AITOLIA

KLAUS FREITAG, PETER FUNKE, NIKOLA MOUSTAKIS

I. The Region

Already in the Homeric period (Hom. *Il.* 2.638) ἡ Αἰτωλία (Hecat. fr. 15; Thuc. 3.96.1; Xen. *Hell.* 4.6.1) was a region north of the Corinthian Gulf bounded to the west by the river Acheloos and to the east by Cape Antirrhion. In the north Aitolia bordered on the tribal territories of the Perrhaibians, the Athamanians, the Ainians and the Oitaians (Strabo 10.2.21). Of the coastal cities Homer and Hesiod mention only those connected with mythology (Hom. *Il.* 2.638–40; Hes. fr. 10.a63). In C6/C5 they had developed into fully-fledged *poleis* which, apart from Proschion, were independent of the Aitolian tribal organisation (Thuc. 3.102.5), whose sphere of influence was restricted to the hinterland (Hdt. 6.127.2; Thuc. 3.94.3–98.5). Only in C5/C4 did the Aitolians regain possession of the coastal region, and only in stiff competition with the neighbouring Akarnanians, Achaians and Lokrians. The territorial changes are reflected in Strabo's self-contradictory account of the western boundary of Aitolia (8.2.3 *versus* 10.2.1; cf. Funke (1991a) 181f; cf. also Strabo's subdivision of Aitolia into Αἰτωλία ἀρχαία and Αἰτωλία ἐπικτητος (10.2.3)).

The reintegration of the Aitolian coast seems to have been closely connected with the transformation of the region from a tribal state into a federation (Larsen (1968) 78–80, 195–215; Funke (1997); Corsten (1999) 133–59; Grainger (1999); Scholten (2000) 9–25). Originally, the three major Aitolian tribes—the Apodotai, the Ophiones and the Eurytanes—had been subdivided into numerous smaller units (Thuc. 3.94.4–5, 101.1). This organisation was now abandoned and replaced by a federal structure which combined a strong central power with a plurality of member states, formed by an emancipation of the sub-tribes. In C4, if not earlier, the old Aitolian coastal cities (Xen. *Hell.* 4.6.1) joined the federation as new member states.

The tribal ethnic is Αἰτωλός, attested externally in numerous archaic and classical sources (Hom. *Il.* 2.638; Hes. fr. 198.9; Hdt. 6.127.2; Thuc. 1.5.3; Soph. *OC* 1315; Ar. *Eq.* 79; *SEG* 28.408; *IG* 1³ 190). A rare variant form is Αἰτώλιος

(Hom. *Il.* 4.399; Steph. Byz. 55.13). From C4 onwards the tribal ethnic denotes membership of the new federal state and is attested externally (RO 35 (367); *Syll.*³ 563 = *IG* 1X².1 192 (C3l)) as well as internally on coins (Head, *HN*² 334–35) and in federal decrees (*IG* 1X².1 1.5 (C3m)). The federation itself is called τὸ κοινὸν (τὸ) τῶν Αἰτωλῶν (*IG* 1X².1 6.1 (C3f); RO 35.8 (367)). The names of the member states are sometimes recorded in interstate relations (*I. Magnesia* 28.9–26 (c.200); *SEG* 38 1476 (206/5)). Inside the Aitolian Federation a citizen's affiliation with his *polis* is indicated by the addition of a city-ethnic, and usually in the form: name (+ patronymic) + city-ethnic. Internally the city-ethnic is added directly to the name (+ patronymic): Πολύκριτος Καλλιεύς (*IG* 1X².1 3A.16 (C3f)); Κλεισίας Λύκου Πλευρώνιος (*IG* 1X².1 53.1 (C3m)); Δαμόκριτος Στρατάγου Καλυδώνιος (*IG* 1X².1 30.21 (C2e)). Externally an Aitolian is identified either by the tribal ethnic alone: Φίλλακος Αἰτωλός (*IG* 11² 7994 (C4); *F. Delphes* 11 4 387.1–4 (c.320–310)) or by the city-ethnic alone: Θρασύβουλος Καλυδώνιος (Lys. 13.71), or in the form of Αἰτωλός ἐκ/ἀπό + city-ethnic in the genitive: (—name patronymic—ο)υ Αἰτω[λῶ]ι ἐκ Μ[ακυνέας] (*BCH* 23 (1899) 356 no. 2 (C4l)). The ethnics which signify affiliation with a member state of the Federation can reasonably be described as city-ethnics, in so far as the members of the Aitolian Federation seem frequently to fulfil the political criteria for being a *polis* and, furthermore, seem frequently to have had an urban centre, thus conforming to the observation expressed in the *Lex Hafniensis*.

These ethnics are attested in great numbers in sources of C3/C2, but most of them have not yet been located, mainly because the archaeological investigation of Aitolia is still in its first stage. For a good survey of the state of research, see Bommeljé (1987). An additional problem is that almost all these ethnics are attested in Hellenistic sources only, and cannot be adduced as evidence of classical *poleis* unless they are supported by archaeological evidence of earlier periods. Recently this problem has become a focus of discussion. The investigations once conducted by E. Kirsten induced him to

argue that, in large parts of north-western Greece, urbanisation began in C3/C2. But recent research shows that urbanisation in Aitolia was contemporaneous with the political shift from a tribal to a federal state, which in several member states began in C4 and resulted in the formation of urban habitation centres (Funke (1987), (1997)).

One example is the Aitolian city of Kallion/Kallipolis. According to Thucydides (3.96.3) the *Καλλιεῖς* were still a sub-tribe of the Ophionians, one of the three large Aitolian tribes, but later they became inhabitants of a separate member state of the Aitolian Federation, with an urban centre, called *Κάλλιον* or, significantly, *Καλλίπολις* (Polyb. 20.11.11). The affiliation with the Aitolian tribe of the Ophionians had become obsolete, and instead we find in C3/C2 inscriptions one of the following forms of a city-ethnic: *Καλλιεύς* (IG IX².1 3A.16, 19) or *Αἰτωλὸς ἐκ Καλλίων* (SEG 11 415.38) or *Καλλιπόλιτας* (IG IX².1 18.4, 206.3) or *Αἰτωλὸς ἐκ Καλλιπόλιος* (IG IX².1 783). In the 1970s the excavations of the ancient nucleated settlement at Veluchovo (west of modern Lidoriki) not only confirmed the identification of this town with Kallipolis (SEG 28 504); they also showed that the town grew up already in C4 (Themelis (1979), (1983) 237ff; Bakhuizen (1992)).

Archaeological evidence of the same kind from other sites of inland Aitolia supports the inference that numerous member states of the Aitolian Federation were centred on a large nucleated settlement, i.e. a town. This conclusion matches the description of Aitolia at Ps.-Skylax 35; and the distinction between *πόλεις* and *ἔθνη* attested in an Akarnanian inscription of C3l (IG IX².1 583.40) points in the same direction and seems to reflect the settlement pattern of north-western Greece in general.

The numerous unlocated Aitolian ethnics of C3/C2 combined with the unidentified remains of Aitolian urban settlements of C5/C4 must lead to the conclusion that, as the evidence stands, it is impossible to suggest even a rough estimate of the number of Aitolian *poleis* in the Classical period. What one can do is, as an appendix to the Inventory of identifiable *poleis*, add (1) a list of all the unlocated Aitolian ethnics (*infra* 386–87) and (2) a list of Hellenistic and undated settlements which may have been *poleis* already in the Classical period (*infra* 387–88).

Finally, there are four communities which are attested in C4 sources, but excluded from the Inventory *infra*, because we cannot prove that they were *poleis* rather than *ethne*. Among the relatively few Aitolian inscriptions of the Classical period are two boundary stones, each recording the border between two named communities. One marks

the border between the Eiteaioi and the Eoitanes (IG IX².1 116.1–3 (C4): *τέρμων Εἰτειαίων Ἐοιτάνω[ν]*), the other the border between the Arysaioi and the Nomenaioi (AD 22 (1967) 322 (C4): *τέρμων Ἀρυσάων Νωμεναίων*). The two stones provide us with information about four communities which were all members of the Aitolian Federation (Funke (1997) 162 with n. 75). What we cannot know is whether these communities were organised as tribes settled in *komai*, like the Kallieis mentioned by Thucydides at 3.96.3, or were *poleis*, like Makynia (see *infra*). It is impossible to ascertain whether the four ethnics recorded on the two stones are city-ethnics (testifying to *polis* status) or regional ethnics (testifying to some form of tribal organisation). In 1987, however, a C3 tombstone set over a certain *Στομᾶς Νουμναι<ε>ύς* was found at Palairos in Akarnania (Antonetti (1987b) 97; cf. SEG 38 435). The editor connected the ethnic *Νουμναι<ε>ύς* with the Aitolian ethnic *Νωμεναῖος*, and, if she is right, the individual and the external use of an ethnic suggests that it was a city-ethnic rather than a regional ethnic (Funke (1997) 183 n. 75). Thus, one might list the Noumenaioi in the Inventory as a *polis* type C. But, as the evidence stands, it seems preferable to list all four communities here rather than in the Inventory.

The Inventory of *poleis*, here, as elsewhere, is preceded by a list of pre-Hellenistic settlements excluded from the Inventory. The list consists of two parts: (1) named and identified settlements of the Archaic and Classical periods which seem not to have been *poleis*, or for which the information derived from written sources and archaeological evidence is insufficient to warrant inclusion in the Inventory. (2) Unidentified archaeological sites which have significant remains of urban structures of the Classical period (defence circuit, habitation quarters, etc.); see Bommeljé (1987) 75–113.

1. Pre-Hellenistic Settlements not Attested as Poleis

Akragas (Ἀκράγας) Steph. Byz. 62.16 (*πόλις Αἰτωλίας*). Probably, Akragas, Akrai and Akropolis designate the same site (Pritchett (1989) 134f). Akragas is identified with the ancient remains of Lithovounion. Bommeljé (1987) 93f report on a totally vanished double-scaled wall which has never been dated precisely, some very scanty architectural remains probably of a temple, and a large cemetery dated from C5l–C4e. *Barr. C.*

Akraï (Ἄκραι) Polyb. 5.13.9 (περὶ τὴν καλουμένην πόλιν Ἄκρας), probably identical with Akragas (Pritchett (1989) 134f; Antonetti (1990) 237f); see *supra* Akragas.

Akropolis (Ἀκρόπολις) Steph. Byz. 63.20 (πόλις Αἰτωλίας), probably identical with Akragas (Pritchett (1989) 134f); see *supra* Akragas.

Ithoria (Ἰθωρία) Polyb. 4.64.9f (χωρίον . . . ὀχυρότητι δὲ φυσικῇ καὶ χειροποιήτῳ διαφέρεται). Ithoria is identified with Ag. Ilias: C/H fortification, habitation site, acropolis walls, wall of a lower town, finds from C4 to C1 AD (Bommeljé (1987) 74). Not in *Barr*.

Krokyleion (Κροκύλειον) Thuc. 3.96.2 (without any site-classification). Krokyleion is identified with Filothei (Goumaioi). Hellenistic? fortified settlement, acropolis wall (Bommeljé (1987) 82). *Barr. C*.

Oichalia (Οἰχαλία) Hom. *Il.* 2.730 (πόλις Εὐρύτου); cf. also Steph. Byz. 488.1; Strabo. 10.1.10 (Οἰχαλία, κώμη ἐν Αἰτωλίᾳ περὶ τοὺς Εὐρυτάνας). No indication of *polis* status in the Classical and Hellenistic periods. Perhaps to be identified with modern Koryskhades. *Barr. C*.

Olenos (Ὠλενος) Hom. *Il.* 2.638f (Αἰτωλῶν δ' ἡγήετο Θόας Ἀνδραίμονος υἱός, οἱ Πλευρῶν' ἐνέμοντο καὶ Ὠλενον ἠδὲ Πυλῆνην); Hellan. (FGrHist 4) fr. 118 = Strabo. 10.2.6 (Ὠλενον δὲ καὶ Πυλῆνην ὀνομάζει πόλεις ὁ ποιητῆς Αἰτωλικῆς) referring to Homer; Steph. Byz. 707.12 (πόλις Αἰτωλίας). No indication of *polis* status in C7–C4. Unlocated (discussion see Kirsten (1937) 2444f; Antonetti (1990) 277f). *Barr.* undated.

Paianion (Παιάνιον) Polyb. 4.65.3 (πόλις). No indication of *polis* status before C3. Paianion is identified with Mastron. C2/H remains of fortifications, double-scaled wall (Kirsten (1942); Bommeljé (1987) 96; cf. also Funke (1987) 92–94; Antonetti (1990) 277). Not in *Barr*.

Potidania (Ποτιδανία) Thuc. 3.96.2 (without any site-classification); cf. Livy 28.8.9 (in *propinquis castellis Potidaniae atque Apolloniae*); Steph. Byz. 533.18 (πόλις Αἰτωλίας). The city is also mentioned in the C3/C2 *theorodokoi* list from Delphi: ἐν Ποτειδανίαι (BCH (1921) col. iv 58). The city-ethnic is Ποτειδανιεύς (IG IX².1.9.13 (C3f)). Potidania is located near Kambos (Lerat (1952) i. 8, 76, 192; Antonetti (1990) 294f). Potidania issued coins in C3s/C2f (Liampi (1996) *passim*). Not in *Barr*.

Pylene (Πυλήνη) See the Inventory s.v. Proschion.

Rhion (Ῥίον) Steph. Byz. 545.14 (πόλις Αἰτωλίας); cf. Thuc. 2.86.2 (τὸ Ῥίον τὸ Μολυκρικόν). Dependent harbour of Molykreion (see the Inventory s.v. Molykreion). Not in *Barr*.

Teichion (Τείχιον) Thuc. 3.96.2 (without any site-classification). Teichion was part of the region of the Apodotoi. It must have been situated near the Locrian border (Fiehn (1934)). *Barr. C*.

Thermos (Θέρμος) Steph. Byz. 310.3 (πολίχιον Αἰτωλίας); Polyb. 5.6.6 (τὸν ἐν τοῖς Θέρμοις τόπον); Strabo. 10.3.2 (ἐν Θέρμοις τῆς Αἰτωλίας). In Archaic and Classical times Thermos was the religious centre of the Aitolian tribes, since C4 of the Aitolian Federation (Funke (1997) 154). There is no explicit indication of *polis*-ness apart from the city-ethnic: Θέρμιος (IG IX².1 102.8 (C2e)), Θρέμιος (IG IX².1 91.1.4 (C5e)); *ketikon*: Θερμικός (Steph. Byz. 310.3). *Barr. AC*.

2. Unidentified Classical Settlements

Amvrakia Situated north of Thermos. C/H, scanty remains of an acropolis wall (Bommeljé (1987) 76; Antonetti (1990) 224f). Not in *Barr*.

Analipsis C/H, remains of a fortified settlement (Bommeljé (1987) 76; Antonetti (1990) 237). Not in *Barr*.

Dorikon C/H, remains of a wall (Bommeljé (1987) 80). *Barr. AC*.

Drymon C/H, small fortification (Bommeljé (1987) 81). Not in *Barr*.

Dyo Ekklesies C2/H, remains of a fort (Bommeljé (1987) 107). Not in *Barr*.

Klepa C/H?, scanty remains of a fortified settlement (Bommeljé (1987) 89). Not in *Barr*.

Klima C/H, a fortified hill-top settlement (Bommeljé (1987) 89). Not in *Barr*.

Koniakos C/H, fortified settlement (Bommeljé (1987) 90). *Barr. C*.

Kryonerion (Galatas) In the past the site was probably erroneously identified with ancient Chalkis, or with the harbour of Kalydon. C/H, scanty remains of walls (Bommeljé (1987) 91; Antonetti (1990) 283). Not in *Barr*.

Levka C/H, remains of walls, ancient buildings (Bommeljé (1987) 91). Not in *Barr*.

Lidorikion C/H, remains of a fortified settlement (Bommeljé (1987) 92–93). *Barr.* A?C.

Makrini-Mount Gyros C/H, scanty remains of a fortified settlement (Bommeljé (1987) 94). Not in *Barr.*

Malevros C/H, remains of an ancient fortified settlement; remains of a C5 Doric temple on the acropolis (Bommeljé (1987) 95; Antonetti (1990) 236). A C4 boundary stone has been found there, marking the border between two tribes: *Τέρμων—Ἀρυσάων Νωμεναίων* (Mastrokostas (1967) 322). Not in *Barr.*

Milea-Mount Bouchori C/H, remains of a circuit wall (Bommeljé (1987) 97). Not in *Barr.*

Perista C/H, remains of a fortified settlement, an aqueduct (Bommeljé (1987) 102). *Barr.* A?C.

Petrokhorion C/H, remains of a fortification wall (Bommeljé (1987) 103). Not in *Barr.*

Sykea (Palaiokastro Koniakos) C/H, fortified settlement and (fortified) acropolis (Bommeljé (1987) 108). *Barr.* C.

Tsoukka C/H, small fortified settlement (Bommeljé (1987) 111). *Barr.* C.

II. The *Poleis*

142. Agrinion (Agrinieus) Map. 55. Lat. 38.40, long. 21.20. Size of territory: 2? Type: B. The toponym is *Ἀγρίνιον, τό* (Polyb. 5.7.7; Hsch. A797). The city-ethnic is *Ἀγρινιεύς* (*Syll.*³ 603.3 (C2e)) or, once and probably in error: *Ἀγλινιεύς* (*IG* IX².1 625.2 (C2e)).

Agrinion is called a *polis* in the urban sense (Diod. 19.67.4 (r314)). The individual and internal use of the city-ethnic is attested for citizens serving as magistrates in the Aitolian Confederacy (*IG* IX².1 618.3); the external use is attested for a Delphic hieromnemon (*Syll.*³ 603.3, C2e).

At 19.67.4 Diodoros reports that, in 314, King Kassander of Macedon convened an *ekklēsia* of the Akarnanians and persuaded them to leave the small and unfortified settlements and move into a few *poleis* of which Stratos, Sauria and Agrinion are explicitly mentioned. As a result the Derieis (*SEG* 36 331.A.41 (C4s); *IG* IV².1 96.61, 65 (C3m)) and other Akarnanians were synoecised into Agrinion (Diod. 19.67.4). Shortly afterwards Agrinion was besieged and conquered by the Aitolians (Diod. 19.68.1). It seems reasonable to infer that Agrinion must have been a *polis* during the last decades

of the Classical period. Agrinion may have been an urban settlement founded by the Agrinian *ethnos*, but there is no evidence (Antonetti (1987a); 236; Dany (1999) 37f).

Agrinion is identified with Megali Chora (once Zapandi) situated c.3 km north-west of modern Agrinion, with remains of a fortified settlement (defence circuit, stoa, houses) of uncertain date but undoubtedly going back to C4 (Bommeljé (1987) 96; Antonetti (1990) 236f; Strauch (1996) 255f).

143. Aigition Map. 55. Lat. 38.30, long. 22.10. Size of territory: ? Type: A. The toponym is *Αἰγίτιον, τό* (Thuc. 3.97.3). In his account of the Athenian attack on Aigition in 426. Thucydides calls Aigition a *polis* in the urban sense, describing how the inhabitants found refuge in the hills above the city: *ὑπέφευγον γὰρ οἱ ἄνθρωποι καὶ ἐκάθηγτο ἐπὶ τῶν λόφων τῶν ὑπὲρ τῆς πόλεως*. From Thucydides' account it is reasonable to infer that Aigition was a relatively small fortified settlement. On its *polis* status, see the exchange of views between M. H. Hansen and P. Funke in Funke (1997) 173–76 and Hansen (2000) 200. There is no other mention of Aigition in any source. Aigition was situated some 80 stades from the sea in the country settled by the Apodotai, one of the three major Aitolian tribes (Thuc. 3.97.2; Funke (1997) 148). It must have been close to the border between Aitolia and Lokris, and has been identified with the ancient Classical–Hellenistic remains near Strouza. One km west of the village Strouza—now abandoned—is a fortified settlement (“Strouza A”) and a hill-top stronghold (“Strouza B”) and not far away is the so-called Fortress on Mt. Boucheri (Bommeljé (1987) 75; Bommeljé *et al.* (1981–88); Pritchett (1991) 67–75; Strauch (1996) 256).

144. Akripis Map 55. Unlocated, not in *Barr.* Type: C. The toponym is *Ἀκριπιος* (-ον?). The only thing we know about Akripis is that in, probably, 355 a *theorodokos* was appointed to host *theoroi* from Epidaurus: *Ἀκριπίωι. Μύστρων* (*IG* IV².1 95.34). In the document, Akripis, Hyporeiai, Therminea, Phylea, and Proschion (ll. 34–38) are listed after Amphilocheian Argos (l. 33) and before Syracuse (l. 39). While Hyporeiai seems to have been part of Akarnania (cf. Robert (1940); *LGNP* s.v. *Ἐχεμένης* and *Φιλοίτιος*), the other sites were presumably Aitolian towns situated in the borderland between Aitolia and Akarnania; see Antonetti (1987b) 100f and Funke (1997) 183 n. 73.

145. Chalkis (Chalkideus) Map. 55. Lat. 38.20, long. 21.35. Size of territory: 1 or 2. Type: A. The toponym is *Χαλκίς, ἡ* (Hom. *Il.* 2.640; Thuc. 1.108.5; Strabo 9.4.8), or *Χάλκεια, ἡ*

(Polyb. 5.94.8; cf. Walbank (1957) 625), or ‘Υποχαλκίς (Hecat. quoted by Steph. Byz. at 651.13, not recorded as a fragment in *FGrHist* 1).

The city-ethnic is, possibly, Χαλκ[ιδεῖς] (Alcm. fr. 24.18, Calame), perhaps denoting both Euboian and Aitolian Chalkis.

Chalkis is called a πόλιν Κορινθίων at Thuc. 1.108.5. It is unwarranted with some editors to delete πόλιν. Thus, Thucydides classified Chalkis as a polis, primarily in the urban sense, but the genitive Κορινθίων points to the political sense as a connotation. Quoting Hekataios, Steph. Byz. (651.13) lists Hypochalkis as a polis, but it is uncertain whether the site-classification stems from Hekataios (Hansen (1997) 17–18).

Chalkis is called Aitolian by Homer (*Il.* 2.639) and Alkman (fr. 24, Calame); but Thucydides’ description of the city as Corinthian indicates that Chalkis was a Corinthian dependency, though probably not a colony settled by Corinthians (Salmon (1984) 213, 268, 277–79). During the later part of the Archidamian War Chalkis was controlled by Athens (Thuc. 2.83.3).

Chalkis was situated on a small coastal plain between M. Chalkis (Varassova) and M. Taphiassos (Klokova) (Strabo. 9.4.8). On the coast, upon the hill Hag. Triadha at modern Kato Vasiliki, are the remains of a defence circuit and some houses belonging to a settlement of the Classical and Hellenistic periods (Woodhouse (1897/1973) 106–14; Bommeljé (1987) 112; Antonetti (1990) 283f; Dietz *et al.* (1998), (2000)).

For the control of the Corinthian Gulf, Chalkis was a strategically important harbour (Thuc. 2.83.3; Polyb. 5.94.8; cf. Freitag (2000) 53–57). Above the city on the southern slope of M. Varassova are substantial remains of a C5?–C4 fortress (Noack (1916) 238f; Bommeljé (1987) 112; Ober (1992) 165; Houby-Nielsen and Moschos in Dietz *et al.* (1998) 255–57). Chalkis may have struck coins in C4 (unpublished).

146. Halikyrna Map 55. Lat. 38.25, long. 21.30. Size of territory: 1 or 2. Type: [A]. The toponym is Ἁλικυρνα, ἡ (Strabo 10.2.21; Steph. Byz. 74.17). At Ps.-Skylax 35 Ἁλικαρνα is a conjecture for MS Μύκαρνα; cf. Plin. *HN* 4.6). The only attestation of a city-ethnic is in Steph. Byz. 74.17.

At Ps.-Skylax 35 Halikyrna is one of three toponyms listed after the heading πόλεις ἐν αὐτῇ εἰσὶν αἰδε, where the term polis is used in the urban sense. The late sources have κώμη.

According to Ps.-Skylax, Halikyrna was situated between Kalydon and Pleuron. Halikyrna is identified with the ancient remains near modern Agios Symeon (Khilia Spitia). Among the archaeological remains are scanty remains of a fortified settlement (C?) and graves of C8 (Bommeljé (1987) 74).

147. Kallion (Kallieus)/Kallipolis (Kallipolites) Map 55. Lat. 38.35, long. 22.10. Size of territory: ? Type: B. The toponym is Καλλίπολις, ἡ (IG IX².1 783.2 (C3l), 676.11 (C2m); Polyb. 20.11.11) or Κάλλιον (SEG 11 415.38 (C3s)). The city-ethnic is Καλλιεύς (IG IX².1 3.A.16, 19 (C3m)) or Καλλιπολίτας (IG IX².1 154 (C3e); SEG 28 504 (C2/C1); SEG 48 602 (undated); cf. Nachmanson (1907) 64; Klaffenbach (1936) 367; Funke (1987) 95 Anm. 44).

The earliest references to Kallipolis as a polis are of the Hellenistic period (IG IX².1 154), but the toponym as well as the archaeological remains show that the polis status of the settlement goes back to the Classical period.

The collective use of the city-ethnic is attested internally on a preserved specimen of the seal of the polis (Pantos (1985) 545f), and externally in a decree of C3l (IG IX².1 186); the individual and external use is found in a Delphic proxeny decree of c.425–375 (*F.Delphes* III.1 422.3–4) and in references to citizens serving as federal magistrates (IG IX².1 3.A.16, 19 (C3)).

The city was situated in the interior of Aitolia at Velouchovo, in the central part of the Mornos valley (= ancient Daphnos) (Laffineur (1977); SEG 28 504 (C2/C1)). In C4 Kallion/Kallipolis became the urban centre of the tribe of the Kallieis, who in C5/C4 were still part of the large Aitolian tribe of the Ophiones (Thuc. 3.96.3). Kallipolis was founded in C4m at the latest, and was from the outset laid out as a planned city. Excavations have revealed substantial remains of a defence circuit (enclosing an area of c.25 ha) with a separate wall of the acropolis, a C3 bouleuterion (Gneisz (1990) no. 29), a stoa, a theatre, and two sanctuaries (Antonetti (1990) 289–92). Among the excavated houses are remains of an archive (C4s) in which were found over 600 seals of C3/C2 (Pantos (1985); Habicht (1985) 44–46; Funke (1987) 95f, (1991b) 326, (1997) 171–72; Themelis (1999) 431–36). On the archaeological remains, see Themelis (1979), (1999); Bakhuizen (1992), (1994); Vroom (1993); Strauch (1996) 291–94.

Votive offerings of the Hellenistic period testify to cults of Demeter and Kore (SEG 40 458 (C3–C2)), Artemis (IG IX².1 155 (C3–C2)) and Eileithya (IG IX².1 156, undated). A C5 *lex sacra* contains a ban on entering an otherwise unknown sanctuary (SEG 16 368; cf. Antonetti (1990) 287–96).

148. Kalydon (Kalydonios) Map. 55. Lat. 38.20, long. 21.30. Size of territory: 2. Type: [A]. The toponym is *Καλυδών, ἡ* (Hom. *Il.* 2.640; Thuc. 3.102.5; Xen. *Hell.* 4.6.1). The city-ethnic is *Καλυδώνιος* (Lys. 13.71; Pantos (1985) no. 238).

In the *Iliad* Kalydon is described as a *polis* in the Heroic Age (Hom. *Il.* 9.531). At Ps.-Skylax 35 Kalydon is the first of three toponyms listed after the heading *πόλεις ἐν αὐτῇ εἰσὶν αἰδέ*, where the term *polis* is used in the urban sense. The earliest epigraphical reference to a *πόλις Καλυδωνίων* is on a C2 statue base (*IG IX².1 140.1*).

The collective use of the city-ethnic is attested internally in a dedication of C51 (*SEG 32 550*, partly restored) as well as in the public seal (Pantos (1985) no. 238; cf. Pantos (1988), undated), and externally in Xen. *Hell.* 4.6.1. The individual and external use is attested in an Athenian citizenship decree for Thrasyboulos of Kalydon (Lys. 13.71; cf. *IG I³ 102 + add. 946*).

In the Catalogue of Ships Kalydon is recorded as an Aitolian city (*Il.* 2.640), but it can be inferred from Thuc. 3.102.5 that in C6/C5 Kalydon had parted company with the other Aitolians. Originally an independent *polis*, Kalydon became in C5/C4 a member of the Early Achaian Federation and in 389 Kalydon was besieged by the Akarnanians and their allies (Xen. *Hell.* 4.6.1–4); but in 367/6 Epameinondas expelled the Achaian garrison from Kalydon (Diod. 15.75.1–2), whereafter the city seems to have joined the Aitolian Federation (Buckler (1980) 188–91; Merker (1989); Bommeljé (1988) 310). A pair of *damiourgoi* served as eponymic officials (*IG IX².1 138 (C41)*); cf. Veligianni-Terzi (1977) 64f; Sherk (1990) 260). In, probably, 355, *theorodokoi* were appointed to host *theoroi* from Epidauros (*IG IV².1 95.7*).

According to Thucydides, Kalydon and its neighbour Pleuron were situated near the Corinthian Gulf in the northern part of the littoral in the region called *Αἰολίς* (Thuc. 3.102.5; Hsch. s.v. *Αἰολικὸν θέαμα*). According to Strabo 10.2.21 and Plin. *HN* 4.6, Kalydon was situated 7.5 Roman miles from the coast, near the river Euenos. The city possessed its own harbour at the coast (Paus. 7.21.5; cf. Freitag (2000) 40–52).

Kalydon is securely identified with the ancient settlement at the spur of Mt. Arakynthos c.9 km east of Messolonghion; and the archaeological investigation of the remains shows that, as early as the Archaic period, the city had close cultural connections with the other centres of the Corinthian Gulf, especially Corinth.

A C4 defence circuit of c.4 km with gates and towers encloses a settlement situated on and between two hills of which the western constituted a separately fortified acropo-

lis with a citadel. The walls enclosed an area of c.25 ha. Of the ancient remains the most important are the temples of Artemis Laphria (C7, rebuilt several times), Apollo Laphrios and Dionysos, all situated in a suburban *temenos* a little to the south of the city. On the archaeological evidence, see von Geisau (1919); Poulsen and Rhomaios (1927) 50f; Dyggve *et al.* (1934); Dyggve (1948), (1951); Knell (1973) 448–53. See also AR (2001–2) 44–45 for the new Danish–Greek excavations at the site.

The principal cult of Kalydonian Artemis Laphria goes back to the Archaic period (Paus. 4.31.7, 7.18.8–19.1, 7.20.2); the sanctuary of Apollo Laphrios is attested through a C6 boundary stone (*IG IX².1 149*; cf. Strabo 10.2.21). A cult of Zeus Soter is mentioned in Hellenistic manumission records (*IG IX².1 137.86 (C2m)*; *SEG 25 621.8 (C2)*), and Pausanias (7.21.1) has a reference to a cult of Dionysos Kalydonios (Antonetti (1990) 241–69). Stelai inscribed with public documents were set up in the sanctuary of Laphreion (*IG IX².1 170.4 (C41/3e)*; 186.6–7 (C31)).

149. Makyneia (Makyneus) Map. 55. Lat. 38.20, long. 21.45. Size of territory: 1 or 2. Type: B. The toponym is *Μακυνέα, ἡ* (Bourguet (1899) 356 no. 2), *Μακυνία* (Strabo 10.2.21), *Μακύνεια* (Steph. Byz. 429.9–10), *Μάκυνα* (Archytas of Amphissa fr. 1, Powell). The city-ethnic is *Μακυνεύς* (*IG IX².1 13.VI.22 (C31)*), *Μακύνιος* (*SEG 25 621.11f (C2s)*).

Makyneia is not explicitly called a *polis* in any Archaic or Classical text. Strabo wavers between *polichnion* (10.2.4) and *polis* (10.2.21; cf. Steph. Byz. 429.16), and at 10.2.6 he criticises Hellanikos (fr. 118) for classifying Makyneia as a *polis* founded in the Heroic Age. That Makyneia was a *polis* in the Classical period is indicated by a C4 proxeny decree from Delphi, in which the individual and external use of the city-ethnic is attested (Bourguet (1899) 356 no. 2: *Αἰτω[λῶι ἐκ Μα]κυνέας*; cf. Sordi (1969) 356; Funke (1997) 161).

Makyneia seems originally to have been a Lokrian community (Plut. *Mor.* 294E; cf. Lerat (1952) i. 7, 34f), but by C5 it had become part of Aitolia (Hohmann (1908) 17f; Bosworth (1974) 177).

Makyneia was situated in the borderland between Aitolia and Lokris near Cape Rhion at the eastern spur of Mt. Taphiassos (modern Klokova). A suggested identification is with Palaiokastro at Mamaku, c.3 km north-west of Rhion. Here are the remains of a fortified settlement of C4(?)/C3 with a theatre *extra muros* (Woodhouse (1897/1973) 327; Lerat (1952) i. 82–84, 189–91; Bommeljé (1987) 95; Bommeljé and Vroom (1995) 94).

150. Molykreion (Molykreus) Map. 55. Lat. 38.20, long. 21.45. Size of territory: 1 or 2. Type: [A]. The toponym is *Μολύκρειον*, τὸ (Thuc. 2.84.4, 3.102.2), *Μολύκρεια*, ἡ (Hellan. (*FGrHist* 4) fr. 118; Ps.-Skylax 35; Strabo 9.4.8, 10.2.6; Plut. *Mor.* 162E), *Μολυκρία* (Polyb. 5.94.7; Diod. Sic. 12.60.3; Paus. 9.31.6; Steph. Byz. 455.12), *Μολύκριον* (Paus. 5.3.6), or *Ὀλύκραι* (Hecat. fr. 112). The city-ethnic is *Μολυκρεύς* (*IG* 1x².1 14.6 (C3f), 35.7 (C2m)) with *Μολύκριος* and *Μολυκραῖος* as attested variant forms (Steph. Byz. 455.14–16).

At Ps.-Skylax 35 Molykreia is the last of three toponyms listed after the heading *πόλεις ἐν αὐτῇ εἰσὶν αἷδε*, where the term *polis* is used in the urban sense. Molykreion is explicitly called a *polis* at Diod. Sic. 12.60.3 (r 426) again in the urban sense.

In C6/C5 Molykreion was within the Corinthian sphere of influence (Gschntzer (1958) 124f; Graham (1962), (1983) 137ff), but by C5m it had passed into the Athenian sphere (Salmon (1984) 266) and from, probably, C5l it was under Aitolian influence (Benecke (1934) 8). Thucydides (3.102.2) describes Molykreion as a Corinthian colony that had become an Athenian satellite (*τῆν Κορινθίων μὲν ἀποικίαν, Ἀθηναίων δὲ ὑπήκοον*).

In the sources Molykreion is located at the spur of Mt. Taphiassos (modern Varassova) (Strabo 10.2.4, 21) near Cape Rion (Polyb. 5.94.7; Strabo 9.4.8, 10.2.21; Plut. *Mor.* 162E; Plin. *HN* 9.28; Ptol. 3.15.3; Steph. Byz. 545.13–14). The phrase τὸ *Ψίον τὸ Μολυκρικὸν* (Thuc. 2.86.2; cf. Strabo. 8.2.3; Steph. Byz. 545.14) indicates that the cape was within the territory of the city, which, then, must have been situated at the cape itself (Oldfather (1918), (1933) 36), or a little inland by modern Velvina. Here, c.4 km from the coast at modern Helleniko, are the remains of a C4 settlement (defence circuit, temple, stoa and houses; cf. Woodhouse (1897/1973) 328; Lerat (1952) i. 84–86; 188–89; Bommeljé (1987) 112; cf. Freitag (2000) 58–67). At Cape Rhion was a major sanctuary of Poseidon (Thuc. 2.84.4; Ps.-Skylax 35; Paus. 10.11.6; Diod. Sic. 12.48.1; Plut. *Mor.* 345C). Molykreion was responsible for the administration of the sanctuary and the organisation of the festival associated with the sanctuary, called τὰ *Ψίεια* (*IG* 1v 428.10 (C3); Plut. *Mor.* 162E; cf. Klaffenbach (1936) 375; Pfister (1914); Knell (1973) 454ff; Cabanes (1988) 65ff).

151. *Phola (Pholaieus) Map 55. Unlocated, not in *Barr.* Type: C. The toponym is, presumably, **Φόλα* (reconstructed from the various forms of the city-ethnic). The city-ethnic is either *Φολαιεύς* (*IG* 11² 10482 (C4f)) or *Φολάντιος*

(*IG* 1x².1 17.28, 24.11, 13 (C3s); 25.61, 71 (C3s)) or *Φολᾶς* (*IG* 1x².1 31.115, 138 (C2f)). Phola was indisputably a *polis* in the Hellenistic period (*strategos* (*IG* 1x².1 31.115, 138), *grammateus* (*IG* 1x².1 25.61, 71)). The only evidence that it was already a *polis* in the Classical period is the name *Τίτυρμος Φολαιεύς*, recorded in two Attic sepulchral inscriptions (*IG* 11² 10036 (C5l–C4e), 10482) where the individual and external use of the ethnic indicates that it is a city-ethnic rather than a sub-ethnic; see Hansen (1996) 172–73, 195.

152. Phylea Map. 55. Unlocated, not in *Barr.* Type: C. The toponym is *Φυλέα*, ἡ. The only thing we know about Phylea is that in, probably, 355 a *theorodokos* was appointed to host *theoroi* from Epidaurus: *Φυλέα. Φιλοίτιος* (*IG* 1v² 195.37), see Akripos (*supra*).

153. Pleuron (Pleuronios) Map. 55. Lat. 38.25, long. 21.25. Size of territory: ? Type: A. The toponym is *Πλευρών*, ἡ (Hom. *Il.* 2.639; Thuc. 3.102.5). The city-ethnic is *Πλευρώνιος* (Hom. *Il.* 23.635; *IG* 1x².1 3A.17 (C3); Strabo 10.2.24).

Pleuron is called a *polis* in the urban sense by Bacchylides at *Ep.* 5.149–51; cf. Daimachos (*FGrHist* 65) fr. 1. The earliest epigraphical reference to a *πόλις Πλευρωνίων* is on a C3 statue base (*IG* 1x².1 70.1.) The collective internal use of the city-ethnic is attested at *IG* 1x².1 70.1. For the external use, see *IvMag* 28.9 = *IG* 1x².1 186.9 (C3l). The individual and external use is attested in a proxeny decree from Delphi (*Syll.*³ 621.1–2 (C2f)).

In the Catalogue of Ships Pleuron is recorded as an Aitolian city (*Il.* 2.639; cf. Visser (1997) 601ff); but it can be inferred from Thuc. 3.102.5 that in C6/C5 Pleuron had parted company with the other Aitolians. Pleuron was originally an independent *polis*. In C5/C4 it became—like Kalydon—a member of the early Achaian Federation. In C4m/s it became integrated into the Aitolian Federation, as did the neighbouring *poleis* (Bommeljé (1988) 302ff). The affiliation with Aitolia, however, is not explicitly attested until C3, when citizens of Pleuron repeatedly filled federal offices (e.g. *IG* 1x².1 13.13–14 (C3f)).

In C3s Pleuron was destroyed, but the city was soon rebuilt at a nearby but more elevated place (Strabo 10.2.4; cf. Ehrhardt (1978) 251f.; Funke (1987) 94 with n. 40). According to Strabo 10.2.23, old Pleuron was situated on the coast between the rivers Acheloos and Euenos near Kalydon (cf. Strabo 10.2.4, 3.6). The settlement has not yet been found, but presumably it was close to new Pleuron, which has been identified with the ancient settlement at modern Kato Retsina, on the southern side of Mt. Arakynthos; cf.

Woodhouse (1897/1973) 128ff; Kirsten (1951*a*); Bommeljé (1987) 104; Antonetti (1990) 281f; Weißl (1999) 106ff.

The only cult attested is one of Athene (Stat. *Theb.* 2.727; Dion. Calliphon. 57; cf. Antonetti (1990) 282).

154. Proschion (Proscheios) Map 55. Unlocated. Type: B. The toponym is *Πρόσχιον, τό* (Thuc. 3.102.5, 106.1; Steph. Byz. 536.22) or *Πρόσχεον* (IG IV² 95.38 (355)). The city-ethnic is *Πρόσχειος* (*F.Delphes* III 4 213.2 (325–275)).

Proschion is not called a *polis* in any ancient text, but in, probably, 355 *theorodokoi* were appointed to host *theoroi* from Epidaurus (IG IV² 95.38), and a citizen of Proschion is honoured in a Delphic proxeny decree of the early Hellenistic period (*supra*). Combined, the two sources indicate that Proschion was a *polis*, at least in the late Classical period. The individual and external use of the city-ethnic is attested in the proxeny decree from Delphi (*supra*).

According to Strabo (10.2.6) Pylene—mentioned in the Homeric Catalogue of Ships (*Il.* 2.639)—was later moved to a more elevated place and renamed Proschion; cf. Ath. 411A; Hsch. s.v. *Πυλήνη*. Proschion was situated west of Pleuron and Kalydon near the river Acheloos (Thuc. 3.102.5, 106.1). The city must have been close to modern Aitolikon, but has not yet been securely identified; cf. Woodhouse (1897/1973) 138f.; Kirsten (1951*b*); Antonetti (1990) 278–80; Pritchett (1991) 18ff; Strauch (1996) 356f.

155. Therminia Map 55. Unlocated, not in *Barr.* Type: C. The toponym is *Θερμινέα, ἡ*. The only thing we know about Therminia is that in, probably, 355 a *theorodokos* was

appointed to host *theoroi* from Epidaurus: *Θερμινέα, ἡ* *Ἐχεμένης* (IG IV² 95.36), see Akripos (*supra*).

156. Trichoneion (Trichoneius) Map 55. Lat. 38.30; long. 21.30. Size of territory: ? Type: B. The toponym is *Τριχόνειον, τό* (*F.Delphes* III 4 125.1 (C3s); *Syll.*³ 509.9 (C3s)), *Τριχώνιον* (Polyb. 5.7.8). The city-ethnic is *Τριχονιεύς* (IG IX².1 5.6 (C3m)), *Τριχονειεύς* (Tod 137.12), *Τριχονεύς* (IG IX².1 17.8 (C3f)), *Τριχωνιεύς* (Pol. 18.10.9), *Τριχωνεύς* (Pol. 4.3.5), *Τριχόνιος* (IG IX².1 3A.2), *Τρικωνιεύς* (Paus. 2.37.3); for other forms, see also Steph. Byz. 638.8–10.

The only author to call Trichoneion a *polis* is Steph. Byz. (638.8), but that Trichoneion was a *polis* and a member of the Aitolian Federation already in C4f is implied by an Athenian decree of 367 in which the Trichoneians are charged with having broken a sacred truce (Tod 137). The collective use of the city-ethnic is attested externally in this decree (l. 12) and internally on two stamped tiles (IG IX².1 125–6 (undated)). The individual use of the city-ethnic is attested externally in an inscription from Magnesia (IG IX² 187.2–3 (C2e)).

Trichoneion was one of the most important cities in Aitolia. The identification of Trichoneion with modern Gavalou on the south bank of Lake Trichonian was first suggested by Leake (1835) 55. In this area have been found very scanty remains of a large fortified settlement of the Classical and Hellenistic periods, as well as numerous tombs (Bommeljé (1987) 83, 110f; Antonetti (1990) 238–240).

APPENDIX

1. Unidentified Ethnics Attested in Hellenistic Sources

Only one occurrence recorded for each ethnic.

Aiklymios IG IX².1 36.8 (C2m): *Νικόβουλος Αϊκλύμιος*.
 Andreatas IG IX².1 101.10 (C2m): *Ἀριστέας Ἀνδρέατας*.
 Antaieus IG IX².1 17.11 (C3m): *Γρίπαλος Ἄνταιεύς*. Perhaps part of Locris or Phocis (Lerat (1952) i. 72).
 Aperantos *Syll.*³ 539A.8f (C3l): *Θεόδοτος Ἀπεραντός*; cf. Antonetti (1987*b*) 98).
 Ap(e)irikos *F.Delphes* III.4 163 = Rigsby (1996) 163.3 (C3l): *Τελέσαρχος Ἀπ[ε]ιρικός*.

Arakyneus IG IX².1 17.81 (C3m): *Ἀστύλος (?) Ἀρακυνεύς*.
 Attaleus IG IX².1 95.2 (C3l): *Εὐξίθεος Ἀτταλεύς*.
 Boutaieus IG IX².1 13.34 (C3f): *Φιλέας Αἰγίσθου Βουταιεύς*. Perhaps part of Locris (Lerat [1952] i. 20f, ii. 183; cf. *infra* 391).
 Chasilios IG IX².1 17.92 (C3m): (name) *Φυσκίνιος Χασίλιος* (= Kasilios?).
 Choleos IG IX².1 9.10 (C3): *Ἀρχίδαμος Χωλέος*.
 Daian IG IX².1 3A.21 (C3f): *Ἀρίστων Δαιάν*.
 Dardios, -eos IG IX².1 96.21 (C2): *Σύμμαχος Εὐρυδάμου Δάρδιος*; IG IX².1 99.12 (C2m): *Φερένικος Δάρδεος*.
 Dastiadas *Syll.*³ 539A.6 (C3l): *Λάμιος Δαστιάδας*. Perhaps part of Locris (Lerat (1952) i. 68; cf. *infra* 391).

- Dexieus *IG* 1x².1 25.71–2 (C3s): Ἅγις Δεξιεύς. Perhaps part of Locris (Lerat (1952) i. 71, ii. 184).
- Eggoraios *IG* 1x².1 31.51 (C3s): Ἐγόραχος Ἐγγοραῖος.
- Eidaios *IG* 1x².1 177.21 (C3l): Λυκίσκος Εἰδαῖος.
- Ertaios *IG* 1x².1 3A.18 (C3m): Ἀρίσταρχος Ἐρταῖος.
- Ethanos *IG* 1x².1 31.185–6 (C3s): Φαλαυσίας Ἡθάσιος.
- Eukyleis *IG* 1x².1 625.15 (C2e): Εὐκυληΐς; cf. Lerat (1952) i. 91. Perhaps part of Locris (Lerat (1952) i. 70) (= Oikyleis?).
- Haimonius *F.Delphes* III 3 221.3 (C3l): Νυμφόδοτος Αἰμονιεύς.
- Hermattios *IG* 1x².1 188.35 (C3l): Ἀλέξων Ἐρμάτιος.
- Hyposeirios *IG* 1x².1 17.6–7 (C3m): Στρατόνικος Ὑποσεῖριος.
- Istorios *IG* 1x².1 638.3.5 (C2): Ἐπίλαος Ξενία Ἰστώριος. Perhaps part of Locris (Lerat (1952) i. 66); cf. also Kirsten (1942) 2367 and *infra*.
- Kaphreus *IG* 1x².1 632.3 (C2m): Λύκος Καφρέυς. Perhaps part of Locris (Lerat (1952) i. 66; cf. *infra* 391).
- Kasilios *IG* 1x².1 25.56 (C3s): Δίων Κασίλιος (= Chasilios?).
- Kerreatas *Syll.*³ 603.4 (C2e): —λαος Κερρεάτας.
- Kottaus *F.Delphes* III 4 103.5–6 (C3l): Θεόδωρος Κοτταεύς.
- Lepadaios *F.Delphes* III 4 362.6–7 (C3l): Μενεκράτας Λεπαδαῖος. Part of Aitolia (?) (*LGPN*s.v. Μενεκράτης).
- Machetius *IG* 1x².1 69.3–4 (C2f): Στόμιος Χαβρία Μαχετιεύς. Perhaps part of Locris (Lerat (1952) i. 71).
- Mystakeus *IG* 1x².1 59.B7 (C3l): Ταυρίων Μυστακεύς. Perhaps part of Lokris (Lerat (1952) i. 64).
- Neapolitas *IG* 1x².1 96.15 (C2): Ἁγίας Νεοπολίτας.
- Oikyle(i)us *IG* 1x².1 31.90 (C3s): Δαμόκριτος Οἰκυληεύς; *Syll.*³ 564.4 (C3l): Λάμιος Οἰκυλεεύς. Perhaps part of Locris (Lerat (1952) i. 70) (= Eukyleis?).
- Oribatos *IG* 1x².1 137.25 (C2m): Ἀντίφιλος Ὀρίβατος.
- Paphanos *IG* 1x².1 17.13 (C3m): Ἀλεξιμένης Πάφανος.
- Peleios *IG* 1x².1 97.14f (C2e): Δρωπίνας Πελήσιος.
- Pellotios *IG* 1x².1 12.23 (C3f): Παντάρχης Πελλώτιος.
- Perochtheos *IG* 1x².1 639.8.9f (C2m): Τελέσαρχος Νικομάχου Περόχθεος. Perhaps part of Locris (Lerat (1952) i. 67; cf. *infra* 391).
- Phalikaioi *SGDI* 2136.2 (C2s): Φαλικαῖοι. Perhaps part of Locris (Lerat (1952) i. 63f).
- Philotaieus *IG* 1x².1 96.23 (C3l): Λέων Μικκία Φιλωταιεύς; cf. *IG* 1x².1 105.2f (C2m): Νικασὼ Φιλωταῖς.
- Phoistan *Syll.*³ 523.5 (C3s): (name) Φοιστάν.
- Phyllaios *IG* 1x².1 634.8 (C2s): Στρατόλαος Φυλλαῖος. Perhaps part of Locris (Lerat (1952) i. 65; cf. *infra* 391).
- Phyrtaios *SGDI* 1949.16 (C2f): Θωπίας Φυρταῖος; cf. also the first list s.v. Phytaiou.
- Plygoneus *SGDI* 1978.7 (C2e): Κλέων Πλυγονεύς. Perhaps part of Locris or Phocis (Lerat (1952) i. 59; cf. *infra* 391).
- Porios *IG* 1x².1 638.13.14 (C2m): Νίκαρχος Πώριος. Perhaps part of Locris (Lerat (1952) i. 65f; cf. *infra* 391).
- Potanaios *SGDI* 2137.15 (C2s): Ἐπίνικος Καλλιμάχου Ποταναῖος.
- Proennios *IG* 1x².1 109.10 (C2m): Ἀνδρων Προένιος.
- Psolountios *SEG* 25 621.10 (C2): Ἄγριος Κλεοξένου Ψολούντιος.
- Ptolemaieus *F.Delphes* III 3 220.6 (C3l): Τίμαρχος Πτολεμαιεύς.
- Pyrh(a)ios Jardé (1902) 263 no. 14.4 (C3s): Εὐρύδαμος Πυρρ[αῖος]. Perhaps part of Locris or Phocis (Lerat (1952) i. 62).
- Rhadanios *F.Delphes* III 4 362.8 (C3l): Λυκέας Ῥαδάνιος.
- Rhadeos *IG* 1x².1 96.24–5 (C2): Νικόστρατος Ἀρίστωνος Ῥάδεος.
- Spattios *IG* 1x².1 188.33–4 (C3l): Πειθόλαος Σπάτιος. Perhaps part of Locris (Lerat (1952) i. 67).
- Tapheius *IG* 1x².1 13.18 (C3f): Ἀντιλέων Ταφειεύς.
- Thai(i)os *IG* 1x².1 638.13.11 (C2): Πολεμαίνετος Θαῖος; *IG* 1x².1 639 2.13 (C2): Λέων Θαῖος. Perhaps part of Locris (Lerat (1952) i. 66f, 69; Nachmanson (1907) 65; cf. *infra* 391).
- Thyriskaios *IG* 1x².1 4.7–8 (C3l): Πολέμαρχος Θυρiskaῖος.
- Titdaios *IG* 1x².1 9.11 (C3): (name) Τιτδαῖος (= Titraios?).
- Titraios *IG* 1x².1 11.48 (C3m): Λάμιος Τιτραῖος (= Titdaios?).
- Tnimaioi *IG* 1x².1 105.11–2 (C2m): Ξενίας Τνιμαῖος.
- Tragantios *IG* 1x².1 109.7–8 (C2m): Ἐμπεδίχων Τραγάντιος.

2. Hellenistic and Undated Settlements

- Aigai (Αἰγαί). Steph. Byz. 39.2f (πόλις Αἰτωλίας). Unlocated, not in *Barr*.
- Apollonia (Ἀπολλωνία). Livy 28.8.9 (*in propinquis castellis Potidaniae atque Apolloniae*); city-ethnic: Ἀπολλωνιεύς (*F.Delphes* III 4 164.6f (C3l)). Apollonia probably issued coins in C3s/C2f (Liampi (1996) *passim*). Unlocated.
- Arsinoe (Ἄρσινώη). Cf. Konope.
- Boukation (?). *IG* 1x².1 97.14 (Βουκατιεῖς (C2e)). Boukation (?) is identified by some with the remains of a large fortified Hellenistic settlement in the modern village of Paravola; cf. Bommeljé (1987) 101.
- Ellopion (Ἐλλόπιον). Polyb. 11.7.4; Steph. Byz. 269.1 (πόλις Αἰτωλίας). Identified with ancient remains near to

- Mesovouni, south-east of Morosklava (Woodhouse (1897/1973) 1f), not in *Barr*.
- Ephyra (Ἐφύρα). Strabo 8.3.5 (καὶ ἐν τῇ Ἀγραιά τῆς Αἰτωλίας Ἐφυρα κώμη); Steph. Byz. 291.4 (κώμη Αἰτωλίας Ἐφύρα); Plin. *HN* 4.6 (*Aetolorum populi* . . . *Ephyri*). Unlocated, not in *Barr*.
- Konope/Arsinoe (Κωνώπη/Ἄρσινώη). Strabo 10.2.22 (Ἄρσινώης πόλεως, ἣ κώμη μὲν ἦν πρότερον καλουμένη Κωνόπα, κτίσμα δ' ὑπήρξεν Ἄρσινώης); Steph. Byz. 126.1 (Ἄρσινώη, πόλις Αἰτωλίας), 401.6 (Κωνώπη, πόλις Ἀκαρνανίας); cf. also Polyb. 4.64.3f, 5.7.7, 5.13.9 (without any site-classification); city-ethnic: Ἄρσινωεύς (*IG* 1x².1 624.4 (C2)). Konope/Arsinoe is identified with modern Angelokastron. Hellenistic remains (Bommeljé (1987) 77). Arsinoe is a city foundation of C3f (Antonetti (1989) 73f, (1990) 273–76). It is uncertain whether Konope—the settlement replaced by Arsinoe—can be classified as a *polis*; at Strabo 10.2.22 it is classified as a κώμη.
- Kyniadaí (Κυνιάδαι). C3/C2 *theorodokoi* list from Delphi: ἐγ Κυνιάδαις (*BCH* (1921) col. iv 121); cf. Strabo 10.2.21 (λίμνη Κυνία). Unlocated, not in *Barr*.
- Lysimacheia (Λυσιμάχεια). Steph. Byz. 423.10f (Λυσιμάχεια. πόλις Αἰτωλίας); cf. also Polyb. 5.7.7f and Strabo 10.2.22 (*polis* status not indicated). The city is also mentioned in the C3/C2 *theorodokoi* list from Delphi: ἐν Λυσιμαχεία (*BCH* (1921) col. iv 74). The city-ethnic is Λυσιμαχεύς (*IG* 1x².1 3A.20 (C3m)). Lysimacheia is identified with modern Mourstianou. Scanty Hellenistic remains of a walled settlement (Bommeljé (1987) 94). The city of Lysimacheia was founded between 285 and 281 (Antonetti (1989) 73f; Hatzopoulos (1988) 21); there is no indication of *polis* status before this time.
- Mesata (Μεσάτα). *IG* XII 8 151.12 (Σείρακον Ἰσχομάχου Αἰτωλῶν ἐγ Μεσάτας (C3)). Unlocated, not in *Barr*.
- Metapa (Μέταπα). Polyb. 5.7.8f (πόλις); Steph. Byz. 448.12 (πόλις Ἀκαρνανίας); city-ethnic: Μετάπιος (*Syll.*³ 539 A.8f (C3l)). No indication of *polis* status before C3. Metapa is identified with modern Ano Bourlesa, where remains of an ancient habitation have been found (Bommeljé (1987) 97).
- Pamphía (Παμφία). Polyb. 5.8.1 (κώμη Παμφία); cf. also Polyb. 5.13.7; city-ethnic: Πανφιεύς (*IG* 1x².1 105.9 (C2m)). Pamphía is identified with the modern site Goustiani (= Foustiani). “Ancient remains are only suggested” (Bommeljé (1987) 100).
- Perantia (Περαντία). Steph. Byz. 517.3 (πόλις Αἰτωλίας). Unlocated, not in *Barr*.
- Phana (Φάνα). Herod. *De prosod. cath.* 3.1.256.11 (πόλις Αἰτωλίας); Paus. 10.18.2 (Φάναν πυργήρεα κώμην). Steph. Byz. 657.15 calls Phana πόλις Ἰταλίας, convincingly emended by Klaffenbach (*IG* 1x².1 p. 81.53f) to πόλις Αἰτωλίας; cf. the note in Herod. (*supra*). Phana is identified by Bommeljé ((1987) 107) with the ancient remains at the modern site Stamna (Stathmos Sideroporta), whereas Pritchett (1991) 36f localises Phana at modern Treis Ekklesies; not in *Barr*.
- Pherai (Φεραί). Steph. Byz. 662.16 (πόλις Αἰτωλίας). Unlocated, not in *Barr*.
- Phistyon (Φίστυον). *IG* 1x².1 97.2 (C2e); cf. Nikandros (*FGrHist* 271–2) fr. 3). The ethnic is Φίστυος (*IG* 1x².1 100.9 (C2m)). The identification of Phistyon with the remains of the modern site Neromanna is only a conjecture. The suggestion is based mainly on the proximity of the sanctuary of Aphrodite Phistyis at nearby Kryonero. Bommeljé ((1987) 99f; cf. Antonetti (1990) 230) reports undated remains of a well-preserved fortified settlement. The principal cult was that of the Syrian Aphrodite in Phistyon (*IG* 1x².1 108.4–5 (C2m), 95.2 (C3l); cf. Antonetti (1990) 230–35).
- Phytaion (Φύτειον). C3/C2 *theorodokoi* list from Delphi: ἐν Φυταίωι (*BCH* (1921) col. iv 46); Polyb. 11.7.5 = Steph. Byz. 675.15 (πόλις Αἰτωλίας); cf. also Polyb. 5.7.7 (without any site-classification); city-ethnic: Φυταιεύς (*IG* 1x².1 24.6f (C3e); 186.14 (C3l)); perhaps also Φυρταῖος (*SGDI* 1949.16 (C2f)). Phytaion is identified by Pritchett (1989) 133f with the ruins at Palaiochori south of Kapsorachi; cf. also Bommeljé (1987) 100.
- The(s)stiai (Θεσστιαί). C3/C2 *theorodokoi* list from Delphi: ἐν Θεσστιαῖς (*BCH* (1921) col. iv 75); Polyb. 5.7.7 (Θεστιεύς); city-ethnic: Θεστιεύς (*IG* 1x².1 30.6 (C3l); *F.Delphes.* III 3 220.4 (C3l)). Civic institutions (ἐκκλησία, ταμίας, πολιτικός νόμος τᾶς πόλιος τῶν Θεστιέων) in C2 (*SEG* 23 398). Thestiai is identified with modern Ano Volochos. Hellenistic fortifications (Bommeljé (1987) 112).
- Thorax (Θώραξ). Steph. Byz. 321.3 (πόλις Αἰτωλίας). Unlocated, not in *Barr*.

WEST LOKRIS

DENIS ROUSSET

I. The Region

The name of the region is *Λοκρίς*, ἡ (Thuc. 3.95.3; *Hell. Oxy.* 21.3; Ps.-Skylax 35). The same name is used for the region inhabited by the East Lokrians (see Nielsen (2000) 95–96 and *infra*). The East and West Lokrians belonged in fact to the same *ethnos*, as is apparent from Aeschin. 2.116 and the lists of *hieromnemones* of the Amphiktyonic League in which the two seats for the Lokrians were given one to the East and one to the West Lokrians (Lefèvre (1998) 79–83). Thus the ethnic *Λοκρός* without further qualifications may designate a West Lokrian (e.g. *CID* II 31.34; *IG* VII 3055 (C4m); cf. Hecat. fr. 113; Thuc. 3.97.2; Dem. 18.150). Within the region, *Λοκρός* alone is used both collectively (*IG* IX².1 667: τὸ κοινὸν τῶν Λοκρῶν (C2m)) and individually (*IG* IX².1 681 (C2m)).

In inscriptions the official and unambiguous designation of the West Lokrians is *Λοκροὶ οἱ Ἐσπέριοι*. This regional ethnic is attested in the collective and internal sense in *IG* IX².1 718: *Λογρῶν τῶν Φεσπαρίων* (C5f) and *IG* IX².1 665: *τῶν Λοκρῶν τῶν Ἐσπερίων* (C4m). The collective and external use is attested in *CID* II 5.II.46 (C4m). For the individual and external use, see *CID* II 74.1.70 (337). This form of the regional ethnic is also found in literary sources (*Hell. Oxy.* 21.3; Arist. fr. 574; Theopomp. fr. 80.7; Ps.-Skylax 36); cf. *προεσπέριοι* in Diod. 14.34.2 (r404). The designation οἱ Ὀζόλαι Λοκροί, however, is attested in literary sources only from C5m onwards (Hdt. 8.32.2; Thuc. 1.5.3; Xen. *Hell.* 4.2.17; Ps.-Skylax 36; Arist. fr. 574).

The frontiers of the region inhabited by the West Lokrians are difficult to establish, because lists of Lokrian cities are few and fragmentary, and because the boundary between the Lokrians and the Aitolians was drawn differently at different periods. To the east the Lokrian cities bordered on the port of Kirrha, the *hiera chora* dedicated to Apollo and the *polis* of Delphi (no. 177). Towards the north-east the Lokrians extended as far as the foothills of Parnassos and the Phokian *poleis* (*infra* 399). To the north, it is hard to establish the precise extent of the mountainous hinterland inhabited

by Lokrians. There is no doubt that the frontier with Aitolia ran north of Physkeis and the land belonging to the Laphrioi (located only recently: *BCH* 93 (1969) 86; *infra*). But in the Hellenistic period there were many communities whose affiliation with either Lokris or Aitolia is unknown, such as the Peleoi, the Phalikaioi and the Potanaioi, all in the neighbourhood of Amphissa (Lerat (1952) i. 62–64; Rousset (2002) 13–15). North of Naupaktos (no. 165) and near the Bouttians there were several communities that have not yet been located (Akotieis, Boutaieis, Dastiadaï, Istorioi, Kaphreis, Perochtheoi, Phyllaioi, Porioi and Thaioi); see Lerat (1952) i. 65–70, 192. Finally, to the west, Makynaea and Molykriion, both originally belonging to Lokris, became Aitolian at an early date,¹ and that happened to Naupaktos too after 338 (*infra*). Similarly, other cities, such as Eupalion, became part of what Strabo at 10.2.3 calls Extended Aitolia (*Αἰτωλία Ἐπικτητος*); see Lerat (1952) i. 7, ii. 62.

The Lokrian settlements were scattered along the north coast of the Corinthian Gulf and in the mountainous hinterland, which no doubt explains the region's lack of political unity in the Classical period and later. In C4m, as well as after 167, the centre of the Lokrian Federation was Physkeis, a mountain town near the Aitolian border (*infra*). But the two major Lokrian cities—the port of Naupaktos (no. 165) and Amphissa (no. 158), facing the plain of Kirrha—each had its own history. Furthermore, Amphissa seems not to have belonged to the Lokrian Federation.

Were it not for Thucydides' account of the events of 426 (3.95.3–96.2 and 101–2), we would know almost nothing of the Lokrian communities of the Classical period, apart from Amphissa and Naupaktos. Thucydides, however, did not describe the communities he mentions in 3.101.2–102.1 as *poleis*, and one may ask whether the ethnics he lists are

¹ Makynaea, originally a Lokrian settlement (Plut. *Mor.* 295A; Lerat (1952) i. 7, 34) but Aitolian from the Classical period onwards (*supra* 384). Molykriion, presumably originally a Lokrian settlement (Plut. *Mor.* 162E; Ptol. 3.14.3; Lerat (1952) i. 7, 35–36) but Aitolian from the Classical period onwards (*supra* 385).

city-ethnics or regional ethnics denoting peoples scattered across quite a wide area and settled in a number of villages. It is worth remembering that, according to Thuc. 1.5.3, the Lokrians—like the Aitolians and Akarnanians—lived in the old-fashioned way, i.e. in unfortified villages. In that case, when did the West Lokrians begin to live in urban fortified centres, each organised as a *polis* in the political sense? Given the absence of archaeological excavations in the region, it is better to follow Lerat ((1952) i. 218–19) and refrain from dating the preserved fortifications to C4 rather than to the Hellenistic period. It is therefore impossible with any certainty to date the organisation of West Lokris into *poleis* before the Hellenistic period. This uncertainty is a serious obstacle to classifying all the Lokrian communities according to the categories applied in the present work. Some settlements, however, can tentatively be classified as type C *poleis* on the basis of what is known about their status in the Classical and Hellenistic periods combined with an evaluation of how far it might be legitimate to interpret this evidence retrospectively.

A final note of warning: our ignorance about the northern frontier of West Lokris and about the number of separate communities and cities, including their location, makes it hard to assess the size of their territories. An estimate is given only for some of the cities in the eastern part of the region, near Delphi (no. 177), where the political map can be reconstructed with some confidence, at least for the Hellenistic period.

Pre-Hellenistic Settlements not Attested as Poleis

Erythrai (*Ἐρυθραί*) Port of Aitolia Epiktetos near Eupalion (Livy 28.8.8; cf. Pantos (1985) 159 no. 132 = *SEG* 37 427). Called a *polis* by Steph. Byz. 280.10 and perhaps to be located at Monastiraki (Lerat (1952) i. 29–30 and 192–95; Pritchett (1991) 52–60). *Barr. C.*

Eupalion (*Ἐυπάλιον*) Lokrian settlement mentioned by Thucydides at 3.96.2 and 3.102.1. References in post-Classical sources include Strabo 9.4.8, 10.2.3; Steph. Byz. 286.8–9. The ethnic *Ἐυπαλιεύς* is attested in C3–C2 inscriptions from Thermos and the Naupaktos region (*IG* 1x².1 10, 13, 17, 640; *SEG* 17 265–66). Apart from Steph. Byz., Eupalion is not attested as a *polis* in any source. Eupalion was situated at modern Soulè-Eupalion, where there is an undated defence circuit enclosing an area of c.2 ha (Lerat (1952) i. 98–102, 192–95; Pritchett (1991) 60–61). *Barr. C.*

Laphron (*Λαφρον* -ος?) Known from the C3l list of Delphic *theorodokoi* (*BCH* 45 (1921) 26.iv.122: *ἐν Λαφρωί*) and from a C2s manumission inscription (*BCH* 93 (1969) 86) testifying to the ethnic, membership of the Lokrian Federation, and a location near modern Milea. *Barr. C.*

Oineon (*Οἰνεών*) Lokrian settlement mentioned by Thucydides at 3.95.3, 98.3 and 102.1. It was probably a harbour, as stated by Steph. Byz. 485.18–19: *Οἰνεών, Λοκρίδος λιμὴν*; cf. Lerat (1952) i. 195–96. Near Oineon was a sanctuary of Nemean Zeus, where, reputedly, Hesiod died (Thuc. 3.96.1). This *Οἰνεών* is probably identical with *Οἰνόη*, where Hesiod died according to two other sources (*Certamen Homeri et Hesiodi* 14; Tzetzes, *Vita Hesiodi*). Similarly, it is possible that the *Οἰνοαῖοι*—attested in inscriptions from Aitolia (*IG* 1x².1 6, 7 (C3f)), Delphi (*Syll.*³ 539A (C3l)) and Lokris (*IG* 1x².1 681 (C2m))—were the inhabitants of *Οἰνεών/Οἰνόη*. The settlement must be located east of Eupalion and Erythrai in the region of Klima, Marathias or Glypha (Lerat (1952) i. 195–97; Pritchett (1991) 52–60). *Barr. C.*

Phaistinos (*Φαιστίνος*) A Lokrian from Phaistinos is honoured with *proxenia* in a C3s inscription from Delphi (*F.Delphes* III.1 442), and C2s manumission inscriptions found in Panormos testify to its sanctuary of Apollo (Lerat (1952) i. 47–48, 115–23). *Barr. C.*

Physkeis (*Φυσκεῖς*) *IG* 1x².1 680.11.2; Plut. *Mor.* 294E. In the Hellenistic period a *polis* (*IG* 1x².1 704.1 (c.200)) but unattested in sources of the Archaic and Classical periods. It was the centre of the Lokrian Federation after 167 (*IG* 1x².1 667; Lerat (1952) ii. 97–98) and an inscription of C4m found in Physkeis shows that it must by then have been the capital of the federation of the Hesperian Lokrians (*IG* 1x².1 665). There is, however, no indication that Physkeis was a *polis* at that time. Physkeis was situated at modern Malandrino. Some remains date from the Classical period, but the impressive fortifications enclosing an area of c.15 ha are still undated (Lerat (1952) i. 123–37, esp. 136). *Barr. AC.*

Polis (*Πόλις*) Classified as a *kome* by Thuc. 3.102.1, a civic subdivision of the Hyaiaians (no. 160). *Barr. C.*

II. The *Poleis*

157. Alpa (*Alpaios*) Map. 55. Lat. 38.25, long. 22.10, but see *infra*. Type: C. The toponym is *Ἄλπα* (*BCH* 45 (1921) 25

iv.120 (C3l) or *Ἀλόπη* (Strabo 9.4.9; Steph. Byz. 77.12). The city-ethnic is *Ἀλπαῖος*, used in the external and individual sense in three inscriptions of C2 (Rousset (2002) 251.51, 89; *IG* ix².1 672 and 708), and in the external and collective sense in Thuc. 3.101.2, where the evidence of the three Hellenistic inscriptions shows that *Ἀλπαῖοι* is a convincing conjecture for MSS *Ὀλπαῖοι*.

Apart from Steph. Byz. 77.12, Alpa is not called a *polis* in any source, and the main reason for interpreting *Ἀλπαῖος* as a city-ethnic and including Alpa in this inventory of Archaic and Classical *poleis* is the C3 list of *theorodokoi*, interpreted retrospectively, and combined with Thucydides' information at 3.101.2 that, in 426, the Alpaioi had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three of which were presumably *poleis* (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others of which may have been. The passage shows that Alpa must have been a political community, and may perhaps have been a *polis*.

Lerat ((1952) i. 13–15 and 212–13) showed that the Alpaioi must have been settled in the neighbourhood of Physkeis and Phaistinos, but he refrained from placing Alpa on the map. Philippson and Kirsten ((1951) map and 740 no. 64) suggested one possible location, but a different one in (1958) 629 n. 34 and 669 no. 62: *viz.* Makrysi-Kokorista, accepted in *Barr.* for no good reason. As the evidence stands, Alpa ought to be left unlocated.

158. Amphissa (Amphisseus) Map. 55. Lat. 38.30, long. 22.20. Size of territory: 2. Type: A. The toponym is *Ἀμφισσα*, ἡ (Hdt. 8.32.2; Dem. 18.143; Aeschin. 3.125; Ps.-Skylax 36; *IG* iv².1 95.4 (C4m)) or, in inscriptions, sometimes *Ἄμφισσα* (*SEG* 39 441 (C3)). The city-ethnic is *Ἀμφισσεύς* (Thuc. 3.101.2; Dem. 18.150; Aeschin. 3.113; *CID* II 118.5 (C4f)) or, in inscriptions, sometimes *Ἄμφισσεύς* (*CID* v index s.v.). Apart from the feminine *Ἀμφισσίς*, *Ἀμφισσαία* is also attested (*IG* II² 8088 (C3l)). Both the toponym and the ethnic may have the geminate -σσ- written simplex (*CID* II 31.79 (C4m)). Amphissa is called a *polis* in the urban sense at Hdt. 8.32.2 and Ps.-Skylax 36. That it was a *polis* in the political sense as well is indicated by the appointment of an Epidaurian *theorodokos* in Amphissa (*IG* iv².1 95.4 (C4m)), the presence of Amphissaians among the Delphic *naopoioi* (*CID* II 31.79 (C4m)) and *hieromnemes* (*CID* II 43.23 (341)), and by the Amphiktyonic League's declaration of war upon Amphissa in 340/39 (Aeschin. 3.128–29). The collective use of the city-ethnic is attested internally in an inscription of C2 (*BCH* 126 (2002) 85; *IG*

ix².1 750.29) and on Hellenistic coins (Head, *HN*² 337), and externally in Thuc. 3.101.2 and in a Delphic dedicatory inscription of C4–C3 (*BCH* 73 (1949) 258). The individual use is attested externally in Delphic C4 inscriptions (*CID* II 118.5, 31.79) and internally in a first century AD inscription from Amphissa (*IG* ix².1 755.4).

The territory of Amphissa bordered on that of Myania (no. 164) to the south (Thuc. 3.101.2). To the north it extended as far as the Phokian *poleis*, as appears from the sources for the conflict of 395 (*Hell. Oxy.* 21.2–3; Paus. 3.9.9; *contra* Xen. *Hell.* 3.5.3; cf. Rousset (2002) 162–64). To the east the C4 frontier with Delphi (no. 177) is mentioned at Plut. *Mor.* 249F (r354 or 353). To the south-east the territory of Amphissa was contiguous with the sacred land of Apollo. The occupation of the *hiera chora* at the beginning of the Fourth Sacred War of 340–338 (Dem. 18.150; Aeschin. 3.113) was followed by a redrawing of the frontier to the detriment of the Amphissaians (Rousset (2002) 86.8.30–31 (r335/4)). From these Classical sources, as well as from later documents, it appears that Amphissa possessed a larger territory than the other Lokrian *poleis*.

In 480 Amphissa served as a place of refuge for the Phokians and the Delphians (Hdt. 8.32.2, 36.2). Amphissa is then not mentioned again in the sources until the Peloponnesian War (on the reference to the Amphissaians at Diod. 12.42.4 (r431), see Lerat (1952) ii. 37). Among the West Lokrians, who in 426 were allied with Athens, the Amphissaians were the first to change sides and join the Spartans (Thuc. 3.101.2). In the Third Sacred War, the Amphissaians were prepared to relieve Delphi from Phokian occupation (Diod. 16.24.4 (r356)), but soon had to submit to the Phokians (Diod. 16.33.3 (r354 or 353)). The Fourth Sacred War (340–338) was provoked by the Amphissaians (Aeschin. 3.113–29; Dem. 18.140–59), and ended with Philip's conquest of the city (Polyaen. 4.2.8) and the exile of some of the citizens. Aeschin. 3.129 states that the Amphissaians recalled the exiles soon after, and had their opponents exiled instead, but according to Diod. 18.56.5, the exile of the Amphissaians who had caused the Sacred War was still effective in 319. However, in spite of Strabo 9.4.8 (cf. 9.3.4), it seems that the city was not destroyed in 338 (Lerat (1952) ii. 53–54). It is apparent from the Amphiktyonic lists of 341–323 that Amphissa was not a member of the C4m federation of the Hesperian Lokrians which had its centre at Physkeis (*supra*). During this period an Amphissaian and a Hesperian took turns serving as the *hieromnemon* of the West Lokrians (Lerat (1952) ii. 57–60; Lefèvre (1998) 79, 295–96).

The mythical founder of Amphissa was Andraimon (Arist. fr. 569), whose tomb could still be seen in Amphissa in the second century AD (Paus. 10.38.5). Nothing is known about the political institutions of Amphissa prior to C2. In C4m the Amphissaians appointed a *theorodokos* to host the *theoroi* from Epidauros (no. 348) (IG IV².1 95.4).

In 321, when Amphissa was besieged by the Aitolians (Diod. 18.38.2), the city must have been fortified. There are still remains of the ancient acropolis wall, built partly in Lesbian masonry and enclosing an area of 1 ha. Furthermore, excavations have revealed sections of what may be a C4s defence circuit enclosing the town (ArchDelt 37 (1982) 208–10, 44 (1989) Chron. 190, 198–99, 50 (1995) Chron. 358, 51 (1996) Chron. 328).

159. Chaleion (Chaleieus) Map 55. Lat. 38.20, long. 22.20. Size of territory: 2? Type: A. The toponym is *Χαλειόν* (IG IX².1 717.7 (C5m); BCH 45 (1921) 23 IV.69 (C3l)) or, once, *Χάλαιον* (Hecat. fr. 113) or, in late inscriptions, *Χαλέον*, *Χαληόν* (CID v 862, 1115 (C1)). The city-ethnic is *Χαλειεύς* (IG IX².1 718.47 (C5f), 717.7 (C5m)). Variant forms are *Χαλεύς* (IG IX².1 738 (C5)), *Χαλεεύς* (BCH 92 (1968) 30 (C4l–C3e)), *Χαληεύς* (CID v 20 (198/7)), *Χαλεάτης* (CID v 1249 (first century AD)) or *Χαλαίος* (Thuc. 3.101.2). Chaleion is attested as a *polis* both in the urban sense (Hecat. fr. 113; IG IX².1 717.4 (C5m)) and in the political sense (BCH 92 (1968) 30 (C4l–C3e) = IG IX².1 739). The citizen is called *astos* (IG IX².1 717.14). The collective and internal use of the city-ethnic is attested in the treaty with Oianthea (IG IX².1 717 (C5m)) and on a C5 weight (IG IX².1 738); the collective and external use is attested at Thuc. 3.101.2. The individual use is attested both internally (IG IX².1 721C.5, 7 (C3)) and externally (BCH 92 (1968) 30.14 (C4l–C3e), Delphi).

The inscription, BCH 92 (1968) 30, which concerns the ownership of landed property in one *polis* by citizens from another *polis*, shows that Chaleion bordered on Tritea (no. 168). The treaty with Oianthea (IG IX².1 717) mentions the name of the territory (1: *Χαλείς*) and refers to the harbour of the city (4: *λιμένος τὸ κατὰ πόλιν*).

Apart from IG IX².1 718—attesting to the participation of Chaleion in the C5f colonisation of Naupaktos (no. 165)—the best source for the status of Chaleion in C5 is the treaty with Oianthea (no. 166) IG IX².1 717; see Gauthier (1972) 222–25, 242–44, 286–92). It regulates the presence of Chaleian metics (6: *μεταΦοικῆν*) in Oianthea, and vice versa. The inscription refers to *proxenoi*, *xenodikai*, *damiourgoi*, and to institutions of an aristocratic type, e.g. that jurors are to be appointed *aristindan*. The Chaleian

board of *damiourgoi* is also attested in a C5f dedication to an unnamed hero (IG IX².1 720).

On the basis of the epigraphical evidence, Lerat ((1952) i. 198–205) has shown that Chaleion was situated at modern Galaxidi. The defence circuit at this site encloses an area of 8 ha and dates from C4l or C3e (ibid. 152–58; ArchDelt 33 (1978) Chron. 147–48, 44 (1989) Chron. 201 and 204).

160. *Hyaia (Hyaïos) (with Polis) Map 55. Hyaia unlocated and not in Barr.; Polis located at lat. 38.25, long. 22.05, but see *infra*. Type: C. The toponym is ‘*Υαία* (Steph. Byz. 644.4: ‘*Υαία, πόλις Λοκρῶν τῶν Ὀζολῶν. τὸ ἐθνικὸν Ὑαίος. Θουκυδίδης τρίτω* (‘*Υαίους* at Thuc. 3.101.2)). In this note the toponym is probably generated by Stephanos from the ethnic in Thucydides and has no authority. Hyaia is attested as a *polis* in Hellenistic sources only (*infra*). The collective and external use of the city-ethnic is attested at Thuc. 3.101.2; for the individual and external use, see *F.Delphes* III.3 221 (C3l); SEG 44 438.6 (C2); IG IX².1 34.18 (C2).

Among the Lokrian peoples who were in contact with the Spartan Eurýlochos in 426, Thucydides mentions the Hyaioi, “who did not submit to giving hostages until he had taken their village called Polis” (‘*Υαίοι οὐκ ἔδωσαν ὀμήρους πρὶν ἀπτῶν εἶλον κώμην Πόλιν ὄνομα ἔχουσαν*, 3.101.2). This, our only early source, is open to several interpretations: (a) most of the Hyaïans lived scattered around a single village which they called Polis; (b) the Hyaïans were settled in a number of villages, one of which was called Polis; (c) the Hyaïans were settled in one town (*polis*) plus one or more villages (*komaï*), one of which was called Polis. Irrespective of which of the three interpretations one prefers, it can be assumed that the name Polis is derived from the term *polis* in the sense of *akropolis* (Hansen (1996) 36).

In the Hellenistic period the Hyaioi and the Polieis were distinct political communities, and each was a *polis*: c.200 the πόλις ‘*Υαίων* set up a statue in Thermos (IG IX².1 71a), in C3e a *Δράκων Πολιεύς* served as hipparch of the Aitolian Federation (IG IX².1 8.12–13; cf. 17.5), and in 208 the *Πολιεύς* were among those who recognised the Leukophryeneia of Magnesia on the Maiander (*I.Magnesia* 28.13).

If the Polieis of the Hellenistic period can be connected with the *kome* called Polis at Thuc. 3.101.2, the inference is that Polis had changed its status from *kome* to *polis*. A further inference is that the *polis* of the Hyaïans did not have its urban centre at the settlement which in 426 was called Polis.

Lerat ((1952) i. 197, ii. 239) refrained from locating the Hyaïans and Polis. Polis was tentatively located at modern

Glypha by Philippson and Kirsten (1951) 1391–96 and (1958) 319 n. 2, 636 n. 19; accepted in *Barr.* for no good reason. As the evidence stands, Polis ought to be left unlocated.

161. Hypnia (Hypneus) Map. 55. Lat. 38.25, long. 22.20. Size of territory: 1. Type: C. The toponym is ‘Υπνία, ἡ (*F.Delphes* III.4 352.Π.4 (c.190)). The city-ethnic is ‘Υπνιεύς (*F.Delphes* III.4 352.Π.24). In Steph. Byz. 335.17 the toponym is ‘Ιπνιος, ‘Ιπνέα, possibly generated from the city-ethnic ‘Ιπνέας (acc. plur.) at Thuc. 3.101.2, where, however, ‘Υπνέας is a plausible conjecture for MSS ‘Ιπνέας.

Hypnia is explicitly called a polis in the C2e *sympoliteia* with neighbouring Myania (no. 164; *F.Delphes* III.4 352.Π.4–5). The treaty records the name of the territory (‘Υπνιάς, Π.24–25), and refers to troops and officials in Hypnia (Π.14–16). The Hellenistic evidence should be combined, retrospectively, with Thucydides’ information at 3.101.2 that, in 426, the Hypnians had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three of which were presumably poleis (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others of which may have been. The passage shows that the Hypnians must have been a political community, and may perhaps have been a polis.

162. (Issioi) Map. 55. Unlocated. Type: C. Only the city-ethnic is known, viz. Ἴσσιος, attested in numerous Hellenistic inscriptions (*IG* IX².1 17A.56 (C3f), 638.13; *CID* v 17, 22, 104; *SEG* 41.514?). In Steph. Byz. 304.17 the toponym ‘Ησσός is probably generated from the city-ethnic ‘Ησσίους (acc. plur.) at Thuc. 3.101.2, where, however, Ἴσσίους is a plausible conjecture for MSS ‘Ησσίους. Apart from Steph. Byz. 304.17, the Issioi are not described as a polis in any source, and the main reason for interpreting Ἴσσιος as a city-ethnic and including the Issioi in this inventory of Archaic and Classical poleis is Thucydides’ information at 3.101.2 that, in 426, the Issioi had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three of which were presumably poleis (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others may have been. The passage shows that the Issians must have been a political community, and may perhaps have been a polis. The Issioi were probably settled between Tolophon (no. 167) and Oianthea (no. 166) (Lerat (1952) i. 32–34, 212–13).

163. (Messapioi) Map. 55. Unlocated. Type: [A]. Only the city-ethnic is known, viz. Μεσάπιος, attested at Thuc. 3.101.2 in the collective and external sense, and in the

individual and external sense in a single Delphic inscription recording a West Lokrian treasurer of 337 named Χαίρεας Ὀρθαγόρ[α] Μ[ε]σ[σ]άπιος (*CID* Π 74.1.51). The list of treasurers is headed by the stipulation τὸν ταμίαν ἀποπέμπειν τὰς πόλεις (l.4), an indication that the Messapioi were a polis in the political sense. There is no longer any basis for the traditional view (cf. Lerat (1952) i. 35) that Messapioi was the earlier name of the community called Physkeis from C3 onwards (Rousset (2002) 18). The attestation of a Messapian treasurer of 337/6 should be combined, retrospectively, with Thucydides’ information at 3.101.2 that, in 426, the Messapians had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three of which were presumably poleis (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others of which may have been. The passage shows that the Messapians must have been a political community, and may perhaps have been a polis.

164. Myania (Myaneus) Map. 55. Lat. 38.30, long. 22.20. Size of territory: 1. Type: C. The toponym is Μυανία, ἡ (*F.Delphes* III.4 352.Π.15 (c.190); *CID* v 631, 632 (138/7)) or Μυονία (Paus. 10.38.8; Steph. Byz. 462.9) or, once, Μύων (Steph. Byz. 465.17). The city-ethnic is, apparently, Μυᾶνες (pl.), on an ancient shield dedicated to Zeus in Olympia and quoted by Pausanias at 6.19.4–5 (*Μυᾶνων*) and 10.38.8 (*Μυᾶνες*). The form *Μυανεῖς* (*Μυανεύς*) appears in *F.Delphes* III.4 352.Π.23–24, and the Attic-Ionic form *Μυονεῖς* (*Μυονεύς*) at Thuc. 3.101.2.

Myania is attested as a polis in the *sympoliteia* with Hypnia (no. 161) of c.190 (*F.Delphes* III.4 352.Π.12–13). The main reason for classifying Myania as a polis in the Archaic and Classical periods is Thucydides’ information at 3.101.2 that, in 426, the Myonians had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three of which were presumably poleis (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others of which may have been. The passage shows that the Myonians must have been a political community, and may perhaps have been a polis.

The persistence of the toponym down to the sixteenth century has made it possible to locate Myania at modern Agia Efthymia, where there are remains of an ancient cemetery and of a defence circuit enclosing an area of c.8 ha (Lerat (1952) i. 78–80, 170–72) and at least in part to be dated to C4 (*ArchDelt* 44 (1989) *Chron.* 214).

165. Naupaktos (Naupaktios) Map. 55. Lat. 38.20, long. 21.50. Size of territory: 2? Type: A. The toponym is

Ναύπακτος, ἡ (IG 1x².1 718 (C5f); IG 1v² 1 95.6 (C4m); Thuc. 1.103.3; Isoc. 12.94; Dem. 9.34). The city-ethnic is, once, *Ναυπάκτιος* (IG 1x².1 718.40), but elsewhere in the same inscription (ll. 2, 14, 16, etc.) and in all other sources *Ναυπάκτιος* (IvO 259 (C5l?); Thuc. 2.92.3). Naupaktos is called a *polis* in the urban sense by Thuc. 3.102.5 and Ps.-Skylax 35. For *polis* in the political sense, see IG 1x².1 609.10, a law of C6l, often assigned to Naupaktos (Koerner (1993) no. 47), though the ascription is far from certain (*Nomima* 1 no. 44). At Thuc. 2.9.1 and 4, the Messenians in Naupaktos are subsumed under the heading *poleis* and listed among the allies of Athens in 431. See also Diod. 15.66.5 (1460/59 or 456/5), 12.48.1 (1429). The city-ethnic is used in the collective and external sense in IG 1x².1 718.2, etc.; IvO 259.1. The individual use is attested from C4s onwards, both externally (SEG 26 697 (C4); IG 1x².1 3A.17; *F.Delphes* III.4 12.3 (C3f)) and internally (IG 1x².1 613.5 (C3l)).

The territory is called *Ναυπακτία* (Aesch. *Suppl.* 262; Thuc. 3.102.2). Its frontiers are virtually unknown (see introduction *supra*). In the Hellenistic period the Bouttios, situated c.5 km north of Naupaktos, are attested as a dependency of Naupaktos (Lerat (1952) i. 20–23, 76, 93–96, 191–92). On the frontier between Lokris and Aitolia north of Naupaktos, see *supra* 391. An Archaic law on landed property (IG 1x².1 609) concerns the region of Naupaktos or the borderland towards Aitolia, but the ascription of the law to the city of Naupaktos is uncertain (*supra*).

According to Ps.-Skymnos 479, Naupaktos was a Dorian *polis* founded in the Heroic Age by Temenos. In C5f contingents of colonists were sent to Naupaktos from East Lokris and Chaleion (no. 159) (IG 1x².1 718 = ML 20 = Koerner (1993) no. 47). In 456/5 the Athenians took Naupaktos away from the West Lokrians and gave it to Messenian exiles from the Peloponnese (Thuc. 1.103.3; Diod. 11.84.7; cf. Hornblower (1991) 160). The Messenians and the Naupaktians formed a *sympoliteia* (IG 1x².1 fasc. 3 ix; see also Nielsen (2002) 60 n. 87; for a C2 echo of this *sympoliteia*, see SEG 41 331 and BE 1994 no. 341); they won several victories: one over Kalydon (no. 148), commemorated at Delphi (*BCH* 106 (1982) 196–99, 204), and one over the Akarnanians and Oiniadai (no. 130), commemorated in Olympia (IvO 259 (C5l?); Paus. 5.26.1). The Messenians of Naupaktos remained loyal to Athens during the Peloponnesian War (Thuc. 2.9.4; Diod. 12.48.1) and provided strong contingents of hoplites, testifying to the large size of the population (500 hoplites in 427 (Thuc. 3.75.1), 600 in 410 (Diod. 13.48.6)). In 400, after the end of the war, the Messenians were expelled, and Naupaktos was given back to the Lokrians (Diod.

14.34.2; Paus. 4.26.2, 10.38.10). Twice in C4 Naupaktos became an Achaian dependency, first between 389 and 367, and then again during the Third Sacred War and down to 338 (Diod. 15.75.2; Dem. 9.34; Lerat (1952) ii. 44–45, 49). In that year Naupaktos was captured by Philip II, who killed the Achaian garrison and gave the city to the Aitolians (Theopomp. fr. 235; Strabo 9.4.7; cf. Lerat (1952) ii. 54–55; Freitag (2000) 87).

IG 1x².1 718 contains some information about the Lokrian political institutions in C5f. The inscription regulates the status and rights of the new colonists from Naupaktos, mentions the laws of Naupaktos, and refers to an official called *archos*, and the agora as the place where proclamations take place. IG 1x².1 609 refers to *damiourgoi* and to three types of assembly: *preiga*, *polis* and *apoklesia*, but the ascription to Naukratos remains doubtful.

The divinities attested in the Classical period are Athena Polias (unpublished *sympoliteia*, cf. *supra*) and Apollo (Thuc. 2.91.1). In C4m Naupaktos appointed a *theorodokos* to host *theoroi* from Epidauros (no. 348) (IG 1v².1 95.6).

Naupaktos is the only Lokrian city that we know for certain was fortified in C5. Thuc. 3.102.2–4 distinguishes an unfortified suburb (*proasteion*) from the “big wall” (*μέγα τεῖχος*), which ought to be a wall enclosing the town below the acropolis. The harbour seems to have been fortified too (Lerat (1952) i. 89). Remains of the ancient fortifications and other buildings have been unearthed during numerous excavations, but there is not yet a chronologically organised synthesis that indicates which of the urban remains can be dated to the Archaic and Classical periods.

166. Oianthea (Oiantheus) Map. 55. Lat. 38.15, long. 22.10. Size of territory: ? Type: A. The toponym is *Οἰανθέα*, ἡ (IG 1x².1 717.7 (C5m); IG 1v².1 95.5) or *Οἰάνθη* (Hecat. fr. 113) or *Οἰάνθεια* (Hellan. fr. 120); Polyb. 4.57.2; Paus. 10.38.9; and in the C2 manumission inscriptions (see *infra*), or *Ἐβανθίς* (Ps.-Skylax 36) or *Ἐβάνθεια* (Ptol. 3.14.3). The city-ethnic is *Οἰανθεύς* in the Archaic and Classical periods (ML 4.2 (C7–C6); IG 1x².1 717.7 (C5m); Thuc. 3.101.2). *Ἐβανθεύς* is an alternative form attested in the Hellenistic period (*CID* v 17 (C2f); IG 1x².1 709a.2 (C2m)); cf. Lerat (1952) i. 41–44.

Oianthea is called a *polis* in the urban sense at Hecat. fr. 113; IG 1x².1 717.4 (C5m) and Ps.-Skylax 36. The earliest attestation of Oianthea as a *polis* in the political sense is in a C2 manumission inscription (IG 1x².1 709a.2); that it was a *polis* community in the Classical period as well is apparent from the treaty with Chaleion of C5m (IG 1x².1 717) and the attestation of a C4m *theorodokos* to host *theoroi* from Epidauros

(no. 348) (*IG* 1v² 95.5). The collective use of the city-ethnic is attested internally on Hellenistic coins (Head, *HN*² 338) and externally at Thuc. 3.101.2. The individual and external use is found on a C7–C6 cenotaph of a Korkyrean *proxenos* (ML 4.2); *patris* (*gaia*) is found *ibid.*

The treaty with Chaleion (no. 159) (*IG* 1x² .1 717 (C5m)) mentions the name of the territory (2: *Οϊανθίς*) and refers to the harbour of the city (4: *λιμένος τὸ κατὰ πῶλον*). Apart from this treaty—which concerns the presence of Oianthean citizens in Chaleion and vice versa—little is known of the history of Oianthea in the Classical period. In 426 Oianthea had to provide hostages to the Peloponnesian League (Thuc. 3.101.2). C.373 the city was ruled by a tyrant (Polyaen. 8.46). Oianthea's relations with the Greek world are attested, for the Archaic period, by the *proxenos* buried in Korkyra (ML 4; see *Nomima* 1 no. 34) and, for the Classical period, by the *theorodokos* of C4m (*IG* 1v².1 95.5). According to Plut. *Mor.* 294E, the city was founded by the hero Lokros. Plutarch's account may stem from an Aristotelian *politeia* (no. 104, Gigon).

167. Tolophon (Tolophonios) Map. 55. Lat. 38.20, long. 22.15. Size of territory: 1? Type: C. The toponym is *Τολφών* (*BCH* 45 (1921) 23.iv.70 (C3l); *CID* v 560, 564 (C2m); *IG* 1x².1 715 (C2m)) or *Τολοφών*, ἡ (Dion. Calliphon. 66, Marcotte; Steph. Byz. 628.1). The city-ethnic is *Τολοφώνιος*, attested at Thuc. 3.101.2, where it is used in the collective and external sense. The individual use is attested both internally (*IG* 1x².1 715 (C2m): *Τολοφώνιος*) and externally at Delphi (Rousset (2002) 251.14 (C2)).

Tolophon is attested as a *polis* in the political sense in an inscription of C2m (*IG* 1x².1 715) found *in situ* at Vidavi/Marmara and thus identifying the site. The reason for including Tolophon in this inventory of Archaic and Classical *poleis* is Thucydides' information at 3.101.2 that, in

426, the Tolophonians had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three which were presumably *poleis* (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others of which may have been. The passage shows that the Tolophonians must have been a political community, and may perhaps have been a *polis*. The remains of a defence circuit enclosing an area of c.3 ha are still undated (Lerat (1952) i. 50–51, 138–44).

168. Tritea (Triteus) Map. 55. Lat. 38.20, long. 22.20. Size of territory: 1. Type: A. The toponym is *Τριτῆα*, ἡ (*BCH* 92 (1968) 30.8–9 (C4l–C3e) = *IG* 1x².1 739). The city-ethnic is *Τριτεύς* (*ibid.* 14). Tritea is attested as a *polis* in the political sense (*ibid.* 14). The collective use of the city-ethnic is attested externally at Thuc. 3.101.2 and *BCH* 92 (1968) 30.14 (C4l–C3e). For the individual and external use, see *IG* 1x².1 31.148, 174, 177 (214/13), and *CID* 1v 96 (204/3).

The treaty between Chaleion (no. 159) and Triteia (*BCH* 92 (1968) 30, Delphi), which concerns the ownership of landed property in one *polis* by citizens from the other *polis*, shows that Tritea bordered on Chaleion, and that both communities were *poleis*. For C5 we have Thucydides' information at 3.101.2 that, in 426, the Triteians had to provide hostages to the Peloponnesian League alongside a number of other Lokrian communities, three of which were presumably *poleis* (Amphissa (no. 158), Chaleion (no. 159) and Oianthea (no. 166)) and the others of which may have been. The passage shows that Tritea must have been a political community, and may perhaps have been a *polis*. These sources as well as the manumission inscriptions from Delphi show that Tritea was situated at modern Pendeoria, where there is an undated defence circuit enclosing an area of c.1 ha (Lerat (1952) i. 51–52, 145–49, 211).

PHOKIS

JACQUES OULHEN

I. The Region

The name of the region is $\Phi\omega\kappa\acute{\iota}\varsigma$, $\eta\acute{\iota}$ (Hdt. 8.32.2; Thuc. 4.76.3; Xen. *Hell.* 3.5.4). The regional ethnic is $\Phi\omega\kappa\epsilon\upsilon\varsigma$ (Hom. *Il.* 2.517; Hdt. 1.46.2; Thuc. 1.107.2). The collective and internal use of the ethnic and/or ktetic is attested in abbreviated form ($\Phi\Omega$ or $\Phi\Omega\text{KI}$) on coins of, allegedly, C6l/C5e (Williams (1972) 9ff) and in its proper ethnic form on C4 coins ($\Phi\Omega\text{KE}\Omega\text{N}$; Head, *HN*² 339) and in inscriptions (*CID* II 1.1.24 (361); *IG* IX.1 111.3 (C4s)), sometimes combined with a city-ethnic (*CID* II 5.11.50: $\Phi\omega\kappa\epsilon\upsilon\varsigma$ $\text{T}\epsilon\iota\theta\rho\acute{\omega}\nu\iota\omicron$ (C4f)). The collective and external use is attested in inscriptions (*IG* II² 70 (C4f); cf. Klaffenbach (1949) 224; *IG* II² 236b.11.8 (338/7)) and in literature (Hdt. 7.203; Thuc. 1.107). The individual and internal use is attested in the *naopoioi* accounts (*CID* II 5.1.14 (C4f); cf. *CEG* II 799 (C4l)). The individual and external use is found on a C4 Attic tombstone (*IG* II² 10493) and in literature (Dem. 23.124). Phokis is described as a $\chi\acute{\omega}\rho\alpha$ (Hdt. 8.32.2; Thuc. 8.108.3) and is once called $\pi\alpha\tau\rho\acute{\iota}\varsigma$ (*CEG* II 799 (C4l); cf. Nielsen, *Patris*). The term $\epsilon\theta\nu\omicron\varsigma$ is used about the Phokians in various contexts (*Hell. Oxy.* 21.3; Ps.-Skylax 37) and in particular as a member of the Amphiktyonic League (Aeschin. 2.116). For $\delta\delta\eta\mu\omicron\varsigma\delta\tau\acute{\omega}\nu\Phi\omega\kappa\acute{\epsilon}\omega\nu$, see Dem. 19.81.

To the east Phokis borders on Boiotia (Thuc. 3.95.1), and the territory of Phanoteus (no. 190) is explicitly described as the frontier district (Thuc. 4.76.3). Mt. Heduleion, which lies north-east of Parapotamioi (no. 188), is often taken to be the boundary between Phokis and Boiotia (Strabo 9.3.16; schol. Dem. 19.148, 313–14c, Dilts). Orchomenos (no. 213) is the Boiotian frontier town to the north-east (Hdt. 8.34). According to Ps.-Skylax 37 and Paus. 10.1.2 (who do not mention Boulis (no. 174)), Antikyra (no. 173) is the easternmost Phokian town towards the south-east. To the west Phokis borders on West Lokris. To the south-west, the plain

of Kirrha is sometimes described as Lokrian (schol. Hom. *Il.* 2.520, Erbse). *Hell. Oxy.* 21.2–3 mentions a disputed region near Parnassos as being the origin of a conflict between the Phokians and the West Lokrians. Paus. 3.9.9 specifies that the Lokrians involved were the Amphissaiaians (no. 158). Xenophon, however, traces the origin of the conflict to a disputed region between Phokis and East Lokris (*Hell.* 3.5.3). To the north-east Phokis borders on Doris (Hdt. 8.31–32), and to the north it borders on East Lokris (Xen. *Hell.* 3.5.3). The strategic importance of the mountain pass at Hyampolis (no. 182) has been stressed by Ellinger (1993) 22–24, *contra* Pritchett (1996)). Strabo 9.3.1 reports that, previously, Phokis reached the coast of the Euboian Gulf, where it controlled the port of Daphnous (*infra* 401).

Involvement in the Persian War is the first securely dated attestation of the Phokians in Greek history (Hdt. 7.203.1). There can be no doubt that the Phokian *koinon* (*IG* IX.1 101 (C3l)) antedated the Persian War, but neither Phokian participation in the Delphic Amphiktyony nor the war between Phokis and Thessalia can be securely dated (Larsen (1968) 43–44; Giovannini (1971) 50–51; Sanchez (2001) 37–44; Ellinger (1993) 17–22). For the Phokian dedications in Delphi, see Jacquemin (1999) 52–53. In the sanctuary of Kalapodi, the oldest Archaic temples of C7e and the building programme of C6f have been attributed to the Phokian *koinon* (Felsch (1987); *Kalapodi* I: xvi; Ellinger (1993) 27–34). On purely *a priori* grounds the beginning of the Phokian coinage has been dated to C6l/C5e (Williams (1972) 11–12).

Next to nothing is known about the place of the *poleis* in the organisation of the *koinon*. Lack of sources makes it impossible to determine whether the *dioikismos* of 346 was accompanied by a shift from a primary assembly open to all Phokians to a federal assembly of representatives from the *poleis* (Daverio-Rocchi (1994); *contra* Larsen (1968) 40–48, 300–8). In a C6 context Plutarch mentions magistrates and tyrants installed by the Thessalians (*Mor.* 244B), but elsewhere he mentions a C6 tyrant of the Phokians (*Mor.* 859C). From the Archaic period (C6?) onwards, the *strategoí* were the principal magistrates (Kazarow (1899) 7–12), and in

I would like to thank my friend D. Rousset for discussing with me several of the issues treated in this chapter and for letting me see the manuscript of Rousset (2002) prior to its publication. I also owe a debt of gratitude to M. H. Hansen for his suggestions and improvements—and for his patience.

Pausanias two of the Phokian *strategoî* in the war against Thessalia are identified by city-ethnic: Roios of Ambryssos (no. 171) and Daiphantes of Hyampolis (no. 182) (Paus. 10.1.8 (rC6?); cf. Plut. *Mor.* 244C). The magistrates were elected by an assembly of unknown composition (Diod. 27.2 (rC4)), and the criterion for election was competence, which excludes rotation among the *poleis*. *Strategoî* were elected from those who had served as *phylarchoi* or *tamiai* (Vat.Gr. 2306B.205–15). The *poleis* seem to have retained some independence in foreign policy; thus, Abai (no. 169) was not forced to join the other *poleis* in the Third Sacred War (Paus. 10.3.2). Also, the Phokian envoys were those of the *poleis* (Aeschin. 2.142 (343)). Some C5 Phokian coins are inscribed with the abbreviated legend of one of the *poleis*: Lilaia in C5e? (Williams (1972) 17–18) and Neon in C5l (ibid. 42).

The Hellenistic treaty by Polemon on the foundation of Phokian *poleis* is lost except for the title: *Κτίσεις τῶν ἐν Φωκίᾳ πόλεων καὶ περὶ τῆς πρὸς Ἀθηναίων συγγενείας αὐτῶν* (FGrHist III B p. 484). The Homeric Catalogue of Ships records the following nine(?) communities: Kyparissos, Python, Krisa, Daulis, Panopeus (= Phanoteus), Anemoreaia, Hyampolis, Parapotamioi(?) and Lilaia (Hom. *Il.* 517–26).

In the Archaic period the Phokian *poleis* appear in the accounts of the First Sacred War (Robertson (1978); Càssola (1980); Davies (1994)) and the war between the Phokians and the Thessalians (Ellinger (1993) 12–22), but the historiographic tradition of these events poses serious problems of interpretation. Only three *poleis* are attested: Krisa/Kirrha (no. 183), Hyampolis (no. 182 (city-ethnic, *supra*)) and Ambryssos (no. 171 (city-ethnic, *supra*)), and the status of Kirrha is highly questionable. Phokian participation in colonisation is so poorly attested that it is impossible to suggest a diffusion of the Phokian political system in the Archaic period (Schober (1924) 57–58).

For C5 there is no epigraphical evidence, apart from the attestation of two city-ethnics: *Delphoi* (CID I 8) and *Hyampoloi* (SEG 37 422). However, Phokian cities are attested by Herodotos (8.32–38; cf. Paus. 10.3.2, 33.8), who, however, restricts his list to sixteen *πόλεις* passed and destroyed by the Persians in 480: *viz.* Drymos, Charadra, Erochos, Tethronion, Amphikaia, Neon, Pedieis, Triteis, Elateia, Hyampolis, Parapotamioi, Abai, Panopeus (= Phanoteus), Daulis, *Aiolidai and Delphoi. The cities of southern Phokis are missing from the catalogue. Lilaia and Neon are also attested, by their C5 coinage.

In C4 sources, on the other hand, the Phokian *poleis* appear in several sources and in different contexts. In his

account of the prelude to the Corinthian War, *Hell. Oxy.* 21 mentions Parapotamioi, Daulis, Phanoteus (no. 190), Elateia, Pedieis and Hyampolis, which reappears in Xenophon's account of Jason of Pherai's attack in 371 (*Hell.* 6.4.27).

Several Phokian *poleis* appear in the Delphic *naopoioîs* lists of contributions to the rebuilding of the temple of Apollo in 373–346 (cf. CID II 4.14–15: *τὰδε πόλεις καὶ ἰδιῶται ἐπάρξαντο*). Some of these contributions are from the *poleis* themselves, *viz.* Charadra (CID II 8.I.5), Pedieis (CID II 5.II.54) and Teithronion (CID II 5.II.50), some are from individual citizens identified by city-ethnic, *viz.* Lilaia (CID II 2.1.6) and Phanoteus (CID II 24.II.14).

Above all, the Phokian cities are attested in connection with the Third Sacred War. Their destruction in 346 is mentioned by Demosthenes at 19.61, and at 19.123 he reports that there were twenty-two *poleis* altogether. Pausanias has a list of twenty named *poleis* (in the urban sense) which were destroyed at the end of the Third Sacred War (10.3.2: *καὶ ἐς ἔδαφος ἀλοῦσαι κατεβλήθησαν τῶν Φωκῶν αἱ πόλεις*). Pausanias distinguishes between (a) ancient cities known, first of all, from Homer: Lilaia, Hyampolis, Antikyra, Parapotamioi, Panopeus (= Phanoteus) and Daulis (Antikyra is missing from the Catalogue of Ships but included by Paus. at 10.36.5); (b) the cities burnt down by Xerxes: Erochos, Charadra, Amphikleia, Neon, Tithronion and Drymea; and, finally, (c) the other cities which, apart from Elateia, had no record in history prior to 346: Trachis, Medeon, Echedamia, Ambryssos, Ledon, Phlygonion and Stiris. To these cities, all exposed to *dioikismos* (Diod. 16.60), Pausanias adds Abai, the only one that was not split up into *komai* (10.3.2: *τότε δὲ κατεσκάφησάν τε αἱ κατελεγμένοι καὶ ἐς κώμας πλὴν Ἄβας ὑκίσθησαν αἱ ἄλλαι*). Thus, Pausanias records twenty-one *poleis*, Demosthenes has twenty-two. The difference of one is variously explained (Beloch (1911) 439–40, *contra* Schober (1941) 477).

Due to the paucity of Classical sources about the regions of central Greece, the Hellenistic inscriptions must sometimes be used retrospectively, and they testify to the reliability of the list found in Pausanias; thus, the inclusion of Echedamia and Phlygonion may be based on an older inscription (Paus. 10.33.11). On the other hand, the list in Pausanias and the number of *poleis* reported by Demosthenes are not above suspicion. Inscriptions and the coins of C4 testify to the existence of some of the cities listed by Pausanias, but also to the existence of some cities which are absent from the list. Thus, Pedieis is mentioned in a list

of 358 of contributions to the rebuilding of the temple of Apollo (*CID* II 5.11.55) but is omitted by Pausanias. Furthermore, the payments of the Phokian fine to Delphi suggest the existence of two (?) other *poleis*, of which a broken city-ethnic is all that is preserved: *Πο[...]*οῦ (*CID* II 38.5 (C4s)) and *Τρωειεῖς* (*CID* II 108.9). Finally, the existence of *Triteis* and **Aiolidai* in C4 may seem suspicious but, conversely, of the cities attested exclusively in later sources (*Boulis*, *Helikonioi*, *Stephane*), at least *Boulis* seems to have existed in C4. Thus, the total of twenty-two *poleis* is a minimum. Furthermore the number may have varied over time due to ecological factors (changes of the stream bed of the *Kephisos*), external military pressures, and rivalry between neighbouring *poleis*. *Triteis* and **Aiolidai* are attested only in *Herodotos*, and they may well have disappeared with their destruction in 480. Conversely, *Boulis* may have been founded in the course of C5.

The *dioikismos* suffered by the Phokian *poleis* in 346 did not lead to their disappearance as polities, and the *poleis* appear in the payments of the Phokian fine to Delphi: *Elateia*, *Erochos*, *Lilaia*, *Medon*, *Po[---]* in c.340 (*CID* II 37–38) and *Charadra*, *Lilaia*, *Medeon*, *Teithronioi*, *Tronieis*(?) and [*Phlyg*]oneis in c.320 (*CID* II 108). The *dioikismos* (*Diod.* 16.60) consisted in the destruction of the urban centres and their defence circuits and in the breaking up of the urban centres into villages.

Furthermore, one may question the degree of the destruction, presumably exaggerated by *Demosthenes* in his emotional description (19.65) and by the example of *Ambryssos*, adduced by *Pausanias* (4.31.5, 10.36.3). Here the archaeological evidence calls for circumspection. There are impressive remains of numerous defence circuits in Phokis, but there is no stratigraphic analysis of the evidence. Nevertheless, the *communis opinio* is that these walls are later than 346. The typology and date of these walls are based on the *a priori* assumption that all Phokian fortifications were completely destroyed in 346, and that this year, or rather the year 339/8, constitutes the *terminus post quem*. Even with the help of the Athenians and Thebans, one wonders how the Phokians, in addition to the huge fine, could afford such fortifications before C4I. But recent analyses of several Phokian defence circuits tend to place their date earlier than 346 (*Ober* (1992) 163–64; *Lilaia* c.356–346; *Winter* (1997) 262; *Tithorea*, *Lilaia*; *McInerney* (1999) 340–51). Whatever the merit of these dates, careful handling of the data is required. All Phokian fortifications were not razed to the ground in 346, and it seems that some of them underwent various repairs at various times.

However that may be, by Athenian and Theban intervention the Phokian cities were apparently refounded soon after the *dioikismos* (*Paus.* 10.33.8). *Pausanias* tells us that the Thebans in 339/8 had *Ambryssos* fortified with a double defence circuit (10.36.3). Without reporting the date or the context, *Pausanias* refers to the *anoikismos* of *Lilaia* (10.33.3) and that of *Neon*, refounded with the name of *Tithorea* (10.32.9). One may add *Elateia*, apparently fortified in 338 (*Aeschin.* 3.140, but cf. *Dem.* 6.15).

We do not know whether all cities were rebuilt. At least, the *dioikismos* resulted in the disappearance of *Parapotamioi* as a *polis*. *Pausanias* reports that the population of *Parapotamioi* had become impoverished and reduced in size, and that the Athenians and Thebans had it distributed among the other *poleis* (10.33.9). Other *poleis* may have suffered the same fate. *Pedieis*, already absent from *Pausanias*' list of *dioikised poleis* at 10.1.3, is unattested in later sources, and so is *Trachis*; but the silence of our sources may be fallacious.

Several *sympoliteiai* resulted in the temporary or definitive disappearance of Phokian cities. Some of them date from C2 (*Phlygonion*–*Delphi*, *Phlygonion*–*Ambryssos*, *Stiris*–*Medeon*). On the other hand, the annexation of *Troneia* by *Daulis* (*infra* 427) and of *Erochos* by *Lilaia* (*infra* 421) may go back to the Classical period.

In consequence of their expansionist policy, the Phokians succeeded for shorter periods in conquering *poleis* situated outside Phokis, and it is difficult to ascertain whether the Phokians' control of these *poleis* resulted in their incorporation into the Phokian *koinon*. In 457 the Phokians were forced by the *Lakedaimonians* to cede a *polis* in *Doris* which they had occupied (*Thuc.* 1.107.2). During the Third Sacred War *Onomarchos* took possession of three *Boiotian poleis*: *Orchomenos* (no. 213; *Diod.* 16.33.4) and *Koroneia* (no. 210; *Diod.* 16.35.3), both in 353/2, and, at an unknown date, *Chorsiai* (no. 202) and the fort of *Tilphosaion* (*Dem.* 19.148; *Diod.* 16.58.1). Two of these *poleis*, and perhaps all three, were exposed to *andrapodismos* in 346 (*Dem.* 19.325) and, perhaps, the destruction of their walls as well (*Diod.* 16.60.1; *contra Sanchez* (2001) 208–9 and 218). The inference is that they had been members of the Phokian *koinon*. Similarly, the Phokians took possession of some *poleis* in *East Lokris* in 351/50 (*Diod.* 16.38.2): *Alponos* (no. 379), *Nikaia* (no. 385) and *Thronion* (no. 388) (*Aeschin.* 2.138; *Diod.* 16.33.3). *Strabo* holds that once (τὸ παλαιόν) *Daphnous* in *East Lokris* belonged to Phokis (9.3.1), and refers to *Daphnous* as a Phokian *polis* at 9.3.17; cf. *Steph. Byz.* 222.14. It is not known when this *Lokrian* port belonged to Phokis (*Glötz* (1909) 531; *Nielsen* (2000) 107–8; *contra Beloch* (1911)). *Onchoe*

(*infra* 406), Pharygai (*infra* 403) and Knemis (Ps.-Skylax 61) may belong in the same context.

We know next to nothing about the exact size of the territory of the Phokian *poleis*, and comparison with modern centres does not help (*contra* Ruschenbusch (1991)). Furthermore, it is impossible to determine the frontiers of the *poleis* around Mt. Parnassos, of which at least a part was a no man's land. Here the approximate size of the territories is assessed by the drawing of Thiessen polygons, admittedly an imprecise method, but often sufficient when the purpose is to place a *polis* in one, or at most two, of the five groups used in this work.

1. Ancient Toponyms not Denoting Pre-Hellenistic Poleis

Some toponyms and names of communities are excluded from the inventory of *poleis*. They are listed below and belong to at least one of the following five categories. (1) Communities of unknown status mentioned in Classical literary sources: Kragalidai. (2) Communities not attested as Phokian *poleis* earlier than the Hellenistic period: Antaieis, Helikonioi, Pharygai, Pyrrha(?), Stephane. (3) Toponyms erroneously classified as Phokian *poleis* in late sources: (a) sites belonging in other regions: Aigostheneia, Erannos; (b) toponyms invented by misreading manuscripts: Groneia, Larisa, Patronis(?); (c) extrapolation or misinterpretation in late sources of information in earlier sources: Anemoreia, Apollonia, Boukaia, Hya(m)peia, Kirphis/Skirphai, Krisa, Kyparissos, Lykoreia, Melainai, Onchoe(?); (d) mythological *poleis*: Agatheia, Lykoreia; (e) pseudo-historical *poleis*: Krisa. (4) Toponyms designating sites attested in a context in which *polis* status is questionable: Naulochos. (5) Sites erroneously interpreted as *poleis* by modern historians: Glechon, Kleonai, Marathon.

1.1 Communities of unknown status mentioned in Classical literary sources

Kragalidai (*Κραγαλίδαι*) Unlocated. Various spellings of the name are attested in lexicographers and scholiasts, all probably derived from poor copies of Aeschin. 3.107–8: *Κραγαλίδαι* (Aeschin. 3.107, 108, Dilts; schol. Aeschin. 3.107); *Κραγαλλίδαι* (Aeschin. 3.107k; *Suda* Σ2349); *Κραναλλίδαι* (Harp. K80; *Suda* Σ2349); *Κραναγαλλίδαι* (Didymos in Harp. K80); *Κρακαλίδαι* (Hsch. K3923); *Ἀκραγα(γ)αλ(λ)ίδαι* (Aeschin. 3.107βf); *Ἀκραγαλῖς* (*Suda*

A951). The hinterland of Kirrha is called *Κραναγάλλιον* by the C3 historian Xenokrates (*FGrHist* 240) fr. 22, but this toponym is probably derived from *Κραναγαλλίδαι* (Schober (1924) 34; Rousset (2002) 33–34). Reminding his audience of the exploitations leading up to the First Sacred War, Aischines (3.107) mentions that the Kirrhaioi and Kragalidai had settled in the sacred land: *τὴν χώραν κατώκησαν Κιρραῖοι καὶ Κραγαλίδαι, γένη παρονομώτατα*. And these Kragalidai are once again associated with the Kirrhaioi in the oracle quoted in 3.108: *ἀναρεῖ ἢ Πυθία πολεμεῖν Κιρραίοις καὶ Κραγαλίδαις . . . καὶ τὴν χώραν καὶ τὴν πόλιν ἐκπορθήσαντας καὶ αὐτοὺς ἀνδραποδισαμένους ἀναθεῖναι τῷ Ἀπόλλωνι*. The historiographic context of the First Sacred War is a moot point (Robertson (1978); Davies (1994)), and the absence of the Kragalidai in other sources for the war calls for circumspection. Some modern historians have connected the Kragalidai with an undatable crystallisation of local legends of Delphi (Davies (1994) 202). Thus, the existence of a hero Kragaleus allied with Herakles against Apollo (Ant. Lib. 4) may have led to the invention of these Kragalidai at the time when the struggle between Apollo and Herakles over the tripod came to constitute a representation of the First Sacred War (Parke and Boardman (1957) 276–78). Thus, even the existence of the Kragalidai is subject to doubt. The variant spellings attested in the lexicographers testify to their ignorance. But since there is no explicit evidence to the contrary, it seems better to assume the historicity of the Kragalidai. On the other hand, it is more difficult to decide their status. The text of Aischines is open to several interpretations, depending on (a) whether the term *γένος* denotes a race or a lineage or a civic subdivision; (b) whether the word *γένη* qualifies the Kragalidai only, or the Kirrhaioi and the Kragalidai combined; (c) whether the word *πόλις* in the singular means the *polis* of the Kirrhaioi and the Kragalidai, or the *polis* of the Kirrhaioi and the *polis* of the Kragalidai. There is no way we can decide these issues, and it seems prudent not to trust the account of the *Presbeutikos Logos* (Hippoc. *Ep.* 27), who in connection with the Sacred War mentions the *ethnos* of the Krisaians and the *cities* found there in order to represent the Kragalidai as a *polis*. The description of the *Κρακαλίδαι* as *τῶν Κρισσαίων βασιλεῖς* (Hsch. K3923) is probably just an interpretation of Aischines' text. Not in Barr.

1.2 Communities not attested as Phokian poleis earlier than the Hellenistic period

Antaieis (*Ἄνταιεῖς*) The ethnic *Ἄνταιεῖς* is attested in post-Classical inscriptions (e.g. *IG IX² 1.1 17A.1.11* (C3m-s)), but it cannot be determined whether this possible *polis* was Aitolian, Lokrian or Phokian (Lerat (1952) i. 72). No date or location in *Barr*.

Helikonioi (*Ἑλικώνιος*) Unlocated. The Delphic manumission inscriptions of C2 provide us with at least one unquestionable attestation of the ethnic *Ἑλικώνιος* (*SGDI 2241* (C2e); cf. *F.Delphes III.1 333* (C2l): *Ἑλι[κώνιος]*). A C2–C1 sepulchral inscription from Thisbe (*Νείκη Ἑλικωνία* (*IG VII 2348*)) may provide us with the only other attestation of the ethnic. That this community should be located in the south-eastern part of Phokis is apparent from (1) the similarity between the ethnic and the name of Mt. Helikon, (2) the origin of the guarantor (Medeon) and the witnesses (Ambryssos) listed in the C2 manumission inscription, (3) the provenance of *IG VII 2348*. It can be cautiously suggested that the *Helikonioi* inhabited the site of Kyriaki, where some ancient remains have been dated to C4 (Fossey (1986) 35–39; Rousset (1999) 43–44); but the existence of a city in western Boiotia cannot be precluded. The nature of the inscriptions does not allow us to presume that the ethnic is a sub-ethnic rather than a city-ethnic (Robert (1946) 87; Hansen (1996) 194; Rousset (1999) 55). Irrespective of the status of the *Helikonioi* in the Hellenistic period, the silence of the sources for the Archaic and Classical periods precludes the inclusion in the Inventory of a *polis* of the *Helikonioi*. Not in *Barr*.

Pharygai (*Φαρύγαι*) reporting an embassy of 318, *Plut. Phoc.* 33.7 mentions the toponym *Φαρύγαι*, which he calls a *κώμη τῆς Φωκίδος*, but at *Strabo* 9.4.6 *Φαρύγαι* is identified with *Τάρφη* in East Lokris. Pritchett (1992) 151–55 denied its existence and took it to be an error for *Ναρύκα*, but Buckler (1989) 96 n. 17 has defended Plutarch's reference to a Pharygai in Phokis. Not in *Barr*.

Pyrrha (*Pyrrha*) In his list of Lokrian and Phokian toponyms (*HN* 4.7), Pliny mentions *Pyrrha*, which has been associated with *Πυρρ[αῖος]* in a list of Aitolian *hieronymones* of C3s (*CID* iv 81). The site is unlocated and unattested before the Hellenistic period (Lerat (1952) i. 62). *Barr.* unlocated and undated.

Stephane (*Στεφάνη*) Unlocated. Both Herodian and Steph. Byz. mention a *πόλις Φωκίδος* called sometimes

Στεφάνη (*Hdn.* III.1 328.24, 370.18; Steph. Byz. 585.9) and sometimes *Στεφαναῖον* (*Hdn.* III.1 370.18).

Two other passages are sometimes adduced in connection with this *πόλις Φωκίδος*: Herodian mentions a *Στεφαναῖον, ὄνομα τόπου* (III.2 426.33) and *Suda* has the entry *Στεφάνη πόλις* (Σ1065). Finally, Steph. Byz. has the ethnic *Στεφαναῖος*. A Boiotian inscription confirms the information brought by the lexica. In a C1f list of *proxenoi* of an unknown *polis* is the heading *Στεφανίται* followed by three names, of which the second is . . . *ὠνδης Διονυσόδωρου* (*SEG* 37 388.14–17). Although Stephanos attributes the ethnic *Στεφανίτης* to a Stephane in Paphlagonia, a name ending in *-ὠνδης* suggests a *proxenos* coming from central Greece (*SEG* 42 436); thus the link between the ethnic and the toponym is likely, but not enough to show that Stephane was a Phokian *polis* in the Archaic and Classical periods. *Barr.* unlocated, C, town in Phokis, but no evidence supports C.

1.3 Toponyms erroneously classified as Phokian poleis in late sources

1.3a Sites belonging in other regions

Aigostheneia (*Αἰγιοσθένεια*) Called a *πόλις Φωκίδος* by Steph. Byz. 44.7, quoting Arkadios. The toponym is mentioned by Ptol. *Geog.* 3.14.17 among the *τόποι Φωκίδος μεσσόγειοι* and is probably mistaken for Megarian Aigosthena (no. 224) (cf. implicitly Meyer, *RE* xv. 164) rather than for one of the Phokian toponyms *Αἰγώνεια* (*F.Delphes* III.2 136) or *Αἰγάι* (schol. Ap. Rhod. 1.1165c) or *Αἰγαῖον πεδῖον* (*Eusth. Comm. ad Dionys. Per.*, *GGM* II.240.6–7). Rousset (2002) 16.

Erannos (*Ἐρρανός*) See Kyparissos (*infra*).

1.3b Toponyms invented by misreading manuscripts

Groneia (*Γρόνεια*) At Steph. Byz. 213.16, *Γρόνεια* is a misreading by Stephanos or his source of *Τρόνεια* (Schober (1924) 30; Robert (1960) 75; cf. no. 197). *Barr.* lists it as an unlocated Phokian city.

Larisa (*Λάρισα*) A Larisa is mentioned among other Phokian toponyms in two sources of the Roman imperial period: *Dion. Calliphon.* 81, Marcotte: *Ἐν τῇ μεσογειῶ . . . Κυπαρισσοῦ πόλις, Λαρισά τε, μετ' αὐτὴν Δαυλῖς*, a passage which is probably the source of *Plin. HN* 4.27: *introrsus autem Larisa, Elatea et in ripa Cephesi, ut diximus, Lilaea* (cf. Rousset (1994) 302, *contra* Marcotte (1990) 135).

But even if one rejects the plausible conjecture of *Κρίσα* (Marcotte (1990) 133), there is no reason to make a *polis* of this Larisa, which is otherwise unattested in Archaic and Classical sources. Not in *Barr*.

Patronis (*Πατρωνίς*) The only source for this toponym is the account in Plut. *Sull.* 15.6 of the preparations for the battle of Chaironeia in 86. Some commentators have suggested an emendation of Plutarch's text. His *Πατρωνίς* was situated north-east of Tithorea near *Τρωνίς*, which is epigraphically attested and according to Pausanias was situated in the territory of Daulis (cf. Troneia (no. 197)). It is tempting in Plutarch to read {πα} *Τρωνίς*. On the other hand, a C4 Delphic inscription may provide us with an attestation of the ethnic *Πατρωνεῖς*. At *CID* II 108.9 [...] *ΤΡΩΝΕΙΕΙΣ* is normally interpreted as *Τρωνεῖς*, the ethnic corresponding to *Τρωνίς*, but an equally possible restoration is [...] *Πατρωνεῖς*. Thus, Robert (1960) 75 (*pace* Schober (1924) 43) argues in favour of two distinct cities. But the topographical argument which permitted Robert to establish a distinction between Troneia and Patronis has been countered persuasively by McInerney (1997) 197–99. There is no proof that the sanctuary of a hero Archegetes at Troneia is to be located in the neighbourhood of the Phokikon. Thus, there is no basis for arguing that Troneia was situated south of Daulis and was different from Patronis, probably to be located north of Daulis (Plut. *Sulla* 15). As the evidence stands, the identification of *Πατρωνίς* with *Τρωνίς* seems the preferable solution (Leake (1835) ii. 104; Tillard (1911) 65; Kirsten (1951) 713; *Barr.*). *Barr.* C.

1.3c Extrapolation or misinterpretation in late sources

Anemoreia (*Ἀνεμώρεια*) Unlocated. The toponym is *Ἀνεμώρεια*, ἡ (Hom. *Il.* 2.521; cf. schol. 521a, Erbse; Eust. *Il.* 1 421.17, van der Valk; Lycoph. *Alex.* 1073; Strabo 9.3.15; Hdn. III.1 276.23, 2 476.10; Steph. Byz. 95.1; Hsch. *A4483*; Eust. *Il.* 421.17, van der Valk) or *Ἀνεμώλεια* (Strabo 9.3.13; Steph. Byz. 95.1, taking it to be the contemporary toponym; cf. Eust. *Il.* 1 421.17, van der Valk). Eustathios' statement that the toponym Anemoreia was changed into Hyampolis rests on a misreading of Strabo. The only sources to classify Anemoreia as a πόλις *Φωκίδος* are lexicographers (Steph. Byz.; Hsch.), grammarians (Herodian) and scholiasts (*in* Lycoph. *Alex.*). Apart from the scholiast, these sources paraphrase Strabo. He describes Anemoreia as a τόπος serving as the boundary between the Delphians and the Phokians after the Second Sacred War in C5m. Such an economical

solution, which reduces the *polis* status of Anemoreia to a mistaken item of information in sources all derived from Strabo, does not accord with the observation that some items of information are absent from Strabo's account and too precise to be pure invention: ἐξ οὗ δι' ἡμέρας καὶ νυκτὸς καταγιγίσκεται (Herodian; Steph. Byz.) and κειμένη ἐπὶ λόφου ὑψηλοῦ (Steph. Byz.). These details must stem from an independent source, and so may the classification of Anemoreia as a *polis*. On the other hand, the evidence is insufficient to show that Anemoreia was a *polis* in the Archaic and Classical periods. It was probably just a *topos* (Rousset (2002) 29–30). It is not possible to verify the identification with the toponym *Ἀνέμια*, mentioned in the Amphiktyonic regulations of 380 (*CID* I 115 n. 147). Attempts to locate Homeric Anemoreia are unconvincing. The frontier regulation attested at *F.Delphes* III.2 136 mentions a place called Katopterion, which must have been situated somewhere between Phlygonion and Delphi. According to Strabo, Anemoreia was situated below Katopterion: “a cliff extending from Parnassos”. However, since it is impossible to locate Katopterion, there is no basis for the common identification of Anemoreia with the prehistoric site at Kastrouli or the village of Arachova (*pace* Lazenby and Hope Simpson (1970) 43; Dassios (1992) no. 114; *CID* I 115 n. 147; McInerney (1999) 307–8). *Barr.* unlocated and undated.

Apollonia (*Ἀπολλωνία*) Lexicographers and scholiasts mention an *Ἀπολλωνία* (Steph. Byz. 106.7) or *Ἀπολλωνιάς* (Steph. Byz. 395.10 = schol. Hom. *Il.* 519; Eust. *Il.* 519), stating that it was a new name for Homeric *Κυπάρισσος* (*Il.* 2.519). In Steph. Byz. 106.7 it is listed among the *poleis* called Apollonia. It is undoubtedly a “ghost-toponym”, derived from the adjective *Ἀπολλώνιος*, often used to designate some locality in the territory of Delphi; cf., e.g., Pind. *Pyth.* 6.8–9 with schol.: *θησαυρὸς ἐν πολυχρύσῳ Ἀπολλωνία τετεῖχισταί νάπη*. The identification with Kyparissos is explained by the juxtaposition of Kyparissos and Delphi (*Πυθῶν*) at Hom. *Il.* 2.519. Any attempt to locate Apollonia is therefore doomed to fail (*pace* McInerney (1999) 306). *Barr.* unlocated and undated.

Boukaia (*Βούκεια*) The only source is *Etym. Magn.* 207.23: *Βούκεια. πόλις Φωκίδος ἐν τῷ Παρνασσῷ*. But the entry shows that *Βούκεια* is the name of a famous sacrifice performed on Parnassos in memory of Deukalion and Pyrrha. The toponym *Βούκεια* is coined either directly from the name of the sacrifice or from the adjective *βουκαεῖς* (signifying a person participating in the sacrifice?), misinterpreted as an ethnic. The only other attes-

tation of the toponym is Schober's conjecture *Βούκαια* for MSS *Βοὲ καὶ Δριμύα* in Hierokles *Synekdemos* (643,9, Honigmann). By rejecting this conjecture and suggesting instead *Βοαὶ καί*, Honigmann has eliminated the other source for a *polis* called Boukaia. Not in *Barr.*

Hya(m)peia (Ἰάμπεια) The toponym Hyampeia designates one of the cliffs surmounting the sanctuary of Apollo at Delphi (Hdt. 8.39.1; Plut. *Mor.* 557A). But, knowing only the spelling Ἰάπεια, Steph. Byz. 644.14 classifies Hya(m)peia as a πόλις Φωκίδος. His interpretation is based on an erroneous interpretation of Strabo 9.3.15, where the geographer distinguishes Hyampolis from Hyampeia. Conversely, Eust. *Il.* 2.521 imagines a Hyampolis on Parnassos. *Barr.*: unlocated Phokian town.

Kirphis (Κίρφις) See Skirphai (*infra*).

Krisa (Κρίσα) Hom. *Il.* 2.520 (*Κρίσα*); Pind. *Isthm.* 2.26 (*Κρίση*); *Hymn. Hom. Ap.* 269 (*Κρίσσα*); schol. Pind. *Pyth.* I, inscr. b. There is no epigraphical attestation. For the relation to the toponyms *Κίρρα* and *Κίρσα*, see *infra* 419. *Κρίσα* is a Homeric toponym from which is derived the ethnic *Κρῖσαιοι* (*Hymn. Hom. Ap.* 446). The aetiological aspect of this hymn is probably the reason why the future sanctuary of Apollo is called *Κρίση* and its inhabitants *Κρῖσαιοι* (Lerat (1948), *contra* Skorda (1992) 62–63). The attestations in Homer and the hymn do not allow any localisation of the site (*contra*: Lerat (1948), but see *infra*). Later occurrences of the toponym *Κρίσα* and the ethnic *Κρῖσαιοι* are often a mere citation or reminiscence of the Homeric name in a poetic context (Pind. *Isthm.* 2.26; Soph. *El.* 180) or in a mythical context (Hecat. fr. 115a; Ephor. fr. 141). Alternatively, they are late authors' often confused attempts to give a historical interpretation of the Homeric poems (Strabo 9.3.3–4), and/or they are second-hand citations of sources referring sometimes to *Κρίσα* and sometimes to *Κίρρα* (Plin. *HN* 4.7; Dion. Calliphon. 81(?); cf. *supra* s.v. Larisa; Ptol. *Geog.* 3.14.17). Modern scholars have mostly identified Homeric Krisa with the fortified Mycenaean site at Ag. Georgios (Hope Simpson (1981) 77; Skorda (1992) 44–46; Dassios (1992) no. 124), which, however, has no remains of the Archaic period. Scholars believing in an Archaic Krisa, as attested in the Hymn to Apollo or the sources for the First Sacred War, have suggested alternative locations, none of which is convincing (Skorda (1992) 62–65 followed by *Barr.*: Ag. Varvara; McInerney (1999) 312; Khryssos). With the toponym is associated an area called *Κρῖ(σ)σαίων πεδῖον* in Classical sources (Hdt. 8.32.2; Isoc. 14.31). This plain—situated between Amphissa and the

port of Kirrha—is identical with the *Κιρραίων πεδῖον* which constituted part of the Sacred Land (*infra* 419). For the confusion of the two toponyms, see Lerat (1948); Robertson (1978); Càssola (1980); and Rousset (2002) 32–33. It may have added to the confusion that, in sources which had no connection with the First Sacred War, the name *Κρῖσαιός κόλπος* was used to designate the Corinthian Gulf (Thuc. 2.69.1). Krisa is classified as a *polis* in numerous late sources (Paus. 10.37.5; Steph. Byz. 385.4; Hsch. *K*4145; *Suda* *K*2440; Eust. *Il.* I 419.7–8, 420.15, van der Valk). Stephanos and Eustathios cite Hekataios, but the context is probably mythological, so that nothing can be inferred from their use of the term *polis*. In the other sources it is impossible to determine whether the reference is to Homeric Krisa, in which case their use of the term *polis* can be dismissed, or to the Krisa mentioned in connection with the notoriously problematical First Sacred War, for which see Robertson (1978); Càssola (1980); and Davies (1994). The variation between the toponyms of Krisa and Kirrha is inextricably bound up with the historiographical tradition about the First Sacred War, and anything said about Krisa can be said about Kirrha as well; see *infra* 419. The distinction between the two entries in this inventory is purely formal. The First Sacred War, called *Κρῖσαιός πόλεμος* by Kallisthenes ((*FGrHist* 124) fr. 1), was conducted against a polity called *Κρῖσαιοι* in some sources and *Κιρραῖοι* in others (catalogue in Robertson (1978) 43; Càssola (1980) 258–59). The longest account we have of the First Sacred War is a rhetorical composition of C4–C3, called *Presbeutikos Logos* and inserted into the Hippocratic corpus (Littré 9.404–28 no. 27; cf. Smith (1990) 2–4). The speaker mentions the *Κρῖσαιον πεδῖον*, inhabited by the *Κρῖσαιον ἔθνος* which was settled in numerous πόλεις, of which one, lying near the later hippodrome, was fortified and exposed to a long siege (Littré 9.406–8). To conclude: (1) whatever historical reality may be hidden behind this tradition, its inaccuracies and inconsistencies preclude any reliable reconstruction, and nothing can be deduced from the terminology used in these sources. (2) There is much to be said for the view that the *polis* status of Krisa/Kirrha in C6e is an aetiological invention which became prominent in the context of the Third and Fourth Sacred Wars in order to explain the obscure origin of the *hierage*. In that case, there is no reason to debate the historicity of such a *polis* any longer (cf. Kirrha (no. 183)). *Barr.* ACH.

Kyparissos (Κυπάρισσος) The first Phokian community recorded in the Homeric Catalogue of Ships (*Il.* 2.519). A variant form *Κυπαρισσοῦς* is found at Steph. Byz. 395.2 = Eust. *Il.* 2.519. Believed to have been the residence of

the hero Kyparissos (Nonnos, *Dion.* 13.123–24; Steph. Byz. 395.3; schol. Hom. *Il.* 2.519), it is also attested in the periphrastic form *Κυπαρίσσου πόλις* (Dion. Calliphon. 80). Citing Homer, Steph. Byz. 395.6 describes Kyparissos as a *πόλις ἐν Παρνασσῷ κατὰ τοὺς Δελφούς*. On the other hand, Strabo 9.3.13 = Eust. *Il.* 2.519 classifies Kyparissos as a *κώμη ὑπὸ τῇ Λυκωρείᾳ*. The absence of sources antedating the Roman period indicates that the information found in the late authors is pure guesswork concerning the status and location of a community known exclusively from Homer's text. The ignorance explains Pausanias' suggestion at 10.36.5 that Kyparissos was the ancient name for Antikyra. According to Steph. Byz. 295.10, Kyparissos was called Apollonia in a later period (*supra* 404). That its former name was Erannos (*Ἐραννος*) stems from its being mixed up with the Messenian Kyparissia (Steph. Byz. 395.7 with the note). The various attempts to locate Kyparissos are highly hypothetical (*contra* Lazenby and Hope Simpson (1970) 40; McInerney (1999) 306). Not in *Barr.*

Lykoreia (*Λυκώρεια*) In the Roman imperial period, apart from the Corycian Cave, the pilgrims coming to Delphi visited on Parnassos a site called *Λυκώρεια* (Plut. *Mor.* 394F, emendation of MS *Λυκουρίαν*). No matter whether this Lykoreia was a natural site or some kind of building, it was just a place in the territory of Delphi (cf. Rousset (2002) 34–35). But some ancient sources took Lykoreia to be a mythological *polis* founded by Deukalion (see *supra* 404). The sources do in fact disagree, some classifying Lykoreia as a *polis* (Paus. 10.6.2; *Suda* A829; *Marm. Par.* (FGrHist 239) A2, A4), others as a *kome* (Steph. Byz. 422.15) or just a *topos* (Strabo 9.3.3, cf. 9.3.13). The formulas used are even self-contradictory (*Etym. Magn.* 571.46: *πόλις Δελφίδος*; Steph. Byz. 422.16–17: *κώμη versus πολίτης*). *Barr.* unlocated, C, but no evidence supports C.

