16); in the two cases where the amount paid is (partly) preserved, it is 2 tal. (*IG* I³ 285.1.101–2, 290.1.16, partly restored). The Diakrioi are known only from these lists, and it is not known to which part of the island they belonged (*RE* suppl. vii. 126–27). The fact that they paid individually may suggest that they formed a (dependent) *polis* (inside the territory of one of the major *poleis*; cf. Hansen (1997) 31), or—considering the sporadic nature of their payments—may suggest civic disorder in one of the major *poleis* (cf. Schuller (1995) 166–67). Alternatively, the appearance of the Diakrioi may indicate an arrangement imposed by the Athenians in order to weaken a powerful ally, as all three major *poleis* must have been. See also Brikindera (no. 993), Oiai (no. 998) and Pedies (no. 999).

995. Ialysos (Ialysios) Map 60. Lat. 36.25, long. 28.10. Size of territory: 4 (c.345 km²). Type: A. The Doric for the toponym is *Ίάλυσος* or *Ίαλυσός*, *ἡ* (Timocreon fr. 1.7; Ps.-Skylax 99; Ergias (*FGrHist* 513) fr. 1); Ionic has *Ίήλυ(σ)σος* or *Ίηλυσός* (Hdt. 1.144.3; Hom. *Il.* 2.656). The city-ethnic is *Ίαλύσιος* (ML 7c and g (591); C5 coins (*infra*)) or *Ίελύσιος* (*IG* I³ 71.1.128 (425/4)) or *Ίηλύσιος* (Anakreon fr. 4.1, Page; *SEG* 28 48.6 (c.394)).

Ialysos is called a *polis* both in the urban sense (Thuc. 8.44.2; Ps.-Skylax 99; *IG* XII.1 677.15 (c.300)) and in the political sense (Hdt. 1.144.3).

At *IG* XII.1 677.18 and Ergias (*FGrHist* 513) fr. 1, *polis* refers to the acropolis. *Patris* is found in Timocreon fr. 1.7.

The collective use of the city-ethnic is found internally on C5 coins (*infra*), and externally in Anakreon fr. 4, Page, and *IG* I³ 71.1.128 (425/4); the individual and external use is found as early as 591 (ML 7c and g).

Ialysos occupied the northernmost part of the island; its territory measured c.345 km². Several second-order settlements within the territory have been surmised on the basis of ceramic surface evidence (Papachristodoulou (1989) 83–146). Of these, the most significant is located at the foot of the Daphne Hill, a little to the north-west of the acropolis (Inglieri (1936) *foglio nord* p. 27 no. 20): here rich finds of Classical pottery have been made (*ASAtene* 6–7 (1923–24) 326); it is not impossible that this site was in fact part of Ialysos proper. Another settlement of moderate size seems to have been situated within that part of Ialysian territory on which later the city of Rhodes (no. 1000) was built (Dreliosi-

Herakleidou (1999)). At modern Theologos (Tholos) north of the city are remains of a temple dedicated to Apollo Erethimios: it was a Doric temple constructed c.400 and measuring 7.8×13.10 m; a well in the *temenos* contained C5 pottery (*ClRh* 2 (1932) 77–116). Near the temple are remains of a C4 theatre with a horseshoe-shaped *koilon* (ibid.; *TGR* ii. 281).

With Halikarnassos (no. 886), Kos (no. 499), Knidos (no. 903), Kamiros (no. 996) and Lindos (no. 997), Ialysos formed the so-called Dorian *hexapolis*, later *pentapolis*, a cultic association centred on the sanctuary of Apollo at Triopion near Knidos (Hdt. 1.144).

Anakreon fr. 4, Page, has been interpreted as indicating that Polykrates of Samos incorporated Ialysos in his “empire” (Weiss and Hurter (1998) 13). Ialysos was a member of the Delian League, and was probably among the original members (*ATL* iii. 213). Ialysos belonged to the Karian district (*IG* I³ 271.ii.66), and is registered in the tribute lists from 452/1 (*IG* I³ 261.iv.13) to 415/14 (*IG* I³ 290.i.11) a total of sixteen times, four times completely restored. Ialysos initially paid a *phoros* of 10 tal. (*IG* I³ 263.i.11, 265.ii.27; cf. 261.iv.13, 262.v.2, 264.ii.37 where this amount is completely restored); in 443/2, the *phoros* had dropped to 6 tal. (*IG* I³ 269.iv.10, partly restored) and remained so until 432/1 (*IG* I³ 270.iv.11, 271.ii.66, 272.ii.89, 279.i.45, 280.i.49); in 428/7, 10 tal. was again paid (*IG* I³ 283.iii.19; cf. 284.10), but in 421/20 only 5 tal. was paid (*IG* I³ 285.i.100). Ialysos was assessed for tribute in 424/3 (*IG* I³ 71.i.128). In addition, the tribute lists thrice register the Brikindarioi (no. 993), the inhabitants of Brikindera, a place in the territory of Ialysos (Papachristodoulou (1989) 124–31).

In 412/11 a Peloponnesian squadron arrived at Rhodes invited by some wealthy Rhodians (Thuc. 8.44.1); as a result, Ialysos (with Kamiros and Lindos) defected from the Athenians and joined the Peloponnesians in the war against Athens (Thuc. 8.44.2). Thuc. 8.44.4 records a payment by the Rhodians to the Peloponnesians of 32 tal., but the share contributed by Ialysos to this amount is unknown. An attempt to undo the new alliance with the Lakedaimonians shortly after was quelled by a squadron commanded by the Ialysian exile Dorieus (Diod. 13.38.5, 45.1; Gehrke, *Stasis* 133–34). The presumption is that in 411 a democratic constitution was replaced by an oligarchy and that the following *neoterismos* (Diod.) was an attempt to bring the democrats back into power.

According to Diod. 13.75.1, in 408 the inhabitants of Ialysos (and Kamiros and Lindos) *μετῴκηθησαν εἰς μίαν πόλιν τὴν νῦν καλουμένην Ῥόδον*, a process which Strabo 14.2.10 refers to by the verb *συνοικίζειν*. As in numerous

other cases, only part of the population was transferred to the new urban centre, and it is clear that a wholesale relocation of the Ialysian population was not carried out (Gabrielsen (2000b) 188–89). Furthermore, there appears to be no good reason for the idea that the foundation of Rhodes town was accompanied by a fundamental restructuring of the political organisation of the island (ibid. 189–90): the move towards pan-Rhodian unity had begun long before 408 (ibid. 180–87), and the three old *poleis* continued to exist (Xen. *Hell.* 4.8.25; Ps.-Skylax 99) and function as *poleis* after 408 (Gabrielsen (2000b) 192–95): c.394, citizens of Ialysos were appointed *proxenoi* by Athens as their father had been (Walbank (1978) no. 72; *SEG* 28 48; cf. Gabrielsen (2000b) 192 with n. 91), and Hellenistic and later inscriptions describe Ialysos as a *polis* both in the urban (*IG* XII.1 677.16 (c.300)) and the political (*IG* XII.1 58.21 (Roman)) senses, and the former inscription attests to the existence of a council (*οἱ μαστροὶ*) and an assembly (*ἔδοξε . . . Ἰαλυσίοις*). However, Ialysos was now a subordinate *polis* inside the *polis* of Rhodes, and constituted a *phyle* (*Ἰαλυσία*; Maiuri, *Nuova silloge* 19.1.6 (c.200); cf. *BCH* 99 (1975) p. 97 col. B.26–27 (C3)) of the Rhodian *polis*; see Jones, *POAG* 243–44. In the Hellenistic period, a system of Ialysian demes is attested, as is the employment of demotics as the third part of personal names (*IG* XII.1 166). By analogy with Kamiros and Lindos, where such systems are known to have existed in C4, it may be assumed that it existed in Ialysos by that time as well.

The existence of a Ialysian navy may be inferred from Diod. 13.70.2 (r408) (Gabrielsen (2000b) 182).

The acropolis, presumably located outside the city proper, was called *Achaia polis* (*IG* XII.1 677.14 (c.300); Ergias (*FGrHist* 513) fr. 1; Diod. 5.57.6). It was situated on the summit of Mt. Phileremos. The main architectural structure was the temple of Athena Polias and Zeus Polieus (*Suppl. Epigr. Rh.* 1 no. 54 (no date)). In their present form the remains of the Doric temple are C4, but a limited number of architectural members and roof-tiles attest to the existence of a C6 predecessor (Livadiotti and Rocco (1999)); a rich deposit to the south of the temple contained votive offerings dating from C9 to C5 (Maiuri (1928)).

The location of the urban centre of Ialysos can be inferred from *IG* XII.1 677.15 (c.300), from which it appears that it was situated near the acropolis (Gabrielsen (2000b) 204 n. 87). However, the archaeological evidence for the city is scarce, and the urban history of the *polis* thus poorly known.

In C5f the Diagorids of Ialysos (cf. Paus. 4.24.2) and Diagoras himself won several Olympic victories (e.g.

Olympionikai 252, 287, 299, 300); Diagoras himself was *periodonikes* (Knab (1934) no. 9); the victors are described, however, not as Ialysians but as Rhodians (*IvO* 151–52; Gabrielsen (2000b) 184); but some Diagorids participated as citizens of their new *polis*, Thourioi (*Olympionikai* 322, 356), where Dorieus settled after his exile (*Xen. Hell.* 1.5.19).

Attested cults include those of Athena Polias and Zeus Polieus (*Suppl. Epigr. Rh.* 54.5 1 (undated)) and Elektrona (Michel 434 (C4–C3)).

Ialysos began issuing coins in C6s and struck in both electrum and silver. The earliest silver coins are possibly the so-called palmette staters (anepigraphic) on the “Ialysian standard” and their fractions (on the Aiginetan standard: Bresson (1981) 221), which have been attributed to Ialysos and dated c.540–530: *obv.* palmette; *rev.* two incuse rectangles separated by a broad band, a type used also at Kamiros (no. 996) and Lindos (no. 997) (Bresson (1981); Weiss and Hurter (1998) 13–14). The main issue is a series of electrum fractions and silver staters with thirds and minor fractions, beginning c.520 and continuing into C5, and apparently struck to the same individual, Ialysian, standard as the palmette coins: *obv.* forepart of winged boar sometimes with symbol beneath; *rev.* eagle’s head in dotted and incuse square with floral ornament in corner; legend: *IEAYΣION* or *IAAYΣION* (sometimes on both *obv.* and *rev.*; sometimes retrograde), sometimes no legend. Minor silver fractions struck after 479 depict (1) *obv.* forepart of winged boar to r.; *rev.* helmeted head of goddess (Athena?); anepigraphic but “Gef. in Rhodos” (*SNG von Aulock* 2777–78); weight 1.37 g, 1.40 g = diobol?; (2) *obv.* forepart of winged horse; *rev.* rose in dotted and incuse square; legend: *IA* (retrograde); a similar *obv.* occurs on contemporary coins of Kamiros and Lindos (Gabrielsen (2000b) 182). Head, *HN*² 636–37; Babelon, *Traité* ii.1. 467–74 and ii.2. 1007–10; *SNG Cop. Caria* 716–19; Weiss and Hurter (1998); Bresson (1981). (Babelon, *Traité* ii.1 no. 105 catalogues an Archaic electrum coin of Ialysos which he interprets as an obol on the Aiginetan standard; but this coin is now considered a forgery (information kindly provided by M. Amandry).)

Pind. *Ol.* 7.73ff relates the foundation myth of the three Rhodian *poleis* (they were founded by descendants of Helios) and names the eponymous hero of Ialysos.

996. Kamiros (Kamireus) Map 60. Lat. 36.20, long. 27.55. Size of territory: 4 (c.265 km²). Type: A. The local Doric form of the toponym is *Kάμριος* (*Tit. Cam.* 109.16 (C4l); cf. *Tit. Cam.* 103.4 (C5)), *ὀ* (*Hom. Il.* 2.656) or *ῆ* (*Diod.* 5.59.3);

Κάμριος is found in *Hom. Il.* 2.656 and *Thuc.* 8.44.2; *Καμειρίς*, *ῆ* is found in Dieuchidas (*FGrHist* 485) fr. 7, possibly as the name of the territory. The city-ethnic is *Καμριεύς* (C5 coins (*infra*); *IG* 1³ 269.IV.11 (443/2)) or *Καμρεεύς* (*IG* 1³ 290.I.10 (415/14)); *Καμριεύς* is found in *Diod.* 5.55.2.

Kamiros is called a *polis* both in the urban sense (*Thuc.* 8.44.2; *Ps.-Skylax* 99) and in the political sense (*Hdt.* 1.144.3). The collective use of the city-ethnic is found internally on C5 coins (*infra*) and in *Tit. Cam.* 105.7 (C4f), and externally in *IG* 1³ 269.IV.11 (443/2). For the individual and external use, see Peisandros, an epic poet of C7–C6, mentioned by *schol. Pind. Ol.* 3.50b and *Paus.* 2.37.4.

The name of the territory was *Καμειρίς* (Dieuchidas (*FGrHist* 485) fr. 7); it measured c.265 km². Apart from the Classical settlement at Kymisala in the western extremity of the territory (Maiuri (1916); Hope Simpson and Lazenby (1973) 146), no second-order settlement has been located, but various cemeteries are dispersed in the vicinity of Kamiros town, and they suggest that such settlements may have existed. The most significant of these cemeteries is at the locality Makri Longoni by the sea; here 260 tombs dating from C7 to C6 have been excavated (Jacopi (1929–30) esp. 10 and fig. 3; Gates (1983) 21–22); this site may have formed a part of the city of Kamiros proper. Kamiran authority extended beyond the territory on the island itself: (1) in addition to the islets near the coast, Kamiros had by C4l incorporated the island of Chalke; in C4m, Chalke appears as a community, probably a *polis* (no. 477), concluding what was presumably a treaty of *isopoliteia* with Knidos (no. 903) (*I.Knidos* 605; cf. Gawantka (1975) 209 n. 11 and 38 n. 79), whereas in *Theophr. Hist. pl.* 8.2.9 it is called a *νησος* ‘*Ποδίωων*’ and had become a Kamiran deme, though apparently one with a certain degree of independence (*Tit. Cam.* 109 (C4l)); (2) Kamiran territory, subdivided into demes, existed by C4l in the *peraiá* (*Tit. Cam.* 109.1–5).

With Halikarnassos (no. 886), Kos (no. 499), Knidos (no. 903), Ialysos (no. 995) and Lindos (no. 997), Kamiros formed the so-called Dorian *hexapolis*, later *pentapolis*, a cultic association centred on the sanctuary of Apollo at Triopion near Knidos (*Hdt.* 1.144).

Kamiros was a member of the Delian League, and was probably among the original members (*ATL* iii. 213). Kamiros belonged to the Karian district (*IG* 1³ 271.II.69) and is registered in the tribute lists from 454/3 (*IG* 1³ 259.III.8) to 415/14 (*IG* 1³ 290.I.10) a total of sixteen times, twice completely restored. Kamiros initially paid a *phoros* of 9 tal. (*IG* 1³ 259.III.8, 262.II.15, 263.I.13, 265.I.9); in 443/2 the *phoros* paid

was 6 tal. (*IG* 1³ 269.IV.11), and so it remained (cf. *IG* 1³ 271.II.69, 280.I.48) until 10 tal. was paid in 416/15 (*IG* 1³ 289.I.34). Kamiros was assessed for tribute in 425/4 (*IG* 1³ 71.I.123).

In 412/11 a Peloponnesian squadron arrived at Rhodos invited by some wealthy Rhodians (Thuc. 8.44.1); as a result, Kamiros (with Ialysos and Lindos) defected from the Athenians and joined the Peloponnesians in the war against Athens (Thuc. 8.44.2). Thuc. 8.44.4 records a payment by the Rhodians to the Peloponnesians of 32 tal., but the share contributed by Kamiros to this amount is not known. An attempt to undo the new alliance with the Lakedaimonians shortly after was quelled by a squadron commanded by the Ialysian exile Dorieus (Diod. 13.38.5, 45.1; Gehrke, *Stasis* 133–34). The presumption is that in 411 a democratic constitution was replaced by an oligarchy and that the following *neoterismos* (Diod.) was an attempt to bring the democrats back into power.

According to Diod. 13.75.1, in 408 the inhabitants of Kamiros (and Ialysos and Lindos) *μετῴκησθησαν εἰς μίαν πόλιν τὴν τῶν καλουμένην Ῥόδον*, a process which Strabo 14.2.10 refers to by the verb *συνοικίζειν*. As in numerous other cases, only part of the population was transferred to the new urban centre, and it is clear that a wholesale relocation of the Kamiran population was not carried out (Gabrielsen (2000b) 188–89). Furthermore, there appears to be no good reason for the idea that the foundation of Rhodos town was accompanied by a fundamental restructuring of the political organisation of the island (ibid. 189–90): the move towards pan-Rhodian unity had begun long *before* 408 (ibid. 180–87), and the three old *poleis* continued to exist (Xen. *Hell.* 4.8.25; Ps.-Skylax 99) and function as *poleis after* 408: council, assembly and officials are attested in Kamiros in C4f (*Tit. Cam.* 106; cf. Gabrielsen (2000b) 192–95), and the civic mint may have continued to function somewhat beyond 408 (Babelon, *Traité* ii.2. 1008 *ad no.* 1681). However, Kamiros was now a subordinate *polis* inside the *polis* of Rhodos (no. 1000), and constituted a *phyle* (*Καμυρίς*; *Tit. Cam.* 21.6 (C2)) of the Rhodian *polis*; see Jones, *POAG* 243–44.

The existence of a Kamiran navy may be inferred from Diod. 13.70.2 (r408) (Gabrielsen (2000b) 182).

By C4l, Kamiros had a system of territorial demes subdivided into *ktoinai*, and demotics were used as the third part of a citizen's name (*Tit. Cam.* 110.1–2 (C2)); see further Gabrielsen (1997) 29–31, 151–54); a system of *patrai* may also go back to C4 (ibid. 146–49). A number of local Kamiran *phylai* (of which the name of one (Althaimenis) is attested in

C3e) in all likelihood also go back to the Classical period (*Tit. Cam.* 1b.10; Gabrielsen (1997) 146). However, nothing is known about the functions of these various divisions.

The eponymous official was a *damiourgos* (*Tit. Cam.* 105 (C4f); Sherk (1990) 280). The council, called *οἱ μαστροί*, is attested in *Tit. Cam.* 105.6 (C4f), restored. The office of *prytanis* is attested in a C5 inscription (*Tit. Cam.* 103); he seems *inter al.* to have been in charge of the construction of a public building (*ἐπεστέγασσε*). A board of *hiaropoioi* and a *tamias* are attested by *Tit. Cam.* 104 (C4); a board of *epistatai* is attested by *Tit. Cam.* 105.6 (C4f). The assembly, called *ἐκκλησία*, is attested in *Tit. Cam.* 105.26–27 (C4f). A C5 enactment records a grant of *ateleia* (*Tit. Cam.* 103.3). A public loan contracted by the *polis* possibly as early as C5m is attested by *Tit. Cam.* 105 (C4f).

According to Thuc. 8.44.2, Kamiros was unwalled (*ateichistos*) in 412/11, and it may have remained unfortified until the Hellenistic period (cf. *Tit. Cam.* 110.19ff (C2)). The town of Kamiros has been partially excavated. The areas known consist of three parts: a public area (agora), the residential area and the acropolis. In its present form, almost the entire public area dates to the Hellenistic period or later; however, the monumental fountain house in the midst of the agora may have a Classical predecessor; a sanctuary of Apollo Pythios has produced Archaic and Classical finds (Konstantinopoulos (1986) 173, 175–76). The few pre-Hellenistic remains of the residential area indicate a rather unplanned urban area (ibid. 172–73). Right above the residential area is the Kamiran acropolis, on which the temple of Athena Polias and Zeus Polieus was situated: in its present form the temple (a Doric tetrastyle with east–west orientation) is of Hellenistic date; however, the existence of a predecessor is indicated by various remains of the Archaic and Classical periods (Jacopi (1932–33) 223–29). A large rectangular cistern (17.40 × 10.20 × 3.2 m) from the Archaic period was positioned in an east–west orientation immediately to the south of the temple; its capacity was 600 m³ (ibid. 229). At a distance of c.300 m from the city is a small coastal settlement whose origin dates to the Archaic period and which is believed to have been the port of Kamiros; it is situated at the promontory Mylantia Akra in the area of modern Ag. Menas; about halfway between this site and the town are the remains of a possibly Archaic temple and other buildings (Konstantinopoulos (1971) 42).

Attested cults include those of Athena (*Tit. Cam.* 104.3, 109.10 (C4)), Athena Polias (*Tit. Cam.* 148 (C3)), Zeus Polieus (*Tit. Cam.* 15.8 (C3f)) and Apollo (*Suppl. Tit. Cam.* 115a (C6)).

Kamiroi began striking anepigraphic electrum and silver coins on the Aiginetan standard in C6. Denominations: 1/24 stater (electrum); stater, drachm, hemidrachm, tritemorion, hemiobol (silver). Types: *obv.* fig leaf; *rev.* incuse square, on silver issues divided into two compartments (a type used also at Lindos (no. 997) and Ialysos (no. 995), if the attribution of the palmette coins to Ialysos is accepted, cf. *supra* 1200). In C5, silver and bronze coins were struck. Denominations: stater, trihemiobol, obol. Silver types: *obv.* fig leaf; *rev.* two oblong incuses, on staters separated by a broad band; legends: *KA*, *KAMIPÉΩN* (stater, trihemiobol); or *obv.* rose; *rev.* griffin's head in incuse square; legend: *KA* (obol). Bronze types: *obv.* fig leaf; *rev.* *KA* in two quarters of a wheel. Some minor silver fractions struck after 479 depict *obv.* forepart of horse; *rev.* fig leaf in incuse square; legends: *KA*, *KAMI*; a similar *obv.* occurs on contemporary coins of Ialysos and Lindos (Gabrielsen (2000b) 182). A tetartemorion (Babelon, *Traité* ii.2 no. 1681) shows *obv.* head of Helios, radiate; *rev.* head of griffin; legend: *KA*, and is on the Chian–Rhodian standard, which suggests that “l'atelier de Camiros ne fut pas fermé tout de suite après la fondation de Rhodes”. Head, *HN*² 636; Babelon, *Traité* ii.1.459–68, ii.2.1005–8; *SNG Cop. Caria* 710–15; Fried (1987) 7–8.

Pind. *Ol.* 7.73ff relates the foundation myth of the three Rhodian *poleis* (they were founded by descendants of Helios) and names the eponymous hero of Kamiroi.

997. Lindos (Lindios) Map 60. Lat. 36.05, long. 28.05. Size of territory: 5 (c.790 km²). Type: A. The toponym is *Λίνδος* (Hom. *Il.* 2.656; *IG*¹³ 269.iv.18 (443/2); *I.Lindos* 13 (before 411 or later)), *ῆ* (Callim. *Aet.* fr. 7.20). The city-ethnic is *Λίνδιος* (C6–C5 coins (*infra*); *IG*¹³ 71.1.120 (425/4); *I.Lindos* 13).

Lindos is called a *polis* both in the urban sense (Thuc. 8.44.2; Ps.-Skylax 99) and in the political sense (Hdt. 1.144.3); *akropolis* is found in *FGrHist* 532 D.1 (r490). *Damosios* is found in *I.Rhod.Per.* 251.6–7 (440–420). *Politai* is found in *FGrHist* 532 D.1 (r490).

The internal collective use of the city-ethnic is found on C6–C5 coins (*infra*) and in *I.Lindos* 13 and 15–16 *App.* (all before 411?). The external collective use of the ethnic is found in *IG*¹³ 71.1.120 (425/4), 269.iv.12 (443/2) and Hdt. 7.153.1 (r689/8); the external individual use is found in *Pl. Prt.* 343A; *IG*¹³ 1454A.38 (445–430); and possibly *I.Knidos* 623 (C4f).

The territory of Lindos on Rhodos itself measured c.790 km². In it were situated several second-order settlements, among which the following are worth noting. At Kattabia, in the south-western part of the territory, an

inland settlement is indicated by an Archaic (and later) burial ground (Inglieri (1936) *foglio sud* p. 69 no. 87). On the coast south of Lindos, remains of two Archaic settlements have been located, one at Kiotari and another, at Plimmiti further south, at Germatas, where the settlement seems to have been fortified; neither of these sites has been excavated (Konstantinopoulos (1972) 24–25). Finally, and most conspicuously, there is Vroulia, at the southernmost tip of the island. The settlement there was founded *ab novo* c.700; parts of the settlement have fallen into the sea, but the preserved remains consist of a fortification wall separating the settlement from a cemetery to the north-east; inside the settlement are remains of two rows of houses and a small sanctuary with a *naiskos*; to the west is an unbuilt area. The settlement was abandoned in C6e. See further Kinch (1914); Drerup (1969); and Melander (1988). Furthermore, Lindian territory extended to parts of the *peraia* already in C4: this is shown by *I.Lindos* 51.cii.17 (c.325), a catalogue of donors arranged by demes and including the deme of the *Φύσκιαι* known to have been located at Physkos in the *peraia* (Fraser and Bean (1954) 57, 66–67).

With Halikarnassos (no. 886), Kos (no. 499), Knidos (no. 903), Ialysos (no. 995) and Kamiroi (no. 996), Lindos formed the so-called Dorian *hexapolis*, later *pentapolis*, a cultic association centred on the sanctuary of Apollo at Triopion near Knidos (Hdt. 1.144).

According to the Lindian Temple Chronicle (*FGrHist* 532 D.1), Lindos was besieged in 490 by a Persian force under Datis; the siege was unsuccessful and ended in the conclusion of a treaty of *philia*. Lindos was a member of the Delian League, and was probably among the original members (*ATL* iii. 213). Lindos belonged to the Karian district (*IG*¹³ 271.ii.74), and is registered in the tribute lists from 454/3 (*IG*¹³ 259.iv.6) to 415/14 (*IG*¹³ 290.i.8) a total of fifteen times, once completely restored. Lindos initially paid a *phoros* of 8 tal., 2,700 dr. (*IG*¹³ 259.iv.6; cf. 261.iv.14 where this amount is completely restored); in 448/7 it paid 10 tal. (*IG*¹³ 264.ii.11; cf. 265.i.53, where this amount is restored); in 445/4–440/39 it paid 6 tal. (*IG*¹³ 267.iii.21, 269.iv.12, 270.iv.25, 271.ii.74, 272.ii.68); in 433/2 and 432/1 it paid 10 tal. (*IG*¹³ 279.i.19, 280.i.51), but in 421/0 and again in 415/14 15 tal. (*IG*¹³ 285.i.97, 290.i.8). Lindos was assessed for tribute in 425/4 (*IG*¹³ 71.1.120), and there was a speech by Antiphon *περὶ τοῦ Λινδίων φόρου* (fr. 25–33, Thalheim). In addition, the tribute lists registered two other groups connected with Lindos: (i) the *Λινδίων Οἰῆται* (no. 998) and (ii) the *Πεδιῆς* (no. 999).

In 412/11 a Peloponnesian squadron arrived at Rhodos invited by some wealthy Rhodians (Thuc. 8.44.1); as a result,

Lindos (with Ialysos (no. 995) and Kamiros (no. 996)) defected from the Athenians and joined the Peloponnesians in the war against Athens (Thuc. 8.44.2). Thuc. 8.44.4 records a payment by the Rhodians to the Peloponnesians of 32 tal., but the share contributed by Lindos to this amount is unknown. An attempt to undo the new alliance with the Lakedaimonians shortly after was quelled by a squadron commanded by the Ialysian exile Dorieus (Diod. 13.38.5, 45.1; Gehrke, *Stasis* 133–34). The presumption is that in 411 a democratic constitution was replaced by an oligarchy and that the following *neoterismos* (Diod.) was an attempt to bring the democrats back into power. *I.Lindos* 13 is a treaty of unknown nature between Lindos and Cretan Lyktos (no. 974), traditionally dated prior to 411, though it could well be later.

According to Diod. 13.75.1, in 408 the inhabitants of Lindos (and Ialysos and Kamiros) *μετωκίσθησαν εἰς μίαν πόλιν τὴν νῦν καλουμένην Ῥόδον*, a process which Strabo 14.2.10 refers to by the verb *συνοικίζεω*. As in numerous other cases, only part of the population was transferred to the new urban centre, and it is clear that a wholesale relocation of the Lindian population was not carried out (Gabrielsen (2000b) 188–89). Furthermore, there appears to be no good reason for the idea that the foundation of Rhodos town was accompanied by a fundamental restructuring of the political organisation of the island (ibid. 189–90): the move towards pan-Rhodian unity had begun long before 408 (ibid. 180–87), and the three old *poleis* continued to exist (Xen. *Hell.* 4.8.25; Ps.-Skylax 99) and function as *poleis* after 408 (for Lindos, see Gabrielsen (2000b) 192 with n. 87), although Lindos was now a dependent *polis* inside the *polis* of Rhodos (no. 1000) and constituted a *phyle*, *Λινδία* (BCH 99 (1975) p. 97 col. A.8–9 (C3); *Suppl. Epigr. Rh.* 1 18.8 (C2f)) of the Rhodian *polis*; see Jones, *POAG* 243–44.

The existence of a Lindian navy may be inferred from Diod. 13.70.2 (1408) (Gabrielsen (2000b) 182). Hoplites are attested by *I.Rhod.Per.* 251.33 (440–420); they seem to have received *misthos* for service (ll. 4–9). *Stratagoi* are attested in *I.Rhod.Per.* 251.40 (440–420).

I.Lindos 15 (before 411) is a grant of proxeny (with *ateleia*, etc.) by Lindos to a man of unknown origin; *I.Lindos* 16 *App.* is a similar grant of similar date to a man described as “living in Aigyptos”; presumably in Naukratis (no. 1023) (cf. *ἐν τῶ[ι] Ἑλληνίῳ*, ll. 17–18).

A C6 tyranny by Kleoboulos is reported in later sources; he is known to have waged war in Lykia (*FGrHist* 532.23), but apart from that nothing substantial is known of his rule

(Berve (1967) 119–20, 588–89). Democracy seems implied by C5s enactment formulas (*infra*).

The existence of a system of demes and the practice of using demotics as the third part of personal names is attested by two inscriptions dating from c.325 (*I.Lindos* 51; *IG* XII.1 761). The demes were territorial divisions and probably subdivided into *ktoinai* (Gabrielsen (1997) 29–31, 151–54). About the functions of these units nothing is known.

The eponymous official was the priest of Athena Lindia (Sherk (1990) 281–83). The assembly (*damos*) is attested by *I.Lindos* 16 *App.* 2 (before 411; cf. *I.Lindos* 23.3: *ψαφ[ί]ζωνται Λίνδιοι* (c.400)). The council, *βωλά*, is securely attested by *I.Rhod. Per.* 251.16–17, 35 (440–420) and *I.Lindos* 16 *App.* 1 (before 411); it was probouleutic (*ἔδοξε τῶν βωλῶν καὶ τῶν δάμων*; *I.Lindos* 16 *App.* 1–2; cf. *I.Rhod.Per.* 251 of 440–420, where the same enactment formula has been restored). *I.Rhod.Per.* 251.26–27 (440–420) attests to the existence of *prytaneis* holding office for a month, and so presumably a committee of the council. A *grammateus* (*I.Lindos* 16 *App.* 3, before 411) and a board of *epistatai* (*I.Rhod.Per.* 251.2 and 20 (440–420)), of the council or of the assembly, are also attested. The earliest surviving public enactment is *I.Rhod.Per.* 251 (440–420), an enactment by the council and assembly concerning the cult of Enyalios.

The city of Lindos was situated by the southern peninsula delineating the bay of Megalos Gialos on the western coast of the island. The ancient town lies beneath its modern successor and is thus virtually unknown, with the exception of a small rock-cut theatre, possibly of C4 date, which occupies part of the south-eastern slope of the acropolis and has an estimated capacity of c.1,800–2,000 (Dyggve (1960) 406–7; see also *TGR* ii. 279). On the plateau of the steep rock formation rising above the city was the Lindian acropolis (called *ἀκρόπολις* in (*FGrHist* 532) D.1 (1490)). It served as a place of refuge in 490 and was besieged by the Persians under Datis ((*FGrHist* 532) D.1: cf. Dyggve (1960) 51–52). The most important feature of the acropolis was the temple of Athena Lindia, whose cult is assumed to have been instituted by C8 (Konstantinopoulos (1972) 32). The earliest known temple is C6, but in its present form the structure is Hellenistic (Dyggve (1960)). The Archaic temple was a Doric amphiprostyle (or prostyle: Gruben (1986) 414) with four columns at each end and situated within a walled *temenos* approached by a long staircase (Dyggve (1960) 112–26, 365, 463 with fig. II.1 at 44; Konstantinopoulos (1986) 180 fig. 203). Having been destroyed by fire (cf. Blinkenberg, *I.Lindos* cols. 198–200), the temple was rebuilt in C4 on a similar plan but with the addition of monumental *propylaea*

entered by a 21 m-wide staircase (Dyggve (1960) 126–30; Konstantinopoulos (1986) fig. 205). North-east of the acropolis, on the rocky plateau of Vigli, clearly visible from the acropolis, was the *Boukopion*, an Archaic sanctuary consisting of a grotto on top of which was a small temple whose dedicatee divinity is unknown; the temple is Archaic, but its precise date is disputed (Dyggve (1960) 459–63); rock-cut inscriptions at the sanctuary date from C6 onwards (*I.Lindos* 580–612).

In the Hellenistic period, a group of citizens described as *ματρόξενοι* (or as being *ματρὸς ξένας*) is commonly encountered in inscriptions; *matroxenoi* were full citizens though their mothers were of foreign extraction (Morelli (1955); Hannick (1976); Gabrielsen (1992) 48 n. 7). An inscription of c.325 shows that the group of *matroxenoi* existed already in C4 (*I.Lindos* 51.ci.26–27: [Σ]ωσικ[λ]ῆς Κοσμοκλέος [ματρὸς δ]᾽ ξένας, in a list of donors arranged by demes); the implication is that a group of free foreign women married to Lindian citizens resided in the community.

I.Rhod.Per. 251.26 (440–420), refers to the month Artamitios, and, prior to the synoecism of Rhodos city, Lindos—as well as Ialysos and Kamiros—may have had its own individual calendar (Trümpy, *Monat.* 168).

An undated communal dedication by Lindos in Delphi is mentioned in Paus. 10.18.4 (Jacquemin (1999) no. 336).

The chief divinity of Lindos was Athena Lindia, in whose sanctuary state documents were published (*I.Lindos* 16 *App.* 9–10 (before 411)); the sanctuary was also of wider, pan-Rhodian importance: documents of Kamiros were deposited there (*Tit. Cam.* 105.16 (C4e)) and a copy—inscribed in golden letters—of Pind. *Ol.* 7, celebrating an Olympic victory by Diagoras of Ialysos, was deposited there as well (Gorgon of Rhodos (*FGrHist* 515) fr. 18; on Athena Lindia, see Morelli (1959) 80–86). Zeus Polieus is attested by *I.Lindos* 56.B (313–275); Apollo Pythios by *I.Lindos* 61a.3 (c.308); a cult of Enyalios is attested by *I.Rhod.Per.* 251 (440–420). Other attested cults include those of Athena Apotropaia (*Nuovo Supplemento Epigr. Rh.* 20 (C4)), Zeus (*I.Lindos* 26.2 (c.400)), Zeus Polieus (*I.Lindos* 56 (c.313)), Apollo (*I.Lindos* 57C (c.313)), Enyalios (*I.Rhod.Per.* 251 (440–420)), and Hermes (*I.Lindos* 20 (c.400)).

Lindos began issuing coins in C6 and continued minting down to at least 408; the earliest issues included small electrum coins (Head, *HN²* 637; cf. J. Hirsch *Auct.* xiii 4002–3) and silver already in C6. The types are *obv.* lion's head with open jaws and tuft of hair on forehead; *rev.* incuse square divided into two oblong halves by broad band (a type used

also at Kamiros (no. 996) and Ialysos (no. 995); if the attribution of the palmette coins to Ialysos is accepted; cf. *supra* 1200); some coins are anepigraphic, but when present the legend is Α, ΑΙΝΔΙ (sometimes retrograde: Babelon, *Traité* ii.1 no. 779; Fried (1987) no. 46) or ΑΙΝΔΙΟΝ (Babelon, *Traité* ii.1 no. 781; Cahn (1957) 22). The silver coins were struck, according to Babelon, first on the Milesian standard (*Traité* ii.1. 475–78: staters and diobols; cf. Cahn (1957) 25), later on the Aiginetan (*Traité* ii.2. 1011–12: diobols and hemiobols). After 479, Lindos struck minor silver fractions with types: *obv.* forepart of a horse; *rev.* lion's head within incuse square; legend: ΑΙΝΔΙ; similar obverse types were employed by Ialysos and Kamiros (Gabrielsen (2000b) 182). Head, *HN²*; Babelon, *Traité* ii.1. 473–78 and ii.2. 1011–12; *SNG Cop. Caria* 720–22, *Suppl.* 356; Cahn (1957).

According to Hdt. 7.153.1, Lindos founded the colony Gela (no. 17) in Sicily (see also Thuc. 6.4.3, reporting that the original site of Gela town was called *Λίνδιοι*; cf. Fischer-Hansen (1996) 321–22); Thuc. 6.4.3 reports that Cretans also participated in the foundation of Gela in 689/8 (see further Gela (no. 17)). In addition, Lindos is claimed by later authors to have been the founder of Phaselis (no. 942) in Lykia in 691/0 (Philostephanos, *FHG* III 29; Aristainetos (*FGrHist* 771) fr. 1); but this tradition is not beyond suspicion. The oecist was supposedly Lakios (Aristainetos (*FGrHist* 771) fr. 1; Ath. 297E–298A), a native of either Lindos or Argos (Philostephanos, *FHG* III 29), but he is possibly mythical; Phaselis is described as Dorian by Hdt. 2.178.2, but is not called a πόλις 'Ελληνίς by Ps.-Skylax. According to Strabo 14.5.8, Lindians and Achaians founded Kilikian Soloi (no. 1021).

Pind. *Ol.* 7.73ff relates the foundation myth of the three Rhodian *poleis* (they were founded by descendants of Helios) and names the eponymous hero of Lindos (a votive to whom survives as *I.Lindos* 56Ab (c.313)).

998. Oiai (Oiiates) Map 60. Unlocated. Type: C. The toponym is *Oiai*, *ai* (Maiuri, *Nuova silloge* 18.22 (C1)). The city-ethnic is *Oiάρης* (*IG* I³ 259.III.26). Our only source for this community are the Athenian tribute lists in which the *Λινδίων Οιῆται* are listed twice: in 454/3 (*IG* I³ 259.III.26), paying 3,300 dr., and in 452/1 (*IG* I³ 262.III.28), same amount restored. In the same two years Lindos (no. 997) itself paid 8 tal., 2,700 dr. The *Λινδίων Οιῆται* must have been the inhabitants of *Oiai*, a town in the territory of Lindos (*RE* xvii.2. 2085; suppl. v. 746–47). The fact that it paid individually may suggest that it was a dependent *polis* inside the territory of Lindos (cf. Hansen (1997) 31), or—considering the

sporadic nature of its payments—suggest civic disorder at Lindos (cf. Schuller (1995) 166–67). Alternatively, the appearance of the Oiiatai may indicate an arrangement serving primarily the interests of Athens by weakening a powerful ally. See further Brikindera (no. 993), Diakrioi (no. 994) and Pedies (no. 999).

999. (Pedieis) Map 60. Unlocated. Type: C. No toponym is attested. The ethnic is *Πεδιεύς* (*IG* 1³ 269.iv.18). Our only source for this community are the Athenian tribute lists in which the *Πεδιεύς* are further qualified by the prepositional group *ἐλ Λίνδοι* (*IG* 1³ 269.iv.18) or *ἐγ Λίνδο* (*IG* 1³ 280.i.52–53), but twice appear simply as Pedies (*IG* 1³ 264.ii.12, 265.i.54, partly restored); this group is listed no fewer than thirteen times (twice completely restored) from 448/7 (*IG* 1³ 264.ii.12) to 415/14 (*IG* 1³ 290.i.13), and was presumably assessed for tribute in 425/4 (*IG* 1³ 71.ii.91). In 448/7 and 447/6, the *phoros* of the Pedies was 2,000 dr.; in 445/4, a mere 100 dr. (*IG* 1³ 267.iii.20, partly restored; cf. 269.iv.18, 270.iv.18, 271.i.75–76, 272.i.87); in 433/2–432/1, 5,000 dr. was paid (*IG* 1³ 279.i.20–21, 280.i.52–53), and in 421, 1 tal. (*IG* 1³ 285.i.98–99). The fact that the Pedies paid individually may suggest that they constituted a dependent *polis* inside the territory of Lindos (no. 997) (cf. Hansen (1997) 31), or it may suggest civic disorder at Lindos (cf. Schuller (1995) 166–67). Alternatively, the appearance of the Pedies may indicate an arrangement serving primarily the interests of Athens by weakening a powerful ally. See further Brikindera (no. 993), Diakrioi (no. 994) and Oiai (no. 998).

1000. Rhodos (Rhodios) Map 60. Lat. 36.25, long. 28.15. Size of territory: 5 (= size of island: 1,400 km² + *peraia*(?)). Type: A. The toponym is the same as that of the island, *Ῥόδος*, ἡ (*Hell. Oxy.* 20.6; Aeschin. *Epist.* 5.1; Ps.-Skylax 99; Diod. 13.75.1). The city-ethnic is *Ῥόδιος* (C51 coins, *infra*; Dem. 15.3; Lycurg. 1.15; *IG* xii.6 149.4 (C41)).

Rhodos is called a *polis* in the urban sense at Ps.-Skylax 99 (*νησος καὶ πόλις*); Lycurg. 1.14 (*τὴν ἀπαγγελίαν . . . πρὸς τὴν πόλιν τὴν τῶν Ῥοδίων καὶ τῶν ἐμπόρων τοῖς ἐπιδημοῦσιν ἐκεῖ*); Dem. 15.14 (*εἶχον τὴν πόλιν οἱ νῦν ὄντες ἐν αὐτῇ Ῥόδιοι*); and Kallisthenes (*FGrHist* 124) fr. 5.31; cf. Diod. 13.75.1 (408/7) (*μετρωκίσθησαν εἰς μίαν πόλιν*) and 14.99.5 (r390); Maiuri restored *Nuona Silloge* 1.6 (C41) to read *τῶν κατο[ι/κ]ούντων ἐν Ῥόδωι πόλ[ει τῆ]ν ἐπιμέλεια[ν]*, but Hallof in *IG* xii.6 149 proposed: *τῶν κατο[ι/κ]ούντων ἐν Ῥόδωι πο[λλ]ῆν ἐπιμέλειαν*, a restoration that eliminates the term *polis*. The political sense is found in Theopomp. fr. 121; Aeschin. 3.42; Lycurg. 1.143; and in *IG* ii² 43.82 (378/7), where *Ῥόδιοι* are listed under

the heading *Ἀθηναίων πόλεις αἶδε σύμμαχοι*. Dem. 15.13 and 27 seem to combine the urban and territorial senses with the political sense (13: *ἀντιποιήσεται τῆς πόλεως τῆς Ῥοδίων*; 27: *λαμβάνειν Κῶν καὶ Ῥόδον καὶ ἄλλας ἑτέρας πόλεις Ἑλληνίδας*). *Politai* is found in *Hell. Oxy.* 18.3; Dem. 15.14; and Theopomp. fr. 121; *πολιτεία* is found in *Hell. Oxy.* 18.3. *Patris* is found in Ergias (*FGrHist* 513) fr. 1.

The internal collective use of the city-ethnic is found on C51 coins (*infra*); the internal individual use is found in *L.Lindos* 42 (c.340); the external collective use is found in *IG* ii² 43.80; Dem. 15.13; Lycurg. 1.15; Theopomp. fr. 121; and on a C41 block found at Nemea (Miller (1990) 70–71); the external individual use is found in *IG* ii² 19 (394/3) and 10139–42 (C4 epitaphs); *IG* xii.6 149 (C41) and Aen. Tact. 18.13.

According to Diod. 13.75.1, the inhabitants of the three old major *poleis* in 408/7 relocated to the city of Rhodos (*μετρωκίσθησαν εἰς μίαν πόλιν τὴν νῦν καλουμένην Ῥόδον*), a process which Strabo 14.2.10 describes as synoecism. As in numerous other cases, only part of the population was transferred to the new urban centre, and it is clear that the synoecising cities continued to exist (Gabrielsen (2000b) 188; cf. nos. 995–97). It is as yet unresolved to what extent the building of the town of Rhodos was “immediately followed by a significant demographic event” (Gabrielsen (2000b) 189); however, three things are worth noting. (1) It is apparent from Thuc. 8.44.2 that in 411 no city of Rhodos was yet in existence. (2) The democratic revolution in 395 took place in Rhodos town (Diod. 14.79.6: *πόλις*), which by the time already had harbours capable of sheltering large fleets (*Hell. Oxy.* 18.2; Diod. 14.79.6) and an agora (*Hell. Oxy.*), and was the place where officials resided (*Hell. Oxy.*) and assemblies were held (*Hell. Oxy.*). (3) At the time of the floods in 316 the city had a whole range of public buildings (Diod. 19.45.6–8), and during the siege in 305 by Demetrios Poliorketes, Rhodos was a populous city (Diod. 20.84.3).

The territory of Rhodos corresponded to those of Ialysos, Kamiros and Lindos (c.1,400 km²), and included a *peraia* already by C4 (Ps.-Skylax 99; Gabrielsen (2000a) 149). The population of Rhodos consisted of the populations of the three synoecising *poleis*, which were constituted as *phylai* (subdivided into demes: Papachristodoulou (1999b)) of the new *polis* (*Ἰαλυσία*: BCH 99 (1975) p. 97 col. B.26–27 (C3); *Καμυρίς*: Tit. Cam. 21.6 (C2); *Λινδία*: BCH 99 (1975) p. 97 col. A.8–9 (C3); see Jones, *POAG* 243–44). According to Diod. 20.84.3, during the siege of 305 there were 6,000 able-bodied *politai* in the city of Rhodos.

At its foundation, Rhodos presumably became an ally of Sparta (no. 345), as were the three synoecising cities (Thuc.

8.44.2; Berthold (1980) 35–36); prior to 395, however, the Rhodians revolted from Sparta (Diod. 14.79.6; Bruce (1961) 166–68). Rhodos was a member of a *symmachia* attested exclusively by the so-called ΣΥΝ coinage (whose legend abbreviates *synmachon*, *synmachikon* or *synmachia*, *vel sim.*) dating to C51–C4e; the other *poleis* striking ΣΥΝ coins were Byzantion (no. 674), Ephesos (no. 844), Iasos (no. 891), Knidos (no. 903), Kyzikos (no. 747), Lampsakos (no. 748) and Samos (no. 864) (Karwiese (1980); Debord (1999) 273–77). Rhodos was a founding member of the Second Athenian Naval League (IG II² 43.80 (378/7)), and was probably allied with Athens (no. 361) prior to its entry into the League (Berthold (1984) 28). However, in 357/6, Rhodos joined Chios (no. 840), Kos (no. 497) and Byzantion (no. 674) in a revolt against Athens (the “Social War” of 357–355, Diod. 16.7.3; cf. Dem. 15.3 and *Staatsverträge* 305); the war ended in 355 when the Athenians, fearing Persian support for the rebels, concluded peace with them (Diod. 16.22.2), and recognised the independence of the rebels (Berthold (1980) 43; Cargill (1981) 182–83). In 340, Rhodos sent out forces, presumably naval, to support Byzantion against Philip II of Makedon, a support described as *συμμαχία* by Diod. 16.77.2 (Berthold (1980) 45–46). In 332, Rhodos submitted to Alexander the Great (Arr. *Anab.* 2.20.2), but the Makedonian garrison installed probably on this occasion was expelled in 323 (Diod. 18.8.1).

Oligarchic exiles are attested at *Hell. Oxy.* 18.3, and in 391/0, οἱ ἐκπεπτωκότες Ῥοδίων ὑπὸ τοῦ δήμου arrived in Sparta. A navy is attested in Xen. *Hell.* 4.8.22 (at least sixteen triremes) and Lycurg. 1.18 (cf. Diod. 16.77.2 (r340)); Arist. *Pol.* 1304^b29 attests to the existence of *trierarchoi* (cf. Diod. 20.88.6 (r305)).

Reception of an Athenian embassy is recorded by Plut. *Mor.* 850A (rC4s). Sending of an embassy of submission to Alexander is recorded in Arr. *Anab.* 2.20.2 (r332). Exchange of embassies with Argos (no. 347)—and presumably other *poleis* of mainland Greece—at the time of the Lamian War is attested by an Argive decree (SEG 19 317 (325–300) with Stroud (1984) 215–16). During the grain crisis of 330–326, Rhodos received 30,000 *medimnoi* from Kyrene (no. 1028) (Tod 196.11).

A grant of proxeny by Athens to a citizen of Rhodos is attested by IG II² 19a (394/3), and one to three men by Arkesine (no. 472) by IG XII.7 8 (C4–C3e); a grant of proxeny by an unknown Ionian *polis* to citizens of Rhodos is found in Peek, *Inschriften von den dorischen Inseln* no. 1 (c.300), a text that refers also to an earlier grant. A grant of citizenship by Athens to a citizen of Rhodos is attested by IG

II² 19b (394/3) and one by Chios in SEG 39 1151 (320s); special honours, including the right to address the assembly, were voted by Argos to citizens of Rhodos c.320 (Stroud (1984) 215–16).

Rhodos must initially have been an oligarchy (Papa-christodoulou (1999b) 29) since the revolution in 395 brought a democracy to power (*Hell. Oxy.* 18.3). However, in the years 391/0–390/89 there was a new outbreak of *stasis*; oligarchs and democrats had the opposing faction expelled, possibly twice; the oligarchs were supported by Lakedaimonian squadrons, and the democrats by ships from Athens (Xen. *Hell.* 4.8.20–25, 30; Diod. 14.97.1–4, 99.4–5; cf. Westlake (1983); Gehrke, *Stasis* 137–39, *pace* Berthold (1980) 39–40). Aristotle’s mention of severe civic disorder arising from *dikai* is commonly connected with this series of revolutions, and the *stasis* was perhaps triggered by the democrats’ introduction of political pay (*Pol.* 1302^b23–4, 32–33 and 1304^b27–31). In the end the democrats must have expelled the oligarchs: Rhodos was among the founding members of the Second Athenian Naval League, and shortly after the Social War the democracy was overthrown and an oligarchy established with the support of the Karian satrap Mausolos (Dem. 15.3, 14–15, 19, 27–28; Theopomp. fr. 121); a Karian garrison was installed (Dem. 15.14–15), a democratic appeal for assistance in 351 fell on deaf ears in Athens (cf. Dem. 15), and Rhodos remained oligarchic and under Karian domination until the time of Alexander the Great (Berthold (1980) 43–44), to whom the Rhodians submitted in 332 (Arr. *Anab.* 2.20.2). Alexander presumably restored democracy (Berthold (1980) 47; Bosworth (1980) 243); he certainly installed a garrison, whose expulsion is attested for 323 by Diod. 18.8.1. For the democratic institutions, see Gabrielsen (1997) 24–31.

The eponymous official was the priest of Helios (SEG 12 360 (C4) with Sherk (1990) 283–85 and Gabrielsen (2000b) 202 n. 49); ἄρχοντες are mentioned in *Hell. Oxy.* 18.2, and *πρυτάνεις* at Diod. 20.88.3; a council (βουλή) is referred to by SEG 19 317.31 (325–300) (cf. Diod. 20.93.5 (r304): ἡ βουλή). Arist. *Pol.* 1304^b27–31 attests to the existence of *mis-thophora* during a democratic period, but whether for office-holding or assembly attendance *vel sim.* is left unexplained. A meeting of the *ekklesia* is attested in *Hell. Oxy.* 18.2 (cf. SEG 18 317.31 (325–300)). The earliest preserved public enactment is the extremely fragmentary decree SEG 15 496 (C4). Dem 56.47 refers to a *dikasterion* at Rhodos.

Residence of free foreigners at Rhodos is implied by Lycurg. 1.55 (ἀπεδήμησεν εἰς Ῥόδον); according to Diod. 20.84.3, 1,000 able-bodied foreigners (κατοικοῦντες

παρόικοι καὶ ξένοι) participated in the defence of the city during the siege of 305/4; this number, however, includes only those who remained behind after disabled foreigners and foreigners unwilling to serve in the defensive forces had left the city.

The acropolis is situated on the terraced hill of Ag. Stephanos (Monte Smith), which dominates the amphitheatre-like shape of the city (cf. Diod. 19.45.3, 20.83.2). The acropolis was included within the circuit of the city wall (cf. *infra*). On the acropolis are remains of several monumental structures, but in their present form these are all Hellenistic or later. The only buildings assumed to have had Classical predecessors are the temple of Athena Polias and Zeus Polieus and the temple of Apollo Pythios. However, very little is known about the acropolis, since no systematic excavations have been conducted there so far (see further Konstantinopoulos (1973); Livadiotti and Rocco (1996) 12–26). Also of Hellenistic date is the reconstructed *stadion* east of the temple of Apollo; however, it has now been demonstrated that it had a C4 predecessor with opposite, i.e. east–west, orientation (Valavanis (1999) esp. 99 with fig. 4).

Recent archaeological discoveries prove that the city wall built in 407 was both of a smaller circumference and of lesser width than its C3e successor. To date, only a section of some 20 m of the early wall is known; it is constructed of orthogonal blocks in isodomic technique, and its width (0.60 m) indicates that this can have been only the outer face of the wall of whose inner face and central and inner constructions (probably in wood) nothing remains (Philimonos in Hoepfner and Schwandner (1994) 53). This type of construction may perhaps explain Diodorus' description of a particular stretch of this wall as ἀσθενές καὶ ταπεινόν (20.86.2). The area enclosed by the early wall (c.300 ha) was much smaller than the area enclosed by its C3e successor (c.430 ha; see Philimonos-Tsopotou (1998) fig. 10): a much stronger and enlarged circuit was constructed in C3e, which at certain points shows a width of 3.50 m and even 4.10 m (see further Philimonos-Tsopotou (1998), (1999)).

The site chosen for the new city of Rhodos was not entirely virgin ground, as various finds indicate (Drelisioi-Herakleidou (1999)). The city was laid out on an orthogonal grid plan at its foundation, but the direct participation of Hippodamos himself is reported only by Strabo 14.2.9 (see Wycherley (1964); Burns (1976)). On average, each street was 5.50 m wide, with the exception of two conspicuously broad main streets, one in the western, the other in the eastern part of the town, which were 16 m and 16.5 m wide respectively (Kondis (1958) 151; *ArchDelt* 35 (1980) *Chron.* 534). In

general, see Konstantinopoulos (1970), (1988); and Philimonos (1996).

Archaeologically, the Classical city is poorly known. However, some impression of the C4s city may be gained from Diodorus' description of the great flood of 316 (19.45.6–8). The description refers to (1) private houses built in stone: such houses have been found but are mostly of the Hellenistic period (Philimonos (1996) 87); (2) drains (*ὄχετοί*): the course of the main drain is known for a stretch of 200 m (Kondis (1954) 11; Philimonos (1996) 85 fig. 12; see also Owens (1991) 59–60); (3) the *deigma*, which may or may not be part of the agora mentioned at *Hell. Oxy.* 18.2: the agora is assumed to have been situated in the centre of the town near the great harbour and within the mediaeval town (Kondis (1958) 152); (4) a Dionysion: this sanctuary is believed to have been situated in the neighbourhood of the agora (Philimonos (1996) 82); (5) an Asklepieion: this sanctuary has been located by recent finds in the south-western outskirts of the mediaeval town (Papachristodoulou (1999a) with fig. 1); (6) a theatre: the theatre has not been located, but it seems a reasonable hypothesis that it was situated in the southernmost section of the acropolis (Philimonos (1996) 76). In addition, a C5I–C4 sanctuary of Demeter Thesmophoros has been identified in the northern part of the city; it consists of eight orthogonal structures and a subterranean room (Zervoudaki (1988); Yannikouri (1999) with fig. 2). Finally, for what it is worth, it may be noted that Vitruv. *De arch.* 6 intr. 1 mentions a *gymnasion* in reference to the Classical period (cf. Delorme (1960) 82).

As early as the 390s, the city was equipped with several harbours (Diod. 14.79.7 (r396): εἰς τοὺς λιμένας; cf. 20.82.3). Archaeologically, a total of five harbours—all outside the circuit—are known, one of which is described as ὁ μικρὸς λιμῆν by Diod. 20.85.4 and is commonly identified with the modern Mandraki harbour. Here, remains of *neosoikoi* dating from before and after 227 have been found (Blackman *et al.* (1996)). Immediately south of Mandraki are the great harbour, the Akantia harbour and, further south, the southern harbour. The fifth harbour was situated in the north-western part of the city; this harbour, however, was filled up when the city expanded in C3. Archaeological remains associated with naval facilities have been discovered in the vicinity of these harbours, especially by the western harbour and the Mandraki harbour (Blackman (1999); Philimonos-Tsopotou (1998) fig. 10).

In terms of architectural splendour and topographical extent, the C4 cemetery complexes stretching out south of the city are far more modest in scale than those of the

Hellenistic period, the early graves being characterised by simplicity. The C4 graves are situated not only by the city wall but also at a considerable distance from it, perhaps an indication of awareness of the need for future expansion of the urban area. On the cemetery complexes, see Fraser (1977) 1–11; Salta (1999); Patsiada (2001) esp. 34 and fig. 1.

The patron divinity was Helios, depicted on the obverse of Rhodian coins (*infra*), whose priest was eponymous (*supra*) and in whose honour pentaeteric festivals were celebrated (Morelli (1959) 94–99); note, however, that the usual identification of his sanctuary (Kontorini (1989) 129–84) is now disputed by the excavator herself (Michalaki-Kollia (1999)), and the question of the location of Helios' sanctuary must be considered unresolved. A festival of Dionysos is attested by *SEG* 19 317 (325–300); cf. Diod. 20.84.3. See further Morelli (1959).

The Rhodian calendar is known only from C3m onwards (Trümpy, *Monat.* 167–85).

C.330–300, the Rhodians dedicated at Delphi a sculptural group depicting the chariot of Helios (Jacquemin and Laroche (1986)).

Mikinas of Rhodos won the Olympic *stadion* in 324 (Diod. 17.113.1; *Olympionikai* 469); a Rhodian was victorious in the Lykaian Games (Arkadia) in C4l (*IG* v.2 550.vi.27).

Beginning shortly after the synoecism, Rhodos struck coins in silver, bronze and gold. Silver: Ashton (2001) divides the Classical period silver issues of Rhodos (struck initially on the Chian–Rhodian standard, later on a reduced standard termed “Rhodian” by Ashton) into three chronologically distinct periods.

(1) 408–c.385: the issues in this period fall into two groups: (a) standard Rhodian issues, and (b) a special series of the so-called $\Sigma\Upsilon\Nu$ coins with which is associated a group of conventional Rhodian coins related to the $\Sigma\Upsilon\Nu$ coins by their weight. *Re* (a), this group includes tetradrachms, hemidrachms and obols. Types: *obv.* head of Helios facing; *rev.* rose (on tetradrachms between two bunches of grapes) in

incuse square, with or without symbols below, or head of nymph Rhodos to r. in incuse square; legend: *PO*, *POΔION*, *POΔΙΟΙ* (Babelon, *Traité* ii.2 nos. 1693–94). *Re* (b), Rhodos was one of eight *poleis* producing the so-called $\Sigma\Upsilon\Nu$ coinage in C5l–C4e (though the Rhodian coins in fact do not use the legend $\Sigma\Upsilon\Nu$ on the obverse; cf. Karwiese (1980) 20 n. 151); just over twenty silver specimens are known (Aiginetan didrachms, or Chian–Rhodian tridrachms, or double *sigloi*). Types: *obv.* infant Herakles strangling serpents; *rev.* rose; legend: *PO* (Karwiese (1980); Ashton (1993) 13). With these coins are associated a series of triple *sigloi* of conventional Helios/rose types (Ashton (2001) nos. 7–10).

(2) C.385–late 340s: this group includes tetradrachms, didrachms, drachms, hemidrachms and diobols. The types are generally similar to the earlier issues: *obv.* head of Helios facing; *rev.* rose in incuse square, beside which are various symbols and letters; legend: *PO*, *POΔION*; however, the *obv.* of the diobols in this group depict for the first time the radiate profile head of Helios. During this period tetradrachms ceased to be struck (except for an exceptional issue struck in the next period) and were replaced by didrachms as the main denomination; the didrachms were struck to a reduced weight standard (the “Rhodian” standard proper of Ashton (2001)) which became established as the usual standard of Rhodos.

(3) Late 340s–305/4: this group includes primarily didrachms, but also an exceptional issue of tetradrachms on the Chian–Rhodian standard. Types as earlier; legend: *PO*, *POΔION*.

Bronze: the Rhodian mint struck bronze *chalkoi* immediately after it began to function, and again in C4s: *obv.* rose, or head of nymph Rhodos; *rev.* rose; legend: *PO*, *POΔION*. Gold: in C4s, Rhodos struck gold staters; four specimens are known, all from the same pair of dies: *obv.* head of Helios facing; *rev.* rose with bud to r. and grapes to l., all in incuse square; legend: *POΔION*. Head, *HN*² 637–40; Babelon, *Traité* ii.2 1011–28; *SNG Cop. Caria* 723–51; Ashton (1993), (2001).

THE SOUTH COAST OF ASIA MINOR (PAMPHYLIA, KILIKIA)

ANTONY G. KEEN, TOBIAS FISCHER-HANSEN

I. The Regions

The name of Pamphylia is *Παμφυλία*, ἡ (Thuc. 1.100.1; Theopomp. fr. 103.15–16; Arist. *De ventis* 973^a6). The ethnic is *Πάμφυλος*, used collectively and externally in Hdt. 1.28, 7.91, and internally on an inscription from Aspendos (*SEG* 17 639.6–7 (c.300)). It bordered on Lykia in the west (Ps.-Skylax 100) and Kilikia in the east (Ps.-Skylax 102). The border with Lykia was west of Phellos, according to Hecat. fr. 258 *apud* Steph. Byz. 661.19, which locates that settlement in Pamphylia. Ps.-Skylax 100, however, includes the area as far east as Perge in Lykia. By Strabo's time (14.4.1) the border between Lykia and Pamphylia was set around Phaselis (no. 942), which is variously allocated to either region in the sources. The account of Ps.-Skylax may reflect extensions to the satrapy of Lykia in the 330s (cf. Keen (1997) 117 n. 50). A foundation myth for Pamphylia, that it was settled by Greeks, can be found in Hdt. 7.91 and Theopomp. fr. 103.15.

The border between Pamphylia and Kilikia was placed variously (*RE* xviiiA. 358) at Nagidos (Hecat. fr. 266), at Korakesion (Ps.-Skylax 101; Strabo 14.4.2), at Kelenderis (Artemidoros *apud* Strabo 14.5.3; Strabo 16.2.33), at Side (Pompon. 1.78; Plin. *HN* 5.96) or at Syedra (Ptol. *Geog.* 5.7.1). According to Herodotos, Kilikia bordered on Armenia (1.72, 5.49.6, 5.52.3), the border being marked by the Euphrates, Kappadokia (5.49.6, 5.52.1), where the border was marked by the “Kilikian Gates”, and Syria, the border being at Posideion (no. 1022) (Hdt. 3.91.1). Diod. 14.21.1 (r401) places the eastern border beyond Issos (no. 1007). According to Strabo 14.5.1, Kilikia bordered to the north on Isauria, Pisidia and Kappadokia, and to the east on Syria (16.2.33). Kilikia itself was later divided into “rough” Kilikia in the west, and “smooth” Kilikia in the east; the border between the two was placed at Soloi (no. 1011) (Strabo 14.5.8).

The name of Kilikia was *Κιλικία*, ἡ, in Attic *Κιλικία* (Hdt. 2.17.1, 3.90.3; Xen. *An.* 1.4.1; Strabo 14.5.1) or ἡ *Κίλιξ χώρα*

(Trag. Adesp. 162). The ethnic is *Κίλιξ*; the external collective use is attested in Hom. *Il.* 6.397, 415; Hdt. 1.28, 3.90.3, etc.; and Xen. *An.* 1.2.17. For the individual external use, note *Συέεσσις ὁ Κίλιξ* (Hdt. 7.98.2). A foundation myth for Kilikia, that the people took their name from Kilix, a Phoenician, is found in Hdt. 7.91. Kallisthenes (*FGHist* 124) fr. 32 reports the myth that settlements on the western edge of Pamphylia were founded by Kilikians; he names Lyrnateia and Thebe. Strabo cites a number of sources for general south Anatolian foundation myths, including Sophokles, *Reclaiming of Helen* (14.1.28, 5.16) and Kallisthenes (14.4.3; cf. West, *IEG*, ii, Callinus [8]). He also records that Kilikia was founded by Rhodians from Lindos (no. 997), together with Achaians (14.5.8; cf. Roebuck (1959) 25, 65). Both Pamphylia and Kilikia paid tribute to the Persian king (Hdt. 3.90).

North of Pamphylia was Pisidia. A number of sites in that areas are described as *poleis*, largely in the context of Alexander's invasion—e.g. Termessos (Arr. *Anab.* 1.27.5) and Sagalassos (Arr. *Anab.* 1.28.2)—but they were not Hellenic, and lie outside the scope of the present work. Selge, however, has been included among the non-*polis* sites listed in the introduction, even though it is regularly described as Pisidian (Arr. *Anab.* 1.28.1; Strabo 12.7.3), because of the Graeco–Pamphylian dialect found there.

The Kilikians and Pamphylians are both considered *barbaroi* by Xen. *An.* 1.2.15–19, by Ephor. fr. 162, and by Arr. *Anab.* 1.26.1–28.1, 2.4.4–7.2. A mixed Graeco–Anatolian dialect was spoken in some cities in Pamphylia (Robert (1963)). The regions were generally barbarian ones. There were, as already noted, tales told in the Classical period by Greeks ascribing the origins of these regions to Achaian settlement after the Trojan War; these stories were later taken up by the inhabitants of the cities themselves. *Pace* Bing (1969) 213–15 (who views the tales relating to Kilikia as originating from a wave of significant Greek colonisation in C7), it seems best to view such myths as largely a Hellenistic invention (Desideri and Jasink (1990)

30–36, 161–62). No ancient source prior to the Hellenistic period asserts a Greek colonial presence in Pamphylia and Kilikia. Thus, the regions were principally non-Greek, though some settlements (e.g. Side, Soloi) may well have had Greek origins, and in Ps.-Skylax 102 Holmoi (no. 1006) and Soloi (no. 1011) are explicitly classified as *polis Hellenis*. Also the widespread striking of coins with Greek types and Greek legends indicates a certain degree of Hellenisation before Alexander's conquest of Asia Minor; for a recent acute analysis of the problems see Salmeri (2003). The following sites, listed in early investigations by Gjerstad (1934) and Seton-Williams (1954), have yielded important finds which testify to Greek C8–C7 contacts though not necessarily to Greek settlers: *Hesigin* (Kilikia); *Kazanli* (Kilikia) (see Garstang (1953) 254); *Mersin* (Kilikia) see *Zephyrion* (for Greek finds cf. Garstang (1953); Dunbabin (1957) 31–32; Roebuck (1959) 64; and Bing (1969) 110—with the suggestion that Mersin was a Greek colony); *Sirkeli* (Kilikia) (*TIB* 5: 321), a Hittite settlement; *Soyali* (Kilikia), a Hittite site; *Tilan* (Kilikia), a Hittite site; *Karatepe* (Kilikia)—the site is the Late Hittite seat of the dynast Asitawanda, but is of some interest as the findspot of the bilingual inscription naming Mopsos (Landsberger (1948); Bossert (1950–51); Barnett (1953); Erzen (1973) 396); for evidence of Greek contacts cf. Gjerstad (1934) 199; Dunbabin (1957) 32.

The lack of evidence about the areas, especially internal evidence, is an obstacle to reaching conclusions on this matter; but when Aspendos (no. 1001) emerges out of such shadows, with the honorific inscription of 301/298 (*SEG* 17 639), it already possesses many of the features of a typical Greek *polis*. Until more evidence (especially epigraphic) emerges, however, one can make only preliminary suggestions about the evolution of *polis* identity in Pamphylia and Kilikia (cf. Keen (2002)).

The site list below comprises partly non-*polis* settlements of the Archaic and Classical periods and partly some settlements explicitly described as *poleis*, but at the time probably non-Greek *poleis* which became Hellenised in the course of the Hellenistic period.

1. Pre-Hellenistic Settlements not Attested as Hellenic Poleis

A. Pamphylia

Kibyra (*Κίβυρα*) Ps.-Skylax 101 (*πόλις*); Strabo 14.4.2 (*ἡ Κίβυρατῶν παραλία τῶν μικρῶν*). So far no urban remains are attested from the Greek history of the city, and there is no evidence of Hellenisation. *Barr.* 65, H, but Ps.-Skylax testifies to C.

Korakesion (*Κορακήσιον*) Ps.-Skylax 101 (*πόλις*); Strabo 14.4.2, 5.2 (*φρούριον*). The extant urban remains are no earlier than the Hellenistic period, and probably no earlier than 144–141 (Lloyd and Storm Rice (1958) 1, 24–25). *Barr.* 65, H, but Ps.-Skylax testifies to C.

Kordytos (*Κορδυτός*) Hecat. fr. 263 = Steph. Byz. 373.7 (*πόλις*). Unlocated, not in *Barr.*

Kyrbe (*Κύρβη*) Hecat. fr. 264 = Steph. Byz. 396.13 (*πόλις*). Not in *Barr.*

Lyrnateia (*Λυρνάτεια*) Ps.-Skylax 100 (*νησος*, conj. of MS *αὑραίατεια*); Arist. *De ventis* 973^a8 (*Λυρνατεῖς οἱ κατὰ Φασηλίδαι*); Alex. Polyh. (*FGrHist* 273) fr. 59 = Steph. Byz. 423.4 (*Λυρνατία χειρρόνησος καὶ χωρίον Λυκίας*); Hecat. fr. 261 = Steph. Byz. 418.11 (*Λυρνύτεια*); Strabo 14.4.1 (*Λυρνησσός*). Ruge (1927) suggests that the different names may refer to the same locality, possibly the small island of Rashat between Phaselis (no. 942) and Attaleia. There is no archaeological or epigraphic evidence. *Barr.* 65, C.

Magydos (*Μάγυδος*) *SEG* 39 1180.26 (first century AD); Ps.-Skylax 100 (conj. of MSS *Μάσηδος*); Arist. *De ventis* 973^a5–6 (conj. of MSS *Μύγαλος*). The settlement is not classified by Ps.-Skylax. The archaeological remains are late Hellenistic or Roman. *Barr.* 65, R, but if the conjecture is accepted, Ps.-Skylax testifies to C.

***Marmara** (*Μαρμαρεῖς*) Diod. 17.28.1 (*χωρίον*). In *Barr.* 65, following Anti (1923) 668–711, identified with Kavak Daği (*TAVO* BV 15, 15.2); but see Arr. *Anab.* 1.24.5 with Bosworth (1980) 158. Not mentioned by Ruge in *RE* xviii.3. 397–402. The settlement at Kavak Daği is situated on a high, irregular plateau with habitation areas and public buildings grouped along the outer edges (Anti (1923) 669 fig. 3). A sanctuary, perhaps of Apollo (ibid. 669), has three temples delimited by a *temenos* wall. It is dated C4–Hellenistic, but a supporting polygonal terrace wall may be earlier. Bordering on the *temenos* are the remains of a stoa, a row of structures interpreted as *thesauroi*, and a large structure of C4–C2 identified as a *bouleuterion* by Anti (1923) 669–700. The fortress (*petra*) of the Marmareis near the border of Lykia was besieged by Alexander (Diod. 17.28.1–5 (r334/3) with Anti (1923) 709–12). *Barr.* 65, H, but, if correctly identified, C should be added.

Olbia (*Ὀλβία*) Ps.-Skylax 100; Arist. *De ventis* 973^a5; Strabo 14.4.1; Steph. Byz. 346.11 (*Κάδρεμα πόλις Λυκίας ἄποικος Ὀλβίων*). The urban remains are few and undated (Bean (1979) 84–86). *Barr.* 65, C.

Selge (Σέλγη) Strabo 12.7.2 (πόλις); Steph. Byz. 560.1 (πόλις), from Graeco-Pamphylian *Stelga*. The city-ethnic is *Ἐστελγίως*, with variations (coins before 300, see Brixhe (1991)) or *Σελγεύς* (Arr. *Anab.* 1.28.1 (r333); coins (after 300)). Arr. *Anab.* 1.28.1 calls Selge a large *polis* (Σελγέων πόλιν μεγάλην), but he describes the inhabitants as Pisidian *barbaroi*. There is little evidence of C4 Hellenisation, apart from the coinage (*infra*), and the myth that Selge was founded by the Lakedaimonians is probably C4/C3e (Strabo 12.7.3; Steph. Byz. 560.1). The ambition of Selge to present itself as Greek is reflected in the change of the ethnic in coin legends from the Pamphylian Στελγίως to Greek Σελγεύς c.300 (Brixhe (1976) 289; *I.Selge* 6 with comm.; cf. Osborne and Byrne (1996) no. 6603). For a survey of late Classical/early Hellenistic history, see *I.Selge* p. 14. Selge struck silver staters (and smaller denominations) on the Persian standard c.450–333, imitating the types of Aspendos (no. 1001). *Obv.* two wrestlers; *rev.* slinger; legend: ΕΣΤΑΕΓΕΙΥΣ or ΣΤΑΕΓΕΙΥΣ or related forms (SNG Cop. *Pisidia* 232–45, *Suppl.* 530; SNG von Aulock 5243–65). *Barr.* 65, H., but the coins testify to C.

Sillyon (Σύλλυον) IG 1³ 71.11.114; Ps.-Skylax 101 (πόλις Σύλλειον); Arr. *Anab.* 1.26.5 (r333) (Σύλλιον χωρίον ὀχυρόν). Graeco-Pamphylian *Selyniys* appears on C3 coinage (SNG Cop. *Pamphylia* 437–38). Sillyon was a member of the Delian League; at least it was assessed for tribute in 425/4 (IG 1³ 71.11.114). It was a fortified settlement and was besieged by Alexander the Great (Arr. *Anab.* 1.26.5). The site has habitation structures from C5 (Bean (1979) 39–45; Küpper (1996)). The fortifications were quite sophisticated for such a small site (Winter (1971) 91, 137, 170, *passim*). The C5–C4 stater SNG Cop. *Pamphylia* 436, erroneously attributed to Sillyon, belongs to Aspendos (no. 1001) (SNG von Aulock 4503; Brixhe (1976) 165 n. 1). Arrian calls the inhabitants *barbaroi*, and a Graeco-Pamphylian dialect was spoken (SGDI 1266–67; Blumenthal (1963) 46; Brixhe (1976) 167–90). *Barr.* 65, C.

B. Kilikia

Adana (Ἄδανα) Ps.-Skylax 102 (Ἄδάνη, conj. of Ἀλάνη, ἐμπόριον); Steph. Byz. 24.19 (πόλις); cf. App. *Mith.* 96; Ptol. *Geog.* 5.7.7, 8.17.46. *Barr.* 66, C?

Anchiale (Ἀγχιάλη) Aristoboulos (*FGrHist* 139) fr. 9a–b; Arr. *Anab.* 2.5.2 (r333) (πόλις); Steph. Byz. 23.22 (πόλις). Bing (1969) 110 suggests that it was a Greek colony, but the evidence for a Greek settlement at Anchiale is wholly circumstantial. *Barr.* 66, H, but Arr. *Anab.* testifies to C.

Anemourion (Ἄνεμούριον) Ps.-Skylax 102 (ἄκρα καὶ πόλις); Strabo 14.5.3 (ἄκρα). The history of the city is unknown before the late Hellenistic period. Public buildings and other urban remains are Roman, but there is evidence for a Hellenistic origin of the circuit wall (*TIB* 5: 189). *Barr.* 66, C.

Charadrous (Χαραδρούς) Ps.-Skylax 102 (πόλις καὶ λιμὴν); Strabo 14.5.3 (ἔρμα ὑφορμον ἔχον); Steph. Byz. 687.7 (λιμὴν καὶ ἐπίγειον); *Stadiasmus* 200 (Χωρίον Χάραδρος); Hecat. fr. 265 (Χάραδρος ποταμός). There are no urban remains from the Greek history of the city (*TIB* 5: 226), and we have no information about the degree of Hellenisation in the Archaic and Classical periods. *Barr.* 66, H, but Ps.-Skylax testifies to C.

Hyrria (Ύρρία) Steph. Byz. 560.3 (πόλις). Seleukeia Tracheia was earlier named Hermia (Plin. *HN* 5.93) or Hyrria (Steph. Byz. 560.5). Holmoi, also mentioned in connection with Seleukeia, is normally seen as a separate settlement (Strabo 14.5.4; Steph. Byz. 490.5–6; *infra* no. 1006). Strangely, Hermia is identified with Holmoi by *Barr.* 66, and Hyrria is not mentioned at all. However, Hyrria = Hermia seems to be an earlier name for Seleukeia. Gjerstad (1934) 157 refers to pre-Hellenistic finds at “Seleukeia at Kalykadnos . . . the foundation therefore to be understood as a re-foundation of an already existing site”. Not in *Barr.*

Magarsos (Μάγαρσος) Arr. *Anab.* 2.5.9 (r333); Lycoph. *Alex.* 444; Steph. Byz. 424.6 (ὄχθος); Strabo 14.5.16 (Μάγαρσα). The harbour town of Mallos (no. 1009). Arrian mentions a sanctuary of Athena Magarsis, whose cult statue was used as a coin type on the Seleucid coinage of Mallos (Houghton (1984)). *Barr.* 66, H, but Arrian testifies to C.

Mopsouestia (Μοψουεστία) Theopomp. fr. 103.15; Strabo 14.5.19 (Μόψου ἐστία); App. *Syr.* 69.365 (Ἔστία Μόψου τῆς Κιλικίας). According to Ruge (1935), there are at least fifty variants of the toponym. Supposedly the oldest of the foundations of Mopsos (Theopomp. fr. 103.15). A C2 coin legend is the earliest attestation of an ethnic: *Μοψεάτης* (Imhoof-Blumer (1901–2) 475.9). *Barr.* 67, C?

Myous (Μυούς) Ps.-Skylax 102. Some scholars believe that Myous is the Melania of Strabo 14.5.3 (*TIB* 5: 363). There are no extant urban remains from the Greek history of the city, if the location is Crionaro. *Barr.* 66, R, but Ps.-Skylax testifies to C.

Myriandos (Μυριάδος) Xen. *An.* 1.4.6 (πόλιν οἰκουμένην ὑπὸ Φοινίκων, ἐμπόριον); Ps.-Skylax 102

(*λιμὴν Μυριάδος Φουνίκων*); Strabo 14.5.19 (*πόλις*). There are no urban remains from the Greek history of the settlement (*TIB* 5: 362–63; Hellenkemper and Hild (1986) 113). *Barr.* 67, C.

Salon (*Σάλον*) Ps.-Skylax 102. Unlocated. *Barr.* 66, C.

Sarpedon (*Σαρπηδών*) Ps.-Skylax 102 (*πόλις ἔρημος*); Strabo 13.4.6, 14.5.4 (*ἄκρα*). A sanctuary of Apollo Sarpedonios was situated on the promontory of Sarpedon (Diod. 32.10.2 (r145)); for the few remains, see *TIB* 5: 399; MacKay (1990) 2112: C4 origin. No urban remains have been connected with a city of Sarpedon. *Barr.* 66, C.

Selinous (*Σελινοῦς*) Ps.-Skylax 102 (first toponym listed after *πόλεις αἰθε*); Strabo 14.5.3 (*πόλις*). There are no Greek urban remains (*TIB* 5: 407–8). *Barr.* AC.

Setos (*Σητός*) Ps.-Skylax 102 (*λιμὴν*, but the text is corrupt). The site is assumed by some scholars to be identical with the *polis* Sykai which is now identified with the fortified ruins on the high plateau of Softa Kalesi in the plain of Nagidos (Steph. Byz. 591.2; cf. *TIB* 5: 421). The urban remains are all Roman or later (*TIB* 5: 422–23). *Barr.* has C, but only Ps.-Skylax 102 points to such an early date.

Tarsos (*Ταρσός*) Xen. *An.* 1.2.23 (*Ταρσοῦς τῆς Κιλικίας πόλιν μεγάλην*); Diod. 14.20.2 (*Ταρσόν, μεγίστην τῶν ἐν Κιλικίᾳ πόλεων*); Arr. *Anab.* 2.4.5 (*Ταρσὸν . . . πόλιν*). Walls of a temple may have been noted by Goldman ((1963) 8), though the evidence is equivocal (cf. Desideri and Jasink (1990) 156–57). Coin types with head of Dionysos or Ares (*infra*) may attest Greek influence in C4e. Evidence of C8–C7 Greek settlers at Tarsos is tenuous and does not support the idea of Rhodian colonisation suggested by Bing ((1971); cf. Boardman (1980) 46 n. 37; Desideri and Jasink (1990) 151, 158, 162). Urban remains from the Greek history of the settlement are scant and mainly Hellenistic. The tradition found in Strabo (14.5.12, 16.2.5) that the city was founded by a group of Argives led by Triptolemos is probably Hellenistic. Tarsos struck coins on the Persian standard from C5m with Aramaic legends (Kraay (1976) 280–84). Coins of Pharnabazos (379–373) have the Greek ktetic *ΤΑΡΣΙΚΟΣ* or *ΤΕΡΣΙΚΟΝ* (*SNG Cop. Cilicia* 272; cf. *Suppl.* 606–10). *Barr.* AC.

Zephyrion (*Ζεφύριον*) Ps.-Skylax 102 (*πόλις*); Diod. 18.62.1; Strabo 14.5.9 (*κτίσμα Σαρδαναπάλλου*). Architectural features and finds reveal a settlement comparable to that of Al-Mina. However, the material has revealed greater similarity to that known from Vroulia, and the site

may have been within the influence of Rhodos (Garstang (1953) 253–55). We have no information about the degree of Hellenisation in the Archaic and Classical periods, and Zephyrion seems to have been a barbarian rather than a Hellenic *polis*. *Barr.* 66, C.

II. The *Poleis*

A. Pamphylia

1001. Aspendos (Aspendios) Map 65. Long. 36.55, lat. 31.10. Size of territory: ? Type: A;β. The toponym is *Ἄσπενδος*, ἡ (Thuc. 8.87.3; Xen. *Hell.* 4.8.30; Ps.-Skylax 101; Theopomp. fr. 9 = Steph. Byz. 134.10; Strabo 14.4.2; [*Ἄσπεν*]δος is restored at *IG* 1³ 71.11.156 (425/4)). The city-ethnic is *Ἄσπένδιος* (Xen. *An.* 1.2.12; *Hell.* 4.8.30; Theopomp. fr. 9 (rC5l), 103.13 (rC4e); Arr. *Anab.* 1.26.2 (r333); *SEG* 17 639.3–4, 6 (301–298)); Graeco-Pamphylian *ΕΣΤΦΕΔΙΙΥΣ* is found on C5 coinage (*SGDI* 1259).

Aspendos is called a *polis* in the urban sense (Ps.-Skylax 101), in the territorial sense with the political sense as a connotation (Xen. *Hell.* 4.8.30), and in the political sense (*SEG* 17 639.6, 10, 18 (a citizenship decree of C4l/C3e)). The collective use of the city-ethnic is found internally on Hellenistic coins (*infra*) and in the citizenship decree *SEG* 17 639.3–4 (C4l/C3e); externally it is found in an Argive decree in honour of Aspendos (*SEG* 34 282.4 (c.330–300)) as well as in literary sources (Theopomp. fr. 103.13; Xen. *Hell.* 4.8.30). For the individual and external use, see the Argive decree (*SEG* 34 282.18 (330–300)).

Aspendos is placed in Pamphylia by Ps.-Skylax 101 and Steph. Byz. 134.10. The territory is called *Ἄσπενδία* in Theopomp. fr. 9 and is termed *χώρα* by Diod. 14.99.4 (r388) and Arr. *Anab.* 1.26.5 (r333). Its extent was disputed by its neighbours (Arr. *Anab.* 1.27.4); the dispute may have been with Side (no. 1004) (Bean (1979) 47 n. 1), with whom relations were bad (Polyb. 5.73.4).

According to Hellan. fr. 15, Aspendos was founded by the hero Aspendos. Other versions of the foundation myth are found in later sources: e.g. that it was an Argive foundation (Strabo 14.4.2). However, Mopsos, the legendary founder of Pamphylian cities (cf. Hereward (1958) 58 with refs.), has been suggested as the oecist of Aspendos too (Robert (1960) 177–78, who connects the coin types of a horseman hurling a spear and of a boar (*infra*) with the tradition of Mopsos' sacrifice of a boar to Aphrodite Kastnietis in Aspendos; cf. Strabo 9.5.17; Callim. *Dieg.* VIII.41–IX.1–11, Pfeiffer).

The tradition of an Argive foundation of Aspendos (and Soloi (no. 1011)) is the background for the decree of c.330–300 (from Nemea) in which Argos (no. 347) bestowed citizenship on the Aspendians (who are described as *συγγενέ[σι καὶ ἀποίκ]οις*) and granted the privilege of access to the Argive assembly (Stroud (1984) 200–1, 206). Aspendian *theoroi* were sent to Nemea and to Argos to participate in offerings to Zeus and Hera; the Aspendians were possibly granted *prohedria* (the reading is uncertain: Stroud (1984) 203–4).

It has been suggested that Aspendos became a member of the Delian League in the 450s (Meiggs (1972) 58, 102); but the only evidence of League membership is the restoration [*Ἀσπεν*]δος [*ἐμ Παμφ*]υλῆαι in the assessment decree of 425/4 (*IG* I³ 71.11.155–56). Aspendos was possibly under Kilikian control c.401 (Xen. *An.* 1.2.12, a passage which distinguishes between Kilikians and Aspendians). In 388 the Aspendians were forced to pay a contribution to the Athenian commander Thrasyboulos, but later killed him in revenge for the conduct of his soldiers (Xen. *Hell.* 4.8.30). In 333 Aspendos sent *πρέσβεις ἀυτοκράτορες* to Alexander the Great (Arr. *Anab.* 1.26.2) and was a subordinate party to a treaty with him (*Staatsverträge* 405).

The earliest evidence for public enactments is a decree of C4/C3e granting citizenship to mercenaries (*SEG* 17 639). This decree attests a number of institutions indicative of *polis* status. Apart from those already mentioned are an eponymous *δημιουργός* (1), an *ἐκκλησία* (2), and a *ιερόν τῆς Ἀρτέμιδος* (13–14). A citizen of Aspendos was granted *proxenia* by Anaphe (no. 474) (*IG* XII.3 250; cf. *SEG* 41 1788 (C4/C3e)).

Aphrodite Kastnietis, named after the mountain on which Aspendos was founded, had a cult in the city (Brandt (1988) 241 with refs.; cf. *supra*). The C4–C3e citizenship decree (*supra*) mentions a sanctuary of Artemis (*SEG* 17 639.13–14; Brandt (1988) 241). C4–C3 coins (*infra*) testify to a cult of Athena (Brandt (1988) 242), and a cult of Zeus and Hera has been surmised on the basis of a late dedication (*SEG* 17 641; Robert (1960) 187–88; Brandt (1988) 243). The *kerykeion* of Hermes on C5–C1 coins may indicate a cult of this divinity as well (Brandt (1988) 247).

Aspendos was situated in the plain below the foothills of the Tauros mountains; it was on the river Eurymedon and in Antiquity was accessible for trade by sea (Xen. *Hell.* 4.8.30; Ps.-Skylax 101). In 333 it had a walled acropolis (*ἄκρα*) and a defence circuit enclosing the lower city (Arr. *Anab.* 1.26.5–27.3). There are no urban remains from the Greek history of the city.