Melainai (*Μελαιναί*) Quoting Dioscorides, Galen mentions a *polis* called Melainai: . . . βούς μελαινίς. καὶ δηλοῦσθαί φησι τὴν ἐκ Μελαινῶν. πόλις δὲ αὕτη κατὰ τὸ Κρῖσαϊον πεδῖον προκειμένη Κιρφίω . . . The same toponym appears as the name of a simple locality in the *Presbeutikos Logos* in the Hippocratic corpus: τὸ μὲν Κρῖσαϊον πεδῖον . . . ᾧ Μελαιναί πρόσεισι ((Ep.) 27, 9.406, Littré). The classification of Melainai as a *polis* rests on Dioscorides' misinterpretation of the Hippocrates passage (Rousset (2002) 35–37). *Barr.* unlocated and undated.

Anchoe (*Ὀνχόη*) Hdn. III.1 306.20 and Steph. Byz. 483.10 record an *Ὀνχόη, πόλις Φωκίδος*. There is no other

evidence, but see *ad* Stephane *supra*). K. O. Müller (1824) 51 suggested that in Steph. Byz. *Ὀνχόη* had been mixed up with *Ἄνχόαι*, attested as an East Lokrian toponym at Strabo 9.2.18 and Plin. *HN* 4.26; cf. Oldfather (1918); Fossey (1990) 27–32. The reason for placing Anchoe in Phokis may have been either that the Kephisos, principally a Phokian river, was supposed to reappear at Anchoai (Strabo 9.2.18) or that this part of Lokris had once been under Phokian control; cf. *supra* 399. Not in *Barr.*

Skirphai (*Σκίρφαι*) Steph. Byz. 576.9 records Skirphai as a *πόλις Φωκική*, and he quotes the C4 historian Dieuchidas for the ethnics *Σκίρφιος* and *Σκιρφαῖος* ((FGrHist 485) fr. 11). Stephanos provides us with the only attestation of the toponym, which must be a variant form of *Κίρφις*. In Strabo 9.3.1 Kirphis is juxtaposed with Delphi and Daulis, and all three are called *χωρία*; but *Κίρφις* is nevertheless not a community but a mountain to the south of Delphi (Strabo 9.3.3; Hippoc. *Ep.* 27: *Κίρφιον*; Ant. Lib. 8.1; Pind. *Hyp. Pyth.* b, d; cf. Rousset (2002) 32). Not in *Barr.*

1.3d Mythological *poleis*

Agatheia (*Ἀγάθεια*) Called a *πόλις Φωκίδος* by Steph. Byz. 10.19, quoting Hellan. fr. 11. The fragment is about Deukalion, the father of Phokos, the eponymous hero of Phokis, and the reference is probably to an imaginary *polis*. However, it cannot be precluded that Stephanos is mistaking *Ἀγάθεια* for *Ἀγάθα*, a colony founded by the Phokaians of Massalia (cf. Ps.–Skym. 208).

Lykoreia (*Λυκώρεια*) See *supra*.

1.3e Pseudo-historical *poleis*

Krisa (*Κρῖσα*) See *supra*.

1.4 Toponyms designating sites attested in a context in which polis status is questionable

***Naulochos** (*Naulochos*) The toponym *Naulochum* appears in Plin. *HN* 4.7 in a muddled list of Phokian and Lokrian toponyms, some of which were names of *poleis*. The toponym reappears in the form *Nolo[chum]* in a second century AD delineation of frontiers (*F.Delphes* III.4 294), which permits us to place *Naulochum* somewhere between Kirrha and Antikyra, but as a local toponym without the status of *polis* (cf. Rousset (2002) 37). *Barr.* C.

1.5 Sites erroneously interpreted as poleis by modern historians

Glechon From Strabo's erroneous quote of Hesiod at 9.3.16: *παρὲκ Πανοπήα διὰ Γλήχωνά τ' ἐρύμνην*, Schober (1924) 30 assumed the existence of a Phokian Glechon situated between Phanoteus (no. 190) and Orchomenos (no. 213). The improved reading [διὰ Γ]ληχώνα *τέρειων* in *PYale* 1.17 (= Hes. fr. 70.21, MW) has disposed of Glechon as a "ghost-toponym". Not in *Barr*.

Kleonai (*Κλεωναί*) In his account of a war between the Phokians and the Thessalians, Plutarch (*Mor.* 244D) tells us that the decisive battle took place *περὶ Κλεωνὰς τῆς Ὑαμπόλιδος*. Thus, Kleonai must have been a site somewhere in the territory of Hyampolis (no. 182). A mutilated inscription has led to the assumption that there was a community of "Kleoneis" (*AJA* 19 (1916) 334: *Κλεωνέ[ων] Κλεωνε[ίς]*; see Schober (1924) 33). But a different reading of the inscription, which is probably just an ordinary tombstone, gives *ΚΛΕΩΝΙ*, e.g. *Κλεωνί[δας]*. As the evidence stands, there is no reason to assume the existence of a community of Kleoneis. The identification of Kleonai with modern Smixi, suggested by Pritchett (1996) 141–45, is unconvincing. *Barr.* unlocated, HR, but A attested as well.

Marathon (*Μαραθών*) At 9.3.13 Strabo writes: *ἐξῆς γὰρ ἐν τῇ παραλίᾳ μετὰ τὴν Ἄντικυραν πολίχνην ὀπισθεν ὁ Μαραθών*. On the basis of this passage some have assumed the existence of a *polichnion* called Marathon (Schober (1924) 36; cf. Baladié's translation in the Budé edn.). But the term *polichnion* may just as well be construed with Antikyra, in which case Marathon is a site in the territory of the *polichnion* of Antikyra. Even on the traditional interpretation of the passage, it must be taken into account that Strabo's site-classifications cannot be interpreted retrospectively, and that there is no other attestation of Marathon in Archaic or Classical sources. Marathon may have been situated at modern Aspra-Spitia, where there are no ancient remains antedating the Roman period (*contra* Rousset (1999) 74 and map no. 46; on the site, see Fossey (1986) 25; Dassios (1992) no. 91). *Pace* Dassios (1992) no. 83, the ruins mentioned at Palaiotarsos are not impressive enough to be those of a *polis*. The same may be said of the small remains at Grammatiko (= Dassios (1992) no. 84), where Rousset (1999) 74 no. 46 and (2002) 61 no. 45 tentatively proposes to locate Marathon. Not in *Barr*.

2. Unidentified Settlements

Of the archaeological sites mentioned in the bibliography (Dassios (1992)), some have not been identified and some are unidentifiable (Rousset (1999)). One must distinguish between (1) sites that should presumably be identified with a Phokian *polis*, although which one is not beyond doubt; (2) sites whose identification with a named *polis* can be questioned; (3) sites whose identification with a named *polis* must be rejected.

2.1

Drossochori Possibly not in Phokis (Dassios (1992) no. 122; Rousset (1999) no. 81, (2002) 66 no. 96). The precise date of the remains is unknown (from Archaic to Hellenistic?). Not in *Barr*.

Kastro Tseresi Fossey (1986) 54–56; Dassios (1992) no. 62; Rousset (1999) no. 36, (2002) 61 no. 36; cf. *Aiolidai (no. 170) and Trachis (no. 195). The site has produced ceramic material dating from C4 to Imperial times. *Barr.* registers the site as "Ano Tseresi, Palaiokastro" and (wrongly) identifies it with Phlygonion (no. 191).

Kyriaki Fossey (1986) 35–39; Dassios (1992) no. 72; Rousset (1999) no. 42, (2002) 61 no. 41; cf. *supra* 403, s.v. *Helikonioi*. *Barr.*, following Fossey (1986) 35–39, tentatively identifies the site with Trachis (no. 195).

Modi Dassios (1992) no. 21; Rousset (1999) no. 18, (2002) 61 no. 19, *Barr.* dates the site C, but the reference to Dassios (1992) 42 is wrong (Dassios is discussing Gournes (*infra*), tentatively (and questionably) identifying it with Ledon (no. 184)).

Palaiia Phiva Dassios (1999) no. 26; Rousset (1992) no. 19, (2002) 61 no. 19; cf. *Pedieis* (no. 189). *Barr.* (following Dassios (1992) 40–41) tentatively identifies this site with *Pedieis* and dates it C.

Vourlia Amphikleias Dassios (1992) no. 20; Rousset (1999) no. 16, (2002) 60 no. 16; cf. *Pedieis* (no. 189) and *Triteis* (no. 196). Tentatively described as Classical by Dassios (1992) no. 20, but the date remains unknown. Not in *Barr*.

2.2

Gournes Dassios (1992) no. 32; Rousset (1999) no. 21, (2002) 61 no. 21. The nature and the date of the remains are poorly known; Dassios (1992) no. 32 tentatively suggests a C date; cf. Ledon (no. 184). Not in *Barr*.

Karakolithos Lolling (1989) 608; Fossey (1986) 59–61; Dassios (1992) no. 57; Rousset (1999) no. 37, (2002) 61 no. 37. The nature of the remains is poorly known; Fossey (1986) 56 and Dassios (1992) no. 57 tentatively propose a C–Hellenistic date; cf. Trachis (no. 195). *Barr.* identifies the site with Aiolidai (no. 170), but calls it “Bania”, a modern site not marked on the map itself.

Rosoufi Dassios (1992) no. 68. The nature of the remains is poorly known; cf. *Aiolidai (no. 170); Dassios (1992) no. 67 hypothetically describes the scanty ceramic material at the site as prehistoric and Classical. Not in *Barr.*

Theotokos Dassios (1992) no. 3; cf. Lilaia (no. 185). The site has produced ceramic material dating from prehistoric to Byzantine times. The fortification may be C6 (Kase *et al.* (1991) 53). Not in *Barr.*

2.3

Grammatiko Dassios (1992) no. 84. Traces of walls hypothetically described as Classical(?) and Hellenistic(?) by Dassios; here Rousset (1999) 74 no. 46 and (2002) 61 no. 45 tentatively proposes to locate Marathon (cf. *supra* 407).

Kastrouli Zemenou Dassios (1992) no. 112; Rousset (2002) 63 no. 68. Dated to the Mycenaean period (cf. S. Müller (1992) 490 no. 18). Identified with Kyparissos by McNerney (1999) 303; but cf. *supra* 406. Not in *Barr.*

Palaio tarsos-Kyriaki Pace Dassios (1992) no. 83; cf. *supra* s.v. Marathon. Dassios (1992) no. 32 hypothetically describes the remains as Classical. Not in *Barr.*

Panagitsa Dassios (1992) no. 30, *pace* Kirsten (1951) 741; cf. Tritsis (no. 196). Finds from tombs excavated at the site have been dated from Geometric to Classical times (cf. Dassios (1992) no. 30). Not in *Barr.*

II. The Poleis

169. Abai (Abaios) Map 55. Lat. 38.35, long. 22.55. Size of territory: 1 or 2. Type: A. The toponym is Ἀβαί, αἶ (Hdt. 8.33; Diod. 16.58.4; *F.Delphes* III.2 230.5 (C2s)) or Ἀβαί (Kallisthenes (*FGrHist* 124) fr. 11) or Ἀβαί/Ἀβη (Arist. fr. 617; Hdn. III.1 308.24–26; Steph. Byz. 1.1) or Ἀβαντα (Hsch. A65). The city-ethnic is Ἀβαῖος (*IG* IX.1 78.2 (C31); Paus. 10.3.2). Abai is called a *polis* in the urban sense at Hdt. 8.33 in connection with Xerxes’ invasion of Phokis in 480, when

Abai was burnt to the ground and, retrospectively, at Paus. 10.3.2 (r346). The collective and external use of the city-ethnic is attested in a letter of Philip V to the Abaians (*IG* IX.1 78.2) and, retrospectively, in Paus. 10.3.2 (rC4m); cf. also 10.35.4. The individual and external use is attested in a C2s Delphic manumission (*F.Delphes* III.2 230.7) and in a first century AD proxeny decree (*F.Delphes* III.4 443).

Abai is commonly mentioned in literary sources in connection with the oracle of Apollo situated in its territory (Hdt. 8.27.5 (rC6?); for the date, see Ellinger (1993) 17–22; Hdt. 1.46.2 (rC6m), 8.33, 8.134; Soph. *OT* 899; Paus. 4.32.5 (r371); Diod. 16.58 (r347/6); Paus. 10.35.1–5). The location of the sanctuary is unknown (Ellinger (1993) 25, *contra* Yorke (1896) 298–302; McNerney (1999) 288–89). Abaios as the epithet of Apollo is attested in Hsch. A50 and confirmed by onomastic material (Sittig (1911) 52). The identity between the epithet and the city-ethnic may be the explanation of the use of the toponym to designate the sanctuary itself (Strabo 9.3.13).

There can be no doubt that Abai was a member of the Phokian *koinon*, although there is no explicit attestation. In the idiom εἰς Ἀβας τὰς Φωκέων (Hdt. 1.46.2 (rC6m) and 8.134.1 (rC5f)) the reference to the Phokians indicates location rather than political status, and that applies also to Kallisthenes (*FGrHist* 124) fr. 11. On the other hand, Pausanias’ account of the fate of Abai in 346 implies that Abai belonged to the Phokian *koinon*. Pausanias asserts that Abai avoided the *dioikismos* because it participated neither in the occupation of the sanctuary in Delphi nor in the war (10.3.2). Diodorus, on the other hand, tells us that in 347 the Phokians built a *phourion* on what was undoubtedly Abaian territory (16.58.4; cf. Dassios (1995), (1992) no. 43). The possible inferences from these two pieces of information are (a) that in 347 the Abaians no longer had control of their own territory, or (b) that Abai’s participation in the war was purely defensive, or (c) that Abai’s pacifist attitude is a later rewriting of history.

The site is enclosed by a fortification wall in polygonal masonry, a part of it in Lesbian style. Both the acropolis and the lower town were fortified, and the walls enclosed an area of c.16 ha. The wall enclosing the acropolis may be older than that enclosing the lower town, but the dates, based on style and *a priori* historical arguments, are disputed (Yorke (1896) 294–96: C5 or earlier; Scranton (1941) 160: C6; Fossey (1986) 78–79, 122–27: C5; Winter (1971) 103; the wall enclosing the lower town not earlier than C4). Pausanias mentions an agora and a theatre both of ancient construction (10.35.4; *κατασκευῆς ἀρχαίας*). The remains found in the neigh-

bouring sanctuary and in the cemetery date back to C7 (Fossey (1986) 164–65).

170. *Aiolidai (Aiolideus) Map 55. Lat. 38.25, long. 22.45. *Barr.* (with a query) locates it at modern Karakolithos, although in the directory this site is named “Bania”, a modern site not marked on the map itself; cf. *supra* 408, s. v. *karakolithos*, and see *infra*. Size of territory: ? Type: A. The toponym is unattested and reconstructed from the city-ethnic. The city-ethnic is *Aiolideús*, attested at Hdt. 8.35.1 in its collective and external use. The *pólis* of the *Aiolideús* is known exclusively from Herodotos’ account at 8.35.1 of Xerxes’ march in 480 from Phanoteus towards Delphi when *Aiolidai was burnt to the ground: *Καὶ γὰρ τῶν Πανοπέων τὴν πόλιν ἐνέπρησαν καὶ Δαυλίων Αἰολιδέων* (*Aiolídon* MSP). Tillard (1911) 64 demonstrated that Valckenaer’s conjecture *Λιλαιέων* must be rejected for topographical reasons. At *Mor.* 418A Plutarch mentions a group of persons in Delphi perhaps called the *Aioládai*, but there is no reason to connect them with the *Aiolideús* attested in Herodotos (Rousset (2002) 28).

At Hdt. 8.35.1 *polis* is used in the urban sense, but the use of the city-ethnic instead of the toponym indicates that the political sense is a connotation; see Hansen (2000) 176, 205. The passage from Herodotos shows that the *polis* of the Aiolideis must have been situated between Daulis and Delphi. Assuming that the *polis* was fortified, one would have to exclude the site of Phokikon, where, however, some epitaphs of the Archaic period have been found (Fossey (1986) 57). On the other hand, *Aiolidai must then be identified with one of the three sites found along this route: (a) Rosoufi (= Dassios (1992) no. 68), the remains of which, however, are poorly attested; or (b) Kastro-Zemenou (McInerney (1999) 304 = Dassios (1992) no. 112), but the remains do not look like a permanent settlement and the alleged Archaic remains are questionable; (c) Kastro Teresi, where no remains of the Archaic period have been found (Tillard (1911) 66–68 = *Aiolidai; Fossey (1986) 54–56 = Phlygonion; Rousset (2002) 43 n. 46 = Trachis). In any case, one must abandon the identification of *Aiolidai with the remains at Bania (Schober (1924) 22). This site is to be identified with ancient Phlygonion (no. 191), and there is no basis for assuming a change of name from *Aiolidai to Phlygonion. To conclude, the location of *Aiolidai remains unresolved.

171. Ambryssos (Ambryssios) Map 55. Lat. 37.55, long. 22.40. Size of territory: probably 2. Type: B. The toponym is *Ἀμβρυσσ(σ)ος*, ἡ (*SGDI* 2147.1 (C2m); Strabo 9.3.13; *SGDI*

2314.1 (C2l); Polyb. 4.25.2 (rC3s)). In late sources the toponym is sometimes *Ἀμβροσσος* (*IG* IX.1 12.2–3 (third century AD); Paus. 10.36.3) or *Ἀμβροσσός* (schol. Ap. Rhod. A54) or *Ἀμφρυσος* (Steph. Byz. 91.9). The city-ethnic is *Ἀμβρύσ(σ)ιος* (*SGDI* 2125.2 (C2e), 2147.5–6 (C2s) or *Ἀμφρύσιος* (Lycoph. *Alex.* 900) or, in late sources only, *Ἀμβρόσσιος* (*F.Delphes* III.3 431.6 (C1m)) or *Ἀμβρυσσεύς* (*F.Delphes* III.2 136.24 (C2m)) or *Ἀμβρολωσσεύς* (*IG* IX.1 18.12 (third century AD); Paus. 10.1.8 (rC6?); *IG* IX.1 18.12 (third century AD)). The earliest attestation of Ambryssos as a *polis* is of C2 (*IG* IX.1 10.1–2), but it is retrospectively attested as a *polis* in the urban sense at Paus. 10.3.2, where it is listed among the Phokian cities dioikised in 346. The collective use of the city-ethnic is attested internally in *IG* IX.1 10.1–2. The individual and external use is attested in a proxeny decree of C3 (*IG* IX.1 1.4) and in Pausanias’ account of the C6(?) war between the Phokians and the Thessalians, where *Ῥοῖος Ἀμβροσσεύς* was the general of the Phokian infantry (Paus. 10.1.7–8). If one accepts the historicity of this war (but cf. Ellinger (1993) 17–22, *contra* Pritchett (1996)) we have here the oldest attestation of Ambryssos as a *polis*.

By C2s Ambryssos and Phlygonion (no. 191) had formed a *sympoliteia* with Phlygonion as the subordinate party, and a preserved delimitation of frontiers (*F.Delphes* III.2 136) shows that, at least then, the two communities bordered on Delphi (Rousset (2002) 128, 140, 155–60).

The *dioikismos* suffered in 346 shows that Ambryssos belonged to the Phokian *koinon*. Pausanias tells us that the defence circuit he saw had been built by the Thebans when they were at war with Philip II of Makedon, probably in the year between the Theban–Athenian alliance of 339 and the battle of Chaironeia in 338 (Ellis (1994) 781).

Ambryssos had a double defence circuit built by the Thebans in 339/8 (Paus. 4.31.5, 10.36.3). But some sections of the walls found during the excavations are a little later (Fossey (1986) 30; *BCH* 110 (1986) 706, 114 (1990) 762; for the date, see *ArchDelt* 38 (1983) 190–91). Pausanias mentions a small agora of unknown date. The principal sanctuary was that of Artemis Diktynnaia, whose statue was of Aiginetan workmanship (Rolley (1994) 276–77).

172. Amphikaia (Amphikleieus) Map 55. Lat. 38.40, long. 22.35. Size of territory: 1 or 2. Type: A. The toponym is *Ἀμφίκαια*, ἡ (Hdt. 8.33, most MSS; Steph. Byz. 90.3) or *τά* (Hdt. 8.33, Vat. gr. 123) or *Ἀμφίκλεια* (Paus. 10.33.9, quoting the *dioikismos* decree of 346 as his source for the changed spelling of the toponym). A local tradition according to which the toponym was *Ῥοφτεία* is reported by Paus.

10.33.11. Apart from Steph. Byz. 90.4, our only attestation of the city-ethnic is *Ἀμφικλειεύς* at Paus. 10.33.11.

Amphikaia is called a *polis* in the urban sense at Hdt. 8.33 and, retrospectively, at Paus. 10.3.1 and 2, in both passages in connection with Xerxes' invasion of Phokis in 480, when Amphikaia was burnt to the ground. Pausanias treats Amphikaia as a *polis* once again in connection with the *dioikismos* of the Phokian cities in 346 after the Third Sacred War (10.3.2–3 and 10.33.9: in the decree (*dogma*) about the destruction of the Phokian *poleis* the Amphiktyonians called it Amphikleia). Both sources show that Amphikaia was a member of the Phokian *koinon*.

The almost quadrangular fortification wall (c.250 m (east-west) × c.200 m (north-south)) is in trapezoidal masonry and has at least three towers on the western and two on the eastern side. A *diateichisma* encloses a small area in the eastern part of the fortification. The wall cannot be dated more precisely than C4–C3 (Frazer (1898) 420).

173. Antikyra (Antikyreus) Map 55. Lat. 38.20, long. 22.35. Size of territory: 2. Type: A. The toponym is *Ἄντικυρα*, ἡ (Ps.-Skylax 37; Polyb. 27.16.6; Demetrios of Kallatis (FGrHist 85) fr. 5; Paus 10.3.1; BCH 66–67 (1942–43) 69 no. 1 (C2m)) or *Ἄντικυρέα*, ἡ (Strabo 9.3.1). Paus. 10.36.5 reports a local tradition according to which the original toponym was *Κυπάρισσος*. Thus, the Antikyreis could claim mention in the Homeric Catalogue of Ships (*Il.* 2.519; cf. Paus. 10.3.1). This invention of a glorious past (for which see also Paus. 10.36.6, 10 and Steph. Byz. 99.4–5) may date from the time of the Third Sacred War (Diod. 16.23.5–6). The city-ethnic is *Ἄντικυρεύς* (SGDI 1872.8 (C2f); Polyb. 9.39.2 (rC3l)). Antikyra is called a *polis* in the urban sense by Ps.-Skylax 37 and, retrospectively, by Paus. 10.3.1 in connection with the *dioikismos* of 346. The collective use of the city-ethnic is attested internally on Hellenistic coins (Head, *HN*² 339) and in Hellenistic proxeny decrees (*IG* IX.1 1–3) and externally in Polyb. 9.39.2 (rC3l). The individual and external use is attested in Delphic inscriptions of C2 (SGDI 1872.8; *SEG* 18 190.5). In C3–C2 some federal coins were inscribed *AN*, probably an abbreviation of the city-ethnic *Ἄντικυρεύς* (Head, *HN*² 339; *SNG Cop. Phocis* 134).

A bronze statuette found in a sanctuary of Athena that was probably situated in the territory of Antikyra (Rousset (1999) 77 n. 55) has a dedicatory inscription which, according to the editor, is “Archaic”: *Διόνδαι μ' ἀνέθεκαν τ' Ἀθάνα* (BCH 89 (1955) 257 (C6–C5?)). It is tempting to take the Diondai to be a civic subdivision, in which case the inscription is the oldest testimony we possess about Antikyra's political institutions.

A defence circuit is attested for C3l (Livy 26.26.1–3), but the few uncovered remains do not allow of a more precise date (*ArchDelt* 37 (1982) 205–6; Dassios (1992) no. 76). Pausanias lists an agora, a fountain and two *gymnasia*, one of which is called “ancient”, but none can be dated. Excavations have revealed a sanctuary of Athena of the Archaic and Classical periods (BCH 89 (1955) 257 (C6f)). Pausanias mentions other sanctuaries: one of Poseidon and, first of all, one of Artemis (10.37.1), whose statue, by Praxiteles or his sons, was reproduced on the C2 coins struck by the city (*AM* 14 (1989) 229–32; Lacroix (1949) 309–10; Head, *HN*² 339).

174. Boulis (Boulios) Map 55. Lat. 38.15, long. 22.50. Size of territory: 2. Type: C. The toponym is *Βούλις*, ἡ, exclusively attested in late literary sources (Paus. 10.37.2–3; Steph. Byz. 182.5) or *Βούλια*, *Βούλεια*, *Βουλεία* (Ptol. *Geog.* 3.14.18). The city-ethnic is *Βούλιος* (Paus. 10.37.1–2, most MSS) or *Βουλίδιος* (some MSS and Steph. Byz. 182.6). According to Pausanias, the toponym was derived from the name *Βούλων*, the oecist of this colony founded by some of the *poleis* of Doris: *ὀνομάζεται ἀπὸ Βούλωνος ἀγαρόντος τὴν ἀποικίαν ἀνδρός, συνωκίσθη δὲ ἐκ πόλεων τῶν ἐν ἀρχαίᾳ Δωρίδι* (10.37.2).

The only sources in which Boulis is classified as a *polis* are Steph. Byz. and Ptol. *Geog.*, which lists Boulis among the *πόλεις μεσόγειοι*, using *polis* in a purely topographical sense, as in the case of the Attic demes which are also called *πόλεις μεσόγειοι* (3.15.22). Even if Pausanias' link between Boulis and Boulon is suspicious, there is no reason to reject his testimony about the foundation of Boulis. And the status of *apoikia* implies the status of *polis*. The date of the foundation, however, is unknown. With Herakleia as a possible analogy (Thuc. 3.92), it is tempting to connect the foundation with the strained relations between Doris and its neighbours in C5 (Thuc. 1.107). But that remains a hypothesis.

It is problematic, on the other hand, that Boulis is not listed by Pausanias as one of the *poleis* subjected to *dioikismos* in 346 (10.3.1–2). But this list is not exhaustive (see *supra* 400), and an argument from silence carries no weight. On the contrary, in a mutilated passage Pausanias connects the Boulioi with Philomelos, the Phokians and their assembly: *λέγονται δὲ οἱ Βούλιοι Φιλομήλου καὶ Φωκῶων . . . σύλλογον τὸν κοινόν* (Paus. 10.37.2). No matter how the passage is emended, there must be some connection between the Boulioi and the Phokian assembly in the period 356–354. The inference seems to be that Boulis was a *polis* in the years 356–354. It is unknown whether the relations between the Boulioi and the Phokians were friendly or hostile. That depends on how the passage is emended. The text

has been interpreted in different ways (see the *apparatus* in the editions by Hitzig-Bluemner (1896–1910) and Rocha Pereira (1973–81)). The attempt to restore a form of the city-ethnic in IG IX.1.111.5 = CID II 38 is too far-fetched to be further discussed here; cf. *infra* no. 192.

The remains of Boullis' city walls are undated. The circuit is partly constructed in local limestone in trapezoidal masonry and a part of reddish *poros* stone in ashlar masonry (Leake (1835) ii.520–23; Dassios (1992) 65 no. 70; *ArchDelt* 36 (1981) 193–94 pl. 122d). The discovery of sherds of the Classical period ensures that the site was inhabited at that time (*ArchDelt* 36 (1981) 193). Pausanias mentions three sanctuaries: one of Megistos (undoubtedly Zeus), one of Artemis and one of Dionysos. The cult statues of the two last gods were of wood, but that does not warrant any conclusion about their date (Donohue (1988) 173–74).

175. Charadra (Charadraios) Map 55. Lat. 38.40, long. 22.30. Size of territory: 1 or 2. Type: A. The toponym is *Χαράδρα*, ἡ (Hdt. 8.33; *BCH* 57 (1933) 68 (C3e)). The city-ethnic is *Χαράδραϊος* (SGDI 1789.11 (C2f); Paus. 10.33.6). The form [Χαρά]δραῖοι [Φωκ]εῖς is attested in a C4f Delphic inscription (CID II 8.1.5). A C3e proxy decree has *Φωκεὺς ἐκ Χαράδρας* (*BCH* 57 (1933) 68.2–3).

Charadra is called a *polis* in the urban sense at Hdt. 8.33 and, retrospectively, at Paus. 10.3.2, in both passages in connection with Xerxes' invasion of Phokis in 480, when Charadra was burnt to the ground. In the accounts of the Delphic *naopoioi* the [Χαρά]δραῖοι are recorded as contributors (CID II 8.1.5; [Χαρά]δραῖοι [Φωκ]εῖς) in a fragmentary list whose lost heading undoubtedly had *ταῖδε τᾶμ πολίων ἤνικαν vel sim.* (cf. CID II 4.1.3–4), and here *polis* is used in the political sense. Pausanias treats Charadra as a *polis* once again in connection with the *dioikismos* of the Phokian cities in 346 after the Third Sacred War (10.3.2–3). Pausanias' information is confirmed by the Delphic accounts where the Charadraioi are recorded among the Phokian communities that paid the annual fine (CID II 108.2 (322)). The collective and external use of the city-ethnic is attested in Delphic inscriptions (CID II 8.1.4, II 108.2). The individual and external use is found in the C3 Delphic proxy decree (*BCH* 57 (1933) 68.2–3). The *dioikismos* suffered in 346 and the fine paid in 322 show that Charadra belonged to the Phokian *koinon*.

The identification of Charadra with Mariolata was established definitively by Tillard (1911) 62–64. The site is protected by an undated defence circuit in trapezoidal and pseudo-isodomonic masonry, in some cases joggled. A *diate-*

ichisma separated the acropolis to the south from the lower town to the north (Frazer (1898) 416). The southern part of the wall was enforced with at least five towers. The northern part is too poorly preserved to estimate the area enclosed by the city wall.

176. Daulis (Daulieus) Map 55. Lat. 38.30, long. 22.45. Size of territory: 1 or 2. Type: A. The toponym recorded in inscriptions and in authors of the Classical period is *Δαυλία*, ἡ (SGDI 2118.3 (C2e); Thuc. 2.29.3; *Hell. Oxy.* 21.5, Chambers), in later literary sources *Δαύλεια* (Steph. Byz. 221.10; Eust. *Il.* 2.520). Nevertheless, the lexicographers treat this form as recent (Steph. Byz. 221.10; *Etym. Magn.* 250.7), compared with *Δαυλῖς*, -ῖδος, ἡ attested in the Catalogue of Ships (Hom. *Il.* 2.520). The Homeric form is probably the reason why Daulis is the only form attested in Strabo (7.7.1, 9.3.1, 13) and Pausanias (10.3.1, 35.8). The form *Δαύλιον*, τό is found once in Polyb. 4.25.2 (rC3s). The restoration of the proxy decree for *Δίων* [B]ού[λων]ος ἐγ Δαυλίου[ν] (*ArchEph* (1907) 102 (C1)) is questionable, and a preferable restoration is *Ἐπ<ι>δαυρίου*. The city-ethnic is *Δαυλιεύς* attested both in inscriptions (SGDI 1969.5 (C2e)) and in literary sources (Aesch. *Cho.* 674; Theopomp. fr. 385; Paus. 10.4.9), whereas *Δαύλιος* is found exclusively in literary sources (Hdt. 8.35.1; *Hell. Oxy.* 21.5).

Daulis is called *polis* in the urban sense by Hdt. 8.35.1 in connection with Xerxes' invasion of Greece in 480, when Daulis was burnt to the ground, and by *Hell. Oxy.* 21.5 in connection with a Theban attack on some Phokian cities in 395. In both passages the political sense is a connotation (Hansen (2000) 176). The collective use of the ethnic is attested internally in a decree of C2s passed by the *polis* of the Daulieis (*BCH* 59 (1935) 206–7) and externally in texts of the Classical period (Hdt. 8.35.1 and *Hell. Oxy.* 21.5). The individual and external use is attested in a C4s Delphic account in which a Daulian *grammateus* witnesses the payment of the fine imposed on the Phokians *poleis* (CID II 112.11: [Δαυ]λιεύς γραμ[---]). Daulis is recorded by Paus. 10.3.2 among the cities exposed to *dioikismos* in 346, which shows that it belonged to the Phokian *koinon*, an inference further confirmed by the Daulian citizen who witnessed the payment of the fine (*supra*). The territory is indirectly termed *χώρα* at *Hell. Oxy.* 21.5.

In 395 the Boiotians failed to conquer Daulis (*Hell. Oxy.* 21.5). The abortive attack suggests that Daulis was fortified; but the location of Daulis on the top of a steep hill may in itself have provided sufficient protection. The undated remains of the ancient defence circuit enclose an area of

c.200 × 250 m (Frazer (1898) 222; Dassios (1992) no. 54). Some sections are in polygonal masonry, some in trapezoidal, which is interpreted by Scranton (1941) 162 and 172 as evidence of successive phases of construction. The principal gate in the western side of the wall is cautiously dated by Winter (1971) 216 as “late Classical or Hellenistic”. A *terminus ante quem* is, in any case, 198, when Daulis was conquered by the Romans (Livy 32.18.7).

177. Delphoi (Delphos) Map 55. Lat. 38.30, long. 32.30. Size of territory: probably 2 or 3. Type: A. The toponym is normally *Δελφοί, οί* (Hdt. 1.50.1; Pl. *Ap.* 20E; *F.Delphes* III.1 68.1 (c.400)); the epichoric form is sometimes *Δαλφοί* (coins (*infra*); *F.Delphes* III.1 294.13 (C5l/C4e)). The Boiotian form is *Βελφοί* (*Syll.*³ 201.23 (C4m)). The toponym is used with the definite article (*οί Δελφοί*) only rarely (Diod. 16.27.3). Referring to the sanctuary of Apollo rather than the town of Delphi, poets prefer the toponym *Πυθῶν* (Hom. *Il.* 2.519; Soph. *OT* 152) or *Πυθῶ* (*Hymn. Hom. Ap.* 372; Ar. *Av.* 188–89). In prose *Δελφοί* often denotes the whole settlement, of which the sanctuary of Apollo was only a part (Thuc. 1.112.5), but sometimes the sanctuary alone (Thuc. 3.57.2). In *Hymn. Hom. Ap.* 269 the use of the toponym *Krisa* to designate Delphi is aetiological (Lerat (1948), *contra* Skorda (1992) 62–63). For the toponym *Krisa*, see 419. The city-ethnic is *Δελφός* (Bacchyl. 3.21, Maehler; *CID* I 8.1 (c.400)). Delphi is called a *polis* both in the urban sense (Hdt. 8.36.2; Ps.-Skylax 37) and in the political sense (*CID* I 9A.2–3 (C4m)). The earliest epigraphical attestation of a *πόλις τῶν Δελφῶν* is of 363/2 (*IG* II² 109A.27; cf. *CID* II 31.1 (358/7)). The collective use of the city-ethnic is attested internally in ktetic or abbreviated form on coins (*infra*) and in decrees (*CID* I 8 (c.400); *SEG* 16 307.3 (C4f); *F.Delphes* III.1.391.3 (C4f)) and externally in inscriptions (*IG* IV².1 122.77 (C4)) and in literary sources (Hdt. 8.36.2; Aeschin. 3.122). The individual use is attested internally in the *naopoioi* accounts (*CID* II 10.1.10 (357/6)) and externally in sepulchral inscriptions (*IG* II² 8478: *Δελφίς* (C4s)) and in literary sources (Hdt. 5.72.4).

It is difficult to determine the exact relation between the sanctuary of Apollo Pythios and the *polis* of Delphi. As far as territory is concerned, as demonstrated by Rousset (2002) *passim*, cf. 286–88, one must distinguish between (a) the territory of the *polis*, called *Δελφίς* (*F.Delphes* III.4 175 (C3l)), in which houses and landed property were owned by the citizens (*CID* II 67.11–13 (C4f)) and controlled by them through grants of *enktesis* (*F.Delphes* III.4 378.7: *ἐμπασις* (C4s)); (b) land which was part of *Δελφίς*, but consecrated

to Apollo (?) (cf. Rousset (2002) 292); it was let out to individuals (*CID* II 67.1) or communities (*CID* II 67.5) and was a source of income administered by the Amphiktyony (Sanchez (2001) 142–44); (c) the *hiera chora*, the former territory of *Krisa/Kirra*(?), consecrated to Apollo after the First Sacred War; it was administered by the Amphiktyony and strictly separated from the territory of Delphi in the Classical and Hellenistic periods, see *infra* 419–20.

The extent of the territory of Delphi in the Classical period is not known, but the presumption is that it was roughly the same as in the Hellenistic period (cf. Rousset (2002) 71–175). To the west Delphi bordered on Amphissa (no. 158) (*F.Delphes* III.3 383 (C2e); Plut. *Mor.* 249E–F (rC4m)); to the east it bordered on the Phlygonioi (no. 191), incorporated into Delphi in C2e, whereafter the borderland was the territory owned in common (?) by Ambryssians (no. 171) and Phlygonians (*F.Delphes* III.2 136 (C2m)). According to Strabo 9.3.15 (rC5m), the site called Anemoreia (unlocated) was made the frontier between Delphi and the Phokians when the Lakedaimonians cut Delphi out of the Phokian *koinon*. To the south and south-west the territory bordered on the “Sacred Land” (cf. *Krisa/Kirra*). To the north, it is unknown how far the territory stretched up Parnassos; it may have reached the Korykian Grotto (Rousset (2002) 160–62).

We have no information about the total number of citizens (Rousset (2002) 290), but the minimum number of adult male citizens can be established from some decrees passed by the Delphian assembly. When the people voted with pebbles, the decree passed sometimes records the number of votes cast, and three such decrees are preserved: the first records a total of 454 votes (*F.Delphes* III.1 294.1.2–3 (C4f); cf. Rougemont (1998) 164), the second over 400 votes (*CID* I 13.35–37 (C4f)), and the third 353 votes (Lerat (1943) 63). A decision made in C4m by the Labyades, one of the civic subdivisions (*infra* 414), was passed with 182 votes (*CID* I 9.A.21–22).

Being the seat of one of the two sanctuaries of the Pylo–Delphic Amphiktyony, Delphi, as the only *polis*, had two seats in the Amphiktyonic Council (*CID* II 36.1.24–25 (343/2); cf. Lefèvre (1998) 34–51). Delphi’s participation in the Council is securely attested in 343/2 (*CID* II 36.1.24; cf. Lefèvre (1998) 34–51), but probably antedates this occurrence (Theopomp. fr. 63; cf. Sanchez (2001) 119). The original date of Delphi’s admission to the Amphiktyony, however, cannot be positively established (Sanchez (2001) 118–20). It has sometimes been dated to the Archaic period and seen as a consequence of the First Sacred War in C6e

(e.g. Roux (1979) 16–19). Alternatively, it has been dated to the Classical period and seen as a consequence of the Lakedaimonian invasion of Phokis in C5m (e.g. Kahrstedt (1953) 750).

The original position of the sanctuary of Apollo, serving both the *polis* and the Amphiktyony, promoted collaboration as well as competition between the two organisations in religious (Lefèvre (1998) 239), military (ibid. 43) and financial (ibid. 257–64) matters. Nevertheless, the disputed view that the independence of the *polis* was sometimes interfered with by the Amphiktyony may merely reflect our ignorance of the organisation and working of the institutions; cf. for example the opposed interpretations of the Amphiktyonic involvement in the exile of Astykrates (Lefèvre (1998) 49, *contra* Sanchez (2001) 142–44, 171).

Geographically, Delphi was situated in Phokis (Hdt. 8.35.1; Eur. *Or.* 1094; Ps.-Skylax 37), but the Delphians refused to be called Phokians (Paus. 4.34.11). Supported by interested allies, the Delphians often clashed with the Phokians who tried to control the sanctuary of Pythian Apollo.

There is no mention of Delphi in the sources for the First Sacred War against Kirrha/Krisa (see 419–20 and no. 183). A number of sometimes conflicting sources concern what modern scholars call the Second Sacred War (cf. Thuc. 1.112.4), in which the Lakedaimonians opposed Phokian attempts to control the resources of Apollo's sanctuary in Delphi (schol. Eur. *Tro.* 9; Diod. 16.33.1; Paus. 10.15.1). The issue is difficult; thus it remains problematic that there is no mention of the Amphiktyony (Sanchez (2001) 106–9), and modern scholars agree in preferring Thucydides' account of a single Lakedaimonian intervention in 449 (1.112.4) to other sources' accounts of two interventions, one in 457 (Plut. *Cim.* 17.4) and one in 449, as well as a Boiotian intervention (Philoch. fr. 34a). Thucydides reports that the Lakedaimonians took possession of the sanctuary and gave it to the Delphians. Strabo (9.3.15) adds that the Lakedaimonians separated Delphi from the Phokian *koinon*. When the Lakedaimonians had left Phokis (Thuc. 1.112.5)—or three years later (Philoch. fr. 34b)—the Athenians sent an army, took possession of Delphi, and gave it to the Phokians (Thuc. 1.112.5). (Sanchez (2001) 116 prefers to connect the Strabo passage with the Peace of Nikias in 421, and Meiggs (1972) 423 is convinced that the Athenian campaign took place immediately after the Lakedaimonians' retreat.)

The status of the *polis* of Delphi was guaranteed in the Peace of Nikias in 421: “The sanctuary and the temple at

Delphi, and the Delphian people shall be their own masters in legislation, in taxation and in administration of justice, both concerning their persons and their territory, according to their ancestral customs” (Thuc. 5.18.2; cf. Hornblower (1996) 472). This clause probably means that Delphi was free of the Phokian *koinon* after 421, and this state of affairs seems to have persisted in 356 when, at the beginning of the Third Sacred War, the Phokians justified their occupation of the sanctuary with a reference to their ancestral right to the oracle. Such a legitimisation would have been superfluous if Delphi had been a member of the Phokian *koinon*. It was in all cases the Delphians who made decisions about access to the oracle, granted to the Phaselitans (no. 942) (*CID* I 8 (c.400) = *Staatsverträge* 218) and the Asklepiadaei (*CID* I 11 (C4s?)), and the Skiathians (no. 520) (*CID* I 11 (C4s?) = *Staatsverträge* 295). There is no evidence that, during the Sacred War, the Delphians were forced to join the *koinon*. On the contrary, independence of the *koinon* is indicated by the fact that the Delphians kept their seats in the Amphiktyony while the Phokians were excluded in 346.

Internal strife in, probably, C4f is indicated by the mention of penalties for “organisation of *stasis*” ([τ]ᾶς *στασιαρχίας*) in the so-called Law of Kadys (*BCH* 50 (1926) 18.VII.14). In, presumably, C4e (but cf. Rougemont (1998) 161–62), the first of a number of *staseis* was caused by the dispute between two Delphic families (Arist. *Pol.* 1303^b37–4^a3; Heracl. Lemb. 52; Plut. *Mor.* 825B–C; Carrère (1984)). In 363, Astykrates and his associates, all Delphian citizens, were exiled by the Amphiktyonic Council and fled to Athens, where they obtained Athenian citizenship (*IG* II² 109). Their property was confiscated and leased as property belonging to Apollo (*CID* II 67–72 (C4s)). Perhaps their enemies were, in turn, sent into exile a little later (*CID* II 73 (C4m)). This episode is often seen as reflecting international interference in the government of Delphi in C4f (Pomtow (1906); cf. *Syll.*³ 175–78; Buckler (1985); *contra* Sanchez (2001) 170). The penalty of exile, however, is attested already in C5e, when the Delphian Kobon was exiled for having subverted the Pythia (Hdt. 6.66).

The Aristotelian collection of *politeiai* included a constitution of the Delphians (fr. 494; see Musielak (1993)). In C2 Delphi was a democracy (Gauthier (1992)). The constitution of the Classical period has often been interpreted as an oligarchy (Roux (1979) 61–93; Salviat (1984); *contra* Gauthier (1990); Musielak (1993)), but, *pace* Roux (1979) 62–65, there is no basis for the view that the citizens were divided into two classes with different political rights. There was a popular assembly (Lerat (1943) 70–79), to which apparently all

citizens were admitted (*contra* Roux (1979) 70); it was called *ἀγορά* (*F.Delphes* III.1 294.1.1 (C4f)), which is the ancient term (Lerat (1943) 74), and later *ἐκκλησία* (*CID* II 32.58–60 (C4s)). An ordinary meeting of this assembly was called *τέλειος*. The formula *σὺμ ψάφοις ταῖς ἐνόμοις* is not attested before C3, but similar phrases show that a quorum was also required in C4: *πλεθο[ύ]σης ἀγορᾶς* (*Syll.*³ 257.14 (340/39)), or *σὺμ ψάφωι ταῖ νικεούσαι* (*Syll.*³ 265.3 (336/5); cf. Lerat (1943); Gauthier (1990) 86–89). Furthermore, three documents record the number of votes cast in favour of the motion (Gauthier (1990) 87): 454 votes (*F.Delphes* III.1 294.1.2–3 (C4f)), 400+ (*CID* I 13.35–37 (C4f)), and 353 (Lerat (1943) 63); for another fragmentary attestation, see Salviat and Vatin (1971) 52. The quorum is not known, but the strange formulation of *CID* I 13 suggests that it could have been 400 votes (Roux (1979) 69). The decisions passed by the assembly were *tethmoi* (*F.Delphes* III.1 294.1.1: *ὄδ' ὁ τεθμός*) or *nomoi* (Lerat (1943) 62: *τὸν νόμ[ον] ἀνγράψαι*), or treaties (*CID* ¾ 13 (C4f)) or honorific decrees (*Syll.*³ 265 (336/5)). The *boula* had thirty members, divided into two sections of fifteen members, each serving six months (*CID* II 32.78–86; cf. Roux (1979) 71–77); the view that it may have been further subdivided into subsections is unconvincing (Tréheux (1980) 523–24). There is no evidence of *probouleusis* before C2 (Gauthier (1992) 123–26). In C4 the powers of the Council were primarily judicial and financial (Roux (1979) 76–77; Salviat (1984)). It did not, however, possess full powers in either judicial matters (Gauthier (1992) 130) or in financial administration, where, at least on one occasion, the *boula* was assisted by a board of thirteen *προαιρετοὶ ὑπὸ τᾶς πόλιος* (*CID* II 32.26–29 (C4s); cf. Bousquet (1988) 184; Roux (1979) 71, 76–77). There is no information about the composition of the Delphian lawcourts in C5–C4, but the existence of lawcourts in C4m is ensured by the grant of *προδικία ποτὶ Δελφούς* (*F.Delphes* III.1 392.7–8). A C4 law on maltreatment of parents mentions a public prison (Lerat (1943) 63: *δαμοσίαν οἰκίαν*). The archon who was the eponymous official is indisputably attested in C4f (*F.Delphes* III.1 391), possibly in C6 (Roux (1969) 47; *contra* Rougemont (1998) 161–62), and perhaps even in C6e (Pind. *Hyp. Pyth.* b). He must be distinguished from the board of eight *prytaneis*, a financial magistracy in charge of the sacred treasures of Apollo (Bousquet (1988) 143m; *contra* Roux (1979) 81–92).

Of the civic subdivisions, *phylai* are not attested earlier than C2 (*F.Delphes* III.3 238.10–11), and their number is unknown (for a hypothesis, see Roux (1979) 88). An enfranchisement act of C1 (*F.Delphes* III.6 79) mentions money

lent by the tribe *δάνειον φυλοτικόν*. The entry *Λαφριάδαι* in Hsch. *Λ*436 is the only explicit attestation of *phratriai*. The Labyades are often called a *phratiria* (cf. *CID* I p. 43 n. 68); however, we have no explicit evidence (Sebillote (1997)), but the mention of Poseidon Phratrion in *CID* I 9.B.13–14 supports the view. The Labyades are first attested in, presumably, C61 (*CID* I 1.9 *bis*; Roux (1969) 47–56). In C4m they had an assembly (*alia* A.41), some of its decisions required a quorum of 101 votes (B.9–10), and one of the enactments was passed with 182 votes (A.21–23). The group had laws (A.3) and magistrates (*tagoi*: A.23, *damiorgoi*: D.19–20); they performed public functions which in Attika were performed by the *phratriai* (*CID* I pp. 26–88). The group was subdivided into *patriai*. In the Law of Kadys on interest on loans (*BCH* 50 (1926) 15.9–10) a *patria* is mentioned alongside other groups called *ἡρωισσταί* and *Θίασος*, which may or may not have been civic subdivisions. We are totally ignorant of the nature of the *Thradikai* mentioned at Diod. 16.24.3 in connection with the Phokians' occupation of the sanctuary in 356.

In C4s the Delphians conferred *proxenia* and other honours on citizens from e.g. Selinous (no. 44), Pellene (no. 240), Arethousa (no. 546) and Phleious (no. 355) (*F.Delphes* III.1 391, 395, 396; *SEG* 16 309). A citizen of Delphi was granted *proxenia* by the Athenians (no. 361) in C4e (*IG* II² 51). In C61 Timesitheos of Delphi was victorious in the Olympic and in the Pythian Games (*Olympionikai* 140, 146; Hdt. 5.72.4; Paus. 6.8.6).

Apollo Pythios was the protective divinity of the Delphians (*CID* I 10.8, 35 (C4e)). The Delphians controlled the oracle; they had the exclusive right to grant *promanteia*, and themselves possessed the first claim to consult the oracle (*F.Delphes* III.4 375 (C4m); Pouilloux (1952)). Strangers needed the assistance of Delphian *proxenoi* in order to consult the oracle (*CID* I 5.4 (C5?); *Syll.*³ 548 (C3s); cf. Gauthier (1972) 46–52; Pouilloux (1974)). Treaties about consultation of the oracle were concluded between Delphi and Phaselis (no. 942) (*CID* I 8; *Staatsverträge* 218 (c.400)) and Delphi and Skiathos (no. 520) (*CID* I 13 = *Staatsverträge* 295 (C4f)). Some of the revenues of the Delphians, such as the *pelanos*, were directly connected with the oracle (Amandry (1950) 86–103; cf. *CID* I 11: *ἀτέλειαν τῶν ὀσίων*). The temple of Apollo was, if not the property, then at least the possession of the Amphiktyones. In C61 (La Coste-Messelière (1946)), when the Amphiktyones had undertaken for the sum of 300 talents to reconstruct the temple, the Delphians had to pay a quarter of the costs and send out envoys to the various *poleis* to ask for contributions (Hdt. 2.180). Remains of this temple

are preserved, whereas the attribution to the previous temple of some architectural remains of C7 is still a moot point (Bommelaer (1991) 181–84). The Amphiktyony organised the Pythian Games, but the *theoroi* who performed the *epangelia* were sent out by the Delphians (*CID* 1 10.45–46 (380) with pp. 118–19; *SEG* 24 379 (C4m); cf. Sourvinou-Inwood (1990) 299). These *theoroi* were hosted by *theorodokoi* appointed by the Delphian *polis* (Daux (1949) 4–11 = *Syll.*³ 90 (C5s?); *F.Delphes* III.4 4 (C4s)). Conversely, a Delphian *theorodokos* was appointed to host *theoroi* from Epidaurus (no. 348) in 356 (*IG* IV².1 95.3). The other major sanctuary of the Delphian *polis* was that of Athena (Hdt. 8.39), whose temple of the Archaic period has been dated to C7–C6 (Bommelaer (1991) 56–59). Cults of other gods are known, but their existence in the Archaic and Classical periods is often unattested (Pomtow (1912); Roux (1976) 165–208). For the religious festivals, see *CID* 1 58–60.

Apart from remains of the Mycenaean period (S. Müller (1992) 455–90), evidence of a settlement within the sanctuary can be traced back to C10, and remains of a house have been dated to C8m (Luce (1993)). The earliest dedications to Apollo(?) date from C9l (Rolley (1977) 135), and the first traces of the administration of the sanctuary can be dated to C7e (La Coste-Messelière (1969) 731–40). The first *peribolos* of c.575 may be connected with the formation of the Amphiktyony in Delphi (Luce (1992) 704). In its original form the fountain of Kastalia may date from C7l–C6m (Bommelaer (1991) 81–83). The Pythian hippodrome and *stadion* were probably placed in the Kirrhaian plain in the Classical period (Bommelaer (1991) 215; cf. *infra* 419).

The Panhellenic sanctuary at Delphi has been excavated and studied in detail by, principally, the French school. The sanctuary (2.3 ha) is densely built and centres on the so-called Sacred Way which winds its way down the slopes of the *temenos*. The most conspicuous features are: (1) the C4 Doric peripteral (6 × 15) temple of Apollo, which dominates the sanctuary; built after the earthquake of 373, it replaced a monumental C6 temple adorned with pedimental sculptures, which itself replaced one or more earlier buildings. Later tradition locates the oracle of Apollo in an underground chamber of the temple, no trace of which, however, has been found (Bommelaer (1991) 176–84); (2) a C4–Hellenistic theatre (*TGR* ii. 188–90; Bommelaer (1991) 207–12); (3) the treasuries: twenty buildings among the numerous constructions in the sanctuary have been identified, with varying degrees of certainty, as treasuries dedicated by individual Greek *poleis* or even non-Greek polities (cf. Strabo 5.1.3 (Etruscan Agylla)); apparently, most treasuries

were constructed prior to the Hellenistic period, but the attribution of individual buildings to specific *poleis* depends largely on Pausanias. The *poleis* known to have constructed treasuries are (numerals prefaced with # refer to pl. V in Bommelaer (1991)): Syracuse (no. 47), cf. Jacquemin (1999) no. 453 (after 413); Kroton (no. 56), cf. Jacquemin (1999) no. 127 (C6l); Sybaris (no. 70), cf. Jacquemin (1999) no. 445 (C6); Spina (no. 85), cf. Jacquemin (1999) no. 443 (C5?); Korkyra (no. 123), cf. Jacquemin (1999) no. 123 (c.580); #124 Thebes (no. 221), cf. Jacquemin (1999) no. 461 (after 371 or after 346); #216 Megara (no. 225), cf. *F.Delphes* III.1 91–111, Jacquemin (1999) no. 659 and p. 54 (C6l/C5e); #308 Corinth (no. 227), cf. Hdt. 1.14.2, 51.3, 4.162.3, and Jacquemin (1999) no. 124 (C7l?); #121 Sikyon (no. 228), cf. Jacquemin (1999) no. 436 (C6l); #223 Athens (no. 361), cf. Xen. *An.* 5.3.5 and Jacquemin (1999) nos. 85 (C6e) and 86 (C5e); #122 Siphnos (no. 519), cf. Hdt. 3.57.2 and Jacquemin (1999) no. 441 (c.525); Akanthos (no. 559), cf. Jacquemin (1999) no. 2 (C5l or earlier); Poteidaia (no. 598), cf. Jacquemin (1999) no. 414 (C6 or C5); Klazomenai (no. 847), cf. Hdt. 1.51.2 and Jacquemin (1999) no. 112 (C6l); #219 Knidos (no. 903), cf. Jacquemin (1999) no. 118 (C6m; for the C6m dedicatory inscription *F.Delphes* III.1 289, see Bommelaer (1991) 142); #302 Kyrene (no. 1028), cf. *F.Delphes* II and *BCH* 112 (1988) 291–305, and Jacquemin (1999) no. 132 (334–324). The treasuries of the Athenians, the Sikyonians and the Siphnians were decorated with pedimental sculptures and reliefs in exquisite late Archaic style (Bommelaer (1991) 118–26, 133–36). And (4) commemorative dedications, outstanding among which are e.g. the Monument of the Admirals, dedicated to commemorate the Spartan victory at Aigos potamoi (cf. *ML* 95 (405)), and the Athenian thank offering for the victory at Marathon, honouring the commander Miltiades (Bommelaer (1991) 108–11), and, of course, the Greek thank offering for victories in the Persian War (*ML* 27). For treasuries and other monumental dedications, see the synthetic study by Jacquemin (1999).

Below the sanctuary of Apollo is the sanctuary of Athena (0.5 ha). The central features of this sanctuary are, from west to east: (1) the C6l temple of Athena Pronaia, which replaced an earlier construction; it is Doric peripteral (6 × 12); (2) a C5e Doric treasury, of unknown ownership; (3) the C6s Aiolic Treasury generally ascribed to Massalia (no. 3), which also housed dedications by Rome (cf. Diod. 14.93.4 (r393)); (4) a C4e *tholos*; and (5) a C4f Doric prostyle hexastyle temple, of Athena or possibly Artemis (Bommelaer (1991) 46–71).

The town of the Archaic and Classical periods is poorly attested, and occasional references in the inscriptions are

obscure (on the toponym of Thuia, see Jacquemin (1992)). It is not known where the assembly met (*contra* Roux (1979) 70); a public prison (*δαμοσία οἰκία*) is mentioned in a C4 text (Lerat (1943) 63); texts of C2 mention a *bouleion* (*F.Delphes* III.2 89) which has not been securely located (Bommelaer (1991) 144); and the location of the *prytaneion* is likewise unknown (*CID* II 81.A.16 (C4s)). A *dikasterion*—either a law-court or a court room—is mentioned in a C4f document (*F.Delphes* III.1 295, inv. 1373). The *gymnasion* in Delphi is of C4s (Bommelaer (1991) 72–79). It is commonly believed that the town of Delphi was unfortified. The walls situated on the rocky ridge west of the sanctuary have, tentatively, been attributed to Philomelos (Diod. 16.25.1; Bommelaer (1991) 217). The Logari tower east of the sanctuary may date from the same period (Bommelaer (1991) 41). South of the sanctuary are some undated remains of walls (P. Leriche, pers. comm.).

Delphi struck silver coins on the Aiginetan standard from C6l to C4m (356/5). (1) Several series of small denominations struck from C6l to C5m, and from C5l to C4m. Trihemiobol: *obv.* ram's head, beneath: dolphin; *rev.* goat's head facing between two dolphins; legend: at first anepigraphic, then ΔΑΛ on coins of C5m, ΔΕΛ on coins of C4. Tritartemorion: *obv.* head of (Ethiopian) negro; *rev.* goat's head facing between ΔΑ reversed, or three Ts in triangular pattern. Tetartemorion: *obv.* bull's head; *rev.* goat's head facing between ΔΑ reversed. (2) Tridrachms and didrachms struck in C5f. Tridrachm: *obv.* two rams' heads in juxtaposition, faces downwards, above two dolphins; legend: ΔΑΛΦΙΚΟΝ; *rev.* four incuse squares, in each of which a dolphin and a flower. Didrachm: *obv.* ram's head, beneath dolphin; legend: ΔΑΛΦΙΚΟΝ; *rev.* four incuse squares, in each of which a star (Kraay (1976) 121–22; Picard (1991) 33–36; *SNG Cop. Aetolia-Euboea* 139–48).

178. Drymos (Drymios) Map 55. Lat. 38.45, long. 22.35. Size of territory: probably 2. Type: A. The toponym is Δρυμός (Hdt. 8.33) or Δρύμος, ὄ (Eust. *Il.* 2.298.7, van der Valk) or Δρυμαία, ἡ (Paus. 10.3.2; 33.12) or Δρυμία (Steph. Byz. 239.18). The city-ethnic is Δρύμιος (*IG* IX.1 226.2 (C2f); *F.Delphes* III.4 277.25 (C2s); *SGDI* 1712.1 (C2m)). Apart from Δρυμειύς at Steph. Byz. 239.19–20, the only attestation in literary sources of a city-ethnic is Δρυμαιοῖς in Paus. 10.33.12. According to Paus. 10.32.12, the original toponym (or city-ethnic?) was *Ναυβολεῖς*.

Drymos is called a *polis* in the urban sense at Hdt. 8.33 and, retrospectively, at Paus. 10.3.1 and 2, in both passages in connection with Xerxes' invasion of Phokis in 480, when Drymos was burnt to the ground. Paus. 10.3.2 treats Drymos

as a *polis* in the urban sense in connection with the *dioikismos* of the Phokian cities in 346 after the Third Sacred War. The *dioikismos* suffered in 346 shows that Drymos belonged to the Phokian *koinon*. The collective and internal use of the city-ethnic is attested in a C2f agreement between Drymos and the Oitaian Federation (*IG* IX.1 226.2: ἡ πόλις τῶν Δρυμίων). The individual and external use is attested in Delphic inscriptions (*F.Delphes* III.4 277.25 (C2s)).

Drymos was protected by a large defence circuit of triangular shape. Today its base toward the south has completely disappeared, but remains of it were seen by Frazer (1898) 423–24. The western and eastern side stretched c.450 m and 350 m respectively, and were equipped with towers at regular intervals of c.50 m. At the northern end the circuit was divided by two *diateichismata* also equipped with towers. The whole fortification was thus subdivided into three sections of unequal size. The upper part enclosed an area of c.20 ha (Frazer (1898) 423–24; Dassios (1992) no. 2). It was built in irregular isodomic masonry, and was dated to C4l by Winter (1971) 36, 158. Paus. 10.33.12 mentions an ancient sanctuary of Demeter Thesmophoros and the celebration of Thesmophoria.

179. Echedameia (Echedamieus). Map 55. Unlocated. Type: B. The toponym is Ἐχεδάμεια, ἡ (Paus. 10.3.2) The city-ethnic is Ἐχεδαμειεύς (*SGDI* 1983.13 (C2e)). Echedameia is listed by Paus. 10.3.2 among the *poleis* (in the urban sense) exposed by Philip to *dioikismos* in 346. Pausanias was the only source for Echedameia until the discovery in 1863 (Wescher-Foucart) of a Delphic manumission inscription of 194 (*SGDI* 1983) in which both the vendors and one of the guarantors are recorded with the city-ethnic Ἐχεδαμειεύς as the second part of their name. The two vendors are further described as living in Tithronion.

Echedamia is still unlocated. Its absence from the list of cities sacked by the Persians in 480 has induced some scholars to assume a location in the southern part of Phokis (Bursian (1862) 1.182), but Lilaia is likewise absent from the list, which calls for circumspection. No topographical conclusion can be based on the fact that two Echedamieus were living in Tithronion (*SGDI* 1983).

180. Elateia (Elateus) Map 55. Lat. 38.40, long. 22.50. Size of territory: 3 or 4. Type: A. The toponym is Ἐλάτεια, ἡ (Hdt. 8.33; *Hell. Oxy.* 21.5; *F.Delphes* III.4 219.2 (C4l)) or Ἐλάτη (Hsch. *E*1887) or *Ἐλατή* in a Boiotian inscription of C3s (*IG* VII 3171.26). The city-ethnic is Ἐλατεεύς (*CID* II 38.14–16 (C4s)) or Ἐλατεειεύς (*CID* II 38.3–5 (C4s); *SEG* 1 199.3 (C3m)). Elateia is called a *polis* in the urban sense at

Hdt. 8.33, and in Ps.-Skylax 61 Elateia is the third toponym listed after the heading πόλεις . . . αἰῶς, where *polis* is again used in the urban sense; the political sense is found in *IG* IX.1 130.2 (C4). The collective and internal use of the city-ethnic is attested internally in a Hellenistic proxeny decree (*IG* IX.1 100.1: ἡ πόλις τῶν Ἐλατῶν (C3l)). The individual and external use is found in a Delphic proxeny decree of C4s (*BCH* 73 (1949) 263 no. 11.4–5).

The territory is called Ἐλάτεια (Theophr. *Hist. pl.* 8.8.2) and it covered a large part of the Kephisos valley (*Hell. Oxy.* 21.5; Plut. *Sull.* 16.1: τὰ Ἐλατικὰ πεδία). Elateia controlled the valley, and its strategic importance is frequently attested (Dem. 18.169; Diod. 16.84.2; Strabo 9.3.2; see Pritchett (1982) 123–75). In later sources Elateia is repeatedly, and sometimes retrospectively, singled out as the largest of the Phokian *poleis* (schol. Dem. 18 no. 262, Dilts; Harp. *E*32; Strabo 9.2.19; Paus. 10.3.2, 34.1; Steph. Byz. 264.3). The exact size of the territory is unknown, but the possible disappearance of Pedieis (no. 189) after 346 and the unquestionable disappearance of Parapotamioi (no. 188) may have made Elateia the largest *polis* of Phokis. Thus, Elateia came to control the main pass between Phokis and Boiotia, which would explain the Athenian panic in 339 at the news of the fall of the city (Dem. 18.169).

Like the other Phokian *poleis*, Elateia was sacked and the city burned down by the Persians in 480 (Hdt. 8.33). In 395 the Boiotians overran the plain around Elateia and Pedieis (no. 189), and the population settled in the plain (*Hell. Oxy.* 21.5). In 346 it was one of the cities dioikised by Philip (Paus. 10.3.1). Membership of the Phokian *koinon* is ensured by the recording in C4s of two Elateians among the *archontes* of the Phokians (*CID* II 38.3–5) and by the Phokian dedication in Delphi in 304 and 301 celebrating the liberation of Elateia (*F.Delphes* III.4 219; Paus. 1.26.3, 10.18.7, 34.2; cf. Flacelière (1937) 47, 53–55, 61; Jacquemin (1999) 347).

The principal divinity of Elateia was Athena Kranaia (Paus. 10.34.7). Enactments of the Phokian *koinon* were set up in her sanctuary from at least C4 onwards. The records of the payments of the Phokian fine to Delphi were found there (*IG* IX.1 109–15 = *CID* II 37–42; cf. also *IG* IX.1 96 (C3)). Excavations of the sanctuary have revealed remains of the Archaic and Classical periods (Paris (1892) 253–99).

According to a tradition reported by Paus. 8.4.4, 10.34.2–3 and attested already in C2 (*SEG* II 1107 (C2e); Paus. 7.15.5 (rC2m); cf. Habicht (1998) 67–69), Elateia was founded by the Arkadian Elatos, the son of Arkas. If it is true that the C5 Delphic statue group of Zeus, Kallisto and Elatos was dedicated by the Elateians, this foundation myth can be traced

back to the Classical period. However, the attribution of the group to the Elateians is not above suspicion (*F.Delphes* III.4 142–44 (C5 reinscribed in C4; see Jacquemin (1999) 53)).

In C5 Elateia had a defence circuit, part of which collapsed in the earthquake of 426 (Demetrios of Kallatis (*FGrHist* 85) fr. 6). An anecdote of doubtful value reports a siege of Elateia by Pelopidas in 374 and refers to the gates of the wall (Polyaen. 2.38.1; cf. Schober (1924) 69, *contra* Ellinger (1993) 332). The defence circuit, or at least part of it, must have been destroyed as a consequence of the *dioikismos* in 346, as is confirmed by Demosthenes, who in 344 told the Athenians that there were rumours that Philip intended to have Elateia fortified (Dem. 6.14). In 338, after his capture of Elateia, Philip built a palisade and placed a garrison in the city (Aeschin. 3.140). In C2e both the acropolis and the lower town were protected by a circuit (Livy 32.24). Remains of walls in polygonal masonry were reported by nineteenth-century travellers (Lolling (1989) 177; Paris (1892) 25–33). All that can be seen today are some parts of a wall in Lesbian masonry and some of one in isodomic masonry (Dassios (1992) no. 38). The wall in isodomic masonry uncovered in the early twentieth century is undoubtedly the circuit enclosing the lower town (Paris (1892) 39).

The Archaic-looking drachm with the legend *EAATEON* (retr.) recorded in Head, *HN*² 342 is rejected as a forgery by Babelon, *Traité* II.3. 317–18 n. 2.

181. Erochos (Erochos) Map 55. Lat. 38.40, long. 22.35. Size of territory: 1 or 2. Type: A. The toponym is Ἐρωχος (Hdt. 8.33) or Ἐρωχός (Hdt. 8.33, Codex D; Paus. 10.3.2). The form Ἐρόχ[οι] attested in an undated inscription (*SEG* 27 143) is probably an Archaic spelling of Ἐρώχων; cf. *infra*. The city-ethnic is Ἐρωχός (*CID* II 38.6 (337/6)). Erochos is called a *polis* in the urban sense at Hdt. 8.33 and, retrospectively, at Paus. 10.3.2, in both passages in connection with Xerxes' invasion of Phokis in 480, when Erochos was burnt to the ground. Paus. 10.3.2 treats Erochos as a *polis* once again in connection with the *dioikismos* of the Phokian cities in 346 after the Third Sacred War. The external and individual use of the city-ethnic is attested for two magistrates of the Phokian *koinon*, an *archon* and a *grammateus*, and a witness to the payment of the fine (*CID* II 38.4, 6, 14–15; cf. *IG* IX.1 111 (337/6)).

Erochos was situated at Ano Souvala (not Kato-Souvala as misprinted in *Barr.*). The location was definitively established by Tillard (1911) 61–63 and has been confirmed by the discovery of a dedication to Δάματρι ἐν Ἐρώχωνι found in a sanctuary of Demeter situated c.2.5 km north-east of the

fortified settlement (*SEG* 27 143) at Kato-Souvala. In the sanctuary were found votive offerings of the Archaic, Classical and Hellenistic periods (*ArchDelt* 27 (1972) *Chron.* 386). The inscriptions are published only provisionally and cannot be dated with precision. But since all other attestations of toponym and ethnic have *omega*, the *omicron* in *EPOX[OI]* must stand for an *omega*. It follows that the *terminus ante quem* of the dedication is C4e, when *omega* became used for the long sound and *omicron* was restricted to the short.

The phrase ἐν Ἐρόχ[οι] shows that in C4e the sanctuary was situated in the territory of Erochos and that the toponym Ἐρωχος could be used to denote the territory as well as the city. But in the sanctuary were also found stamped tiles inscribed ΛΙΛΑΙΕΩΝ in letters datable to the Hellenistic period. Thus, at least the sanctuary was now controlled by the Lilaieis (no. 185), and, following Robert and Robert (*BE* (1978) 236), the presumption is that, when the tiles were made, Erochos had been incorporated into Lilaia. This assumption is probably confirmed by the double eponymous archons attested in Lilaia in C3l (*F.Delphes* III.4 133–35). To have two eponymous officials is not attested in any other Phokian *polis*, and a *sympoliteia* with Erochos offers a plausible explanation of the anomaly. When the incorporation took place is not known, but a *terminus post quem* is 337/6, the date of *CID* II 38 = *IG* IX.1 111; see *supra*.

The town of Erochos was situated on the top of the hill of Ag. Vassilios and was protected by a defence circuit, the foundations of which are still visible. The habitation quarters seem to have covered some of the area outside the wall (Dassios (1992) no. 10). The cemetery excavated at Kato-Souvala contains remains of C8 onwards (*AAA* 15 (1982) 76–85).

182. Hyampolis (Hyampolios) Map 55. Lat. 38.35, long. 22.55. Size of territory: 1 or 2. Type: A. The toponym is usually Ἰάμπολις, ἦ (Hom. *Il.* 2.521; Hdt. 8.28; Paus. 10.1.3; *IG* IX.1 86.1 (c.AD 100)). However, a scholiast on Homer (schol. Hom. *Il.* 521) and Eust. *Il.* 275.5, both citing the same source, claim that the locals (ἐγχώριοι) call it Ἰσάμπολις. In inscriptions, the city-ethnic is invariably Ἰάμπολιος (*SEG* 37 422 (C5s)), whereas literary sources have Ἰάμπολίτης (Xen. *Hell.* 6.4.27). The interpretation of the toponym as a composite word whose second part is πόλις—whether correct or not—has led to the construction of variant forms of both toponym and city-ethnic. From the accusative written in two words, Ἰην πόλιν (*Hell. Oxy.* 21.5) or Ἰαν πόλιν

(Diod. 16.56.1), some authors invented the nominative Ἰα (Strabo 9.2.3, 3.15), and this form was then connected with the Hyantes of Thebes (Paus. 10.35.5; Strabo 9.2.3), whereas the schol. Eur. *Or.* 1094 claim that Hyampolis is a foundation of Hyamos, the son of Lykoros. By analogy with *polis*—*polites*, the authors construct the city-ethnic Ἰάμπολίτης, which is the only form found in literary sources (Xen. *Hell.* 6.4.27; Paus. 10.1.8; Steph. Byz. 644.10).

Hyampolis is called a *polis* in the urban sense by Hdt. 8.33 in connection with Xerxes' invasion of Phokis in 480, when Hyampolis was burnt to the ground; by *Hell. Oxy.* 21.5 in connection with the Boiotian campaign into Phokis in 395; and retrospectively by Paus. 10.3.1, where Hyampolis is listed as one of the *poleis* exposed to *dioikismos* in 346. The collective use of the city-ethnic is attested internally in *SEG* 37 422.5 (C5s), where the Ἰανπόλιοι appear as guarantors of a loan. For the individual and external use, see *IG* VII 3055.39 (C4m), where an [Ἰάμ]πόλιος is attested as consulting the oracle of Trophonios at Lebadeia (no. 211).

The city was situated in the middle of a pass which was one of the main approaches to Phokis from the north (Paus. 10.1.11; Ellinger (1993) 22–27). In C1 the city bordered on Opous (no. 386; Strabo 9.2.23) and, being a border town, Hyampolis became the centre of legendary stories about the conflicts between Phokis and Thessalia in the Archaic period (C6?; cf. Ellinger (1993) 17–22). The sanctuary of Artemis Elaphebolia was situated in the territory of Hyampolis (*SEG* 37 422–23), and from C6(?) the Phokians celebrated the annual Elaphebolia in this sanctuary, commemorating their victory over the Thessalians (Plut. *Mor.* 244B–D, 660D, 1099E–F; cf. Ellinger (1993) 22–37). The recent excavations of the sanctuary of Artemis Elaphebolia and Apollo have revealed continuous habitation and utilisation from the Mycenaean age (*LH* III C) to the Byzantine period (Felsch and Kienast (1975); Felsch *et al.* (1980), (1987); Felsch and Siewert (1987); *Kalapodi* I: XVI–XVII). A C2 inscription lists the landed property belonging to Apollo and Artemis (*IG* IX.1 87). In connection with the Archaic wars between the Phokians and the Thessalians, Plut. *Mor.* 244D (rC6) mentions the toponym Κλεώναι, and some commentators have erroneously assumed the existence of a community dependent on Hyampolis (*supra* 407).

If one can trust Pausanias' piece of information that, in the C6 war against Thessalia, the Phokian cavalry was commanded by a Δαιφάντης Ἰάμπολίτης, it follows that Hyampolis was a member of the Phokian *koinon*, and that is further confirmed by the Phokian federal coinage: the female head on the reverse of some of the triobols struck in

C6l by the Phokians is usually taken to be the head of Artemis Elaphebolia (Williams (1972) 2), and a rare issue of C5m has on the obverse a kneeling Artemis armed with bow and quiver (Williams (1972) 43; Felsch and Siewert (1987) 687).

In C4e Hyampolis was fortified with a defence circuit, and in 395 the Boiotians made an abortive attack on the walls of the city (*Hell. Oxy.* 21.5). In 371 Jason of Pherai invaded Phokis, conquered the suburb (τὸ προάστιον) of Hyampolis and ravaged the χώρα (*Xen. Hell.* 6.4.27). Remains of the fortifications are still visible on the plateau where Hyampolis once lay. A circuit wall encloses an area of some 280 m (north–south) by 200 m (east–west). The wall is in trapezoidal masonry, with a dozen interval towers and is usually dated to C4s (Fossey (1986) 72–73). Paus. 10.35.6 mentions a small *bouleuterion*, a theatre near the gate and an ancient agora, and he believes that these buildings antedated the *dioikismos* of 346.

183. Kirrha (Kirrhaios) Map 55. Lat. 38.25, long. 22.30. Size of territory: ? Type A. The toponym is *Κίρρα*, ἡ (*CID* II 31.45, 46, 56 (C4m); Kallisthenes (*FGrHist* 124) fr. 1). *Κύρρα* is a *hapax* attested in *Marm. Par.* (*FGrHist* 239) A37. The relation between *Κίρρα* (*supra*), *Κρίσα* (*Hom. Il.* 2.520) and *Κίρσα* (*Alc. fr.* 7) has been debated since Antiquity (*Etym. Magn.* 515.18; *Eust. Il.* 1.420.15, van der Valk; cf. Robertson (1978); Parker (1997)). From a linguistic point of view the attested forms can easily be explained as phonetic variants of the same toponym; but an identification depends on (a) an identification of the corresponding ethnics *Κιρραῖοι* and *Κρισαῖοι*, mentioned in accounts of the First Sacred War; (b) the location of Homeric Krisa and Classical Kirrha. These questions have been debated since Antiquity (Strabo 9.3.3–4; Paus. 10.37.5; *Steph. Byz.* 385.7; for modern controversies over the First Sacred War, see *infra* 420). The city-ethnic is *Κιρραῖος* (Aeschin. 3.107–8; *Dem.* 18.152; Kallisthenes (*FGrHist* 124) fr. 1). Kirrha is called a *polis* in the urban sense at Aeschin. 3.108–9. All attestations of the city-ethnic testify to the collective and external use.

Since C4 at least, Kirrha was the name of the port of Delphi (*CID* II 31 (C4f); Polyb. 5.27.3; *F. Delphes* III.1 318 (C1); Paus. 10.37.4: τὸ ἐπίνειον Δελφῶν). Kirrha is classified as a *χωρίον* in Paus. 10.37.5, and at 10.37.6 he quotes an oracle in which it is described as a citadel (πόλιος . . . πύργον; cf. *Diod.* 9.16; Aeschin. 3.112; Fontenrose (1978) Q71).

With this harbour town was associated a territory called *Κιρραία χώρα* (*Dem.* 18.149) or *Κιρραίων πεδῖον* (*Ps.-Skylax* 37; cf. Rousset (2002) 183–87). In the Classical period

this plain corresponded to the lower Pleistos valley, which stretches from Delphi and Amphissa to the port of Kirrha. Such a location explains the exploitation by the Amphissaiaans (Aeschin. 3.119) as well as the occasional reference to the plain as being Lokrian (*schol. Hom. Il.* 2.520). In other sources the plain is called *Κρισαῖον πεδῖον* (*Hdt.* 8.32.2; *Isoc.* 14.31). The Pythian hippodrome and stadium were probably placed here in the Classical period (Bommelaer (1991) 215), and accordingly each of these two sports grounds were called *Κίρρα* by Pindar (*Pyth.* 3.74; 8.19) and Bacchylides (11.13). The variant *Κρίσα* (*Pind. Pyth.* 6.18; *Soph. El.* 730) has a Homeric touch (Lerat (1948)).

The port of Kirrha is ideally situated at modern Xeropighado (Dassios (1992) no. 128). There are some prehistoric remains (Hope Simpson (1981) 78; Skorda (1992) 42–43, 60–61), then a complete break, and then again partly excavated remains of C6s and later: (a) a defence circuit, part of which is described by the excavator as Classical (*ArchDelt* 49 (1994) *Chron.* 317–18). The circuit was still visible in the mid-nineteenth century (Ulrichs (1863) 207–8); (b) remains of Classical habitation (*ArchDelt* 34 (1979) *Chron.* 207, 49 (1994) *Chron.* 317) and habitation of the Roman period; (c) remains of the harbour and warehouses(?) (Rolley *et al.* (1990) 28–29); (d) a sanctuary probably dedicated to Apollo, Artemis and Leto with offerings dating back to C6m (Luce (1991)). It is probably(?) in Kirrha that one should place the common *παστάδες* mentioned in the Amphiktyonic law of 380 (*CID* I 10.22). The site was apparently not destroyed by the intervention of the *hieromnemes* instigated by Aischines in 340 (Aeschin. 3.123; Luce (1991)).

The port of Kirrha was situated on the territory consecrated to Apollo (Aeschin. 3.107) and administered by the Amphiktyony, which interfered with the collection of harbour dues (Aeschin. 3.119; *BCH* 118 (1994) 99–112 (C5)) and in the accommodation arrangements (*CID* I 10.2.2 (380)). Consequently, the port did not belong to the city of Delphi.

The extra-territorial status of Kirrha fits the only secure attestation of the ethnic *Κιρραῖοι* not related to the First Sacred War. At *Dem.* 18.152 the collective form *Κιρραῖοι* appears as a kind of pseudo-ethnic denoting the persons who in C4m had fraudulently settled the land consecrated to Apollo, the *Κιρραία χώρα* (18.149). The suggestion that the Kirrhaios struck coins is based on an erroneous reading (Williams (1972) 72), and the only epigraphical attestation of the ethnic is questionable (*SGDI* 2505 (C4–C3); cf. Rousset (2002) 33, 213).

The *Κιρραία χώρα* was part of a larger area called *γῆ ἱερά* (*CID* I 10.21; Aeschin. 3.118). This sacred area

comprised, to the south, a large part of the Desphina peninsula (Rousset (1996), (2002) 58–59), and to the east it bordered on the Phokian *poleis* of Antikyra (no. 173) and Ambryssos (no. 171) (*F.Delphes* III.4 280B–D (C2s); Rousset (2002) 168–69). Agriculture and, in general, any kind of exploitation of the territory consecrated to Apollo was prohibited (*CID* I 10.15–17; Aeschin. 3.108–9); only the herds of Apollo were allowed to graze the plain (Rousset (2002) 192–205). The prohibition was repeatedly ignored by the Phokians during the Second and Third Sacred Wars (Paus. 10.15.1 (C5m); cf. Parke (1939) 65–71; Diod. 16.23.3 (C4m)). In 340, in the prelude to the Fourth Sacred War, the Amphissaian were accused by Aischines of having built farms and brickworks in the plain, of having refortified and resettled the harbour town, and of having levied taxes from the visitors (Aeschin. 3.113, 119).

The only Classical classification of Kirrha as a *polis* occurs in this context. In a speech delivered in 340, Aischines reminds the Amphiktyonic Council of the oracle which triggered the First Sacred War in C6e: to fight the Kirrhaioi and Kragalidai (described as γέννη), to ravage their territory (χώρα) and their town (πόλις used in the urban sense), to expose the population to *andrapodismos*, to consecrate the land to Apollo, Artemis, Leto and Athena Pronoia, and to leave it untilled (Aeschin. 3.108; Fontenrose (1978) Q70). According to Aischines, the Council voted for war, and the Kirrhaioi and Kragalidai were exposed to the penalties described in the oracle, including the destruction of the *polis* (Aeschin. 3.109–11). It is unclear what *genos* denotes, and whether the *polis* is that of the Kirrhaioi or the Kragalidai, or a city common to both groups; see *supra* 402.

In addition to Aischines' account of the historical background to the Fourth Sacred War, we have a number of later historiographic accounts of the First Sacred War (Kallisthenes (*FGrHist* 124) fr. 1; Hippoc. *Ep.* 27, pp. 406–8, Littré; Diod. 9.16; Strabo 9.3.3–4; Plut. *Sol.* 11; Polyæn. 3.5, 6.13; Paus. 10.37.4–8; Pind. *Hyp. Pyth.* a and b). But these accounts are notoriously muddled and contradict one another (Robertson (1978); Lehmann (1980); Càssola (1980); Davies (1994)).

No Archaic remains antedating C6m have been found at Xeropighado (*supra* 419). No site fits the historiographic account of the events (siege and destruction of a fortified settlement), or the location (between Delphi and the Corinthian Gulf), or the chronology (C6e) (cf. Rousset (2002) 43–44). Another point to be taken into account is the marginal location of the port of Kirrha in relation to the peninsula of Desphina, which constituted the central part of

the sacred land. This topography does not fit the historical traditions (cf., however, Pind. *Hyp. Pyth.* b).

The state of the evidence speaks against accepting Kirrha as a *polis* destroyed in C6e. On the contrary, the sources seem to substantiate the opposite view: that, in the Archaic period down to C6e, there was no *polis* of the Kirrhaioi whose territory had been consecrated to Apollo. The *polis* status of Krisa/Kirrha in C6e is an aetiological invention which became prominent in the context of the Third and Fourth Sacred Wars in order to explain the obscure origin of the *hiera ge*. In that case, there is no reason to debate the historicity of such a *polis* any longer (see Krisa, *supra* 419).

184. Ledon (Ledontios) Map 55. Lat. 38.40, long. 22.40, but see *infra*. Size of territory: 1 or 2. Type: B. The only attestations of the toponym Λέδων, -οντος, ἦ are in Paus. 10.2.2 and 33.1, also our only source for the city-ethnic: Λεδόντιος (10.33.1). The C2 bronze coins inscribed ΛΕ must be assigned to Elateia (no. 180); cf. *supra* 417.

Ledon is retrospectively called a *polis* by Pausanias, both in the political and in the urban sense: he tells us that Ledon, one of the *poleis* among the Phokians, was the fatherland of the *strategos* Philomelos (πατρις δὲ αὐτῷ Λέδων τῶν ἐν Φωκεύσῳ ἦν πόλεων (10.2.2 (r357))); and we hear that Ledon was one of the *poleis* exposed to *dioikismos* in 346 (10.3.2). The urban sense is dominant at 10.33.1, where Pausanias reports that Ledon had once been a *polis*, but that in his time the few surviving Ledontians had abandoned their *polis* and settled near the Kephisos. Ledon's fate in 346 shows that it was a member of the Phokian *koinon* (Paus. 10.3.2). The absence of Ledon from Herodotos' account at 8.35 has induced some scholars to suppose that Ledon may have been the successor of one of the settlements that disappear in the course of the Classical period, e.g. Pedieis (no. 189) (Leake (1835) ii. 89), but such an assumption does not square with the documents found later (*Hell. Oxy.*; *CID* II 5; cf. *infra* 424).

The location of Ledon cannot be established with certainty. According to Paus. 10.33.1, it lay in the Kephisos valley: a road leads from Tithorea to the ancient site of Ledon, situated some 40 stades from the river Kephisos, where the Ledontians were settled in the time of Pausanias. In light of the uncertain nature of the physical remains, the identification of Ledon with the site of Gournes Aghia Marina (Dassios (1992) no. 32) is questionable. An identification with Modi remains more satisfactory (Tillard (1911) map; Klaffenbach (1937); Kirsten (1951) 716, 741; *Barr.*), although others have suggested an identification of Modi with Triteis

(no. 196) (Dassios (1992) no. 21; McInerney (1999) 281–83). At Modi are the remains of a small fortification (100 × 100 m) in isodomic masonry, presumably of the Classical or Hellenistic period, whereas Tillard (1911) 54 suggests 338 as the *terminus ante quem*. The remains fit Ledon better than Triteis, a *polis* that disappears completely from all sources after 480 (cf. no. 196).

185. Lilaia (Lilaieus) Map 55. Lat. 38.40, long. 22.30. Size of territory: 1 or 2. Type: B. The toponym is *Λίλαια*, ἡ (Hom. *Il.* 2.523; Theopomp. fr. 385; Paus. 10.3.1 (rC4m); *BCH* 45 (1921) iv.41 (C2f), Oulhen). The form *Λίλαιον* is late and is only found in literary sources (Ptol. *Geog.* 3.14.14; *Suda* A538). The city-ethnic is *Λίλαιεύς* (*IG* ix.1 111 (C4s)).

Lilaia is not explicitly called a *polis* in any Archaic or Classical source. Paraphrasing Theopompos (fr. 385) and quoting the Homeric Catalogue of Ships (*Il.* 2.523), Strabo classifies Lilaia as a *polis* in the territorial sense (9.3.16). Theopompos is cited for the information that the river Kephisos rose near Lilaia (ἐκ Λιλαίας . . . Φωκικῆς πόλεως). We cannot be sure, however, that the term *polis* stems from Theopompos (cf. Jacoby *ad loc.*). Lilaia is retrospectively listed as a *polis* in the urban sense at Paus. 10.3.1, describing the *dioikismos* of the Phokian *poleis* in 346, and at 10.33.3 Pausanias reports that the city was refounded (ἀνωκίσθη αὐτοῖς ἡ πόλις), presumably in C4l (*infra*).

The collective and external use of the city-ethnic is found in abbreviated form on some C5f coins (*infra*) and in an inscription of 322 recording the Phokians' payment of the fine imposed in 346 (*CID* II 108.6). For the individual and external use, see the [Λι]λαιεύς and the [Λι]λαιεύς who made a contribution to the sanctuary of Apollo in Delphi (*CID* II 2.1.6, 9 (C4f)) and Νικόδωρος Λίλαιεύς who in 337/6 witnessed the Phokians' payment of the fine imposed in 346 (*IG* ix.1 111.14 = *CID* II 38).

Lilaia is not mentioned by Hdt. 8.33, 35, among the cities destroyed by the Persians in 480. Several commentators have suggested a topographical or historical explanation for the absence of Lilaia from Herodotos' list. For Valckenaer's unconvincing conjecture *Λιλαιέων* instead of MSS *Αἰολιδέων* at Hdt. 8.35, see *supra* 409. Some have taken Herodotos' omission of Lilaia as proof that, in 480, the city was part of Doris and had joined the other Dorian cities in siding with the Persians (Hdt. 8.31; cf. Leake (1835) ii. 89–90). A slightly modified version of this explanation has induced Williams (1972) 16–18 to interpret the coins inscribed *ΛΙ* as an autonomous issue struck immediately after the Persian invasion. But the coins are federal, and the precise dating is

questionable, although stylistic criteria do point to a date in C5f (*infra*). The coins, the *dioikismos* in 346, and the recording of a Lilaian witnessing the payment of the Phokians' fine in 337/6 (*IG* ix.1 111) are sufficient proof that Lilaia was a member of the Phokian *koinon* in C5 and C4. Consequently, the inclusion of Lilaia as one of a Dorian *hexapolis* must be abandoned (Rousset (1989) 224–25).

After the *dioikismos* of 346 (Paus. 10.3.2) Lilaia was refounded (Paus. 10.33.3). Stamped tiles of the Hellenistic period (C3?) inscribed *ΛΙΛΑΙΕΩΝ* have been found in the sanctuary of Artemis at Erochos, from which Robert and Robert (*BE* (1978) 236) inferred that a *sympolitēia* had resulted in the incorporation of Erochos (no. 181) into Lilaia. In this context it may be worth noting that Lilaia is the only Phokian *polis* that had two eponymous officials, as attested in a series of documents of C3l (*F.Delphes* III.4 133–35). Later documents mention only one eponymous archon (*F.Delphes* III.2 125 (C2s)).

Lilaia bordered to the south on the foothills of Parnassos, to the east on a declivity dominating a small valley beneath which was the source of the river Kephisos. The lower town was presumably situated here (Frazer (1898) 411–14; Dassios (1992) 29–30 no. 5). Today only the uppermost part of the circuit wall is preserved (plan in Tillard (1911) 70). It is a kind of acropolis, and its connection with the circuit wall enclosing the lower town can no longer be determined. It is in isodomic masonry, with bevelled joints, and cannot be dated with certainty. A date after 338 was suggested by Tillard (1911) 75, a date c.356–46 by Ober (1992) 163–64. The wall is mentioned in connection with the siege of Lilaia by Philip V in C3l (Paus. 10.33.3).

It is uncertain, however, whether Archaic Lilaia was situated here. On a hill c.1 km north-west of the C4 fortifications are remains of a wall in polygonal masonry, perhaps of C6, covering an area of c.100 by 60 m (Keramopoulos (1917) 53 (C6?); Kase *et al.* (1991) 53 pl. 4.14 and 35; Dassios (1992) no. 3). Sherds of the early, middle and late Helladic periods have been found as well (Lazenby and Hope Simpson (1970) 44; *Teiresias* (1979) 19–27). Rather than a second-order settlement depending on Lilaia (Dassios (1992) no. 3), this site may well be Archaic Lilaia. Such a hypothesis is supported by the fact that excavations of the Classical site of Lilaia have produced no material of the Archaic period (*ArchDelt* 33 (1978) B1, 154–64). The hypothesis disproves the topographical argument adduced by Tillard (1911) 63 in order to explain the absence of Lilaia from Herodotos' account at 8.33–35 (*supra*).

Pausanias mentions an agora and a theatre, both undated (10.33.4). The source of the river Kephisos was traditionally

located at Lilaia (Hom. *Il.* 2.523; Theopomp. fr. 385; Paus. 9.24.1). It was the object of a cult performed by the Lilaians (Paus. 10.8.10), and a priest of Kephisos is mentioned in the documents of C3l mentioned above (*F.Delphes* III.4 133–35). A retaining wall in polygonal masonry near the source of the river may be dated to C6 (Frazer (1898) 414).

Some silver coins, usually dated to the period 480–421, were struck by the Phokian *koinon*, but instead of $\Phi\Theta$ the legend is $\Lambda\Lambda$, probably an abbreviated form of $\Lambda\iota\lambda\alpha\iota\acute{\epsilon}\omega\nu$, indicating that they were struck for Lilaia in particular. Denominations: triobol, diobol and obol on the Aiginetan standard. Types: *obv.* bull's head facing; *rev.* head of nymph or forepart of wild boar; legend: $\Lambda\Lambda$ (Head, *HN*² 343; Babelon, *Traité* II.3: 349–50 nos. 420–21).

186. Medeon (Medeonios) Map 55. Lat. 38.20, long. 22.40. Size of territory: probably 2. Type: B. The toponym is $\text{Μεδεών -ώνος, } \delta$ (*Syll.*³ 667.36 (C2 or C2f); Paus. 10.3.2; Steph. Byz. 439.19). The city-ethnic is Μεδεώνιος (*CID* II 37.3–4 (C4s); *SGDI* 2057.2 (C2e)). Medeon is not called a *polis* in any Archaic or Classical source, and the first explicit attestation of a $\pi\acute{o}\lambda\iota\varsigma$ Μεδεωνίων is in a C2e *sympoliteia* agreement between Medeon and Stiris (no. 193) (*Syll.*³ 667.6 (C2 or C2f); cf. Migeotte (1984) no. 28); but Medeon is retrospectively attested as a *polis* in the urban sense at Paus. 10.3.2, where it is listed among the Phokian cities dioikised in 346. The collective use of the city-ethnic is attested externally in an inscription of 322 recording the Phokians' payment of the fine imposed in 346 (*CID* II 108.1: $[\text{Μεδε}] \acute{\omega}\nu\iota\omicron\iota$) and internally in the C2f *sympoliteia* agreement (*supra*). For the individual and external use, see $\Theta\rho\alpha\sigma\acute{\iota}\beta\omicron\upsilon\lambda\omicron\varsigma$ $\text{Αἰσχρίωνος Μεδεώνιος}$, the *archon* of the Phokian *koinon* in 342 (*CID* II 37.3–4).

The fate of the city in 346 as well as the federal *archon* of 342 ensure that Medeon was a member of the Phokian *koinon*. There is no other public act of Medeon than the C2 *sympoliteia* agreement according to which Medeon disappears as a *polis* and becomes a *phratría* of Stiris.

The defence circuit surrounding the town of Medeon is built in an unparalleled type of regular polygonal masonry, with three towers in the north-western part (Camp (2000) 42). It measures 200 m (east–west) by 150 m (north–south) (Vatin (1969) 4 fig. 4). On the top of the hill are numerous terraces on which are the remains of some (public?) buildings. The cemetery was abandoned in C3m, according to Robert and Robert (*BE* (1970) 310) in connection with the *sympoliteia* which was probably entailed by a *synoikismos*. Only ruins were left in the time of Pausanias (10.36.6).

187. Neon (Ne(-))/Tithorea (Tithoreus) Map 55. Lat. 38.35, long. 22.40. Size of territory: probably 2. Type: A. The older toponym is Νέων (Hdt. 8.32.1) or Νεών (Paus. 10.2.4) or Νέωνες (Dem. 19.148) or Νεώνες (Androtion (*FGrHist* 324) fr. 23; Paus. 10.3.2; cf. Harding (1994) 119–20). The corresponding city-ethnic is attested only in abbreviated form (as ΝΕ) on some C5 coins (*infra*). Steph. Byz. 473.11 suggests the forms Νεώνιος and Νεωναῖος . The later toponym is $\text{Τιθορέα, } \eta$ (Hdt. 8.32, cited by Paus. 10.32.8–9, in both sources designating a summit of Parnassos). At Paus. 10.32.9 the toponym is taken to designate first the region and later the town, replacing the older toponym of Νεών . The form Τιθόρα is attested both in texts and in inscriptions (Plut. *Sull.* 15.5 (rC1); *IG* IX.1 190.2 (2nd century AD)). Τιθόρρα (*BCH* 45 (1921) III.29, Oulhen (C2f)) and Τιθύρρα (*CID* II 131.9 (C3)) are variant forms found only in inscriptions. The city-ethnic is Τιθορρεύς , attested only in inscriptions (*IG* XI.1 99.3 (C3l)); Τιθορεύς is attested both in inscriptions and in literary texts (*IG* IX.1 66.25 (C2m); Paus. 10.32.11). Τιθορρεύς is attested once (Paus. 9.17.4).

Neon is called a *polis* in the urban sense at Hdt. 8.32.1 and 8.33 and, retrospectively, at Paus. 10.3.2 and 32.9, in both authors in connection with Xerxes' invasion of Phokis in 480, when Neon was burnt to the ground. Pausanias mentions Neon as a *polis* in the urban sense in connection with the battle of Neon in 354 (10.2.4) and also in connection with the *dioikismos* of the Phokian cities in 346 after the Third Sacred War (10.3.2–3). The collective and internal use of the city-ethnic is attested in abbreviated form (ΝΕ) on C5 coins (*infra*). All attestations of the city-ethnic Τιθο(ρ)ρεύς are Hellenistic or later (*supra*).

The problem of whether Tithorea was built on the top of the ruins of Neon depends on how one interprets Hdt. 8.32.1 and the slightly different story told by Plut. *Sull.* 15.5 and Paus. 10.32.9. Pace Leake (1835) II. 79 and Ulrichs (1863) 119, the preferable solution is, with Tillard (1911) 56–60, to follow the account found in Pausanias: (a) in 480 Tithorea was the name of the peak of the mountain towering over the *polis* of Neon (Hdt. 8.32.1; Paus. 10.32.9); (b) the toponym Tithorea came to designate the surrounding region, i.e. the territory of the *polis* of Neon (Paus. 10.32.9: $\acute{\alpha}\pi\acute{\alpha}\sigma\eta$ $\tau\eta\eta$ $\chi\acute{\omega}\rho\alpha$); (c) the *polis* of Neon, demolished in 346, took the name of Tithorea when it was refounded on the same site by people returning from their temporary residence in the surrounding villages (Paus. 10.32.9: $\acute{\alpha}\nu\omicron\kappa\acute{\iota}\sigma\theta\eta\sigma\alpha\nu$ $\acute{\alpha}\pi\acute{o}$ $\tau\acute{\omega}\nu$ $\kappa\omega\mu\acute{\omega}\nu$). It follows that the attempts to locate Neon somewhere in the Kephisos valley must be abandoned (Dassios (1992) no. 26, who identifies Neon with Palai Thiva; see Pedieis (no. 189)). The date

of the refoundation is not known, and the earliest attestations of the new toponym (*CID* II 131) and city-ethnic (*IG* IX.1 99) are of C3.

The federal coins inscribed *NE*, as well the fate of the city in 346, ensure that Neon was a member of the Phokian *koinon*. The classification of Tithorea as a Boiotian *polis* at Steph. Byz. 623.14 is probably just a mistake: the Theban occupation of Neon during the Third Sacred War, from 354 to 349, was apparently not followed by a political annexation of the city (Paus. 10.2.4; Dem. 19.148; Buckler (1989) 44–45, 100–11).

The events of 349 (Dem. 19.148) suggest that the city was fortified, but the remains of fortifications still visible may well be of a later date. The north-eastern part of the wall with its towers is in a fine state of preservation, and the date is much debated (after 338: Tillard (1911) 59–61, 75; Winter (1971) 158; c.356–46: Ober (1992) 163–64). A deep gorge lay immediately west of the town, and the town was protected by a defence circuit on the northern and eastern sides only. The wall was built in isodomic masonry with interval towers, ten of which are still visible. The wall enclosed an area of max. c.580 m (north–south) × 250 m (east–west). Paus. 10.32.10 mentions a *peribolos* wall enclosing an ancient agora. He also mentions several undated sanctuaries and the tomb of Antiope and Phokos (10.17.4, 32.10). According to legend, the region of Phokis was named after Phokos, who settled at Tithorea (Paus. 2.4.3, 29.3, 10.1.1).

Some silver obols, usually dated to the period 480–421, were struck by the Phokian *koinon*, but with the legend *NE* on the reverse, probably an abbreviated form of the city-ethnic, indicating that they were struck for Neon in particular. Types: *obv.* bull's head facing; legend: *OΦ*; *rev.* forepart of wild boar in incuse square; legend: *NE* (Head, *HN*² 343; Babelon, *Traité* ii.3. 349–52 no. 422; Williams (1972) 42).

188. Parapotamioi (Parapotamios) Map 55. Lat. 38.35, long. 22.50. Size of territory: probably 2. Type: A. The toponym is *Παραποτάμιοι, οί* (Hdt. 8.33; Strabo 9.3.16; Paus. 10.3.1); the form *Παραποταμία, ἡ* is attested only twice (Strabo 9.3.16 and Steph. Byz. 503.4), and dates from a time when Parapotamioi had disappeared as a city and denoted a geographical area only. The city-ethnic is *Παραποτάμιος* (*Hell. Oxy.* 21.5; Paus. 10.33.8 (r586)). In the Homeric Catalogue of Ships the line *οἱ τ' ἄρα παρ' ποταμὸν Κηφισὸν ἔναλον* (*Il.* 2.522) is commonly interpreted as a periphrastic reference to the Parapotaimoi (Paus. 10.3.2, *contra* 10.33.7). The pseudo-ethnics *Ἐπικηφίσιοι* (schol. Hom. *Il.* 2.522) and *Παρακηφίσιοι* (Steph. Byz.

707.6) are derived from the line in Homer and have no independent authority. All indisputable attestations of the city-ethnic are in literary sources, and at *SEG* 3 408.7 [*T*]αρα[ν]τ[ίνωι] could be proposed as a possible alternative to [*IT*]αρα[πο]τ[αμίωι]. Parapotamioi is called a *polis* in the urban sense by Hdt. 8.33 in connection with Xerxes' invasion of Phokis in 480, when Parapotamioi was burnt to the ground, and by Paus. 10.3.1–2 in connection with the *διοικισμος* in 346. It is implicitly called a *polis* by *Hell. Oxy.* 21.5 in connection with the Boiotian campaign into Phokis in 395, where *polis* is used in the urban sense with the political sense as a possible connotation (Hansen and Nielsen (2000) 146). The collective and external use of the city-ethnic is attested in *Hell. Oxy.* 21.5. The only attestation of the individual and external use is Pausanias' mention of an *Αἰχμέας Παραποτάμιος*, allegedly a victor in the first Pythian Games of 586 (10.33.7). The merging of the toponym and the city-ethnic makes it difficult to distinguish between attestations of the city-ethnic (found at *Hell. Oxy.* 21.5: *ἡ τῶν Παραποταμίων χώρα*) and the toponym (found at Plut. *Sull.* 16.12: *ἡ ἀκρόπολις τῶν Παραποταμίων*).

Parapotamioi was situated on the north-western side of a hill called *Ἡδύλειον*, at a strategic point controlling the access to the Kephisos valley and close to the frontier of Phokis (schol. Dem. 19.148, nos. 313–14c, Dilts; cf. Daviero-Rocchi (1993)). Owing to its strategic position, it repeatedly became the battleground where the Phokian and Boiotian armies clashed during the Third Sacred War (Theopomp. fr. 385 = Strabo 9.3.16; schol. Dem. 19.20, no. 73b, Dilts; cf. Plut. *Sull.* 16.8).

At *Hell. Oxy.* 21.5 the territory is referred to as *ἡ τῶν Παραποταμίων χώρα*. According to Theopomp. fr. 385, Parapotamioi bordered on the *poleis* of Ambryssos (no. 171), Phanoteus (no. 190) and Daulis (no. 176). (Ambryssos is a mistake, but so far no satisfactory emendation has been suggested (Fossey (1986) 69; Marcotte (1988) 489; cf. the comment in the Budé edn. *ad loc.*).

Parapotamioi was never rebuilt after the *διοικισμος* in 346, but its population was distributed between the other *poleis* refounded in the 330s by the Boiotians and Athenians (Paus. 10.33.8 (rC4s); cf. Plut. *Sull.* 16.12; Strabo 9.3.16). The *polis* ceased to exist, and its territory was presumably divided among some or all of the neighbouring *poleis*.

Parapotamioi had a small defence circuit of c.100 m × 80 m (Fossey (1986) 69–71; Dassios (1992) no. 51). The wall was built of small stones in Lesbian polygonal masonry. The workmanship is undistinguished, and the wall is difficult to date (Frazer (1898) 419; Fossey (1986) 69). This defence

circuit was retrospectively described as the *akropolis* of Parapotamioi by Plut. *Sull.* 16.12.

189. Pedieis (Pedieis) Map 55. Lat. 38.40, long. 22.40, but see *infra* for a discussion of the unresolved location. Size of territory: probably 2 (if identified with Palaia Phiva). Type: A. The toponym is *Πεδιείς, οί* (Hdt. 8.35; *Hell. Oxy.* 21.5). The city-ethnic is *Πεδιεύς* (*CID* II 5.11.54: *Πε[διε]ίς* (373–346)). Pedieis is called a *polis* in the urban sense at Hdt. 8.33 in connection with Xerxes' invasion of Phokis in 480, when the town was burnt to the ground, and it is listed as a *polis* in the political sense in the Delphic *naopoioi* accounts, where the Pedieis appear as contributors in a list dated between 373 and 346 (*CID* II 5.11.55) and headed by the formula: *ταῖδε τῶμ πολλῶν ἤγρικαν* (II.25–26). This list testifies to the collective and external use of the city-ethnic.

In 395 the Boiotians overrun the plain round Elateia and Pedieis (no. 189), and the population settled in the plain (*Hell. Oxy.* 21.5). Pedieis is not listed by Pausanias among the *poleis* exposed to *διοικισμός* in 346; but that Pedieis was still a member of the Phokian *koinon* in C4f can be inferred from the Boiotian attack in 395 and the occurrence of the city-ethnic in *CID* II 5.11.54: *Φωκεῖς Πε[διε]ίς*), dated between 373 and 346. The presumption is that Pausanias omitted the city from his list by mistake, and that it disappeared for good in 346 (cf. Parapotamioi (no. 188)). But, depending on the date of *CID* II 5, Pedieis may have disappeared earlier, which would also explain Pausanias' silence. For some historians' unconvincing link between Ledon (no. 184) and Pedieis, see *supra* 420.

Pedieis is still unlocated. The toponym as well as the account of *Hell. Oxy.* indicate that the city was situated in the plain, and probably adjacent to Elateia (no. 180). In Hdt. 8.33, Pedieis is placed between Neon (no. 187) and Triteis (no. 196), itself an unlocated town. Consequently, Pedieis is normally identified with the ancient site of Palaia Phiva (Schober (1924) 38; Klaffenbach (1937); *Barr.*). The remains described by early travellers are no longer visible (Ulrichs (1863) ii. 119; Frazer (1898) 407; Dassios (1992) no. 26): *viz.* a quadrangular defence circuit with a side of c.790 m and interval towers, semicircular on the outside and rectangular on the inner side. Such a description does not fit an Archaic wall, and accordingly Klaffenbach (1937) preferred to identify this site with the later site of Ledon (Paus. 10.33.1). But that remains a doubtful hypothesis. The recently described defence circuit at Vourlia (Rousset (1999) no. 16) is an alternative candidate according to Dassios (1992) no. 20.

190. Phanoteus, Panopeus (Phanoteus, Panopeus) Map 55. Lat. 38.30, long. 22.50. Size of territory: 1 or 2. Type: A. The

toponym is *Πανοτεύς* (Hom. *Il.* 2.520; Ps.-Skylax 61; Ephor. fr. 31a), *δ* (Paus. 10.4.2), *ῆ* (*Etym. Magn.* 111.25) or, in the plural, *Πανοπέεις* (Hdt. 8.34; Strabo 9.3.12 = Ephor. fr. 31b) or *Φανοτεύς* (Thuc. 4.89.1; Strabo 9.3.14) or *Φανατεύς* (*CID* I 9.D.29–30 (C4m); *IG* VII 3376.9 (C2)). A variant form, *Φανοτεία*, is exclusively attested in late authors (Polyb. 29.12.7; Livy 32.18). For other forms invented by the grammarians, see Steph. Byz. 657.17–18. The city-ethnic is identical with the toponym, and is either *Πανοτεύς* (Hdt. 8.35.1; Theopomp. fr. 385) or *Φανοτεύς* (*Hell. Oxy.* 21.5; *CID* II 24.11.14 (C4s); *SEG* 42 479.4 (C3)) or *Φανατεύς* (*SGDI* 1770.1 (C2f); *IG* VII 3376.12 (C2)). According to Strabo 9.3.14, *Πανοτεύς* is the older, and *Φανοτεύς* the later, form of the toponym, and the same observation applies to the city-ethnic. *Πανοτεύς* is found in literary sources only, *Φανοτεύς* both in literary sources and in inscriptions, whereas *Φανατεύς* is an epichoric variant form attested exclusively in inscriptions. At *SEG* 3 345.3, the restoration of [*Παν*]οπέια is not beyond suspicion.

Phanoteus is called a *polis* in the urban sense, with the political sense as a connotation, at Hdt. 8.35.1 in connection with Xerxes' invasion of Phokis in 480, when the town was burned to the ground (Hansen (2000) 175–76), and at *Hell. Oxy.* 21.5 in connection with the Boiotian campaign into Phokis in 395 (Hansen and Nielsen (2000) 146). The urban sense occurs at Ps.-Skylax 61 and, retrospectively, in Paus. 10.3.1–2 in connection with the *διοικισμός* in 346. The collective and external use of the city-ethnic is found at Hdt. 8.35.1; *Hell. Oxy.* 21.5; *SEG* 42 479.4 (C3). The individual and external use is applied to the Phokian from Phanoteus who in 424 told the Lakedaimonians about the Athenian plan to attack Boiotia (Thuc. 4.89.1) and to an exile who in C4s contributed to the rebuilding of the temple in Delphi (*CID* II 24.11.14).

The territory of Phanoteus is called *ῆ Φανοτίς* at Thuc. 4.76.3, and is designated by the toponym at Hdt. 8.34; it is indirectly termed *χώρα* at *Hell. Oxy.* 21.5. Phanoteus is the easternmost *polis* of Phokis, bordering on Boiotian Chaironeia (no. 201) (Thuc. 4.76.3; Plut. *Lys.* 29.4 (rC4e); Paus. 9.40.12). A C3 inscription lays down the frontier between Phanoteus and Stiris (no. 193), situated south of Mt. Helikon (*SEG* 42 479), and according to Strabo 9.3.14, Phanoteus bordered on “the region round Lebadeia” (no. 211). In 395 the body of Lysandros was carried over the frontier of Boiotia and buried in the territory of Phanoteus (Plut. *Lys.* 29.4), testimony of Lakedaimonian alliance with Phokis in general rather than with Phanoteus in particular.

The Boiotian attack on Phanoteus in 395, as well as the *dioikismos* in 346, ensure that the *polis* belonged to the Phokian *koinon* in C4. Membership in C5, too, is to be assumed, but there is no explicit evidence (Thuc. 4.76.3, 89.1).

The eponymous hero of Phanoteus was Phanoteus, son of Phokos (Steph. Byz. 500.19; Paus. 2.29.2), and this foundation myth can be traced back to Archaic and Classical sources (Hom. *Il.* 23.665; Soph. *El.* 45; Pl. *Ion* 533B, *Resp.* 620C).

Phanoteus is situated on a steep-sided hill measuring c.600 m by 100 m, described as an *ἀκρᾶ* by Polyb. 5.96.5. From *Hell. Oxy.* 21.5 it can be inferred that the site was fortified in 395. On the eminence are two types of remains: (a) on the southern slope is a stretch of a wall in “cyclopean” masonry, often interpreted as traces of a Mycenaean acropolis (Lazenby and Hope Simpson (1970) 42–43; Fossey (1986) 63–64; cf. Hom. *Il.* 17.307–8; Paus. 10.4.2); (b) apart from stretches where the escarpment offers sufficient protection, the entire hill is enclosed by a defence circuit, with eight interval towers on the western and southern sides. The length of the *peribolos* was seven stades according to Paus. 10.4.2. The wall was built partly in irregular trapezoidal masonry, unique in Phokis, and partly in isodomic masonry (Kirsten (1949a) 641–47; Fossey (1986) 63–64). A part of the wall may correspond to an internal *diateichisma*. This fortification, of which the western and southern parts are well preserved, cannot be dated with certainty: Camp (2000) 45 suggests the late 340s; but according to Winter (1971) it is “post Chaironeian”, see *supra* 401. The early travellers describe a section of a wall which is no longer visible, perhaps the defence circuit of the lower town (Leake (1835) ii. 110–11; Frazer (1898) 218; Camp *et al.* (1997) 267 n. 29). The occupation of the suburbs (*proastion*) by the Boiotians, mentioned at *Hell. Oxy.* 21.5, indicates that the lower town was unfortified in 395. The famous passage in Paus. 10.4.1 about the absence of public buildings of Phanoteus in his own time carries no weight as evidence for the Archaic and Classical periods (Alcock (1995) 326–27).

191. Phlygonion (P(h)lygoneus) Map 55. Lat. 38.30, long. 22.45. Size of territory: probably 2. Type: B. In literary sources the toponym is *Φλυγόμιον*, *τό* (Paus. 10.3.2 (rC4m); Steph. Byz. 668.11; cf. *Phlegya* at Plin. *HN* 4.7.12). The variant form *Φλυγονία*, suggested by Steph. Byz. 668.12, is either a mere invention of the grammarians or a misinterpreted form of the name of the territory. In inscriptions of C3l and C2e the city-ethnic is invariably *Πλυγονεύς* (*SGDI* 2049 (C3l); for a

list of attestations, see Daux (1936) 234–58; Lerat (1952) i. 59–60), but in a C2m regulation of the frontiers the city-ethnic is *Φλυγονεύς* (*F.Delphes* III.2 136.22) or *Φλυγωνεύς* (*F.Delphes* III.2 136.29). The only attestation of the city-ethnic in an inscription of the Classical period is restored, viz. [*Φλυγ*]ονεῖς or [*Πλυγ*]ονεῖς in *CID* II 108.10 (322). *Φλυγονιεύς* and *Φλυγόμιος* are found only in Steph. Byz. 668.12 and are presumably invented by the grammarians.

Phlygonion is recorded in Pausanias’ list of *poleis* exposed to *dioikismos* in 346 (10.3.2). Pausanias’ information is confirmed by the Delphic accounts, where the Phlygonians (*[Φ/Πλυγ]ονεῖς*) are recorded among the Phokian communities that paid the annual fine (*CID* II 108.10 (322)). Both sources ensure that Phlygonion belonged to the Phokian *koinon* in C4. The collective and external use of the city-ethnic is attested in this inscription. The individual and external use is attested in the Delphic manumission inscriptions of C3l/C2e (*SGDI* 2049.3, 20).

The existence of two different city-ethnics—viz. *Πλυγονεύς* versus *Φλυγονεύς* derived from *Φλυγόμιον*—has for a long time induced commentators to postulate the existence of two different cities: the Phokian city of *Φλυγόμιον* inhabited by the *Φλυγονεῖς*, and the Lokrian city of **Πλυγόμιον*, an unattested toponym derived from the city-ethnic *Πλυγονεύς* (Schober (1924) 39–40; Daux (1936) 234–58; Lerat (1952) i. 59–61; *contra* Colin at *F.Delphes* III.2 136), but both city-ethnics do in fact denote the same city (Rousset (1999) 43 n. 37 and (2002) 20–27).

Although the Persians must have passed Phlygonion on their march in 480 from Phanoteus to Delphi, the city is absent from Herodotos’ list at 8.35. But no argument from silence can be based on this chapter. The *dioikismos* of Phlygonion in 346 (Paus. 10.3.2), as well as the Phlygonians’ contribution to the fine in 322 (*CID* II 108) ensure that Phlygonion was a member of the Phokian *koinon*. The inscriptions of C2f show that, in 191/90, all Phlygonians had become Delphians (Daux (1936) 252–53). The C2m regulation of the frontiers between the Delphians (no. 177) and, on the other hand, the Ambrysians (no. 171) and Phlygonians shows that the two latter cities by then were united in a *sym-politeia* (*F.Delphes* III.2 136).

The ruins at Bania, where **Aiolidai* has often been located (no. 170), are to be identified with Phlygonion (Robert and Robert, *BE* (1941) 8; Rousset (1999) 43 n. 37, (2002) 45). At the site is a small defence circuit in isodomic masonry, but its poor state of preservation does not allow of any more precise description (Schober (1924) 22; Dassios (1992) no. 113; Rousset (2002) 63 no. 69).

192. Po[---] Map 55. Unlocated. Type: C. The preamble of a payment in 337/6 of the fine imposed on the Phokians in 346 lists as one of the archons of the Phokians a *Κρίτωνος Πο[---]ου* (CID II 38.5). The letters *Πο[---]ου* must be a city-ethnic in the genitive case, but no other source testifies to a Phokian city whose city-ethnic fits *Πο[...4-5...]*ος. So far no satisfactory restoration or emendation has been suggested. J. Bousquet's suggestion at CID II 38 is unconvincing. The place called *Πούρειον* (Syll.³ 826.III.34 = *F.Delphes* III.4 280.C.34) from which he derived *Πο[υρεάτ]ου* is certainly not the name of a community. We have a choice among four possibilities: (a) an error by the mason; (b) a dialectal variant of a well-known Phokian ethnic *Π/Βο[υλιδί]ου*; (c) an ethnic of an unlocated *polis* of central Greece called *Πο[ταναί]ου* (Lerat (1952) i. 62–64, *contra* Rousset (2002) 15, 38); or (d) an ethnic of an otherwise unknown Phokian *polis*.

193. Stiris (Stirios) Map 55. Lat. 38.25, long. 22.45. Size of territory: 2. Type: B. The toponym is *Στίρις*, -ιος (Syll.³ 647.24 (C2f); Paus. 10.3.2 (r346)) or *Στείρις* (IG IX.1 36.1 (C2f); Plut. *Cim.* 1.9). The city-ethnic is *Στίριος* (SGDI 1727.6 (C2f); Syll.³ 647.15) or *Στείριος* (SEG 42 479.3 (C3l); Syll.³ 647.5). The variant form *Στιριεύς* is attested once in an inscription of the Roman Imperial period (IG IX.1 48.7 (third century AD), and *Στιριότης* is found once (Paus. 10.3.2). Neither the toponym nor the city-ethnic is attested prior to the Hellenistic period; but Stiris is listed by Paus. 10.2.3 as one of the *poleis* exposed to *διοικισμός* in 346, which shows that, in C4m, it was a member of the Phokian *koinon*.

The collective use of the city-ethnic is attested internally in a *sympolitēia* agreement with Medeon (no. 186) of C2f? (Syll.³ 647) and externally in a C3 inscription which regulates the frontier between Stiris and Phanoteus (no. 190; SEG 42 479 (C3l)). The individual and external use is found in a Delphic manumission inscription of C2f (SGDI 1727).

Paus. 10.35.10 records a sanctuary of Demeter Stiritis with a temple in mudbrick in which was a very old image of the goddess. The epithet indicates that Demeter was the protective divinity of Stiris.

Stiris is situated on a low rocky hill, c.700 m long and 100 m across. Along the east side are the remains of an undated defence circuit in isodomic masonry (Fossey (1986) 32–33; Dassios (1992) no. 75; McInerney (1999) 319–20).

194. Teithronion (Teithronios) Map 55. Lat. 38.40, long. 22.35. Size of territory: probably 2. Type: A. As attested in inscriptions, the toponym is *Τεῖθρων* (SEG 1 198.5 (C4l/C3e); SEG 16 351.3 (c.200); SGDI 1983.3–4 (C2e)); in literary sources

it is *Τεθρώνιον*, τό (Hdt. 8.33 most MSS; Paus. 10.3.2) or *Τεθρόνιον* (Hdt. 8.33, RSV) or *Τιθρώνιον* (Paus. 10.33.12; Steph. Byz. 624.6). On *Θρόνιον* at Ps.-Skylax 61, see Nielsen (2000) 107–8. The city-ethnic is *Τεῖθρώνιος* (CID II 108.7, 322; SGDI 1983.13 (C2e)); in CID II 5.11.50 (C4f) it is combined with the regional ethnic: *Φωκεῖς Τεῖθρώνιοι*.

Teithronion is called a *polis* in the urban sense at Hdt. 8.33 and, retrospectively, at Paus. 10.3.1 and 2, in both passages in connection with Xerxes' invasion of Phokis in 480, when the town was burned to the ground. Paus. 10.3.2–3 treats Teithronion as a *polis* in the urban sense in connection with the *διοικισμός* of the Phokian cities in 346 after the Third Sacred War. The city is listed as a *polis* in the political sense in the Delphic *naopoioi* accounts, where the Teithronioi appear as contributors in a list (CID II 5.11.50) headed by the formula: *ταῖδε τῶμ πολίων ἤνικαν* (II.25–26). The collective use of the city-ethnic is attested externally in one of the receipts of the Phokian fine (CID II 108.7 (322)), and internally in a proxeny decree of C3–C2 (IG IX.1 222.10); the individual use is attested externally in a C4–C3 proxeny decree from Delphi (no. 177) (SEG 1 198.5).

The *διοικισμός* of Teithronion in 346 (Paus. 10.3.2), as well as the city's contribution in 322 to the payment of the fine (CID II 108.7), ensure that Teithronion was a member of the Phokian *koinon*.

Teithronion is situated north of the river Kephisos at a bend of the river which surrounds the southern part of the city. It was protected by a defence circuit (c.400 × 200 m) in pseudo-isodomic masonry, with interval towers (Frazer (1898) 422–23; Dassios (1992) no. 14).

Tithorea (Tithoreus) See **187. Neon** (Ne(-)).

195. Trachis (Trachinios) Map 55. Lat. 38.20, long. 22.45, but see *infra* for a discussion of the unresolved location. Type: B. The toponym is *Τραχίν*, ἡ (Strabo 9.3.14) or *Τραχίς* (Paus. 10.3.2). The only attestation of a city-ethnic is at Strabo 9.3.14: *οἱ δ' ἐνοικοῦντες Τραχίνιοι*. Neither the toponym nor the city-ethnic is attested prior to the Hellenistic period; but Trachis is listed by Paus. 10.2.3 as one of the *poleis* exposed to *διοικισμός* in 346, which shows that, in C4m, it was a member of the Phokian *koinon*.

The location of Trachis is unknown. The only indication is provided by Strabo, who places Trachis near Lebadeia (no. 211) (9.3.14: *πλησίον δὲ Λεβαδείας καὶ ἡ Τραχίν*). This piece of evidence leaves us with a choice between three different sites: Kyriaki (Fossey (1986) 35–39; Barr.), Kastro-Tseresi (Tillard (1911) 66–68; Fossey (1986) 54–56; Dassios (1992) no. 62) and Korakolithos (Dassios (1992) no. 57;

McInerney (1999) 300–2). Kastraki should probably be identified with Helikonioi (*supra* 403). At Kastro-Tseresi there is a small enclosure of roughly triangular shape, but only the north-western side of c.100 m and the north-eastern side of c.180 m are fortified. The longer southern side is protected by steep cliffs. The wall is in rusticated isodomic masonry which cannot antedate the Classical period, and no traces of the Archaic period have been found. Thus, the identification with *Aiolidai as proposed by Tillard (1911) 66–68 is dubious, whereas the site might fit Trachis (Rousset (1999) 43 n. 46, but more cautiously (2002) 45–46). The topographic information found in Strabo, however, makes a third site a better candidate: *viz.* Korakolithos. A small eminence is all that is still visible (Fossey (1986) 59; Dassios (1992) no. 57), but the existence of a settlement is indicated by a C5f–C2f cemetery found c.1 km to the west (*ArchDelt* 33 (1978) 152). Furthermore, Lolling mentions the remains—no longer visible—of a defence circuit of 240 “paces” (= 200m?) with the foundations of a tower. However, the regulation of the frontier between Phanoteus (no. 190) and Stiris (no. 193) (*SEG* 42 479) is not easily compatible with a C3 *polis* situated at Korakolithos; cf. the map in Rousset and Katzouros (1992) 211.

196. Triteis Map 55. Unlocated. Type: A. Triteis is known exclusively from one passage in Herodotos: at 8.35, enumerating the Phokian *poleis* burnt down by the Persians in 480, Herodotos records *Τριτεῖς* between Pedieis (no. 189) and Elateia (no. 180). The city is not mentioned in any other source (Lerat (1952) i. 51 n. 7). At 8.32.2 Herodotos tells us that many Phokians found refuge at Amphissa (no. 158) in Lokris, and Steph. Byz. 637.16 reports that there was a *Τρίτεια* situated between Phokis and West Lokris. On the basis of these two pieces of evidence Oldfather (1939) suggests that Lokrian Tritea, attested from C5m only, may have been founded by Triteians coming from Phokis; but cf. Klaffenbach (1937).

The location of Triteis is discussed by McInerney (1999) 281–83. The text of Herodotos suggests a location west of Elateia, which has induced some scholars to identify Triteis with the fortified enclosure at Modi (Lolling (1989) 90; Schober (1924) 43). But the chronology of this small fortification fits Ledon (no. 184) better than Triteis. Alternatively, Triteis has been located between Modi and Elateia at the village of Turkochorion-Panagitsa (Kirsten (1951) 741 no. 106, followed by Dakoronia, *ArchDelt* (1979) 194). To date, however, the only remains found there are of a cemetery used from the Geometric to the Classical period (*ArchDelt* 34

(1979) 193–94, 36 (1981) 222, 43 (1988) 232–33, 44 (1989) 221). The recent discovery of a fortification 2 km south-east of Modi (Dassios (1992) no. 20; cf. *supra* Pedieis) invites a reassessment of the issue.

197. Troneia (Troneieus) Map 55. Lat. 38.45, long. 22.40. Size of territory: 1 or 2. Type: B. The toponym is *Τρώνεια*, ἡ, attested in a Delphic manumission act to designate the place of origin of the slave (*SGDI* 2132.3 (188/7)). Steph. Byz. 213.16 and Hdn. III.1 276.35 both mention a *Γρώνεια*, πόλις *Φωκίδος*. This *Γρώνεια* is usually interpreted as a misreading of *Τρώνεια* (Robert (1960) 74–75; cf. *supra* 403, s. v. Groneia). The masculine form of the city-ethnic has become an issue. In an inscription of 322 recording the Phokians’ payment of the fine imposed in 346 (*CID* II 108), one of the contributing communities is recorded as [---] *ΤΡΩΝΕΙΕΙΣ* (9), usually interpreted as the city-ethnic *Τρωνειεῖς*. But an equally possible restoration is [---] *Πα*] *τρωνειεῖς*, derived from the toponym *Πατρωνίς* attested in Plut. *Sull.* 15.6 (Robert (1960) 75). Patronis, however, seems to be a ghost toponym (*supra* 404), from which it follows that the Troneieis are in fact attested in the inscription.

The only sources to classify Troneia as a *polis* are Steph. Byz. and Herodian (accepting the conjecture *Τρώνεια* for *Γρώνεια*). Furthermore, Troneia is absent from Pausanias’ list of *poleis* exposed to *διοίκισμος* in 346 (10.3.1–2), but its contribution to the fine in 322 ensures that it was a member of the Phokian *koinon* and undoubtedly a *polis*. The external use of the city-ethnic is attested collectively in the payment of 322 (*CID* II 108.9). The individual and external use of the city-ethnic can be deduced from a manumission of C2s in which the origin of a slave is recorded as *τὸ γένος Τρωνίδα* (*SGDI* 2130.3).

Paus. 10.4.10 mentions a part of the territory of Daulis (no. 176) called *Τρωνίς* in which was situated the shrine of a founder hero, either Xanthippos or Phokos, who reappears in a second century AD inscription from Daulis (*IG* IX.1 61.50). This *Tronis* is undoubtedly the name of the territory of the city of Troneia, and the presumption is that, in the time of Pausanias, Troneia had been incorporated into Daulis (Robert (1960) 78–80).

Interpreting the three sources (Paus. 10.4.10; Plut. *Sull.* 15.6; *IG* IX.1 61), all commentators agree that Troneia should be located in the neighbourhood of Daulis, and two identifications have been suggested: (a) Kato Tseresi, south of Daulis, and (b) Ag. Marina west of Daulis.

Re (a): the historians who distinguished Troneia from Patronis suggested the site of Kato Tseresi lying south of

Daulis (Kirsten (1939)). Considering that this site can be identified with a small fort only, Robert (1960) 78–82 cautiously suggested a location somewhat south of Daulis (*contra* McInerney (1997) 197–99).

Re (b): a preferable site for Troneia has been proposed by historians who identify Patronis with Troneia (Tillard (1911) 64–66; Kirsten (1951) 713; cautiously Fossey (1986) 53; *Barr.*) and thus follow the topographical indication given by Plut. *Sull.* 15.6. This site is identified with Patronis by historians who, wrongly in my opinion, distinguish between Troneia

and Patronis (Schober (1924) 38; Kirsten (1949*b*); Robert (1960). The site in question is at Ag. Marina, where there are remains on a rocky hill of which only the northern and eastern part had to be fortified. The wall is in two different types of masonry: the curtain is in joggled trapezoidal masonry, and the towers in isodomic masonry. The wall and the western escarpment enclose an area of c.100 m north–south by 150 m west–east and rise above the remains of a grid-planned lower town.

BOIOTIA

MOGENS HERMAN HANSEN

I. The Region

The name of the region is *Βοιωτία* (Hes. fr. 181; Ar. *Ach.* 160; Thuc. 1.12.3; *SEG* 28 461.28 (287–280)). The ethnic is *Βοιωτός* (Hom. *Il.* 2.494; Ducat (1971) no. 257) or *Βοιώτιος* (Hom. *Il.* 14.476; *CID* II 31.93 (C4f)). The collective use of the ethnic is attested externally in the epigram commemorating the Athenian victory over the Boiotians in 506 (*ἔθνεα Βοιωτῶν*: *IG* I³ 501 = *CEG* 179, restored from Hdt. 5.77.3–4) and internally on the obverse of the coins (*BOI*, *BOIΩ*: Head (1881) 21, 54) and in the C4f Boiotian proxy decrees (*πρόξενον εἶμεν Βοιωτῶν*: *IG* VII 2407–8). For the individual and external use, see [*Ε*]πιδδαλος τὸ π[ό]λλονι *Βοιώτιος* ἐχ[ε]ς *Ἐρχ[ο]μενῶ*] (Lazzarini (1976) 374 (C5f)); for the internal use, see *Ἐϋβουλος Παναρμόστου Βοιώτιος* (*BCH* 99 (1975) 51.4 (C3f)). The Boiotian region is described with the terms *χώρα* (Hdt. 8.44.1; *Hell. Oxy.* 19.2) or *γῆ* (Soph. fr. 314.31, Radt; Hdt. 5.57.1), and from c.500 the term *ἔθνος* is used of the people (*IG* I³ 501; Hdt. 9.31.5–32.1; *Hell. Oxy.* 19.4; Aeschin. 2.116; Bakhuizen (1989)).

In the Homeric Catalogue of Ships, Orchomenos (no. 213) and Aspledon are described as Minyan settlements outside Boiotia (Hom. *Il.* 2.511; cf. Thuc. 4.76.3). In later sources both Orchomenos (Hdt. 8.34.1; Thuc. 1.113.1) and Aspledon (Strabo 9.2.41; Paus. 9.38.9) were considered Boiotian, and in the Archaic and Classical periods the frontiers of the whole region were the following: Boiotia bordered on Phokis, and the westernmost Boiotian *poleis* were Orchomenos (Hdt. 8.34.1), Chaironeia (no. 201) (Hecat. fr. 116; Thuc. 4.76.3), Lebadeia (no. 211) (Strabo 9.3.14) and Chorsiai (no. 202) (Ps.-Skylax 38). To the north Boiotia bordered on East Lokris, and the frontier must have run north of Hyettos (no. 207) and Kopai (no. 209) (no explicit evidence, Etienne and Knoepfler (1976) 197) and west of Anthedon (no. 200) (Strabo 9.2.13; cf. Hom. *Il.* 2.508). The easternmost Boiotian settlement was Delphinion in the Oropia (Strabo 9.2.6). Oropos (no. 214) was contiguous with Attika (Thuc. 4.99.1); it was under Athenian domination in the years c.500–411, c.375–366 and 338–322, but never

integrated into Attika. Moving westward from Oropos (Heracl. Cret. 7–8, *GGM* 1.101) the Boiotian *poleis* bordering on Attika were Tanagra (no. 220) (Thuc. 3.91.3–5; Dem. 18.96), Hysiai (no. 208) (Hdt. 6.108.6) and Plataiai (no. 216) (Hdt. 6.108.3). In the years around 500 Hysiai was an Attic “deme” (Hdt. 5.74.1), and Plataiai may have been part of Attika as well (see *infra* 450). Eleutherai was originally a Boiotian settlement (Polemon fr. 2; Steph. Byz. 265.10) incorporated into Attika (Paus. 1.38.8) in, probably, 506 (Connor (1989) 8–16). After the Athenian defeat at Koroneia in 447, it became a Theban military outpost (Schachter (forthcoming)). It is a moot point whether it belonged to Boiotia once again in C4 (for: Camp (1991); against: Munn (1993) 8–9). Towards the Isthmus Boiotia bordered on Megaris, and the frontier ran along the ridge of Kithairon between Boiotian Kreusis and Megarian Aigosthena (no. 224) (Xen. *Hell.* 5.4.17–18).

The earliest attestation of a liaison among Boiotian *poleis* is a C6e dedication to Apollo Karykaios in Tanagra (no. 220) by a group of soldiers from Thebes (no. 221) (*LSAG* 94 no. 7; cf. Schachter (1996b) 16–17). Collaboration between the Boiotian *poleis* is attested in numerous sources of C6l. (a) Several Boiotian *poleis* began to strike coins in C6l, and from the very beginning all coins except those struck by Orchomenos (no. 213) had a common obverse type: the “Boiotian” shield. These early coins were struck by Akraiphia (no. 198), Hyettos (no. 207), Koroneia (no. 210), Mykalessos (no. 212), Tanagra (no. 220), Thebes (no. 221) and Thespiiai (no. 222). (b) From c.520 onwards Herodotos and other sources refer to the Boiotians and make it clear that in war and diplomacy the Boiotian cities often acted in concert (Hdt. 5.74.2, 77.1–4, 6.108.4–5; Thuc. 3.65.2). (c) A Delphic inscription from c.500 records a treaty between the Boiotians and the Lokrians (*SEG* 41 506), and an Athenian dedication of 506 commemorates a victory over the Boiotians (*IG* I³ 501 = *CEG* 179). (d) Boiotarchs are attested in connection with Mardonios’ invasion of Boiotia in 479 (Hdt. 9.15.1). This is commonly taken as evidence of an early federation or league led by Thebes and subsequently

dissolved in connection with the subjection of that city in 479 (Busolt and Swoboda (1926) 1413; Larsen (1968) 29–32). An alternative view is that the federation or league persisted, and from some coins of C5f with the legends *T* or *TA* (*obv.*) and *BO* or *BOI* (*rev.*) it is inferred that Tanagra took the place of Thebes as the head of the union (Buck (1979) 141–42; Beck (1997) 89).

A proper Boiotian federation, however, cannot be traced further back than C5m, and I shall here follow the generally accepted terminology and refer to the First Federation 446–386, the Second Federation 378–338, and the Third Federation 338–171.

(1) The constitution of the First Federation is known from *Hell. Oxy.* 19, describing its organisation in 395 (Salmon (1978)). The earliest explicit references to the federation are Thucydides' mention of Boiotarchs at the battle of Delion in 424 (Thuc. 4.91), and his mention of the Boiotarchs and the federal council in connection with the Boiotians' refusal to join an alliance with Corinth (no. 227) and Megara (no. 225) (Thuc. 5.38.2). There is no explicit evidence antedating the Peloponnesian War, but it is commonly (and reasonably) believed that this federation was formed in 447/6 after the Athenian defeat at Koroneia (Thuc. 1.113), and that Plataiai (no. 216) controlled two of the eleven Boiotian districts in the period down to 431 (*Hell. Oxy.* 19.3). The federation was dissolved in 386 in consequence of the King's Peace (Xen. *Hell.* 5.1.33).

(2) The federation was re-established in 378 (Xen. *Hell.* 5.4.63, 6.1.1; Isoc. 14.9; Diod. 15.28.1; cf. Buckler (1980) 15–45), and new Boiotarchs elected (Plut. *Pel.* 13.1; *Ages.* 24.6; cf. Buckler (1979)). The dissolution of this federation after the battle of Chaironeia in 338 is inferred from late sources (Diod. 16.87.3; Paus. 9.1.8, 4.27.10). A dissolution is rejected by Busolt and Swoboda (1926) 1431 n. 4, followed by Larsen (1968) 175–80. A re-establishment of the federation is assumed by Roesch (1965) 46–71, followed by Etienne and Knoepfler (1976) 241–42.

(3) That the defeat of Thebes in 338 and its destruction in 335 resulted in a reorganisation, perhaps even a re-establishment of the federation, is indicated (a) by the transfer of the capital of the federation from Thebes to Onchestos, *infra* 435; (b) by a new board of *aphedriateuontes*, attested from C3e onwards (*IG VII* 2723–4b; for the date, see Knoepfler (1992) 451, (2001b) 15–19).

The Boiotian *ethnos* was one of the members of the Amphiktyonic League (Lefèvre (1998) 70–73) and provided two *hieromnemes* (Aeschin. 2.116). *Poleis* attested in C4s as providing a *hieromnemon* are Haliartos (no. 206), Lebadeia

(no. 211), Orchomenos (no. 213), Plataiai (no. 216), Tanagra (no. 220), Thebes (no. 221) and Thespiiai (no. 222).

In Boiotia names of months are attested from C3 onwards, and since the same sequence of months is attested in all *poleis* without any discernible variation, the inference is that it is a federal calendar adopted by all the members during the Classical period. There is no evidence of individual *polis* calendars of the Archaic period. Some of the months are peculiar to Boiotia (*Παμβοιώτιος* and *Ἀλαλκομένιος*). Others, like *Ἐρμῆαιος*, are found in Thessaly and north-west Greece (Roesch (1982) 1–85; Trümpy, *Monat.* 244–46).

In recent years the traditional dates of Boiotian coins have been changed as follows. (a) In Head, *HN*² and in *SNG* volumes published before the 1970s the earliest Boiotian coins are dated c.600–550; today a more recent date is universally accepted, either c.550–500 (Kraay (1976) 109) or c.500 (Schachter (1989) 85 n. 44). (b) The generally accepted chronology of the Boiotian coinage of the Classical period is based on the *a priori* assumption that, apart from Thebes, the individual *poleis* struck coins only when the federation was dissolved, i.e. in the years after the battle of Oinophyta (457–446), then after the King's Peace (386–374), and after the battle of Chaironeia in 338. The following three observations must lead to a revision of this chronology. (1) Some of the coins allegedly struck in the years 386–374 have legends in the epichoric alphabet, indicating a date before c.394 (Salmon (1978) 45–47). (2) There was no activity in the sanctuary of Nemea between c.410 and c.330, and of over 4,000 coins found in Nemea only four have been dated to that period: *viz.* one of Thebes (395–386), two of Tanagra (386–374), and one of Thespiiai (386–374). Now, of the two coins of Tanagra, one (C1177) was found in a context of which 99 per cent antedate c.410 and 1 per cent postdate c.330, and the other (C1401) in a context of which 30 per cent antedate c.410, 70 per cent postdate c.330. The coin from Thespiiai was found in a C3 context (*Hesperia* 48 (1979) pl. 25e, 51 (1982) pl. 15c, 53 (1984) pl. 34d; letter from S. G. Miller of 17 March 1995). The presumption is that the first coin was struck before c.410 and the two others presumably after 374. (3) The Myron hoard (*IGCH* 62), buried c.365 (Hepworth (1986) 37), includes fifteen of the so-called autonomous staters traditionally dated 386–374; two are from Haliartos (no. 206) and thirteen from Orchomenos (no. 213). Most of these coins are more worn than even the earliest of the Theban coins which were struck c.390 or even earlier (Hansen (1995a) 63 additional note). The inference from these three observations is that some of the “autonomous” Boiotian coins were struck before 386 and others after 374. Similarly, it seems likely that the period

457–446 has been too narrowly defined as well, and that many of the coins assigned to this period should be dated either before 457 or after 446.

1. Pre-Hellenistic Settlements not Attested as Poleis

Apart from major extra-urban sanctuaries,¹ our written sources provide us with information about sixty-six named Boiotian sites of the Archaic and Classical periods.² Of these sixty-one have been identified, most beyond reasonable doubt, some with a certain degree of probability only.³ Five ancient toponyms, however, remain unlocated,⁴ and, conversely, we have remains of two fairly small ancient settlements which cannot be convincingly matched with any of the toponyms found in the written sources.⁵ Thus we know of a total of sixty-eight Archaic and Classical sites. Twenty-six are described below in the inventory of *poleis*. Of the remaining forty-two sites, ten were probably not settlements of the Archaic and Classical periods; some were just alternative names of *poleis*, some did not belong in Boiotia, etc.⁶ It follows that, in addition to the twenty-six *poleis*, we have evidence of thirty-two non-polis settlements of which only one is an unidentified site known exclusively from the physical remains. Including two unidentified sites, forty-two sites are as follows.

Askra (Ἄσκρα) Hes. *Op.* 639–40 (κώμη); Ephor. fr. 1 (κώμη); Strabo 9.2.25; Paus. 9.29.1–2; Steph. Byz. 133.12

¹ The list of settlements excludes extra-urban sanctuaries (cf. Fossey (1988) 435 n. 107), each briefly treated under the *polis* to which it belonged: the Amphiarion (Oropos), the Kabeirion (Thebes), Apollo Ptoios and the hero Ptoios (Akraiphia), Apollo Tegyraios (Orchomenos), Apollo Thourios (Chaironeia), Athena Itonia (Koroneia), Dionysos (Orchomenos), the Muses (Thespiiai) and Zeus Hypatos (Thebes).

² Doubtful or spurious settlements mentioned in late sources only include a number of toponyms recorded in Strabo: *Θεράπναι* (9.2.24) and *Φοινικίς* (9.2.27) or in Steph. Byz.: *Ἄστυνα* (140.18), *Ἄχραι* (152.17–18), *Γέφυρα* (= Tanagra, Fossey (1988) 54), *Ζαῖα* (293.20), *Ἰσμήνη* (338.21), *Τρων* (342.10; cf. Armenidas (FGrHist 378) fr. 1), *Κελαῖθρα* (372.8), *Ὀλμιον* (490.3), *Φιληγόριον* (665.21) and *Φλεγυά* (667.15). Furthermore, following Bakhuizen (1989) 65–66, I have left out *Ἄρνη* (Hom. *Il.* 2.507; Hes. fr. 218; Strabo 9.2.35; Steph. Byz. 123.18, *πόλις*), which allegedly was swallowed up by Lake Kopais (Strabo 9.2.35). It seems to be a mythical toponym, not even to be placed on an atlas of Bronze Age settlements. However, Fossey (1988) 382–83 identifies Homeric Arne with a settlement (Magoula Balomenou) which has substantial remains from the Bronze Age plus some Roman and Late Roman.

³ Viz. Aspledon, Delphinion, Donakon, Heleon, Hyle, Oinophyta, Okalea, Pharai, Skolos, Stephon, Tegyra, Tilphosaion and Trapheia; see Fossey (1988) 390–91.

⁴ Eteonos/Skaph(I)ai, Keressos, Midea, Metachioin and Nisa.

⁵ Gla and Mali both recorded in *Barr.* as settlements of the smallest size.

⁶ Viz. Drymos, Eleutherai, Graia, Kyrtone, Metachioin, Midea, Nisa, Oinophyta, Tilphosaion and Gla.

(πόλις). Askra had a walled acropolis with a C4 signalling tower surrounded by a presumed Archaic circuit with gates enclosing an area of c.4,000 m². The whole settlement covered an area of c.10 ha (Bintliff (1997a) 244). Sherds show resettlement of the site in the Dark Ages and a peak of activity in the Archaic and Classical periods, dropping off in the Hellenistic period. Askra was apparently under Thespiiai (no. 222) in Hesiod's lifetime, but Arist. fr. 580 suggests that the Thespians drove out the Askra people after Hesiod's death (Snodgrass (1985); Fossey (1988) 142–45; Bintliff (1996)). *Barr.* AC.

Aspledon (Ἀσπληδών) Hom. *Il.* 2.511; cf. Hes. fr. 77; Strabo 9.2.41; Paus. 9.38.9 (πόλις); Steph. Byz. 135.8 (πόλις). Fossey (1988) 361–63. *Barr.* C, but A also attested through literary sources.

Aulis (Ἀυλῖς) Hom. *Il.* 2.496; Hes. *Op.* 651; Aesch. *Ag.* 191; Xen. *Hell.* 3.4.3; Ephor. fr. 119; *Hell. Oxy.* 20.3 (?); Ps.-Skylax 59 (ἱερόν); Nikokrates (FGrHist 376) fr. 1; Ps.-Skymnos 495 (πόλις); Dion. Calliphon. 88, *GGM* 1.241 (πόλις); Strabo 9.2.8 (χωρίον, κώμη, λιμὴν); Paus. 9.19.6; Steph. Byz. 147.1. The sanctuary was that of Artemis Aulideia (*SEG* 25 542 (Roman)). The cult is attested from C6l (*SEG* 25 543; Schachter (1981–94) i. 94–98), and the remains of an aperipteral Doric temple are still visible. Aulis was one of the small unwallled settlements whose population was moved to Thebes (no. 221) (*Hell. Oxy.* 20.3: [Aῦ]λίδος) in connection with the major synoecism at the outbreak of the Peloponnesian War (Demand (1990) 83–85; Moggi, *Sin.* 197–204 prefers a date c.426–424). The archaeological record shows that the settlement was still inhabited in C4 and later (Fossey (1988) 68–74). *Barr.* AC.

Chalia (Χαλία) Theopomp. fr. 211–12 = Steph. Byz. 681.4–8 (πόλις). In fr. 212, Theopompos lists the Chalioi (Χαλίους) alongside Aiolians, Boiotians, Orchomenians and Thebans. According to Jacoby's comment on the fragment, the context is a digression in book 15 about the prehistory of Thebes, which means that it is impossible from the use of the ethnic to make any inference about the status of Chalia in the Archaic and Classical periods (Fossey (1988) 77–78). *Barr.* AC.

Delion (Δήλιον) Hdt. 6.118.2; Thuc. 4.76.4–5 (ἱερόν); Ps.-Skylax 59 (ἱερόν); Strabo 9.2.7 (ἱερόν, πολίχνη); Paus. 9.20.1; Steph. Byz. 226.13–14 (ἱερόν, πολίχνη). A sanctuary of Apollo with a gilded statue allegedly dedicated by the Thebans (no. 221; Hdt. 1.118.2). In 424, when only a ruined stoa was left in the sanctuary, it was fortified by the Athenians (Thuc. 4.90.2) (Fossey (1988) 62–66; Schachter (1981–94) i. 44–47). *Barr.* C.

Delphinion (*Δελφίνιον*) Strabo 9.2.6 (*ἑρὸς λιμῆν*). Fossey (1988) 37–38. *Barr. C.*

Donakon (*Δονακῶν*) Paus. 9.31.7. Fossey (1988) 147–49. *Barr. C.*

Drymos (*Δρυμός*) Harp. Δ81 (*πόλις*) = Arist. fr. 405. Unlocated settlement near Panaktos and sometimes belonging to Athens (no. 361); see 624. Drymos means “oak wood”. At Paus 9.3.4 it is uncertain whether the reference is to another settlement near Alalkomenai (no. 199) called *Δρυμός*, or to an oak wood described as a *δρυμός*. *Barr. 59 C.*

Eilesion (*Εἰλέσιον*) Hom. *Il.* 2.499; Strabo 9.2.17; Steph. Byz. 261.13 (*πόλις*). The form *Εἰρέσιον* is found at *Etym. Magn.* 303.11 (*πόλις*) and *Suda EI* 183 (*πόλις*); *Ἐρέσιον* is an unconvincing emendation at Dion. Calliphon. 90, *GGM* 1.241 (Fossey (1988) 127–30). *Barr. AC.*

Eleutherai (*Ἐλευθεραῖ*) Strabo 9.2.31; Steph. Byz. 265.10 (*πόλις*). Originally a Boiotian settlement which passed to Athens (no. 361) in, presumably, 506, but was not incorporated into Attika; see 431 *supra* and 624 *infra*. Eleutherai was famous for its sanctuary of Dionysos, with a *xoanon* removed to Athens (Schachter (1981–94) i.174–76). *Barr. AC.*

Glisas (*Γλίσας*) Hom. *Il.* 2.504; Hdt. 9.43.2; Hellan. fr. 100; Strabo 9.2.31 (*κατοικία*); Paus. 9.19.2 (*ἐρείπια*); Steph. Byz. 209.16 (*πόλις*). Remains of a walled acropolis and (once) a walled lower town, both walls in polygonal masonry, with structures of C6l–C5f. Above it was the sanctuary of Zeus Hypatos (Fossey (1988) 217–23). *Barr. AC.*

Graia (*Γραῖα*) Hom. *Il.* 2.498. In the sources Graia was identified sometimes with Tanagra (no. 220) (Callim. fr. 711; Strabo 9.2.10; Paus. 9.20.1–2; *Etym. Magn.* 228.58), sometimes with Oropos (no. 214) or, rather, a place in the territory of Oropos (Arist. fr. 406.1–2; Strabo 9.2.10; Thuc. 2.22.3 and 3.91.3 as emended in accordance with Steph. Byz. 712.6–7). Most modern historians prefer the Aristotelian view, but disagree about the location. Fossey ((1970), (1988) 66–67; *Barr.*) suggests an identification with a Bronze Age settlement and points to modern Dhramesi. Beister (1985) prefers an identification with a settlement of the Archaic and Classical periods situated somewhere on the coast, but not yet located. See also Cosmopoulos (2001) 14, 127 n. 37. *Barr. AC.*

Harma (*Ἄρμα*) Hom. *Il.* 2.499; Philoch. fr. 113 (*κωμηταί*) = Strabo 9.2.11 (*κώμη ἔρημος*), 14 (*τῆς τετρακωμίας*); Paus. 9.19.4 (*ἐρείπια πόλεως*); Steph. Byz. 122.6 (*πόλις*). Settlement centred on a walled acropolis with

structures of the Classical period. The walls, in polygonal masonry, are older than the buildings (Fossey (1988) 85–89). *Barr. AC.*

Heleon (*Ἑλεών*) Hom. *Il.* 2.500; Strabo 9.2.12 (*κώμη*), 14 (*τῆς τετρακωμίας*); Plut. *Mor.* 301A; Paus. 1.29.6. Acropolis settlement with well-preserved walls in Lesbian masonry and remains of several buildings (Fossey (1988) 89–95). The settlement covered c.3.3 ha (Bintliff (1997a) 244). *Barr. AC.*

Hippotai (*Ἰππόται*) Plut. *Mor.* 775A (*κώμη*). Walled acropolis? (Fossey (1988) 339–40). *Barr. C.*

Hyle (*Ἦλη* or *Ἦλαι*) Hom. *Il.* 2.500; 5.708; Mosch. *Ep. Bion.* 3.88 (cf. Gaertner (2001)); Strabo 9.2.20 (*κώμη*); Steph. Byz. 647.13. Remains of a walled acropolis and a walled lower town. The acropolis had two walls: a larger one of LH III B and a smaller one of the Archaic period, both in rubble masonry. In the lower town a small aperipteral temple of the late Geometric period (Fossey (1988) 235–43). *Barr. AC.*

Hyria (*Ἦρία*) Hom. *Il.* 2.496; Theopomp. fr. 211 = Steph. Byz. 651.15 (*πρότερον πολίδιον*); Strabo 9.2.12. Settlement with traces of an ancient circuit wall reported in 1966 (Fossey (1988) 75–76). *Barr. AR.*

Isos (*Ἴσος*) Strabo 9.2.14 (*ἔχνη πόλεως*). Substantial settlement with walled acropolis, perhaps a refortification of a Mycenaean enceinte (Fossey (1988) 257–61). *Barr. AC.*

Keressos (*Κερησσός*) Plut. *Cam.* 19.4; cf. *Mor.* 866F; Paus. 9.14.2–4 (*ἐχυρόν χωρίον* = *Anth. Pal. App.* 6.73; see Fontenrose (1978) Q 204). Cf. the tombstone set over *Κερεσόδωτος* (*IG VII* 1927 (C5)) and the dedication by *Κερεσότιμος* (*SEG* 28 458 (C6–C5)). Unlocated fortified settlement in the territory of Thespiiai (no. 222), where a major battle was fought between Boiotians and Thessalians in the Archaic period, but variously dated (Buck (1979) 108–10; Sordi (1993)). Not in *Barr.*

Korseia (*Κορσεία*) Paus. 9.24.5 (*πόλισμα*). Settlement with remains of a circuit wall in polygonal masonry and three towers in ashlar masonry (Fossey (1990) 58–61). *Barr. C.*

Kreusis (*Κρεῦσις*) Xen. *Hell.* 5.4.16–17, 6.4.3 (*τείχος*); Xen. *Ages.* 2.18; Strabo 9.2.25 (*ἐπίγειον*); Paus. 9.32.1 (*ἐπίγειον*); Steph. Byz. 383.6 (*πόλις*); *ἐν Κρεῖσι* (*SEG* 24 361.27 (C4f)) is either a misspelling or a variant. Fortified port with substantial remains of a C4 circuit wall in ashlar masonry with a small section in Lesbian and polygonal

masonry (Fossey (1988) 157–63). The major Boiotian naval harbour on the Corinthian Gulf (Freitag (2000) 164–71). *Barr.* AC.

Kyrtone (*Κυρτώνη*, later *Κύρτωνες*) Paus. 9.24.4 (πόλισμα) = Steph. Byz. 398.9 (πόλις). Settlement with remains of a circuit wall in polygonal masonry and a tower in ashlar masonry. In the neighbourhood, remains of what was possibly a temple (Fossey (1990) 52–57). *Barr.* C, but classified as a sanctuary. Perhaps an East Lokrian settlement; see 664.

Leuktra (*Λεύκτρα*) Xen. *Hell.* 6.4.4 (ἐν Λεύκτροις τῆς Θεσπικῆς); Dem. 9.23; Diod. 15.53.2 (τὸ Λευκτρικὸν πεδῖον); Harp. *Λ14* (χωρίον Βοιώτιον περὶ Θεσπιάς); Plut. *Mor.* 773B (κώμιον τῆς τῶν Θεσπιέων χώρας); Strabo 9.2.39 (τόπος). Possibly a settlement (Fossey (1988) 154–57). *Barr.* C.

Medeon (*Μεδεών*) Hom. *Il.* 2.501 (ἐϋκτίμενον πτολίεθρον); Strabo 9.2.26; Dion. Calliphon. 99, *GGM* 1.241 (πόλις); Steph. Byz. 439.19 (πόλις). Settlement with remains of a circuit wall in polygonal masonry (Fossey (1988) 312–14). *Barr.* AC.

Metachioion (*Μετὰχοιον*) Ephor. fr. 94a–b (a) = schol. Arist. *Eth. Nic.* 1116^b6 (*Μετατοίχου* MSS: *Μεταχοίου* Marx); (b) = Steph. Byz. 448.19 (*φρούριον*). A Classical fortress between Orchomenos (no. 213) and Koroneia (no. 210), perhaps near or on Mt. Laphystion (Buckler (1989) 72). Not in *Barr.*

Mideia (*Μίδεια*) Hom. *Il.* 2.507; Strabo 8.6.11 (*Μίδεια*); Steph. Byz. 451.17 (πόλις). Perhaps to be identified with Lebadeia (no. 211) (Paus. 9.39.1). If not, an unlocated settlement. Not in *Barr.*

Nisa (*Νίσα*) Hom. *Il.* 2.508; Dion. Calliphon. 102, *GGM* 1.242. Unlocated.

Oinophyta (*Ὀινόφυτα*) Thuc. 1.108.3, 4.95.3, Pl. *Menex.* 242B; Arist. *Pol.* 1302^b29; Diod. 11.83.1; *SEG* 19 363 (C4s). Fossey (1988) 58–60. *Barr.* C, but neither the literary nor the archaeological evidence supports *Barr.*'s classification of Oinophyta as a settlement.

Okalea (*Ὠκαλέα*) Hom. *Il.* 2.501; *Hymn. Hom. Ap.* 242 (*Ὠκαλέην πολύπυργον*); Strabo 9.2.26–27; Dion. Calliphon. 99, *GGM* 1.241 (πόλις); Steph. Byz. 706.11 (πόλις). Fossey (1988) 314–18. *Barr.* C, but the literary evidence shows that it was a walled settlement in the Archaic period.

Olmones (*Ὀλμωνες*) Paus. 9.24.3, 34.10 (*κώμη*); Steph. Byz. 490.7 (*κώμη*); *IG VII* 2808a15 (after AD 212). Walled hill-top settlement with remains of a small number of buildings, one of them perhaps an early aperipteral temple (Fossey (1988) 296–98). *Barr.* C.

Onchestos (*Ὀγχηστός*) Hom. *Il.* 2.506; *IG IX*².1 170.5 (292); Heracl. Cret. 25, *GGM* 1.104 (πόλις); Paus. 9.26.5 (πόλις). In 338 Onchestos became the capital of the Boiotian Federation (Roesch (1982) 266–82), and the federal *archon* was thereafter referred to as the “*Archon* in Onchestos” (*SEG* 27 60 (C4l); *IG VII* 1747.1 (C3f)). The remains of a C6s temple of Poseidon have been found (Schachter (1981–94) ii. 207). The settlement itself has been tentatively identified with a site of c.5 ha about 1 km west of the sanctuary of Poseidon. On the site were found fragments of monumental Doric architecture, traces of a fortification wall and of a Hellenistic *bouleuterion*, perhaps serving the Federation, and the plan of what appears to be an agora of Hellenistic date (Bintliff and Snodgrass (1985) 140; Schachter (1981–94) ii. 208). *Barr.* AC.

Peteon (*Πετέων*) Hom. *Il.* 2.500; Strabo 9.2.26 (*κώμη*); Steph. Byz. 519.13 (πόλις). Fossey (1988) 233–34. *Barr.* AC.

Salganeus (*Σαλγανεύς*) Nicocrates (*FGrHist* 376) fr. 1; Heracl. Cret. 26, *GGM* 1.105; Strabo 9.2.9 (*χωρίον*); Steph. Byz. 551.6 (πόλις). Settlement fortified in 313/12 (Diod. 19.77.4) with very few remains of the Classical period, and the circuit walls seen by early travellers were probably not ancient (Bakhuizen (1970) 6–12; Fossey (1988) 78–80; Gehrke (1988)). *Barr.* C.

Schedia (*Σχεδία*) *Etym. Magn.* 229.2 (*κώμη*). Hill-top settlement with remains of Ionic capitals, drums and bases (Fossey (1988) 52–56). *Barr.* AC.

Schoinos (*Σχοῖνος*) Hom. *Il.* 2.497; Strabo 9.2.22. Schoinos was one of the small unwall settlements whose population was moved to Thebes (no. 221) (*Hell. Oxy.* 20.3) in connection with the major synoecism at the outbreak of the Peloponnesian War (Demand (1990) 83–85; Moggi, *Sin.* 197–204 prefers a date c.426–424). Remains of a circuit wall partly in polygonal masonry (C5l?, postdating the synoecism?) and partly in rubble work (C4f?) (Fossey (1988) 229–32). *Barr.* AC.

Stephon (*Στέφων*) Plut. *Mor.* 299C: fortified place (*χωρίον*) in the Heroic period when Tanagra (no. 220) was still settled in villages (*ἔτι τῆς Ταναγρακῆς κατὰ κώμας*

οἰκουμένης). Walled acropolis with defence circuit in polygonal masonry but no structural remains inside the walls (Fossey (1988) 49–52, 56). *Barr.* AC.

Tegyra (Τεγύρα) Lycoph. *Alex.* 646; Callisthenes (*FGrHist* 124) fr. 11 = Steph. Byz. 611.3 (πόλις); Plut. *Pelop.* 16–19. Settlement with a temple of Apollo Tegyraios and an oracle active in the Archaic period but closed down in C4 (Plut. *Pelop.* 16.5; *Mor.* 412B–D; Schachter (1981–94) i. 75). Walled acropolis with defence circuit in polygonal masonry observed by early travellers. In the neighbourhood, remains of what may be an aperipteral temple (Fossey (1988) 367–72). *Barr.* AC.

Teumessos (Τευμησός) *Hymn. Hom. Ap.* 224; Eur. *Phoen.* 1100; Demosthenes Bithynius fr. 3 (ἄστν); Strabo 9.2.24; Paus. 9.19.1 (χωρίον); Steph. Byz. 618.21 (ὄρος). Fossey (1988) 212–16. *Barr.* AC.

Tilphosaion (Τιλφωσαῖον) According to Strabo (9.2.27), Tilfossa was a spring (ἡ Τιλφῶσσα κρήνη) beneath Mt. Tilfossion (τὸ Τιλφωσσίων ὄρος) with a sanctuary of Apollo Tilfossios (ὁ Τιλφώσσιος Ἀπόλλων). Again, τὸ Τιλφωσαῖον is attested as a mountain (schol. Dem. 19.141, 314c, Dilts; Ephor. fr. 153; Theopomp. fr. 301) and as a spring (Aristophanes Boeotus (*FGrHist* 379) fr. 4 (κρήνη δ' ἐν Βοιωτίᾳ ἡ Τιλφῶσσα)). The spring was deified as a goddess Τελφούσα or Τιλφῶσσα (Pind. fr. 198b) and worshipped together with Apollo (*Hymn. Hom. Ap.* 383–87) and Artemis (*SEG* 27 74 (C4–C3)). Remains of the sanctuary have been found c.400 m from the spring perhaps consecrated to the Praxidikai (Schachter (1990), (1981–94) iii. 60–62). According to Dem. 19.141, 148, there was a fort on the mountain; cf. Fossey (1992) 112–14, followed by *Barr.* (C).

Trapheia (Τράφεια) Nicander *Ther.* 887; Steph. Byz. 632.4 (πόλις). A primarily Mycenaean settlement with some remains of the Archaic period (Fossey (1988) 244–46). *Barr.* AC?

2. Unidentified Settlements

Gla Mycenaean settlement with a few remains of the Classical period, lying in the north-east bay of the Kopais in the territory of Kopai (no. 209) (Fossey (1988) 288). *Barr.*, C.

Mali Walled settlement with a separately walled acropolis and remains of buildings, lying south-east of Chorsiai (no. 202) (Fossey (1988) 194–95). *Barr.*, A.

Of these forty-two sites, thirty-two were probably settlements of the Archaic and Classical periods.⁷ But some of them may have been *poleis* rather than non-*polis* settlements. Heleon, for example, seems to have had a territory of its own bordering on the territory of Tanagra (no. 220) (Paus. 1.29.6), and that is an indication that the settlement was a *polis*. Similarly, Harma is a rather sizeable settlement with impressive fortifications (Fossey (1988) 86–88) and is described by Pausanias as the ruins of a *polis* (9.19.4). Thus we must consider the possibility that all four members of what in the Hellenistic period was called the *Tetrakomia*, i.e. Pharai (no. 215), Mykalessos (no. 212), Heleon and Harma (Strabo 9.2.14), were *poleis* in the Archaic and/or Classical period (Etienne and Knoepfler (1976) 225–26). Conversely, some of the settlements included in the Inventory of *poleis* might perhaps be omitted, e.g. Alalkomenai (no. 199). Even allowing for some uncertainty, the Inventory leads to the conclusion that more than two-fifths of all the Boiotian settlements must have been considered to be *poleis*, either throughout the Archaic and Classical periods or at least for some time within these periods.

Many of these *poleis*, however, were small dependencies, and at least in the Classical period the Boiotian *poleis* seem to have formed a hierarchy with at least three different layers: during the First and Second Federations (c.446–386 and 378–338), the only truly independent *polis* was Thebes (no. 221), which, in addition to being the leading member of the confederacy, preserved its capacity to enter into relations with other *poleis* (*Staatsverträge* 273, 277, 283, 345; see *infra* 455). Below Thebes were several *poleis* which, being member states of the Federation, provided magistrates and councillors to the federal government and contingents to the federal army. Below these *poleis* were several little *poleis*, each depending on one of the larger *poleis* and with its own territory inside the territory of the larger *polis* but without any representation in the federal government. Chorsiai (no. 202), Eutresis (no. 205), Siphai (no. 218) and Thisbai (no. 223) were *poleis* depending on Thespiai (no. 222); Mykalessos (no. 212) and Pharai (no. 215) belonged to Tanagra; Erythrai (no. 203), Skolos (no. 219), Eteonos/Skaphlai (no. 204) and Hysiai (no. 208) were first connected with Plataiai (no. 216) in some form

⁷ Of the 42 non-*polis* sites recorded above I exclude the following 10: Drymos (belongs rather with Attika), Eleutherai (Athenian after C61), Gla (the Classical remains too insignificant to ensure that Gla was a settlement after the Mycenaean period), Graia (a settlement listed in the Homeric *Catalogue of Ships*, but unknown to all later commentators), Kyrtone (perhaps an East Lokrian settlement), Metachioin (a fortress rather than a settlement), Mideia (probably an old name for Lebadeia), Nisa (known only from the *Catalogue of Ships*, perhaps identical with Isos), Oinophyta (a fortress, not a settlement) and Tilphosaion (a fortress, not a settlement).

of *sympoliteia*, but were later subdued by Thebes, which also possessed Anthedon (no. 200), Oropos (no. 214) and Potniai (no. 217); Chaironeia (no. 201) lay within the territory of Orchomenos (no. 213) until after 424.

We are poorly informed about the status of all the settlements which were not *poleis*. The orthodoxy is that they were *komai* and, *mutatis mutandis*, had a status similar to the Attic demes (see Hansen (1995b) 69–71). But apart from phratries, attested in the late Hellenistic period only (Knoepfler (1981) 148–49), we know of no civic subdivisions in Boiotia (Jones, *POAG* 79). So, even supposing that these settlements were in fact *komai*, there is no evidence to show that *komai* were an element in the political organisation of Boiotia in the same way as they must have been in, e.g., Mantinea (no. 281) or Megara (no. 225).

Furthermore, only one Boiotian settlement is called *kome* in Archaic and Classical sources, *viz.* Askra (Hes. *Op.* 639–40; Ephor. fr. 1). Philoch. fr. 113 may have used the term *kometai* about the inhabitants of Harma. In all other cases the authority for Boiotian *komai* is either Strabo or Pausanias, but it is not legitimate to project their site-classifications back into the Archaic and Classical periods (see Hansen (1995b) 48–52). To conclude: the territory of a major Boiotian *polis*, e.g. Thebes or Thespias or Tanagra, comprised a number of settlements of which some were *poleis* but some were not, and the relation between dependent *poleis* and other dependencies remains obscure.

II. The *Poleis*

198. Akraiphia (Akraiphieus) Map 55. Lat. 38.25, long 23.15. Size of territory: 2. Type: A. The toponym is *Ἀκραίφια*, *τά* (*IG VII* 4135.6 (C38), 2871.1 (C1)) or (in literary sources only) *Ἀκραίφια*, *ἡ* (Hdt. 8.135.1; Steph. Byz. 63.1), *Ἀκραίφια* (Strabo 9.2.27), *Ἀκραίφνιον* (*Hell. Oxy.* 19.3), *Ἀκραίφνια* (Theopomp. fr. 362). The toponym denotes either the town (Hdt. 8.135) or the polity (*Hell. Oxy.* 19.3). The city-ethnic is *Ἀκραίφιεύς* (Ducat (1971) no. 260 = *SEG* 31 393 (C5f)) or (in literary sources only) *Ἀκραίφνιεύς* (Theopomp. (*FGrHist* 115) fr. 362); *Ἀκραίφνιος*, *Ἀκραίφνεώτης* (Ephor. fr. 229).

Akraiphia is called a *polis* both in the urban sense (Hdt. 8.135.1) and in the political sense (*Hell. Oxy.* 19.3).

The collective use of the city-ethnic is attested internally in a dedication from Ptoion (*LSAG* 93 and 95 no. 13; *SEG* 22 430 (both C6l)) and externally on a boundary stone of C4f–C3m (*IG VII* 2792; cf. Vottéro (2001) 115). The individual

use of the city-ethnic is attested internally in a dedication: *Πυθίας ὀκραίφ[ιεύς]* (*LSAG* 93 and 95 no. 15 (c.500)) and externally in a list of *aphedriateuontes* (*IG VII* 2724a.2 (c.280–270)).

An inscription of C4f–C3m cut in the rock near Vristika marked the border between Akraiphia and Kopai (no. 209) as determined by the Boiotians (*IG VII* 2792; *SEG* 36 411; Lauffer (1986) 136; Vottéro (2001) 115), and, similarly, a C6 *horos* (Vottéro (2001) 117) probably records the border between the two *poleis* (*SEG* 30 440, 42 407): [*ἡ* ὄρος *Ἄ*]κραι[φίειον κ]αὶ Κο[παίων]. The size of the territory has been assessed at c.35 km² (Fossey (1988) 264, 198).

The eponymous official of Akraiphia was an *archon* (*LSAG* 93 and 95 no. 13 (C6l)). In C4e Akraiphia was united with Chaironeia (no. 201) and Kopai, and constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3). The principal body of government was a *boule* to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). There is no explicit evidence for membership of the Second Federation whereas the attestation of an *aphedriateuon* from Akraiphia testifies to membership of the Third Federation (*IG VII* 2724.a.2 (c.280–270)). An eponymous *archon* is attested in C6s (*LSAG* 93, 95 no. 13).

The protecting god of Akraiphia was perhaps Zeus of some sort (*IG VII* 2733 (C5); Schachter (1981–94) iii. 93–95); cf. the C6l–C5e dedication to Zeus Oporeus (*SEG* 46 528). On Mt. Ptoion (Paus. 9.23.5–7; Pind. fr. 51b, 52f), c.4 km east of Akraiphia, was an oracular shrine (Hdt. 8.135; Pind. fr. 52g.A), since C7m consecrated to Apollo Ptoieus (Ducat (1971) 89 no. 50b (c.640); *IG VII* 27–29 (c.640–620), 4155 (C4l)) in association with a goddess and served by a male Akraiphian prophet (*IG VII* 4155). The oracle was especially famous in C6s (Schachter (1981–94) i. 52–73). Dedications of this period abound (Ducat (1971); Schachter (1981–94) iii. 295), including two by the Alkmaionids and Peisistratids (*IG I³* 1469–70). At the sanctuary are remains of a *peribolos*, an oracular cave and a temple of C4l built on top of an older one (Lauffer (1959) 1528–40). The sanctuary was controlled by Akraiphia in the Archaic period (Ducat (1971) 448–50) as well as in the Hellenistic age (*IG VII* 4139.20–21 (C2l); Roesch (1982) 225ff); but when the oracle was consulted by Mys in 479, it was under Theban control (Hdt. 8.135.1; cf. Strabo 9.2.34). The Thebans may have dispossessed the Akraiphians of the oracle in C6s (Gullath (1989) 166), but a preferable explanation is that “the oracle may have remained within the direction of Akraiphia, although formally the sanctuary and the territory of Akraiphia were under Theban control” (Schachter (1981–94) i. 69).

Halfway (as the crow flies) between Akraiphia and the sanctuary of Apollo Ptoieus was a sanctuary of the Hero Ptoios, the descendant of Athamas, here worshipped in association with some goddess. A lower terrace has altars and a stoa of the Archaic period, the upper terrace a temple of C41 built over a C7 edifice. Between the two levels is an avenue of monumental tripod bases, dedicated by the *polis* of Akraiphia c.525–450 (*IG VII 2734–35*; *SEG 22 430*; Schachter (1981–94) iii. 11–21).

The acropolis was fortified with a double-faced wall: an outer face of hard limestone in trapezoidal coursed masonry, perhaps of C4, and an inner face of poros stone in ashlar coursed masonry, built in C3 and probably destroyed in 196. A *diateichisma* in polygonal work is either contemporary with or older than the limestone wall. There are substantial remains of a pentagonal tower of the Hellenistic period. The circuit enclosed an area of c.17 ha (Fossey (1988) 266–68; Garland (1974) 98–112 and information from John Camp). The size of the lower town is unknown (Bintliff (1997a) 231) nor do we know whether there was a defence circuit enclosing the entire town. Buildings and streets have been uncovered at the western end of the town, and outside the town are four cemeteries with remains from the late Geometric, Archaic and Classical periods (Fossey (1988) 268). So far, more than 2,000 graves have been found (*AR* (1999–2000) 56). The settlement can be traced back to C8 (Fossey (1988) 269).

Akraiphia struck silver coins on the Aiginetan standard from c.500 to 480, from 456 to 446, and from 386 (or earlier) to 374 (or later). Denominations: stater, obol, hemiobol, trihemitarternion; *obv.* Boiotian shield; *rev.* kantharos in incuse square (some). Legend: *A* (C5e) or *AK* (C5m) or *AKPH* (C4e) (Head, *HN*² 344; Babelon, *Traité* ii.3. 257–58; Schachter (1989) 85; Baldwin Brett (1955) 137 no. 1011; Etienne and Knoepfler (1976) 221 n. 768 suggest that the earliest issues may have been minted at (H)aliartos).

199. Alalkomenai Map 55. Lat. 38.25, long. 23.00. Located at Vouno c.1 km east of Solinarion (Knauss (1987) 42–68). Size of territory: 1. Type: C. The toponym is *Ἀλαλκομεναί, αἱ* (Strabo 9.2.27; Paus. 9.33.5). Apart from Steph. Byz. 68.19, there is no attestation of a city-ethnic.

The only author to call Alalkomenai a *polis* is Strabo, who retrospectively describes the site as a small *polis* situated in a plain (9.2.36). According to Paus. 9.33.5, the settlement was just a *κώμη*. But it may deserve inclusion in this inventory of *poleis* because it seems to have had a territory of its own, and especially because of its famous sanctuary of Athena, τὸ

Ἀλαλκομεναίων (*IG IX*^{2.1} 170.5 (C41–C3e)) dedicated to the cult of *Ἀλαλκομεναίης Ἀθήνη* (Hom. *Il.* 4.8; see Schachter (1981–94) i. 111–14). According to Steph. Byz. 68.18–19, the goddess had the epithet Polias, and her cult was linked with that of Zeus Polieus (Etym. Magn. 56.8–10; Schachter (1981–94) iii. 96). Since the sanctuary was in the lowlands (Paus. 9.33.5), the epithets Polias and Polieus must refer not to an acropolis cult but rather to cults of divinities protecting the *polis* (cf. Cole (1995) 301–3). The cult of Athena at the Alalkomenion was presumably an old one (Schachter (1981–94) i. 12), which would indicate that at least in the Archaic period Alalkomenai was probably a *polis* (Hansen (1995a) 32–33) with the cult of its protecting god located in an extra-mural sanctuary. Later Alalkomenai was incorporated into Koroneia (no. 210). The territory is called *Ἀλαλκομεναία*; it must have been very small, but at least it included the fortified mountain Tilphosion (Ephor. fr. 153; Diod. 19.53.7). The Alalkomenion was located c.300 m north of Alalkomenai (Knauss (1987) 50).

200. Anthedon (Anthedonios). Map 55. Lat. 38.30, long. 23.25. Size of territory: 2. Type: A. The toponym is *Ἀνθηδών, ἡ* (Hom. *Il.* 2.508; Ps.-Skylax 59; Arcestratos fr. 15.1; *I.Stratonikeia* 508.43 (C1)). The city-ethnic is *Ἀνθηδόνιος* (Palaiphatos 27; *IG IX*^{2.1} 27.4 (C3)), in the Boiotian dialect: *Ἀνθαδόνιος* (*IG VII 2723.4* (C3e)).

Anthedon is called a *polis* in the urban sense in a C4 mythological treatise (Palaiphatos 27) and again in Heracl. Cret. (23, *CGM I.104* (C3s)); that it was a *polis* in the political sense as well is apparent from the fact that *Ἀριστοκλῆς Ἀγασιήω Ἀνθαδόνιος* appears c.285–280 among the *aphedriateuontes* (*IG VII 2723.4*). That its status as a *polis* in the political sense stems at least from the beginning of the Third Federation (i.e. from 338) is indicated by the eight victories at the four major Panhellenic games won c.300 by the pankratis Nikon of Anthedon (Steph. Byz. 96. 17–18; Phlegon of Tralles (*FGrHist* 257a) = *P Oxy.* 2082 4.27; see Knoepfler (1986a) 602–3). In Ps.-Skylax 59 Anthedon is described as a *teichos*, but it is unclear whether he took it to be a *polis* as well. The only epigraphical reference to Anthedon as a *polis* is a heavily restored proxeny decree of C3 (*SEG* 36 413 = Knoepfler (1986a) 624–30. The individual and external use of the city-ethnic is attested at *IG VII 2723.4* (C3f); Plut. *Mor.* 300F: *Μυρτίς ἡ Ἀνθηδονία ποιήτρια* (rC5); and Steph. Byz. 96.18–19 *Λεωνίδης Ζωγράφος, Εὐφράνορος μαθητής, Ἀνθηδόνιος* (rC4).

The territory is called *ἡ Ἀνθηδονία* (Strabo 9.2.13) and its size has been assessed at c.85 km² (Fossey (1988) 250).

Anthedon bordered on Tanagra (no. 220) to the south-east (Nicocrates (*FGrHist* 376 fr. 1) and on Thebes (no. 221) to the south-west (Heracl. Cret. 23, *GGM* 1.104). Herakleides tells us that the soil was poor and that almost all the inhabitants lived as fishermen (Heracl. Cret. 23, *GGM* 1.104; cf. Archestratos fr. 15.1). Although there is no explicit evidence, it is usually assumed that Anthedon belonged to Thebes (no. 221) and that its harbour was used as a naval base by the Thebans when in the 360s they built a fleet (Schläger *et al.* (1968–69) 90), but see Fossey (1992) 117–20. The attestation of an *aphedriateuon* from Anthedon testifies to membership of the Third Federation (*IG VII* 2723.4 (c.280–270)).

The protecting god of Anthedon was probably Zeus Karaios and Anthas, whose cult, however, is unattested before C2 (*IG II²* 2360; Schachter (1981–94) iii. 97 and letter of Dec. 1994).

The ancient town lay beside the sea around a tiny harbour (Strabo 9.2.13; Schläger *et al.* (1968–69)). A separately fortified hill about 30 m high was used for the acropolis. On the north side of the hill are the remains of a Hellenistic (Roesch (1976)) fortification wall built in ashlar masonry with interval towers. The city walls encompassed both the hill and the harbour and enclosed an area of 30 ha (Wallace (1979) 58; Bintliff (1997a) 244). Herakleides mentions an agora flanked with two stoas. The settlement can be traced back to the Neolithic period, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 255).

201. Chaironeia (Chaironeus) Map 55. Lat. 38.30, long. 22.55. Size of territory: 2. Type: A. The toponym is *Χαιρώνεια*, ἡ (Thuc. 1.113.1; *F.Delphes* III.3 96 = *SEG* 32 529 (c.313–300)), but in some Boiotian inscriptions *X[η]ρώνεια* (*IG VII* 3170.10 (C3)) or *Χαιρωνία* (*SEG* 38 380.1 (C1)). The toponym denotes either the town (Thuc. 1.113.1) or the polity (*Hell. Oxy.* 19.3) or the territory (Lycurg. 1.16). The city-ethnic is *Χαιρωνεύς* (*SEG* 15 282.4 (263–255)).

Chaironeia is called a *polis* presumably in the urban sense (Hecat. fr. 116; cf. Hansen (1995a) 55 n. 44) and in the political sense (Thuc. 4.76.3, 89.2; cf. Hansen (1995a) 21–24; Theopomp. fr. 407; *Hell. Oxy.* 19.3). The term *πόλισμα* is used by Aristophanes Boeotus (*FGrHist* 379) fr. 3 (C4)).

The collective use of the city-ethnic is attested internally as *XAIΠΩΝΕ* on coins of C4e (Head (1881) 44) and externally by Polyb. 27.1.4. For the individual use of the city-ethnic, see e.g. *Ἐὐρυβάοντος Καλλίφρονος Χαιρωνεύς* (*SEG* 15 282.4, *grammateus* (263–255)).

The territory is called *Χαιρώνεια* (Lycurg. 1.16: ἡ ἐν *Χαιρωνείᾳ μάχη*), and it was the westernmost region of

Boiotia, bordered by Phokis to the west (Thuc. 4.76.3; cf. Hecat. fr. 116) and by Orchomenos (no. 213) to the north (Plut. *Cim.* 2.1). In C5f its territory was a part of the territory of Orchomenos (inference from Hdt. 8.34.1). The size of the territory has been assessed at c.55 km² (Fossey (1988) 342).

In C5 Chaironeia was a dependent *polis* under Orchomenos (*πόλις Ὀρχομενίων*: Theopomp. fr. 407, probably referring to 446; ἐς Ὀρχομενὸν *ξυντελεῖν*: Thuc. 4.76.3, referring to 424), and was perhaps without any representation in the federal government. In 395, however, Chaironeia was united with Akraiphia (no. 198) and Kopai (no. 209), and constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3). It is not known when Chaironeia changed its status from an Orchomenian dependency to one of the six *poleis* that provided one Boiotarch every third year. The principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2.3). Chaironeia was a member of the Second Federation (*ἐπιβοηθεῖν*, Diod. 16.39.8) and of the Third Federation as well (*IG VII* 2724c.6 (245–240)). After 457 Chaironeia and Orchomenos served as a refuge for oligarchs from the other Boiotian *poleis* (Hellan. fr. 81); but in 446 Chaironeia was conquered by the Athenians and exposed to *andrapodismos* (Thuc. 1.113.1; Theopomp. fr. 407). From the abortive attempt in 424 to introduce a democracy, we can infer that Chaironeia must have had an oligarchic constitution. The democratic faction was supported by Athens and by some Orchomenians, but the *stasis* was quelled by armed assistance from the other Boiotians (Thuc. 4.76.2–3, 89.2; Hansen (1995a) 21–24).

Chaironeia must have been fortified in 424 (Thuc. 4.89.2) and again in 354 when the town was besieged by Onomarchos (Diod. 16.33.4; cf. Buckler (1989) 56). On the acropolis there are remains of (1) a circuit of cyclopean masonry, probably of the Archaic period; (2) Lesbian blocks, presumably Archaic; (3) a C4 ashlar circuit. Small extensions at the north-east corner of the cyclopean wall and at the north-west corner of the ashlar wall suggest that the lower city in the Archaic and Classical periods was walled and lay north of the acropolis. The acropolis walls enclose an area of c.15 ha. The size of the lower city is unknown (Fossey (1988) 376–79); Bintliff's guesstimate is c.23 ha ((1997a) 244). The settlement can be traced back to the early Helladic period (Fossey (1988) 380). Of public architecture the only known building is a small rock-cut theatre. A rectilinear *koilon* with eight steps, probably of the Classical period, was replaced in the early Hellenistic period by a curvilinear *koilon* of which fifteen steps are preserved (Dilke 45 (1950) 35–37; Isler (1994) 146).

The protecting god of Chaironeia may have been Zeus (Paus. 9.41.6; Schachter (1981–94) iii. 99). Other major divinities presumably worshipped in the Archaic and Classical periods are Apollo Thourios (Plut. *Sulla* 17.7, interpreted retrospectively by Schachter (1981–94) i. 43–44) with an extra-urban sanctuary at Thourion (Camp *et al.* (1992) 454–55), Dionysos (Plut. *Cim.* 2.2; Schachter (1981–94) i. 173–74) and Herakles (Plut. *Dem.* 19.2; Schachter (1981–94) ii. 2).

Chaironeia struck hemidrachms on the Aiginetan standard and bronze coins between 386 (or earlier) and 374 (or later). (1) Silver: *obv.* Boiotian shield; *rev.* club. Legend: *XAI*. (2) Bronze: *obv.* Boiotian shield; *rev.* club. Legend: *XAIΠΩNE* (Head (1881) 44, *HN*² 344).

202. Chorsiai (Chorsieus) Map 55. Lat. 38.15, long. 22.55. Size of territory: 2. Type: A. The toponym *Κορσιαί, αἱ* (Dem. 19.141 codd. AY; Harp. *K*77; Ps.-Skylax 38) is attested in literary sources, and from the city-ethnic *Χορσιεύς* (*SEG* 3 342; Migeotte (1984) no. 11 (C2e)) we can infer that in the Boiotian dialect the toponym must have been *Χορσιαί*, which is the spelling offered by Steph. Byz. at 696.1, and perhaps attested in the Delphic list of *theorodokoi* of c.230–210 (*SEG* 36 500). It has been suggested that the *Κορσιαί* referred to by Demosthenes must be *Κορσεία* in north-west Boiotia near East Lokris (Etienne and Knoepfler (1976) 32–41), but Demosthenes' mention of Orchomenos (no. 213), Koroneia (no. 210) and Tilphoseion side by side with *Κορσιαί*, as well as the notes in Harp. and Ps.-Skylax, strongly support the traditional location of the site in southern Boiotia.

Ps.-Skylax 38 lists Chorsiai as the first toponym after the heading *πόλεις αἰδέ*, where *polis* is used in the urban sense, and the settlement is presumably called a *polis* by Theopomp. fr. 167 = Harp. *K*77, quoting Dem. 19.141 for the toponym and Theopompos for the site-classification.

The collective use of the city-ethnic is attested externally in a treaty with Thisbai (*SEG* 3 342 (C2e)) and internally in a proxeny decree (*SEG* 22 410 (C2f)). There is no attestation of the individual use.

The name of the territory is unknown; its size has been assessed at c.40 km² (Fossey (1988) 186). A C4f inventory of *hestiatorion* equipment, presumably found in Chorsiai, indicates that Chorsiai in C4e was a dependent *polis* lying inside the territory of Thespiiai (no. 222) (*SEG* 24 361, 30 441 (386–380), but cf. 47 520). The inscription testifies to a Heraion and a cult of Hera in Chorsiai (Schachter (1981–94) i. 238). For a possible cult of Zeus Soter, see *SEG* 36 417

(C6–C4 but heavily restored: Schachter (1981–94) iii. 99–100).

In 346 Chorsiai was destroyed by the Thebans, had its walls demolished and, like Orchomenos and Koroneia, the city was perhaps exposed to an *andrapodismos* (Dem. 19.141). The epigraphical and archaeological evidence shows that the city was soon resettled.

The only reference in written sources to walls is *ἄχυρωμένος* at Diod. 16.58.1, describing the Phokians' occupation of Chorsiai during the Sacred War down to 346. Remains of a coursed trapezoidal wall enclosed both the acropolis and the lower town on the east, north and west sides, whereas the south side was protected by cliffs. This circuit seems to date from the years after the battle of Leuktra; it was probably destroyed by the Thebans in 346 (Dem. 19.141), but re-erected later on in C4 in isodomic ashlar work. The walls enclose residential quarters of c.1 ha (Büsing and Büsing-Kolbe (1972) 79–87; Fossey (1986). According to Bintliff (1997a) 244, the habitation area amounted to between 1.7 and 4.5 ha. The settlement can be traced back to the early Helladic period, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 193).

203. Erythrai Map 54. Lat. 38.15, long. 23.25. Size of territory: 1. Type: C. The toponym is *Ἐρύθραι, αἱ* (Hom. *Il.* 2.499 (for the accent see schol. *ad loc.*); Thuc. 3.24.2), denoting either the town (Eur. *Bacch.* 751) or the polity (*Hell. Oxy.* 19.3). There is no attestation of the toponym in epigraphical sources, and the only attestation of a city-ethnic is *Ἐρυθραῖος Παντία[s]* (*SEG* 30 457 (C61); cf. Fossey (1991) 181–89; Hansen (1995a) 46–47; for the sequence ethnic-name, see *IG* VII 2796). But *[Δ]ημαρέτ[η Μ]οίριχου [Ἐ]ρυθραί[α]* (*IG* II² 8500 = *SEG* 14 194 (C4s)) may come from Boiotian Erythrai too, since *Μοίριχος* is a good Boiotian name, and since the *stèle* was found in Eleusis, where several other sepulchral inscriptions commemorating Boiotians have been found (Koumanoudis (1961) 104).

The only reference in ancient literature to Erythrai having been a *polis* is Pausanias' remark: *Ἰσιῶν καὶ Ἐρυθρῶν ἐρείπια ἔστι. πόλεις δέ ποτε τῶν Βοιωτῶν ἦσαν* (9.2.1). Pausanias' retrospective site-classification is supported by two observations: (a) in 479 Erythrai had a territory which must have been very small (Hdt. 9.15.3, 25.2: *ὁ Ἐρυθραῖος χῶρος*), and (b) a *sympoliteia* with Plataiai (no. 216) in C5m suggests that Erythrai had been a *polis* before it joined the *sympoliteia* and may perhaps still have been a dependent *polis* even after the union (*Hell. Oxy.* 19.3; Hansen (1995a) 16) by which its territory seems to have become a part of Plataiis

(Strabo 9.2.24). Erythrai must have been annexed by Thebes (no. 221) before the synoecism of c.431 when its population was moved to Thebes (*Hell. Oxy.* 20.3; Demand (1990) 83–85; Moggi, *Sim.* 197–204). By 395, however, Erythrai had been repopulated, but was still lying within the territory of Thebes (*Hell. Oxy.* 19.3).

The acropolis was fortified by an undated defence circuit of rubble with no pretence to style enclosing an area of 1,600 m² (Fossey (1988) 117–18). A wall of the lower town “is only visible as a line in the fall of the land” (letter from Fossey, Jan. 1995). The walls are probably later than 431, when Erythrai is described as unfortified (*Hell. Oxy.* 20.3). Apart from a few LH III sherds, the settlement cannot be traced further back than the Classical period (Fossey (1988) 118).

204. Eteonos/Skaphai (Skaph(1)eus) Map 55. Unlocated. Type: C. The toponym was originally Ἐτεωνός, ὁ (Hom. *Il.* 2.497; Strabo 9.2.24), but it was changed into Σκαφαί, αἱ (*Hell. Oxy.* 20.3) or alternatively Σκαφλαί (IG II² 11654 (C4m); Strabo 9.2.24, erroneously emended Σκάρφη by all eds.). The change of name may perhaps be connected with the refoundation of the town in c.400 after the synoecism with Thebes (no. 221) in c.431. We know that Eteonos/Skaphlai was located near Skolos (no. 219) and occupied a hill (Hom. *Il.* 2.497) in the Parasopia (Strabo 9.2.24), but the precise location is unknown (Fossey (1988) 130–31).

Apart from Steph. Byz. (283.8), Eteonos/Skaphai is never called a *polis*, and the reasons for including the site in this inventory are (a) that a city-ethnic is attested in Classical sources (Hansen (1995a) 28, 48) and (b) that a *sympoliteia* with Plataiai in C5m suggests that Eteonos/Skaphlai had been a *polis* before it joined the *sympoliteia* and may perhaps still have been a dependent *polis* even after the union (*Hell. Oxy.* 19.3; Hansen (1995a) 16). Skaphai was one of the small unwallled settlements whose population was moved to Thebes (*Hell. Oxy.* 20.3) in connection with the major synoecism at the outbreak of the Peloponnesian War (Demand (1990) 83–85; Moggi, *Sim.* 197–204 prefers a date c.426–424).

Apart from Steph. Byz. 283.10, there is no attestation of a city-ethnic derived from the toponym Eteonos, but the city-ethnic Σκαφ(λ)εύς is attested in three Attic sepulchral inscriptions of C4: IG II² 11202: Σκαφλεύς (C4f); SEG 15 161: Σκαφλικά, Σκαφλικαί (C4m, Eleusis); SEG 22 191: Σκαφλικαί (C4s, Eleusis); cf. also SEG 22 192 (second and third centuries AD). The only other attestation is in Men. *Dysc.* hypoth. 14: ὑπεκρίνατο Ἀριστόδημος Σκαφεύς. Cf. IG II² 11654: ἐΣκαφλάων (C4m) (Koumanoudis: α<ί>ων, but see δραχμαων in IG VII 3055.4).

205. Eutresis (Eutretidieus) Map 54. Lat. 38.15, long. 23.15. Size of territory: 1. Type: C. The toponym is Ἐύτρησις, ἡ (Hom. *Il.* 2.502; Eust. *Il.* 1.409.20, van der Valk; *Hell. Oxy.* 19.3, where the toponym denotes the polity). The only surviving attestation of the city-ethnic is in a Hellenistic dedication to Apollo: Ἐύτρητιδιεῖς Ἀπόλλωνι (BCH 28 (1904) 430–31 no. 1).

Strabo calls Eutresis a κομίον Θεοσιέων (9.2.28), and in Steph. Byz. (287.21) it is classified as a *kome*. Eutresis is not called a *polis* in any extant source, but the reference at *Hell. Oxy.* 19.3 to what was probably a *sympoliteia* between Thespiiai (no. 222), Thisbai (no. 223) and Eutresis suggests that Eutresis during the First Federation was a dependent *polis* dominated by Thespiiai (Siewert (1977) 463; Hansen (1995a) 16); cf. τοῖ Θεοσιέσσω καὶ τοῖρ σὺν αὐτοῖς (SEG 31 358.5 (C5f)). The attestation of the city-ethnic further suggests that Eutresis was still a *polis* in the Hellenistic period during the Third Federation.

Excavations have revealed a part of a circuit wall. Its compartment construction has been taken to suggest a C4m date (Fossey (1988) 152), and it enclosed an area of between 13 and 20 ha (Bintliff (1997a) 244). The settlement can be traced back to the Neolithic period (Fossey (1988) 152).

206. Haliartos (Haliartios) Map 55. Lat. 38.25, long. 23.05. Size of territory: 2. Type: A. The toponym is Ἄλιάρτος, ὁ (Armenidas (FGrHist 378) fr.7) or Ἄλιάρτος, ὁ (Hom. *Il.* 2.503, cf. *PLond. Lit.* 6; Lys. 16.13; IG VII 2850 (C2–C1)), denoting either the town (Diod. 14.81.2 (r395)) or the territory (Xen. *Hell.* 3.5.17). In Boiotia the city-ethnic is either Ἀλιάρτιος (SEG 25 554 (C5); Etienne and Knoepfler (1976) 221–25) or Ἀλιάρτιος (IG VII 2724.4–5 (c.280–270)); outside Boiotia it is always Ἀλιάρτιος (Thuc. 4.93.4). For the late appearance of the form Ἀλιάρτιος, see most recently Knoepfler (1992) 480–81.

Haliartos is listed as one of the Boiotian *poleis* in Thucydides' description of the battle of Delion (4.91.1, 93.4). It is called a *polis* in the urban sense by Heracl. Cret. 25 (GGM 1.104 (C3)) and in the political sense by the Oxyrhynchus historian (*Hell. Oxy.* 19.3). The term [πο]λιτεία (citizenship) in a proxeny and citizenship decree of C4l (SEG 28 453.8) strongly supports Knoepfler's restoration [τᾶς πόλιος Ἀριαρτίων] in lines 3–4 of the decree (BCH 102 (1978) 381, *pace* Fossey in *Boeotia Antiqua* 4 (1994) 49–51).

The collective use of the city-ethnic is attested internally on the reverse of a coin of C4f (APIAPTION: Head, HN² 345; see Etienne and Knoepfler (1976) 222 n. 771) and externally in a C5 dedication found near Onchestos (SEG 25 554).

For the individual and external use, see [Ἄλι]άρτιος (*CID* II 94.5), a *hieromnemon* of 327.

The territory was called Ἄλιάρτος (*Xen. Hell.* 3.5.17) or Ἀλιαρτία (Strabo 9.2.33; Paus. 9.33.4). Together with Lebadeia (no. 211) and Koroneia (no. 210), Haliartos constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3). The size of the territory has been assessed at c.80 km² (Fossey (1988) 300). It comprised Onchestos (Strabo 9.2.33; *SEG* 25 554; Etienne and Knoepfler (1976) 223; Schachter (1981–94) ii. 206), Tilphossa and Okalea, as well as Medeon (Strabo 9.2.26). A line of fortifications, now dated to 371 (Fossey (1992) 112–14), indicates the border of the city towards Koroneia (Fossey (1988) 320). The Cambridge/Bradford survey of Boiotia has revealed that there is a band of almost empty territory running east–west just north of Askra, probably the border zone between the territory of Haliartos and that of Thespiiai (no. 222) (Snodgrass (1990) 129). The Thebans' remark at *Hdt.* 5.79.2 that the Koroneians and Thespians are their neighbours indicates that Haliartos in 507/6 was a dependent *polis* and situated in what was then the territory of either Koroneia or Thebes.

Haliartos was a member of the First Federation (*Hell. Oxy.* 19.3), and the principal body of government was a *boule* to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). Haliartos was a member of the Third Federation; it provided one of the *hieromnemes* in 327 (*CID* II 94.5) and one of the *aphedriateuontes* in c.280–270 (*IG* VII 2724b.2). We have no evidence relating to the Second Federation. In C41 Haliartos seems to have awarded *proxenia* and *politeia* to a citizen from an unknown *polis* (*SEG* 28 453, restored).

On the acropolis have been found the remains of an Archaic sanctuary with a *stoa* (Coulton (1976) 240) and a temple of Athena (C7–C6), and the protecting god of Haliartos was probably Athena Itonia (*SEG* 32 456.8–9, cf. 44 408 (C31); Schachter (1981–94) i. 116). Cults of Dionysos, Alkmene and the hero Aleas have been inferred from *Plut. Lys.* 28 (Schachter (1981–94) i. 9–10, 11–12, 176).

A small circuit of cyclopean masonry (Mycenaean?) with Lesbian (Archaic?) and trapezoidal (Classical?) repairs encloses the acropolis. An ashlar circuit, probably of C4, encloses the lower city and covers an area of c.42 ha (Fossey (1988) 301–5; Bintliff (1997a) 244). Haliartos was fortified when attacked by Lysandros in 395/4 (*Xen. Hell.* 3.5.17–19; *Diod.* 14.81.2; Paus. 3.5.3–5). All three passages refer to a circuit wall enclosing the whole city and not just the acropolis. Haliartos seems to have been an early Iron Age settlement located in and round the acropolis, and from there it spread down the slope to the south. The settlement can be traced

back to the Neolithic period (Fossey (1988) 305–6). The urban centre reached its maximum size in C4 (Bintliff and Snodgrass (1988) 61–65). An important Classical cemetery outside Haliartos is reported in *AR* (1999–2000) 56.

Haliartos struck silver coins on the Aiginetan standard from c.456 to 446 and from c.400 (or earlier) to 374 (or later), and bronze coins from c.338 to 315. (1) Silver, 456–446: denominations: stater, triobol, obol, tetartemorion; *obv.* Boiotian shield, *rev.* amphora or kantharos in incuse square. Legend: *A* or *AP* or *API*. (2) Silver, C51–C4f: denominations: stater, hemiobol; *obv.* Boiotian shield on which trident; *rev.* naked Poseidon. Legend: *APIAPTION* (or *-IOΣ*) in epichoric letters, which points to a date around 400 rather than after 386 (*supra* 432). (3) Bronze, 338–315: *obv.* Boiotian shield; *rev.* legend: *API* or *AAI* in concave field (Head, *HN*² 345; Babelon, *Traité* ii.3. 270–74; Kraay (1976) 111–12; Etienne and Knoepfler (1976) 222; Hansen (1995a) 63 add. note; *SNG Cop. Boeotia* 187). The Archaic coins inscribed with an epichoric H and traditionally assigned to Haliartos are now believed to have been struck by Hyettos (no. 207; Etienne and Knoepfler (1976) 218–26). Conversely, Etienne and Knoepfler (1976) 221 n. 768 suggest that the C5e issues usually ascribed to Akraiphia (no. 198) may have been minted at (H)aliartos.

207. Hyettos (Hyettios) Map 55. Lat. 38.35, long. 23.05. Size of territory: 2. Type: [A]. Apart from the Latinised version in *Plin. HN* 36.128, the toponym Ὑηττος, ὄ is attested in two late sources only: Paus. 9.24.3–4, 36.6 and *Steph. Byz.* 646.14–15. But the personal name Ὑηττος (*Hes. fr.* 257 (C7–C6)) implies that the toponym goes back to the Archaic period. The city-ethnic is Ὑέτιος (*SEG* 24 300 (C6s)), Ὑείττιος (*IG* VII 1673.4 (c.240)), Ὑέττιος (*IG* VII 416.78 (C1)) or Ὑήττιος (*IG* VII 2833.4 (c.AD 200)).

The earliest explicit reference to Hyettos as a *polis* is in a military catalogue of c.250 (*SEG* 26 498.3–4). But other evidence implies that Hyettos was a *polis* in the Archaic and Classical periods as well. (a) *SEG* 24 300 (C6s): Θεβαῖοι τὸν *huetion* inscribed on a greave and undoubtedly commemorating a Theban victory over the Hyettans. (b) *Hell. Oxy.* 19.3: δύο δὲ παρέιχοντο βωιωτάρχας Ὀρχομένιοι καὶ Ὑήττιοι (conj. Wilamowitz; Etienne and Knoepfler (1976) 230: MS Ὑσιαῖοι), which shows that in c.400 Hyettos was one of the *poleis* that participated in the running of the federal administration; cf. 19.2: παρ' ἐκάσῃ τῶν πόλεων. Further evidence of the close relations between Hyettos and Orchomenos (no. 213) is provided by a public dedication of c.400 set up by the Orchomenians on the acropolis of

Hyettos (now lost but seen in 1938 by M. Feyel, *BCH* 62 (1938) 165 n. 5; Etienne and Knoepfler (1976) 228–29).

The collective use of the city-ethnic is attested internally on the coins if Θ is an abbreviation of *ἡγετίων* (*infra*), and externally in the Theban dedication *SEG* 24 300 (C6s). The individual and external use of the city-ethnic is attested in a list of *aphedriateuontes*: ... Ἀριστομάχῳ Ὑγειπίῳ: *IG* VII 1673.4 (c.240). The name of the territory is unknown; its size has been assessed at c.55 km² (Fossey (1988) 292).

During the First Federation, Orchomenos and Hyettos constituted two of the Boiotian districts and provided two Boiotarchs (*Hell. Oxy.* 19.3). The difference in size between the two cities indicates that, like the other small *poleis* around Lake Kopais, Hyettos provided one Boiotarch every third year and Orchomenos all the others (Etienne and Knoepfler (1976) 229–33). The principal body of government was a *boule* to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). Hyettos was a member of the Third Federation (*IG* VII 1673.4 (c.240)). There is no evidence concerning the Second Federation.

The acropolis was fortified by a wall of Lesbian masonry dating from c.500 with repairs of C4 and C2. The circuit encloses an area of c.6 ha. There are no traces of any wall around the lower city, which seems to have lain south and east of the acropolis (Etienne and Knoepfler (1976) 45–65). A surface survey of the urban centre shows that it covered c.26 ha (Bintliff (1999) 15). There are no traces of habitation antedating the Archaic period (Fossey (1988) 294–95).

Hyettos struck silver coins on the Aiginetan standard from c.500 to c.480. Denominations: stater, drachm, hemidrachm, obol, tetartemorion; *obv.* Boiotian shield; *rev.* mill-sail punch. Legend (first on *obv.* later on *rev.*): the epichoric letter h (Θ) (Head (1881) 14–15, *HN*² 345; Kraay (1976) 109–10 under Haliartos (no. 206), but assigned to Hyettos by Etienne and Knoepfler (1976) 218–26 and 383–90; Schachter (1989) 85; *SNG Cop. Boeotia* 187–88).

208. Hysiai Map 55. Lat. 38.15, long. 23.20. Size of territory: 1. Type: C. The toponym is Ὑσιαί, αἶ (*Hdt.* 5.74.2; *Eur. Bacch.* 751), denoting the polity (*Hdt.* 6.108.6) or the town (*Hdt.* 9.15.3) or the territory (*Thuc.* 3.24.2). There is no attestation of the toponym in epigraphical sources, and the only attestation of a city-ethnic is in *Steph. Byz.* 653.9.

Apart from Pausanias' description of Hysiai as the ruins of what had once been a Boiotian *polis* (9.2.1), the only reference in ancient literature to Hysiai as a *polis* is in *Harp. Y15*: Ὑσιαί, τῆς Βοιωτίας πόλις, quoting Hypereides' speech *For Xenophilos* (fr. 156, Sauppe) for the toponym and

Euripides' *Antiope* (fr. 180, Nauck) for the site-classification, which, however, is applied to the Heroic Age and cannot be used as evidence for the status of Hysiai in the Archaic and Classical periods. The two main reasons for including Hysiai in this inventory are (a) that it had a territory of its own and (b) that it was placed right between Plataiai (no. 216) and the three small cities which are named by the Oxyrhynchus historian as *συμπολιτευόμεναι* with Plataiai (*Hell. Oxy.* 19.3): viz. Erythrai (no. 203), Skolos (no. 219) and Eteonos/Skaphai (no. 204). This location strongly indicates that Hysiai must have been one of the small members of the *sympoliteia* not mentioned explicitly by the Oxyrhynchus historian but referred to in the phrase τῶν ἄλλων χωρίων, and thus Hysiai was presumably a *polis*, perhaps a dependent *polis* after it joined the *sympoliteia*.

Hysiai had been annexed by Athens, probably in 519, and was still part of Attika in 506 (*Hdt.* 5.74.2, 6.108.6); but in 479 Hysiai was lying in Plataian territory (*Hdt.* 9.101.1), yet at the same time had a territory of its own which, however, must have been very small (*Hdt.* 9.25.3, cf. 6.108.6) bordering on Plataiai to the west (*Hdt.* 9.15.3, 25.3), Thebes to the north (*Hdt.* 6.108.6), Erythrai to the east (*Hdt.* 9.15.3) and Eleutherai to the south (*Paus.* 9.1.6). Later in C5 Hysiai seems to have been a member of the *sympoliteia* led by Plataiai (*Hell. Oxy.* 19.3) and must accordingly have been a part of Plataiis (cf. *Paus.* 9.2.1).

A cult of Demeter is attested in inscriptions (*IG* VII 1670–71 (both C5e)) and in the sources for the battle of Plataiai, in which the sanctuary is described as that of Demeter Eleusinia (*Hdt.* 9.57.2, 62.2, 65.2, 69.1; *Plut. Arist.* 11.6; *Paus.* 9.4.3; Schachter (1981–94) i. 152–54). Pritchett (1979) associated the sanctuary with some remains of C5e found in the plain near modern Pantanassa, but a location on the hills just north of modern Kriekouki was suggested by Wallace (1985) 97–99. Of the settlement itself, remains of a circuit wall (undated) could still be seen at Kriekouki in the early twentieth century (Fossey (1988) 113), and there are pottery and small finds of the Archaic and Classical periods (*ibid.* 114).

209. Kopai (Kopaieus) Map 55. Lat. 38.30, long. 23.10. Size of territory: 3. Type: [A]. The toponym *Κῶπαι, αἶ* is attested in literary sources only (*Hom. Il.* 2.502; *Hell. Oxy.* 19.3, where it denotes the polity). The city-ethnic is *Κῶπαιεύς* (*Thuc.* 4.93.4; *IG* VII 4149.15 (C1f)) or *Κῶπαῖος* (Head, *HN*² 344 (C4f)) or *Κῶπηῖος* (*IG* VII 2792 (C4s)), which is the more common form in Boiotian inscriptions (Fossey in *LCM* 10 (1985) 39).

Kopai is listed as one of the Boiotian *poleis* in Thucydides' description of the battle of Delion (4.91.1, 93.4) and in the Oxyrhynchus historian's account of the federal constitution (*Hell. Oxy.* 19.3), both passages using *polis* in the political sense.

The collective use of the city-ethnic is attested externally on a C4s boundary stone (*IG VII* 2792) and internally on the reverse of a coin of C4f (*ΚΩΠΠΑΙΩΝ*: Head, *HN*² 344); the individual use is attested externally in a list of *aphedriateuontes*: *Ἀριστοκράτιος [ῚΕμ]τέδωνος Κωτ[Ὶ]ω* (*IG VII* 2724d.5 (c.240)) and internally in a Hellenistic grave epigram (*IG VII* 2796.1).

An inscription of c.315 cut in the rock near Vristika marked the border between Kopai and Akraiphia (no. 198) (*IG VII* 2792; *SEG* 36 411; Lauffer (1986) 136), and, similarly, a *horos* of the late Archaic period probably records the border between the two *poleis* (*SEG* 30 440). The size of the territory has been assessed at c.105 km² (Fossey (1988) 264).

In 395 Kopai was united with Akraiphia and Chaironeia (no. 201) and constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3). The principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). There is no explicit evidence concerning the Second Federation, but Kopai was a member of the Third Federation (*IG VII* 2724d.5 (c.240)).

A temple of Demeter is mentioned in Pausanias' description of Kopai (9.24.1), and a cult of Demeter Tauropolos is attested in an undated inscription found in Kopai (*IG VII* 2793, now lost); the bull on the C4 coins of Kopai (*infra*) indicates that Demeter Tauropolos was worshipped in Kopai already in the Classical period (Schachter (1981–94) i. 154–55).

A line of an ashlar wall (presumably of C4s) and possibly the position of a tower can still be observed (Fossey (1988) 278). The settlement is supposed to have covered c.23 ha (Bintliff (1997a) 244); it can be traced back to the Neolithic period, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 279).

Kopai struck silver obols on the Aiginetan standard and bronze coins between 386 (or earlier) and 374 (or later). (1) Silver: *obv.* Boiotian shield; *rev.* forepart of bull. Legend: *ΚΩΠΠΑΙΩΝ*. (2) Bronze: *obv.* Boiotian shield; *rev.* head of bull. Legend: *ΚΩ* (Head, *HN*² 344).

210. Koroneia (Koroneus) Map 55. Lat. 38.25, long. 22.55. Size of territory: 2. Type: A. The toponym is *Κορώνεια*, Ὶ (*Hom. Il.* 2.503; *Thuc.* 1.113.2; *IG II*² 5222 (394); *SEG* 19 363 (C4s)), but a C6 dedication in Olympia has *Ὶορόνια* (*LSAG*

93 and 95 no. 11). The toponym denotes either the town (*IG IV*².1 94.a.7) or the polity (*Dem.* 19.325) or the territory (*IG II*² 5222.vii.1 (394)). In most literary sources the city-ethnic is *Κορωναῖος* (*Hdt.* 5.79.2; *Thuc.* 4.93.4), but in inscriptions and some literary sources it is *Κορωνεύς* (Lazzarini (1976) 916; *CID II* 74.1.50 (337/6); *Hell. Oxy.* 19.3); once it is *Κορώνιος* (Strabo 9.2.29). Again, [*Ὶο*]ρονε[Ὶς] has been restored on a C6l helmet dedicated to Olympian Zeus (*SEG* 42 381), and the oldest coins (500–480) are marked with a Ὶ, whereas the coins of the next series (from c.456–446) have the legend *ΚΟΡΟ* (Head, *HN*² 345).

Koroneia is perhaps called a *polis* in the urban sense by *Hecat. fr.* 117 (= *Steph. Byz.* 377.12, where Hekataios is quoted for the toponym but not necessarily for the site-classification). Koroneia is called a *polis* in the political sense in Thucydides' description of the battle of Delion (4.91.1, 93.4) and in the Oxyrhynchus historian's description of the Boiotian constitution (*Hell. Oxy.* 19.3).

The collective use of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in a C6 dedication in Thebes (Lazzarini (1976) 916) as well as in literary sources (*Hdt.* 5.79.2; *Thuc.* 4.93.4). The individual use is attested internally in a list of victors at the Pamboiotia (*SEG* 26 551 (C3s)) and externally in a sepulchral inscription from Thespiai: *Ἐδκράτη Κορωνεῦ χαῖρε* (*IG VII* 2114 = *Choix* 49 (Hellenistic)).

The territory was called *Κορώνεια* (*Thuc.* 1.113.2; *Arist. Mir. ausc.* 842^b3) or Ὶ *Κορωνειακή* (Strabo 9.2.19, 28). The territory comprised Hermaion (a valley), Metachoion (a fortress between Koroneia and Orchomenos (no. 213), *Ephor. fr.* 94a), the sanctuary of Athena Itonia (Strabo 9.2.29; *schol. Ap. Rhod.* 1.551a) and Alalkomenai (no. 199) (Schachter (1981–94) i. 113). Its size has been assessed at c.95 km² (Fossey (1988) 322). Together with Haliartos (no. 206) and Lebadeia (no. 211), Koroneia constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3). The principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3).

Koroneia was allied with Thebes in 506 and earlier (*Hdt.* 5.79.2). The city was a member of the First Federation (*Hell. Oxy.* 19.3–4), the Second Federation (*Diod.* 16.35.3) and the Third Federation (*CID II* 74.50). A citizen of Koroneia was appointed *proxenos* by Delphi (no. 177) (*F. Delphes III*.3 102 (C4l)). In 359 a *theorodokos* was appointed to host *theoroi* from Epidauros (no. 348) (*IG IV*².1 94.a.7).

The protecting god of Koroneia was Athena Itonia, whose sanctuary seems to have been located just to the north of the acropolis (*Alc. fr.* 325; *Bacchyl. fr.* 15; Schachter (1981–94) i.

117–27), where excavations have uncovered the foundations of three buildings that can be traced back to C6 (Fossey (1988) 326). The cult is attested on a C6 lekane (Brit. Mus. B80) depicting Athena, her priestess and a serpentine consort, later identified with the chthonic Zeus. Her festival included hippic competitions (Pind. *Parth.* 2.46–49). The pan-Boiotian festival postdates the Classical period. Another important deity at Koroneia was Herakles Charops (Schachter (1981–94) ii. 3–10), whose sanctuary was close to and possibly shared with Zeus Laphystios (*SEG* 23 297.6–7; Schachter (1981–94) iii. 104–6). In inscriptions of C4–C3 is attested a cult of Demeter Thesmophoros (*IG VII* 2876; Schachter (1981–94) i. 155).

In 353/2 Koroneia was conquered by Onomarchos (Ephor. fr. 94a; Diod. 16.35.3) and became a Phokian stronghold (Dem. 19.148; Diod. 16.58.1) until 346, when Philip had the city handed over to the Thebans (Dem. 5.22, 6.13), who exposed it to an *andrapodismos* (Dem. 19.112, 325); but shortly afterwards Koroneia must have been resettled, since in 337/6 one of the Boiotian *tamiai* in Delphi was a Koroneian citizen (*CID II* 74.50).

Koroneia was a walled city when conquered by the Phokians in 353 (Ephor. fr. 94a; Diod. 16.58.1). There are remains of an undated polygonal circuit around the acropolis, enclosing an area of 38 ha (Fossey (1988) 325–26, letter of Jan. 1995); another circuit of unknown date enclosing the lower town could still be seen in the nineteenth century (Frazer (1898) v. 70). The settlement is supposed to have covered c.94 ha (Bintliff (1997a) 244); it can be traced back to the Neolithic period, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 326). The site of a possible theatre and above it remains of a Doric temple were noted by early travellers (Fossey (1988) 325).

Koroneia struck silver coins on the Aiginetan standard c.500–480, c.456–446 and in C5l–C4f, and bronze coins c.338–315. (1) Silver, c.500–480, denominations: drachm, obol, hemiobol, tetartemorion; *obv.* Boiotian shield; *rev.* letter ϱ in mill-sail or incuse square. (2) Silver, c.456–446, denomination: hemidrachm; *obv.* Boiotian shield; *rev.* Gorgon head. Legend: *KOPO*. (3) Silver, C5l–C4f, denominations: hemidrachm, obol; *obv.* Boiotian shield; *rev.* head of Athena Itonia or Gorgoneion. Legend: *KO* or *KOP* or *KOPO*. (4) Bronze, 338–315; *obv.* Boiotian shield; *rev.* legend: *KOP* in concave field (Head (1881) 14, 26, 45; *HN*² 345; Kraay (1976) 110–11; Schachter (1989) 85; *SNG Cop. Boeotia* 182–86).

211. Lebadeia (Lebadeus) Map 55. Lat. 38.25, long. 22.50. Size of territory: 2. Type: A. The toponym is *Λεβάρεια*, ἦ

(Hdt 8.134.1; *IG VII* 3083.4–5 (C3s)), denoting either the town (*IG IV*².1 94.a.9; Theophr. *Hist. pl.* 4.11.8) or the territory (Xen. *Mem.* 3.5.4). According to Paus. 9.39.1, the original toponym was *Μῦδεια*, mentioned in the Homeric Catalogue of Ships (Hom. *Il.* 2.507). The city-ethnic is *Λεβαδεύς* (*Hell. Oxy.* 19.3; *CID II* 102.1.11 (324/3)) or, once, *Λεπαδεύς* (*IG XII.5* 542.25 (C4m)), but in some Boiotian inscriptions it is *Λεβαδειῆος* (*IG VII* 3068.1 = Michel 635 (C3)).

Lebadeia is called a *polis* in the political sense at *Hell. Oxy.* 19.3 and in a sacred law of C4m (*IG VII* 3055). The formula [*τᾶς πόλιος τᾶς*] *Λεβαδεῖ*[ι]α[ί]ω[ν] is restored in *IG VII* 3086 of c.400, but see Schachter (1981–94) iii. 76 n.1.

The collective use of the city-ethnic is attested internally in a sacred law (*IG VII* 3055 (C4s); Schachter (1981–94) iii. 86–88) and externally in *Hell. Oxy.* 19.3. For the individual and external use, see *IG XII.5* 542.25 (C4m), a Karthaian *proxenos*, or *CID II* 102.1.11: *Σωκράτε*[ος] *Λεβαδειέο*[ς], *hieromnemon* in 324/3.

The territory was called *Λεβάρεια* (Cratinus fr. 220; Xen. *Mem.* 3.5.4; Theophr. *Hist. pl.* 4.11.8) or ἡ *Λεβαδιακῆ* (Arist. *Hist. an.* 606^a1). Together with Koroneia (no. 210) and Haliartos (no. 206), Lebadeia constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3). A *horos* of C4–C3 found some 4 km south-east of Lebadeia marks the border between Lebadeia and Koroneia (*SEG* 23 297). To the north-east Lebadeia bordered on the territory of Orchomenos (no. 213) (Arist. *Hist. an.* 606^a1, a passage which shows that Lake Kopais in C4 was considerably smaller than indicated in *Barr.*; cf. also Lauffer (1986) 136). The adjoining city to the north was Chaironeia (no. 201) (Plut. *Mor.* 849A (rC4)). The size of the territory has been assessed at c.95 km² (Fossey (1988) 322, 342).

Lebadeia was a member of the First Federation (*Hell. Oxy.* 19.3), and the principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). The city was sacked by Lysandros in 395 (Plut. *Lys.* 28.2). The city must have been a member of the Second Federation as well, since the *panegyris* celebrating the Boiotian victory at Leuktra took place in Lebadeia (*infra*), and the attestation of a *hieromnemon* in 324/3 testifies to membership of the Third Federation (*CID II* 102.1.11). *Theorodokoi* were appointed c.400 to host *theoroi* from Delphi (no. 177) (*Syll.*³ 90.14–15), and in 359 to host *theoroi* from Epidauros (no. 348) (restored in *IG IV*².1 94.a.9).

Lebadeia was famous for its oracle of Trophonios, with his brother Agamedes the mythical architect of Apollo's temple at Delphi (*Hymn. Hom. Ap.* 296). In his subterranean cave just outside Lebadeia, Trophonios was consulted

allegedly by Kroisos of Lydia (Hdt. 1.46.2) and Mys of Persia (Hdt. 8.134.1), and certainly in C4m by King Amyntas of Macedon (*IG VII* 3055.7–8). The cult is attested from C6 to the end of Antiquity (*IG VII* 3055: a sacred law of C4m regulating the consultations; Eur. *Ion* 300–2, 404–9; Paus. 9.39.2–14; Schachter (1991–94) iii. 66–89).

The protecting god of Lebadeia was probably Zeus Basileus and, allegedly following an oracle of Trophonios given before the battle of Leuktra in 371, a pan-Boiotian festival was set up at Lebadeia in honour of Zeus Basileus (Diod. 15.53.4). The festival was held under Theban sponsorship to celebrate their victory and included gymnastic and hippic competitions (*IG VII* 552, 2532; *SEG* 23 332 (all C4m); Schachter (1981–94) iii. 109–18).

The city of Lebadeia was situated on the eastern bank of the river Herkyna (Paus. 9.39.2) beneath the modern city. The size of the city is still unknown (Bintliff (1997a) 231), and so far no traces of an ancient defence circuit have been found. Excavations have revealed some remains of C4 monumental buildings including a stoa and a temple of the Megale Meter (Fossey (1988) 345; Schachter (1981–94) ii. 127–30; Turner (1994)). To the west of the river Herkyna were the famous oracle of Trophonios and the sanctuary of Zeus Basileios with a Doric temple, of which there are still some remains, presumably dating from C3 (Fossey (1988) 345; Schachter (1981–94) iv. 112–13).

Lebadeia struck silver diobols on the Aiginetan standard from c.386 (or earlier) to 374 (or later) and bronze coins from c.338 to 315. (1) Silver: *obv.* Boiotian shield; *rev.* thunderbolt. Legend: *AEBA*. (2) Bronze: *obv.* Boiotian shield; *rev.* legend: *AEB* in concave field (Head, *HN*² 346).

212. Mykalessos (Mykalessios) Map 55. Lat. 38.25, long. 23.30. Size of territory: 2? Type: A. The toponym is *Μυκαλησσός, ἡ* (Hom. *Il.* 2.498; Thuc. 7.29.2–3), denoting either the town (Thuc. 7.29.3–4) or the polity (Thuc. 7.30.3) or the territory (Hom. *Il.* 2.498). The city-ethnic is *Μυκαλήσσιος* (Thuc. 7.30.3). Neither the toponym nor the city-ethnic is attested in epigraphical sources.

Mykalessos is called a *polis* both in the urban and in the political sense by Thuc. 7.29–30. According to Strabo it was a *kome* (9.2.11, 14), whereas Paus. 9.19.4, retrospectively, describes Mykalessos as the ruins of a *polis*.

The collective form of the city-ethnic is attested internally in abbreviated form on coins (*infra*) and externally in Thuc. 7.30.3, paraphrased by Pausanias at 1.23.3.

In the Hellenistic and Roman periods Mykalessos was located in the territory of Tanagra (no. 220) (Strabo 9.2.11,

14; Paus. 9.19.8), and that seems to have been the case already in C5e (Fossey (1988) 83–84, 222–23; Hansen (1995a) 36–37). Within the Tanagraian territory, however, Mykalessos had its own territory, called *Μυκαλησσός*, which seems to have stretched as far as the Euboian Gulf (Paus. 9.19.5; Bakhuizen (1970) 20–21, 148–49), and so its area must be assessed as at least 50 and perhaps more than 100 km².

In 413 the city was sacked by Thracian mercenaries, and a large part of the population was killed (Thuc. 7.29–30). Mykalessos was walled, but the circuit was not very high, and parts of it had collapsed (Thuc. 7.29.3). The wall reported by Lolling (1989) 508 may have been the remains of a circuit (Fossey (1988) 80–81). Thucydides describes Mykalessos as a small *polis*, and apart from houses the only buildings mentioned are some sanctuaries and a school (Thuc. 7.29.4–5). At the site are remains of an undated circuit wall in polygonal masonry and considerable architectural fragments. The settlement can be traced back to EH II and there are remains of the Archaic and Classical periods (Fossey (1988) 80–83). The large cemetery testifies to a peak of population in C6s (Ure (1940); Sparkes (1967) 128–30).

Mykalessos struck silver coins on the Aiginetan standard from c.500 to 480 and from 386 (or earlier) to 374 (or later). (1) c.500–480, denominations: stater, drachm, hemiobol; *obv.* Boiotian shield; *rev.* letter *M* in mill-sail or incuse square. (2) C5l–C4f, denominations: obol, hemiobol, tetartemorion, 1/8 obol; *obv.* Boiotian shield; *rev.* thunderbolt (some). Legend: *M* or *MY* (Head (1881) 47, *HN*² 346; Kraay (1976) 110; Schachter (1989) 85; *SNG. Cop. Boeotia* 190–91).

213. Orchomenos (Orchomenios) Map 55. Lat. 38.30, long. 23.00. Size of territory: 3. Type: A. The toponym is *Ὀρχομενός, ὁ* (Hom. *Il.* 2.511; Thuc. 3.87.4) or, in the Boiotian dialect, *Ἐρχομενός* (*LSAG* 93 and 95 no. 17 (c.475–450?)). The toponym denotes either the town (*IG IV*².1 94.a.8) or the polity (Dem. 19.325) or the territory (Thuc. 1.113.2). The city-ethnic is *Ὀρχομένιος* (Hdt. 9.16.1; *CID* II 74.1.36), but in Boiotian inscriptions almost always *Ἐρχομένιος* (*LSAG* 93 and 95 no. 11 (C6m)) and only occasionally *Ὀρχομένιος* (both forms are attested in *IG VII* 3172.17, 51–52 (223)).

Orchomenos is called a *polis* in the urban sense (Dem. 16.25 and implicitly in Ps.-Skylax 59), in the political sense (Thuc. 4.91.1, 93.4; *Hell. Oxy.* 19.2–3) and in the territorial sense (Pind. fr. 333.a.8, Maehler).

The collective use of the city-ethnic is attested internally in an abbreviated form on coins (*infra*) and externally on a

C6m helmet at Olympia commemorating a victory over Koroneia (no. 210) (*LSAG* 93 and 95 no. 11). For the individual and external use, see Νικίας 'Ερμαίου 'Ερχομένιος (*IG* II² 10036 (410–390)). See also in the C5 dedication from Delphi: [Ἐ]πίδαλος . . . Βοιότιος ἔχης 'Ερχ[ομενῶ] (*LSAG* 93 and 95 no. 17 (c.475–450)).

The territory was called γῆ ἢ 'Ορχομενίων (Hdt. 8.34) or ἡ 'Ορχομενία (Theophr. *Hist. pl.* 9.13.1; Strabo 9.2.19) or ἡ 'Ορχομενός (Thuc. 1.113.2). (When denoting the city, the gender of the toponym is invariably masculine—the exception is Apol. Rhod. *Arg.* 4.257—thus ἡ 'Ορχομενός probably denotes the territory of Orchomenos with either γῆ or χώρα implied.)

To the north, Orchomenos bordered on Phokis and included Aspledon (Paus. 9.38.9), Kyrtone and Korseia (Paus. 9.39.1; cf. Etienne and Knoepfler (1976) 196) and Tegyra (Plut. *Pelop.* 16.1–3). To the south Orchomenos bordered on the territory of Lebadeia (no. 211) (Arist. *Hist. an.* 605^b3; Paus. 9.39.1). Down to c.400 the territory of Orchomenos seems to have included Chaironeia (no. 201) (Hdt. 8.34.1; Thuc. 4.76.3; Theopomp. fr. 407), and after 457 Chaironeia and Orchomenos served as a refuge for oligarchs from the other Boiotian *poleis* (Hellan. fr. 81). But Chaironeia became free of Orchomenos at some time after 424 (Thuc. 4.76.3, 93.4) but before 395 (*Hell. Oxy.* 19.3). The size of the territory has been assessed at c.105 km² (Fossey (1988) 342); including Kyrtone and Korseia it was c.150 km. Together with Hyettos (no. 207), Orchomenos constituted two of the eleven Boiotian districts (*Hell. Oxy.* 19.3).

In the Catalogue of Ships Orchomenos is called Μινύειος and is not a part of Boiotia (Hom. *Il.* 2.511; cf. Thuc. 4.76.3). According to this tradition, Orchomenos and the Minyans had once ruled Boiotia and received tribute from the Boiotian cities (Isoc. 14.10; Diod. 15.79.5). On the Bronze Age palace and Mycenaean remains in Orchomenos, see Hiller (1989).

Orchomenos was a member of the First Federation, and, together with Hyettos, supplied two of the eleven Boiotarchs (*Hell. Oxy.* 19.3); but in 395 at the outbreak of the Corinthian War the Orchomenians joined Sparta and defected from the Federation (Xen. *Hell.* 3.5.6). The city was garrisoned by the Spartans from 395 to 375 or even later (Xen. *Hell.* 4.3.15, 5.1.29; Diod. 15.37.1), and the war between Thebes and Orchomenos went on until 371 (Xen. *Hell.* 6.4.10). In 370, however, Orchomenos was forced to rejoin the Boiotian Federation (Diod. 15.57.1), apparently without any representation in the federal government (only seven Boiotarchs in 365: *SEG* 34 355). An abortive *coup d'état* planned by the

Orchomenian knights in collusion with some Theban exiles resulted in a Theban attack on Orchomenos in 364. The city was conquered, destroyed and exposed to an *andrapodismos* by which all men were killed while women and children were sold into slavery (Diod. 15.79.3–6; Dem. 16.4, 16.25, 20.109). But the site was not abandoned: and in 359 an Orchomenian *theorodokos* was appointed to host a *theoros* from Epidauros (no. 348) (*IG* IV².1 94.a.8). So in 364 Orchomenos must have been given to settlers who were loyal to Thebes. In 354 Orchomenos was conquered by Onomarchos (Diod. 16.33.4; Buckler (1989) 56) and occupied by the Phokians until their capitulation in the summer of 346 (Dem. 19.148; Aeschin. 2.141; Diod. 16.58.1). During the Phokian occupation the city was resettled by some Orchomenians, probably those who had escaped the *andrapodismos* of 364 (Aeschin. 2.141; Dem. 16.25; schol. Dem. 6.13, 21, Dilts). After the peace with the Phokians, Philip surrendered Orchomenos to the Thebans (Dem. 5.21–22), and the city seems to have suffered yet another *andrapodismos* (Dem. 19.112, 141, 325). When the Thebans had been defeated at Chaironeia, however, Orchomenos was refounded, this time with Philip's support, and the city was given back to the surviving Orchomenians (Paus. 4.27.10, 9.37.8); it joined the Federation again, and in 337/6 one of the Boiotian *hieromnemes* at Delphi was an Orchomenian (*CID* II 74.I.36, II.27). After the destruction of Thebes in 335, Orchomenos became once again a walled city (Arr. *Anab.* 1.9.10).

Orchomenos was a member of the Kalaurian Amphiktyony (Strabo 8.6.14; Schachter (1981–94) ii. 213–14; Tausend (1992) 12–13). In 452 Orchomenos may have been a member of the Delian League (*IG* I³ 260.IX.9, as restored by D. Lewis; see *CAH* v. 50).

The constitution of Orchomenos was oligarchic (Thuc. 4.76.3; Diod. 15.79.3), and we hear about some Orchomenian exiles who in 424 planned to set up democracies in Siphai (no. 218) and Chaironeia (Thuc. 4.76.3; cf. Hansen (1995a) 22). The principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). The Aristotelian collection of *politeiai* included a *Constitution of the Orchomenians* (Arist. fr. 578–82). Pausanias' reference at 9.34.10 to two Orchomenian *phylai*, if trustworthy, must refer to his own day (Jones, *POAG* 78–79). Orchomenian citizens were appointed *proxenoi* by Delphi (no. 177) (*F.Delphes* III.4 394 (C4s, but heavily restored)).

The protecting god of Orchomenos was Zeus with various epithets, of which Karaios (*SEG* 32 478 (C4f)) and Soter (Tod 197 (330/29)) are attested in Classical sources

(Schachter (1981–94) iii. 120–24). Other major divinities attested in the Archaic and Classical periods are (a) the Charites (Pind. *Ol.* 14.3–4; Ephor. fr. 152), whose sanctuary according to Paus. 9.38.1 was the oldest in Orchomenos (Schachter (1981–94) i. 140–41); (b) Dionysos, whose sanctuary housed a cult image by Myron (Paus. 9.30.1 (rC5m)); musical contests are attested c.400 (Schachter (1981–94) i. 180 n. 2), and a biennial rite in which the priest of Dionysos pursued women in ritual flight (and if he caught one might kill her) must antedate the Classical period (Plut. *Mor.* 299F; Schachter (1981–94) i. 179–81). An extra-urban sanctuary of the Classical period c.3.5 km north of Orchomenos has been assigned to Dionysos (Schachter (1981–94) i. 181). Asopichos of Orchomenos is recorded as victor in the Olympic Games of 488 (Pind. *Ol.* 14; *Olympionikai* 182).

The only explicit reference in written sources to walls is *ἄχυρωμένος* at Diod. 16.58.1, which shows that Orchomenos was fortified during the Phokian occupation, 353–346. Substantial remains of a polygonal and irregular trapezoidal wall enclose the acropolis and the western part of the town; it is crowned by a keep of ashlar masonry. The existing walls enclose an area of less than 40 ha, but the lower city must have extended further to the south, and the settlement may have covered altogether c.90 ha (Bintliff (1997a) 243). The date of the wall is disputed. Fossey (1988) 353 suggests the Archaic period for the polygonal masonry and the Classical for the ashlar; Scranton (1941) prefers C4m, whereas Lauffer (1974) 297–99 prefers to identify the remains with the walls erected in the 330s after the sack of Thebes in 335 (Arr. *Anab.* 1.9.10). For the Archaic and Classical periods the degree of urbanisation is virtually unknown, partly because the Classical remains were destroyed by the later Byzantine occupation and partly because the relevant material from Bulle's excavations was never published (Lauffer (1974) 311). Remains have been found of Archaic temples, one of them possibly the shrine of the Charites or of Dionysos (Fossey (1988) 354), and a theatre of C4s (Spyropoulos in *AR* 20 (1973–74) 20), apparently dedicated to the Charites (*BCH* 98 (1974) 224; Isler (1994) 268). The settlement can be traced back to the Neolithic period, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 353–59).

Orchomenos struck silver coins on the Aiginetan standard from c.500 to 480 and from c.400 (or earlier, *supra* 432) to 374 (or later), and bronze coins c.338–315. (1) Silver, c.500–480, denominations: obol, tritartemorion, hemiobol; *obv.* incuse; *rev.* sprouting corn-grain. Legend (on *obv.* or *rev.*): *E* or *EP*. (2) Silver, C51–C4f: (a) denominations stater,

hemidrachm; *obv.* Boiotian shield; *rev.* running horse or amphora. Legend: *EP*, *EPX* or *EPXO*. (b) Denominations tritartemorion, hemiobol, tetartemorion; *obv.* sprouting grain of corn; *rev.* horse or wreath or ear of corn. Legend (on *obv.* or *rev.*): *EP*. (3) Bronze, c.338–315, *obv.* Boiotian shield; *rev.* legend: *OPX* in concave field (Head (1881) 18–19, 48–49, 79, *HN*² 346–47; Kraay (1976) 110; Schachter (1989) 85; *SNG Cop. Boeotia* 192–208).

214. Oropos (Oropios) Map 55. Lat. 38.20, long. 23.45. Size of territory: 3. Type: B. The toponym is *Ἰσρωπός*, *ὄ* (Hdt. 6.101.1; Dem. 16.11; *SEG* 19 363 (C4s); *SEG* 3 117.14 (303/2)), or, once, *ἦ* (Steph. Byz. 601.3) denoting either the town (Thuc. 8.60.1) or the territory (Hyp. 3.16). The city-ethnic is *Ἰσρωπίος* (Thuc. 2.23.3; *I.Oropos* 1–2 = *IG* VII 4250–51 = RO 75 A–B (338–335); cf. Rhodes, *DGS* 116).

All attestations of Oropos as a *polis* are Hellenistic. Oropos is called a *polis* in the urban sense by Heracl. Cret. 7 (*GGM* 1.100 (C3s)) and in the political sense by Diod. 14.17.3 (rC4), and in some citizenship decrees of 322–312 (*I.Oropos* 4.7–8, 5.8–9, 6.9–10 = *IG* VII 4256–57 and *SEG* 15.264 (all C4l)).

The collective use of the city-ethnic is attested internally in two proxeny decrees of C4m (*I.Oropos* 1–2) and externally in many literary sources (Thuc. 2.23.3; Isoc. 14.20). The individual use of the city-ethnic is attested internally in a sepulchral inscription of C2 (*SEG* 15 303) and externally in an Attic naval catalogue of C5l (*IG* I³ 1032.170) and in a list of *aphedriateuontes* of 312–304: [*K*]ρατύλλω Ἀμφιδαμίω Ἰσρωπίω (*IG* VII 2724a.5 (c.280–270)).

The name of the territory is *Ἰσρωπία* (Thuc. 4.99.1) or *Ἰσρωπός* (Hyp. 3.16), *ὄ* (Steph. Byz. 711.2) or *ἦ* (Steph. Byz. 601.3). It is sometimes referred to as being contiguous with Boiotia (*SEG* 37 100.142 (c.330)) and sometimes as being part of Boiotia (Paus. 1.34.1). Thucydides' account of the aftermath of the battle of Delion shows that Oropos was a border district between Attika and Boiotia (Thuc. 4.99.1). The size of the territory has been assessed at c.110 km² (Fossey (1988) 28). A survey has been conducted in the territory (Cosmopoulos (2001)).

According to the Boiotian historian Nikokrates (*FGrHist* 376) fr. 1, Oropos was originally a colony of Eretria (no. 370), and this piece of information is supported by a study of the local dialect, which was neither Boiotian nor Attic but a form of Ionic very close to that spoken by the Eretrians (Wilamowitz-Möllendorff (1886) 97–103). Oropos fell to Athens probably after 507/6 (since the settlement did not become an Attic deme), perhaps before 490 (Hdt. 6.101.1),

but perhaps only after the Persian destruction of Eretria (Knoepfler (1985) 52). During most of C5 Oropos was an Athenian dependency (Thuc. 2.23.3), but in 412/11 the city was conquered by the Boiotians, assisted by some Oropians (Thuc. 8.60.1; Gehrke, *Stasis* 125), and enjoyed a short period of independence (Lys. 31.9) until 402, when the losing side in a civil war appealed to Thebes. The Thebans captured the city and forced its population to leave their settlement on the coast and move 7 stades inland. The Oropians were first allowed to retain their political institutions, probably as a Theban dependency, but after a few years Oropos was annexed to the Boiotian Federation and all Oropians were made citizens of Thebes (Diod. 14.17.1–3; Theopomp. fr. 12). When the Boiotian federation was dissolved in 386 after the King's Peace, Oropos must have regained its independence, but some time between 375 and 373 the Oropians preferred to join Athens once again rather than be forced by Thebes to join the new Boiotian Federation (Isoc. 14.20, 37; Knoepfler (1986b) 90–93; SEG 36 442). Already in 366 (Diod. 15.76.1), however, Oropos was captured by the Eretrian tyrants (Aeschin. 3.85; Dem. 18.99). Faced with the threat of a major Athenian attack, they agreed to hand over Oropos to the Thebans and submit to international arbitration. The Thebans garrisoned the city, but the arbitration came to nothing, and Thebes annexed Oropos once again (Xen. *Hell.* 7.4.1; Diod. 15.76.1; schol. Dem. 18.99, 176, Dilts; 21.64, 204, Dilts). Two proxeny decrees passed by the Oropians in their *ekklesia* (RO 75 A–B) in probably 359/8 (Coulton (1968) 182) strongly suggest that Oropos, though depending on Thebes, was still a *polis*, and not just a municipality (Hansen (1995a) 39). After the defeat at Chaironeia, Oropos was transferred to Athens, perhaps already by Philip in 338 (Paus. 1.34.1; schol. Dem. 18.99, 176, Dilts; Robert (1960) 195), perhaps only in 335 after Alexander's destruction of Thebes (Knoepfler (1993) 295). During this period Oropos was ruled by a *demarchos* (IG II² 1672.272–3). Oropos regained its independence in 322, had it confirmed in 319 (Diod. 18.56.6), but became a member of the Third Boiotian Federation in the years 312–304 (Diod. 19.78.3; IG VII 2724a.5 (c.280–270)). In C4s Oropos awarded *proxenia* to a member of the Makedonian royal family and to a Makedonian nobleman (*I.Oropos* 1–2).

Remains of an undated fortification wall enclosing the acropolis are still visible along the west side, but only as a fall in the land with some debris. All remains of ancient structures have disappeared (Fossey (1988) 30 and letter of Jan. 1995).

Oropos was famous for its sanctuary of Amphiaraios situated east of the city. The Amphiareion was originally an

underground oracle, allegedly consulted by Kroisos of Lydia (Hdt. 1.46.2) and by Mys of Persia (Hdt. 8.134), in C4s by Euxenippos on behalf of the Athenian *polis* (Hyp. 3.14–17). It was rebuilt and reorganised in C5s as a predominantly iatromantic sanctuary (Ar. fr. 21, *PCG*) administered by a *hiereus* and a *neokoros* (*I.Oropos* 276–77 (C4f); Schachter (1981–94) i. 19–26; Petrakos (1968) 61–129). The visible remains are mostly of C5l–C4s, and include a temple, an altar, separate baths for men and women, a small theatre, a Doric stoa and a larger theatre behind the stoa (*I.Oropos* 290–93 (C4s); Petrakos (1974) 26–57; Travlos (1988) 301–18).

In 329/8 the Athenians instituted the Great Amphiaraiia as a Panhellenic quadrennial festival with competitions in athletics and music (*I.Oropos* 298). A contemporary list of victors records participants from, e.g. Sinope (no. 729), Kolophon (no. 848), Argos (no. 347) and Thebes (no. 221) in addition to numerous Athenians (no. 361) (*IG VII* 414 = *I.Oropos* 520; cf. Knoepfler (1993)).

215. Pharai Map 55. Lat. 38.20, long. 23.40. Size of territory: ? Type: B. The toponym is *Φαραί, αἱ*, attested in Strabo 9.2.14 and Steph. Byz. 658.5 but not in any other source. The full form of the city-ethnic is unknown since it is attested only in the abbreviated form *ΦΑ* on the reverse of some coins of C4e (*infra*). The identification of Pharai with modern Ag. Pandleimon is uncertain (Fossey (1988) 96; Barr.).

Pharai is not called a *polis* in any extant source, but the existence of a C4 mint strongly suggests that it must have been a *polis*, at least in the period after the King's Peace of 386.

According to Strabo (9.2.14–15), Pharai, Heleon, Harma and Mykalessos (no. 212) formed a *τετρακωμία* which lay in the territory of Tanagra (no. 220). All sherds and tombs found in the area date from the Archaic and Classical periods (Fossey (1988) 97).

Pharai struck silver obols on the Aiginetan standard between c.386 (or earlier) and 374 (or later): *obv.* Boiotian shield; *rev.* amphora. Legend: *ΦΑ* (Head, *HN*² 347; *SNG Cop. Boeotia* 211). On the Archaic issues traditionally assigned to Pharai, see s.v. Thespiiai (no. 222).

216. Plataiai (Plataieus) Map 55. Lat. 38.15, long. 23.15. Size of territory: 3. Type: A. The toponym is *Πλαταιαί, αἱ* (RO 88.34–35 (C4m); *IG IV*².1 629 (C2); Hdt. 9.25.2), but some authors use the singular: *Πλάταια, ἡ* (Hom. *Il* 2.504; Thuc. 2.2.1 *et alibi*). The toponym denotes either the town (Thuc. 2.2.1) or the polity (Thuc. 2.2.3) or the territory (Xen. *Hell.* 5.4.48). The city-ethnic is *Πλαταιεύς* (ML 27.6 (479); SEG 9 2.44 (C4s); *IG VII* 1664.2–3 (C3); Hdt. 8.44.1; Thuc.

2.3.1; Lys. 23.2), and the *ktetikon Πλαταιικός* is used as an ethnic only in the feminine (*IG* 11² 10096 (C4m)); for one possible exception, see Aeschin. 3.162.

Plataiai is called a *polis* both in the urban sense (Hdt. 8.50.2; Thuc. 2.5.4, 3.68.3; Aen. Tact. 2.3) and in the political sense (Thuc. 2.2.2, 3.57.2; Isoc. 8.17, 14.1; Dem. 16.25, 59.98); cf. *polites* at Thuc. 2.2.2, 3.65.3. At RO 88.34 (C4), *polis* is used in the urban and political senses simultaneously. The term *ἄστυ* is used by Hdt. 7.233.2.

The collective use of the city-ethnic is attested internally in abbreviated form on coins of C4e (*infra*; cf. also *IG* VII 1664.2–3 (C3)) and externally on the Serpent Column (ML 27.6 (479)). For the individual and external use, see, e.g. *Ἐχίλαος Φιλωνίδου Πλαταιεύς* in a Troizenian citizenship decree of 369 (*Syll.*³ 162.2–3 (369)). *Patris* is used about the community at Isoc. 14.13.

The name of the territory is γῆ Πλαταιίς (Thuc. 2.71.4); *χώρα Πλαταιίς* (Thuc. 3.58.5); *Πλαταιᾶσι* (Thuc. 4.72.1); *ἐν ταῖς Πλαταιαῖς* (Xen. *Hell.* 5.4.48). In 506 the river Asopos was made the border between Plataiai and Thebes (Hdt. 6.108.6; Paus. 9.4.4). To the west Plataiai bordered on Thespiiai (no. 222) (Hdt. 8.50.2) and to the east on Hysiai (no. 208) (Hdt. 6.108.6), which was then a part of Attika (Hdt. 5.74.2). The size of the territory has been assessed at c.170 km² (Fossey (1988) 100). It is debated whether Plataiai too was a part of Attika from 519 onwards (for: Badian (1993) 117; against: Hammond (1992) 145). But at least from 479 Plataiai was a part of Boiotia. Plataiis came to constitute two of the eleven Boiotian districts and included the small towns in the Parasopia which by then had entered into a *sympoliteia* with Plataiai; viz. Skolos (no. 219), Erythrai (no. 203), Eteonos/Skaphai (no. 204) and, undoubtedly, Hysiai (*Hell. Oxy.* 19.3). In 429 King Archidamos summoned the Plataians to show him the borders of Plataian territory (Thuc. 2.72.3). In 427/6 the territory was annexed by Thebes (Thuc. 3.68.2–3, 5.17.2).

Plataiai is described as a small town (Thuc. 2.77.2), and according to Poseidippos (fr. 29, C3e) it deserved to be called a *polis* only during the celebration of the Eleutheria (*infra*). Six hundred Plataian hoplites fought at Plataiai in 479 (Hdt. 9.28.6). When the Thebans made their nocturnal attack on Plataiai in 431, the urban population must have totalled at least some 2,000 persons (Thuc. 2.3.2; Hansen (1997) 27–28), and there were 400 to defend the city when the siege began in 429 (Thuc. 2.78.3).

In 519 (Thuc. 3.68.5; Hornblower (1991) 464–65) Plataiai entered into an alliance with Athens (Thuc. 2.73.3, 3.68.5; Hammond (1992) 144) whereby the Plataians were granted

Athenian citizenship collectively (Thuc. 3.55.3, 63.2; Amit (1973) 75–78; Hornblower (1991) 449); the grant probably implied that a Plataian who moved to Athens was inscribed as a citizen without an individual decree passed by the people. The Plataians fought side by side with the Athenians at Marathon (Hdt. 6.108.1), and those who died in battle were buried with the Athenian (manumitted) slaves (Paus. 1.32.3; Hammond (1992) 147–50). In 480 the Persians occupied Plataiai, and destroyed the city by fire (Hdt. 8.50.2). Plataians fought in the battle of Plataiai in 479 (Hdt. 9.28.6), and after the battle Pausanias had all the victors take an oath that guaranteed the independence of the Plataian *polis* (Thuc. 2.71.2). At some time between the Persian and the Peloponnesian Wars, when the First Federation was organised as described by the Oxyrhynchus historian, Plataiai had some kind of *sympoliteia* with the small towns in the Parasopia, controlled two of the eleven districts of Boiotia, and provided two Boiotarchs (*Hell. Oxy.* 19.3; Kirsten (1950) 2302–3). It is apparent, however, from Thucydides' account (Thuc. 2.2.4, 3.65.2; Buck (1979) 153–54) that Plataiai had left the Federation when in the spring of 431 the city was attacked by the Thebans (Thuc. 2.2–6), assisted by some Plataian collaborators (Thuc. 2.2.2–3) of oligarchic convictions (Thuc. 3.65.2; Gehrke, *Stasis* 132).

During this period Plataiai was a democracy in which major decisions were made by the people in assembly (Thuc. 2.72.2; see Amit (1973) 66–71). In the years 429–427 Plataiai was besieged by the Lakedaimonians and the members of the Peloponnesian League (Thuc. 2.71–78, 3.20–24, 3.52–68). After its capture in 427, the men were killed, while the women were exposed to *andrapodismos* (Thuc. 3.68.2; Dem. 59.103). In 426 the city was razed to the ground (Thuc. 3.68.3) and settled by some Megarians plus a few Plataians who were loyal to Sparta (Thuc. 3.68.3). Some Plataian evacuees of 431 (Thuc. 2.6.4) and some who in 428 escaped the siege (Thuc. 3.24.2) were all granted Athenian citizenship (Dem. 59.103–4; Isoc. 12.94; Osborne (1982) D 1) and inscribed in the Attic tribes and demes (Lys. 23.2–3). After the destruction of Skione (no. 609) in 421, the Athenians gave the place to the Plataians (Thuc. 5.32.1), but many remained in Athens (Lys. 23.5–7). The Plataians were restored to their native city only after the King's Peace of 386 (Paus. 9.1.4), and perhaps in connection with Sparta's occupation of the Kadmeia in 382 (Isoc. 14, hypoth.). They remained loyal to the Lakedaimonians after the liberation of Thebes in 379 (Xen. *Hell.* 5.4.14), and when the Thebans put pressure on the Plataians to join the Second Federation, they refused (Isoc. 14.8–9). As a result, Plataiai was conquered

and destroyed once again by the Thebans (Xen. *Hell.* 6.3.1, 3.5; Isoc. 14.1, 5, 7, 19, 35, 46), probably in 373 (Paus. 9.1.5–8; Tuplin (1986) 321 n. 2) rather than in 374 (Diod. 15.46.6). This time the Plataians were allowed to go into exile (Paus. 9.1.7). They found refuge in Athens once again, and had their previous grant of citizenship renewed (Diod. 15.46.6; cf. Isoc. 14.51–52). The town was still deserted and unfortified in 343 (Dem. 19.21, 112, 325), but the Plataians were repatriated by Philip II (Paus. 4.27.10, 9.1.8), undoubtedly in consequence of the peace of 338. They took an active part in the destruction of Thebes in 335 (Arr. *Anab.* 1.8.8; Diod. 17.13.5), whereupon the members of the Corinthian League decided to rebuild and refortify Plataiai (Arr. *Anab.* 1.9.10). Yet it may have taken another four years before the town and its walls were re-erected in 331 (Plut. *Alex.* 34.2, *Arist.* 11.9). Plataiai provided one of the *naopoioi* of 336/5 and must accordingly have joined the Boiotian Federation already before the destruction of Thebes (*CID* II 32.32). Plataiai is attested in 331 as providing one of the *hieromnemes* (*CID* II 86.13) and in C3e as providing one of the *aphedriateuontes*; it must accordingly have been a member of the Third Federation (*JG* VII 272.4.5–6 (c.280–270)). Plataian citizens were appointed *proxenoi* by Aigina (no. 358) (Hdt. 9.85.3), Lakedaimon (no. 345) (Thuc. 3.52.5), and Chios (no. 840) (*PEP Chios* 50 (C4m)).

The protecting god of Plataiai was Hera (Plut. *Arist.* 18.1 (r479)), whose sanctuary before the destruction of Plataiai in 427 was outside the city (Hdt. 9.52.1), whereas the temple for Hera built by the Thebans in 427/6 was probably inside the walls alongside a new *katagogeion* measuring 200 × 200 feet (Thuc. 3.68.3). The goddess was worshipped by the Plataians at a festival called the “Little” Daidala. At irregular intervals were held the Greater Daidala, in which several Boiotian *poleis* participated—in the end perhaps all Boiotian *poleis*. The key features were a procession carrying a log dressed like a woman and a sacrifice in which the animals were burned up completely, together with the wooden altar on which they were placed (Paus. 9.2.7–3.9; Schachter (1981–94) i. 242–50). The hostel built by the Thebans indicates that the Daidala were an inter-*polis* festival already in C5s, and C6 terracotta figurines have been interpreted as evidence of the festival in the Archaic period (Schachter (1981–94) i. 244). What we know about the festival, however, belongs in the Hellenistic period (Knoepfler (2001a)). After the victory in 479 Pausanias made a sacrifice to Zeus Eleutherios in the agora of Plataiai (Thuc. 2.71.2–4), and thereafter the Plataians carried out annual rituals in honour of the fallen (Thuc. 3.58.4; Isoc. 14.61); but a regular cult of

Zeus Eleutherios and the associated festival of Eleutheria were not instituted until C3 (Schachter (1981–94) iii. 124–43). The most famous temple in Plataiai was that of Athena Araia, with a cult image by Pheidias and paintings by Polygnotos and Onasias (Paus. 9.4.1–2; Plut. *Arist.* 20.3).

Plataiai was a fortified city when attacked by Thebes in 431 (Thuc. 2.4.4, 75.4), but in 426 the walls were demolished (Thuc. 3.68.3), and were not re-erected until after the King’s Peace of 386, now with Spartan help (Paus. 9.1.6). This circuit, however, was destroyed once again by the Thebans in 373 (Isoc. 14.19, 35; Dem. 6.30), and new walls were built only after the sack of Thebes in 335 (Arr. *Anab.* 1.9.10). Remains of all three phases are still to be seen: (1) Plataiai had no proper acropolis, but the oldest part of the settlement to the northwest, an area of 10 ha, was enclosed by a wall in Lesbian masonry—probably the one that was demolished in 426. (2) A new and much larger wall in polygonal masonry with interval towers enclosed an area of 80 ha. (3) Refounded in 335, the city was protected by a wall of coursed ashlar blocks enclosing an area of 70 ha (Fossey (1988) 102–7). The settlement can be traced back to the Neolithic period and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 109). Traces of a (still undated) orthogonal town plan have been found in recent excavations (*AR* (1999–2000) 57).

Plataiai struck coins on the Aiginetan standard from c.386 (or earlier) to 374 (or later). Denominations: hemidrachm, diobol, obol; *obv.* Boiotian shield; *rev.* head of Hera. Legend: ΠΛΑ (Head, *HN²* 347; *SNG Cop. Boeotia* 212–14).

217. Potniai (Potnieus) Map 55. Lat. 38.20, long. 23.20. Size of territory: 1. Type: C. The toponym is Ποτνιαί, αἱ (*Hell. Oxy.* 20.3; Xen. *Hell.* 5.4.51). The city-ethnic is Ποτνιαεύς (*ArchDelt* 3 (1917) 64 (C6)).

Potniai is called a *polis* in late sources only (Strabo 9.2.24; schol. Eur. *Or.* 317–18; Steph. Byz. 533.21), and Paus. 9.8.1 has just ἐρείπια. The reason for including Potniai in this inventory of *poleis* is the C6 attestation of a city-ethnic inscribed on a poros column drum dedicated to Apollo: [Ἀπόλλ]ωνι Ποτνιαῖς (*ArchDelt* 3 (1917) 64; cf. Hansen (1995a) 32, 48). The only other attestation of the ethnic is as an epithet to Glaukos, the heroic founder of Anthedon: Γλαῦκος Ποτνιαεύς (Aesch. fr. 450–53, Mette; cf. Schachter (1981–94) i. 228).

We have no information about the name of the territory. Potniai was one of the small unwallled settlements whose population was moved to Thebes (*Hell. Oxy.* 20.3) in connection with the major synoecism at the outbreak of the

Peloponnesian War (Demand (1990) 83–85; Moggi, *Sin.* 197–204 prefers a date c.426–424). The absence of physical remains of the Hellenistic period (Fossey (1988) 209) may indicate that, unlike the other small towns synoecised with Thebes in 431, Potniai was not resettled. Potniai was famous for its sanctuary of Demeter and Kore (Paus. 9.8.1), which was an ancient one (Schachter (1981–94) i. 159–60). The settlement can be traced back to the Protogeometric period (Fossey (1988) 209), but *po-ti-ni-ja* on a Theban Linear B tablet suggests that Potniai was inhabited in the Mycenaean period too (Schachter (1981–94) i. 159).

218. Siphai (Siphaieus) Map 55. Lat. 38.10, long. 23.05. Size of territory: 1. Type: A. The toponym is *Σίφαι*, *αί* (Thuc. 4.76.2), but the singular form is also attested (Steph. Byz. 573.1), and according to Paus. 9.32.4 the toponym was *Τίφα*. The toponym denotes either the town (Thuc. 4.76.3) or the territory (Arist. *Part. an.* 696^a5). The only preserved attestation of the city-ethnic is *Σιφειεύς* (IG VII 207 = Michel 170 (C3s)).

Siphai is called a *polis* in the political sense by Thuc. 4.76.2–3, 89.2 (cf. Hansen (1995a) 21–23), and in the urban sense implicitly at Ps.-Skylax 38, where *Σίφαι καὶ λιμὴν* is a convincing emendation of MSS *Σφάσις καὶ λιμὴν*. In Ps.-Skylax *καὶ λιμὴν*, an ellipsis of *πόλις καὶ λιμὴν* (Flensted-Jensen and Hansen (1996) 142, 145), invariably goes with the preceding and not the following toponym (*pace* Müller in GGM).

The territory is called *Σίφαι* (Arist. *Part. an.* 696^a5; Schwandner (1977) 519–20). It constituted the coastal region of the territory of Thespiiai (no. 222) (Thuc. 4.76.3), and its size has been assessed at c.25 km² (Fossey (1988) 134). Steph. Byz. 573.1 calls Siphai an *ἐπίνειον τῆς Θεσπιακῆς*. A C4f inventory of Thespian *hestiatorion* equipment includes some in Siphai (SEG 24 361.25), which supports the assumption that Siphai was a dependent *polis* in Thespian territory.

From the abortive attempt in 424 to introduce a democracy, we can infer that Siphai must have had an oligarchic constitution. The democratic faction was supported by Athens, but the *stasis* was quelled by armed assistance from the other Boiotians (Thuc. 4.76.2–3, 89.2, 101.3; Hansen (1995a) 21–24).

Siphai was walled in 424 (*προδῶσεν*: Thuc. 4.76.3). The existing circuit in ashlar masonry with square towers (of which seven are preserved) encloses both the acropolis and the settlement below to the north, east and south. A wall to the south separated the acropolis from the lower city. To the west was the Corinthian Gulf, and no traces of a wall have

been found here. The wall is of C4 and, partly for historical reasons, Schwandner suggests a date between 363 and 330, but the nearby tower at Mavrovouni (Ano-Siphai) from c.400 points to earlier fortifications at Siphai as well (Schwandner (1977) 548–51). The circuit encloses an area of c.3 ha, of which only a part was used for settlement. The harbour was presumably to the south of the city. The settlement can be traced back to EH I–II, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 171).

Siphai had no mint, but stray finds on the acropolis of Thespian coins (Schwandner (1977) 547 n. 32) may suggest that such coins were legal tender in Siphai.

219. Skolos Map 55. Lat. 38.20/38.15, long. 23.25. Size of territory: 1. Type: C. Down to c.404 probably north of the river Asopos, after 404 south of the river, see *infra*. The toponym is *Σκῶλος*, *ὁ* (Hom. *Il.* 2.497; Eust. *Il.* 1.404.24, van der Valk), denoting either the town (Xen. *Ages.* 2.22) or the polity (*Hell. Oxy.* 19.3). The toponym may have been derived from *σκόλοπες* “palisade” (letter from Schachter). Apart from Steph. Byz. 580.8, there is no attestation of an ethnic.

The only classification of Skolos as a *polis* is in Steph. Byz. 580.7. According to Strabo 9.2.23 it was a *κώμη τῆς Παρασωπίας*, and Paus. 9.4.4 has just *ἐρείπια*. What justifies the inclusion of Skolos in this inventory is only its membership of the *sympoliteia* headed by Plataiai (no. 216) (*Hell. Oxy.* 19.3; Hansen (1995a) 16).

We have no information about the name of the territory, which must have been very small. Down to 479 Skolos was in Theban territory (Hdt. 9.15.2, 65.1) and probably situated north of the river Asopos, which was the southern border of the territory of Thebes (Hdt. 6.108.6; cf. most recently Munn (1987) 121–24). After the Persian Wars Skolos became part of Plataian territory and a member of the *sympoliteia* which for some time constituted two of the eleven Boiotian districts (*Hell. Oxy.* 19.3). But by 431 Skolos must have been annexed by Thebes once again, since it was one of the small unwalled settlements whose population was moved to Thebes (*Hell. Oxy.* 20.3) in connection with the major synoecism at the outbreak of the Peloponnesian War (Demand (1990) 82–85; Moggi, *Sin.* 197–204). By 395 Skolos had been repopulated. It still belonged to Thebes (*Hell. Oxy.* 19.3), but since both Strabo 9.2.23 and, more importantly, Paus. 9.4.4 (cf. Wallace (1979) 89) place Skolos south of the river Asopos, the refounded village was probably located south of the Asopos in land that had been Theban territory since the destruction of Plataiai in 426.

220. Tanagra (Tanagraios) Map 55. Lat. 38.20, long. 23.35. Size of territory: 5. Type: A. The toponym is *Τάναγρα*, ἡ (ML 35, 36 = Lazzarini (1976) 998 (c.458); Thuc. 4.97.1), denoting either the town (Heracl. Cret. 8, GGM 1.101) or the polity (Xen. *Hell.* 5.4.49) or the territory (Thuc. 1.108.1). The city-ethnic is *Ταναγραῖος* (LSAG 93 and 95 no. 12 (C6); SEG 9 2.32 (C4s); Dem. 25.60) but in Boiotian inscriptions from C4 onwards mostly *Ταναργήος* (IG VII 3055.25 (C4m), 2723.2–3 (C3e)), attested already in C5f (SEG 29 1788.7; for the date, see Vottéro (2001) 183), and sometimes *Ταναγρεῖος* (IG VII 522.10 (C3s)). Roller (1989a) does not record the city-ethnic.

Tanagra is called a *polis* in the urban sense (Aristophanes Boeotus (FGrHist 379) fr. 2 bis = P Oxy. 2463.26; cf. Heracl. Cret. 8–10, GGM 1.101 (C3s)) and in the territorial sense (Xen. *Hell.* 5.4.49), and is listed as a *polis* in the political sense (Thuc. 4.91.1, 93.4; *Hell. Oxy.* 19.2–3).

The collective use of the city-ethnic is attested internally on a stamped tile of C5f (SEG 29 1788.7: *δαμοσία Ταναργήων*) and in abbreviated form on coins (*infra*), and externally on a late C6 shield at Olympia commemorating a victory over an unknown enemy (LSAG 93 and 95 no. 12). For the individual and external use of the city-ethnic, see e.g. Σ[κ]υθρίωνι Φορμίδα Τανα[γραίω]ι, ναοποιος at Delphi in 335 (CID II 76.11.19–20).

The territory is called *Τάναγρα* (Thuc. 3.91.3–4) or ἡ *Ταναγραία* (Thuc. 4.76.4) or (later) ἡ *Ταναγραϊκή* (Strabo 9.2.11). During the First Federation the territory of Tanagra constituted one of the eleven Boiotian districts (*Hell. Oxy.* 19.3); it comprised Delion (Thuc. 4.76.4), Aulis (Nicocrates (FGrHist 376) fr. 1; Strabo 9.2.8), Salgameus (Nicocrates (FGrHist 376) fr. 1), and what was later called the *Tetrakomia*, i.e. Heleon, Harma, Mykalessos (no. 212) and Pharai (no. 215) (Strabo 9.2.14; Fossey (1988) 43–99 and 222–23). Tanagra was bordered on the east by Oropos (no. 214) (Heracl. Cret. 7–8, GGM 1.101), on the west by Skolos (no. 219), belonging to Thebes (Hdt. 9.15.2, 5.79.2; Xen. *Hell.* 5.4.49) and on the north by Anthedon (no. 200) (Nicocrates (FGrHist 376) fr. 1) and Glisas (Hdt. 9.43.2), belonging to Thebes (Strabo 9.2.31). Inclusive of the small dependent *poleis*, its size has been assessed at c.530 km² (Fossey (1988) 28).

Tanagra was allied with Thebes in 506 and earlier (Hdt. 5.79.2). The city was a member of the First Federation (*Hell. Oxy.* 19.3), during which the principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). It was a member of the Second Federation (Isoc. 14.9), providing one Boiotarch (SEG 25

553 = 32 476.14 (C4f); for the date, see SEG 45 431 and Vottéro (2001) 71), and of the Third Federation (IG VII 2724.7 (c.280–270)). Tanagran citizens were appointed *proxenoi* by Delphi (no. 177; SGI 2674 (c.328)) and Eretria (no. 370) (IG XII.9 203 (C4s)). The Aristotelian collection of *politeiai* seems to have included a *Constitution of Tanagra* (Plut. *Mor.* 299C; Hansen (1995a) 53), which reported a tradition that the territory of Tanagra had once been inhabited *κατὰ κώμας* (Moggi, *Sin.* 82–84). During the crisis of 330–326, Tanagra received 10,000 *medimnoi* of grain from Kyrene (no. 1028) (RO 96.32).

The protecting god of Tanagra seems to have been Hermes, with the epithets Kriophoros and Promachos, each with his own temple—that of Promachos near the theatre (Paus. 9.22.1–2 (rC5m); LSAG 92 and 94 no. 7 (C7I–C6e); Schachter (1981–94) ii. 44–50; iii. 50). Other major divinities attested in the Archaic and Classical periods are Artemis Eileithyia (IG VII 546 (C5), 458 (C4–C3); Paus. 9.22.1; Schachter (1981–94) i. 193), Athena Longatis (SEG 31 497 (C4I–C3e)), Demeter Gephyraia (Hdt. 5.57–61; REG 12 (1899) 53–115; Schachter (1981–94) i. 162–63); Dionysos (IG VII 550 (C5); Paus. 9.20.4 (rC5); Schachter (1981–94) i. 183–85), Herakles (SEG 34 367: kantharoi inscribed *ἱαρός* and *Ἡρακλέους* (C6s); Schachter (1981–94) ii. 12; Andriomenou (1985) 113).

According to Thuc. 1.108.2–3, Tanagra was a walled city in 457, but following the battle of Oinophyta the Tanagrans had their walls demolished by the Athenians (cf. Diod. 11.82.5). The existing circuit of 2.2 km with forty-three towers was of mudbrick on a mostly isodomic ashlar sockle; it can be dated to the period c.425–375 and may have been erected after the King's Peace in 386 (Roller (1974), (1987)). Xenophon's mention at *Hell.* 5.4.49 of τὸ τεῖχος, however, must refer to the Theban stockade and not to the walls of Tanagra (Munn (1987) 124–26). The city walls enclose an area of 30 ha (Roller (1987) 223). Except, perhaps, for a temple of Hermes Promachos near the theatre (Paus. 9.22.2), all architectural remains seem to be later than the C4 circuit; and the orthogonal town plan, with insulae of 52 × 102 m, was clearly devised to fit the existing walls. Nothing of Archaic and C5 Tanagra is visible today (Roller (1989b) 157); but a surface survey of the town has been carried out by a team from Leiden, and a geo-prospection team has reconstructed the C4 street and insula plan across the city (*Teiresias* 32 (2002) 1). A depression in the ground is all that is left of a theatre seen by early travellers. It seems to be an integral part of the urban plan of C4f (Roller (1989b) 152–54). Herakleides describes Tanagra as a town inhabited

by farmers (9, *GGM* 1.101, 9). Outside the city walls a cemetery has been excavated with some 500 graves, the majority from C6l and C5s (Andriomenou (1985)).

Tanagra struck silver coins on the Aiginetan standard from c.500 to 446, and from before 410 to 374 (or later) (Hansen (1995a) 20–21), and bronze coins from c.338 to 315. Denominations: drachm, hemidrachm, obol. (1) Silver, c.500–480: *obv.* Boiotian shield with *TT* or *TA* in the side openings; *rev.* mill-sail incuse. Legend: *T* or *TT* (some). (2) Silver, c.480–456: *obv.* Boiotian shield with *TT* or *TA* in the side openings; *rev.* spokes of a wheel. Legend: *BO* or *BOI* or *TA*. (3) Silver, c.456–446 and C5l–C4f: *obv.* Boiotian shield; *rev.* forepart or head of horse (mostly). Legend: *TA* or *TAN* or *TANA*. (4) Bronze, c.338–315: *obv.* Boiotian shield; *rev.* Legend: *TAN* in concave field. (Head, *HN*² 347–48; Kraay (1976) 109–14; Schachter (1989) 85; *SNG Cop. Boeotia* 215–35).

C.560 Tanagra joined Megara (no. 225) in colonising Herakleia Pontike (no. 715) (Paus. 5.26.7; Bursstein (1976) 15–18).

221. Thebai (Thebaios) Map 55. Lat. 38.20, long. 23.20. Size of territory: 5. Type: A. The toponym is *Θήβαι*, *αἱ* (*LSAG* 93 and 95 no. 16 (c.470); Hom. *Il.* 5.804); the singular *Θήβη* or *Θήβα* is sometimes found in poetry (Hom. *Il.* 4.378; *IG VII* 2470.1 (c.300)). The toponym denotes either the town (Hdt. 1.92.1) or the polity (Dem. 19.325) or the territory (Xen. *Hell.* 5.2.25). The toponym is attested in linear B tablets. The composite *Υπόθηβαι* (Hom. *Il.* 2.505) may refer to the early town built at the base of the Kadmeia = Thebai proper (letter from Schachter). The city-ethnic is *Θηβαίος* (*LSAG* 92 and 94 no. 7 (C6f); Hdt. 5.79.2), in the Boiotian dialect often *Θειβήτος* (*SEG* 28 465.4 (C4s)).

Thebes is called a *polis* in the urban sense (Hes. *Scut.* 105 (C6); Thgn. 1.1209; Pind. *Pyth.* 12.26; Bacchyl. 9.54; Hdt. 9.86.1; Dem. 18.216), in the political sense (Hdt. 9.13.3; Thuc. 3.62.3–4; Xen. *Hell.* 3.5.8; Arist. *Rh.* 1398^b18–20; Dem. 19.138–41; RO 88.33 (C4); *SEG* 28 265.3–4 (C4m, but C4l by Gullath (1982) 112–13)), and in the territorial sense (Xen. *Hell.* 5.4.49; Isoc. 14.35). The term *polisma* is found at Men. *Sam.* 325, and *ἄστυ* is used by Dem. 18.215.

The collective use of the city-ethnic is attested internally on coins of C5s (Head (1881) 31–32) and externally on a dedication in Olympia of C6s (*SEG* 24 300). For the individual and external use of the city-ethnic, see Ducat (1971) no. 232: *Ἐπιχάρης* ἠὲ *Θειβ[αίος]* (dedication in Ptoion (C6s)). *Patris* is found in Pind. *Isthm.* 1.12; Xen. *Hell.* 7.5.18, *An.* 3.1.4; Dem. 18.177; Aeschin. 2.164; *CEG II* 635 (C4).

The territory is called *Θηβαίς* (Hdt. 9.65.1; Thuc. 3.58.5) or *Θήβαι* (Xen. *Hell.* 5.2.25) or in later sources sometimes *Θηβαία* (Strabo 9.2.26). Before 506 Thebais extended south of the Asopos, but in 506 the river was made the border between Thebes and Plataiai (no. 216) (Hdt. 6.108.6; Paus. 9.4.4), and the territory of Thebes may then have comprised both Haliartos (no. 206) (inference from Hdt. 5.79.2) and presumably Akraiphia (no. 198) with Apollo's sanctuary at Ptoion (Hdt. 8.135.1; Schachter (1981–94) i. 69; cf. also Strabo 9.2.34; Paus. 9.23.5). To the east, Theban territory may have reached the coast and included Delion (Hdt. 6.118.2; Schachter (1981–94) i. 46). After the battle of Plataiai, Thebes was probably deprived of most of its former territory including the *Tetrakomia* (Hdt. 9.43.2; Fossey (1988) 222–23, probably relating to the period c.450–430; cf. Hansen (1995a) 37 with n. 137) and Delion (Thuc. 4.76.4). But at the beginning of the Peloponnesian War the Thebais must have comprised all the small towns that joined the synoecism and had their populations moved to Thebes (*Hell. Oxy.* 20.3). The size of its territory c.435 has been assessed at c.650 km² (Bakhuizen (1994) 314). In 427/6 the territory of Plataiai was incorporated into Thebes (Thuc. 3.68.2–3, 5.17.2). In 395 the Thebais constituted two of the eleven Boiotian districts and controlled the two Plataian districts as well (*Hell. Oxy.* 19.3) plus Oropos (no. 214) (Diod. 14.17.1–3) and Aulis (Xen. *Hell.* 3.5.5). Thebes suffered its next major set-back during the Spartan occupation in 382–379 (Xen. *Hell.* 5.2.25–36, 4.1–12), but when the Boiotian Federation had been re-established in 378–374, Thebes extended its territory to include Plataiai (from 373; Xen. *Hell.* 6.3.1; Paus. 9.1.5–8), Thespiiai (after 377; Xen. *Hell.* 5.4.46–48, but before the autumn of 371; Xen. *Hell.* 6.3.5; Isoc. 8.17), Kreusis (Xen. *Hell.* 6.4.3) and Oropos (from 366; Xen. *Hell.* 7.4.1). We have no information about Anthedon (no. 200) (Gullath (1989) 164), and we do not know whether Orchomenos (no. 213) was annexed by Thebes after its destruction in 364 (Diod. 15.79.3–6). During the Third Sacred War, Koroneia (no. 210) and Orchomenos were held by the Phokians, but in 346 Philip handed them back to the Thebans (Dem. 5.21–22). Thebais must now have been bordered by Thisbai, Haliartos, Akraiphia, Tanagra (Xen. *Hell.* 5.4.49) and Athens (*πόλις ἀστυγείτων*: Aeschin. 3.133; Din. 1.38) and most have covered c.800 km². In 338 Thebes lost Plataiai, Orchomenos (Paus. 4.27.10), Thespiiai and Oropos (Paus. 1.34.1), and after the destruction of Thebes in 335, what remained of its territory was given to the neighbouring cities (Hyp. 6.17; Diod. 18.11.3–4; Paus. 1.25.4; Gullath (1982) 77–82).

After the victory at Plataiai in 479, Thebes was besieged by the Greek army until it surrendered the leaders of the

pro-Persian faction (Hdt. 9.86–88). Shortly after the outbreak of the Peloponnesian War many small unfortified Boiotian towns were synoecised with Thebes, which thereby doubled its population. The towns merged with Thebes included Erythrai (no. 203), Eteonos/Skaphai (no. 204), Skolos (no. 219), (Au)lis, Schoinos and Potniai (no. 217) (*Hell. Oxy.* 20.3; Demand (1990) 83–85; Moggi, *Sin.* 197–204 prefers a date c.426–424). From 382 to 379 Thebes had to suffer a Spartan occupation (*Xen. Hell.* 5.2.25–36, 4.1–12); and by the peace of 338 a Makedonian garrison was placed on the Kadmeia (Diod. 16.87.3).

In 335 Thebes was conquered by Alexander and razed to the ground (Din. 1.24; Arr. *Anab.* 1.7–9; Diod. 17.7–14; Plut. *Alex.* 11.6–12; Gullath (1982) 60–85). More than 6,000 men were killed, and the remaining population, some 30,000 men, women and children, were exposed to *andrapodismos* and sold into slavery (Din. 1.24; Arr. *Anab.* 1.9.9; Diod. 17.13.3, 14.1; Plut. *Alex.* 11.12).

Thebes was the leading member of the First Federation (Thuc. 4.91.1; *Hell. Oxy.* 19.3); it re-established the Federation immediately after the liberation of the city in 379 (Plut. *Pelop.* 13.1) and dominated all the other member states (Isoc. 14.8–10; Aeschin. 3.142); and in spite of the defeat in 338, Thebes was still a member of the Third Federation between 338 and the destruction of the city in 335 (Arr. *Anab.* 1.7.11; *CID* II 74.1.72 (337/6)).

Membership of the Boiotian Federation did not prevent Thebes from joining one of the major leagues or from entering into alliance with other *poleis*: during the 370s Thebes was a member of the Second Athenian Naval Confederacy (*IG* II² 40, 43.24–25, 79; *IG* II² 1607.155) and in 339 Athens concluded an alliance with Thebes, not with the Boiotian Federation (Aeschin. 3.142; *Staatsverträge* 345).