Aspendos struck silver coins on the Persian standard from C5e. (1) Staters. Types: *obv.* naked warrior helmeted and armed with sword and shield fighting to r.; *rev.* triskeles, in field abbreviations of ethnic (*Estwediiys*) *E*, *EΣ*, *EΣT*, *EΣΠ* or *EΣTFE* (cf. *SGDI* 1259; Brixhe (1976) 194–99), and various symbols, all within incuse square. Lower denominations are obols and hemiobols: *obv.* vase; *rev.* triskeles. (2) C5l–C4: staters. *Obv.* wrestlers; *rev.* slinger, in field ethnic legend *EΣTFEΔIIYE* or various abbreviations, small triskeles and sometimes other symbols such as an eagle, in later issues a standing Eros; also various countermarks, all within incuse square. (3) C.420–360. Drachms: *obv.* galloping horseman hurling spear (Mopsos(?); cf. *LIMC* 6: 653.4); *rev.* standing or running boar in circular incuse, legends as above. Obols: *obv.* Gorgoneion; *rev.* head of Athena. Hemiobol: *obv.* Gorgoneion; *rev.* lion's head. (4) Bronze coinage from C4. Types: *obv.* head of Athena, or bridled horse, or shield; *rev.* sling, or head of Athena, or triskeles. The legend *ΑΣΠΕΝΔΙΩΝ* is found only after c.300 (Brixhe (1976) 191–200; *SNG Cop. Pamphylia* 153–235, 247–61, 436, erroneously attributed to Sillyon, *SNG Cop. Suppl.* 516–17; *SNG von Aulock* 4477–503).

Though it was allegedly an Argive foundation (Strabo 14.4.2), dialect inscriptions (*SGDI* 1259–64; *SEG* 38 1364–94, 41 1304–21) indicate a substantial indigenous Pamphylian population.

1002. Idyros Map 65. Long. 36.35, lat. 30.35. Size of territory: ? Type: A:γ. The toponym is *Ἰδυρος* (Hecat. fr. 260; Ps.-Skylax 100) or *Ἰδυρίς* (Steph. Byz. 327.2) or *Ἰτύρα* (*IG* I³ 71.11.147 (425/4): the identification with Idyros is suggested by *ATL* i. 493). There is no cogent reason to accept Meineke's conjectures *Ἰδυρεύς* and *Ἰδυρίς* for MSS *Γαυρεύς* and *Γαυρίς* at Arist. *De ventis* 973^a6–7. The only source to record a city-ethnic is Steph. Byz., who suggests *Ἰδυρίτης* (327.2).

Idyros is called a *polis* in the urban sense by Ps.-Skylax 100 (cf. Steph. Byz. 327.2, who may quote Hekataios for the site-classification and not just for the toponym (Hecat. fr. 260)). If the identification of Ityra with Idyros is accepted, the presumption is that it was a member of the Delian League and a *polis* in the political sense too: at least, it was assessed for tribute in 425/4 (*IG* I³ 71.11.147 (4,000 dr.)). It belonged to the Ionian district, which by then included the members of the former Karian district.

Idyros is placed in Pamphylia by Steph. Byz. 327.1, possibly citing Hekataios (fr. 260); Ps.-Skylax 100 places it in Lykia. Idyros' location is uncertain (Ruge (1916); cf. *TAVO* BV 15,15.2 and *Barr.* 65). It is normally identified with the ruins

found at modern Kemer on the Lykian Pamphylian border (Özoral (1980)). The 1980 investigation identified no Classical or Hellenistic remains. Hecat. fr. 260, as cited by Steph. Byz. 327.1, associates Idyros with a homonymous river, also mentioned by Theophr. fr. 5.53 (cf. *ATL* i. 493–94).

1003. Perge (Pergaios) Map 65. Lat. 37.00, long. 30.50. Size of territory: probably 5. Type: A:β. The toponym is Πέργη, ῆ (Ps.-Skylax 100, MSS *πελπίπολις*, conj. Salmassius; Arr. *Anab.* 1.26.1 (r333); Strabo 14.4.2; *IG* I³ 71.II.113 (425/4)). The city-ethnic is Περγαίος (Arr. *Anab.* 1.25.9 (r333)); possibly Graeco-Pamphylian Πρέλιος on inscriptions (Merkelbach and Şahin (1988) no. 1 (C5l/C4e)). Perge is called a *polis* in the urban sense by Ps.-Skylax 100. The collective use of the city-ethnic is attested externally in Arr. *Anab.* 1.25.9 (r333) (Pergaian guides used by Alexander).

Perge may have been one of the cities allegedly founded by a mixed contingent of people, led by Amphilochos, Mopsos and Kalchas, in the aftermath of the fall of Troy, but the city is not specifically mentioned in the sources (cf. Hdt. 7.91; Strabo 14.4.3). Statues of mythological founders, including Mopsos and Kalchas, stood at the main gates of Roman Perge, as revealed by inscriptions on bases (Merkelbach and Şahin (1988) nos. 24, 27, imp.; Şahin (1999) 140–45; for Mopsos, see Hanfmann (1958)). Olshausen (1972) suggests that Perge was in fact founded in the Mycenaean period from the Argolid and Sparta. A Graeco-Pamphylian dialect was spoken in Perge (*SGDI* 1265; Ramsay (1880) 246; Blumenthal (1963) 46; Brixhe (1976)). Perge was probably an indigenous community gradually Hellenised from C7 onwards (Martin (2000) 562).

Perge was probably a member of the Delian League; at least, it was assessed for tribute in 425/4 (*IG* I³ 71.II.113). In 333 Alexander sent part of his force inland to Perge, whereas he himself took the route along the coast (Arr. *Anab.* 1.26.1).

Perge is placed in Lykia by Ps.-Skylax (see *supra*, introduction), and in Pamphylia by Strabo. The territory of Perge may have extended westwards to Telmessos and eastwards to the river Kastros, according to the distribution of inscriptions honouring Artemis Pergaia and coin finds (Jameson (1974) 376).

The city of Perge lay on a 50 m-high, flat plateau bordering upon the plain of Pamphylia, at modern Murtana; the city could be reached by the river Kestros (Strabo 14.4.2). The size of the Roman settlement area was c.61 ha (Jameson (1974) 375), but the original Greek settlement probably comprised only the northern part of the site, the so-called Acropolis Hill. The earliest extant urban remains are the C3

city walls and the Hellenistic Doric temple outside the southern gate (Bean (1979) 25–38; MacKay (1990) 2078).

A temple and a cult of Artemis Pergaia (*Wanassa Preiia*) is known from Ps.-Skylax 100 and Strabo 14.4.2 (cf. Brandt (1992)). According to Strabo, the location of the sanctuary was extra-urban (14.4.2) (such a location is probably also to be inferred from Ps.-Skylax 100; cf. Jameson (1974) 381 for further refs.). Remains of the Classical sanctuary have not been identified, but remains of a C3–C2 Doric temple and fragments from a large Ionic temple outside the south gate of the city have revealed a major sanctuary (MacKay (1990) 2066–67), possibly that of Artemis Pergaia. The cult with its annual festival (Strabo 14.4.2) is at least as old as the C5e–C4e dedication of *Μαναΐαι Πρεΐαι* (Merkelbach and Şahin (1988) no. 1; Ps.-Skylax 100; Strabo 14.4.2; Brandt (1992); Lebrun (1992); MacKay (1990) 2048; cf. also the C4 inscription from Naukratis (*SGDI* 5772); full survey: MacKay (1990) 2048–58). The goddess was honoured by Pamphylians in general.

1004. Side (Sidetes) Map 65. Lat. 36.45, long. 31.25. Size of territory: 4. Type: A:β. The toponym is Σίδη, ῆ (Hecat. fr. 262 = Steph. Byz. 565.10; Ps.-Skylax 101; Arr. *Anab.* 1.26.4 (r333); Strabo 14.4.2), from Graeco-Pamphylian *Sibdê*. The city-ethnic is Σιδήτης (Arr. *Anab.* 1.26.4) or Σιδάτας (Nollé (1993) 225, TEp 22). It is called a *polis* in the urban sense by Ps.-Skylax 101 (who adds *καὶ λιμῆν*). The collective use of the city-ethnic may be attested internally in abbreviated form on a unique coin of C5m (*infra*). It is attested externally in an Attic list of mercenaries (*IG* II² 1956.132 (c.300)) and in literary sources (Arr. *Anab.* 1.26.4–5). The individual use of the city-ethnic is attested externally in C4 sepulchral monuments from Rhodos (*I.Side* 225, TEp 22) and Attica (*IG* II² 12600a), and internally on a marble base inscribed with the artist's name (*I.Side* 1 (C3e)).

Ps.-Skylax 101 and Steph. Byz. 565.10 place Side in Pamphylia. However, according to a story concerning the musician Stratonikos (Ath. 350A), Side was *not* situated in Pamphylia, but, presumably, in Kilikia. Side was probably the most important harbour in Pamphylia (if that is where it was), at least in Hellenistic times, with a large territory bordering on the territories of Aspendos (no. 1001), Etenna (Nollé (1984)), and Karallia (Nollé (1993) 12–15). Bean ((1979) 47 n. 1) suggests a border dispute with Aspendos, with whom relations were bad (Polyb. 5.73.4 (r218)).

Side was supposedly colonised from Kyme (no. 817) (Ps.-Skylax 101; Arr. *Anab.* 1.26.4; Strabo 14.4.2), possibly in C7l (Martin (2001) 517). The foundation myth was that Side was

named after Side, the daughter of Tauros and wife of Kimolos; it is reported by Steph. Byz. 565.10–12, perhaps quoting Hekataios (cf. Hecat. fr. 262). The tradition—found in Strabo, Ps.-Skylax and Arrian—that Side was a foundation of Aiolian Kyme probably has its origin in the age of Alexander the Great, but there may be a kernel of truth, reflecting early Kymaian colonisation in Pamphylia. An influx of C8–C7 Greek, possibly Aiolian, settlers at Side is conceivable, given the background of the traditions and the archaeological evidence of Greek influence in other Pamphylian and Kilikian cities; cf. Aspendos (no. 1001) and Soloi (no. 1011). However, the degree of Hellenisation cannot be determined by archaeology, and no Archaic Greek finds are mentioned by Mansel ((1965) 881) or by Nollé ((1993) 37; cf. also 45–47 for the linguistic evidence).

During the reign of Kroisos, Side lay within the Lydian sphere of influence (Hdt. 1.28), but after the fall of Lydia the region came under the rule of Persian satraps, and the city is absent from the Athenian tribute lists (historical survey: Nollé (1993) 47ff). According to tradition, the Sidetans gave up speaking their native Hellenic tongue ('*Ἑλλάς γλώσσα*, Arr. *Anab.* 1.26.4) and adopted a barbarian language (*ἔβαρβαρίζον*, Arr. *Anab.* 1.26.4) which was spoken until the late Hellenistic period (C₃ or C₂). It has a non-Greek name (Mansel in Mansel and Neumann (1975) 171). On the Sidetan language and Greek–Sidetan bilinguals, see Neumann (1968); Brixhe (1969a); Nollé (1988).

The Greek history of Side commenced—or recommenced—in the early Hellenistic period with the occupation of the city by Alexander the Great, and with the growing Hellenisation reflected, for instance, in the Greek-sounding names of officials recorded on C₄ coins (*infra*).

The city had a sanctuary of Athena (Strabo 14.4.2), and the head of this goddess is the most common coin type (*infra*), which testifies to the importance of her cult at Side (cf. Nollé (1993) 107–8). A late source (*ibid.* 262.4) gives Apollo as *ktistes*, and Apollo was depicted already on C₅ coins (*infra*). The cults of Athena and Apollo undoubtedly took over from indigenous divinities (Mansel (1965) 880; Nollé (1993) 107), though Bing (1969) 111 suggests a connection with Athena Lindia.

The city is situated on a low coastal promontory c.9 km west of the estuary of the river Melas. There was direct access to a sandy bay which served as the only—not very convenient—harbour of the city (Mansel (1965) 899). The city encompassed the whole promontory, c.45 ha, in Hellenistic and Roman times, but probably comprised only the outermost peninsula in the Archaic and Classical periods.

However, pre-Hellenistic urban remains are sparse; the impressive fortifications go back no earlier than C₂m (Mansel (1965) 881, 897–99).

Side struck silver coins on the Persic standard from c.450/430 to 330; for the mint within Persian suzerainty, see Nollé (1993) 49–50. The initial date of minting has been disputed, but is now placed after 450 (Kraay (1976) 275; Nollé (1993) 37, 49; for the coinage of Side: Atlan (1967); Kraay (1969); Brixhe (1969b)). (1) A unique stater of C₅m has *obv.* pomegranate; legend: ΣΙΔΗ (retr.); *rev.* raven. Uncertain legend in Sidetan–Pamphylian alphabet (Destrooper-Georgiades (1995)). (2) Staters, C₅: *obv.* pomegranate resting on dolphin; *rev.* head of Athena in Corinthian helmet, in incuse square. Lower denominations are tetrobols and obols, types as above. (3) Rare early issues have two dolphins and a sprig of olive or a head of Apollo as *rev.* types. (4) Staters with *obv.* pomegranate and *rev.* head of Athena continue in later issues. Lower denominations are tetrobols and obols, types as above: *obv.* lion's head, or Gorgoneion; *rev.* head of Athena in Corinthian helmet, in incuse square. (5) C.C4e–300 new types were introduced: staters: *obv.* standing Athena resting on shield or spear, holding owl or Nike, in field a pomegranate; *rev.* Apollo wearing only *chlamys* standing before an altar holding patera and laurel branch, in field legends naming officials in the Sidetan alphabet. For the stereotypically statue-based renderings of the divinities, see Nollé (1993) 51, 112. (*SNG Cop. Pamphylia* 369–78; *Suppl.* 520).

B. Kilikia

1005. Aphrodisias Map 66. Lat. 36.10, long. 33.40. Size of territory: ? Type: C:γ. The toponym is *Ἀφροδίσσιος* (Ps.-Skylax 102) or *Ἀφροδισιάς, -άδος, ἡ* (Alex. Polyh. (*FGrHist* 273) fr. 29 (= Steph. Byz. 150.11), citing Zopyros; Diod. 19.64.5 (r315)). Ps.-Skylax describes it as a *λιμὴν*; Diodorus, Ps.-Skylax and Alexander Polyhistor place it in Kilikia. Alexander Polyhistor relates a foundation myth.

The territory of Aphrodisias must have comprised the coastal lowland of the river Melas, later, with the foundation of Seleukeia, probably annexed by this city. Aphrodisias is situated on the eastern side of the isthmus joining the promontory of Zephyrion with its hinterland, c.31 km south-west of Seleukeia. The city had harbours on the western and eastern sides of the peninsula (Ps.-Skylax 102; cf. Hellenkemper and Hild (1986) 28 n. 12 for the suggestion that the eastern harbour is the *limen heteros* of Holmoi (no. 1006)). The early remains are on two hills to the south-west of the isthmus (Bean and Mitford (1970) 193–94 fig. 8).

These, separated by a gully, were fortified by C₅–C₄ walls raised in cyclopean and in polygonal masonry, strengthened with square towers and a curtain-wall. The settlement area on the small plateau above the eastern harbour comprised c.15 ha, but no extant remains are Greek (*TIB* 5: 194).

A cult of Aphrodite is suggested partly by the name of the city (cf. the foundation myth (Steph. Byz. 150.13)) and partly by the evidence of the coin types (*infra*).

Aphrodisias struck silver coins on the Aiginetan standard from c.520 (Imhoof-Blumer (1901–2) 433–36). *Obv.* female(?) figure in *Knielauf* holding uncertain object; *rev.* baetyl in incuse square (Head, *HN*² 717). From c.485: *obv.* winged female figure in *Knielauf* holding *kerykeion* or staff or wreath; *rev.* baetyl in incuse square; legend: letters of uncertain meaning (Head, *HN*² 717). From c.379–374, the time of Pharnabazos(?), coins were perhaps struck at this mint on the Persic standard. Staters: *obv.* Aphrodite seated between sphinxes; *rev.* Athena Parthenos (cf. Kraay (1976) 280, 283; Head, *HN*² 718). Obols: *obv.* Gorgoneion; *rev.* seated sphinx (*SNG Cop. Cilicia* 68). Other *obv.* types, all obols, carry beardless head, or head of Hermes, or facing female head; and *rev.* head of Aphrodite, or Aphrodite seated between sphinxes, or sphinx.

1006. Holmoi (Holmites) Map 66. Lat. 36.20, long. 33.55. Size of territory: ? Type: A:a. The toponym is Ὀλμοί (Ps.-Skylax 102; Strabo 14.5.4). The city-ethnic Ὀλμίτης is attested on C₄ coins (*infra*). Ps.-Skylax 102 describes it as a *polis Hellenis*, *polis* being used in the urban sense.

The population of Holmoi was transferred to Seleukeia on the Kalykadnos when that city was founded in 312 (Strabo. 14.5.4). However, Holmoi may have continued to serve as the harbour of Seleukeia, and the toponym survived into the Byzantine period (*TIB* 5: 272). Coin types may indicate cults of Athena and of Apollo (*infra*).

Holmoi is placed in Kilikia (Ps.-Skylax 102; Strabo 14.5.4) and is identified with the modern site of Taşucu, on the coast c.8 km south-west of Seleukeia. The city probably occupied the upper part of the coastal plateau (Blumenthal (1963) 114 fig. 38, 120). There are no urban remains from the Greek history of the city (*TIB* 5: 272).

Holmoi struck silver coins on the Persian standard from C₄ (Imhoof-Blumer (1901–2) 453–54; *BMC Lycaonia* 109–10). Staters: *obv.* standing Athena holding Nike; *rev.* Apollo Sarpedonios; legend: *OAMITIKON*. Smaller denominations (including some in bronze) have *obv.* head of Athena; *rev.* head of Apollo, or of a goddess; legend: *OAMITIKON* or *OAMITON* or abbreviations (Head, *HN*² 721).

1007. Issos (Isseus) Map 67. Lat. 36.50, long. 36.10. Size of territory: ? Type: A:γ. The toponym is Ἴσσοί, ἡ (Diod. 17.32.4; Arr. *Anab.* 2.7.1 (r333)) or Ἴσσοί, ὁ (Strabo 14.5.8; Ael. *HA* 6.48) or Ἴσσοί (Xen. *An.* 1.2.24, 1.4.1). It was renamed *Νικόπολις* by Alexander the Great (Steph. Byz. 340.2; however, Strabo 14.5.19 distinguishes the two). The city-ethnic is Ἴσσεύς on some coins of c.400 (*infra*); Steph. Byz. 340.3 suggests Ἴσσαιός. Issos is called a *polis*, in the urban sense, by Xen. *An.* 1.4.1 and Diod. 14.21.1 (r401). Xenophon describes it as *μεγάλην καὶ εὐδαίμονα* and places it in Kilikia (*An.* 1.4.1), as does Diod. 14.21.1.

Issos was situated on a c.6,000 m²-wide coastal plateau near the estuary of the river Pinaros, on the western border of Kilikia Pedia (cf. Diod. 14.21.1; Strabo 14.5.1; for the identification of the site with Yeşil (Kinet) Hüyük, see Hellenkemper (1984)). *TIB* 5: 278 refers to Hellenistic pottery, but no Greek urban remains have been recorded.

A silver coinage struck by local officials on the Persian standard from c.400 has been attributed to Issos (the most recent survey is Brindley (1993)). (1) Staters: *obv.* bearded Baal holding sceptre releases bird; *rev.* Ahuramazda with human upper body and winged lower body. On some the *obv.* legend is *ΙΣΣΕΩΝ* (information from Peter Franke) or *ΙΣΣΙΚΟΝ* and Teribazu in Aramaic (Head *HN*² 722; *SNG von Aulock* 5601; Brindley (1993) 4–5). (2) Coins struck in the period of the Satrap's Revolt c.380–370 are very similar to contemporary issues of Side (no. 1004), Nagidos (no. 1010) and Holmoi (no. 1006). Staters: *obv.* naked Apollo standing l. holding patera; legend: *ΑΙΑΤΠΙΟΥ* and *ΙΣΣΙ*, or variants; *rev.* naked Herakles standing r. holding club, bow and arrow, and lion skin (*SNG Cop. Cilicia* 153–55; Brindley (1993) 7–8). (3) Another issue from the same period has *obv.* head of Athena, in style of Athena Parthenos; legend: *ΙΣΙ* (Brindley (1993) 8).

The coinage is the only evidence for Hellenisation in the Classical period; there is no tradition of Greek colonisation, and Issos may well have been a barbarian rather than a Hellenic *polis*.

1008. Kelenderis Map 66. Lat. 36.10, long. 33.20. Size of territory: ? Type: A:a. The toponym is Κελένδρις, -έως (*IG* I³ 71.146; Strabo 14.5.3; *Stadiasmus* 192). The MSS of Ps.-Skylax 102 have *Κελένδρις*, emended in *GGM*. Kelenderis is called a *polis* in the urban sense by Ps.-Skylax 102. That it was a *polis* in the political sense too is indicated by its membership of the Delian League. At least, it was assessed for tribute in 425/4 (*IG* I³ 71.146), 2 tal.

Kelenderis was a Greek colony founded by Samos (no. 864) (Pompon. 1.77 (with Nagidos); Hdn. III.2 925.7). The

Samian foundation is tentatively dated before 700 (Shipley (1987) 41–42). A cult of Hera was taken over from the *metropolis* Samos (Hdn. *Περὶ μων.* λέξ. 925,7, Lentz). C8l Greek sherds from Tarsos attest Greek presence in Kilikia from this period (Braun (1982) 15).

Ps.-Skylax 102 places Kelenderis in Kilikia. It lay on a coastal promontory, protecting the natural harbour below; a larger harbour was situated 1.6 km to the west. Strabo 14.5.3 describes it as having a *λιμὴν*. Urban remains from the Greek history of the site are sparse; some stretches of the circuit wall are probably Greek, though no chronology is offered (*TIB* 5: 298).

Kelenderis struck silver coins on the Persic standard from C5m. (1) Staters: *obv.* nude horseman with whip riding to l.; *rev.* goat kneeling l. head reverted, at times symbols in field, all within incuse circle; legends on either *obv.* or *rev.* *KEA*, *KEAEN* (*SNG Cop. Cilicia* 76–78; Kraay (1962) 2–6); one issue has *KEAENΔEΠITIKON* (Head, *HN*² 719). (2) Lower denominations: thirds with types as above (*SNG von Aulock* 5333–34), obols, hemiobols: *obv.* forepart of Pegasus; *rev.* forepart of goat; legend: *KEA* (*SNG Cop. Cilicia* 79–80); or Gorgoneion, or head of Athena or other types (*SNG von Aulock* 5614–16). (3) From c.400–333, staters: types and legends as above, but *obv.* horseman riding r. (*SNG Cop. Cilicia* 81–84, 90–91; *SNG von Aulock* 5630–38); obols, types as above and *obv.* horse prancing, or head of Herakles (*SNG Cop. Cilicia* 85–89, 92–94).

1009. Mallos (Marlotas, Mallotes) Map 66. Lat. 36.45, lat. 35.30. Size of territory: ? Type: A:β. The toponym is *Μαλλός*, ἡ (Arist. *De ventis* 973^a1; Ps.-Skylax 102; Arr. *Anab.* 2.5.9; Eust. *Comm. Dionys. Per.* 875) or *Μάλος* (Diod. 19.56.5). The city-ethnic is *Μαρλότας* on C5l/C4e coins (*infra*) or *Μαλλώτης* (Arr. *Anab.* 2.5.9). Mallos is called a *polis* in the urban sense by Ps.-Skylax 102. The collective use of the city-ethnic is found internally on coinage (*infra*), and externally in Arr. *Anab.* 2.5.9 (r333).

The Mallotai were supposedly ἄποικοι of Argos (no. 347) (Arr. *Anab.* 2.5.9; cf. Bing (1969) 110). A foundation myth involved the Argive hero Amphilochos and Mopsos (Strabo 14.5.16; cf. *supra* 1216). There was a cult of Amphilochos in Mallos (Arr. *Anab.* 2.5.9 (r333)), and his famous oracle in Mallos is attested in late sources (Bosworth (1980) 197). The Aramaic coin legends, however, should be noted, and it has been suggested that the name indicates a Phoenician origin (Triedler (1969)). Alexander the Great conquered Mallos in 333 and put an end to an ongoing *stasis* between the citizens (Arr. *Anab.* 2.5.9).

Mallos is placed in Kilikia by Ps.-Skylax 102 and Diod. 19.56.5. It has been identified with the urban remains on a hill above the river Ceyhan (ancient Pyramos), near the present-day village of Kiziltahta. According to local inhabitants, an inscription mentioning the city was found in the vicinity (*AnatSt* (1974) 28). Mallos' harbour was Magarsos (see *supra* 1213), and the two cities became Antiocheia on the Pyramos during the reign of Antiochos IV. The extant urban remains are Roman (*TIB* 5: 337).

Mallos struck coins from C5s on the Persian standard. (1) Staters: *obv.* semi-nude male winged figure in *Knielauf* to r., holding disk with star on it, at times Aramaic legend; *rev.* swan, in field various symbols; legend: *MAPAOTAN*, *MAPAIO*, *MAIPO* or other abbreviations. Other types are *obv.* bearded winged figure in *Knielauf* holding disk, various symbols in field; *rev.* as above. An issue attested by a single specimen has *obv.* Hermes riding l. on a ram; *rev.* male winged figure in *Knielauf* to l. carrying disk; legend: *MAP*. Minor denominations have *obv.* bearded head of Herakles, or head of Athena, or head of Aphrodite and *rev.* types as above; legend: *MAA*. (2) C.385–333 Mallos issued a rich coinage with a great variety of types. Staters: *obv.* Dionysos; *rev.* male figure ploughing. Or *obv.* head of Kronos; *rev.* Demeter. Or *obv.* Baal standing resting on sceptre; *rev.* Ahuramazda (issue of Tiribazos, 386–380). Or *obv.* Athena seated; *rev.* Hermes and Aphrodite standing. Or *obv.* head of Herakles; *rev.* bearded satrap; head of Aphrodite. Or *obv.* head of satrap; *rev.* legend: *MAA* or *MAAAΩTHΣ* (Imhoof-Blumer (1901–2) 467–68; Kraay (1962) 7–8; *SNG Cop. Cilicia* 164–65, *Suppl.* 580–81; *SNG von Aulock*, 5705–6, 5708–10).

1010. Nagidos (Nagideus) Map 66. Lat. 36.05, long. 33.00. Size of territory: ? Type: A:a. The toponym is *Νάγιδος*, ἡ (Hecat. fr. 266; Ps.-Skylax 102; Strabo 14.6.3, conj. Corais; *SEG* 39 1426.46 (after 238)). The city-ethnic is *Ναγιδεύς* (*SEG* 39 1426.4 (after 238); C4e coins (*infra*)). It is called a *polis* in the urban sense by Hecat. fr. 266 (Hansen (1997) 24) and Ps.-Skylax 102. It is placed between Pamphylia and Kilikia by Steph. Byz. 466.24, possibly citing Hecat. fr. 266, and in Kilikia by Ps.-Skylax 102. The *metropolis* was supposedly Samos (no. 864) (Pompon. 1.77; cf. Shipley (1987) 41–42), and Hecat. fr. 266 identifies an eponymous founder, Nagis.

On the basis of Strabo, who mentions Nagidos as the first city after Anemourion (14.5.3, cf. 14.6.3), the city has been identified with the ruins of Bozyazi, c.18 km east of Anemourion. Nagidos was situated on a coastal plateau,

fortified with a circuit wall, of which substantial segments are extant. The C₅–C₄ fortification was built in polygonal and isodomic masonry, strengthened with square bastions. The few other urban remains are Roman, but surface finds cover C₄ through Roman periods. The cemetery of the Greek city on the slopes of the settlement plateau has been investigated (*TIB* 5: 363–64; Bean and Mitford (1970) 191–92).

Nagidos struck silver coins from C₅l on the Persian standard. Staters: *obv.* Aphrodite seated l. on throne holding phiale, crowned by Eros; *rev.* bearded Dionysos, in *himation*, standing l. holding *thyrsos* and grapes; legend: *ΝΑΓΙΔΙΚΟΝ* or *ΝΑΓΙΔ*, all in incuse circle. Variant types have *rev.* Dionysos in *chlamys* holding kantharos; legend: *ΝΑΓΙΔΕΩΝ*. Or *obv.* head of bearded Dionysos with ivy wreath; *rev.* head of Athena, legends as above. Smaller denominations are tetrobols: types as above, and obols: *obv.* head of Aphrodite; *rev.* head of Dionysos, or standing Dionysos, or head of Pan, or kantharos. The mint produced coins until c.333, with variations of the above types. Nagidos also issued a bronze coinage in the same period (*SNG Cop. Cilicia* 174–84; *Suppl.* 588; *SNG von Aulock* 5748–52).

1011. Soloi (Soleus) Map 66. Lat. 36.45, long. 34.30. Size of territory: ? Type: A:a. The toponym is *Σόλοιοι, οἱ* (Hecat. fr. 268 = Steph. Byz. 581.12; Xen. *An.* 1.2.24; Ps.-Skylax 102; Strabo 14.5.8, 17 (rC4l); Eust. *Comm. Dionys. Per.* 875) or *Σώλεια, ἡ* (Dion. Epic. fr. 5, Müller, *GGM* II, xxvii (undated)). The city-ethnic is *Σολεῦς* (C₅ coins (*infra*); *Lind. Temp. Chron.* (*FGrHist* 532) C.33; Polyb. 21.24.11 (190/89)) or, exceptionally, *Σόλιος* (some C₅ coins (*infra*); cf. Stroud (1984) 201 n. 24. Soloi is called a *polis Hellenis* in the urban sense by Ps.-Skylax 102. The earliest attestation of the political sense is Polyb. 21.24.10. The collective use of the city-ethnic is found internally on Classical coins (*infra*), and externally in *Lind. Temp. Chron.* (*FGrHist* 532) C.33 (rC6 or rC5)) and at Polyb. 21.24.11.

Hes. fr. 279, MW, associates Soloi with the death of Amphilochos; Euphorion fr. 1 (Scheidweiler) and Diog. Laert. 1.51 report that the name originally derived from Solon and believe it to be an Athenian colony. Soloi was allegedly founded by Lindos (no. 997) on Rhodos and by Achaians (Strabo 14.5.8, 17). Bing (1971) suggests a foundation date of 700–600; Boardman ((1980) 50) suggests C₇e (but notes that there is no archaeological evidence). For a pre-C₇ colonisation by Argos (no. 347), see Pompon. 1.13;

Polyb. 21.24.11; Livy 37.56.7 (with Blumenthal (1963) 106). Ps.-Skylax 102 describes Soloi as a *polis Hellenis*, and inscriptions in Doric Greek are known from the site (Erzen (1940) 71 n. 118), though the term *σολοικίζειν*, “speaking incorrectly”, is supposed to derive from Kilikian Soloi (Strabo 14.2.28; cf. Diog. Laert. 1.51). It has been suggested that originally it was a Phoenician colony settled by Rhodians in C₈ (Olshausen (1975)).

The Argive foundation of Soloi and kinship between Argos (no. 347) and Soloi are reflected in the Argive decree (*SEG* 34 282) which grants citizenship to the Aspendians and access to the Argive *aliaia* (cf. Aspendos (no. 1001)) and refers to similar rights as granted previously, i.e. before c.330, to Soloi (Stroud (1984) 201–2, 208).

In 333 Alexander the Great fined the city for its support for Persia (Arr. *Anab.* 2.5.5) and gave it a democratic constitution (*Anab.* 2.5.8). A dedication was made to Athana Lindia, prior to C₃, possibly in C₅ or even in C₆ according to Blinkenberg ((*FGrHist* 532) C.33).

Soloi was situated on a coastal plateau on the estuary of the river Liparis. The urban remains of the c.35 ha settlement site are no earlier than the late Hellenistic period (*TIB* 5: 382). An acropolis is mentioned by Curt. 3.7.2.

Soloi struck silver coins from c.480 to 333. (1) Sigloi of the royal Persian type, c.480: *obv.* Amazon examining bowl l.; *rev.* rough rectangular incuse. (2) In c.460 followed a first issue of staters on the Persic standard: *obv.* type as above; *rev.* bunch of grapes, no legend. (3) From c.440 staters: *obv.* Amazon kneeling l. wearing pointed cap, holding bow, in field bow case and quiver; *rev.* bunch of grapes; legend: *ΣΟ* or *ΣΟΛΕΩΝ*, at times letters, possibly magistrates’ initials, all within incuse square. Lower denominations are tetrobols (types as above), obols and hemiobols: *obv.* head of Amazon; *rev.* as above. (4) Later issues have *obv.* head of Athena in Athenian helmet; *rev.* bunch of grapes; legend: *ΣΟΛΙ*, or *ΣΟΛΙΟ*, or *ΣΟΛΙΟΝ*, or the ktetic *ΣΟΛΙΚΟΝ*. Lesser denominations are obols and hemiobols (types as above). (5) From 386 to 333, staters: *obv.* head of Herakles; *rev.* bearded head of satrap in Persian tiara; legend: *ΣΟΛΕΩΝ* or *ΣΟΛΙΚΟΝ*. Also staters with types as above, but on *rev.* owl in field. (6) In C₄ also an issue of bronze coins: *obv.* head of Athena; *rev.* bunch of grapes; legend: *ΣΟΛΕΩΝ* and magistrates’ names (Head, *HN*² 728; Brindley (1994) 264–65, groups 1–7; *SNG Cop. Cilicia* 223–38; *SNG von Aulock* 5857–65).

CYPRUS

FRANZ GEORG MAIER

I. The Island

The name of the island is *Κύπρος*, ἡ (Hom. *Od.* 4.83; Hdt. 1.199.5); the ethnic is *Κύπριος* (Pind. *Pyth.* 2.16; Hdt. 1.105.3). During the Archaic and Classical periods (c.750–c.325) Cyprus was divided into local kingdoms—relatively small political units whose rulers were vassals first of Assyria (C8l–c.663 (c.612?)), then of Egypt (c.570–526/5), and finally of Achaemenid Persia (526/5–332).¹ Our information about the history of Cyprus in these times is unfortunately scanty and often confused. Extant contemporary written sources are confined to Herodotos, Isokrates, Ps.-Skylax, some fragments of authors such as Solon, Aristotle and Klearchos of Soloi, and to syllabic inscriptions. The archaeological evidence is uneven, to say the least: “While the major settlements remain largely unexcavated, it is the cemeteries which provide most of our available information.”²

Hellenistic and Roman inscriptions and literary texts also refer to cities in the island as *poleis*. From a methodological point of view, however, this later evidence cannot be used retrospectively in order to determine whether a Cypriot city was a *polis* (or was considered as such) in Archaic or Classical times. After the abolition of the kingdoms between 313 and 306,³ the cities began to evolve institutions modelled on the traditional Greek *polis*.⁴ A digraphic inscription from Amathous, in which *he polis he Amathousion* honours a citizen, attests the beginnings of this process.⁵ Later writers such as Diodorus may be fairly reliable witnesses for political and military events in Cyprus, or for the cults of the cities; but their designation of a city as a *polis* reflects more likely than not its status in the Hellenistic or Roman period.

The earliest evidence for the kingdoms of Cyprus are inscriptions of Sargon II (709) which mention seven kings of *Yadnana* (Kypros) paying tribute.⁶ A prism of Essarhadon (673/2) and an identical list of Ashurbanipal (664) name ten kingdoms of Cyprus.⁷ Of these, eight can be identified: Idalion, Chytroi, Salamis, Paphos, Soloi, Kourion, Tamassos, Ledroi. *Qartihadast* very likely equals Kition, while *Núria* defies identification, although it is sometimes equated with Amathous.

From C6l to C4l, when Cyprus formed part of the Fifth Satrapy (Hdt. 3.91.1), twelve local kingdoms are securely attested in contemporary literary and epigraphical sources: Salamis, Lapethos, Soloi, Marion, Tamassos, Idalion, Amathous, Kourion, Paphos, Karpasia, Keryneia and Kition.⁸ Diodorus confirms the continuing political division of Cyprus when he reports that by C4m the island had nine *πόλεις ἀξιόλογοι*, ruled by a king who was in turn a vassal of the Great King (16.42.4); he probably no longer counted Idalion and Tamassos.⁹ The numbers of kingdoms given by the various ancient authors never tally exactly, but as it is obvious that critical caution has to be exercised with regard to the reliability of such lists, there seems no point in arguing too finely about the differences. There can be no doubt, however, that the number of kingdoms did vary to a certain extent.¹⁰

The Cypriot kingdoms are often called “city kingdoms”, but this term seems somehow incongruous. The kings of Cyprus ruled over fairly large territories which comprised, besides the city which served both as residence and

⁶ Saporetti (1976); Elayi and Cavigneaux (1979).

⁷ Campbell Thompson (1931); Borger (1956) 60; Pritchard (1969) 290–91, 294; see Hill (1949) 105–8; Karageorghis (1982) 57–59; Reyes (1994) 58–60.

⁸ Karpasia (no. 1014) and Keryneia (no. 1015) appear—together with Salamis (no. 1020), Lapethos (no. 1017), Soloi (no. 1021), Marion (no. 1018), and Amathous (no. 1012)—as *poleis* in Ps.-Skylax 103. As this *Periplus* seems to have been compiled at the end of C4 (“c. 325 B.C.”, *OCD*³ 802; “late 4th cent.”, *OCD*³ 1141), it may with some confidence be considered as a more or less contemporary source.

⁹ Collombier (1991) 29, 38 lists for C4 Salamis, Kition, Amathous, Kourion, Paphos, Marion, Soloi, Lapethos and Keryneia.

¹⁰ See also Collombier (1991) 28–30.

³ See Collombier (1993) 127–41.

⁴ Mehl (1996a) 127–28, 142–44; see also Collombier (1993) 121.

⁵ *ICS* 196b; after the end of the last king, Androkles: Mitford (1953) 87; Masson (1983) 207; Mehl (1995) 102 n. 20; Collombier (1993) 136.

administrative centre, small towns and villages. Diodorus hints at this state of affairs when he refers to *μικρὰ πόλίσματα* dependent on the *πόλεις ἀξιόλογοι* (16.42.4 (rC4m)). Most of these smaller settlements are known from archaeological evidence only. The settlement patterns, and especially the relations between centre and periphery, are now being investigated by a number of survey projects in various parts of the island. The size of the kingdoms cannot be determined with any accuracy at present. The attempts made so far are, in view of the evidence available, at best inspired guesswork.¹¹ There can be little doubt, however, that all the Cypriot *poleis* had territories of over 500 km² and thus belong in the largest of the categories used in this Inventory.

How far do these Cypriot kingdoms and their cities fit into an inventory of Archaic and Classical Greek *poleis*? Their political institutions are difficult to reconstruct. The contemporary sources unequivocally record the rule of kings in the cities of Cyprus.¹² The conditions of their vassalage and the resulting restrictions of sovereignty are not known in great detail. The basic structure common to all kingdoms—whether they were ruled by Greek or Phoenician dynasties—seems to have been a hereditary autocratic monarchy.¹³ This political system survived until the kingdoms were abolished by Ptolemy I at the end of C4.

The contemporary sources do not often designate the cities that formed the capitals of the Greek kingdoms in Cyprus as *poleis*. The term is applied in its urban meaning e.g. when Herodotos, describing the Persian siege operations and reconquest in 498/7, refers to *τὰς πόλεις τῶν Κυπρίων*, viz. *τῶν δὲ ἐν Κύπρῳ πολίων* (5.115). When Solon wishes King Philokypros of Soloi to rule long *τῆνδε πόλιν*, *polis* might be taken to mean the state; the *οἰκισμὸς* context of these distics, on the other hand, could suggest an urban meaning.¹⁴

In hundreds of contemporary syllabic inscriptions the term *polis* occurs in one text only: in the C5 bronze tablet from Idalion (no. 1013) (*ICS* 217) *πτόλις* seems to be used in a restricted political sense. It is indeed extremely doubtful whether *poleis* in the traditional Greek sense existed in

Archaic and Classical Cyprus. There is no positive evidence either for the inhabitants of the cities being citizens and not subjects, or for the development of representative institutions before the end of C4.¹⁵

If we confine ourselves to the facts that are based on reliable contemporary evidence or can be inferred from it with a sufficient degree of plausibility, ten out of the fourteen settlements mentioned so far can be included in the Inventory of Archaic and Classical Greek *poleis* in Cyprus: Amathous (no. 1012), Idalion (no. 1013), Karpasia (no. 1014), Keryneia (no. 1015), Kourion (no. 1016), Lapethos (no. 1017), Marion (no. 1018), Paphos (no. 1019), Salamis (no. 1020) and Soloi (no. 1021).

Kition possibly appears in the Assyrian kingdom lists,¹⁶ but was and remained a Phoenician foundation. *Chytroi*, named in the Assyrian lists as a kingdom,¹⁷ is not mentioned again before C2e.¹⁸ For *Ledroi*, also named in the Assyrian lists,¹⁹ the ethnic *Λέδριος* is attested in a C4I inscription and in C3 inscriptions and graffiti.²⁰ In the first century AD, however, Ledrai appears as a *κώμη* (*Acta Barnabae* 25). Neither town obviously was any longer autonomous at the beginning of Persian rule.²¹ Their listing as kingdoms in the Assyrian texts cannot be regarded as an equivalent for the term *polis*, and Chytroi and Ledroi therefore are not included in the Inventory.

Tamassos does not appear as a *polis* in contemporary sources, although it is named as “Tamesi” in the lists of Esarhaddon and Ashurbanipal.²² After that, “history has nothing to say about Tamassos”,²³ until around 350–340 the bankrupt King Pasikypros sells *τὸ χωρίον καὶ τὴν αὐτοῦ βασιλείαν* to King Pumiathon of Kition for 50 tal. (Douris (*FGHHist* 76) fr. 4).²⁴ Here again the Assyrian texts cannot provide an equivalent for the term *polis*. The existence of C6 built “royal tombs”, of remains of a C5–C4 fortification wall, and of Archaic/Classical sanctuaries (of Aphrodite-Astarte

¹⁵ The hypothesis of an “essentially aristocratic government” in the kingdoms, suggested (in the wake of R. S. Merrillees, H. van Effenterre and W. D. Rupp) recently by Demand (1996), is based on a speculative (and slightly preconceived) reading of the archaeological evidence; it tends to create another factoid.

¹⁶ But not certainly: Hill (1949) 107–8; Collombier (1991) 27–28.

¹⁷ Borger (1956) no. 60. 64.

¹⁸ Save for a reference to *τοὺς Χυτρούς* in a fragment of Lysias, preserved by Harpokration, s.v. *Chytroi*. *Chytroi* in a Delphic list of *theorodokoi* from Cyprus (C2e): Plassart (1921) 4 col. 1.3; the restoration of the ethnic in Kafizin (C3I) by Mitford (1980) nos. 46, 221, 226, is open to doubt.

¹⁹ Borger (1956) no. 60. 71.

²¹ Collombier (1991) 38.

²² Borger (1956) no. 60. 69.

²³ Mitford (1961) 138.

²⁴ Maier (1994) 327.

¹¹ E.g. the maps sketched by Rupp (1987) 166–68; cf. also Collombier (1991) 38; Masson and Hermay (1992). Snodgrass (1988) 14–15 calculates about 925 km² for the “notional” Cypriot kingdoms.”

¹² Herodotos describes the rulers sometimes as *basilees*, sometimes (even in the same chapter) as *tyrannoi* (5.109, 110, 113): both terms denote autocratic rule. Isokrates’ description of the ruling methods of Euagoras conforms, despite its openly eulogistic tendencies (9.20–23, 46, 48, 72, 3.38), in principle with Herodotos.

¹³ Maier (1994) 299–302; Mehl (1995), (1996a) 140–41.

¹⁴ Solon fr. 7.2, Diehl; Plut. *Sol.* 26: Solon counselled Philokypros to transfer the city from a hill-top to the coastal plain.

and Apollo)²⁵ do not warrant inclusion of Tamassos in the list of Archaic and Classical *poleis*.

Golgoi presents a slightly different case. It does not appear in contemporary sources; no coins of *Golgoi* are known.²⁶ The archaeological evidence points to a fortified town in C5–C4,²⁷ but this does not seem reason enough to list *Golgoi* as a *polis* (not even as a weak type C)—especially as it appears as a *χωρόιον* in Paus. 8.5.2. *Golgoi* seems to have been, however, a relatively important cult centre “en dehors des capitales”, comparable to places such as Ag. Irini.²⁸ Settlements of this type might represent the dependent *mikra polismata* to which Diodorus refers (16.42.4 (rC4m)).

II. The *Poleis*

1012. Amathous (Amathousios) Map 72. Lat. 34.15, long. 33.10. Size of territory: 5. Type: A:β. The toponym is *Ἀμαθοῦς*, -ντος, ἡ (Hdt. 5.105.1; Epiph. *De xii Gemmis* 1.6). The city-ethnic is *Ἀμαθοῦσιος* (Hdt. 5.104.2). Amathous possibly appears as a kingdom in the inscriptions of Esarhaddon and Ashurbanipal (Borger (1956) no. 60.71; Baurain (1981); Collombier (1991) 27–28). It is called a *polis* in the urban sense at Ps.-Skylax 103, where Amathous, with the comment *ἀπόχθονές εἰσιν*, is listed as one of the toponyms after the heading *πόλεις . . . αἰδε*. *Polis* in the political sense is found in SEG 16 789 (C4l/C3e). The syllabic inscriptions of Amathous show indeed that a thus far undeciphered language (“Eteokyprian”) was written (and spoken?) there (Masson (1983) 203–6; but see Reyes (1994) 13–17); a Phoenician element is also attested, especially in the Archaic period (Hermay (1997)). The collective use of the city-ethnic is attested externally in Hdt. 5.104.2.

Amathous sided with the Persians in the Ionian Revolt. The city must have been fortified by then, as it was besieged by Onesilos of Salamis and successfully defended (Hdt. 5.104–8, 114). In 391 it was allied with Soloi (no. 1021) and Kition against Euagoras I (Ephor. fr. 76; Diod. 14.98.2). King Androkles joined Alexander the Great during the siege of Tyros in 332 and lost his quinquireme (Arr. *Anab.* 2.22.2).

²⁵ Masson (1964) 210–31; Nicolaou (1976c); Buchholz (1977).

²⁶ Collombier (1991) 38. No evidence for *Golgoi* as an independent state in this period: Hill (1949) 133 n. 4.

²⁷ Sector of living quarters and fortification wall of the Classical period: Bakalakis (1988).

²⁸ Collombier (1991) 30. “Rural sanctuary” at *Golgoi*, 1st phase until C4l: Christou (1995) 822–24. For Ayia Irini, see SCE ii. 642–824; Quillici and Quillici-Gigli (1972–73); Nicolaou (1976a).

During the Archaic and Classical periods the acropolis and the lower town were defended by a city wall with rectangular towers (Hermay (1993) 174–75; Aupert and Hermay (1995) 95; Aupert (2000) 47–52); the defences enclosed c.18 ha. The main architectural remains on the acropolis consist of a large public building (a palace?), rebuilt several times between C8m and c.300, and the open court sanctuary of Aphrodite, C8m to first century AD (Hermay (1993) 175–76, 183–87, (1997) 88; Aupert and Hermay (1995) 90–93; Aupert (2000) 52–55, 59–63).

The “goddess of Amathous” was Aphrodite, often called “Kypria” or “Aphrodite Kypria” (*Catal.* 36.11–14, 68.51; Verg. *Aen.* 10.51; Ov. *Met.* 10.220–42; Paus. 9.41.2 mentions an “ancient sanctuary of Adonis and Aphrodite”). The eponymous hero Amathous, son of Aërias, the founder of the Paphian shrine of Aphrodite, is said to have founded the sanctuary of the Amathousian Venus, one of the three oldest shrines in Cyprus (*Tac. Ann.* 3.62.4). Another tradition makes the Amathousians descendants of “companions of Kinyras, who had been put to flight by the Greeks who accompanied Agamemnon” (Theopomp. fr. 103).

The kings of Amathous struck coins on the Persian standard, from C4e on the Rhodian standard, c.460/430–c.350 (Rhoikos). Denominations: stater and fractions down to hemiobol. Principal types: *obv.* recumbent lion, sometimes with eagle flying above, or lion’s head; *rev.* forepart of lion in incuse square or circle; legend: name of king in syllabic script (Babelon, *Traité* ii.2 nos. 1254–77; Head, *HN*² 737; Masson (1983) 209–12; Amandry (1984); *SNG Cop. Cyprus* 1–4).

1013. Idalion (Edalios) Map 72. Lat. 35.7, long. 33.25. Size of territory: 5. Type: A:β. The toponym is *Ἰδάλιον* (e-ta-li-o-ne (*Ἰεδάλιον*) in C5 syllabic inscriptions such as ISC 217–18; Steph. Byz. 326.6). The city-ethnic is *Ἰεδάλιος* (syllabic e-ta-li-e-we-se: ICS 217.2). Idalion appears as a kingdom, “Edil”, in the lists of Esarhaddon and Ashurbanipal (Borger (1956) no. 60.63). The C5m syllabic inscription ICS 217 (Mitford and Masson (1982) 72) mentions the *basileus* Stasikypros and the *πόλις* of Idalion. Both contribute to the emoluments of physicians, and this seems to imply that the *ptolis* had a separate treasury. Thus *ἀ πόλις* here seems to have a political meaning, although it does not follow from the extant text that the king and city shared the government of Idalion, as is sometimes assumed. In line 1 referring to a siege of the city, *πόλις* is used in the urban sense; and Idalion is likely to be one of the unnamed *poleis* mentioned in the urban sense by Hdt. 5.115. The

collective use of the city-ethnic is attested internally on coins (*infra*) and in inscriptions (*ICS* 217, 220, 228).

Idalion joined the Ionian Revolt and was besieged and taken by the Persians (Hdt. 5.115.1–2). The inscription *ICS* 217 records a siege of Idalion by “Medes and Kitians” (its date is disputed, between c.478 and c.445, if not later); but the siege was unsuccessful, as King Stasikypros still ruled when the inscription was set up. Thus these operations cannot have been connected with the conquest of Idalion by the Phoenicians during the reign of King Ozbaal of Kition, who seems to have ruled shortly after the middle of C5 (the precise chronology of these events and of the kings of Kition is still disputed: Collombier (1991) 34–35; Maier (1994) 310). It is also open to debate whether Idalion was incorporated into the kingdom of Kition or ruled in personal union only. In any case, Phoenician influence followed political conquest: Phoenicians lived at Idalion, as their tomb inscriptions testify; Phoenician deities were worshipped in the city. The city seems to have suffered a major destruction at the end of C4 (Stager and Walker (1989) 466; Hadjicosti (1993)), but survived into Hellenistic and Roman times.

The principal (western) acropolis was fortified already in the Archaic period, and thus was possibly affected by the Persian siege of 498/7. At the end of C6 the whole city, including both citadels (an area of c.40 ha), was enclosed by a fortification wall with rectangular bastions (stone foundation with mudbrick superstructure), which was rebuilt at least twice and remained in use until c.300 (Stager and Walker (1978), (1979), (1989) 13–57, 462–64; Hadjicosti (1994), (1995)). A large building on the western acropolis may have served in the Archaic period as a palace, and in the Classical period as the administrative centre of Idalion with archives (C4 ostraka, with mainly Phoenician, but also some syllabic and alphabetic Greek texts; Masson (1992); Hadjicosti (1994), (1995); Stager and Walker (1989) 5–13, 462–64). It remains to be seen whether the “alignments suggestive of an overall building plan” observed so far do constitute “evidence for town-planning” in C5 (Stager and Walker (1989) 463).

The main cult of Idalion was that of Aphrodite (Theoc. *Id.* 15.100–3; Verg. *Aen.* 1.681, 692–93, 10.51–52; *Catal.* 36.11–12, 64.96). A court sanctuary of the “Great Mother”, identified by the Greeks with Aphrodite, and a C8–C4 open-air sanctuary of Apollo Amyklos, the Phoenician “Reshef Mikal”, were situated on the eastern acropolis (Masson (1968a); Senff (1993); Gaber (1997) 137). The western acropolis housed a *temenos* of Athena (identified with “Anat” by the Phoenicians), C8m(?)–c.475.

The kings of Idalion struck coins on the Persian standard C61–c.450 (Stasikypros). Denominations: stater and fractions down to twelfth. Principal types: *obv.* sphinx seated, or head of Aphrodite; legend: name of king in syllabic script; e-ta-li on a series of Stasikypros; *rev.* incuse square, or lotus flower in incuse circle (Babelon, *Traité* ii.2 nos. 1245–53; Head, *HN*² 738–39; Masson (1983) 250–52; *SNG Cop. Cyprus* 22).

1014. Karpasia (Karpaseus) Map 72. Lat. 35.40, long. 34.25. Size of territory: 5. Type: [A]:a. The toponym is *Καρπασία*, ἡ (Hellan. fr. 57) or *Καρπάσεια* (Ps.-Skylax 103) or *Κραπάσεια* (Dion. Epic. fr. 2, Heitsch). The city-ethnic is *Καρπασεύς* (Hell. *Oxy.* 15.3; Theopomp. fr. 20). Karpasia is called a *polis* in the urban sense at Ps.-Skylax 103, where it is listed as one of the toponyms after the heading *πόλεις* . . . αἰδε; it was, however, possibly never the capital of a kingdom (Hadjioannou (1983) no. 197; Collombier (1993) 145). The collective use of the city-ethnic is attested externally in Theopomp. fr. 20; in *Hell. Oxy.* 15.2–4 an individual is repeatedly referred to as ὁ *Καρπασεύς* (e.g. 23.2, 3, Chambers), but the individual use proper is not attested before C3 (*I. Cal.* 227.A.17).

In 398 a *Καρπασεύς*, elected *strategos* of Cypriot troops in Konon’s force, led a mutiny at Kaunos (*Hell. Oxy.* 15.1–3). There is no further mention of the city until the siege by Demetrios in 307/6 (Diod. 20.47.2). Thus Karpasia must have been fortified at least in C4; but so far the only traces of the Archaic and Classical town are remains of a few C5–C4 houses (du Plat Taylor (1980) 160–82; see also Hogarth (1889) 88–90) and a Classical cemetery (Dray and du Plat Taylor (1937–39)). According to a fragment of Hellanikos’ *Kypriaka*, the town was founded by Pygmalion, king of Sidon (Hellan. fr. 57 *apud* Steph. Byz. 361.13–14), but there is no evidence of Phoenician presence thus far (see also Gjerstad (1948) 441–42).

1015. Keryneia (Kerynites) Map 72. Lat. 35.20, long. 33.20. Size of territory: 5. Type: [A]:? The toponym is *Κερύνεια*, ἡ (Ps.-Skylax 103; Diod. 19.62.6). The city-ethnic is *Κερυνίτης* (Diod. 19.59.1 (r315); a restored [*Κερυ*]νίτης in Mitford (1980) no. 317 (225/4) is doubtful). Keryneia is called a *polis* in the urban sense at Ps.-Skylax 103, where it is listed as one of the toponyms after the heading *πόλεις* . . . αἰδε. It was ruled by kings (Diod. 19.59.1 (r315); *basileus*, 19.79.4 (r313/12); *dynastes*). The individual use of the city-ethnic is attested externally in Diod. 19.59.1 (r315) and possibly at Kafizin (Mitford (1980) no. 307).

No remains of Archaic or Classical architecture have been discovered so far; Archaic–Hellenistic terracotta and lime-

stone statuettes come from the sanctuary of an unknown deity.

From Strabo's reference to an *Achaion akte* (14.6.3) on the north coast of Cyprus, it has sometimes been inferred, not very convincingly, that Keryneia was colonised from Achaia.

1016. Kourion (Kourieus) Map 72. Lat. 34.40, long. 32.50. Size of territory: 5. Type: B:a. The toponym is *Κούριον* (Hdt. 5.113.1). The city-ethnic is *Κουριεύς* (Hdt. 5.113.1; Arr. *Anab.* 22.22.2 (r332); Aupert (1982) no. 265.5). Kourion appears as a kingdom, "Kuri", in the inscriptions of Esarhaddon and Ashurbanipal (Borger (1956) no. 60.68) and may have been one of the unnamed *poleis* mentioned in the urban sense at Hdt. 5.115. The collective use of the city-ethnic is attested externally in Hdt. 5.113.1 (cf. Aupert (1982) no. 265.5 (C2e)), its individual use externally in Arr. *Anab.* 22.22.2 (r332).

According to Hdt. 5.113.1, the *Kouriees* were *Ἀργείων ἄποικοι* (cf. Strabo 14.6.3: *Argeion ktisma*). Kourion joined the Ionian Revolt (Hdt. 5.113.1, by implication), but King Stasanor deserted the Cypriot army in the battle of Salamis in 498 (Hdt. 5.113.1). Thus we cannot be certain that Hdt. 5.115. implies a siege and conquest of Kourion by the Persians in 498/7; no remains of city defences of this period have been discovered so far. In 332 King Pasikrates joined Alexander the Great at the siege of Tyros and lost his quinquireme (Arr. *Anab.* 22.22.2); in 323/2 he was appointed *theorodokos* to host *theoroi* from Nemea (Miller (1988) 148.6–7).

The protecting god of Kourion was Apollo Hylates (*I.Kourion* 41, 104, etc.; Strabo 14.6.3). The remains of his sanctuary outside the walls date from C7 to the fourth century AD (Scranton (1967); Christou (1986) 50–57; Soren (1997) 305).

No coins can be securely attributed thus far to the kings of Kourion (Babelon, *Traité* ii.2 nos. 827–31; Head, *HN*² 745; Cox (1959); Masson (1983) 200–1; Collombier (1991) 30).

1017. Lapethos (Lapithios) Map 72. Lat. 35.20, long. 33.10. Size of territory: 5. Type: [A]:β. The toponym is *Λήπηθις* (Ps.-Skylax 103) or *Λάπιθος* (Diod. 19.62.6 (r315)) or *Λάπηθος* (BCH 45 (1921) 4.1.5 (230–220)). The city-ethnic is *Λαπίθιος* (Diod. 19.59.1 (r315)) or *Λαπήθιος* (Traunecker *et al.* (1981) no. 38 (c.385); REG 3 (1890) 85 no. 74); cf. on the name RE xii. 763. Lapethos occurs only once in a contemporary source: as a *polis* in the urban sense at Ps.-Skylax 103, where it is listed as one of the toponyms after the heading *πόλεις . . . αἰδε*. The individual use of the city-ethnic is attested externally in Traunecker (1981) no. 38 (c.385; *Ὀνασίλος Λαπή(θιος)*) and Diod. 19.59.1 (r315).

Ps.-Skylax 103 calls the city *Λήπηθις Φωϊκῶν*. In the Archaic and Classical periods Lapethos seems indeed to have represented a kind of Graeco-Phoenician community—despite a Greek foundation legend (Lakonians under Praxandros: Strabo 14.6.3) and its undoubtedly Greek character in the subsequent Hellenistic period (Lapethos in a Delphic list of *theorodokoi* in Cyprus: Plassart (1921) 4.1.5 (230–220)). Greek and Phoenician names occur side by side in the list of kings; their coin legends uniformly use Phoenician script (except for the last king, Praxippos, who ruled when Lapethos was involved in the Successors' struggle for Cyprus (Diod. 19.59.1, 62.6 (r315); Maier (1994) 306); no syllabic inscriptions have been found thus far.

The kings of Lapethos struck silver staters on the Persian standard C5f–c.312 (Praxippos). Principal types: *obv.* helmeted head of Athena; *rev.* helmeted head of Athena, or *obv.* head of Aphrodite; *rev.* helmeted head of Athena, or *obv.* head of Apollo; *rev.* Krater (Praxippos). Legends are: name of king in Phoenician script; Praxippos' in Greek letters (Babelon, *Traité* ii.2 nos. 1356–64; Head, *HN*² 739; Schwabacher (1947) 79–84, 100–1 nos. 206–222; Robinson (1948) 45–47, 60–65; Kraay (1976) 302–3; *SNG Cop. Cyprus* 23, Suppl. 627).

1018. Marion (Marieus) Map 72. Lat. 35.05, long. 32.25. Size of territory: 5. Type: A:a. The toponym is *Μάριον, τό* (Ps.-Skylax 103). The city-ethnic is *Μαριεύς* (syllabic ma-ri-e-u-se on coins of King Sasma (C5e), Timocharis (C5l), Stasioikos II (C4l); cf. *ICS* 168, 170c, 171e; Diod. 19.59.1 (r315)). Marion is called a (*polis*) *Hellenis* in the urban sense by Ps.-Skylax 103 (cf. Flensted-Jensen and Hansen (1996) 142). It is also likely to be one of the unnamed *poleis* mentioned in the urban sense by Hdt. 5.115. The individual use of the city-ethnic is attested externally in Diod. 19.59.1 (r315), internally on the coins of Sasma (C5e), Timocharis (C5l), Stasioikos II (C4l); cf. *ICS* 168, 170c, 171e.

Marion joined the Ionian Revolt and was besieged and taken by the Persians (Hdt. 5.115.1–2). Kimon laid siege to Marion in 449 (Diod. 12.3.3; Hill (1949) 123). The city was destroyed by order of Ptolemy I in 312 (Diod. 19.79.4).

Whether and when the kings of Marion were lords of the palace of Vouni and dominated Soloi (no. 1021) from there is still open to debate (Hill (1949) 123; Nicolaou (1976*d*); Maier (1985) 36–37; Collombier (1991) 31–32; Reyes (1994) 92–94; Nielsen (1994) 54–61). Marion must have been a walled city, most likely already in 498/7, and certainly in 449, when it was besieged by the Athenians. The only remains of public architecture known so far consist of a sanctuary founded in

C8–C7 and abandoned or destroyed in C5, and of (possible) traces of ramparts (Childs (1990), (1992), (1995), (1999)). Rich cemeteries of the Archaic and Classical periods have also been excavated.

The kings of Marion struck coins of silver and later also of gold and bronze on the Persian standard from C5e (Sasmas) to c.312 (Stasioikos II, who used the Rhodian standard for some of his coins). Denominations (silver): stater and fractions down to twelfth. Principal types: *obv.* recumbent lion; *rev.* boar with Phrixos, or *obv.* head of Apollo; *rev.* female deity (Aphrodite?) on bull, or *obv.* head of Aphrodite; *rev.* thunderbolt, or ankh. Legends are *basileus* and name of king in syllabic script; sometimes *Marieus* is added in syllabic script, in Greek letters on coins of Stasioikos II (Babelon, *Traité* ii.2 nos. 1328–47; Head, *HN*² 739–40; Schwabacher (1947) 72–78, 92–97 nos. 5–154; Masson (1983) 181–85; *SNG Cop. Cyprus* 24).

Ps.-Skylax 103 classifies Marion as a (*polis*) *Ἑλληνίς*. To judge from the archaeological evidence and from the epitaphs (Mitford (1960) 178–98; Masson (1983) 154–81), Marion was definitely a Greek city, despite King Sasmas (c.470/60–450?), whose name is Phoenician and who uses the Phoenician *MLK* for “king” on some of his coins (Gjerstad (1946); Mehl (1996*b*) 381 assumes a Phoenician ruling family using Greek names).

1019. Paphos (Paphios) Map 72. Lat. 34.40, long. 32.35. Size of territory: 5. Type: A:a. The toponym is Πάφος, ἡ (Alcm. fr. 55, *PMG*; Hdt.7.195). The city-ethnic is Πάφιος (Hdt. 7.195). Paphos appears as a kingdom, “Pappa”, in the lists of Esarhaddon and Ashurbanipal (Borger (1956) no. 60.66); whether the men from “Pappa” (or “Papa”) mentioned in the annals of Sargon are Paphians, Anatolians or Urartians is still uncertain: see Reyes (1994) 56. It is called a *polis*, possibly in the political sense, at Aesch. *Pers.* 892. It must also be one of the unnamed Cypriot *poleis* mentioned in the urban sense at Hdt. 5.115. Paphos also appears as a *polis* in the urban sense in an inscription (c.321–309) of the last king, Nikokles, which refers to the defences of the εὐρύχορος πόλις (Maier (1959) 207 no. 58; Mitford (1960) 203; *CEG* II 869). The individual use of the city-ethnic is attested externally in Hdt. 7.195, the collective use internally on coins of King Timarchos c.350–c.325 (Πα[φίων]: *ICS* 29) and Nikokles (Παφίων: Masson (1968*b*)).

Paphos took part in the Ionian Revolt and was besieged and taken by the Persians (Hdt. 5.115.1–2). Elaborate siege and counter-siege works recovered by excavation allow a detailed reconstruction of the operations (Maier and

Karageorghis (1984) 194–203; Maier (1996) 125–27). A Paphian contingent of twelve ships, commanded by Penthylos, fought in the Persian fleet of 480 (Hdt. 7.195). Paphos became an ally of Alexander the Great in 332 (Arr. *Anab.* 2.20.3, by implication).

The kings of Paphos traced their origin to the legendary founder-king Kinyras; they alone in Cyprus combined political power with the cult functions of high priest of Aphrodite (Maier (1989*b*)). Two syllabic inscriptions of King Nikokles (*ICS* 8; *AAP* 4, 237) are fragments of oaths, but do not (as suggested by Mehl (1996*a*) 141) represent a kind of treaty between the king and his subjects.

Paphos was defended by a circuit of walls with rectangular towers, built in C8l and maintained until about 300 (remodelled C6l, repaired C4m: Maier and Karageorghis (1984) 128–70, 209–12; Maier and von Wartburg (1985) 153–55; cf. *CEG* II 869 (C4l)); it enclosed an area of c.45 ha. A large C6–C5 ashlar building, reminiscent of Achaemenid prototypes, seems to have been a royal palace; a large C4s peristyle mansion may have served public functions (Schäfer (1960); Maier (1989*a*) 17). An imposing chamber tomb was the burial place of two C4s kings of Paphos, Timocharis and Echetimos (Maier and von Wartburg (1998) 105–10; *AAP* 5).

Aphrodite, the “Wanassa” of the syllabic inscriptions, was the protective goddess of Paphos (Hom. *Od.* 8.362–66; *Hymn. Hom. Ven.* 56–67). Her main shrine was an open court sanctuary (C12 to fourth century AD), but of its Archaic and Classical period only votive statuettes survive (Maier and Karageorghis (1984) 182–83; Maier and von Wartburg (1985) 155–56). Outside the intricate north-east gate stood an Archaic sanctuary, dedicated possibly to Aphrodite/Astarte and Melquart/Baal and destroyed in 498/7 (Maier and Karageorghis (1984) 186–92).

The kings of Paphos struck silver coins on the Persian standard C6l–c.325; Nikokles (c.325–c.309) used the Attic standard. Denominations: stater and fractions down to 1/24th. Principal types: *obv.* human-headed bull; *rev.* astragalos, or head of eagle, or *obv.* bull walking or standing; *rev.* eagle standing or flying, or *obv.* Zeus(?) seated on throne; *rev.* Aphrodite(?) sacrificing, or *obv.* head or bust of Aphrodite wearing crown; *rev.* Apollo seated on omphalos. Legends are name of king in syllabic script, except for *Nikokleous Paphion* in alphabetic Greek (Babelon, *Traité* ii.2 nos. 1278–1327; Head, *HN*² 740–41; Schwabacher (1947) 85–87, 101–2 nos. 224–43; May (1952); Masson (1983) 115–23; Gesche (1970) 169, 191–93; *SNG Cop. Cyprus* 25–30, *Suppl.* 628).

The traditional founder of sanctuary and town was the Arkadian king Agapenor of Tegea (Paus. 8.5.2; cf. Roy (1987); Strabo 14.6.3); but another tradition names the indigenous King Kinyras as the mythical founder (Pind. *Pyth.* 2.15–17; *Nem.* 8.16–18). The cult of Aphrodite and the Archaic sculpture of Paphos show definite Phoenician influences, but traces of Phoenician presence are lacking so far (Masson and Sznycer (1972) 81–86).

1020. Salamis (Salaminius) Map 72. Lat. 35.10, long. 33.55. Size of territory: 5. Type: A:a. The toponym is *Σαλαμίς*, ἡ (Hdt. 4.162; Thuc. 1.112.4). The city-ethnic is *Σαλαμίνιος* (Hdt. 5.104.1–2) or *Σελαμίνιος* (ICS 323 (C5)). Salamis appears as a kingdom, “Silli”, in the lists of Esarhaddon and Ashurbanipal (Borger (1956) no. 60.67). It is called a *polis* in the political sense at Aesch. *Pers.* 893 and Isoc. *Paneg.* 141, 9.19 and 3.32. Salamis is mentioned as a *polis* in the urban sense by Hdt. 5.104.3, 115.1; Isoc. 9.20, 47 and 3.28; Ps.-Skylax 103. τὸ ἄστυ τὸ Σαλαμίνιον is found at Hdt. 5.104.2. The term *Polites* is found in Isoc. 9.30–31.

The collective use of the city-ethnic is attested externally in Hdt. 5.104.1–2 and internally on coins of King Nikodamos (C5e?): syllabic se-la-mi-ni (*Σελαμινί(ων)*) in ICS 323; the individual use is found externally in Hdt. 5.108.1 and SEG 29 296 (C5).

The Greek dynasty of Salamis traced its ancestry back to the legendary hero Teukros, son of Telamon, king of the Greek Salamis (Pind. *Nem.* 4.46–48; Paus. 1.3.2, 2.29.4; Pouilloux (1975) 111–15). Salamis joined the Ionian Revolt (Hdt. 5.104–15) after King Gorgos had been expelled by a faction (*stasiotai*) led by his younger brother Onesilos (Hdt. 5.104). The desertion of its war chariots led to the defeat of the Cypriots in the battle of the *πεδῖον τὸ Σαλαμίνιον* (Hdt. 5.110), but Salamis was granted exemption from the retaliatory measures of the Persian army (Hdt. 5.115.1). At the end of the Athenian operations in the eastern Mediterranean in 450/49, a combined action on land and sea was fought off Salamis (Thuc. 1.112.4; Isoc. 8.86). King Euagoras I (410–374/3) strengthened the fortifications, enlarged the harbour and built a fleet of triremes (Isoc. 9.47). In 351/0–350/49 Salamis was besieged by Persian forces (Diod. 16.42.3–9, 46.1–3). King Pnytagoras joined Alexander the Great in the siege of Tyros in 332 and lost his quinquireme (Arr. *Anab.* 2.22.2); in 331 he acted as *choregos* at Alexander’s victory celebrations (Plut. *Alex.* 29.1). His son Nitaphon served as *trierarchos* on the Indian expedition (Arr. *Ind.* 18.1–2.8 (r326)). In 323/2 King Nikokreon was appointed *theorodokos* to host *theoroi* from Nemea (Miller

(1988) 148.3–4). King Euagoras I was given Athenian citizenship in 410 or 409; he was made *proxenos* in 393/2 (Pouilloux (1975) 117–18; Maier (1994) 313–14).

The monumental remains of Archaic and Classical Salamis, besides the sumptuous “princely” C8–C7 dromos tombs (Karageorghis (1969) 23–150 and (1967–71)), are scanty. They consist mainly of a short section of the southern defences which possibly included a gate. The stone and mudbrick wall was erected in the Archaic period on Protogeometric foundations (C11?), and destroyed by fire in C6 (Jehasse (1980)). Inside the wall the remains of a sanctuary of the “Great God of Salamis”, dating to the same period, were discovered; a C5–C4 rural sanctuary of the Great Goddess was situated outside the walls to the west of the city (Yon (1993) 144–46).

The most important cult of Salamis was that of Zeus Salaminius, said to have been founded by Teukros and regarded by Tacitus as nearly as prominent as that of the Paphian Aphrodite (*Ann.* 3.62.4).

The kings of Salamis struck silver coins on the Persian standard from c.530/20 (Euelthon) to c.310 (Nikokreon, who also used the Rhodian standard). Denominations: stater and fractions down to twelfth. From 411 coins of gold and bronze were struck too. Principal types: *obv.* recumbent ram, or ram’s head; *rev.* ankh, or smooth; or *obv.* head of bearded Herakles in lion skin; *rev.* forepart of recumbent goat, or goat’s head; or *obv.* bust or head of crowned Aphrodite; *rev.* helmeted head of Athena, or head of crowned Aphrodite; or *obv.* forepart of galloping horse; *rev.* ram’s head; or *obv.* ram’s head; *rev.* lion’s head; or *obv.* helmeted head of Athena; *rev.* lion walking, or lion’s head; or *obv.* head of Aphrodite; *rev.* head or bust of Euagoras II; or *obv.* head of Artemis; *rev.* head of Aphrodite; or *obv.* head of Aphrodite in turreted crown; *rev.* head of Apollo. Legends are name of king in syllabic script; from C4m in alphabetic Greek (Babelon, *Traité* ii.2 nos. 1129–95; Head, *HN*² 742–44; Masson (1983) 318–23; Gesche (1970) 169, 193–96; Helly (1970); *SNG Cop. Cyprus* 31–62).

Ps.-Skylax 103 calls Salamis a (*polis*) ‘*Ἑλληνίς*’; its society and culture were basically Greek, although there existed a small Phoenician colony there (Karageorghis (1969) 12, 149; Masson and Sznycer (1972) 123–28; Pouilloux *et al.* (1987) 9).

1021. Soloi (Solios) Map 72. Lat. 35.10, long. 32.50. Size of territory: 5. Type: A:a. the toponym is *Σόλοι*, αἱ (Aesch. *Pers.* 892 with schol.; Hdt. 5.115.2). The city-ethnic is *Σόλιος* (Solon fr. 7.1, Diehl; Hdt. 5.110, 113.2). Soloi appears as a

kingdom, “Sillua”, in the lists of Esarhaddon and Ashurbanipal (Borger (1956) no. 60.65). It is called a *polis* in the political sense by Solon fr. 19.2, West, and Aesch. *Pers.* 892; in the urban sense by Hdt. 5.115.2 and Ps.-Skylax 103. The collective use of the city-ethnic is attested externally in Solon fr. 7.1, Diehl, and Hdt. 5.110, 113.2.

Soloi was founded, according to Strabo 14.6.3, by the Athenians Phaleros and Akamas. Soloi took part in the Ionian Revolt, and King Aristokypros was killed in the battle of Salamis (Hdt. 5.104.1, by implication); the city was besieged and taken by the Persians in 498/7 (Hdt. 5.115.1–2). That the city was afterwards for a time controlled by a “Persophile king” of Marion remains an unproved hypothesis (Maier (1985) 36–37, (1989*a*) 18; Collombier (1991) 31–32). In 391 it was allied with Amathous (no. 1012) and Kition against Euagoras I of Salamis (Ephor. fr. 76; Diod. 14.98.2; Maier (1994) 314–15); after the Cypriot rulers had sided with Alexander the Great in 332 (Arr. *Anab.* 2.20.3; Plut. *Alex.* 24.2), King Pasikrates acted as *choregos* at Alexander’s victory celebrations in 331 (Plut. *Alex.* 29.2); his son Nikokles served as *trierarchos* on the Indian expedition (Arr. *Ind.* 18.1–2.8 (r326)). In 323/2 King Stasikrates was appointed *theorodokos* to host *theoroi* from Nemea (Miller (1988) 148.9–10).

FROM SYRIA TO THE PILLARS OF HERAKLES

MICHEL AUSTIN

I. The Regions

The area considered here includes the lands stretching from the mouth of the river Orontes in Syria to the Pillars of Herakles in the far west. This is a vast and diverse area, but the common element is that, apart from the Libyan plateau and its coastline, and the special case of Egypt, it was characterised by the absence of large-scale Greek implantation in the period before Alexander and the scarcity of definite or probable *poleis*. In Syria, while Greek contacts are attested archaeologically from an early date, only one *polis* receives a casual mention in C₅—Posideion (no. 1022) in north Syria—and it has little recorded history. In Egypt significant Greek presence started in C₇, but only two Greek settlements—Naukratis (no. 1023) in the west of the Nile Delta and the Samian settlement Oasis (no. 1024)—may have been *poleis* in Archaic and Classical times, though in both cases *polis* status is debatable. It was only in Libya that several Greek *poleis* were founded in the Archaic period: Kyrene (no. 1028), Barke (no. 1025), Taucheira (no. 1029) and Eu(h)esperides (no. 1026). Further to the south and west beyond Eu(h)esperides there was no lasting Greek settlement, and evidence for Greek *poleis* is almost completely missing.

The reason for this is probably that in this period, and with the exception of Libya, the Greeks were not in a position to establish themselves on their own terms, as they were elsewhere. If they settled at all, it was on conditions regulated by the local powers: the empires of the Middle East in Syria (the Assyrians, later the Babylonians, then the Persians), the Phoenician cities, the pharaohs in Egypt, and to the west of the Libyan plateau the Carthaginians (cf. Strabo 17.1.19 on their hostility).

1. Syria

The name “Syria” designated a large but ill-defined area, and there were different ancient views of its boundaries (cf.

Honigmann (1932) 1552–53). For Herodotos Syria started at Posideion (no. 1022) (modern Bassit), which he described as lying on the boundaries between the Kilikians and the Syrians—in other words, some 25 km to the south of the river Orontes (which he does not mention). Strabo, on the other hand, defined Syria as bounded on the north by Kilikia and Mt. Amanos (16.2.1), with Pylai as the boundary between the Kilikians and the Syrians (14.5.19; cf. 20 on Seleukia in Pieria). In this chapter the dividing line is taken as the river Orontes. Syria comprised both Phoinike (Hdt. 2.116.6) and Palestine (Hdt. 3.5.1), and Herodotos drew the boundary between Syria in the south and Egypt at Mt. Kasios (modern Ras el Kasroun) and Lake Serbonis, where Egypt started (2.6.1, 158.4, 3.5.2; cf. 2.141.4 on Pelousion).

After the breakdown of relations between the Greek world and the Levant at the end of the Bronze Age, contacts were eventually resumed. The earliest evidence of Greek finds from coastal Levantine sites comes now from some Protogeometric amphoras of C10m found at Bassit and at Tyre in Phoinike (Courbin (1993), and 103–4 on Tyre). At Al Mina at the northern mouth of the Orontes, Greek pottery was arriving not later than C8s and possibly earlier (the date is disputed), while at Tell Sukas some 30 km to the south of Lattakiye, Greek material began to arrive from C9s. The interpretation of this evidence is disputed, and there are conflicting estimates of the relative roles played by Greeks and easterners, notably the Phoinikians, in the renewal of links between the Greeks and the eastern world (for contrasting views see e.g. Riis (1970) 126–75; Graham (1986); Boardman (1990); Perreault (1993); Courbin (1993)).

It is clear, however, that even on the most favourable estimate of the role played by Greeks, Greek settlement in Syria was limited. Even where there is most evidence of Greek presence, the sites have a Levantine history that precedes the arrival of the Greeks, and any resident Greeks represented only a part of the total population (Riis (1970) 129; Perreault (1993) 82). In practice, with one exception (Posideion (no.

1022)), the whole of Syria was empty of Greek *poleis* down to the time of Alexander.

Neither Al Mina nor Tell Sukas are mentioned in any Classical source, and there is no evidence to show that either had the status of a *polis*. The excavations at Al Mina uncovered only part of the town and the warehouses, and there is no evidence for any sanctuaries there. At Tell Sukas remains have been found of a sanctuary of C7 and C6, which has been identified as Greek and possibly dedicated to Apollo (Riis (1970)), but the identification has been questioned (Perreault (1993) 71–79, esp. 75–77). In any case, this does not by itself say anything about the institutional status of the Greek community there.

Bassit, however, is almost certainly identical with Posideion (*Ποσιδηΐον*) (no. 1022), the one Greek settlement in Syria that can be considered a *polis* in the Classical period.

In Phoinike further south there is nothing to suggest the existence of any Greek *polis* through the Archaic and Classical periods. A few Protogeometric Greek amphoras reached Tyre as early as C10m, and there are finds of Greek pottery subsequently (Courbin (1993) 103–4). There is evidence in the Old Testament of the presence of Greek traders at Tyre in the Archaic period (Ezekiel 27; cf. Bunnens (1979) 79–90; Diakonoff (1992)). Sources of the Classical period attest commercial relations between the Greek world and the Phoinikian cities (e.g. Thuc. 2.69.1; Xen. *Hell.* 3.4.1; Tod 139 (C4f); cf. Perreault (1986)). But there were no Greek settlements in Phoinikian territory.

Further south at Mezad Hashavyahu in Palestine, halfway between Jaffa and Ashdod, remains have been found of a fortress with a substantial amount of east Greek pottery dated to the last third of C7, and sufficient to imply the presence of Greeks on the spot at that time. It is most likely that they were mercenaries in the service of Psammetichos I of Egypt (664–610), who established the fort during his campaigns in Palestine and Syria in the latter part of his reign. There is nothing to suggest that this temporary settlement was ever a *polis* (Naveh (1962); Austin (1970) 16 and n. 1; Haider (1988) 204–6).

2. Egypt

According to Herodotos, the boundaries of Egypt along the sea in the north stretched from the Gulf of Plinthinetes in the west of the Nile Delta to Mt. Kasios (modern Ras el Kasroun) and Lake Serbonis in the east (2.6.1; cf. 2.7–9 for a description of the land). The Cataracts and Elephantine

formed the southern boundary, beyond which lay Ethiopia (2.17–18).

Egypt attracted Greeks from an early period. Stories in the *Odyssey* (14.245–86, 17.224–44) imply raiding by Greeks on the Nile Delta as a contemporary phenomenon. Strabo relates how the rulers placed a guard at Rhakotis, the site of the later Alexandria, to keep out Greek raiders (17.1.6; cf. 17.1.19 on Egyptian hostility to foreigners). Under Psammetichos I (664–610) Egypt was brought under the control of a strong central government, partly with the help of Ionian and Carian pirates enlisted by Psammetichos as mercenaries. It is to his reign that Hdt. 2.152 dates the first settlement of Greeks in Egypt and the beginnings of a more accurate knowledge by them of Egyptian affairs. The rulers of Egypt needed the services of Greeks as well as other foreigners, but they regulated the terms on which they were admitted to the land (cf. Austin (1970); Lloyd (1975) 1–60; Boardman (1980) 111–53; Braun (1982); Haider (1988) 153–223).

Greek settlement was concentrated for the most part in Lower Egypt, i.e. the Nile Delta and as far as Memphis. Known Greek settlements of the Archaic and Classical periods include the following (in alphabetical order).

Daphnai (*Δάφναι*) Hdt. 2.30 mentions the establishment of three principal garrison posts in Egypt by Psammetichos I, one of them at Daphnai on the Pelusian (eastern) branch of the Nile, against the Arabs and the Assyrians. There is no mention of Greeks (or Carians) in this context, though the settlement is very likely to have included them. At a site called Tell Defenneh evidence of Greek (and Carian) presence in C6 in the reign of Amasis (570–526) has been found, and the identification with Daphnai is probable. The recovered pottery finds end around 525, though this need not mean that the settlement came to an end then (Austin (1970) 20; Boardman (1980) 133–34).¹ On a C5 graffito from Abydos a certain Timarchos describes himself as *Δαφναίτης*, which could imply continuity of the Greek community at Daphnai. The use of the ethnic does not mean, however, that the Greeks at Daphnai ever formed a *polis* with its own citizenship (Bresson (1980) 316; Hansen (1996b) 185). *Barr.* 74, AC.

Memphis (*Μέμφις*) Hdt. 2.154 mentions the transfer of the Greek and Carian mercenaries from Stratopeda (*infra*) to Memphis during the reign of Amasis. Archaeological

¹ Evidence has also been discovered of another large fort some 20 km from Tell Defenneh, with C6 Greek pottery and cremations (Boardman (1980) 134–35; Haider (1988) 203–4).

evidence further suggests the presence of Greeks in Memphis from C71 onwards, and it is likely that the Greek community there had a continuous existence through to Hellenistic times. In C3 a body of *Ἑλληνομεμφίται* was established there, with a sanctuary called the *Ἑλλάγιον* and representatives known as *τιμοῦχοι*, both of which recall Naukratis (no. 1023), and which may have originated in C6 (Austin (1970) 20–22; Boardman (1980) 134–35; Thompson (1988) 95–97; cf. too Gallo and Masson (1993)). On a C5 graffito from Abydos a certain Chariandros describes himself as *Μεμφίτης*, but as with the case of Timarchos from Daphnai, this does not imply that the Greeks at Memphis formed a *polis* with its own citizenship (Bresson (1980) 316; Hansen (1996a) 185).

Milesion Teichos (*Μιλησίων τεῖχος*) This settlement near the Bolbitine mouth of the Nile is mentioned by Strabo 17.1.18, who relates its fortification by the Milesians in the time of Psammetichos I, before they went on to found Naukratis not far above Schedia. Nothing further is known about the site, and the role credited to the Milesians will be discussed below in relation to Naukratis (no. 1023). *Barr.* 74 lists it as unlocated and dates it HR.

Naukratis (*Ναύκρατις*) See the Inventory (no. 1023).

Oasis (*Ὀάσις*) See the Inventory (no. 1024).

Stratopeda (*Στρατόπεδα*) Hdt. 2.154 mentions the settlement by Psammetichos I of his Greek and Carian mercenaries in opposite camps (*στρατόπεδα*), with the Nile flowing between them, on the eastern (Pelusian) branch of the Nile, near the sea and a little below Bubastis. He relates that they stayed there until Amasis moved them to Memphis to use them as a bodyguard against the Egyptians, and according to Herodotos traces of the settlement at Stratopeda were still to be seen in his time. There is no evidence to suggest that these settlements (not to be identified with Tell Defenneh (*supra*)) constituted a *polis*.

Beyond these settlements attested by literary and/or archaeological evidence, there are indications in Herodotos of Greeks present elsewhere in Egypt in the Classical period (2.39.2, 41.3, 91, 180.2; cf. Austin (1970) 33).

3. Libya

Libya was commonly reckoned to begin at the Nile valley, which for most writers formed the boundary between Asia and Libya (Hdt. 2.15–17; cf. 4.45.2). Herodotos, however,

argued that the whole of Egypt should be reckoned as part of Asia, and Libya proper therefore lay to the west of Egypt (cf. also 2.8, 18, 19.1, 30.2, 124.2; 4.41, 197). Strabo reasserted the standard view, without any mention of Herodotos on this point (2.5.26; cf. 2.5.33, 17.1.30, 53). Knowledge of the western and southern extremities of Libya was extremely vague in the Classical period (cf. Hdt. 4.181, 185), as the area of Greek settlement and influence was confined to a small part of the continent. The name “Libya” was therefore often used to designate that area specifically (cf. frequently in the account of the foundation of Kyrene, Hdt. 4.150–51; Pind. *Pyth.* 4.6), though no *a priori* limits were established to Greek settlement (cf. Malkin (1994) 169–74).

Under the Roman Empire the area constituted the province of Cyrenaica, but the term “Cyrenaica” is not found until the time of Augustus.² Though convenient and commonly used,³ it is therefore anachronistic for the Classical and Hellenistic periods (Chamoux (1953) 35–36; Laronde (1987) 44–45, 418, 488). The term “Cyrenaica” is frequently used by the Elder Pliny, for example (e.g. *HN* 2.115, 5.28, 6.209). Strabo, on the other hand, avoids it and applies instead *ἡ Κυρηναία* to distinguish the area of Greek settlement from Carthaginian territory in the west and Egyptian territory in the east (e.g. 2.5.20, 33; 17.3.20). The word and concept are attested first in late Classical and early Hellenistic times (*SEG* 23 189 I 1.16 (c.330); Arist. *Hist. an.* 556^b; Theophr. *Hist. pl.* 4.3.1, 4, 5.3.7). The phrase *ἡ Κυρηναίη χώρα* is used by Hdt. 4.199.1, but only to refer to the territory of Kyrene proper, not to the whole area of Greek influence.