Theban laws were traditionally ascribed to Philolaos of Corinth (Arist. *Pol.* 1274^a31–32), who probably lived in C7s. The Aristotelian collection of *politeiai* included a *Constitution of Thebes* (Arist. *fr.* 506–7). Down to the Spartan occupation of Kadmeia in 382–379 Thebes was an oligarchy, in C6l–C5e of the narrow type (*dynasteia*: Thuc. 3.62.3), later a more moderate oligarchy (ibid.; Arist. *Pol.* 1278^a25) ruled by a *boule* based on a property qualification (*Hell. Oxy.* 19.2). A bronze phiale of C6f is dedicated by *λεῖστοι ἑββαῖοι*, perhaps members of the nobility (Lazzarini (1976) no. 920, cf. p. 156), perhaps a body of officials (*LSAG* 92 and 94 no. 7; cf. Schachter (1989) 79), or, rather, a military elite (Schachter, forthcoming).

The Athenian victory at Oinophyta in 457 (Thuc. 1.108.3; Pl. *Menex.* 242B) and *stasis* in Thebes (Thuc. 3.62.5, 4.92.6)

were followed by a brief period of democracy (Arist. *Pol.* 1302^b28–9). The Athenians were expelled, *autonomia* recovered, exiles recalled and oligarchy restored after the Athenian defeat at Koroneia in 447/6 (Thuc. 1.113.2–4, 3.62.3). The principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). In C4e the leading oligarchs were divided into a pro-Athenian and a pro-Lakedaimonian faction (*Hell. Oxy.* 19.1, 20.1), and after a protracted *stasis* the pro-Lakedaimonians came to power in 382 with the Spartan occupation of Thebes (*Xen. Hell.* 5.2.25–36). Between 382 and 379 the constitution was again a *dynasteia* (*Xen. Hell.* 5.4.46). From 379 onwards Thebes was a democracy (Diod. 15.79.3; Polyb. 6.43; Buckler (1980) 20). In collusion with a faction in Thebes, some Theban exiles made an abortive attempt in 364 to reintroduce an aristocratic constitution (Diod. 15.79.3–5).

Thebes had a *boule* (*Xen. Hell.* 5.2.29), which prepared the matters to be put to the assembly (Diod. 17.9.1). An oracular response refers to a meeting of the popular assembly in 506 (Hdt. 5.79.1). It is unknown what powers it had during the oligarchy down to 379, but from then on major decisions were made by the people in assembly (Aeschin. 2.105; Dem. 18.213; Ar. *Anab.* 1.7.2). An eponymous *archon* is attested in C4s (*SEG* 28 466 (c.338)) and polemarchs from 382 (*Xen. Hell.* 5.2.25; Schaefer (1956) 1108–11). Thebes awarded *proxenia* to citizens from Opous (no. 386) (schol. Pind. *Ol.* 9.123c (C5f)), from Athens (no. 361) (Demosthenes: Aeschin. 2.141; Thrason: Aeschin. 3.138), and from unknown *poleis* (*IG* VII 2409 (C4m–C3m); cf. Vottéro (2001) 159; *SEG* 28 465 (C4s)). Theban citizens were appointed *proxenoi* by Athens (no. 361) (Pindar, Isoc. 15.166), Delphi (no. 177) (*F.Delphes* III.1 356 (327)); and Karthaia (no. 492) (*IG* XII.5 542.27 (C4m)).

The protective divinities of Thebes were probably Demeter Thesmophoros and Dionysos Kadmeios (Pind. *Isthm.* 7.1–5; Eur. *Bacch.* 1–12; *Xen. Hell.* 5.2.29; Paus. 9.15.5–6; Brackertz (1976) 73–78; Schachter (1981–94) i. 168, 187), but Athena Onka (Aesch. *Sept.* 164–65) and Athena Pronoia (*ArchDelt* 3 (1917) 36.2) are also attested as the protectors of Thebes (Soph. *OT* 18–19; *SEG* 32 493 (C4l); Schachter (1981–94) i. 129–32). Other major divinities attested in the Archaic and Classical periods are Herakles Promachos, whose sanctuary was outside the walls (Pind. *Nem.* 4.22–24; Isoc. 5.32; *Xen. Hell.* 6.4.7; Paus. 9.11.4; Schachter (1981–94) ii. 14–30); Aphrodite, the divine patron of the Theban polemarchs, whose sanctuary was on the Kadmeia (*Xen. Hell.* 5.4.4–7; Schachter (1981–94) i. 38–41); Apollo Ismenios, whose sanctuary was on the Ismenion hill (*IG* VII 2455 (C6); *SEG* 22 417 (C6); Pind. *Pyth.* 11.1–11; Paus. 9.10.2; Schachter

(1981–94) i. 77–85). The major extra-urban cults were Zeus Hypatos (Paus. 9.19.3), in whose sanctuary on Mt. Hypatos some remains of the Classical period have been found (Schachter (1981–94) iii. 102); and the Kabiroi: a mother goddess, her consort and two attending Kabiroi, usually represented as Hermes and Pan. It was a mystery cult reserved for the initiated and situated at the Kabirion, a natural cavity c.5.5 km west of Thebes. Monumental architecture at the sanctuary dates from the Hellenistic and Roman periods. The cult is attested from the Geometric to the Roman imperial period (*IG VII* 2457 (C6–C5), cf. *SEG* 36 458; Schachter (1986–94) ii. 66–110, (2003)). *Theorodokoi* were appointed in 359 to host *theoroi* from Epidauros (no. 348) (*IG IV*².1 94.a.4); in 360/59 Thebes was granted *promanteia* by the Delphians (no. 177) (*F.Delphes.* III.4 375). The Theban Ismenias was *hieromnemon* in 341 (*CID II* 43.229).

Citizens of Thebes are frequently attested as victors at the major Panhellenic festivals, e.g. at the Isthmian Games (Pind. *Isthm.* 1, 3–4, 7 (in 474, 458 and 454)), at the Nemean Games (schol. Pind. *Isthm.* 223.10, Drachmann (470s)), at the Olympic Games (Paus. 5.8.7 (680); see *Olympionikai* 33, 69, 136, 206, 352, 427, 441), at the Pythian Games (Pind. *Pyth.* 11 (474); Paus. 10.7.7 (r378), 7.8 (r346)), and at the Amphiareia (*IG VII* 414.4, 24, = *I.Oropos* 520 (329/8)). The city dedicated a treasury at Delphi to commemorate the victory at Leuktra (Bommelaer (1991) 129–30).

Thebes is called a fortified city in c.540 (Thgn. 1.1209) and again in 479 (Hdt. 9.41.2, 9.86–88), but it is uncertain whether the references are to the acropolis wall or to a wall enclosing the lower city as well, referred to at Xen. *Hell.* 5.4.53. In C4 the city had two circuits (Arr. *Anab.* 1.7.9–10, 8.5–6): an acropolis wall around the Kadmeia with the seven famous gates (Pind. *Pyth.* 11.12; Paus. 9.8.4) enclosed an area of c.32 ha, and a wall around the lower city enclosed an area of 350 ha (Bintliff (1997a) 243). Only a few traces are left (Symeonoglou (1985) 119). The acropolis wall seems to have followed the line of the late Helladic cyclopean wall, and the surviving traces of polygonal and isodomic masonry may be no more than Archaic and Classical repairs of the late Helladic wall (cf. Hes. *Scut.* 105). The short south side of the acropolis wall seems to have been a part of the city wall as well (Arr. *Anab.* 1.7.9–10). The great city wall was of mud-brick superimposed on a foundation of isodomic masonry and covered with tiles. The masonry suggests a C5 date. The synoecism of 431 must be the *terminus ante quem*, and the most likely *terminus post quem* seems to be the liberation of Boiotia from Athenian domination in 446 (Symeonoglou (1985) 118–22). The city wall was demolished in 335 (Aeschin.

3.157), but the acropolis wall was probably left to protect the Makedonian garrison on the Kadmeia (Hyp. 6.17; Arr. *Anab.* 1.9.9).

In the Archaic period much of the Kadmeia was inhabited (Fossey (1988) 204), but some Thebans, including Pindar, lived in the lower city (Paus. 9.25.3), which became densely populated after the erection of the greater circuit in C5m and the synoecism of c.431 (*Hell. Oxy.* 20.3). In the Classical period Thebes had at least twenty-three sanctuaries, twelve on the Kadmeia and eleven in the lower city (Symeonoglou (1985) 123–37). South-east of the Kadmeia are remains of the temple of Apollo Ismenias, built in C8s, rebuilt c.700 and again in C4 (Symeonoglou (1985) site 8 pp. 236–8), and in the lower town were found the foundations of a temple of the Classical period (Symeonoglou (1985) site 229 p. 299). The Theban *boule* (Xen. *Hell.* 5.2.29), as well as the federal council (*Hell. Oxy.* 19.4) and the Boiotarchs (Aeschin. 3.145), had their meeting place on the Kadmeia. In lower Thebes was the *polemarcheion* (Xen. *Hell.* 5.4.6), a hippodrome (Paus. 9.23.2; Symeonoglou (1985) 140 and cat. no. 106), a C5 *stadion* and *gymnasion* (Paus. 9.23.1; Symeonoglou (1985) 140 cat. nos. 65, 169); an earlier *stadion* and *gymnasion* (of C6?) was situated outside the walls (Xen. *Hell.* 5.2.25; Symeonoglou (1985) 108–9). The agora in the lower city was flanked with several stoas (Xen. *Hell.* 5.2.29; Diod. 12.70.5). Thebes had a theatre (Paus. 9.16.6), which in C4 was used for meetings of the assembly (Plut. *Mor.* 799E–F); traces have been found in the northern part of the lower city (Symeonoglou (1985) 189–90). The city got most of its water through an impressive system of subterranean aqueducts already famous in antiquity (Heracl. Cret. 13, *GGM* 1.102) and still partly preserved (Symeonoglou (1985) 141–44).

Thebes struck silver coins on the Aiginetan standard from c.500 to 335. Denominations: stater, drachm, hemidrachm, obol, hemiobol, tetartemorion, in C4 also tritemorion; *obv.* mostly Boiotian shield; *rev.* down to 479: mill-sail; thereafter Herakles or Dionysos or amphora with symbols relating to Herakles or Dionysos. Legend: first Θ, later various abbreviations of the city-ethnic or occasionally the full form: ΘEBAION. An abbreviated personal name, denoting the issuing magistrate, appears on the C4 amphora-type coins, and forty-five separate magistrates can be identified (Hepworth (1986) 35). A series of probably Theban coins struck c.386–379 have a kantharos on the *rev.* and the legend BOI or BOIΩ. Some rare gold coins of C5l have *obv.* head of bearded Dionysos; *rev.* infant Herakles strangling serpents. Legend: ΘE. A small series of C4 bronze obols have *obv.* head of young Herakles; *rev.* club and other symbols

and magistrate's name (Head (1881) 11, 16–18, 23–24, 29–42, 54–55, 61–72; Kraay (1976) 109–14; Schachter (1989) 85; *SNG Cop. Boeotia* 241–355).

C.560 Thebes joined Megara (no. 225) in colonising Herakleia Pontike (no. 715) (*Suda* H461; cf. Burstein (1976) 15–18).

222. Thespiiai (Thespieus) Map 55. Lat. 38.15, long. 23.10. Size of territory: 4. Type: A. The toponym is *Θεσπιαί*, *αἱ* (Xen. *Hell.* 5.4.10; *IG* VII 1862 (Roman)), but *Θέσπεια* at Hom. *Il.* 2.498 and Hdt. 8.50.2. The toponym denotes either the town (*IG* IV².1 94.a.6; Dem. 6.30) or the polity (Isoc. 8.17) or the territory (Xen. *Hell.* 5.4.41). The city-ethnic is *Θεσπιεύς* (*F. Delphes* III.4 148 (C5f); Xen. *Hell.* 4.2.20).

At Hes. *Op.* 222, *πόλις* probably denotes Thespiiai. In sources of the Classical period Thespiiai is called a *polis* in the urban sense (Hdt. 8.50.2; Xen. *Hell.* 6.3.1; Dem. 16.25) and in the political sense (*IG* I³ 72.6, 16 (C51); Xen. *Hell.* 5.4.46; *Hell. Oxy.* 19.2–3; Isoc. 8.17; Dem. 16.25).

The collective use of the city-ethnic is attested internally in a proxeny decree of C3m (*SEG* 32 496.2–3) and externally on the Serpent Column (ML 27.6: *Θεσπιές* (479)). The individual and external use of the city-ethnic is attested in an Athenian proxeny decree of C5m for four named Thespiians (*IG* I³ 23) and in Delphic inscriptions where a Thespiian appears as *naoipios* at Delphi in 334 (*CID* II 79A.15). In the feminine, the *ketikon* *Θεσπικῆ* is sometimes used (*IG* II² 8834 (C4)). *Patra* (= *patris*) has been restored in *CEG* II 788 (c.350).

The territory is called *ἡ Θεσπικῆ γῆ* (Thuc. 4.76.3); *ἡ τῶν Θεσπιῶν χώρα* (Xen. *Hell.* 5.4.42) or just *ἡ Θεσπικῆ* (Xen. *Hell.* 6.4.4); *Anth. Pal.* III.19.2 (r480) has *Θεσπιᾶς*. During the First Federation, Thespiiai constituted two of the eleven Boiotian districts (*Hell. Oxy.* 19.3), including Siphai (no. 218) (Thuc. 4.76.3), Leuktra (Xen. *Hell.* 6.4.4), Eutresis (no. 205) and Thisbai (no. 223; *Hell. Oxy.* 19.3), Chorsiai (no. 202) (*SEG* 24 361, but cf. 47 520), Kreusis (Ps.-Skylax 38, as restored by Roesch (1980); Livy 36.21.5; but Xen. *Hell.* 6.4.3 shows that in 371 it belonged to Thebes), Askra (Hes. *Op.* 639–40 with 222; Arist. fr. 580), Keressos (Paus. 9.14.1–4; Plut. *Cam.* 19.4; *Mor.* 866F), Donakon (Paus. 9.31.7) and perhaps Hippotai (Plut. *Mor.* 775A; Schachter (1996a) 104). Including the dependent *poleis* of Chorsiai, Thisbai, Siphai and Eutresis (no. 205), its territory covered c.425 km². Excluding these, it came to some 200 km². Thespiiai bordered on Haliartos (no. 206) to the north, on Thebes to the east (Hdt. 5.79.2), on Plataiai (no. 216) to the south-east (Hdt. 8.50.2), and on Thisbai to the south-west (Xen. *Hell.* 6.4.3–4).

Thespiiai was allied with Thebes in 506 and earlier (Hdt. 5.79.2). Seven hundred Thespiians were killed at Thermopylai in 480 (Hdt. 7.202.1; cf. *Anth. Pal.* III.19), and the Thespiians fled to the Peloponnese when the Persians attacked Boiotia and burned down the city of Thespiiai (Hdt. 8.50.2). A force of 1,800 light-armed Thespiians fought in the battle of Plataiai in 479 (Hdt. 9.30.1), and the Thespiians are duly recorded on the Serpent Column commemorating the victory (ML 27.6). Thespiiai was resettled and the Thespiians admitted extra citizens to make up for the losses during the war (Hdt. 8.75.5; Schachter (1996a) 115). The city was a member of the First Federation and provided two Boiotarchs (*Hell. Oxy.* 19.3–4). The Thespiians suffered severe losses in 424 in the battle of Delion (Thuc. 4.96.3, 133.1) and 101 names are recorded in the public funeral monument set up after the battle (*IG* VII 1888). The Thespiians fought in the Boiotian army in the battle of the Nemea in 394 (Xen. *Hell.* 4.2.20; cf. *SEG* 2 186, 47 519). Thespiiai was garrisoned by the Spartans in 379 and 378, under the supremacy of a harmost (Xen. *Hell.* 5.4.15, 41), but by the mid-370s Thebes had regained control of the neighbouring *poleis*, probably including Thespiiai (Xen. *Hell.* 5.4.63). By 372 the Thespiians had been forced by the Thebans to join the Second Federation (Isoc. 14.9: *συντελεῖν εἰς τὰς Θήβας*), providing one Boiotarch (*SEG* 25 553.14 (C4f; for the date, see *SEG* 45 431 and Vottéro (2001) 71)). Before the autumn of 371 (Xen. *Hell.* 6.3.5, 6.4.10) the city was sacked by the Thebans and depopulated (Diod. 15.46.6; Isoc. 6.27; Dem. 16.4, 25, 28). The Thespiians, or some of them, withdrew to nearby Keressos (Paus. 9.14.2), but probably only after the sack of Thespiiai (Tuplin (1986) 333–34; Buck (1994) 110 with n. 46). In 359, however, a Thespiian *theorodokos* hosted *theoroi* sent from Epidaurus (no. 348) (*IG* IV².1 94.a.6), and Aischylos of Thespiiai was a victor in the Olympic Games, probably in 348 (*LAG* 26; *Olympionikai* 444); so Demosthenes' contention (19.325) that the city was still not rebuilt in 346 must be taken with a grain of salt. The Thespiians took an active part in the destruction of Thebes in 335 (Diod. 17.13.5), and in C3e the city was resettled (Plut. *Dem.* 39.5; *IG* VII 1747 and 1751, military catalogues of C3e).

The constitution of Thespiiai was oligarchic and based on a property qualification (*Hell. Oxy.* 19.3; Xen. *Hell.* 5.4.46). A democratic uprising in 414 was immediately quelled by the Thebans (Thuc. 6.95.2; Gehrke, *Stasis* 172). In 378 the constitution is classified as a *dynasteia*, and the democratic faction as living in exile in Thebes (Xen. *Hell.* 5.4.46). The principal body of government was a *boule*, to which only propertied citizens were admitted (*Hell. Oxy.* 19.2, 3). An eponymous

archon is attested c.386 (*SEG* 24 361.3; Sherk (1990) 287). The Aristotelian collection of *politeiai* included a *Constitution of Thespiiai* (Heracl. Lemb. 76 = no. 59, Gigon). Thespian citizens were appointed *proxenoi* by Athens (no. 361) (*IG* 1³ 23) and Delphi (no. 177) (*F.Delphes* III.1 96 (318–306), 416 (C41)).

Apollo Archegetas seems to have been the protecting god of Thespiiai. His cult was associated with the foundation of the *polis*, and was performed in a Doric peristyle temple of C5, c.2 km south-west of Thespiiai (*SEG* 2 237 (C5f); Schachter (1981–94) i. 88–89, (1996a) 103). Other major cults attested in the Archaic and Classical periods are the nine Muses, whose sanctuary was in the Valley of the Muses c.6 km west of Thespiiai (Hes. *Op.* 654–59; Paus. 9.30.1 (rC4e); Schachter (1981–94) ii. 151–58), Herakles (*BCH* 50 (1926) 390.4; *SEG* 15 324 (C5f); Schachter (1981–94) ii. 34–35), Dionysos (*IG* VII 1794 (C5); Schachter (1981–94) i. 192–95), Zeus Karaios (*SEG* 32 505 (C41)); Zeus Saotes (*Anth. Pal.* 6.344 (330/29); Schachter (1981–94) iii. 150–53), and the Daimones (Michel 1102 (c.300); Schachter (1981–94) i. 149).

Surveys have shown that “the early city consisted of at least four separate nuclei, spread out over a total area of about 100 ha”. In C5 and C4 they were merged together into one large conurbation (Snodgrass (1987–89) 57). Remains of the Geometric and Archaic periods, however, are scarce, and it has been suggested that the centre of Thespiiai before 480 was at the temple of Apollo, and that the settlement was moved to its Classical site only after the Persian destruction in 480 (Schachter (1996a) 103–4).

The walls were demolished by the Thebans in 423 (Thuc. 4.133.1), re-erected with Spartan help in 378 (Xen. *Hell.* 5.4.41), demolished once more by the Thebans (Dem. 6.30; Isoc. 14.19, 35), probably before 373/2 (the date of Isoc. *Plat.*) and not yet rebuilt in 343 (Dem. 19.112). Three huge square blocks of the Classical city wall were discovered in 1987 (Bintliff and Snodgrass (1988) 67). The settlements covered an area of at least 50 and perhaps more than 100 ha (Bintliff (1997a) 243).

Thespiiai struck silver coins on the Aiginetan standard from c.500 to 480 and from 386 (or earlier) to 374 (or later), and bronze coins from c.338 to 315. (1) Silver, c.500–480, denominations: stater, drachm, hemidrachm, obol; *obv.* Boiotian shield, some with Θ in one of the openings of the shield; *rev.* the letter Θ in mill-sail incuse square. The epichoric letter (Ⓢ), originally interpreted as a Φ and associated with Pharai (no. 215), but now interpreted as a Θ signifying Thespiiai (Etienne and Knoepfler (1976) 219). (2) Silver, C51–C4f, denominations: stater, hemidrachm, obol, hemiobol, tetartemorion; *rev.* Boiotian shield; *rev.* crescent and (on some) amphora or head of Aphrodite. Legend: ΘΕΣ or ΘΕΣΙΙΙ or ΘΕΣΙΙΙΚΟΝ.

Some have the epichoric sigma (Σ), pointing to a date earlier than 386. (3) Bronze, c.338–315; *obv.* Boiotian shield; *rev.* legend: ΘΕΣ in concave field (Head (1881) 15–16, 55–56; *HN*² 354; Etienne and Knoepfler (1976) 219; Schachter (1996a) 113; *SNG Cop. Boeotia* 397–405).

223. Thisbai (Thisbeus) Map 55. Lat. 38.15, long. 23.00. Size of territory: 3. Type: B. The toponym is Θίσβη, ἡ (Hom. *Il.* 2.502) or more frequently Θίσβαι in the plural (*Hell. Oxy.* 19.3; *F.Delphes* III.3 103.3 (300–280)), denoting the polity (*Hell. Oxy.* 19.3) or the territory (Xen. *Hell.* 6.4.3). The city-ethnic is Θισβεύς (*IG* VII 2724.b.6 (c.280–270); *SEG* 15, 282.4 (263–255)).

The earliest attestation of Thisbai as a *polis* is in a treaty with Chorsiai of C2e (*SEG* 3 342.4 = Migeotte (1984) no. 11), and the only attestation in a literary source is Paus. 9.32.2. The occurrence in C41 of a Thisban among the *aphedriateuontes*, however, shows that Thisbai was a *polis* at least from the beginning of the Third Federation (*IG* VII 2724.b.6 (c.280–270)), and the reference at *Hell. Oxy.* 19.3 to what was probably a *sympoliteia* between Thespiiai (no. 222), Eutresis (no. 205) and Thisbai suggests that during the First Federation Thisbai was a dependent *polis* dominated by Thespiiai (Roesch (1965) 37; Siewert (1977) 463; Hansen (1995a) 16); cf. *τοῖ Θεσπιέσσω καὶ τοῖρ σὺν αὐτοῖς* (*SEG* 31 358.5 (C5f)). The size of its territory has been assessed at just over 100 km² (Fossey (1988) 176). A funeral epigram of c.500 indicates that the population of Thisbai consisted of citizens (*astoi*) and foreigners (*xenoi*) (*CEG* 112).

The only cults at Thisbai attested in sources of the Archaic and Classical periods are of Athena (*IG* VII 2230 (C6–C5); Schachter (1981–94) i. 133) and, perhaps, Demeter Achaia (*BCH* 50 (1926) 418 n. 4 (C3s); Schachter (1981–94) i. 170; for the date, see Vottéro (2001) 256).

The collective use of the city-ethnic is attested internally in Thisbai's copy of a treaty with Chorsiai (*SEG* 3 342 = Migeotte (1984) no. 11 (C2e)), but externally only in a Roman inscription (*IG* VII 2870.13 (AD 155)). For the individual and external use, see e.g. Πύρρακος Ἰθουδαμίω Θισβεῖος in a list of *aphedriateuontes* (*IG* VII 2724.b.4 (c.280–270)). The territory was called Θίσβαι (Xen. *Hell.* 6.4.3).

Thisbai is attested as a member of the First Federation (*Hell. Oxy.* 19.3) and of the Third Federation (*IG* VII 2724.b.4 (c.280–270)).

A circuit of c.2.5 km with interval square towers enclosed the city, which was situated with a rocky hill to the north, the foot of Mt. Helikon to the south, and in the narrow corridor between the two. Most of the wall is of pseudo-isodomic

trapezoidal or ashlar work, but one round tower on the northern hill (the acropolis) is in Lesbian masonry (Maier (1958)). The circuit enclosed an area of c.48.5 ha (Bintliff (1997a) 244). Maier (1958) 24–25 suggests a date between c.325 and 175, but the tower indicates a date between 375 and

325 (Buckler (1980) 283 n.19) and Camp (2000) 43 suggests a date of 375–60. No remains of buildings have been identified. The settlement can be traced back to the early Helladic period, and there are remains of the Geometric, Archaic and Classical periods (Fossey (1988) 180).

MEGARIS, CORINTHIA AND SIKYONIA

RONALD P. LEGON

I. The Region

Megaris, Corinthia and Sikyonia constitute the Isthmus of Corinth and the territory immediately south of the Isthmus in the north-eastern Peloponnese. See Maps 57–58. This region has no specific identity in Greek nomenclature. It is set off from the territory of Attika and Boiotia by the mountains of Kithairon, Pateras and Kerata, but, despite these physical barriers, the Athenians regarded Megaris as originally part of Attika (Strabo 8.1.5–7). The region was conquered and settled by the Dorian Greeks between C11 and C9. Although there is no universal agreement regarding early Dorian settlement patterns, it seems most likely that their initial settlements were agricultural communities referred to as *komai*. By C8, in a process that is little recorded or understood (see Roebuck (1972) and Salmon (1984) 57–58), these *komai* coalesced into the city-states of Corinth (no. 227), Megara (no. 225) and Sikyon (no. 228), each with one major urban centre. From that point forward, throughout C7–C4, these states were remarkably stable, politically and territorially.

Many of the initial *komai* survived as towns within the consolidated *poleis*, and numerous other settlements are known within their territories. There seems to have been at least five second-order settlements in Megaris, eleven in Korinthia and five in the territory of Sikyon. These localities are enumerated in the entries for each of the three major *poleis*. Pagai (no. 226) and Aigosthena (no. 224), two Corinthian Gulf ports of Megara, were minor *poleis* by C3, but may have been *poleis* already in C4; they are described, along with Megara, in the Inventory below. Tenea, in the Corinthia, attained the status of *polis* only in Hellenistic times (SEG 13 248 (C1); Head, *HN*² 418).

In addition to controlling territory suitable for agriculture and animal husbandry, the Isthmian states occupied territory of the greatest military and commercial significance in Mainland Greece. Both Corinth and Megara straddled the narrow land bridge joining the Peloponnese to

central Greece, and were in a position to interdict land traffic in both directions, although they were seldom powerful enough to accomplish this without the involvement of greater military powers. Equally important, both *poleis* possessed ports on the Saronic and Corinthian Gulfs, making them crucial transfer points and entrepôts in the trans-Hellenic and trans-Mediterranean sea trade, and contributing greatly to their prosperity, particularly in the case of Corinth, which controlled the shortest route across the Isthmus. The strategic location of the Isthmus states made them frequently the cockpit of power struggles among the Greek *poleis*, and, at crucial junctures in their history, with the external forces of Persia, Makedon and Rome. These circumstances make all the more remarkable the relative stability of the major *poleis* of the region.

II. The *Poleis*

1. *Megaris*

224. Aigosthena (Aigosthenitas) Map 58. Lat. 38.10, long. 23.15. Size of territory: probably 1. Type: [A]. The toponym is *Αἰγόσθαινα*, *τά* (Xen. *Hell.* 5.4.18). The city-ethnic is *Αἰγόσθενίτας* (IG VII 1.5 (c.300); 43.2 (C3)) or *Ἡγούσθενίτης* (IG VII 207.4 (C38)).

Aigosthena was situated in the territory of Megara (Xen. *Hell.* 5.4.18: *τῆς Μεγαρικῆς ἐν Αἰγούσθαινοῖς*; cf. 6.4.26). In a difficult chapter, Ps.-Skylax 39 (on which see Flensted-Jensen and Hansen (1996) 142–43) refers to a plurality of *poleis* in Megaris under the heading *πόλεις αἰδε*, and the toponym *Aigosthena* has been plausibly restored from the MS reading *λιγούθειναι* which follows this heading; accepting this, Aigosthena is here listed as a *polis* in the urban sense in a C4 source. C3 sources use *polis* in the political sense about the city (IG VII 207.4, 10 (C38); 208.19, 21; 213.10, 219.5 (C38–C2e)) and in C3s a citizen of Aigosthena served as

Delphic *theorodokos* (BCH 45 (1921) II.28). This suggests that Aigosthena may in fact have been a *polis* by C4, as indicated by Ps.-Skylax. However, an inscription of c.300 describes Aigosthena as a *kome* of Megara (IG VII 1.19), so the city may have had a double status as both a *kome* and a *polis*, and in this case a dependent *polis* within the territory of Megara (Hansen (1995) 74–75); alternatively, the city developed into a *polis* only in the Hellenistic period.

The date of the impressive fortifications at Aigosthena is uncertain, but probably C4I–C3e (PECS s.v.; Winter (1971) 142 n. 56); on the site, see Benson (1895).

225. Megara (Megareus) Map 58. Lat. 38.00, long 23.20. Size of territory: 4. Type: A. The toponym is *Μέγαρα, τὰ* (IG I³ 1353 (C5s); Hdt. 9.14). The ethnic is *Μεγαρεῦς* (Hdt. 9.21.1; Thuc. 1.103.4; CID II 4.1.6 (361/60); SGDI 3034 (C4)).

Megara is called a *polis* in the political sense by the C6m poet Theognis (53–58, etc.), in a late copy of a rC5 inscription (IG VII 53 = Tod 20.15) and in CID II 5.1.3–4, 6 (360). Thuc. 1.103.4 and Xen. *Vect.* 4.46 refer to Megara as a *polis* in the urban sense. The Aristotelian collection of *politeiai* included one of the Megarians (fr. 561). Thgn. 219 refers to his fellow Megarians as *πολιητέων*, but also as *ἄστοισιν* (24; cf. Tod 20.13 (c.479)). At Thgn. 788, *patre* (= *patris*) is used about Megara, and at Dem. 18.291–92 it is implicitly described as *patris*.

The internal collective use of the city-ethnic is found in Tod 20.5, 13 (c.479) and on C4 coins (*infra*) and in a C4I inscription: *ὁ δᾶμος [ὁ Μ]εγαρέων* (IG VII 1.12, 17); the external collective use is attested on the Serpent Column (ML 27.4 (479/8)) and in, e.g., Hdt. 9.21.1 and Thuc. 1.103.4. The internal individual use of the city-ethnic may be found as early as Theognis' self-description: *Θεύγνιδός . . . τοῦ Μεγαρέως* (22–23); the external individual use is attested in Hdt. 3.60.3 (rC6s), on a C4 gravestone (*Χαίρις Θεγείτου Μεγα[ρ]εύ[ς]* (SGDI 3034, from Sparta)) and in CID II 63.16 (C4m). The territory is called *τὰ Μέγαρα* (*ἐγ Μεγάρων*>*ν*): IG I³ 1353 (C5m); Thuc. 2.31.1 or *ἡ Μεγαρίς* (Hdt. 9.14; Thuc. 4.70.1) or *ἡ Μεγαρικὴ* (Xen. *Hell.* 5.4.18). It is called *χώρα* in Ps.-Skylax 39.

Megara was situated on the Isthmus of Corinth, bounded by the Corinthian Gulf on the north, Mts. Kithairon, Pateras and Kerata on the east, separating Megarian territory from Attika and Boiotia, the Saronic Gulf on the south, and Mt. Gerania on the west, dividing Megaris and Corinthia. Legon (1981) 59–70 argues that Krommyon, Mt. Gerania and the Perachora peninsula were controlled by Megara after the Dorian invasions and were taken by Corinth (no. 227) in

the conflicts of C8. Salmon (1984) 46–48 places the transition at least a century earlier. The Dorians seem to have settled the Megarid in five *komai*: *Ἡραεῖς, Πιραεῖς, Μεγαρεῖς, Κυνοσουρεῖς* and *Τριποδίσκιοι* (Plut. *Quaest. Graec.* 17; cf. Arist. *Poet.* 1448^b30ff; Legon (1981) 47–55; Jones, *POAG* 94–96). Another version of the early settlement pattern may be inferred from Strabo (9.1.10), where he reports that the Megarians interpolated a passage in Homer's *Iliad* linking Salamis with Polichna, Aigiroussa, Nisaia and Tripodes, to prove the pre-Dorian antiquity of their claim to Salamis. The implication is that the latter four places were all within Megarian territory. Rigsby (1987) 98–102 argues that this couplet presents a more accurate picture of the Megarid in the Dark Ages than does Plutarch's testimony. Synoecism appears to have occurred in C8 through the union of five *komai*, including the *kome* of Megara (Plut. *Quaest. Graec.* 17; cf. Moggi, *Sin.* 29–34).

Attested place-names in the Megarid include Aigiros, perhaps in the region of Vathikhoria, based on the incident of the “waggon-rollers” (Plut. *Quaest. Graec.* 59); Aigosthena (no. 224), in C4 a *kome* of Megara (IG VII 1.19) and possibly a dependent *polis* of Megara as well (*supra*); Eirenea, a village (Paus. 7.22.8); Kynosoura, Archaic–Classical evidence is lacking, but a C3 inscription (IG IV².1.42) refers to the *hekatostyes* of Kynosoura (see Legon (1981) 53 and nn. 23 and 32); Nisaia, the Saronic Gulf port of Megara (Thuc. 4.69; Paus. 1.39.4) associated with the island or promontory of Minoa (Thuc. 4.67; Paus. 1.44.3; Legon (1981) 29–32); Pagai (no. 226) (IG I³ 1353.5 (C5m)) was possibly a dependent *polis* of Megara by C4 (*infra*); Panormos, a harbour between Pagai and Aigosthena (Paus. 7.22.10); and Tripodiskos, tentatively identified in a central depression of Mt. Gerania, near the western edge of the Megarian plain (Thuc. 4.70.1; Paus. 1.43.8; Plut. *Quaest. Graec.* 17; Nicopoulou (1969), (1970); and Rigsby (1987)).

Megara's estimated peak population (C5) was 40,000, including 15,000 slaves and free non-citizens (Legon (1981) 23–24, 167–68, 258–59, 268–71).

Megara is attested as a member of the Peloponnesian League in C5e (e.g. Thuc. 1.103.4), probably having accepted the obligatory bilateral alliance with Sparta (no. 345) in C6I at approximately the same time as Corinth (no. 227) (see Legon (1981) 143–45). Megara broke away from the Peloponnesian League to become an ally of Athens (no. 361) in 461, but returned to the League in 448 (Thuc. 1.103.3–114; cf. Diod. 11.79 and 12.5). In C4 and beyond Megara frequently shifted allegiance and attempted to maintain neutrality among its larger neighbours and more distant powers (Legon (1981) 257–79, 285–95, 299–303).

Megara awarded *proxenia* to citizens of, e.g., Argos (no. 347) (*IG VII 2* (C41)), and Megarian citizens were appointed *proxenoi* by Athens (no. 361) in C4f (*SEG 40 57*) and by Delphi (no. 177) in 320–310 (*F.Delphes III.1 161*). A citizen of Megara served as Epidaurian *theorodokos* in 360/59 (*IG IV².1 94.1a.2*).

Megara mustered 3,000 hoplite troops at full mobilisation during the C5e battles of the Persian Wars (Hdt. 9.28.6, 31.5), but less than half this number under similar circumstances in C4e (Legon (1981) 268–71, based on Diod. 15.31 and Xen. *Hell.* 5.2.11–22). Six *strategoï* are attested in C4s (*IG VII 1–7*; cf. Heath (1912–13)). Naval power is attested for Megara as early as its C7l sea battle with Samos (no. 864) (Plut. *Quaest. Graec.* 57). Megara contributed twenty triremes to the Greek fleets at Artemision (Hdt. 8.1.1) and Salamis (Hdt. 8.45).

The Megarians maintained that citizenship had been granted to only two non-Megarians: the hero Herakles and Alexander the Great (Plut. *Mor.* 826C). The denial of citizenship to Hermon the metic is recorded by Dem. 23.212, but see Paus. 10.9.4. For Athenians living as metics in Megara, see also Dem. 29.3; Lycurg 1.21; Plut. *Mor.* 605D. A casualty list of c.425–400 (*SEG 39 411*) attests to a group of *ἔποικοι* (l. 22), i.e. free non-citizens.

The existence of the three Dorian *phylai* at Classical Megara is attested by *SEG 39 411*, a casualty list of c.425–400 listing the fallen soldiers under the rubrics *Ἡυλλῆς*, etc. A *hekatostys* is attested in C3s (*IG IV².1 42.18–21*), but evidence from Megarian colonies (*infra*) suggests that such units existed at a much earlier date (Jones, *POAG* 94). Plut. *Mor.* 295B reports the early existence of five *komai* (*Ἡραεῖς*, *Πιραεῖς*, *Μεγαρεῖς*, *Κυνοσουρεῖς*, *Τριποδίσκιοι*) in Megaris, and one of these, Tripodiskos, is called a *kome* at Thuc. 4.70.1 as well. There is no compelling evidence that these *komai* functioned as civic subdivisions or as units of public organisation (Jones, *POAG* 95–96; Hansen (1995) 72–73), though it is worth noting that the C6–C5 poet Sossarion refers to himself as a *Μεγαρόνεν Τριποδίσκιος* (fr. 1, West).

The Megarian constitution was oligarchic for most of the period between C7 and C5, briefly interrupted by the tyranny of Theagenes in C7s (Thuc. 1.126; Arist. *Pol.* 1305^a, *Rh.* 1357^b; Plut. *Quaest. Graec.* 18; Paus. 1.40.1, 41.2) and by the “unbridled democracy” in C6e (Arist. *Pol.* 1300^a15–19, 1302^b31–32, 1304^b35–40; Plut. *Quaest. Graec.* 18 and 59). Legon (1981) 105–19 argues that much of the *Theognidea*, e.g. 43–48, 43–60 and 182–92, also refers to the latter regime; cf. Robinson (1997) 114–17. A democratic faction seized power

in 427 and had the leading oligarchs exiled. Renewed *stasis* in 424, however, resulted in the Athenian conquest of Nisaia and the long walls, whereupon the Megarians opened their gates to the Lakedaimonians under Brasidas. A radical oligarchic constitution was introduced, and, of the leaders of the democratic faction, some went into exile while others were executed (Thuc. 3.68.3, 4.66–74; Gehrke, *Stasis* 106–10). This oligarchy was still in power in C4e (Thuc. 4.74.3, cf. 5.31.6; Dem. 18.96). Diod. 15.40.4 reports an attempted *coup* that was defeated by the *demos* in 375, though it is more likely to have occurred in 369 after Leuktra (Legon (1981) 276–78). C.343 an attempt to introduce a pro-Makedonian faction into power was reported to Athens and thwarted by an Athenian relieving force under Phokion that fortified Nisaia and reconstructed Megara’s long walls from the city to Nisaia (Dem. 19.294–95; Plut. *Phoc.* 15.1; cf. Legon (1981) 289–94).

The institution of ostracism is reported by schol. Ar. *Eq.* 855 (*ὠστρακοφόρου... καὶ Μεγαρεῖς*), a report now supported by the finding of an inscribed C5l–C4e *ostrakon* at Megara (Kritzias (1987)). Decrees of C4l show that decisions were made by the *boule* and the *demos* in accordance with a probouleumatic procedure (*IG VII 1–14*; Rhodes, *DGS* 109–12), but these decrees reflect the constitution after 307. Other institutions known from C4 and later sources include a high court, “the three hundred” (Dem. 19.295), the *aisymnatai* (*IG VII 15*), five *demiourgoi* in C4 (*IG VII 41*) and five *polemarchoi* in C3 (*IG VII 27–28*). A *basileus* is attested as the eponymous official (*IG VII 1–14*); cf. a *grammateus boulas kai demou* (*IG VII 1–14*); a *grammateus tou damou* (*IG VII 29*); and a *grammateus ton synhedron* (*IG VII 31*).

The town centres on the twin hills of Karia and Alkathoa, both under 300 m (Threpsiades and Travlos (1934) and (1936), which are encircled by a 3.5 km perimeter wall (of C4?) enclosing an area of 140 ha (Alexandris (1970)). Long walls from the perimeter wall to the port of Nisaia, approximately 1.5 km distant, were built in C5m (Thuc. 1.103.4), destroyed in 424/3 (Thuc. 4.109.1), and briefly rebuilt in C4m (Plut. *Phoc.* 15); a section of the long walls has been uncovered; see P. Zoridis in *ArchDelt* 38 Chron. 1983 (1989) 39–40 with plate 22B; cf. *AR* (1990–91) 12.

The site and main physical features of the town of Megara are well known. Excavations have identified the agora, stoas, major arteries and portions of the circuit wall (Threpsiades and Travlos (1936)). The fountain house of Theagenes (C6) is Megara’s most famous surviving monument (Gruben (1964)). The divinities honoured include Apollo, Artemis, Athena, Demeter, Dionysos and Zeus (Paus. 1.39–44; Hanell

(1934)). The principal divinity was Apollo Pythios (Paus. 1.42.5; *Syll.*³ 653.22 (C2); Meyer (1931) 201–2). On Alkathoa have been found the remains of a temple of Athena (Laufer (1989) 415).

Orsippos was victor at Olympia in 720 (*IG* VII 52; Paus. 1.44.1 = *Olympionikai* 16; cf. nos. 23, 48, 49, 468). A Megarian treasury was built at Olympia in C6l–C5e (Paus. 6.19.12–14; Bol (1974)) and one at Delphi in C5–C4 (Bommelaer (1991) 126–28). In C4l the trumpeter Herodoros of Megara won the prize in all the four major Panhellenic games, ten times according to Ath. 414F–415A, seventeen times according to Poll. 4.89–90; Ath. probably refers to the Olympia and Pythia, Poll. to the Isthmia and Nemea. From the time of the First Sacred War in C6e, Megara seems to have been frequently at odds with Delphi (no. 177) over the question of tolls levied on pilgrims to the sanctuary, and to have been involved in territorial disputes with its neighbours, Athens (no. 361) and Corinth (no. 227) (see Legon (1981) for details). The Megarians dedicated a statue of Apollo at Delphi in C5m for a victory over the Athenians at Nisaia (Paus. 10.15.1); cf. *MEFR* (1983) 631, 1.1. In C4m Megara contributed money to the rebuilding of Apollo's temple at Delphi after its collapse in 369 (*CID* II 4.1.6, II.55 (360)), and Megarians appear among the *naopoioi* (*CID* II 31.34 (354/3, etc.)).

Megara may have minted the disputed C6 “waggon wheel” coins (Head, *HN*² 393), but its first authenticated coinage is dated to C4: *obv.* head of Apollo; *rev.* Apollo's lyre. Legend: *MEΓAPE* on the didrachm, *MEΓA* and *MEΓ* on smaller coins (Head, *HN*² 329–30; *SNG Cop. Attica-Aegina* 459–65).

Megara was an active coloniser from C8s to C7m, founding Megara Hyblaia (no. 36), one of the earliest Sicilian colonies c.750 (Thuc. 6.2.2; Strabo 5.270–82; Hellen. fr. 82; cf. Vallet and Villard (1952) for discussion of literary and archaeological evidence). Megara also sent the oecist Pammilos for Selinous (no. 44) in Sicily in C7m (Thuc. 6.4.2), but concentrated its further colonising activities in the Hellenistic period. Megara was principal or sole founder of Kalchedon (no. 743) c.675 (Thuc. 4.75.2; Strabo 12.4.2; Pompon. 1.101), Selymbria (no. 679) c.660 (Ps.-Skymnos 715–16), Byzantion (no. 674) c.658 (Hdt. 4.144.2; Hsch. *Patria Constantinoupoleos* 5.3), Astakos (no. 737) (Memnon (*FGrHist* 434) fr. 12), Herakleia Pontike (no. 715) in C6m (Paus. 5.26.7) and possibly Olbia (no. 753). Since Megara was not a major factor in later Greek history, many of its early foundations were disputed in late sources. See Hanell (1934), esp. 161–204, for cult and calendar evidence that confirms Megarian influence in the colonies.

226. Pagai (Pagaios) Map 58. Lat. 38.05, long. 23.10. Size of territory: probably 1. Type: [A]. The toponym is *Παγαί, αἱ* (*IG* I³ 1353.5 (C5m)) or *Πηγαί, αἱ* (Thuc. 1.111.2; Ps.-Skylax 39). The city-ethnic is *Παγαῖος* (C2 coins: Head, *HN*² 417).

Pagai was situated in Megaris, according to Hellen. fr. 44 and Ps.-Skylax 39. In a difficult chapter (on which see Flensted-Jensen and Hansen (1996) 142–43), Ps.-Skylax 39 (C4) refers to a plurality of *poleis* in Megaris by the heading *πόλεις αἰδέε*, and among the toponyms which follow this heading *Πηγαί* is securely preserved; it is thus likely that Pagai is here listed as a *polis* in the urban sense. Several sources indicate that Pagai was a *polis* in the political sense in the Hellenistic period: it legislated (*IG* VII 190), one of its citizens served as Delphic *theorodokos* (*BCH* 45 (1921) 11.29 (230–220)), and it was a member of the Achaian Confederacy (Head, *HN*² 417). That it may already have been a *polis* by C4 is suggested by Ps.-Skylax 39. An inscription of c.300 refers to a plurality of *komai* in Megaris (*IG* VII 1.19); it seems likely that, like Aigosthena (no. 224), Pagai was one of these *komai*, and so the city may have had a double status as both a *kome* and a *polis* and in this case a dependent *polis* within the territory of Megara (Hansen (1995) 74–75); alternatively, the city developed into a *polis* only in the Hellenistic period. An Archaic inscription suggests a cult of Apollo Lykeios (*IG* VII 35). On the site are remains of undated walls (Hammond (1973) 438–40). Thuc. 1.103.4 shows that Pagai was fortified in C5m.

2. Corinthia

227. Korinthos (Korinthios) Map 58. Lat. 37.55, long. 23.55. Size of territory: 5. Type: A. The toponym is *Κόρωθος, ἡ* (Anac. 195, Gentili; Simon. fr. 40, Page; Hdt. 3.50.3), also spelled *ῥόρωθος* (ML 24 = *IG* I³ 1143 (480/79)). The city-ethnic is *Κορίνθιος* (*IG* IV 355 (C5e); Hdt. 1.23), also spelled *ῥορίνθιος* (*SEG* 41 540B.1 (C6m); *SEG* 23 264a.3 (540–525)).

Corinth is called a *polis* in the urban sense by Hdt. 8.61.2 and Thuc. 1.13.5. The territorial sense is a connotation at Thuc. 1.13.5 (second occurrence). The political sense is attested in C6m (Thgn. 893) and later by Xen. *Hell.* 4.4.2 and *CID* II 4.11.35 and 58. Aristotle also included Corinth in his collection of 158 *politeiai* (fr. 521–22). The term *asty* is used for Corinth on a C5e gravestone found on Salamis (ML 24 = *IG* I³ 1143) and by Simon. fr. 10, West.

The collective use of the city-ethnic is attested internally on C4 bronze coinage (*infra*), and externally in a C6 oracle reported by Hdt. 5.92β3 and on the Serpent Column (ML 27.2 (479/8)). The external individual city-ethnic is attested, e.g. in

SEG 41 540B.1 (C6m) and SEG 23 264a.3 (540–525), in IG iv 355 (C5e) and in Thuc. 6.104.1. Corinth is called *patris* in Xen. *Hell.* 4.4.6; Dem. 18.291–92, 20.52–54; and CEG II 720 (C4f; cf. SEG 27 298, 30 579 (with a suggestion of a slightly earlier date)).

The territory is called ἡ Κορινθία (Thuc. 4.42.1, 45.1; Xen. *Hell.* 4.8.8) or Κορινθός: Anakreon uses the phrase εὐρυχόροιο Κορινθίου (fr. 195, Gentili). Estimated area was 900 km² (Beloch (1922) 276), situated in the north-eastern Peloponnese, and extending on to the Isthmus of Corinth (see Wiseman (1978) for a thorough survey). The boundary between Corinth and Megaris was Mt. Gerania. The peninsula of Perachora on the Isthmus passed into Corinthian control no later than C8l (Legon (1981) 67–69). Salmon (1984) 46–48 would place the transition at least a century earlier. On the east, the Corinthian coast was washed by the Saronic Gulf, in the north-west by the Corinthian Gulf. The river Nemea formed Corinth's western boundary with Sikyon (no. 228) (Strabo 8.6.25). The complexities of Corinth's southern boundaries with Kleonai (no. 351), Argos (no. 347) and Epidaurus (no. 348) are discussed by Salmon (1984) 3–6. *Horoï* are recorded along the border between Corinth and Argos by Xen. *Hell.* 4.4.60. No other *poleis* are recorded as having existed within Corinthian territory in the Archaic and Classical periods. Located settlements in the territory of Corinth (see Wiseman (1978)) comprise Boukephalos (*Bucephalus*: Plin. *HN* 4.18; Barr., AC); Kromna (*Κρώμνα*: Lycoph. *Alex.* 522 with schol; Barr., AC; cf. SEG 22 219 (325–280), a sepulchral inscription over or a dedication by Ἀγάθων Κρωμνίτης); Krommyon (*Κρομμυών*: Thuc. 4.45.1; Ps.-Skylax 55; Xen. *Hell.* 4.4.13, 19, *τείχος*; Strabo 8.6.22; Barr., AC); Oinoe (*Οινόη*: Xen. *Hell.* 4.5.19; Strabo 8.6.22; Barr. C); Schoinous (*Σχοινοῦς*: Strabo 8.6.4, 22; *λιμὴν* Barr., AC); Sidous (*Σιδούς*: Ps.-Skylax 55; Xen. *Hell.* 4.4.13, 19, *τείχος*; Ath. 82A–B, Barr.; AC); Solygeia (*Σολύγεια*: Thuc. 4.42.2–43.5, *κώμη*; Barr., AC); Tenea (*Τενέα*: Xen. *Hell.* 4.4.19; Strabo 8.6.22, *κώμη*; Paus. 2.5.4; Barr., AC), which developed into a *polis* in the Hellenistic period (see SEG 13 348 (C1) and Head, *HN*² 418); and Therme (*Θερμά*: Xen. *Hell.* 4.5.8; Barr., AC); furthermore, Lechaion (Xen. *Hell.* 4.4.7; Pl. *Menex.* 245E) and Kenchreai (*Κεγχρεαί(ι)*: Thuc. 8.23.1, 5; Xen. *Hell.* 4.5.1), the two harbours of Corinth (Ps.-Skylax 40, 55; Paus. 2.2.3; Strabo 8.6.22; Barr. AC). Note also that Hdt. 5.92β1 refers to a *dḗμος* called Πέτρη, and that Theopomp. fr. 173 refers to two *κώμαι μεγάλαι καὶ πολυάνθρωποι* called Asai and Mausos; Asai is unlocated (Barr.), whereas Barr. (following Wiseman (1978) 81) tentatively identifies Mausos with the C site at modern Mapsos.

The estimated C5 population is 70,000, including slaves and any non-citizens (Salmon (1984) 165–69). The three Dorian *phylai* (Hylleis, Pamphyloi and Dymanes), are attested only indirectly, through their presence in Corinthian colonies (Salmon (1984) 57). In C6, probably during the reign of the Kypselidai, the three Dorian *phylai* were replaced for political and military purposes by eight territorially defined *phylai*, in which districts of the various regions of the Corinthia were intentionally mixed by means of subdivisions designated as *hemioğdoa* and *triakada* (C2 decree found at Delos and reported by Robert (1948), (1960); cf. Jones (1980), *POAG* 97–103). There is no compelling evidence that subordinate settlements (*supra*) functioned as units of public administration (Salmon (1984) 417 n. 18), though a sub-ethnic (*Κρωμνίτης* (SEG 22 219 (325–280)) was presumably coined from the toponym of one of them.

Corinth was among the most steadfast allies of Sparta (no. 345) and most active members of the Peloponnesian League throughout C5 (Salmon (1984) 240–380). Corinth was probably allied to Sparta by C6m (ibid. 240ff), some time before they jointly participated in the Samian expedition c.525/4 (Hdt. 3.44–46). Corinth's prominence in the Peloponnesian League is widely attested in Herodotos (e.g. 5.92–93) and Thucydides (e.g. 1.67–72, 119–25.1). In 421 Corinth was an equal party to an alliance with Mantinea (no. 281), Elis (no. 251), Chalkidike and Argos (no. 347) (Thuc. 5.27ff), but did not repudiate the alliance with Sparta. In 395 Corinth broke away from Sparta and was instrumental in organising a series of bilateral alliances linking Corinth, Argos, Athens (no. 361) and Boiotia, but dissolved these arrangements and made a new alliance with Sparta at the time of the King's Peace (Diod. 14.82; Xen. *Hell.* 4.2.17, 5.1.36; Andoc. 3.22; cf. Salmon (1984) 348ff). Corinth attempted to remain neutral in C4m (Xen. *Hell.* 7.4.7–10; Salmon (1984) 379–82, 427–28), but joined Athens against Makedonia, probably without concluding a formal alliance (Dem. 18.237; Aeschin. 3.95; Strabo 9.2.37; cf. Salmon (1984) 383). Corinth was garrisoned by the Makedonians after Chaironeia (Polyb. 38.3.3; Ael. *VH* 6.1).

The founding of Corinth was described in myth. Aletes is alleged to have consulted the oracle at Dodona, and received Zeus's blessing for a foundation at Corinth (Paus. 2.4.3; Pind. *Ol.* 13.14; Satyros *P Oxy.* 2465 fr. 3.2 12–20). The proverb “δέχεται καὶ βῶλον Ἀλήτης” (Diogenian. 4.27; Zen. 3.22; Douris (*FGrHist* 76) fr. 84) may be traced back to Eumelos (Salmon (1984) 38). Based on a king list (Diod. 7.9), however, Bacchis may have been the actual founder, c.900. Legend

attributed the Corinthian synoecism to King Aletes at the time of the foundation. Salmon (1984) 57–58 concludes that Corinthia was unified from the time of the Dorian conquest, c.900 (Phot. *Lexicon: πάντα ὄκτω*).

During the Persian War Corinth mustered 5,000 hoplites at Plataiai in 479 (Hdt. 9.28.3) and forty triremes at Artemision and Salamis (Hdt. 8.1, 43). In the Peloponnesian War Corinth sent 3,000 hoplites and thirty triremes to Leukimme (Thuc. 1.27.2), ninety triremes to Sybota (Thuc. 1.46.1), forty triremes and 1,500 hoplites to restore the tyrant of Astakos (no. 116) (Thuc. 2.33.1), and 2,000 hoplites to Boiotia after Delion in 424 (Thuc. 4.100.1). Some 3,000 Corinthian hoplites fought at Nemea in 394 (Xen. *Hell.* 4.2.17). Corinth appointed eight *strategoí* to command its forces, one per tribe (Thuc. 1.46.2, 2.33.1, 7.7.1, 19.4, 34.2). Salmon (1984) 232–33 suggests that they “acted as a college, without an overall commander”.

Few diplomatic envoys are named in the sources, but Hdt. 5.93.1 (rC6l) describes Sokles as ἀπὸ Κορίνθου πρεσβεύων, and Aineas, son of Okytos, and Euphamidas, son of Aristonymos, were signers of the Peloponnesian truce with Athens in 423 (Thuc. 4.119.2). Corinth awarded *proxenia* to citizens of Korkyra (no. 123) (Thuc. 3.70.1), and Corinthian citizens were appointed *proxenoi* by Karthaia (no. 492) (*IG XII 5 542.14* (C4m)) and Delphi (no. 177) (*F.Delphes III.1 178–79* (C4l)). In 356 a *theorodokos* was appointed to host *theoroi* from Epidauros (no. 348) (*IG IV².1 95.2*).

Monarchy gave way to the Bacchiad aristocracy in C8m (Diod. 7.9; Salmon (1984) 55–56). The tyranny of the Kypselids lasted from C7m to C6e (Arist. *Pol.* 1315^b22–26; Salmon (1984) 186–230). Thereafter, an oligarchic constitution characterised Corinth throughout C6, C5 and C4, interrupted only by a brief period of democracy 392–386 (*infra*) and the tyranny of Timophanes in 366 (Arist. *Pol.* 1306^a21–24). A Council of Eighty comprised of eight *probouloi* and seventy-two ordinary members (Nic. Dam. (*FGrHist* 90) fr. 60.2; cf. Will (1955) 609–15) existed by C4 and probably goes back to the time of the tyranny. This Council is probably the *γεροουσία* mentioned by Diod. (16.65.6, 9) as involved in the dispatch of Timoleon to Sicily in 346/5 (Salmon (1984) 231). Thuc. 5.30.5 mentions a Corinthian ξύλλογος in 421, which must be an assembly.

Isopoliteia with Argos (no. 347) in C4e (Xen. *Hell.* 4.4.6; Diod. 14.92.1) led to joint administration of the Isthmian Games and some reciprocal political rights, but its further significance is disputed. Xen. *Hell.* 4.4.6 took it as a step toward the merger of the two *poleis*. Salmon (1984) 357–71

disputes this interpretation. Corinthian exiles are attested at the time of these events: 150 of these exiles fought under the Spartan Praxitas to retake Corinth (Xen. *Hell.* 4.4.9). The *isopoliteia* was dissolved by the terms of the King's Peace (Xen. *Hell.* 5.1.32–34). Salmon (1984) 354–62 argues that even the revolution of 392 (Xen. *Hell.* 4.4.2–5; Diod. 14.86.1–2) did not overturn the oligarchy, but Xen. *Hell.* 4.4.6 supports the view of Kagan (1962) 447–53 and Hamilton (1979) 260–78 that a democratic regime came to power briefly.

Corinth suffered threats and outbreaks of *stasis* during the tyranny of Periander (Hdt. 5.92ζ–η; Arist. *Pol.* 1284^a26–33, 1311^a20–22, 1313^a36–37, ^b21–23), in connection with the overthrow of the tyranny (Nic. Dam. (*FGrHist* 90) fr. 60), and in C4f during and after the Corinthian War: *stasis* between pro-Lakedaimonian and anti-Lakedaimonian factions broke out in 395 (*Hell. Oxy.* 10.3), and the core of the pro-Lakedaimonian faction was massacred in 392 (Xen. *Hell.* 4.4.1–5; cf. Buckler (1999)). Later in 392 the Corinthian exiles and their allies conquered Lecheion and won a battle fought against the Corinthians in the city (Xen. *Hell.* 4.4.9–11). The anti-Lakedaimonian democrats were expelled in turn after the King's Peace in 386, when the pro-Spartan oligarchy had been restored (Xen. *Hell.* 5.1.34). Corinthian exiles are found in Argos (Diod. 15.40.3) and in Athens (Dem. 20.51–57), and an attempted return in 375 ended in bloodshed (Diod. 15.40.3; for the date, see Stylianou (1998) 330–31). Another *stasis* occurred in 366/5, when Timophanes was appointed commander of a standing force of 400 mercenaries, but then set himself up as tyrant of Corinth, whereupon he was murdered by his brother Timoleon (Plut. *Tim.* 4.4; Arist. *Pol.* 1306^a22–24; Diod. 16.65.3–8).

The Akrokorinth was a “natural fortress” (Salmon (1984) 220) and traces of what are most likely Archaic fortifications have been found there (Carpenter in Bon *et al.* (1936) 1ff). Kypselos is credited with building the earliest fortifications around the city (rubble-filled stone with an average width of 2.4 m) and joining it to the Akrokorinth (A. N. Stillwell (1948) 14). Remains are dated to C7f (*ibid.*; Lang (1996) 171). The Classical city walls of Corinth were approximately 7.5 km in length, enclosing an urban area of 600–700 ha (Carpenter in Bon *et al.* (1936) 1–83). In C5m, long walls were built between Corinth and the port of Lechaion (Parsons in Bon *et al.* (1936) 84–125). These were breached by Praxitas in 392 (Xen. *Hell.* 4.4.13).

Public buildings included the *bouleuterion* (Diod. 16.65.6 (r346)), the Kyklopeian Springs constructed by the Bacchiads in C8–C7, the Sacred Spring, the springs of

Glauke (Paus. 2.3.5) and Peirene (Paus. 2.3.3; cf. Salmon (1984) 78–80 on the springs); and remains have been found of a *stadion* of C5f (Romano (1993) 43). Pausanias visited what remained of the Corinthian agora (2.2.5–3.1); the north stoa was built in several stages in C5; the early stage of the north building consisted of a stoa and shops (R. Stillwell *et al.* (1941) 212–28), the south stoa built in C4l (Broneer (1954) 1.4 and Williams (1980) 121), and a theatre (Paus. 2.3.6). The earliest theatre was built in C5l (R. Stillwell (1952) 131–33; cf. *TGR* ii. 152–55). Xen. *Hell.* 4.4.3 mentions a theatre in the context of Corinthian *stasis* in 392. Among the temples and shrines observed by Pausanias were the shrine of Tyche (2.2.7), the temple of Aphrodite (Strabo 8.6.20), the temple of Athena of the Bridle, and the temple of Zeus Supreme (2.4.5). Pausanias omits mention of the temple of Apollo built under the tyranny in C6m, which superseded an earlier temple of Apollo built in C7 by the Bacchiads (Salmon (1984) 78–79, 180). At Isthmia, the Corinthians built a temple of Poseidon and a sanctuary of Kyklopes (Ps.-Skylax 55; Paus. 2.2.2). At Perachora, Kypselos built the temple and altar of Hera Akraia in C6.

Among the cults attested in Corinth are those associated with Aphrodite, Hera, Medea, Athena, Bellerophon, Apollo, Poseidon, Ephesian Artemis, Dionysos, Hermes, Zeus of the Underworld, Zeus the All-Highest, Demeter, Kore, the Fates, Necessity and Violence, Pelagian and Egyptian Isis, and Serapis. (See Odelberg (1896) and Will (1955) 81–236.) Corinth was custodian of the sanctuary at Isthmia and presided over the Isthmian Games (Thuc. 8.9–10.1; Xen. *Hell.* 4.5.1–2; Paus. 2.2.2).

Consultation of the oracle at Delphi by the Bacchiad regime (C6e) is recorded by Hdt. 5.92β3. Corinthian victories are reported in the Olympic Games (*Olympionikai* 13, 14, 147, 152, 154, 229, 249–50, 367c), the Pythian Games (Pind. *Ol.* 13.37; *Anth. Pal.* 13.19), the Nemean Games (Pind. *Ol.* 13.44; *Anth. Pal.* 13.19), the Panathenaic Games (*Anth. Pal.* 13.19), and, of course, the Isthmian Games (Pind. *Ol.* 13.41; *Anth. Pal.* 13.19). The earliest known treasury at Delphi was dedicated by the Corinthian tyrant Kypselos (Hdt. 1.14.2; Plut. *Mor.* 164A, 400D–E). He also dedicated a gold colossus at Olympia in C7m (Pl. *Phdr.* 236B). The Olympieion allegedly built by Periander, near Corinth, was destroyed in C4e (Paus. 2.5.5).

Corinth had one of the most prolific mints in ancient Greece (see Kraay (1976) 78–88). C6f and later silver coins bore an image of Pegasus and the letter ϙ on the *obv.*, and a helmeted Athena on the *rev.*, with Aphrodite substituted for Athena on drachms and smaller denominations. The

Corinthian weight standard was adopted in much of north-west Greece. Minting ceased during the greater part of the Peloponnesian War in C5l and resumed in C4e (Kraay (1976) 85–86). On C4 bronze coinage we find *K*, *KOP*, and *KOPINΘIΩN* (Head, *HN*² xlvi and 399ff; *SNG Cop. Corinth* 1–67).

Corinth was involved in the colonisation of Syracuse (no. 47), oecist Archias (Thuc. 6.3.2); Apollonia (no. 77), which was either a Corinthian foundation (Thuc. 1.26.2; Plin. *HN* 3.145; Plut. *Dio* 41.45.1; Steph. Byz. 105.21–22) or a joint foundation with Korkyra (Strabo 7.5.8; Ps.-Skymnos 439–40); Elea (no. 95); possibly Alyzeia (no. 112); Ambrakia (no. 113), oecist Gorgos (Strabo 7.7.6; Ps.-Skymnos 453–55; Thuc. 2.80.3); Anaktoron (no. 114) in C7l–C6e (Nic. Dam. (*FGrHist* 90) fr. 57.7; Strabo 10.2.8); Plut. *Mor.* 552E credits Periander with this foundation, but Anaktoron may have been jointly founded with Korkyra (Thuc. 1.55.1); possibly Astakos (no. 116); Korkyra (no. 123), oecist Chersikrates (Thuc. 1.26; Ap. Rhod. 4.1212 with schol.; Timaeus (*FGrHist* 566) fr. 80); Leukas (no. 126), founded by Kypselos (Hdt. 8.45; Thuc. 1.30.2; Ps.-Skylax 34); Sollion (no. 137); Chalkis (no. 145); Molykreion (no. 150); and Poteidaia (no. 598) in C6e, said to have been founded by Periander (Nic. Dam. (*FGrHist* 90) fr. 59.1). Corinth maintained active relations with its colonies. Thus, a Corinthian, Phalios, son of Eratokleides, was oecist at the Korkyran colony of Epidamnos in C7lm (Thuc. 1.24.1–2); in C5e, Corinth and Korkyra arbitrated between Syracuse and Hippokrates of Gela (Hdt. 7.154.3); as late as C5s, magistrates called ἐπιδημιουργοί were sent to Poteidaia (Thuc. 1.56.2), and in 346/5 Timoleon was sent to Syracuse on that city's own request to end the political chaos there (Diod. 16–65; see Talbert (1974)). See further Graham (1964) 118–53.

3. Sikyonia

228. Sikyon (Sikyonios) Map 58. Lat. 38.00, long. 22.45. Size of territory: 4. Type: A. The toponym is Σικυών, ὁ (Pind. *Ol.* 13.109; Thuc. 1.111.2; Xen. *Hell.* 4.2.14) or ἡ (Pind. *Nem.* 9.53); in local script up to C4l, it appears as Σεκυών (*SEG* 11 257 (C5f)). The ethnic is Σικυόνιος (ML 27.3 (479/8)), Σικυώνιος (*IG* v.1 1565 = Tod 120; Hdt. 5.69.1), or Σεκυώνιος (*SGDI* 3162; Griffin (1982) 62); ΣεϙυΦονιος is found in *LSAG* 140 and pl. 23 (C7).

In Classical sources Sikyon is called a *polis* in the political sense by Thuc. 8.3.2 and Xen. *Hell.* 7.1.44; the urban sense is found at Ps.-Skylax 41, and *asty* appears in Xen. *Hell.* 7.3.4 and Theopomp. fr. 176; *polis* in the territorial sense is found

in Xen. *Hell.* 7.3.3 (ὄλην . . . τῆν πόλιν). The term *astyis* is used for Sikyon at Xen. *Hell.* 7.3.4 and Theopomp. fr. 176 and 311. Xenophon refers to the *politeia* at *Hell.* 7.1.44 (κατὰ τοὺς ἀρχαίους νόμους ἢ πολιτεία ἦν), and Aristotle included Sikyon in his collection of 158 *politeiai* (Arist. fr. 598).

The internal collective use of the city-ethnic is found in *IG* IV 429.3 (C4s); the external collective use is attested in *IvO* 649 (C5f), on a C5m bronze greave dedicated at Olympia (Griffin (1982) 62; cf. *SEG* 31 369), and on the Serpent Column (ML 27.3 (479/8)); the external individual use is found on a C7 graffito from Delphi: Σέρυφοῦσιος (*LSAG* 140 and pl. 23), in *IG* I³ 741 (C5e), on a C4f limestone base at Delphi: [Κλ]έων ἐπόησε Σικυώνιος (Tod 120), and in the historians (e.g. Hdt. 5.69.1; Thuc. 7.19.4). Sikyon is called *patra* (= *patris*) in *CEG* II 811 (356) and is implicitly called *patris* at Dem. 18.291–92 (cf. *IG* II² 448.55–56 (318/7)).

The territory is called Σικυών (Hdt. 1.145, 5.67.1; Thuc. 5.81.2) or Σικυωνία (Thuc. 4.101.3); it is called χώρα at Hdt. 5.67. The size of the territory has been estimated at 360–400 km² (Beloch (1922) 276). Sikyon's eastern boundary was the river Nemea, which divided its territory from Corinthia (Strabo 8.6.25). Sikyon was bounded by the Corinthian Gulf on the north, and by the river Sythas and the territory of Pellene (no. 240) on the west (Paus. 7.27.12). In the south, Sikyon was separated from the territory of Phleious (no. 355) by mountains—Apesas, Spiria and Trikaranon (Skalet (1928) 28). The main area of occupation and the city of Sikyon were located in a triangular coastal plain bounded by the rivers Asopus and Helisson (Skalet (1928) 1–4). Urban sites within Sikyonia included Titane, probably the most important site after Sikyon itself, but with little remaining (Paus. 2.11.3; *Barr.*, AC); Ephyra (Strabo 8.3.4; not in *Barr.*), Plataiai (Strabo 9.2.31; not in *Barr.*), Donoussa (Gonoussa; not in *Barr.*) (Paus. 5.18.7, 7.26.6; Hom. *Il.* 2.573), and Phoibia (alias Bouphia; Steph. Byz. 184.5 = Ephor. fr. 81; not in *Barr.*) called a πόλισμα (town) by Paus. 9.15.2. Forts identified in the sources are Epieikia (Xen. *Hell.* 4.2.14, 4.13); Derai (Gerai), a stronghold (Xen. *Hell.* 7.1.22); and Thyamia (Xen. *Hell.* 7.2.1, 23, 4.1.11).

The free population in C5 and C4 is estimated at 20,000 (Beloch (1922) 276). The three Dorian *phylai*—Hylleis, Pamphyloi and Dymanes—are attested, and an additional tribe, Aigialeis, established for the pre-Dorian population (Hdt. 5.68). These were abolished by the tyrant Kleisthenes, but restored after the fall of the tyranny in C6m (Hdt. 5.68).

Sikyon was dominated by Argos (no. 347) until the period of the Sikyonian tyranny, when Kleisthenes (C6e) fought a

war with Argos (Hdt. 5.67–68). It was a member of the Peloponnesian League from C61 to 369 (the earliest notice of Sikyon's membership being in 494, when it supplied ships to the Spartan king, Kleomenes: Hdt. 6.92.1). In the reorganisation of the Peloponnesian League in 377, Sikyon was paired with Phleious (no. 355) and the communities of Akte in one of the ten divisions (Diod. 15.31.2). Sikyon was included as a subordinate party in the Athenian/Spartan alliance of 369 (Xen. *Hell.* 7.1.1, 15–23, 2.2). After Sparta's defeat at Leuktra in the same year, Sikyonia was invaded by Epameinondas, conquered and forced to join the Theban alliance (Xen. *Hell.* 7.1.18, 22, 44; 2.2, 3.2; Diod. 15.69.1). A Theban harmost is attested in Sikyon c.366 (Xen. *Hell.* 7.2.11 and 3.4, 9). By the time of Alexander's death a Makedonian garrison held Sikyon (*IG* II² 448). An inscription from C4l records a treaty between Athens (no. 361) and Sikyon (*Staatsverträge* no. 445).

In 480, Sikyon sent twelve ships to the Hellenic fleet at Artemision (Hdt. 8.1.2) and, later, fifteen to Salamis (Hdt. 8.43). In 479, Sikyon mustered 3,000 hoplites at Plataiai (Hdt. 9.28.4, 31.3). At Nemea, a century later, Sikyon mustered only 1,500 hoplites (Xen. *Hell.* 4.2.16). The tyrant Orthagoras was a general (*polemarchos*) according to *P Oxy.* 11, 1365, and Herodotos calls Perileos, the Sikyonian general who died at Mykale in 479, *strategos* (Hdt. 9.103.1). In C4m Euphron asked the people of Sikyon to choose *strategoí*, which they did (Xen. *Hell.* 7.1.45).

Few Sikyonian diplomats are named, but Damotimos, son of Naukrates, and Onesimos, son of Megakles, are recorded as signers of the one-year truce in 423 (Thuc. 4.119.2); cf. Thuc. 1.28.1 for Sikyonian *presbeis*. Άγαθοκλεΐς Άμούνταο was Sikyonian *proxenos* at Thespiiai (no. 222) in Boiotia (*IG* VII 1724); and three Sikyonian *proxenoi* are noted in Messenia in C4s or later (Paus. 4.14). Kleandros and Sokles were *proxenoi* and *theorodokoi* of the Pisatans (no. 262) c.365–363 (*Syll.*³ 171; Perlman (2000) 64–65, 175). There is no evidence of grants of citizenship by Sikyon, or of free non-citizens. A citizen of Sikyon was granted citizenship by Athens (no. 361) in 323/2 (*IG* II² 448), and another by Eretria (no. 370) in C4s (*Eretria* XI 1).

The Dorian aristocracy of C8–C7 gave way to tyranny in C7m. Sikyon experienced a century of tyrannical rule (Arist. *Pol.* 1315^b; Diod. 8.24; cf. Skalet (1928) 51–62 and Griffin (1982) 40–59, esp. 43–47 on chronology) under Orthagoras, Myron, Aristonymos, Isodemos, Kleisthenes and Aischines. The tyrant Kleisthenes reformed the tribal structure in C6f (Hdt. 5.67–68; Jones, *POAG* 103–6). After the overthrow of the tyranny of Aischines in C6m (Plut. *De Herod. Mal.* 21),

probably through Spartan intervention, oligarchy prevailed in Sikyon through most of C6, C5 and C4. Fearing that Sikyon might go over to Argos, the Spartans intervened again in 417 to establish a more extreme oligarchic regime (Thuc. 5.81.2). We do not know how long this regime remained in power, but Sikyon is referred to as supporting Sparta several years later, during the Sicilian campaign, under compulsion (Thuc. 7.58.3). There was an unsuccessful revolution in Sikyon in 375/4 (Diod. 15.40.4; for the date, see Stylianou 1998) 330–31), and the oligarchy survived a shift to the Theban alliance in 369 except for the brief democratic/tyrannical *coup* of Euphron in 367 (Xen. *Hell.* 7.1.44–46, 3.4–12; Diod. 15.70.3; Plut. *Arat.* 53). Outbreaks of *stasis* occurred in C6m when the tyranny was abolished (Plut. *Mor.* 859D), in 417 when a more narrow form of oligarchy was established (Thuc. 5.81.2), c.375 when a *coup* failed, probably planned by a democratic faction (Diod. 15.40.4), in 367–366 when Euphron established a short-lived tyranny (Xen. *Hell.* 7.1.44–46, 2.11–15, 2–12), and c.340 when a pro-Macedonian group was headed by the “traitors” Aristrotos and Epichares (Dem. 18.48, 295).

Artemis was the chief goddess of Sikyon, and Apollo the most revered god. The presence of Athena Polias or Poliouchos is disputed (for: Odelberg (1896) 31; against: Hitzig-Blümner, *Pausanias* 1.2, p. 537). *SEG* 11 257.6 (C5f) attests to athletic games at Sikyon (cf. Pind. *Nem.* 9).

The Sikyonians consulted the Delphic oracle on several important occasions in rC6m (Parke and Wormell (1956) nos. 23 (cf. Diod. 8.24 and Plut. *Mor.* 553A) and 28; Pliny, *HN* 36.9). Sikyonians are listed among the temple-builders (*naopoioi*) who restored the temple of Apollo at Delphi in C4m, e.g. *Ἐυρότιμος Σικυώνιος* (*CID* II 31.12 (356/5)). A collective donation of money by Sikyon towards this purpose is recorded in *CID* II 8.11.9 (C4m).

Tellis won the *stadion* at Olympia in 708 (*Olympionikai* 20); Myron, the tyrant, was chariot victor in 648 (Paus. 6.19.2; *Olympionikai* 52), and Kleisthenes, his descendant, won the chariot race in 576 or 572 (Hdt. 6.126.2; *Olympionikai* 96). Pythokritos, son of Kallinikos, the flute-player, won six consecutive victories at the Pythian Games in C6, and was honoured with a statue at Olympia (Paus. 6.14.9–10). Boukelos won the boys’ boxing some time between 412 and 360 (Paus. 6.13.7; Hyde (1921) 120; *Olympionikai* 360). Sostratos was most prolific of all, winning the pancratic contests at Isthmia, Nemea, Olympia (*Olympionikai* 420, 425, 433) and Delphi (Paus. 6.4.2).

Sikyon built a prominent treasury at Delphi (Paus. 10.11.1). Archaeology has established a C5s building, but

older C6f foundations beneath may be remains of a Sikyonian treasury of Kleisthenes’ time, though the traditional attribution of the building to Sikyon is uncertain (Griffin (1982) 106–11). A treasury at Olympia was dedicated by the Sikyonian Olympic victor and tyrant “Myron and the Sikyonian *demoi*” in C7m (Paus. 6.19.1–6), but letter-form dating assigns the archaeological remains to C5f (Jeffery (1990) 143–44). There may have been an earlier C7l structure (Herrman (1972) 99–100).

The town of Sikyon had a two-level acropolis. A C5 wall surrounded the city, and another wall protected the acropolis. The city walls enclosed an area of approximately 175 ha (this wall is mentioned in Xen. *Hell.* 4.4.14; Aen. *Tact.* 29.12; Diod. 11.88.2 (r453)). The agora is mentioned at Hdt. 5.67.1. The harbour must have had its own fortifications (see Skalet (1928) 7). In C4l, the city was relocated by Demeterios Poliorketes: the outer city wall was demolished, the lower acropolis wall was strengthened (2.5 m thickness), and a new wall was built surrounding the upper acropolis. The urban population moved from the old city on the plain below the acropolis to what had been the lower acropolis (Diod. 20.102; Plut. *Demetr.* 25; Strabo 8.6.25; Paus. 2.7.1; cf. Skalet (1928) 2–3; Griffin (1982) 23–24, 78).

The remains of public buildings in the city and on the acropolis are surveyed by Griffin (1982) 6–24. Most of the visible ruins date from Hellenistic and Roman times, including a theatre on the slope of the acropolis (*TGR* ii. 291–92; cf. Paus. 2.7.5; cf. Polyb. 29.24.6 and 25.2); but there is an Archaic temple rebuilt in the Hellenistic period. Paus. 2.9.6 mentions a *bouleuterion* in the agora and a stoa ascribed to Kleisthenes, the C6 tyrant who also had a part of the *prytaneion* turned into a sanctuary for Melanippos (Hdt. 5.67). The C4l remains of a quadrangular hypostyle hall on the east side of the agora are usually identified with the *bouleuterion* referred to by Pausanias (Gneisz (1990) 351–52). Xen. *Hell.* 7.1.45 describes a gathering of the *demoi* in the agora in 367–366. Pausanias describes (2.11.1–2) the remains of older temples on the original acropolis, whose precise location is still in dispute (Griffin (1982) 21–24). These sacred buildings include the temple of Athena, the sanctuaries of Artemis and Apollo, Hera, and Demeter, and the shrines of Karneian Apollo and Hera Prodrómia.

The earliest Sikyonian coinage dated to C6l. Sikyon used the Aiginetan weight standard (Kraay (1976) 329). C5 silver coinage had types: *obv.* Chimaera, or Apollo kneeling with his bow and arrows; *rev.* dove (a symbol of Artemis) and the letter Σ. C4e coinage with legend ΣΕ or ΣΙ. See Head, *HN*² 409–12 and *SNG Cop. Phliasia-Laconia* 18–72.

ACHAIA

CATHERINE MORGAN, JONATHAN M. HALL

I. The Region

The name of the region is *Ἀχαΐα*, ἡ (Thuc. 2.83.3, 84.3; Xen. *Hell.* 3.2.23, 7.1.41). The ethnic is *Ἀχαιός* (*IvO* 630.3 (C6–C5); Hdt. 1.145). The collective use of the ethnic is attested externally (Hdt. 1.145; Thuc. 2.9.2; Xen. *Hell.* 4.6.1; *IG* II² 112 (362/1)), and internally on federal coins dating to c.370–360 and inscribed *ΑΧΑΙΩΝ* (Head, *HN*² 416); cf. *SEG* 14 375 (C41). The external individual use is found in *IG* I³ 174.5: *Λύκωνα τὸν Ἀχαιόν* (425–410), and is frequently combined with an indication of local origin: *Ἀχαιὸς Ὀλένιος* (*SEG* 39 370a.A.7 (427–414)); *Ἀριστέ[αν τὸν Ἀχαι]όν τὸν Αἰγιά* (*IG* II² 13 (399/8)); *Κλέων Ἀχαιὸς ἐχ Φάρας* (*IG* XII.8 637 (C4)); or *Μανίδαί Ἀψεφέος [Ἀ]χαιῶν ἐξ Αἰγίρας* (*BCH* 22 (1898) 261 n. 1 with *BCH* 62 (1938) 340–41 (326/5)). The region of Achaia is described as *γη* at Hdt. 8.73.1 and *χώρα* at Ps.-Skylax 42, while the population is termed *ἔθνος τὸ Ἀχαιϊκόν* at Hdt. 8.73.1.

Achaia spans the north coast of the Peloponnese, from the border with Sikyon at the river Sythas in the east to the river Larisos which marked the Eleian frontier in the west (Strabo 9.5). Mt. Skollis served as a common frontier between Elis, Dyme and Tritaia (Strabo 8.3.10) and in the south, Mts. Erymanthos, Aroania and Kyllini in northern Arkadia formed a striking natural barrier dividing Achaia from the central Peloponnese (Paus. 8.15.8–9, 17.5). Geographically and culturally, Achaia may be divided into four sub-regions, which show great variety in the pace and pattern of local development (Morgan and Hall (1996) 166–93). The narrow, alluvial coastal plain that runs from Aigeira to Neos Erineos attains a depth greater than one mile only east of Aigion, and is characterised by a series of headlands punctuated by the outflow of the rivers which originate in the inland mountains (Pellene, further to the east, appears distinct both in its topography and its role in history). The northern escarpments of the inland mountains are abrupt—Mt. Kyllini being a mere 13 miles from the coast—and rivers cut deep valleys which are mainly dry in summer. Routes inland are few—notably along the river Vouraikos towards modern

Kalavryta, and the Meganeitas and Selinous valleys inland from Aigion—and the easiest communication in Antiquity was via the coast. To the west of this area lies the *chora* of Patrai, which in Classical times extended from Drepanon perhaps as far as Tsoukaleika, although the exact boundary of the *chora* of Olenos is hard to define. The interior is dominated by Mt. Panachaikon, situated 9 miles inland from Drepanon, with uplands—many over 5,000 feet—offering good summer pasture to complement the broad coastal plain. The Gulfs of Corinth and Patras reach their narrowest point at modern Rion, just outside Patras, offering the easiest crossing north to Aitolia. Thirdly, the area of Dyme (modern Kato Achaia) west of the river Peiros has a broad, continuous coastal plain surrounding lower and more undulating hill country (rising to 2,300 feet), which is well watered due to a comparatively high rainfall. It is possible that this area was extensively forested in Antiquity. Finally, the Pharai valley runs inland south of Panachaikon, rising in elevation and growing increasingly narrow towards the east; it is punctuated by small, well-watered plains (Philippon (1959) ch. 1; NID (1945) 162–66, 189–93).

According to literary sources, Achaia was divided into twelve regions. Hdt. 1.145 names these as Pellene, Aigeira, Aigai, Boura, Helike, Aigion, Rhypes, Patrees (Patrai), Pharees (Pharai), Olenos, Dyme and Tritaiees (Tritaia). Strabo 8.7.4, drawing on Herodotos, gives the same names in the same order. Ps.-Skylax 42 also follows this order, but omits Boura, Helike, Pharai, Olenos and Tritaia. The absence of inland Pharai and Tritaia is, of course, understandable in a treatise which purports to be a *periplous*. Helike had been engulfed by a tidal wave occasioned by an earthquake in 373 (Polyb. 2.41; Strabo 8.7.2; Paus. 7.24.6), while Boura was affected by the same event but was swiftly resettled by survivors who had escaped thanks to their absence on military service (Paus. 7.25.8–9)—an omission that may suggest that this particular section of Ps.-Skylax's work dates to a period immediately after the earthquake (see Flensted-Jensen and Hansen (1996) 137–38). Olenos had been abandoned due to weakness (Paus. 7.18.1), and its

inhabitants incorporated within Dyme (Strabo 8.7.4). Leontion and Keryneia, neither of which is mentioned by Classical sources, may have originally been hill sites (Anderson (1954) 73): Pausanias implies that Keryneia, situated between Helike and Boura, already existed when it received refugees from Mykenai (no. 353) shortly after 468, but that it was this increase in population that guaranteed Keryneia's future importance. Other late authors reflect these various reversals. Polyb. 2.41.7–8 omits Aigai, Rhypes, Helike and Olenos, but adds Keryneia and Leontion. Pausanias' list (7.6.1; cf. 7.18.7, 22.1, 22.6) largely accords with that of Herodotos, though he too adds the name of Keryneia and omits that of Patrai—perhaps because by his day it had been refounded as a Roman colony.

For Hdt. 1.145–146.1, the Ionians of Asia Minor had originated from Peloponnesian Achaia; the reason why they were organised into twelve *poleis* and were reluctant to admit new members was that they had been divided into twelve *mere* when they had occupied Achaia. At first sight, Herodotos appears to be establishing a direct contrast between the *poleis* of Ionia and the *mere* of Achaia, and this has led Sakellariou (1991) 14 to hypothesise that the emergence of *poleis* in Achaia must postdate the time of Herodotos. Yet if this was Herodotos' intention, it was misunderstood by later writers. Paus. 7.6.1 says that the Achaians immediately established *poleis* upon their arrival in Achaia, and Strabo 8.7.4 contrasts the village settlements of the Ionians with the *poleis* founded by the Achaians (although he had previously (8.7.1) described Achaia as already settled in *poleis* at the time of the Ionian "occupation"). However, far from being concerned with the political geography of Achaia in historical times, Herodotos' aim was to provide an *aition* for the restriction of membership of the Panionion to twelve cities. The *mere* of Achaia are introduced in the context of the protohistoric period prior to the return of the Herakleidai, whose arrival in Argos and Sparta supposedly forced the Achaians to migrate to the north Peloponnese (Paus. 7.1.5; cf. Hdt. 7.94; Strabo 8.7.1). If Herodotos subscribes to a view of Achaia at this time as relatively unurbanised, he is almost certainly reflecting a commonly held opinion: Homer mentions only Hyperesia (Aigeira), Gonoessa (Donoussa?), Pellene, Aigion, Aigai and Helike, and attaches to none a term such as *polis* or *ptoliethron* (Hom. *Il.* 2.573–75, 8.203; cf. 2.501, 505, 538, 546, 569, 584, 648–49, 677, 739). And since *polis* would have been an unsuitable term in this period, Herodotos uses the term *meros* which, together with its cognate *meris*, continued to be employed in Achaian contexts as a synonym for *chora* even after the appearance of urban cen-

tres (Strabo 8.7.2, 4, 5; Paus. 7.17.13). In short, the dictates of Herodotos' argument, together with the fact that *meros* could be used to describe a *chora* with or without an urban centre, makes it difficult to maintain that *poleis* cannot have existed by Herodotos' day.

According to Strabo 8.7.5, each of the twelve *mere* of Achaia was formed from seven or eight *demoi*. While it is possible that the "prehistory" of these *demoi* was invented during the Hellenistic period to bestow a deeper historical pedigree upon the members of the Achaian Confederacy, it is equally likely that they had existed during the Archaic period at least. Unfortunately, there is no epigraphic evidence for their existence in Achaia at any period—indeed, the only testimony for civic subdivisions comes in a C3 law (*Syll.*³ 531) which regulates citizenship at Dyme (no. 234) and names three *phylai*: Stratis (or Spatis), Dymaia and Thesmiaia. Jones, *POAG* 130–32, argues that the absence of *demoi* in this inscription indicates that they played no role in public administration, although he suggests that the *phylai*—which in Dyme, at any rate, seem to have had a geographical significance—were modelled on a pre-existing system of *demoi*. Archaeological evidence appears to suggest that the *physical* existence of the *demoi* continued long after the Archaic period, even if their political identity was lost after synoecism (see generally Rizakis (1995)).

Poleis are certainly attested in Achaia by C4. Xen. *Hell.* 6.5.29 includes Pellene (no. 240) in a list of *poleis* that gave aid to the Spartans during the Theban invasion of Lakonia in the winter of 370/69. Cicero says that Dikaiarchos, a pupil of Aristotle, wrote a *Constitution of the Pellenians* (Cic. *ad Att.* II 2 = no. 125, Gigon), and *IG* II² 220 (344/3) refers to *presbeis* from Pellene being entertained in the *prytaneion* at Athens. More explicit evidence is available for 367, when the Thebans decided to send *harmostai* to the *poleis* of Achaia (Xen. *Hell.* 7.1.43), and in a document thought to date to C4 (see *supra*), Ps.-Skylax 42 refers to the settlements of Achaia as *poleis*. Nevertheless, we are unable to find any good evidence that would allow us to date the emergence of Achaian *poleis* much, if at all, before C5 (Morgan and Hall (1996) 193).

Particularly relevant to this question is the issue of synoecism, which represents a frequent *topos* within the literary sources. Koerner (1974) has argued that many of these synoecisms should have already taken place by the end of C6, and cites the example of Dyme (no. 234), which is first named as the home city of an Olympic victor in 496 (*Olympionikai* 171); since the settlement of Paleia is named as the home of an earlier local victor (Paus. 7.17.6–7; *Olympionikai* 6), Koerner (1974) 469 assumes that the

toponym Dyme was adopted after the synoecism of formerly independent demes such as Paleia and Stratos (cf. Strabo 8.7.5; Steph. Byz. s.v. Δύμη). It is unclear whether Strabo 8.3.2 sought to imply a synchronism in juxtaposing the synoecisms of Dyme (no. 234), Aigion (no. 231) and Patrai (no. 239) with those of Mantinea (no. 281), Tegea (no. 297), Heraia (no. 274) and Elis (no. 251)—the last of which is dated to the period after the Persian Wars—but the archaeological record generally argues against C6 synoecisms (see also Moggi, *Sin.*) 93, 124, 126; Demand (1990) 61–64). It is not until the Classical period that there is any discernible emphasis on urban centres at the expense of rural sites in the Dyme region (Lakakis (1991); Lakakis and Rizakis (1992)). At Patrai the establishment of large rural sites some distance from the urban centre may indicate a certain degree of abandonment among intervening settlements (Petropoulos and Rizakis (1994)), while the commencement of urbanisation within the city of Aigion was a phenomenon of C5 (Papakosta (1991)). The process of synoecism was, no doubt, a lengthy one, but there is no evidence that would allow us to place the start of this process before 500—the date at which the issue of coinage, probably at Aigai (no. 229) (Babelon, *Traité* ii.1. 823–26; Head, *HN²* 412; Kroll (1996) 52 n. 14; *contra* Imhoof-Blumer (1883) 157; Jeffery (1990) 222), may provide the first clear indication of a self-conscious political identity (though see Martin (1995)).

It is often assumed that even if *poleis* were a relatively late phenomenon in Achaia, some form of overarching political organisation existed from an early period. Yet, while there is good evidence to indicate that the Achaian Confederacy existed prior to its refoundation in 280, it is difficult to subscribe to the view (e.g. Larsen (1968) 83) that the legend of Achaian colonial foundations in South Italy allows us to trace Achaian political unity back as far as C8 (Hall (forthcoming)). The local traditions recorded by Paus. 7.6.1–2 speak of a plurality of *basileis* in the early period. After the death of Teisamenos, son of Orestes and reputedly the leader of the Achaian migration to the northern Peloponnese, the rule (*κράτος*) of the Achaians was distributed among the four sons of Teisamenos—Daïmenes, Sparton, Tellis and Leontomenes—as well as being extended to their cousin, Damasias, and the unrelated Preugenes and his son, Patreus. The first explicit reference to a collective *boule* of the Achaians is found in an inscription (*SEG* 14 375) dating to C4, though Hypereides (*Dem.* 5.18), in describing events of 324, speaks of a *syllogos* of the Achaians. However, the existence of the double *politeia* (i.e. citizenship of both an Achaian *polis* and the Achaian Confederacy) which was so

central to the refounded Confederacy can probably be traced back to the first third of C4, since at some point shortly before 389 the Achaians enrolled the Aitolian city of Kalydon (no. 148) in the *politeia* of the Confederacy (Xen. *Hell.* 4.6.1; Larsen (1953) 809, (1968) 9; Koerner (1974) 485; cf. Polyb. 2.41.7–8). Xen. *Hell.* 6.4.18 even appears to regard Achaia itself as a *polis* in his description of the allies who rallied to the aid of Sparta immediately after the battle of Leuktra. The fact that a shipowner named Lykon is described as *Achaïos* in *IG* 1³ 174 (an Athenian honorific inscription which should predate 413) may—if it is not a simple ethnic (see *infra*)—testify to the Confederacy's existence at this date (cf. the grant of Athenian *proxenia* to Ἀριστέων τὸν Ἀχαιὸν τὸν Αἰγιά in *IG* 11² 13 (C4e)), but earlier indications are difficult to substantiate. Patrai (no. 239) seems not to have consulted with other Achaian cities when it responded to Alkibiades' request to extend its walls to the sea (Thuc. 5.52.2), and Pellene (no. 240) appears to have acted independently in joining the Peloponnesian League in 431 (Thuc. 2.9.2). Nor does Thucydides' reference (1.111.3) to Perikles taking Achaians with him on his siege of Akarnanian Oiniadaï in the 460s necessarily imply the existence of the Achaian Confederacy: they are simply referred to as Ἀχαιοὺς without any definite article and could be Achaian mercenaries as much as citizen-soldiers. Indeed, Thucydides refers far more frequently to the region of Achaia as a geographical pawn in Athenian and Spartan attempts to control the Corinthian Gulf than he does to the Achaians as a collective political entity (e.g. Thuc. 1.115.1, 2.86.1, 4, 2.92.5, 4.21.3, 5.82.1).

According to Polyb. 2.39.5–6, in C5m the Italian cities of Kroton (no. 56), Sybaris (no. 70) and Kaulonia (no. 55) met and decided to adopt the *politeia* of the Achaians. It has generally been assumed from this notice that by this date the Achaians both possessed a common *politeia* and held regular *synodoi* in the sanctuary of Zeus (see most recently Walbank (2000)). However, it should be remembered that Polybios' intention was not to document early Achaian history *per se* but to establish a historical credential which might prove his contention that the Achaian League of his own day enshrined age-old principles of equality and fairness. To emphasise these qualities, it was necessary to retroject them, and it should be noted that elsewhere (2.41.3–6) he attempts to trace the origins of the Achaian Confederacy back to the time of Teisamenos. Furthermore, it is not at all clear that the sanctuary of Zeus Hamarios/Homarios did act as a centre for the Achaian Confederacy as early as C5 (as argued by Aymard (1935) 454, among others). There is no

doubt that the Confederacy met in the sanctuary after its refoundation. Strabo (8.7.3; cf. Aymard (1935) 454 n. 1) describes how the *koïnon* of the Achaïans met in the Homarion from 280; Polyb. 5.93.10 recounts that a *stèle* was erected here in 217 recording a mediation by the federal general, Aratos, to re-establish peace in Megalopolis; and an inscription from Arkadian Orchomenos which dates to 234–224 stipulates that the representatives of the Achaïan Federation have to invoke Zeus Amarios and Athena Amaria (Foucart (1876)). This literary *terminus ante quem* of 280 can be pushed back to the late 370s or 360s—the date of the first stater coined by the Achaïan Confederacy and depicting the head of Zeus (Head, *HN*² 416; cf. Kraay (1976) 101).

The sanctuary of Zeus Homarios belonged to Aigion (no. 231) (Livy 38.30.2), but almost certainly lay outside the city itself (Strabo 8.7.5). Interestingly, Pausanias does not mention the Homarion, which should not be confused with the coastal sanctuary of Zeus Homagyrios at Aigion (Paus. 7.24.2; cf. Aymard (1935) 454 n. 1, (1938) 279–80; Rizakis (1995) 200–1). Instead, he mentions (7.24.4) that the *synedrion* of the Achaïans met at Aigion in his own day, but he implies elsewhere (7.7.2) that Aigion assumed a prominent place within Achaïan historical consciousness only after the destruction of Helike (no. 235). Aymard (1938) 286–87, 293 therefore hypothesised that the sanctuary lay midway between Helike and Aigion, and that it was originally part of the *chora* of Helike, but became part of the territory of Aigion after the destruction of Helike and the redistribution of its *chora*. Yet this forces the meaning of Pausanias' testimony, which does appear to distinguish between an earlier meeting place at Helike and a later one near Aigion, and is now contradicted by the discovery of Achaïan federal inscriptions which indicate that the Homarion lay not between Aigion and Helike but to the north-west of Aigion (see Parker (1998) 31 n. 77; Walbank (2000) 26). If any location functioned as a place of union for the Achaïans in an earlier period, it is more likely to have been the sanctuary of Poseidon Helikonios than that of Zeus Homarios. The cult of Poseidon was associated with Helike as early as the Homeric epics (*Il.* 8.203; cf. Rizakis (1995) 101–2), and although it was traditionally treated as the meeting place of the Ionians of Achaïa, it clearly retained its importance through to the destruction of Helike in 373 (Hdt. 1.148.1; Paus. 7.24.5, 6; Strabo 8.7.2). Indeed, one might argue that it could not have continued to act as a potent symbol of Ionian ancestral origins in the northern Peloponnese had it not retained its importance throughout the historical period. If so, then one might suppose that the sanctuary of Zeus

Homarios became the federal sanctuary of the Achaïans only after the destruction of Helike—the fact that federal coinage bearing the head of Zeus appeared very shortly after this destruction is particularly suggestive. In the absence of archaeological evidence, certainty is impossible, but there are good reasons to doubt the early existence of the Homarion as a federal centre and to view Polybios' testimony as an attempt to construct a historical legitimation for the Achaïan Confederacy of his own day.

Two earlier events sometimes invoked in support of an early Achaïan Confederacy command no greater credence. According to Paus. 7.25.6, when the Argives (no. 347) destroyed Mykenai (no. 353) in 468, Mykenaiian refugees fled to Kleonai (no. 351), Makedon and Keryneia (no. 236) in the vicinity of Aigion and Helike. It has been argued (e.g. Larsen (1968) 81–82; Anderson (1954) 81) that this indicates the existence of a federal government which extended free passage to the foreign refugees through the “string of city-states” that lay to the east of Aigion. However, this argument seems predicated on an anachronistic view of state boundaries and ignores the fact that by tracing descent from the Herakleidai, the Mykenaiians could claim ethnic ties with the Achaïans (Hall (1997) 94–107). Finally, Anderson (1954) 80 has suggested that the independent stance of the Achaïans during the Persian Wars indicates a common policy decision. Again, however, this is not an inevitable conclusion, especially since Achaïa was barely—if at all—affected by the invasion of Xerxes. Collective participation would surely have been much more significant than collective non-participation. In short, there is little solid evidence for the existence of an Achaïan Confederacy much before the very end of C5. And if the Confederacy postdates the emergence of *poleis* in Achaïa, it becomes easier to explain why in the later period there are clear differences between the constitutions of individual Achaïan *poleis*. *Damiourgoi*, for example, are not attested in every Achaïan *polis*, and at Dyme (no. 234) an official named the *theokolos* appears to share equal rank with the *damiourgoi* (Koerner (1974) 474). Nevertheless, if the Confederacy itself is late, there is some evidence for an earlier, less formal and looser association of Achaïan *mere* based on perceived ethnic affinity.

By C5 at the very latest, the Achaïans were thought to constitute an *ethnos*. Hdt. 8.73.1 describes them as one of the seven *ethne* which inhabit the Peloponnese and adds that they have always been indigenous there, even if they had originally occupied another region within the Peloponnese. Thuc. 3.92.5, in describing the foundation of Herakleia Trachinia (no. 430) in 426, reports that the Spartans made a

proclamation to the effect that any Greek could join the new settlement with the exception of *ethne* such as the Ionians and Achaians. In Greek, the word *ethnos* carries a far wider semantic scope than its English derivations (Giovannini (1971) 14–16; Donlan (1985) 295), though it can certainly be applied to ethnic groups—that is, those whose common identity is predicated on kinship (however fictive) and an association with a primordial territory (Hall (1997) 25–26). The centrality of descent to notions of Achaian ethnic affinity is demonstrated by Herodotos' comment (8.47) that the people of Kroton (no. 56) are Achaian “by birth”. A sense of collective identity was engendered among the historical Achaians by their belief that they were descended from heroes who, after being expelled by the Dorians from their original homes in Argos and Sparta, had migrated to Achaia, where they replaced the former Ionian population. Archaeologically, there are few material indications of sharp cultural discontinuity in Achaia, and we prefer to regard Achaian ethnicity as a constructed identity of the Early Iron Age rather than as the hazy memory of genuine migrations (Morgan and Hall (1996) 198, *contra* Sakellariou (1991)). For the Ionians of Asia Minor, origins in Mainland Greece formed an important aspect of their collective identity; Achaia was an obvious candidate, since the Achaians had to regard themselves as newcomers to the region if they were to substantiate their claim to being the descendants of the Homeric Achaians who had ruled in the Argolid and Lakonia. In fact, with the notable exception of the Athenians and the Arkadians who claimed autochthony, it was generally the rule for Greek populations to regard themselves as immigrants from other regions, and thus to circumvent the problem of ultimate origins. Nevertheless, the inventive character of this Ionian tradition is revealed by the existence of alternative, competing myths of ethnic origins which situated their *Urheimat* elsewhere in Greece, in Messenia (Mimnermos fr. 9, West; cf. Hom. *Il.* 11.690–93; Hes. fr. 33a, MW; Hellan. fr. 125; Hdt. 9.97; Pherecydes (*FGrHist* 3) fr. 155; Strabo 14.1.3; Paus. 7.2.1–2), or Boiotia (Hellan. fr. 101; Hdt. 1.146.1–2).

Territoriality is an important component of *ethnos* states, yet, as already noted, Achaia does not form a natural geographical or cultural unity. For this reason, we should perhaps follow Pausanias' view (7.1.1) that the geographical definition of Achaia was structured around the ethnic definition of its inhabitants, and not vice versa (Gschnitzer (1955); Koerner (1974) 458). The notion of Achaian territoriality was probably a gradual and aggregative creation, which began in the east of the region. It is the northern

coastal *mere* of Pellene, Aigeira, Aigai, Helike and Aigion which are first attested in the literary sources (Hom. *Il.* 2.573–75, 8.203), and it is here that the earliest evidence for cult is attested. By contrast, references to the western and inland regions of Achaia are scarce in the literary record, although Olenos appears to be listed among the contingent from Eleia in the Catalogue of Ships (Hom. *Il.* 2.617). Furthermore, a variety of sources (Hom. *Il.* 2.575; Hdt. 7.94; Strabo 8.7.1; Paus. 7.1.1.) state that the earlier name of Achaia was Aigialos/Aigialeia—a designation more appropriate to the northern coastal area with its settlements of Aigion, Aigai and Aigeira.

The very latest *terminus ante quem* for the association of ethnic Achaians with the north coast of Achaia is C6m—the date at which the Spartans decided to repatriate the bones of the Achaian king, Teisamenos, which were said to have been discovered in the region of Helike (Paus. 7.1.8). Leahy (1955) dates this transferral between 560 and 555, and while there is no suggestion that the Achaians had been aware of Teisamenos' tomb prior to the Spartan “discovery”, the connection of Teisamenos with eastern Achaia must have already been established for the Spartans to have made any political capital out of the event. If, on the other hand, Strabo 8.7.5 is right to derive the name of Dyme (no. 234) from the fact that it was the most westerly of the Achaian cities, then this should mark the completion of the territorial construction of Achaia (at least in a westerly direction). Mendone (1991) 68 argues that Dyme is attested in *Hymn. Hom. Ap.* 416–26, normally dated c.600, though the fact that it is mentioned as part of a sea voyage around the Peloponnese *after* Pylos and *before* Elis, Ithaka, Doulichion and Zakynthos may suggest that this is a different Dyme. In fact, a combination of literary and archaeological evidence suggests a date in C5 (and possibly even late in that century) for the synoecism of Dyme, and thus for the final stage in the territorial construction of Achaia (Lakakis and Rizakis (1992)).

Certainly in C5, *Achaios* appears to be used as a regional/ethnic designation rather than as a political label in the strict sense. The clearest indication of this is the bronze statue group, seen by Paus. 5.25.8–10 at Olympia, which depicted the Achaian heroes casting lots to see who would meet Hektor in single combat. Jeffery (1990) 221 assumed that this was a dedication by the Achaian Confederacy, but Paus. 5.25.8 simply describes it as the donation *ἐν κοινῷ τοῦ Ἀχαιῶν ἔθρους*, and the ethnic signification of the *τᾶχαιοί* named on the monument is emphasised not only by the subject matter of the statue group but by the self-professed

derivation of descent from Pelops (via Teisamenos, Orestes and Agamemnon). A similar usage of *Achaios* appears to be indicated on the base of a statue erected at Olympia in 460 for the athlete Oibotas (Paus. 7.17.7). The inscription describes Oibotas as an Achaian, but his *patris* as Paleia (one of the demes of Dyme). It is possible that the attestation of Paleia is deliberately archaizing, or it may provide evidence for a synoecism of Dyme later than 460 (cf. Demand (1990) 63–64). On another statue base at Olympia (*IvO* 630–31 (480–475)), the sculptor Athanodoros is described as *Achaios*: that this is not simply a political label may be suggested by the fact that his collaborator, Asopodoros, is described not as *Argeios* but as $\delta\ \delta'\epsilon\ \xi\ \text{Άργεος}\ \epsilon\upsilon\rho\nu\chi\acute{o}\rho\omega$ (probably indicating the Argive plain rather than the city of Argos itself). It is possible too that the *Achaios* attached to the shipowner Lykon in *IG* I³ 174 or to Aristreas of Aigion in *IG* II² 13 (see *supra*) is meant to indicate their *ethnos* rather than act as a political label, especially since in both cases it is applied externally (*contra* Koerner (1974) 486). In short, it should be reiterated that there is, at this period, no good evidence that the term “Achaian” carried its later political and juridical definition.

The inventory of *poleis* describes the sixteen settlements which were certainly (type A), probably (type B) or possibly (type C) *poleis* during the Archaic and/or Classical period. In addition, we have information about nine further Archaic and/or Classical settlements whose precise status is unknown.¹

1. Pre-Hellenistic Settlements not Attested as Poleis

Antheia (*Άνθεια*) Paus. 7.18.6 (*πόλισμα*). Antheia, probably to be located at modern Ano Sykaina, was (re)settled after the *dioikismos* of Patrai (no. 239) in 279 (Paus. 7.18.6). It may have formerly been a *demos* of Patrai (Curtius (1851) 453; Moggi, *Sin.* 92–93). Although there is no firm evidence that it was ever a *polis* in the Archaic or Classical periods, Ath. 11.460d does refer to the *chora* of the Antheioi. Archaic sherds and burials on the site of a Classical villa complex at Ano Sykaina suggest settlement in the Late Archaic and Classical periods (Petropoulos and Rizakis (1994) sites 102, 103; *AR* (1955) 17). See Patrai (no. 239). No date in *Barr*.

Arba (*Άρβα*) Paus. 7.18.6 (*πόλισμα*). Arba, possibly to be located at modern Ano Kastritsi, was (re)settled after the *dioikismos* of Patrai (no. 239) in 279 (Paus. 7.18.6). It may have formerly been a *demos* of Patrai (Curtius (1851) 453; Moggi, *Sin.* 92–93), but there is no evidence that it was ever a *polis* in the Archaic or Classical periods. Slight indications for pre-Hellenistic settlement may be offered by C8 burial evidence at Ano Kastritsi (*ArchDelt* 30B (1975) 118; Petropoulos and Rizakis (1994) sites 113–16). See Patrai (no. 239). No date in *Barr*.

Argyra (*Άργύρα*) Paus. 7.18.6 (*πόλισμα*). Argyra, probably to be located at modern Mavropodia, was (re)settled after the *dioikismos* of Patrai (no. 239) in 279 (Paus. 7.18.6). It may formerly have been a *demos* of Patrai (Curtius (1851) 453; Moggi, *Sin.* 92–93), but there is no evidence that it was ever a *polis* in the Archaic or Classical periods. Settlement evidence from the Geometric and Classical periods has been reported (Petropoulos (1991) 256). See Patrai (no. 239). No date in *Barr*.

Boline (*Βολίνα*) (Paus. 7.23.4), *Βολίνη* (Paus. 7.18.6; Steph. Byz. 174.14), *Βόλινον* (*Etym. Magn.* 204.33–38). Paus. 7.23.4 (*πόλις*), 7.2.6, 18.6 (*πόλισμα*); *Etym. Magn.* 204.33 (*κώμη*). Boline, probably to be located at Drepaneiko (2 km south of modern Drepano), was (re)settled after the *dioikismos* of Patrai (no. 239) in 279 (Paus. 7.18.6). It may formerly have been a *demos* of Patrai (Curtius (1851) 453; Moggi, *Sin.* 92–93), but there is no evidence that it was ever a *polis* in the Archaic or Classical periods. Surface remains from near Drepano suggest continuous and perhaps extensive settlement from the Protogeometric to the Roman periods (Petropoulos (1991) 254; Morgan and Hall (1996) 183–84). See Patrai (no. 239). No date in *Barr*.

Donoussa (*Δονούσσα*) Paus. 7.26.13 says that Donoussa, which lay between Aigeira (no. 230) and Pellene (no. 240) and should probably be located at modern Ano Taratses (Rizakis (1995) 223–24), was a *πόλισμα ὑπήκοον* of Sikyon (no. 228). The *periegete* equates Donoussa with Homeric *Γονόεσσα* (*Il.* 2.573), which Eustathios (*Il.* 291.40) describes as an *ἀκρωτήριον* of Pellene and which Hesychios (4.442.23) classifies as a *πόλις* of the Peloponnese. Surface remains include sherds that predate the Hellenistic period (Anderson and Anderson (1975)). No date in *Barr*.

Erineos (*Έρινεός*, *Έρινείος*) Paus. 7.22.10 (*λιμὴν*). In C5, Erineos lay within the territory of Rhypes (no. 243) (*Thuc.* 7.34.1). See Rhypes (no. 243). *Barr.* AC.

¹ Teichos Dymaion is omitted from this list. It is described by Polyb. 4.59.4 and 4.83.1 as a *φρούριον*, but there are no indications that it was permanently settled.

Mesatis (*Μεσάτις*) Paus. 7.18.6 (*πόλισμα*). Mesatis, probably to be located at modern Mygdalia, was (re)settled after the *dioikismos* of Patrai in 279 (Paus. 7.18.6). It may formerly have been a *demos* of Patrai (no. 239) (Curtius (1851) 453; Moggi, *Sin.* 92–93), but there is no evidence that it was ever a *polis* in the Archaic or Classical periods. Late Geometric and Classical burials at Mygdalia suggest occupation prior to the Hellenistic period (*ArchDelt* 43 B (1988) 168; Petropoulos (1990) 517 n. 28, (1991) 253; Petropoulos and Rizakis (1994) site 57). See Patrai (no. 239). No date in *Barr.*

Olouros (*Ὀλουρος*) Xen. *Hell.* 7.4.17. Olouros lay within the territory of Pellene (no. 240). See Pellene (no. 240). *Barr.* C.

Panormos (*Πάνορμος*) Thuc. 2.86.1; 4, cf. 2.92.1. Panormos' precise status is not specified by Thucydides, but it is clear that the settlement was a naval station within the territory of Patrai (no. 239). *Barr.* C.

None of these settlements is likely to have been a *polis*, although Archaic and Classical sources fail to specify whether they were considered demes or *komai*. All that can be said on the basis of evidence currently available is that sixteen of twenty-five known Archaic or Classical settlements were considered to be *poleis* throughout their period of existence or for at least some time within this period.

Almost all the *poleis* described in the inventory below are known to have been members of the Achaian Confederacy whose development was traced above. The Confederacy was not ethnically exclusive, however, and “at least as early as the beginning of the fourth century, overstepped the ethnic boundary and admitted non-Achaean to citizenship” (Larsen (1968) 80), when the Kalydonians (no. 148) of Aitolia were made Achaian *politai* (Xen. *Hell.* 4.6.1; cf. Diod. 15.75.2 (r367/6) and Dem. 9.34 (suggesting that Lokrian Naupaktos (no. 165) was also a member of the Confederacy)). Its name was presumably τὸ κοινὸν τῶν Ἀχαιῶν (Diod. 15.49.2; Beck (1997) 63). It seems to have been highly stable: no secessionist movements or internal wars are on record (Beck (1997) 66), though Pellene (no. 240) sometimes acted independently (cf. Thuc. 2.9.2; Beck (1997) 62). The Confederacy struck coins c.370–360 (Head, *HN*² 416), and its constitution was described in the Aristotelian *Ἀχαιῶν πολιτεία* (no. 30, Gigon). It was presumably oligarchic (Beck (1997) 64), but not much is known about it: *SEG* 14 375 (C41) attests the existence of a βουλ[ά] τῶν Ἀχαιῶν together with a board of *damiorgoi*, composed of contingents from individual member cities. The

Confederacy conducted the foreign policy of the region, sending out embassies (Xen. *Hell.* 4.6.1) and concluding treaties (*Staatsverträge* 283, 290, 337, 343, 452). It was a member of the Peloponnesian League (Xen. *Hell.* 4.6.2–3; Beck (1997) 59). Federal forces are attested at Xen. *Hell.* 6.2.3 (naval forces) and 6.4.18 (infantry).

In C4f the constitutions of the Achaian *poleis* were oligarchic (Xen. *Hell.* 7.1.43), and had probably been so since 417, when the Lakedaimonians had forced the Achaians to adopt a political system that suited Sparta (no. 345) (Thuc. 5.82.1; Anderson (1954) 83–85). But after Epameinondas' conquest of Achaia in 366, the Thebans sent harmosts to the Achaian *poleis*, had the constitutions changed into democracies, and got the new democratic regime to send members of the oligarchic factions into exile. However, the exiles soon returned to their *poleis*, regained their position, re-established the alliance with Lakedaimon and undoubtedly the oligarchic constitutions as well (Xen. *Hell.* 7.1.41–43; Buckler (1980) 188–91; Gehrke, *Stasis* 13–15).

II. The *Poleis*

229. Aigai (Aigaios) Map 58. Lat. 38.20, long. 22.20. Size of territory: 1 or 2. Type: [A]. The precise location of Aigai, which Paus. 7.27.12 situates close to the river Krathis, is uncertain, although it should probably be sought at either modern Akrata (Morgan and Hall (1996) 174; *Barr.*) or Kokinies near the village of Ambelos (Rizakis (1995) 214). The toponym is normally *Αἰγαί* (Hom. *Il.* 8.203; Hdt. 1.145; Ps.-Skylax 42), *αἶ* (Strabo 8.7.4), though *Αἰγά*, ἡ is also attested (*IG* II² 8404 (C4–C3e); Strabo 8.7.5). The city-ethnic is *Αἰγαῖος* (Classical coins (*infra*); Strabo 8.7.4).

The only Classical source to call Aigai a *polis* is Ps.-Skylax at 42, where *Αἰγαί* is the third toponym listed after the heading πόλεις . . . αἰθε, where *polis* is used in the urban sense. However, the appearance of coinage c.500 should probably be seen as a strong indication that Aigai was already a *polis* in the political sense by this date (Morgan and Hall (1996) 174, though see Martin (1995)). The internal collective use of the city-ethnic is attested on coins from c.500 onwards.

The toponym is already attested in Hom. *Il.* 8.203, and Hdt 1.145 (C5s) records Aigai as one of the original twelve Achaian *mere*—a term that is often used synonymously with *chora* in Achaian contexts, but need not necessarily imply the existence of an urban centre (Morgan and Hall (1996) 168–69).

According to Paus. 7.25.12 and 8.15.9, Aigai was abandoned due to “weakness”, and its inhabitants incorporated within the *polis* of Aigeira (no. 230), where they were nevertheless permitted to retain their own ethnic (Strabo 8.7.4). The date at which this happened is not easy to determine: a *terminus post quem* may be provided by Aigai’s inclusion in Ps.-Skylax’s list of Achaian *poleis* (42)—a section which should probably be dated to the years around 370 (Morgan and Hall (1996) 167), and it may not be coincidental that coinage issues cease at about the same time (Head, *HN*² 412). Aigai is omitted from Polybios’ list of Achaian *poleis* (2.41.7–8), which purports to describe the Achaian Confederacy prior to the time of Philip II and Alexander. On the other hand, *IG* II² 8404 (C4–C3e) commemorates a man who is described as an Ἀχαιὸς ἐξ Αἰγᾶς, which might suggest that Aigai had not yet been abandoned by the beginning of C₃ if indeed the inscription is C₃e.

There is no explicit literary testimony for any colonial foundations originating from Aigai, but the homonymy between the river Krathis near Aigai and the river Krathis in the territory of Sybaris (no. 70) in South Italy has sometimes been taken to imply that some of the founders of Sybaris originated from the region of Aigai (Dunbabin (1948) 24; Bérard (1957) 141; Koerner (1974) 464; Giangiulio (1989) 166–67).

Aigai struck silver coins from c.500 to c.370 (Head, *HN*² 412). Minted on the Aiginetan standard and including triobols and obols, this coinage had previously been assigned to Aigion (no. 231) by both Imhoof-Blumer (1883) 157 and Jeffery (1990) 222, though the original attribution to Aigai has recently been defended by Rizakis (1995) no. 530 and Kroll (1996) 52 n. 14. The *obv.* is a punning type depicting the forepart of a goat and accompanied by the legend ΑΙΓ; the *rev.* depicts the ivy-crowned head of a bearded Dionysos and has the legend ΑΙΓΑΙΟΝ or ΑΙΓΑΙΩΝ (Rizakis (1995) no. 530; *SNG Cop. Phlhisia-Laconia* 125–26).

230. Aigeira (Aigeirates) Map 58. Lat. 38.10, long. 22.20. Size of territory: 1 or 2. Type: A. Aigeira, which ancient authors situated on a steep hill (Polyb. 4.57.5; Strabo 8.7.5), is located east of modern Krathio (Rizakis (1995) 215–16; *Barr.*) The toponym is Αἰγείρα, ἡ (Hdt. 1.145; Ps.-Skylax 42; Polyb. 2.41.8; Paus. 7.26.4), though Αἰγίρα is attested in *BCH* 22 (1898) 261 n. 1 (325 (cf. *BCH* 62 (1938) 340–41)) and *IG* XII.9 1187.34 (C₃). The city-ethnic is regularly Αἰγειράτης from C₄ onwards (*infra*).

Classified by Hdt 1.145 as one of the original twelve Achaian *mere*, it is listed by Ps.-Skylax 42 as the second

toponym after the heading πόλεις . . . αἰδέε, where *polis* is used in the urban sense; Theophr. *Phys. op.* 12.122 also uses *polis* in the urban sense, and the internal use of the collective city-ethnic on coinage from c.330 (*infra*) would indicate that Aigeira was by this period also a *polis* in the political sense; Polyb. 2.41.7–8 (rC₄) calls it a *polis* in the political sense and attests to its membership of the Achaian Confederacy prior to the time of Philip II and Alexander. A citizen of Aigeira was appointed *proxenos* by Delphi (no. 177) in 325 (Ἀχαιὸς ἐξ Αἰγίρας: *BCH* 22 (1898) 261 n. 1 with *BCH* 62 (1938) 340–41).

Paus. 7.26.2 says that Aigeira was formerly called Ὑπερησία—a name known from Hom. *Il.* 2.573—though he seems to date this shift in nomenclature to the period of the Ionian settlement of Achaia (i.e. the Heroic Age). It is therefore surprising that he should attach the ethnic *Hyperesieus* to an athlete from Aigeira named Ikaros who won the *stade* in 688 (Paus. 4.15.1; *Olympionikai* 28). The term could be archaising, or it could indicate a period prior to the synoecism of Aigeira (Morgan and Hall (1996) 173). Such a synoecism is not explicitly attested by any source, though is perhaps suggested by the existence of a homonymous port (ἐπίγειον) of Aigeira some two and a half miles from the acropolis (Paus. 7.26.1). It may be that the name *Hyperesia* was originally applied to the acropolis area—known in later periods as the ἄκρα (Polyb. 4.58.4) or the ἄνω πόλιν (Paus. 7.26.1) and almost certainly to be associated with the plateau excavated since 1972 by the Austrian Archaeological Institute (see Alzinger (1972–73), (1976–77), (1981–82), (1983), (1985), (1986); Bammer (forthcoming))—but that after synoecism the ἐπίγειον of Aigeira gave its name to the whole *polis* (Morgan and Hall (1996) 173). The population of Aigeira expanded again when the *polis* incorporated the inhabitants of Aigai (Strabo 8.7.4). The date at which this happened is not easy to determine (cf. Aigai (no. 229)).

The archaeological evidence from the acropolis shows settlement dating back more or less continuously to the Neolithic period. Reappraisal of evidence from the acropolis has cast doubt upon the interpretation of foundations dating to C₇s as those of a temple which Paus. 7.26.5 assigns to Artemis and Iphigeneia, and also upon the identification of an earlier C₈ structure as a temple (Bammer (forthcoming), *contra* Gogos (1986); Alzinger (1982) 13–18, (1985) 426–30, 449–50). This evidence is more likely to relate to continuous settlement. Walls are certainly attested at Aigeira by C₂ (Polyb. 4.57.3, 58.7), and their circuit—encompassing a separately acropolis wall enclosing 3.5 ha—has been traced

on the ground (Alzinger (1985) 392); recent investigations suggest that city walls existed prior to Hellenistic times (AR (2001–2) 36).

Aigeira began minting bronze coins *c.*C4m: *obv.* helmeted Athena or veiled female head; *rev.* forepart of a goat or standing goat in a wreath. Legends: *AITI* or *AITIPATAN* (Head, *HN*² 412; *SNG Cop. Phliasia-Laconia* 127).

231. Aigion (Aigieus) Map 58. Lat. 38.15, long. 22.05. Size of territory: 2 or 3. Type: [A]. The toponym is *Αἴγιον*, τό (Hom. *Il.* 2.574; Hdt. 1.145; Ps.-Skylax 42). The city-ethnic is usually *Αἴγυιεύς* (*SEG* 40 54 (399/8); Diod. 19.66.3; Strabo 8.7.5) but *IG* II² 7946 (*c.*400) has *Αἴγυαυεύς*.

Located at modern Egio (*Barr.*), Aigion was one of the original twelve Achaian *mere* (Hdt. 1.145). It is first described as a *polis* in the urban sense in Ps.-Skylax 42, where it is listed as the fourth toponym after the heading *πόλεις . . . αἰδε*; Polyb. 2.41.7–8 (rC4) calls it a *polis* in the political sense, and attests to its membership of the Achaian Confederacy prior to the time of Philip II and Alexander. The external collective use of the city-ethnic (*Αἴγυιέες*) is attested in a supposedly C7 Delphic oracle cited by Ion of Chios (*apud Anth. Pal.* 14.73; Zenob. 1.57), but it is debatable whether Aigion's status as a *polis* in the political sense can really be retrojected as far back as C7—the date supposedly attributed to this apocryphal and much-cited Delphic consultation. The external collective use of the city-ethnic is attested in Diod. 19.66.3 (r313). The external individual use of the city-ethnic is found in an Athenian proxeny decree of 399/8 for *Ἀριστέας ὁ Ἀχαιῶς ὁ Αἴγυιεύς* (*SEG* 40 54); cf. *IG* II² 7946 (*c.*400, epitaph).

Strabo says that Aigion was synoecised from seven or eight *demoi* (8.3.2; Moggi, *Sin.* 125–27), but although a number of rural sites appear in the archaeological record (see Morgan and Hall (1996) 177), we are poorly informed as to their ancient names.

Rescue excavations are beginning to yield a clearer picture of the urbanisation of Aigion (Papakosta (1991)). The evidence of Polyb. 11.9.8 reveals that a *bouleuterion*—probably housing meetings of the Achaian Confederacy (Walbank (1967) 280; Hansen and Fischer-Hansen (1994) 38)—was in existence by C3 at least, while Pausanias' description (3.12.7, 7.24.1) of the *mnema* of Talthybios in the agora of Aigion ought to suggest that the agora already existed by the late Classical period. Diod. 19.66.3 suggests that the city was fortified by C4 and mentions private houses within the circuit.

The sanctuary of Zeus Homarios, which belonged to Aigion, although it lay outside the city (Aymard (1935)),

was certainly in existence by 280, when the *koinon* of the Achaians met there (Strabo 8.7.3). It is not entirely certain, however, that it had always served as a common meeting place for the Achaians. The fact that the issue of the earliest Achaian federal coinage, depicting the head of Zeus, cannot be pushed back further than the 360s may suggest that the sanctuary of Poseidon at Helike (no. 235) had formerly been a place of union for the Achaians and that this function was transferred to the Homarion after the destruction of Helike in 373 (Morgan and Hall (1996) 196, but see Walbank (2000)). From C5, an inscribed bronze *oinochoe* provides evidence for a sanctuary of Aigeus, although it is not known whether this signifies the hero or is a cult epithet for Poseidon (Robinson (1942); Morgan and Hall (1996) 177).

Xenophon of Aigion was victorious in the pankration at the Olympic Games of 380 (Paus. 6.3.13; *Olympionikai* 400).

A series of silver triobols, struck on the Aiginetan standard, was formerly assigned to Aigion (Imhoof-Blumer (1883) 157; Jeffery (1990) 222), but is now attributed to Aigai (no. 229) (Rizakis (1995) no. 530; Kroll (1996) 52 n. 14).

According to Paus. 6.3.12, Kaulonia (no. 55) in South Italy was colonised by Typhon of Aigion, though this receives no other literary support (Anderson (1954) 78; Koerner (1974) 464; Morgan and Hall (1996) 208–9).

232. Ascheion (Ascheieus) Unlocated. Type: B. The toponym is *Ἀσχεῖον*, τό (*CID* II 51.8 (339/8)) or *Ἀσχειον* (*BCH* 45 (1921) II.63 (230–220)). The city-ethnic is *Ἀσχειεύς* (*F.Delphes* III.1 413 (C4s)) or *Ἀσχεύς* (*SEG* 1 74 (229/8)).

Ascheion is never identified explicitly as a *polis*, though a Delphic decree granting *proxenia* to two of its citizens (*F.Delphes* III.1 413 (C4s)) suggests that it was a *polis* in C4; there may also be some retrospective value in the fact that two men of Ascheion are listed as Delphic *theorodokoi* in *BCH* 45 (1921) II.63 (230–220).

233. Boura (Bourios) Map 58. Lat. 38.10, long. 22.15. Size of territory: 2 or 3. Type: A. Situated near Keryneia (no. 236) by Paus. 7.25.8 and 40 stades from the sea by Strabo 8.7.5, Boura should probably be located either near Ano Diakophto (Morgan and Hall (1996) 175; *Barr.*) or on the left bank of the river Bouraikos near Ag. Stephanos (Rizakis (1995) 209–10). The toponym is *Βοῦρα*, ἡ (Aesch. fr. 745a, Mette; Hdt. 1.145; Polyb. 2.41.8). The city-ethnic is usually *Βούριος* (Polyb. 2.41.13; *SEG* 1 74 (229/8), 12 1122 (C3)), though *Βουραῖος* (Tzetz. *Chil.* 37.179 (rC4s)) and *Βουρεύς* (Paus. 7.25.8–9 (r373)) are also found.

Classified by Hdt 1.145 as a *meros*, it is called a *polis* in the urban sense by Theophr. *Phys. op.* 12.122 (r373), and retrospective evidence is furnished by Polyb. 2.41.7–8 (rC4), who uses *polis* in the political sense and attests to its membership of the Achaian Confederacy in the time prior to Philip II and Alexander, and by Diod. 15.48.3 (r373), who uses the term in its urban sense. The external collective use of the city-ethnic is attested at Paus. 7.25.8–9 (r373); the external individual use is found at Tzetz. *Chil.* 37.179 (rC4s).

Boura was affected severely by the earthquake of 373 which destroyed Helike (no. 235) (Paus. 7.25.8–9), and is absent from the list of Achaian *poleis* in Ps.-Skylax 42 (C4f). Pausanias' comment (7.25.8–9) that Boura was swiftly refounded by inhabitants who had been away on military service during the earthquake may find some confirmation in the archaeological record from Kastro (if, indeed, Kastro is to be identified with ancient Boura; see *supra*) which appears to indicate virtual continuity from the late Archaic/early Classical period through until Roman times (Lauffer (1989) 160; Rizakis (1995) 209–12; Morgan and Hall (1996) 175). If so, then Ovid's assertion (*Met.* 15.293–95) that a city named Buris was under water by his own day is either mistaken or indicates that Buris should not be identified with Boura. That Boura was a *polis* after its refoundation is virtually certain, since in C3 the collective city-ethnic is used internally (*SEG* 1 1122), while the external use of the city-ethnic for an individual is also attested (*SEG* 1 74 (229/8)); cf. also Tzetz. *Chil.* 37.179 (rC4s). Similarly, in C3m a citizen of Boura named Archedamos was granted *proxenia* by Thermon (*IG IX 1.1² 12e*); cf. also Polyb. 2.41.7–8. That Boura was a *polis* prior to its destruction is impossible to prove, although it is highly likely.

There is no explicit testimony that Boura engaged in any colonial ventures to South Italy, though this is sometimes assumed on the basis of the homonymy between the river Sybaris in Sybarite territory and the Sybaris spring near Boura (Dunbabin (1948) 24; Bérard (1957) 141; Koerner (1974) 464; Giangliulio (1989) 166–67).

234. Dyme (Dymaios) Map 58. Lat. 38.10, long. 21.35. Size of territory:?? Type: [A]. Paus. 7.17.5 locates Dyme near the river Larisos, marking the border between Achaia and Elis, which has led to its being associated with modern Kato Achaia (Rizakis (1995) 156; *Barr.*). The toponym is normally Δύμη, ἡ (Hdt 1.145; Thuc. 2.84.5; Ephor. fr. 84; Ps.-Skylax 42), though Δύμα (*IdiCos* ED 232.14 (C2)), Δύμαι (Plut. *Cleom.* 14.4) and Δυμαῖαι (*Etym. Magn.* 291.12–16) are also attested. The city-ethnic is Δυμαῖος (Ephor. fr. 84; *SEG* 14 375 (C4l)).

Hdt. 1.145 lists it among the original twelve *mere* of Achaia, but the only Classical source to call it a *polis* in the urban sense is Ps.-Skylax 42, where it is listed as the seventh toponym after the heading πόλεις . . . αἰθε; Polyb. 2.41.7–8 (rC4) calls it a *polis* in the political sense, and attests to its membership of the Achaian Confederacy prior to the time of Philip II and Alexander (cf. *SEG* 14 375 (C4l)). The internal collective use of the city-ethnic is found abbreviated on C4m coins (*infra*); the external collective use is found in Ephor. fr. 84; the external individual use is found in Theopomp. fr. 194 and probably in *SEG* 14 375 (C4l).

Strabo says that Dyme was synoecised from eight *demoi* (8.3.2; Moggi, *Sin.* 121–25), and there are other indications in generally late sources that the toponym was adopted relatively late. Thus Paus. 7.17.5 says that Dyme's original name was Paleia, while Steph. Byz. (s.v. Δύμη) say that its original name was Stratos; Strabo 8.7.5 compromises by hypothesising that Dyme was originally called Paleia and then Stratos.² It is possible that Paleia and Stratos were the names of two of the *demoi* that were synoecised, along with the πολλύχνη of Teuthea (Strabo 8.3.11; Morgan and Hall (1996) 186–87). Determining the date of this synoecism is not easy: the toponym Paleia is attested as the πατρις of an athlete named Oibotas on the base of a dedication referring to an Olympic victory in 756 but erected in 460 (Paus. 7.17.7, cf. 6.3.8; *Olympionikai* 6), though the name of Dyme appears to be familiar already to Hecat. fr. 121 (c.500). Koerner (1974) 469 argues that Dyme must have been synoecised prior to 496, the year in which Pataikos of Dyme won the trotting race at Olympia (Paus. 5.9.1; *Olympionikai* 171), though Pausanias does not attach the city-ethnic to Pataikos' name but merely says that he was an Achaian from Dyme. Demand (1990) 61–64 suggests that the synoecism that Strabo imagines must have involved the incorporation of Olenos (no. 238)—an event that would have to postdate Hdt. 1.145. On the other hand, the city-ethnic, which is certainly used on coinage dating to C4m (*infra*), is already attached to Oibotas' name on the retrospective victory dedication mentioned above. This should indicate that Dyme was a synoecised *polis* by 460. At this point, the *demoi* may have been reorganised within the three *phylai* of Stratis (or Spatis), Dymaia and Thesmiaia, which are attested in C3 (*Syll.*³ 531, with Jones, *POAG* 130–32). By C3, an eponymous magistrate named the *theokolos* is attested (Sherk (1990) 258), though there is no way of determining the antiquity of this office.

² The phrase και ἔτι πρότερον Πάλλ[ι]εια, ὅτι ἄρ' ἐνέφηκσαν <ἐν> τοῖς Πάλλ<ε>εῖωταις does not appear in all manuscripts. It is included in the Budé edition but omitted from the Loeb.

A late tradition told of a war between Dyme and Elis (no. 251) in 668 (Euseb. *Chron.* 1.28; Philostr. *Gymn.* 7), though this provides no explicit indications of Dyme's status in the Archaic period. In 367, it was "liberated" along with Naupaktos (no. 165) and Kalydon (no. 148) by Epameinondas of Thebes (Diod. 15.75.2).

According to Steph. Byz. (s.v. *Δύμη*), the original name of the *chora* was *Δύμη*, while for Polyb. 2.51.3 and Paus. 7.17.3 it was *Δυμαία*. The *chora* included the *polichne* of Teutha (Strabo 8.3.11) and the *phourion* of Teichos (Polyb. 4.59.4). The archaeological evidence suggests a dispersed settlement pattern until well into the Classical period (Morgan and Hall (1996) 189), with the foundations of a small Archaic temple being found at Santameri, in the south of the territory of Dyme (*ArchDelt* 22 B (1967) 216), and Classical elements—possibly to be associated with the temple of Athena Larisaia (Paus. 7.17)—being found to the south-west, at Katarchia. An urban centre is attested c.400 by Antimachos of Kolophon (*apud* Steph. Byz. s.v. *Δύμη*), who refers to *Δύμιον ἄστυ*, though archaeological evidence suggests the existence of settlement in the area of the later centre already from the Archaic period (Morgan and Hall (1996) 187).

In 496, Pataikos of Dyme won the trotting race at Olympia (*Olympionikai* 171). On Oibotas of Paleia, see *supra* 473–74.

Dyme minted in both silver (obols) and bronze by C4m; the standard employed was the Aiginetan. Types: *obv.* female head. Legend: *ΔΥ*. *Rev.* amphora or broad fish. Legend: *ΔΥΜΑ* (Head, *HN*² 414; *SNG Cop. Phliasia-Laconia* 143–46).

235. Helike (Helikeus) Map 58. Lat. 38.15, long. 22.10. Size of territory: 1 or 2. Type: A. Paus. 7.24.5 locates Helike 40 stades from Aigion (no. 231), while Strabo 8.7.2 (following Herakleides) places it 12 stades from the sea. This should put it between the rivers Selinous and Kerynitis (Morgan and Hall (1996) 175; *Barr.*). The city, which was overwhelmed by a tidal wave occasioned by an earthquake in 373 (Diod. 15.48.1–49.4; Polyb. 2.41.7; Strabo 8.7.2; Paus. 7.24.6; Ael. *NA* 11.19), was normally supposed to lie under water (cf. *Ov. Met.* 15.293–95), but sonar investigation suggests that it may actually lie inland under massive sedimentary deposits in the vicinity of Nea Keryneia (Petropoulos (1983); cf. *Ptol. Geog.* 3.14.36, who lists Helike among the inland cities of Achaia). However, Rizakis (1995) 203–4 finds all candidates for ancient Helike unconvincing. The toponym is usually *Ἐλίκη*, ἡ (Hom. *Il.* 2.575; *SEG* 36 718 (C5e); *Hdt.* 1.145) or

Ἐλίκα (*Syll.*³ 90.12), though Theophr. *Phys. Op.* 12.122 cites a verse which gives the toponym as *Ἐλίκεια*. The city-ethnic is *Ἐλικεύς* (Diod. 15.49.3).

Helike is called a *polis* in the urban sense in Heraclid. Pont. fr. 46a (r373) and Theophr. *Phys. op.* 12.122 (r373), but is absent from Ps.-Skylax's list of Achaian *poleis* (42), which may suggest that this chapter was composed after 373. Retrospective evidence is provided by Polyb. 2.41.7 (rC4), who calls it a *polis* in the political sense, and by Diod. 15.48.3 (r373), who describes it as a *polis* in the urban sense. The internal collective use of the city-ethnic is probably found (abbreviated) on C4 coins (*infra*), and the external collective use is found in Diod. 15.49.3 (r *ante* 373). A citizen of Helike served as Delphic *theorodokos* in C5l (*Syll.*³ 90.12). According to Polyb. 2.41.6–7 (rC4), Helike had been a member of the Achaian Confederacy.

The early physical existence of Helike is attested in Hom. *Il.* 2.575 and in a C5e inscription (*SEG* 36 718; see also Soter and Katsonopoulou (1999)). Archaeological investigations have revealed the foundations of two small temples, one Archaic, the other Classical, at Nea Keryneia, which may possibly be associated with the acropolis of ancient Helike (Petropoulos (1990)). The most important sanctuary at Helike was, however, that of Poseidon Helikonios (Hom. *Il.* 8.203; Diod. 15.49.2–3; Strabo 8.7.2; Paus. 7.24.5–6), and it is quite likely that this sanctuary acted as a common place of union for the Achaians prior to the destruction of Helike, when that function was assumed by the sanctuary of Zeus Homarios near Aigion (Morgan and Hall (1996) 195–96, *contra* Aymard (1938) 286–87, 293; Walbank (2000)).

According to Strabo 6.1.13, Is of Helike was the founder of Sybaris (no. 70) in South Italy. The reading (*οἰκιστῆς δ' αὐτῆς Οἶσ*. . . *ὁ*) *Ἐλικεύς* is, however, unsure, and Bérard (1957) 141 n. 2 proposed either *<Σύβαρ>* or *<Σάγαρ>*.

A series of bronze coins, dating to C4f, depicts *obv.* head of Poseidon. Legend: *ΕΛΙΚ* (retr.). *Rev.* trident between dolphins in wreath (Head, *HN*² 414).