Kyrene (no. 1028), the earliest Greek foundation in Libya, became rapidly the largest and most conspicuous of the Greek *poleis* there. A wide sphere of potential Kyrenaian influence was recognised by C41, as appears from the *diagramma* of Ptolemy I for Kyrene (*SEG* 9 1 and 18 726) (322/1); Laronde (1987) chs. 4–5), where Kyrenaian citizenship is defined as including, among others, men born from (Kyrenaian fathers and) the Libyan women between the Great Katabathmos and Authamalax (*SEG* 9 1.3). The Great Katabathmos lies to the east and corresponds to the modern Gulf of Solloum, east of Tobruk and at the western limit of modern Egypt (Laronde (1987) 220–28). Since, according to Ps.-Skylax 108, Kyrenaian influence started only at Cape Chersonese (modern Ras et Tin; Laronde (1987) 219) it is likely that Kyrene’s control was extended eastward during

² An exception is Diod. 40.4.1, citing an inscription set up by Pompey in the late 60s to celebrate his achievements.

³ As frequently by Malkin (1994).

C4s (ibid. 228). Authamalax lies west in the Great Syrtis, to the east of Arae Philaenorum, and is identified with modern Bu Sceefa (Goodchild (1952*a*); Laronde (1987) 199–200, 206–7, 350; testimonia in Purcaro Pagano (1976) 328–29). This wide area is much larger than the territory proper of Kyrene, or even the area of Greek settlement, which extended from Kyrene on the Libyan plateau in the east to Eu(h)esperides in the west.

A. *The area of Greek settlement as far as Eu(h)esperides*

The fertile and well-watered Libyan plateau, within easy reach of the Aegean Greek world, was a natural target for Greek settlement, not least because of the lack of strong organisation on the part of the indigenous Libyan tribes, which allowed the Greeks to maintain the initiative.⁴ The known Greek settlements in Libya in the Archaic and Classical period are as follows (alphabetically).

Apollonia (Ἀπολλωνία) Archaeological evidence indicates that the site of the harbour of Kyrene (no. 1028), some 12.5 km inland in a straight line, was occupied from c.600, soon after Kyrene herself (Boardman (1966) 152–53; testimonia on Apollonia in Purcaro Pagano (1976) 327–28).⁵ After the Classical period the site was known as Apollonia, and it eventually became a *polis* in its own right, though the precise date and circumstances are uncertain (Goodchild *et al.* (1976); Laronde (1987) 457–61, (1996), who sets the change in C1e). The earliest mention of the name of Apollonia appears to be in the Aristotelian *Περὶ σημείων* (Arist. fr. 363). The earliest epigraphic mention of Apollonia is in an inscription of the year 67, though the name is restored (*SEG* 20 709.4; cf. Laronde (1987) 457, 459, 461). The first reference to Apollonia as a *polis* is in Strabo, where it is described as the “naval station” (ἐπίνειον) of the Kyrenaians and a large *polis* (17.3.20), and also as one of several πολίχνηα that were περιπόλια of Kyrene (17.3.21). During the Classical period references to the harbour of Kyrene do not give it a name, and it is very unlikely that it was a *polis* at this time (Chamoux (1953) 221 n. 21; cf. Hdt. 5.47.1, where it is referred to by implication; Ps-Skylax 108; Diod. 18.20.1–2). It was fortified in 322, as the siege by Thibron in 322 shows (Diod. *loc. cit.*).

Aziris (Ἀζιρίς) Aziris was the site on the Libyan coast opposite the island of Platea which the early colonists settled first and occupied for 6 years before they moved to Kyrene (no. 1028) inland (Hdt. 4.157.3–58.1, 169.1; testimonia in Purcaro Pagano (1976) 330). The site, tentatively identified with the Wadi el Chalig (Boardman (1966) 150–52 against Chamoux (1953) 118–20; cf. Laronde (1987) 229 n. 1), has traces of the early settlement and continued to be occupied later. Kyrene was almost certainly a *polis* from the very beginning of its existence, but it is not possible to say whether the early Greek settlers at Aziris organised themselves as a *polis* during their stay there (Hdt. 4.157.3 refers to Aziris only as a χῶρος).

Barke (Βάρκη) See the Inventory (no. 1025).

Eu(h)esperides (Ἐννεσπερίδες) See the Inventory (no. 1026).

Kinyps (Κίνυψ) See the Inventory (no. 1027).

Kyrene (Κυρήνη) See the Inventory (no. 1028).

Platea (Πλατέα) This was the island off the coast of Libya where the early colonists from Thera (no. 527) established themselves for 2 years, before they eventually moved to the mainland and settled, first at Aziris (*supra*) and then at Kyrene (no. 1028) (Hdt. 4.151.2–52.2, 156.3, 157.1, 3). The island is to be sought in the Gulf of Bomba, but the precise identification is disputed (Chamoux (1953) 115–17; Boardman (1966) 149–50; Laronde (1987) 223–24; testimonia in Purcaro Pagano (1976) 344–45).

Taucheira (Ταύχειρα) See the Inventory (no. 1029).

Tolmeita Modern Tolmeita, the site of the harbour of Barke (no. 1025) some 30 km away, has produced pottery fragments dating from C7l onwards (Boardman (1966) 153). According to Hdt. 4.160.1, Barke itself was founded only in the reign of Arkesilas II (c.C6m). It seems therefore possible that there was a town on the site before the foundation of Barke. The harbour of Barke is first mentioned in Ps.-Skylax 108 (Laronde (1987) 61–63), who says simply λιμὴν ὁ κατὰ Βάρκην and does not name it. There is no evidence to show that it was a *polis* in the Classical period (cf. Apollonia (*supra*) and Kyrene (no. 1028)). In the reign of Ptolemy III, the harbour town was built up somewhat artificially at royal instigation to become a major city, with large fortifications and a new urban layout on a regular grid plan. Barke was deliberately demoted in status, while the new city received the name of Ptolemais (Πτολεμαῖς), which has survived in

⁴ There is no mention in the story of the foundation and growth of Kyrene of any presence or intervention on the part of the Phoinikians.

⁵ On the ports of inland cities cf. Hansen (1995) 44.

the modern place-name Tolmeita (Strabo 17.3.20; Laronde (1987) 382–83, 396–401, 460; testimonia in Purcaro Pagano (1976) 345–46).

B. To the west of Eu(h)esperides as far as the Pillars of Herakles

To the south and west of Eu(h)esperides there was no long-term Greek settlement in the period before Alexander, though there is evidence of continued Greek interest in the possibility of further expansion in this direction. Legends associated with the voyages of the Argonauts connected them not just with the part of Libya settled by the Greeks but with lands further to the west. Thera (no. 527), the mother city of Kyrene (no. 1028), was reportedly founded by a band of Minyans from Sparta (no. 345), descendants of the Argonauts (Hdt. 4.145–49). Pindar elaborated at length the connection between Kyrene and the Argonauts: the Battiads themselves were of Argonaut descent through Euphemos, and the Greek settlement in Libya was presented as the long-delayed fulfilment of a prophecy once made by Medeia, who was herself recalling an earlier prophecy made to Euphemos at (the mysterious) Lake Tritonis (*Pyth.* 4.9–69).⁶ Herodotos mentions elsewhere (4.178) a prophecy that the island of Phla in Lake Tritonis was to be settled by the Lakedaimonians, and goes on to relate a prophecy made by the sea-god Triton to Jason that 100 Greek cities would have to be founded around Lake Tritonis, a prophecy which the Libyans contrived to frustrate (4.179).

The unsuccessful attempt of the Spartan Dorieus in around 512 to found a settlement at Kinyps (*Kίνυψ*) (no. 1027) fits such legends, and illustrates the long Spartan connection with Libya (Chamoux (1953) 88, 242; Nafissi (1985); Schaus (1985); Schaus in White (1984–93) ii. 98–102; Malkin (1994)). On the settlement, which may have been a short-lived *polis*, see the Inventory.

No further Greek attempt at settlement along the west coast of Libya is known until the time after Alexander (the expedition of Ophellas from Kyrene to Carthage), but there are indications of moves in C4 by the Greeks of Libya to push the Greek sphere of influence further westward in opposition to the Carthaginians (Laronde (1987), 200, 202, 487).

The colonisation of Libya was carried out by Dorian Greeks. It has been claimed, however, that it was preceded by

an earlier colonisation, by Ionian Greeks, who were the first to settle in the west in Italy and Sicily. This alleged colonisation was not in the region of the Syrtis (unlike the attempt of Dorieus), but much further, to the west of Carthage, and was eventually stifled by Carthaginian opposition (Mazzarino (1947) 117–20; at length, Treidler (1959)). This is a possibility, but the evidence for it is limited to two passages in literary sources, and there is as yet no archaeological or other confirmation.

(1) Hecat. fr. 343 = Steph. Byz. 389.13–14 mentions a place called Kybos on the coast of North Africa which he describes as a *polis* of the Ionians: *Κύβος· πόλις Ἰώνων ἐν Λιβύῃ Φουνίκων. Ἐκαταίος Περιηγήσει αὐτῆς· “καὶ λιμὴν που ἄκρη καὶ Κυβώ”*. The exact location is unknown. There is no further evidence of its existence, and the accuracy of the information is disputed (in favour: Mazzarino (1947) 119; Treidler (1959) 263; against: Gsell (1914) 344–46).

(2) Ps.-Skylax 111, describing the Libyan coast from east to west, writes *Ἀπὸ Ἰτύκης Ἰππου ἄκρα [ῆ] Ἰππων πόλις, καὶ λίμνη ἐπ’ αὐτῇ ἐστι καὶ νῆσοι ἐν τῇ λίμνῃ, καὶ περὶ τὴν λίμνην πόλεις <ἐν ταῖς νήσοις> αἶδε· Ψέγας πόλις, καὶ ἐναντίον αὐτῆς Ναξικαὶ πολλαί. Πιθηκοῦσαι καὶ λιμὴν· κατ’ ἐναντίον αὐτῶν καὶ νῆσος καὶ πόλις ἐν τῇ νήσῳ Εὔβοια*. On the strength of the Greek names, the sites have been interpreted as foundations by Ionian Greeks to the west of Carthage (see Treidler (1959)). But the reliability of the information is far from established, and the use of Greek names to describe far-away places is no guarantee of their Greekness. While Ps.-Skylax is generally accurate in his description of the Greek world, his information about countries remote from the Greek world is of uncertain value,⁷ and in the absence of supporting evidence the question must remain open.

II. The *Poleis*

1. Syria

1022. Posideion Map 68. Lat. 35.50, long. 35.50. Size of territory: 1? Type: A:β. The toponym is *Ποσιδηιον, τό* (Hdt. 3.91.1) or *Ποσειδιον* (Strabo 16.2.8); *Ποσειδειον* at Ps.-Skylax 102 is an emendation of MS *Ποσειθέριον*. No city-ethnic is attested in the full form apart from Steph. Byz. 533.12. The identification of Posideion with Bassit has long

⁶ There is no agreement among ancient writers as to the exact location in Libya of Lake Tritonis (Malkin (1994) 197–203).

⁷ Ps.-Skylax 111 contains a large number of place-names that are unknown from other sources; see the list in Flensted-Jensen and Hansen (1996) 165.

been considered probable from the similarity of name (cf. Riis (1970) 137–38; Courbin (1986) 187–88 and 206–7). Posideion is first mentioned by Hdt. 3.91.1 as a *polis* founded by Amphilochos, son of Amphiaraos, on the borders between the Kilikians and the Syrians—in other words, a foundation that was believed to go back to the Bronze Age, and which Herodotos presented as Greek. Since the C7 poet Kallinos of Ephesos (cited by Strabo 14.4.3) alluded to the settlement of the followers of Amphilochos in Kilikia and Syria as far as Phoinike, it is probable that the story of the foundation of Posideion by them was already in circulation by his time. Courbin (1986) 194 suggests that the story does not reflect an actual Greek settlement of the late Bronze Age, for which there is no archaeological confirmation, but was invented in C8s as a legitimation for the Greek presence at the site which begins at that time. For Greek heroic legends connected with the Levant cf. Riis (1970) 137–42. Strabo mentions Posideion at 16.2.8 and 12, where it is called a *πολίχμιον*, while Steph. Byz. 533.12 refers to it as a *polis* for which he gives the ethnic *Ποσειδειεύς*, though this information may be merely constructed from Herodotos.

Archaeological evidence has shown that Ras el Bassit had a continuous existence through to Hellenistic and Roman times, but it clearly was in origin a Levantine site to which the Greeks came late (C8s), and which in the Archaic and Classical periods was not purely Greek, though it became a Greek *polis* (Courbin (1986); Perreault (1993) 69–71, though he obscures the character of Posideion as a Greek *polis*). Archaeology has not revealed for this time any public buildings, cultic places or city walls (Courbin (1986) 203). The settlement developed in the Hellenistic period, and there is now evidence of fortifications (Courbin (1986) 206–9). In C3m it is referred to in the Gurob papyrus (*FGrHist* 160 I §3), where it is described as a *φρούριον*. It is also mentioned by Diod. 34/35.28.1, 2 (r123), though without indication of its character.

Posideion struck coins of silver (drachm on the Attic standard) and bronze in C4s. Only a few are known, identified by the legend *ΠΟΣΙΔ* or *ΠΟΣΙΔΕ* on the reverse. The types are: *obv.* seated deity (Baal of Tarsos); *rev.* head of a Kabeiros or Poseidon with trident (Head, *HN*² 785; Courbin (1986) 205–6; Le Rider (1986) 400–3).

2. Egypt

1023. Naukratis (Naukratites) Map 74. Lat. 30.55, long. 30.35. Size of territory: unknown. Type: A:β. The toponym is *Ναύκρατις*, ἡ, attested on dedications at Naukratis of C6

(Bernand (1970), 683 no. 419, 744–45 no. 5; Lazzarini (1976), nos. 175, 177c), in Herodotos (2.97.2, 135.5, 178.1, 179) and on a Rhodian proxeny decree (*Lindos* II no. 16.4–5 (C5l)), and frequently thereafter. The city-ethnic is *Ναυκρατίτης*, doubtfully restored on a C6 vase dedication (Bernand (1970), 708 no. 670), and first securely attested on an Attic tombstone dated to C5l (*IG* II² 9984). There are further examples on inscriptions of C4, at Athens (*IG* II² 163.1 (C4f), 206.7–8, 20 (C4m), 9985–87 (C4f)), at Delphi (*CID* II 4.1.37, III.21, 24, II 10 fr. B.1, 3, 5), and at Ephesos (*I.Eph* 1424.1 (323–321)). The form [*N*]αοκρατίτης is also found (*I.Eph* 1425.1 (323–321); on the date, cf. Keil (1923) 238–39, 244). Steph. Byz. 470.12–15 also mentions the form *Ναυκρατιώτης*, but there is no attestation of this.

The external use of the city-ethnic is found collectively in the Delphic *naopoioi* accounts (*CID* II 4.1.37 (360s)) and individually in Attic sepulchral inscriptions (*IG* II² 9587–89 (C4f)). An early literary example of the non-political use of *Ναυκρατίτης* is in Anakreon (fr. 89, Page *PMG*; Campbell, *Greek Lyric* II (1988) 106 no. 434). Literary examples of the city-ethnic in the political sense are all post-Classical. For example, Plutarch introduces ὁ *Ναυκρατίτης Νειλόξενος* in a C6 context (*Mor.* 146E), allegedly an intimate of Solon and Thales in Egypt (cf. also repeatedly in Athenaios, himself a Naukratite, e.g. 3.73A, 4.149D).

Naukratis was without doubt a *polis* in the period after Alexander: an honorific decree of probably C2f was passed by ἡ πόλις ἡ *Ναυκρατιτ[ῶν]* (*OGIS* 120; Bernand (1970) 751–72 no. 15), and later writers assume that it was a *polis* that had been founded in the same way as others in the Archaic period (Strabo 17.1.18; Steph. Byz. 470.12–15 citing Strabo; Suda s.v. *Ναύκρατις*). But whether it can be reckoned to have been a *polis* in the Archaic and Classical periods continues to be debated (for Naukratis as a *polis* cf. Roebuck (1951), followed by Sherk (1992) 259–60 and 268–69; Austin (1970) 29–33; Hansen (1997a) 91–94, (1997b) 29, 32–33; against: Bresson (1980); Bowden (1996) 29–30).

Herodotos is the earliest author to call Naukratis a *polis* already in C6 (2.178.1): *Φιλέλλην δὲ γενόμενος ὁ Ἄμασις ἄλλα τε ἐς Ἑλλήνων μετεξέτερος ἀπεδέξατο καὶ δὴ καὶ τοῖσι ἀπικνεομένοισι ἐς Αἴγυπτον ἔδωκε Νάυκρατιν πόλιν ἐνοικῆσαι*. There may be a very indirect reference to Naukratis as a *polis* in 2.180.2, where the Delphians visit the *poleis* and receive contributions from Amasis and from “the Greeks living in Egypt”, a reference which must include Naukratis (compare the same phrase in the Rhodian decree *Lindos* II cols. 212–14, referring to Naukratis). It has been questioned whether Herodotos is

using the word *polis* strictly (Bresson (1980) 292–93; Bowden (1996) 29–30), but he is otherwise consistent in applying the word to Greek communities that were *poleis* in the political as well as the urban sense (Hansen (1996b) 23–34, 39–54). Inscriptions of the Classical period provide conclusive evidence from the use of the city-ethnic *Ναυκρατίτης*, found on tombstones of metics in Athens (*IG II² 9984–87* (C51–C4)), in a proxeny decree from Delphi for Naukratites (*F.Delphes III.1 419* (C4f?)), from two Athenian proxeny decrees for Naukratites (*IG II² 163.1* (C4f), 206.7–8, 20 (349/8)), and from two decrees from Ephesos granting citizenship to Naukratites (*I.Eph 1424, 1425*). Furthermore, in the Delphic *naopoioi* accounts the Naukratitai are listed as a community under the heading *πόλεις καὶ ἰδιῶται* (*CID II 4.I.37, 4.III.21, 24, 10 fr. B.1, 3, 5* (369–363)). It has been denied that these ethnics indicate political status as opposed merely to place of origin (Bresson (1980) 316–17, 332 no. 84; Bowden (1996) 30), but this is not consistent with the evidence for ethnics on Attic tombstones or for the institution of the proxeny (Hansen (1996a) 184–85, cf. 177–80; Hansen (1997a) 91–94). Note also the notorious Kleomenes of Naukratis, appointed as financial official in Egypt by Alexander in 332/1 (Berve (1926) no. 431), who is described as *Ναυκρατίτης* by Ps.-Callisthenes 1.31, though only as *ἐκ Ναυκράτιος* at Arr. *Anab.* 3.5.4.

Naukratis was an unusual community in a special position. Established by a multiplicity of different Greeks as an enclave within Egyptian territory, on the eastern side of the Canobic branch of the Nile, and some 70 km from the sea (cf. Bernard (1970) 615–25 on its position), it was dependent for its existence and prosperity on the continued good will of the rulers of Egypt, from the pharaohs to the Romans. It could not engage in any independent political activity, and if it was a *polis* already in the Archaic and Classical periods, it belonged to the category of *poleis* that were dependent (Hansen (1997b) 29, 32–33).

Uncertainty also surrounds the exact role of Miletos (no. 854) in the early history of Naukratis. Post-Classical evidence unanimously attributes the “foundation” of Naukratis (if “foundation” is an appropriate concept; cf. Austin (1970) 22; Malkin (1987) 130–31) to Miletos exclusively. This applies not only to the literary sources (Strabo 17.1.18; Eusebios, ed. Schoene, ii. 81; Steph. Byz. 470.12–15; Suda s.v. *Ναύκρατις*), but also to epigraphic evidence from Miletos itself, which reproduces a version of events traceable to the Hellenistic period (Austin (1970) 22 and n. 5). The Milesian origin of Naukratis has often been accepted (Lloyd (1975) 24–25; Braun (1982) 37–38; Ehrhardt (1983) 87–90, 119 (in a qualified

form); Haider (1988) 184–99, 211; Sherk (1992) 259–60 and 268–69), but this does not harmonise with the more complex account of Herodotos, which does not give any specially prominent role to Miletos in the origins of Naukratis. There is thus a case for regarding this tradition as a construct of the Hellenistic period (Austin (1970) 23, followed by Bresson (1980) 315–16). Ehrhardt (1983) 89–90 and 119 argues for Milesian participation in the “foundation” of Naukratis from the Milesian calendar of Antinoopolis which derived its laws from Naukratis (Wilcken (1912) no. 27), but it is not certain how far back these date (cf. Bowden (1996) 25–26).

Nothing is known of the territory of Naukratis, if indeed it had a territory of its own beyond the area of urban settlement with its sanctuaries, houses and workshops, to the north of the Egyptian town and covering an area of c.800 m from south to north and 400 m from west to east (Bernard (1970) 857–63; on the question of Naukratis’ territory cf. Bresson (1980) 325 n. 12; Boardman (1994) 140; Bowden (1996) 30–31).

Hdt. 2.178–79 appears to present Naukratis in C6 as a double community, at once a *πόλις* and an *ἐμπόριον* (cf. Austin (1970) 29–30; Malkin (1987) 130–31; Hansen (1997a) 91–94), which comprised a *polis* of residents on the one hand, and non-resident traders who were not part of the *polis* on the other. The latter included the founders of the Hellenion: viz. the Ionian cities of Chios (no. 840), Teos (no. 868), Phokaia (no. 859) and Klazomenai (no. 847), the Dorian cities of Rhodos, Knidos (no. 903), Halikarnassos (no. 886) and Phaselis (no. 942), and the Aeolian city of Mytilene (no. 798). According to him, these had the exclusive right of appointing the *προστάται τοῦ ἐμπορίου*, whose precise functions cannot be defined (Roebuck (1951); Bresson (1980) 311–15; Sherk (1992) 268–69; Bowden (1996) 32–34). Roebuck (1951) argued that the *prostatai* must have been appointed by the traders on the spot, and not by the Greek cities at home, as stated by Herodotos; but see Bresson (1980) 311–15.

Late evidence mentions the existence of a *πρυτανεῖον* where communal festivals were celebrated on the birthday of Hestia Prytanitis, at the Dionysia and at the *πανήγυρις* for Apollo Komaios (Miller (1978) 11, 12–13, 16, 199–200; Bresson (1980) 344 n. 161), and officials called *τιμούχοι* (Gottlieb (1968) 28–30) had the power to inflict fines on offenders (Ath. 4.149D–E, citing Hermeias *FHG II* 80–81). The identity and date of Hermeias, Athenaios’ source, are uncertain, and he need not be identical with the C4 historian Hermeias of Methymna (*FGrHist* 558). It is therefore not

clear whether this evidence can be projected back to the Classical or the Archaic periods (as by Sherk (1992) 259–60 and 268–69; Hansen (1997*a*) 92, (1997*b*) 33).

According to Herodotos the Hellenion, founded jointly by several Greek cities of Asia Minor, was the largest, best-known and most frequented of the sanctuaries at Naukratis. He also mentions (2.178.2) separate foundations of a sanctuary of Zeus by the Aiginetans (no. 358), one of Hera by the Samians (no. 864), and one of Apollo by the Milesians (no. 854). Excavations have to some extent confirmed and supplemented this evidence, though important areas of uncertainty persist. On the basis of the numerous inscribed dedications on vases (cf. Lazzarini (1976) 177, index p. 326), remains of all the sanctuaries mentioned by Herodotos have been identified, except for that of Zeus founded by the Aiginetans (Bernand (1970) 817–49; Boardman (1980) 118–29; though cf. Bowden (1996) esp. 18–28 for a sceptical view, doubting the identification of the Hellenion and the sanctuary of Hera). Dedications to Apollo, sometimes specifically described as Milesian, are the most numerous to have survived (Bernand (1970) 772 for comparative figures). Another sanctuary, of Aphrodite and probably founded by Chios (no. 840), is not mentioned by Herodotos, though from its position in the south of the town it is likely to have been the earliest to be founded (Bernand (1970) 829–37; Boardman (1980) 119–20; Bresson (1980) 313–14). Extant dedications to Aphrodite are second in importance to those to Apollo, and late evidence tells of the popularity of the cult in early times, allegedly already in the Twenty-third Olympiad, i.e. 688–685 (Ath. 15.675F–76C from Polycharmos (*FGrHist* 640) fr. 1; Bernand (1970) 772, 774, 829–37). Later evidence (above) also mentions cults of Hestia Prytanitis, Dionysos and Apollo Komaios. The archaeological evidence has thus not revealed the existence of any civic sanctuaries distinct from those set up by the traders themselves, and they seem to have been used by all members of the community on the spot (cf. Burkert (1995) 206). Without exception the remains of all the sanctuaries are poorly preserved. Excavation has not revealed either the existence of any city wall. Civic architecture (*α πρυτανείον*) is implied by later literary evidence (Ath. 4.149D–F; see *supra*), but it has not been located (cf. Bernand (1970) 857–63 on Naukratis as a town). Little is known of the Egyptian part of the town to the south, and the archaeological evidence was interpreted in different ways by the excavators themselves (Bernand (1970) 849–57). It has even been argued that the Greeks may have been the first to settle at Naukratis (Boardman (1994) 139; cf. Möller (2000)). The sanctuaries

of Naukratis remain the best-known part of a badly known site.

Only a few isolated bronze coins of Naukratis survive (Head, *HN*² 845). Type: *obv.* wreathed female head (Aphrodite?), legend underneath *ΝΑΥ*; *rev.* unidentified wreathed head, legend underneath *ΑΛΕ*. The coins thus date from the time of Alexander the Great (not earlier than 332/1).

1024. Oasis Not in *Barr.* Type: *A.a.* The toponym is *ἸΟασίς* (Hdt. 3.26.1) and the site is classified as a *πόλις* in the urban sense (*ibid.*). Herodotos is the only writer to allude to this settlement. He describes Oasis as lying 7 days' journey from Egyptian Thebes and being occupied by Samians said to be of the "tribe" Aischrione (cf. Chamoux (1953) 63–66; Jones, *POAG* 195 on Herodotos' probably non-technical use of the word "tribe"). On the other hand, he may be correct in describing the settlement as a *polis*.

3. *Libya*

1025. Barke (Barkaios) Map 38. Lat. 32.30, long. 20.55. Size of territory: 4 or 5. Type: *A:a.* The toponym is *Βάρκη*, *ἡ* (Hdt. 3.91.2, 4.160.1; Ps.-Skylax 108; Diod. 1.68.2 from Hekataios of Abdera (*FGrHist* 264) fr. 25; testimonia in Purcaro Pagano (1976) 330–31). Hrd., *De prosodia catholica* 3.1 272.16–17 and Steph. Byz. 159.11 both state that it was also called *Βάρκαια*, though this is not attested otherwise. The city-ethnic is *Βαρκαῖος* (Hdt. 3.13.3, 4.164.4; Ps.-Skylax 108; Polyaeus. 7.28.1 (rC5e)), sometimes *Βαρκαίεύς* (*BGU* vi 1280.10, x 1943.5, 25 (Ptolemaic)). Steph. Byz. *loc. cit.* also gives *Βαρκαιάτης*, for which there is no known example.

In C₃, in the reign of Ptolemy III, the harbour of Barke was renamed Ptolemais and elevated to the status of a *polis*, while Barke itself was subordinated to Ptolemais (see *supra*). But the use of the name Barke survived, as shown by references in post-Classical authors (e.g. Strabo 17.3.20, 21; Plin. *HN* 5.32) and by documents (*P Lond.* vii 1986 r 4, 13, 17 (C₃); cf. Laronde (1987) 396–97).

The earliest references to Barke as a *polis* are in Herodotos, who uses the word in various senses. In 4.160.1 and in 4.202.2 he uses it primarily in the political sense. In 4.200.1–2 and 203.2 he refers to it in the urban sense, emphasising that Barke was a Hellenic *polis*. Ps.-Skylax 108 uses the word in the urban sense. Strabo, who at 17.3.20 implies that Barke was a *polis*, describes her at 17.3.21 as one of several *πολίχνια* that were *περιπόλια* of Kyrene (no. 1028). Hdt. 4.201.3 refers to the *ἄστυ* of Barke.

The collective use of the city-ethnic is attested internally on coins (*infra*), and externally in Hdt. 3.13.3 (and repeatedly in 4.167.2 and 200–5). For the individual and external use of the city-ethnic see *I.Délos* 1 298 A.61, 313 a.51 (C3s).

The territory is called *Βαρκαίη* (Hdt. 4.171). Its exact extent is not known, and fluctuated at different periods. It was certainly large and second in size only to that of Kyrene, though less well-watered (cf. Laronde (1987) 49–51 for a comparison with Kyrene, 259–60 on climate and rainfall). It reached to the sea, where its harbour lay some 30 km away to the east, and in C5 its control extended along the coast westward over Taucheira (no. 1029) (Hdt. 4.171 where Taucheira is described as *πόλις τῆς Βαρκαίης*), though Taucheira seems to have recovered its independence subsequently (Laronde (1987) 62–63). Ps.-Skylax 108 refers to the control exercised by Barke westwards as far as Eu(h)esperides (no. 1026) (cf. Laronde (1987) 200–2).

Founded by brothers of Arkesilas II of Kyrene in conflict with him (Hdt. 4.160.1), Barke was from the start in opposition to Kyrene and frequently followed a different political line (Laronde (1987) 49, 211, 252). C.514 a Persian expedition invited by Pheretima, mother of Arkesilas III (Hdt. 4.165, 167), captured Barke after a siege and exposed the city to an *andrapodismos* (Hdt. 4.203.1, 204) in which she executed the opponents of the Battiads and enslaved a large part of the population (Hdt. 4.200–2). They were deported to Bactria by Darius and settled in a village to which they gave the name Barke, which was still inhabited in Herodotos' time (4.204). The population of Barke must have recovered subsequently, since Barke enjoyed a period of prosperity in C5, as shown by its abundant coinage, though after the second quarter of C4 she was eclipsed by Kyrene (Laronde (1987) 49–50, 162). C.390–386 Barke was in alliance with Evagoras of Salamis (no. 1020) and King Akoris of Egypt against the Persians (Theopomp. fr. 103; *Staatsverträge* 237). Together with Eu(h)esperides, Barke was in alliance with Thibron in his war with Kyrene in 322 (Diod. 18.20.3; cf. Laronde (1987) 41, 63). A league of the Greek cities in Libya has been postulated on the basis of a passage in the "Stele of the ΣΥΛΛΑ" (*SEG* 20 716.8 (C4s); Laronde (1987) 150), but the evidence is not cogent (Laronde (1987) 156–57).

Little is known of the constitution and cults of Barke, though it is likely to have adopted many of the institutions of Kyrene. In the Bacchiad period Barke is mentioned as having been under a *basileus* of the name of Alazeir (Hdt. 4.164.4). The account in Polyae. 7.28 of the siege of Barke at the time of the Persian Wars (Chamoux (1953) 164–65) mentions the *archontes* of Barke, but without specific detail. In

the Classical period Barke was probably oligarchic in character. An eponymous priest of Apollo is attested at Ptolemais (Barke) in the Roman period, and may have derived from Kyrene in earlier times (Sherk (1992) 271–72).

Barke may have been named in a catalogue of *theorodokoi* of the Heraia at Argos (no. 347) (*SEG* 23 189 (c.330), 1 ll. 16–19; Laronde (1987) 161–62, though cf. Charneux in *BE* (1988) no. 595). Amasinus of Barke won the wrestling match at Olympia in 460 (*Olympionikai* 261).

In his account of the siege of Barke by the Persians, Herodotos mentions the city wall which the Persians tried unsuccessfully to sap before they entered the city by a ruse (4.200–2). In the other Persian siege of Barke at the time of the Persian War the city gates are mentioned again (Polyae. 7.28; cf. Chamoux (1953) 164–65). Little is known as yet of the archaeology of the site (Boardman (1966) 153).

The coinage of Barke (mostly silver except for a scarce bronze coinage at the end of C4) developed along the same lines as that of Kyrene, and went through three main periods: c.525–480, c.480–435 and c.435–308, (see *BMC Cyrenaica* pp. clxiv–clxxxvii and 91–106; cf. also Laronde (1987) 51–52).

At first Barke coined in silver on the Attic standard (tetradrachms, didrachms, fifths, later also tenths). Types: *obv.* silphium plant and/or fruit; *rev.* bull with palm tree, or ram's head, then head of Ammon as the most frequent type, legends sometimes *BAPKAION* but mostly abbreviated, sometimes down to *B*. In the third period Barke switched to the Asiatic standard (tetradrachms, drachms, hemidrachms and fractional denominations). Types mostly: *obv.* silphium plant; *rev.* head of Ammon, same legends. A number of coins now bear magistrates' names as well, and a few invert the obverse and reverse types.

Some silver issues of C5s have been described as "alliance" coinages, in that they bear the city-ethnics of Kyrene (no. 1028) on the obverse and Barke on the reverse, or Taucheira (no. 1029) on the obverse and Barke on the reverse. The presence of the city-ethnic of Barke on the reverse suggests that Barke was at the time the predominant partner, which corresponds to the implications of Hdt. 4.171 for Taucheira, but the precise historical circumstances are not known (see *BMC Cyrenaica* pp. xliiv–xlvii and 107–8).

1026. Eu(h)esperides (Eu(h)esperites) Map 38. Lat. 32.07, long. 20.05. Size of territory: ? Type: A:a (testimonia in Purcaro Pagano (1976) 331, 335). The toponym is *Ἐὐεσπερίδες* (Hdt. 4.171; Theophr. *Hist. pl.* 4.3.2, 6.3.3, 8.6.6; *SEG* 9 76.6 and Tod 203 (C4s); Steph. Byz. 284.19–21) or *Ἐσπερίδες*, *αἱ* (Ps.-Skylax 108–9; Heracl. Lemb. 17;

Theotimos of Kyrene (*FGrHist* 470) fr. 1 (C2); Strabo 10.2.18). Steph. Byz. 282.16–17, who draws attention to the two forms of the name, does not mention the form *Ἐσπερίδες*, but gives the alternative form as *Ἐσπερίς* (cf. *SEG* 9 362.7 = *CEG* II 680.6 (C4)). Similarly the city-ethnic is found in both forms, *Ἐὐεσπερίτης* (Hdt. 4.198.3; Thuc. 7.50.2; Diod. 4.56.6 = Timaios (*FGrHist* 566) fr. 85 §6; *CID* II 26.4–7; cf. Laronde (1987) 148) and *Ἐσπερίτης* (Diod. 18.20.3; *BGU* x 1946.14, 1956.5, 1958.11 (all C3); *SEG* 9 362.1 (C4) has the feminine form *Ἐσπερίτις*). A C4s proxeny decree has the form *Ἐὐσπερίτης* (*SEG* 18 772.5). *Ἐὐεσπερίδες* and *Ἐδεσπερίτης* are first attested in C5 in literary sources and (in abbreviated form) on the coinage, while *Ἐσπερίς* and *Ἐσπερίτης* are not found till C4 but become common thereafter.

The earliest reference to Eu(h)esperides as a *polis* is in Ps.-Skylax 108, where it is described as both a *polis* and a *λιμὴν*. There is no doubt that it was a *polis* in C5 and probably from the time of its foundation, as shown by the use of the city-ethnic in Hdt. 4.198.2 and Thuc. 7.50.2 and later writers (Diod. 18.20.3; Paus. 4.26.2–3, 5), the coins it issued, which bear the city-ethnic, and from the historical record which shows it involved in active warfare with its Libyan neighbours (Thuc. 7.50.2; Paus. *loc. cit.*). It is called *patra* (= *patris*) in *SEG* 9 362.7 (C4).

The collective use of the city-ethnic is attested internally, mostly in an abbreviated form, by coins of Eu(h)esperides, and externally in literary sources (Hdt. 4.198.3; Thuc. 7.50.2). The external individual use is found in *SEG* 9 362.1 (C4).

Colonists were sent to Eu(h)esperides by Arkesilas IV, i.e. in C5f (Theotimos of Kyrene (*FGrHist* 470) fr. 1 (C2); Chamoux (1953) 173–75), but the city had been founded well before this. Pottery dating to C6f has been found (Boardman (1966) 155–56; Vickers and Gill (1986), who leave the chronology open), and Eu(h)esperides is first mentioned c.514 during the Persian expedition to Libya (Hdt. 4.204). Though founded from Kyrene (no. 1028), it was often in conflict with its mother city. In C4s there is a dedication to Apollo at Kyrene by the *strategos* Aristis for victories won at sea, one of them ἐν Ἐὐεσπερίδεσσι (*SEG* 9 76.6 and Tod 203; Laronde (1987) 66–69).

In C3 under Ptolemy III the site of Eu(h)esperides was abandoned and moved nearly 3 km to the coast; the new city, fortified from the start, was renamed Berenike, a name which supplanted the original one (Steph. Byz. 164.6–9; Laronde (1987) 382–96). Strabo, who mentions Berenike several times, does not refer to the refoundation and renaming of the old city, which he does not name explicitly (17.3.20, 21).

The exact extent of the territory of Eu(h)esperides is not known, though it was certainly more restricted than that of Kyrene (no. 1028) or even Barke (no. 1025). Hdt. 4.198.3 probably exaggerates the fertility of the land. Eu(h)esperides was frequently in conflict with neighbouring Libyan tribes and welcomed support from Greeks of the mainland (Thuc. 7.50.2; Paus. 4.26.2–3; cf. Chamoux (1953) 226–27, 230; Laronde (1987) 27, 52).

Together with Barke, Eu(h)esperides was in alliance with Thibron in his war with Kyrene in 322 (Diod. 18.20.3; cf. Laronde (1987) 41–42, 49, 63, 211). For the alleged C4 league of Greek cities in Libya, see *supra* under Barke (no. 1025).

The political institutions of Eu(h)esperides probably reproduced those of her mother city Kyrene, though little detail is known. A proxeny decree for two Syracusans of C4s shows the existence of *ephoroi* and *gerontes* who introduce motions to the *boule* (*SEG* 18 772.1–2; cf. *SEG* 41 1693). In the Classical period the constitution was probably oligarchic in character.

Little is known of the cults of Eu(h)esperides, beyond a dedication to Apollo of C4 (Laronde (1987) 394) and a C4 relief in honour of four local heroes (*SEG* 9 769; Chamoux (1953) 279; Laronde (1987) 390 fig. 141 and 411 n. 101). In the Roman period Eu(h)esperides had an eponymous priest of Apollo (*SEG* 28 1540 (62–61); cf. Sherk (1992) 271–72), and this was probably derived from the institutions of Kyrene (no. 1028).

It is not clear whether Eu(h)esperides was named in a catalogue of *theorodokoi* of the Heraia at Argos (no. 347) (*SEG* 23 189 (c.330) I ll. 16–19; Laronde (1987) 161–62; Charneux in *BE* (1988) no. 595).

The urban planning seems to fall into two major phases, the first of C6e in the northern part of the site, the second, to the south and more large-scale, completed by C4e. The southern part of the city, unlike the earlier northern part, was laid out on a Hippodamian grid plan with space for an agora in the centre of a residential area. It dates from C4e, as do the extant parts of the city wall. The area enclosed by the city walls has been estimated as c.21 ha at its maximum extent. Eu(h)esperides was besieged by the Libyans in 413, which shows that the city was fortified by then (Thuc. 7.50.2); recent excavations have revealed a stretch of a fortification wall of 1.5 m width and a possible square tower, probably dating to C7l–C6e (Buzaian and Lloyd (1996) 143–46). Because of silting, the harbour had to be moved westward away from the urban settlement by C4, as shown by the distinction drawn by Ps.-Skylax 108 between the city and the port. The site has yielded sherds dating from C6e

onwards (see Goodchild (1952*b*) 210–11; Jones and Little (1971) 65–67; Jones (1985) 28–33 with figs. 3.1–3; Lloyd (1985) esp. 51–53 with figs. 5.1 and 5.2; Laronde (1987) 389–90 and fig. 142).

Eu(h)esperides struck coins intermittently from C5e (C5m according to Buttrey (1994) 137), mostly silver on the Asiatic standard except for some bronze issues of C4l, and its coinage follows the same lines as those of Kyrene and Barke, though it was never abundant (see *BMC Cyrenaica* pp. clxxxviii–cxcvii and 109–12). Types: *obv.* silphium plant; *rev.* dolphin, then head of Ammon, legends *EY*, *EYΞ* (a tetradrachm has the full legend *EYΞΠΙΕΠΙΤΑΝ*). Other denominations: didrachm, drachm and hemidrachm.

Some silver issues of C5s have been described as “alliance” coinages, in that they bear the city-ethnics of Eu(h)esperides on the obverse and that of Kyrene (no. 1028) on the reverse. This suggests that Kyrene was at the time the predominant partner, and contrasts with the apparently subordinate position of Kyrene in relation to Barke (no. 1025) at the same period (see *BMC Cyrenaica* pp. xli–xlvi).

1027. Kinyps Map 35. Lat. 32.35, long. 14.30. Size of territory: ? Type: A:a. The toponym is *Κίνυψ*, -υπος or -υφος, ἡ (Hdt. 4.198.1; Ps.-Skylax 109). No city-ethnic is attested. Kinyps is called a *polis* by Ps.-Skylax 109.

In about 512, Dorieus, half-brother of King Kleomenes of Sparta (no. 347), led a band of followers to found a new settlement. He sailed first to Libya and settled in the land of Kinyps (some 18 km to the east of Lepcis Magna; cf. Hdt. 4.175.2, 198.1–2 on the reported fertility of its territory), though he was expelled after two years by the Libyan Maces and the Carthaginians (Hdt. 5.42.2–3; cf. Chamoux (1953) 162–63; Malkin (1994), 192–203). Ps.-Skylax 109 refers to Kinyps as a *πόλις ἔρημος*, which may simply be a mistake on his part (cf. Flensted-Jensen and Hansen (1996) 151–53, cf. 160). It is possible, however, that he is referring to the ruins of the short-lived settlement by Dorieus, which may still have been extant in C4 (Müller *GGM* I p. 85).

1028. Kyrene (Kyrenaios) Map 38. Lat. 32.50, long. 21.52. Size of territory: 5. Type: A:a (some literary testimonia in Purcaro Pagano (1976) 339). The toponym is *Κυρήνη*, ἡ (Hdt. 2.181.4–5; Thuc. 1.110.1), Doric *Κυράνα* (Pind. *Pyth.* 4.2; ML 5.6).⁸ The city-ethnic is *Κυρηναίος* (Hdt. 2.32.1; *IG* II² 9124 (C4)), feminine *Κυρηναία* (*IG* II² 9136 (C4)). The Doric form *Κυραναίος* seems to be attested only on inscriptions and coins (*CID* II 4.111.11 (363); *BMC Cyrenaica*).

⁸ Alone of the Greek cities in Libya, Kyrene preserved her original name throughout. On the name cf. Chamoux (1953) 126–27, and 275–77.

Kyrene is first referred to as a *polis* in Pind. *Pyth.* 5.81 of 462, then in Hdt. 4.156.3, 164.3, 203.1. Pindar uses the word in the political sense. Herodotos uses the word in the urban sense at 4.164.3 and 4.203.1, and in the territorial sense at 4.156.3. Pindar refers to the *ἄστυ* of Kyrene in *Pyth.* 4.260–61, as does Hdt. at 2.181.5 and 4.203.1. The first epigraphic attestations of Kyrene as a *polis* are in C4, all of them in the political sense: ML 5.3; *Tit. Cam.* 105.10–11; *SEG* 20 716.6, 15; Tod 196.2 (330–326). *Patris* is found in *CEG* II 850 (c.335) and *patra* (= *patris*) in Pind. *Pyth.* 9.74.

The collective use of the city-ethnic internally is attested by the reverse of coins. The collective use of the city-ethnic externally is attested by several dedications (*SGDI* 4838) (Archaic); Paus. 10.13.5 (rC5); 10.15.6 (rC5m)). The individual external use is frequently found, e.g. in Attika (*IG* II² 9124, 9136–39; tombstones (C4)), and at Oropos (no. 214) (*IG* VII 414.11 (366–338)).