236. Keryneia (Keryneus) Map 58. Lat. 38.10, long. 22.10. Size of territory: 1 or 2. Type: C. Paus. 7.25.5 situates Keryneia above the road in an elevated position, and it is almost certainly to be located just south of the modern village of Mamousia, near Derveni (Rizakis (1995) 206; *Barr.*). The toponym is *Κερύνεια*, ἡ (Paus. 7.25.5); epichoric form: *Καρύνεια* (Polyb. 2.41.8). However, *Κερυνία* (Ael. *VH* 13.6) and *Καρυνία* (schol. *Soph. OC* 42) are also attested. The

epichoric city-ethnic is *Καρυνεύς* (*SEG* 15 113.34 (C3l), 254 (C2s); Polyb. 2.41.14 (rC4s)). *Καρυννεύς* is also attested (*I.Magnesia* 38 (C2l)).

Keryneia is not described as a *polis* in any Archaic or Classical source, but Polyb. 2.41.7–8 states that it was one of the *poleis* (in a political sense) that formed the Achaian Confederacy prior to the time of Philip II and Alexander. It was certainly a *polis* by C3, when it began to strike Achaian Confederate coinage (Head, *HN*² 417; *SNG Cop. Phlasiolaconia* 236–38). Its precise status in earlier times is unsure, though Paus. 7.25.3–5 describes it as a *πόλισμα* and describes how it owed its strength to taking in refugees after the destruction of Mykenai (no. 353) in C5m (see also Anderson (1954) 73). Sculptural fragments appear to testify to the existence of an Archaic temple (*ArchDelt* 39 B (1984) 99).

237. Leontion (Leontesios) Map 58. Lat. 38.00, long. 21.55. Size of territory: ? Type: C. Leontion is probably to be located 3 km north of Kastritsi (Lauffer (1989) 380; *Barr.*). The toponym is *Λεόντιον* (Polyb. 2.41). The city-ethnic is *Λεοντήσιος* (*IvO* 300 (C2f); *SEG* 15 254 (C2s)).

No Archaic or Classical source calls Leontion a *polis*, but Polyb. 2.41.7–8 records it as one of the *poleis* (in the political sense) that constituted the Achaian Confederacy in the period prior to Philip II and Alexander. The external use of individual (*SEG* 26 530 (200); *IvO* 300 (C2f)) and collective (*SEG* 15 254 (120)) city-ethnics suggests strongly that it was a *polis* in the political sense by the end of C3, though this dates to after its refoundation by Antigonos Gonatas (Strabo 8.7.5; cf. Baladié *ad loc.*; Lauffer (1989) 380; Rizakis (1995) 308). The walls date back only as far as the Hellenistic period, though a theatre appears to belong to C4 (Lauffer (1989) 380; *TGR* ii. 251). By the Roman period, the territory was called *Λεοντησία* (Strabo 8.7.5).³

238. Olenos (Olenios) Map 58. Lat. 38.10, long. 21.40. Size of territory: ? Type: B. Paus. 7.18.1–2 and Strabo 8.7.4 situate Olenos between Dyme (no. 234) and Patrai (no. 239), and it is probably to be located west of modern Tsoukaleika (Rizakis (1995) 159–60; Morgan and Hall (1996) 181; *Barr.*). The toponym is *Ὠλένος, ἦ/ὸ* (Aesch. fr. 745b, Mette; *Hdt* 1.145; Polyb. 2.41.7). The city-ethnic is *Ὀλένιος* (*IG* v.1 1 (C5s)), *Ὠλένιος* (*SEG* 14 375.10 (C4l)).

No Archaic or Classical source calls Olenos a *polis*, but Polyb. 2.41.7 (rC4) calls it a *polis* in the political sense and attests to its membership of the Achaian Confederacy in the

time prior to Philip II and Alexander (cf. *SEG* 14 375 (C4l)). Furthermore, a citizen of Olenos who made contributions to Sparta (no. 345) in the middle phase of the Peloponnesian War is described as *Ἀχαιοὺς Ὀλένιος* (*IG* v.1 1; cf. *IG* 11² 62.6 where the restoration *τὸν Ὠλ[ένοιον]* produces a pre-378 honorary decree for an Olenian) and this, together with the external application of the individual city-ethnic in a C4l inscription (*SEG* 14 375.10), ought to suggest that Olenos was a Classical *polis* in the political sense. The external collective use of the ethnic is found in Aesch. fr. 745c, Mette, and—referring to exiles—Ael. *NA* 5.29 (citing Theophr. fr. 109). Olenos is called a *πόλισμα* by the C3e poet Hermesianax (Paus. 7.18.1).

Olenos was abandoned due to “weakness” (Paus. 7.18.1), and its inhabitants were incorporated within Dyme (no. 234) (Strabo 8.7.1). Demand (1990) 61–64 argues that this must have taken place after the time at which Herodotos was writing, though Strabo 8.7.1 seems to imply that Olenos still existed by 280; it had certainly been abandoned by C2 (Polyb. 2.41.7). The territory (called *Ὠλένος γῆ* by Soph. fr. 300, Radt) probably included the settlements of Peirai and Euryteiai (Paus. 7.18.2). According to an ancient commentator (schol. vet. Pind. *Ol.* 1.37a), Pelops is supposed to have originated from the *polis* of Olenos.

239. Patrai (Patreus) Map 58. Lat. 38.15, long. 21.45. Size of territory: ? Type: [A]. The toponym is *Πάτραι, αἶ* (Thuc. 2.83.3; Ps.-Skylax 42). The city-ethnic is *Πατρεύς* (*Hdt.* 1.145; Thuc. 5.52.2; *SEG* 14 375 (C4l)), though *Πατραίεύς* appears to be attested in Polyb. 5.30.3, 95.7.

Underlying the modern coastal city of Patras (*Barr.*), Patrai is listed by *Hdt.* 1.145 as one of the original twelve *mere* of Achaia and is described as a *polis* (in the urban sense) by Ps.-Skylax 42 (C4f), where it is listed as the sixth toponym after the heading *πόλεις . . . αἶδε*. That it was considered to be a *polis* in the urban sense during C5l is rendered likely by Thucydides’ notice (5.52.2) that in 419 the citizens of Patrai were persuaded by Alkibiades to extend their walls down to the sea; traces of these long walls have recently been found (*ArchDelt* 52 (1997) *Chron.* 273–75). Polyb. 2.41.7–8 (rC4) calls it a *polis* in the political sense, and attests to its membership of the Achaian Confederacy prior to the time of Philip II and Alexander (cf. *SEG* 14 375.9 (C4l)). The external collective use of the city-ethnic is found in *Hdt.* 1.145 and Thuc. 5.52.2, the external individual use in *SEG* 14 375.9 (C4l) and Paus. 6.4.6 (rC4s).

According to tradition, Patrai was originally formed by the synoecism of Aroe, Antheia and Mesatis (Paus. 7.18.2–6),

³ The phrase *Ἡ δὲ Τριταία τῆς Φαραϊκῆς ἐφάπτεται κα<ι> Λεοντησίας καὶ Λασιονίας* does not appear in all manuscripts. It is included in the Budé edition but omitted from the Loeb.

three communities which shared the common cult of Artemis Triklaria (Paus. 7.19.1). In 279, Patrai underwent a *dioikismos*, and its inhabitants settled in the *polismata* of Mesatis, Antheia, Boline, Argyra and Arba as well as Patrai (Paus. 7.18.6). This suggested to Curtius ((1851) 437, 453) that these *polismata* had formerly been *demoi*, which had earlier been incorporated through a second process of synoecism. Moggi, *Sin.* 89–95 dates this latter synoecism to C61 or C5e, though it is worth noting that Herodotos' use in his list of Achaian *mere* (1.145) of the plural city-ethnic rather than the toponym may suggest that a multifocal settlement pattern still existed in C5m (Nilsson (1951) 22–23). In 429, the Peloponnesian fleet used Patrai, Panormos and Rhion as naval bases (Thuc. 2.83.3, 86.1–2, 92.5), and this has suggested to Larsen (1953) 802–3 that Patrai was by this time part of the Peloponnesian League.

The territory was called *Πατραϊκὴ* (Theophr. *Hist. pl.* 9.15.8, 20.2) and included the naval station of Panormos—modern Golimi—(Thuc. 2.86.1, 4, cf. 2.92.1) together with the settlements which were later to be resettled after *dioikismos*.

In C4m, Cheilon of Patrai won a string of wrestling victories at the Isthmian, Nemean, Olympic (*Olympionikai* 461, 465) and Pythian Games (Paus 6.4.6–7).

240. Pellene (Pelleneus) Map 58. Lat. 38.05, long. 22.35. Size of territory: 3 or 4. Type: A. The Attic-Ionic form of the toponym is regularly *Πελλήνη*, ἡ (Hom. *Il.* 2.574; Hdt. 1.145; Xen. *Hell.* 7.2.18; Ps.-Skylax 42); the epichoric form is *Πε(λ)άνα* (*SEG* 11 1272 (C6); *IG* IV 510 (C61); Pind. *Ol.* 9.98), though *Πελλίνα* is also attested (Steph. Byz. 515.12). The city-ethnic is *Πελληνεύς* in Attic-Ionic (Thuc. 2.9.2; *IG* II² 1388A.34 (398/7)) and *Πελλανεύς* in the epichoric dialect (*SEG* 3 83 (365–335); *IG* II² 220 (344/3)); later sources retrospectively use *Πελληναῖος* (Cic. *ad Att.* II 2; Plut. *Mor.* 399B). *Πελληνημιος* is also attested (Lycoph. *Alex.* 922).

Almost certainly to be located on the Tserkova hill near the modern village of Pellini (Rizakis (1995) 225; *Barr.*), Pellene is the best-documented *polis* of Achaia. It is called a *polis* in the urban sense by Xen. *Hell.* 7.4.18 and Ps.-Skylax 42, where it is listed as the first toponym after the heading *πόλεις ... αἰθε*, and in the political sense by Thuc. 8.3.2 and Xen. *Hell.* 6.5.29. In an honorific decree for some Pellenian *presbeis* passed by the Athenians in C4m (*IG* II² 220), [*ἡ πόλις τῶν Π*]ελλα[*νέων*] is restored in 15–16. Polyb. 2.41.7–8 attests to its membership of the Achaian Confederacy in the time prior to Philip II and Alexander. There was a *Πελληνέων πολιτεία* among the 158 constitu-

tions collected by Aristotle (fr. 583–84), and Dikaiarchos (fr. 69, Wehrli) wrote a similar work (Cic. *ad Att.* II 2). *Polites* and *demos* are found in [Dem.] 17.10.

The internal collective use of the city-ethnic is found (abbreviated) on C4s coins (*infra*); the external collective use is attested in Thuc. 2.9.2, 8.3.2; Xen. *Hell.* 6.5.29; and *IG* II² 220.8 (344/3). The external individual use is attested in Xen. *Hell.* 3.2.11 and *IG* II² 1388A.34 (398/7) and *SEG* 3 83 (365–335).

The fact that a homonymous *kome* of Pellene existed between Pellene and Aigion (no. 231) (Strabo 8.7.5) may suggest that the *polis* of Pellene was the result of a series of synoecisms to which one of its constituents gave its name (Koerner (1974) 468; Morgan and Hall (1996) 171). Other possible participants in this synoecism are Mysaion (Paus. 7.27.9), Kyros (Paus. 7.27.11), the harbour of Aristonautai (Paus. 7.26.14, cf. 2.12.2), Poseidion—which is explicitly called a *δημιος* (Paus. 7.27.8)—and Oluoros, which Xen. *Hell.* 7.4.17 describes as being besieged by the Pelleneis after its capture by the Arkadians (thus implying some form of urban settlement).

According to tradition, Pellene was exposed to *andrapodismos* and destroyed by Sikyon (no. 228) in C6e, but refounded shortly afterwards (Zenob. 1.57, citing Anaxandridas (*FGH Hist* 404) fr. 1; *P Oxy.* 1241.III.2–12, citing Aristotle (not in Gigon), 1365.28–45). This is not definitive proof of Pellene's status as a *polis* in the Archaic period (*contra* Koerner (1974) 469), and it may be that the settlement that was destroyed was the *kome* of Pellene (Haussoullier (1917) 165–66). At the outbreak of the Peloponnesian War in 431, Pellene was the first Achaian city to join the Peloponnesian League (Thuc. 2.9.2–3; cf. Ar. *Lys.* 996); it was still allied with Sparta (no. 345) shortly after the battle of Leuktra (Xen. *Hell.* 7.2.2); action by its naval forces is attested at the battle of Abydos in 411 (Thuc. 8.106.3; Diod. 13.40.5; cf. Thuc. 2.9.3, 8.3.2, attesting to naval forces); infantry forces are attested at Thuc. 5.60.3, at the battle of the Nemea in 395 (Xen. *Hell.* 4.2.20), at Oneion in 369 (Xen. *Hell.* 7.1.15–16) and at Lechaion in 369 (Paus. 9.15.4). In 367, following the expulsion of oligarchs from the *poleis* of Achaia, Pellene allied herself with Thebes (no. 221) (Xen. *Hell.* 7.2.11), though the oligarchs swiftly resumed power and forged new alliances with both Sparta and Elis (no. 251) (Xen. *Hell.* 7.4.16–18). In the 330s, the Makedonians installed the tyrant Chairon ([Dem.] 17.10; Paus. 7.27.7; Ath. 509B) and Pellene was the only Achaian city not to join King Agis' anti-Makedonian league (Aeschin. 3.165; Curt. 6.1). By and large, the constitution of Pellene was normally oligarchic, and according to Harp. s.v. *Μαστήρες*, the Aristotelian *Πελληνέων πολιτεία* attested the existence

of magistrates named *mastroi* (fr. 583). A period of democracy is implied by [Dem.] 17.10.

C4 sees a number of citizens of Pellene appointed to diplomatic offices: apart from the hospitality afforded to *presbeis* of Pellene by Athens (*IG* 11² 220 (344/3)), a similar invitation to dine in the Athenian *prytaneion* is proffered to Andrion, son of Pausanias (*SEG* 3 83 (365–335)); Xen. *Hell.* 7.2.16 refers to a *proxenos* of the Phliasians (no. 355); in 340/39, Ekephylos, son of Charmides, was granted *proxenia*, *politeia*, *promanteia* and *prodikia* by Delphi (no. 177) (*BCH* 23 (1899) 349); and shortly after 338, Oikles was granted *proxenia* by the Boiotians (*SEG* 25 553).

Pellene's renown in the Panhellenic athletic circuit dates back as far as 542, when Phanas won victories in the *stade*, the *diaulos* and the *hoplitodromos* at the Olympic Games (Euseb. *Chron.* 1.67; *Olympionikai* 142–44). Sostratos won a victory in the boys' foot-race at Olympia in 460 (Paus. 6.8.1; *Olympionikai* 263), Promachos won the Olympic pankration in 404 (Paus. 7.27.5; *Olympionikai* 355) and in the third quarter of C4 the tyrant Chairon won two wrestling victories at Isthmia and four at Olympia (Paus. 7.27.5; *Olympionikai* 432, 437, 443, 447). A victory in boys' boxing by Philip, described as *Ἀζάν ἐκ Πελλάνας*, is recorded by Paus. 6.8.5 and dated to 436 in *Olympionikai* 319 (see Nielsen and Roy (1998) 36–39). Pellene even hosted her own prize games, known variously as the Heraia (schol. Ar. *Av.* 1421), the Hermaia (schol. Ar. *Av.* 1421; schol. Pind. *Ol.* 9.116c) or the Theoxenia (Paus 7.27.4; schol. Pind. *Ol.* 7.156a). The games are already attested by C61 (*IG* IV 510; *Anth. Pal.* 13.19; cf. Bacchyl. 9.33, Jebb).

A cult to (Zeus) Mellichios is known in C6 (*SEG* 11 1272), but Apollo's importance at Pellene is suggested by the depiction of his head on silver and bronze coins dating to the period 370–322 (Head, *HN*² 415).

Pellene struck coins in both silver (triobols) and bronze in C4s: *obv.* head of Apollo or a lyre; *rev.* tripod or ram's head in a wreath. Legend: *ΠΕ* or *ΠΕΛ* (Head, *HN*² 415–16; *SNG Cop. Phliasia-Laconia* 209–23).

241. Pharai (Pharaieus) Map 58. Lat. 38.05, long. 21.45. Size of territory: ? Type: B. Paus. 7.22.1 situates Pharai near the river Peiros, and it is probably to be located at the modern village of Prevedos on the left bank of the river (Rizakis (1995) 186; *Barr.*). The toponym is regularly *Φαραί* (Polyb. 2.41.8), though *Φάρα*, ἡ is attested in a C4 inscription (*IG* XII.8 637). The city-ethnic is normally *Φαραίεύς* (*SEG* 1 74 (C3s); *IG* v.2 392 (C4–C3); Polyb. 2.41.12); the Ionic form is *Φαρεύς* (Hdt. 1.145).

Designated by Hdt. 1.145 as one of the original twelve *mere* of Achaia, Pharai is absent from Ps.-Skylax's list of Achaian *poleis* (42), though in this case the negative evidence should not be overstressed, since we would not expect to find an inland settlement recorded in a treatise composed as a *periplous* (Morgan and Hall (1996) 167). Polyb. 2.41.7–8 states that Pharai was one of the Achaian *poleis* (in the political sense) that constituted the Achaian Confederacy prior to the time of Philip II and Alexander. The external collective use of the city-ethnic is found in Hdt. 1.145 and Polyb. 2.41.12 (r280); the external individual use is found in *IG* v.2 392 (C4–C3).

A man of *Φάρα* is recorded in a C51 inscription listing Delphic *theorodokoi* (*Syll.*³ 90.3), and if this is a reference to a citizen of Achaian Pharai, then it might indicate *polis* status before 400. It is possible, however, that the reference is to Arkadian Phara (no. 290). A citizen of Pharai was appointed *proxenos* and *theorodokos* by Arkadian Lousoi (no. 279) in C4–C3 (*IG* v.2 392). The territory was called *Φαραϊκή* (Strabo 8.7.5; cf. Baladié *ad loc.*

242. Phelloe Map 58. Lat. 38.05, long. 22.25. Size of territory: 1 or 2. Type: B. Paus. 7.26.10 locates Phelloe on the mountain road from Aigeira (no. 230), and it may possibly be situated at Zachali/Seliana (Morgan and Hall (1996) 174; *Barr.*). The toponym is *Φελλόα* (-η), ἡ (*BCH* 70 (1946) 39B; Paus. 7.26.10).

Paus. 7.26.10 calls Phelloe a *πόλισμα* and claims that it had been settled ever since the Ionian occupation of Achaia. A C4m decree granting Delphic *proxenia* to an *Ἀχαιὸς ἐκ Φελλόας* (*BCH* 70 (1946) 39B) indicates that Phelloe was a *polis* in the political sense by C4. If an eponymous mythical hero named Phellos, mentioned in Hes. fr. 167 (MW), is to be associated with Achaian Phelloe (see West (1985) 91), this might suggest the existence of a political community in the Archaic period. Certainly, surface exploration and limited excavation in the area have revealed settlement evidence and burials dating from C8s and continuing into the Archaic and Classical periods (Alzinger (1986) 319–26; Morgan and Hall (1996) 174).

243. Rhypes (Rhyphs) Map 58. Lat. 38.15, long. 22.00. Size of territory: ? Type: [A]. Paus. 7.23.4 situates Rhypes a little above the Aigion–Patrai road, some 30 stades from Aigion (no. 231). The identification is not certain, but it is often located on the Trapeza hill, 7 km west of Aigion (Rizakis (1995) 193; Morgan and Hall (1996) 179; *Barr.*). The toponym is *Ῥύπες* (Ps.-Skylax 42), *Ῥύπαι* (Strabo 8.7.5; Paus. 7.18.7) or *Ῥύπη* (Diod. 8.17.1). Steph. Byz. 548.4 also attests *Ῥυπαίη*. The city-ethnic is *Ῥύψ* (*SGDI* 1644 (C6); Hdt.

1.145; *SEG* 14 375 (C4l)). Pherecydes (*FGrHist* 3) fr. 163 has Ἀρυπες, presumably for the ethnic.

Rhypes is one of the original twelve *mere* of Achaia (Hdt 1.145) and is cited as a *polis* in the urban sense in Ps.-Skylax 42, where it is listed as the fifth toponym after the heading πόλεις . . . αἰθε. That status may possibly be retrojected, however, since according to Phot. *Lex.* p. 492.10, Aischylos (fr. 394, Nauck) had described Rhypes as a πόλις τῶν Ὀλενίων Ἀχαιῶν. An even earlier attestation of what appears to be the external individual city-ethnic Ῥυπ(ό)[ς] in an Archaic inscription (*SGDI* 1644) may just possibly indicate that Rhypes was a *polis* in the political sense during C6. In C4l, the external application of the individual city-ethnic is attested in *SEG* 14 375. The external collective use of the city-ethnic is found in Hdt. 1.145 (cf. Pherecydes (*FGrHist* 3) fr. 163). C4l membership of the Achaian Confederacy is suggested by *SEG* 14 375.8.

Anderson (1954) 73 suggests that Rhypes was abandoned in C4, though this does not accord with the archaeological evidence (Rizakis (1995) 193–94; Morgan and Hall (1996) 216 n. 19; Vordos (forthcoming)), and it would appear that it persisted until its destruction by Augustus, when its territory was distributed between Aigion (no. 231) and Pharai (no. 241) (Strabo 8.7.5), as well as Patrai (no. 239) (Paus. 7.18.7). The territory of Rhypes is designated variously (ἐν τῇ Ῥυπικῇ (Thuc. 7.34.1); τῆν δὲ χώραν Ῥυπίδα (Strabo 8.7.5)), and seems to have included Erineos, in the vicinity of the modern Lambiri (Thuc. 7.34.1), and Leuktron (Strabo 8.7.5).

Kroton (no. 56) in South Italy was reputedly founded by Myskellos of Rhypes (Antiochos (*FGrHist* 555) fr. 10; Hippys of Rhegion (*FGrHist* 554) fr. 1; Ps.-Skymnos 325; Diod. 8.17; Dion. Hal. *Ant. Rom.* 2.59.3; Strabo 6.1.12, 8.7.5; Solin. 2.10; Zenob. 3.42). However, Paus. 3.3.1 attributes Kroton's foundation to

the Spartans (no. 345) (see further Giannelli (1963) 148–51; Koerner (1974) 463; Malkin (1987) 44–46, (1994) 62–64; Leschhorn (1984) 30; Giangulio (1989) 136–39, 183–84).

244. Tritaia (Tritaieus) Map 58. Lat. 37.55, long. 21.40. Size of territory: ? Type: B. Paus. 7.22.6, 10 describes Tritaia as an inland city 120 stades from Pharai (no. 241), and it should probably be located on the Voundoukla plateau near the modern village of Hagia Marina (Rizakis (1995) 189; *Barr.*). The toponym is *Τριταία* (Polyb. 2.41.8; Strabo 8.3.10), though *Τρίτεια* is also attested (Paus. 6.12.9, 7.22.6). The city-ethnic is *Τριταίεύς* (Hdt. 1.145; *SEG* 1 74 (C3s); Polyb. 2.41.12).

Tritaia is described as one of the original twelve *mere* of Achaia by Hdt 1.145. It is absent from Ps.-Skylax's list (42), though—as in the case of Pharai (no. 241)—negative evidence is not conclusive, since one would normally not expect to find an inland *polis* listed in a treatise composed as a *periplous* (Morgan and Hall (1996) 167). Polyb. 2.41.7–8 (rC4) calls it a *polis* in the political sense, and attests its membership of the Achaian Confederacy in the period prior to Philip II and Alexander. The external collective use of the city-ethnic appears in Hdt. 1.145 and Polyb. 2.41.12. In C3, the city-ethnic is used externally and individually (*SEG* 1 74; *IG* v.2 368.77ff (*ante* 280)). Citizens of Tritaia are listed as *proxenoi* of Arkadian Kleitor (no. 276) in *IG* v.2 368.77ff (*ante* 280).

Cicero (*ad Att.* 6.2.2) implies that Tritaia was attached to Arkadia after the foundation of Megalopolis (no. 282), but this is contradicted by Paus. 6.12.8–9, who appears to attest Tritaia's independence in C2m (cf. Nielsen and Roy (1998) 38). Tritaia was eventually annexed by Augustus, and its territory assigned to Patrai (Paus. 7.22.6). An eponymous *damiorgos* is attested in C3 (Sherk (1990) 258–59).

ELIS

JAMES ROY

I. The Region

The region of Elis was bordered by Achaia to the north and north-east, by Arkadia to the east and south-east, and by Messenia to the south. The boundaries changed with time, especially that with Arkadia (Roy (2000)). The Eleians' original home appears to have been in the valley of the river Peneios in *κοίλη Ἑλίας* (a name first found in Thuc. 2.25.3). In Homer they are usually called *Ἐπειοί* (e.g. *Il.* 4.537), but also *Ἑλείοι* (*Il.* 11.671); their home was *Ἑλίας* (*Il.* 2.615, etc.). From their homeland they eventually expanded their power over the entire area later known as Elis (or Eleia, e.g. Thuc. 5.34.1), incorporating some territory directly into the Eleian state while imposing perioikic status on other communities.

Early Eleian expansion, and in particular the struggle with Pisa for control of Olympia, is obscure (*RE* v. 2373–91, xx. 1747–53). Surviving accounts are distorted by a desire to identify people and places mentioned by Homer (see especially the material from Apollodoros in Strabo book 8), and by the influence of later political interests (see Sordi (1994); Ulf (1997); Bilik (1998–99); and Nafissi (2001) on the historiography of Olympia and Elis). By C6, however, Elis (no. 251) dominated Pisa, and with it Olympia, and probably also Akroreia to the east and some territory south of the river Alpheios, and in C5 Elis extended its power to the Messenian border. Pisatis was incorporated directly into the Eleian state proper, as was territory down the coast at least as far as the harbour Pheia, while other areas (Akroreia, Lasion (no. 256) on the Arkadian border, Letrinoi (no. 258), Marganeis (no. 259) and Amphidolia (no. 247) near Pisatis, and all Triphylia) became perioikic (Roy (1997), (1999)). Elis then lost all perioikic territory after a war with Sparta c.400, but made considerable efforts—with varying success—to win it

back. A notable, but brief, set-back was the breakaway of Pisa as an independent state from 365 until c.362. Elis ultimately achieved lasting control of the entire area, probably in 146 (Roy (1999); *RE* v. 2391–2416). The region of Elis from C6 onwards can therefore be divided into two categories:

- (1) the territory of the Eleian state proper, all north of the river Alpheios, and including Pisatis except during its brief independence, 365–c.362; and
- (2) the remaining territory, which was perioikic when under Eleian control, and otherwise independent or associated with states other than Elis.

The second category includes Triphylia, but in this Inventory the communities of Triphylia are treated in a separate chapter by Nielsen (540–46). The present chapter therefore deals with the Eleian state proper and with other Eleian territory north of the Alpheios. The total area of Eleian and perioikic territory north of the Alpheios was 2,120 km² according to Yalouris (1972a) 96.

There was considerable settlement within the region of Elis as a whole. Yalouris reported (*PECS* 299–300, in 1976) that 120 settlements have been found by excavation, and a further 160 by surface finds, adding that these settlements range from Paleolithic to Byzantine, and must mainly be small villages, hamlets and isolated farms. Cf. Yalouris (1972a), with the same figures, and also the statement that forty-nine towns—not identified—are recorded in the area by literary sources, twenty-seven north of the river Alpheios and twenty-two south of it; and see also Roy (1999).

Few known urban sites north of the river Alpheios have benefited from intensive archaeological investigation: apart from the town of Elis, Pylos (no. 263) has been thoroughly excavated (and Olympia, not a town), and Kyllene (no. 254) and Pheia have been examined. There remain, however, sites with archaeological material which may have been urban settlements but need further exploration, particularly at Elaionas (formerly Malapasi) (Sperling (1942) 83 no. 22); Goumero (Bon (1946) 29–30); Korifi (formerly Koukouvitsa) (Sperling (1942) 82 no. 13); and Vartholomio

I wish to thank the British Academy, the Fondation Hardt and the University of Nottingham Research Committee for support during the preparation of this chapter. I am grateful to Dr. S. Minon for permission to cite her unpublished doctoral thesis (which she is revising for publication) and to Drs. B. Eder, P. Flensted-Jensen, M. H. Hansen, Professor S. Hornblower, Drs. C. Morgan, T. H. Nielsen, and Professor P. Siewert for information and advice. Responsibility for the text remains entirely my own.

(*ArchDelt* 44 (1989) B.1.104–5). It is also the case that north of the river Alpheios very few ancient towns known from literary or epigraphical evidence have been precisely located: Elis, Pheia, Kyllene and Lasion have been identified with certainty, and Pylos very plausibly, while sites have been suggested for other communities (e.g. Gartsiko for Opous (no. 261)) but lack proof, and yet other ancient settlements can be located only approximately, or not at all.

Besides towns, Classical Elis had many villages and scattered farmsteads. Polyb. 4.73.5–9 described considerable settlement in C3l in villages, places of refuge and open countryside, which offered protection against attack, and clearly believed that this pattern of settlement was old. Much evidence for settlements in Classical Elis comes, however, from sources even later than Polybios, notably Strabo and Pausanias, and even Stephanos of Byzantion. Such evidence mentions numerous nucleated settlements, but its value varies.

Concerning the perioikic communities north of the river Alpheios there is less difficulty. Available evidence suggests that all such communities were *poleis* in the Classical period, and they are described below in the Inventory of *poleis*. In addition to evidence on particular communities, both Xen. *Hell.* 3.2.23 and Diod. 14.17.5 use the term *polis* for the perioikic communities of Elis generally at the time of the Eleian–Spartan War c.400. Moreover, the relationship between Elis and the perioikic communities was structured as a military alliance (*symmachia*) by C6l (Siewert (1994a); Ebert and Siewert (1999); Roy (1997)). The internal structure of the Eleian state is sometimes described as federal, but the limited evidence for the relationship between the Eleian state and settlements within that state's territory does not show a federal structure.¹ There may have been an amphiktyony of states connected with Olympia, though there is little evidence for it (Roy (1997) 296; cf. Taita (1999)): if it existed, it lost importance by 500 to the hegemonial alliance by which Elis structured its relations with its *perioikoi*. As subordinate allies, the perioikic *poleis* were enrolled by Elis in Elis' alliance of 420 with Athens (no. 361), Argos (no. 347) and Mantinea (no. 281) (Thuc. 5.47.8–9), and while of perioikic status they presumably contributed to the Peloponnesian League during Elis' own membership, though no such effort is direct-

ly recorded for *perioikoi* north of the river Alpheios (as it is implicitly for Lepreon (no. 306) in Triphylia, Thuc. 5.31.2–3). The perioikic communities in question are Letrinoi (no. 258), Marganeis (no. 259) and Amphidolia (no. 247), all fairly near Olympia; the four *poleis* of Akroreia (Alion (no. 246), Eupagion (no. 252), Opous (no. 261) and Thraistos (no. 264)), and Lasion (no. 256) east of Akroreia. (Both Xen. *Hell.* 3.2.30, 4.2.16, and Diod. 14.17.8 distinguish Lasion from Akroreia.) The four Akroreian communities (on which see Siewert (1987–88)) at least occasionally acted collectively. Once free from Eleian control c.400 (Xen. *Hell.* 3.2.30), the Akroreians sent a collective military contingent to support Sparta (no. 345) in 394 (Xen. *Hell.* 4.2.16), and may have formed a federal state. Their collective dedication at Olympia, made jointly with the Alasyes, may be dated either in C5l, when Akroreia was perioikic, or during independence in C4e (Siewert (1987–88) 8 n. 3). The Akroreians were again under Eleian control by 365, when Arkadia captured all the Akroreian *poleis* except Thraistos (no. 264) (Xen. *Hell.* 7.4.14). The Akroreians then again formed a state, possibly federal, since they and Pisa (no. 262) allied with Arkadia (Ringel *et al.* (1999)). This Akroreian state is not heard of again after the battle of Mantinea in 362, and Akroreia presumably reverted to Eleian control.

Four other communities which are each attested only by a single epigraphic reference—the Anaitoi (no. 248), the Metapioi (no. 260), the Chaladrioi (no. 249) and the Ewaoi (no. 253)—were evidently *poleis*. They used the Eleian dialect and presumably belonged to the region of Elis in the widest sense, but it is impossible to determine whether they fell within the Eleian state proper or lay in perioikic territory (either north or south of the river Alpheios). They are included in the Inventory of Eleian *poleis* (though they may in fact have been Triphylian).

Within the Eleian state proper there were certainly towns other than Elis itself, but there is only limited Classical evidence that any of these settlements were considered to be *poleis*. Ps.-Skylax 43 calls Kyllene a *polis*, and for the inhabitants of Eleian Pylos Xenophon uses an ethnic (*Hell.* 7.4.26), which may be a sign of *polis* status (Hansen (1996)): Kyllene and Pylos are included, as possible cases, in the Inventory of *poleis*. There is, however, much later evidence of varying value. Strabo 8.3.31 reports a tradition that there were eight *poleis* in Pisatis: the report is probably taken from Apollodoros, and is antiquarian rather than contemporary (*RE* xx. 1737–39; Roy (2002a)). (No Classical source refers to any Pisatan community as a *polis*: cf. in Xen. *Hell.* 3.2.31 the

¹ Walter (1993) 118–21 considers seriously the possibility that there were subordinate *poleis* within the Eleian state, and suggests that it may have been federal. Van Effenterre and Ruzé (1994–95) write without comment about “la Confédération des Eléens” (e.g. 1 no. 21). Siewert (1994b) 30 argues against the suggestion that Elis was a “Stammstaat”.

term “rustics” (*χωρίτας*) referring to the Pisatans.) The obscure Pisatan community of the Alasyeis (no. 245) is included in the Inventory because, using its ethnic, it made a joint dedication at Olympia with the Akroreians in C5l or C4e (Siewert (1991)). (Pisa itself, because it briefly operated as an independent state 365–c.362, is also included in the Inventory.) For Elis apart from Pisatis there is also evidence of nucleated settlements, sometimes described as *poleis*. Paus. 5.16.2–8 states that the Sixteen Women, responsible for an important cult, were originally chosen from sixteen *poleis* which once existed in Elis (Bultrighini (1990) 165–73). Reports of the synoecism of Elis in 471 mention other settlements, called *poleis* by Diod. 11.54.1 (cf. Strabo 8.3.2). Ps.-Skylax 43, after calling Kyllene a *polis*, speaks of a *synoikia* of *poleis* farther inland in Elis (possibly a reflection of the synoecism). The archaeological evidence on Kyllene, Pheia and Pylos does not help to determine their formal status (though in the case of Pylos it does not suggest a highly developed community). Finally there are scattered post-Classical reports, often from Stephanos, describing individual settlements as *poleis*. This range of evidence raises problems.

First, there is the difficulty of deciding whether any individual subordinate settlement within the Eleian state proper was considered to be a *polis* in the Classical period. (It is unlikely that there would be only one single subordinate *polis* within the Eleian state: if any single subordinate settlement can be shown to have been a *polis*, that increases the likelihood that others were too.) The Anaitoi (no. 248), Metapioi (no. 260), Chaladrioi (no. 249) and Ewaoioi (no. 253) were probably *poleis*, but may not have lain within the Eleian state in the narrow sense. Dyspotion (no. 250) and Lenos (no. 257) produced Olympic victors, but are otherwise little known. Of communities that can be securely located within the Eleian state proper there is Classical evidence (however limited) for *polis* status only for Kyllene (no. 254), Pylos (no. 263) and the Alasyeis (no. 245). For other communities there is only later evidence, of varying value. It is thus possible that there were a number of subordinate *poleis* within the Eleian state, but the evidence to support this view is limited. Since there is, however, no direct evidence of a federal structure, Elis probably functioned as a unitary state, with internal subdivisions of a kind normal in a unitary *polis* (and possibly with dependent *poleis* within its territory).

The Inventory below describes twenty certain, probable, or possible *poleis* certainly or probably located in Elis as defined here. The following Archaic and Classical settle-

ments have not been included in the Inventory. They are grouped in three categories: (1) settlements in Pisatis;² (2) settlements within the Eleian state proper but not described as Pisatan;³ and (3) a settlement which might be located anywhere within the region of Elis (including Triphylia).⁴

² Other settlements in Pisatis may have existed in the Classical period, but evidence is lacking. *Kikysion* (*Κικύσιον*) was the biggest of the eight *poleis* of Pisatis (Strabo 8.3.31, 32), but its existence is not attested before the Hellenistic period. *Pharaia*/Pheraia (*Φαραία*, *Φηραία*) is mentioned only by Polybios 4.77.5 and Strabo 8.3.32, both identifying a road by it: Strabo puts it in Arkadia, but his text is corrupt when giving the location, and if it is correctly located at modern Nemuta (Pritchett (1989) 35–37), it was in territory considered Eleian in Pausanias’ day (Paus. 8.26.3–4) and could have been part of Pisatis. However, the existence of Pharaia is not attested before the Hellenistic period, though it is dated C by the *Princeton Classical Atlas*.

³ Other settlements are reported in Elis north of the river Alpheios, but their existence in the A or C periods is not attested. Oinoe (*Οἰνώη*, or *Βουνώα*) is known only from Strabo 8.3.5 as a place 120 stades from Elis on the road to Lasion (MSS emended: a different emendation would put Oinoe on the road to the sea). A location at ruins near modern Kulogli (officially Oinoe) has been suggested, but questioned (*RE* xvii. 2240–44 no. 10): Sperling (1942) 83 n. 14 found no remains there earlier than Roman. Ancient attempts were made (*RE* xvii. 2240–44 no. 10) to identify Oinoe with a probably non-existent *polis* Ephyra (on which see below) related to Homeric Ephyra. Orthia (*Ὀρθία*) was a *demos* of Koile Elis, home of Physkoa, who bore Narkaios to Dionysos (Paus. 5.16.6), but is not otherwise attested. Petra (*Πέτρα*): Paus. 6.2.4.5 reports the tomb of the sophist Pyrrhon (c.360–271) at Petra, near the town of Elis, and says that in ancient times Petra was a *demos*, without mentioning other remains: Petra presumably existed at the time of Pyrrhon’s death, but is not attested earlier. Phyteion (*Φύτειον*) was referred to in C3 by Istros (*FGrHist* 334) fr. 40, but is not attested earlier: Steph. Byz. 675.17–19 calls it a *polis* of Koile Elis, with ethnic. Pyrgos is mentioned only by Livy 27.32.7 (r209) as a *castellum* not far from the town of Elis, apparently capable of sheltering 4,000 people and 20,000 animals (which must be exaggerated, but suggests a settlement larger than a simple fort). It is not identical with Pyrgos or Pyrgoi in Triphylia (Pritchett (1989) 73), and, though some MSS have Phyrcom *vel sim.* for the name, it is most unlikely to be identical with Phyrkon near Lepreone mentioned by Thuc. 5.49.1. Thalamai (*Θαλάμαι*) was a C locality in Koile Elis: a location near Mt. Skollis has been suggested (*KIPauly* v. 642 no. 2). Polyb. 4.75.2 (cf. 4.84.2) “the *chorion* which they call Thalamai” shows that it was not a *polis* in his day, and Xen. *Hell.* 7.4.26 might refer to a fortress or a natural stronghold rather than a settlement: there is therefore no good evidence that Thalamai was ever a settlement. Thrious (*Θηριούς*) was a *polis* of Achaia, and later of Elis, bordering on Patrai (Steph. Byz. 318.7–10; cf. Pliny *HN* 4.22). Clearly a real community, as an inscription of C2 or C1 shows (*SEG* 15 524, *Θηριάσιοι*: cf. *SEG* 45 409), it is unknown earlier. Bon (1946) 20–23 proposed for Thrious a location at Aspra Litharia near Santameri where he found C material; but Thrious is likely to have been Eleian—if it ever was—after boundary changes in the Roman period (*KIPauly* iv. 549–551 on Patrai).

⁴ *Asiane* (*Ἀσιανή*) is known only from Steph. Byz. 131.4–5 as a *polis* of Elis. Mention of Boupriasion (*Βουπράσιον*) in Homer (*Il.* 2.615, etc.) caused a clear ancient desire to identify it as a town (Strabo 8.3.8), but there is no evidence that it was a *polis* (*RE* iii. 1058). Brysiai (*Βρυσαί*) is known only from Steph. Byz. 188.2–3 as a *polis* of Elis: this is possibly a mistake for Lakonian Bryseai (*RE* iii. 927). Mention of Ephyra (*Ἐφύρη*, *Ἐφυρα*) in Homer *Il.* 2.659, etc. provoked later attempts to locate it in Elis (Strabo 8.3.5), but there are no good grounds for believing in an Eleian Ephyra (*KIPauly* ii. 301 no. 4): cf. Oinoe (above). Kyme (*Κύμη*) is known only from Steph. Byz. 392.22 as a *polis* of Eleia. Pind. *Ol.* 6.34 said that Aipytos ruled Arkadians at Phaisana (*Φαισάνα*) on the Alpheios, but Istros (*FGrHist* 334) fr. 41 (C3) said Phaisana was in Elis: if indeed in Elis, it could be north or south of the Alpheios, though it has been suggested that it should be identified with Phrixa in Triphylia (*KIPauly* iv. 695). Phaisana could in any case be purely mythical.

1. Pre-Hellenistic Settlements not Attested as Poleis

A. Settlements of Pisatis

Harpina (Ἄρπινα) Ethnic only in Steph. Byz. 125.3–5. One of the eight *poleis* of Pisatis (Strabo 8.3.32). Paus. 6.21.8 saw the ruins of the *polis* Harpina, including altars. Probably to be located near modern Miraka (Baladié (1978) 268; Papahatzis (1979) 382 n. 8, despite *RE* vii. 2407–9 art. *Harpina*): at the locality Frangonisi there are archaeological remains ranging from the Archaic to the Roman periods and including traces of Archaic and Classical walls and Classical graves (McDonald and Hope Simpson (1972) 320–21 no. 723; cf. *ibid.* 306–7 nos. 323 and 324). See also Luc. *De mort. Peregr.* 35; cf. Pritchett (1989) 35–36. Thuc. 5.50.3 is emended to give a reference to Harpina. According to Paus. 6.21.8, Oinomaos founded Harpina. Roy (2002a) 232–33, 235–43, (2002b) 254. *Barr.* AC.

Herakleia (Ἡράκλεια) An ethnic is not attested, save for the forms given by Steph. Byz. 304.3–5, cf. 303.21, after a list of communities of this name. Strabo 8.3.32 calls it one of the eight *poleis* of Pisatis, and Paus. 6.22.7 a *kome* of Elis (no. 251); both mention a shrine of the nymphs Ioni(a)des, with healing waters. On a likely location beside medicinal springs near modern Pournari, see Panayotopoulos (1991). *Barr.* dates Herakleia AC; there is, however, no evidence attesting its existence in the Archaic period, and the only evidence of its existence in the Classical period is surface finds at the site proposed by Panayotopoulos. Identifying Herakleia in Pisatis with the Herakleia of the Archaic Kypselid dedication at Olympia (see *SEG* 45 404) is purely speculative, and implausible. Roy (2002a) 232–33, 235–39, 242–43.

Salmone (Σαλμώνη, also Σαλαμόνα and Σαλμωνία) Ethnic only in Steph. Byz. Salmone is one of the eight *poleis* of Pisatis, near the source of the river Enipeus (modern Lestenitsa) (Strabo 8.3.31–32). Salmoneus, son of Aiolos, founded the *polis* Salmonia in Elis beside the Alpheios (Diod. 4.68.1). Steph. Byz. 552.5–7: a *polis* of Pisatis. *IvO* 18 (c.425, *LSAG* no. 20) is an agreement between two individuals for one to rent to the other 18 plethra of “the land in Salamona”. On a likely location, see Panayotopoulos (1991). Roy (2002a) 232–33, 235, 237–42. *Barr.* C.

B. Settlements of Elis Proper

<A>**griades** (Ἄγριάδες) Apparently one of the communities from which Elis was synoecised in 471 (Strabo 8.3.2),

but there is manuscript corruption, and the name—if indeed truly a name—is uncertain. Not attested elsewhere. Roy (2002b) 254. Not in *Barr.*, but C would be attested by acceptance of its inclusion in the synoecism.

Hyrmine (Ἰρμίνη, also Ἰρμίνα and Ὀρμιναι) In Hom. *Il.* 2.616 one of the limits of the land of the Epeioi. Paus. 5.1.11 gives Aktor as the (mythical) founder of the *polis* Hyrmina in Eleia: Strabo 8.3.10 says that Hyrmine was a *polichnion*, but no longer exists. Mentioned also by Echephylidas (*FGrHist* 409) fr. 3 (probably C4), Menelaos (*FGrHist* 384) fr. 2 and Pliny, *HN* 4.13. It has not been certainly located, but the name apparently survived for a hill near Kyllene (no. 254) (Servais (1964)). To be dated AC (so *Barr.* with a query) if it existed from Homeric times.

Myrtountion (Μυρτούντιον) Steph. Byz. 464.14–16 s.v. *Μύρσινος*: a *polis* of Elis, later called Myrtountion, with ethnic. Strabo 8.3.10: Myrsinos (Hom. *Il.* 2.616) is the present-day Myrtountion, a *katoikia* by the sea on the road from Dyme (no. 234) to Elis (no. 251). On a suggested site near the lagoon of Kotiki, see Servais (1964) 37. To be dated AC (so *Barr.*) if it existed from Homeric times.

Pheia (Φειά, and several variant forms, *KIPauly* iv. 721) An important harbour town (e.g. Thuc. 2.25.3–5), with fortifications (Xen. *Hell.* 3.2.30; Roy (1999) 162–63). Diod. 12.43.4 (r430) describes it as a *chorion*, Strabo 8.3.12 calls it a *polichne*; cf. Paus. 5.18.6, referring to Hom. *Il.* 7.132–35. The site has been explored archaeologically, including examination of remains now under the sea (Yalouris (1957); Themelis (1968)); there was settlement from prehistoric times, and in particular a flourishing town from the Archaic period to later Roman times (though oddly not dated A in *Barr.*). Yalouris did not report traces of a city wall round the settlement as a whole, but did record ancient fortification of the hill Pontikokastro, which he identified as the ancient acropolis.

C. Settlement within the Entire Region of Elis

Andria (Ἄνδρῖα) Known as a *polis* of Elis with ethnic *Ἄνδρῖεύς* only from Steph. Byz. 94.15–17 (citing Teupalos (*FGrHist* 408) fr. 1 (probably C4)). The ethnic may have been in Teupalos' text. Unlocated. No date in *Barr.*, but C if Teupalos (*supra*) is C4.

There are also archaeological remains of Classical (or Archaic–Classical) settlements, not yet identified with

known ancient communities, at the following sites in Elis north of the Alpheios.⁵

2. Unidentified Settlements

Elaionas (formerly *Malapasi*) Small Classical settlement: Sperling (1942) 83 no. 22. Not in *Barr*.

Goumero Fortified Classical settlement: Bon (1946) 29–30. Not in *Barr*.

Korifi (formerly *Koukouvitsa*) Fortified Classical settlement: Sperling (1942) 82 no. 13. Not in *Barr*.

Vartholomio Archaic–Classical settlement (reported as prehistoric to Roman): *ArchDelt* 44 (1989) B.1.104–5. Not in *Barr*.

Thus, we know of thirty-two settlements in Archaic and Classical Elis as defined here. As already stated, twenty of these were *poleis* throughout the Archaic and Classical periods or at least for some time during these periods. About the status of the remaining twelve settlements we are too poorly informed to allow any inference. It should, however, be stressed here that Andria may possibly have been located outside Elis as defined here (and the same is true of four of the settlements described in the Inventory: the Anaitoi (no. 248), Metapioi (no. 260), Chaladrioi (no. 249) and Ewaoioi (no. 253)).

⁵ Material at other sites may also be from A or C settlements, as follows. Probable cases are Aspra Spitia, map 58, lat. 21.47, long. 37.38 (McDonald and Hope Simpson (1972) 308–9 no. 329); Flokas, map 58, lat. 21.37, long. 37.39 (ibid. 304–5 no. 316 and *ArchDelt* 25 (1970) B.1.194, 26 (1971) B.1.194, 28 (1973) B.1.199–201, 38 (1983) B.1.109); Kafkonias, map 58, lat. 21.37, long. 37.42 (McDonald and Hope Simpson (1972) 320–21 no. 733; cf. 306–9 nos. 327 and 328 (listed as Kavkania); *BCH* 83 (1959) *Chron.* 656; *ArchDelt* 20 (1965) B.1.210, 27 (1972) B.1.270, 39 (1984) B.1.78); Koskinas, map 58, lat. 21.38, long. 37.46 (see esp. *ArchDelt* 25 (1970) B.1.191–93, also 33 (1978) B.1.78, 45 (1990) B.1.109, 47 (1992) B.1.120–21, 48 (1993) B.1.105–6); Strefi, map 58, lat. 21.33, long. 37.40 (McDonald and Hope Simpson (1972) 320–21 no. 718; cf. 304–5 no. 309). Possible cases are Kladheos, map 58, lat. 21.39, long. 37.40 (ibid. 306–7 no. 325); Latzoï, map 58, lat. 21.34, long. 37.43 (ibid. no. 320 (with a note on its commanding position in the Lestenitsa valley)); Mayiros, map 58, lat. 21.41, long. 37.41 (ibid. no. 319 (listed as Mayira)); Palaiochori, map 58, lat. 21.16, long. 37.49 (Sperling (1942) 84 no. 28); Platanos, map 58, lat. 21.37, long. 37.40 (McDonald and Hope Simpson (1972) 306–7 no. 318). At Olena, map 58, lat. 21.34, long. 37.45, there is an ancient village, not closely dated (Bon (1946) 29).

Cemeteries at the following sites suggest that there will have been settlements nearby: Borsi, map 5, lat. 21.26, long. 37.55 (C) (*ArchDelt* 48 (1993) B.1.103); Glifa, map 58, lat. 21.08, long. 37.51 (C6) (*ArchDelt* 45 (1990) B.1.111); Paliokritharies, map 58, lat. 21.21, long. 37.54 (ancient) (*ArchDelt* 48 (1993) B.1.102); Palouki, map 58, lat. 21.20, long. 37.46 (C) (*ArchDelt* 35 (1980) A.37–59, B.1.170, Hatzis (1982) and (1980)); Stafidhokambos, map 58, lat. 21.17, long. 37.54 (C) (*ArchDelt* 47 (1992) B.1.113–14, 48 (1993) B.1.103–5, 49 (1994) B.1.194; Arapoyianni (1996–97)); Yeraki, map 58, lat. 21.24, long. 37.47, ancient, possibly connected with fortified settlement of Korifi (Koukouvitsa) to east) (*ArchDelt* 35 (1980) B.1.169–71).

The *polis* structure of Archaic and Classical Elis as defined here depends of course on the evidence currently available. It should be noted that, given the large area concerned and the often lacunose evidence, it is possible, even likely, that other settlements, though not at present explicitly attested for the Archaic and Classical periods, did in fact exist then, and it is also possible that some settlements (especially within the Eleian state proper) for which there is currently no clear evidence of *polis* status in the Archaic and Classical periods were in fact *poleis*. These, however, are mere possibilities which could be tested only if new evidence appears. On present evidence the pattern is as follows. Throughout the perioikic areas the *polis* was the universal form of political organisation at least by C5j; in most cases we have little evidence about earlier circumstances. The very large territory of the Eleian state proper was organised as a *polis* by C6m; but there is evidence that Alasyaion (no. 245), Kyllene (no. 254) and Pylos (no. 263) also had the status of *polis*, and they were therefore presumably subordinate *poleis* within the territory of Elis. It follows that at least from the Classical period the entire area was organised in *poleis*, much of it admittedly in the exceptionally large *polis* of Elis.

II. The *Poleis*

245. Alasyaion (Alasyeus) Map 58. Unlocated. Type: C. The toponym is *Ἀλασσαῖων* (MSS at Strabo 8.3.10, usually amended); the city-ethnic is *Ἀλασσεύς* (>*Ἀλασῶς* (nom. pl.) in Siewert (1991) no. 3 = *IvO* 258 (C5m–C4e)); Steph. Byz. 72.17–20 s.v. *Ἀλήσιον* suggests *Ἀλησιεύς*. Ale(i)sion, a Homeric place in Elis (*Il.* 2.617) with a hill or mound (*Il.* 11.757), was later (Strabo 8.3.10) identified with Alasyaion, described by Strabo as a *chora* around Amphidolia (no. 247) with a monthly market and previously a *polis* of Pisatis. In C5l or C4e the Alasyeis and the Akroreioi made a joint inscribed dedication at Olympia (Siewert (1991) no. 3); the dedication with collective ethnics suggests that Alasyaion may at the time have been a dependent *polis* of Elis (no. 251). It was presumably situated at the border of Pisatis and Amphidolia, and therefore probably not adjacent to Akroreia. According to Steph. Byz. 72.17–20 its founder was Alesios, son of Skillous or of Gargettos.

246. Alion Map 58. Unlocated. Type: B. The toponym *Ἄλιον* (or *Ἄλιος*) occurs only in Diod. 14.17.8 (following MS P, most editors print *Ἄλιον*). It was a perioikic community. It is described retrospectively as a *polis* (in the political

sense) of the Akroreians *c.*400 (Diod. 14.17.8); Xen. *Hell.* 7.4.14 refers collectively to the *poleis* of the Akroreians in 365, without naming Alion (*supra*, on Akroreia).

247. Amphidolia (Amphidolos) Map 58. Unlocated. Type: A. The toponym is Ἀμφιδολία, ἡ (Strabo 8.3.24) and Ἀμφιδολίς, -ίδος, ἡ (Strabo 8.3.10). The city-ethnic is Ἀνφίδολος (Siewert (1991) no. 2 (C5–C4e)) or Ἀμφίδολος (Xen. *Hell.* 3.2.25). Though not precisely located, Amphidolia lay in hilly territory west of Olympia; Meyer (*RE* xx. 1739) suggests that it did not extend into the upper valley of the river Lestenitsa, leaving a route on purely Eleian territory between Elis (no. 251) and Pisatis. In Strabo's day Margalai (presumably = Marganeis) was in Amphidolia (8.3.24), and Alasyaion (no. 245) near it (8.3.10).

In the years following *c.*400 it is seen to function as a *polis*: it is described as a (perioikic) *polis* in the political sense at Xen. *Hell.* 3.2.23 and 30, and the Amphidoloi made a dedication at Olympia in C5 or C4e (Siewert (1991) no. 2), which provides an instance of the external collective use of the city-ethnic, as does Xen. *Hell.* 3.2.26 (cf. 4.2.16, where it is used to name a military contingent). It is not known when Amphidolia became subordinate to Elis, but presumably no later than adjacent Pisatis. Like all Eleian *perioikoi*, it was freed at the end of the Eleian–Spartan war *c.*400 (Xen. *Hell.* 3.2.25, 30; Roy (1997) 299–304). It probably then joined the Peloponnesian League, and in 394 sent troops (*sphendonetai*) to fight with Sparta (Xen. *Hell.* 4.2.16). Its later history is unknown; it was presumably regained by Elis *c.*362 if not before (cf. Xen. *Hell.* 6.5.2 with Tuplin (1993) 183–85).

248. (Anaitoi) Map 58. Unlocated. Type: B. The toponym is not attested. The city-ethnic is Ἀναίτο[ς], known only from *IvO* 10 (*c.*475–450), where the collective and external use is attested in a 50-year treaty of friendship with the equally unknown Metapioi (no. 260) (Minon (1994) no. 10; *Staatsverträge* 111). Since the treaty is in Eleian dialect, both the Anaitoi and the Metapioi presumably belong to the region of Elis, but may have been located anywhere in the region, either within the Eleian state proper or in perioikic territory north or south of the river Alpheios. The existence of an ethnic and the capacity to enter into a treaty with another community strongly suggest that the Anaitoi were a *polis*. Failure to observe the treaty is to be sanctioned by the *proxenoi* and the *manteis* (in Eleian *mantier*), and ultimately by the *iaromaoi*: these are all known as Eleian officials at Olympia, but do not necessarily imply direct subordination to Elis (251). Cf. Metapioi (no. 260).

249. (Chaladrioi) Map 58. Unlocated. Type: B. The toponym is not attested. The city-ethnic is Χαλάδριος known only from *IvO* 11 = Minon (1994) no. 9, an agreement of C5e in which the internal and collective use is attested: hereditary Chaladrian citizenship is granted to a man called Deukalion, together with status equal to a *proxenos* and to a *damiorgos* (Gauthier (1972) 42–44) and possession of “the land in Pisa”. The community evidently had officials with the titles *proxenos* and *damiorgos*. The *damos* had considerable authority: the final clause in the decree is to apply “unless the *damos* decides otherwise”. There seems no doubt that the Chaladrioi formed a *polis*. The text is in Eleian dialect, but the community is otherwise entirely unknown, and could belong anywhere in the region, either within the Eleian state proper or in perioikic territory north or south of the river Alpheios. For the suggestion that the land which the Chaladrioi evidently controlled in Pisa was land for camping during Olympic festivals, available for use at other times, see Roy (1997) 313 n. 31: control of such a plot need not mean that the territory of the Chaladrioi was in or even very close to Pisatis.

250. Dyspontion (Dyspontios) Map 58. Unlocated. Type: C. The toponym is Δυσπόντιον, τό (Strabo 8.3.32; Tryphon fr. 15.5). The city-ethnic is Δυσποντεύς (Tryphon fr. 15.5) or Δυσπόντιος (Paus. 6.22.4 (rC6f)).

It is called a *polis* in the urban sense in Tryphon fr. 15.5 = Steph. Byz. 245.19; Paus. 6.22.4 provides an instance of the external collective use of the city-ethnic in reference to C6f.

Strabo 8.3.32 puts it in Pisatis on the mountain road from Olympia to Elis (no. 251) (*RE* xx. 1737; *contra* Baladié (1978) 114), but does not call it one of the eight *poleis* of Pisatis. It produced one or two early Olympic victors (Phlegon (*FGrHist*) 257 fr. 4 (r772) and possibly fr. 6 (r672), where the text is disturbed), described as “Eleian(s) from Dyspontion”. Paus. 6.22.4 reports that it was a perioikic community, though presumably not Pisatan since it joined Pisa in revolt against Elis *c.*570, and was destroyed. Strabo 8.3.32 says that Dyspontion was destroyed and that most of its inhabitants emigrated to Epidamnos (no. 79) and Apollonia (no. 77). There is no evidence of its later existence. Because of the Olympic victors, it may have been a *polis*. Dysponteus (or Dyspontos, Tryphon fr. 15.5), son of Oinomaos, was the oecist of Dyspontion (Paus. 6.22.4).

251. Elis (Eleios) Map 58. Lat. 21.20, long. 37.55. Size of territory: 5 (not precisely known, but in excess of 1,000km²). Type: A. The toponym is in local dialect *Fâλις* (*SEG* 12

371.38), elsewhere Ἄλις (Pind. *Ol.* 1.78; *SEG* 27 1194 (c.335)) or Ἡλῖς, -ιδος, ἦ (Hom. *Il.* 2.615; Pl. *Hp. mai.* 281A; Xen. *Hell.* 3.2.23). The city-ethnic is in local dialect Φαλειός (*IvO* 2) or rarely on coins ΑΛΕΙΟΝ (Seltman (1921) 30 no. 120), elsewhere Ἄλειος (Pind. *Isthm.* 2.24) or Ἡλειός (Hom. *Il.* 11.671; Xen. *Hell.* 3.2.25). On distinguishing the Eleian ethnic from that of Alea (no. 265) in Arkadia, see Nielsen (1996) 118.

Elis is attested as a *polis* both in the urban sense (Xen. *Hell.* 3.2.27, 7.4.14; Ps.-Skylax 43) and in the political sense (Hdt. 8.73.2; Thuc. 5.47.3 (cf. *IG* I³ 83); Gorgias fr. 10 (= Arist. *Rh.* 1416^a1–4); Pl. *Hp. mai.* 281C; Xen. *Hell.* 3.2.27, 7.4.17). *Politai* is used of the citizens by Hdt. 2.160 and Pl. *Hp. mai.* 282E and Xen. *Hell.* 7.4.16. There was an Aristotelian *politeia* of the Eleians (Heracl. Lemb. 21; Arist. fr. 499–500); cf. Plut. *Adv. Col.* 1126C (reform of the *politeia* of the Eleians by Plato's pupil Phormio) and Arist. *Pol.* 1306^a16–19 (*politeia* as conduct of state business among the Eleians). *Asty* is used of the town Elis by Xen. *Hell.* 3.2.26, 7.4.32 (cf. 3.2.27: τὰ προάστια).

The collective use of the city-ethnic is found internally in Siewert (1991) no. 4 (C6l) and on C6l–C5 coins (*infra*) and externally in ML 27.9 (479–478); Hecat. fr. 25.2; Hdt. 4.148.4; Thuc. 1.27.2. The individual use is found internally in *IvO* 271 = *LSAG* no. 19 (c.450–425?) and externally in Hdt. 5.45.2; Pl. *Ap.* 19E; Dem. 18.295; *IG* II² 8528 (C4e); *IG* VII 414.22–23, 25–26 (C4m); and *IG* II² 3827 (C4m). Elis is implicitly described as *patris* at Dem. 18.291–92 (cf. Hdt. 6.127.1–4 implicitly describing it as *patre*).

The territory was called Ἡλῖς (already in Hom. *Il.* 2.615; also Hdt. 6.70.2; Thuc. 2.66.1), and also Ἡλεῖα (Hdt. 4.30.1; Thuc. 2.25.3). Κοιλὴ Ἡλῖς was used for the area of the valley of the river Peneios (first by Thuc. 2.25.3), believed to be the area originally controlled by the Eleians (cf. Arist. fr. 500). The territory was at least sometimes understood as including perioikic areas: Thuc. 5.34.1, putting Lepreon (no. 306) on the border of Lakonike and Eleia, must include in Eleia at least Triphylia north of Lepreon, if not Lepreon itself; and Diod. 14.17.8 (r400) apparently includes Lasion (no. 256) in Elis. There is, however, no reason to suppose that perioikic territory was formally incorporated into the Eleian state proper in the Classical period (Roy (1997) 297–98; cf. Roy (1999)).

Apart from the town of Elis, there were numerous other settlements in Eleia, including urban sites, though their status is often not clear. Within the Eleian state proper Alasyaion (no. 245), Kyllene (no. 254) and Pylos (no. 263) may have been (dependent) *poleis*, while other settlements are reliably or plausibly reported especially at Harpina,

Herakleia and Salmone (all in Pisatis), and at Hyrmine, Myrtauntion and Pheia. There was also the sanctuary at Olympia, run by Elis at least from C6. Elis also controlled perioikic communities north of the river Alpheios at Amphidolia (no. 247), Letrinoi (no. 258), Marganeis (no. 259), Lasion (no. 256) and (in Akroreia) Alion (no. 246), Eupagion (no. 252), Opous (no. 261) and Thraistos (no. 264), besides numerous perioikic communities in Triphylia south of the Alpheios (on which see Nielsen, in this volume 540–46).

There is very limited evidence on population size: 3,000 hoplites from Elis are recorded in 418 (Thuc. 5.58.1, 75.5) and 3,000 jointly from Elis, Triphylia, Akroreia and Lasion in 394 (Xen. *Hell.* 4.2.16).

Though there is no hard evidence of a Spartan–Eleian alliance before the Persian Wars (Hdt. 8.72, 9.77.3; Paus. 5.4.7), Elis may have been among the earliest members of the Peloponnesian League (Tausend (1992) 167); membership lasted till Elis quarrelled with Sparta (no. 345) over Lepreon in 420 (Thuc. 5.31.1–5, 34.1). War between Sparta and Elis c.400 (Roy (1997) 283–84, 299–304) was ended by a treaty under which Elis evidently rejoined the Peloponnesian League, since it is seen as Sparta's ally in 394 (Xen. *Hell.* 4.2.16), 382 (Diod. 15.31.2) and 374 (Xen. *Hell.* 6.2.3). Elis' membership of the League finally ended in the aftermath of Leuktra (Roy (1994)). C.500 Elis made a treaty, for 100 years and agreeing *inter alia* mutual military support, with the otherwise unknown Ewaoioi (no. 253) (*IvO* 9), in which Elis was the superior partner (Roy (1998) 367–68; Roy and Schofield (1999)). Treaties of *symmachia* with Corinth (no. 227), Argos (no. 347) and Lepreon (no. 306) are mentioned at Thuc. 5.31.1; Elis formed a major alliance in 420–418 with Athens (no. 361), Argos (no. 347) and Mantinea (no. 281) (Thuc. 5.47; *IG* I³ 83), and in 370 an alliance with Arkadia, Argos (no. 347) and Thebes (no. 221) (Diod. 15.62.3; Dem. 16.12, 19–20; see Roy (1994) 190), which broke down when Elis and Arkadia went to war in 365 (Xen. *Hell.* 7.4.12; Diod. 15.77.1–2). *IG* II² 112 (362/1) records a treaty of *symmachia* between Elis and Athens (no. 361), Arkadia, Achaia and Phleious (no. 355). Elis was a member of the League of Corinth set up by Philip II in 338–337 (cf. RO 76; Hammond and Griffith (1979) 623–46).

A supposed early synoecism of Elis (Paus. 5.4.3) by Oxylos seems unhistorical (so rightly Moggi, *Sin.* 160). In 471 (Diod. 11.54.1), “after the Persian Wars” (Strabo 8.3.2), the Eleians were synoecised (*συνωκίσθησαν*, both authors). Diodorus says the Eleians were synoecised from numerous small *poleis* into one; Strabo that they had previously lived *κωμηδόν*,

and then came together into the *polis* Elis from many *demoi*. Strabo also says that the Eleians were synoecised from the *perioikides*, a term presumably used in a purely local sense, not suggesting that subordinate perioikic communities were incorporated (Roy (1997) 285–89). There may be other references to this synoecism in Ps.-Skylax 43 (a *συνουκία πόλεων* in Elis) and in Leandr(i)os (*FGrHist* 492) fr. 13 (Eleians lived in *komai* and were then gathered into one *polis*). The ancient sources do not clarify the nature of the synoecism (Moggi, *Sin.* 157–66; Roy (1997) 286–89, (2002b)). A unitary Eleian state certainly existed before 471, as did the town Elis (Eder and Mitsopoulos (1999); see also Yalouris (1994) on the town in the Archaic period and later). Political restructuring within Elis may have accompanied the synoecism: see Gehrke, *Stasis* 55, 365–67; but note the scepticism of Walter (1993) 118 and n. 19, 124 and n. 55. Strabo's report (8.3.15) that Hypana in Triphylia was synoecised into Elis must—if accurate—refer to a period after C₃ (Moggi, *Sin.* 164 n. 18).

The following Eleian refugees are attested: commanders exiled during the Persian Wars (Hdt. 9.77.3); oligarchs, after a failed oligarchic *coup* c.400 (Xen. *Hell.* 3.2.27–29; cf. Paus. 3.8.4–5); democrats driven out of the town of Elis in 365 (Xen. *Hell.* 7.4.16, 26); Eleians exiled by oligarchs in 343 (Dem. 19.260, 294; Paus. 4.28.4, 5.4.9; Diod. 16.63.4–5; cf. Dem. 9.27 and 18.295); and pro-Makedonian exiles restored after Alexander overcame Thebes in 335 (Arr. *Anab.* 1.10.1; presumably exiled when Elis tried to leave the League of Corinth on the death of Philip (Diod. 17.3.5, cf. 17.8.5)). C₃.350(?) a law was passed (supplementing an earlier text) about the return of exiles and the treatment of their relatives and property (*DGE* 424). In 365 there were Arkadian exiles in Elis (Diod. 15.77.1).

Elis took part in the Persian Wars (ML 27.9; cf. Hdt. 8.72.3, 9.77.3). Eleian hoplite contingents are recorded in 418 (Thuc. 5.58.1) and 394 (Xen. *Hell.* 4.2.16); 300 *logades* are mentioned by Thuc. 2.25.4; 300 was also the number of the special guard which is attested in C₄ (Xen. *Hell.* 7.4.13, 16, 31) and whose commander is mentioned at Xen. *Hell.* 7.4.31 (Pritchett (1974) 223). Commanders (*hegemones*) are mentioned at Hdt. 9.77. A *hipparchos* is attested at Xen. *Hell.* 7.4.19, and *hippeis* are mentioned at *Hell.* 7.4.16, 26. An Eleian navy is mentioned or implied by Thuc. 1.27.2, 46.1, 2.9.3 (cf. Diod. 14.34.1); it was presumably served by the harbours at Pheia (Thuc. 2.25.4) and Kyllene (2.84.5). The Eleian Teutiaplos was evidently a commander in the Peloponnesian fleet in 427 (Thuc. 3.29.2).

An Eleian embassy went to Corinth (no. 227) and then Argos (no. 347) in 421 (Thuc. 5.31.1, cf. 5.44.2); for Eleian

diplomatic activity cf. Hippias' claims to be preferred as ambassador (Pl. *Hp. mai.* 281A) and Hdt. 2.160.1 and Xen. *Hell.* 7.1.38. A quarrel between Elis and Lepreon (no. 306) was arbitrated by Sparta (no. 345), but Elis refused to accept the verdict (Thuc. 5.31.3; Roy (1998)). In C₅f, Elis itself passed a verdict in a case of unknown nature, involving Athens (no. 361), Thespiiai (no. 222), the Boiotians and the Thessalians (*SEG* 26 475, 31 358).

The earliest award of proxeny by Elis (with a guarantor) is recorded by an unpublished inscription of c.550–500 (Marek (1984) 23; Taeuber (1991) 112). An inscription of C₅m records an award of citizenship (Taita (2001) 57–60). If the Chaladrians (no. 249) were a community within Elis proper, the award of Chaladrian citizenship (*IvO* 11 (c.500–475); Minon (1994) no. 9) presumably made the recipient an Eleian citizen; but the Chaladrians may have been perioikic.

Elis announced the holding of the Olympic Games, and the beginning of the Olympic truce (Rougemont (1973); Jameson *et al.* (1993); cf. Thuc. 5.49.1–4). An unpublished inscription of C₅m records an award of citizenship and *theorodokia* (Taeuber (1991) 112). The Tenedian honorand of *IvO* 39 (C₃ or C₂e) was hereditary *theorodokos* of Elis, and entertained *theoroi*. It may have been Elis which developed the system of *theorodokia* (Perlman (2000) 18–20), naturally in order to facilitate the *epangelia* for the Olympics. Hippias of Elis dated the first Olympic Games to 776, but archaeological evidence suggests that the Games gained major popularity only from C₈l (Morgan (1990) 26–56). Besides that of Zeus, numerous other cults developed at the sanctuary of Olympia (Paus. 5.15.3–10). There was also an important oracle of Zeus (Jacquemin (1999–2002), hereafter J.) on Paus. 5.13.11). The first temple at Olympia was that of Hera (c.600) (J. on Paus. 5.16.1), followed by the temple of Zeus in the second quarter of C₅ (J. on Paus. 5.10.2–12.8). No earlier than C₅ the shrine of Pelops (Pelopion) was surrounded by a hexagonal enclosure, and a monumental porch was added in C₄ (J. on Paus. 5.13.1). The last temple built in the Altis was the Metröon (C₅l) (J. on Paus. 5.20.9). All these buildings stood within the defined sacred area, the Altis (see J. on Paus. 5.10.1). On a terrace north of the Altis twelve (?) treasuries were built by different Greek *poleis* to store offerings: the earliest was that of Gela (no. 17) (c.600), while others belonged to Megara (no. 225), Metapontion (no. 61), Selinous (no. 44), Kyrene (no. 1028), Sybaris (no. 70), Byzantion (no. 674), Epidamnos (no. 79), Syracuse (no. 47), Sikyon (no. 228) and an unknown state (J. on Paus. 6.19.1–15; there are difficulties reconciling Pausanias and the archaeological findings). Two buildings were built close to each

other south of the Altis, the older c.550–500 and the other C5e, and they were joined by further construction in C4; they have been identified as the *bouleuterion*, though it has been doubted whether that was their original function (Gneisz (1990) 340–1; J. on Paus. 5.23.1; note the reservations of Morgan and Coulton (1997) 112–13). North of the Altis a *prytaneion* was constructed in C5e (Miller (1978) 86–91, 235–239). The original *stadion* was moved east out of the Altis by C6m, and developed and extended later (Mallwitz (1988)). Classical Greeks believed in early conflict between Elis and Pisatis for control of Olympia, but it is difficult to construct a reliable narrative from the surviving accounts: at any rate Elis effectively controlled Olympia by some time in C6. Both the town of Elis and the Olympic sanctuary served as political centres for the polis Elis from the C6 onwards. Various Elean officials (e.g. the *hellanodikai*) carried out duties at both places, and their duties concerning the sanctuary and the Games overlapped with their other responsibilities (Minon (1994) ii. 508–9; Roy (1999) 159, (2002b) 257). The use of both Elis and Olympia for political purposes made the Elean *polis* remarkably bicentral. The sanctuary, though under Elean control and sometimes exploited by Elis (Roy (1998)), attracted Greeks from other communities in large numbers, and received a multitude of dedications (described by Paus.) from both individuals and *poleis*, including armour and weapons dedicated to celebrate victory in war. Texts of documents such as inter-state treaties were displayed there, and the large gatherings at the Games were an occasion for political speeches and pronouncements to the Greek world. The sanctuary's Panhellenic character of course made control all the more valuable to Elis.

As civic subdivisions, twelve *phylai* are attested in 368. The number was reduced to eight in 364 because of territory lost in war with Arkadia (Paus. 5.9.4–6), and apparently remained at eight (Paus. 5.16.7). See Jones, *POAG* 142–45, and Roy (1997) 297–98.

The form of constitution changed several times in Elis (Gehrke, *Stasis* 52–57, 365–67; cf. Bultrighini (1990)). In C6 an extreme oligarchy was largely controlled by a few families (Arist. *Pol.* 1306^a13–19), though probably later became more moderate (but, *pace* Gehrke, the Chaladrian decree *IvO* 11 may not be directly relevant). Elis then became democratic, possibly in the synoecism of 471 (Diod. 11.54.1; Strabo 8.3.2), and—despite an attempted oligarchic *coup d'état* c.400 (Xen. *Hell.* 3.2.27–29; cf. Paus. 3.8.4–5)—retained democratic constitutional forms until 365, when oligarchs took control (Xen. *Hell.* 7.4.15–16). Reconciliation between oligarchs

and democrats (*DGE* 24) may be dated c.350, and may have been followed by constitutional reform by Plato's pupil Phormio (Plut. *Adv. Col.* 1206C). Probably in 343 there was an oligarchic *coup d'état* (Dem. 19.260, 294; Paus. 4.28.4, 5.4.9; Diod. 16.63.4–5; cf. Dem. 9.27 and 18.295). After Philip's death Elis tried to break away from the League of Corinth (Diod. 17.3.5, cf. 17.8.5), apparently exiling pro-Makedonians; after Alexander overcame Thebes, Elis took back these exiles (Arr. *Anab.* 1.10.1).

On public enactments, see Minon (1994) ii. 514–16. Examples of laws are *IvO* 4 (Minon (1994) no. 6 (c.500–480), law concerning the *theokolos*); *IvO* 2 (Minon (1994) no. 14 (c.475–450), decree concerning Patrias); *DGE* 424 (c.350(?), law concerning exiles). Lawcourts are attested in an inscription of C6 found at the town of Elis (Siewert (1994b) and (2001)). It is notable that Olympian Zeus was often involved in sanctions for offences (e.g. *IvO* 2, 3; Minon (1994) ii. 516–26); this involvement extended to the treaty with the Ewaoioi (no. 253) (*IvO* 9; Roy and Schofield (1999)), and to the penalty imposed on Sparta (no. 345) for alleged breach of the Olympic truce in 420 (Thuc. 5.49.1–50.4; Roy (1998)). Elis also held Olympic tribunals, delivering judgments and penalties (Thuc. 5.49.1–50.4 (cf. Hyp. fr. 111–12); Siewert (1981); Minon (1994) ii. 490–95; Roy (1998)).

As eponymous officials (Sherk (1990b) 233–34), *damiorgoi* are attested in *IvO* 17 (C5l–C4e, number unknown), *SEG* 15 241 (C4, two *damiorgoi*), *DGE* 424 (C4m, one *damiorgos*). Cf. *IvO* 39 (C3 or C2e), with eponymous *hellanodikai*.

On the *boule*, see Minon (1994) ii. 509–11. There was an early oligarchic council of ninety *gerontes*, in which membership was for life, and election was dominated by a few families so that, even among the oligarchs, few gained membership (Arist. *Pol.* 1306^a13–19). By c.525–500 there was a council of 500 (*IvO* 7 = Minon (1994) no. 1; cf. reference to a council in *IvO* 3 = Minon (1994) no. 5 (c.500–475)), presumably later replaced by the council of 600 found in 420 (Thuc. 5.47.9).

On other officials, see e.g. Thuc. 5.47.9 (*demiourgoi* and *thesmophylakes*) and Minon (1994) ii. 473–509. In *IvO* 9 (c.500) *τελεστα* appears as a generic term for an official, as opposed to an ordinary citizen (*ἴετας*). Officials called *mastroi* had powers to review actions of other magistrates (*IvO* 2 (c.475–450)) and judicial decisions (*SEG* 31 358 (c.475–470)). Among other officials the *hellanodikai* were important, but the development of the office is not clear (Jones, *POAG* 142–45 with nn. at 152–53; Bultrighini (1990) 146–65); the original title was possibly *diaitater* (Ebert and Siewert (1999)). The administration of Olympic affairs

overlapped considerably with other functions of Eleian officials (Minon (1994) ii. 508–9; Roy (1999) 159).

On the assembly, see Minon (1994) ii. 511–13. There are references to meetings of an assembly as *damos plethyon* in *IvO* 7 (= Minon (1994) no. 1 (c.525–500)) and 3 (= Minon (1994) no. 5 (c.500–475)). There is a reference to a decision of the *damos* in *IvO* 13 (= Minon (1994) no. 12 (c.475–450)), and in *IvO* 7 the *damos* has power to take a definitive decision in jurisdiction.

For the public architecture of Elis, see the description of the town Elis by Paus. 6.23.1–26.3. Architectural fragments suggest that there were several monumental structures already in the Archaic period (Yalouris, *PECS* 299–300 (“Elis”); Eder and Mitsopoulos (1999) 25–35). While at least some functions of the state took place at the town Elis by C6 (Siewert (1994*b*)), there were also buildings for such purposes at Olympia, which may have been the major seat of Eleian government in C6 (Hansen and Fischer-Hansen (1994) 86–89).

There was a *bouleuterion* at Olympia (see Gneisz (1990) 340–41, dating its first phase to C6s). On the C5e *prytaneion* at Olympia, see Miller (1978) 86–91, 235–39. There was an agora at Elis (Xen. *Hell.* 3.2.28 (r c.400); Martin (1951) 311–13, cf. 241–44 on two areas at Olympia which he saw as agoras). On the south stoa (c.450–425) and the west stoa (C5 or early C4) at Elis, see Coulton (1976) 237; at Olympia there were the Echo Stoa of c.340–330 (Jacquemin (1999–2002) on Paus. 5.21.17), and others. At Elis the temple of Athena on the acropolis was probably erected in the Archaic period (Yalouris, *PECS*). The cult site at Olympia was already well established in the Archaic period (Morgan (1990) 26–56; Sinn (1994) on early developments); see also Yalouris, *PECS* 646–650. The theatre at Elis was first built c.300 (Glaser (2001); *TGR* ii. 207). On *gymnasia* at Elis, see Xen. *Hell.* 3.2.27 (c.400); on the *gymnasion* at Olympia, see Wacker (1996), dating the first phase (p. 24) to C4 or C3e.

On a plan of settlement in the town of Elis from the Classical to the Roman periods the area of settlement is shown as between 4 and 5 km², extending north of the river Peneios (Yalouris (1972*b*) 141; see also Yalouris (1994)). Xen. *Hell.* 3.2.27 says that c.400 the *gymnasia* were near the suburbs (*proastia*), but on Yalouris’ plan they are shown near the centre of the area of settlement, which may have grown after c.400. The hill Kaloskopi became the acropolis of Elis (Yalouris, *PECS*: cf. Xen. *Hell.* 7.4.15 (r365) and Paus. 6.26.3), but was apparently not fortified until 312 (note the wording of Diod. 19.87.2–3). The town of Elis was unwallled c.400 according to Xen. *Hell.* 3.2.27 (Roy (1997) 299–304). No walls

are shown on Yalouris’ plan, and no remains of walls have been reported from subsequent archaeological investigation.

The most important cult at Elis was that of Zeus Olympios, under Eleian control at least from C6 (Siewert (1987–88) 7), and Elis organised the Olympic festival and the Heraia at Olympia (*KIPauly* iv. 286–88, ii. 1031–32). On Eleian victors at Olympia, Delphi and Nemea, see Crowther (1988). Eleians did not participate in the Isthmian Games (e.g. Paus. 5.2.2). Communal dedications by the Eleians at Olympia are attested in C6 (Siewert (1991*b*) nos. 4–8) and C4 (*DGE* 423); on the surprising rarity of Eleian dedications at Olympia, see Taeuber (1991) 113.

Elis had its own calendar, with some month names not known from elsewhere (Samuel (1972) 95–97, 284, 288, 294; Trümpy, *Monat.* 199–201).

From C6l Elis struck silver coinage on the Aiginetan standard, mainly staters but also smaller denominations. From C5l bronze coins were also struck. Most coins carried the Eleian city-ethnic (or an abbreviation), but from C5e coins were also struck with the legend *OΛΥΜΠΙΚΟΝ* (spelt with kappa or koppa), clearly in connection with Olympic festivals. Frequent types were Olympian Zeus and his attributes (thunderbolt, eagle), and also Hera (Head, *HN*² 419–25; Seltman (1921) on silver coinage only; Kraay (1976) 103–7; Franke (1984); *SNG Cop. Phliasia-Laconia* 352–418). There is no reason to accept Seltman’s view that Eleian coinage was essentially a “temple coinage” (Warren (1962); Nicolet-Pierre (1975)).

Elis established four colonies in southern Epeiros: Boucheta (no. 90), Elateia (no. 94), Pandosia (no. 104) and Batiai (no. 88) (Theopomp. fr. 206; Dem. 7.32; Strabo 7.7.5). Though not precisely dated, the foundations are assigned to C8–C6 (Hammond (1967) 427, 478; Dakaris (1971) 16, 30–33).

Varying legendary accounts of the foundation of Elis existed in the Classical period, giving prominence to the role of Oxylos, but also reflecting in one way or another Elis’ relations with Aitolia (cf. Hdt. 8.73), Elis’ relations with Sparta, and Elis’ struggle with Pisa for control of Olympia. The accounts are heavily affected by political considerations of the Classical period. See Sordi (1994).

252. Eupagion Map 58. Unlocated. Type: B. The toponym *Ἐυπάγιον* occurs only in Diod. 14.17.8 (all modern editors wrongly accept Wesseling’s emendation: *Ἐπιτάλιον*, impossible because it lay south of the Alpheios). A city-ethnic is not attested. It was a perioikic community. It is

described as a *polis* (in the political sense) of the Akroreians *c.*400 (Diod. 14.17.8); Xen. *Hell.* 7.4.14 refers collectively to the *poleis* of the Akroreians in 365, without naming Eupagion (*supra*, on Akroreia).

253. (Ewaoioi) Map 58. Unlocated. Type: B. The toponym is not attested. The city-ethnic is *Ἐφαιοίος* (*IvO* 9; Roy and Schofield (1999)); the ethnic had previously been read as *Ἐρφαοίος* and referred to Heraia (no. 274) in Arkadia, or as *Ἐυφαιοίος* and referred to an unknown Eleian community; but see Roy and Schofield (1999). The inscription attests the collective and external use of the city-ethnic.

The community is known only from *IvO* 9 of *c.*500, a 100-year alliance with Elis (no. 251). The alliance may well be an example of the hegemonial alliance by which Elis structured its relations with its *perioikoi* (Siewert (1994a); Ebert and Siewert (1999); Roy (1997) 292–95); if so, the Ewaoioi will have been a perioikic *polis* somewhere in the region of Elis.

254. Kyllene (Kyllenios) Map 58. Lat. 21.05, long. 37.55. Size of territory: unknown, presumably 1 or 2. Type: A. The toponym is *Κυλλήνη*, ἡ (Thuc. 1.30.2; Ps.-Skylax 43). The external and individual use of the city-ethnic *Κυλλήνιος* occurs in Hom. *Il.* 15.518), but is not found in Classical sources. Called a *polis* (and *limen*) only by Ps.-Skylax 43 (Flensted-Jensen and Hansen (1996) 148), Kyllene is often called *epineion* as a base for the Eleian fleet (e.g. Thuc. 1.30.2). By *c.*400 it was fortified (Xen. *Hell.* 3.2.30; Roy (1997) 299–304; cf. Diod. 19.66.2 (r314); Polyb. 5.3.1 (r218)). Strabo 8.3.4 calls it a *kome metria*, with a remarkable ivory statue of Asklepios; Paus. 6.26.4 mentions sanctuaries of Asklepios and Aphrodite and a popular cult of Hermes. On its location and archaeological remains, see Servais (1961), who makes a convincing case for identifying it with the physical remains immediately adjacent to modern Killini (despite the lack of conclusive documentary evidence). There was a town on that site at least from C5 to the Roman imperial period; there is no direct evidence of ancient fortifications in place, but Servais (1961) 140) found numerous large blocks of stone which he identified as having once belonged to ancient fortifications. Kyllene had cults of Asklepios (Strabo 8.3.4; Paus. 6.26.4), Aphrodite (Paus. 6.26.4) and Hermes (Paus. 6.26.4). Only the reference in Ps.-Skylax 43 suggests that Kyllene had the status of a *polis*.

255. Laris(s)a Map 58. Unlocated, not in *Barr.* Type: A. Larisa was situated in the borderland between Elis (no. 251) and Achaian Dyme (no. 234) according to Theopomp. fr. 386, who calls it a *polis* in the urban sense. The location may

be confirmed by a reference in the MSS of Xen. *Hell.* 3.2.23 (*κατὰ Λάρισσαν*) to a toponym “Larissa” on a route through Achaia into Elis, though modern editors generally follow Portus’ emendation to *κατὰ Λάρισσον*, referring to the river between Achaia and Elis (Strabo 8.7.5). Nothing else is known about this Laris(s)a (cf. Hansen (2000) 193), and, according to the references in Theopompos and Xenophon, it could have been in either Achaia or Elis.

256. Lasion (Lasionios) Map 58. Lat. 21.45, long. 37.50. Size of territory: unknown but probably 2. Type: A. The toponym is *Λασιών*, ὁ (Xen. *Hell.* 3.2.30). The city-ethnic is *Λασιώνιος* (Xen. *Hell.* 4.2.16). Lasion is described by Polyb. 4.73.1 (r219/18) as a *polis* in the urban sense; Xen. *Hell.* 3.2.23, 30 describes it as a (perioikic) *polis* in the political sense. The external collective city-ethnic is used by Xen. *Hell.* 4.2.16 (r394) for a military contingent; the external individual use is attested in the Hellenistic period (Euphorion of Chalkis fr. 47, de Cuenca, *apud* Ath. 44F).

It is not known when Lasion became perioikic: it certainly was by the Eleian–Spartan war of *c.*400, after which it became independent (Xen. *Hell.* 3.2.30) and probably joined the Peloponnesian League, sending troops (hoplites) to support Sparta (no. 256) in 394 (Xen. *Hell.* 4.2.16). It was claimed as Arkadian *c.*400 (Xen. *Hell.* 3.2.30), and joined the Arkadian League in the 360s (Xen. *Hell.* 7.1.26, where “the others” must refer to Lasion). In 365 it was captured by Elis (no. 251), or Arkadian exiles backed by Elis, but was soon recaptured by Arkadia (Xen. *Hell.* 7.4.12–13; Diod. 15.77.1). The site has been identified (though without documentary proof) and examined but not excavated (Pritchett (1989) 28–30).

257. Lenos Map 58. Unlocated. Type: C. The community is known only from Phlegon (*FGrHist* 257) fr. 7, quoted by Steph. Byz. 413.17–18 for the toponym *Λήνος* and the city-ethnic *Ληναίος*.

A *Ληναίος* was Olympic victor in 588 (Phlegon (*FGrHist* 257) fr. 7 = Steph. Byz. 413.17–18). Steph. Byz. 413.17 describes it as a *chora* of Pisatis, but it may have been a *polis* because of the Olympic victor, whose ethnic was presumably given by Phlegon.

258. Letrinoi (Letrinios) Map 58. Probably lat. 21.25, long. 37.40. Size of territory: unknown, presumably 1 or 2. Type: A. The toponym is *Λετρίνοι*, οἱ (Paus. 6.22.8) or *Λέτρινα*, ἡ (Lyc. *Alex.* 54). The city-ethnic is *Λετρίνιος* (Xen. *Hell.* 3.2.25), or *Λεδρίνιος* (Siewert (1991b) no. 9 (C6s)).

Letrinoi lay 120 stades from Olympia and 180 from Elis (no. 251) on the Olympia–Elis road through the plain (Paus.

6.22.8); locations near modern Ag. Ioannis (*RE* xii. 2148, xx. 1732–55) and near Pirgos (Sperling (1942) 85) have been suggested: Pirgos is more likely because Classical remains have been found there but not at Ag. Ioannis (Pirgos: *BCH* 108 (1984) *Chron.* 770 and McDonald and Hope Simpson (1972) 320–21 no. 717; Ag. Ioannis: *ibid.* 302–3 no. 306).

It is described as a (perioikic) *polis* in the political sense at Xen. *Hell.* 3.2.23, 30. The external collective city-ethnic is used on a C6s dedication at Olympia (Siewert (1991) no. 9), and by Xen. *Hell.* 3.2.25 and 4.2.16 ((r394) for a military contingent). When Letrinoi became perioikic is not known: it was certainly perioikic by the Eleian–Spartan war of c.400. It then became independent (Xen. *Hell.* 3.2.25, 30) and probably joined the Peloponnesian League, sending troops (*sphendonetai*) to support Sparta (no. 345) in 394 (Xen. *Hell.* 4.2.16). Elis probably recovered it by c.362 (cf. Xen. *Hell.* 6.5.2 with Tuplin (1993) 183–85). Paus. 6.22.8 says that it was originally a *polisma*, but in his day had only a few buildings with a temple and statue of Artemis Alpheiaia. According to Lyc. *Alex.* 53–55, the bones of Pelops were at Letrina. Letreus, son of Pelops, was oecist of Letrinoi (Paus. 6.22.8).

259. Marganeis (Marganeus) Map 58. At or near lat. 21.30, long. 37.40. Size of territory: unknown, presumably 1 or 2. Type: A. The toponym is *Μαργανείς* (Xen. *Hell.* 7.4.14) or *Μάργανα* (Diod. 15.77.4), and the same site is probably meant by *Μαργάλαι* (MS at Strabo 8.3.24) and *Μάργαλα* (Steph. Byz. 432.11–12). The city-ethnic is *Μαργανεύς* (Xen. *Hell.* 3.2.25).

It was apparently near Olympia (Xen. *Hell.* 7.4.14). A location between modern Floka and Strefi west of Olympia has been suggested (*KIPauly* iii. 1020), but the site with Classical material at Salmoni (formerly Koukoura) (McDonald and Hope Simpson (1972) 304–5 no. 308; see also *ibid.* 320–21 no. 722) would suit well.

It is called a (perioikic) *polis* in the political sense at Xen. *Hell.* 3.2.23–25, 30. The external collective use of the city-ethnic is found in Xen. *Hell.* 3.2.25, 4.2.16.

When Marganeis became perioikic is not known: it was certainly perioikic by the Eleian–Spartan war of c.400, after which it became independent (Xen. *Hell.* 3.2.25, 30). It then probably joined the Peloponnesian League. It sent troops to support Sparta (no. 345) in 394 (Xen. *Hell.* 4.2.16). In 371/0 Elis (no. 251) claimed that Marganeis should belong to Elis (Xen. *Hell.* 6.5.2); it was Eleian by 365, when it was captured by Arkadia (Xen. *Hell.* 7.4.14; Diod. 15.77.4), but was soon recaptured by Elis (Xen. *Hell.* 7.4.26). It was probably fortified; Xen. *Hell.* 7.4.14 notes that it was captured because of

treachery, and Strabo 8.3.24 says that it was not a natural stronghold, implying man-made defences. In Strabo's day (*ibid.*) it was part of Amphidolia (no. 247).

260. (Metapioi) Map 58. Unlocated, not in *Barr.* Type: B. The toponym is not attested. The city-ethnic is *Μετάπιος*, known only from *IvO* 10 (c.475–450), where the collective and external use is attested in a 50-year treaty of friendship with the equally unknown Anaitoi (no. 248) (cf. Miron (1994) no. 10; *Staatsverträge* 111). Since the treaty is in Eleian dialect, both Anaitoi and Metapioi presumably belong to the region of Elis, but may have been located anywhere in the region, either within the Eleian state proper or in perioikic territory north or south of the river Alpheios. The collective use of the city-ethnic and the capacity to enter into a treaty with another community strongly suggest that the Metapioi were a *polis*. On the difficulty of identifying the Classical community with the Mycenaean Me-ta-pa, see Roy (1997) 313–14. Cf. Anaitoi (no. 248).

261. Opous (Opountios) Map 58. Unlocated. Type: B. The toponym is *᾽Οπούς* (Diod. 14.17.8), also *᾽Οφίους* (*BCH* 45 (1921) 11.128). The city-ethnic is *᾽Οπούντιος* (*IG* v.2 368.135–7 (C3)). It was a perioikic community, perhaps to be identified with the ruins of an ancient acropolis at Gartsiko (*KIPauly* iv. 323 no. 2). It is described as a *polis* (in a political sense) of the Akroreians c.400 (Diod. 14.17.8); Xen. *Hell.* 7.4.14 refers collectively to the *poleis* of the Akroreians in 365, without naming Opous. There were two Opountian *proxenoi* at Kleitor in Arkadia at a date before 221 (*IG* v.2 368.135–37). Strabo 9.4.2 regarded Opous as insignificant, but noted that it renewed its kinship with the Opuntian Lokrians (*supra*, on Akroreia).

262. Pisa (Pisatas) Map 58. Unlocated. Type: B (in c.365–362). The toponym is *Πίσα*, ἡ (Ringel *et al.* (1999) a + c line 7 (365–362); Pind. *Ol.* 1.18). The city-ethnic is *Πισάτας* (*IvO* 36 = *DGE* 422 (365–362); Xen. *Hell.* 7.4.28).

It seems clear that in the Archaic period Elis struggled with an independent community Pisa; the ethnic *Πισαίος* is often used of it (e.g. Paus. 6.22.4), and Stesichoros (fr. 86, Page = Strabo 8.3.31, on which see Hansen (1998) 124–32) called it a *polis*; in its territory lay Olympia (where one of its own citizens was victorious in 724, according to Paus. 5.8.6 = *Olympionikai* 15), and it struggled with Elis for control of Olympia and of Pisatan territory generally. Elis eventually prevailed—perhaps c.570—and incorporated Pisatan territory into the Eleian state. Because reports of these events are distorted by later interests (Sordi (1994)), little is

known about the Archaic Pisatan state save that its rulers were remembered as kings or tyrants (on early Pisatan history, see *RE* xx. 1746–53). Pisa later broke away from Eleian control, and again formed an independent, or at least self-governing, state 365–c.362, but was then reabsorbed into the Eleian state. It merits inclusion in this Inventory primarily because it was quite possibly a *polis* in 365–c.362. No source explicitly calls it a *polis*, but the internal collective use of the city-ethnic is found in *IvO* 36 = *DGE* 422 (365–362) and the external collective use in *Xen. Hell.* 7.4.28; it issued coins and conducted a foreign policy (*infra*). However, several points should be borne in mind when assessing the form taken by the independent Pisatan state of 365–c.362. First, there is no reason to believe in the existence of a town Pisa (*infra*). Secondly, there were other towns in Classical Pisatis: Alasyaion (no. 245) is included in this Inventory, and Harpina, Herakleia and Salmons are listed above among the settlements not included, but a strong case can be made that yet other towns also existed in Classical Pisatis (Roy (2002a)). According to the criteria used in the present work to determine whether a community should be included, only Alasyaion merits inclusion: but the evidence on towns in Pisatis is such that there is a real possibility that several Pisatan towns were *poleis* in the Classical period (Roy (2002a)). If there were such *poleis*, then presumably during the Classical period, except for the period 365–c.362, they were subordinate *poleis* within the territory of Elis (cf. the cases of Kyllene (no. 254) and Pylos (no. 263), both within Elis but not in Pisatis). In that case the towns could have been subordinate *poleis* of Pisatis in 365–c.362. Alternatively, the independent state of Pisatis may have been not a *polis*, but a confederacy of several small *poleis*: in the limited surviving evidence there is no indication of a federal structure, but equally nothing to exclude it. Thus Pisatis in 365–c.362 may have been (1) a *polis* with no central town Pisa but with several towns not of *polis* status within its territory; or (2) a *polis* with no central town Pisa but with several subordinate *poleis* within its territory; or (3) not a *polis* but a confederacy uniting several small *poleis*. Despite this last possibility, Pisa is here included in the Inventory of *poleis* because its status as a *polis* is likely; but, if in fact a *polis*, it may have had a somewhat anomalous composition.

The extent of the territory of the independent Pisatan state is unknown, but presumably included some or all of the supposed eight *poleis* of Pisatis (see the Introduction and Alasyaion (no. 245) in this Inventory). Despite ancient attempts to argue for a town Pisa (countered by Apollodoros in *Strabo* 8.3.31), there is no reliable evidence, literary or

archaeological, for a town of that name, and no reason to believe in it (*KIPauly* iv. 866–67).

Pisa's claim to Olympia was still remembered c.400 (*Xen. Hell.* 3.2.31, where the other claimants, besides the Eleians, must be Pisatan). When war broke out between Arkadia and Elis (no. 251) in 365, the Arkadians occupied various pieces of Eleian territory (*Xen. Hell.* 7.4.14), including Pisa, which became an independent state. It was probably a puppet-state of the Arkadians: the Arkadians were able to draw on Olympic treasures (*Xen. Hell.* 7.4.33–34; *Diod.* 15.82.1), as the Pisatans themselves may have done for their gold coinage, and it was often said that the Olympic Games of 364, regarded as a non-Olympiad by the Eleians (*Diod.* 15.78.3), were held by the Pisatans and the Arkadians (*Xen. Hell.* 7.4.28–29; *Diod.* 15.82.1; *Paus.* 6.4.2) or even by the Arkadians alone (*Paus.* 6.8.3, 6.22.3; cf. *Xen. Hell.* 7.4.35). The Pisatan state none the less appears to have had the forms of an independent state. It is not heard of again after the battle of Mantinea in 362, and presumably rapidly returned to Elis, which had regained control of Olympia before the Olympic Games of 360.

Pisa made treaties with Arkadia and Akroreia and with Messenia and Sikyon (no. 228) (Ringel *et al.* (1999)). A Pisatan decree (*IvO* 36 = *DGE* 422) appointed two Sikyonians *proxenoi* and *theorodokoi*: the decree was dated by three eponymous Pisatan *hellanodikai* (not noted in *Sherk* (1990b)).

Pisa minted gold coins bearing the head of Zeus and with the legend *ΠΙΣΑ* (Head, *HN²* 426). Pisa held the Olympic Games of 364 (*Diod.* 15.78.2–3), though (as noted *supra*) Arkadia was often said to have been involved in organising the games. It is clear that for a brief period Pisa discharged typical functions of an independent Greek state, and can be regarded as such, even if it was probably in fact a puppet-state of the Arkadian federation.

Pisos was founder of Pisa (*RE* xx. 1806 no. 1). The genealogical claim that Olympia, consort of Pisos, was a daughter of Arkas (*Etym. Magn.* s.v. Olympia) may be an attempt, from the period of Pisatan independence, to connect Pisa and Arkadia.

263. Pylos (Pylios) Map 58. Lat. 21.30, long. 37.55. Size of territory: unknown, presumably 1 or 2. Type: C. The toponym is *Πύλος*, *ὁ* (*Xen. Hell.* 7.4.16; *Strabo* 8.3.7). The city-ethnic is *Πύλιος* (*Xen. Hell.* 7.4.26).

The only evidence which suggests that Pylos may have been a *polis* is the use of a collective ethnic twice in a single passage by Xenophon (*Hell.* 7.4.26), but it is notable that

Xenophon appears to include in the “Pylians” both Eleian exiles and non-Eleian foreigners, though possibly through imprecision in the narrative.

There was ancient confusion about the location because of the desire to identify Homeric Pylos, and the existence of other sites called Pylos in the western Peloponnese (*RE* xxiii. 2131–33 no. 3). The site at modern Armatova near Agradidokhori, which has been thoroughly excavated (Coleman (1986)), is very probably Pylos. *Xen. Hell.* 7.4.16 (1365) says that Eleian exiles seized Pylos and were joined by many of the Eleian *demos* because it was a *chorion kalon*; the Eleians captured the Pylians and their *chorion* (*ibid.* 26). The excavation has shown a significant Classical nucleated settlement from c.425, but without monumental architecture of any kind: communal buildings, if any, must have been of the same character as the houses (Coleman (1986) 67). The archaeological findings are compatible with destruction in the 360s. Pylos was reputedly founded by the Megarian Pylon, then destroyed by Herakles, and refounded by the Eleians (Paus. 6.22.5).

264. **Thraistos** (Thraistios) Map 58. Unlocated. Type: A. The toponym is *Θραϊστος* or *Θραϊστον* (Diod. 14.17.8), but *Θραῦστος* or *Θραῦστον* in *Xen. Hell.* 7.4.14. The city-ethnic is *Θραϊστῖος* (*IG* 1x.1²138 (C4e)).
- Thraistos was an Akroreian community, and therefore perioikic, but is not more precisely located. It is described as a *polis* of the Akroreians (either as a town or as a political community) in 365 by *Xen. Hell.* 7.4.14. The external collective use of the city-ethnic is found in *IG* 1x.1² 138 (C4e).
- It sent judges to Kalydon (no. 148) in Aitolia, probably in C4e (*IG* 1x.1² 138), because the inscription is dated by two sets of eponymous officials, the second set (two *damonomoi*) are likely to have been officials of Thraistos (Sherk (1990a) 260). Unlike the other Akroreian *poleis*, Thraistos was not captured by the Arkadians in 365 (*Xen. Hell.* 7.4.14); it is therefore unknown whether it formed part of the Akroreian state of 365–c.362. Its own particular history is not otherwise known: it will have shared the fate of the Akroreians (see Introduction). On Thraistos, see Nielsen (1995) 93.

ARKADIA

THOMAS HEINE NIELSEN

I. The Region

The name of the region is Ἀρκαδία, ἡ (*IvO* 266 (C61–C5e); Thuc. 1.2.3), or Ἀρκαδίη in the Ionic dialect (Hom. *Il.* 2.603; Hdt. 1.66.2). The ethnic proper is invariably Ἀρκάς (Hom. *Il.* 2.611; *IvO* 147.148 (C5f)), but the ktetic Ἀρκαδικόν sometimes serves as the plural (*infra*). The collective use of the ethnic proper is attested externally in Hom. *Il.* 2.611 and often in literature, whereas it does not occur in inscriptions before the foundation of the Confederacy in 370 (*CEG* II 824.10 (369)); *IG* II² 112.15 (362)); internally it is attested (in the form *ΑΡΚΑΔΙΚΟΝ* or different abbreviations thereof (cf. Xen. *Hell.* 6.5.6) on C5 coins (for which see R. T. Williams (1965) and *SNG Cop. Argolis* 164–90) and in the C4 federal decree *IG* v.2 1.3 (360s). The individual use is found externally in *IvO* 147.148 (C5f) and Thuc. 5.49.1, and internally in *IG* v.2 549.550 (C4l). The region Arkadia is described as χώρα (Hdt. 1.66.1; Xen. *Hell.* 6.5.21), and from C5 onwards the people are described by such terms as ἔθνος (Hdt. 8.73.1), φυλή (Xen. *Hell.* 7.1.23) and λαός (*CEG* II 824.2 (369)); see further Nielsen (1999).

The earliest source for the extent of Arkadia is probably the Homeric *Catalogue of Ships* (*Il.* 2.603–14), which describes the eastern plain and Parrhasia as Arkadian, in addition to Rhipe, Stratie and Enispe, communities that are otherwise unknown.¹ The northern border with Achaia is not very well attested in Archaic and Classical sources, but

Herodotos includes Nonakris (no. 285) and Pheneos (no. 291) in Arkadia (Hdt. 6.74.2). The border with Achaia ran north of Kynaitha (no. 278), always described as Arkadian (e.g. by Polyb. 4.20–21), but exactly where it ran in the earlier period is uncertain, since it is possible that the northern district Azania once included territory later considered to be Achaian (Nielsen and Roy (1998) 36–39); in the present Inventory, however, Kynaitha is considered to be the northernmost Arkadian community. The western border with Elis (no. 251) and Triphylia was particularly unstable. The city of Lasion (no. 256) must have been right in the border zone between Elis and Arkadia, since it was the object of dispute between Eleians and Arkadians for long periods in Antiquity (cf. Xen. *Hell.* 3.2.30, 7.4.12; Diod. 14.17.8, 15.77.1; Polyb. 4.73.1, 74.1); in the present context the border is considered to run slightly to the east of Lasion, which is therefore not included here but treated by Roy in the Eleian Inventory (no. 256). The border with Triphylia is a problem in itself: though the area was under Eleian control during C5 (Roy (1997)), some of the communities in Triphylia were sometimes considered to be Arkadian; Phrixia(i) (no. 309), for example, was described as Arkadian by Pherekydes (*FGrHist* 3) fr. 161, and Triphylia as such ended up being considered a part of Arkadia (cf. Ps.-Skylax 44; Nielsen (1997) 131, 155–56). In the present work, however, Triphylia is treated as an individual region (next chapter). For a full discussion of the western border of Arkadia, see Roy (2000a). The southern border with Lakonike ran from Phigaleia (no. 292) in south-western Arkadia (Hdt. 6.83.2) to Parrhasia, which bordered on Lakonike (Thuc. 5.33.2), to Eutaia (no. 270), south of Tegea (no. 297), which was on the Lakonian border (Xen. *Hell.* 6.5.12). The western border with Thyreatis and Argolis was quite stable, but it is possible, it should be noted, that the Arkadian Eua mentioned by Theopomp. fr. 60 was the one in the Thyreatis (no. 331) (for which see Christien and Spyropoulos (1985)), and that the Hysia mentioned as Arkadian by Pherekydes (*FGrHist* 3) fr. 5 was Hysiai in the Argolid (so Bölte in *RE* IX (1916) 540 and Shaw (1999) 284–85). If so, the border here may also have fluctuated a

I would like to thank Dr. Björn Forsén, Dr. Jeannette Forsén, Prof. Hector Williams and Dr. James Roy for valuable comments on this chapter.

¹ See however Steph. Byz. 271.1–3 for Enispe. For an attempt to locate Enispe, see Syriopoulos (1973). Other Archaic/Classical toponyms which are mere names to us are Ἀλλάντιον: Theopomp. fr. 33 = Steph. Byz. 76.1–2: πόλις... καὶ Ἀρκαδίας (Hejnic (1961) 119). A mistake is not impossible (*RE* I (1894) 1583–84); confusion with Pallantion seems possible as well. Βουκολίων: Thuc. 4.134.2. Δελφουσία: Androton (*FGrHist* 324) fr. 7 = Steph. Byz. 225.3: ἔστι καὶ Δελφουσία. πόλις Ἀρκαδίας, ὡς Ἀνδροτίων ἐν β' Ἀρθίδος; commonly taken to be a mistake for Thelphousia; cf. Harding (1994) 98–99 with refs. Διόπη: Pherekydes (*FGrHist* 3) fr. 159 = Steph. Byz. 233.10: πόλις Ἀρκαδίας, ὡς Φερεκύδης (Hejnic (1961) 119). Ἐλυμία: Xen. *Hell.* 6.5.13. Λαοδικεῖον: in Oresthis, place of battle in 423. Φέα: Pherekydes (*FGrHist* 3) fr. 159: πόλις τῆς Ἠλίδος, οἱ δὲ τῆς Ἀρκαδίας (Hejnic (1961) 119). Confusion with Eleian Pheia seems likely. See also Hejnic (1961) 119–20.

little, but in the present Inventory neither Eua nor Hysia(i) is considered to be Arkadian.

Our written sources provide us with information about seventy named settlements of the Archaic and Classical periods in Arkadia as thus delimited.² Of these, fifty-three have been located, with certainty or with varying degrees of probability. Fifteen ancient toponyms, however, remain unlocated; there is no example of a major urban settlement that cannot be matched with a toponym attested in the written sources (but see, e.g., Dipoina(i) and Kallia(i) in the following list for identifications that remain hypothetical). Thirty-nine settlements are described in the Inventory of *poleis* below. The other thirty-one settlements in alphabetical order are as follows.³

1. Pre-Hellenistic Settlements not Attested as Poleis

Akakiesion (Ἀκακήσιον) Unlocated. Paus. 8.27.4 (ῥ371/70, πόλις), 8.36.10 (πόλις); Steph. Byz. 56.5 (πόλις). *Barr.* R, but C is indicated by Paus. 8.27.4.

Akontion (Ἀκόντιον) Unlocated. Paus. 8.27.4 (ῥ371/70, πόλις); Steph. Byz. 61.15 (πόλις). *Barr.* R, but C is indicated by Paus. 8.27.4.

Aphrodision (Ἀφροδίσιον) Paus. 8.44.2 (χωρίον). *Barr.* AC.

Athenaion (Ἀθήναιον) Paus. 8.44.2 (χωρίον). *Barr.* C.

² For some toponyms which may or may not be names of settlements, see the preceding note; they are disregarded in the following.

³ The following list diverges from the *Barr.* directory of Map 58 by excluding the following settlements from consideration as not demonstrably Archaic or Classical or not demonstrably settlements *vel sim.*: Apheidantes: an urban deme of Tegea; Boukolion: a mere toponym, cf. n. 1 above; Brenthe: listed as C, but see Jost, *Comm.* 28.7; Anemosa: listed as AC but the reference is to Paus. 8.35.9 (cf. Jost, *Comm.* 35.9); Delphousia: see n. 1 above; Diope: a mere toponym; cf. n. 1 above; Elymia: not demonstrably a settlement; Enispe: see n. 1 above; Eugeia = Eutaia, cf. the entry for Eutaia; Gareatai: a deme of Tegea (Paus. 8.45.1), but not demonstrably a settlement and not attested for A or C; Hypsous: listed as AC, but the reference is to Paus. 8.35.7 (cf. Jost, *Comm.* 35.7); Korythis: a deme of Tegea (Paus. 8.45.1) but not demonstrably a settlement and not demonstrably A or C; Laodikeion: a mere toponym, cf. n. 1 above; Manthouria: not securely located or dated, cf. Jost, *Comm.* 44.7–8; Melea: Lakonian, not Arkadian (cf. Shipley, *infra* 575); Nostia: a variant name of Nestane, cf. the entry for Nestane in the Inventory; Oios/Oiatai: Lakonian, not Arkadian, cf. Shipley, *infra* no. 339; Potarchidai: a deme of Tegea (Paus. 8.45.1), unlocated and undated (Jost, *Comm.* 45.1); Propous: not a settlement (Pritchett (1969) 128); Rhipe: cf. n. 1 above; Stratie: cf. n. 1 above; Thyraion: listed as AC, but the reference is to Paus. 8.35.7 (cf. Jost, *Comm.* 35.7). On the other hand, some sites are included in the list though dated outside the Archaic–Classical period by *Barr.*, e.g. Akakesion which is dated R by *Barr.*, but for which C is indicated by Paus. 8.27.4 (ῥ371/70); such cases are noted in the text of the list.

Basilis (Βάσιλις) Paus. 8.29.1, without indication of type of site, but presumably a settlement, since a mythical *oikistes* is mentioned (so *Barr.*). *Barr.* dates it AC with reference to Paus. 8.29.5, which, however, gives no indication of the date of its existence (it was in ruins in Pausanias' day).⁴ But Basilis is possibly to be located near modern Kyparissia, c.20 km north-west of Megalopolis (no. 282): here recent rescue excavations by A. V. Karapanagiotou have brought to light a candidate for Basilis: a city with a rectangular street plan and a fortification wall with rectangular towers, of considerable size (18 ha) though not excavated in its entirety, and dated by the excavator to C5e; the earliest material is C6 ceramic material; a C6–C4 sanctuary is located 1.5 km from the city (information derived from public lecture by A. V. Karapanagiotou in Athens, May 2002; for earlier finds at the site, see Bather and Yorke (1892–93) 229–30; Jost (1985) 170). If not to be equated with Basilis, the site may be ancient Trapezous (no. 303) (Paus. 8.29.5).

Bathos (Βάθος) Paus. 8.29.1. Regarded as a settlement by *Barr.*, but perhaps rather a sanctuary (Paus. 8.29.1: Βάθος ἐστὶν ὀνομαζόμενον, ἔνθα ἄγουσι τελετὴν διὰ ἔτους τρίτου θεαῖς <ταῖς> Μεγάλαις; Bather and Yorke (1892–93) 229: “The site excavated appears to be that of a small shrine”. No date in *Barr.*, but AC is attested (Bather and Yorke (1892–93) 228–29; Jost (1985) 170).

Charisia(i) (Χαρισία(ι)) Unlocated. Paus. 8.3.4, 27.3 (ῥ371/70, πόλις). No date in *Barr.*, but C is indicated by Paus. 8.27.3.

Dasea(i) (Δασέα(ι)) Paus. 8.27.4 (ῥ371/70, πόλις), 8.36.9 (ἐρείπια); Steph. Byz. 220.7 (πόλις). *Barr.* AC (but the reference is to Paus. 8.36.3; C is indicated, however, by Paus. 8.27.4).

Dipoina(i) (Δίποινα(ι); but cf. Jost (1986a) 152 n. 69) Unlocated (but see *infra*). Paus. 8.27.4 (ῥ371/0, πόλις). With Kallia and Nonakris (for both of which see the present list) it formed a Tripolis, reportedly synoecised into Megalopolis (no. 282) (Paus. 8.27.3). No date in *Barr.*, but C is indicated by Paus. 8.27.3. Meyer (1939a) 50–58 briefly describes two ancient settlements (not in *Barr.*) at Kastro Galatas/Kastro tis Monovizas and Kerpini (both on the map in Jost (1985)), which should probably be identified with two of the three

⁴ Τοῦ δὲ χωρίου τοῦ ὀνομαζομένου Βάθους σταδίου ὡς δέκα ἀφέστηκε καλουμένη Βάσιλις· ταύτης ἐγένετο οἰκίστης Κύβελος ὁ Κρεσφόντης τῷ Ἀριστομάχου τὴν θυγατέρα ἐκδοῦς· ἐπ' ἐμοῦ δὲ ἐρείπια ἢ Βάσιλις ἦν καὶ Δήμετρος ἱερὸν ἐν αὐτοῖς ἐλείπετο Ἐλευσινίας. Cf. Jost, *Comm.*

communities constituting the Tripolis (Dipoina(i) and Kallia(i), according to Meyer).

Haimoniai (*Αίμωνιαί*) Paus. 8.44.1 (*Αίμωνιαὶ πόλις ἦσαν τὸ ἄρχαῖον*); Steph. Byz. 50.4 (*πόλις*). *Barr.* AC (cf. Roy *et al.* (1992)).

Iasaia (*Ἰασαία*) Paus. 8.27.3 (r371/70, *πόλις*). Not in *Barr.*; C indicated by Paus. 8.27.3.

Kallia(i) (*Καλλία(ι)*) Unlocated (but see *infra*). Paus. 8.27.4 (r371/70, *πόλις*), 27.7 (*κώμη*). With Dipoina(i) and Nonakris (for both of which see the present list) it formed a Tripolis, reportedly synoecised into Megalopolis (no. 282; Paus. 8.27.3). No date in *Barr.*, but C is indicated by Paus. 8.27.3. Meyer (1939a) 50–58 briefly describes two ancient settlements (not in *Barr.*) at Kastro Galatas/Kastro tis Monovizas and Kerpini (both on the map in Jost (1985)), which should probably be identified with two of the three communities constituting the Tripolis (Dipoina(i) and Kallia(i), according to Meyer).

Kaous (*Καοῦς*) Listed in *Barr.* as unlocated; for a suggested location, see Jost (1985) 65–66, (1986*b*). Paus. 8.25.1 (*κώμη*), Steph. Byz. 355.13 (*κώμη*). *Barr.* attaches no date, but C is attested (cf. Jost (1985) 65–66, (1986*b*)).

Knauson (*Κναῦσον*) Unlocated. Paus. 8.27.3 (r371/70, *πόλις*). No date in *Barr.*, but C is indicated by Paus. 8.27.3.

Lykoa, Lykaia (*Λυκόα, Λύκαια*) Paus. 8.27.3 (r371/70, *πόλις*). *Barr.* AC, but the reference is to Paus. 8.36.7; Paus. 8.27.3 indicates C, and there are remains of a late Archaic–Classical temple (Voyatzis (1999) 154 (Mainalon); Pikoulas (1999*c*) 126–27).

Lykoatai, Lykoa (*Λυκοᾶται, Λυκόα*) Unlocated. Polyb. 16.17; Paus. 8.27.4 (r371/70, *πόλις*). Listed in *Barr.* (as “Lykaia”) as unlocated and not given a date; but Paus. 8.27.4–5 indicates C.

Lykouria (*Λυκουρία*) Paus. 8.19.4 (*χωρίον*). *Barr.* AC?, but the reference is to Paus. 8.19.4; however, AC is archaeologically attested; cf. Erath (1999a) 223–25.

Mainalos (*Μαίναλος*) Paus. 8.2.3 (*πόλις* “in ancient times”). Located by *Barr.* near Daria, but the location is uncertain (Jost, *Comm.* 36.8); cf., however, Pikoulas (1999*c*) 120–21, 127–28. *Barr.* AC, but the reference is to Paus. 8.36.8; C existence is indicated by its Olympic victors (*Olympionikai* 362, 377); cf. Jost, *Comm.* 36.8.

Makaria (*Μακαρία, Μακαρέαι*) Paus. 8.27.4 (r371/70, *πόλις*). *Barr.* puts it on the map near the river Alpheios, but its ruins have disappeared (Jost, *Comm.* 36.9). *Barr.* AC, but the reference is to Paus. 8.36.9; Paus. 8.27.4 indicates C existence.

Melainai (*Μελαίναί*) Paus. 8.26.8. Listed in the *Barr.* directory as unlocated and with no date attached; however, Pikoulas (1999a) 304–5 suggests that it should be located at Helliniko of Paloumba, an “important archaeological site . . . unquestionably occupied by a settlement”, which is proved by pottery to have been Archaic and Classical.

Nonakris (*Νώνακρις*) Unlocated. Paus. 8.27.4 (r371/70, *πόλις*). With Dipoina(i) and Kallia(i) (for both of which see the present list) it formed a Tripolis, reportedly synoecised into Megalopolis (no. 282) (Paus. 8.27.3). Not in *Barr.*, but C is indicated by Paus. 8.27.3. Not to be confused with the *polis* of Nonakris (no. 285). Meyer (1939a) 50–58 briefly describes two ancient settlements (not in *Barr.*) at Kastro Galatas/Kastro tis Monovizas and Kerpini (both on the map in Jost (1985)), which should probably be identified with two of the three communities constituting the Tripolis (Dipoina(i) and Kallia(i), according to Meyer).

Onkeion (*Ὀγκειον*) Paus. 8.25.4. Listed as unlocated by *Barr.* and with no date attached, but see Meyer (1957*b*) 13ff for a possible location with AC remains.

Paror(e)ia (*Παρωρ(ε)ία*) Paus. 8.27.3 (r371/70, *πόλις*), 8.35.6–7. No date is attached in *Barr.*, but Paus. 8.27.3 indicates C.

Peraitheis (*Περαϊθεῖς*) Paus. 8.27.3 (r371/70, *πόλις*), 8.36.7. *Barr.* AC, though the reference is to Paus. 8.3.4; Paus. 8.27.3 indicates C, and there are some A archaeological remains (Pikoulas (1999a) 276).

Proseis (*Προσεῖς*) Unlocated. Paus. 8.27.4 (r371/70, *πόλις*). No date is attached in *Barr.*, but C is indicated by Paus. 8.27.4.

Ptolederma (*Πτολέδερμα*) Unlocated. Paus. 8.27.3 (r371/70, *πόλις*). No date is attached in *Barr.*, but Paus. 8.27.3 indicates C.

Soumateion (*Σουμάτειον*) Unlocated in *Barr.*, but see Pikoulas (1999*c*) 127. Paus. 8.27.3 (r371/70, *πόλις*). No date is attached in *Barr.*, but Paus. 8.27.3 indicates C, and so the site proposed by Pikoulas (1999*c*) 116.

Thisoa (*Θισόα*) Paus. 8.27.4 (r371/70, *πόλις*); *Barr.* gives HR, but Paus. 8.27.4 indicates C. Cf. *Pharos* 2 (1994) 39–89.

Thoknia (*Θωκνία, Θωκνεῖς*) Paus. 8.27.4 (r371/70, πόλις), 8.29.5. *Barr. AC*, but the reference is to Paus. 8.29.5; Paus. 8.27.4 indicates C.

Trikolonoι (*Τρικόλωνοι*) Paus. 8.27.3 (r371/70, πόλις). *Barr. AC*, but the reference is to Paus. 8.35.6; Paus. 8.27.3 indicates C. Jost, *Comm.* 35.6.

Zoiteion (*Ζοιτείον*) Paus. 8.27.3 (r371/70, πόλις). *Barr. AC*, but the reference is to Paus. 8.35.6–7; Paus. 8.27.3 indicates C.

Some of these settlements may have been *poleis*. Mainalos, for example, probably produced an Olympic victor in 400 (*Olympionikai* 362, 377; cf. Roy (1972*b*) 49) and was presumably a Mainalian community (Nielsen (1996*a*) 148); so it may have been a *polis* by analogy with Mainalian communities such as Pallantion (no. 289) and Helisson (no. 273). Conversely, communities such as, e.g., Pylai (no. 295) and Phorieia (no. 293) which have been included in the Inventory might perhaps be omitted. But even allowing for a margin of uncertainty, the Inventory points to the conclusion that c.60 per cent of all Arkadian settlements were considered to be *poleis* at some time or throughout the Archaic and Classical periods.

A distinctive feature of the Arkadian *polis* structure was the existence of the so-called *tribal states*, states based on populations living settled in several minor communities (Roy (1972*b*), (1996); Nielsen (1996*a*) 132–43). In the Classical period there existed four such tribal states: the Eutresians, the Kynourians, the Mainalians and the Parrhasians. In the Archaic period a fifth tribe, the Azanians, existed, but if they ever formed a tribal *state*, this had disintegrated before C5, and during the Classical period the former Azanian communities appear as individual *poleis* and are described as such below in the Inventory (Nielsen (1996*a*) 139; Nielsen and Roy (1998)). We know next to nothing about the internal political structure of the Eutresians; the Mainalians, on the other hand, are quite well documented (Nielsen (1996*a*) 134–38): their state was composed of a number of local communities which were organised as *poleis*, and six such Mainalian *poleis* are described in the Inventory below. It is very likely that both the Parrhasians and the Kynourians were subdivided into *poleis* as well, but the evidence is less substantial in these cases, and only two communities of each of these two tribal states are described in the Inventory.

Besides the tribal *poleis* there were in Arkadia a number of more conventional *poleis*. Some of the larger *poleis* devel-

oped local dominions. Mantinea (no. 281), for example, created a hegemonic league in C5s (Nielsen (1996*c*) 79–84), and so did Orchomenos (no. 286) in C4f (Nielsen (1996*c*) 84–86). However, the small communities subjugated by Mantinea and Orchomenos continued to function as *poleis*: they became dependent *poleis* and are duly described as such in the Inventory.

There is hardly any contemporary evidence for the status of those settlements which were not *poleis*. It is clear, however, from Xen. *Hell.* 5.2.6–7 and *IPArk* no. 9.7–8 that Mantinea possessed a number of *komai*, which played a role in the organisation of the *polis*. In his description of the synoecism of Megalopolis (no. 282), Diod. 15.72.4 refers to twenty unnamed Mainalian and Parrhasian communities as *komai*, but this classification runs counter to contemporary sources which regularly describe, e.g., Mainalian communities as *poleis*; it is probably prompted by the context of synoecism, for according to C4 theory *poleis* arose through synoecisms of *komai* (Arist. *Pol.* 1252^b27 with Demand (1990) 14–27 and Hansen (1995*b*) 52–61). But apart from Helisson (no. 273) (which became a Mantinean *kome* by the conclusion of the C4f treaty *IPArk* no. 9), no individual community is classified as a *kome* by Archaic or Classical sources. So although we have evidence for second-order settlements in several Arkadian *poleis*, we do not know what status they enjoyed, since we do not know whether the evidence pertaining to Mantinea can be generalised.

Even though the existence of a C5 Arkadian Confederacy has been argued by, for instance, Wallace (1954), there is very little evidence for such an organisation (Roy (1972*d*); Nielsen (1996*d*)), and the only attested political unification of the region remains the short-lived C4 Confederacy (for which see Larsen (1968) 180–95; Dušanić (1970); Nielsen (1996*c*) 93–100; Roy (2000*b*)) that united Arkadia from 370 to 363. At the latter date it split into two factions, which seem never to have been reunited (Nielsen (1996*b*) 356–59), although some kind of Confederacy still existed in C4l (Pierart (1982)).

II. The *Poleis*

265. Alea (Aleos) Map 58. Lat. 37.50, long. 22.25. Size of territory: 3. Type: B. The toponym is Ἀλέα, ἡ (*IG* IV.1² 103.45 (C4m); *SEG* 23 189 (c.330)). The city-ethnic is Ἀλεός (*IG* I³ 80 (421)); *IvO* 30 (C5s–C4f) has Ἀλεῖος (cf. Nielsen (1996*a*) 118); Classical coins use the form Ἀλεάτας (often abbreviated) in the legends (*infra*; cf. Roy (1972*a*) 331).

There is no certain attestation of *polis* in references to Alea, but Theopomp. fr. 242 (= Steph. Byz. 69.20) may have classed Alea as a *polis* (cf. Whitehead (1994) 119), and the πόλις τῶν Ἀλειῶν of *IvO* 295 (c.275–250) is probably our city (cf. Nielsen (1996a) 118).

The collective use of the ethnic is attested internally in Classical coin legends (*infra*; cf. Roy (1972a) 331) and externally in *IvO* 30 (C5s–C4f), for which see Nielsen (1996a) 118. The individual use is found externally on *IG* 1³ 80 (421).

The territory occupied c.110 km².⁵ There is a temple(?) at Anemomilo, in the pass leading to Orchomenos (no. 286); with it are associated Classical sherds (Meyer (1939a) 29; Jost (1985) 108).

It may be assumed that Alea was a member both of the Peloponnesian League (Nielsen (1996c) 87) and the Arkadian Confederacy (ibid. 94–95). *IG* 1v.1² 103.45 (C4m) records a payment of ἐφόδια to two people ἐς Ἀλέαν, and the presumption is that Alea received an embassy from Epidaurus (no. 348). *IvO* 30 (C5s–C4f) is a grant of *proxenia* by Alea to an Athenian (cf. Nielsen (1996a) 118), and *IG* 1³ 80 (421) is a grant by Athens (no. 361) of *proxenia* to a man of Alea; *SEG* 23 189.25 (c.330) records an Argive *theorodokos* in Alea.

IvO 30 (C5s–C4f), a grant of *proxenia*, is the oldest known public enactment of Alea; from its enactment formula (ἔδοξε Ἀλειοῖς) the existence of an assembly may be inferred, but otherwise the political institutions of the city are unknown.

The well-preserved walls of Alea are probably C₃ (Meyer (1939a) 26). The acropolis measured 14.3 ha, and on it was a building which Meyer identified as a military barracks. The city below the “Stadtberg” occupied 14.6 ha; no substantial remains are extant, but scattered remains seem to be of houses. See Meyer (1939a) 19–29; Papachatzis (1994) 265–66.

Head, *HN*² 446 dates the first coinage of Alea to c.430; Babelon, *Traité* ii.3. 630 proposes 421. The legend abbreviates the ethnic Ἀεάτας (Roy (1972a) 331) to *AA*, *AIE*, *AAEA*; Lacroix (1968) 325 n. 4 cites the legend *AIE[A] TAN* (C₄ according to Jost (1985) 526). The types show Artemis (Babelon, *Traité* ii.3 nos. 946–49), Athena

(ibid. no. 950), Herakles (ibid. no. 951) and Helios (Lacroix (1968) 325 n. 4). Both bronze and silver coins are known. Denominations are triobol (Babelon, *Traité* ii.3 no. 951), obol (ibid. no. 946), and tritartemorion (ibid. no. 947). *SNG Cop. Argolis* 213–14.

Alean coins seem to indicate cults of Athena Alea and Artemis (Jost (1985) 107–9). Alea may have consulted the oracle at Delphi before 300 (cf. Paus. 8.23.1 with Fontenrose (1978) 353); *IvO* 295 (c.275–250) is probably an Alean dedication, and *IvO* 30 (C5s–C4f), although an Alean document (cf. Nielsen (1996a) 118), was put up at Olympia.

266. Alipheira (Alipheireus) Map 58. Lat. 37.35, long. 21.50. Size of territory: 2–3. Type: C. The toponym is Ἀλίφειρα, ἡ (Polyb. 4.78.3; *SEG* 25 448.15 (C3s)), or Ἀλίφηρα (Paus. 8.27.4). The city-ethnic is Ἀλιφειρεύς (Polyb. 4.77.10; *SEG* 25 449.2 (C2)) or Ἀλιφηρεύς (*CIG* 1936 (Hell.); Paus. 8.27.7); see Orlandos (1967–68) 9–10.

Alipheira is well attested only in Hellenistic sources, where it is called a *polis* both in the urban sense (Polyb. 4.78.11 (r219)) and in the political sense (*SEG* 25 447.9 (C3)). Since Alipheira certainly existed before C₃ (*infra*), the city may possibly have been a *polis*.

The collective use of the city-ethnic is attested internally in *SEG* 25 449 (C2f) and externally in Polyb. 4.77.10 and *IvO* 48 (C2); the external individual use is found in *CIG* 1936 (Hell.).

The territory covered c.100 km²; *SEG* 25 449 (C2f) has been interpreted as a demarcation of the border of Alipheira.

According to Paus. 8.27.4, Alipheira was in 371 a part of the tribal state of the Kynourians (Nielsen (1996a) 132–34, 140–41), and it can be inferred from a combination of *IG* v.2 1.40 (360s) and Paus. 8.27.4 (r371) (with Nielsen (1996a) 132–34) that the city was a member of the Arkadian Confederacy. Membership of the Peloponnesian League may also be assumed (Nielsen (1996c) 87).

According to Paus. 8.27.4, Alipheira was one of the cities that the Arkadian Confederacy had voted to incorporate into Megalopolis (no. 282); whether this decision was implemented is not certain. According to Paus. 8.26.5, a part of the population actually relocated to Megalopolis, but the city was not abandoned. In C₃ Alipheira was, at least sometimes, controlled by Megalopolis (Polyb. 4.77.10); but it also appears as a *polis* (*SEG* 25 447).

Alipheira was centred on a hill rising to 686 m above sea level. The hill measures 800 × 65 m and was fortified before 370 (Orlandos (1967–68) 32). The city proper seems to have lain outside these walls and to have occupied the area

⁵ Most of the territorial sizes given in this Inventory are based on the map in Jost (1985); on this map Jost has indicated the probable borders of the major *poleis*. She comments: “Il va de soi que les limites . . . sont approximatives: elles marquent la zone frontalière dont seuls quelques points . . . sont assurés.” It may be added that these points are most often known from Pausanias, and so the borders indicated reflect the Roman period. In general, there is no way of knowing whether this corresponds to Archaic and Classical conditions, a problem further complicated by the fact that we do have information which indicates that borders could fluctuate even within the Archaic and Classical periods (Nielsen (1996b) 181). So the territorial sizes given here are merely educated guesses.

north-east of the acropolis (ibid. 41). The lower city too was fortified (Pritchett (1989) 44, no dates). In the eastern part of the acropolis was the sanctuary of Athena, with a temple constructed c.500–490; votives go back to C6m (Jost (1985) 80). In addition to the temple, the sanctuary included a colossal statue of Athena dating to C5 (ibid. 81). In the north-western part of the hill was a sanctuary of Asklepios with a C4s temple (ibid. 81).

267. Asea (Aseates) Map 58. Lat. 37.25, long. 22.20. Size of territory: 2. Type: A. The toponym is Ἀσέα, ἡ (Xen. *Hell.* 6.5.15); in the great Delphic catalogue of *theorodokoi* (c.230–210) we find the entry ἐν Ἀσέωι, but this form is unique (BCH 45 (1921) III.9). The city-ethnic is ΑΣΕΑΤΑΝ on the Achaian federal bronze coinage of the city (Head, *HN*² 418 (c.190s)); this enables us to emend the ἀθεᾶται/ἀσθεᾶται of the MSS at Xen. *Hell.* 7.5.5 to Ἀσεᾶται.

Asea is classified as a *polis* in the territorial sense (with the political sense as a possible connotation) at Xen. *Hell.* 7.5.5, a passage that also provides an instance of the external collective use of the city-ethnic. Strabo 8.3.12 classifies Asea as a κώμη τῆς Μεγαλοπολιτίδος, but the reference is to C1.

The territory is implicitly referred to at Xen. *Hell.* 7.5.5 as *polis* (Nielsen (1996c) 72–73). The size of the territory has been estimated at c.60 km² by Forsén and Forsén (1997) 175. The city of Asea was not the only place of habitation: Forsén and Forsén (1997) 173 report that they have found between twenty and thirty sites dating from the Archaic to the Hellenistic periods in the *chora*. Some of these were presumably isolated farmsteads, but at least four seem to have been small villages connected with sanctuaries: one is situated only 1.5 km from the Vigla temple, while another was probably situated close to a temple of Athena of which Forsén and Forsén have found scattered architectural remains dating to C4; in addition, two other sites may have been villages and one of these was possibly also connected with a sanctuary (Forsén and Forsén (1997) 172–74).

Two important temples have been excavated in the territory of Asea. (a) At Vigla, on the border with Pallantion (no. 289) (Forsén and Forsén (1997) 170), is a temple dedicated to Athena and Poseidon; it is dated to C6 (Østby (1995b) 348–50). This temple was preceded by a smaller temple built of wood and clay c.630–620 (Voyatzis (1990) 34). (b) At Ag. Elias, on the border with (presumably) Peraitheis, a large temple dates from c.500 (Forsén *et al.* (1999)).

Forsén and Forsén (1997) 176 estimate that the urban population could have been max. 2,000–3,000. The total population of the *polis* is estimated at 2,500–3,500 at the

most. It is impossible to give any estimate of the number of adult male citizens.

Asea was a Mainalian city (Paus. 8.27.3; Nielsen (1996a) 132–34). Membership of the Arkadian Confederacy can be assumed, both on the basis of Xen. *Hell.* 6.5.11, where the city is described as the rallying place of the federal army in 370, and because the Mainalians as such were members of the Confederacy (*IG* v.2 1.16 (360s)); membership of the Peloponnesian League may also be assumed, probably mediated by the Mainalian tribal state (Nielsen (1996c) 87, 100).

According to Paus. 8.27.3, Asea was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282); however, it is not known whether this relocation was ever wholly or partly carried out (Moggi (1974) 87–88).

Asea was centred on a fortified acropolis rising to 54 m and measuring 240 × 120 m. The fortification may be C4e (Forsén and Forsén (1997) 169; Forsén *et al.* (2002) 96); Forsén *et al.* (2002) 100 suggest that a temple was erected on the acropolis during the late Archaic–Classical (?) period. The lower city was fortified too, but the wall here seems to be later than the acropolis wall, probably C3 (Forsén *et al.* (2002) 96; Forsén and Forsén (1997) 167–68; Holmberg (1944) 132–42); it probably enclosed all of the lower city. Forsén and Forsén (1997) 166–67 and Forsén *et al.* (2002) 100–2 report that they found Archaic and Classical pottery around the acropolis, and that the area yielding finds was at least 13 ha, but perhaps twice as large (the eastern area of the site having been covered with alluvium brought down by the river Alpheios). The area inside the lower wall was built up for habitation; some of the houses contained Hellenistic finds, but others contained nothing and may possibly be older (Forsén and Forsén (1997) 169).

268. Dipaia (Dipaeus) Map 58. Not securely located, but it is clear from Paus. 8.30.1 that Dipaia must have been situated in the upper Helisson valley; it is probably to be identified with the ancient remains near Davia (Jost (1973) pl. 9.1–3; Pikoulas (1992–93) 204; Pikoulas (1999c) 126); lat. 37.20, long. 22.15. Size of territory: ? Type: B. The toponym is the plural of the ethnic at Hdt. 9.35.2 (ἐν Διπαιεύσι; cf. the comment by Steph. Byz. 234.14–15), but at Isoc. 6.99 we find Δίπαια, ἡ. The city-ethnic is Διπαιεύς in *SEG* 23 179 (C4f); at Paus. 6.7.9 Διπαιεύς is an emendation of Διπαιεύς; Paus. 8.30.1 has Διπαιεύς, and the C2 coinage of the city uses the legend ΔΙΠΑΙΕΩΝ (Head, *HN*² 418).

At 8.27.3 (r371) Pausanias retrospectively lists Dipaia as a *polis*, and at 3.11.7 (rC5f) it is classified as a *polisma*. The

collective use of the ethnic is attested externally in Hdt. 9.35.2 and on *SEG* 23 179 (C4f); the individual use of the ethnic is attested externally at Paus. 6.7.9 (r440) (*Olympionikai* 314).

The name of the territory is unknown; Paus. 8.30.1 refers to it, contemporaneously, as ἡ Διπαιέων χώρα. In the 460s an apparently major battle was fought near Dipaia between Sparta (no. 345) and an Arkadian alliance (Hdt. 9.35.2; Isoc. 6.99).

A C4f inscription (*SEG* 23 179) mentions the Διπαιέες; the nature of the inscription is not clear, but Bradeen (1966) 321 thinks that it is a fragment of a record of a judgment by a foreign board of arbitration in a dispute involving the city of Dipaia. Dipaia was a Mainalian city (Paus. 3.11.7, 6.7.9, 8.27.3; for the last passage, see Nielsen (1996a) 132–34), but this is the only explicitly attested membership of a larger organisation; however, membership of the Arkadian Confederacy can be inferred from a combination of Paus. 8.27.3 (r271) and *IG* v.2 1.16 (360s; see further Nielsen (1996c) 95–96, 100–1), and membership of the Peloponnesian League may be assumed (ibid. 87). According to Paus. 8.27.3 (r371), Dipaia was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282); however, it is unknown whether this decision was implemented (Moggi (1974) 83–84).