Starting from very modest beginnings (Hdt. 4.153, 156.2), the population of Kyrene grew rapidly to become the largest of the Greek cities of Libya. Hdt. 4.160.3 gives a figure of 7,000 hoplites killed at the battle fought by Arkesilas II against Barke (no. 1025) and the Libyans. The *diagramma* of Ptolemy I in 322/1 defines a citizen body referred to as the “Ten Thousand”, which was to replace a narrower body of 1,000 (*SEG* 9 1.6–15, 35 and *passim* (cf. *SEG* 18 726)). The total population of Kyrene, city and countryside included, has been estimated for C4 at around 300,000 (Laronde (1987) 340, 342, discussing earlier estimates; lower estimates in Goodchild (1971) 15). Even on a low figure, Kyrene was one of the most populous Greek states of her time. The original colonists came from Thera (no. 527) c.631 (Chamoux (1953) 120–24), though may have included others as well (cf. Paus. 3.14.3; *Lindos Temple Chronicle* (*FGrHist* 532) §17). In the reign of Battos II they were supplemented by colonists from the Peloponnese and the islands (cf. Hdt. 4.159.2–3, 161.3). Inter-marriage with the Libyans was apparently common from the start (cf. Hdt. 4.186.2; Chamoux (1953) 129), and was recognised in the *diagramma* of Ptolemy I (*SEG* 9 1.2–3). Libyan influence on the Greek settlers is shown in many ways, though relations were ambivalent and ranged from co-operation to hostility (cf. Hdt. 4.158–60 and numerous Libyan wars subsequently; cf. *SEG* 9 1.29), but Kyrene maintained her dominant position as well as her Hellenic character (cf. Chamoux (1953) 129, 223–24; Masson (1976) for the evidence of names).

It is likely that the Kyrenaians were divided from the start into the three Dorian tribes, as were the Theraians (Jones, *POAG* 215–16). Under Battos III, Demonax of Mantinea (no.

281) was called in as arbitrator to settle internal conflicts (Hdt. 4.161.1–2); he redistributed the people into three tribes, making three parts (*moirai*) respectively of Theraians and *perioikoi*, Peloponnesians and Cretans, and all the islanders. This may refer to a redefinition of the composition of the pre-existing tribes, each tribe being composed of one of the three parts Herodotos mentions (cf. Chamoux (1953) 221–24 on the *perioikoi*; Jones, *POAG* 217–18). Alternatively, Demonax may have made each of the three tribes comprise all three parts (Hölkescamp (1993)). Arist. *Pol.* 1319^b1–27 alludes to constitutional changes at Kyrene involving the organisation of the citizen body after the end of the monarchy, but date and details are obscure (Jones, *POAG* 218–19; Laronde (1987) 249–52). The C4 decree on citizenship for Theraians resident at Kyrene specifies their assignment to *phylai*, *patrai* (phratries) and nine *hetairai*, the latter peculiar to Crete and Thera (ML 5.15–16; Chamoux (1953) 214; Jones, *POAG* 219; Hölkescamp (1993) 410–13).

Situated on a well-watered plateau, the territory of Kyrene, called ἡ Κυρηναίη χώρα by Hdt. 4.199.1, was reputed for its fertility and formed the basis of Kyrene's great wealth (Hdt. 4.199; Laronde (1987) 257–323). The land was previously occupied by Libyan tribes, who were gradually pushed out. From early days, Kyrene showed a continuous tendency to expand, through the invitation to new Greek settlers (Hdt. 4.159.2–4; cf. too 4.163.1) and new foundations, as that of Barke (Hdt. 4.160.1). The C4 decree for Theraians in Kyrene assumes the availability of unoccupied land for settlement (ML 5.33), and the *diagramma* of Ptolemy I mentions the establishment of new outposts by Kyrene to the east (described as πόλεις, *SEG* 9 1.4–5; cf. Laronde (1987) 349). The territory of Kyrene thus grew to become probably one of the largest of any Greek *polis*, though its precise extension is conjectural (Laronde (1987) 15). The total area available for cultivation in Greek Libya depended on the rainfall (cf. Laronde (1987) 15–17 and figs. 1–3) and has been variously calculated: even a lower estimate of 16,100 km² corresponds to about three-quarters of the area of the Peloponnese or twice that of Crete (Laronde (1987) 15 and 340). The territory under the direct control of Kyrene consisted of a central inner core measuring about 50 × 35 km, i.e. 1,750 km² (Laronde (1987) 285–93 with fig. 87), where a scattered population depended directly on the urban centre, and further away a zone of nucleated villages (Laronde (1987) 293–313 with fig. 108). About a quarter of the territory of Kyrene was occupied by Libyans (Laronde (1987) 313).

Kyrene claimed a pre-eminent position in Libya as the mother city of the other Greek foundations there (Barke

(no. 1025), Eu(h)esperides (no. 1026), Taucheira (no. 1029)), though she was frequently in conflict with them. The Battiads sought to restore control over Barke after its foundation, and eventually invited Persian intervention to punish the rebellious city (Hdt. 4.164.3–65, 167, 200–4). Arkesilas IV is addressed by Pindar as “king of cities” (Pind. *Pyth.* 5.15); he sent colonists to Eu(h)esperides, which he made into a place of refuge (Theotimos of Kyrene (*FGrHist* 470) fr. 1 (second century AD?); Chamoux (1953) 173–75), and was eventually killed there (Heracl. Lemb. 17 = Arist. fr. 611, Rose). But Kyrene's relationship with the Greek cities in Libya was not translated into constitutional forms. The political interpretation of the so-called alliance coinages of C5s is unclear (see under Barke, Eu(h)esperides, Taucheira). A federation of Greek cities in Libya in C4 has been postulated on the basis of a passage in the “Stele of the ΣΥΛΛΑ” (*SEG* 20 716.8–9; cf. Oliviero *et al.* (1961–62) 273–80), but this seems doubtful (Laronde (1987) 156).

Kyrene maintained from earliest days close relations with the mainland of Greece and the Aegean world (for C4 cf. Laronde (1987) 137–68). But politically she played no part in the major conflicts and alliances of the mainland.

The political and constitutional history of Kyrene divides into two periods: the monarchy down to the end of the Battiads c.440, and the establishment of a republican form of government down to Alexander. The Aristotelian collection of *politeiai* included a *Kyrenaion Politeia* (Heracl. Lemb. 16–17; Arist. fr. 535–38).

Thera (no. 527) at the time of the foundation of Kyrene was herself under a *basileus* (Hdt. 4.150.2–3; Malkin (1994) 113–14), and Kyrene adopted the institutions of her mother city. Hence Battos,⁹ the *oikistes*, was at the same time *basileus*, and founded a hereditary dynasty that lasted eight generations (cf. Hdt. 4.163.2; for the designation *basileus* cf. Hdt. 4.153; Pind. *Pyth.* 4.2, 62, 5.15). The monarch was probably from the start the priest of Apollo (Chamoux (1953) 217–19). Battos the founder received after his death a heroic cult at his tomb in the agora of Kyrene (Pind. *Pyth.* 5.93–95; Leschhorn (1984) 60–72; Malkin (1987) 204–16). As Kyrene grew, the monarch's position was increasingly challenged. In the reign of Battos II a large-scale influx of new settlers changed the political and social balance (Hdt. 4.159). Conflict broke out within the dynasty itself in the reign of Arkesilas II (Hdt. 4.160). This necessitated the intervention in the reign of Battos III of the arbitrator Demonax of

⁹ He is called Aristoteles by Pind. *Pyth.* 5.87 and other sources, a name unknown to Herodotos; on this problem, cf. Chamoux (1953) 95–98; Malkin (1987) 63.

Mantineia. He handed over the powers of the *basileus* to the *demos*, while leaving him only *temene* and priesthoods (Hdt. 4.161.3; Chamoux (1953) 138–42; E. W. Robinson (1997) 105–8). The history of the dynasty thereafter was a long struggle by the rulers (Arkesilas III and his mother Pheretime) to restore their lost power against internal opposition, first with support from the Greek world (Hdt. 4.162–64), then thanks to Persian intervention (Hdt. 4.165, 167, 200–5; Austin (1990) 301–2). Arkesilas IV was eventually killed at Eu(h)esperides, and the monarchy came to an end c.440 (Chamoux (1953) 202–9; cf. Bacchielli (1985)).

The government which followed was classified as a “democracy” by Arist. *Pol.* 1319^b15–27 and Heracl. Lemb. 17, Arist. fr. 611, Rose); however, according to Laronde (1987) it was more likely republican in character (27), though dominated by a wealthy aristocracy (129–36). There were further internal conflicts down to the age of Alexander (cf. Diod. 14.34.3–6 (401); Arist. *Pol.* 1319^b1–27; cf. Laronde (1987) 249–56). From the evidence of some inscribed sherds it seems possible that Kyrene used the institution of ostracism in C51 (Bacchielli (1994)). In 331 Kyrene sent an embassy to Alexander to ask for his friendship (Diod. 17.49.3; Curt. 4.7.8; Laronde (1987) 28–30, 35–36). After his death the mercenary captain Thibron intervened at the invitation of exiles (Diod. 18.19–21; App. (*FGrHist* 156) fr. 9 §§16–19; Laronde (1987) 41–84). His defeat and death eventually provoked the intervention of Ptolemy I, who imposed a settlement on Kyrene, recorded in a long inscription (the *diagramma*) of probably 322/1 (*SEG* 9 1) which sheds much light on the constitution of Kyrene before this time.

After the end of the monarchy, the priesthood of Apollo became an eponymous magistracy (cf. *SEG* 9 11–13 etc.; Chamoux (1953) 217, 301–2; Sherk (1992) 270–72). The *diagramma* of Ptolemy I specifies a minimum age of 50 (*SEG* 9 1.25; list of known priests in Oliviero *et al.* (1961–62) 359–75). The *temene* of the monarchy probably then became public property, administered by a body of three *damiergoi* whose functions are illustrated by a series of inscriptions of C4–C2 (*SEG* 9 11–44; Laronde (1987) 156–57, 325–34; Chamoux (1988); Sherk (1992) 270–72). A body of 101 *gerontes* is first attested in 322/1 (*SEG* 9 1.20–23). They are found also in a proxeny decree of Eu(h)esperides of C4s (*SEG* 18 772.1–2; cf. *SEG* 41 1693), and are likely to have existed in some form since the early history of Kyrene. A building of C4 on the west side of the agora has been identified as the chamber for their meetings (Laronde (1987) 176–77; but see Goodchild (1971) 98). *Ephors* are likely to have existed from an early date, as part of Kyrene’s Thera–Spartan inheritance

(Chamoux (1953) 214–16). Heraclid. Pont. (*FHG* II 212; Arist. fr. 611.115–17, Rose) mentions their judicial powers. They were five in number in 322/1 (*SEG* 9 1.33; cf. 82–84). *Strategoï* are first attested in C4 by dedications put up by them (*SEG* 9 76, 77; Laronde (1987) 52–53 with fig. 10, 66–69, 104, 178, 199, 207). Lists of soldiers of C4 also mention *lochagoï* (*SEG* 9 46.13, 49.1–2, 50.32, 51; Laronde (1987) 131–34). Kyrene is likely to have had a *boule* in addition to *gerontes* and *ephors* (cf. Eu(h)esperides). Pheretime, the mother of Arkesilas III, is presented by Hdt. 4.165.1 as sitting in the *boule*, but the reference could be to the *gerousia* (cf. Chamoux (1953) 216). A stoa built in C4 in the north-west corner of the agora has been identified as a chamber for the meetings of the *boule* (Stucchi (1975) 65; cf. Laronde (1987) 175–76). A *boule* of 500 men appointed by lot and over the age of 50 is specified in 322/1 (*SEG* 9 1.16–19, 34–35). An assembly of the people is presupposed as existing already at Thera in C7 in the *Oath of the Founders* (ML 5.24), but this may be anachronistic. The C4 decree on citizenship for Thera was passed by the *demos* (ML 5.11; cf. Laronde (1987) 250).

Kyrene was almost certainly named in a C4 list of *theorodokoi* for the Argive *Heraia* (*SEG* 23 189 (c.330) I ll. 16–19; Laronde (1987) 161–62; Charneux in *BE* (1988) no. 595). In C51 a citizen of Kyrene was granted *proxenia* by Athens (no. 361) (*IG* II² 174). Competitors from Kyrene were very prominent in the major Panhellenic festivals (Pind. *Pyth.* 4, 5, 9 for the Pythian Games, with Chamoux (1953) 169–201; Paus. 6.12.7 for the Isthmian Games; *Olympionikai* 194, 257, 268, 269, 347, 421, 423, 428, 430, 442, 508, 990 for the Olympic Games; and see generally Laronde (1987) 146–47). In C41, the city dedicated a treasury at Delphi (Bommelaer (1991) 155–58).

The site of Kyrene lies inland some 12.5 km from its harbour (Apollonia) in a straight line.¹⁰ It was built on a large hill with two peaks in the west and the east at 620 m, and strong natural defences to the south (the Wadi Bel Gadir) and the north (the Wadi Bu Turkia). The suburban approaches to the city from the north were used as a large necropolis, and other cemeteries were also located around the city (Chamoux (1953) 287–300; Cassels (1955); Goodchild (1971) 165–71). The city consisted of four main areas.

(1) The acropolis on the western peak had no public buildings (Goodchild (1971) 104–8), and it is not clear whether it was used as a residence by the Battiads.¹¹

¹⁰ On the routes of approach to Kyrene cf. Stucchi (1985).

¹¹ Cf. Hansen and Fischer-Hansen (1994) 27 against Chamoux (1953) 260; cf. 217, 310.

(2) The civic centre of the agora, slightly below the acropolis to the south-east, grew in time with the addition of new buildings (Stucchi (1965); Goodchild (1971) 91–103 with fig. 7; Vickers and Reynolds (1972) 33–34; Bacchielli (1981); Laronde (1987) 169–78 with fig. 48 for C4). By C4 it had four stoas (Stucchi (1975) 31–34, 63–65; Coulton (1976) 228, 230–31 with fig. 59), but the identification of many of the public buildings and sanctuaries remains disputed, including the location of the *heroon* of Battos the founder, the *bouleuterion*, *geronteion*, *prytaneion* (the latter attested in *SEG* 9 1.44 of 322/1; cf. Miller (1978) 183–84, 227), and the sanctuaries of Apollo and Demeter. In C4 a monumental altar of Apollo was built in the agora, similar to that in front of his temple (Stucchi (1975) 59–60; Laronde (1987) 175).

(3) The eastern peak was chosen as the location for the sanctuary of Zeus Lykaios (plan with site index in Goodchild (1971) facing p. 200). Hdt. 4.203.2 implies that the latter was originally outside the city perimeter. In C6I under Battos IV Zeus Lykaios was identified with the Egyptian god Amon who achieved great status at Kyrene (cf. coin types), from where his cult spread to the Greek world (Chamoux (1953) 320–41 with pls. XIX, XXVII–XXVIII; Goodchild (1971) 149–55; Stucchi (1975) 19–20, 23–29; Bisi (1985)). His temple, made of local limestone, was built at some time during C6s–C5s, the largest Greek temple in Libya, comparable in size to the Parthenon at Athens and the temple of Zeus at Olympia. Traces of two other sanctuaries have been found on the eastern hill in addition to the temple of Zeus (Stucchi in Goodchild (1971) 155–56).

(4) A paved street led down from the acropolis via the agora to the terrace of the sanctuary of Apollo, to the north-north-east of the acropolis and on a lower level than the agora (Goodchild (1971) 109–28 with fig. 13). A temple of C6 ascribed to Battos the founder (Pind. *Pyth.* 5.89; Callim. *Hymn* 2.75–79; *SEG* 9 189) was rebuilt in C4 on a larger scale (Chamoux (1953) 203, 304–8; Goodchild (1971) 116–19; Laronde (1987) 104–5, 178–79). A monumental altar in front of the temple was also renovated in C4s (*SEG* 9 85, 86; Chamoux (1953) 308–9; Goodchild (1971) 116; Stucchi (1975) 29, 58–59; Laronde (1987) 110–13). The sacred spring near the sanctuary was dedicated to the god (Pind. *Pyth.* 4.294; Hdt. 4.158.3; Chamoux (1953) 77–82, 126–27; Goodchild (1971) 109–12). Artemis was closely associated with Apollo from the start (Chamoux (1953) 311–20 with pls. XVII–XVIII; Goodchild (1971) 127–28; Stucchi (1975) 8–9, 48–49, 58). Her temple, immediately to the north of the temple of Apollo and with a C6 monumental altar in front of it, was also reconstructed in C4. The terrace received substantial

additions subsequently, notably in C4 (Laronde (1987) 178–92 with fig. 54). A small treasure was built there by the *strategoï* in C4s to commemorate victories over the Libyans (*SEG* 9 89–90; Goodchild (1971) 113–14; Laronde (1987) 104–5 with fig. 29). To the west of the sanctuary of Apollo a theatre (*TGR* iii. 137) was constructed, partly excavated in the hill, though the date of initial construction is uncertain (Goodchild (1971) 125–27; Stucchi (1975) 34–36, 69–70).

Outside the city, on a terraced site across the Wadi Bel Gadir, lay the sanctuary of Demeter and Kore, in an isolated position opposite the agora and about 75 m south of the city's wall circuit. It was established by C6e and had a continuous history till Roman times, as shown by numerous votive offerings (White (1981), (1984–93)).

The city wall was gradually developed (detailed description for C4I in Laronde (1987) 71–76 with figs. 19–22), and by the early Hellenistic period enclosed both peaks, with a total length of 5,560 m and an enclosed area of about 750 ha. The acropolis was separately fortified in C4I (Diod. 19.79.1). Kyrene was besieged in 322 (Diod. 18.19.4). Only about one-third of the area enclosed by the city walls was inhabited. Estimates of the size of the urban population depend on the density of settlement assumed, and thus vary considerably from c.30,000 (Goodchild (1971) 15) to as much as 100,000 or more (Laronde (1987) 342, discussing other estimates). A settlement density of 100–300 per ha (Jameson *et al.* (1994), 542–43; cf. Hansen (1997c) 28–30) would indicate an urban population in the range 25,000–75,000.

The coinage of Kyrene provided the models for the coinages of the other Greek cities of Libya. It went through three main phases: c.570–480, c.480–435 and c.435–308 (see *BMC Cyrenaica*; Laronde (1987) 233–48; *SNG Cop. Suppl.* 1330).

The earliest coinage (*BMC Cyrenaica* pp. xviii–xxxvi and 1–9) was in silver on the Euboic–Attic standard, at first tetradrachms, didrachms and drachms and later fractional denominations as well. Types: *obv.* silphium plant or fruit, which remained the distinctive obverse type at Kyrene;¹² *rev.* at first incuse, later animals, then anthropomorphic types. In the second period (*BMC Cyrenaica* pp. xxxvi–xlvi and 10–14) the Asiatic standard mostly took over from the Attic, and types became more standardized, and the head of Amon was introduced as the normal reverse type. In the third period (*BMC Cyrenaica* pp. xlvi–xcviii and 15–47), the names of magistrates appear on a number of gold and silver

¹² On the silphium plant cf. *BMC Cyrenaica* pp. ccli–cclvii; Chamoux (1953) 246–63 and in Barker *et al.* (1985).

coins, but are not found on the bronze coins which were introduced in the latter part of the period (C4l). In the latter part of the period there are also numerous gold issues on the Attic standard with a greater variety of types (on these see also Naville (1951); Laronde (1987) 208–11, 239–40). Legends appear late in the first period, with the city-ethnic, which becomes common, mostly abbreviated, sometimes down to *KY* but occasionally in the full form *KYPANAION*. On the C5s “alliance” coinage, see under Barke (no. 1025) and Eu(h)esperides (no. 1026).

1029. Taucheira (Taucheirites) Map 38. Lat. 32.32, long. 20.34. Size of territory: 3? Type: A:a. The toponym is *Ταύχειρα* or *Τεύχειρα*, and other variants are found (testimonia in Purcaro Pagano (1976) 347–48). *Ταύχειρα* is the earliest attested form, and it continued to be used in the post-Classical period (Hdt. 4.171; Ps.-Skylax 108). *Τεύχειρα* appears not to be found till the Roman Empire (Arr. *Diadochi* (*FGrHist* 156) fr. 9 §17; Hippol. *Chron.* §300 l. 1 (second century AD)); the letters *TE*, however, are found on the obverse of some C5s coins issued jointly by Barke and Taucheira (*BMC Cyrenaica* pp. clxxxvi–clxxxvii and 107–8). This latter form of the toponym is not mentioned anywhere by Steph. Byz. Other forms are also found, as *Ταύχιρα*, *Τεύχηρα* and *Τεύχιρα*. The gender of the toponym was treated as either feminine singular (Strabo; Procopius) or neuter plural (Hdt.; Diod. 18.20.6; Hippol.). In C3 under the Ptolemies Taucheira was renamed Arsinoe (Laronde (1987) 382–83), but the original name survived, as shown by references in post-Classical sources (e.g. Strabo 17.3.20; Plin. *HN* 5.32). The city-ethnic is rarely attested. Steph. Byz. 608.20–609.1 gives several versions: *Ταυχείριος*, *Ταυχέριος*, *Ταύχερος*, *Ταυχερίτης*. Of these, only *Ταυχέριος* seems to be attested in a literary source (Parthenius fr. 45.1 and 662.1 (C1)). Not mentioned by Steph. Byz. is the form *Τευχερίται* found in Arr. *Diadochi* (*FGrHist* 156) fr. 9 §18 (r322).

Taucheira is first referred to as a *polis* (in the urban sense) by Hdt. 4.171. Ps.-Skylax describes it as only a *χωρίον*, while Strabo, who calls it a *polis* at 17.3.20, lists it at 17.3.21 among the *περιπόλια* of Kyrene (no. 1028), which he describes as *πολίχνια*. It is also described as a *polis* in the urban sense by Diod. 18.20.6 and in the political sense by Arrian (*FGrHist* 156) fr. 9 §17 (both r322). The collective use of the city-ethnic internally is attested (abbreviated as *TE*) by some coins of Taucheira issued together with Barke.

Little is heard of Taucheira in the Archaic and Classical periods. It was reportedly founded by Kyrene, at an unspec-

ified date (schol. Pind. *Pyth.* 4.26). Archaeological evidence of Greek presence there goes back to C7l (Boardman (1966) 153–55; Boardman and Hayes (1966) 12–15, 170; Boardman (1994) 143–46), and its foundation is likely to have preceded that of Barke (no. 1025).

The extent of Taucheira’s territory is unknown, though it was probably much more limited than that of Kyrene or Barke (see Laronde (1987) 59–63, (1994) 25, 27–28 who estimates the arable land potentially available at 250 km², which could sustain a population of more than 20,000). Situated on the coast, Taucheira was overshadowed by Barke inland to the east, and in C5 it was in some sense subordinated to her (cf. Hdt. 4.171 and the evidence of the so-called alliance coinage). To the south-west its possibilities of expansion were restricted by Eu(h)esperides as well as by Libyan tribes.

In the war of Thibron against Kyrene in 322, Taucheira was in alliance with Kyrene (no. 1028), while Barke (no. 1025) and Eu(h)esperides (no. 1026) sided with him; but it was captured by Thibron (Diod. 18.20.6; Laronde (1987) 42, 49, 63).

There is no evidence regarding the political institutions of Taucheira and little regarding its cults. Votive material from a sanctuary of Demeter and Kore has been found (Boardman and Hayes (1966) 11–12, 15; Boardman (1994) 143–46). A temple of Dionysos is reported from the centre of Taucheira, but no further details are available (Laronde (1987) 335).

It is not clear whether Taucheira was named in a catalogue of *theorodokoi* of the Heraia at Argos (no. 347) (*SEG* 23 189 (c.330), I ll. 16–19; Laronde (1987) 161–62; Charneux in *BE* (1988) no. 595).

Traces of what may be a C6e circuit wall have been found (Boardman and Hayes (1966) 9–10, 13; Boardman (1994) 144; cf. Smith and Crow (1998) 37), and Thibron’s siege and capture of Taucheira in 322 implies that it had a wall at the time (Diod. 18.20.6). It is not clear whether the urban remains of Taucheira, with traces of a city wall, can be dated to before the Hellenistic period (Laronde (1987) 59–61). The city perimeter as fixed in C3m enclosed an area of 40 ha and an urban population at the time estimated at a minimum of 6,000 (Laronde (1994) 27–28).

The only known coinage of Taucheira consists of an issue of C5s of silver tetradrachms (Attic standard) and drachmas (Asiatic standard). It has been described as an “alliance” coinage, as the coins bear the city-ethnic of Taucheira (in the form *TE*) on the obverse and Barke (no. 1025) on the reverse. Types: *obv.* silphium plant; *rev.* head of Amon.

UNLOCATED

MOGENS HERMAN HANSEN

1030. (Astraiousoi) Unlocated. Not in *Barr.* Type: [A]. The city-ethnic is Ἀστραιούσιοι (*IG* II² 43.B.22). There is no other source. The Astraioi were members of the Second Athenian Naval League, and in the so-called Charter of the League they are recorded under the heading Ἀθηναίων πόλεις αἶδε σύμμαχοι (*IG* II² 43.A.78 (378/7)).

1031. (Erodioi) Unlocated. Not in *Barr.* Type: C. The ethnic is Ἐροδῖος, attested in *IG* I³ 263.IV.18, which is the only source we have for this community. The ethnic is almost completely restored in the list of 454/3 (*IG* I³ 259.II.8: Ἐ[ροδιοι]). Thus, the only thing we know is that the Erodioi were members of the Delian League and that in 450/49 they paid a *phoros* of 500 dr. (*IG* I³ 263.IV.18). They are listed after Astakos in Propontis and Stolos in Chalkidike (IV.16–17) and before the islands of Tenos and Siphnos (IV.19–20). There is no foundation for the suggestion in *ATL* i. 485 that the Erodioi should be located somewhere in Thrace.

1032. (Eurymachitai) Unlocated. Not in *Barr.* Type: C. The ethnic is Εὐρυμαχίτης (*IG* I³ 264.III.16, 265.II.46). There are no other sources. The Eurymachitai were members of the Delian League and are recorded twice in the tribute lists, in 448/7 (*IG* I³ 264.III.16) and in 447/6 (*IG* I³ 265.II.46), paying 1,000 dr. In both cases we find the sequence: Dikaia (in Thrace), the Dieis (on Euboia), the Eurymachitai (unlocated), the Brykontioi (on Karpathos, which belonged to the Karian district) and, probably, the Kioi (in the Hellespontine district).

1033. Kystiros (Kystirios) Unlocated. Not in *Barr.* Type: A. The toponym is Κύστιρος (Hdn. III.1 198.20; III.2 449.2). The city-ethnic is Κυστήριος (*IG* I³ 278.VI.37).

Kystiros is called a *polis* in the political sense in the Athenian tribute list of 434/3, where it is the only community recorded after the heading ἀτακτος πόλις and is put down for a payment of 300 dr. (*IG* I³ 278.VI.36–7, followed by *vacat*). Since this heading stands apart from the organisation of the members into districts, we have no clue as to where Kystiros was located. *ATL* i. 509 attempts to identify the Kystirioi with the inhabitants of Pistiros on the coast of Thrace (Hdt. 7.109.2; no. 638). It is true that one family of MSS of Herodotos has Πύστιρος (ABDV) and that *K* and *Π* are sometimes mixed up (*Cydna* for *Pydna* at Pompon. 2.35). But Herodian clearly distinguishes between Πύστιρος and Κύστιρος in both the passages cited above (not mentioned in *ATL*). As the evidence stands, the identification of the two communities should be abandoned, and Kystiros recorded as an unlocated *polis*.

1034. (Lechoioi) Unlocated. Not in *Barr.* Type: A. The city-ethnic is Λεχώιος, attested in our only source: a C5 dedication from Dodone: Διὶ δῶρον ἀνέθηκε πόλις Λεχώϊων (Lazzarini (1976) 897) where the Lechooi are classified as a *polis* in the political sense.

1035. (Phytaioi) Unlocated. Not in *Barr.* Type: C. The city-ethnic is Φύταιος (Head, *HN*² 252). The only source for this *polis* is one surviving coin dated to C5: *obv.* bearded head of Dionysos (?); *rev.* round incuse square with vine. Legend: ΦΥΤΑΙΟΝ. Because of the types, Head believes that this unidentified community was somewhere in the neighbourhood of Maroneia. He may be right, but, to be on the safe side, it is better placed here among the unlocated *poleis*.

 366. Diakrioi en Euboia
 367. Diakres apo Chalkideon
 368. Dion (Dieus)
 369. Dystos
 370. Eretria (Eretrieus)
 371. *Grynchai (Gryncheus)

372. Hestiaia (Hestiaieus)/Oreos (Oreites)
 373. Karystos (Karystios)
 374. Orobiai (Orobieus)
 375. *Peraia (Peraeus)
 376. Posideion (Posideites)
 377. Styra (Styreus)
 378. Alope (Alopaïos)
 379. Alponos (Alponios)
 380. Halai (Haleeus)
 381. Knemi(de)s
 382. Kynos (Kynios)
 383. Larymna (Larymnaïos)
 384. Naryka (Narykaïos)
 385. Nikaia (Nikaëus)
 386. Opous (Opountios)
 387. Skarpheia (Skarpheus)
 388. Thronion (Thronieus)
 389. Akyphas/Pindos
 390. Boion (Boiaïos)
 391. Erineos (Erinaïos)
 392. Kytinion (Kytinieus)
 393. Amphanai (Amphanaieus)
 394. Argoussa (Argoussios)
 395. Atrax (Atragios, Atrakios)
 396. Gomphoi (Gompheus)
 397. Gyrtion, Gyrtone (Gyrtionios)
 398. Kierion (Kierieus)
 399. *Kondaia (Kondaieus)
 400. Krannon (Krannonios)
 401. Larisa (Larisaïos)
 402. Methyilion (Methylieus)
 403. Metropolis (Matropolitias)
 404. Mopsion (Mopseus)
 405. Orthos (Orthieus)
 406. Oxyinion
 407. Pagasai (Pagasitas)
 408. Peirasia (Peirasieus)
 409. Pelinna(ion) (Pelinna(i)eus)
 410. Phakion (Phakiasias)
 411. Phaloria (Phaloriastias)
 412. Pharkadon (Pharkadonios)
 413. Pharsalos (Pharsalios)
 414. Pherai (Pheraios)
 415. Skotoussa (Skotoussaïos)
 416. Thetonion (Thetonios)
 417. Triikka (Triikkaïos)
 418. Angeia (Angeieus)
 419. Ktimene (Ktimenaïos)
 420. Hypata (Hypataïos)
 421. (Kaphelleis)
 422. (Korophaïoi)
 423. (Phyrrhagioi)
 424. Talana
 425. Chen (Cheneus)
 426. Parasopioi (Parasopieus)
 427. Anthele
 428. Antikyre (Antikyritas)
 429. Echinus (Echinaïos)
 430. Herakleia (Herakle(i)otes)
 431. Lamia (Lamieus)
 432. Trachis (Trachinios)
 433. Antron
 434. *Ekkarra (Ekkarreus)
 435. Halos (Haleus)
 436. Kypaira (Kypharreus)
 437. Larisa (Larisaïos)
 438. Melitaia (Melitaieus)
 439. Peuma (Peumatios)
 440. Phylake
 441. Proerna (Proernios)
 442. Pyrasos (Pyrasios)
 443. Thaumakoi (Thaumakos)
 444. Thebai (Thebaïos)
 445. Amyros (Amyreus)
 446. (Eureaïoi)
 447. Eurymenai (Eurymenios)
 448. Homolion (Homolieus)
 449. Iolkos (Iolkeus)
 450. Kasthanaie (Kassanaeus)
 451. Kikynethos
 452. Korakai (Korokaïos)
 453. Meliboia (Meliboieus)
 454. Methone (Methonaïos)
 455. Olizon (Olizonios)
 456. (Oxoniaïoi)
 457. Rhizous (Rhizousios)
 458. Spalauthra (Spalauthreus)
 459. Azoros (Azoriastias)
 460. Chyretiai (Chyretiaïos)
 461. Doliche (Dolichaios)
 462. *Ereikinion (Ereikineus)
 463. Gonnos (Gonneus)
 464. *Malloia (Malloiatas)
 465. Mondaia (Mondaieus)
 466. Mylai (Mylaios)
 467. Oloosson (Oloossonios)

468. Phalanna (Phalannaios)
 469. Pythoion (Pythoiastas)
 470. Argethia (Argethies)
 471. Aigiale (Aigialeus)
 472. Arkesine (Arkesineus)
 473. Minoa (Minoetes)
 474. Anaphe (Anaphaios)
 475. Andros (Andrios)
 476. Astypalaia (Astypaleius)
 477. Chalke (Chalkeates)
 478. Delos (Delios)
 479. Helene
 480. Oine (Oin(o)aios)
 481. *Therma (Thermaios)
 482. Ikos (Ikios)
 483. Imbros (Imbrios)
 484. Ios (Ietes)
 485. Kalyrna (Kalyrnios)
 486. Arke(s)seia (Arkesies)
 487. Brykous (Brykountios)
 488. Eteokarpathioi
 489. Karpathos (Karpathios)
 490. Kasos (Kasios)
 491. Ioulis (Ioulietes)
 492. Karthaia (Karthaios)
 493. Koresia (Koresios)
 494. Poiessa (Poiessios)
 495. Keria (Keraios)
 496. Kimolos (Kimolios)
 497. Kos (Koos)
 498. Astypalaia
 499. Kos Meropis
 500. Halasarna (Halasarnitas)
 501. Kythnos (Kythnios)
 502. Myrina (Myrinaios)
 503. Hephaistia (Hephaisties)
 504. Leros (Lerios)
 505. Melos (Melios)
 506. Mykonos (Mykonios)
 507. Naxos (Naxios)
 508. Nisyros (Nisyrios)
 509. Paros (Parios)
 510. Panormos
 511. Peparethos
 512. Seleinous
 513. Pholegandros (Pholegandrios)
 514. Rheneia (Rhenaieus, Rheneus)
 515. Samothrake (Samothrax)
 516. *Saros (Sarios)
 517. Seriphos (Seriphios)
 518. Sikinos (Sikinetes)
 519. Siphnos (Siphnios)
 520. Skiathos (Skiathios)
 521. Skyros (Skyrios)
 522. Syme (Symaios)
 523. Syros (Syrios)
 524. Telos (Telios)
 525. Tenos (Tenios)
 526. Thasos (Thasios)
 527. Thera (Theraios)
 528. Aiane (Aianaiois?)
 529. Aigeai (Aigeaios)
 530. Alebaia
 531. Allante (Allantaios)
 532. Aloros (Alorites)
 533. Beroia (Beroiaios)
 534. Dion (Diestes)
 535. Edessa (Edessaios)
 536. Europos (Europaios)
 537. Herakleion (Herakleiotas)
 538. Ichnai (Ichnaios)
 539. Kyrrhos (Kyrrhestes)
 540. Leibethra (Leibethrios)
 541. Methone (Methoniaios)
 542. Mieza (Miezaios/Miezeus)
 543. Pella (Pellaios)
 544. Pydna (Pydnaios)
 545. Apollonia (Apolloniatas)
 546. Arethousa (Arethousios)
 547. Bormiskos
 548. Chalestre
 549. Herakleia (Herakleotes)
 550. Lete (Letaios)
 551. Sindos (Sindoniaios?)
 552. Therme
 553. Amphipolis (Amphipolites)
 554. Argilos (Argilios)
 555. Trailos (Trailios)
 556. Aige (Aigantios)
 557. Aineia (Aineiatas)
 558. Aioleion (Aiolites)
 559. Akanthos (Akanthios)
 560. Akrothooi (Akrothoios)
 561. Alapta (Alaptas)
 562. Anthemous (Anthemountios)
 563. Aphytis (Aphytaios)

564. Assera (Asserites)
 565. Charadrous
 566. (Chedrolioi)
 567. Chytropolis (Chytropolitai)
 568. Dikaia (Dikaiopolites)
 569. Dion (Dieus)
 570. Eion
 571. Galepsos (Galaios)
 572. Gigonos
 573. Haisa
 574. Iastos
 575. Kalindoia
 576. Kamakai
 577. Kampsa
 578. Kissos (Kisseites)
 579. Kithas
 580. Kleonai
 581. Kombreia
 582. Lipaxos
 583. Mekyberna (Mekybernaios)
 584. Mende (Mendaios)
 585. Milkoros (Milkorios)
 586. Neapolis (Neopolites)
 587. Olophyxos (Olophyxios)
 588. Olynthos (Olynthios)
 589. (Osbaioi)
 590. Othoros (Othorios)
 591. Pharbelos (Pharbelios)
 592. (Phegontioi)
 593. Piloros
 594. Pistasos
 595. Pleume (Pleumeus)
 596. (Polichnitai)
 597. Posideion
 598. Poteidaia (Poteidaiates)
 599. Prassilos (Prassilios)
 600. Sane (Sanaios)
 601. Sane
 602. Sarte (Sartaivos)
 603. Serme (Sermaivos)
 604. Sermylia (Sermylieus)
 605. Singos (Singaios)
 606. Sinos
 607. Skabala (Skablaivos)
 608. (Skapsaioi)
 609. Skione (Skionaios)
 610. Skithai (Skithaios)
 611. Smila
 612. Spartolos (Spartolios)
 613. Stagiros (Stagirites)
 614. Stolos (Stolios)
 615. Strepsa (Strepsaios)
 616. Therambos (Thrambaios)
 617. Thestoros
 618. Thyssos (Thyssios)
 619. Tinde (Tindaivos)
 620. Torone (Toronaios)
 621. Tripoiai
 622. Zereia (Zeraios)
 623. Aison (Aisionios)
 624. Brea (Breaios)
 625. Kossaia (Kossaios)
 626. Okolon
 627. Apollonia
 628. Berga (Bergaios)
 629. Datos (Datenos)
 630. Eion
 631. Galepsos (Galepsios)
 632. Krenides (Krenites)
 633. Myrkinos (Myrkinios)
 634. Neapolis (Neopolites)
 635. Oisyme (Oisymaios)
 636. Phagres (Phagesios)
 637. Philippoi (Philippeus)
 638. Pistyros
 639. Sirra (Sirraivos)
 640. Abdera (Abderites)
 641. Ainos (Ainios)
 642. Bergopolis (Bergepolites)
 643. Dikaia
 644. Drys (Dryites)
 645. Kypsela
 646. Maroneia (Maronites)
 647. Mesambrie
 648. Orthagoria (Orthagoreus)
 649. Sale
 650. Stryme
 651. Zone (Zonaios)
 652. Alexandropolis
 653. Apros
 654. Kabyle (Kabylenos)
 655. Philippopolis (Philippopolites)
 656. Pistiros (Pistirenos)
 657. Seuthopolis
 658. Aigos potamoi (Aigos po(-))
 659. Alopekonnos (Alopekonnosios)

660. Araplos
661. Chersonesos/Agora (Chersonesites ap' Agoras)
662. Deris (Deraios?)
663. Elaious (Elaiousios)
664. Ide
665. Kardia (Kardianos)
666. Kressa
667. Krithote (Krithousios)
668. Limnai (Limnaios)
669. Madytos (Madytios)
670. Paion
671. Paktye
672. Sestos (Sestios)
673. Bisanthe (Bisanthenos)
674. Byzantion (Byzantios)
675. Daminon Teichos (Daminoteichites)
676. Heraion, Heraion Teichos (Heraites)
677. Neapolis (Neopolites)
678. Perinthos (Perinthios)
679. Selymbria (Selymbrianos)
680. Ser(re)ion Teichos (Ser(re)ioteichites)
681. Tyrodiza (Tyrodizenos)
682. Apollonia (Apolloniates)
683. Bizone (Bizonites)
684. Dionysopolis (Dionysopolites)
685. Istros (Istrianos)
686. Kallatis (Kallatianos)
687. Mesambria (Mesambrianos)
688. Nikonion
689. Odessos (Odess(e)ites)
690. Olbia (Olbiopolites)/Borysthenes (Borysthenites)
691. Ophioussa
692. Orgame
693. Tomis (Tomites)
694. Tyras (Tyranos)
695. Chersonesos (Chersonesites)
696. Gorgipp(e)ia (Gorgippeus)
697. Hermonassa (Hermonaseites)
698. Karkinitis (Kerkinites)
699. Kepoi (Kepites)
700. Kimmerikon
701. Kytaia
702. Labrys/Labryta
703. Myrmekeion
704. Nymphaion (Nymphatos)
705. Pantikapaion (Pantikapaites)/Bosporos (Bosporites)
706. Phanagoria (Phanagorites)
707. Theodosia (Theudosieus)
708. Tyritake
709. Dioskouris
710. Gyenos
711. Phasis (Phasianos)
712. Amisos (Amisenos)/Peiraieus (Peiraieus)
713. Becheirias
714. Choirades
715. Herakleia (Herakle(i)otes)
716. Iasonia
717. Karambis
718. Karoussa
719. Kerasous (Kerasountios)
720. Kinolis
721. Koloussa
722. Kotyora (Kotyorites)
723. Kromna (Kromnites)
724. Kytoros
725. Limne
726. Lykastos
727. Odeinios
728. Sesamos (Sesamenos)/Amastris (Amastrianos)
729. Sinope (Sinopeus)
730. Stameneia
731. Tetrakis
732. Themiskyra
733. Tieion (Tianos)
734. Trapezous (Trapezountios)
735. Artaiou Teichos (Artaioteichites)
736. Artake (Artakenos)
737. Astakos (Astakenos)
738. Bysbikos (Bysbikenos)
739. Dar(i)eion
740. Daskyleion (Daskyleianos)
741. *Didymon Teichos (Didymoteichites)
742. Harpagion (Harpagianos)
743. Kalchedon (Kalchedonios)
744. Kallipolis (Kallipolites)
745. Kios (Kianos)
746. Kolonai (Koloneus?)
747. Kyzikos (Kyzikenos)
748. Lampsakos (Lampsakenos)
749. Metropolis
750. Miletoupolis (Miletopolites)
751. Miletouteichos (Miletoteichites)
752. Myrleia (Myrleanos)/Brylleion
753. Olbia
754. (Otlanoi)
755. Paisos (Paisenos)

756. Parion (Parianos)
 757. Plakia (Plakianos)
 758. Priapos (Priapenos)
 759. Prokonnesos (Prokonnesios)
 760. Pythopolis (Pythopolites)
 761. Skylake
 762. Sombia
 763. Tereia
 764. Zeleia (Zeleites)
 765. Abydos (Abydenos)
 766. Achilleion
 767. Antandros (Antandrios)
 768. Arisbe (Arisbaios)
 769. Assos (Assios)
 770. Astyra (Astyrenos)
 771. Astyra Troika
 772. Azeia (Azeieus)
 773. Birytis (Berysios)
 774. Dardanos (Dardaneus)
 775. Gargara (Gargareus)
 776. Gentinos (Gentinius)
 777. Gergis (Gergithios)
 778. Hamaxitos (Hamaxiteus)
 779. Ilion (Ilieus)
 780. Kebren (Kebrenios)
 781. *Kokylyion (Kokylyites)
 782. Kolonai (Kolonaeus)
 783. Lampondeia (Lamponeus)
 784. Larisa (Larisaaios)
 785. Neandrea (Neandrieus)
 786. Ophryneion (Ophryneus)
 787. *Palaiperkote (Palaiperkosios)
 788. Perkote (Perkosios)
 789. Polichna (Polichnaaios)
 790. Rhoiteion (Rhoiteus)
 791. Sigeion (Sigeieus)
 792. Skepsis (Skapsios)
 793. Tenedos (Tenedios)
 794. Antissa (Antissaaios)
 795. Arisba
 796. Eresos (Eresios)
 797. Methymna (Methymnaios)
 798. Mytilene (Mytilenaios)
 799. Pyrrha (Pyrrhaaios)
 800. Adramyttion (Adramytenos)
 801. Aigai (ai) (Aigaieus)
 802. Aigirossa
 803. Atarneus (Artaneites)
 804. Autokane (Autokanaios?)
 805. *Boione
 806. Chalkis (Chalkideus)
 807. Elaia (Elaiites)
 808. Gambriion (Gambreiotos)
 809. Gryneion/Gryneia (Gryneieus)
 810. Halisarna
 811. Herakleia? (Herakleotas)
 812. Iolla (Iolleus)
 813. Karene (Karenaios)
 814. Killa
 815. Kisthene
 816. Kyllene
 817. Kyme (Kymaios)
 818. Larisa (Larisaaios)
 819. Leukai (Leokates)
 820. Magnesia (Magnes)
 821. *Melanpagos? (Melanpagitas)
 822. Myrina (Myrinaaios)
 823. Nasos (Nasiotas)
 824. Neon Teichos
 825. Notion
 826. Palaigambriion
 827. Parthenion
 828. Pergamon (Pergamenos)
 829. Perperene (Perperenios)
 830. Pitane (Pitanaaios)
 831. Pordoselene
 832. Temnos (Temnites)
 833. Teuthrania
 834. Thebe
 835. *Tisna (Tisnaaios)
 836. Achilleion
 837. Airai (Airaios)
 838. Anaia (Anaïtes)
 839. Boutheia (Boutheieus)
 840. Chios (Chios)
 841. Chyton
 842. Dios Hieron (Diosirites)
 843. (Elaiousioi)
 844. Ephesos (Ephesios)
 845. Erythrai (Erythraios)
 846. Isinda (Isindios)
 847. Klazomenai (Klazomenios)
 848. Kolophon (Kolophonios)
 849. Korykos (Korykaaios)
 850. Lebedos (Lebedios)
 851. Leukophrys