If Dipaia is to be identified with the remains at Davia (*supra*), then the city was centred on a fortified acropolis.

In C5m, c.440 according to *Olympionikai* 314, Dipaia produced an Olympic victor.

269. Euaimon (Euaimnios) Unlocated (but see Howell (1970) 82). Size of territory: ? Type: B. The toponym is *Εὐαίμων* (*IG* V.2 343 = *IPArk* no. 15.7, 49–50 (C4m); Steph. Byz. 283.14). The city-ethnic is *Εὐαίμωνιος* (*IG* v.2 343 = *IPArk* no. 15.3 (C4m)).

No Archaic or Classical source describes Euaimon as a *polis*, though Theopomp. fr. 61 (= Steph. Byz. 283.14–15) may have done so (Whitehead (1994) 119; Nielsen (1996c) 71); *IG* v.2 343 = *IPArk* no. 15 is a treaty between Euaimon and Orchomenos (no. 286), concluded ἐπὶ τοῖς Φίσφοις καὶ τοῖς ὕμοις (ll. 4–6), and the nature of the document thus suggests that Euaimon was a *polis*; Dubois (1986) 148, 159 proposes to restore [ἰν πόλι Φε]κατέραι in ll. 56–57. The same treaty uses the collective ethnic to refer to the community of Euaimon (2–3, 53–54, 75–76, 83).

The treaty *IPArk* no. 15.2 describes itself as an agreement of *συνουκία* and provides for the inclusion of the Euaiminians into the Orchomenian citizen body (*IPArk* p. 135); however,

Euaimon probably continued to exist (cf. Steph. Byz. 283.14–15; Dušanić (1978) 338; Nielsen (1996c) 71), and may thereafter have been a dependent *polis* of Orchomenos.

In *IPArk* no. 15.6–7, τὰ δὲ ἱερά τὰ ἰν Εὐαίμωνι is presumably a reference to communal cults in Euaimon which were to be preserved after the agreement, but the local pantheon is otherwise unknown (Jost (1985) 115, 120).

270. Eutaia Map 58. Lat. 37.20, long. 22.20. Size of territory: 1 or 2. Type: A. The MSS of Xen. *Hell.* (at 6.5.12, 21) vary between *Εὔταια*, *Εὔγαία* and *Εὔγέα*, ἡ (Tuplin (1986) 27–28); since later sources such as Paus. 8.27.3 and Steph. Byz. 287.19 use the τ-form, this form has become customary in scholarly literature.

At *Hell.* 6.5.12 Xenophon uses *polis* three times about Eutaia, presumably primarily in the sense of town, although the meaning “territory” may be a connotation in the phrase πόλιν ὄμορον οἶσαν and “political community” in οὐκ ἠδίκησε τὴν πόλιν.

The name of the territory is unknown, but the territory is probably referred to as *polis* by Xen. *Hell.* 6.5.12. To the south Eutaia bordered on Lakonia (Xen. *Hell.* 6.5.12).

Eutaia was a Mainalian city (Paus. 8.27.3; Nielsen (1996a) 132–34). Membership of the Arkadian Confederacy is proved by Xen. *Hell.* 6.5.12; membership was probably mediated by the tribal state of the Mainalians (Nielsen (1996c) 95). Membership of the Peloponnesian League may be assumed (ibid. 87).

According to Paus. 8.27.3, Eutaia was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282). It is unknown whether the relocation was ever carried out: the site seems not to have been abandoned, since coins of the Arkadian and Achaian Confederacies have been found there (Loring (1895) 50; Pikoulas (1988) 70–73).

At *Hell.* 6.5.12, Xenophon mentions that in 370 Eutaia raised troops, which were put under the command of the Arkadian Confederacy.

Eutaia was located at modern Lianos; the site has not been excavated. Xen. *Hell.* 6.5.12 mentions οἰκίαι, and Loring (1895) 50 as well as Pikoulas (1988) report numerous antiquities at Lianos; Pikoulas (1988) reports an abundance of sherds and minor architectural fragments in the fields.

At *Hell.* 6.5.12 Xenophon mentions a *τειχος*. The reference may be to the poor fortification found on the hill of Agios Konstantinos which overlooks the site (Pikoulas (1988) 75). If so, the lower city proper was possibly unfortified.

271. Gortys (Kortynios) Map 58. Lat. 37.30, long. 22.20. Size of territory: probably 2 or 3. Type: B. The toponym is *Κόρτυς*, ἡ (Hsch. s.v. *Κορτύνοι*) or *Γόρτυς*, -υδος, ἡ (Pl. *Leg.* 708A); Paus. 5.7.1 and Hsch. s.v. *Ἐκατομβαίος* have *Γόρτυνα*, -ης, ἡ. The city-ethnic is *Κορτύνιος* (*Syll.*³ 49 (C5f)); *ΚΟΡΤΥΝΕΩΝ* from **Κορτυνεύς* is found on C2 coins (Dubois (1986) 287).

The only source that classifies Gortys as a *polis* is Paus. 8.27.4 (r371) and 28.1 (*κώμη τὰ ἐπ' ἐμοῦ, τὰ δὲ ἔτι ἀρχαιότερα πόλις*), but the external collective use of the city-ethnic is found on a C5f dedication of spoils at Delphi (*Syll.*³ 49). The ethnic is attested as a personal name already in C6 (Nielsen (1996a) 122).

Gortys was a Kynourian community (Paus. 8.27.4; Nielsen (1996a) 132–34). Membership of the Peloponnesian League can be assumed (Nielsen (1996c) 87); membership of the Arkadian Confederacy is proved by a combination of *IG* v.2 1.40 (360s) and Paus. 8.27.4 (Nielsen (1996a) 132–34).

According to Paus. 8.27.4, Gortys was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282). It is, however, unknown whether this decision was implemented, and the site seems not to have been abandoned (Moggi (1974) 91–92).

C5f military activity by Gortys can be inferred from *Syll.*³ 49 (*Κορτύνοι δεκάταν πολέμιον*), a dedication of spoils set up at Delphi.

The site of Gortys is situated on the western bank of the river Lousios/Gortynios near the modern village of Atsicholo. It is dominated by two sanctuaries: an upper sanctuary with a fortified “acropolis” and a lower sanctuary. The upper sanctuary was dedicated to Asklepios and contains a C4e stoa (Jost (1985) 204), a C5l–C4e fountain house (*ibid.*), and a C5l–C4e prostyle Doric temple (*ibid.*). The acropolis measures 425 × 160/100 m. The fortifications were constructed entirely in local stone, at least some of which was quarried on the acropolis itself (Martin (1947–48) 112). In general, archaeology points to a date after 370 for the fortifications. Martin (1947–48) 139 believes that the fortifications were erected by Megalopolis/the Arkadian Confederacy as a military outpost protecting Megalopolitan territory; a large number of C4 Arkadian federal coins have been found on the acropolis (*ibid.*), pointing to a C4m date for the fortifications. Furthermore, there are no remains on the acropolis linking the fortifications to the city of Gortys (Martin (1947–48) 142). If Martin is right, this is not really the acropolis of Gortys, but a military fort; this interpretation is accepted by Jost (1999) 197, but the fortification may also have served the local population, turning Gortys into a

settlement of the *ville acropole* type described by Jost (1999) 193–98. The lower sanctuary lay 500 m north of the acropolis, and the residential area was presumably situated between the two sanctuaries (*BCH* 79 (1955) 335): at least one house excavated there dates to C4 (*BCH* 80 (1956) 402), but in contrast to the sanctuaries, the city proper is not well known, and no sketch of it can be given (for a plan, see Papachatzis (1994) 298). The lower sanctuary was likewise dedicated to Asklepios and contains a stoa of, possibly, C4 (*BCH* 79 (1955) 340), a C4s bath (Jost (1985) 205) and a large temple, laid out c.370 but apparently never finished (*ibid.* 206–7). There is no obvious explanation for the existence of two Asklepieia, and apart from Asklepios the local pantheon is not well known (*ibid.* 202–3, 205).

272. Halous Map 58. Lat. 37.45, long. 22.00. Size of territory: probably 2 or 3. Type: C. The toponym is *Ἄλοῦς* (-οῦντος), ὁ at Paus. 8.25.2; the entry *ἐν χαλείος* in the Delphic catalogue of *theorodokoi* of C5l–C4e (ed. by Daux in *REG* 62 (1949) p. 6 l. 10) may refer to this site, using an older form of the toponym (Daux *ad loc.* and Meyer (1957a) 86).

The city deserves inclusion in this Inventory only because it may have had a Delphic *theorodokos* in C5l–C4e (*supra*), and thus was possibly a *polis* (Perlman (1995) 116, 121, 135). Meyer (1939a) 78–83 identified Halous with the Palaiokastro at Syriamou, south-west of Thaliades (no. 299). The site consists of a small walled hill with the habitation area, unwallled, below. The wall runs for c.640 m and encloses an area of 1.7 ha; it dates from C4, according to Meyer; sherds and tiles from the walled area date to the Classical and Hellenistic periods. In the habitation area outside the wall Meyer made “massenhaften Ziegel- und Scherbefunde”. The inhabited area was considerable, according to Meyer, but he does not estimate the size of the city proper.

273. Helisson (Heliswasios) Map 58 (not precisely located; cf. Bölte (1913a); Pikoulas (1992–93) 204, (1999c) 125–26). Lat. 37.35, long. 22.15. Size of territory: probably 1 or 2. Type: A. The toponym is *Ἐλισόντι* in *SEG* 37 340.9–10 (C4f), which points to the nominative *Ἐλισ(σ)οῦς* or *Ἐλισ(σ)ῶν* (< *Ἐλισ(σ)F-*), ὁ, for which see te Riele (1987) 171–72 and Dubois (1988) 289; Paus. 8.27.3 (r371) has *Ἐλισσῶν* and Diod. 16.39.5 (r352) *Ἐλισ(σ)οῦς*. The city-ethnic is *Ἐλισφάσιος* in *SEG* 37 340; it is later written *Ἐλισφάσιος* (*IG* IV².1 42.2, 16–17 (c.300); Polyb. 11.11.6); see Dubois (1988) 288.

Helisson is called *polis* in the urban sense by *SEG* 37 340.6–7 (C4f) and Diod. 16.39.5 (r352), and in the political

sense by *SEG* 37 340.5 (C4f). The individual use of the ethnic is unattested, but the collective use is found externally in *SEG* 37 340 (C4f), *IG* IV².1 42.2 (c.300) and in Polyb. 11.11.6.

The territory is referred to as *χώρα* by *SEG* 37 340.5 (C4f) and Polyb. 11.11.6 (r207).

Helisson was a Mainalian city (Paus. 8.27.3 (r371); Nielsen (1996a) 132–34), and it can be inferred from a combination of *IG* v.2 1.16 (360s) and Paus. 8.27.3 (r371) (cf. Nielsen (1996a) 132–34) that the city was a member of the Arkadian Confederacy. Membership of the Peloponnesian League may be assumed (Nielsen (1996c) 87).

In C4f, Helisson concluded a treaty with Mantinea (no. 281) (*SEG* 37 340), whereby all citizens of Helisson became Mantinean citizens; the city of Helisson was left in existence as a *κώμη* of Mantinea, but continued to be a *polis* none the less (*SEG* 37 340.6–7); it is debatable whether Helisson was to survive as a *polis* merely in the urban sense (so Rhodes (1995) 97), or whether the city was constituted as a dependent *polis* within the Mantinike (so Hansen (1995a) 39, (1995b) 73–74; Nielsen (1996c) 67–70). The treaty does not call itself a *sympoliteia*, but simply a *σύνθεσις* (*SEG* 37 340.2); it has, however, become customary to refer to the agreement as a *sympoliteia*, for which concept see Hansen (1995b) 56. After the treaty, Helisson—like the other dependencies of Mantinea—was entitled to send a *theoros* to the Mantinean board of *theoroi* (8–9: *θεαρὸν ἦναι ἐξ Ἑλισό[ν]τι κατάπερ ἐς ταῖς ἄλλαις πόλισι*).

According to Paus. 8.27.3 (r371), Helisson was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282); it is not known, however, whether this decision was implemented, and the city still existed in 352, when it was captured and pillaged by the Spartans (Diod. 16.39.5).

No *theorodokos* is attested for Helisson, but *SEG* 37 340.9–10: *τὰς θεαρίας δέκεσθαι καὶ τὰ πάτρια* suggests that the city was connected to some system of *theorodokia*. By the treaty *SEG* 37 340 (C4f), Helisson adopted the Mantinean constitution and thus became a democracy (Nielsen (1996c) 69–70); it is, however, clear from the inscription (which among other things mentions a body of local laws, *νόμοι* (l. 15)) that Helisson had its own constitution before the agreement, although what form it took is unknown. The treaty is the only surviving public enactment of Helisson; at l. 17 it refers to a local board of *ἐπιμελητῆαι* (te Riele (1987) 180; Nielsen (1996a) 160 n. 56).

The local pantheon is unknown, but in *SEG* 37 340.9–10 *τὰς θυσίας . . . τὰς ἐν Ἑλισό[ν]τι* is presumably a reference to local communal cults which were to be preserved

after the unification of Helisson and Mantinea. For a C4 hero relief from Helisson, see Damaskos (1990–91).

274. Heraia (Heraieus) Map 58. Lat. 37.35, long. 21.50. Size of territory: 4. Type: A. The toponym is *Ἡερ[αί]α* in *REG* 62 (1949) p. 6 ll. 11–12 (C51–C4f); *Ἡραία*, *ἦ* is found at Xen. *Hell.* 2.30.9, 6.5.22; Ps.-Skylax 44; and *IPArk* no. 23.7 (C3). The city-ethnic is *Ἡραεὺς* in *SEG* 11 1045 (c.500); *IPArk* no. 15.19 (C4m) and Xen. *Hell.* 6.5.11 have *Ἡραεὺς*; Thuc. 5.67.1 and Xen. *Hell.* 6.5.22 have *Ἡραεὺς*; coins have *HPAEΩN* (Babelon, *Traité* ii.3 no. 1015).

Heraia is listed as the third toponym after the heading *πόλεις αἱ μεγάλαι αὐδὲ* (where *polis* is used in the urban sense) in Ps.-Skylax 44; at Xen. *Hell.* 3.2.30 it is implicitly described as a *polis* in the urban and territorial senses combined (for the idiom, cf. Diod. 2.43.6 and see Smyth, *Greek Grammar* §1096); at Arist. *Pol.* 1303^a15–16 there is a reference to a change of *politeia* in Heraia, in a passage (1302^b40, 1303^a15) where Heraia is listed as the fourth of six examples of the observation that a *polis* (in the political sense) consists of sometimes disproportionate parts. At Paus. 8.26.1 there is a reference to a temple of Dionysos Polites, but its date is unknown.

The collective use of the city-ethnic is found internally on coins (Babelon, *Traité* ii.3 no. 1015), and externally in *SEG* 11 1045 (c.500); Thuc. 5.67.1; *IPArk* no. 15.19 (C4m); and Xen. *Hell.* 6.5.11. The individual use is found externally on *IG* II² 2327 (rC6) and *IG* IV².1 96.35 (C3f).

Xen. *Hell.* 6.5.22 (*ἀπαλλάττονται* (sc. the Arkadian federal troops) *ἐκ τῆς Ἡραίας*) suggests that the toponym could designate the territory as well as the city, since it is a reasonable inference from the context that the federal troops were operating not in the city, but in the territory of Heraia (so Bölte (1913b) 415). Its size was c.265 km². Bölte (1913b) estimated the citizen population at min. 2,000.

According to Strabo 8.3.2, Heraia was synoecised (at an unknown date: Bergese (1985)) from nine *δήμοι*. These demes were perhaps minor settlements in the territory. Their identity is unknown, but Bölte (1913b) 412 counted Melainai and Bouphagion among them. A site which he identified with Bouphagion is described by Meyer (1939a) 103–6, but Jost (1985) 76–77 rejects the identification of this site with Bouphagion. The impressive fortifications of the site and its acropolis are Hellenistic (Meyer (1939a) 106; Jost (1985) 76 states that they are Classical), but large quantities of Archaic and Classical sherds were found at the site (Meyer (1939a) 102), which perhaps had a temple on the acropolis

(ibid. 106). Meyer (1957*b*) 20 identified another site, Loutra Ireas, near Betsi as another Heraian “Dorf”.

A number of fortresses in the territory are known; one at Ochthia on the border with Thelphousa (no. 300) is described by Meyer (1939*a*) 100–1: sherds at the site go back to the Archaic period. Near Paloumba is another fortified site (including a temple) with sherds going back to the Archaic period, for which see Meyer (1939*a*) 102 and Pikoulas (1999*a*) 304–5 (suggesting that this may be Melainai).

The symmarchy treaty ML 17 (c.500) was traditionally thought of as concluded between Elis (no. 251) and Heraia; however, Dubois (1985) correctly pointed out that the form *Ἐρφαοῖοι* (the then accepted reading) would be unique for the Heraian ethnic (cf. Roy (1997) 293–94); a recent re-examination of the text (by Roy and Schofield (1999)) has established that the name of Elis’ partner was in fact *Ἐρφαοῖοι*, which should probably be thought of as an otherwise unknown minor community in Eleia (see Ewaoioi (no. 253)).

Heraia fought with Sparta (no. 345) at Mantinea in 418 (Thuc. 5.67.1), and was thus a member of the Peloponnesian League. The city was loyal to Sparta even after Leuktra (Xen. *Hell.* 6.5.11), although it eventually joined the Arkadian Confederacy (IG v.2 1.58 (360s)). Heraian military activity is attested, in addition to Thuc. 5.67.1, by Xen. *Hell.* 6.5.11 and SEG 11 1045 (c.500), a dedication of spoils taken from the Heraians and set up by an unknown Arkadian community.

IPArk no. 15.19 (a treaty of *sympoliteia* between Euaimon (no. 269) and Orchomenos (no. 286)) stipulates that the Heraians are to act as arbiters in case of conflicts over property rights. A Delphic *theorodokos* resided in Heraia in C5–C4e (REG 62 (1949) p. 6 ll. 11–12). Nothing is known about the form of constitution at Heraia, but from the passage at Arist. *Pol.* 1303^a15–16 it can be inferred that at some point there was a constitutional reform there whereby the procedure for the appointment of magistrates was changed from election to sortition. Bölte (1913*b*) 415 dates the reform to 370.

At Diod. 15.40.2 (r375) a Heraia is described as a *χωρίον ὀχυρὸν*; if this is a reference to this city (which has been disputed; cf. Stylianou (1998) *ad loc.*), it may mean that the city was fortified (Bölte (1913*b*) 414): early travellers saw the remains of well-built walls, but these may have been Hellenistic (ibid. 408 and 415). The city of Heraia seems to have occupied a large area (Jost (1985) 73), but since the site has not been systematically investigated, no description of the urban layout is possible (Philadelphus (1931–32) reviews the remains at Heraia).

Heraian coinage began c.510; the earliest coins are hemidrachms and obols: *obv.* head of Hera; *rev.* *E, EP, EPA* or *EPAI*; see R. T. Williams (1970) and SNG Cop. *Argolis* 231–33. By C5–C4 the city struck in silver (SNG Cop. *Argolis* 234–36) and possibly even in iron (for which see Köhler (1882*a*)), and by C4 in bronze (SNG Cop. *Argolis* 236–41). Attested denominations are triobol, diobol, trihemiobol, obol and hemiobol. The legends are *E, EP, EPA, EPAL, H, HP, HPAEΩN* (Head, HN² 448; Babelon, *Traité* ii.1 nos. 1211–23 and ii.3 nos. 1000–15). The most common types depict female deities (Artemis and Athena), but Pan is found too (Imhoof-Blumer and Gardner (1964) 103).

The pantheon of Heraia is discussed by Jost (1985) 70–77. Heraians achieved two Olympic victories in C6 (*Olympionikai* 132, 138) and six in C5 (*Olympionikai* 189, 200, 205, 313, 317, 344).

275. Kaphy(i)ai (Kaphyieus) Map 58. Lat. 37.45, long. 22.15. Size of territory: 4. Type: B. The toponym is *Καφυαί, αῖ* in IG IV².1 122 (C4); it is *Καφύαι* in Michel 489 (C4) and Theophr. *Hist. pl.* 4.13.2. The city-ethnic is *Καφυιεύς* in *F.Delphes* III.4 191 (C5f) and *CID* II 12.1.2 (341/40); *Καφυεύς* is found in IG II² 66c (c.400); cf. Roy (1972*a*) 333–34.

There is no certain attestation of *polis* in any Archaic or Classical source: in Theopomp. fr. 77.3 *πόλις* probably does not stem from Theopompos. The earliest source that classifies Kaphy(i)ai as a *polis* is *Staatsverträge* 476.25, 92 (c.265).

The city-ethnic is found externally in the collective use in *F.Delphes* III.4 191 (C5f), and in the individual use in IG II² 66c (c.400) and *CID* II 12.1.2 (341/40).

The territory occupied c.220 km². A Classical sanctuary in the territory is reported by *ArchDelt* 37 (1982) 116 and *AR* 37 (1991) 25; for another, see Pritchett (1969) 125 and Jost (1985) 112. For a possible fortress, see Jost (1985) 112.

Kaphy(i)ai was a member of the revived Peloponnesian League of King Areus of Sparta (no. 345) for the Chremonidean War (*Staatsverträge* 476.25), but membership of the early Peloponnesian League may be assumed as well (Nielsen (1996*c*) 87). Membership of the Arkadian Confederacy is not explicitly attested, but may be assumed (ibid. 95).

Kaphy(i)an military activity can be inferred from *F.Delphes* III.4 191 (C5f), a dedication of spoils taken *ΤΟΝ [ΙΤΟ]ΛΕΜΙΟΝ* and set up at Delphi. A citizen of Kaphyia was Athenian *proxenos* in C51 and had the grant renewed after the fall of the Thirty (IG II² 66c with Walbank (1978) 151–53).

The city of Kaphy(i)ai was, like Mantinea (no. 281), situated in a plain and not centred on an acropolis (Pritchett

(1969) 123–24). It was located south-east of the modern village of Chotoussa, and the site is covered with Classical sherds and other remains (Pritchett (1969) 123–24; Howell (1970) 81; Jost (1985) 111). There are also remains of a circuit wall with round towers at Kaphy(i)ai, but they have not been systematically investigated (Pritchett (1969) 123–24). Among isolated finds from the city is an Archaic bronze statuette, reported by von Gaertringen and Lattermann (1911) 42 with table 13.2.

The Kaphy(i)an pantheon is almost unknown (Jost (1985) 110–11); Theophr. *Hist. pl.* 4.13.2 reports that Agamemnon was held to have planted a *platanos* in the city.

276. Kleitor (Kleitorios) Map 58. Lat. 37.55, long. 22.05. Size of territory: 5. Type: A. The toponym is found as [Κλε(ι)]τορι in IG1V 510 (C5f), as Κλείτωρ, ὄ in Pind. *Nem.* 10.47; SEG 20 716 (C4), and as Κλήτωρ in SEG 23 189 (c.330). The city-ethnic is Κλειτόριος (Paus. 5.23.7 (rC6s)); Maddoli (1992) 260; *Syll.*³ 291 (332) or Κλητόριος (Xen. *Hell.* 5.4.36; IG v.2 1.52 (360s)), abbreviated to ΚΑΕΤΟ on C5 coins (Head, *HN*² 446).

No Archaic or Classical source explicitly calls Kleitor a polis, but at Xen. *Hell.* 5.4.37 the city is referred to as a polis in the political sense.

The collective use of the city-ethnic is attested internally on C5 coins (Head, *HN*² 446) and externally in Paus. 5.23.7 (rC6s) (cf. Maddoli (1992) 260); IG v.2 1.52 (360s); and Xen. *Hell.* 5.4.36. The individual use is attested externally in *IvO* 167 (C4f) and *CID* II 51.7 (C4m).

The name of the territory was Κλειτορία (Theophr. *Hist. pl.* 9.15.6; Polyb. 4.11.2). Pausanias mentions a number of sites inside the territory: Leukasion, Mesoboa, Nasoi, Oryx, Halous (no. 272), Thaliades (no. 299) (8.23.8–24.3), Soron, Paion (no. 288), Seirai, Argeathai, Lykountes and Skotane (cf. Jost (1985) 42–46). Of these, Paion and Thaliades were probably, and Halous possibly, poleis at some time (see the respective entries); but whether they were dependent poleis within Kleitorian territory in the Archaic and Classical periods is unknown, though not impossible. About the other toponyms, nothing is known. On the basis of the map in Jost (1985), the size of the territory can be estimated at c.625 km², but this includes Lousoi (no. 279), Paion, Thaliades and Halous: it is unknown whether all of these ever formed part of Kleitor prior to the Roman era. For two C4s fortresses, see Pikoulas (1999b) 144–53.

Kleitor was almost certainly an Azanian community (K. Tausend (1993) 15); however, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972b) 44,

(1996) 110; Nielsen (1996a) 139). Kleitor may just possibly have headed a small hegemonic league in northern Arkadia (Nielsen (1996c) 86–87). The city was a member of the Peloponnesian League (Xen. *Hell.* 5.4.36–37) before the foundation of the Arkadian Confederacy of which it was a member (IG v.2 1.52 (360s)), and probably a leading one since it, like Mantinea (no. 281) and Tegea (no. 297), provided two of the ten oecists who founded Megalopolis (no. 282) (Paus. 8.27.2 (r371)).

C6s military activity can be inferred from Paus. 5.23.2 (Maddoli (1992) 260), referring to spoils dedicated at Olympia and, according to the accompanying epigram, taken by the Kleitorians πολλῶν ἐκ πολλίων χερσὶ βιασσάμενοι. At *Hell.* 5.4.36 Xenophon has a brief reference to a war in 379 between Kleitor and Orchomenos (no. 286) (cf. Roy (1972c)); for this war the Kleitorians had hired mercenaries (ibid.), but it is not clear whether they conducted the war exclusively with mercenaries. Xen. *Hell.* 5.4.37 refers to the ἀρχῶν τῶν παρὰ τοῖς Κλητορίοις ξένων, but it is not clear whether he was a citizen or a mercenary as well.

Xen. *Hell.* 5.4.36 mentions negotiations between Sparta (no. 345) and Kleitor, and SEG 20 716.14–15 refers to an embassy which travelled from Kyrene (no. 1028) to Kleitor; a Kleitorian was appointed Delphic proxenos in 332 (*Syll.*³ 291), and IG v.2 368 is a long C3e catalogue of proxenoi of Kleitor. *IPArk* no. 30, a sacred law of c.525, may belong to Kleitor. C.330 an Argive theorodokos resided at Kleitor (SEG 23 189.11.22). In C4f the constitution was presumably democratic (Roy (1972c) 79). SEG 20 716.18–19 (C4m) mentions a sentence of exile passed by the Kleitorians.

Like Mantinea, Kleitor was situated in a plain and had no acropolis (Jost (1985) 40; Winter (1989) 198 with fig. 3). The Hellenistic fortification wall is 2,500 m long and encloses an area of c.58 ha (Petritaki (1996) 83–84). It is built of stone throughout (Winter (1989) 198); it is “among the most advanced anywhere in the Peloponnese”, and so Winter (1989) 199 dates it to c.300. Inside the walled area are numerous ancient remains, and a theatre is discernible (Petritaki (1996) 85; cf. *TGR* ii. 237); ceramic evidence suggests that the earliest phases of the construction may go back to C4 (Petritaki (2001)). Outside the wall are late Archaic and Classical graves (Petritaki (1996) 84).

According to Head, *HN*² 446, minting at Kleitor began c.C5m; Babelon, *Traité* ii.1. 877–88 dates its start somewhat earlier. The city struck in both silver (*SNG Cop. Argolis* 217–25) and bronze (from C4; *SNG Cop. Argolis* 226–30). Known denominations are triobol, obol, hemiobol and possibly tetartemorion (*SNG Cop. Argolis* 218). Recurrent

types show Athena, horses and Helios (cf. Lacroix (1968)). Legends are *ΚΑ*, *ΚΑΗ*, *ΚΑΕΤΟ*.

The Kleitorian pantheon is imperfectly known; Athena Koria was probably the most important divinity (Jost (1985) 41–42). Prestigious games were celebrated at Kleitor (Pind. *Nem.* 10.47; Lazzarini (1976) no. 865 (C5f)).

Delphic *promanteia* is granted to a Kleitorian by *Syll.*³ 291 (332). Two Olympic victors from the city are on record, in 384 (*Olympionikai* 395) and in 376 (*Olympionikai* 406). In C6s (Paus. 5.23.7; for which see Maddoli (1992) 260), the city set up a dedication of spoils at Olympia.

277. Koila Unlocated (Meyer (1957a) 86). Size of territory: ? Type: C. The toponym is *Κοίλα* in *REG* 62 (1949) p. 6 ll. 4–5 (C5–C4e); an ethnic is not attested. Koila deserves inclusion in this Inventory solely because it may have had a Delphic *theorodokos* in C5l–C4e (*REG* 62 (1949) p. 6 ll. 4–5), and thus was possibly a *polis* (Perlman (1995) 116, 121, 135).

278. Kynaitha (Kynaitheus) Map. 58. Lat. 38.00, long. 22.05. Size of territory: 3. Type: C. The toponym is *Κύναιθα*, -ης, ἡ (Polyb. 4.17.3, 9.17.1). The city-ethnic is *Κύναιθεύς* (Aristox. fr. 135, Wehrli; Polyb. 4.16.11); Paus. 5.22.1 has *Κύναιθαεύς*, and Steph. Byz. 393.4 cites *Κύναιθαεύς* in addition to the two forms listed here.

No Archaic or Classical source mentions Kynaitha, but Polybios at 4.16.11 calls it a *polis* in the political sense, and at 9.17.1 in the urban sense; at 4.17.10 he uses *πατρίς*, and at 17.11 *πολιτεία*. However, since there is a C4 occurrence of the city-ethnic in the external individual use (Aristox. fr. 135, Wehrli), the city must have existed in the Classical period and was possibly a *polis* (Nielsen (1996a) 131–32), as it certainly was in C3 (see, e.g., the description of a *stasis* given by Polyb. 4.17–18 and 9.17).

The name of the territory is unknown; at 4.17.5, Polybios terms it *γῆ*. It occupied c.125 km². There are no important remains in the territory (Jost (1985) 53), and the major part of the city itself is probably hidden beneath modern Kalavryta (Meyer (1939a) 107 and Howell (1970) 96; but see Petropoulos (1985) 65–66).

279. Lousoi (Lousiatis) Map 58. Lat. 38.00, long. 22.05. Size of territory: ? Type: B. The toponym is *Λουσοί* in *IG* v.2 399 (C5e); Bacchyl. *Ep.* 11.96 has *Λοῦσος*, but this refers to a spring at the sanctuary of Artemis Hemera, and need not be the form behind the locative *Λουσοί* found in *IG* v.2 394.132 (c.200); see Bölte (1927) 1891. Arist. *Mir. ausc.* 842^b2 and *IG* v.1 1387.2 (C3) have *Λουσοί, οί*. Theophr. *Hist. pl.* 9.15.8, 16.8 has *Σοῦσα*, commonly taken to be a corruption of *Λοῦσα*,

τὰ, see Bölte (1927) 1891. In C5, the ethnic is found both as *Λουσαέτας* (*IG* v.2 387.8 (C5s)) and as *Λουσιάτας* (*IG* v.2 387.2 (C5s)); later only *Λουσιάτας* is found, e.g. Xen. *An.* 7.6.40; Xen. *An.* 4.2.21, 7.11–12 has *Λουσιεύς* (cf. Philostr. *De gymnastica* 12 (r708)); Paus. 8.18.8 uses *Λουσεύς* retrospectively (rC6).

Lousoi may be called a *polis* in a treaty dating to 500–475 (*Nomima* 1 no. 57, but cf. Dubois (1986) 220); a series of decrees dating to C4l onwards (*IG* v.2 388–96) frequently refers to the city as a *polis* in the political sense. The collective use of the city-ethnic is found internally in *IG* v.2 387 (C5s) and externally in *IG* v.2 358 (C3f?) and Polyb. 4.18.11. The external individual use is found in Xen. *An.* 7.6.40 (cf. Philostr. *De gymnastica* 12 (r708) and Paus. 8.18.8 (r546)).

The name and size of the territory are unknown; *IPArk* no. 22 (C3) may be a delimitation of the border between Lousoi and Achaian Boura (no. 233). Stangl (1999b) estimates that the territory could support max. 1,000 individuals. For a Classical watch-tower in the territory, see K. Tausend (1999b) 306–7.

Lousoi was probably an Azanian community (K. Tausend (1993) 15); however, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972b) 44, (1996) 110; Nielsen (1996a) 138). The city may have been party to a treaty as early as 500–475 (*Nomima* 1 no. 57, but cf. Dubois (1986) 220). A C3f(?) treaty with Stymphalos (no. 296) is preserved as *IG* v.2 358 (= *Staatsverträge* 560).

The earliest public enactment of Lousoi is a C5s list of *proxenoi* (*IG* v.2 387); *IPArk* no. 20, a sacred law of c.525, may belong to Lousoi. The decrees *IG* v.2 388–96 (C4l onwards) attest to an eponymous *damiorgos*, a board of *damiorgoi* and an *oikonomos*. From the enactment formulas (e.g. *ἔδοξε τῶι πόλι τῶλ Λουσιατᾶν* (*IG* v.2 389), *ἔδοξε τῶι δάμω(ι) τῶλ Λουσι[ι]ατᾶν* (*IG* v.2 390)), the existence of an assembly may be inferred. An *enktesis* grant is found in *IG* v.2 394 (C3l). According to Paus. 8.18.8, Agesilas of Lousoi was victorious in the Pythian Games in 546; Eurybatos of Lousoi is recorded as Olympic victor as early as 708 (*Olympionikai* 22); cf. S. Tausend (1999).

The acropolis of Lousoi is crowned by a C4 fortification wall, possibly of mudbrick on a polygonal stone foundation, and encloses an area of 0.3 ha (Petropoulos (1985) 67–73). South of the acropolis is the most important feature of the community of Lousoi: the sanctuary of Artemis Hemera (Jost (1985) 47), the pre-eminent divinity of the city. The temple is Hellenistic, but an older structure probably existed (Jost (1985) 49; Voyatzis (1990) 36). For a plan of the sanctuary, see Jost (1985) pl. 5.1. K. Tausend (1993) suggests

that the sanctuary at Lousoi was originally the cultic centre of the Azanian tribe, and owed its continual importance to this fact. The city lay c.1 km west of the sanctuary, at Phournoi, where there are numerous ancient remains (Jost (1985) 48). Private houses of C4–C3 have been found; see AR (1984–85) 23, (1985–86) 28, (1988–89) 33–34, and Mitsopoulos-Leon (1985) 96.

Apart from Artemis, no other divinities are securely attested at Lousoi (Jost (1985) 50) unless *IPArk* no. 20, mentioning Demeter, belongs to Lousoi. The city certainly celebrated games in honour of Artemis by C3 (*IG* v.1 1387) but may already have done so in C4 when the series of decrees granting *theorodokia* commences (*IG* v.2 388–96); cf. S. Tausend (1999) 372–73.

280. Lykosoura (Lykourasios) Map 58. Lat. 37.25, long. 22.00. Size of territory: ? Type: C. The toponym is *Λυκόσουρα*, ἡ (*SEG* 41 332.45 (c.230–190)); the MSS of Pausanias have different variants of this form (Meyer (1927) 2417–18). The city-ethnic is *Λυκουράσιος* in *SEG* 41 332.1 (c.230–190); Pausanias (e.g. 8.27.6 (r371/70)) uses *Λυκοσουρεύς* (Meyer (1927) 2417).

The collective use of the city-ethnic is found internally in *SEG* 41 332.22–23 (c.230–190) and externally in Paus. 8.27.5 (r371) (probably taken over from a historiographic source, see Nielsen (1996b) 296). No Archaic or Classical source mentions Lykosoura. At 8.27.4 (r371), Pausanias states that Lykosoura was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282); however, he goes on to explain that this decision was not implemented (8.27.6), because the city resisted the relocation. Since the very first source that mentions Lykosoura (*SEG* 41 332 (c.230–190)) describes it as a *polis* (in the political sense, e.g. l. 3) and refers to the *politai* (ll. 7–8), it is possible that at the foundation of Megalopolis the city was left as a dependent *polis* inside Megalopolitan territory. Three other cities that resisted the synoecism (Lykaia, Trikolonoi and Trapezous (no. 303)) were either forced to relocate (Lykaia and Trikolonoi) or annihilated (Trapezous). It is thus rather remarkable that Lykosoura was spared, and we should look for an explanation. According to Paus. 8.27.6, the inhabitants of the city took shelter in the sanctuary of Despoina and were spared “*Δήμητρος τε ἔνεκα καὶ Δεσποίνης*”. The best explanation, then, seems to be that the city was allowed to exist in order to look after the important sanctuary at which it was situated (see also the judicious remarks by Meyer (1927) 2431 on the importance of the sanctuary in comparison with the city). And in fact,

the decree *SEG* 41 332 (c.223–190) that shows Lykosoura acting as a *polis* concerns business related to the sanctuary. This points to the conclusion that after the synoecism Lykosoura was a dependent *polis* in charge of an important sanctuary inside the *polis* of Megalopolis (see Meyer (1927) 2431–32, suggesting that citizens of Lykosoura were *also* citizens of Megalopolis; cf. Jost (1999) 194).

Before the synoecism of Megalopolis, Lykosoura belonged to the Parrhasian tribe (Paus. 8.27.4; Nielsen (1996a) 132–34). In C5s the Parrhasians, and thus probably Lykosoura, were members of a local hegemonic league led by Mantinea (no. 281), for which see Nielsen (1996c) 79–86. Membership of the Peloponnesian League may be assumed; it was probably mediated by the Parrhasian tribe (Nielsen (1996c) 97, 89, 100–1). Membership of the Arkadian Confederacy through the Parrhasian tribe can be inferred from Paus. 8.27.4 (cf. Nielsen (1996c) 87, 89, 100–1).

The date at which the monumental buildings in the sanctuary at Lykosoura were erected is not certain, but may be C4 (Jost (1985) 178). Above the sanctuary is the walled acropolis of the city; Meyer (1927) 2426 dates the wall to C5–C4 (so *PECS*). Ancient temple remains were reused in a chapel (Meyer (1927) 2426). The city proper (termed *ἄστυ* by Paus. 8.27.5) was on the northern slope of the acropolis, west of the sanctuary; Meyer (1927) 2426 reports that “*der ganze Nord- und Ostabhang ist mit antiken Trümmern übersät*”.

281. Mantinea (Mantineus) Map 58. Lat. 37.35, long. 22.25. Size of territory: 4. Type: A. The epichoric and Doric form of the toponym is *Μαντινεία*, ἡ (*SEG* 37 340.6 (C4f); *IG* v.1 1124 (C5l)); the regular Ionic form is *Μαντινέη* (Hom. *Il.* 2.607; Hdt. 4.161.2), but Hecat. fr. 123 (= Steph. Byz. 13.8) apparently used the synaloiphic form *Μαντινήη*. The Attic form is *Μαντινεία* (Eupolis fr. 99.30, K&A; Thuc. 5.55.1). The city-ethnic is invariably *Μαντινεύς* (Hdt. 4.162.2; *CID* II 1.11.24 (360)). For ethnic and toponym, see further Bölte (1930) 1290–92.

Mantinea is called *polis* in the urban sense at Thuc. 5.33.2, Ephor. fr. 79, Ps.-Skylax 44 (who lists it as the second toponym after the heading *πόλεις αἰ μεγάλαι αἶδε*, where *polis* is used in the urban sense), and at Isoc. *Paneg.* 126; in the territorial sense at Xen. *Hell.* 5.2.6; and in the political sense at Hdt. 7.202 and 204, Thuc. 5.47.3, and *IG* 1³ 83.15–17 (420). Hermippos *apud* Ath. 4.41 (rC6) uses *πολίται* (Hdt. 4.161.2 (rC6m) has *ἄστοί*); Isoc. *Paneg.* 125 uses *πολιτεία* (opposed to *μοναρχία*); Ael. *VH* 2.23 (rC5s) uses *πολιτεύεσθαι*; and Polyb. 6.43.1 *πολίτευμα* (achronic

reference). At 5.69.1 Thucydides uses *πατρις* (cf. *CEG* II 887 (C4)).

The collective use of the city-ethnic is found internally in *SEG* 37 340 (C4f), and externally at Hdt. 4.161.2 (rC6m), Bacchyl. fr. 21, Thuc. 3.107.4, *IvO* 16.17 (C5m) and *IG* I³ 83.4 (420); the individual use is attested externally only, e.g. Hdt. 4.162.2 (rC6m), *SEG* 26 330 (C4), *CID* II 1.11.24 (360) and Xen. *Hell.* 7.1.23.

The territory occupied c.295 km² (cf. Hodkinson and Hodkinson (1981) 275 n. 128), and its name was ἡ Μαντινική (Thuc. 5.64.5; Xen. *Hell.* 6.5.15). However, the passage at Thuc. 5.64.4 (βοηθεῖν δὲ καὶ Ἀθηναίους ἐς... Μαντινείαν) suggests that the toponym could also designate the territory. The territory is termed γῆ by Hdt. 9.77.3, Thuc. 5.64.5 and Xen. *Hell.* 5.2.4, and χώρα at Xen. *Hell.* 6.5.15; for the territory, see Hodkinson and Hodkinson (1981) 242–46. The neighbours were, to the north, Orchomenos (no. 286); to the east, Argos (no. 347); to the south, Tegea (no. 297); and to the west, Mainalia. Extra-urban sanctuaries are known, e.g. one of Herakles mentioned at Thuc. 5.64.5 (for which see Pritchett (1969) 46–49); see also Jost (1985) 132–41. The important sanctuary of Poseidon Hippios, the tutelary god of the city (Brackertz (1976) 68–71), was situated 1.3 km south of the city; it has been located, but no substantial finds have been published (Jost (1985) 136); however, the web site of the Hellenic Ministry of Culture (www.culture.gr s.v. ‘The Sanctuary of Hippios Poseidon’ as assessed 21 January 2003) reports: “The excavations of Th. Spyropoulos in 1985–95 revealed remains of the Archaic temple and important objects of the same period (clay akroterion of Lakonic type bearing Gorgoneion, pottery of Archaic and Classical date, idols, etc.). The excavations also uncovered later buildings and tombs preserving ancient liberative inscriptions dedicated to Hippios Poseidon.” For a group of four C4 fortified watch-towers in the territory, see Pikoulas (1995) cat. nos. 38–41; see also Jost (2001–2) esp. fig. 1, noting a new tower at Simiades.

The town of Mantinea (the date of whose foundation is uncertain; see Hodkinson and Hodkinson (1981) 256–61) was not the only settlement in Mantinean territory. A number of sources state that at the *dioikismos* in 385 (*infra*) the Mantineans were dispersed to the old villages, *komai*, which was their old pre-synoecistic way of life. It seems likely that these villages were the ones from which the city was originally synoecised (*infra*); but it is unknown whether they were inhabited between the original synoecism and the *dioikismos* (Hodkinson and Hodkinson (1981) 261–63), although it seems probable (Bölte (1930) 1318; Hodkinson and Hodkinson (1981) 264; Jost (1986a) 155). The identity of

these *komai* is not clear from Classical sources, but Pausanias mentions a number of sites that are possibly to be identified with at least some of them (Jost (1986a) 155–56). Hodkinson and Hodkinson (1981) 262 have identified two of the villages with surviving remains: (a) Nestane (no. 284), c.7.5 km west of Mantinea town. The site occupies the hill of Nestani, measures 160 × 40 m, and was fortified c.370 (Hodkinson and Hodkinson (1981) 247). There are some foundations on the summit, and a few Classical and Hellenistic sherds were found there (Howell (1970) 87). A lower ridge runs east–west for 350 m and is probably the site of the village (Hodkinson and Hodkinson (1981) 246–48); (b) Maira, c.5.7 km north of Mantinea town (*ibid.* 248–50). At modern Gourtsouli, probably ancient Ptolis, just north of the town, there is evidence of cult and habitation down to C6l, thereafter of cult only (*ibid.* 252–56); see, however, *AR* (1990–91) 26 reporting early Hellenistic habitation on the eastern slope.

It seems reasonably certain that at least in some periods the Mantinike included a number of settlements which were themselves organised as *poleis*. Thus, Nestane had its own ethnic in C4, which indicates that the city was organised as a *polis* (and thus as a dependent *polis* within Mantinean territory) since no Arkadian sub-ethnics are known (Nielsen (1996a) 117–32); it is likely that during the *dioikismos* Nestane and (some of) the other individual *komai* rose to *polis* status (Polyb. 4.27.6 (r385)), and that this was recognised at the new synoecism in 370 (Xen. *Hell.* 6.5.3). However, even prior to the *dioikismos* the Mantinike included other *poleis* besides Mantinea. Thus, it is clear from the treaty *SEG* 37 340 (C4f) that by this treaty the Mantinike was enlarged to cover the territory of Helisson (no. 273), and that Helisson persisted as a (dependent) *polis* within Mantinean territory; the text furthermore shows that Helisson was not the only *polis* in this position; others may have been some of the original *komai* or other Mainalian communities such as Dipaia (no. 268), etc.; cf. Nielsen (1996c) 66–70.

At Thermopylai Mantinea contributed 500 hoplites (Hdt. 7.202), and in 420, 1,000 soldiers helped to protect the Olympic Games against an anticipated Spartan attack. According to Lys. 34.7, the Mantineans did not number 3,000; it is not possible to give any exact estimate of the size of population on this basis (cf. Forsén (2000) 36–39); Xen. *Hell.* 5.2.7 implies that in 385 residence in the town was the norm in Mantinea.

Mantinea was a member of the Hellenic League against Persia (Hdt. 7.202) and of the Peloponnesian League (Thuc. 5.29.2; Xen. *Hell.* 5.2.3; cf. Tuplin (1977)), but relations with

Sparta (no. 345) were very varied and seldom easy (Nielsen (1996c) 90–91). In 421 Mantinea defected from the League and concluded an alliance with Argos (Thuc. 5.29.1), which was followed the next year by the conclusion of a quadruple alliance of Argos (no. 347), Athens (no. 361), Elis (no. 251) and Mantinea (Thuc. 5.47 = IG 1³ 80). However, after the defeat at Mantinea in 418 (exactly when is unknown), Mantinea came to terms with Sparta again (Thuc. 5.81.1); and it remained an ally of Sparta (Xen. *Hell.* 5.2.1) down to the foundation of the Arkadian Confederacy after Leuktra.

Inside Arkadia, Mantinea was a major power, and in C5s it led a league that included all the Parrhasians and some of the Mainalians (see Nielsen (1996c) 79–84 for details), who were reduced to dependencies. In C4f Helisson was reduced to dependent status through a treaty of what amounts to *sym-politeia* (SEG 37 340). The city was also a leading member of the Arkadian Confederacy (IG v.2 1.34 (360s)); the move towards the foundation of the Confederacy probably began in Mantinea (Larsen (1968) 183; Dušanić (1970) 285), and it was the home town of the important federal leader Lykomedes (for whom see Xen. *Hell.* 7.1.23–24, 1.39, 4.2–3), who was one of the two oecists that the city supplied for the foundation of Megalopolis (no. 282) (Paus. 8.27.2). Mantinea was likewise a chief actor in the crisis that led to the dismemberment of the Confederacy in 363 (Xen. *Hell.* 7.4.33ff; Larsen (1968) 189; Roy (1971a) 588). After the Confederacy split up, Mantinea seems, like Megalopolis, to have been the leading city of a continued but smaller Confederacy (*Staatsverträge* 290; Diod. 15.94.1–3 (r361), 16.39.1–3 (r352); *Staatsverträge* 337, 342; cf. Nielsen (1996b) 356–59).

According to Strabo 8.3.2, Mantinea was originally synoecised from five *demoi* (termed *komai* at Diod. 15.5.4; cf. Ephor. fr. 79). At Xen. *Hell.* 5.2.7, it is stated that settlement in (four) *komai* was the old way of the Mantineans, given up by 385; but the *dioikismos* that year meant a return to this settlement pattern, and the implication is that the original synoecism was the reverse process. The synoecism cannot be dated (Hodkinson and Hodkinson (1981) 257–61). In 385, the Spartans undid the synoecism by *dioikismos*, described in our sources by the terms *διοικίζειν* (Xen. *Hell.* 5.2.7; Isoc. *De Pace* 100; Ephor. fr. 79.2; Polyb. 4.27.6), *μετοικεῖν* (Diod. 15.12.2) and *ἀνάστατον ποιεῖν* (Isoc. *Paneg.* 126). However, in 370 the city was synoecised again (Xen. *Hell.* 6.5.3–5).

Mantinean military activity is attested by, e.g., Hdt. 7.202 and Thuc. 5.69.1; commanders are mentioned at Hdt. 7.203 and Thuc. 5.69.1. Ephor. fr. 54 implies that public instruction in fighting under arms was given at Mantinea from an early

date; Bölte (1930) 1317 assumes that this institution was inspired by Sparta. Bacchyl. *Ep.* fr. 1.2–3 with schol. Pind. *Ol.* 10.83a suggest that Mantinean hoplites carried the trident of Poseidon as a blazon (Anderson (1970) 18).

The military leaders who were late for Plataiai were exiled (Hdt. 9.77.2); in IG v.2 261.18 = IPArk no. 7 (C5m) there is a reference to *φεύγοντες*, and in connection with the *dioikismos* 60 προστάται τοῦ δήμου went into exile (Xen. *Hell.* 5.2.6). Reception of an embassy is implied by Hdt. 4.161.2 (rC6m), and Thuc. 5.44.2 mentions the sending of an embassy.

According to Thuc. 5.29.1 and Xen. *Hell.* 5.2.7, Mantinea was a democracy, and according to Arist. *Pol.* 1318^b27 it had been a democracy of the old, moderate type in which officials were appointed by electors chosen by election from all citizens and serving in rotation (Larsen (1950)). Political decision making, on the other hand, was left to the *demos* in assembly (cf. Xen. *Hell.* 6.5.4–5). This old type of democracy corresponds to a C4 *politeia* (Arist. *Pol.* 1297^b24–5) in the sense of “citizen constitution”, and Mantinea is in fact described as a *πολιτεία* in this sense by Isoc. *Paneg.* 4.125–26 (r385). Robinson (1997) 113–14 believes that Mantinea was a democracy already by C6, and Waisglas (1956) argues for the C6m existence at Mantinea of an elective office of *βασιλεύς*. During the *dioikismos*, the constitution was aristocratic (Xen. *Hell.* 5.2.7). In connection with the *dioikismos* there is evidence of a sharp divide within the citizenry between on the one side οἱ ἀργολλίζοντες and οἱ τοῦ δήμου προστάται and on the other οἱ βέλτιστοι (Xen. *Hell.* 5.2.6).

The earliest surviving public enactments are a fragmentary law (IG v.2 261 = IPArk no. 7 (C5m)) and the treaties recorded at Thuc. 5.47 and SEG 37 340 (C4f). IG v.2 262 = IPArk no. 8 (C5m) records a verdict and refers to *δικασσταί* at l. 19. Ael. *VH* 2.23 (rC5s) mentions a *νομοθέτης*, and in SEG 37 340.6 (C4f) there is a general reference to *νόμοι τῶν Μαντινέων* as well as a reference to procedural laws (ll. 11–12).

A council is attested by Thuc. 5.47.9 (cf. IG v.2 289 (C4), for Ζεὺς *Εὐβωλῆς*); it possibly had 300 members (SEG 37 340.24 (C4f)). The eponymous official was a *δαμιουργός* (SEG 37 340.20 (C4f)) who probably headed a board (Thuc. 5.47.9). Boards of *ταμίαι* (IG v.2 261.7 (C5m)), *θεωροί* (Thuc. 5.47.9), *πολέμαρχοι* (Thuc. 5.47.9), *σταλογράφοι* (SEG 37 340.18 (C4f)) and *θεσμοτόραροι* (SEG 37 340.20) are attested as well. For the assembly, see Xen. *Hell.* 6.5.4–5. A system of five *phylai* is attested, but its function is unknown (IG v.2 271 (C4m); Jones, *POAG* 132–35).

The city of Mantinea was situated on level ground and had no acropolis. The town had two periods of existence: down to the *dioikismos* in 385, and from the new synoecism in 370. The first town was fortified (Xen. *Hell.* 5.2.1), but the wall was pulled down at the *dioikismos* when the site was abandoned (Xen. *Hell.* 5.2.7). In 370 it was decided to re-fortify (and obviously reoccupy) the town (Xen. *Hell.* 6.5.3). The preserved wall, though probably following the course of the pre-385 wall (Hodkinson and Hodkinson (1981) 257–58), is the one built in 370 (though it has been thought to incorporate parts of the earlier wall (Scranton (1941) 57ff)). It encloses an area of 124 ha (Hodkinson and Hodkinson (1981) 256) and runs for 3,942 m with ten gates and 126 towers; it was constructed in mudbrick on a stone foundation (Winter (1989) 191). Not much is known about the degree of urbanisation reached by the pre-385 city; archaeology does not reveal much, and the best information comes, in fact, from the written sources. From Thuc. 5.47.11 it appears that it had an agora with a sanctuary of Zeus; from *SEG* 37 340 it appears that there was a *boleion* (for which see Winter (1987) 240–41), and Xen. *Hell.* 5.2.1–7 refers to houses. But even the post-370 city is imperfectly known, since the excavations have been directed primarily towards the area of the agora, which was laid out on the site of the old agora (Winter (1987) 240). Here several stoas have been found, one of which may be a relic of the first town (ibid. 239–40). West of the agora is a C4 theatre (ibid. 240; cf. *TGR* ii. 313) with an artificial embankment (Dilke (1950) 45–46). Near the theatre are several Classical temples (Jost (1985) 130–31). The “vast private sector” of the city is completely unknown (Hodkinson and Hodkinson (1981) 259), but at *Hell.* 7.5.15 Xenophon refers to houses in the second city too.

The rich pantheon of Mantinea is discussed by Jost (1985) 124–42. The patron divinity was Poseidon Hippios, in whose honour festivals were celebrated (Jost (1985) 133, 290). According to Xen. *Hell.* 5.2.1, the Spartans in 386/5 accused the Mantineans of manipulating *ἐκχειρία* to avoid campaigning. C5 communal consultation of the Delphic oracle is suggested by Paus. 8.36.8 (Hejnic (1961) 29).

Several C5 Olympic victors are on record (*Olympionikai* 163, 193, 202, 254, 256, 265); spoils were dedicated at Delphi *c.*423 (Thuc. 4.134.2), and a C5 dedication in Olympia is mentioned at Paus. 5.26.6 (a wingless Nike by Kalamis, for whom see Pollitt (1990) 46).

Mantineia struck silver coins from *c.*500 to 385, and silver and bronze from 370 onwards. Denominations: tritetartemion, hemiobol, obol, trihemiobol, triobol and drachm. (1) Silver, 500–385. Types: *obv.* bear or acorn; *rev.* acorn(s);

legend (sometimes on *obv.*): *M* or *MA* or *MAN* or *MANT*. (2) Silver, 370 onwards. Types: *obv.* Odysseus or Athena; *rev.* altar of Poseidon or trident; legend (sometimes on *obv.*): *M* or *MANTI* or *MANTIN*. (3) Bronze, 370 onwards. Types: *obv.* Athena; *rev.* Poseidon or trident; legend: *MAN*. (4) A particularly interesting C4 issue showing a dancing hoplite has been studied by Lacroix (1967). Head, *HN*² 449–50; *SNG Cop. Argolis* 242–54.

282. Megale polis (Megalopolites) Map. 58. Lat. 37.25, long. 22.05. Size of territory: 4–5. Type: A. The toponym is *Μεγάλα πόλις*, ἡ (*CID* II 5.1.24 (358)), or *Μεγάλη πόλις* in Attic (Dem. 16.4); the form *Μεγαλόπολις* is late but occurs, e.g., at Strabo 8.4.5. The city-ethnic is *Μεγαλοπολίτας* (*CID* II 4.111.50 (360)) or in Attic *Μεγαλοπολίτης* (*IG* II² 161.2 (C4m)).

Megalopolis is called a *polis* in the urban sense at Dem. 16.25 and *Syll.*³ 559.29 (r371–368), and it is listed (as *Μεγαλοπολίται*) as a *polis* in the political sense in the accounts of the Delphic *naoroioi* at *CID* II 4.111.1, 50 (360) under the heading *τάδε πόλεις καὶ ἰδιῶται ἐπάρξαντο*; Diod. 18.70.1 (r318) refers to the *πολίται*. The territorial sense of *polis* (with the political sense as a possible connotation) occurs in Xen. *Hell.* 7.5.5 (for which see Nielsen (1996c) 72–73). The collective use of the ethnic is attested externally in, e.g., *CID* II 4.111.50 (360) and Isoc. 5.97; the individual use is attested externally in *CID* II 4.111.55–56 (360).

Megalopolis was a creation of the Arkadian Confederacy and was synoecised by a board of ten *oikistai*, two each from Mantinea (no. 281), Tegea (no. 297), Kleitor (no. 276), the Mainalians and the Parrhasians (Paus. 8.27.2). The synoecism is known principally from Diod. 15.72.4, who gives a compressed account of an *event* and dates the synoecism to 368; and from Paus. 8.27.1–8, who gives a detailed account of the original *plan* for the foundation as well as an account of the *implementation* of this plan, and dates the synoecism to shortly after Leuktra. The two accounts are, apparently, irreconcilable, and it has been customary to follow one and reject the other; however, the differences concern chiefly the date and the extent of the synoecism, and the difficulties may be at least partly removed by the realisation that Pausanias’ account is primarily *prescriptive*, whereas that of Diodoros is *descriptive*: thus, the decision to synoecise may have been taken shortly after Leuktra (Paus.) but the implementation may have been postponed to 368 (Diod.). The real problem, however, is the extent of the synoecism. According to Diod. 15.72.4, the city was created by a synoecism whereby twenty *komai* belonging to the Parrhasians

and Mainalians were relocated to a new site (accepted by, e.g., Moggi (1974) and Demand (1990) 113); according to Paus. 8.27.3–4, the synoecism was *planned* as a much larger enterprise, which was to absorb thirty-nine different *poleis*, among them some former Lakedaimonian perioikic communities. However, Pausanias himself goes on to explain that the decision was *not* implemented exactly as planned (8.27.5–8). So, although by the Roman period Megalopolis seems to have controlled all the sites listed by Pausanias (Roy *et al.* (1988) 180), it is not safe to assume that the synoecism originally had the extent implied by his list. What happened in 368 was thus a synoecism of smaller dimensions than originally envisaged, and the synoecism may primarily have involved Parrhasian and Mainalian communities (Diod.), though Eutresian communities are likely to have been involved as well (cf. Paus. 8.27.5, stating that Eutresian Trikolonoi unsuccessfully resisted incorporation). As in many other cases, the synoecism was probably planned, and certainly carried out, as a relocation of only a part of the population of the settlements concerned (Roy (1968) 159). Among the communities situated in Megalopolitan territory, at least Lykosoura (no. 280) seems to have survived as a dependent *polis*, and there may have been some others (Roy (2000a) 139).

The ancient sources (Paus. 8.27; Diod. 15.72.4) agree that Megalopolis was intended to serve as protection against Sparta (no. 345). For a modern but highly speculative discussion of the ideology behind the foundation, see Braunert and Petersen (1972). In 361 the city suffered a serious crisis as some of the relocated populations left for their old settlements and called upon Mantinea for support; the rebellion was, however, overcome with Theban assistance (Diod. 15.94.1); nor did the Spartans succeed in a *διοικισμος* of the city in 352 (Dem. 16.30; Diod. 16.39).

If the territory comprised all the communities listed at Paus. 8.27.3–4, it will have occupied 1,500 km² (Roy *et al.* (1988) 179). If, however, the reconstruction of Moggi (1974), based on Diodoros, is preferred, the territory will have measured c.400 km², somewhat larger than that of Tegea but smaller than that of Kleitor. A survey has been carried out in the territory; from the preliminary reports it appears that even after the synoecism there was considerable habitation in the rural areas, both in dispersed farmsteads and in nucleated settlements (Roy *et al.* (1992)). Almost all other information about the territory comes from the late account of Pausanias, which is discussed in detail by Jost (1973).

There is no good evidence relating to the size of the population; for what it is worth, Diod. 18.70.1 states that in 318 the

city managed to put 15,000 men under arms, but this figure includes metics and slaves (Bury (1898) 16); Gardner *et al.* (1893) 3 supposes a total population of 65,000.

Megalopolis was a federal foundation, and the city was, of course, a member of the Arkadian Confederacy (IG v.2 1.23 (360s)). It is often believed that the city was intended to serve as the capital of the Confederacy (Bury (1898); Braunert and Petersen (1972) 81ff). Certainly, the fact that the city provided ten *damiorgoi* for the Confederacy, whereas Tegea (no. 297) and Mantinea provided only five each (IG v.2 1.1, 23, 34 (360s)), suggests that the city did somehow enjoy a favoured position within the Confederacy, but greater precision on this point is impossible (Roy (2000b); Tsiolis (1995) 51, 54). When the Confederacy split in 363, Megalopolis sided with Tegea and Boiotia against Mantinea, Athens (no. 361) and Sparta. According to Polyb. 4.33.9, after the battle of Mantinea in 362, Megalopolis was the centre of an Arkadian alliance: *Μεγαλοπολίται καὶ πάντες οἱ κοινωνοῦντες Ἀρκάδων τῆς αὐτῶν συμμαχίας κτλ.* This presumably means that the city posed as the leader of one faction of the Confederacy; at least, we know that the federal assembly, *Myrioi*, held a session in Megalopolis in 348/7 (Dem. 19.10; Aeschin. 2.157); since there is no reason to believe that the Confederacy had reunited by this date (cf. *Staatsverträge* 337 (342)), this probably means that Megalopolis claimed to represent the Arkadian Confederacy; but Mantinea probably did so as well; see Nielsen (1996b) 356–59 for further discussion.

From Dem. 16.28 it appears that in the 350s Megalopolis was allied to Thebes (no. 221); from Diod. 16.39 it is clear that the city had alliances with Argos (no. 347), Sikyon (no. 228), Messene (no. 318) and Orneai (no. 354) as well. *Staatsverträge* 337 attests to an alliance with Athens in 342.

Xen. *Hell.* 7.5.5 refers to Megalopolitan troops. Diod. 18.56.5 (r318) refers to exiles from the city. Dem. 16.1 refers to the sending of an embassy, and Dem. 19.10, Aeschin. 2.157 and SEG 20 716.20 (C4) to reception of embassies. Two citizens were appointed Athenian *proxenoi* in C4m (IG II² 161), and another received Delphic *proxenia* in the 330s (*I. Delphes* III.4 380–81). An Epidaurian *theorodokos* resided in the city in C4l–C3e (*IAEpid* 42.3).

Being a federal foundation, Megalopolis was probably originally a democracy, since the Confederacy was democratic (Larsen (1968) 180). The earliest reference to a public enactment is Diod. 18.70.1 (r318): *οἱ Μεγαλοπολίται . . . ἐψηφίσαντο*; IG v.2 431.3 (C4) has been restored to refer to a council. A board of *damiorgoi* is referred to in IG v.2 431.2; the office of *agonothetes* is attested by IG v.2 450 (C4s). It is

as good as certain that a system of six *phylai* was created at the foundation of the city, but on its functions we have no information (*IG* v.2 451 (C3l–C2e) and 468 (C4–C3) with Jones, *POAG* 135–38).

The public architecture included a *bouleuterion* (Paus. 8.30.9, without indication of its date; cf. Hansen and Fischer-Hansen (1994) 40), a stoa erected by Philip II of Makedon (Paus. 8.30.6; cf. Gardner *et al.* (1893) 59–66 and *AR* (1993–94) 17–18, (1994–95) 13); in addition, Paus. 8.30.7 has a reference to unspecified ἀρχαία. In the agora (for which see Gardner *et al.* (1893) 101–6) there was a sanctuary with a temple of Zeus Soter (C4) (cf. *AR* (1993–94) 17). The theatre had a seating capacity of c.20,000 (Gardner *et al.* (1893) 42; *TGR* ii. 262–63) and was built when the city was founded (Gardner *et al.* (1893) 69, 75; cf. *AR* (2001–2) 28). Finally, the city housed a C4m assembly hall which served the Confederacy (Paus. 8.32.1; cf. Gardner *et al.* (1893) 17–23) as well as the city itself (Tsiolis (1995) 51–54). So the city was able to house federal institutions, and a federal assembly met in the city in 348/7 (Dem. 19.10; Aeschin. 2.165); it is unknown, however, whether the assembly met in the city in the 360s; Harp. s.v. *Myrioi* states: Μύριοι ἐν Μεγάλῃ πόλει ... πολλάκις μνημονεύουσι οἱ ἱστορικοί, but this need not refer to meetings in the 360s (cf. Dem. 19.10; Aeschin. 2.165). None the less, Braunert and Petersen (1972) 81 believe that the city was *planned* as the capital of the Confederacy.

The city wall of Megalopolis was erected when the city was founded and was c.9 km long (Loring in Gardner *et al.* (1893) 115); it withstood a siege during the revolt of Agis (Aeschin. 3.165) in 331, but in 318 certain sections had to be repaired (Diod. 18.70.2). It was a mudbrick wall on a stone foundation (*ibid.*). The area enclosed by walls measured c.350 ha; this area, however, includes the river Helisson, which divided the city in two. Since the excavations have been directed exclusively at the agora and the theatre, there is no way of knowing how densely populated this large area was; it is usually assumed that the city was much too large for its population (Gardner *et al.* (1893) 116). This was certainly the case in C3l (Polyb. 2.55.2, 5.93.5); however, as Moggi (1974) 105–7 has argued, the extreme lack of population in C3l was probably due to exceptional circumstances. In any case, a drop in population is normally assumed for C3 Arkadia in general (Sallares (1991) 106), and so it is problematical to use the evidence about the C3 level of population retrospectively for C4. Even on the most cautious estimate—that only 100 ha was occupied by habitation and that each ha accommodated only 100 people—the urban population of the city would have been 10,000.

Free non-citizens, ξένοι, are referred to by Diod. 18.70.1 (r318). The patron deity was either Athena Polias (Paus. 8.31.9; Jost (1985) 230) or Zeus Lykaios (Brackertz (1976) 85–87). In general, the Megalopolitan pantheon reflects the fact that the city was founded by synoecism of pre-existing states: in the city are found several doublets of cults that belonged to the communities from which the city was synoecised (Nilsson (1951) 18–22; Jost (1985) 221–33, (1994) 225–28). Most importantly, there was a *peribolos* of Zeus Lykaios in the agora. Cf. Jost (1996).

In C4m Megalopolis applied to the Amphiktyonic League for membership (*Syll.*³ 224).

During the 360s and later, Megalopolis struck staters with *obv.* Pan; *rev.* Zeus Lykaios; legend: *APK* in monogram (Head, *HN*² 445). A series of triobols and obols with similar types and legends may belong to C4l (Head, *HN*² 445; Warren (1969) 39; *SNG Cop. Argolis* 191–200). In addition, bronze coins with similar types and legends were struck (Head, *HN*² 445; *SNG Cop. Argolis* 201–10); *SNG Cop. Argolis* 208 shows Athena and Pan.

283. Methydrion (Methydrieus) Map 58. Lat. 37.40, long. 22.10. Size of territory: probably 2. Type: B. The toponym is *Μεθύδριον*, τό (Thuc. 5.58.2; *REG* 62 (1949) p. 6 l. 6 (C5l–C4e); Paus. 8.12.2). The city-ethnic is *Μεθυδριεύς* at Xen. *An.* 4.1.27; *IPArk* no. 14.6–7 (360s, from Orchomenos) has *Μετιδριήων*, which points to an epichoric toponym **Μετιδριον*.

The only Classical source that possibly classified Methydrion as a *polis* is Theopomp. fr. 344.18 (= Porph. *Abst.* 2.16); at Paus. 8.27.4 (r371) the city is listed as a *polis*. The collective use of the city-ethnic is found internally on coin legends (Head, *HN*² 451) and externally in *IPArk* no. 14.6–7; the individual use is found externally at Xen. *An.* 4.6.20.

Thuc. 5.58.2 (*προϊόντες ἀπαντῶσι τοῖς Λακεδαιμονίοις ἐν Μεθυδρίῳ*) suggests that the toponym could designate the territory as well. An inscription from Orchomenos refers to a point where the borders of Methydrion met those of Orchomenos (no. 286) and Torthyneion (no. 302) (*IPArk* no. 14.4–6); this allows the conclusion that C4m Methydrion had a well-defined territory and that it abutted those of Torthyneion and Orchomenos; in the fragmentary C5l–C4e Delphic list of *theorodokoi*, the city is listed just before Torthyneion (*REG* 62 (1949) p. 6 ll. 6–9).

According to Paus. 8.27.4, Methydrion was in 371 one of a number of communities whose relationship to Orchomenos could be described by the phrase *συντελεῖν εἰς*. It is unclear exactly what this means, but Methydrion was presumably in

one way or another a dependency of Orchomenos (cf. Hejnic (1961) 37–38; Roy (1972*c*) 78; Nielsen (1996*b*) 231–36; (1996*c*) 84–86).

At Petrovouni, 3 km west of the city, a sanctuary has been found; the temple is Hellenistic, but architectural fragments and votives go back to C7 (Jost (1985) 215).

Membership of the Peloponnesian League may be assumed; in 418, a League army camped in the territory of the city (Thuc. 5.58.2). Membership of the Arkadian Confederacy can be inferred from Paus. 8.27.4 (r371). It is furthermore not impossible that the *synteleia* of Orchomenos mentioned at Paus. 8.27.4, and of which Methydrion was a part, was an organisation based on formal treaties (Nielsen (1996*b*) 234).

According to Paus. 8.27.4, Methydrion was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282). *IPArk* no. 14 (360s) seems to demarcate the border with Orchomenos and may be taken to indicate that steps were taken to implement this decision (cf. *IPArk* on no. 14; Nielsen (1996*c*) 84). However, it is uncertain whether Megalopolis in the Classical period effectively controlled the city, which was clearly not abandoned (Moggi (1974) 93–94; Nielsen (1996*b*) 316–19).

In C5l–C4e a Delphic *theorodokos* resided in the city (*REG* 62 (1949) p. 6 l. 6). The earliest surviving reference to a public enactment by Methydrion is *IMagnesia* 38.61, which attests to a C3l *asylia* decree for Magnesia.

The preserved fortification wall at Methydrion is Classical, C5 according to von Gaertringen and Lattermann (1911) 31, C4 according to Jost (1985) 213 n. 8. The wall encloses an area of 11 ha (von Gaertringen and Lattermann (1911) 31). They noted some foundations, sherds and tiles inside the wall, and suggested the existence of a large temple (but gave no date, *ibid.* 23, 31). The oldest find at the site is an Archaic statuette of Zeus (Jost (1985) 214–15). According to Theopomp. fr. 344.27–8 (= Porph. *Abst.* 2.16), Methydrion was a small, poor place (*μικροῦ καὶ ταπεινοῦ ὄντος τὸ μέγεθος τοῦ χωρίου*). Several Arkadian towns, such as Halous (no. 272) and Pallantion (no. 289), consist of a fortified acropolis with the residential area unfortified below. It is not clear whether Methydrion was such a city; if it was, the fortified area can be equated with the acropolis.

Cults of Zeus Hoplosmios and Poseidon Hippios are attested (Jost (1985) 214), and Theopomp. fr. 344 mentions *θυσαίαι δημοτελείς* and public *έορταί*. According to Paus. 8.36.2, citizens of Methydrion achieved Olympic victories before 371 (*Olympionikai* 410–11).

From Methydrion comes a bronze coinage of, presumably, C4 (Meyer (1932) 1389–90), though other dates have

been proposed, see *ibid.* and Moggi (1974) 93 n. 72. The legend is *ΜΕΘΥΔΡΙΕΩΝ*; the types show *rev.* Zeus; *obv.* Kallisto in the shape of a woman, falling back pierced by an arrow with Arkas on the ground beside her: this type is “aus Orchomenos entlehnt” (Meyer (1932) 1389); on the significance of this, see Nielsen (1996*b*) 234–36.

284. Nestane (Nestanos) Map 58. Lat. 37.35, long. 22.30. Size of territory: 1 or 2. Type: C. Steph. Byz. 478.7 uses the toponym *Νοστία* and cites Theopomp. fr. 175; Paus. 8.7.4 has *Νεστάνη, ἦ*. An ethnic derived from the latter toponym, *Νεστάνιος*, was used by Ephor. fr. 234 (= Steph. Byz. 478.8).

In C4m, Nestane may have been a dependent *polis* inside Mantinean territory; see above Mantinea (no. 281) and Hansen (1995*b*) 74, Nielsen (1996*a*) 131–32, (1996*c*) 66–67. For the site, see above Mantinea (no. 281).

285. Nonakris (Nonakrieus) Map 58. Lat. 38.00, long. 22.15; for the location, see Pikoulas (1986*a*). Size of territory: 1 or 2. Type: A. The toponym is *Νώνακρις, ἦ* (Hdt. 6.74.2). The ethnic is *Νωνακριεύς* (Steph. Byz. 480.3–4, citing Aristophanes = Ar. fr. 861 (*PCG*)).

Nonakris is called *polis* three times at Hdt. 6.74.1–2, in the territorial sense. Name and size of the territory are unknown. In Theophrastos’ day Nonakris was presumably situated inside the territory of Pheneos (no. 291) (Theophr. fr. 160; Meyer (1937*a*) 860); if the city was still in existence, the presumption is that it was a dependent *polis* within the territory of Pheneos. But it may already have been so in C5, since Herodotos (6.74.2) describes it as a *πόλις . . . Ἀρκαδίας πρὸς Φενεῶν*.

Nonakris was probably an Azanian community (K. Tausend (1993) 15); however, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972*b*) 44, (1996) 110; Nielsen (1996*a*) 138). At the presumed site of Nonakris, Archaic and Classical pottery has been found, together with some poor architectural fragments (Pikoulas (1986*a*)).

286. Orchomenos (Orchomenios) Map 58. Lat. 37.45, long. 22.20. Size of territory: 3. Type: A. The literary form of the toponym is *’Ορχομενός, ὁ* (Hom. *Il.* 2.605; Thuc. 5.61.4; Xen. *Hell.* 6.5.15), and the corresponding city-ethnic *’Ορχομένιος*. In the epigraphical record we find the toponym *’Ερχομενός* (*BCH* 45 (1921) π.114 (c.230–210)) with the ethnic *’Ερχομένιος* (*ML* 27.4 (479)); the epichoric ethnic *’Ερχομίνιος* is found in *IPArk* no. 15.3–4 (360–350) and the toponym is restored [*’Ερχομιν*]ός in l. 51 (for Arkadian *ι* for *ε* before nasal, see Buck (1955) 145).

Orchomenos is classified as a *polis* in the political sense at Hdt. 7.202, 204, and called *polis* in the urban sense at Xen. *Hell.* 6.5.11 and Ps.-Skylax 44, who lists it as the fourth toponym after the heading *πόλεις αἱ μεγάλαι αἶδε* where *polis* is used in the urban sense; Diod. 19.63.5 (r315) uses *πολιῖται*. The collective use of the city-ethnic is found externally in ML 27.4 (479) and Thuc. 5.61.5, and internally on coin legends (Head, *HN*² 451 (C4)). The individual use is found externally in *IvOlb* 4 (C4) and Xen. *An.* 2.5.37.

The territory occupied c.145 km² or, according to Meyer (1939b) 890, c.230 km². For a short description of the territory, see Jost (1985) 113–14. It was divided into two sub-plains: the southern was the smaller and higher (630 m); the northern was larger and lower (620 m), but suffered from drainage problems (Jost (1985) 114). The city itself was centred on a hill rising to 929 m and situated in a dominating position between the two plains. A number of sanctuaries in the border zones of the territory are attested by written sources, but none has been securely identified (cf. Jost (1985) 119–21). Prior to the foundation of Megalopolis (no. 282), Orchomenos was, presumably, the centre of an organisation comprising a number of minor *poleis* dependent on it, among which were Methydrion (no. 283), Thisoa (no. 301) and Teuthis (no. 298) (Paus. 8.27.4 (r371)); exactly how this organisation functioned is unclear, and it is also unclear whether these minor *poleis* were conceived of as situated within Orchomenian territory. Cf. Nielsen (1996b) 231–36, (1996c) 84–86.

The only indication we have of the order of size of the Orchomenian population is the fact that the city fielded 600 hoplites at Plataiai in 479 (cf. Forsén (2000) 36–39).

C4 membership of the Peloponnesian League is proved by Xen. *Hell.* 5.4.37, and can be inferred for C5 on the basis of Thuc. 5.61.4, 63.2. At 5.61.5 Thucydides relates how Orchomenos in 418 joined the quadruple alliance of Argos (no. 347), Athens (no. 361), Elis (no. 251) and Mantinea (no. 281): after a siege, the city agreed to join the alliance and give hostages to the Mantineans, and we may therefore consider Orchomenos to be the subordinate party to this treaty. On the other hand, the C4m treaty of *sympoliteia* between Orchomenos and Euaimon (no. 269) (*IPArk* no. 15) was expressly concluded *ἐπὶ τοῖς Φίσφοις καὶ τοῖς ὕμοις* (ll. 4–5). Although the city at first opposed the Arkadian Confederacy, owing to hatred (*ἔχθρα*) of Mantinea (Xen. *Hell.* 6.5.11), Orchomenos did eventually join the Confederacy (*IG* v.2.1.46 (360s)).

In 480, 120 Orchomenian hoplites were present at Thermopylai (Hdt. 7.202), and the next year 600 fought at

Plataiai (Hdt. 9.28.4). In 378/7 Orchomenos fought a war with Kleitor (no. 276) (Xen. *Hell.* 5.4.36), and in 370 hoplites of the city fought against Mantinean troops in Orchomenian territory (Xen. *Hell.* 6.5.13). An Orchomenian *strategos* is implied by Hdt. 7.202 and 204, and a board of *πολέμαρχοι* is attested by *IPArk* no. 14.31–32 (360s). A citizen of Orchomenos was appointed *proxenos* by Olbia (no. 690) in C4 (*I.Olbia* 4 = Dubois (1996) 17) and one by Tegea (no. 297) in C4l (*SEG* 11 1051); the earliest attested grant by the city itself dates to C3f (*SEG* 25 443). The earliest surviving public enactment is *IPArk* no. 15 of 360–350, a treaty of *sympoliteia* with Euaimon; the earliest decrees date to C3f: e.g. *SEG* 25 443. Execution of citizens is referred to by Diod. 19.63–65 (r315). In C4 we find boards of *θεαροί* and *πολέμαρχοι* (*IPArk* no. 14.30–31 (360s)).

Orchomenos occupied the top and southern slope of the Kalpaki hill, which rises to 939 m. The hill was enclosed with a circuit wall c.350–325 (Winter (1989) 195). It has been suggested that there was no proper urban site within the fortifications (Osborne (1987) 118), and certainly no substantial residential area has yet come to light, which, however, may not be very significant since the archaeological investigations have been directed primarily towards the agora, the theatre and the temple of Artemis. Furthermore, it should be noted that von Gaertringen and Lattermann (1911) 20 concluded that there was habitation within the circuit “bis tief in die Hellenistische Zeit”. Cf. Jost (1999) 240 n. 51.

The city proper seems to have been situated at the foot of the southern slope of the Kalpaki hill (Meyer (1939b) 890) both before the construction of the circuit wall and after its abandonment; here Geometric and Archaic material has come to light (Blum and Plassart (1914) 81–88), as well as Roman material (Meyer (1939b) 893). Attention has been directed primarily at sacred buildings. At least one and perhaps two temples were built in the Archaic period in the lower city; the building which was definitely a temple measured 31.3 × 13.3 m with six times thirteen columns; it is unknown to which divinity it was dedicated (Jost (1985) 118–19; Voyatzis (1990) 32–33).

Pausanias at 8.13.2 explicitly states that the *προτέρα πόλις* was on the Kalpaki hill, but that in his day habitation was under (*ὑπό*) the circuit wall, and so far the archaeological material supports this. We may then believe him when he implies that in the Classical period habitation was within the circuit wall. The inference is that in C4 the city was moved from the southern slope to the hill when the wall was constructed (so Winter (1989) 194–95), although habitation in the former town seems not to have ceased (cf. *PECS* s.v.

Orchomenos, p. 654). But the urban history of Orchomenos is by no means entirely clear.

The fortification wall encloses the upper part of the Kalpaki hill; it was 2,300 m long and enclosed an area of c.20 ha. It was constructed c.350–325 (Winter (1989) 195); however, Thuc. 5.61.5, Diod. 12.79.2 (r418) and Xen. *Hell.* 6.5.13 mention a *τείχος*, but where this ran is unknown.

The agora was laid out in a single building programme in C4s (Winter (1987) 235–39). The northern and eastern edges of the agora were flanked by stoas of C4s; the eastern stoa is sometimes thought to have been a *bouleuterion* (e.g. Blum and Plassart (1914) 73); but Winter (1987) 238–39 thinks that it was simply a stoa. West of the agora is a C4l theatre (Winter (1987) 235; TGR ii. 229), and south of the agora, on a terrace supported by a retaining wall is a poros temple of Artemis Mesopolitis (Jost (1985) 117–18); the preserved remains are probably C4, but Winter (1991) 213 suggests that it had an Archaic predecessor.

The patron divinity was presumably Artemis Mesopolitis (Meyer (1939b) 904); on the basis of the theatre and a C4l–C3e dedication describing a man as *ἀγωνοθετήσας Διονύσων* and found in the theatre (SEG 11 1104) we may assume the existence of a festival of Dionysos.

The Orchomenian mint was late; according to Head, *HN*² 451 it began to function immediately after 370; according to Babelon, *Traité* ii.3. 624 it began after 362. The legend is *EP* (SNG Cop. Argolis 267), or *EPXOMENIΩN* (SNG Cop. Argolis 265–66). All known coins are of bronze. Some interesting coin types show *obv.* Artemis kneeling, sometimes with a dog behind her, shooting an arrow; *rev.* Kallisto falling back pierced by an arrow, on the ground beside her her child Arkas, sometimes with his name in monogram (SNG Cop. Argolis 265–66); these types are found copied at Methydrion, one of the cities thought to have been a dependency of Orchomenos (see Methydrion (no. 283)).

287. Oresthasion (Oresthasios) Map 58, probably at modern Anemodhouri (see Pikoulas (1988) 102ff); lat. 37.25, long. 22.10. Size of territory: 1 or 2. Type: A. The toponym is *Ὀρέσθειον*, τό (Pherekydes (FGrHist 3) fr. 135a; Thuc. 5.64.2); at Paus. 8.27.3 (r371) the toponym is *Ὀρεσθάσιον*. The city-ethnic is *Ὀρεσθάσιος* (IvO 147.148). For a discussion of onomastics, see Meyer (1939c) 1014–15.

Oresthasion is called a *polis* by Pherekydes (FGrHist 3) fr. 135a and by Eur. *El.* 1273–75, in both cases presumably in the urban sense; Paus. 8.27.3 (r371) retrospectively lists it as a *polis*. The external individual use of the city-ethnic is found in IvO 147.148 (C5f) and SEG 20 716.23 (C4m).

The name of the territory was *Ὀρεσθίς* (Thuc. 4.134.1); its size is unknown. In 423 a battle was fought in the territory between the Tegean and Mantinean Leagues (for which see Nielsen (1996c) 79–86) at a place called *Λαοδικεῖον* (Thuc. 4.134.1).

Oresthasion was a Mainalian city (Paus. 8.27.3; Nielsen (1996a) 132–34). The city seems to have been an important centre for assembling Peloponnesian League troops (Hdt. 9.11.2; Thuc. 5.64.3; Pikoulas (1988) 109–10, 205–11); membership of the League may thus be assumed, but it was probably *via* the Mainalian tribal state (Nielsen (1996c) 100–1). Membership of the Arkadian Confederacy can be inferred from Paus. 8.27.3, and was probably again *via* the Mainalian tribe.

According to Paus. 8.27.3, Oresthasion was one of the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282). It is likely that the city came under Megalopolitan control, but it was probably not abandoned since a surface survey has brought to light numerous Hellenistic sherds at the probable site of the city, see Pikoulas (1988) 102–4.

According to Pikoulas (1988) 102, the hill of Groumourou at Anemodhouri, rising to 70 m, was an ideal acropolis for the site at Anemodhouri (= Oresthasion). The hill-top measures 44 × 30 m; it has yielded sherds and remains of a pre-Classical fortification wall (Pikoulas (1988) 104). According to Pikoulas (1988) 102, the *megalos archaios oikismos* of Oresthasion covered an area of 450 × 200 m. The area is filled with sherds spanning the Archaic to Hellenistic periods, and column drums lie exposed (ibid.). No remains of fortifications of the lower city are visible.

In C5f, in 472 according to *Olympionikai* 231, a citizen of Oresthasion won an Olympic victory (IvO 147.148).

288. Paion Map 58. Lat. 37.55, long. 22.00. Size of territory: ? Type: A. The toponym is *Παῖον* at Hdt. 6.127.3 (cf. Nielsen and Roy (1998) 8 n. 17). No city-ethnic is attested.

The city is called *polis* at Hdt. 6.127.3, and in the same passage *πάτριη* is implicitly used about it (cf. Hdt. 6.126.3, 127.3). C.230–210 a Delphic *theorodokos* resided in the city (BCH 45 (1921) 11.72).

Paion was an Azanian community (Hdt. 6.127.3); however, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972b) 44, (1996) 110; Nielsen (1996a) 138).

Paion was situated at modern Skoupi. The acropolis was constituted by a small, separately fortified plateau measuring 34 × 65 m (Meyer (1942) 2399). Here Papandreou

believed he saw the foundations of a temple and another building (*Prakt* (1920) 125).

The city wall did not enclose the whole city, but just the upper city (Meyer (1942) 2399). It was 516 m long and possibly dates to C4 (*ibid.*). A large cistern (11 × 8 m) was built into the city wall (*ibid.*).

The extent of the city is not stated by any authority, but there was probably occupation both inside and outside the wall (*ibid.*). Papandreou seems to believe that the site was of considerable size (*Prakt* (1920) 128–29). Inside the wall there are remains of foundations, and tiles and sherds cover the ground. A plan of the site is found in Papachatzis (1994) 269.

For a possible suburban temple (undated), see *Prakt* (1920) 128; a passage in Herodotos connects the Dioskouroi with Paion (Hdt. 6.127.3), but that is all we know about the pantheon of the city.

289. Pallantion (Pallanteus) Map 58. Lat. 37.30, long. 22.20. Size of territory: 2. Type: A. The toponym is Βαλλά[ντιο]ν in a Delphic catalogue of C51–C4e (Daux (1949) 6–8) and Παλλάντιον, τό in Xen. *Hell.* 6.5.9 and *SEG* 11 1084.21–22 (c.318–316); the toponym was possibly used by Stesichoros; cf. Paus. 8.3.2 = Stesichoros; fr. 85, Davies = fr. 5, Page. *SEG* 11 1084.6 (c.318–316) gives the ethnic as τοὶ Παλλαντέες; the singular is found as Παλλαντεύς in *CID* 11 5.21 (358); the MSS of Xen. *Hell.* have Παλλαντεῖς at 7.5.5, but editors often print Παλλαντιεῖς. At Diod. 15.59.3 the MSS have οἱ Παλλάντιοι or Παλλαντίνοι, but this form is unique (cf., however, the entry in Steph. Byz. with Meyer (1949) 231). According to Meyer (1949) 231, the genuine form of the toponym (coined on the basis of the ethnic Παλλαντεύς) is Παλλάντιον; this form is found only once, in the great Delphic catalogue of *theorodokoi* dating to c.230–210 (*BCH* 45 (1921) III.7). For a discussion of name and ethnic, see Meyer (1949) 231–32.

Pallantion is described as a *polis* in the political sense in *SEG* 11 1084.10 (cf. *SEG* 25 442 and 33 276 (c.318–316)), and in the territorial sense (with the political sense as a possible connotation) at Xen. *Hell.* 7.5.5 (for which see Nielsen (1996c) 72–73). The collective use of the city-ethnic is found internally on Classical coins (*infra*) and in *SEG* 11 1084.6 (c.318–316), and externally in Xen. *Hell.* 7.5.5 and *SEG* 33 276.9 (c.318–316).

The name of the territory is unknown; Paus. 8.44.5 terms it Παλλαντικὸν πεδῖον, and it is referred to as *polis* by Xen. *Hell.* 7.5.5 (for which see Nielsen (1996c) 72–73). Meyer (1949) 233 estimates its size at c.30 km², but Jost (1985) at c.55 km². The *Suda* s.v. Stesichoros states that this poet was an

exile from Pallantion (= Stesichoros Test. A19 and 35, Davies).

Pallantion was a Mainalian city (Paus. 8.27.3; Nielsen (1996a) 132–34). Membership of the Peloponnesian League is not explicitly attested, but may be assumed (Nielsen (1996c) 87, 101) and it was probably *via* the Mainalian tribe. Membership of the Arkadian Confederacy may be inferred from Diod. 15.59.3 (r370) and Paus. 8.27.3 (r371). In c.318–316, Pallantion concluded a treaty of friendship with Argos (no. 347) (*SEG* 11 1084).

According to Paus. 8.27.3, Pallantion was among the communities that the Arkadian Confederacy voted to relocate to Megalopolis (no. 282); but, for whatever reason, the decision seems not to have been implemented (Moggi (1974) 85–87), and the city was not under Megalopolitan control in 318: in this year the city was captured by Polyperchon, and some citizens were taken captives, but Pallantion negotiated for their release via Argos (no. 347), not Megalopolis (*SEG* 11 1084).

According to Xen. *Hell.* 7.5.5, Epameinondas counted on Pallantion as an ally for the battle of Mantinea in 362, but it is unknown whether Pallantian troops actually fought in the battle. In c.318–316, Pallantion sent an embassy to Argos, and the envoys were all granted Argive *proxenia* (*SEG* 11 1084.27). In C51–C4e a Delphic *theorodokos* resided in Pallantion (Daux (1949) 6–8).

Pallantion was centred on a hill of moderate height; the city proper was situated in the plain at the northern and eastern foot of the hill; it appears to have occupied a considerable area (Frazer (1898) iv. 421). The lower town has not been excavated, but remains of Classical buildings have been found reused, and Classical sherds have also come to light (Jost (1985) 199). A Classical cemetery has also been identified (*ibid.*).

The acropolis of Pallantion was fortified, but the date of the wall has not been established. Inside the wall, on the top of the acropolis and on its southern slope, are no fewer than four modest temple buildings (for which see Østby (1995a)); all the buildings seem to belong to a single programme of construction dating to c.600–550, and later modifications are discernible (*ibid.* 54).

According to Head, *HN*² 451, Pallantion began to strike coins c.400; Babelon, *Traité* ii.3. 665–68 dates the coinage to 421–371; it is a silver coinage on the Aiginetan standard; all known coins have a young beardless male (= Apollo or the eponymous hero Pallas) on the *obv.* and the legend ΠΑΛΛΑΝΤΙΟΝ on the *rev.* Known denominations are the obol and the hemiobol. *SNG Cop. Argolis* 270.

290. Phara Unlocated, but presumably in western Arkadia, see Meyer (1957a) 82–86 and Pritchett (1989) 36–37. Size of territory: ? Type: C. The toponym is *Φάρα*, ἡ in *REG* 62 (1949) p. 6 l. 3. An ethnic is not attested. Phara deserves inclusion in this Inventory solely because it may have had a Delphic *theorodokos* in C5l–C4e (*REG* 62 (1949) p. 6 ll. 4–5), and thus was possibly a *polis* (Perlman (1995) 116, 121, 135). But the Phara in question may well be that in Achaia (Rizakis (1995) no. 689; cf. Pharai (no. 241) in the Achaian Inventory).

291. Pheneos (Pheneeus) Map 58. Lat. 37.55, long. 22.20. Size of territory: 4. Type: B. The toponym is *Φενεός* (δ/ῆς; cf. Steph. Byz. 662.5) in Hom. *Il.* 2.605; *IG* v.2 360 (C5–C4); *SEG* 23 189.23 (c.330). The ethnic is *Φενεεύς* in *SEG* 39 1365 (470–450). Other forms are *Φενικός* and *Φενεάτης*; the former may lie behind the Classical coin legend *ΦΕΝΙΚΟΝ* (Head, *HN*² 452; Roy (1972a) 334–36), whereas the latter seems to make its appearance only in C3 (ibid. 335–36).

No Archaic or Classical source describes Pheneos as a *polis*, but Hejnic (1961) 42 has pointed out that it follows *a fortiori* from Hdt. 6.75.1: *Νώνακρῖς . . . πόλις ἐστὶ τῆς Ἀρκαδίας πρὸς Φενεῶν*, that Herodotos considered Pheneos to be a *polis*; Polyb. 2.52.2 (r225) calls it a *polis* in the political sense, and Eratosthenes fr. III B 105, Berger (= Strabo 8.8.4) in the urban sense.

The collective use of city-ethnic is attested internally on C4 coin legends (Head, *HN*² 452) and externally in *SEG* 39 1365 (470–450); the individual use is found in *IG* IV².1 96.48 (C3f).

The territory occupied c.345 km²; this, however, includes Nonakris (no. 285), which perhaps as early as C5 was a dependent *polis* inside the territory of Pheneos (see *supra* s.v. Nonakris). Its name was *Φενική* (Polyb. 4.68.1) or ἡ *Φενεατική χώρα* (Paus. 8.14.5); Theophr. fr. 160, Wimmer, suggests that the toponym could designate the territory as well. The territory is termed *πεδῖον* by Theophr. *Hist. pl.* 3.1.2, 5.4.6. It must have suffered from severe problems of drainage (Strabo 8.8.4; Baker-Penoyre (1902); Knauss (1990)). Stangl (1999a), (1999b), estimates that the territory could support max. 5,000 individuals. In addition to Nonakris and Pheneos itself, the territory included Lykouria c.4 km south-west of Pheneos, a site that seems to have been a substantial village (Knauss (1990) 50–51; cf. K. Tausend (1999c)). For Classical watch-towers, see K. Tausend and Erath (1997) 2; K. Tausend (1999b) 308–12. Three extra-urban sanctuaries are archaeologically attested (K. Tausend and Erath (1997); Erath (1999b)).

Pheneos was an Azanian community (Steph. Byz. 662.6); however, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972b) 44, (1996) 110; Nielsen (1996a) 138).

C.330 an Argive *theorodokos* resided in Pheneos, and c.300 (*SEG* 23 189.23) one of its citizens was granted Argive *proxenia* (*SEG* 30 356).

In Pheneos only the sanctuary of Asklepios in the lower city has been excavated (Jost (1985) 29–30). It was a city with a habitation area beneath a fortified acropolis. The earliest part of the acropolis wall dates to C4 (Bölte (1938) 1970; Jost (1985) 31); good C5 sherds have been found at the site (Simpson and Lazenby (1970) 91). A recent survey suggests that the urban centre occupied c.20 ha (Stangl (1999b) 178).

The principal deity of Pheneos was Hermes (Paus. 8.14.10; Bölte (1938) 1972–73; cf. Jost (1985) 27–37), in whose honour games were celebrated (schol. Pind. *Ol.* 7.153a). A festival with games in honour of the Dioskouroi is attested by *SEG* 39 1365 (470–450). Before 460, Pheneos set up a statue of Hermes in Olympia (Paus. 5.27.8); it was made by Onatas (for whom see Pollitt (1990) 36–39). Neolaidas of Pheneos won the boys' boxing contest at Olympia c.392 (*Olympionikai* 380).

The coinage of Pheneos begins C5l (421, according to both Head, *HN*² 452 and Babelon, *Traité* ii.3. 598). The legends are: *ΦΕ*, *ΦΕΝΙΚΟΝ*, *ΦΕΝΕΩΝ*. The city struck in both silver (*SNG Cop. Argolis* 271–73) and bronze (*SNG Cop. Argolis* 274–77). Known denominations are hemiobol, obol, triobol, drachm and stater. The most commonly depicted divinities are Demeter and Hermes. The magnificent C4 staters depict Demeter (Maia?) on the *obv.*; *rev.* Hermes running with the infant Arkas, to which is sometimes added the legend *ΑΡΚΑΣ*. The staters are collected and described by Schultz (1991), who dates them to 360–340.

292. Phigaleia (Phigaleus) Map 58. Lat. 37.25, long. 21.20. Size of territory: 3. Type: [A]. The city-ethnic is *Φιγαλεύς* (Hdt. 6.83.2; *IvO* 161 (C4e)). The toponym is not attested in Archaic or Classical sources; Rhianos *apud* Steph. Byz. 664.10 and Polyb. 4.3.8 have *Φιγάλεια*, ἡ, but *IG* v.2 419.6 (c.240) and Diod. 15.40.2 (r374) have *Φιάλεια*, ἡ; see further Meyer (1938) 2065–67, who argues for the forms *Φιγαλέα* and *Φιγαλία*.

Phigaleia is listed (as *Φιγαλεῖς Ἀρκαῖδες*) as a *polis* in the political sense in the accounts of the Delphic *naoroioi* at *CID* II 4.III.1, 45 (c.360) under the heading *τάδε πόλεις καὶ ἰδιώται ἐπάρξαντο* and in Diod. 15.40.1, 40.2 (r374), and in the urban sense at Polyb. 4.3.7. *IvO* 161 (C4e) uses *πατρίς* about the city. The collective use of the city-ethnic is

attested externally in *CID* II 4.III.45 (c.360); the individual use is found externally at Hdt. 6.83.2 and in *IvO* 161 (C4e).

The territory occupied c.125 km²; its mountainous character is well brought out by Jost (1985) 82–83. It is termed *χώρα* by *IG* v.2 419 (c.240) and Polyb. 4.3.7. A possible inland port on the river Neda is described by Cooper (1972) 359–62. On a promontory overlooking the Neda valley and with city and port within sight is a free-standing C4 watch-tower (*ibid.* 363). Phigaleia probably had a number of second-order settlements; one such, c.1 km west of the city, is briefly noticed by Cooper and Myers (1981) 133, who hypothesise “a number of satellite villages” (*ibid.*); one such was associated with the sanctuary at Bassai (Yalouris (1979) 90). At Bassai, on the southern slope of Mt. Kotilion, the sanctuary of Apollo Bassitas or Epikourios (cf. Cooper (1968) 103 n. 5) can be traced back to c.C8s or c.700 (Jost (1985) 93; Voyatzis (1990) 43). C.620–580 a monumental temple was built (for a plan, see Jost (1985) pl. 22.2; Kelly (1995) fig. 1) which was oriented north–south. It is possible that the construction of a new temple was begun c.500 (Yalouris (1979) 94–96; Jost (1985) 94); however, the famous Classical temple was built in C5s (Jost (1985) 95). It is a Doric peripteral temple measuring 16.13 × 38.87 m and oriented north–south, with six times fifteen columns, and is built of local limestone (for a plan, see Cooper (1968) 104). A large number of other Archaic and Classical buildings stood within the sanctuary (Yalouris (1979) 90). Just above Bassai, on Mt. Kotilion, two simple temples without peristasis have been excavated (see Jost (1985) pl. 22.3 for a plan). They were presumably parts of a single sanctuary (Jost (1985) 97) that can be traced back to C8–C7 (*ibid.*). The temples were erected contemporaneously with the first temple at Bassai, i.e. c.625–600 (Cooper (1968) 103 n. 7). For other extra-urban sanctuaries, see Cooper (1972) 363–67 and *AR* (1995–96) 12.

K. Tausend (1993) 16 argues that Phigaleia was an Azanian city, but this is highly unlikely (Roy (1972*b*) 44 n. 6; Nielsen (1996*a*) 160 n. 61; Nielsen and Roy (1998) 33–36); in any case, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972*b*) 44, (1996) 110; Nielsen (1996*a*) 138). Membership of the Peloponnesian League is not explicitly attested, but can be assumed (Nielsen (1996*c*) 87, 92); the same is true of membership of the Arkadian Confederacy (*ibid.* 94–95). According to Polyæn. 6.27.2, Phigaleia sent an embassy to Argos (no. 347) to conclude a *symmachia*; Meyer (1938) 2070, 2082, believes that the passage refers to C5; see, however, Robertson (1992) 234–35, 240, 243–44 and esp. 250–52, arguing that this passage simply reflects an aetiological mythic complex. The earliest attested

treaty to which Phigaleia was a party is *Staatsverträge* 476 of c.267–265, a treaty between Athens (no. 361) and Sparta (no. 345) with allies. A citizen of Phigaleia was appointed *proxenos* by the Aitolian Confederacy c.270 (*IG* IX.1 13.19).

Phigaleian exiles are mentioned by Diod. 15.40.2 (r374). From the same passage it can be inferred that Phigaleia was a democracy in 374 (Roy (1973) 138). A system of *phylai* is attested in *IG* v.2 421 (undated); *damiorgoi* are mentioned in *IG* v.2 423 (undated).

The agora is mentioned in *IG* v.2 421.7 (undated); Polyb. 4.79.5 refers to a *polemarchion*; Diod. 15.40.2 (r374) mentions a theatre. A C4–C3 fountain is found too (Papachatzis (1994) 352–53). The acropolis was separately fortified (Cooper and Myers (1981) fig. 4); there are no remains on the acropolis (Jost (1985) 86). “Fortifications embrace a large area, approximately 1.5 km north–south and 1.3 km east–west” (Cooper and Myers (1981) 124; a plan is found as fig. 4); “Stretches of the circuit may date as early as the 5th c. B.C. but in the mid 4th c. B.C. portions were rebuilt” (Cooper in *PECS* s.v. Phigalia). Meyer (1938) 2069 supposes that not all the area of the city was actually occupied by habitation, but that the city was built to give shelter to herds of cattle; on the other hand, Cooper and Myers (1981) 133 note that roof-tiles, some Classical, are scattered across most of the site, indicating habitation and/or other roofed buildings. According to Cooper in *PECS* s.v. Phigalia, “considerable remains of the Archaic, Classical, and Roman periods lie exposed”. For a C4 intra-mural temple of Zeus Soter and Athena, see *AR* (1996–97) 47.

A Polias divinity is attested by *IG* v.2 421 (undated). The principal deity of the city was Dionysos (Meyer (1938) 2083–84), in whose honour festivals (Diod. 15.40.2 (r374)) and mysteries (Jost (1985) 85 with refs.) were celebrated; recently, a C4 intramural temple dedicated to Athena and Zeus Soter has been excavated; at the temple a number of inscriptions were found, among which grants of *proxenia* to citizens of Megalopolis (no. 282) and Byzantion (no. 674), etc., and an Archaic votive inscription to Athena (*Ergon* (1996) 41–47). *SEG* 23 240 is a C4 dedication to Hygieia.

Citizens of Phigaleia achieved Olympic victories in C6 (*Olympionikai* 95, 99, 102) and C4 (*Olympionikai* 392); the latter athlete won three Isthmian victories as well (*CEG* II 826). The city as such donated money for the construction of the new temple at Delphi in the 360s (*CID* II 4.III.45).

293. Phorieia (Phoriaeus) Unlocated. Type: C. The toponym is *Φορίαία* in Steph. Byz. 670.7, who cites Ephor. fr. 55 for the ethnic *Φοριαεύς*. The city’s only claim to

inclusion in this Inventory is the fact that it had its own ethnic; since sub-ethnics are practically unknown in Arkadia, the ethnic may be a city-ethnic; cf. Nielsen (1996a) 117–32.

294. Psophis (Psophidios) Map 58. Lat. 37.50, long. 21.55. Size of territory: 4. Type: A. The toponym is *Ψωφίς, ἡ* (Theophr. *Hist. pl.* 9.15.2; Polyb. 4.70.3). The city-ethnic is invariably *Ψωφίδιος* (Hecat. fr. 6). Psophis is called *polis* in the political sense in *IvO* 294 (C4s; see comm. *IvO* and Meyer (1959) 1426), and in the urban sense at Polyb. 4.70.4 (r219). The collective use of the city-ethnic is attested internally on C5 coins (Head, *HN*² 453) and externally in *SEG* 24 299 (C6s) and at Hecat. fr. 6.

The territory occupied c.280 km². No second-order settlements are known. The mountains Malea and Lampeia were sacred to Pan (Jost (1985) 57). On Mt. Aphrodision was a sanctuary with several buildings, among which a C5 temple (9.9 × 7.4 m) and a C5 stoa stand out; the votives date back to the Archaic period (Jost (1985) 58–59). According to Paus. 8.25.1, the border with Thelphousa (no. 300) was marked by a stele with *ἀρχαῖα γράμματα*.

Psophis is not attested as having been a member of any larger organisation during our period, but according to Polyb. 4.70.3, it was an Azanian community; however, if the Azanians ever formed a political unit, this had broken up before C5 (Roy (1972b) 44, (1996) 110; Nielsen (1996a) 138). Paus. 5.24.2 refers to undatable military activities by Psophis; however, *SEG* 24 299 is a C6s dedication of a shield by the city at Olympia, indicating that it was conducting military campaigns by that time.

No Psophidian *proxenoi* are known, but at 6.16.7 Pausanias refers to an (undatable) sculptural group at Olympia which he thought represented Eleian *proxenoi* of Psophis.

Psophis was situated in a remarkable, almost peninsular position between the rivers Erymanthos and Aroanios (see Jost (1985) pl. 10.1), a position commented upon by Polyb. 4.70.7–10 and well brought out by Pritchett (1989) 23–24. For what it is worth, Polybios at 4.70.3 calls the city a *παλαιὸν Ἀρκάδων κτίσμα*. For Archaic stray finds from the site, see Jost (1985) 57. Several sections of retaining walls can be found inside the circuit (Papandreou (1920) 138). Within the circuit are numerous ancient remains and sherds (ibid. 138–41); some of the larger foundations may be of temples (cf. Jost (1985) 55–57), and there are traces of a *proasteion* as well (Papandreou (1920) 142). The circuit wall enclosed an area of 80 ha (Meyer (1959) 1424). It is of Scranton's class C5 (isodomic trapezoidal: quarry face, p. 170), which he dates

425–375 (Scranton (1941) 85). Polybios refers to private houses in Psophis three times (4.72.1 twice (*οἰκίων*), 8 (*οἰκήσεις*)). The acropolis, too, is mentioned by Polyb. 4.71.11, 72.1 (r219). An acropolis wall is not visible (Pritchett (1989) 28) and there are no ancient remains on the acropolis (Papandreou (1920) 138).

Athena Polias is presumably attested on coin types (Jost (1985) 55), and Papandreou (1920) 139 assumes that Artemis Erykine was the patron divinity of the city.

The coinage of Psophis began in C5f (Head, *HN*² 453). The Classical coinage was in silver only. Known denominations are tritemorion, hemiobol, obol, trihemiobol and tetrobol. The legend is *ΨΟΦΙΔΙΟΝ* or abbreviations thereof. Frequent types are *obv.* Keryneian stag; *rev.* fish (with acorn) in incuse square, and *obv.* head of Athena; *rev.* club (of Herakles). In C4l the city began to strike in bronze. *SNG Cop. Argolis* 280–82.

295. Pylai (Parpylaios) Unlocated, but presumably in western Arkadia (Meyer (1957a) 81). Type: C. Steph. Byz. 538.19 mentions a *Πύλαι* as a *τόπος Ἀρκαδίας*; Meyer (1957a) 81 connects this place with the ethnic *Παρρυλαῖος* (*SEG* 18 157 (C5)). If accepted, Pylai may claim inclusion in this Inventory because it had its own ethnic; since sub-ethnics are practically unknown in Arkadia, the ethnic may be a city-ethnic; cf. further Nielsen (1996a) 117–32.

296. Stymphalos (Stymphalios) Map 58. Lat. 37.50, long. 22.30. Size of territory: 3. Type: A. The toponym is *Στύμφαλος* in *SEG* 35 371 (C5f); Ps.-Skylax 44, *SEG* 36 147.B fr. d.7 (c.368) and Polyb. 4.68.6 have *Στύμφαλος, ὁ* (cf. ἡ at Paus. 8.22.2), and Hom. *Il.* 2.608 has *Στύμφηλος*. The city-ethnic is *Στυμφάλιος* (Pind. *Ol.* 6.99; *SEG* 20 716.20 (C4m)).

Stymphalos is listed as the fifth toponym after the heading *πόλεις αἱ μεγάλαι αἶδε* (where *polis* is used in the urban sense) at Ps.-Skylax 44. In the political sense *polis* is used about the city in, e.g., *IG* v.2 352 (C4s) and *SEG* 32 370 *quater* (c.315); *πολίτης* is found in *IG* v.2 351.3 (C4l), *πολιτεία* in *IG* v.2 358 (C3f), and *πολιτεύειν* in *IPArk* no. 17.176 (C4l). The internal collective use of the city-ethnic is found in *IG* v.2 352.1–2 (C4l) and on C4 coins (Head, *HN*² 454); externally, the individual use is found at Xen. *An.* 1.1.11 and in *IG* iv² 102 A23 (C4), and the collective use in Pind. *Ol.* 6.99 and *SEG* 20 716.20 (C4m).

The lake near the city was called ἡ *Στυμφηλῆς λίμνη* (Hdt. 6.76.3); the size of this lake varied, and it sometimes extended to the southern part of the city, which itself occupied the lacustrine plain. The size of the territory was c.180

km². Near Lafka, c.6 km south-west of the city, is a late Classical/Hellenistic cemetery, and Doric architectural fragments.

Stymphalian membership of the Peloponnesian League may be assumed (Nielsen (1996c) 87). Membership of the Arkadian Confederacy is proved by Xen. *Hell.* 7.3.1 (Bölte (1931) 447). A treaty of *symbola* was concluded with Athens (no. 361) in C4m (cf. *Staatsverträge* 279; *SEG* 36 147), and one with Demetrius = Sikyon (no. 228) in C4l (*IPArk* no. 17); in C3f a treaty of *sympoliteia vel sim.* was concluded with Lousoi (no. 279) (*IGV.2* 358).

In *SEG* 36 147 fr. a.4 (c.368) occurs the expression $\pi\rho\lambda\omicron\acute{\xi}\nu\omega\nu\ \pi\rho\epsilon\sigma\beta\iota$, which may indicate the exchange of envoys and the existence of *proxenia* relations between Athens and Stymphalos before the final conclusion of the treaty (of *symbola*); see Walbank (1986) 333 note *ad* fr. a.4 and 350–51; Stymphalos granted *proxenia* to an unknown man in C4s (*IG v.2* 352), and had one of its own citizens appointed Delphic *proxenos* and *theorodokos* c.360 (*Syll.*³ 189); an Argive *theorodokos* resided in the city c.330 (*SEG* 23 189.24).

The earliest surviving public enactments are a series of C4s decrees (*IG v.2* 351–56), for which see Taueber (1981). A death sentence is recorded at *SEG* 20 716.20 (C4m). A *boule* is attested at *IG v.2* 351 and 356 (C4s), and a board of *prostatai bolas* at *IG v.2* 351; a board of *damiorgoi* at *IG v.2* 351 too. An assembly ($\acute{\epsilon}\kappa\kappa\lambda\eta\sigma\acute{\iota}\alpha$) is attested at *IPArk* no. 17.194; its ordinary name was probably *polis* (*IG v.2* 352 (C4s)).

The public architecture of Stymphalos is still imperfectly known; the agora has not been located with certainty (H. Williams (1984) 186; but see Bölte (1931) 443 and Jost (1985) 104–5). An area of seating cut in the bare rock south of the acropolis suggests the existence of a theatre (H. Williams (1983) 200, (1984) 176–77; cf. Frederiksen (2002) 67). The acropolis is included within the circuit; here three temples are known, not all of them firmly dated, but one possibly dedicated to Athena Polias is C4m (H. Williams, pers. comm.) and has yielded late Archaic and Classical sculpture (H. Williams *et al.* (1997) 44, pers. comm.).

Pind. *Ol.* 6.99 uses the phrase $\acute{\alpha}\pi\omicron\ \Sigma\tau\upsilon\mu\phi\alpha\lambda\acute{\iota}\omega\nu\ \tau\epsilon\iota\chi\acute{\epsilon}\omega\nu$, thus suggesting the existence of a C5f fortification; at 8.8.4, Strabo mentions a siege of Stymphalos by Iphikrates, which probably occurred in 369 (Dušanić (1970) 332 n. 9). The preserved wall is C4m or C4l, and is constructed in mudbrick on a stone foundation (H. Williams and Price (1995) 8; Williams *et al.* (1997) 66). It was 2,300 m long and is described by H. Williams (1983), (1984); it seems to have enclosed an area of at least 40 ha (calculated on the basis of H. Williams (1983) fig. 1).

According to Paus. 8.22.1–2, old Stymphalos was not in the same place as the known city, but we have no idea about where this can have been (Jost (1985) 101, 105); however, at the village of Lafka, part of a well-preserved polygonal circuit wall has been found, thus providing a possible candidate for early Stymphalos (H. Williams, pers. comm.). The later city was “laid out as an orthogonally planned town some time in the fourth century (= 375–350, p. 8); it had a sophisticated grid of streets and blocks apparently laid out on a module of 110 Doric feet, or 36 m, for width of street and block, inside a well-built circuit of stone and mud brick walls that encompassed a relatively low acropolis near the lake as well as the flat terrain to the north and east of it” (H. Williams and Price (1995) 1). So far, the earliest pottery from the site is Late Archaic (*ibid.* 8); sufficient Classical pottery has now been found to push the existence of the town back into C5 (H. Williams *et al.* (1997) 41, 43; part of the road system may also predate C4; *ibid.* 42). There is evidence for several late Archaic or early Classical peri-urban Doric temples (H. Williams and Price (1995) 20; H. Williams *et al.* (1997) 67).

Athena Polias is attested by *SEG* 11 1111 (C4), but the patron deity of the city was probably Artemis: she is depicted on coins, and her sanctuary was used for publication of decrees (*IG v.2* 351.9–10 (C4l)). In C5, Dromeus of Stymphalos was *periodonikes* (Knab (1934) no. 3).

According to Head, *HN*², the coinage of Stymphalos began c.400; according to Babelon, *Traité* ii.3. 593–94 it began c.420. The city struck in both silver and bronze. The legend is ΣT , $\Sigma T Y M \Phi A$ (bronze coins), and $\Sigma T Y M$, $\Sigma T Y M \Phi A$, $\Sigma T Y M \Phi A A$, $\Sigma T Y M \Phi A A I O N$, $\Sigma T Y M \Phi A A I O N$ (silver coins). Known denominations are obol, triobol and stater. The types depict Artemis, Herakles and the Stymphalian birds. The *rev.* type of the staters (Herakles with club) is discussed by Schefold (1963–64). *SNG Cop. Argolis* 283–87.

297. Tegea (Tegeatas) Map 58. Lat. 37.30, long. 22.25. Size of territory: 4. Type: A. The toponym is $T\epsilon\gamma\acute{\epsilon}\alpha$, $\acute{\eta}$ (*IG* iv 510 (C5f); Pind. *Ol.* 10.66), or in Ionic $T\epsilon\gamma\acute{\epsilon}\eta$ (Hom. *Il.* 2.607; *IvO* 268 (c.460)); Diod. 11.66.3 (r467/6) has $T\epsilon\gamma\acute{\epsilon}\alpha$. The city-ethnic is invariably $T\epsilon\gamma\acute{\epsilon}\alpha\tau\alpha\varsigma$ (*IG v.2* 159 (C5); *SEG* 37 676 (C4f)), of which the Ionic form is $T\epsilon\gamma\acute{\epsilon}\eta\tau\eta\varsigma$ (Hdt. 1.65.1).

Tegea is called a *polis* in the political sense at Simon. 122, Diehl = *Anth. Pal.* 7.512, possibly C5f (Molyneux (1992) 201), or c.369 (Pritchett (1985) 217–19), Hdt. 7.202, 204, and *SEG* 11 1051 (C4e); in the urban sense *polis* is used about it at Thuc.

5.62.2, Xen. *Hell.* 7.5.8 and Ps.-Skylax 44, who lists it as the first toponym after the heading *πόλεις αἱ μεγάλαι αἰδε*, where *polis* is used in the urban sense. The territorial sense of *polis* (with the political sense as a possible connotation) occurs in Xen. *Hell.* 7.5.5 (for which see Nielsen (1996c) 72–73). Xen. *Hell.* 6.5.7 and IG v.2 39 (C4) use *πολιται*, whereas IG v.2 3.11 (C5–C4e) makes a distinction between *Φαστός* and *ξένος*. There was an Aristotelian *Τεγεατῶν πολιτεία* (frg. 608–9). *IPArk* no. 5 (c.324) uses *πολιτεύειν* at l. 21, and at l. 28 it uses *πολιτικός* to distinguish the ordinary lawcourt of the city from an *ad hoc* court, called *τὸ δικαστήριον τὸ ξενικόν* and presumably composed of citizens from a foreign *polis* (*IPArk* p. 65), established to adjudicate the claims of returning exiles. SEG 22 287 (C3) uses *πατρίς* about the city and the poetess Anyte *πάτρα* (*Anth. Pal.* 6.153 = Gow and Page 11). A C4 tile is stamped *ΔΑΜΟΣΙΟΣ* (IG v.2 170.1).

The collective use of the city-ethnic is found internally in IG v.2 159 (C5), and externally in ML 27.3, Hdt. 1.65.1 and Thuc. 4.143.1. The individual use is found externally in Hdt. 9.9.1, Thuc. 2.67.1, IG¹³ 1371 *bis* (c.410) and SEG 37 676 (C4f).

The territory occupied c.385 km². It is described as a *καλὸν πεδῖον* in a C6 oracle reported at Hdt. 1.66.2. Its name was (*ῆ*) *Τεγεαῖτις* (*χώρα*) (Thuc. 5.64.4; Xen. *Hell.* 6.5.15). Hdt. 1.66.4 calls the territory *τὸ πεδῖον τὸ τῶν Τεγεητῶν*, and it is termed *χώρα* at Xen. *Hell.* 6.5.6. The border with Lakonia is referred to at Hdt. 8.124.3 (*ὄδοι οἱ Τεγεητικοί*). Near this border, at Analipsis, was a Classical sanctuary which seems to have been associated with a small settlement (Jost (1985) 161). At Mavriki south-east of the city was a C6 Doric marble temple (Voyatzis (1990) 29–30). Just north of the city, on Ag. Sostis, is an Archaic sanctuary which perhaps included a C5 temple (Jost (1985) 155). For two C4 fortified watch-towers in the territory, see Pikoulas (1995) cat. nos. 42–43. According to Strabo 8.3.2, Tegea was (at an uncertain date) synoecised from nine demes, whose names are given at Paus. 8.45.1. The nature of the settlement pattern and the political organisation before the synoecism are completely unknown, but the areas of the demes can be roughly located (cf. Voyatzis (1990) 10–11 with fig. 2); two of the demes, those of the Karyatai and the Oiatai, seem to have been annexed by the Spartans at an early date and to have alternated between inclusion in Tegea and Sparta (no. 345) (cf. Shipley (1997) 233–34, 238–39; Nielsen (1999) 49).

Tegea fielded 500 hoplites for Thermopylai (Hdt. 7.202), but at Plataiai the city provided 1,500 (Hdt. 9.27.3) in addition to 1,500 *psiloi* (Hdt. 9.61.2); at the battle of Nemea in 394 the city may have fielded upwards of 2,400 hoplites (Roy

(1971b) 440). Finally, the *stasis* of 370 sent 800 oligarchs into exile at Sparta (Xen. *Hell.* 6.5.10). These figures suggest a substantial population, but its exact size cannot be estimated (cf. Forsén (2000) 36–39), and it is, furthermore, not known how large a fraction of the population resided in the town.

According to Hdt. 1.66.3, the Spartans in C6f planned to subject Tegea to an *exandrapodismos*, but were unsuccessful. It is often believed that it was this conflict that led, around C6m, to the conclusion of the treaty *Staatsverträge* 112 (cf. p. 11); an alliance between Tegea and Sparta antedating the Persian Wars is certainly implied by Hdt. 9.26.2, but the treaty *Staatsverträge* 112 is now thought to belong to C5f (Cawkwell (1993) 368–70; Braun (1994) 42–45; cf. Osborne (1996) 287–89). C5 membership of the Peloponnesian League can be inferred from numerous passages in Thucydides (2.67.1, 5.32.3, 57.2, 67.1), and C4 membership is proved by, e.g., Xen. *Hell.* 4.2.13. A C5f alliance with Argos (no. 347) can be inferred from Hdt. 9.35.2 (cf. Strabo 8.6.19, who gives a vague chronological reference: *μετὰ δὲ τὴν ἐν Σαλαμῖνι ναυμαχίαν*): Argos assisted Tegea in a battle against Sparta (Hdt.), and Tegea assisted Argos against Mykenai (no. 353) (Strabo). The same Herodotean passage allows the inference that Tegea at one point in C5f was the leader of an anti-Spartan alliance comprising all Arkadia except Mantinea (no. 281); cf. Nielsen (1996b) 218–20. From Thuc. 4.134.1 it appears that Tegea, like Mantinea, was the leader of a local alliance; cf. Nielsen (1996c) 79–86.

In 370, Tegea joined the Arkadian Confederacy, but only after a bloody civil war which sent 800 oligarchs into exile (Xen. *Hell.* 6.5.6–9). Tegea became a leading member providing oecists for the foundation of Megalopolis (no. 282) (Paus. 8.27.2). When the Confederacy split in two in 363, Tegea with Megalopolis remained loyal to Boiotia (Xen. *Hell.* 7.5.5), whereas Mantinea joined Sparta; Diod. 15.82.2 refers to Tegea as the leader of the faction opposing Mantinea.

Tegean military commanders are referred to at Hdt. 7.202 and 204, and *στραταγοί* are mentioned in a C4m law (*IPArk* no. 3.9). Five hundred Tegean hoplites were present at Thermopylai (Hdt. 7.202); 1,500 hoplites and 1,500 other troops fought at Plataiai (Hdt. 9.28.3, 61.2), and Tegean troops fought at Mantinea in 418 (Thuc. 5.67.1) and at Nemea in 394 (Xen. *Hell.* 4.2.20).

A Tegean envoy to the Persian king is mentioned at Thuc. 2.67.1, and according to Diod. 15.82.3 Tegea in 362 sent an embassy to Boiotia; Tegea received envoys from Corinth (no. 227) and Argos (no. 347) in 421 (Thuc. 5.32.3) and from

Epidaurus (no. 348) in C4f (*IG* IV²¹ 102.A.11.102). In C4e, the city granted *proxenia* to a man from Orchomenos (no. 286) (*SEG* 11 1051), and in C4m two Tegeans were granted Delphic *proxenia* (*SEG* 31 560); in C4–C3 an Argive *theorodokos* resided in Tegea (*SEG* 33 283).

A system of four, presumably territorial, *phylai* is attested, but its functions are unknown; Paus. 8.53.6 names them *Κλαρεῶτις*, *Ἰπποβοῦτις*, *Ἀπολλωνιάτις* and *Ἀθανεᾶτις*, and these names occur on a C3 inscription (*IG* v.2 36) as *Ἰπποβοῦται*, *Ἀπολλωνιάται*, etc.; Jones, *POAG* 139–42. There was an Aristotelian *Τεγεατῶν πολιτεία* (fr. 608), but there is no direct evidence about the *form* of constitution; however, a *stasis* is described at Xen. *Hell.* 6.5.7; this *stasis* brought the *demos* to power, and it can be inferred that prior to the *stasis* Tegea was an oligarchy governed in accordance with *οἱ παῖριοι νόμοι*; a *θεσμός* is referred to in *IPArk* no. 1.8, 19–20 (C5). The earliest surviving public enactment is *SEG* 11 1051 of C4e (*ἔδοξε τῷ πόλι τῶν Τεγεατᾶν*). The eponymous official was presumably the priest of Athena Alea (*IPArk* no. 4 n. 1 (C4)); a board called *οἱ Τριακάσιοι* (*IPArk* nos. 2.20–21, 3.8 (C51–C4e)) was presumably a council, and one called *οἱ πεντέκοντα* possibly its executive committee (*IPArk* no. 1.20 with n. 7 (C51–C4e)). In addition, there is evidence of boards of *θεαροί* (Xen. *Hell.* 6.5.7); *δαμοργοί* (*IPArk* no. 2.28 (C51–C4e)); *ἔσδοτήρες* (= *poletai*) (*IPArk* no. 3.48 (C4m)); and *hieromonámones* (*IPArk* no. 2.22–23 (C51–C4e)). In addition, *IPArk* no. 2.5 attests to a *hierobútas*, and *SEG* 11 1070 (C4l) to an *agonothetes*. The existence of an assembly can be inferred from *SEG* 11 1051 (C4e): *ἔδοξε τῷ πόλι*, for which formula see Rhodes (1995) 95–96. A local calendar is attested by *IPArk* no. 2.29–30 (C51–C4e).

The layout of the city of Tegea is not well known, though there are indications that by the end of the Archaic period the sanctuary of Athena Alea was at the heart of a well-developed site (Morgan (1999) 396–97); Ødegård (*AR* (2000–1) 32) refers to various C6s and C5 finds from the city area. A circuit wall and two gates are mentioned at Xen. *Hell.* 6.5.8–9 in reference to 370; however, Diod. 12.79.3 (r418) mentions a *poliorkia* of Tegea, thus suggesting that the city was walled at this date. Furthermore, at 5.62.2 Thucydides states that in 418 some people in Tegea were willing to betray the city to the democratic quadruple alliance (*καί τινες αὐτοῖς καὶ τῶν ἐν τῇ πόλει* [sc. of Tegea] *ἐνεδίδοσαν τὰ πράγματα*); if insiders were necessary to conquer the city, we may assume that it was fortified. The preserved remains of the C4e wall show it to have been constructed in mudbrick on a stone foundation (Bérard (1892) 548; cf. Voyatzis (1990) 12);

traces of the wall were reportedly found in four places, thus giving a very rough indication of its course (Bérard (1892) 547; cf. Voyatzis (1990) fig. 3), and this course has now been confirmed in its basic assumptions (*AR* (2000–1) 32) except for the fact that the sanctuary of Athena Alea seems to have been *outside* the wall. The area enclosed by the wall seems to have had the shape of “an irregular ellipse, with the long axis measuring 2,000 metres and the short axis 1,400 metres” (Voyatzis (1990) 12; cf. Bérard (1892) 547). It measured max. c.190 ha. *IPArk* no. 5 (324) refers to *oikiai*, but there is, unfortunately, no way of knowing how densely populated the large area inside the wall was. At 5.17.2 Polybios refers to the acropolis, but this has so far escaped identification (Voyatzis (1990) 16–17; cf. Bérard (1892) 541–42).

Little is known about public architecture. Xen. *Hell.* 7.4.36 refers to a *desmoterion* and to a *demosia oikia*. There are remains of a C4 theatre (Callmer (1943) 121; *TGR* ii. 270). A C3 inscription refers to the agora (*SEG* 22 280.24). But the most famous Tegean structure was, of course, the temple of Athena Alea; the first monumental temple was constructed C7l (Voyatzis (1990) 11); the Classical temple was constructed c.345–335 (Norman (1984) 191–93).

An Athena Poliatis is attested by Paus. 8.47.5 and *IG* v.2 77 (Roman, but the divinity is presumably much earlier; see Burkert (1995) 208), but the real patron divinity of Tegea was Athena Alea (Voyatzis (1990) 14; cf. Jost (1985) 142–65). Festivals are attested by *IPArk* no. 2.26 (C51–C4e) and *IPArk* no. 5.21–22 (324); games in honour of Athena Alea are attested as early as Pind. *Ol.* 7.83 (cf. *IG* v.2 75 (C6l), 113 (C5e)); Jost (1985) 374); a *στάδιον χῶμα γῆς* is mentioned by Paus. 8.47.4; a starting line block of uncertain but possibly late Classical date is published by Pakkanen, *Tegea Stadium*. A Pythian victor is attested for 554 (Paus. 10.7.7), a Nemean for C5 (Dubois (1986) TE 1), and an Olympic for 308 (Diod. 20.37.1). Dedications of Spartan and Persian spoils were set up in the temple of Athena Alea (Hdt. 1.66.4, 9.70.3), and in 423 the city sent Mantinean spoils to Delphi (Thuc. 4.134.1); in Delphi, too, the city dedicated Spartan spoils and erected a stoa in c.369 (cf. *SEG* 31 558–59; Vatin (1988) 453–59).

According to Head, *HN*² 454, the mint at Tegea began to strike c.420; hoard evidence, however, may point to the Archaic period for the first coinage (cf. *IGCH* 11, buried c.480; *Hesperia* 24 (1955) 135–36). The city struck on the Aiginetan standard and minted in silver, bronze and iron; the single surviving iron coin (C5s) is discussed by Köhler (1882b) (cf. also MacIsaac (1988) 48–49): *obv.* Gorgoneion; *rev.* owl + *TEΓE*. Known denominations are hemiobol, trihemiobol, obol and triobol; in addition, a single

didrachm is known, for which see Schwabacher (1939) 15–18. The most common types are Gorgoneion, head of Athena Alea and owl. Legends: *T*, *TE*, *TEΓ*, *TEΓE*, *TEΓEA*, *TEΓEATAN* (-ΩΝ) or *AΘΑΝΑΣ ΑΛΕΑΣ*. *SNG Cop. Argolis* 288–313.

298. Teuthis (Teuthidas) Map 58. Lat. 37.35, long. 22.00. Located at modern Dimitsana; see Jost (1985) 212 and Pikoulas (1986*b*). Size of territory: ? Type: C. The toponym is *Τεῦθις*, ἡ (Paus. 8.28.4); the ethnic is *Τευνθίδας*, attested on Hellenistic coins (Head, *HN*² 418). At 8.28.4 Pausanias states that *πάλαι δὲ ἦν πόλισμα ἡ Τεῦθις*, but the only reason for including it in this Inventory is the fact that according to Paus. 8.27.4 (r371) Teuthis was, prior to the foundation of Megalopolis (no. 282), among the communities whose relationship to Orchomenos (no. 286) could be described by the phrase *συντελεῖν ἔς*. The other communities so described are Methydrion (no. 283) and Thisoa (no. 301), both of which were probably *poleis*. So, by analogy, we may class Teuthis as a possible *polis*.

According to Paus. 8.27.4, Teuthis was among the communities that the Arkadian Confederacy decreed to relocate to Megalopolis; it is unknown, however, whether this decision was implemented, and the site seems not to have been abandoned at the synoecism (Pikoulas (1986*b*)).

The city proper lay below the acropolis. The site is now occupied by the village of Dimitsana, and so the degree of ancient urbanisation cannot be estimated; but Pikoulas (1986*b*) 116 reports considerable numbers of Archaic and Hellenistic sherds, but fewer Classical. The acropolis was fortified (ibid. 110 with map 1 at 101). The date of the impressive fortification is uncertain, but it is not earlier than C4 and is probably Hellenistic (ibid. 113).

299. Thaliades Map 58. Lat. 37.45, long. 21.55. Size of territory: ? Type: C. Paus. 8.25.2 has the toponym *Θαλιάδες*, αἱ; the Archaic coinage of the city has the legend *ΘΑΛΙ*, probably an abbreviation of the otherwise unattested city-ethnic. The only reason for including the city in this Inventory is the existence of this Archaic coinage (Head, *HN*² 456; Six (1888) 103). The *obv.* type shows Hermes; attested denominations are obol and tetrobol. *SNG Cop. Argolis* 317.

Meyer (1939*a*) 75–78 describes “pseudopolygonale” fortification walls at the site of Thaliades (modern Vaklia), a small temple on the separately fortified acropolis and three further small temples in the immediate surroundings of the city (all four temples undated); the sherds at the site range from Classical to Hellenistic, but Jost (1985) 44 refers to earlier material. Cf. Jost (1985) 44–45.

300. Thelphousa (Thelphousios) Map 58. Lat. 37.45, long. 21.55. Size of territory: 4. Type: B. The toponym shows several variants: (1) *Θέλφουσα* (*IG* v.2 412 (Classical)); (2) *Θελ[φ]ούσσα* (*BCH* 45 (1921) 11.73 (c.230–210)); (3) *Τέλφουσα*, ἡ (Polyb. 2.54.13); (4) *Θέλπουσα*, ἡ (Paus. 8.25.1). The ethnic shows the corresponding variations: (1) *Θελφούσιος* (*IG* v.2 1.64 (360s)); (2) *[Θε]λ[φ]ούσ[σ]ιος* (*IG* iv 727.B.13 (C4)); (3) *Τελφούσιος* (Polyb. 4.73.2); (4) *Θελπούσιος* (Head, *HN*² 418). In addition, Steph. Byz. s.v. has *Θάλπουσα*, *Θαλπούσιος*. Finally, a C5e dedication at Olympia has *κάρυξ δαμόσιος Θελφοίσιος* (*SEG* 11 1254a), which points to the form **Θέλφοισα* for the toponym. For a discussion of toponym and ethnic, see Meyer (1934) 1618.

Thelphousa is called a *polis* in the political sense at *SEG* 12 371 (242), and in the urban sense at Polyb. 2.54.13; it is referred to as *πάτρα* in *IG* v.2 412.2 (Classical). The city-ethnic is found in the external individual use in *IG* ix.1² 31.89 (C3l) and Phld. *Acad. Ind.* 20.8, Dorandi (rC3f); the collective use is found internally on C4 coins (abbreviated to *ΘΕΛ*: Head, *HN*² 456) and externally in *IG* v.2 1.64 (360s).

The territory occupied c.275 km² and was called *Τελφουσία* (Lycoph. *Alex.* 1040; Polyb. 4.60.4). Steph. Byz. 306.5 describes Thelphousa as a *πόλις Ἀρκαδίας τοῦ Ὀρχομενοῦ*. Orchomenos (no. 286) seems to have ruled a number of dependent *poleis* (Nielsen (1996*c*) 84–86), but there is no other evidence that Thelphousa was one of these (Meyer (1934) 1619). At 8.25.1 Pausanias mentions a *kome* by the name of *Καοῦς*; the settlement may have existed by C4e (Jost (1986*b*) 644), and its *raison d'être* was presumably to look after the sanctuary of Asklepios Kaousios (Jost (1986*a*) 149). Kaous, at modern Voutsis, lay 6.5 km north of the city (Jost (1985) 63). C.2 km south of the city Meyer (1957*b*) 13ff found traces of a settlement which includes a C6l–C5e temple and thus existed in the Classical period; it must have constituted a second-order settlement of Thelphousa, possibly to be identified with ancient Onkeion (Paus. 8.25.4; cf. Jost (1985) 66). Another small settlement in the same general area is mentioned by Meyer (1957*b*) 15. For a possible settlement at Bertisia, see Jost (1985) 67. A fortress called *Στράτος*, ἡ was likewise situated in Thelphousian territory (Polyb. 4.73.2; Meyer (1934) 1619). It has not yet been located. The territory was dotted with sanctuaries (see Jost (1985) 66 (Classical), 67 (Archaic/Classical), 68 (possibly a temple), 68–69, 69 (a temple and Archaic votives)).

K. Tausend (1993) 18 argues that Thelphousa was an Azanian community, but certainty is impossible (Nielsen and Roy (1998) 33–36). In any case, even if the Azanians ever formed a political unity, this had broken up before C5 (Roy

(1972*b*) 44, (1996) 110; Nielsen (1996*a*) 139). Membership of the Peloponnesian League is not explicitly attested, but may be assumed (Nielsen (1996*c*) 87); membership of the Arkadian Confederacy is attested by *IG* v.2 1.64 (360s).

IG v.2 412 is a Classical epigram commemorating fallen warriors, and may perhaps be connected with the battle fought at Thelphousa in 352 (Diod. 16.39.6). Thelphousian diplomatic activity is implied by the C5e dedication of a herald's staff at Olympia which was inscribed *κάρυξ δαμόσιος Θελφοίσιος* (*SEG* 11 1254*a*).

The form of constitution is unknown; a Classical epigram commemorating fallen warriors refers to their saving the *εὐνομίαν* . . . *πατέρων* (*IG* v.2 412.6). Otherwise the earliest preserved public enactment is *SEG* 12 371 of 242, an *asylia* decree for Kos; it attests to an assembly in the enactment formula *ἔδοξε τῶι πόλι τῶ[ν] Θελφουσίων*.

"Ancient Thelphousa is situated on the left bank of the Ladon about one kilometer north of the hamlet of *Toubitsi*" (Pritchett (1989) 38). The city was situated on a hill and covered an extensive area on the lower slopes, not all of which was occupied (Jost (1985) 62). Numerous scattered remains have been found, particularly in the lower city (*ibid.*). For a plan, see Jost (1986*b*) fig. 4. The only well-known feature of the city is the agora. It was huge, measuring 130 × c.120 m, and was laid out on an artificial terrace supported by a retaining wall (Jost (1986*b*) 638). The agora was flanked by stoas on all four sides, the western stoa, however, running for only half the length of the agora; on the southern side, the agora was flanked by a C4 stoa which measured at least 78 × 7 m (*ibid.*). For a plan, see Jost (1986*a*) fig. 5. All in all, the layout and construction of the agora is C4 (Jost (1986*b*) 642). No monumental structures have been found on the acropolis (*ibid.* 637). The city was walled, and traces of the wall are extant, but have not been investigated separately; cf. Meyer (1939*a*) 86–87. It may, however, be noted that a Classical epigram (= *IG* v.2 412) commemorating fallen warriors probably refers to the wall (*ἔρκεα πύργων*).

Thelphousa began minting c.400 and struck in both silver and bronze, the bronze issues beginning perhaps only c.323 (Babelon, *Traité* ii.3. 621–22); the legends used are: Θ, ΘΕΛ (Head, *HN*² 456; Babelon, *Traité* ii.3 nos. 935–39). Types: Demeter Erinys, the horse Erion (= Arion), and later Apollo. The known silver coins are obols on the Aiginetan standard. *SNG Cop. Argolis* 318.

301. Thisoa (Thisoaios) Map 58. Lat. 37.40, long. 22.05. Size of territory: 1 or 2. Type: B (?). The toponym does not appear until *BCH* 45 (1921) III.5 (c.230–210), which gives

Θισόα, ἡ; the MSS of Pausanias have Θεισόα (which Rocha-Pereira prints) and Θισόα (which Casevitz prints); cf. 8.27.4, 28.3. The city-ethnic is Θισοαῖος, which points to the toponym Θισόα; the ethnic occurs in, e.g., *CID* II 5.1.23–24 (358) and *IG* v.2 511 (C3l–C2e).

Thisoa is listed as a *polis* in the urban or political sense at Paus. 8.27.4 (r371), and refers to itself as a *polis* in the political sense in *IG* v.2 510–11 (C3l–C2e). The ethnic is found in the external individual use in *SEG* 14 455 (C4f), for which see Roy (1972*c*) 78; the internal collective use is found in *IG* v.2 510–11 (C3l–C2e).

The name and size of the territory are unknown; Paus. 8.28.3 (*ἐν Θεισόα τῇ Μεθυδριεῦσιν δμόρῳ*) and 8.28.4 (*τῇ χώρα δὲ τῇ Θεισόα*) suggest that the toponym could be used as the name of the territory. At Paus. 8.27.3 (r371) Thisoa is listed among a number of communities whose relationship to Orchomenos (no. 286) could be described by the expression *συντελεῖν ἐς*. It is not clear what this means, but it suggests that prior to 371 Thisoa was a dependency of Orchomenos (Nielsen (1996*c*) 84–86).

Membership of the Arkadian Confederacy can be inferred from Paus. 8.27.4; the same passage claims that Thisoa was one of the communities that the Arkadian Confederacy decreed to relocate to Megalopolis (no. 282), but it is not known whether the decision was implemented.

SEG 14 455 (C4f) attests to a Delphic grant of *proxenia* to a Thisoaian; this man could conceivably originate from Kynourian Thisoa (for which see Paus. 8.27.3), but it is more likely that he was a citizen of the Thisoa under discussion (Roy (1972*c*) 78).

Thisoa was located at modern Karkalou. The city proper, unwalled, lay below the acropolis on a plateau (Jost (1985) 212). The acropolis was walled, but the fortification has not been dated; it may be C3 (Jost (1985) 212 n. 1). Remains of buildings have been found both on the acropolis and in the lower city; the oldest remains reported are C3 (*Prakt* (1911–12) 243).

302. Torthyneion (Torthyneus) Map 58 (at the Kolinos hill 1 km north-west of Lasta; see Pikoulas (1990–91)). Lat. 37.40, long. 22.10. Size of territory: ? Type: B. The toponym is *Τορθύν[ν]εον, τό* (*Syll.*³ 90.9 = *REG* 62 (1949) 4–12 (C5l–C4e)). The ethnic is found in the genitive plural as *Τορθυνήων* in *IPArk* no. 14.6 (360s).

Though Torthyneion occurs in two Classical sources only, these are enough to establish the community as a probable *polis*: (1) *Syll.*³ 90.9 = *REG* 62 (1949) 4–12 (C5l–C4e) attests the existence of a Delphic *theorodokos* at Torthyneion, and

(2) *IPark* no. 14.5–7 has the ethnic in the external collective use (cf. Nielsen (1996a) 131–32) and attests to a Torthyanean territory with fixed borders: ἀπὸ τῶν ὀρίων τῶν . . . τῶν Ὀρχομενίων καὶ τῶν Τορθυνήων καὶ Μετιδριήων κοινοί. In 262, a citizen of Torthyneion was awarded Aitolian *proxenia* (*IG* 1x.1² 17).

There are clear indications of habitation at Torthyneion, with abundant sherds ranging from the Geometric to the Hellenistic periods (Howell (1970) 99–100; Pikoulas (1990–91) 140–43). There are remains of fortification walls too (Pikoulas (1990–91) 144–45).

303. Trapezous (Trapezountios) Map 58. Lat. 37.25, long. 22.05. Size of territory: 1 or 2. Type: C. The toponym is *Τραπεζοῦς* (Hdt. 6.127.3); the ethnic is *Τραπεζούντιος* (Paus 8.27.5 (r371)).

Trapezous is called *polis* in the urban or political sense at Paus. 8.27.4 (r371) and—implicitly—*πάτριη* at Hdt. 6.127.3. The collective use of the ethnic is found at Paus. 8.27.5 (r371), probably taken over from a historiographic source.

The territory is called *χώρα Τραπεζουντία* at Paus. 8.29.1. According to Paus. 8.27.4, Trapezous was among the communities that the Arkadian Confederacy decreed to relocate to Megalopolis (no. 282); however, the Trapezountioi resisted the decision, but a part of the population was relocated by use of force, whereas another part left the Peloponnese (Paus. 8.27.5). The synoecism thus meant the end of the city's existence (cf. Meyer (1937b) 2213).

The city was a Parrhasian community and a member of the Arkadian Confederacy (Paus. 8.27.4; Nielsen (1996a) 132–34). Membership of the Peloponnesian League is not explicitly attested, but may be assumed; it was probably mediated by the tribal state of the Parrhasians (Nielsen (1996c) 100–1), and the same is true of the C5 alliance with Mantinea (no. 281) (*ibid.* 79–86).

There is a very brief report on an excavation at a site which may be Trapezous (modern Mavria) by Stephanos in *Prakt* (1907) 123; he reports remains of several buildings and sherds “of Hellenic times” (i.e. Hellenistic; cf. Jost (1985) 170). However, recent rescue excavations near modern Kyparissia (c.20 km north-west of Megalopolis) by A. V. Karapanagiotou have brought to light a new candidate for Trapezous: a city with a rectangular street plan and a fortification wall with rectangular towers, of considerable size (18 ha) though not excavated in its entirety, and dated by the excavator to the earlier fifth century; the earliest material is C6 ceramic material; a C6–C4 sanctuary is located 1.5 km from the city (information derived from public lecture by A. V. Karapanagiotou in Athens, May 2002; for earlier finds at the site, see Bather and Yorke (1892–93) 229–30; Jost (1985) 170). If not to be equated with Trapezous, the site may be ancient Basilis (Paus. 8.29.5).

According to Paus. 8.31.5, some old *xoana* of Hera, Apollo and the Muses found at Megalopolis had been transferred to the city from Trapezous; the likely date is the 360s, and we may thus assume that before that date Trapezous possessed cults of these divinities; cf. Jost (1985) 169.

TRIPHYLIA

THOMAS HEINE NIELSEN

I. The Region

The name of the region is *Τριφυλία*, ἡ (Dem. 16.16; Diod. 15.77.2 (r366)). The ethnic is *Τριφύλιος* (Xen. *Hell.* 4.2.16; *SEG* 35 389.1 (c.399–369)). The collective use of the ethnic is attested externally in Xen. *Hell.* 6.5.2, and internally in a decree found at Makiston (no. 307) (*SEG* 35 389 (c.399–369)). The individual use is attested—externally—only once, on a C4 gravestone from Attika, *IG* 11² 10461: *Μαρσύας Ἀνδροκλέους Τριφύλιος*. No Classical source describes Triphylia by the terms *χώρα* or *γη*, but Hdt. 4.148.4 uses *χώρα* of the area occupied by Lepreon (no. 306), Makiston, Phrixa(i) (no. 309), Pyrgos (no. 310), Ep(e)ion (no. 304) and Noudion (no. 308); a late source, Dionysios Periegetes (at 409), uses the expression *Τριφυλὶς γαίη*. No source describes the Triphylians as an *ἔθνος vel sim.*, probably by coincidence.

Geographically, Triphylia is equated by modern scholars with the area between the river Alpheios south of Olympia and the river Neda north of Messenia (e.g. Tuplin (1993) 184); there are, however, considerable difficulties involved in establishing what the ancient Greeks themselves considered to be Triphylia, because (a) before C4, the concept of Triphylia probably did not yet exist (Niese (1910) 13; Nielsen (1997) 133–44); this means that no information about the extent of “Triphylia” can be found in Herodotos or Thucydides; (b) later sources such as Strabo and Pausanias are influenced by the debate of Homeric scholars who located the kingdom of Nestor in Pisatis and what was later called Triphylia (Strabo 8.3.3; Niese (1910) 35ff).¹

For an outline of what was in Antiquity considered to be Triphylia we must begin with Polybios and work backwards to the period when the region was created. At 4.77.9 Polybios states that Triphylia comprised the following *poleis*: Samikon, Lepreon (no. 306), Hypana, Typaneiai, Pyrgos

(no. 310), Ep(e)ion (= Aipion) (no. 304), Bolax, Stylangion and Phrixa(i) (no. 309). From Polyb. 4.80.13 it appears that Epitalion (no. 305) too was considered to be Triphylian. The passage at 4.77.9 employs the present tense (ἔχει [sc. ἡ *Τριφυλία*] ἐν αὐτῇ πόλεις ταύτας), and thus strictly speaking refers to C2; but the passage at 4.80.14 employs the past tense (παρέλαβε... πᾶσαν ὑφ’ ἑαυτὸν πεποιημένους τὴν *Τριφυλίαν*), and thus refers to the year 219. Since the extent of Triphylia implied by the two passages is virtually identical, this does not constitute a problem. It may be noted that all communities treated as Triphylian by Polybios were situated in the area between the river Alpheios and the river Neda.

Moving back into C4, Makiston (no. 307) is explicitly attested as Triphylian by a C4 inscription originating from the Triphylian federation itself (*SEG* 35 389). The importance of this should be stressed: since Makiston does not appear in Polybios’ list, this list cannot simply be retrojected back into the Classical period. But Makiston too was situated between the Neda and the Alpheios.

At *Hell.* 3.2.30 Xenophon reports that one of the terms of the peace treaty agreed upon by Elis (no. 251) and Sparta (no. 345) c.400 was the following: τὰς *Τριφυλίδας πόλεις ἀφεῖναι* (sc. the Eleians) *Φρίξαν καὶ Ἐπιτάλιον καὶ Λετρίνους καὶ Ἀμφιδόλους καὶ Μαργανέας*. This passage is open to more than one interpretation: (a) it may—on a strict reading—be taken to mean that all communities listed were Triphylian; (b) since Amphidoloi (no. 247) and probably also Letrinoi (no. 258) and Marganeis (no. 259) were north of the Alpheios (see Map 58), it may mean that only Phrixa(i) (no. 309) and Epitalion (no. 305) are thought of as Triphylian; (c) accepting Grote’s *καί* after *ἀφεῖναι*, it may be taken to mean that Phrixa(i) and Epitalion (and by implication the other items on the list) are *not* considered Triphylian. Item (c) would eliminate the significance of the passage as a source for the extent of Triphylia, and accepting it means tampering with the text. Item (b) seems more likely, since Phrixa(i) and Epitalion are both considered Triphylian by Polybios. Certainty is impossible, however,

¹ Strabo, of course, does not hide this fact; see 8.3.3: λέγω δὲ ταῦτα, συμβάλλων τὰ τε νῦν καὶ τὰ ὑφ’ Ὀμήρου λεγόμενα. On Pisatis, see the Eleian Inventory by Roy, *supra* 489–92, and Roy (2002).

since Triphylia was also a political concept which may well have included communities outside geographical Triphylia proper (whatever that was). For example, Diodoros records in reference to the year 366/5 that Lasion (no. 256) was a *Τριφυλίας χωρίον* (Diod. 15.77.1); this may simply be a slip (Nielsen (1997) 150 n. 133; cf. Stylianou (1998) *ad loc.*), but it cannot entirely be excluded that Lasion had been a part of Triphylia as a political entity (Lasion is treated as Eleian in the present work, *supra* 499). On balance, it seems best to accept (a); it must then be emphasised that (a) means accepting that sites north of the Alpheios are here described as Triphylian although the only other sources to do so are Diod. 15.77.1 (on Lasion; cf. Stylianou (1998) *ad loc.*) and Stephanos of Byzantion (s.v. *Ἀκρόρειοι* and *Ἀμφιδόλοι*, in both cases without source reference). This may mean that Xenophon was careless, though this is an unsatisfactory hypothesis in the light of his personal acquaintance with the area. A better explanation is that Triphylian identity may initially have been claimed by/for communities north of the Alpheios but that this was a short-lived phenomenon of which there are no traces in later sources of any note. (The communities north of the Alpheios are treated by Roy, *supra* 489–504).

Four of the communities described as Triphylian by Polybios reappear in Hdt. 4.148.4, in a list of Minyan foundations: *viz.* Lepreon (no. 306), Phrixa(i) (no. 309), Pyrgos (no. 310) and Ep(e)ion (no. 304). Herodotos' list includes Makiston (no. 307) and Noudion (no. 308) as well. Since Makiston is explicitly attested as Triphylian by a C4 inscription (SEG 35 389), we may assume that Noudion became Triphylian too (if it survived into C4).

Summing up, we may tentatively conclude that Triphylia came to be conceived of as the area west of Arkadia between the Neda and the Alpheios, and that it comprised the following major sites: Bolax, Ep(e)ion (no. 304), Epitalion (no. 305), Hypana, Lepreon (no. 306), Makiston (no. 307), Noudion (no. 308), Phrixa(i) (no. 309), Pyrgos (no. 310), Samikon, Stylangion and Typaneiai, although it is uncertain whether all of these ever existed contemporaneously. Of the communities explicitly described as Triphylian, those securely located were all south of the Alpheios and north of the Neda; so was Skillous, which we may then include, although it is described as Triphylian only by Pausanias at 5.6.4 (see, however, Xen. *Hell.* 6.5.2 with Tuplin (1993) 183–84). The border towards Arkadia is not explicitly attested, but it presumably ran west of Heraia and Alipheira, but east of Ep(e)ion and Typaneiai (Nielsen (1997) 155; cf. Roy (2000)).

The written sources associate thirty² toponyms with Triphylia.³ Of these, three (Akroreioi, Amphidoloi (no. 247) and Lasion (no. 256)) are probably described as Triphylian by mistake;⁴ another nine (Aipy, Amphigeneia, Arene, Dorion, Helos, Kyparissia, Pteleos, Samos and Thryon) seem to be purely legendary or prehistoric; one (Chaa) is the name of a fort, and eight (Epeion, Epitalion, Lepreon, Makiston, Noudion, Phrixa[i], Pyrgos and Skillous) of the remaining seventeen belong to communities which are described as *poleis* in the Inventory below; three (Alorion, Chalkis and Bolax) of the remaining nine are unlocated, and it is unknown whether they existed in the Archaic and Classical periods. The remaining six are as follows.

1. Pre-Hellenistic Settlements not Attested as Poleis

Hypana (*Ἵπανα*) Polyb. 4.79.9 (*πόλις*). Meyer (1957) 33–34; Pritchett (1989) 49–50, 55–58. Among the remains are those of a possibly C4 theatre, and a phase of the fortification wall is C4 as well (Nielsen (2002) 609–10 with refs.). Barr. C.

Pylos (*Πύλος*) Unlocated. Strabo 8.3.1 (*πόλις*), 3.14, 3.26. According to Strabo 8.3.30, Pylos was at an unspecified date (Moggi, *Sin.* 168 proposes a date c.460; cf. Demand (1990) 64 who proposes a C5m date) synoecised into Lepreon (no. 306) by Elis (no. 251). Moggi, *Sin.* no. 26; *Neue Pauly* x. 618. Barr. AC.

Pyrgoi (*Πύργοι*) Strabo 8.3.22; Steph. Byz. 541.6 (*πόλις*); presumably to be distinguished from the Pyrgos (no. 310) of

² Four unlocated communities (the Anaitoi, the Ewaioi, the Metapioi and the Chaladrioi) known only from epigraphical documents may possibly have been located in Triphylia; they are treated by Roy in the Eleian Inventory, *supra* 489–504. On the Ewaioi, see also Roy and Schofield (1999).

³ 1. Aipy (Strabo 8.3.24); 2. Akroreioi (Steph. Byz. 64.5); 3. Alorion (Strabo 8.3.25); 4. Amphidoloi (Steph. Byz. 89.19); 5. Amphigeneia (Strabo 8.3.25); 6. Arene (Steph. Byz. 117.15; Eust. *Il.* 1.459.2); 7. Bolax (Polyb. 4.77.9); 8. Chaa (Strabo 8.3.21); 9. Chalkis (Strabo 8.3.13); 10. Dorion (Strabo 8.3.25); 11. Ep(e)ion (Xen. *Hell.* 3.2.30; cf. Tuplin (1993) 183–84; Polyb. 4.77.9); 12. Epitalion (Xen. *Hell.* 3.2.30; cf. Tuplin (1993) 183–84; Polyb. 4.80.13); 13. Helos (Strabo 8.3.25); 14. Hypana (Polyb. 4.77.9; Strabo 8.3.13); 15. Kyparissia (Strabo 8.3.22; Steph. Byz. 395.1); 16. Lasion (Diod. 15.77.1); 17. Lepreon (Polyb. 4.77.9; Strabo 8.3.11; Paus. 5.5.3); 18. Makiston (SEG 35 389 (c.399–369); Paus. 6.22.4; Strabo 8.3.13); 19. Noudion (Hdt. 4.148, cf. *supra*); 20. Phrixa(i) (Xen. *Hell.* 3.2.30; cf. Tuplin (1993) 183–84; Polyb. 4.77.9); 21. Pylos (Strabo 8.3.7; Eust. *Il.* 1.458.33); 22. Pyrgoi (Strabo 8.3.22; cf. *KIPauly* iv. 1259); 23. Pyrgos (Polyb. 4.77.9); 24. Pteleos (Strabo 8.3.25); 25. Samikon (Polyb. 4.77.9; Paus. 6.25.6; Steph. Byz. 553.4); 26. Samos (Strabo 8.3.19); 27. Skillous (Xen. *Hell.* 6.5.2; cf. Tuplin (1993) 183–84; Paus. 5.6.4; Steph. Byz. 575.3); 28. Stylangion (Polyb. 4.77.9; Steph. Byz. 588.9); 29. Thryon (Strabo 8.3.24); 30. Typaneai (Polyb. 4.77; Strabo 8.3.15).

⁴ On these three communities, see Roy's introduction to the Eleian Inventory, *supra* 489–93.

Hdt. 4.148.4 and Polyb. 4.77.9; cf. *KIPauly* iv. 1259; Pritchett (1989) 75; however, Müller (1987) 840–41 (followed by *Barr.*) identifies the two. *Barr.* AC.

Samikon (Σαμικόν) Polyb. 4.79.9 (πόλις); cf. Pritchett (1989) 64; Nielsen (2002) 610. *Barr.* C.

Stylangion (Στυλάγγιον) Polyb. 4.79.9 (πόλις). *Barr.* H, but cf. Pritchett (1989) 72 for “definitely Classical” sherds; Nielsen (2002) 611.

Typaneiai (Τυπανέαι) Polyb. 4.77.9, 79.4 (πόλις). *Barr.* C, but cf. Meyer (1957) 56–59 for A. See also Pritchett (1989) 46–58 and Nielsen (2002) 611–12.

At least four (Hypana, Samikon, Stylangion and Typaneiai) of these *may* in fact possibly have been *poleis*. Admittedly, we have no evidence whatsoever for their political status prior to the Hellenistic period, but they are listed as *poleis* at Polyb. 4.77.9, and there is good reason to trust Polybios’ site-classification for this period (Nielsen (1997) 132). Since the archaeological record at these sites goes back to the Archaic and/or Classical periods, they surely existed in these periods and may possibly already have been *poleis*. Pyrgoi was presumably a second-order settlement in the territory of Lepreon (Pritchett (1989) 75) and so was Pylos after its inclusion in Lepreon.

2. Unidentified Settlements⁵

Prasidaki Settlement associated with Archaic–Classical sanctuary, described below, s.v. Lepreon (no. 306); cannot be convincingly connected with any ancient toponym.⁶

So, of fifteen settlements known to have existed in the Archaic and Classical periods, eight were considered to be *poleis* either throughout these periods or at least for some time within them. The topography of the region was thoroughly studied by Pritchett (1989) 1–78, whose identifications are followed here. In addition to such settlements, there was an important sanctuary of Artemis Limnatis at Kombothekra, but it is unknown which *polis/poleis* had the supervision of it (Sinn (1978), (1981)).

In C5, all communities of the later Triphylia were dependencies of Elis (no. 251) (Roy (1997) 283–85); however, when the Eleian *perioikis* was broken up by Sparta (no. 345) c.400, the

former Eleian dependencies united and formed a small federal state (Nielsen (1997) 148–55). Two decrees (*SEG* 35 389 and 40 392 (both C4f)) passed by this state have survived (cf. Siewert (1987); Nielsen (1997) 148–49; Ruggeri, *L’État fédéral*). The decrees mention a body called τοὶ Τριφύλιοι (*SEG* 35 389.1 and 40 392.1), presumably an assembly, and an eponymous *damiorgos* who was the head of a board (*SEG* 40 392.3). One decree grants Triphylian citizenship as such (*SEG* 40 392; Siewert (1987) 276), whereas the other grants citizenship in Makiston (no. 307) (*SEG* 35 389; Siewert (1987) 275; Nielsen (1997) 149). It thus seems that there were two levels of citizenship in Triphylia, which may then reasonably be described as a small federal state. See further Nielsen (1997) 148–55.

The Triphylians supplied Sparta with hoplites who fought in the battle of Nemea in 394 (Xen. *Hell.* 4.2.16) and were thus members of the Peloponnesian League; from Xen. *Hell.* 6.5.2–3 it can be inferred that the Triphylians took the oath of the second Common Peace of 371. In the 360s the Triphylians were members of the Arkadian Confederacy (*IG* v.2 1.20; Xen. *Hell.* 7.1.26). It is uncertain when the Triphylian Federation broke down; from Polyb. 4.77–80 it appears that it no longer existed in 219. See further Nielsen (1997) 152–53.

II. The *Poleis*

304. Ep(e)ion Map 58. Lat. 37.35, long. 21.50. Size of territory: 1 or 2. Type: A. The toponym is **Ἐπιον* (Hdt. 4.148.4), τό (cf. Steph. Byz. 302.16, who enters it as **Ἡπιον*); Xen. *Hell.* 3.2.30 has **Ἡπειον*, and Polyb. 4.77.9 has *Ἀπειον*. A city-ethnic is attested only in Steph. Byz.

Ep(e)ion is called a *polis* in the urban sense at Hdt. 4.148.4; Xen. *Hell.* 3.2.31 uses *polis* of the city twice, first in the urban, then in the political sense, in both cases with the territorial sense as a connotation; and a comparison between *Hell.* 3.2.23 and 31 shows that Xenophon thought of Ep(e)ion as a *polis* in the political sense too (Nielsen (1995) 88).

The territory is termed *χώρα* by Xen. *Hell.* 3.2.30. From Hdt. 4.148.4 and Xen. *Hell.* 3.2.23, 31 it appears that in C5s (at the latest) Ep(e)ion was a perioikic community of Elis (no. 251) (Roy (1997) 283–85). Xenophon attributes to the Eleians the claim that they had originally bought the territory of Ep(e)ion from τῶν τότε ἐχόντων τὴν πόλιν (*Hell.* 3.2.31). The identity of these “holders” is unknown; Xenophon’s phrasing suggests that, at the time of the sale, Ep(e)ion was not controlled by its own original population; Niese (1910) 7 suggested that it was held by Arkadians (cf. Roy (1997) 290).

⁵ The minor archaeological sites of the district are surveyed by Yalouris (1973). Some of these may have been settlements; see e.g. Yalouris (1973) 158; cf. Pritchett (1989) 75; Müller (1987) 839–40.

⁶ Recently, Arapogianni (1999) 168 has suggested that the site at Prasidaki is ancient Pyrgos.

C.400 Ep(e)ion was liberated from Eleian rule and made *autonomos* (Xen. *Hell.* 3.2.31); presumably the city now joined the Triphylian Federation and through it, in 369 at the latest, the Arkadian Confederacy (Nielsen (1997) 152–54).

Pritchett (1989) 57 (followed by Barr.) located Ep(e)ion at modern Trypiti (formerly Bitsibardi). Here are “a good sprinkling of sherds, convincing evidence for a settlement”, the stylobate foundations of an ancient structure, a retaining wall and many tiles (Pritchett (1989) 52). Earlier scholars have noted walls of ashlar masonry, tiles and pottery of the Classical period, as well as blocks and column drums (*ibid.* 51). The acropolis covers an area of 150 × 25 m. The oldest find noted thus far is an Archaic sima (Papakonstantinou (1982)).

305. Epitalion (Epitalieus) Map 58. Lat. 37.40, long. 21.30. Size of territory: 1 or 2. Type: A. The toponym is *Ἐπιτάλιον* (Xen. *Hell.* 3.2.30), *τό* (Strabo 8.3.24). The city-ethnic is *Ἐπιταλιεύς* (Xen. *Hell.* 3.2.25).

Epitalion is called a *polis* in the political sense by Xen. *Hell.* 3.2.30. The city-ethnic is found in the external collective use at Xen. *Hell.* 3.2.25.

The territory is termed *χώρα* by Strabo 8.3.24. It appears from a combination of Xen. *Hell.* 3.2.20, 25 and 30 that by C51 (at the latest) Epitalion was a perioikic community of Elis (no. 251) (cf. Roy (1997) 283–85). During the war between Sparta (no. 345) and Elis c.400 Epitalion seceded from Elis and joined Sparta (Xen. *Hell.* 3.2.25). The Spartans placed a garrison and a harmost in the city with some Eleian refugees after the second Spartan invasion of Elis (Xen. *Hell.* 3.2.29). According to Xen. *Hell.* 3.2.30, Epitalion was formally liberated from Eleian rule by the peace treaty concluded between Sparta and Elis after the war (Nielsen (1997) 137–39); it is a safe inference from Xenophon’s description of the city as a *Τριφυλῆς πόλις* (*Hell.* 3.2.30) that Epitalion now joined the Triphylian Federation with which it presumably joined the Arkadian Confederacy c.369 (Nielsen (1997) 153–55).

The site of Epitalion, at modern Aghulinita, has as yet yielded no Archaic or Classical finds, though the Hellenistic and Roman town has been found (Themelis (1968); Papachatzes (1982) 223; Pritchett (1989) 75–76).

306. Lepreon (Lepreatas) Map 58. Lat. 37.25, long. 21.45. Size of territory: probably 3. Type: A. The toponym is *Λέπρεον* (Hdt. 4.148.4; Thuc. 5.31.4); Ps.-Skylax 44 has *Λεπρέων*, and Paus. 5.5.3 *Λέπρεος*; the gender of the toponym in the Classical period is commonly taken to be neuter (for which see Polyb. 4.79.2), but Ar. *Aves* 149 (*τὸν Ἥλεῖον Λέπρεον*) presupposes the masculine (cf. Paus. 5.5.3). The city-ethnic is *Λεπρεάτας* (-της); Heracl. Lemb.

42 has *Λεπρεεῖς* as if from **Λεπρεεύς*.

Lepreon is called a *polis* in the urban sense by Hdt. 4.148.4 and Aristotle (Heracl. Lemb. 42; Arist. no. 99, Gigon) and in the political sense by Thuc. 5.31.5. The city-ethnic is attested epigraphically in the external collective use on the Serpent Column (ML 27.11) and in *IG* v.2 1.20 (360s); in literature it is found at Hdt. 9.28.4, Thuc. 5.31 *quater*, Xen. *Hell.* 3.2.25 and Ps.-Skylax 44. The external individual use is found in Dubois (1986) Phi. 5.2 (C3). *Patris* is found in *CEG* II 382 (C5f; completely restored).

The territory of Lepreon is described as *χώρα* in Ps.-Skylax 44, and as *γη* by Thuc. 5.31.2, 3. Sometime before the Peloponnesian War the city ceded half its territory to the Eleians as part of a treaty of *symmachia* and now had to pay 1 tal. (presumably each year) for the right to exploit this part of the territory (Thuc. 5.31.2; *Staatsverträge* 164). According to Strabo 8.3.30, Lepreon at some point absorbed Pylos by synoecism (Moggi, *Sin.* 168 proposes a date c.460; cf. Demand (1990) 64). There were a number of second-order settlements in the territory of Lepreon: one was associated with a large temple at Prasadaki (see *infra*) unless this was in fact Pyrgos (no. 310), as suggested by Arapogianni (1999) 168, itself a *polis* (*infra*). East of modern Tholo is a settlement which existed from the Archaic period (Yalouris (1973) 158; cf. Pritchett (1989) 75; Müller (1987) 839–40). At modern Kakovatos Classical sherds are reported by Yalouris (1973) 164. At 5.49.1, Thucydides mentions a *teichos* called Phyrkon which must have been in Lepreatan territory (see *HCT ad loc.*). A fortress that is a possible candidate for Strabo’s *Χάα* (8.3.21) is briefly discussed by Pritchett (1989) 61–62; it may have existed in the Classical period. A temple by the river Neda, at modern Prasadaki, is thought to have belonged to Lepreon (Pritchett (1989) 60 n. 138; see, however, Arapogianni (1999) 168, suggesting that Prasadaki was in fact Pyrgos). It was a monumental Doric limestone temple of the late Classical period; it had an Archaic predecessor; the votives at the site go back to C7m and, according to Yalouris, there was an *ἀξιόλογος ἀρχαῖος οἰκισμὸς* associated with the temple, which thus was perhaps situated in a second-order settlement of Lepreon (Yalouris (1971); cf. Yalouris (1973) 155, reporting remains of a wall and many buildings). The temple was dedicated to Athena *Agorios* (Arapogianni (1999), who interprets the epithet as equivalent to *Agoraios*).

Lepreon provided 200 hoplites for the battle of Plataiai in 479 (Hdt. 9.28.4), but this is the only indication we have for the order of size of the population.

Lepreon was a member of the Hellenic League against Persia (ML 27.11; Hdt. 9.28.4); in C5s the city was a perioikic

community of Elis (cf. Hdt. 4.148.4; Xen. *Hell.* 3.2.23, 25; Paus. 3.8.3; Roy (1997) 283–85). The city was briefly liberated from Eleian rule by Sparta (no. 345) in 421 and received a Spartan garrison (Thuc. 5.31.4; cf. 5.34.1; Roy (1998); Hunt (1998) 174; Falkner (1999)); however, the city was reconquered by Elis (no. 251) before the end of C5 (cf. Xen. *Hell.* 3.2.23, 25), but must have been liberated again by the peace treaty concluded between Elis and Sparta c.400 (Roy (1997) 291). Nothing is known with certainty about the position of Lepreon in the united Triphylian state of c.400–369, but it was probably the central city of Triphylia, since it seems that Lepreon represented Triphylia in the Arkadian Confederacy of which it is securely attested as a member (*IG* v.2 1.20 (360s); Nielsen (1997) 153–54).

Nothing is known about the form of constitution, but there was an Aristotelian treatise on the *politeia* of Lepreon; the only surviving fragment attests to the existence of laws on adultery, on *atimia* and on admission to citizenship (Heracl. Lemb. 42; Arist. no. 99, Gigon).

Lepreon was situated on a steep hill north of modern Lepreo (formerly Strovitz), c.7 km from the coast. The acropolis was fortified; the remains are mostly of the Hellenistic period, but an earlier phase may be C4 (*PECS* s.v. Lepreon, 499). On the acropolis was a Doric temple of Demeter dating to c.375–350; it was without sculptural ornamentation but had a predecessor (Knell (1979), (1983)).

The lower city was fortified too (Pritchett (1989) 60), but the wall has not been dated. The extent of the lower city was considerable, according to Frazer (1898) iii. 474 (cf. Pritchett (1989) 59). Heracl. Lemb. 42 refers to an agora.

In the Classical period, Lepreon may have produced as many as seven Olympic victors: *Olympionikai* 267 (c.460); nos. 276, 309 (c.C5m); no. 331 (424); no. 338 (420); no. 360 (c.400); no. 405 (c.376); no. 426 (c.360). Furthermore, Antiochos (*Olympionikai* 360) was victorious in the *pentathlon* twice in both the Isthmian Games (cf. Nielsen, *Lepreon*) and the Nemean Games.

307. Makiston (Makistios) Map 58. Lat. 37.35, long. 21.40. Size of territory: possibly 3. Type: A. The toponym is found mostly in oblique cases in the Classical period: Hdt. 4.148.4 gives *Μάκιστον* in the accusative, Xen. *Hell.* 3.2.30 *Μακίστου* in the genitive; Arist. Heracl. Lemb. 55 and a C3 inscription (for which see *AR* (1996–97) 49) have *Μακίστω* in the dative; thus the gender is unknown. Strabo has *τὸ Μάκιστον* at 8.3.18, but *τὸν Μάκιστον* at 8.3.16; Steph. Byz. at 428.11 gives *Μάκιστος* without source reference; however, at 450.3 he cites Hekataios (= *FGrHist* 1, fr. 122) for the form *Μήκιστον*, which tips the balance in favour of the

neuter for C5. The city-ethnic is *Μακίστιος* (*SEG* 35 389.2–3 (c.399–369); Xen. *An.* 7.4.16). Schol. Eur. *Or.* 4 has *ἐν Τριφυλία . . . ἐν Μακέστω*, and correspondingly Steph. Byz. 428.14–15 states: *τὸ ἔθνικόν . . . εὕρηται καὶ Μακέστιος διὰ τοῦ ε ψιλῶς*.

Makiston is called a *polis* in the urban sense at Hdt. 4.148.4; there is no attestation of *polis* in the political sense specifically applied to Makiston, but from Hdt. 4.148.4 and Xen. *Hell.* 3.2.23, 25 it appears that Makiston was one of the *perioikides poleis* of Elis (no. 251) (Roy (1997) 283–85); for the urban and territorial senses combined, see Xen. *Hell.* 3.2.30 (for the idiom, cf. Diod. 2.43.6, and see Smyth, *Greek Grammar* §1096); *πολιτεύεσθαι* is attested in *SEG* 35 389 (c.399–369). The external collective use of the city-ethnic is attested in *SEG* 35 389.2–3 (c.399–369) and at Xen. *Hell.* 3.2.25; Paus. 6.22.4 provides an instance referring to C6f. The external individual use is found in Xen. *An.* 7.4.16 (*Σιλανὸς Μακίστιος*).

It is likely that the city controlled the sanctuary of Poseidon Samios at Samikon (Strabo 8.3.13; Bölte (1930) 777–78; Tausend (1992) 19–21).

In C5s (at the latest) Makiston was a perioikic community of Elis (cf. Hdt. 4.148.4 and Xen. *Hell.* 3.2.23, 25; Roy (1997) 283–85); in the period c.400–369 Makiston was a member of the Triphylian federation (*SEG* 35 389 (c.399–369)), an organisation that was capable of granting Makistian citizenship to foreigners (*SEG* 35 389; cf. Nielsen (1997) 149); magistracies (*τέλεια*) and a *nomos* are attested for C4f (ibid.; cf. Siewert (1987) 276). The city presumably joined the Arkadian Confederacy with the rest of Triphylia c.369 at the latest (Nielsen (1997) 152–55).

Makiston was presumably situated at modern Mázi (Pritchett (1989) 65; followed by *Barr.*); this site was a large town and there are remains of houses and probably of public buildings (Trianti (1985) 22). Two burial areas of C4 have been excavated (ibid.); the acropolis was fortified (Trianti (1985) 21; Pritchett (1989) 68) and contained a Doric peripteral temple, probably of C5e (Trianti (1985) 23–24); the temple was presumably dedicated to Athena (ibid. 24–33). After c.400–369 (*SEG* 35 389) the city is mentioned as existing only once (*AR* (1996–97) 49 (C3)), and it is absent from Polybios' list of Triphylian cities at 4.77.9; it may have ceased to exist by 219, the date to which Polybios' description of Triphylia refers.

308. Noudion Unlocated. Type: A. The toponym is *Νούδιον* at Hdt. 4.148.4. A city-ethnic is not attested. Noudion is called a *polis* in the urban sense at Hdt. 4.148.4. Herodotos is the only source to mention Noudion; it may possibly have been destroyed by the Eleians during their expansion into Triphylia.

309. Phrixa(i) Map 58. Lat. 37.40, long. 21.45. Size of territory: 1 or 2. Type: A. The toponym is *Φρίξαι, αἱ* in Hdt. 4.148.4; Xen. *Hell.* 3.2.30 has *Φρίξα, ἡ* (as Polyb. 4.77.9). Strabo 8.3.12 has *Φρίξη*. A city-ethnic is unattested apart from the entry in Steph. Byz. The territory was possibly homonymous with the city (Strabo 8.3.12).

Phrixa(i) is called a *polis* in the urban sense at Hdt. 4.148.4 and in the political sense at Xen. *Hell.* 3.2.30. In C5m Phrixa(i) seems to have been considered to be Arkadian (Pherekydes (*FGrHist* 3) fr. 161), but from a combination of Hdt. 4.148.4 and Xen. *Hell.* 3.2.23, 30 it appears that in C5l (at the latest) the city was a perioikic community of Elis (no. 251) (Roy (1997) 283–85). However, according to Xen. *Hell.* 3.2.30, Phrixa(i) was formally liberated from Eleian rule by the peace treaty concluded between Sparta (no. 345) and Elis after their war in c.400; it is a safe inference from Xenophon's description of the city as a *Τριφυλῆς πόλις* (*Hell.* 3.2.30) that Phrixa(i) now joined the Triphylian Federation with which it presumably entered the Arkadian Confederacy c.369 (Nielsen (1997) 152–54).

Phrixa(i) was located on a steep hill on the left bank of the river Alpheios (Pritchett (1989) 70–71; followed by *Barr.*). Yalouris describes the site as a Classical town with an acropolis, and reports remains of walls, abundant sherds and tiles, and the foundations of a large building (Yalouris (1973) 170–71).

310. Pyrgos Map 58. *Barr.* follows Müller (1987) 839–40 in identifying Pyrgos with the Pyrgoi of Strabo 8.3.22 and locating it at Ag. Ilias south-west of Lepreon at lat. 37.25, long. 21.40; Arapogianni (1999) 168 identifies Pyrgos with the site at Prasadaki; here, however, both these sites are considered second-order settlements of Lepreon (no. 306), and Pyrgos is located at Bambes in accordance with Pritchett (1989) 73–75, more or less where *Barr.* puts 'Selinous' (cf. Lauffer (1989) 352–53), at lat. 37.35, long. 21.35. Size of territory: ? Type: A. The toponym is *Πύργος, ὁ* at Hdt. 148.8 and Polyb. 4.77.9, 80.13 (both giving the accusative without article, though). The city-ethnic is unattested.

Pyrgos is called a *polis* in the urban sense at Hdt. 4.148.4; Polyb. 4.77.9 describes it as a *polistoo*, and c.230–210 a Delphic *theorodokos* resided in Pyrgos. (If Pyrgos is identified with Bambes (*infra*), then the Delphic *theorodokos ἐν Πύργῳ* (for which see Oulhen (1992) 43, l. 89) presumably resided in Herodotos' Pyrgos, since Phrixa(i), located only 5 km north-east of Bambes, is the next Triphylian entry in the list.) In C5 Pyrgos was probably the victim of Eleian aggression (Hdt. 4.148.4), but apart from that nothing is known about the political history of the city in the Archaic and Classical peri-

ods; it may be assumed, however, that it became a perioikic dependency of Elis (no. 251) (Roy (1997) 283–85), was liberated c.400, joined the Triphylian Federation and through it the Arkadian Confederacy (Nielsen (1997) 152–54).

Pyrgos was probably located at modern Bambes (Pritchett (1989) 73–75). Here a small C5e temple of Zeus has been found, situated on a hill (Yalouris (1954) 290). Around the hill have been found four groups of houses, thus revealing a city of C5s (ibid. 291) with traces of earlier occupation (Yalouris (1958) 194). According to the excavator, the site was an important city occupying a considerable area, which has yielded Archaic and Classical pottery as well as displaced Archaic and Classical Doric columns (Yalouris (1956) 187, 191; Yalouris (1958) 194, 198).

311. Skillous (Skillountios) Map 58. Lat. 37.35, long. 21.35. Size of territory: ? Type: A. The toponym is *Σκιλλοῦς, ὁ* (Xen. *An.* 5.3.7, 8; Paus. 5.6.6). The city-ethnic is *Σκιλλοῦντιος* (Xen. *Hell.* 6.5.2). Siewert (1991) 82 restores *ΙvO* 930 *Σκιλλόντιοι*. The territory of the city is called *ἡ γῆ ἢ Σκιλλουντία* at Paus. 5.6.6, but the toponym could presumably also be used to denote the territory (Paus. 5.6.6: *παρέχεται δὲ ὁ Σκιλλοῦς καὶ ἄγρας θηρίων κτλ*).

Skillous is—presumably—repeatedly referred to as a *polis* in the political sense in *ΙvO* 16 (c.450–425) (for which see Koerner (1993) no. 44 at 130 and Roy (1997) 296). Xen. *Hell.* 6.5.2 describes Skillous as a *polis* in the political sense too, and Xen. *An.* 5.3.7–8 twice uses *πολιταί* about the inhabitants. The city-ethnic is found in the external collective use in *ΙvO* 16 and Xen. *Hell.* 6.5.2; Paus. 6.22.4 provides an instance referring to C6f.

In C5s Skillous was presumably a perioikic community of Elis (no. 251) (Roy (1997) 283–85); if so, it must have been liberated from Eleian rule by the peace treaty concluded by Sparta (no. 345) and Elis after their war in C5l–C4e (for which see Xen. *Hell.* 3.2.23–31), and it may have joined the new Triphylian Federation and through it the Arkadian Confederacy (Nielsen (1997) 152–54); a board of officials (*damiorgoi*) is attested for C5m (*ΙvO* 16; Koerner (1993) 130). However, not much is known about the history of Skillous in C4e, apart from the fact that Xenophon lived there; according to *An.* 5.3.7, he was settled there by the Lakedaimonians (*ὑπὸ τῶν Λακεδαιμονίων οἰκισθέντος*), but it is not clear how the Lakedaimonians could grant land in a foreign *polis* unless they did so with Skillountian acceptance and collaboration (cf. Hunt (1998) 174). Skillous may have granted citizenship to Xenophon: in *An.* 5.3.10 he refers to his own sons and those of *τῶν ἄλλων πολιτῶν* which seems to indicate that Xenophon too was a

citizen; if so, it may be suggested that he served as *proxenos* of the Lakedaimonians at Skillous, since at Diog. Laert. 2.51 it is reported that *αὐτῷ προξενίαν ἔδωσαν οἱ Λακεδαιμόνιοι* but not in which state. In 371, the Eleians claimed that Skillous was a *polis* belonging to them, but the implications of this claim are uncertain (Tuplin (1993) 183–85). After 371, Skillous disappears from the records.

MESSENIA

GRAHAM SHIPLEY

I. The Region

Perhaps no region of Mainland Greece can be regarded as typical in how it adopted the *polis*, but Messenia may be more unusual than most, for the simple reason that between C8l and C4e it had no autonomous civic communities, but was ruled by a colonial power, the Lakedaimonians. Such *poleis* as existed before its first, partial liberation in 369 were perioikic *poleis* dependent on Sparta. Four can be identified with a high degree of confidence: Aithaia (no. 312), Asine (no. 313), Mothone (no. 319) and Thouria (no. 322). A fifth, Kyparissos (no. 317), may have been perioikic, though it did not necessarily become a *polis* at all until after 369. Five more—Aulon (no. 314), Kardamyle (no. 315), Korone (no. 316), Pharai (no. 320) and Thalamai (no. 321)—are candidates for *polis* status before 369, though Aulon's status is especially uncertain.

For the relatively short period between 369 or 338 and the notional cut-off date of the Copenhagen Polis Project, 323, the coarse resolution afforded by the literary and archaeological evidence in its present state makes it difficult to ascertain exactly how many *poleis* existed. The chief *polis* was the new “capital”, Messene-Ithome (no. 318), founded in 369. Chance has preserved epigraphic attestations of Asine and Thouria from just before and just after 300. At this time and in the Hellenistic period, these and probably other former perioikic *poleis*, such as Mothone, continued to exist as *poleis* within Messenia, probably in a federal arrangement (see Messene (no. 318)). Others, such as the possible Classical *poleis* of Aulon and Kardamyle, continued to exist as settlements, but we do not know whether they remained *poleis*. New *poleis* may have been created after 369 as counterweights to those still in Spartan hands.

For C2–C1 we possess documents from the *poleis* of the new “Laconian League” (more precisely, *koinon* of the Lakedaimonians), probably founded by Flamininus, which embraced some places west of Taygetos (e.g. Gerenia).¹ Of the

four later Eleutherolaconian *poleis* (members of the “League of Free Laconians” or *koinon* of the Eleutherolaconians, set up by Augustus) in this region—Leuktra, Thalamai, Alagonia and Gerenia—only Thalamai provides convincing evidence that it was earlier a perioikic *polis* of Sparta.

The fragmentary evidence at our disposal almost certainly underrepresents the number of *poleis* at any given time, as well as concealing the appearance of new cities and the disappearance of existing ones. Earlier scholarship on Messenian landscapes is dominated by topographical research, notably the extended explorations of Valmin ((1930) and other works of his) and the excellent doctoral thesis by Roebuck (1941). Excavation has tended to focus on the important prehistoric sites such as “Nestor’s palace”, while much historical discussion centres on the Second Messenian War and the topography of the surrounding legends, as told by Pausanias and others (see e.g. Kiechle (1959)). The post-Second World War Minnesota Messenia Expedition, or MME (McDonald and Rapp (1972)), set a benchmark for multi-period surveys, but despite the extended discussion of the ancient periods by Lazenby and Hope Simpson (1972), as well as other relevant studies by Hope Simpson, the main focus of that survey was explicitly prehistoric and its methods largely non-intensive. The data produced did not permit full differentiation between Classical and Hellenistic times, though they did allow broad conclusions to be drawn about the distribution of settlements and changes through time. The recent PRAP survey (*infra*) has refined our understanding of the landscape in some respects, but a renewal of exploration of larger centres, and a comprehensive synthesis of ancient settlement in Messenia, are still to be hoped for.

Archaeology has thus produced only piecemeal evidence for the major centres.² Detailed site histories cannot be written except for Messene (no. 318), where a successful campaign of excavations has been conducted for many years by the Archaeological Society of Athens. Generally, the

¹ On the history of the League, see most recently the synthetic treatment by Kennell (1999).

² For an overview of topographical and historical problems, the articles of Meyer in *RE*, reprinted as Meyer (1978), can scarcely be bettered; his conclusions are summarised in his various articles in *KIPauly*.

chronological data are extremely crude—understandably, given the state of knowledge in pottery chronology for the Hellenistic and Roman periods at the times when most exploration took place. Major questions of toponymic identification remain unresolved, and a number of first- and especially second-order sites doubtless lie completely undetected. The lack of historical writings about Classical Messenia, let alone writings by Messenians during the Spartan occupation, caused our ancient counterparts, such as Strabo, the same kinds of onomastic problems as ourselves. We can only hope to do better once we have fuller archaeological and, if possible, epigraphic evidence.

For the general character of the system of perioikic *poleis* in Archaic and Classical Lakonike (the Spartan-dominated territory), the reader should consult the introduction to the Lakedaimon inventory. Up to now, scholars have had difficulty in establishing which Messenian communities were perioikic. As a result of the work of the Copenhagen Polis Centre, however, it seems clear that the Spartan perioikic system was intrinsically *polis*-based: *perioikoi* normally lived in *poleis* (see the introduction to the Lakedaimon inventory), and these were dependent upon Sparta (see Shipley (1997)). Harrison and Spencer (1998) 160 raise (though they also reject) the possibility that any nucleated settlement in Messenia must be perioikic, but this is to put the cart before the horse; the correct approach is to find out first which settlements were *poleis*, and this will reveal which settlements were probably perioikic. For example, although Harrison and Spencer (1998) 156 state that the known communities of the west coast, such as Kyparissos and Aulon, were “clearly” perioikic, closer examination shows that the evidence for the *polis* status of those settlements, and therefore their perioikic nature, is not clear-cut. In the following pages the normal criteria of the Copenhagen Polis Centre have been adopted.

While it is true that, given the inadequacies of the evidence, the only safe assumption is that at any given period there were more *poleis* than can be demonstrated, it seems likely that the small number of known *poleis* does in part reflect a relatively sparse population. Beloch (1886) 149 argued for low population levels in both Laconia and Messenia, and although Roebuck (1941) proposed a potential population of 112,000 for Messenia south of the river Neda in the late Hellenistic period, this has been considered too high.³ Archaeological survey has tended to confirm the

existence of a relatively sparse population. The MME identified a sharp increase in rural site numbers in the Classical period in the richer agricultural regions of Messenia (the Alpheios valley, Stenyklaros, the Pamisos valley) and an increase in coastal settlement, perhaps reflecting improved trading conditions during independence (McDonald and Hope Simpson (1972) 145). There remained, however, a general lack of dispersed rural sites and a marked gap in settlement in the west. The Pylos Regional Archaeological Project (PRAP) has built on the work of the MME in the west, and its work has important implications for the nature of rural settlement in Spartan Messenia (Davis (1998a, b, c) and other works). Through a more intensive survey method the PRAP confirmed, at least for the area around Pylos, the finding of the MME that Messenia lacked a scatter of small rural sites, making the region untypical of Mainland Greece in the Classical period (see Davis (1998b) 284–88). Harrison and Spencer (1998) 159–60 link this unusual settlement pattern to Spartan domination, which may have inhibited normal demographic patterns and settlement evolution.

The situation of the numerically dominant semi-free, or unfree, population of Messenia, the helots (*heilotai*), has been outlined in the Lakedaimon chapter. Thucydides states that most were “descendants of the old-time Messenians who had once been enslaved, whereby they were all called Messenians” (1.101.2). Earlier debates centred around the number and timing of helot revolts (e.g. Wade-Gery (1966); de Ste Croix (2002)). It is agreed that helots worked the land and gave up a large part of their produce to the Spartans, though the precise degree of freedom they enjoyed and the extent to which they were able to construct and reproduce a “normal” social structure and economic environment are endlessly debated.⁴

Zunino (1997) has explored the evidence for Messenian religion during the Spartan occupation, concluding that the Messenians were not denatured but maintained their identity through Hellenic cult practices even under the colonial yoke. Her work has tilted the balance towards the view that the Messenian helots were more like other Greek agricultural communities than used to be imagined.⁵ The complex question of how Messenian identity crystallised and was rhetorically exploited by Spartans and Athenians in C5 has been perceptively examined by Figueira (1999) and Luraghi (2002).

³ Hope Simpson (1972) 99 n. 131; McDonald and Hope Simpson (1972) 144, 145; McDonald and Rapp (1972) 254–55.

Harrison and Spencer's rejection of the view that any nucleated settlement must be perioikic is based not on an appreciation of the *polis*-based nature of perioikic status, but on the evidence of the unique eleven-roomed late Archaic farmhouse at Kopanaki in north-central Messenia (Kaltsas (1983)), tentatively interpreted as evidence against the view that helot communities were dispersed. It is, however, strictly irrelevant, for it is not a nucleated settlement but a single building and (since *perioikoi* lived in *poleis* as far as we know) does not bear on the matter of perioikic settlement. That said, the Kopanaki building, violently destroyed around 475, is susceptible of various interpretations. Did helots work there for an absentee Spartan landlord? Did they work under the supervision of one or more Spartiates, or of *perioikoi*, or without supervision? Did citizens of a perioikic *polis* occupy this outlying large farmstead—though no *polis* can be conclusively shown to have lain within easy reach? We cannot yet answer these fundamental questions about society in Messenia. However, the lack of dispersed small sites, detected by the MME for Messenia in general and confirmed for the west coast by the PRAP (Harrison and Spencer (1998) 160), tells against a landscape dotted with dispersed helot farms and in favour of a high degree of centralised residence in “a few fairly large towns or villages”, whether perioikic or in some cases run by helots themselves—or, one might add, in helot barracks such as we may have at Kopanaki.

Regarding the *perioikoi* of Messenia as opposed to Laconia, a special question arises: were they normally of Lakedaimonian or Messenian origin? It may be significant that two of the most prominent and securely attested perioikic *poleis*, Asine (no. 313) and Mothone (no. 319), had populations that were believed to be (wholly or partly) neither Messenian nor Lakedaimonian in origin but descended from exiles from the Argolid to whom the Lakedaimonians had given new homes. Perhaps the Spartans hoped to increase security and control of the helot population by introducing alien ethnic communities who were heavily indebted to them.⁶ The same model may have been followed in another marginal area of Lakonike, at Thyrea (no. 346) in north-eastern Laconia. Indeed, the only specific non-helot communities where we hear of actual or potential unrest in the Classical period, Aithaia (no. 312) and Thouria (no. 322) in C5m and Aulon (no. 314) c.399, are places where an alien population had *not*, so far as we know, been installed. This

leaves it open whether the restless communities were descended from Messenians rather than Lakedaimonians, a possibility raised by Harrison and Spencer (1998) 156, though there is no direct evidence either way. Whichever was the case, the *perioikoi* of Messenia surely had the status of Lakedaimonians, like those of Laconia.

For the purposes of this Inventory, the division of Laconia from Messenia is set between Oitylos (no. 340) and Thalamai (no. 321), to the second of which (or at least the nearby islet of Pephnos and the mainland opposite) the Messenians of Pausanias' time laid claim (Paus. 3.20.6; cf. 3.26.3, 6). In the Roman period, however, the boundary lay between Laconian Gerenia and Alagonia on the one side (Paus. 3.26.11) and Messenian Abia on the other (Paus. 4.30.1), specifically at Choirios Nape (modern Sandava gorge; Paus. 4.1.1). Gerenia and Alagonia had, it appears, been given to Sparta by Octavian (as was Kardamyle, Paus. 3.26.7) in punishment for the Messenians having supported Antony and Cleopatra.⁷ Messenia in this study will thus include the district and islet of Pephnos between Thalamai and Leuktra, as well as the sometime *poleis* of Thalamai, Leuktra, Kardamyle, Gerenia and Alagonia, even though four of these were Eleutherolaconian *poleis* in the early Imperial period (the exception, Kardamyle, being directly subject to Sparta at that time).

Messenia is not named by Homer, Messene only at *Od.* 2.15, where Ortilochos' home is wrongly located in Messenian Pharai instead of Arkadian (Meyer, *KIPauly* iii. 1251). Some settlements later situated in Messenia, however, are named by the poet. At *Il.* 9.150–52 = 9.292–94 (repeated by Strabo 8.4.5) we have a list of the seven cities that Agamemnon, lord of Sparta, gave to Achilles: Kardamyle, Enope, holy Poieessa (or “grassy Hire”), fertile Pharai, deep-meadowed Antheia, fine Aipeia and vine-clad Pedasos—all said to be near Pylos and the sea. Enope was later identified with Pellana, Kardamyle or Gerenia; Hire with Mesola or Abia; Antheia with Asine or Thouria, Aipeia with Thouria or Mothone, and Pedasos with Mothone or Korone (see *infra*); even if these identifications were imaginary, the list may imply that Sparta already possessed south-eastern Messenia in Homer's day (Meyer, *KIPauly* iii. 1251). The seven cities are discussed by Valmin (1930) 206–13 and Hope Simpson (1966).

The Spartans' conquest of Messenia probably proceeded by stages (Lazenby (1972) 84–86). In C8l they captured

⁶ Müller (1855) 40–41 points out that the Spartan retention of Mothone and Asine after 369 may have been facilitated by the fact that populations were not ethnic Messenians.

⁷ On the boundaries reflected in Strabo and Pausanias, see Le Roy (2001) 232–36.

mainly “the Stenyklaros plain and the lower plain west of the Pamisos” (ibid. 85). In the Second Messenian War (C7m), centred around Stenyklaros (Forrest (1980) 70–71; Lazenby (1972) 85–86), the inhabitants of the Hyameitis, Pylos and Mothone, still unconquered, were among those fighting against the Spartans (ibid. 85). The Spartans captured Arkadian Phigaleia (no. 292) in 659 (ibid. 86; Paus. 8.39.3) and the Messenian stronghold on Mt. Eira some time later (on its location, see Valmin (1930) 118–20). Paus. 4.27.9 refers to 287 years of Messenian exile, implying (if one counts back from 369) that it began in 656. Epameinondas’ allusion (Plut. *Mor.* 19.4B) to 230 years of Messenian oppression may imply a C7l stage in the conquest, when the Nauplians were settled at Mothone (no. 319) (Paus. 4.35.2), but we should not place too much weight on such seemingly exact dates (even leaving aside the more radical chronological anxieties of Shaw (1999), (2003)). By c.600 at the latest, then, the whole of Messenia was under Spartan control (Lazenby (1972) 86).

At the end of the colonial period, there were two main stages in the removal of Messenia from Spartan control (cf. Meyer (1978) 265–68; Shipley (2000)). In 369 and the years immediately following, Messene (no. 318) was founded and parts of central and northern Messenia detached from Sparta; but the process was still going on in 365/4 when the Arkadians attacked Kyparissos and Koryphasion (Diod. 15.77.4). Ps.-Skylax’s (46) laconic description of “Lakedaimon” begins with Mothone (no. 319) and Asine (no. 313), and thus reflects the situation between 369 and 338. After Philip II’s victory at Chaironeia in 338, Messenia received extra territory as a reward for supporting the king and for having remained neutral (summary at Alcock (1998) 182).

The usual name for the region before the foundation of the new capital was *Μεσσανία* (Pind. *Pyth.* 4.126) or *Μεσσήνη* (Tyrtaios fr. 5, West; Hellan. fr. 124; Ar. *Lys.* 11.41; Ephor. fr. 18b; Xen. *Hell.* 5.2.3, 7.4.9 (but at 7.1.27 and 36 of the city); Pl. *Leg.* 683C, D (early Messene as a *polis*); Ps.-Skylax 45; Isoc. 12.72 (*Μεσσήνη* counterposed to *Λακεδαίμων*); ibid. 177 etc.; Isoc. 4.61, 6.11, 16, 19, etc., referring to Messenia generally). Thuc. 4.41.2 refers to Pylos as located “in the former *Μεσσηνίς γῆ*”, whereas at 4.3.2 he locates it *ἐν τῇ Μεσσηνίᾳ ποτὲ οὔσῃ γῆ*.

The region is called *Μεσσανία* (ῆ) in SEG 12 219 (322–310) and *Μεσσηνία* by Polyb. 2.5.1 and by Strabo 8.4.1, who says it was originally named *Μεσσήνη*. The Classical usages of the feminine adjective, as in τῇ *Μεσσηνίᾳ ποτὲ οὔσῃ γῆ* (Thuc. 4.3.2), γῆ *Μεσσηνίᾳ* (Eur. *P. Oxy.* 27.2458), *Μεσσηνία χώρα* (Ps.-Skylax 45), are not evidence for *Μεσσηνία tout court* being used as a name for the region; that is a later usage,

perhaps from C3 on (Meyer (1978) 159–60, 284), though Theophr. fr. 172 (if accurately quoted by Steph. Byz.) could be the earliest attestation. *Μεσσηνία* does not occur in literary texts after Thucydides until Menander (and then perhaps as a feminine ethnic?); cf. Diod. 12.61.4 (with reference to the Pylos incidents).⁸

The ethnic is *Μεθάνιος* (*IvO* 247 (C5f); cf. Bauslaugh (1990)), *Μεσάνιος* (*IG* 1³ 1355 (c.475–450)), *Μεσσανίος* (ML 74 (c.421)), or *Μεσσήνιος* (Thuc. 1.101.2, 2.9.4). Prior to 369, the ethnic is found in the internal collective use in a C5f dedication of Athenian spoils from Korone (*LSAG* Messenia no. 3); externally, the collective use is found in *IvO* 247 (C5f); ML 74 (c.421) and in Thuc. 1.101.2, 2.9.4. The external individual use is found in *IG* 1³ 1455 (c.475–450). For the construction of Messenian identity to which these instances of the ethnic testify, see Figueira (1999). After 369, *Μεσσήνιος* developed into the city-ethnic of the new *polis* of Messene (no. 318).

Before 369 Messenia (or Messene) may have comprised only the two plains of Stenyklaros and Makaria. After 369 Sparta retained control of Asine (no. 313), Mothone (no. 319) and perhaps Pharai (no. 320), while Thouria (no. 322) may have become independent (Valmin (1930) 24–25). Ps.-Skylax 45 in C4m makes Kyparissos (no. 317) already Messenian. After 338 it is enlarged on all sides and was probably bounded by the Neda on the north, the Pamisos in the south-east, the Taygetos on the east, and the sea on the west. Control of the Dentheliatis in the south-east was disputed with Sparta for centuries (Tac. *Ann.* 4.43; Pikoulas (1991)). Valmin (1930) 26–30 discusses its Hellenistic extent, 30–33 its Roman. Valmin (1930) 39 notes that the name Makaria for the lower plain is only in Strabo, though Steph. Byz. 427.8–9 may preserve a reference.⁹ For boundary markers between Messenia and Lakonike in Roman times, see Hope Simpson (1972) 99 n. 129 with references, including *JG* v.1 1431.

1. Identification of Place-names with Known Locations

Excluding geographical items such as capes, mountains and rivers, and names of cult places consisting simply of the name of a deity and a term such as “sanctuary” or “temple”,

⁸ For a map showing modern sites and ancient places, see Meyer (1978) 171–74. Roebuck (1941) 30 n. 12, notes that Bölte (*RE* iii. 1278–79) and Larsen (*RE* xix. 817) rebut Kahrstedt’s suggestion (*Griechische Staatsrecht* i. 5–6) that *Λακωνική* refers only to perioikic territory.

⁹ s.v. Makareai, a town of Arkadia also known as Makaria and called Beata by the Romans.

our sources purport to transmit the names of fifty-five places in Messenia from the Archaic to Roman periods. First it is necessary to dispose of one name that is probably corrupt: (S120)¹⁰ †Thea (Θέα, Philoch. *apud* Steph. Byz. 308.4; probably a doublet of Aithaia, q.v. *infra*).

A further five alleged settlements or *poleis* appear to be doublets of real places elsewhere:

(S121) *Haliartos* (Ἁλίαρτος) Listed by Ptol. *Geog.* 3.14.42; perhaps a doublet of Haliartos (no. 206) in Boiotia.

(—) *Pteleon* (Πτελεόν) Included by Hom. *Il.* 2.594 among Pylian places, which oddly include Helos. Plin. *HN* 4.5.15 includes Pteleon, Helos and Dorion among inland towns in Messenia. This Pteleon is otherwise unattested (that at 2.697 is in Achaia Phthiotis; others are in Ionia and Boiotia), and given the presence of Laconian Helos in Homer's list, it cannot be presumed to be Messenian. MME no. 701 Vresto (Pikoulas (2001), hereafter *ΛΟΠ* no. 504; Archaic to mediaeval, 10 ha in area) is tentatively identified as Pteleai (*sic*) (cf. Hope Simpson (1972) 98 n. 108), but the question remains open.

(S122) *Tripolis* (Τρίπολις) Mentioned without further details by Steph. Byz. 637.8; *KIPauly* v. 964.

(S123) *Troizen* (Τροιζήν) Listed by Ptol. *Geog.* 3.14.42; perhaps a doublet of the Troizen (no. 357) in the Argolid.

(S124) *Zankle* (Ζανκλή) Plin. *HN* 4.5.15. Was an epitomator confused by mention of Sicilian Zankle (no. 51) at Paus. 4.23.7?

In two cases, while the place-name is real, there is no firm basis for regarding it as the name of a settlement:

(—) *Dera* (Δέρα) *IG* v.11429 = *SEG* 41 325 (C2); probably the same as *Derai* (Δέραι), Paus. 4.15.4. Probably a district.

(S119) *Pephnos* or *Pephnon* (Πέφνος or Πέφνον) Islet with cult, and the coastal locality opposite (Apollod. fr. 196 *apud* Steph. Byz. 520.5–9; Paus. 3.26.2, citing but not quoting Alkman). Valmin (1930) 204 follows Forster in locating it at modern Pephnos (*LS* ii. 300, *LL* 149, formerly Platsa).

Two places, though very probably settlements at certain periods, did not exist primarily as nucleated settlements: the first may have been a settlement only during the Messenian revolt of C5m; the second may have existed primarily to service a cult site.

(S76) *Ithome* (Ἰθώμη) A mountain; the source of the cult title of Zeus Ithomatas, whose sanctuary lay in the *polis* of Messene (no. 318) from 369. A settlement in Hom. *Il.* 2.729; allegedly a *polisima* during the First Messenian War (Paus. 4.9.1, etc.), but not necessarily more than a fortified place (see Hope Simpson (1972) 97 n. 90). Defended and fortified in the Messenian Revolt of the 460s (e.g. Thuc. 1.101.2–3, 102.2); a *χωρίον* at Thuc. 1.102.3, perhaps suggesting a settlement. Archaeological survey suggests limited occupation in the surrounding area before the foundation of Messene (McDonald and Hope Simpson (1972) 145, 146). Ithome was also, however, the official name of the new *polis* of Messene for a time (*infra*).

(S136) *Limnai* (Λίμναι) A *χωρίον* with a famous sanctuary of Artemis Limnatis (Paus. 4.4.2, 31.3); probably MME no. 138, Volimnos Artemisias (Bronze to Classical and especially Hellenistic, 2 ha in size), a “[p]robable refuge site and shrine” (rather than no. 548, Brinda: see *infra* under Alagonia; see also Meyer (1978) 179–80). *KIPauly* iii. 668 (Meyer, “Limnai 2”) with further references, including *RE* iiiA. 1312 (Bölte). Meyer rejects the suggestion of Valmin (1930) 190–94 that it is Ag. Phloros. Hope Simpson (1972) 98 n. 104 follows Roebuck (1941) 118–21; cf. Hope Simpson (1966) 115–16. Findspot of *IG* v.1 1375–77 (Roman).

A further nine places may be legendary, or may not have existed as nucleated settlements after the Lakedaimonian conquest of Messenia:

(S70) *Amphigeneia* (Ἀμφιγένεια) Hom. *Il.* 2.593; Strabo 8.3.24, 25; Steph. Byz. 89.12–18, citing Apollod. fr. 186 and Antimachos, presumably the Kolophonian commentator on Homer.

(S88) *Denthalioi* Steph. Byz. 225.8–9: “a *polis*, one of those disputed between the Messenians and Lakedaimonians”; with an ethnic of the same form; cf. *Denthiades* (Δενθιάδες), Ath. 1.31C–D, who cites Alkman (*PMG* 92) for wine from this place, a fort (ἔρρυμα) in Spartan territory; also the toponymic adjective (in its masculine singular accusative form), *Δένθιω*, *ibid.* (this is the word Alkman, as quoted, actually uses; it suggests a shorter place-name than *Denthiades*). Cf. also the river Dentheios, *Etymologicum Symeonis* 1.344.22. All these should be situated in the *Dentheliatas ager*, whose history is outlined by Tac. *Ann.* 4.43. Probably *Denthalioi vel sim.* was believed to have been a settlement at the time of the First Messenian War. On *Dentheliatas*, see Pikoulas (1991) and Shipley (2000) 386.

¹⁰ Serial numbers prefixed by S refer to the catalogue in Shipley (1997).

(S89) *Echeiai* (Ἐχαιαί) Strabo 8.4.4: the Spartan king Teleklos (reigned c.760–c.740) is said to have founded (οἰκίσαι) this along with Poiaessa and Tragion. Lazenby (1972) 84 assumes it was in the vicinity of the river Nedon.

(S90) *Hyameia* (Ἰάμεια (Paus. 4.14.3; Steph. Byz. 644.6–7)) or *Hyameitis* (Ἰάμειτις (Ephor. fr. 116 *apud* Strabo 8.4.7)) Both are described as one of the five *poleis* into which Kresphontes “divided Messene” about two generations after the Trojan War, the others being Stenyklaros, Pylos, Rhion and Mesola. Probably, in Classical times at least, these were districts rather than nucleated settlements. Hope Simpson (1972) 97 n. 87 concurs, following Valmin (1930) 24.

(S91) *Mesola* (Μεσόλα) Another *polis* of Kresphontes; evidently, from the description by Ephor. fr. 116 *apud* Strabo 8.4.7 (repeated by Nic. Dam. *apud* Steph. Byz. 447.1–2), a district. In Strabo it extends to the gulf between Taygetos and Messenia; he says it may be Homeric Ire/Hire, 8.4.5. Hope Simpson (1972) 97 n. 86 follows Valmin (1930) 23, 207–8, making Mesola approximate to the territories of Thouria (no. 322) and Pharai (no. 320).

(S93) *Rhion* (Ῥίον) Another *polis* of Kresphontes; possibly, like Hyameia, Mesola and Stenyklaros, a district rather than a settlement; “opposite Tainaron” (Ephor. fr. 116 *apud* Strabo 8.4.7); possibly Korone (no. 316), but Hope Simpson (1972) 97 n. 88 follows Valmin (1930) 169 and Hope Simpson (1966) 127 n. 11 in placing Rhion at or near Asine (no. 313), perhaps at MME no. 512 itself (ancient Asine, mediaeval Coron, modern Koroni).

(S94) *Stenyklaros* (Στενύκλαρος) Another *polis* of Kresphontes (Ephor. fr. 116 *apud* Strabo 8.4.7). Named by Hdt. 9.64.2 but not called a *polis*; it could be a district. Cf. *πεδίων* . . . *Στενυκληρικόν* (Paus. 4.33.4, cf. 4.3.7). Hope Simpson (1972) 97 n. 85 follows Valmin (1933–34) 12 (*contra* Valmin (1930) 82–85) and Roebuck (1941)) in proposing no site. Probably removed from Messene (no. 318 in 182 (Lazenby (1972) 92, citing Roebuck (1941) 102 and n. 167); probably regained 146 (*Syll.*³ 736). *KIPauly*v. 358 (Meyer); *RE* iiiA. 2339ff (Bölte).

(S95) *Tragion* (Τράγιον) See Echeiai *supra*.

(S82) *Trikka* (Τρίκκα) Mentioned by Hom. *Il.* 2.729 (Τρίκκη) alongside Ithome and Oichalia but not again until Paus. 4.3.2, for whom it was a deserted spot in Messenia.¹¹

¹¹ Strabo 8.4.4 reports a temple of Asklepios Trikkaios in Messenian Gerenia, a replica of that in Thessalian Triikka.

We may note in passing that the *Makareai* or *Makaria* recorded as an Arkadian *polis* by Steph. Byz. 427.7–9 may be a doublet of the plain of Makaria in central Messenia (cf. Valmin (1930) 39).

Of the thirty-six historical settlements that remain, eighteen have locations that are disputed or highly uncertain; at best we know the general area where they lay. Two of these may refer to a single place (Hire, Poiaessa). Some may be more mythical than real, while some may have been (or were believed to have been) predecessors of known places under different names.

(S68) *Aipeia* (Αἶπεια) One of Agamemnon’s seven *ptoliethra* (Hom. *Il.* 9.152 = 9.294). For Strabo 8.4.5 it is Thouria (no. 322), though he says others located it at Mothone (no. 319); for Steph. Byz. 53.15 it is a *polis* in Lakonike. Modern Aipeia, formerly Phormi (ΛΟΙΠ no. 305), is no guide.

(S69) *Aipy* (Αἶπυ or Αἶπυ) The ἐὺκτιτον Αἶπυ of Hom. *Il.* 2.592, it is located in Messenia by Steph. Byz. but was perhaps in Triphylia (e.g. MME no. 245, Ag. Dimitrios, near ancient Lepreon (no. 306); Neolithic, Bronze Age). A *polis* only in Steph. Byz. 54.4, not in Homer or in Strabo 8.3.24, who considers that either word may be the name and either the epithet, and that Aipy is the former name of one of (a) Margalai in Amphidolia, (b) a place in Makistia, or (c) Epitalion (see *infra* under Thryon). Zachos (1984) links Aipy with Strabo’s *Aipasian* plain and reaffirms the identification with Ag. Dimitrios.

(S18) *Aithaia* (Αἶθαία (no. 312)) In south-central Messenia (probably fairly close to, but not at, modern Aithaia, formerly Delimimi (ΛΟΙΠ no. 304; the fortified acropolis near Aithaia is probably Thouria (no. 322)).

(S85) *Ampheia* (Ἀμφεία) Alleged town in north-eastern Messenia at the time of the First Messenian War (C8l). It is not mentioned by Homer or Strabo. It was a former *polisma* (πόλισμα ἦν), small and located on a lofty hill-top close to Lakonike (Paus. 4.5.9). (See Lazenby (1972) 84; Hope Simpson (1972) 97 n. 89. It is unlikely to be attested in *IG* v.1 1426 (C4l–C3e); see Roebuck (1941) 9 n. 20 but now Matthaiou (1990–91) 269 n. 1.) The proposed site (MME no. 211, Kokkala Loutrou; cf. Pikoulas (1987–88)) has no reported finds later than Geometric. (Valmin (1930) 13, 74–77 proposes MME no. 608, Elliniko Desylla (Desyllas is formerly Dousila, ΛΟΙΠ no. 984); late Classical fortifications, Hellenistic pottery; but this is perhaps a fort rather than a town, see MME 319. Modern Ano Ampheia and Kato Ampheia in south-central Messenia, both correspon-

ding to the former Gardiki (*ΛΟΠ* nos. 397–98), are no guide).

(S86) *Andania* (*Ἄνδανία*) North-west of Messene, this was a settlement by 217 (Polyb. 5.92.6) and a *parvum oppidum* in 191 (Livy 36.31.7) but may well, even then, have been a community centred upon a sanctuary rather than a *polis*; the Messenians did not wish to resettle it in 369 (Paus. 4.26.6). Lazenby (1972) 92 (see also Hope Simpson (1972) 98 n. 92), citing Roebuck (1941) 102 and n. 167, suggests that it was detached from Messene (no. 318) in 182, when Messene was required to rejoin the Achaean Confederacy, and was regained in 146. It was revived with new regulations in 92/1 (*IG* v.1 1390 = *Syll.*³ 736), but Paus. 4.33.6 saw ruins. A possible site is MME no. 607, Ag. Athanasios (Divari) at Konstandinoi (Classical to Roman; see also Valmin (1930) 89–99; for the name Konstandinoi, cf. *ΛΟΠ* no. 2020; see also Meyer (1978) 186), with a Bronze Age predecessor at MME no. 212, Ag. Taxiarchos Polichnis (MH? LH III C). Pikoulas (1987–88) 483 suggests that Andania is to be located at Desyllas.

(S71) *Antheia* (*Ἄνθεια*) One of Agamemnon's seven *ptoliethra* (Hom. *Il.* 9.151 = 9.293). Strabo 8.4.5 seems inclined to identify it as Asine (no. 313), though others say Thouria (no. 322). *IG* v.1 1426 (*SEG* 11 1029, Messene (C4l–C3e)) was once thought to name either Antheia or Ampheia, but see now under Ampheia (*supra*). *KIPauly* i. 371 (Kiechle, suggesting that the identification with Thouria was made only because the site was unknown); Kiechle (1960) 56ff (modern Antheia, formerly Venzami or Veis Aga (*ΛΟΠ* no. 434), is no guide).

(S72) *Arene* (*Ἀρήνη*) A sometime Spartan possession, in north-eastern Messenia (Hom. *Il.* 2.591; Paus. 4.2.4, 5; Strabo 8.3.19 (cf. 8.3.23, 24, 8.4.6); Steph. Byz. 117.15–17). For Strabo, it was perhaps Samikon and certainly not Erana; possibly MME no. 302, Kleidi Kato Samikou (Bronze Age site, c.1.5 ha; Samiko is the former Ali Tselepi, *ΛΟΠ* no. 3688) with no. 707 Kastro Kato Samikou (Archaic to Roman, c.1.8 ha). See Hope Simpson (1972) 94 and nn. 97, 99 (also 98 n. 110), referring to MME nos. 701, 707.

(S20) *Aulon* (no. 314) In north-western Messenia, near Kyparissos and the river Neda.

(S87) *Charadra* (*Χαράδρα*) Strabo 8.4.4. Founded by Pelops along with Leuktron and “Thalamoi”, it may have lain in the area of Kardamyle (no. 315) (Niese (1906) 117; *KIPauly* i. 1130 (E. Meyer)).

(S73) *Dorion* (*Δόριον*) Hom. *Il.* 2.594. Strabo 8.3.24 saw nothing, but Paus. 4.33.7 saw ruins near Andania. It appears to be attested epigraphically as *Δούρειον*, *BCH* 44 (1921) 12 col. II.84 (Delphi (c.200): *ἐν Δουρέϊω*; this observation is due to Meyer (1978) 211, but I have corrected the spelling). Possibly MME no. 222, Malthi Vasilikou (Valmin (1938) 13, (1930) 112–17 on the excavations, 104–7, 111–12, 116–18 on questions of identification; Roebuck (1941) 7 n. 16), but this site is Bronze Age only; if there was a historical Doureion, this would also rule out a less likely candidate, MME no. 201, Elliniko Mouriatadas, which existed only in LH III times.

(S74) *Enope* (*Ἐνόπη*) Another of Agamemnon's seven *ptoliethra* (Hom. *Il.* 9.150 = 9.292). For Strabo 8.4.5 it is Pellana, Kardamyle or Gerenia; Paus. 3.25.8 simply identifies it as Gerenia (see *infra*), in which case it lay on the eastern side of the Messenian Gulf.

(S56) *Erana* (*Ἐρανα*) Placed by Strabo 8.3.23 (where MSS have *Ἐρενα*, *Ἐρενα*) on the coast between Kyparissos and Pylos and distinguished from Arene (*supra*). MME no. 406, Dialiskari Marathopolis (or D. Marathou, *ΛΟΠ* no. 2341) is suggested by Valmin (1930) 136–41 (H, R), but Stone and Kampke (1998) regard that site as a Roman villa; another suggestion is MME no. 408, Aghia Kyriaki (Roman) (suggested in the *MME* catalogue but not at Hope Simpson (1972) 98 n. 102).

(S75) *Ire/Hire* (*Ἰρή/Ἰρή*) One of Agamemnon's seven *ptoliethra* (Hom. *Il.* 9.150 = 9.292, *Ἰρή/Ἰρή ποιήεσσα*, “grassy (H)Ire”, or *ἴρη Πουήεσσα*, “holy Poieessa”). Either Ire or Poiaessa (*infra*) must be a concoction of ancient scholarship. For Strabo 8.4.5 (cf. 8.4.1) it is either a place near Megalopolis (no. 282) or the same as Mesola. Paus. 4.30.1 (followed by *MME*) identifies it with Abia, but if it was connected with Mt. (H)Eira (Paus. 4.7.10–23.4 *passim* and 4.27.4, 9) it is, rather, in north-central Messenia and may be correctly identified with MME no. 611, Ag. Athanasios Kakaletriou (two forts, one Archaic, the other Classical and Hellenistic; for the spelling of Kakaletriou, see *ΛΟΠ* no. 1278); cf. Hope Simpson (1972) 98 n. 93.

(S77) *Oichalia* (*Οἰχάλια*) Homeric site (Hom. *Il.* 2.730); c.8 stades (1.5 km) from Andania (Paus. 4.33.4). Pherekydes (*FGHist* 3) fr. 82a (schol. Soph. *Trach.* 354) located it “at Thoule (i.e. “goodness knows where”) in Arkadia”; cf. Eust. *Il.* 1.461.18, 21–22, 31–32, 516.26–27. *KIPauly* iv. 251; *RE* xvii. 2097ff no. 2.

(S78) *Pedatos* (*Πήδατος*) One of Agamemnon's seven *ptoliethra* (Hom. *Il.* 9.152 = 9.294). For Strabo (8.4.3 with

8.4.5) it is Mothone (no. 319), though some say Korone (no. 316).

(S92) *Poiaessa* (Ποιάεσσα) Possibly an area; but since Homer only twice mentions ἱρήν Ποιήεσσαν (or Ἴρῆν/Ἴρῆν ποιήεσσαν; *Il.* 9.150 = 292), either Ire/Hire or Poiaessa must be a fiction. See under Ire/Hire.

(S60) *Polichne* (Πολίχνη) Attested only in Pausanias (4.33.6), who locates it in north-western Messenia; no evidence of *polis* status beyond the suggestive name. Marked in north-western Messenia, *Barr.* Hope Simpson (1972) 98 n. 103 does not contest the suggestion of Valmin (1930) 79–81, 101–3, to locate it at MME no. 233, Stilari Ano Kopanakiou (Bronze Age, Classical, Hellenistic, possibly Roman; 0.4 ha; the “Ano” is unofficial, *ΛΟΠ* no. 1788), but notes that Roebuck (1941) 12 stresses the difficulty of locating toponyms in the Soulima valley.

(S62) *Thryon/Thryoessa* (Θρύον/Θρυόεσσα) Steph. Byz. 318.15–20; Plin. *HN* 4.5.15; in Homer (*Il.* 2.592 = *Hom. Hymn to Apollo*, 423 and 11.711–12) Thryoessa is a Pylian town on the river Alpheios, in Pliny and Steph. Byz. a Messenian town; for Strabo 8.3.24 it is later Epitalion (Ἐπιτάλιον (no. 305) (Steph. 274.15–16)); not listed separately here since it is never attested as Spartan or Messenian, only as Triphylian (Xen. *Hell.* 3.2.25; it joins Sparta) and later Eleian (Polyb. 4.80); proposed sites include MME no. 303, Ag. Georgios Epitaliou (Epitalio was formerly Agoulinitza, *ΛΟΠ* no. 1147; BA, Cl–R, c.3 ha) and no. 715, Samakia Epitaliou (Archaic to Roman, c.5 ha).

A further eight are placed with probability at or near known sites:

(S55) *Abia/Abea/Abeia* (Ἀβία/Ἀβέα/Ἀβεία) This was a *polis* in 182, when it separated from Messene (no. 318) and joined the Achaian Confederacy (Polyb. 23.17.2: Ἀβία; cf. *IG* 1.1 1374.4–6 (late Hellenistic?): Ἀβεατων πόλις; *IG* ff.1 1353 (Hellenistic?): Ἀβειᾶται) and down to Hadrianic times (*IG* v.1 1352 = *SEG* 11 967; Paus. 4.30.1, etc.: Ἀβία). It may have been a *polis* since 338 or earlier, but there is no written or archaeological evidence before C2. Pausanias says it is Homeric Hire or Ire (4.30.1), but that is more plausibly placed at Mt. (H)Eira near Andania (see *supra*). *IG* v.1 1356 (C5? cf. *LSAG* 206 no. 6 (c.C5e?)) and 1357 (C5; *LSAG* 206 no. 9, “c.450?”) are votive stelae possibly from Abia, the former dedicated by two *ἡγεροί*, perhaps on behalf of the community. Abia is probably MME no. 545, Avia (formerly Paliokhora, *ΛΟΠ* no. 3; Hellenistic? Roman); Valmin (1930)

181–82; Meyer (1978) 178 notes Classical finds at MME no. 144, Ag. Georgios, c.500 m from Mikra Mantinea.

(S38) *Alagonia* Probably MME no. 548, Ag. Ilias Brindas (Classical to Roman), see *infra*.

(S102) *Kalamai* Probably Giannitsa near modern Kalamata, see *infra*.

(S58) *Kolonis/Kolonides* On the western side of the Messenian Gulf; plausibly identified as one of two sites, see *infra*.

(S57) *Gerenia* Probably MME no. 146, Zarnata Kambou (Classical to Roman), see *infra*.

(S48) *Leuktron* At or near MME no. 148, Lefkro Stoupas, see *infra*.

(S21) *Thalamai* (no. 321) Probably MME no. 150, Svina Koutiphariou (now Platanos Thalamon, *ΛΟΠ* no. 3427).

(S21) *Thouria* (no. 322) Probably MME no. 137, Ellinika Aithaias, not far north of modern Thouria.

Finally, ten names are attached with certainty, or high probability, to known settlement remains (two of them refer to the same place), though some identifications remain inferential.

(S19) *Asine* (no. 313) MME no. 512, Bourgo Koronis (mediaeval Coron).

(S34) *Kardamyle* (no. 315) MME no. 147, Kastro Kardamyli.

(S59) *Korone* (no. 316) MME no. 502, Petalidi.

(S109) *Koryphasion* MME no. 9, Paliokastro Petrochoriou (Bronze Age, Protogeometric and Classical to Roman finds; 1.4 ha), see *infra*.

(S35) *Kyparissos* (no. 317) MME no. 70, Kastro Kyparissias.

(S11) *Messene* (no. 318) MME no. 529, Mavrommati (for spelling with *mm* cf. *ΛΟΠ* no. 2393).

(S36) *Mothone* (no. 319) MME no. 412, Methoni.

(S79) *Pharai* (no. 320) MME no. 142, Kastro Kalamatas.

(—) *Prote* MME no. 407, Proti, see *infra*.

(S81) *Pylos* The same as Koryphasion, see *infra*.

Messenian is a much more “Homeric” landscape than Laconia. The scholarly industry of trying to identify legendary and Homeric places began early, perhaps because of the lack of sources and documents for the Classical period. Homeric Pteleon, Amphigeneia and Triikka have no plausible location in the landscape, and only the first is assumed to have been a settlement. Homeric Ithome has a known location, but was not necessarily a settlement. Among the thirty-six places with certain or possible locations, eight that have Homeric names and were presumably real places at some early date are located only in a general area or are assigned (usually by ancient authorities) to different places:

- Aipeia (Thouria (no. 322) or Mothone (no. 319)).
- Aipy (Margalai, or a place in Triphylia, or Epitalion (no. 305); possibly MME no. 245).
- Antheia (Asine (no. 313) or Thouria (no. 322)).
- Arene (possibly Samikon, possibly MME no. 302).
- Enope (Pellana, Kardamyle (no. 315), or Gerenia).
- Pedagos (Mothone (no. 319) or Korone (no. 316)).
- Thryon/Thryoessa (possibly Epitalion (no. 305), for which two locations have been proposed).
- Hire/Ire/Poiaessa (either in north-central or in south-eastern Messenia).

Homeric Dorion (possibly at the Bronze Age site known by its modern name of Malthi) and Oichalia (near ancient Andania) are not certainly identified, but are more confidently tied to specific localities. Homeric Kyparisseis may have been succeeded at a different location by Messenian Kyparissos (no. 317), whose site is known. Homeric Kardamyle (no. 315) and Phere (if it is Pharai (no. 320)) are more or less securely tied to actual historical sites. Homeric Pylos is presumed to be a different site from Classical Pylos (see under Pylos, *infra*). An oddity is that of the five *poleis* of Kresphontes (Hyameia, Stenyklaros, Pylos, Rhion and Mesola) only the third is mentioned in Homer, while of Teleklos’ three foundations of Echeiai, Poiaessa and Tragion, only the second—perhaps—occurs in Homer.

2. Identification of Poleis

Of the fifty-five place-names with which we started, we should first exclude spurious names and non-settlements (including Ithome). The thirty-six historical settlements can now be classified for the purposes of investigating the Archaic and Classical *poleis* of Messenia.

The Inventory describes eleven settlements, covering every place that, in the Archaic or Classical period, was

certainly a *polis* (Asine (no. 313), Kyparissos (no. 317), Mothone (no. 319) and, after 369, Messene (no. 318) itself), probably a *polis* (Aithaia (no. 312) and Thouria (no. 322)), or possibly a *polis* (Aulon (no. 314), Kardamyle (no. 315), Korone (no. 316), Pharai (no. 320) and Thalamai (no. 321)).

Before the eleven Archaic and Classical *poleis* are catalogued, the other twenty-five settlements of all periods will be described briefly. There is a strong possibility that some were *poleis* before 300—either perioikic *poleis* before 369 or settlements subsequently elevated to *polis* status—but happen not to have been recorded in surviving evidence from the Classical period. Because in some cases the issues are more problematic than for similar places in Laconia, and because it is sometimes possible to be more precise than was the case in Shipley (1997), a little more detail will be given here than for the equivalent places in the Lakedaimon inventory.

3. Ancient Settlements without Demonstrable Archaic or Classical Occupation

In seventeen cases among the twenty-five known settlements, there is no firm evidence that the place was a settlement in the Archaic or Classical periods, but only at some later or (usually) earlier date. Details of some have already been given in the list of possible settlements *supra*:

(S55) Abea/Abia/Abeia (see *supra*) may not have existed before C2.

(S68) Aipeia (see *supra*) did not exist under this name in Classical times, though possibly it had been renamed Thouria.

(S69) Aipy (see *supra*) did not exist under this name in Classical times, though possibly it had changed its name.

(S85) Ampheia (see *supra*) probably did not exist in Classical times.

(S86) Andania (see *supra*) was a settlement by C3 and presumably existed earlier as a sanctuary, but the Messenians reportedly did not wish to resettle it after 369 (Paus. 4.26.6).

(S71) Antheia (see *supra*) did not exist under this name in Classical times, but possibly had been renamed Asine; it is extremely doubtful whether it is named in a C4–C3e inscription (see under Ampheia *supra*).

(S72) Arene did not exist under this name in Classical times, though possibly it had been renamed Samikon.

(S87) Charadra is only attested in Strabo and is possibly legendary.

(S73) Dorion is not mentioned after Homer and before Strabo, unless it existed as Doureon *c.*200 (*BCH* 44 (1921) 12 col. 11.84 (Delphi (*c.*200)); it must be doubtful whether Pausanias could be sure the ruins he was shown were those of Dorion, let alone whether it existed in the Archaic/Classical periods.

(S74) Enope did not exist under this name in Classical times, though possibly it existed under the name Gerenia or under another name.

(S75) Erana is attested only in Strabo 8.3.23 (who distinguishes it from Arene), and may have existed only in the Roman period.

(S75) Ire/Hire is either a doublet of Poiaessa or existed under another name in Classical times, possibly Abia.

(S77) Oichalia was shown to Pausanias as “the place formerly called Oichalia” (4.2.2), where the Messenians did not wish to resettle after 369; probably only Homeric (the name Oichalia has been adopted by the former Ali Tselepi, *ΛΟΙΠ* no. 3080).

(S78) Pedasos did not exist under this name in Classical times, though possibly it had been renamed Mothone or Korone.

(S92) Poiaessa is probably purely Homeric (if not a doublet of Hire/Ire).

(S60) Polichne, attested only in Paus. 4.33.6. Cf. Valmin (1930) 92, 99–103.

(S62) Thryon did not exist under this name in Classical times, though possibly it had been renamed Epitalion.

The remaining seven settlements had, or probably had, Archaic or Classical occupation but cannot plausibly be shown to have been *poleis* at that time (two names refer to the same site):

4. Pre-Hellenistic Settlements not Attested as Poleis

Alagonia (*Ἀλαγονία*) (S38) Attested only in the Imperial period, when it was an Eleutherolaconian *polis* (Paus. 3.12.7; 30 stades (5.6 km) from Gerenia, 3.26.11); but the highly probable location (MME no. 548, Aghios Ilias, or Gaitsets, at Brinda, the last now renamed Voreio, *ΛΟΙΠ* no. 719), adjoining the Sandava gorge (ancient Choirios Nape, Paus. 4.1.1), has Classical to mediaeval finds. Meyer (1978) 177–78; Hope Simpson (1972) 95 fig. 6.2, 98 n. 105, concurring with Valmin (1930) 187–89. (Alternatively, at Zarnata Kambou: see *infra*, under Gerenia; Meyer (1978) 177–78.) *Barr.* locates it at Anatoliko and dates it C.

Gerenia, Gerena (*Γερηνία, Γέρηνα*) (S57) First attested in *IG* v.1 1336 = *SEG* 11 950 (date corrected to C2 at *SEG* 13 268; C3–C2 in *LGPN* 111a, s.v. *Νικάνδριππος*). Cf. Strabo 8.3.29, 4.4–5. Paus. 3.26.8 says its population is Messenian, though it is Eleutherolaconian (cf. 3.21.7). It may have existed shortly after Messenia’s independence; there is no definite evidence, though its identification with MME no. 146, Zarnata Kambou, is reasonably certain (prehistoric, Classical to Roman, mediaeval; traces of ancient circuit wall; probable findspot of C5 stelae *IG* v.1 1337–38; cf. another (C5?) in *SEG* 11 951). (Another proposed location, Kitries, has few finds, but Zarnata may nevertheless be Alagonia (Meyer (1978) 177)). For the location, see Valmin (1930) 182–86; Hope Simpson (1972) 98 n. 105 with refs. It may have belonged to the Messenian *koinon* after 338/7 (Lazenby (1972) 90). Since Kardamyle, further south-east, had to be detached from Messenia in order to be given to Sparta by Augustus (Paus. 3.21.6), it seems that Gerenia, too, must have been Messenian at that time, and therefore not a member of the *koinon* of the Lakedaimonians founded after 195; this would be consistent with its having ceased to be perioikic in 338. Sanctuary of Machaon attested in C2 (*IG* V.1 1336.19; *SEG* 11 949). *Barr.* C (Zarnatas?).

Kalamai (*Καλάμαι*) (S102) First attested in Polyb. 5.92.4, where it is a settlement (*χωρίον*) captured by Lykourgos in 217—implicitly a defensible one since it is taken by treachery. Although Kalamai probably existed in C4, there is no evidence that it was a *polis*. It is a *kome* in Paus. 4.31.3; Steph. Byz. 347.16 alone calls it a *polis*, but cites only Pausanias, who does not. Plausibly located at MME no. 537, Giannitsa, c.6 km east of Kalamata (Classical and Hellenistic site with C4–C3 buildings, fortifications; now Elaiochori, *ΛΟΙΠ* no. 1106) or at nearby MME no. 140, Sola Perivolakion (LH III, Hellenistic? Roman, 0.8 ha; squared blocks, inscriptions). (Cf. Meyer (1978) 180–81 for full references; Roebuck (1941) 122–23, followed by Hope Simpson (1972) 98 n. 104; cf. Hope Simpson (1966) 119 and n. 27.) This locality is argued for on topographical grounds regarding Lykourgos’ invasion route in 217, supported by epigraphic finds naming Kalamai (*IG* v.1 1369–70) from the area of the church 20 minutes (c.2 km?) away at Ag. Vasileios. Meyer, *KIPauly* v. 51 (with refs. to earlier literature), prefers to put it at modern Kalamai c.2 km north-west of Kalamata (usually identified with Pharai). *Barr.* HR (Perivolakia/Sola).

Kolonis, Kolonides (*Κολωνίς, Κολωνίδες*) (S58) It was a settlement by 188 and is plausibly linked with an excavated Classical cemetery, but is not attested before Plut. *Philop.*

18.3 (cf. Paus. 4.34.8, 12), unless possibly in Hom. *Il.* 17.111. In Plut. *Philop.* 18.3 it is a *kome*. It remains possible that it was founded as a *polis* after 369 to isolate Asine (no. 313) and Mothone (no. 319), which were still Spartan (Lazenby (1972) 89). One proposed site, Kastelia–Vounarion (MME no. 507; excavated by Valmin (1930) 171–73; presumably *ΛΟΙΠ* no. 1589, Kasteli Neas Koronis, formerly in the *dimos* of Kollonides) is Classical to Roman and mediaeval; Hope Simpson (1972) 99 n. 125 (following Hope Simpson (1966) 125) prefers MME no. 107, Kaphirio (Roman settlement). The people of Kolonides in Pausanias' time claimed to be Athenians by origin who later dorianised (Paus. 4.34.8). Full bibliography in Meyer (1978) 197. Lazenby (1972) 89 suggests that Kolonides and Korone (which bordered it: Paus. 4.34.8) may have been founded post-369 to isolate still-perioikic Asine and Mothone; if so, Kolonis was probably made “independent” from Messene (no. 318) when it was required to join the Achaian Confederacy in 191 (Lazenby (1972) 92). *Barr. C* (Vournaria).

Koryphasion (*Κορυφάσιον*) (S109) Koryphasion (which presumably meant “headland”; cf. LSJ s.v. *κορυφή*, i. 3) was the Lakedaïmonian name for the then uninhabited promontory of Pylos, opposite the island of Sphakteria, on the northern side of modern Navarino Bay (Thuc. 4.3.2). *Pylos* (*Πύλος*) (S81) was presumably the Messenian name for the same place (preserving the Bronze Age *pu-ro*, found in Linear B tablets from the nearby “palace of Nestor”). Paus. 4.36.1–5 (referring to ἡ *Πύλος* on Koryphasion) takes it to be Nestor's home (Hom. *Il.* 2.153, etc.; *Od.* 3.4, where it is called a *ptoliethron*). Pylos is located in Messenia, and is distinguished from other Pyloi, by Strabo 8.3.7 (*τοῦ Μεσσηνιακοῦ Πύλου*, masc., *τοῦ κατὰ Κορυφάσιον*), 8.4.2 (*Πύλος ἡ Μεσσηνιακὴ*, this time fem.), etc. It is implicitly called a *polis* at 8.4.6, but this is vague. It is different from Triphylian Pylos and Eleian Pylos; Homer's Pylos may be a fourth site, that of the excavated Bronze Age palace, MME no. 1, Ano Englianos Choras. (On the tablets, see Bennet (1998).) On all four sites, see Meyer in *KIPauly* iv. 1249–51. Modern Pylos is a fifth site, formerly Neokastro Navarinou (*ΛΟΙΠ* no. 3549), on the south side of the bay. Valmin (1930) 146–51 discusses the locations of Pylos, Sphakteria and Koryphasion. For the migration of the name “Pylos” since the Bronze Age, see Davis (1998a) p. xx. The headland was garrisoned during 425–421 and 418–409 (or 408) by Messenian exiles (Thuc. 4.41.2, 5.35.6–7; Xen. *Hell.* 1.2.18). In 365 it was taken by Arkadians (not Argives as Alcock (1998) 183 has it) (Diod. 15.77.4). The headland site

(MME no. 9, Paliokastro Petrochoriou) has Bronze Age, Protogeometric and Classical to Roman finds, including the C5 fortification connected with the Athenians' operations in 425. Lazenby (1972) 86 suggests that it was left uninhabited after the conquest of Messenia was completed c.600. Recent survey confirms the dearth of Classical settlement in the area (Harrison and Spencer (1998) 160). The lower-lying settlement between the lagoon (smaller than in modern times) and the bay, at MME no. 401, Divari Gialova (cf. *ΛΟΙΠ* no. 841), had Archaic to Roman monument bases, etc., and was substantial in Hellenistic times (at least 1.5 ha; *MME* 310–11 no. 401; see also Pritchett (1965) 6–29). Alcock (1998) 183 speculates that the fort and the “true” *polis* may date from post-365; but it is not certain that it ever was a *polis*. Meyer, *KIPauly* iii. 312 notes that Osmanaga village is now Koryphasion (cf. *ΛΟΙΠ* no. 1806) and cross-refers to his article on Pylos at *KIPauly* iv. 2149–50, where he notes C5 fortification. It was a small place in Imperial times, but claimed to be Nestor's home; the fort is late thirteenth century AD, named Palaïokastro, later Palaïo Avarino, once the Turkish fort was built on the south side of the bay at modern Pylos. Meyer also cites Pompon. 2.52; Plin. *HN* 4.55; Ptol. *Geog.* 3.14.31; Tab. Peut. 7.5; Meyer (1951); idem, *RE* xxiii. 2114–15; Marinatos, *PP* 16 (1961) 225–26; plan, *JHS* 16 (1896) fig. 3 (reproduced in Spencer (1998) 175). Full refs. in Meyer (1978) 201–3. *IG* v.1 1418 (= *SEG* 11 1004) and 1419 (= *SEG* 11 1003) are LCI stelae found in the vicinity, with single names on them. *KIPauly* iv. 1249–51 (Meyer): “Pylos 1” (cols. 1249–50), Koryphasion; “Pylos 2” (col. 1250), Triphylian Pylos; “Pylos 3” (col. 1250), Eleian Pylos; “Pylos 4” (cols. 1250–51), site of the BA palace, Hom. *Il.* 2.153 = 2.295, 9.591, 11.682, 712; *Od.* 3.4 (*πτολίεθρον*), similarly 3.485, 15.193. *Barr. AC*.

Leuktron, Leuktra (*Λεῦκτρον, Λεῦκτρα*) (S48) Leuktron is not attested (except in Linear B) before Strabo 8.4.4, though he claims it was founded by Pelops. Plut. *Pelop.* 20.7 tells that in the run-up to the battle of Leuktra in 371 the Thebans were uncertain whether the *πολίχμιον* of Leuktron in Laconia was meant in the relevant oracle, but we cannot rely on this as evidence for its existence then. Plin. *HN* 4.5.16 lists it, and in Paus. 3.21.7 it is an Eleutherolaconian *polis*. Valmin (1930) 203–4 locates it at the village of Leftro. If *re-u-ko-to-ro* (“Leuktron”?) in the Pylos tablets is the name of the predecessor of Thouria (no. 322) (see Bennet (1998) 122, 124), the toponym has migrated to its present site. The probable site, MME no. 148, Leftro Stoupas, has Bronze Age, Classical to Roman, and mediaeval remains. *IG* v.1 1329 is a late Archaic or Classical cultic stele found in a field near Leuktra; Hope

Simpson (1972) 98 n. 100 says that Leuktron must have been occupied in the Archaic period, but direct evidence seems lacking. Roebuck (1941) 30–31 n. 17, notes that Heidemann (1904) 51 suggests it was a Messenian foundation after 369, but again evidence is lacking. See also Meyer (1978) 176. *Barr.* AC (Stoupa).

Prote (*Πρωτή*) A deserted island, Thuc. 4.13.3; Ps.-Skylax 45 (depending on the orthography: TLG reads *πρώτη Μεσσήνη καὶ λιμὴν, Κυπάρισσος*, but one could read (as Meyer evidently does) *Πρωτή, Μεσσήνη, καὶ λιμὴν Κυπάρισσος*. Ps.-Skylax uses *πρώτη* elsewhere to pick out the first *polis* in a region, though in every other case the phrase *πρώτη πόλις* occurs, so Meyer may be right.) See Meyer, *KIPauly* iv. 1195–96. It is described as *νησίον καὶ πολίχνηον* in Strabo 8.3.23. It is also named in Plin. *HN* 4.55, Ptol. 3.14.44 and Steph. Byz. 537.16–17, who claims the ethnic is *Protaios*, but there are no parallels. The island has a substantial late Classical (?) and Hellenistic settlement, including a Hellenistic fortress enclosing 2.8 ha (MME no. 407, Próti; better Protí, *ΛΟΙΠ* no. 3536). Archaeological evidence confirms that it was apparently uninhabited in C5 but was a settlement by C1, and possibly as early as C4. Valmin (1930) 141–45: rock-cut inscriptions (including *IG* v.1 1533 (C5); *SEG* 11 1005 (C6) = *LSAG* 206 no. 2 (C6?)); ancient fortress on south point, probably C4e at earliest; pottery (cites Niese (1906) 131). Full refs. in Meyer (1978) 204. *Barr.* C.

In addition, a few significant Archaic or Classical settlements might be linked with unlocated known toponyms. They include MME no. 216, Krebeni Kato Melpeias (Krebeni Melpeias was formerly Krebeni Garantza, *ΛΟΙΠ* no. 2430; Bronze Age, Classical, Hellenistic, c.9 ha), in northern Messenia. Others are cited under particular sites in this introduction or in the main Inventory.

Some of the settlements listed *supra*, both those attested in sources and those known only from archaeological evidence, may have been *poleis* in the Classical period. Indeed, good candidates for Classical *polis* status, in addition to the “possible” *poleis* in the main part of the Inventory, are not hard to find: the strongest candidates are perhaps Alagonia, Gerenia, Kolonis and Leuktron. If any of these places was a *polis* before 369, it presumably had perioikic status.

On the other hand, many of these settlements had only small territories, and at least two, neither of which has been assigned to the Inventory of *poleis*, are described as *komai* (a category not inconsistent with *polis* status) after the Classical period: Kolonis (Plut. *Philop.* 18.3) and Kalamai

(Paus. 4.31.3).¹² There is also the stray comic reference from the Hellenistic period to an unnamed *kome* in the vicinity of Thouria (no. 322). As with *poleis*, since no place is called a *kome* twice, there were probably more of which we hear nothing. Such places may have been dependent upon larger perioikic centres. On local settlement hierarchies, see Shipley (1992).

II. The *Poleis*

312. Aithaia (Aithaieus) Unlocated. Type: B. (S18). The toponym is probably *Aĩθαια* (Philoch. fr. 32a *apud* Steph. Byz. 46.4; *vv.ll.* *Αιθαία, Αιθάλα*); *Θέα* at Philoch. fr. 32b (*apud* Steph. Byz. 308.4 s.v. *Θέα*, also citing Thuc.), is probably a doublet. The city-ethnic is probably *Αιθαיעύς* (Thuc. 1.101.2; *vv.ll.* *Αιθαλεύς, Αιθεεῖς, Αιθνεεῖς*; restored on the basis of Steph. Byz. 46.5, who attributes it to Thuc.).

Aithaia is not located with certainty, but may have been near Thouria (no. 322) in south-eastern Messenia, the only other perioikic *polis* to revolt in 465 (Thuc. 1.101.2). Valmin (1930) 61–64 suggests Samarina (Santa Marina), north-east of the village of Kalogeraki (or rather Kalogerorachi: see *MME* 314), or one of several sites in the vicinity, such as Karteroli further south (Mycenaean, Hellenistic). See also Roebuck (1941) 30–31 and 7 n. 16; Lazenby (1972) 86; Hope Simpson (1972) 94 and 98 n. 95. One possible site is MME no. 137, Ellinika Aithaias (at Aithaia, formerly Delimimi, *ΛΟΙΠ* no. 304; Meyer (1978) 183); but this is more probably Thouria (no. 322). If it is Karteroli, it had a Hellenistic existence and so did not cease to exist after the liberation of Messenia; but nothing is known about the status of Aithaia after C5.

Aithaia is never called a *polis* in Classical sources, but apparently it was by Philoch. fr. 32a, who included it as “one of the 100”. It may be assumed to have been a perioikic *polis* during Spartan rule on the basis of Thuc. 1.101.2, the only Archaic or Classical use of the city-ethnic (external collective). There is no evidence for the name or extent of its territory; it is assigned to Lakonike in Philoch. fr. 32a (as is Thea, its possible double, in fr. 32b).

Unlike Mothone (no. 319) and Asine (no. 313), Aithaia is not said to have been the home of exiles from another *polis*. The ethnic affiliation of its population therefore depends on whether the *perioikoi* in Messenia were originally Lakedaimonians, even Spartiates, or ethnic Messenians

¹² References to *komai* in Laconia and Messenia are assembled by Shipley (1997) 261–63.

elevated above their helot compatriots. Malkin (1994) 85 tentatively advances Thouria (no. 322) and Aithaia as possible C8 foundations. Lazenby (1972) 86 assumes that the people of Thouria and elsewhere were still “free Messenians” after the conquest.

Given its possible location, it would have been detached from Sparta (no. 345) in 338 rather than 369. Lazenby (1972) 90 suggests it may have belonged to a Messenian *koinon* after 338/7.

313. Asine (Asinaios) Map 58. Lat. 36.45, long. 21.55. Size of territory: 2 or 3. Type: [A]. (S19). The toponym is Ἀσίνη, ἡ (Hdt. 8.73.2; Thuc. 4.13.1; Xen. *Hell.* 7.1.25; Ps.-Skylax 46). Although Xen. *Hell.* 7.1.25 places it in Λάκαινα, the Messenian town is presumably meant, since *Lakaina* is probably equivalent to *Lakonike*, the territory controlled by Sparta (no. 345); it is explicitly distinguished from Laconian Asine at e.g. Strabo 8.4.1 (τῆς Μεσσηνιακῆς Ἀσίνης) and Steph. Byz. 131.11–13 (Ἀσίνη, πόλις Λακωνικῆ... δευτέρα Μεσσήνης παρὰ τὴν Λακωνικὴν). The city-ethnic is Ἀσιναῖος (Xen. *An.* 5.3.4; *Hell.* 7.1.25; *IG* II² 8387a (C4)); it is specified as Ἀσιναῖος ἐγ Μεσσαν[ίτας] in *SEG* 12 219 = *BCH* 77 (1953) 166 (Delphi, 322–310).

Paus. 4.34.12 locates Asine 40 stades (7.3 km) from Kolonides and a similar distance from Cape Akritas. Hdt. 8.73.2 locates it πρὸς τῇ Καρδαμύλῃ, which must mean opposite Kardamyle. The *polis* is usually (so Barr.) located at MME no. 512, Bourgo Koronis (mediaeval Coron, the name having migrated hither), possibly legendary Rhion (see introduction to this chapter). Asine was sometimes identified with Homer’s Antheia (Strabo 8.4.5). Valmin (1930) 169 suggests that Rhion is the eastern part of Cape Akritas, on the western side of the Thouriate Gulf, rather than its north-eastern side. For a summary of the arguments about its location, see Hope Simpson (1972) 97–98 n. 91 (citing Roebuck (1941) 19–22; *contra* Valmin (1930) 164–68, 169, (1934–35) 44–46). The earliest find is an early Archaic Protocorinthian sherd (cf. Valmin (1930) 178; Hope Simpson (1957) 249). Cf., however, *SEG* 11 985 (second century AD), a decree of Korone found at modern Koroni, which the editors in *SEG* suspect may cause the orthodox view to be revised, though Roebuck (1941) 19–22 presumes that the stone was transported from the site of ancient Korone (no. 316) at Petalidi. See also Meyer (1978) 198–99.

Asine is implicitly called a *polis* in Hdt. 8.73.2, where *polis* is used in the urban and/or political sense; in Ps.-Skylax 46, where *polis* is used in the urban sense, Asine (presumably the Messenian one, cf. *infra*) is listed as the first toponym after

the heading πόλεις αἰῶε (though Mothone (no. 319), listed second, ought to have been named first). Otherwise it is called a *polis* only in post-Classical sources: e.g. *IG* IV 679 (C31–C2e) where the *polis* of the Ἀσιναίων asks to take part in the rites of Demeter at Hermione.

The internal collective use of the city-ethnic occurs in Hellenistic decrees (e.g. *SEG* 11 986 (C3–C2)). The external collective use occurs in Xen. *Hell.* 7.1.25, and the external individual use in Xenophon’s references to Neon of Asine (*infra*), in *IG* II² 8387a (C4) and in *SEG* 12 219 (322–310), a grant of proxeny, *theorodokia*, etc. by Delphi to two citizens of Asine.

Asine was peopled with the expelled population of Argolic Asine (Dryopians, cf. Hdt. 8.73.2) when it was destroyed (Theopomp. fr. 383 *apud* Strabo 8.6.11; Paus. 3.7.4, 4.8.3, 14.3; cf. 4.24.4, 34.9) after the First Messenian War (Lazenby (1972) 85; Harrison and Spencer (1998) 154). Its territory was supposedly exempt from the general allotment of land after the conquest of Messenia (Paus. 4.24.4).

In 425, during the Sphakteria campaign, the Spartans sent to Asine for timber with which to make siege engines (Thuc. 4.13.1). Later, in the Peloponnesian War, the Spartan commander Gylippos had ships sent there (Thuc. 6.93.3).

Neon of Asine (most likely from Messenian Asine) took a leading part in the expedition of the Ten Thousand (Xen. *An.* 5.3.4, etc.; he is also called Λακωνικός, 7.2.29 (for a possible reason for the variation, see Shipley (1997) 209)). In 369 or 368 the Arkadians attacked Asine; again, presumably Messenian Asine is meant (and it is not contradicted by τῆς Λακαίνης) since there was a Spartan garrison (φρουρά) there; they defeated it, killing its Spartiate commander and devastating the outskirts (*proasteion*) of the city (Xen. *Hell.* 7.1.25). After the Spartans lost part of Messenia, the Asinaians were allowed to remain in their homeland (κατὰ χώραν, Paus. 4.27.8); Asine was in fact within the part of Messenia retained by Sparta until 338 (Shipley (2000) 385). Hence, perhaps, it is put in Lakedaimon, not Messenia, by Ps.-Skylax 46. After 338/7 it may have belonged to a Messenian *koinon* (cf. Lazenby (1972) 90). The population was presumably a mixture of Argolic Asinaians (Dryopians; cf. Hdt. 8.73.2) and pre-existing Messenians and/or Lakedaimonians.

Asine was certainly perioikic; the use of its ethnic for its citizen Neon conforms to the rule whereby Lakedaimonian *perioikoi* are identified by their city-ethnics (Shipley (1997) 209; Hansen (1996) 185).

314. Aulon (Aulonites) Map 58. Lat. 37.20, long. 21.40. Size of territory: 1 or 2. Type: C. (S20). The toponym is Ἀυλών, ὁ

(Xen. *Hell.* 3.2.25, 3.3.8, 3.3.10; Strabo 8.3.25, cf. 8.5.1; Paus. 4.36.7), which presumably describes the location (LSJ s.v. *αὐλών*, “hollow, defile, glen”). The (possible) city-ethnic is *Αὐλωνίτης* (Xen. *Hell.* 3.3.8; Steph. Byz. 147.7).

Paus. 4.36.7 places Aulon between Kyparissos (no. 317) and the river Neda. Valmin (1930) 107–11 (and Barr.) locates it at MME no. 601, Vounaki Palioneriu (cf. Roebuck (1941) 25–26 n. 95; for the name Palioneri, cf. *ΑΟΠ* no. 3124), a fortified site with an area of 0.8 ha, and with Hellenistic, Roman and possibly Classical finds. Hope Simpson (1972) 94 and n. 101, however, suggests MME no. 602, Ag. Ilias, a Classical and Hellenistic site of at least 3 ha with a good view over the coastal route.

Aulon is called a *polis* only by Steph. Byz. 147.6, who lists it as “one of the 100 *poleis*”, suggesting a Classical or Hellenistic source such as Theopompos; it is not clear whether *polis* is here used in the urban or the political sense. It is not certain, however, that Aulon was a *polis* in the Classical period. A possible comparandum is Laconian *Σκιρίται*, whose name may be a sub-regional ethnic rather than a city-ethnic. Roebuck (1941) 25–26 n. 95 (followed by Hope Simpson (1972) 98 n. 101) takes Aulon in Xen. *Hell.* 3.2.25 (where Agis invades Elis δι’ *Αὐλώνος*, “via Aulon” or “through the *aulon*”) to be a district. At *Hell.* 3.3.10 Xenophon uses the preposition ἐπί with the dative to locate men previously sent to Aulon (ἐπ’ *Αὐλώνι*); this, again, may possibly suggest that the name denotes a geographical location rather than a *polis*, though there may also have been a *polis*. At 3.3.8 Xenophon says (with reference to c.399) that the conspirator Kinadon was sent to Aulon to bring back “certain of the Aulonitai” and certain helots; Roebuck (ibid.) accepts that this passage probably refers to a town. It is implicitly called an *oppidum* by Plin. *HN* 4.5.14, who lists it first among the westward *oppida* of Elis.

Aulon may well have been a perioikic *polis* during the period of Spartan rule in Messenia. Kinadon, the conspirator sent to arrest certain *Aulonitai*, is described by Xen. *Hell.* 3.3.5 as “not of the *homoioi*” (the full-citizen Spartiates), while at 3.3.11 he is reported to have said that he aspired to be “a lesser man (ἥττων) than none in Lakedaimon”. He has generally been assumed to have belonged to the class of “inferiors” (*ὑπομείονες*) attested only in the enumeration of his fellow-plotters at Xen. *Hell.* 3.3.6. As a demoted Spartiate, Kinadon could still have had authority over *perioikoi*. Roebuck (1941) 30 n. 13 and Spencer (1998) 176 assume that Aulon was perioikic. If perioikic, the population of Aulon may have been ethnically Messenian or Lakedaimonian, depending on whether colonists were sent by Sparta.

The external collective use of the city-ethnic (if it is one) occurs at Xen. *Hell.* 3.3.8.

No name is given to the territory of Aulon. Given its proposed location, it would have been lost by Sparta (no. 345) in 369. It was probably bounded by the territory of Triphylia on the north. Aulon may have belonged to a Messenian *koinon* after 338/7 (cf. Lazenby (1972) 90).

315. Kardamyle (Skardamylites) Map 58. Lat. 36.50, long. 22.15. Size of territory: 1. Type: C. (S34). The toponym is *Καρδαμύλη*, ἡ (Hom. *Il.* 9.150 = 9.252; Hdt. 8.73.2; Strabo 8.4.1, etc.; Paus. 3.26.7). The city-ethnic may be *Καρδαμυλίτης* (Hdn. III.2 530.22; Steph. Byz. 357.17; these could refer to Kardamyle in Chios (no. 840; Thuc. 8.24.3), but that was not a *polis*). Both late authors state that the locals used the form *Σκαρδαμυλίτης*.

Strabo 8.4.4 locates Kardamyle “on a deserted rock” between Leuktron and Pharai (no. 320), which does not mean that it had been abandoned. Paus. 3.26.7 locates it 60 stades (11 km) after Leuktra (overestimating by a factor of two; Valmin (1930) 199) and an unspecified distance before Gerenia. It is generally identified with MME no. 147, Kastro Kardamylis (Archaic to mediaeval remains, as well as pre-historic). Hope Simpson (1972) 98 n. 100 notes that early Doric columns have been found (citing *ArchDelt* 22 (1967) B.1 206; see also *ArchDelt* 20 (1965) B 208).

Kardamyle is not called a *polis* in Classical sources, but Hdt. 8.73.2 identifies Messenian Asine (no. 313), which he describes as a *polis*, as “the Asine by (or opposite) the Laconian Kardamyle (*Καρδαμύλη τῆ Λακωνικῆ*)”, possibly implying that Kardamyle was at least as prominent a place as Asine, and so possibly a *polis*. It is called a *polisma* by Paus. 3.26.7. Herodotos’ description of Kardamyle as “Laconian” (*Λακωνικῆ*) implicitly places it in Lakonike, the territory of Sparta (no. 345). Steph. Byz. 357.17, while citing Herodotos, places it in Messenia, perhaps reflecting the changed circumstances of the Roman period (though the words πόλις *Μεσσηνίας* are restored from the parallel passage in Eust. *Il.* 743.17).

Kardamyle is one of Agamemnon’s seven *ptoliethra* (Hom. *Il.* 9.150 = 9.292). It is generally thought to have been a perioikic *polis* during Spartan rule over Messenia (e.g. Roebuck (1941) 30–31 n. 17). Though situated between two Eleutherolaconian *poleis*, Leuktra and Gerenia, it did not join that League when it was founded under Augustus, being instead detached from Messenia and given to Sparta (Paus. 3.26.7). Since the Eleutherolaconian league was largely a refoundation of the *koinon* of the Lakedaimonians that was

set up after the Roman take-over in 195, Kardamyle had probably not been a member of that body either, which probably means that it ceased to be perioikic in 338, when Philip II detached southern Messenia and the Dentheliatis from Sparta (Shipley (2000) 385–86).

316. Korone (Koronaioi) Map 58. Lat. 36.50, long. 21.55. Size of territory: 2 or 3. Type: C. (S59). The toponym is *Κορώνη*, ἡ (Apollodoros *apud* Steph. Byz. 378.1; Strabo 8.4.5; Paus. 4.34.4) or *Κορωνεία* (IG v.1 34 = SEG 11 479 (second century AD)). Strabo 8.4.5 cites the view that it was Homer's Pedasos; Paus. 4.34.5 states that its original name was Aipeia. The city-ethnic is *Κορωνάιος* but occurs first on C2m coins of the Achaian Confederacy inscribed *Ἀχαιῶν Κορωνάϊων* (Head, *HN*² 433); cf. SEG 11 985 (second century AD), a decree of the *polis*. On Korone's location, see Hope Simpson (1972) 97–98 n. 91; Roebuck (1941) 19–22; Valmin (1930) 171–80, (1934–35) 44–46; Meyer (1978) 195–96.

Korone is called a *polis* only by late sources such as Strabo 8.4.5, Paus. 4.34.4, SEG 11 985 (second century AD), and Steph. Byz. 378.1. However, if Korone is correctly identified with MME no. 502, Petalidhi (rather than mediaeval Coron, modern Koroni, which is identified with ancient Asine), the archaeological evidence suggests the possibility that it was a Classical *polis*. The main evidence is the supposed date of the substantial city walls, which Valmin (1930) 178 regards as including renovations from Epameinondas' time.

At 4.34.5, Pausanias says that it was originally called Aipeia, but was renamed *Koroneia* by its Theban oecist, Epimelides (for whom there was a hero shrine at Korone, 4.34.6), after the liberation of Messenia; the name was shortened to *Korone* by the Messenians (*Κορώνεια* is actually found in inscriptions of Roman date from Sparta (*supra*)). This suggests a *refoundation* c.369; however, Lazenby (1972) 89 and Hope Simpson (1972) 99 n. 125 suggest that Korone (and Kolonides) were *founded* in the aftermath of 369 to isolate perioikic Asine (no. 313) and Mothone (no. 319).

Under Spartan rule, the surrounding area was one of the most densely settled in Messenia (Harrison and Spencer (1998) 159). The important Classical sanctuary of Apollo Korythos (Paus. 4.34.7) probably lay in Korone's territory. Votives there include SEG 42 342, 40 362+ (c.460?), a bronze spear-butt dedicated by the Messenians, possibly celebrating a victory over the Spartans during the revolt of the 460s (cf. Bauslaugh (1990); *LSAG* Messenia no. 3 (c.C5e?)). Other early votives include SEG 11 993 (c.500). Full refs. in Meyer (1978) 196–97. Paus. 4.34.4 locates Korone 20 stades (3.7 km) from an inland spring, Plataniston, which supplied the

town. At 4.34.6 he notes temples of Artemis Paidotrophos, Dionysos and Asklepios, as well as a hero shrine to Epimelides.

317. Kyparissos (Kyparissieus) Map 58. Lat. 37.15, long. 21.40. Size of territory: 3 or 4. Type: [A]. (S35). The toponym is *Κυπάρισσος*, ἡ, in Ps.-Skylax 45 (cf. Plin. *HN* 4.5.15); elsewhere it is *Κυπαρισσία*, ἡ (Strabo 8.3.22; *Κυπαρισ(σ)ίνα* in MSS; cf. 8.3.25; Steph. Byz. 395.1) or *Κυπαρισσιαί* (Paus. 4.36.7). The city-ethnic is *Κυπαρισσιεύς* (IG v.1 1421 (C4–C3); Head, *HN*² 433) or *Κυπαρισσεύς* (Polyb. 5.92.5; SEG 11 1021 (C2–C1); Strabo 8.3.22). The *polis* is plausibly located at MME no. 70 (Kyparissia), a site with Classical walls, Hellenistic and Roman buildings; a settlement of 1 ha or more (modern Kyparissia is also called Arkadia, *ΛΟΙΠ* no. 2000). For the walls, see Valmin (1930) 129–31 (parts are C5 or later; some black-figured pottery); Hope Simpson (1972) 99 n. 123 (where “#72” should read “#70”) cites Valmin (1930) 131–32 on the extent of the fortifications. Full references in Meyer (1978) 204–5.

In Ps.-Skylax 45, where *polis* is used in the urban sense, Kyparissos may be the first toponym listed after the heading *πόλεις αἰθε*. It seems also to be implicitly described as a *polis* in the urban sense in Diod. 15.77.4 (r365/4). In the political sense, *polis* is not attested until the Roman era (SEG 11 1025 (C2–C1); *πόλει* is a near-certain restoration). However, the decree IG v.1 1421 (C4–C3) demonstrates that it was a *polis* in the political sense long before that date: it uses the internal collective city-ethnic (1–2), attests to the existence of a territory ruled by the Kyparissians (εἰ[τ]ί τις κα ἐσάγγη εἰς τὰν χώραν τῶν Κυπαρισσιέων . . . , 1–2), and names a board of officials called οἱ πεντηκοστολόγοι (9), a name that suggests the raising of customs dues. Moreover, IG v.2 390 (C4–C3e) is a grant of proxeny and *theorodokia* by Arkadian Lousoi (no. 279) to two citizens of Kyparissos (cf. Perlman (2000) 241–42); and Polyb. 5.92.5 attests that in 217 the people were able to mobilise military forces.

The internal collective use of the city-ethnic occurs in IG v.1 1421 (C4–C3); the external collective use is attested at Polyb. 5.92.5, and the external individual use in IG v.2 390 (C4–C3e).

In 365/4, when Kyparissos was captured by Arkadian forces, it was evidently a defended settlement (Diod. 15.77.4) and thus quite probably perioikic; alternatively, it became a *polis* only after this time; cf. Roebuck (1941) 30 n. 12; Harrison and Spencer (1998) 156.

318. Messene (Messenios)/**Ithome** (Ithomaios) Map 58. Lat. 37.10, long. 21.55. Size of territory: 4 or 5. Type: A. (S11).

The name of the *polis* founded in 369 is regularly *Μεσσήνη*, ἡ (Dem. 16.25; Lycurg. 1.62), to which corresponds the city-ethnic *Μεσσανίος* (*CID* II 4.1.28 (360)), but it is also called Ἰθώμη, ἡ (Ps.-Skylax 45; *F.Delphes* III.4.6 (326 or 316); Diod. 19.54.4 (r316)), to which the corresponding city-ethnic was probably Ἰθωμαῖος, abbreviated as *ΙΘΩΜ* on C4s coins (Head, *HN*² 432). *Μεσσήνη*, as is normal in earlier literature (*supra* 550), could still denote the region (e.g. Xen. *Hell.* 5.2.3; see Meyer (1978) 159–60, 283). The two names are combined at Ps.-Skylax 45: ἔθνος *Μεσσήνη* (the regional name) καὶ πόλεις ἐν αὐτῇ αἰδεῖ . . . Ἰθώμη ἐν μεσογείᾳ κτλ. (the name of the *polis*). Roebuck (1941) 37 and Lazenby (1972) 89 note that until at least the end of C4 the *polis* was apparently called Ithome; thereafter Messene was the usual name (cf. *KIPauly* ii. 1488).

In *CID* II 4.1.14–15 and 28 (360), where *polis* is used in the political sense, Messene is one of the polities listed (as *Μεσσανῖοι*) after the heading τάδε πόλεις καὶ ἰδιώται ἐπάρ[ξαν]το; the political sense is found also at Isoc. 6.87. In the urban sense, *polis* is found in Dem. 16.25. The earliest literary mention of Messene as an existing *polis* is in Xen. *Hell.* 7.1.27; here he does not explicitly call it a *polis*; however, later he mentions the recognition of its *autonomia* (7.1.36: αὐτόνομον εἶναι ἀπὸ Λακεδαιμονίων), which suggests that he did consider it a *polis*.

The usual city-ethnic, *Μεσσανίος*, is of course attested before the foundation of the *polis*, for it was also the regional ethnic of the Messenians (e.g. *IG* I³ 1355 (475–450); *ML* 74 (c.421); Thuc. 4.9.1; see Figueira (1999) and Luraghi (2002) for the development of Messenian identity). After 369, the internal collective use of the city-ethnic is attested by coins inscribed *ΜΕΣΣΑΝΙΩΝ* (*infra*) and in *IG* v.1 1425.10 (C4–C3e); the external collective use is found e.g. in *SEG* 29 405.10 (365/4), *CID* II 4.1.28 (360), *IG* II² 225.6 (343/2) and in Xen. *Hell.* 7.4.27, 7.5.5. The external individual use is found in *F.Delphes* III.4.4 (340), *IG* II² 9347 (C4m), *IG* IV².1.122.129 (C4) and *IvO* 172 (360–300). We cannot, however, always determine whether the ethnic functions as a city-ethnic and thus refers to citizens of the *polis* of Messene specifically, or as a regional ethnic and thus to members of the wider community (*ethnos*) of Messenians. A particularly ambiguous instance is found in *Syll.*³ 224 (c.345), a response by the Amphictyonic League to a request by the *Μεγαλοπολίται* and the *Μεσσήνιοι* for membership of the League: the fact that *Μεσσήνιοι* occurs alongside *Μεγαλοπολίται* suggests that it is here a city-ethnic, whereas the request to become an Amphictyonic member suggests that it may be the regional ethnic, since the League was organised on the basis of *ethne*

(Lefèvre (1998) 17–20). When it functions as the regional ethnic, it is sometimes amplified by the addition of a phrase denoting a local community of Messenia, e.g. *Μεσσανίος ἐκ Θουρίας* (*BCH* 6 (1882) 221 no. 53 = *F.Delphes* III.4.5 (315–280)) and *Μεσσανίος ἐξ Ἰθώμης* (*BCH* 6 (1882) 221 no. 52 = *F.Delphes* III.4.6 (post-327/6)); cf. *ΜΕΣΣΑΝΙΩΝ ΙΘΩΜ[ΑΙΩΝ]* on coins of c.330–280 (Head, *HN*² 431–32). This plurality of usage may reflect the fact that a federal structure was probably introduced after 369, no doubt under Theban influence, in which the new *polis* played the leading role. The *κοῖνον* is attested in *I.Magnesia* 43 (207/6): τὸ κοινὸν τῶν *Μεσσηνίων* (cf. Lazenby (1972) 90; Meyer (1978) 283, arguing for isopolity rather than sympolity; see Polyb. 23.17.2 on Abia, Thouria and Pharai; also McDonald and Hope Simpson (1972) 145; Davis (1998a) p. xxx). In that case the *symmachia* treaty of the Arkadian Confederacy with the Messenians (*SEG* 22 339, Olympia (365/4)) may have been concluded with a Messenian *κοῖνον* rather than with the *polis* of Messene alone, as may the treaty of *symmachia* with Athens (no. 361) *et al.* attested in *IG* II² 225 (343/2). The city of Messene was no doubt meant to be dominant, not least for the sake of the stability and security of the region. To that extent the other *poleis* of post-liberation Messenia can be regarded as dependent *poleis*, but there seems to have been considerable *polis* autonomy: see Kyparissos (no. 317) for a decree on customs and proxeny relations of that *polis* in C4–C3; note also that Mothone (no. 319) minted its own coins c.C3 (Head, *HN*² 433). Even c.240 the *polis* of Messene made its own treaty of isopolity with Phigaleia (no. 292) (*IG* v.2 419 = *Syll.*³ 472; Meyer (1978) 283). These indications may hold good for C4 also; strong central control by Messene was perhaps a development of C3s or even C3l rather than C4. It was perhaps during C3 that Messenia came to replace Messene as the usual name of the region (Meyer (1978) 284). The federal arrangement appears to have ended in 182, when Messene was required to rejoin the Achaian Confederacy separately from the three *poleis* to its south-east—Abia, Thouria (no. 322) and Pharai (no. 320), which joined the league individually (Polyb. 23.17.2). Cf. also under Mothone *infra*, with reference to 191.

Messene was founded after the first Boiotian invasion of Laconia by Epameinondas and his allies in 370/69 (Roebuck (1941) 27–39). Although Epiteles of Argos was put in charge of building the *polis* (Paus. 4.26.7), Epameinondas was evidently regarded as the oecist, since statues were erected to him (Paus. 4.31.10, 32.1); he was revered as such in the second century AD (Paus. 9.14.5, 15.6). For an account of how he organised the construction of Messene and other *polismata*, see

Paus. 4.27.5–7 (cf. Roebuck (1941) 31–32 n. 21). Philip II was honoured as second oecist for his benefactions after Chaironeia (Strabo 8.4.8). The inhabitants of the new *polis* included former helots (Isoc. 6.28; cf. Roebuck (1941) 34), expatriated Messenians, and “others who so wished” (Diod. 15.66.1; cf. Lycurg. 1.62: *Μεσσήνην . . . ἐκ τῶν τυχόντων ἀνθρώπων συνοικισθεΐσαν*).

The territory of the new *polis* probably embraced the upper Messenian plain and the western part of the lower one, marching with those of Korone (no. 316) to the south, Pylos to the south-west (if it was a *polis*), and Kyparissos (no. 317) to the west and north-west (Meyer (1978) 150); probably also with that of Thouria (no. 322) to the east; and with those of the Arkadian *poleis* to the north—unless Dorion and Andania to the north, and Ampheia to the north-east, were *poleis*. For a possible network of Late Classical/Early Hellenistic forts in the *chora*, see Hope Simpson (1972) 94 with 98–99 nn. 117–20; Roebuck (1941) 39–40 n. 68, 59–60, 64–65, 122–24; Valmin (1930) 67–73, 78–82, 90, 92–93. *SEG* 34 321 lists graffiti from a fort at Vasiliko near Messene, probably dating to C5m and later.

C4 treaties concluded by Messene include one with Pisa (no. 262) and Sikyon (no. 228) (Ringel *et al.* (1999) 417–20), and at least two with Athens (no. 361) (*Staatsverträge* 337 and 343 (on which see, however, Roebuck (1941) 52 n. 113); Dem. 16.9 with Roebuck (1941) 47); though not explicitly attested, alliances with Boiotia/Thebes (no. 221) (cf. Xen. *Hell.* 7.5.4–5), Arkadia and Argos (no. 347) may be assumed to have been concluded immediately after the foundation (Roebuck (1941) 40–41). Messenian troops fought on the anti-Spartan side in the battle of Mantinea in 362 (Diod. 15.85.2). Messene was a party to the *koine eirene* concluded after the battle (Diod. 15.89.1; Ryder (1965) 84–85, 140–44) and thus gained international recognition of its existence (Roebuck (1941) 47). An alliance with Megalopolis (no. 282) is attested by Diod. 16.39.2–3 (r352/1) and one with Philip II was concluded c.344 (Roebuck (1941) 49). Messene also became a member of the Corinthian League ([Dem.] 17.4; Roebuck (1941) 55 n. 120); see, however, *supra* for the possibility that the contracting party in such cases was the *ethnos* of the Messenians and not the *polis* of Messene.

Exiles restored by Alexander the Great are attested in [Dem.] 17.4. *IG* v.1 1425 (C4–C3e) is a grant of proxeny by Messene to a citizen of Zakynthos (no. 141); citizens of Messene were granted proxeny by Delphi (no. 177) in 340 (*F.Delphes* III.4 4) and 326–316 (*F.Delphes* III.4 6). Grants of proxeny and *theorodokia* by Argos (no. 347) to citizens of Messene are listed in *SEG* 13 243 (post-315).

A C4–C3e decree (*IG* v.1 1425.2) attests to the existence of a *phyle* named *Δαιφοντίς*, and it seems probable that a system of five *phylai* was created at the foundation in 369 (Jones, *POAG* 146–48). The existence of a calendar is attested by *IG* v.1 1425 (C4–C3), where a month is referred to by number: *δυωδ(εκάτω) ε΄*.

Although Meyer (1978) 151 supposes the city’s original constitution to have been “oligarchic-timocratic”, decrees of the *polis* demonstrate the existence of democratic institutions. *IG* v.1 1426 (C4–C3e) is a decree for citizens of another *polis* (cf. under Ampheia in the introduction, *supra*) who receive *ισ[οπολιτεΐαν]* and [*γὰς τε καὶ οἰκίας ἔγκτ]ασιν* (*SEG* 11 1029, 41 321). *IG* v.1 1425 is a possibly C4–C3 proxeny decree of the *damos* (*ἔδοξε τῶι δάμωι*) for a citizen of Zakynthos (no. 141) (though it is downdated to C2–C1 by Roebuck at *SEG* 11 1030). *IG* v.1 1435 (= *SEG* 11 1037) is a C4–C3 list of names. In *SEG* 43 135 = 41 320 (317), the Messenians made a treaty with Polyperchon and his son Alexandros for the installation of a garrison on Mt. Ithome; the text mentions the *damos*, presumably of Messene. *SEG* 45 290 = 41 322 (C3e), an alliance of Messene with Lysimachos, probably dates from immediately before 295/4 (Matthaiou (1990–91)) and mentions ephors of the city (line 23; cf. Polyb. 4.4.2–3, 4.31.2). *IG* v.1 1471 (C4), from the Artemis Limnatis sanctuary, suggests that a priest, presumably that of Zeus Ithomatas, was the annual eponym of the city. Arist. *Rh.* 1418^b11 refers to the *Μεσσηνιακὴ ἐκκλησία*, presumably the assembly of the *polis* (or the Messenian Federation?).

The site is located below Mt. Ithome by Paus. 4.31.4, at a distance of c.40 stades (7.3 km) from the sources of the river Pamisos (4.31.4) and c.80 stades (15 km) from its mouth (4.34.1). It is MME no. 529, Mavrommati (Geometric to Roman, including a Geometric figurine), where excavations have been carried out for the Archaeological Society of Athens, latterly by Themelis (see e.g. *AR* 47 (2000–1) 48–49; references prior to 1973 collected by Meyer (1978) 137). The site is at a considerable elevation (350–400 m above sea level: *ibid.* 139), in a hollow between three hills. Diod. 15.67.1 appears to say that the city was built in 85 days, though this can hardly have extended beyond a fort capable of housing the Theban garrison. The completed walls are among the finest (cf. Paus. 4.31.5) and best preserved in Greece. They cannot be shown to postdate C4, and should predate Cassander’s unsuccessful siege of 316–315 (Diod. 19.54.4, 64.1; Meyer (1978) 140–41, 142). They are c.8 km long and enclose c.290 ha (Meyer (1978) 138), not all of which was built up. The “Arkadian gate” in the north wall is the

best-known city gate surviving from ancient Greece (photograph of part of the wall and a tower: *MME* pl. 9.3). Mt. Ithome, above the town, has polygonal fortifications probably dating from the helot revolt of the 460s (Meyer (1978) 149). An unpublished C4 inscription (*SEG* 45 297) contains financial accounts of the construction and repair of public and cult buildings. Stamped roof-tiles with fragmentary legends have been found in the C4l construction fill of the sanctuary of Demeter (see *SEG* 45 333–34). The city exhibits a Hippodamian plan. Some C4 buildings have been excavated (e.g. a two-storey hall with Ionic interior colonnade, dated C4s: Orlandos, *Ergon* (1957) 147–48). Most buildings and sculptures, however, notably the Asklepieion complex, are Hellenistic or Roman; see e.g. Themelis (1994a) on the sculptor Damophon (also Alcock (1998) 183, 186–87).

The important Messenian cult of Zeus Ithomatas, depicted on the city's first coins (*infra*), was based at Messene (Paus. 4.33.2). Other cults from the generations after its foundation include Artemis Limnatis (*IG* v.1 1442 (C3–C2); temple excavated: Le Bas (1844–45); Meyer (1978) 149); Artemis Ortheia (Themelis (1994b)); Athena Kyparissia, with cult officials (*SEG* 23 209–10 (C3)); Asklepios and Hygieia (e.g. *SEG* 38 339 (c.220?), 45 301 (C2)); Acheloös (*SEG* 41 360+ (early Hellenistic)); the Dioskouroi (*SEG* 45 302 (c.300)); Eilethya (*SEG* 41 359 (C4–C3), 45 303 (C3)); Herakles (*SEG* 41 362 (C3)); Hermes (*SEG* 41 361 (C3–C2)); and Poseidon (*SEG* 45 305 (seemingly Late Classical/Early Hellenistic)). See also Jost (1996). On hero cults, see Themelis (2000). Note also *SEG* 45 324 (C4?), a musical notation (cf. *SEG* 43 164, 44 382) in Doric mode, found in the Hierothysion and presumably originating from a cult. The temple of Pamisos at *MME* no. 530, Ag. Phloros (ACHR), excavated by Valmin (1938), may have lain in the territory of Messene. An Archaic stele was dedicated to the river Pamisos: *LSAG* 206 no. 1 (“c.550?”; now C6 or later, *LSAG* 2 448 no. A; Richter (1949) 89–90).