852. Magnesia (Magnes)
 853. Marathesion (Marathesios)
 854. Miletos (Milesios)
 855. Myonnesos (Myon(n)esios)
 856. Myous (Myes(s)ios)
 857. Naulochon
 858. Notion (Notieus)
 859. Phokaia (Phokaieus)
 860. (Polichnitai)
 861. Priene (Prieneus)
 862. Pteleon (Pteleousios)
 863. Pygela (Pygeleus)
 864. Samos (Samios)
 865. Samos (the klerouchy of 365–322)
 866. Sidousa (Sidousios)
 867. Smyrna (Smyrnaios)
 868. Teos (Teios)
 869. Thebai (Thebaios)
 870. Alabanda (Alabandeus)
 871. Alinda (Alindeus)
 872. Amos (Amios)
 873. (Amynandeis)
 874. Amyzon (Amyzoneus)
 875. Arlissos (Arlisseus)
 876. (Armelitai)
 877. Aulai (Auliates)
 878. Bargasa (Pargaseus)
 879. Bargylia (Bargylieus)
 880. Bolbai (Bolbaieis)
 881. Chalketor (Chalketoreus)
 882. Chersonesos (Chersonesios)
 883. Chios (Chios)
 884. (Erineis)
 885. Euromos (Euromeus)
 886. Halikarnassos (Halikarnasseus)
 887. (Hybliseis)
 888. (Hydaieis)
 889. Hydisos (Hydisseus)
 890. (Hymisseis)
 891. Iasos (Iaseus)
 892. Idrias (Edrieus)
 893. Idyma (Idymeus)
 894. Kalynda (Kalyndeus)
 895. *Karbasyanda (Karbasyandeus)
 896. Karyanda (Karyandeus)
 897. Kasolaba (Kasolabeus)
 898. Kaunos (Kaunios)
 899. Kedraei (Kedreates)
 900. Keramos (Kerameus)
 901. (Killareis)
 902. Kindye (Kindyeus)
 903. Knidos (Knidios)
 904. (Kodapeis)
 905. (Koliyrgeis)
 906. Koranza (Koarendeus)
 907. Krya (Kryeus)
 908. Kyllandos (Kyllandios)
 909. Kyrbissos (Kyrbisseus)
 910. Latmos (Latmios)/Herakleia (Herakleotes)
 911. Lepsimandos (Lepsimandeus)
 912. Medmasos (Madnaseus)
 913. Mylasa (Mylaseus)
 914. Myndos (Myndios)
 915. (Narisbareis)
 916. Naryandos (Naryandeus)
 917. Naxia (Naxiates)
 918. (Olaieis)
 919. Olymos (Hylimeus)
 920. Ouranion (Ouranietes)
 921. (Parpariotai)
 922. Passanda (Pasandeus)
 923. Pedasa (Pedaseus)
 924. (Peleiatai)
 925. Pidasas (Pidaseus)
 926. Pladasa (Pladasieus)
 927. Pyrindos (Pyrindios)
 928. Pynos (Pynios)
 929. Salmakis (Salmakites)
 930. (Silois)
 931. Syangela (Syangeleus)/Theangela (Theangeleus)
 932. (Talagreis)
 933. Taramptos
 934. (Tarbaneis)
 935. Telandros (Telandrios)
 936. Telemessos (Telemesseus)
 937. Termera (Termereus)
 938. (Terssogasseis)
 939. (Thasthareis)
 940. Thydonos
 941. Tralleis (Traldeus)
 942. Phaselis (Phaselites)
 943. Xanthos (Xanthios)
 944. Allaria (Allariotas)
 945. Anopolis (Anopolites)
 946. Apellonia (Apelloniatas)
 947. Aptara (Aptaraios)

948. Arkades (Arkas)
 949. Aulon
 950. Axos (Axios)
 951. *Biannos (Biannios)
 952. Bionnos
 953. *Chersonasos (Chersonasios)
 954. Datala (Datales)
 955. Dragmos (Dragmios)
 956. Dreros (Drerios)
 957. Eleutherna (Eleuthernaios)
 958. *Eltynia (Eltynieus)
 959. Elyros (Elyrios)
 960. Gorty(n)s (Gortynios)
 961. Herakleion (Herakleiotas)
 962. Hierapytna (Hierapytnios)
 963. Hyrtakina (Hyrtakinios)
 964. Istron (Istronios)
 965. Itanos (Itanios)
 966. Keraia (Keraïtas)
 967. Knosos (Knosios)
 968. Kydonia (Kydoniatas)
 969. Kytaion
 970. Lappa (Lappaios)
 971. Lato (Latios)
 972. Lebena (Lebenaïos)
 973. Lisos (Lisios)
 974. Lyktos (Lyktios)
 975. Malla (Mallaïos)
 976. Matala (Matalios)
 977. Milatos (Milatios)
 978. Olous (Olontios)
 979. *Petra (Petraïos)
 980. Phaistos (Phaistios)
 981. Phalasarna (Phalasarnios)
 982. Polichne (Polichnites)
 983. Polyrhen (Polyrhenios)
 984. Praisos (Praisios)
 985. Priansos (Priansieus)
 986. Rhaukos (Rhaukios)
 987. Rhithymnos (Rhithymnios)
 988. *Rhitten (Rhittenios)
 989. Stalai (Stalites)
 990. Sybrita (Sybritios)
 991. Tarrha (Tarrhaïos)
 992. Tylisos (Tylisios)
 993. Brikindera (Brikindarios)
 994. (Diakrioi)
 995. Ialysos (Ialysios)
 996. Kamiros (Kamireus)
 997. Lindos (Lindios)
 998. Oiai (Oiiates)
 999. (Pedieis)
 1000. Rhodos (Rhodios)
 1001. Aspendos (Aspendios)
 1002. Idyros
 1003. Perge (Pergaios)
 1004. Side (Sidetes)
 1005. Aphrodisias
 1006. Holmoi (Holmites)
 1007. Issos (Isseus)
 1008. Kelenderis
 1009. Mallos (Marlotas, Mallotes)
 1010. Nagidos (Nagideus)
 1011. Soloi (Soleus)
 1012. Amathous (Amathousios)
 1013. Idalion (Edalios)
 1014. Karpasia (Karpaseus)
 1015. Keryneia (Kerynites)
 1016. Kourion (Kourieus)
 1017. Lapethos (Lapithios)
 1018. Marion (Marieus)
 1019. Paphos (Paphios)
 1020. Salamis (Salaminios)
 1021. Soloi (Solios)
 1022. Posideion
 1023. Naukratis (Naukratites)
 1024. Oasis
 1025. Barke (Barkaios)
 1026. Eu(h)esperides (Eu(h)esperites)
 1027. Kinyps
 1028. Kyrene (Kyrenaïos)
 1029. Taucheira (Taucheirites)
 1030. (Astraiousioi)
 1031. (Erodioi)
 1032. (Eurymachitai)
 1033. Kystiros (Kystirios)
 1034. (Lechoioi)
 1035. (Phytaioi)

2. *Toponyms and City-Ethnics in Alphabetical Order*

The nos. refer to Index 1.

- Abai (Abaios) — Phokis 169
Abakainon (Abakaininos) — Sikelia 5
Abdera (Abderites) — Thrace: from Nestos to Hebros 640
Abydos (Abydenos) — Troas 765
Achilleion — Troas 766
Achilleion — Ionia 836
Adramyttion (Adramytenos) — Aiolis 800
Adranon (Adranites) — Sikelia 6
Adria — The Adriatic 75
Agrinion (Agrinios) — Aitolia 142
Agyrion (Agyrinos) — Sikelia 7
Aiane (Aianaios?) — Makedonia 528
Aigai (Aigaios) — Achaia 229
Aigai(ai) (Aigaieus) — Aiolis 801
Aige (Aigantios) — Chalkidike 556
Aigeai (Aigaios) — Makedonia 529
Aigeira (Aigeirates) — Achaia 230
Aigiale (Aigialeus) — The Aegean 471
Aigina (Aiginetes) — The Saronic Gulf 358
Aigion (Aigios) — Achaia 231
Aigiroessa — Aiolis 802
Aigition — Aitolia 143
Aigos potamoi (Aigos po(-)) — Thracian Chersonesos 658
Aigosthena (Aigosthenitas) — Megaris, etc. 224
Aigys (Aigyeus) — Lakedaimon 323
Aineia (Aineiates) — Chalkidike 557
Ainos (Ainios) — Thrace: from Nestos to Hebros 641
Aioleion (Aiolites) — Chalkidike 558
*Aiolidai (Aiolideus) — Phokis 170
Airai (Airaios) — Ionia 837
Aison (Aisionios) — Unlocated in Thrace 623
Aithaia (Aithaios) — Messenia 312
Aitna (Aitnaios) — Sikelia 8
Akanthos (Akanthios) — Chalkidike 559
Akragas (Akragantinos) — Sikelia 9
Akrai (Akraios) — Sikelia 10
Akraiphia, Akraiphnion (Akraiphios) — Boiotia 198
Akripos — Aitolia 144
Akrothooi (Akrothoios) — Chalkidike 560
Akyphas/Pindos — Doris 389
Alabanda (Alabandus) — Karia 870
Alaisa (Alaisinos) — Sikelia 11
Alalie — Spain and France 1
Alalkomenai — Boiotia 199
Alapta (Alaptes) — Chalkidike 561
Alasyaion (Alasyeus) — Elis 245
Alea (Aleos) — Elis 265
Alebaia — Makedonia 530
Alexandropolis — Inland Thrace 652
Alinda (Alindeus) — Karia 871
Alion — Elis 246
Alipheira (Alipheireus) — Arkadia 266
Allante (Allantaios) — Makedonia 531
Allaria (Allariotas) — Crete 944
Alontion (Alontinos) — Sikelia 12
Alope (Alopaos) — East Lokris 378
Alopekonnesos (Alopekonnesios) — Thracian Chersonesos 659
Aloros (Alorites) — Makedonia 532
Alpa (Alpaos) — West Lokris 157
Alponos (Alponios) — East Lokris 379
Alyzeia (Alyzaos) — Akarnania 112
Amantia (Amantios) — Epeiros 86
Amathous (Amathousios) — Cyprus 1012
Ambrakia (Ambrakiotes) — Akarnania 113
Ambryssos (Ambryssios) — Phokis 171
Amisos (Amisenos)/Peiraieus — Pontic Coast of Asia Minor 712
Amos (Amios) — Karia 872
Amphanai (Amphanaios) — Thessalia 393
Amphidolia (Amphidolos) — Elis 247
Amphikaia (Amphikleios) — Phokis 172
Amphipolis (Amphipolites) — Bisaltia 553
Amphissa (Amphisseus) — West Lokris 158
(Amynandeis) — Karia 873
Amyros (Amyreus) — Magnesia 445
Amyzon (Amyzoneus) — Karia 874
Anaia (Anaïtes) — Ionia 838
(Anaitoi) — Elis 248
Anaktorion (Anaktorios) — Akarnania 114
Anaphe (Anaphaios) — The Aegean 474
Andros (Andrios) — The Aegean 475

- Angeia (Angeieus) — Dolopia 418
 Ankon (Ankonites) — The Adriatic 76
 Anopolis (Anopolites) — Crete 945
 Antandros (Antandrios) — Troas 767
 Anthana — Lakedaïmon 324
 Anthedon (Anthedonios) — Boiotia 200
 Anthele — Malis 427
 Anthemous (Anthemountios) — Chalkidike 562
 Antikyra (Antikyreus) — Phokis 173
 Antikyre (Antikyritas) — Malis 428
 Antissa (Antissaios) — Lesbos 794
 Antron — Achaia Phthiotis 433
 Apellonia (Apelloniatas) — Crete 946
 Aphrodisias — Kilikia 1005
 Aphroditia, Aphrodisia — Lakedaïmon 325

 Datos (Datenos) — Thrace: from Strymon to Nestos 629
 Daulis (Daulieus) — Phokis 176
 Delos (Delios) — The Aegean 478
 Delphoi (Delphos) — Phokis 177
 Derion (Derieus) — Akarnania 117
 Deris (Deraios?) — Thracian Chersonesos 662
 (Diakres apo Chalkideon) — Euboia 367
 (Diakrioi en Euboia) — Euboia 366
 (Diakrioi) — Rhodos 994
- *Didymon Teichos (Didymoteichites) — Propontic Coast
 of Asia Minor 741
 Dikaia (Dikaiopolites) — Chalkidike 568
 Dikaia — Thrace: from Nestos to Hebros 643
 Dion (Dieus) — Euboia 368
 Dion (Diestes) — Makedonia 534
 Dion (Dieus) — Chalkidike 569
 Dionysopolis — Pontos: West Coast 684
 Dios Hieron (Diosirites) — Ionia 842
 Dioskouris — Pontos: Kolchis 709
 Dipaia (Dipaeus) — Arkadia 268
 Dodone (Dodonaos) — Epeiros 93
 Doliche (Dolichaos) — Perrhaibia 461
 Dragmos (Dragmios) — Crete 955
 Dreros (Drerios) — Crete 956
 Drymos (Drymios) — Phokis 178
 Drys (Dryites) — Thrace: from Nestos to Hebros 644
 Dyme (Dymaios) — Achaia 234
 Dyspontion (Dyspontios) — Elis 250
 Dystos — Euboia 369
- Echedameia (Echedamieus) — Phokis 179
 Echinus (Echinaios) — Akarnania 118
 Echinus (Echinaios) — Malis 429
 Edessa (Edessaos) — Makedonia 535
 Eion — Chalkidike 570
 Eion — Thrace: from Strymon to Nestos 630
 *Ekkarra (Ekkarreus) — Achaia Phthiotis 434
 Elaia (Elaiites) — Aiolis 807
 Elaious (Elaiousios) — Thracian Chersonesos 663
 Elaiousioi — Ionia 843
 Elateia — Epeiros 94
 Elateia (Elateus) — Phokis 180
 Elea (Eleaios) — Epeiros 95
 Eleusis — Attika 362
 Eleutherna (Eleuthernaos) — Crete 957
 Elis (Eleios) — Elis 251
 *Eltynia (Eltynieus) — Crete 958
 Elyros (Elyrios) — Crete 959
 Emporion (Emporites) — Spain and France 2
 Engyon (Engyinos) — Sikelia 14
 Ep(e)ion — Triphylyia 304
 Ephesos (Ephesios) — Ionia 844
 Ephyra (Ephyros) — Epeiros 96
 Epidamnos (Epidamnios)/Dyrrhachion (Dyrrachinos) —
 The Adriatic 79
 Epidauros (Epidauros) — Lakedaimon 329
 Epidauros (Epidauros) — Argolis 348

- Epitalion (Epitalieus) — Triphylia 305
 *Ereikinon (Ereikineus) — Perrhaibia 462
 Eresos (Eresios) — Lesbos 796
 Eretria (Eretrieus) — Euboia 370
 (Erineis) — Karia 884
 Erineos (Erinaios) — Doris 391
 Erochos (Erochos) — Phokis 181
 (Erodioi) — Unlocated 1031
 Erythrai — Boiotia 203
 Erythrai (Erythraios) — Ionia 845
 Eteokarpathioi — The Aegean 488
 Eteonos/Skaphai (Skaph(l)eus) — Boiotia 204

 Hipponion (Hipponieus) — Italia 53
 Hestiaia (Hestiaieus)/Oreos (Oreites) — Euboia 372
 Holmoi (Holmites) — Kilikia 1006
 Homolion (Homolieus) — Magnesia 448

- Horraon (Horraitas) — Epeiros 99
 *Hyaia (Hyaïos) — West Lokris 160
 Hyampolis (Hyampolios) — Phokis 182
 (Hybliseis) — Karia 887
 (Hydaieis) — Karia 888
 Hydisos (Hydisseus) — Karia 889
 Hyele (Hyeletes)/Elea (Eleates) — Italia 54
 Hyettos (Hyettios) — Boiotia 207
 (Hymisseis) — Karia 890
 Hypata (Hypataios) — Dolopia 420
 Hypnia (Hypneus) — West Lokris 161
 Hyporeiai (Hyporeates) — Akarnania 121
 Hyrtakina (Hyrtakinios) — Crete 963
 Hysiai — Boiotia 208
- Ialysos (Ialysios) — Rhodos 995
 Iasonia — Pontic Coast of Asia Minor 716
 Iasos (Iaseus) — Karia 891
 Ichnai (Ichnaios) — Makedonia 538
 Idalion (Edalios) — Cyprus 1013
 Ide — Thracian Chersonesos 664
 Idrias (Edrieus) — Karia 892
 Idyma (Idymeus) — Karia 893
 Idyros — Pamphylia 1002
 Ikos (Ikios) — The Aegean 482
 Ilion (Ilieus) — Troas 779
 *Imachara (Imacharaios) — Sikelia 26
 Imbros (Imbrios) — The Aegean 483
 Iolkos (Iolkeus) — Magnesia 449
 Iolla (Iolleus) — Aiolis 812
 Ios (Ietes) — The Aegean 484
 Ioulis (Ioulietes) — The Aegean 491
 Isinda (Isindios) — Ionia 846
 Issa (Issaios) — The Adriatic 81
 (Issioi) — West Lokris 162
 Issos (Isseus) — Kilikia 1007
 Istasos — Chalkidike 574
 Istron (Istronios) — Crete 964
 Istros (Istrianos) — Pontos: West Coast 685
 Itanos (Itanios) — Crete 965
 Ithaka (Ithakesios) — Akarnania 122
- Kabyle (Kabylenos) — Inland Thrace 654
 Kalaureia (Kalaureates) — The Saronic Gulf 360
 Kalchedon (Kalchedonios) — Propontic Coast of Asia
 Minor 743
 Kalindoia — Chalkidike 575
 Kallatis (Kallatianos) — Pontos: West Coast 686
- Kallion (Kallieus)/Kallipolis (Kallipolites) — Aitolia 147
 Kallipolis (Kallipolites) — Sikelia 27
 Kallipolis (Kallipolites) — Propontic Coast of Asia
 Minor 744
 Kalydon (Kalydonios) — Aitolia 148
 Kalymna (Kalymnios) — The Aegean 485
 Kalynda (Kalyndeus) — Karia 894
 Kamakai — Chalkidike 576
 Kamarina (Kamarinaios) — Sikelia 28
 Kamiros (Kamireus) — Rhodos 996
 Kampsas — Chalkidike 577
 (Kaphheleis) — Ainis 421
 Kaphy(i)ai (Kaphyieus) — Arkadia 275
 Karambis — Pontic Coast of Asia Minor 717
 *Karbasyanda (Karbasyandeus) — Karia 895
 Kardamyle (Skardamylites) — Messenia 315
 Kardiania (Kardianos) — Thracian Chersonesos 665
 Karene (Karenaios) — Aiolis 813
 Karkinitis (Kerkinites) — Pontos: Skythia 698
 Karoussa — Pontic Coast of Asia Minor 718
 Karpasia (Karpaseus) — Cyprus 1014
 Karpathos (Karpathios) — The Aegean 489
 Karthaia (Karthaios) — The Aegean 492
 Karyanda (Karyandeus) — Karia 896
 Karystos (Karystios) — Euboia 373
 Kasmenai (Kasmenaios) — Sikelia 29
 Kasolaba (Kasolabeus) — Karia 897
 Kasos (Kasios) — The Aegean 490
 Kassopa (Kassopaios) — Epeiros 100
 Kasthanaie (Kassanaeus) — Magnesia 450
 Katane (Katanaios) — Sikelia 30
 Kaulonia (Kauloniatas) — Italia 55
 Kaunos (Kaunios) — Karia 898
 Kebren (Kebrenios) — Troas 780
 Kedreai (Kedreates) — Karia 899
 Kelenderis — Kilikia 1008
 Kentoripa (Kentoripinos) — Sikelia 31
 Kephaloïdion (Kephaloïditas) — Sikelia 32
 Kepoi (Kepites) — Pontos: Skythia 699
 Keraia (Keraïtas) — Crete 966
 Keramos (Kerameus) — Karia 900
 Kerasous (Kerasountios) — Pontic Coast of Asia
 Minor 719
 Keria (Keraïtas) — The Aegean 495
 Keryneia (Keryneus) — Achaia 236
 Keryneia (Kerynites) — Cyprus 1015
 Kierion (Kierieus) — Thessalia 398
 Kikynethos — Magnesia 451

- Killa — Aiolis 814
 (Killareis) — Karia 901
 Kimmerikon — Pontos: Skythia 700
 Kimolos (Kimolios) — The Aegean 496
 Kindye (Kindyeus) — Karia 902
 Kinolis — Pontic Coast of Asia Minor 720
 Kinyps — Libya 1027
 Kios (Kianos) — Propontic Coast of Asia Minor 745
 Kirrha (Kirrhaios) — Phokis 183
 Kissos (Kisseites) — Chalkidike 578
 Kisthene — Aiolis 815
 Kithas — Chalkidike 579
 Klazomenai (Klazomenios) — Ionia 847
 Kleitor (Kleitirios) — Arkadia 276
 Kleonai (Kleoniaios) — Argolis 351
 Kleonai — Chalkidike 580
 Knemi(de)s — East Lokris 381
 Knidos (Knidios) — Karia 903
 Knosos (Knosios) — Crete 967
 (Kodapeis) — Karia 904
 Koila — Arkadia 277
 *Kokylion (Kokylites) — Troas 781
 (Koliyrgeis) — Karia 905
 Kolonai (Koloneus?) — Propontic Coast of Asia Minor 746
 Kolonai (Kolonaeus) — Troas 782
 Kolophon (Kolophonios) — Ionia 848
 Koloussa — Pontic Coast of Asia Minor 721
 Kombreia — Chalkidike 581
 *Kondaia (Kondaieus) — Thessalia 399
 Kopai (Kopaieus) — Boiotia 209
 Korakai (Korokaios) — Magnesia 452
 Koranza (Koarendeus) — Karia 906
 Koresia (Koresios) — The Aegean 493
 Korinthos (Korinthios) — Megaris, etc. 227
 Korkyra (Korkyraios) — Akarnania 123
 Korone (Koroniaios) — Messenia 316
 Koroneia (Koroneus) — Boiotia 210
 Koronta (Korontaios) — Akarnania 124
 (Korophaioi) — Ainis 422
 Korykos (Korykaios) — Ionia 849
 Kos (Koos) — The Aegean 497
 Kos Meropis — The Aegean 499
 Kossaia (Kossaios) — Unlocated in Thrace 624
 Kotyora (Kotyorites) — Pontic Coast of Asia Minor 722
 Kourion (Kourieus) — Cyprus 1016
 Kranioi (Kranios) — Akarnania 125
 Krannon (Krannonios) — Thessalia 400
 Krenides (Krenites) — Thrace: from Strymon to Nestos 632
 Kressa — Thracian Chersonesos 666
 Krithote (Krithousios) — Thracian Chersonesos 667
 Kromna (Kromnites) — Pontic Coast of Asia Minor 723
 Kromnos (Kromnites) — Lakedaimon 334
 Kroton (Krotoniatas) — Italia 56
 Krya (Kryeus) — Karia 907
 Ktimene (Ktimenaivos) — Dolopia 419
 Kydonia (Kydoniatas) — Crete 968
 Kyllandos (Kyllandios) — Karia 908
 Kyllene (Kyllenios) — Elis 254
 Kyllene — Aiolis 816
 Kyme (Kymaios) — Italia 57
 Kyme (Kymaios) — Aiolis 817
 Kynaitha (Kynaitheus) — Arkadia 278
 Kynos (Kynios) — East Lokris 382
 Kypaira (Kypharreus) — Achaia Phthiotis 436
 Kyparissos (Kyparissieus) — Messenia 317
 Kyphanta (Kyphantaseus) — Lakedaimon 335
 Kypsela — Thrace: from Nestos to Hebros 645
 Kyrbissos (Kyrbisseus) — Karia 909
 Kyrene (Kyrenaivos) — Libya 1028
 Kyrros (Kyrrestes) — Makedonia 539
 Kystiros (Kystirios) — Unlocated 1033
 Kytaia — Pontos: Skythia 701
 Kytaion — Crete 969
 Kythera (Kytherios) — Lakedaimon 336
 Kythnos (Kythnios) — The Aegean 501
 Kytinion (Kytinieus) — Doris 392
 Kytoros — Pontic Coast of Asia Minor 724
 Kyzikos (Kyzikenos) — Propontic Coast of Asia Minor 747
 Labrys/Labryta — Pontos: Skythia 702
 Lamia (Lamieus) — Malis 431
 Lamponeia (Lamponeus) — Troas 783
 Lampsakos (Lampsakenos) — Propontic Coast of Asia Minor 748
 Laos (La(w)-inos) — Italia 58
 Lapethos (Lapithios) — Cyprus 1017
 Lappa (Lappaivos) — Crete 970
 Laris(s)a — Elis 255
 Larisa (Larisaivos) — Thessalia 401
 Larisa (Larisaivos) — Achaia Phthiotis 437
 Larisa (Larisaivos) — Troas 784
 Larisa (Larisaivos) — Aiolis 818
 Larymna (Larymnaivos) — East Lokris 383
 Las (Laos) — Lakedaimon 337

- Lasion (Lasionios) — Elis 256
 Latmos (Latmios)/Herakleia (Herakleotes) — Karia 910
 Lato (Latios) — Crete 971
 Lebadeia (Lebadeus) — Boiotia 211
 Lebedos (Lebedios) — Ionia 850
 Levena (Lebenaïos) — Crete 972
 (Lechoioi) — Unlocated 1034
 Ledon (Ledontios) — Phokis 184
 Leibethra (Leibethrios) — Makedonia 540
 Lenos — Elis 257
 Leontinoi (Leontinos) — Sikelia 33
 Leontion (Leontesios) — Achaia 237
 Lepreon (Lepreatas) — Triphylia 306
 Lepsimandos (Lepsimandeu) — Karia 911
 Leros (Lerios) — The Aegean 504
 Lete (Letaios) — Mygdonia 550
 Letrinoi (Letrinos) — Elis 258
 Leukai (Leokates) — Aiolis 819
 Leukas (Leukadios) — Akarnania 126
 Leukophrys — Ionia 851
 Lilaia (Lilaieus) — Phokis 185
 Limnai (Limnaios) — Thracian Chersonesos 668
 Limnaia (Limnaios) — Akarnania 127
 Limne — Pontic Coast of Asia Minor 725
 Lindos (Lindios) — Rhodos 997
 Lipara (Liparaïos) — Sikelia 34
 Lipaxos — Chalkidike 582
 Lisos (Lisios) — Crete 973
 Lissos (Lissates) — The Adriatic 82
 Lokroi (Lokros) — Italia 59
 *Longane (Longenaïos) — Sikelia 35
 Lousoi (Lousiatas) — Arkadia 279
 Lykastos — Pontic Coast of Asia Minor 726
 Lykosoura (Lykourasios) — Arkadia 280
 Lyktos (Lyktios) — Crete 974

 Madytos (Madytios) — Thracian Chersonesos 669
 Magnesia (Magnes) — Aiolis 820
 Magnesia (Magnes) — Ionia 852
 Makiston (Makistios) — Triphylia 307
 Makyneia (Makyneus) — Aitolia 149
 Malla (Mallaios) — Crete 975
 *Malloia (Malloiatas) — Perrhaibia 464
 Mallos (Marlotas, Mallotes) — Kilikia 1009
 Mantinea (Mantineus) — Arkadia 281
 Marathesion (Marathesios) — Ionia 853
 Marganeis (Marganeus) — Elis 259
 Marion (Marieus) — Cyprus 1018

 Maroneia (Maronites) — Thrace: from Nestos to
 Hebros 646
 Massalia (Massaliotes) — Spain and France 3
 Matala (Matalios) — Crete 976
 *Matropolis (Matropolites) — Akarnania 128
 Medeon (Medeonios) — Phokis 186
 Medion (Medionios) — Akarnania 129
 Medma (Medmaïos) — Italia 60
 Medmasos (Madnaseus) — Karia 912
 Megale polis (Megalopolites) — Arkadia 282
 Megara (Megareus) — Sikelia 36
 Megara (Megareus) — Megaris, etc. 225
 Mekyberna (Mekybernaïos) — Chalkidike 583
 Melaina Korkyra (Korkyraios) — The Adriatic 83
 *Melanpagos? (Melanpagitas) — Aiolis 821
 Meliboia (Meliboieus) — Magnesia 453
 Melitaia (Melitaieus) — Achaia Phthiotis 438
 Melos (Melios) — The Aegean 505
 Mende (Mendaïos) — Chalkidike 584
 Mesambria (Mesambrianos) — Pontos: West Coast 687
 Mesambrie — Thrace: from Nestos to Hebros 647
 (Messapioi) — West Lokris 163
 Messene (Messenios)/Ithome (Ithomaios) — Messenia 318
 (Metapioi) — Elis 260
 Metapontion (Metapontinos) — Italia 61
 Metauros (Mataurinos) — Italia 62
 Methana (Methanaïos) — Argolis 352
 Methone (Methonaïos) — Magnesia 454
 Methone (Methonaïos) — Makedonia 541
 Methydrion (Methydrieus) — Arkadia 283
 Methyilion (Methylieus) — Thessalia 402
 Methymna (Methymnaïos) — Lesbos 797
 Metropolis (Matropolitas) — Thessalia 403
 Metropolis — Propontic Coast of Asia Minor 749
 Mieza (Miezaios/Miezeus) — Makedonia 542
 Milatos (Milatios) — Crete 977
 Miletos (Milesios) — Ionia 854
 Miletoupolis (Miletopolites) — Propontic Coast of Asia
 Minor 750
 Miletouteichos (Miletoteichites) — Propontic Coast of
 Asia Minor 751
 Milkoros (Milkorios) — Chalkidike 585
 Minoa (Minoetes) — The Aegean 473
 Molykreion (Molykreus) — Aitolia 150
 Mondaia (Mondaieus) — Perrhaibia 465
 Mopsion (Mopseus) — Thessalia 404
 Morgantina (Morgantinos) — Sikelia 37
 Mothone (Mothonaïos) — Messenia 319

- Myania (Myaneus) — West Lokris 164
 Mykalessos (Mykalessios) — Boiotia 212
 Mykenai (Mykenaios) — Argolis 353
 Mykonos (Mykonios) — The Aegean 506
 Mylai (Mylaios) — Sikelia 38
 Mylai (Mylaios) — Perrhaibia 466
 Mylasa (Mylaseus) — Karia 913
 Myndos (Myndios) — Karia 914
 Myonnesos (Myon(n)esios) — Ionia 855
 Myous (Myes(s)ios) — Ionia 856
 Myrina (Myrinaios) — The Aegean 502
 Myrina (Myrinaios) — Aiolis 822

 Strepsa (Strepsaios) — Chalkidike 615
 Stryme — Thrace: from Nestos to Hebros 650
 Stymphalos (Stymphalios) — Arkadia 296
 Styra (Styreus) — Euboia 377
 Syangela (Syangeleus)/Theangela (Theangeleus) — Karia 931
 Sybaris (Sybaritas) — Italia 70
 Sybrita (Sybritios) — Crete 990
 Syme (Symaios) — The Aegean 522
 Syrakousai (Syrakosios) — Sikelia 47
 Syros (Syrios) — The Aegean 523

 (Talagreis) — Karia 932
 Talana — Ainis 424

 Tanagra (Tanagraios) — Boiotia 220
 Taramptos — Karia 933
 Taras (Tarantinos) — Italia 71
 (Tarbaneis) — Karia 934
 Tarrha (Tarrhaios) — Crete 991
 Taucheira (Taucheirites) — Libya 1029
 Tauromenion (Tauromenitas) — Sikelia 48
 Tegea (Tegeatas) — Arkadia 297
 Teithronion (Teithronios) — Phokis 194
 Tekmon — Epeiros 109
 Telandros (Telandrios) — Karia 935
 Telemessos (Telemesseus) — Karia 936
 Telos (Telios) — The Aegean 524
 Temesa (Temesaios) — Italia 72
 Temnos (Temnites) — Aiolis 832
 Tenedos (Tenedios) — Troas 793
 Tenos (Tenios) — The Aegean 525
 Teos (Teios) — Ionia 868
 Tereia — Propontic Coast of Asia Minor 763
 Terina (Terinaios) — Italia 73
 Termera (Termereus) — Karia 937
 (Terssogasseis) — Karia 938
 Tetrakis — Pontic Coast of Asia Minor 731
 Teuthis (Teuthidas) — Arkadia 298
 Teuthrania — Aiolis 833
 Thalamai (Thalamates) — Messenia 321
 Thaliades — Arkadia 299
 Thasos (Thasios) — The Aegean 526
 (Thasthareis) — Karia 939
 Thaumakoi (Thaumakos) — Achaia Phthiotis 443
 Thebai (Thebaios) — Boiotia 221
 Thebai (Thebaios) — Achaia Phthiotis 444
 Thebai (Thebaios) — Ionia 869
 Thebe — Aiolis 834
 Thelphousa (Thelphousios) — Arkadia 300
 Themiskyra — Pontic Coast of Asia Minor 732
 Theodosia (Theudosieus) — Pontos: Skythia 707
 Thera (Theraios) — The Aegean 527
 Therambos (Thrambaios) — Chalkidike 616
 *Therma (Thermaios) — The Aegean 481
 Therme — Mygdonia 552
 Therminea — Aitolia 155
 Thespiiai (Thespieus) — Boiotia 222
 Thestoros — Chalkidike 617
 Thetonion (Thetonios) — Thessalia 416
 Thisbai (Thisbeus) — Boiotia 223
 Thisoa (Thisoaios) — Arkadia 301
 Thouria (Thouriates) — Messenia 322

- Thourioi (Thourios) — Italia 74
 Thraistos (Thraistios) — Elis 264
 Thronion (Thronieus) — East Lokris 388
 Thydonos — Karia 940
 Thyrea — Lakeldaimon 346
 Thyrrreion (Thyrieus) — Akarnania 139
 Thyssos (Thyssios) — Chalkidike 618
 Tieion (Tianos) — Pontic Coast of Asia Minor 733
 Tinde (Tindaios) — Chalkidike 619
 Tiryns (Tirynthios) — Argolis 356
 *Tisna (Tisnaios) — Aiolis 835
 Tolophon (Tolophonios) — West Lokris 167
 Tomis (Tomites) — Pontos: West Coast 693
 Torone (Toronaïos) — Chalkidike 620
 Torone — Epeiros 110
 Torthyneion (Torthyneus) — Arkadia 302
 Torybeia (Torybeieus) — Akarnania 140
 Trachis (Trachinios) — Malis 432
 Trachis (Trachinios) — Phokis 195
 Traïlos (Traïlios) — Bisaltia 555
 Tralleis (Traldeus) — Karia 941
 Trapezous (Trapezountios) — Arkadia 303
 Trapezous (Trapezountios) — Pontic Coast of Asia
 Minor 734
 Trichoneion (Trichonieus) — Aitolia 156
 Trika (Trikkaios) — Thessalia 417
 Tripoiai — Chalkidike 621
 Tritaia (Tritaieus) — Achaia 244
 Tritrea (Triteus) — West Lokris 168
 Tritreis — Phokis 196
 Troizen (Troizenios) — Argolis 357
 Troneia (Troneieus) — Phokis 197
 Tylosos (Tylosios) — Crete 992
 Tyndaris (Tyndarites) — Sikelia 49
 Tyras (Tyranos) — Pontos: West Coast 694
 Tyritake — Pontos: Skythia 708
 Tyrodiza (Tyrodizenos) — Propontic Thrace 681
 (Tyrrhenoi) — Sikelia 50
 Xanthos (Xanthios) — Lykia 943
 Zakynthos (Zakynthios) — Akarnania 141
 Zankle (Zanklaios)/Messana (Messanios) — Sikelia 51
 Zeleia (Zeleites) — Propontic Coast of Asia Minor 764
 Zereia (Zeranios) — Chalkidike 622
 Zmaratha — Epeiros 111
 Zone (Zonaios) — Thrace: from Nestos to Hebros 651

3. Toponyms and City-Ethnics in Greek

Toponyms and city-ethnics are separated by a dash.

If no toponym is attested the entry opens with a dash.

(L) = Attested in Hellenistic and/or Roman texts only.

Ἀβαι, αἶ; Ἀβα; Ἀβη; Ἀβαντα (L) — Ἀβαῖος (L) no. 169

Ἀβακαύνη, ἡ (L); Ἀβάκαινον, τό (L) — Ἀβακαῖνος no. 5

Ἀβδηρα, τά; Ἀβδηρος; Ἀβδηρα, ἡ (L) — Ἀβδηρίτης; Ἀβδθρίτης no. 640

Ἀβυδος, ἡ — Ἀβυδενός; Ἀβυδηνός no. 765

Ἀγγεία, ἡ (L) — Ἀγγειεύς; Ἀγγειάτης (L) no. 418

Ἀγκών, ἡ — Ἀγκων(ε)ίτης (L) no. 76

Ἀγορά, ἡ — no. 661

Ἀγρίνιον, τό (L) — Ἀγρινιεύς (L) no. 142

Ἀγύριον, τό (L); Ἀγούριον (L); Ἀγύρινα (L) — Ἀγυριναῖος (L) no. 7

Ἄδραμύτ(ε)ιον — Ἄδραμυτηνός; Ἄδραμου[ττανός] no. 800

Ἄδρανον, τό (L) — Ἄδρανίτας; Ἄδρανίτης (L) no. 6

Ἄδρία, ἡ; Ἄτρία (L) — no. 75

Ἄζεια (L?) — Ἄζειεύς; Ἄζειός; Ἄζειώτης no. 772

Ἄζωρος (L); Ἄζωροι (L); Ἄζώριον, τό (L); Ἄζώρεια (L) — Ἄζωριαστάς (L) no. 459

Ἄθηνα, αἶ; Ἄθαινα — Ἄθηναῖος; Ἄθαναῖος no. 361

Ἄθηναί Διάδες, αἶ — Ἄθηνίτης; Ἄθηνήτης (L); Ἄθηναῖος no. 364

Ἀιανή, ἡ (L) Ἐάνη (L) — no. 528

Ἀιγαί, αἶ; Ἀιγά, ἡ — Ἀιγαῖος no. 229

Ἀιγαῖαι, αἶ; Ἀιγαί, αἶ — Ἀιγαεύς no. 801

Ἀιγεαί, αἶ; Ἀιγαῖαι (L); Ἀιγαί (L); Ἀιγεῖαι (L); Ἀιγαία (L) — Ἀιγαῖος (L); Ἐγέος (L) no. 529

Ἀἴγειρα, ἡ; Ἀἴγυρα — Ἀἴγειράτης no. 230

Ἀιγή, ἡ — Ἀιγάντιος no. 556

Ἀιγιάλη, ἡ (L); Ἀιγιαλός, ό (L); Ἀιγιαλόν, τό (L) — Ἀιγιαλεύς no. 471

Ἀἴγινα, ἡ — Ἀιγινήτης; Ἀιγινάτας no. 358

Ἀἴγιον, τό — Ἀιγιεύς; Ἀιγαιεύς no. 231

Ἀιγιρόεσσα — no. 802

Ἀιγίτιον, τό — no. 143

Ἀιγός ποταμοί, οἶ — Ἄιγός πο(-) no. 658

Ἀιγόςθενα, τά — Ἀιγοσθενίτας (L); Ἐγοσθενίτης (L) no. 224

Ἀἴγυς, ἡ — Ἀἴγυεύς; Ἀἴγύτης (L) no. 323

Ἀἴθαια (L) — Ἀἴθαιεύς no. 312

Ἀἴνεια, ἡ — Ἀἰνιάτης; Ἀἴνε(ι)άτης; Ἀἰνεήτης no. 557

Ἀἴνος, ἡ — Ἀἴνιος; Ἀἰνειεύς no. 641

Ἀἰόλειον; Αἰόλειον — Αἰολίτης no. 558

— Αἰολιδεύς no. 170

Ἀἰραί, αἶ; Ἀἰραί (?) — Ἀἰραιεύς; Ἀἰραιεύς; Ἀἰραῖος; Ἀἰραῖος no. 837

Ἀἶσα — no. 573

Ἀἴσων; Αἴσων — Αἴσωνεύς; Αἴσωνεύς; Αἴσώνιος no. 623

Ἀἴτνα, ἡ; Ἀἴτνη (L) — Αἴτναῖος no. 8

Ἄκανθος, ἡ — Ἀκάνθιος no. 559

Ἄκκαρα (L) — Ἐκκαρεύς no. 434

Ἄκράγας, ἡ — Ἀκραγαντῖνος no. 9

Ἄκραι, αἶ; Ἄκρα (L) — Ἀκραῖος (L) no. 10

Ἀκραίφια, ἡ; Ἀκραίφνιον; Ἀκραίφνία; Ἀκραίφια, τά (L) — Ἀκραφιεύς; Ἀκραφιεύς; Ἀκραίφνιος; Ἀκραιφνεώτης no. 198

Ἄκριπος — no. 144

Ἀκρόθων, τό; Ἀκρόθωοι; Ἀκρόθωοι (L) —

Ἀκρόθωιος; Ἀκροθώτης no. 560

Ἀκύφας — Ἀκυφάνιος (L) no. 389

Ἄλάβανδα, τά/ἡ — Ἄλαβανδεύς; Ἄλαβαδέυς (L) no. 870

Ἄλαί, αἶ (L) — Ἄλεεύς no. 380

Ἄλ(α)ιβαῖοι (L); Λεβαίη, ἡ; Ἄλεβία (L) — no. 530

Ἄλαισα, ἡ (L) — Ἄλαισῖνος no. 11

Ἄλαλίη, ἡ — no. 1

Ἄλαλκομεναί, αἶ (L) — no. 199

Ἄλαπτα — Ἄλάπτης (L) no. 561

Ἄλασάρνα — Ἄλασαρνίτας (L) no. 500

Ἄλασσαίων (L) — Ἄλασσεύς no. 245

Ἄλέα, ἡ — Ἄλε(ι)ός; Ἄλεάτας no. 265

Ἄλεοι; Ἄλοῦς, ό — no. 272

Ἄλεξανδρόπολις (L) — no. 652

Ἄλιάρτος, ό; Ἄρίαρτος, ό — Ἄλιάρτιος (L); Ἄριάρτιος; Ἄλιάρτιος (L) no. 206

Ἄλιεῖς, οἶ; Ἄλία, ἡ; Ἄλική (L) — Ἄλιεύς; Ἄλικός no. 349

Ἄλικαρνασσός, ἡ; Ἄλικαρνησσός — Ἄλικαρνασσεύς; Ἄλικαρνησσεύς; Ἄλικαρνάσσιος no. 886

- Ἀλίκυρνα*, ἡ (L); *Ἀλίκαρνα* (?) — no. 146
Ἄλιωδα, τὰ — *Ἄλιωδεύς* no. 871
Ἄλιον (L) — no. 246
Ἄλισαρνα, ἡ — no. 810
Ἄλιφείρα, ἡ (L); *Ἄλιφήρα* (L) — *Ἄλιφειρεύς* (L);
Ἄλιφηρέυς (L) no. 266
Ἄλλάντειον, τό; *Ἄταλάντη*, ἡ; *Ἄλ(λ)άντη* (L) — (-)
νταῖος; *Ἄλλανταῖος* (L) no. 531
Ἄλλαρία, ἡ — *Ἄλλαριώτας*; *Ἄλλαριάτης* (L) no. 944
Ἄλοντιόν, τό (L) — *Ἄλοντῖνος* no. 12
Ἄλόπη, ἡ — *Ἄλοπαῖος* (L) no. 378
Ἄλος; *Ἄλος*, ὁ/ἡ — *Ἄλεύς*; *Ἄλούσιος*; *Ἄλιος* (L) no.
 435
Ἄλπα (L); *Ἄλόπη* (L) — *Ἄλπαῖος* no. 157
Ἄληνός, ἡ; *Ἄληνοι*, οἱ; *Ἄληνός* — *Ἄληνῖος* (L)
 no. 379
Ἄλυζα, ἡ; *Ἄλύζια*; *Ἄλύζια*; *Λύζια* — *Ἄλυζαῖος*;
Ἄλυζῆος; *Ἄλυζεύς* (L) no. 112
Ἄλωπεκόννησος, ἡ — *Ἄλωπεκοννήσιος*;
Ἄλωποκοννήσιος; *Ἄλαποκονήσιος* (L) no. 659
Ἄλωρος, ἡ — *Ἄλωρίτης* (L) no. 532
Ἄμαθοῦς, ἡ — *Ἄμαθούσιος* no. 1012
Ἄμαντία, ἡ; *Ἄβαντία* (L) — *Ἄμαντιεύς* no. 86
Ἄμαξιτός, ἡ; h[αμαχ]σιτός — *Ἄμαξιτεύς*; *Ἄμαξιτηνός*
 (L) no. 778
Ἄμβρυσ(σ)ός, ἡ (L); *Ἄμβροσσος* (L); *Ἄμφρυσος* (L) —
Ἄμβρυσσεύς (L); *Ἄμφρύσιος* (L); *Ἄμβρόσιος* (L);
Ἄμβροσσεύς (L); *Ἄμβρωσσεύς* (L); *Ἄμβρύσ(σ)ιος*
 (L) no. 171
Ἄμισός, ὁ/ἡ — *Ἄμισηνός* no. 712
Ἄμ(μ)ος, ἡ (L) — *Ἄμιος* no. 872
Ἄμπρακία, ἡ; *Ἄμβρακία*, ἡ; *Ἄνπρακία*, ἡ —
Ἄμπρακιώτας; *Ἄμβρακιώτης*; *Ἄμβρακιάτ[ης]* (L);
Ἄμβρακῖνος no. 113
Ἄμύζονα, τὰ; *Μύδων*; *Ἄμυζών*, ἡ (L) — *Μυδονεύς*;
Ἄμυζονεύς no. 874
 — *Ἄμυνανδεύς* no. 873
Ἄμυρος, ἡ; *Ἄμυρική*, ἡ — *Ἄμυρεύς*; *Ἄμύριος* (?) no.
 445
Ἄμφαναία, ἡ; *Ἄμφαναί*, αἱ; *Ἄμφαναῖον*, τό —
 [Ἄμ]φάνιος (L); *Ἄμφαναῖεύς* (L) no. 393
Ἄμφιδολία, ἡ (L) — *Ἄμφιδολος* no. 247
Ἄμφίκαια, ἡ/τά; *Ἄμφίκλεια* (L) — *Ἄμφικλειεύς* (L)
 no. 172
Ἄμφίπολις, ἡ — *Ἄμφιπολίτης* no. 553
Ἄμφισσα, ἡ; *Ἄνφισσα* (L) — *Ἄμφισσεύς*; *Ἄνφισσεύς* (L)
 no. 158
Ἄναια, τὰ; *Ἄναία*, ἡ (L) — *Ἄναϊτῆς* no. 838
 — *Ἄναίτο*[s] no. 248
Ἄνακτόριον, τό — *Ἄνακτοριεύς*; *Φανακτοριεύς*;
Ἄνακτόριος no. 114
Ἄνάφη, ἡ (L) — *Ἄναφαῖος*; *Ἄναφαιεύς* no. 474
Ἄνδρος, ἡ — *Ἄνδριος* no. 475
Ἄνθεμοῦς, ὁ/ἡ — *Ἄνθεμούντιος* (L); *Ἄνθεμούσιος* (L)
 no. 562
Ἄνθηδών, ἡ — *Ἄνθηδόνιος* (L); *Ἄνθάδονιος* (L) no. 200
Ἄνθήλη, ἡ — no. 427
Ἄνθήνη, ἡ; *Ἄνθάνα* (L) — no. 324
Ἄντανδρος, ἡ — *Ἄντάνδριος* no. 767
Ἄντίκυρα, ἡ — *Ἄντικυρεύς* (L) no. 173
Ἄντικύρη, ἡ — *Ἄντικυρεύς*; *Ἄντικυρίτας* no. 428
Ἄντισσα, ἡ — *Ἄντισσαῖος* no. 794
Ἄντρών, ὁ/ἡ; *Ἄντρώνες* — no. 433
Ἄνώπολις (L) — *Ἄνωπολίτης* (L) no. 945
Ἄξος (L); *Φάξος* (L); *Ῥάξος*, ἡ — *Φάξιος*; *Ἄξιος*; *Ῥάξιος*
 (L) no. 950
Ἄπελλωνία, ἡ (L); *Ἄπολλωνία*, ἡ (L) — *Ἄπελλωνάτας*
 (L); *Ἄπολλωνιάτας* (L) no. 946
Ἄπολλωνία, ἡ (L) — *Ἄπολλωνιάτης* (L) no. 13
Ἄπολλωνία, ἡ — *Ἄπολλωνιάτης* no. 77
Ἄπολλωνία — *Ἄπολλωνιάτης* no. 545
Ἄπολλωνία, ἡ — no. 627
Ἄπολλωνία, ἡ — *Ἄπολλωνιάτης* no. 682
Ἄπρος, ἡ — no. 653
Ἄπταρα, ἡ (L); *Ἄπτερα*, ἡ (L) — *Ἄπταραῖος*; *Ἄπτεραῖος*
 no. 947
Ἄραπλος — no. 660
Ἄργεθία, ἡ (L) — *Ἄργεθιεύς* no. 470
Ἄργιλος, ἡ — *Ἄργίλιος*; *Ἄρκί(λιος)* no. 554
Ἄργισσα, ἡ; *Ἄργουσσα* — *Ἄργούσιος* (L) no. 394
Ἄργος, τό — *Ἄργεῖος*; *Ἄργεῖος* ὁ *Ἄμφίλοχος* no. 115
Ἄργος, τό — *Ἄργεῖος* no. 347
Ἄρεθούσα, ἡ — *Ἄρεθούσιος*; *Ῥερεθούσιος* (L?) no. 546
Ἄρίσβα, ἡ; *Ἄρίσβη* (L) — no. 795
Ἄρίσβη, ἡ; *Ἄρίσβα* — *Ἄρισβαῖος* no. 768
Ἄρκάδες, οἱ (L) — *Ἄρκάς* no. 948
Ἄρκέσ(σ)εῖα, ἡ — *Ἄρκασ(ε)ιεύς* (L) no. 486
Ἄρκεσίνη, ἡ/ὁ (L) — *Ἄρκεσινεύς* no. 472
Ἄρλισσός — *Ἄρλισσεύς* no. 875
 — *Ἄρμελίτης* no. 876
Ἄρπάγιον — *Ἄρπάγιος*; *Ἄρπαγιανός* no. 742
Ἄρταίου τείχος, τό — *Ἄρταιοτειχίτης* (L) no. 735
Ἄρτάκη, ἡ — *Ἄρτακηνός*; *Ἄρτακεύς* no. 736
Ἄρτιχία, ἡ — no. 87
Ἄσέα, ἡ; *Ἄσεός* (L) — *Ἄσεάτης* no. 267
Ἄσίνη, ἡ — *Ἄσιναῖος* no. 313

- Ἀσπενδος*, ἡ — *Ἀσπένδιος* no. 1001
Ἄσσα; *Ἄσσηρα*, τὰ — *Ἄσσερίτης*; *Ἄσσερίτης* no. 564
Ἄσσοσ, ἡ — *Ἄσσιος*; *Ἔσσιος*; *Ἔσσιος*; *Ἡσσιος*; *Ἄσσοσ* no. 769
Ἄστακός, ἡ; *Ἄστακοί* — *Ἄστακός* (L); *Ἄστακηνός* (L) no. 116
Ἄστακός, ἡ; *Ἄστακος*, ἡ — *Ἄστακηνός* no. 737
— *Ἄστραιούσιος* no. 1030
Ἄστυπάλαια, ἡ — *Ἄστυπαλαιεύς* no. 476
Ἄστυπάλαια, ἡ (L) — no. 498
Ἄστυρα Μύσια, τὰ — *Ἄστυρηνός Μύσος* no. 770
Ἄστυρα Τροϊκά, τὰ — no. 771
Ἄσχεον, τό; *Ἄσχειον* (L) — *Ἄσχειεύς*; *Ἄσχεύς* (L) no. 232
Ἄταρνεύς, ὁ — *Ἄταρν(ε)ίτης* no. 803
Ἄτραξ; *Ἄδρακος*; *Ἄτρακία* — *Ἄτράγιος* no. 395
Ἀύλαί, αἱ (L) — *Ἀυλιάτης*; *Ἀυλίήτης*; *Ἀυλεάτης* no. 877
Ἀυλών, ὁ — *Ἀυλωνίτης* no. 314
Ἀυλών (L); *Ἄφλόν* — no. 949
Ἀυτοκάνη, ἡ — *Ἀυτοκανα(ίος)* no. 804
Ἄφροδισία, ἡ; *Ἄφροδιτία* (L); *Ἄφροδισιάς* (L) — no. 325
Ἄφροδίσιος; *Ἄφροδισιάς*, ἡ (L) — no. 1005
Ἄφυτις, ἡ; *Ἄφύτη* (L); *Ἄφυτος* — *Ἄφυταῖος* no. 563
Ἄχιλλεῖον, τό — no. 836
Ἄχιλλήιον, τό — no. 766
- Βάργασα* (L) — *Παργασεύς*; *Βαργασηνός* (L) no. 878
Βαργύλια, τὰ (L) — *Βαργυλιώτης* (L); *Βαργυλιεύς*; *Βαργυλήτης* no. 879
Βάρκη, ἡ; *Βάρκαια* (L) — *Βαρκαῖος*; *Βαρκαιεύς* (L) no. 1025
Βατία, αἱ; *Βιτία*, ἡ — no. 88
Βελβίνα, ἡ (L); *Βελεμίνα* (L) — no. 326
Βέλβινα, ἡ — *Βελβινίτης*; *Βελβινεῖτης* (L) no. 359
Βέργα, ἡ; *Βέργη*, ἡ; *Βέργιον* (L) — *Βεργαῖος* no. 628
Βεργέπολις, ἡ — no. 642
Βέροια, ἡ; *Βέρροια* (L) — *Βεροιαῖος*; *Βεροιεύς* (L); *Βεροιεύς* (L); *Βερωαῖος* (L) no. 533
Βέρυτις (L); *Βήριθος* (L) — *Βερύ[σιος]*; *Βιρύ(σιος)* no. 773
Βεχειριάς — no. 713

 Ἐρχομένιος no. 213
 Ὀρχομενός, ὄ; Ἐρχομενός; [Ἐρχομιν]ός —
 Ὀρχομένιος; Ἐρχομένιος; Ἐρχομίνιος no. 286
 — Ὀσβαῖος no. 589
 — Ὀπλενός no. 754
 Οὐράνιον, τό (L) — Οὐρανήτης no. 920
 Ὀφιοῦσα — no. 691
 Ὀφρύν(ε)ιον, τό; Ὀφρύνιον — Ὀφρυνεύς no. 786
 Παγαί, αἰ; Πηγαί, αἰ — Παγαῖος (L) no. 226
 Παγασαί, αἰ — Παγασίτας; Παγασαῖος no. 407
 Παῖον — no. 288
 Παισός, ἦ — Παισηνός no. 755
 Παιών — no. 670
 Πακτύη — no. 671
 Παλαιγάμβριον, τό — no. 826
 — Παλαιπερκόσιος no. 787
 Πάλαιρος — Παλαιρεύς; Παλαιραῖος no. 131
 Παλεῖς; Πάλη, ἦ (L) — Παλεύς; Παλαιεύς (L) no. 132
 Παλλάντιον, τό; Βαλλά[ντιον]; Παλλάντειον (L) —
 Παλλαντεύς; Παλλάντιος (L); Παλλαντίνος (L) no.
 289
 Πανδοσία, ἦ; Πανδοσίη (L); Πανδοσῖν(ος) no. 64
 Πανδοσία, ἦ — Παν(-) (L) no. 104
 Πανοπεύς, ὄ/ἦ; Πανοπεῖς; Φανοτεύς; Φανατεύς —
 Πανοπεύς; Φανοτεύς; Φανατεύς (L) no. 190
 Πανορμός, ὄ (L) — no. 510
 Παντικάπαιον, τό; Παντικαπαῖτης no. 705
 Παραποτάμιοι, οἰ — Παραποτάμιος no. 188
 Παρασώπιοι; Παρασωπίας (L) — Παρασωπιεύς no.
 426
 Παρθένιον, τό — no. 827
 Πάριον, τό — Παριανός; Παριηνός no. 756
 Πάρος, ἦ — Πάριος no. 509
 — Παρπαριώτης no. 921
 Πάσσανδα (L); Πασάδα (L) — Πασανδεύς no. 922
 Πασσαρών (L) — no. 105
 Πάτραι, αἰ — Πατρεύς; Πατραιεύς (L) no. 239
 Πάφος, ἦ — Πάφιος no. 1019
 Πεδιείς, οἰ — Πεδιεύς no. 189
 — Πεδιεύς no. 999
 Πειραιεύς (L) — Πειρα(ι)εύς no. 712
 Πειρεσία (L) — Πειράσιος; Πειρασιεύς no. 408
 — Πελειάτης no. 924
 Πελινναῖον, τό; Πέλινα, ἦ — Πελινναῖεύς; Πελινναεύς;
 Πελινναῖος no. 409
 Πέλλα, ἦ — Πελλαῖος (L) no. 543
 Πελλάνα, ἦ; Πελλήνη, ἦ; Πέλλα, τά (L) —
 Πελλ[α]νεύς; Πελληνεύς (L) no. 341

- Πελλήνη*, ἡ; *Πελλ(λ)άνα*; *Πελλίνα* (L) — *Πελληνεύς*;
Πελλανεύς; *Πελληναῖος* (L); *Πελλήνιος* no. 240
Πεπάρηθος, ἡ — *Πεπαρήθιος* no. 511
— *Περαεύς* no. 375
Πέργαμον, τό — *Περγαμηνός* (L) no. 828
Πέργη, ἡ — *Περγαῖος* (L) no. 1003
Πέρινθος, ἡ — *Περίνθιος* no. 678
Περκώτη, ἡ; *Περκόττε*; *Περκώπη* (L) — *Περκώσιος*;
Περκόσιος no. 788
Παρπάρων (L); *Περπερήνα*, ἡ (L) — *Παρπαρωνιώτης*;
Περπερήμιος (L) no. 829
Πέτρα (L) — *Πετρῖνος* no. 42
— *Πετραῖος* (L) no. 979
Πεῦμα, τό (L) — *Πενμάτιος* (L) no. 439
Πήδασα, τά (L) — *Πηδασεύς* no. 923
Πιακός (L) — *Πιακῖνος* no. 43

Φάρβελος — Φαρβέλιος no. 591

Φαρκαδών; Φαρκηδών (L) — Φαρκαδόνιος;
 Φαρκαδώνιος (L); Φαρκηδόνιος (L) no. 412

Φάρος, δ/ἡ — Φάριος no. 84

Φάρσαλος — Φαρσάλιος; Φάρσαλος; Φαρράλιος (L)
 no. 413

Φάσις — Φασιανός no. 711

— Φεγέτιος; Φεγέντιος; Φεγόντιος no. 592

Φελλόα, ἡ; Φελλόη (L) — no. 242

Φενεός, δ/ἡ — Φενεεύς; Φενικός; Φενεάτης (L) no. 291

Φεραί, αἰ — Φεραῖος no. 414

Φιγάλεια, ἡ (L); Φιάλεια, ἡ (L) — Φιγαλεύς no. 292

Φίλιπποι (L) — Φιλιπποπολίτης no. 396

Φίλιπποι, οἱ (L) — Φίλιππος; Φιλιππεύς; Φιλιππηνός
 (L) no. 637

Φιλιππόπολις, ἡ — no. 655

Φλειούς, ὁ — Φλειάσιος; Φλειήσιος; Φλειφάσιος;
 Φλιάσιος (L) no. 355

Φλυγόνιον, τό (L) — Πλυγονεύς (L); Φλυγονεύς (L);
 Φλυγωνεύς (L); [Φλυγ]ονεύς/[Πλυγ]ονεύς no. 191

[Φοιν]ίκα, ἡ — no. 107

Φοιτιαί, αἰ; Φυτία, ἡ — Φοιτιεύς; Φοίτιος no. 134

— Φολαιεύς; Φολάντιος (L); Φολᾶς (L) no. 151

Φολέγανδρος, ἡ; Φελέγανδρος — Φολεγάνδριος no.
 513

Φορίεια (L) — Φοριαεύς no. 293

Φρίξαι, αἰ; Φρίξα, ἡ — no. 309

Φυλάκη (L) — no. 440

Φυλέα, ἡ — no. 152

— Φυρράγιος no. 423

— Φύταιος no. 1035

Φώκαια, ἡ; Φώκα, ἡ — Φωκαιεύς; Φωκαεύς no. 859

Χαιρώνεια, ἡ; Χ[η]ρώνια (L); Χαιρωνήα (L) —
 Χαιρωνεύς (L) no. 201

— Χαλάδριος no. 249

Χαλειόν, τό — Χαλειεύς; Χαλεύς; Χαλεεύς; Χαλαῖος
 no. 159

Χαλέστρη; Χαλάστρη — Χαλεστρέ[ος] (L) no. 548

Χάλκη, ἡ; Χαλκία; Χάλκεια — Χαλκε(ι)άτης
 no. 477

Χαλκήτωρ (L); Χαλκητόρες (L) — Χαλκητώρ;
 Χαλκητορεύς no. 881

Χαλκίς, ἡ; ‘Υποχαλκίς; Χάλκεια (L) — Χαλκ[ιδεύς]
 no. 145

Χαλκίς, ἡ — Χαλκιδεύς no. 365

Χαλκίς (L) — Χα(λκιδεύς) no. 806

Χαράδρα, ἡ — Χαραδραῖος (L) no. 175

Χαραδρούς — no. 565

— Χεδρόλιος; ‘Εδρόλιος no. 566

Χερρόνησος — Χερρονήσιος; Χερρονεσίτης no. 661

Χερρόνησος, ἡ; Χερσόνασος — [Χερσο]νησίτης no.
 695

Χερρόνησος — Χερρονήσιος no. 882

Χερρόνησος (L) — Χερσονάσιος no. 953

Χήν, ὁ (L); Χήν (L) — Χηνεύς no. 328

Χήν, ὁ (L); Χήναι, αἰ (L) — Χηνεύς; Χηναῖος (L) no.
 425

Χίος, ἡ (L) — Χίος no. 883

Χίος, ἡ — Χίος no. 840

Χοιράδες — no. 714

Χυρεταίαι, αἰ (L) — Χυρετιαῖος; Χυρετιεύς (L)
 no. 460

Χύτον, τό — no. 841

Χυτρόπολις — Χυτροπολίτης no. 567

Ψωφίς, ἡ — Ψωφίδιος no. 294

‘Ωδεῖνιος — no. 727

‘Ωλενος — ‘Ολένιος; ‘Ωλένιος no. 238

‘Ωρεός, δ/ἡ — ‘Ωρείτης no. 372

‘Ωρικός, ὁ; ‘Ωρικόν, τό (L) — ‘Ωρικός no. 103

‘Ωρωπός, ὁ — ‘Ωρώπιος no. 214

Megara	incorporated into Syracuse c.483	[Berenike]	not yet a <i>polis</i> in 400?	Sollion	incorporated into Palairos in 431/0
Naxos	enslaved by Syracuse in 403	Byllis	not yet a <i>polis</i> in 400?	Therminea	a <i>polis</i> from C4e? onwards
Petra	indigenous community?, Hellenised in C4	Elea	not yet a <i>polis</i> in 400?	Phokis	
Piakos	indigenous community?, Hellenised in C4	Eurymenai	not yet a <i>polis</i> in 400?	Aiolidai	presumably destroyed in 480
Sileraioi	indigenous community?, Hellenised in C4	Gitana	not yet a <i>polis</i> in 400?	Kirrha	ghost <i>polis</i>
Stielanaioi	indigenous community?, Hellenised in C4	Horraon	not yet a <i>polis</i> in 400?	Triteis	presumably destroyed in 480
Tauromenion	a Hellenic <i>polis</i> from C4e onwards	Kassopa	a <i>polis</i> from C4m onwards	Boiotia	
Tyndaris	founded by Dionysios I in 396	Nikaia	not yet a <i>polis</i> in 400?	Alalkomenai	incorporated into Koroneia in C7–C6?
Tyrrhenoi	indigenous community, Hellenised in C4	Olympa	not yet a <i>polis</i> in 400?	Plataiai	destroyed in 427, resettled in 386
Italia and Kampania		Orikos	a <i>polis</i> from C4m onwards	Potniai	synoecised with Thebes 431, not re-established later
Poseidonia	conquered by Leukanians in C5l–C4e	Passaron	not yet a <i>polis</i> in 400?	Megaris, Korinthia, Sikyonia	
Siris/Polieion	disappeared in C5s	Phanote	not yet a <i>polis</i> in 400?	Aigosthena	not yet a <i>polis</i> in 400?
Sybaris	destroyed in 510, disappears in C5f	Phoinike	a <i>polis</i> from C4m onwards	Pagai	not yet a <i>polis</i> in 400?
The Adriatic		Poionos	a <i>polis</i> from C4m? onwards	Achaia	
Ankon	colonised by Syracusans c.387	Tekmon	not yet a <i>polis</i> in 400?	Ascheion	not yet a <i>polis</i> in 400?
Herakleia	probably founded by Dionysios I in C4e	Torone	a <i>polis</i> from C4m? onwards	Leontion	not yet a <i>polis</i> in 400?
Issa	probably founded by Dionysios I in C4e	Zmaratha	a <i>polis</i> from C4m? onwards	Elis	
		Akarnania		Anaitoi	no longer a <i>polis</i> in 400?
		Echinos	a <i>polis</i> from C4e? onwards	Chaladrioi	no longer a <i>polis</i> in 400?
		Euripos	a <i>polis</i> from C4e? onwards	Dyspontion	destroyed c.570
		Hyporeiai	a <i>polis</i> from C4e? onwards	Ewaoioi	no longer a <i>polis</i> in 400?
		Limnaia	a <i>polis</i> from C4e onwards	Lenos	no longer a <i>polis</i> in 400?
		Matropolis	a <i>polis</i> from C4e? onwards		
		Medion	a <i>polis</i> from C4e? onwards		
		Phara	a <i>polis</i> in C4? onwards		

Metapioi	no longer a <i>polis</i> in 400?	Thessalia		Iasonia	ghost <i>polis</i>
Pisa	a <i>polis</i> 365–62	Metropolis	founded by synoecism in C4f	Karambis	ghost <i>polis</i>
Arkadia		Phaloria	not yet a <i>polis</i> in 400?	Lykastos	ghost <i>polis</i>
Megale polis	founded in 368	Malis		Odeinios	ghost <i>polis</i>
Triphylia		Trachis	absorbed by Herakleia in 426	Tetrakis	ghost <i>polis</i>
Noudion	destroyed by Elis in C5s?	Phthiotis		Propontic Coast of Asia Minor	
Messenia		Peuma	not yet a <i>polis</i> in 400?	Paisos	incorporated into Lampsakos in, perhaps, C5l
Korone	founded or refounded in 369	Thebai	founded by synoecism in C4s	Skylake	perhaps incorporated into Kyzikos before 400
Messene/ Ithome	founded in 369	Magnesia		Lesbos	
Lakedaimon		Amyros	abandoned c.400, population moved to Kasthanaia?	Arisba	incorporated into Methymna in C6
Aigys	need not have existed before C4l	The Aegean		Ionia	
Belbina	not earlier than C4	Eteokarpathioi	splinter community in 5s? no <i>polis</i> town?	Naulochon	a <i>polis</i> in C4 onwards
Kyphanta	perhaps a C4 foundation	Kos	synoecised in 366/5	Smyrna	destroyed in C6m, refounded in C4l.
Thyrea	destroyed in 424	Mygdonia		Karia	
Argolis		Chalrestre	perhaps not a Hellenic <i>polis</i> in 400	Alabanda	not yet a Hellenic <i>polis</i> in 400?
Mykenai	destroyed c.460	Thrace: from Strymon to Nestos		Alinda	not yet a Hellenic <i>polis</i> in 400?
Orneai	destroyed c.416/15	Datos	founded c.360	Arlissos	not yet a Hellenic <i>polis</i> in 400?
Tiryns	destroyed in 460s	Eion	incorporated into Amphipolis in C5l	Armelitai	not yet a Hellenic <i>polis</i> in 400?
Attika		Krenides	founded c.360	Hybliseis	not yet a Hellenic <i>polis</i> in 400?
Eleusis	in existence 403–401	Philippoi	founded in 356	Hydaieis	not yet a Hellenic <i>polis</i> in 400?
Euboiia		Sirra	presumably a <i>polis</i> from C4m onwards	Iasos	destroyed in 405, reappears in C4f
Diakrioi	incorporated into Eretria? C5l?	Inland Thrace		Kasolaba	not yet a Hellenic <i>polis</i> in 400?
Diakres apo Chalkideon	incorporated into Chalkis C5l?	Alexandro-polis	founded in 341	Kaunos	not yet a Hellenic <i>polis</i> in 400?
Dystos	ghost <i>polis</i> ? still a dependent <i>polis</i> in C4m?	Apros	not yet a <i>polis</i> in 400	Kaunos	not yet a Hellenic <i>polis</i> in 400?
Grynchai	incorporated into Eretria C5l–C4e	Kabyle	founded c.340	Kedraei	destroyed in 405, reappears in C4–C3
Peraia	incorporated into Eretria C5l–C4e	Philippopolis	founded in C4m	Keramos	not yet a Hellenic <i>polis</i> in 400?
Styra	incorporated into Eretria C5l	Seuthopolis	founded c.325–15	Killareis	not yet a Hellenic <i>polis</i> in 400?
East Lokris		Thracian Chersonesos		Koliyrgeis	not yet a Hellenic <i>polis</i> in 400?
Knemides	ghost <i>polis</i> ?	Aigos potamoi	not a <i>polis</i> between C5l and C4m		
Nikaia	founded in C4f	Pontic Coast of Asia Minor			
Doris		Choirades	not a Hellenic <i>polis</i> in 400		
Akyphas/ Pindos	not yet a <i>polis</i> in 400?				

Koranza	not yet a Hellenic <i>polis</i> in 400?	Arkades	a <i>polis</i> from C4s onwards	Rhithymnos	a <i>polis</i> from C4s onwards
Ouranion	not yet a Hellenic <i>polis</i> in 400?	Bionnos	a <i>polis</i> from C4s onwards	Stalai	a <i>polis</i> from C4s onwards
Pladasa	not yet a Hellenic <i>polis</i> in 400?	Chersonasos	a <i>polis</i> from C4s onwards	Rhodos	
Syangela/ Theangela	not yet a Hellenic <i>polis</i> in 400?	Dragmos	a <i>polis</i> from C4s onwards	Brikindera	incorporated into Lindos in C5?
Terssogasseis	not yet a Hellenic <i>polis</i> in 400?	Hyrtakina	not yet a <i>polis</i> in 400?	Diakrioi	incorporated into Lindos in C5?
Lykia		Keraia	a <i>polis</i> from C4s onwards	Oiai	incorporated into Lindos in C5?
Xanthos	not yet a Hellenic <i>polis</i> in 400	Lappa	a <i>polis</i> from C4s onwards	Pedieis	incorporated into Lindos in C5?
Crete		Matala	not yet a <i>polis</i> in 400?	Libya	
Allaria	a <i>polis</i> from C4s onwards	Priansos	a <i>polis</i> from C4s onwards	Kinyyps	short-lived colony founded by Dorieus in C6l
		Rhaukos	a <i>polis</i> from C4s onwards

13. Civic Subdivisions

Spain and France

Massalia *gene*

Sikelia

Engyon *phratriai*
 Himera *phratriai, phylai?*
 Kamarina *phylai?, phratriai, triakades*
 Morgantina *eikades*
 Naxos *phylai or phratriai*
 Selinous *patrai*
 Syrakousai (3 Doric) *phylai*
 Zankle/Messana *phylai*

Italia and Kampania

Herakleia two unnamed types
 Kaulonia unnamed type
 Lokroi 3 *phylai*, 32? "*demoi*", *phatrai*
 Metapontion *phylai?* or *demoi?*
 Poseidonia unknown type
 Terina territorial units
 Thourioi 10 *phylai*

The Adriatic

Epidamnos *phylai*
 Issa 3 Dorian *phylai*
 Melaina Korkyra 3 Dorian *phylai*

Akarnania

Korkyra 3 Dorian *phylai*, units described by name plus numeral, unknown type

Phokis

Antikyra unknown type
 Delphoi *phratriai, patriai*

Megaris, Korinthia, Sikyonia

Aigosthena *kome* of Megara
 Korinthos 3 Dorian *phylai*, 8 territorial *phylai*, *hemiogda, triakades, phatrai; komai?*
 Megara 3 Dorian *phylai*, 5 *komai, hekatostyes*
 Sikyon 3 Dorian *phylai* + 4th *phyle*, 4 new *phylai*

Achaia

Dyme 3 *phylai*

Elis

Elis 12, later 8 *phylai*

Arkadia

Mantineia 5 *phylai, komai*
 Megalopolis 6 *phylai*
 Phigaleia *phylai*
 Tegea 4 *phylai*

Lakedaimon

Sparta 3 Dorian *phylai*, 5 *obai*

Argolis

Argos 3 Dorian *phylai* + 4th *phyle*, 12 *phatrai, pentekostyes*
 Epidaurus 2 Dorian *phylai* + 2 *phylai*, 39 territorial units
 Troizen 3? Dorian *phylai* + 4th *phyle*

Saronic Gulf

Aigina *patrai*

Attika

Athenai 4 Ionian *phylai, phratriai, naukrariai*; 10 *phylai*, 30 *trittyes*, 139 *demoi*

EuBoia

Athenai Diades *demos* of Histiaia/Oreos
 Chalkis *demosi*
 Dion *demos* of Histiaia/Oreos
 Dystos *demos* of Eretria
 Eretria 6 *phylai*; 5 *choroi*; 55–60 *demoi*
 Gryncheis *demos* of Eretria
 Histiaia (Oreos) *Phylai*; 25–30 *demoi*
 Orobiai *demos* of Histiaia/Oreos
 Peraia *demos* of Eretria
 Posideion *demos* of Histiaia/Oreos
 Styra *demos* of Eretria; unidentified sub-division

The Aegean

Chalke *demos* of Rhodos
 Delos 4 *phylai*, several *trittyes*
 Imbros. Kleisthenic *phylai* and *demoi*
 Kalymna 5 *phylai*, 7 *demoi*, 3 Dorian *phylai*

(Keos)

Ioulis	7 <i>phylai</i> , <i>koineia</i>
Karthaia	<i>phylai</i> , <i>oikoi</i>
Koresia	<i>phyle</i> of Ioulis
(Kos)	
Astypalaia	<i>demos</i> of Kos, subdivided into <i>phylai</i>
Kos	3 Dorian <i>phylai</i> , 9 <i>chiliastyes</i> , <i>triakades</i> , <i>pentekostyes</i>

(Lemnos)

Hephaistia	Kleisthenic <i>phylai</i> and <i>demoi</i>
Myrina	Kleisthenic <i>phylai</i> and <i>demoi</i>
Paros	<i>demoi</i> ?, <i>patrai</i>
Samothrake	5 <i>phylai</i>
Skyros	Kleisthenic <i>phylai</i> and <i>demoi</i>
Syros	3 <i>phylai</i>
Tenos	10 <i>phylai</i> , <i>patrai</i>
Thasos	<i>phylai</i> ?, <i>patrai</i> ?
Thera	3 Dorian <i>phylai</i>

Thrace: from Strymon to Nestos

Abdera	<i>phyle</i>
--------	--------------

Thrace: from Nestos to Ebros

Byzantion	<i>hekatostyes</i> , <i>patrai</i> ?, <i>thiasoi</i> ?
-----------	--

Propontic Thrace

Perinthos	3 of the Ionic <i>phylai</i>
-----------	------------------------------

Pontos: West Coast

Dionysopolis	<i>phylai</i>
Odessos	7 <i>phylai</i>
Tomis	<i>phylai</i>

Pontos: Skythia

Chersonesos	<i>hekatostyes</i>
-------------	--------------------

Pontic Coast of Asia Minor

Herakleia	3 Dorian <i>phylai</i> , 4, later 60, <i>hekatostyes</i>
-----------	--

Propontic Coast of Asia Minor

Kalchedon	<i>hekatostyes</i> ?
Kyzikos	6 Milesian <i>phylai</i>

Troas

Ilion	<i>phylai</i>
Skepsis	<i>phylai</i>

Ionia

Chios	<i>phylai</i> , <i>phratriai</i> , <i>gene</i> , units designated by numbers and letters
Ephesos	5 <i>phylai</i> , c.50 <i>chiliastyes</i>
Erythrai	<i>phylai</i> , <i>gene</i> , <i>chiliastyes</i>
Kolophon	<i>gene</i>
Magnesia	12 <i>phylai</i>
Miletos	6 Ionic <i>phylai</i> , 9–12 <i>phylai</i>
Pygela	<i>phylai</i> , <i>gene</i>
Samos	6 Ionian <i>phylai</i> ?
Teos	Ionian <i>phylai</i> ?

Karia

Iasos	6 <i>phylai</i> , <i>patriai</i>
Keramos	<i>phyle</i>
Koranza	<i>demoi</i> ? or <i>komai</i> ?
Latmos	<i>phylia</i> , <i>phratriai</i>
Mylasa	3 <i>phylai</i>
Pidasas	<i>phylai</i> , <i>phratriai</i>

Crete

Axos	<i>phylai</i> , <i>hetaireia</i>
Chersonasos	<i>phylai</i> ?
Datala	<i>phylai</i>
Dreros	<i>phylai</i> , <i>agela</i> , <i>hetaireia</i> ?
Eleutherna	<i>politeia</i> ?
Gortyns	<i>phylai</i> , <i>startoi</i>
Hierapytna	<i>phylai</i> ?
Knosos	<i>phylai</i> ?
Lato	<i>phylai</i> ?
Lyktos	<i>phylai</i>
Malla	<i>phylai</i>
Olous	<i>phylai</i>
Praisos	<i>phylai</i> ?

Rhodos

Ialysos	a <i>phyle</i> of Rhodos
Kamiros	a <i>phyle</i> of Rhodos, <i>phylai</i> , <i>demoi</i> , <i>ktoinai</i> , <i>patrai</i>
Lindos	a <i>phyle</i> of Rhodos, <i>demoi</i> , <i>ktoinai</i>
Rhodos	<i>phylai</i> , <i>demoi</i> , <i>ktoinai</i>

Libya

Kyrene	3 Dorian <i>phylai</i> , later 3 <i>phylai</i> , <i>patrai</i> , <i>hetairai</i>

Members recorded by regional ethnic

Bottiaioi— <i>Βοττιαῖοι</i> (IG 1 ³ 266.11.19)
Kares— <i>Κᾶρες ἠὸν Τύμνες ἄρχει</i> (IG 1 ³ 71.1.113; 267.111.25; 270.v.10; 272.11.79)
Lykioi— <i>Λυκιοὶ</i> (IG 1 ³ 261.1.30; 262.v.33; 266.111.34) <i>ATL</i> i. 513–14)

Members recorded by, probably, regional ethnic

Maiandrioi— <i>Μαιάνδριοι</i> (IG 1 ³ 71.1.133; 259.111.29; 261.1v.5; 267.v.19)
--

Markaioi—*Μαρκαῖοι* (IG 1³ 100 = Krateros fr. 23)

Mysoi—*Μυσοί* (IG 1³ 71.111.69–70; 259.v.15)

Members recorded by name of ruler

Paktyes Idymeus— <i>Πακτύες Ἰδυμ[εύς]</i> (IG 1 ³ 260.1.16; cf. 262.1v.20)
Pikres Syangeleus— <i>Πίκρες Συναγγελέυς</i> (IG 1 ³ 259.v.16); <i>Συναγγελές ἠὸν ἄρχει Πίτρεις</i> (IG 1 ³ 284.7–8; cf. 263.1.14–15; 280.1.66–67; 282.1v.48–49)
Sa[---] Killareus— <i>[Κι]λλ[αρῆς ἠὸν] Σα[---]αρχει</i> (IG 1 ³ 71.11.96–97)
Sambaktys— <i>Σαμβακτύς</i> (IG 1 ³ 261.v.12); <i>[Σαμβακτ]ύς</i> (IG 1 ³ 259.11.27)
Tymnes— <i>Κᾶρες ἠὸν Τύμνες ἄρχει</i> (IG 1 ³ 71.1.113–14; 267.111.25; 270.v.10 (completely restored); 271.1.84; 272.11.79)

Unconvincingly restored toponyms and ethnics

Dandake— <i>Δα[νδάκε]</i> (IG 1 ³ 71.1v.170) <i>ATL</i> i. 478–79
Halonesioi— <i>[χαλονέως]οι</i> (IG 1 ³ 71.111.101) <i>ATL</i> i. 468
Karkinitis— <i>Καρκινίτις</i> (IG 1 ³ 71.1v.165) <i>ATL</i> i. 496–97. Avram suggests Kallatis
Karoussa— <i>[Κάρο]σα</i> (IG 1 ³ 71.1v.129) <i>ATL</i> i. 497
Karyes para Idyma— <i>[Κ]αρυ[ῆς παρὰ Ἰδυμ]α</i> (IG 1 ³ 71.11.94–5) <i>ATL</i> i. 498–99
Kolone— <i>Κ[ολόνε]</i> (IG 1 ³ 71.111.135) <i>ATL</i> i. 505
Kroseis— <i>[Κ]ροσῆ[ς]</i> (IG 1 ³ 71.1.116) <i>ATL</i> i. 506–7
Krousis— <i>[πόλε]ς [Κροσσι]δος</i> (IG 1 ³ 77.v.41–42) <i>ATL</i> i. 539–41
Kythera— <i>[Κύθερα]</i> (IG 1 ³ 287.1.23) <i>ATL</i> i. 507
Milyai— <i>Μιλύαι</i> (IG 1 ³ 71.11.137) <i>ATL</i> i. 520–21
Neapolis— <i>Νεοπολίται ἕκ νν</i> <i>Μιλέ[το ἐν Λευκῶ]</i> <i>Ἄκροστερίοι</i> (IG 1 ³ 259.111.18–20)
Nipsa— <i>Νί[φσα]</i> (IG 1 ³ 71.1v.143) <i>ATL</i> i. 526–27
Palamedeion— <i>Π[αλαμῆδειον]</i> (IG 1 ³ 71.111.136) <i>ATL</i> i. 531
Patraieus— <i>Πάτ[ραυς]</i> (IG 1 ³ 71.1v.168) <i>ATL</i> i. 532
Pergamoteichitai— <i>[Περγ]αμ[οτειχίται]</i> (IG 1 ³ 71.1v.64) <i>ATL</i> i. 533–34
Petra— <i>Π[έτρα]</i> (IG 1 ³ 71.111.133, completely restored at IG 1 ³ 77.v.19) <i>ATL</i> i. 535
Pieres para Pergamon— <i>[Πί]ερες {σ} π[αρα Περ]γαμο[ν]</i> (IG 1 ³ 71.1v.61–62) <i>ATL</i> i. 538
Tamyrake— <i>Ταμυράκε</i> (IG 1 ³ 71.1v.164) <i>ATL</i> i. 553
Thymbra— <i>Θ[ύμβρα]</i> (IG 1 ³ 71.111.134) <i>ATL</i> i. 491.

Gortys	with Megalopolis 371–68? (persists)
Helisson	with Megalopolis 371–68? (persists)
Heraia	syn. or reinf. C6–C5? (vil. or pol.)
Lykosoura	with Megalopolis 371 (not implemented)
Mantineia	syn. or reinf. C6–C5? (vil. or pol.), syn. 370 (vil.)
Megalopolis	syn. 371–68 (vil. and pol.)
Methydrion	with Megalopolis 371–68? (persists)
Orchomenos	reinf. C4m (Euaimon)
Oresthasion	with Megalopolis 371–68? (persists)

Pallantion with Megalopolis 371–68? (not implemented)
 Tegea syn. or reinf. C6–C5? (vil. or pol.)
 Teuthis with Megalopolis 371–68? (persists)
 Thisoa with Megalopolis 371–68? (persists)
 Trapezous with Megalopolis 371–68 (not implemented)

Argolis

Argos reinf. C5f (vil. Hysiai), c.460 (pol. Tiryns), 416 (pol. Orneai)
 Orneai with Argos 416 (reappears in C4f)
 Tiryns with Argos c.460 (disappears)

Attika

Eleusis syn. 403 (Eleusinians and Athenian oligarchs)

Euboia

Histiaria/Oreos syn. 440s (pol. and vil.); reinf. 342/1 (vil. Ellopeis)

Thessalia

Metropolis syn. before 358 (vil.)

Achaia Phthiotis

Phylake with Thebai C4s (disappears)
 Pyrasos with Thebai C4s (persists)
 Thebai reinf. C4s (pol. Phylake, Pyrasos)

Magnesia

Amyros with Kasthanaie? c.400
 Kasthanaie reinf. c.400? (pol. Amyros?)

The Aegean

Astypalaia with Kos 366/5 (persists)
 Halasarna with Kos 366/5 (persists)
 Kos Meropis with Kos 366/5 (persists)
 Kos syn. 366/5 (pol. Astypalai, Halasarna, Kos Meropis)

Mygdonia

Arethousa reinf.? C5l? (pol. Bormiskos)
 Bormiskos with Arethousa? C5l? (disappears)

Chalkidike

Galepsos with Olynthos 432 (disappears?)
 Mekyberna with Olynthos 432 (reappears in 421)
 Olynthos reinf. 431 (pol. Galepsos, Mekyberna, Singos); reinf. 370s (pol.?)
 Singos with Olynthos 432 (reappears in 421)

Propontic Coast of Asia Minor

Kyzikos reinf. 362 (Prokonnesos)
 Lampsakos reinf. C4f (pol. Paisos)
 Paisos with Lampsakos C4f (disappears)
 Prokonnesos with Kyzikos 362 (persists)

Lesbos

Mytilene syn. planned by Mytilene 428 (pol.)

Ionia

Chios syn.? c.600 (vil.)

Karia

Halikarnassos reinf. C5m (vil.), c.370 (pol. Medmasos, Ouranion, Pedasa, Telemessos, Termera; vil. Side?)
 Latmos reinf. C4l (pol. Pidasas)
 Medmasos with Halikarnassos c.370 (disappears?)
 Ouranion with Halikarnassos c.370 (persists)
 Pedasa with Halikarnassos c.370 (persists?)
 Pidasas with Latmos C4l (persists?)
 Telemessos with Halikarnassos c.370 (persists)
 Termera with Halikarnassos c.370 (persists)

Crete

Hierapytna reinf. C4e (pol.? Larisa)
 Larisa with Hierapytna C4e (disappears)

Rhodos

Ialysos with Rhodos 408/7 (persists)
 Kamiros with Rhodos 408/7 (persists)
 Lindos with Rhodos 408/7 (persists)
 Rhodos syn. 408/7 (pol. Ialysos, Kamiros, Lindos)