As early as 368, Damiskos of Messene (whose later career included Nemean and Isthmian victories) won the boys' *stadion* at Olympia (*Olympionikai* 417); the victory of Damaretos of Messene in boys' boxing is placed c.344 by Moretti (*Olympionikai* 448), and that of Telestas, also in boys' boxing, in 340 (*Olympionikai* 453).

Messene initiated minting in both silver and bronze shortly after the foundation. Silver of 369–330 (staters, triobols, obols, hemiobols on the Aiginetan standard): *obv.* head of Demeter; *rev.* Zeus Ithomatas striding and wielding thunderbolt and holding eagle, or tripod. Legends: *ΜΕΣ*, *ΜΕΣΣΑΝΙΩΝ*. Bronze of 369–330: *obv.* head of Demeter;

rev. *ΜΕ* in plain concave field, or tripod, or Zeus Ithomatas. Legend: *ΜΕ*. A series of Milesian staters is dated by Babelon to 338–336: *obv.* head of Demeter; *rev.* Zeus Ithomatas with thunderbolt and eagle. Legend: *ΜΕΣΣΑΝΙΩΝ*. A series of Attic tetradrachms postdates 330: *obv.* head of Demeter; *rev.* Zeus Ithomatas wielding thunderbolt and holding eagle, in front a tripod. Legends: *ΜΕΣΣΑΝΙΩΝ* or *ΜΕΣΣΑΝΙΩΝ ΙΘΩΜ(ΑΙΩΝ)*. Head, *HN*² 431–32; Babelon, *Traité* ii.3 nos. 1025–34; *SNG Cop. Phliasia–Laconia* 496–503.

319. Mothone (Mothoniaios) Map 58. Lat. 36.50, long. 21.40. Size of territory: 2 or 3. Type: A. (S36). The toponym is given as *Μεθώνη*, ἡ, by Thuc. 2.25.1 (cf. Plin. *HN* 4.51.5; Strabo 8.4.3; Steph. Byz. 440–41); but as *Μοθώνη* in Ps.-Skylax 46 (also Paus. 4.3.10). That the latter is correct for the Classical and at least the early Hellenistic period is suggested by C3 coins with the legend *ΜΟ* (Head, *HN*² 433; Babelon, *Traité* ii.3 no. 1035; *SNG Cop. Phliasia–Laconia* 537). The former spelling was perhaps an assimilation to Methone (no. 541) in Makedonia, just as Methana (no. 352) in the Argolid was sometimes misspelled Methone in some MSS of Thucydides (as noted by Strabo 8.6.15 = Theopomp. fr. 384). The city-ethnic is *Μοθωναῖος* in Paus. 4.18.1 and on third century AD coins (Head, *HN*² 433).

Mothone is called a *polis* in the urban sense by Thuc. 2.25.2; at Ps.-Skylax 46, where *polis* is used in the urban sense, Mothone is the second (or first) toponym listed after the heading *πόλεις αἰθε*.

Mothone is located in Lakonike by Thuc. 2.25.1 (cf. Diod. 11.84.6 (r454)), and in Lakedaimon by Ps.-Skylax 46. Mothone's territory (ἡ *Μοθωναία*, Paus. 4.35.6) would have been bounded by those of Asine (no. 313) to the east, Pylos to the north, and possibly Korone (no. 316) to the north-east and Kolonides (if, as Lazenby and Hope Simpson (1972) suggest, it was founded post-369 to isolate Asine and Mothone). Mothone is assumed to have been perioikic by Harrison and Spencer (1998) 156; this seems certain, since the Athenians twice thought it worth attacking. It remained perioikic after 369, being listed under Lakedaimon by Ps.-Skylax 46. It was probably dependent upon Messene after 338, perhaps as a member of a Messenian Federation (see under Messene, *supra*).

The city is securely located at *MME* no. 412, Methoni (Archaic to mediaeval pottery, graves, architectural fragments), mediaeval Modon with its Venetian fortress. Hope Simpson (1972) 98 n. 96 notes evidence of late Archaic habitation, citing *ArchDelt* 21 (1966) B.1 164; at p. 99 n. 121,

however, it is stated that the precise date of (*sc.* other) remains at Methoni is uncertain. Full references in Meyer (1978) 200–1. Valmin (1930) 152–54 notes a Classical or Hellenistic cemetery c.1.5 km to the north. In 454, it was taken by Tolmides (Diod. 11.84.6); in 431 it was fortified, but weak and unmanned (Thuc. 2.25.1; cf. *HCT ad loc.*; cf. also Diod. 12.43.2–3, which mentions an unsuccessful Athenian siege). The walls and harbour mole were incorporated into the spectacular Venetian fortifications (Meyer (1978) 200).

Pausanias gives Mothone a legendary origin, its harbour having been built by King Dotadas (4.3.10), and its name before the Trojan War having been Pedasos (see Hom. *Il.* 9.152 = 9.294 and *supra* 549, 553–54). The same is asserted by Strabo 8.4.3, who notes that some people locate Homer's Aipeia here. More plausibly, at 4.24.4 Pausanias says that Mothone was founded by exiles from Nauplia, who were not expelled after Leuktra (4.37.8).

320. Pharai (Pharaiates) Map 58. Lat. 37.00, long. 22.10. Size of territory: 1 or 2. Type: C. (S79). The toponym is *Φαραί, αἶ*, in Xen. *Hell.* 4.8.7, Polyb. 16.16.3, Paus. 4.16.8; *Φηραί* is found in Strabo 8.4.4 and Steph. Byz. 658.4 (cf. *Pherae* at Nep. *Conon* 1.1); Ptol. *Geog.* 3.14.31 has *Φεραί*. The city-ethnic was *Φαραιάτης*, according to Strabo 8.7.5, who explicitly distinguishes it from the ethnic of Achaian Pharai (no. 241); cf. Paus. 4.30.3; *Φαραίτης* is found in Steph. Byz. 658.5.

Pharai was clearly a *polis* by 182, when it joined the Achaian Confederacy separately from Messene (Polyb. 23.17.2); but earlier references are vague about its status. Xen. *Hell.* 4.8.7 refers to it as a *chora*, but not in such a way as to exclude a *polis*, and it was clearly already a settlement. Archaeological evidence suggests that it was a significant settlement from early times, and a fortified *polis* at least post-369. It is plausibly located at modern Kalamata (officially Kalamai), specifically MME no. 142, Kastro Kalamatas (LH III, Geometric to mediaeval; extent not stated; Hellenistic foundations, C4(?) city walls, Archaic to Roman funerary reliefs). The Classical fortifications appear to have occupied a much smaller area than those of the Hellenistic period (Hope Simpson (1972) 99 n. 124). See Meyer (1978) 181 for full bibliography. Ancient authors identified it with Pharai or Phere (*Φήρη, ἦ*), home of Diokles (a descendant of the river Alpheios: Hom. *Il.* 5.543, *Od.* 3.488 = 15.186) and one of Agamemnon's seven *ptoliethra* (*Il.* 9.151 = 9.293; cf. 2.743). In Pausanias, it has a legendary oecist (4.30.2) and is described as having been a *polis* during the Second Messenian War (4.16.8).

To the west, the temple of Poseidon at Akovitika will have lain within the territory of Pharai; finds there include C6 and C5 votives to Pohoidan (*SEG* 25 431), tiles with *δαμόσιος* stamps (*SEG* 25 432 (C6–C5)), and the earliest Messenian text, a C6m(?) relief pithos dedicated to Poseidon (*LSAG*² addenda, p. 448 no. 1a; Themelis (1969) fig. 4, (1970) figs 1–2, pl. 37). Cultic rock-cut inscriptions, seemingly Late Archaic or Early Classical, are found about an hour away (c. 6km?) and include votives to Kore, Pan and the Tityroi(?) (see *IG* v.1, addenda): *IG* v.1 1362 a–g; cf. *SEG* 11 969 (*LSAG* 206 no. 5 (c.C5e?)). Paus. 4.31.1 mentions the grove of Apollo Karneios; if correctly identified with MME no. 540, 1 km east of Ag. Pantas near Kalamata, this should date back to Geometric and Archaic times.

After 369, Pharai may, like Mothone (no. 319), have been dependent on Messene within a loose federal structure (cf. Lazenby (1972) 90).

321. Thalamai (Thalamates) Map 58. Lat. 36.45, long. 22.20. Size of territory: 1. Type: C. (S33); *LS* ii. 299–300 LL150. The toponym is *Θαλάμαι, αἶ* (Theopomp. fr. 172 *apud* Steph. Byz. 306.1; Polyb. 16.16.3). The city-ethnic is *Θαλαμάτης* (*IG* v.1 1312 = *SEG* 11 945 (Hell.); Paus. 3.21.7).

No Archaic or Classical source calls Thalamai a *polis*, but archaeological evidence suggests that it was a settlement and thus possibly a *polis*. Its location is very probably MME no. 150, Svina Koutiphariou (now Platanos Thalamon, *ΛΟΠ* no. 3427; for modern Thalamai see *ΛΟΠ* no. 1222), where there are Classical walls and a Hellenistic well-house, and where Archaic to Roman finds have been made, including a C7(?) terracotta statuette (cf. *LS* ii. 299–300, LL150; Levi (1971) ii. 96 n. 271; Hope Simpson (1972) 98 n. 100; Dickens (1904–5); Valmin (1930) 204–5).

Theopomp. fr. 172 *apud* Steph. Byz. 306.1 assigns Thalamai to Messenia; Pausanias implicitly places it in Lakonike, since he includes it in book 3, but attributes it to Messenia in connection with the legend of Tyndareos (3.1.4) and says that the Messenians claim that the district containing Pephnos (only 4 km away) was once theirs (3.26.3).

Wide (1893) 313 collects references to the famous cult of the Dioskouroi at Thalamai. *IG* v.1 1316, a C5e votive stele to Apollo Kabatas, is probably from Thalamai; *IG* v.1 1317 is a C4–C3 votive statue to Pasiphae.

322. Thouria (Thouriates) Map 58. Lat. 37.05, long. 21.00. Size of territory: 1 or 2. Type: B. (S21). The toponym is *Θουρία, ἦ* (Polyb. 23.17.2; restored in *IG* v.1 1387.4 (C3)); *Θευρία, ἦ* is found in *IG* v.1 213.19 (= *SEG* 38 333+; now dated post-403, *LSAG*² 201 no. 52, addenda p. 448). Ptol.

Geog. 3.14.43 has *Θούριον*. Strabo 8.4.5 says that it is Homeric Aipeia (Hom. *Il.* 9.152 = 9.294) but notes that others locate Antheia (9.151, 293) here. Paus. 4.31.1 opts for the latter identification. The city-ethnic is *Θουριάτης* (Thuc. 1.101.2; *SEG* 11 972+ (C2m); Paus. 4.31.1) and *Θουριεύς* (*IvO* 46 (C2m)). *Θου[ριέ]λων* is restored in *SEG* 11 974 (C1), though *Θου[ριατ]λών* seems equally possible. Androtion *apud* Steph. Byz. 320.22, s.v. *Θυρέα*, where the ethnic is unexpectedly *Θούριος*, may be a garbled C4 reference to this *polis* and may preserve a further variant of the name. Thouria would have been detached from Sparta either in 338 or, perhaps more likely, in 369, and under the probably federal arrangements that followed the foundation of Messene (*supra*) we find the phrase *Μεσσήνιος ἐκ Θουρίας* applied to a citizen of the *polis* (*BCH* 6 (1882) 221 no. 53 = *F.Delphes* III.4 5 (315–280)). The feminine *Θουρία* (*IG* II² 8895 (C4m)) may refer to this or another, similarly named *polis*.

Thouria was the only perioikic polity apart from Aithaia (no. 312) to revolt in 465 (Thuc. 1.101.2). It is not explicitly called a *polis*, however, before *IvO* 46 (a C2m boundary adjudication with Megalopolis (no. 282)), where it is called *polis* in the political sense. But it was probably a *polis* long before: Thuc. 1.101.2 uses the external collective city-ethnic, and if it refers to the present city, *IG* II² 8895 (C4m) attests the external individual use. Finally, a citizen of Thouria was granted proxeny at Delphi (no. 177) c.316 (*BCH* 6 (1882), 221 no. 53; *F.Delphes* III.4 5).

The site of Thouria is probably MME no. 137, Ellinika Aithaias, not far north of modern Thouria (Aithaia is the former Delimimi, *ΑΟΠ* no. 304; the latter was formerly Phroutzalokamara, *ΑΟΠ* no. 1237). From Ellinika come Bronze Age and Protogeometric to Roman finds; the extent of the historical site is not stated in the literature (cf. McDonald and Rapp (1972) 243). See Lazenby (1972) 86 and Hope Simpson (1972) 98 n. 94 for more details; Valmin (1930) 51, 56–61; Meyer in *KIPauly* v. 801–2, s.v. Thuria; Meyer (1978) 182. The late Classical or Hellenistic fortifications at Ellinika are C41–C3e (Hope Simpson (1972) 98 n. 111, (1966) 123–24; illustrated, *MME* pl. 9.4). Paus. 4.31.2 says that the city was formerly on higher ground, where he saw ruined walls and a sanctuary of the Syrian goddess; while the sanctuary would have been Hellenistic, the walls may have been Classical.

Paus. 4.31.1 includes Thouria in his account of Messenia. Strabo 8.4.4 implies that it is a *polis* with a territory. It was probably detached from Sparta (no. 345) in 338/7 rather than 369, since Sparta seems to have retained the land around the head of the Messenian (or Thouriate) Gulf (Shipley (2000) 385). In the early Hellenistic period, Stephanus Comicus,

Philolakon, fr. 1 *apud* Athen. 469 a–b (*κώμη μὲν οὖν τίς ἐστὶ περὶ τὴν Θουρίαν*) implies that at least one subordinate centre existed in this district in the time of King Pyrrhos.

Various public institutions and officials are named in inscriptions, but only in the Hellenistic period: e.g. *IG* v.1 1379 (C2–C1), 1380 (C2), 1384 (C2l), 1386 (c.C2), 1388 (undated). They imply a democratic constitution at that time, which may have existed since 369 or 338.

In c.C4e a festival of Poseidon, the *Ποιοῖδια*, was held at Thouria (*IG* v.1 213).

LAKEDAIMON

GRAHAM SHIPLEY

I. The Region

The *polis* of *Sparte* (no. 345) (in the local Doric dialect *Sparta*) was also called *Lakedaimon*. Its citizens, the *Spartiatatai* (Spartans, Spartiates) were the dominant class in a larger state whose members were the *Lakedaimonioi*. Thus all Spartans were Lakedaimonians, but most Lakedaimonians were not Spartans. All Lakedaimonians were free and were citizens of *poleis*; but the other *poleis* were dependent upon Sparta, and their citizens were known as the *perioikoi*, “dwellers around” (*sc.* around Sparta). The perioikic communities could be referred to as *perioikides poleis* (see refs. in Shipley (1997) 207–9) and the territory in which they were located was sometimes called the *perioikis* (*ibid.* 200, 216–17).¹

The army that earned such a spectacular reputation between C6 and C4 was not the Spartan army but the Lakedaimonian. Sparta exercised military power and political leadership while depending heavily upon the *perioikoi*, who made roughly the same numerical contribution to the army as themselves (*cf.* Hdt. 9.10.1, 11.3; 5,000 *Spartiatatai* and 5,000 select *perioikoi* for the Plataiai campaign in 479). The *perioikoi* seem to have conceded to Sparta the right to decide on peace and war, and to have regarded Sparta’s wars as their wars (Thuc. 4.8.1; Xen. *Hell.* 1.3.15, 6.5.21; Shipley (1997) 214–15). Sparta’s two kings were in fact “kings of the Lakedaimonians” (e.g. Alc. fr. 5.2.1.20, Page; Hdt. 6.58.2; Hampl (1937) 22). By C6l Sparta had a naval capability (Hdt. 4.54.1; Cartledge (1979) 142–43), even though it was one of the most important Greek city-states not situated on a coast;

doubtless those of the *perioikoi* who lived in coastal towns played a major role in the Lakedaimonian navy. For access to the sea, the Spartans relied upon the port of Gytheion (no. 333) (Diod. 11.84.6 (r456/5); Xen. *Hell.* 6.5.32; Ps.-Skylax 46; Cartledge (1979) 228), some 40 km to the south of Sparta, which was possibly a perioikic *polis* in Classical times.

The third main group in the population, and the one that arguably made the greatest numerical contribution to Lakedaimonian military success (Hdt. 9.10.1, 28.2; Hunt (1998) 33–39), was the helots or *heilotai*. Various explained in etymological terms as the descendants of the people of Helos or of captives (from the root of *εἶλον*), they were composed mainly of the subjugated population of the pre-existing towns and villages of Messenia, the south-west Peloponnese west of Mt. Taygetos, an area the Lakedaimonians had conquered in C8. The suppression of a Messenian rising in C7m was perhaps the point at which the Spartans set up the full-blown helot system. Helots were akin in some respects to the land-bound serfs of mediaeval Europe and early modern Russia, but were tied to the Spartan *polis* rather than to individual landowners. They were required to surrender part of their agricultural produce to support a non-productive Spartiate citizen body which devoted its energies, at least in the late Archaic and Classical periods, to military and (on a narrow front) cultural excellence. They were periodically terrorized by the Spartans. They were allegedly subject to periodic declarations of war by the Spartan ephors (Plut. *Lyc.* 28.7; MacDowell (1986) 37). Plutarch goes on to describe the *Krypteia*, a sort of initiation ritual whereby young Spartiate soldiers would randomly murder able-bodied helots (for a bloodless version see Pl. *Leg.* 633B–C). Yet they seem, like the *perioikoi*, to have identified Sparta’s wars as theirs (*supra*). At Plataia in 479 they heavily outnumbered their Spartan masters and the *perioikoi* (Hdt. 9.10.1, 28.2); yet they remained loyal, though there were periodic helot revolts before and after this date. Spartan and Lakedaimonian control of the Messenian helots was no doubt exercised partly through the several perioikic *poleis* west of Taygetos. The helots should not be thought of as slave gangs, estate slaves, or even state slaves,

¹ The areas covered include Sparta/Lakedaimon, the island of Kythera, and areas that were under Spartan control for prolonged periods, but excluding Messenia. Although much of Messenia was Lakedaimonian territory in the Classical period, I end Laconia before Kardamyle, since the latter was Messenian immediately before Augustus’ boundary changes (Paus. 3.26.7). In Pausanias’ day, Messenia began just north-west of Gerenia, at the Choirios valley (4.1.1).

The following abbreviations are used in addition to standard ones:

LS i, ii = W. G. Cavanagh *et al.*, *Continuity and Change in a Greek Rural Landscape: The Laconia Survey*, i (London, 2001); ii (London, 1996).

Distances are prefaced by “c.” only if an ancient author gives them as approximate. Serial numbers prefixed by “S” refer to the catalogue in Shipley (1997).

but as communities which were typically Greek in all respects (some may even have lived in nucleated settlements) but were prevented from organising politically: that is to say, into *poleis*.

Intermediate groups included “inferiors” (*ὑπομειόμενοι*), a term that occurs only once (Xen. *Hell.* 3.3.6) and may cover more than one kind of demoted Spartiate.² *Mothakes* (*μόθακες*, Phylarchos (*FGrHist* 81) fr. 43) were probably the sons of poor Spartiates who were sponsored through the training by wealthier men (rather than being, as some have supposed, the illegitimate children of Spartiates by helot women).³ The *trophimoi* (Xen. *Hell.* 5.3.9), sons of *xenoi* who had been admitted to the Spartan upbringing or *agoge* (*ἀγωγή*), would have been a similar group.⁴ From *mothakes* we should probably distinguish *mothones* (*μόθωνες*), who may have been sons of helot families who were attached to Spartan households and brought up as personal attendants to Spartans.⁵ *Neodamodeis* (*νεοδαμώδεις*) were probably full Spartiates who had been promoted from the helot ranks.⁶ Chattel slaves probably existed too.⁷ Most of the population of *Lakonike* (*infra*), however, was made up of Spartiatai, *perioikoi* and helots.

Beloch's estimate for the combined C51 population of Laconia and Messenia, 55,000 including 18,000 free men and their families, is probably of the right order; it makes Laconia–Messenia the least populous part of the Peloponnese, with one-tenth of its inhabitants.⁸ As archaeological survey progresses, it may be possible to improve on these estimates. R. Catling, for example, has estimated the population of the Laconia Survey area (c.70 km², not prime land but near Sparta) as 875 in late Archaic and early Classical times, falling to 705 in the late Classical period. From these figures, crude totals for mainland Laconia may be extrapolated of 45,000 and 32,000 respectively, or 64,000 and 45,000 if Thyreatis and Kythera (no. 336) are included.⁹

Λακεδαίμων, one of the two names of the *polis* of Sparta, also serves as a geographical term for the region around Sparta. Ps.-Skylax divides the central and southern Peloponnese into Elis (43), Arkadia (44), Messene (45), “Lakedaimon *ethnos*” (46) and Argos with the Argeia (49). Lakedaimon is the nearest part of Europe to Crete (47). His

Lakedaimon begins with Methone (no. 319) and (presumably Messenian) Asine (no. 313), reflecting the continued Spartan possession of southern Messenia after 369.¹⁰ It ends at Prasiai (no. 342), which is in Kynouria, and “Methana” (possibly a corruption of Anthana (no. 324), which was in Thyreatis, the northernmost part of Kynouria). He then mentions the inland *poleis*: Sparta (no. 345) “and many others” which he does not name.

In Homer, Lakedaimon is both a settlement (*Od.* 4.702, paired with Pylos; 13.414) and a region containing *Sparte* and eight other centres of population (*Il.* 2.581–85). Five of these (Pharis, Bryseiai, Augeiai—later Aigai/Aigiai—Amyklai and Helos) are in the Eurotas valley, three (Messe, Laas and Oitylos) in the Tainaron peninsula (modern Mani). In Herodotos' striking formulation, “there is in Lakedaimon the *polis* of Sparta” (*Hdt.* 7.234.2: *ἔστι ἐν τῇ Λακεδαίμονι Σπάρτη πόλις*); elsewhere, he makes “the whole of Lakedaimon” embrace the homelands of both *perioikoi* and *Spartiatai* (*Hdt.* 6.58.2). As a geographical term in Classical authors, Lakedaimon approximates to Sparta's core territory, but extends wider, embracing the middle Eurotas valley and possibly (in Homer) the Helos plain and Tainaron peninsula. It may thus have included the territories of perioikic *poleis* such as Geronthrai (no. 332) and Pellana (no. 341). Since Hom. *Il.* 2.581 describes Lakedaimon as “hollow” (*koile*), which certainly does not describe the situations of Messe, Las and Oitylos, the passage may perhaps be evidence of the extent of Spartan power even before the conquest of Messenia in c.735–710. Perhaps the Spartans also conquered the Malea peninsula¹¹ of south-eastern Laconia at this time; the foundation of Boia, for example, is attributed to a Heraklid (son of Herakles), suggesting an early origin (Paus. 3.22.11).

In Pherekydes (*FGrHist* 3) fr. 168 (*Ὀὔτυλος . . . ἡ πόλις ἣ ἐν τῇ Σπαρτῇ*) *Sparte* seems, as *Lakedaimon* often does, to denote the region and not the town of the Spartiates.

However, the wider Lakedaimonian territory formed by the *chorai* of Sparta and those of the perioikic towns, plus Messenia, was generally called *Lakonike* (*Λακωνική*, from *Λάκων*) rather than Lakedaimon (or Sparta).¹² Perioikic Kythera (no. 336), however, is repeatedly said by Thucydides

² MacDowell (1986) 42–46.

³ MacDowell (1986) 46–51; Hodkinson (2000) 355–56.

⁴ Hodkinson (2000) 342. *Agoge*: Xen. *Hell.* 5.3.9.

⁵ *Etym. Magn.* s.v. *μόθων*; Hodkinson (2000) 336.

⁶ Thuc. 5.34.1; MacDowell (1986) 39–42.

⁷ Myron (*FGrHist* 106) fr. 1 *apud* Ath. 271f; MacDowell (1986) 37–39.

⁸ Beloch (1886) 149; at p. 150 he cites Clinton's earlier estimates of c.99,000 including a free population of c.24,000, making Laconia–Messenia about one-sixth of the total population of the Peloponnese.

⁹ R. W. V. Catling (2002).

¹⁰ Müller, *GGM* I: 40–41, points out that the Spartan retention of Methone and Asine was facilitated by the fact that populations were not ethnic Messenians but descendants of exiled Argives and Naupaktians to whom the Lakedaimonians had granted a home.

¹¹ Ps.-Skylax 46. Also called Maleai (fem. pl., Polyb. 3.4.7.12 = Strabo 8.5.1). Also Maleia, Ephor. fr. 145 = Ps.-Skymnos 537.

¹² The name “Lakonika” (modern Greek *Λακωνία*) has no justification beyond the Imperial Latin form *Laconia* (e.g. Plin. *HN* 4.5.16).

to “lie opposite” *Lakonike* (4.53.2, 54.3; cf. 7.26.2), suggesting that *Lakonike* may be restricted to the mainland. It occurs as a toponym first in Herodotos (1.69.4, cf. 6.58.1; but cf. *Hymn. Hom. Ap.* 410: *Λακωνίδα γαίαν*); later as an adjective with *chora* (Xen. *Hell.* 6.2.9). Damaratos (Hdt. 7.235.1) uses *τῆν Λάκωναν χώραν*, by which Herodotos perhaps intends to convey the Spartan habit of speech or simply the change of voice.

Since *Lakonike* denoted the total territory controlled by Sparta and the Lakedaïmonians, its extent varied through time. In Classical sources, it includes coastal territories (Thuc. 3.7.2; cf. 8.6.5) as well as places in the Spartan *chora* proper such as Therapnai (Isoc. *Hel.* 63.4) and Thornax (Hdt. 1.69.4). Pellana (no. 341) and Geronthrai (no. 332), both within easy reach of Sparta, were probably dependent *poleis* in the Archaic and Classical periods, and presumably within *Lakonike*. Writers include Messenia within *Lakonike*, since the Spartans conquered it in C8l (southern Messenia is included even after the rest was lost in 369): west of Ταΰγετος, *Lakonike* includes Kardamyle (no. 315) (Hdt. 8.73.2), Methone (no. 319) (Thuc. 2.25.1), Messenian Asine (no. 313) (in *τῆς Λακωνίης*, Xen. *Hell.* 7.1.25), and even the Sphagiai islands off the west coast (Xen. *Hell.* 6.2.31). By C8l or earlier Sparta controlled the peninsulas of Tainaron and Malea; in Classical sources *Lakonike* explicitly includes Tainaron (Thuc. 7.19.4), Epidaurus Limeria (no. 329) (Thuc. 7.26.2), and Las (no. 337) (Thuc. 8.91.2). In C6 or earlier Sparta gained Kynouria, the eastern seaboard beyond the crest of Parnon (a mountain named only at Paus. 2.38.7).¹³ Prasiai in Kynouria was now part of *Lakonike* (Thuc. 2.56.6). The northern part of Kynouria, Thyreatis on the borders of Argeia and *Lakonike* (Thuc. 2.27.2, 4.56.2), was captured from the Argives c.545 and thereafter administered by the Lakedaïmonians (Hdt. 1.82.2). *Lakonike* was now bounded on the north-east by Argive territory. In the area containing the headwaters of the two great rivers of the Peloponnese, Eurotas and Alpheios, the frontier was with Arkadia, specifically Tegea (no. 297) (cf. Hdt. 8.124.3). The borderland of Skiritis was in *Lakonike* (Thuc. 5.3.3); it contained the settlement of Oios (no. 339) or Oion (Xen. *Hell.* 6.5.24). Nearby Karyai may have been placed in *Lakonike* by Theopomp. fr. 238 (*apud* Steph. Byz. 362.5). Closer to Sparta, Sellasia is “close to *Lakonike*” in the MSS of Xen. *Hell.* 2.2.13 (but see Sellasia (no. 343)); it was, rather, *part of Lakonike* from the time of its foundation in C6s. The Lakedaïmonians also pos-

sessed Aigyitis, in the hill-land bordering the western Arkadian plain; this area, too, may have contained dependent *poleis* (Paus. 8.27.4).¹⁴

After Epameinondas’ invasions of 370/69 and 369, much of Messenia was confiscated and given to the new foundation of Messene, while in the north-west Aigyitis and part or all of Skiritis were absorbed into the new Arkadian capital of Megalopolis (no. 282). In 338/7 Philip II confiscated the remaining northern lands as well as Thyreatis. After the battle of Sellasia (222) the eastern seaboard and several inland towns were detached from Sparta, probably for the first time. Finally, the Roman general Flamininus removed the southern *perioikoi* in 195. The Dentheliatis continued to alternate between Spartan and Messenian control from C2 until well into the Roman period, but after 195 other changes were modest.¹⁵

Excluding geographical items such as capes, mountains and rivers, and names of cult places consisting simply of the name of a deity and a term such as “sanctuary” or “temple”, our sources purport to transmit the names of eighty-four places in Laconia (including the islands of Kythera and Aigilia) from the Archaic to Roman periods.

First it is necessary to dispose of four names that are probably erroneous, spurious, invented or corrupt:

- (S116) Lerne (from Ptol. *Geog.* 3.14.43, misplaced from the Argolid)
- (S117) †Litai (Apollodoros *apud* Steph. Byz. 418.15) = Aigiai?
- (S118) Oinoë (Ptol. *Geog.* 3.14.43) = Oinous (no. 338)? Oios (no. 339)?
- (S120) †Thea (Philoch. *apud* Steph. Byz. 308.4) = Messenian Aithaia (no. 312)?

A further five alleged settlements or *poleis* are recorded in the surviving epitome of Stephanos of Byzantion without a source being named, and there is no other evidence for them:

- (S127) Aphidna (Steph. Byz. 149.16–17)
- (S112) †Ataia (Steph. Byz. 141.10) = Aigiai?
- (S113) Dyrhachion (Steph. Byz. 244.4–5)
- (S114) Etaieis (Steph. Byz. 283.6–7), related to Etis (no. 330)?
- (S52) Tenos (Steph. Byz. 622.2–3), unless *IG* v.1 931.12 (*SEG* 13 259+) refers to this Tenos

¹⁴ Lepreon, however, is between *Lakonike* and *Eleia* (Thuc. 5.34) and not in *Lakonike*.

¹⁵ For details of Spartan territory after 369, see Shipley (2000) esp. summary at 386–87.

¹³ Cf. Cartledge (1979) 15.

In nine cases among the seventy-five valid place-names that remain, there is no firm basis in the source evidence for regarding the place as a settlement: (S119) Pephnos (modern Platsa?) is an islet with cult activity but no probable settlement; (S130) Harpleia (Xirokambi?) and (S106) Skiritis are geographical areas, though the latter may have had some sort of political organisation (see *infra*); (S104) Onogloi (spelling uncertain) and (S107) Stathmoi,¹⁶ both inferred from adjectives in Alkman (fr. 92, Page) but lacking confirmation, may also be districts; they have no known locations; (S125) Aigila (Kionia?), (S129) Epidelion (near Voutama?), and (S108) Therapne (Menelaia) are probably exclusively cult places—the last despite the statements of Pliny and late authors that it was a *polis* (Plin. *HN* 4.5.16; cf. Shipley (1997) 264–65); finally, (S105) Phoinikous, on Kythera, may be only a harbour (possibly Avlemon[as]).¹⁷

Of the remaining sixty-six possible settlements for which names are plausibly preserved, two have no plausible location or even an approximate locality: (S110) Aitolia (if real) and (S13) Chen (no. 328) if real, though possibly it was near Etis (no. 330).

Eighteen named settlements have suggested locations that are disputed or highly uncertain, though we know the general area in which they lay:

- (S126) Alesiai (Tseramio?)¹⁸
- (S83) Aphroditia (no. 325) (east of Neapoli Voion?)
- (S111) Astron (Astros?)
- (S40) Biadina (eastern side of Laconian gulf)
- (S64) Bryseiai (Ag. Vasileios?)
- (S84) Etis (no. 330) (area of Neapoli Voion)
- (S115) Genesion (north-eastern Laconia, possibly Argive, no proposed site)
- (S65) Helos (one of several sites)
- (S43) Hypsoi (outer Mani, no proposed site)
- (S44) Iasos (headwaters of Evrotas)
- (S103) Karystos (area of Dyrrachi or upper Xerilas valley)
- (S47) Leukai (near Molaoi?)
- (S66) Messe (Cape Tigani?)
- (S15) Oinous (no. 338) (upper Kelephina valley)
- (S67) Pharis (Vapheio?)
- (S99) Pleiai/Palaia (Apidia?)
- (S100) Selinous (Ag. Athanasios Nerotriviou?)
- (S8) Side (no. 344) (east of Neapolis Voion)

Another eight are placed with confidence in particular areas, though their identification with actual sites is more speculative or debatable:

- (S1) Anthana (no. 324) (Tsiorovos? Nisi Ag. Andrea? Nisi Paraliou Astrous?)
- (S128) Arainos (Ageranos)
- (S29) Asine (Laconian) (Skoutari?)
- (S30) Eua (no. 331) (Elliniko? Loukou?)
- (S96) Glympeis (Glyppia? Kosmas?)
- (S97) Krokeai (one of various sites near Krokees)
- (S98) Neris (Kourmeki? Tsiorovos?)
- (S10) Thyrea (no. 346) (Nisi Paraliou Astrous? Nisi Ag. Andrea?)

A further twenty-three are placed with reasonable certainty at or near known settlement sites:

- (S63) Aigaii/Aigiai (Palaiochora Aigion; see *infra*)
- (S12) Aigys (no. 323) (Tsamaina Kamaras)
- (S37) Akriai (Kokkinia; see *infra*)
- (S39) Asopos (Plytra; see Kyparissia)
- (S22) Belbina (no. 326) (one of various sites near Chelmos)
- (S42) Hippola (Kipoula)
- (S24) Karyai (Analipsi Vourvouras? see *infra*)
- (S31) Kotyrtta (Kastelli Daimonias)
- (S25) Kromnos (no. 334) (Martiakos Paradision)
- (S46) Kyparissia (Boza and Kastelli Goula)
- (S14) Kyphanta (no. 335) (Kyparissi)
- (S26) Leuktra (north-western Laconia, Leondari?)
- (S27) Malea (north-western Laconia, Mali or Maliokambos Voutsara)
- (S49) Marios (one of various sites near Mari)
- (S131) Messapeai (Analipsi Anthchoriou; see *infra*)¹⁹
- (S16) Oios (no. 339) (Ai-Gianni Kerasias)
- (S17) Pellana (no. 341) (one of various sites at or near Pellana)
- (S50) Polichna (Poulithra)
- (S32) Psamathous (Porto Kagio? see *infra*)
- (S28) Sellasia (no. 343) (Palaioougoulas)
- (S53) Teuthrone (Skopas Kotrona)
- (S134) Thornax (Geladari? see *infra*)²⁰
- (S135) Trinasos (Trinisa; see *infra*)²¹

¹⁹ Messapeai is identified as a settlement rather than purely a cult site on the basis of archaeological evidence (*LS* ii. 293, GGI08 with refs.).

²⁰ Thornax is identified as a settlement rather than purely a cult site on the basis of archaeological evidence (*LS* ii. 355–57, H45).

²¹ Trinasos was unlike a *polis* in Pausanias' judgement (3.22.3): a *phourion* rather than a *polis*; Ptol. *Geog.* 3.14.32: an *epineion*; however, it may have been a settlement as well as a guard-post: *LS* ii. 296, J1126 with ref.; Doukas (1922) 91–93.

¹⁶ Cartledge (1979) 172 gives the name as Stathmos.

¹⁷ Cartledge (1979) 283, following Huxley (1972) 37, suggests the bay of Avlemon/Avlemonas.

¹⁸ Identified as a settlement from archaeological evidence.

Finally, fifteen names are attached with certainty to known archaeological settlement remains:

- Aigilia Island
- (S2) Boia (no. 327) (Neapoli Voion)
- (S3) Epidavros Limera (no. 329) (Epidavros Limira)
- (S41) Geronthrai (no. 332) (Geraki)
- (S23) Gytheion (no. 333) (Gytheio)
- (S45) Kainepolis (Kyparissos; see *infra* s.v. Tainaron)
- (S4) Kythera (no. 336) (Palaiokastro, Kythira)
- (S5) Las (no. 337) (Passava)
- (S6) Oitylos (no. 340) (Oitylo)
- (S7) Prasiai (no. 342) (Leonidi)
- (S51) Pyrrhichos (Pyrrichos; Paus. 3.21.7)
- Sparta (no. 345) (Sparti)
- (S9) Tainaron (Sternes)
- (S101) Tyros (Kastri Tyrou)
- (S54) Zarax (Ierakas)

As a footnote to this list, we may note that Homer names ten places in Laconia. Four that presumably belonged to real places at some early date cannot be securely related to remains on the ground: Bryse(i)ai, Helos, Messe and Pharis. Another four are securely tied to actual Archaic to Roman sites: Augeiai (assuming it is Aigai), Las, Oitylos and Sparte (*Il* 2.584), to which two not listed above can be added: Lakedaimon (as the name of a settlement) and Amyklai (*Il* 2.584), one of the five constituent villages of Classical Sparta (for all five of which, see Sparta (no. 345)).

The sixty-six settlements (or possible settlements (i.e. excluding the nine non-valid names and nine non-settlement toponyms) can now be classified for the purposes of the investigation into Archaic and Classical *poleis*.

The main Inventory below describes twenty-four settlements, covering every place in Laconia (including Kythera and the borderlands) that, in the Archaic or Classical period, was certainly a *polis* (type A, nine places), probably a *polis* (type B, five places), or possibly a *polis* (type C, ten places).

Ten places were settlements, and in some cases *poleis*, at some period other than Archaic or Classical, and are not described in detail:

- (S128) Arainos (Roman place)
- (S39) Asopos (middle Hellenistic and Roman; see *infra* s.v. Kyparissia)
- (S40) Biadina (Roman *polis*)
- (S115) Genesion/Genese (Roman place)
- (S43) Hypsoi (Roman, possibly Hellenistic place)
- (S45) Kainepolis (Eleutherolaconian *polis*; see under *infra* s.v. Tainaron)

- (S47) Leukai (possible Hellenistic *polis*)
- (S66) Messe (early place, Roman *polis*)
- (S67) Pharis (early place)²²
- (S51) Pyrrhichos (Eleutherolaconian *polis*)

Before the Inventory, the remaining thirty-two named settlements that had, or may have had, an Archaic or Classical existence, but were not *poleis*, are described briefly in alphabetical order, with the addition of a non-settlement, Skiritis, the subject of a special discussion at the end of this section.

1. Pre-Hellenistic Settlements not Attested as Poleis

Aigiai, Aigaiai (*Αἴγαιαι, Αἰγαῖαι*) (S63; cf. S112, S117). Possibly a settlement; Strabo 8.5.3 identifies it with Homer's Augeiai (cf. *Il* 2.583); Paus. 3.21.5 (*πόρισμα*), 3.21.7; etc. Located at Palaiochora Aigion near Aigies (Waterhouse and Hope Simpson (1961) 114; *LSii*. 296, 11124; followed by *Barr.*). Archaic to Roman cult site now excavated and identified as sanctuary of Artemis (Bonias (1998)). *Barr.* AC.

Aigilia (*Αἰγιλία*)/**Ogylos** (*Ὠγυλος*) Steph. Byz. 41.5–6 refers to an island named *Αἴγυλα* (*Αἰγίλιος*) and situated *μεταξὺ Κρήτης καὶ Πελοποννήσου* (cf. Ps.-Skylax 113; Plut. *Cleom.* 31(52).2, 32(53).1); at 706.3–4, he refers to an island *μεταξὺ Πελοποννήσου καὶ Κρήτης* which is called *Ὠγυλος* (*Ὠγύλιος*); these two names presumably both refer to the island of Antikythera/Liious (*RE* xvii.2. 2079). This small island was the site of a C5 fortification (Spartan or Athenian?) at Palaiokastro (cf. *Barr.* Map 57); it may have been the scene of military action during the expedition of Konon and Pharnabazos against Kythera (no. 336) (*Xen. Hell.* 4.8.7–8; Foss (1974–75) *ad* no. 10). In C4f, the fort was enlarged to enclose c.30 ha (Waterhouse and Simpson (1961) 160–63), perhaps by Konon (Foss (1974–75) 42; Cartledge (1979) 283). There is no explicit evidence to link the island with Sparta (no. 345). It may possibly have been a *polis*, though the evidence is exiguous: undated sling bullets may preserve abbreviated forms of the ethnic *Αἰγίλιος* (*IG* v.1 951; cf. Foss (1974–75) no. 9); *IG* v.1 948 (C4), a dedication to *Ἀπόλλων Αἰγυλιεύς* by two foreigners. No date in *Barr.*, but C is attested by archaeology and epigraphy (*supra*).

²² Jeffery (1976) 114 suggests that since Pharis and Geronthrai were conquered at the same time (Paus. 3.2.6), they may both have become perioikic. The difference between them is that Paus. 3.20.3 speaks of Pharis as a former *polis*.

Aitolia (*Αἰτωλία*) (S110) Doubtful Classical *polis*. Androtion (*FGrHist* 324) fr. 63 *apud* Steph. Byz. 55.13–15 apparently catalogued Aitolia among Laconian *poleis*. The rather precise citation by Stephanos suggests a genuine quotation, but the implausible name and the absence of other evidence leave this an uncertain case. Possibly the name is a corruption of another, genuine name. No date in *Barr.* but Androtion (*supra*) attests C.

Akriai (*Ἀκριαί*) (S37) Probable Archaic and Classical cult site and/or settlement; later a *polis* (e.g. *IG* v.1 1189 (c.C2); *IG* vii 415, late Hellenistic or early Roman; name restored in 417; etc.; cf. Polyb. 5.19.8). Located at Kokkinia (S37) (followed by *Barr.*), a large middle Geometric to mediaeval settlement, but in Archaic and Classical times possibly only a cult site (temple of Mother of Gods; *LS* ii. 308–9, MM219). *Barr.* gives only HRL, but see *supra*.

Alesiai (*Ἀλεσῖαι*) (S126) Possible Classical settlement; Paus. 3.20.2 (*χωρίον*). Possibly at Tseramio Ag. Ioanni (extensive Classical site, probably also Hellenistic or Roman; *LS* ii. 289, GG85; S126, followed by *Barr.* (without indication of date)).

Asine (*Ἀσίνη*) (S29) Thuc. 4.54.4; Xen. *Hell.* 7.1.25 (?);²³ Polyb. 5.19.5; Strabo 8.5.2. Classical settlement, possibly at Skoutari (*LS* ii. 301, LL162; S29 followed by *Barr.*). *Barr.* AC.

Astron (*Ἄστρον*) (S111) Ptol. *Geog.* 3.14.33 (implicit *πόλις*). Possible Archaic and Classical settlement, possibly at Nisi Paraliou Astrous (fortified Bronze Age and Protogeometric to Roman settlement with acropolis; *LS* ii. 277, AA6; Phaklaris (1990) 56–78; Goester (1993) 91–93, 99; S111, followed by *Barr.* (C)); but see Anthana (no. 324) and Thyrea (no. 346).

Bryseai (*Βρυσεῖαι*) (S64) Early and possibly Classical settlement; e.g. Hom. *Il.* 2.583; Paus. 3.20.3 (*χωρίον*, former *πόλις*), 3.20.4. Possibly at Ag. Vasileios (prehistoric, Classical–Hellenistic site; Waterhouse and Hope Simpson (1960) 80–81; *LS* ii. 290, 291–92, GG87, GG339, GG101 respectively; treated as unlocated by *Barr.* without indication of date).

Glyppia, Glympeis (*Γλυππία, Γλυμπεῖς*) (S96) Possible Classical settlement and Hellenistic *kome* and/or *polis*; e.g. Polyb. 4.36.5 (*Γλυμπεῖς*, a seeming city-ethnic possibly implying *polis* status); Paus. 3.22.8 (*κώμη*). Probably at Glyppia (formerly Lymbiada, Ta Lymbia); C4 to Roman finds, mainly post-C4; *LS* ii. 281–82, BB31; Phaklaris (1990)

153–57; Shipley (2000) 379). *Barr.*, though citing S96, dates it H; but see *supra*.

Helos (*Ἑλος*) (S65) Hom. *Il.* 2.584 (*πτολίεθρον*); Hellan. fr. 188; Thuc. 4.54.4; Xen. *Hell.* 6.5.32; Theopomp. fr. 13; Strabo 8.5.2 (*κώμη*, former *πόλις*), 8.3.12; Paus. 3.2.7, 20.6, 22.3. Early settlement, perhaps revived as a *kome* and/or *polis* in late Hellenistic or Roman times; in C4e a site of festivals (*IG* v.1 213). Possibly at Ag. Stephanos, a possible Classical or Hellenistic settlement (*LS* ii. 299, κκ141; S65, followed by *Barr.* (A?)).

Hippola (*Ἰππόλα*) (S42) Classical settlement. Paus. 3.25.9 (*πόλις*); *IG* v.1 1336 (*πόλις*). The ethnic, *Ἰππολαῖος*, occurs in e.g. *IG* v.1 1312 (*SEG* 11 945 (Hell.)); Steph. Byz. 336.2 gives *Ἰππολαίτης*, which may be invented. From the distances given by Pausanias, Hippola is probably a Geometric to Hellenistic site near Kipoula, which preserves the name (*LS* ii. 304, LL188). Ruined in Pausanias' day (3.25.9), it may by then have relocated c.1.4 km south to Kounos (*LS* ii. 304, LL193). *Barr.* AC.

Iasos (*Ἴασος*) (S44) Paus. 7.13.7 (*πόλισμα* (rC2)), 8.2.7 (r371, but text uncertain; cf. S44). Possible Archaic and Classical settlement, possibly at DD45, Analipsi Vourvouras, but see Karyai (*infra*); Iasos was probably nearer Sparta (no. 345) (Pikoulas (1987) 137–39; *LS* ii. 284). *Barr.* tentatively suggests that Iasos be equated with Karyai.

Karyai (*Καρύαι*) (S24) Thuc. 5.55.3; Xen. *Hell.* 6.5.25, 7.1.28; Theopomp. fr. 238; Paus. 3.10.7 (*χωρίον*), 4.16.9. Archaic and Classical settlement, whose destruction for medism gave rise to Caryatid statues (Vitruv. 1.1.5; Huxley (1967)). Probably at Analipsi (Geometric to Hellenistic acropolis, Classical houses, pottery including C5m–C2m; *LS* ii. 284, DD45; Pikoulas (1987) 137–39; *Barr.*).²⁴

Karystos (*Κάρυστος*) (S103) Strabo 10.1.6 (*τόπος* of Aigys), citing Alkman (cf. fr. 92d, Page, *apud* Ath. 31D) for wine from Karystos. Possible Archaic settlement, possibly near Dyrrachi or the upper Xerilas valley (Pikoulas (1988a) 239, no. II); *Barr.*, citing S103, treats it as unlocated, with no indication of date, though Alkman (*supra*) attests to A.

Kotyrtia (*Κοτύρτια*) (S31) Classical settlement. Thuc. 4.56.1; *IG* v.1 951.10–11 (C2; *polis*). The ethnic, *Κοτυρτάτης*, occurs in e.g. *IG* v.1 961.8–9, 11 (post-195); Steph. Byz. 379.14 gives *Κοτυρταῖος*, which may be invented. Probably at Kastelli Daimonias, a hill with ancient foundations and Geometric, Classical to Hellenistic, and possible Roman

²³ Cartledge (1979) 300 gives reasons for seeing Xen. *Hell.* 7.1.25 as a reference to Messenian Asine, despite τῆς Λακαϊνῆς.

²⁴ “Karyatis” as the name of a district is an invention of modern scholarship.

finds (*LS* ii. 311, NN239). Public buildings are evidenced by C5j terracotta reliefs; there are architectural fragments, cultic and cemetery material, and evidence of cults of Artemis and Asklepios (e.g. *AR* 2 (1955) 15). *Barr.* AC.

Krokeai (*Κροκέαι*) (S97) Paus. 3.21.4 (*κώμη* with quarry, cf. 2.3.5), 3.12.5; Steph. Byz. 385.13. Possible Archaic and Classical settlement and later *kome*, near the source of *lapis lacedaemonius*; probably at Krikiles (Archaic to Roman?) rather than Krokées (formerly Levetsova); Protogeometric finds nearby (*LS* ii. 295, J1120; S97, followed by *Barr.* (AC)).

Kyparissia (*Κυπαρισσία*) (S46) Classical cult site and settlement. Strabo 8.5.2 (*polis*). Probably the same as the ruined “*polis* of the Parakyparissian Achaians” (i.e. Achaeans beside Kyparissia), of Paus. 8.22.9. (Possible attestations of an ethnic—e.g. *IG* IV².1 390; *SEG* 33 290 (c.90–80); Grunauer-von Hoerschelmann (1978) 60, 162—are inconclusive, or may refer to places with similar names. Cf. Kennell (1999) 195.) Very probably at Cape Kastelli, the evident location of the sanctuary of Athena Kyparissia (Paus. 3.22.9), where ancient remains around the foot of the hill may be at the site of Pausanias’ ruins and Strabo’s Kyparissia. It appears to have moved less than 2 km east–south-east to *Asopos* (e.g. *IG* v.1 962.7 (Hell.); Strabo 8.5.2; modern Plytra, mediaeval Asopolis; see Kourinou and Pikoulas (1989)), which had the Athena sanctuary on its acropolis. Since the inhabitants of Kyparissia were known as Achaians, Kyparissia may have been believed to be a pre-Dorian foundation like Geronthrai. The Hyperteleton, the perioikic sanctuary of Apollo at modern Phoiniki, was in the territory of *Asopos* (Paus. 3.22.10), so will have been in the territory of Kyparissia earlier. *Barr.* C.

Leuktra, Leuktron (*Λεύκτρα, Λεύκτρον*) (S26) Thuc. 5.54.1; Xen. *Hell.* 6.5.24. Classical settlement in north-western Laconia. (Not to be confused with Messenian Leuktron or Leuktra.) Called a *polis* only by Paus. 8.27.4 (r371). Probably Leondari, which partly preserves the name (Hellenistic architectural fragments; Archaic, Classical but mainly Hellenistic; Roman sherds; fortified acropolis; possible Archaic cemetery; Pikoulas (1988a) 131–35, no. 92). Paus. 8.27.4, if we accept the Niese–Pikoulas emendation, includes it among the former Aigytian and/or Skiritan *poleis* taken from Sparta and synoecised into Megalopolis (no. 282) (it was in Aigytis rather than Skiritis; for its Megalopolitan affiliation see Plut. *Cleom.* 6.3 (27.3); *Pelop.* 20.7). It may have been settled by Spartans and/or other Lakedaemonians in the late Archaic period. *Barr.* AC.

Malea, Melea (*Μηλέα, Μαλέα*, presumably the original Doric form) (S27) Xen. *Hell.* 7.1.28; Paus. 8.27.4. Classical settlement in north-west Laconia. (Not to be confused with Cape Malea in the south-east.) Probably Mali (also called Maliokambos) at Voutsaras (formerly Zaimi; Pikoulas (1988a) 129–31 no. 91), which preserves the name. Called a *polis* only by Paus. 8.27.4 (r371), in the same context as Leuktra; it certainly belonged to Aigytis. Its territory is ἡ *Μαλεάτις* (Xen. *Hell.* 6.5.24). The large settlement (15 ha) has Archaic and early Classical tiles and pottery, a C5e inscribed grave stele, walls, architectural fragments including a possible stoa, and probably a cemetery (Pikoulas (1988a) 130, (1985) 85–86 no. 1; *SEG* 35 357). The evidence is consistent with abandonment or relocation around the time of the founding of Megalopolis (no. 282). *Barr.* AC.

Marios (*Μαριός*) (S49) Classical settlement. Paus. 3.21.7 (*polis*), 3.22.8 (*polisma*). Modern Mari is consistent with Pausanias’ distances; there are several possible sites nearby (*LS* ii. 286, FF263, 287, 262 and 66). The archaeological evidence suggests an Archaic and Classical settlement, and Paus. 3.22.8 mentions an “old” sanctuary of all the gods (as well as another of Artemis). *Barr.* gives no date.

Messapeai (*Μεσσαπέαι*) (S131) Theopomp. fr. 245 *apud* Steph. Byz. 447.8; Paus. 3.20.3 (*temenos* of Zeus Messapeus; cf. *SEG* 26 460, 39 373). Archaic to Hellenistic settlement and cult site, at Analipsi Anthochoriou (prehistoric, Protogeometric to Hellenistic settlement and cult site; *LS* ii. 293, GG108). For another shrine of Zeus Messapeus, see under Sparta (no. 345). Treated as unlocated by *Barr.* (C), citing S131.

Neris (*Νηρίς*) (S98) Possible Classical town site and later *kome*, e.g. Paus. 2.38.6 (*κώμη*). Possibly at Kourmeki Kato Dolianas (late Hellenistic to late Roman unfortified site; *LS* II: 277, AA3; Phaklaris (1990) 94–96; *Barr.*, following S98, and adding a question mark), alternatively (or earlier?) at Tsirovos (C5–late Roman fortified town site with C5j/C4e walls; *LS* ii. 276, AA1, but see Anthana (no. 324)).

Pleiai, Palaia (*Πλείαι, Παλαιά*) (S99) Possible Archaic and Classical settlement and later *kome*: Livy 25.27.2 (*Pleiae*); Paus. 3.22.6 (*Παλαιά, κώμη*); *IG* v.1 602 (early third century AD). Possibly at Apidea (prehistoric, Protogeometric to Hellenistic, Roman (?), and Byzantine site; *LS* ii. 307–8, MM216; *Barr.* (AC), following S99). Possibly two separate settlements, however.

Polichna (*Πολίχνα*) (S50) Classical settlement. Polyb. 4.36.5 (r220). Probably Poulithra, approximately preserving

the name (fortification, Classical pottery, Hellenistic tombs: *LS* ii. 282, BB35; Phaklaris (1990) 141–42). The name may imply *polis* status, but it may be too close to Prasiai to be a separate *polis*. *Barr.* H, but see *supra*.

Psamathous (*Ψαμαθοῦς*) (S32) Ps.-Skylax 46 (*λιμήν*); Strabo 8.5.2 (*πόλις*); Paus. 3.25.4. Classical harbour and possibly settlement, possibly near Porto Kagio (Hellenistic, post-Roman; *LS* ii. 306, LL209; *Barr.* following S32, but without indication of date, though Ps.-Skylax 46 attests C).

Selinous (*Σελινοῦς*) (S100) Paus. 3.22.8 (*κώμη*). Possible Classical settlement and later *kome*, possibly at Ag. Athanasios Nerotriviou (ashlar walls, BG pottery; *LS* ii. 286, FF98; same location as *Barr.*).

Skiritis (*Σκιριτίς*) See at end of this list.

Tainaron (*Ταίναρον*) (S9) Classical sanctuary with probable Classical settlement and possible *polis*; also a geographical location (Hdt. 7.168.2; Thuc. 7.19.4), specifically the cape of that name (Strabo 8.4.1) with its famous sanctuary of Poseidon (e.g. Paus. 3.25.4–8). Pherekydes (*FGrHist* 3, fr. 39 = schol. Ap. Rhod. 1.102) calls it a *polis* (named after its founder, Tainaros), a cape and a sanctuary, but it is uncertain whether *polis* here stems from Pherekydes or the scholiast. *Ταίναρος*, ἦ, in Pind. *Pyth.* 4.43–44 (462), may refer to the cape or the cult site. Tainaros is later the official name of the “New City”, *Kainepolis* (neatly rendered “New Taenarum” by Cartledge and Spawforth (1989) 174, 175; named e.g. in *IG* v.1 1249 = *SEG* 23 200 (second to third century AD; cf. Paus. 3.21.7, Eleutherolaconian *polis*), which probably came into existence after Gytheion (no. 333) became independent of Sparta (no. 345) c.195 and before C. Iulius Lakon was honoured there (*IG* v.1 1243, found near *Kainepolis* (early first century AD)). *Ταινάριος* is attested as an ethnic from Late Hellenistic times (e.g. *IG* v.1 210, 211–12 = *SEG* 11 648–49 (C1 or earlier); possibly in *IG* v.1 1271 (Hell.), but may already refer to *Kainepolis* (as in *IG* v.1 1244 = *SEG* 23 199 (198–211 AD)). The Classical settlement of Tainaron probably lay beside the sanctuary of Poseidon at Ag. Asomatoi (also called Kionia) at Sternes on the east side of the cape (*LS* ii. 306, LL210; cf. ii. 305, LL201; Moschou (1975); Moskou (1976–78)). Tainaron was the site of a mercenary hiring fair at least from the late 330s (Cartledge and Spawforth (1989) 21). *Barr.* AC.

Teuthrone (*Τευθρώνη*) (S53) Classical settlement. Paus. 3.21.7 (*polis*). The ethnic is *Τευθρώνιος* (*IG* v.2 538 (C1/first century AD)). Its acropolis was very probably Paliokastro

Kolokythias (*LS* ii. 306, LL204; C4e fortification), with the main settlement probably at Skopas Kotrona (large site finds including Classical to Roman, mainly late Classical and Roman; *LS* ii. 305–6, LL203). Paliokastro may have formed part of a system of coastal defence during the Corinthian War (Moschou and Moschos (1981)). The story of an Athenian *oikistes* named Teuthras (Paus. 3.25.4) could be classical. *Barr.* C.

Thornax (*Θόρναξ*) (S134) Archaic and Classical settlement with important cult of Apollo, not *polis*; e.g. Paus. 3.10.8, 11.1. Probably Laconia Survey site H45, Geladari (pre-historic and Late Archaic to Ottoman settlement and cult site, *LS* ii. 355–57; *Barr.*, tentatively and citing S134). So close to Sparta, it cannot have had a corporate existence unless it was part of the *obe* of Pitana (see Sparta (no. 345)); it may have been simply a cult site.

Trinasos (*Τρίνασός*) (S135) Paus. 3.22.3 (*φρούριον* rather than *πόλις*); Ptol. *Geog.* 3.14.32 (*Τρίνασος*, *ἐπίγειον*). Possible Archaic and Classical settlement, not *polis*; probably at Trinisa, but there are no clear remains (*LS* ii. 296, JJ126; *Barr.* (C) following S135).

Tyros (*Τύρος*) (S101) Classical sanctuary and probable settlement. *Τύρος* (Steph. Byz. 643.5, no site-classification). The ethnic is attested in the early Hellenistic period (*Τυρίται*, *Syll.*³ 407 = *F.Delphes* III.1 68 (275)). If Tyros was a *polis*, its *chora* would have included the major cult site of Apollo Tyritas; the cult of Apollo Tyritas is attested earlier by votives, e.g. *IG* v.1 1517 (*SEG* 11 893; late Archaic?). Cf. Hansen (1995a) 68. The alternative restorations of an ethnic, *Τ[υρίτης]* and *Ζ[αράχιος]*, on the same block as *Syll.*³ 407 (part of the Aigos potamoi monument) would be strong evidence that one of these places was a perioikic *polis* in C5l (cf. ML 95 j–k). Admittedly, Tyros is a *κώμη Λακεδαιμονίων* in *Syll.*³ 407, but being a *kome* in C3e is not incompatible with being a *polis* then or earlier. The site is very probably the acropolis of Kastri Tyrou (formerly Lygarias; late Classical to late Roman; Roman inscriptions, coins; fortification wall including polygonal masonry; *LS* ii. 281, BB28; Phaklaris (1990) 142–45), near the cult site of Apollo Tyritas (C7–C4l; C6 temple, votives; *LS* ii. 281, BB29; Phaklaris (1990) 173–78). *Barr.* C.

Zarax (*Ζάραξ*) (S54) Possible Classical settlement. Polyb. 4.36.5 (r219); Paus. 3.21.7 (*polis*). The ethnic is *Ζάραξ* (sic), *SEG* 17 143 (with 18 146; Argos, probably C3l), also the earliest attestation of the place; later *Ζαράχιος* (*IG* v.1 931 (c.C2m)). A possible restoration of the Aigos potamoi monument (cf. s.v. Tyros) would make Zarax a probable

perioikic *polis* in C5]. The acropolis at Ierakas (formerly Limin Ierakos) is consistent with Pausanias' distances; its name partly preserves the ancient name. It is a fortified hill with Late Classical or Hellenistic masonry (LSii. 310, NN231). For Paus. 3.24.1 it has a good harbour, but by 272 had declined more than any other future Eleutherolaconian *polis*; he clearly assumes it existed much earlier. It repulsed Lykourgos in 219 (Polyb. 4.36.5; Cartledge and Spawforth (1989) 34 suggest the fortifications postdate 274). Paus. 3.24.1 refers to a temple of Apollo, but it need not be older than 300. According to Paus. 1.38.4 the *polis* was named after the Lakedaimonian hero Zarex, who had a shrine on the Sacred Way west of Athens; this could be a Classical myth, though it recalls possible anti-Spartan inventions like the Athenian origin of Tyrtaios (Figueira (1999) 230–31). *Barr. C.*

The *Skiritis* (Σκίριτις) (S106) deserves a special word.²⁵ For the name of this upland territory between Sparta and Tegea (no. 297), see e.g. Thuc. 5.33.1, Xen. *Hell.* 6.5.24, *Cyr.* 4.2.1; for its extent (c.100 km²), see Pikoulas (1987) 127–34. The ethnic is Σκίριτης (e.g. Thuc. 5.67.1). The *Skiritai* were a special corps within the Lakedaimonian army, having the privilege of occupying the left wing while the Spartans held the right. In view of their geographical location, they may have been Arkadians by descent, as they asserted in C2m (*Syll.*³ 665 = *IvO* 47; cf. Pikoulas (1987) 122). *Skiritis* was presumably not a *polis* (Bölte (1929) 1323; *contra* Niese (1906) 112 n. 2). The name *Skiritai* presumably derives from a place, however, putting it in the category of *Ortsnamen* rather than *primitive Volksnamen* (cf. Hansen (1996) 174 with refs.; the toponym [Σ]κίριον (acc.) occurs in *F.Delphes* III.4 239 (220–217)). In Classical sources it occurs only in the plural²⁶ and as the name of a group; in principle it could be either a city-ethnic or a (sub-)regional ethnic.²⁷ Which of these it was depends on whether there was an urban centre from which the name derived, and on whether the *Skiritai* were organised as a political community. The *Skiritai* may in fact have belonged, in Classical times or earlier, to a settlement of *Skiros*, as asserted by Steph. Byz. 575.7–8, who calls *Skiros* a *κατοικία* in Arkadia near the Mainalians and Parrhasians. One might support this with an argument from analogy: the other sub-regions of Laconia whose names have similar feminine terminations (Thyreatis, Belbinatis, Aigyitis, Maleatis) were also in the north, and each contained a set-

tlement from which its name presumably derived. On the other hand, the link with Arkadia could refer to the period after 338 when part or all of the *Skiritis* had probably been awarded to Tegea (no. 297) by Philip II (cf. Polyb. 9.28.7, etc.; Shipley (2000) 371). The *Skiritai* may have enjoyed perioikic status (as suggested by Pikoulas (1987) 144), but Σκίριται is nowhere used in any way that suggests a community organised into a *polis*, and there is as yet no Classical evidence for the existence of a central settlement, let alone a *polis*. At *Hell.* 5.2.24, indeed, Xenophon appears to distinguish the *Skiritai* from the *perioikoi*. Σκίριται, then, is probably a “regional ethnic” denoting the inhabitants of a region but not a *polis*. (Cf. also discussion of Aigys, *infra*.)

In addition, a few significant Archaic or Classical settlements have not been linked with known toponyms. They include the following.

2. Unidentified Settlements

Armakades LS ii. 279, AA20: upland settlement (or cult site) in Thyreatis. Not in *Barr.*

Marmaralono, Ag. Petros LS ii. 280, AA23: hill-top (fortified?) with late Classical to early Hellenistic settlement, controlling the route west from Thyreatis (Argive?). Not in *Barr.*

Paliokhoro LS ii. 281, BB27: settlement in fertile upland plain c.8 km west of ancient Tyros (*supra*). Not in *Barr.*

Keramidaki, Kamara LS ii. 283, CC259: C4l–second century AD settlement. Not in *Barr.*

Paizoulia, Valtaki LS ii. 296, JJ125: substantial Classical to Roman pottery scatter with Roman structures. Not in *Barr.*

Some of the settlements listed above, both those attested in sources and those known only from archaeological evidence, may have been *poleis* in the Classical period. Statistically, indeed, this is highly likely to have been the case: given that some of the places of whose *polis* status we can be confident are attested as *poleis* in only one or two sources, it must be a matter of chance that they and not others are so recorded. Good candidates for *polis* status are not hard to find. The cult places at Aigiai and Akriai have substantial remains, possibly indicative of full-blown settlements. Other significant Classical sites include Alesiai, Astron, Bryseai, Iasos, Messapeai and Pleiai, if their locations are correctly identified. Some of these were *poleis* in the

²⁵ The fundamental modern study is Pikoulas (1987).

²⁶ Σκίριτης is used in the singular only as a kletic: Diod. 15.32.1, Σκίριτης λόχος.

²⁷ For these terms see Hansen (1996) esp. 174–76, 187–90.

Hellenistic period, namely Akriai (cf. S37) and possibly Asine (cf. S29) and Glyppia (cf. S96); they may simply have failed to be named in surviving sources. Helos is also possible, since Xenophon may imply *polis* status; but it seems unlikely that the Spartans recognized a *polis* whose name mirrored that of the helots. Karyai may have had a city-ethnic corresponding to the feminine form used for the well-known statue type, and may have been politically organised if it did medise in the Persian wars; if the story is true, however, it also ceased to exist thereafter. More speculatively, the Skiritis may have contained a *polis* (*supra*). If any of these places were *poleis*, they presumably had perioikic status. On the other hand, many of these settlements had only small territories, and several are described as *komai* (a category not inconsistent with *polis* status) in the Classical or Hellenistic period.²⁸ As with *poleis*, since no place is called a *kome* in two sources, there were probably more of them than we hear of. Such places may have been dependent upon larger perioikic centres.²⁹

Thus, of 56 known Archaic and/or Classical settlements, 24 were organised as *poleis*.

II. The *Poleis*

323. Aigys (Aigyeus) Map 58. Lat. 37.15, long. 22.10. Size of territory: 1? Type: C. (S12). The toponym is *Αἰγυς*, ἡ, not used before Ephor. fr. 117 *apud* Strabo 8.5.4 (dat. *Αἰγυι*; *Αἴττυι* codd.); Steph. Byz. 45.1. The ethnic attested in Classical times is *Αἰγυεύς* (Theopomp. fr. 361 *apud* Steph. Byz. 45.6–7); in post-C4 sources *Αἰγύτης* (e.g. Paus. 3.2.5).

It is possible that Ephor. fr. 117 regards Aigys as a *polis* in the political and urban senses; however, he refers to legendary times, and the passage is not conclusive evidence that Aigys was a *polis* in Ephoros' day. Paus. 3.2.5 (rC8e) gives an anachronistic version of history in which Aigys, already a perioikic *polis*, was enslaved by the Lakedaimonians under Archelaos (c.775–c.760). The (external) collective use of the ethnic *Aigyeis* occurs only in Theopomp. fr. 361 *apud* Steph. Byz. 45.6–7 (*Αἰγυέας αὐτούς φησιν*), but we do not know whether he used it as a “sub-regional” ethnic or as a city-ethnic.

²⁸ References to *komai* are assembled by Shipley (1997) 261–63. The only pre-Hellenistic reference to a *kome* is Xenophon's description of S16, Oion (*Hell.* 6.5.25). The inhabitants of S101, Tyros, described their town as a *kome* in 275. Two settlements are described as *komai* in Hellenistic sources: S22, Belbina (C1 papyrus, perhaps quoting Phylarchos) and S65, Helos (Strabo). Pausanias adds the rest: S1, Anthana; S30, Eua; S96, Glyppia; S97, Krokeai; S98, Neris; S99, Pleiiai/Palaia; and S100, Selinous.

²⁹ On local settlement hierarchies, see Shipley (1992).

If Aigys existed as a named settlement from late Classical to Roman times, it was probably Tsamaina Kamaras in the south of Megalopolitan territory, which has C4l–second century AD pottery (*LSii.* 283, CC258; Pikoulas (1982–83) 264, (1988a) 139–47 no. 95). Both Paus. 8.27.4 and Theopomp. fr. 361 would be consistent with Aigys existing as a named settlement only from c.C4l. We are left with no certain evidence that Aigys was ever a perioikic *polis*, but it was a settlement after C4m and perhaps in early times. If it was not an Archaic and Classical *polis*, then *Aigyeis* (like the later *Aigytaí* and possibly like *Skiritai*) may have been a sub-regional ethnic denoting inhabitants of this area who were not politically organised.

The territory was Aigytis (e.g. Polyb. 2.54.3; *Syll.*³ 665, post-164). Pikoulas ((1988a) 141, 143) identifies it as the valley of the Xerilas, ancient Karnion, on the basis of Paus. 8.34.5. Strabo 10.1.6 (citing Alkman, *PMG* 92) may be correct in calling Karystos a “place (τόπος) of Aigys near Arkadia” (Shipley (1997) 263 no. 103). In Strabo and Steph. Byz., Aigys belongs to *Lakonike*. Aigytis may have embraced Leuktron and perhaps Kromoi (Pikoulas (1988a) 143; Shipley (2000) 371–72).

324. Anthana Map 58. Lat. 37.20, long. 22.50. Size of territory: 1? Type: A. (S1). The toponym is *Ἀνθήνη*, ἡ (Thuc. 5.41.2; Lys. fr. 21, Sauppe). In the Doric dialect it is *Ἀνθάνα* (Steph. Byz. 95.11), which is a plausible restoration (in place of *Μέθανα*) in Ps.-Skylax 46. The city-ethnic *Ἀνθανεύς* is attested (or was invented) by Steph. Byz. 95.15.

Anthana is called a *polis* in the urban sense by Thuc. 5.41.2, and presumably by Ps.-Skylax 46 (accepting *Ἀνθάνα* for *Μέθανα*).

Thuc. 5.41.2 places Anthana (with Thyrea) in Kynouria, and says it was a Lakedaimonian possession in C5l (*νέμονται ... Λακεδαιμόνιοι*); Harp. s.v. (quoting Lys. fr. 31 for the toponym) puts it in *Lakonike*, and Ps.-Skylax (as restored, *supra*) in Lakedaimon; Paus. 2.38.6 seemingly in Thyreatis. It will have remained Spartan until 338, when Philip II assigned some Spartan territory to Argos (no. 347) (Shipley (2000) 371, 376–77); it may never have been retaken. Given that its location is disputed, the extent and borders of its territory must remain uncertain. Several possible locations have been proposed in Thyreatis, the northern part of Kynouria, the area long disputed by Sparta and Argos (cf. Thuc. 5.41.2). Tsirovos and Nisi Agiou Andrea both have Classical to Roman pottery (Shipley (1997) 226 no. 1; cf. 230–31 no. 10; see also under Neris, *supra* 575), but Frazer (1898) iii. 309 points out that, if we read *Ἀνθάνα* in

Ps.-Skylax 46, it would be a coastal place; this would rule out Tsiorovos. (On the problems of identification, see summary in Shipley (1993) 132–33.) *Barr.*'s location, "on Mt. Zavitsa", presumably derives from the possible location of Athana at Tsiorovos, a village 2 km west–south-west of the mountain (cf. Phaklaris (1990) 41 fig. 3).

According to Paus. 2.38.6, Anthana was formerly inhabited by Aiginetans; these would be the ones who in C5 also settled at nearby Thyrea with the permission of the Lakedaimonians (Thuc. 2.27.2), as Pausanias is aware (2.29.5).

Whether Anthana is Nisi Paraliou Astrous or Nisi Agiou Andrea, it was a fortified acropolis in late Classical and early Hellenistic times (for Nisi Paraliou Astrous, see Shipley *LS* ii. 277, AA6; Phaklaris (1990) 56–78; Waterhouse and Hope Simpson (1961) 131; Goester (1993) 91–93, 99; for Nisi Agiou Andrea, see Shipley *LS* ii. 279, AA19; Phaklaris (1990) 47–55; Goester (1993) 84–88, 97–98).

325. Aphroditia, Aphrodisia Unlocated. Type: C. (S83). The toponym is *Ἀφροδισία, ἡ* (Thuc. 4.56.1 codd.), perhaps best emended to the laconizing *Ἀφροδιτία*, as by Herodian (repeated by Steph. Byz. 150.24), less plausibly *Ἀφροδισιάς* (Paus. 3.22.11, 8.12.8; Steph. Byz. 150.17). A city-ethnic is not attested. Aphroditia's location is unknown (*LS* ii. 312–13, NN251), but was presumably in the same region as Etis and Side, the other two *poleis* from which Boia is said to have been synoecised (Paus. 3.22.11).

In Thuc. 4.56.1, Aphroditia is a coastal place with a guard-post. The only reference to it as a *polis* is Paus. 3.22.11 (retrospective but referring to legendary times), apparently in both the topographical and the personal/political senses (repeated by Steph. Byz. 150.17). Steph. Byz. 150.24 seems to infer *χωρίον* from Thuc. Aphroditia may still have existed in C4m or later (see Boia (no. 327)). The only reason for including it here is analogy with Side, which was, according to Paus. 3.22.11, like Aphroditia synoecised into Boia, presumably in C4s; Side is described as a *polis* (in the urban sense) by Ps.-Skylax 46 and was, then, a *polis* before the synoecism; Aphroditia may possibly have been one as well. See further Boia (no. 327), Etis (no. 330) and Side (no. 344).

The name implies a cult of Aphrodite. Paus. (3.22.11, 8.12.8) says the town was founded by Aineias. It is not attested after C4 (except in Paus. 3.22.11), and if it disappeared as a *polis* by c.300, both cult and legend should predate that time.

326. Belbina (Belbinetes?) Map 58. Lat. 37.15, long. 22.15. Size of territory: 1? Type: C. (S22). The toponym is *Βελβίνα, ἡ* (Plut. *Cleom.* 4.1 (25.1), 4.4 (25.4); Ptol. *Geog.* 3.14.43; Hsch.

s.v.; restored in Phylarchos *apud P Oxy.* xv. 1801 (C1) (*PGC* Adesp. 1043 (K/A) = fr. 343, Austin); Phylarchos is thus the earliest source. *Βελεμίνα* is regular in Paus.; but at 3.21.3 and 8.35.3–4 it is a sub-region, not a settlement. (At 8.27.4 *Βλέννα* (Teubner) is presumably a scribal error.) The city-ethnic *Βελβινῆτης* is attested (or invented?) by Steph. Byz. 161.13. Paus. 3.21.3 locates Belemina 100 stades (18 km) beyond Pellana. The settlement was probably not on the hill of Chelmos (*LS* ii. 283, CC41); Pikoulas (1988a) 122 regards *Belminatis chora* or Belemina as the area around Chelmos. Possible sites for Classical Belemina/Belbina, if there was one, are Vardouka Skortsinou (C4 to Roman finds) and three less precisely dated sites near Giakoumaiika (Pikoulas (1988a) 120–21 nos. 75, 77). Geometric to Archaic finds in the area (Pikoulas (1988a) 119 no. 74, I, II) tend to push the existence of this possible *polis* back before 300.

Belbina is called a *polis* in the topographical sense by Ptol. *Geog.* 3.14.43 and Steph. Byz. 161.12, in the (urban and) political sense only by Paus. 8.27.4 (r369), in his list of *poleis* from which Megalopolis (no. 282) was founded. It is called a *kome* by Phylarchos and Hsch.

Belbina is explicitly placed in *Lakonike* by Phylarchos and by Paus. 3.21.3. The area is *Βελμινᾶτις χώρα* (Polyb. 2.54.3), *ager Belbinates* (Livy 38.34.8), or *Βελμινᾶτις* (Strabo 8.3.12). As the territory of a *polis*, if it existed before the synoecism of Megalopolis, it will have bordered on those of its fellow Aigyttian towns Leuktron and Malea to the north-west and of the Arkadian towns of Oresthasion (no. 287) to the north and Eutaia (no. 270) to the north–north-east. Athenaion, a C3l fort (Plut. *Cleom.* 4.1 (25.1)), may have been an important pre-C3 cult place.

327. Boia (Boiates) Map 58. Lat. 36.30, long. 23.04. Size of territory: 2? Type: A. (S2). The toponym is *Βοία, ἡ* (Ps.-Skylax 46); *Βοία, ἡ* (Strabo 8.5.2); or *Βοιαί, αἱ* (e.g. Polyb. 5.19.8; Paus. 1.27.5, 3.21.7, 3.22.11, etc.; second century AD grave-epigram, Forrest (1972)). The city-ethnic is *Βοιάτης* (e.g. Paus. 3.22.13; restored in *IG* v.1 932 (C2m); cf. *SEG* 11 894). The *polis* is located c.200 stades (c.37 km) from Epidauros Limera by Paus. 3.23.6. It lay in the Malea (Malias) peninsula, at or immediately north of Neapolis Voion (formerly Vatika; *LS* ii. 312–13, NN251; Pikoulas (1988b); (S2), followed by *Barr.*). Epigraphic finds (especially *IG* v.1 952, late Hellenistic) confirm the presence of a *polis* before Roman times even if they do not preserve its name.

Boia is first called a *polis*, in the urban sense, by Ps.-Skylax 46; in the political sense in *IG* v.1 932 (if correctly restored (C2m)). According to Paus. 3.22.11, Boia was founded by

Boios the Heraklid, who brought men from three *poleis*, Etis, Aphrodisia and Side; but since Aphroditia (no. 325) existed in C5l and Side (no. 344) was a *polis* in or not long before C4m, it seems that the three did not disappear early; in fact the ruins of Etis (no. 330) were still visible in the second century AD. Neither Aphroditia nor Side is attested after C4 except in Paus. 3.22.11 (retrospectively) and Steph. Byz. (derivatively). Possibly these *poleis* or settlements synoecised with an existing *polis* of Boia in the late Classical period, perhaps as a result of changes in the Spartan state following 369. See further Aphroditia (no. 325), Etis (no. 330) and Side (no. 344).

The collective and internal use of the city-ethnic occurs only on Roman coins (Head, *HN²* 433). The collective and external use occurs in *IG* v.1 932, otherwise only in literary texts such as Paus. 3.23.13.

Ps.-Skylax 46 lists Boia under *Λακεδαίμων ἔθνος*, and the *polis* can be assumed to have been perioikic (cf. Paus. 1.27.5 (1456/5): *τῶν περιόικων Βοιάς*). The only evidence for the extent of its territory, or for cult places, is post-C4 (Paus. 3.23.2, 6). Supposing Boia to have been founded in C4m (*supra*), it certainly absorbed the territory of Etis, less than a mile away (if Paus. 3.22.13 is correctly restored).

Archaeological evidence for the Classical *polis* is so far lacking, though Paus. 3.22.13 mentions temples that could be Classical.

328. Chen (Cheneus) Unlocated. Type: C. (S13). The toponym is *Χήν, ὄ* (oracle *apud* Diog. Laert. 1.30, 106, whose source may be Eudoxos of Knidos, c.390–c.340; see 1.29–30). The Classically attested city-ethnic is *Χηνεύς* e.g. Pl. *Prt.* 343A, the earliest evidence for the place. Paus. 10.24.2 and Diod. 9 fr. 5–7 put Chen, birthplace of Myson (one of the seven wise men), in Thessalia, but sources cited by Diog. Laert. 1.106–7, of whom the earliest is Aristoxenos (born c.370), located it in Laconia or Arkadia.

Chen is called a *polis* only by Steph. Byz. 692.13; Aristox. fr. 130, Wehrli, *apud* Diog. Laert. 1.108 implicitly calls it a *κώμη*.

The C1 gravestone of a Lakedaimonian from Koroneia (*IG* vii 2936) is the only epigraphic evidence for the external use of the individual city-ethnic (in the form *Χήν*); the literary evidence comprises Plato and Eudoxos (*supra*).

329. Epidauros (Epidaurios) Map 58. Lat. 36.45, long. 23.00. Size of territory: ? Type: A. (S3). The toponym is *Ἐπίδαυρος, ἥ* (Thuc. 4.56.2, 6.105.2; Ps.-Skylax 46), distinguished from its famous homonym in the Argolid by the addition of *ἥ Λιμύρα* (Thuc. 4.56.2, 6.105.2; cf. Strabo 8.6.1: *ἥ Λιμύρα Ἐπίδαυρος*, citing Artemidoros). The city-

ethnic is *Ἐπιδαύριος*, restored in *IG* v.1 931.24–25 (*SEG* 11 894, 13 259 (c.C2m)); for the attribution to Epidauros Limeria see *SEG ad loc.*; J. and L. Robert, *BE* (1953) 138 no. 76), and occurs on votives from the Hyperteleaton (e.g. *IG* v.1 1005 (Hellenistic)). In a proxeny decree of one of the *poleis* of Keos (*IG* xii.5 542.22–23; Karthaia (no. 492)? (C4m)), it is [*Ἐπιδ*]αύριος ἐκ τ[ῆ]ς Λακ[ωνικῆ]ς (or Λακ[εδαίμωνος]?).

Epidauros is called a *polis* in the urban sense by Ps.-Skylax 46 (*πόλις καὶ λιμύρη*); the first references to it as a *polis* in the political sense are Hellenistic: e.g. *IG* v.1 932 (Epidauros Limeria (C2m); cf. *SEG* 11 894). The proxeny decree from Keos is the only example of the external individual use of the city-ethnic.

Ps.-Skylax 46 lists the city under *Λακεδαίμων ἔθνος*; in *IG* xii.5 542.22–23 it belongs to *Λακ[ωνικῆ]ς* or *Λακ[εδαίμωνος]*. Its territory is not directly named, but Thucydides refers to its *γῆ* being ravaged by the Athenians (4.56.2, 6.105.2; cf. 7.18.3, 7.26.2). It is presumed to have been a perioikic *polis*; in Thuc. 6.105.2 an attack upon it is an attack upon the Lakedaimonians. Its C2 boundary dispute with Zarax is recorded in *IG* v.1 931 (*supra*); in Paus. 3.23.6 its territory marches with that of Boia (no. 327).

According to Paus. 3.23.6–7, Epidauros Limeria was founded by envoys from the Asklepieion of Argolic Epidauros. If true, this would imply a date after c.500. Pausanias records various features in the town and its territory (3.23.7–10). The fortification walls on the acropolis may be C5 in part, with an extension possibly in C4m (Lawrence (1979) 147). The fortified area enclosed c.3 ha; the lower town was probably much more extensive (Hasluck (1907–8) 179–82; Lawrence (1979) 146–47; *LS* ii. 310–11, NN235; Závrou (1996–97)).

330. Etis (Eteios?) (Map 58.) Lat. c.36.30 (?), long. c.23.05. Size of territory: ? Type: C. (S84). The toponym is *Ἡτις, -ιδος, ἥ* (first in Paus. 3.22.11). The city-ethnic is *Ἡτεῖος* (Steph. Byz. 305.2), and it occurs in one of the two versions of an oracle quoted by Diog. Laert. 1.106–7, which may have a C4 or earlier origin (see Chen (no. 328)). The obscure *polis* of *Ἐταιεῖς* (Steph. Byz. 283.6–7; Shipley (1997) 266 no. 114) may be a doublet of Etis. If Etis is correctly restored in Paus. 3.22.13, it was “not more than 7 stades” (1.3 km) from Boia. A possible location is Palaiokastro Neapoleos (*LS* ii. 313, NN253), but there is no definite archaeological evidence.

Etis is called a *polis* only by Paus. 3.22.11 (retrospectively); it is here reported that Etis, with Aphroditia and Side, were synoecised into Boia, presumably in C4s (cf. no. 327); since Side is described as a *polis* (in the urban sense) by Ps.-Skylax

46, it was presumably a *polis* prior to the synoecism, and Etis may possibly have been one as well. See further Aphroditia (no. 325), Boia (no. 327) and Side (no. 344). The only possible attestation of the city-ethnic is individual and external, if it is recognized in the oracle cited *supra*.

Paus. 3.22.13 (if correctly restored) describes Etis as in ruins. It may have disappeared in C4m. If so, Pausanias' sanctuary of Asklepios and Hygieia will have been Classical.

According to Paus. 3.22.11, 8.12.8, it was founded by Aineias; if it disappeared before 300, this myth, too, may have a Classical or Archaic origin.

331. Eua (Euitas) Map 58. Lat. 37.20 (?), long. 22.40 (?). Size of territory: ? Type: C. (S30). The toponym is *Ἐῦα*, ἦ (Theopomp. fr. 60, if this refers to Eua in Thyreatis (Nielsen (1996a) 44, (2002) 106–7); again at Paus. 2.38.6).

A city-ethnic may be attested as early as c.500 in the form *Ἐῦφαος* (SEG 35 378 (ML 17, Syll.³ 9, LSAG 220 no. 6, IvO 9 (c.500)), assuming it refers to this place (see Dubois (1985); *contra* Morgan (1999) 414, 450–51 n. 212; see now also Roy and Schofield (1999) suggesting that the inscription refers to an otherwise unknown community of the Ewaoioi (no. 253) in the wider region of Elis)). Other forms occur once each: *Ἐῦτας* (SEG 13 267, from Phonemenoi (C4)); *Ἐῦάτης*, on a Hellenistic stamped tile (SEG 30 377; cf. 35 287, 39 367) from Anemomylos Ellinikou; *Ἐῦαεύς*, on a coin of Eua when a member of the Achaean League (BCH 39 (1915) 118). Hill (1917) notes an Achaean League hemidrachm with the legend *EY* (cf. Nielsen (1996b) 119–20; SEG 35 287); Phaklaris (1990) 103–4 doubts that the coin belongs to Eua. *Ἐῦαῖος* (Steph. Byz. 283.13) may be an invention.

Eua is probably Elliniko, a settlement with Geometric to Roman finds near Anemomylos, the findspot of SEG 30 377. Anemomylos, a Classical to Roman cult site, is possibly the sanctuary of Asklepios, of whom a statuette was found. Less plausibly, Eua could be the nearby site now renamed Eva (near Moni Loukous) with the excavated villa of Herodes Atticus and a cult of Asklepios (so Phaklaris (1990) 78–90, 96–104, 185–92); but Eva is mainly Roman, and for Pritchett not a nucleated settlement ((1965–91) vi. 87–89). (See also LS ii. 277, AA5 Eva, Moni Loukous; 278, AA10 Anemomylos, Elliniko; 278, AA13 Elliniko; Goester (1993) 81–84, 100–6).

It is possible that Eua was called a *polis* by Theopomp. fr. 60, but there is no certainty that Steph. Byz. (the source of the fragment) is not adding his own gloss. The city-ethnic is used individually and presumably internally on the C4 gravestone from Phonemenoi (SEG 13 267), and this is the primary reason for its inclusion here (cf. Hansen (1996)).

The Hellenistic stamped tile cited above preserves a collective internal use, as does the Achaean League coin. The city-ethnic is used collectively and externally in the Eleian treaty of c.500, if it refers to Eua (see *supra*).

Pausanias appears to place Eua in Thyreatis. It will have been Spartan between C6m and C4m (Shipley (2000) 377). It was later a member of the Achaean Confederacy (BCH 39 (1915) 118). The extent and borders of Eua's territory are uncertain, but it will have included the important cult site of Asklepios at modern Eva, which may have had a late Classical origin. If the ethnics all refer to the same place, and it is Elliniko, it has a long life, though the archaeological evidence suggests late Classical and Hellenistic decline. The nearby sanctuary, however, may have continued to flourish. The Hellenistic stamped tile is evidence of the capacity to take a communal decision about a building project, perhaps at the nearby sanctuary. Elliniko also has fortification walls (Phaklaris (1990) 78–90, esp. 80–81).

332. Geronthrai (Geronthretes) Map 58. Lat. 36.60, long. 22.45. Size of territory: 2? Type: C. (S41). The toponym is *Γερώνθραι*, αῖ (e.g. Paus. 3.21.7, but MSS also have *Γεράνθραι* (e.g. Paus. 3.2.6, repeated by Steph. Byz. 203.13)); *Γερένθραι* occurs later (Hierocl. *Synecd.* 647.9, second half of sixth century AD). The city-ethnic is *Γερονθρήτης* (IG v.1 1111; cf. SEG 11 911+ (C2s), the earliest attestation of the place); Doricised as *Γερονθράτας* (IG v.1 1113 (Hellenistic); *Γερανθράτης* (Paus. 3.2.6; Steph. Byz. 203.14).

Geronthrai is first called a *polis* in the political sense in IG v.1 1111 (C2s). Paus. 3.2.6 (rC8m) says it was a perioikic *polis* when captured by King Teleklos (c.760–740) (Cartledge (1979) 109), but this cannot be relied upon. If the name lists IG v.1 1133–34 (*infra*) are public records of athletic victories by people (citizens) of Geronthrai (Hodkinson (1999) 156–57), then it was possibly a *polis* by c.500. Decrees of the *polis* use the city-ethnic collectively and internally; see IG v.1 1111, 1113 (both Hellenistic). Externally it is used collectively by Paus. 3.2.6.

According to Pausanias, the Dorians of Lakeldaimon under Teleklos replaced the Achaean population of the pre-Heraklid settlement with *ἐποίκους* from among their own number (3.22.6, cf. 3.2.6). The probable Archaic and Classical *polis* was presumably perioikic. It was probably lost to Sparta in 195 (Shipley (2000) 379–80). Archaeological and epigraphic finds, especially the name lists IG v.1 1133–34 (c.500; LSAG 201 no. 46, SEG 11 918) and the victory stele, IG v.1 1120 (C5; SEG 17 189+), found on the acropolis, make the

existence of an important Archaic and Classical settlement a virtual certainty. In the Hellenistic period the city granted proxenies with various combinations of rights (*IG* v.1 1110–13).

Two sepulchral inscriptions commemorating men fallen in battle (ἐμ πολέμοι) may provide evidence of Geronthriate military forces (*IG* v.1 1124 (= *SEG* 11 915, 33 313; *LSAG* 202 no. 60 (C5s)) and 1125 (= *SEG* 11 916, 33 313; *LSAG* 201 no. 58 (C4e)); see Hodkinson (2000) 250–54.

Paus. 3.22.7 names a temple of Apollo on the acropolis; Archaic and Classical sculptures may derive from it (Wace and Hasluck (1904–5); Wace (1904–5); de Waele (1997) 77–81). Excavations have confirmed the existence of a Hellenistic circuit wall and of Classical and Hellenistic buildings, abandoned in C3l (Crouwel *et al.* (1995) 47–52, (1996) 90–98, (1997) esp. 58–60, 63–65, 70, 72, (1999) 24, 25–33).

IG v.1 1120 (C5) lists athletic victories, but the name and location of the festival are missing. Pausanias and Hellenistic votives testify to cults, but none need be early other than the temple of Apollo destroyed by fire (Paus. 3.22.7); probable capitals and votives from it have been found, as well as Archaic to Classical votive pottery, relief sculptures, and architectural fragments (Crouwel *et al.* (1995), (1996), (1997); Wace and Hasluck (1904–5)). *IG* v.1 1113 (Hellenistic) refers to the sanctuary of Apollo. *IG* v.1 1118 is a C3l/C2 votive relief to Eleusia (i.e. Demeter); her cult may have existed earlier.

333. Gytheion (Gytheates) Map 58. Lat. 36.5, long. 22.35. Size of territory: 2? Type: B (but see *infra*). (S23). The toponym is Γύθειον, τό (Xen. *Hell.* 1.4.11; Ps.-Skylax 46; Strabo 8.5.2), later also Γύθειον (Strabo 8.3.12; Paus. 1.27.5); once Γύθιον (Jalabert (1904) 8–9, no. 5, Sidon (C2)). The city-ethnic is Γυθειάτης, first in *IG* v.1 1165 (C2s) and usually thus in Hellenistic and Roman texts, also coins (Head, *HN*² 433–34); once Γυθειάτης (*IG* v.1 1111 (*SEG* 11 911 (C2s))).

No Archaic or Classical source explicitly calls Gytheion a polis, but it seems very likely that Xen. *Hell.* 6.5.32 thinks of it as a polis in the urban sense: καὶ τὰς μὲν ἀτειχίστους τῶν πόλεων ἐνεπίμπρασαν, Γυθείῳ δέ, ἐνθὰ τὰ νεώρια τοῖς Λακεδαιμονίοις ἦν, καὶ προσέβαλλον τρεῖς ἡμέρας; it is explicitly called a polis (in the urban sense) by Diod. 11.84.6 (r456) only. The only individual internal use of the city-ethnic is *IG* v.1 1176 (Imperial date). The only individual external use is *IG* v.1 1111 (C2s); in Jalabert (1904) 8–9, no. 5 (*supra*) the fuller specification Λακεδαιμόνιος ἀπὸ Γυθίου is used. The city-ethnic is used collectively and

internally in *IG* v.1 1165 (C2s) and on Roman coins; externally in *IG* v.1 1147 (*SEG* 15 222+, c.AD 122–135).

Gytheion is placed in Lakedaimon by Ps.-Skylax 46; implicitly in *Lakonike* by Diod. 11.84.6 (r456). Tolmides ravaged its chora in 456 (Diod. 11.84.6). Paus. 3.21.6 locates Gytheion 30 stades (5.5 km) from Aigiai, on the sea, and about the same distance from Trinasos (3.22.3). Epigraphic and archaeological finds confirm the site as the modern town of Gytheio (formerly Marathonisi). The city was evidently fortified in 370–369 (Xen. *Hell.* 6.5.32, quoted *supra*; Ps.-Skylax 46: τεῖχος). Archaeological finds, however, begin in the Archaic period. *SEG* 11 926 (C5) is a bronze goat dedicated to Apollo—ineios (Karneios?). Nearby, rock-cut cult inscriptions have been found: *IG* v.1 1154 (*SEG* 11 927 (C5)) is to Zeus Terastios; *IG* v.1 1155 (*SEG* 11 928, 15 223 (c.C5)) may relate to Zeus Kappotas (Paus. 3.22.1); *IG* v.1 1153 is a Classical (?) relief to the Eleusinian goddess. For Hellenistic cults of the polis, see e.g. *IG* v.1 1152 (C2), 1144 (C2/C1e). Rescue archaeology has brought to light Hellenistic structures and many more of Roman date (*AR* 26 (1979–80) 32; 35 (1988–89) 31; Roman at *AR* 38 (1990–91) 27 and earlier). See generally Giannakopoulos (1987); *LS* ii. 296–97, JJ218+.

Gytheion served the Lakedaimonians as naval base: Diod. 11.84.6 (r456) refers to it as an ἐπίνειον where there are νεώρια (similarly Paus. 1.27.5; Cic. *Off.* 3.11.49 (rC5e)). For other references to the Spartan dockyards here, see e.g. Thuc. 1.108.5 (not naming Gytheion); Xen. *Hell.* 1.4.11. Ps.-Skylax 46 adds a fort. Falkner (1994) argues that Gytheion developed into a naval base only in C5l. For Roman-period ship sheds, see Scoufopoulos and McKernan (1975).

334. Kromnos (Kromnites) Map 58. Lat. 37.20, long. 22.05. Size of territory: 1? Type: C. (S25). The toponym is Κρώμνος, ό, first in Xen. *Hell.* 7.4.20, 26; used alongside Κρώμνα or Κρωμνα, ἦ, by Kallisthenes (*FGrHist* 124) fr. 13 *apud* Ath. 452AB (cf. Steph. Byz. 388.3–7; Suda s.v.); Κρωμοί, οί, e.g. Paus. 8.3.4, 27.4 (r371). The possible city-ethnic Κρωμνίτης occurs in *IG* II² 9094 (365–340), and in *SEG* 22 219 (Corinth, 325–280); but both could belong to Paphlagonian Kromna (no. 723) (cf. Steph. Byz. 388.4–5), though it seems much more likely that in particular *SEG* 22 219, found at Corinth, refers to the Kromna which was a subordinate settlement of Corinth (no. 227).

Kromnos is called a polichnion in the urban sense by Kallisthenes (*FGrHist* 124) fr. 13 *apud* Ath. 452AB, if the words in question are not added by Athenaios. It is called a polis, apparently in the urban and political senses, by Paus.

8.27.4 (r371). *IG* II² 9094 and *SEG* 22 219, if they belong to this Kromnos (*supra*), both attest the external individual use of the city-ethnic.

The town probably lay at Martiakos Paradision (Classical to early Hellenistic pottery: Pikoulas (1988a) 161–64 no. 121; Roy *et al.* (1992) 190–93; *Barr.*). Accepting the Niese–Pikoulas emendation of Paus. 8.27.4 (Niese (1899) 540 n. 1; Pikoulas (1987) 137, 148), it belonged to Aigyitis and/or Skiritis in his day or earlier. It was temporarily recaptured from the Arkadians in 365 (Xen. *Hell.* 7.4.20, 27) by Archidamos, who left a garrison (*φρούρα*) there. Now or earlier, the town was synoecised into Megalopolis (no. 282) (Paus. 8.27.4); it was ruined but “not quite vanished” in Pausanias’ day (8.34.6). The pottery (C5m–C4) suggests a Classical foundation (Pikoulas (1988a) 161–64; *AR* 29 (1982–83) 28–29; *BCH* 107 (1983) 764–67), possibly by Lakedaimonians. The finds are consistent with abandonment during or after C4.

The story that the town was named after Krom(n)os, son of Lykaon (Paus. 8.3.4 with Steph. Byz. 388.7) could be a Classical myth (Roy (1968)).

335. Kyphanta (Kyphantaseus) Map 58. Lat. 37.00, long. 23.00. Size of territory: 1? Type: B. (S14). The toponym is *Κύφαντα, τὰ* (Polyb. 4.36.5; Paus. 3.24.2); *Κύφας, ὁ*, is found in Hdn. III.1 57.16. The city-ethnic is *Κυφανταεὺς*, restored with certainty in *IG* XII.5 542.21 (Karthaiia (no. 492)? (C4m)), the earliest evidence for the place.

It is called a *polis* only by Ptol. *Geog.* 3.14.43 (urban sense); however, the appearance of one of its citizens in a catalogue of *proxenoi* from Keos (*IG* XII.5 542.21, Karthaiia (no. 492)? (C4m)) proves that it was a polity already in the Classical period.

Pausanias implicitly places Kyphanta in *Lakonike* (named at e.g. 3.23.11). Its territory perhaps marched with that of Prasiai (no. 342), since Pausanias gives the distance from Prasiai to Kyphanta (3.24.3): Kyphanta is c.100 stades (c.18 km) from Zarax and c.10 stades (c.1.8 km) inland (3.24.2); 200 stades (37 km) from Prasiai by sea (3.24.3). It was probably at Kyparissi (ancient fort with polygonal masonry, presumably late Classical or Hellenistic; *LS* ii. 282–83, *VB38*). It was ruined in Pausanias’ day (3.24.2); if correctly identified, the archaeology points to occupation into Roman times (Wace and Hasluck (1908–9) 173–74; Hood (1956) 12).

336. Kythera (Kytherios) Map 58. Lat. 36.15, long. 23.05. Size of territory: 4 (262 km²). Type: A. (S4). The island (called *Κύθηρα* at Hdt. 7.235.2 and *ἡ Κύθηρική νῆσος* at 1.82.2) and the town were homonymous, so the toponym

was *Κύθηρα, τὰ* (Ps.-Skylax 46: *νῆσος καὶ πόλις*). The city-ethnic is *Κυθήριος* (Thuc. 4.54.1, the earliest evidence for the town; *IG* II² 9110, C4e).

Kythera is called a *polis* in the urban sense by Ps.-Skylax 46. There are many references to a *πόλις τῶν Κυθηρίων* in the urban sense (e.g. Thuc. 4.54.1 and Xen. *Hell.* 4.8.8), but it appears that no source uses *polis* in the political sense about the community, surely by coincidence. Its *politeia* was the subject of an Aristotelian treatise (Heracl. Lemb. 54; Arist. no. 88, Gigon).

The external individual use of the city-ethnic is found in Ephor. fr. 2 (*apud* Ath. 352C) and *IG* II² 9110 (C4e); the external collective use occurs in Thuc. 4.54.1, 2; Xen. *Hell.* 4.8.8; *RO* 96.48, 52 (Kyrene, 330–326), a record of grain donations by Kyrene (no. 1028) to the *Kytherioi* amounting to 8,100 *medimnoi*.

Ps.-Skylax 46 places Kythera in Lakedaimon. Thuc. 4.53.2 and perhaps 7.26.2 seem to imply that *Lakonike* does not include Kythera, though usually it includes all places under Spartan control; at 4.53.2 he locates Kythera the island opposite *Lakonike* (*ἐπίκειται... τῇ Λακωνικῇ*). The territory of the *polis* is *ἡ Κύθηρία* (Xen. *Hell.* 4.8.7). Its inhabitants are Lakedaimonians and *perioikoi*, but used (in C5!?) to be administered by a magistrate called the *kytherodikes* and were garrisoned (Thuc. 4.53.2). According to Hdt. 1.82.2, the island had been taken from the Argives prior to C6m. For the strategic importance of the island to Sparta (no. 345), see Hdt. 7.235.2.

The *polis* was on the homonymous island, c.10 stades (c.1.8 km) inland (Paus. 3.23.1) at Palaiokastro (Huxley (1972) 38–39; Cartledge (1979) 122). Xen. *Hell.* 4.8.8 mentions the fortification walls of the *polis*; cf. Huxley (1972) 38–39. The second settlement on the island was (ἡ) *Σκάνδεια* (*KIPauly* v. 221; *RE* iiiA. 438), probably at Palaiopolis Kastriou; post-Bronze Age archaeological evidence begins in C6 (Huxley (1972) 34). Skandeia, the *epineion* of Kythera according to Paus. 3.23.1, is called *ἡ ἐπὶ θάλασση πόλις* at Thuc. 4.54.1 (to be contrasted with *ἡ ἄνω πόλις*, i.e. Kythera town itself, at 4.52.2) and *τὸ ἐπὶ τῷ λιμένι πόλισμα* at 4.54.4; it is apparently thought of as a part of Kythera town and not as a *polis* in its own right (Hansen (1995b) 43–44; Shipley (1997) 227–28; see also the note by Hansen in *CPCActs* 4: 173–75). Hdt. 1.105.3 mentions the famous sanctuary of Aphrodite, which was at Palaiokastro (Waterhouse and Hope Simpson (1961) 148ff; alternative location: Huxley (1972) 35 with fig. 6, pl. 4). (The island was the mythical place of arrival of the goddess (Hes. *Theog.* 198).) For lead sling-bullets found on Kythera, on the island of Antikythera, and

in its main town of Aigilia (fortified in C5), see *IG* v.1 951. On Antikythera/Aigilia, see further *supra* 573.

In 424, the Athenians with allies attacked Kythera (Thuc. 4.53.1), captured Skandeia (54.1), and defeated the Kytherians in battle outside the city (54.2); there had already been contact between the Athenians and some of the Kytherians before the attack (54.3), and soon after the battle an agreement was reached (54.4, *ξύμβασις*): the Athenians took over Skandeia and placed a garrison in the city of Kythera (*ibid.*). A little later, the Kytherians were enrolled in the Delian League on the conditions *οἰκοῦντας τὴν ἑαυτῶν φόρον τέσσαρα τάλαντα φέρειν* (Thuc. 4.57.4); they are not, however, named in the extant tribute quota lists. The Athenian–Spartan treaty in Thuc. 4.118.4 stipulates that the Athenians on Kythera are not to have dealings with Peloponnesian League members (*μη ἐπιμισγομένους ἐς τὴν ξυμμαχίαν*). The Peace of Nikias stipulated that the Athenians restore Kythera to the Lakedaimonians (Thuc. 5.18.7); however, Kytherian forces joined the Athenians in the attack on Syracuse (Thuc. 7.57.6), so “it had evidently not been evacuated by 413” (*HCT* iv: 399 *ad* 7.26.2). In 393, Pharnabazos landed on Kythera; *οἱ ἔχοντες τὴν πόλιν τῶν Κυθηρίων* left the fortifications and were sent *hypospondoi* to *Lakonike*, whereupon Pharnabazos had the *teichos* repaired and left a garrison and the Athenian Nikophemos as harmost (Xen. *Hell.* 4.8.8).

According to Thuc. 7.57.6 the Kytherians were Dorians and colonists (*ἄποικοι*) of the Lakedaimonians. They had the capacity to organise themselves militarily during the Peloponnesian War (Thuc. 4.54.1, cf. 7.57.6).

IG v.1 937 (*SEG* 11 896 (C4)) is a dedication to the *Tyndaridai* by an *ἀρμοστήρ*, perhaps the Spartan *Kytherodikes* (Cartledge (1979) 244) or possibly an Athenian commander (cf. Xen. *Hell.* 4.8.8; MacDowell (1986) 30).

337. Las (Laos) Map 58. Lat. 36.40, long. 22.30. Size of territory: 1? Type: A. (S5). The toponym is *Λᾶς*, ὁ (Ps.-Skylax 46); alternatively *Λᾶ*, ἡ (Thuc. 8.91.2, 92.3). Steph. Byz. 404.5 lists the feminine, but comments (6–7) *λέγεται καὶ ἀρσενικῶς*. Sometimes it is unclear which is being declined: e.g. at Hom. *Il.* 2.585, the earliest mention. The city-ethnic *Λᾶος* in Steph. Byz. 404.9 is confirmed by coins of AD 193–211 (Head, *HN*² 436) and *Horos* 10–12 (1992–98) 564 (Hadrianic).

Las is called a *polis* in the urban sense by Ps.-Skylax 46 (*πόλις καὶ λιμὴν*).

Paus. at 3.24.6 locates Las 40 stades (7 km) “right” (i.e. west) of Gytheion (no. 333) and 10 stades (1.8 km) from the

sea; at 3.24.8 it is c.30 stades (c.5.5 km) from Hypsoi, which is at the edge of Spartan territory. It was probably near Chosiari, on the hill with the Frankish castle of Passava (so *Barr.*, following S5); in the land beneath the acropolis, Classical finds have been noted (*LS* ii. 300, LL153; Giannakopoulos (1987) 52–54 and 51 fig. 12 notes Archaic finds from Chosiari).

Las is explicitly assigned to *Lakonike* by Thuc. 8.91.2. Its territory would have been bounded on the east by that of Gytheion (cf. Paus. 3.24.6), on the west by that of Pyrrhichos (3.25.2). Paus. 3.24.7 refers to the spring of Galako, which presumably existed earlier; his sanctuaries of Asklepios and Artemis Daphnaia at Hypsoi (3.24.8), and of Diktyнна Artemis on a cape (3.24.9), need not be Classical, but the tomb of the hero Las at nearby Arainos (3.24.10) is more likely to be.

The acropolis has produced Protogeometric to Roman finds, including a late Archaic or early Classical votive stele (*IG* v.1 1217). Paus. 3.24.6 says that the city was formerly on the summit of Asia, where the ruins of the old city and its fortification walls were situated. A stretch of polygonal walling has been found (Forster (1906–7) 232–34; cf. Traquair (1905–6) 262 fig. 3), suggesting that Passava is Mt. Asia.

On the acropolis was Pausanias’ ruined temple of Athena Asia (3.24.7); it could be Classical, as could his “ancient” statue of Hermes (*ibid.*). His temples of Dionysos and of Asklepios on Mt. Ilion, and of Apollo Karneios by Knakadion, need not be old, though Apollo Karneios is a classic cult of Laconia. His story of the oecist Las, buried at Arainos (3.24.10), may have a Classical origin.

According to Ephor. fr. 117 *apud* Strabo 8.5.4, Las was *eulimēnos*, and Ps.-Skylax mentions a *limēn*; Thuc. 8.91.2, 92.3, mentions naval activities at, presumably, this harbour. The harbour of Las was probably at Vathy Bay, where there are Roman remains (Forster (1906–7) 233). This is supported by the location of the tomb of the founding hero, Las, on the promontory of Arainos (Paus. 3.24.10), probably modern Ageranos on the south side of Vathy Bay (Waterhouse and Hope Simpson (1961) 118 n. 28).

338. Oinous (Woinountios) Unlocated. Type: B. (S15). The toponym is *Οἰνοῦς*, ὁ, Androtion (*FGrHist* 324) fr. 49 *apud* Steph. Byz. 486.9; Ath. 31CD. The city-ethnic is *Φοιδόντιος* on the bronze plaque *SEG* 13 239 (*LSAG* 169 no. 22; *BCH* 77 (1953) 395ff; Argos, c.475?), the earliest evidence for Oinous and the only attestation of the city-ethnic (an external, individual use) apart from Steph. Byz. 486.10, *Οἰνοῦντιος*.

Androtion (*FGrHist* 324) fr. 49 *apud* Steph. Byz. 486.9 calls Oinous a *πολίχμιον*, if accurately cited by Steph. Byz. (the unusual noun and the use of *ὡς* may make this more likely). Ath. 31CD makes it a *χωρίον* near Pitane, but may be drawing an inference from Alkman. Oinous is ascribed to *Lakonike* by Steph. Byz. 486.9–10; doubtless it lay in the valley of the river Oinous (Ptol. *Geog.* 2.65.7ff, 66.7.; Livy 34.28.1), the modern Kelephina.

The attestation of a C5e proxy decree of Argos (no. 347) in favour of a citizen of Oinous (*SEG* 13 239; *LSAG* 169 no. 22; *BCH* 77 (1953) 395ff: *Ἀλιαία ἔδοξε πρόξενον ἔμειν Γνόσταν τὸν Φωνόντιον τοῖς Ἀργείοις*) is a salutary reminder of the paucity of our evidence and the likelihood that a significant number of Classical perioikic *poleis* simply fail to be named in our written sources.

339. Oios (Oiates) Map 58. Lat. 37.20 (?), long. 22.25. Size of territory: 1 (2?). Type: C? (S16). The toponym is *Οἶός*, *ὀ* (Aesch. *Mysoi* fr. 416, the earliest mention, but preserved only by Steph. Byz. 487.5); *Οἶῶ* (dat.) at Xen. *Hell.* 6.4.24 and *Οἶόν* (acc.) at 6.5.25 could be masculine or neuter; the assumption that the nominative is *τὸ Οἶόν* may have no foundation other than similarity with the Attic deme. At Paus. 8.27.4, however, *Οἶόν* (nom.) is a likelier emendation than *Οἶός* (Pikoulas (1987) 137, 148, (1988a) 145 n. 445, 239, following Niese (1899) 540 n. 1). The city-ethnic is *Οἰάτης* (Xen. *Hell.* 6.5.26). (Paus. 8.45.1 refers to *Οἰάται*, a *δῆμος* of Tegea (no. 297) in early times; it may refer to the same place.)

Attestations of Oios as a *polis* are only post-C4 and implicit. Paus. 8.27.4 (r371) may combine the topographical and political senses.

The only attested collective external use of the ethnic is at Xen. *Hell.* 6.5.26, where he calls it a *κώμη* (Hansen (1995a) 74).

At *Hell.* 6.5.24 Xenophon assigns Oios to *Lakonike*; at 6.5.24, 25, specifically to Skiritis. It is the only settlement explicitly included in Skiritis in any source (Pikoulas (1987) 135). In Paus. 8.27.4 (r371), if correctly read, Oion is an Aigyttian and/or Skiritan *polis*; but Skiritis had probably been subsumed under Aigyttis by then.

Oios was possibly at Ai-Gianni Kerasias (Kerasia was formerly Arvanitokerasia; Loring (1895) 60 and n. 141; Pikoulas (1987) 135–37 and n. 35; cf. (1988a) 239 no. 1) where Romaios identified a sanctuary of Demeter (*PAE* 1907: 121); unauthorized excavation later revealed a large building. Xen. *Hell.* 6.5.26 mentions that attacking Arkadians went up on to the roofs of houses (*ἐπὶ τῶν οἰκιῶν*). (See also *LS* ii. 283, *DD* 43.) If correctly identified, Oios may have existed only in the Classical period.

340. Oitylos (Oitylios?)/**Beitylos** (Beityleus) Map 58. Lat. 36.40, long. 22.25. Size of territory: 1 (2?). Type: C. (S6). The toponym is *Οἴτυλος*, *ὀ*, first in *Il.* 2.585; Pherekydes (*FGrHist* 3) fr. 168; Paus. 3.21.7, etc.; but **Βείτυλος* is implied by the earliest epigraphic attestations of the city-ethnic, in Hellenistic and Roman inscriptions. Strabo 8.4.4 gives *Βαίτυλος* as an alternative, perhaps an error for *Βείτυλος*; cf. *Βίτυλα*, Ptol. *Geog.* 3.14.43. The city-ethnic *Οἰτύλιος* given by Steph. Byz. 487.17 is perhaps purely inferential. The few genuine attestations, all post-C4, are of *Βειτυλεύς*, e.g. *IG* v.1 935 (Kythera, C2).

Oitylos is called a *polis* in the topographical sense by Pherekydes (*FGrHist* 3) fr. 168 using the unusual expression “the *polis* in Sparta”; but as he is writing about mythological material, and as this usage is unparalleled, it does not amount to reliable evidence of *polis* status (cf. Hansen and Nielsen (2000) 148–49).

Paus. locates Oitylos 150 stades (27 km) from Hippola (3.25.10) and c.80 stades (c.15 km) from Thalamai (3.26.1). It is near modern Oitylo (formerly Vitylo). Architectural fragments found in churches could be from the ancient *polis*; part of a possible cult building has been uncovered, and a possible defensive wall (*AR* (4) (1957) 10; *LS* ii. 300–1, *LL* 54; Waterhouse and Hope Simpson (1961) 121). Pausanias’ *xoanon* of Karneian Apollo in the agora may be old. The archaeological evidence to date is too imprecise to confirm that Oitylos was a Classical *polis*, though that remains a possibility.

341. Pellana (Pellaneus) Map 58. Lat. 37.10, long. 22.20. Size of territory: 1 (2?). Type: B. (S17). The Doric form of the toponym is *Πελλάνα*, *ῆ*, as in Pausanias’ citation (3.26.2) of Alkman (fr. 23, Page). In earlier sources the name is *Πελλήνη*, *ῆ*; e.g. Xen. *Hell.* 7.5.9. In Strabo 8.4.5 (*Πέλαννα*, *Πέλαννα* codd.) and 8.7.5, however, it is neuter plural: *Πέλλανα*, *τά*. The city-ethnic is *Πελλανεύς* or *Πελληνεύς*; either can be restored in *IG* xii.5 542.20 (Karthaiia (no. 492)? (C4m)). *Πελληνεύς* occurs at Polyb. 18.17.1.

Pellana is called a *polis* only retrospectively, by Diod. 15.67.2 *bis* (r369/8) (*Παλλήνην*, *Παλλήνην* codd.), using *polis* in both the topographical and the political senses. Polyb. 4.81.7 makes it part of a *τρίπολις*, implying that it is itself a *polis*. For Paus. 3.21.2 Pellana was a *polis* “of old”. The only Classical attestation of the city-ethnic is individual and external, in *IG* xii.5 542.20–1 (Karthaiia (no. 492)? (C4m)), which lists a man of Pellana as *proxenos* of the issuing *polis* and provides confirmation that it was a polity in C4m. A C4l sepulchral inscription commemorating a man fallen in

battle (ἐν πολέμοι) may provide evidence of Pellanian military forces (Zavvou (1999) 65–66 no. 6); see Hodkinson (2000) 250–54.

Pellana belongs to *Lakonike* (or Lakedaimon?) in *IG XII.5* 542; to *Lakonike* in *Diod.* 15.67.2 (r369/8); it is a *Λακωνικὸν χωρίον* in *Strabo* 8.7.5. *Polyb.* 4.81.7 refers to τὴν ἐν τῇ τριπόλει . . . Πελλήνην, possibly referring to Aigys (no. 323), Belbina (no. 326) and Pellana (no. 341) with their *chorai* (cf. perhaps the *tripolim* bordering on Megalopolitan territory in *Livy* 35.27.10). In *Diod.* 15.67.2 (r369/8) it has a *χώρα* that is ravaged by the Arkadians. It was 100 stades (18 km) from Belemina (*Paus.* 3.21.3), and more than c.50 stades (c.9 km) from Sparta (3.20.10 with 3.21.1). It is probably Palaiokastro Pellanas and/or Spilies Pellanas (major prehistoric site with Hellenistic (?) and Roman (?) finds). (*LS ii.* 288, G669; *ibid.* G6264; cf. *Spyropoulos* (1998) and *Pikoulas* (1999)).

Pausanias' sanctuary of *Asklepios* (3.21.2) may be late Classical or post-C4. According to *Paus.* 3.21.2 (cf. 3.1.4) it was founded by *Tyndareos*; this could well be a pre-Hellenistic legend.

342. Prasiai (Brasiates) Map 58. Lat. 37.10, long. 22.55. Size of territory: 2? Type: A. (S7). The toponym is *Πρασιαί, αἱ*, first in *Ar. Pax* 242; *Thuc.* 2.56.6, 6.105.2; *Xen. Hell.* 7.2.2–3; *Πρασία* (*Ps.-Skylax* 46); *Βρασιαί* (e.g. *Paus.* 3.21.7). According to *Paus.* 3.24.4 its name was *῾Ορειᾶται* before the Lakedaimonians took it over; an archaizing or poetic form of that name, *῾Ορειοί*, appears in the grave epigram *IG v.1* 723 (*SEG II* 864.3 (C3f or possibly C4s)). The city-ethnic is *Βρασιάτης* (e.g. *Paus.* 3.24.4; *Steph. Byz.* 184.10) and *Πρασιεύς* (*Strabo* 8.6.14; *Steph. Byz.* 534.17).

Prasiai is called a *polis* (*kai limen*) at *Ps.-Skylax* 46, using *polis* in the urban sense; *Thuc.* 2.56.6 twice calls it a *πόλισμα* (cf. *Flensted-Jensen* (1995) 129–31; *Hansen* (1998) 21, 25), once adding *ἐπιθαλάσσιον*. If *IG v.1* 723 (*supra*) refers to it, it is here called *patris*.

The territory is termed *γῆ* by *Thuc.* 2.56.6. The C7–C5 sanctuary of *Apollo Tyritas* at the *kome* of *Tyros* (11 km north of *Plaka*), and that of *Apollo Maleatas* at *Kosmas* in *Mt. Parnon*, may both have lain in the territory of *Prasiai* (unless *Tyros* was a *polis*). *Thuc.* 2.54.6 assigns *Prasiai* to *Lakonike*, *Ps.-Skylax* 46 to *Lakedaimon*. It also belonged to *Kynouria* (as indicated by the extent of this area), periodically disputed between *Sparta* and *Argos* (*Thuc.* 5.14.4, 41.2). By C3l it was *Argive* again (*Polyb.* 4.36.5; *Shipley* (2000) 378). *Strabo* 8.6.2 locates it on the *Ἀργολικὸς κόλπος*; *Pausanias* calls the area *Lakonike* (e.g. 3.23.11).

According to *Strabo* 8.6.14, *Prasiai* was one of seven cities in the *Kalaureian Amphiktyony*, the *Lakedaimonians* paying their dues on their behalf (presumably after they captured *Kynouria* in C6m). This perhaps preserves a non-Lakedaimonian ethnic categorization of *Prasiai* (*OCD*³ 273).

In 430, *Prasiai* was captured and plundered by the *Athenians* who also ravaged its territory (*Thuc.* 2.56.6; cf. *Ar. Pax* 242); it was raided by *Athenian* forces twice again later (*Thuc.* 6.105.2, 7.18.3). In 366, *Peloponnesian League* troops assembled at *Prasiai* (*Xen. Hell.* 7.2.2–3).

Prasiai was 200 stades (37 km) by sea from *Kyphanta* (no. 335) (*Paus.* 3.24.3). The town was at *Paralia Leonidiou*, with an acropolis at *Plaka*, south of *Leonidi*, where ancient remains have been found; there has been no systematic investigation of the area. Finds from c.C7l to Roman are evidence of a nucleated settlement. There are ancient towers and foundations on the acropolis hill between the two harbours (*LS ii.* 282, B33; *Phaklaris* (1990) 129–37). We have no Classical evidence of cults, but *Paus.* 3.10.7 names *Ino* and *Dionysos*, sanctuaries of *Asklepios* and *Achilles* which may be Classical, and a headland cult with small statues. *Paus.* 3.24.3–4 gives the story of *Semele* and the baby *Dionysos* in explanation of the name of the *polis*; this may have had a Classical origin.

343. Sellasia (*Sellasieus?*) Map 58. Lat. 37.10, long. 22.30. Size of territory: 1 (2?). Type: B. (S28). The toponym is *Σελλασία, ἡ*, first at *Xen. Hell.* 2.2.13, etc., unless we read *Σελλασίην* at *Hdt.* 6.74.1. *Σελασία* (e.g. *Polyb.* 2.65.7) may be a genuine alternative, as may *Ἐλλασία* in MSS of *Diod.* 15.64.1, 6 *bis* (cf. *Stylianou* (1998) *ad* 64.1). The city-ethnic may be *Σελλασιεύς*, not attested before (and perhaps invented by) *Steph. Byz.* 561.4, or *Σελασιεύς* (*ibid.* 559.13).

Sellasia is called a *polis* in the urban and political senses combined (cf. *Hansen* (2000) 175–76) by *Diod.* 15.64.1 (r369/8); it is nowhere explicitly called a *polis* in the political sense, but *Diod.* 15.64.1 (r369/8) may imply perioikic status.

There is no direct evidence for *Sellasia's* territory, but *Plut. Agis* 8.1 makes it one of the boundaries of *Spartan* territory in *Agis IV's* proposals. *Sellasia* is placed in *Lakonike* by *Theopomp.* fr. 11, if correctly reproduced by *Steph. Byz.* (561.2–3). The phrase *πλησίον τῆς Λακωνικῆς* is deleted by editors of *Xen. Hell.* 2.2.13; perhaps another word (such as *πόλει, πολυχνίω* or *πολίσματι*) stood before *τῆς Λακωνικῆς* (e.g. ἐν Σελλασίᾳ, πόλει τῆς Λακωνικῆς).

Paus. 3.10.7 places the ruins on the main road just before *Thornax*. *Polyaen.* 3.11.6 probably implies that *Sellasia* was

200 stades (37 km) from Sparta (it is actually 20–25 km). The probable location is the rounded hill of Palaiougoulas (so *Barr.*), Laconia Survey site A118 (late Archaic to early Hellenistic; *LS* ii. 321–23, A118), rather than the nearby mountain-top fortress at Ag. Konstantinos (B111, late Archaic to middle Hellenistic). From archaeological evidence, Sellasia was probably founded in C6m and abandoned in C3 (Catling (2002) 238–40). It was seen in ruins by Pausanias (3.10.7).

A cult of Artemis at Sellasia is implied by Hsch. s.v. *Σελασία*. A cult of the *Dioskouroi* in or near Sellasia is indicated by *IG* v.1 919 (*LSAG* 200 no. 24; *SEG* 42 307+ (c.525?)), a votive found near the modern village of Sellasia (formerly Vourlia). *IG* v.1 920 (*SEG* 11 889 (C6)) is a votive to an unnamed deity.

344. Side Map 58. Lat. 36.30(?), long. 23.10(?) Size of territory: 1? Type: A. (S8): no archaeological site known; NN354 Velanidia proposed on topographical grounds (Hasluck (1907–8) 174; *LS* ii. 313, NN354; Ag. Georgios near Velandia is supported by Pikoulas (2002) 236). The toponym is *Σίδη*, ἡ, only in Ps.-Skylax 46; Paus. 3.22.11. A city-ethnic is not attested.

Side is called a *polis* (in the urban sense) only by Ps.-Skylax 46 (*πόλις καὶ λιμὴν*), and retrospectively by Pausanias, who says that it was one of three *poleis* from which Boia was synoecised in early times (see Boia (no. 327); cf. also Aphroditia (no. 325) and Etis (no. 330)).

Ps.-Skylax 46 lists Side under Lakedaimon. Paus. 3.22.11 says it was named after Side, daughter of Danaos; this could reflect a Classical foundation myth.

345. Sparta (Spartiates)/**Lakedaimon** (Lakedaimonios) Map 58. Lat. 37.05, long. 22.30. Size of territory: 5. Type: A. Two different toponyms are used for the central settlement of *Lakonike*:

(1) *Σπάρτη*, ἡ, (Hom. *Il.* 2.582; Tyrtaios fr. 4.4; Thgn. 785 = Anon. Megarensis (c.480); Hdt. 1.68.5; Thuc. 1.130.1, 4.3.2; Xen. *Hell.* 7.1.28; Ps.-Skylax 46; *SEG* 22 460 *post* 369); in Doric *Σπάρτα* (Alc. fr. 360.2, Liberman (Aeolic); Pind. *Pyth.* 1.77; *IG* XII.9 286 (c.500–475); *IvO* 160.1 (C4e); *IG* v.2 173.37 (C4m)). Sometimes Homer seems to think of *Sparte* as an area (*Od.* 11.460), as does Pherekydes (*FGrHist* 3) fr. 168 (cf. Oitylos (no. 340)).

(2) *Λακεδαίμων*, ἡ (Hdt. 1.82.1), also a word for the region (see *supra* 570). It was already the name of the settlement in the late Bronze Age (Hall (2000)). Lakedaimon, probably in the sense of the city of Sparta, includes the Amyklaion (treaty quoted at Thuc. 5.18.10). For *Lakedaimon* (without *πόλις*) as probably meaning the town, see Pind.

Pyth. 4.49; Hdt. 1.82.1; Thuc. 1.43.1; Xen. *Hell.* 2.3.8; *IG* IV².1 122.xxi.1 (C4s); Polyb. 8.33.8. In a C4l dedication by a Lakedaimonian victor at Olympia (*Syll.*³ 1069 = *IvO* 171, 316), Lakedaimon is said to be 660 stades (121 km) from Olympia, which should refer to the city of Sparta rather than its territory. See further Hall (2000) 78–79.

Sometimes the two seem to be combined for variety's sake: Maiandrios sails “to Lakedaimon” (though this could be the region) and meets Kleomenes who is “ruling Sparta” (Hdt. 3.148.1). At other times the distinction seems deliberate: if Dorieus had remained in Sparta, he would have been king of Lakedaimon (Hdt. 5.48). On other occasions the variation seems to have no special significance: the kings may rule in Sparta (Hdt. 1.65.1) or in Lakedaimon (Hdt. 1.67.1); Ainesias is ephor in Sparta (Thuc. 2.2.1), Pleistolas in Lakedaimon (Thuc. 5.25.1).

The city-ethnic also has two versions:

(1) *Σπαρτιάτης* (Thuc. 1.128.3, 2.25.2; Xen. *Hell.* 3.3.5, 7.4.19); Doric *Σπαρτιάτας* (*LSAG*² 446 no. 16a (c.550); *IvO* 263 (C6); *IvO* 244 (C6/C5e)); Ionic *Σπαρτιήτης* (Hdt. 8.42.2, 9.54.2).

(2) *Λακεδαίμωνιος* (Pind. *Pyth.* 4.257; Hdt. 1.6.2; Thuc. 1.6.4; Xen. *Hell.* 1.2.18; *SEG* 11 1180a (C6f); *SEG* 26 476 (C6?); *IvO* 247 (C6/C5e); *ML* 22 (490–480), no. 67 (c.427); *IG* II² 43.A.9 (378/7)).

Σπαρτιάται denotes only the citizens of Sparta, the dominant *polis*. *Λακεδαίμωνιοι* strictly denotes all Lakedaimonians (Spartans and *perioikoi*), but today it is often translated as if Greek authors used it as a synonym for “Spartans”. This misconception may be based partly on the false premiss that the *perioikoi* were treated almost as badly as helots. It is, of course, true that the Spartans held almost all decision-making power in *Lakonike*, and when Thuc. 1.10.2 comments on the underdeveloped physical urban form of the “*polis* of the Lakedaimonians”, he certainly means the town of Sparta. Sparta was the dominant political community, purporting to speak for all Lakedaimonians; this may be why “Lakedaimonians” often appears to denote the Spartans. This need not be true in every case, however. When Simonides, in his epigram on Thermopylai (Hdt. 7.228.2), asks the passer-by to take a message to “the Lakedaimonians”, he may mean what he says. The same consideration may apply to Thucydides’ statements that the Lakedaimonians do not make their allies pay tribute but favour oligarchies (1.19.1), and that it was Lakedaimonian fear of growing Athenian power that led to war (1.24.5). A telling pairing of the two ethnics is at Thuc. 1.128.3, where King Pausanias ὁ *Λακεδαίμωνιος* is sent for by the

Σπαρτιάται: though king of the wider Lakedaimonian community, he is recalled because the Spartans will it.

The claim to “speak for *Lakonike*” may explain why a Spartiate abroad is usually called *Lakedaimonios*, the only epigraphic exception being the lion dedicated to Hera in Samos by Eumnastos Spartiates (Dunst (1972) 140–44; *LSAG*² 446 no. 16a (c.550)). On the other hand, there are no demonstrable examples of “*Lakedaimonios*” being used as the ethnic of an individual *perioikos*: as far as we know, he is always called by the ethnic of his own *polis* (e.g. Gytheates, Oinountios; Hansen (1996) 185 and n. 96; Shipley (1997) 209). Therefore, when we encounter *Λακεδαιμόνιος* individually, we can probably assume it means a Spartan. Thus, in *IG XII.5* 542, a C4m catalogue of *proxenoi* from (presumably) Karthaia (no. 492), while three citizens of *perioikic poleis* of *Lakonike* are listed with their city-ethnics (20–22), a *Lakedaimonios* is also catalogued (18), and he ought to be a Spartan, as ought the two *Lakedaimonians* attested as Eleian *proxenoi* in C6 (*SEG* 11 1180a (C6f); *SEG* 26 476 (C6?)) and the *Lakedaimonian* sculptor who signed *Corinth* VIII.3 15 (C5l–C4e).

The short form *Λάκων* (*SEG* 31 559 (369/8); Arist. *Pol.* 1271^b28) is less common. It is sometimes used in poetic and colloquial contexts (Ar. *Ach.* 305; Hdt. 1.68.2) or for variety. It seems to be interchangeable with *Λακεδαιμόνιος*, but can be applied specifically to *Spartiatiai* (Xen. *An.* 2.1.3, 5, 5.31) as well as to *Lakedaimonians* in general (cf. Xen. *An.* 5.1.15, where it is applied to a man explicitly described as being a *perioikos*).

Both *Sparte* and *Lakedaimon* are described as a *polis*.

(1) *Sparte*: A rare, perhaps unique, epigraphic description of Sparta as a *polis* is in Tod 204 (καὶ οὐκ ἀναστήσω Ἀθήνας οὐδὲ Σπάρτην . . . οὐδὲ τῶν ἄλλων πόλεων οὐδεμίαν), where the political sense may also be present. For the Archaic period we have Tyrtaios fr. 4.4, West, with connotations of state and perhaps country; fr. 8 and 10 seem to use *polis* in the political sense. Hdt. 7.234.2 combines the urban and political senses of *polis* with a reference to *Lakedaimon* the district, and includes the *polis* of *Sparte* within *Lakedaimon* (ἔστι ἐν τῇ *Λακεδαίμονι* Σπάρτη *πόλις*). Ps.-Skylax 46 implicitly includes *Sparte* among the inland *poleis* of *Lakedaimon*. Couplings of *πόλις* in the urban sense with *Σπαρτιάται* occur at Xen. *Hell.* 6.5.28: οἱ δὲ *Σπαρτιάται* ἀτείχιστον ἔχοντες τὴν πόλιν and 7.5.11: ἐν τῇ πόλει τῶν *Σπαρτιατῶν*. Whereas the urban sense of *polis* is somewhat rare, the political sense occurs somewhat more frequently (e.g. Xen. *Lac.* 1.1, cf. 10.4). Phrases combining *πόλις* and *Σπαρτιάται* occur more often (Thuc. 1.132.1;

Anaximenes, *Ars rhetorica* 24.3; Isoc. *Hel.* 63, *Panath.* 41, 65; Arist. *Pol.* 1271^b11). There seem to be no examples of *Sparte* or the *Spartiatiai* being described as a *polis* in the rarer territorial sense, unless Tyr. fr. 4 (*supra*) or Thuc. 5.63.4 (ἀπάγειν στρατιὰν ἐκ τῆς πόλεως) are examples.

(2) *Lakedaimon*: *Lakedaimon* is never explicitly called a *polis* in the urban sense, though *Λακεδαίμων* on its own often clearly denotes the city (e.g. the Corinthians deliver a speech ἐν *Λακεδαίμονι* (Thuc. 1.43.1)) and ἡ *Λακεδαιμονίων πόλις* in the urban sense is found at Thuc. 1.10.2; note also that at Aen. Tact. 2.2 the ethnic *Λακεδαιμόνιοι* is coupled with *πόλισμα* (cf. Flensted-Jensen (1995) 129). However, at Pl. *Leg.* 683D *polis* is used about *Lakedaimon* primarily in the urban sense (τρεῖς πόλεις κατοικίξειν, Ἄργος, Μεσσήνην, *Λακεδαίμονα*; cf. Hansen (2000) 178), but the political sense is a connotation, and the reference is to the mythical period. *Lakedaimon* is also called a *polis* in the political sense (Xen. *Hell.* 5.2.32; cf. 5.3.25, 4.23; *Lac.* 9.4; Pl. *Resp.* 599D; Isoc. *Paneg.* 64). The phrase “*polis* of the *Lakedaimonians*” in the political sense also occurs at Thuc. 5.23.2, where the text of a treaty couples “the *Lakedaimonians* and Athenians” as τῶν πόλεε; cf. 8.2.3; Xen. *Hell.* 2.1.14, 3.5.6; Arist. *Eth. Nic.* 1180^a25; *CID* II 4.11.48, 360). Sometimes, when *Λακεδαίμων* is not called a *polis*, the name possibly refers to the wider *polis* embracing *Spartiatiai* and *perioikoi* (Thuc. 5.28.2). Apparently, *Λακεδαίμων* is not described as a *polis* in the territorial sense. For *Λακεδαιμόνιοι*, Thuc. 8.40.2 provides a probable example (there are more slaves in Chios than in any *polis* except that of the *Lakedaimonians*). *Lakedaimon* is also called an ἔθνος in the sense of an ethnic territory containing *poleis* (Ps.-Skylax 46: *Λακεδαίμων* ἔθνος . . . καὶ πόλεις ἐν αὐτῇ, including *Sparte* itself). For the *perioikic poleis* see Hdt. 7.234.2: *Λακεδαιμονίων* . . . πόλιες πολλαί (*perioikoi* and Spartans together); Isoc. *Areop.* 7: *Λακεδαιμόνιοι* . . . ἐκ φαύλων καὶ ταπεινῶν πόλεων; Ps.-Skylax 46: εἰσὶ δὲ καὶ ἄλλαι πολλαὶ πόλεις *Λακεδαιμονίων*.

Without being explicitly coupled with *Sparte* or *Lakedaimon* the urban sense of *polis* occurs at Hdt. 6.58.1, Thuc. 1.134.1; Xen. *Hell.* 3.3.10–11; Isoc. 5.48; the political sense occurs at Xen. *Hell.* 1.6.5, 3.3.4, 4.2.9.

The term *πολίται* is applied to Spartans (Hdt. 6.85.2, 9.35.1) and *Lakedaimonians* (Xen. *Hell.* 5.4.13, 7.4.20, 21; Aeschin. 1.180). Without being explicitly coupled with Spartiates or *Lakedaimonians*, *politai* occurs at Xen. *Hell.* 5.4.28, 23, 6.4.26.

There are many references to the *πολιτεία* of the *Lakedaimonian* or Spartan state. Sometimes it is that of the

Spartiatiai (Isoc. *Panath.* 109), much more often than of the *Lakedaimonioi* (Thuc. 1.18.1; Xen. *Hell.* 2.3.34; Arist. *Pol.* 1269^a29). *Λακεδαιμονίων πολιτεία* was the title of works by Xenophon (*Lac.*), Kritias (DK no. 88 fr. 6–9, 32–37), and Aristotle (fr. 539–51). Occasionally *πολιτεία* is linked with *Λακεδαίμων* (Pl. *Leg.* 712D). We also find ἡ *Λακωνικὴ πολιτεία* (Arist. *Pol.* 1272^b33) and ἡ *Λακόνων πολιτεία* (Ephor. fr. 118 *apud* Strabo 8.5.5).

The verb *πολιτεύομαι* is used in laudatory accounts of the Lakedaimonian constitution (Isoc. 3.24; Dem. 20.105).

The terms τὸ *πολιτικόν* (Xen. *Hell.* 4.4.19) and οἱ *πολιτικοί* (Xen. *Hell.* 7.1.28) are used to distinguish Lakedaimonian (including perioikic) forces from those of the allies. Polyb. 6.45.3 refers to τῆς *πολιτικῆς χώρας*, “the land divided among the citizens” (see Hodkinson (1986) 385).

Sparte is called an *asty* in Thgn. 785 = Anon. Megarensis (c.480, Hdt. 7.220.4; and Simon. fr. 11.29, West²; ἄστοι occurs at Hdt. 6.57.2, 61.2 (cf. Hansen (1997) 10–11).

Sparta is called *patris* in IG XII.9 286 (Eretria, C6) and Xen. *Lac.* 1.2 and [πατ]ρώνη π[ό]λις in Simon. fr. 11.32, West². Lakedaimon is called “the *akropolis* of Greece” and *patris* in Lysander’s monument commemorating the battle of Aigos potamoi (ML 95c; SEG 33 439; *F.Delphes* III.1 50). Cf. Xen. *Hell.* 7.1.30 (*patris*) and Hdt. 9.76.1 (*patre*).

The different uses of the two city-ethnics are found as follows.

(1) *Spartiates*: internally, *Spartiates* is not attested in the Archaic or Classical periods. The external individual use is found in LSAG² 446 no. 16a (c.550) and IvO 263 (C6) (Dunst (1972) 140–44); and in Hdt. 7.226.1, 8.42.2; Thuc. 2.66.2, 4.11.2; Xen. *Hell.* 5.4.39, 7.1.25; *An.* 4.8.25. The external collective use is found in IvO 244 (= LSAG 199 no. 10 (C6f?)); and in Hdt. 1.65.4, 67.1; Thuc. 1.28.3, 132.1; Xen. *Hell.* 3.3.5, 4.3.23, 6.5.21.

(2) *Lakedaimonios* is much more common than *Spartiates*. The internal collective use occurs in the list of contributions to the “Spartan” war fund (IG v.1 1; ML 67, with SEG 39 370+, 44 342; LSAG 201 no. 55 and Matthaiou and Pikoulas (1989); Loomis (1992) (C51/C4e) and the treaty with the *Aitoloi/Eraxadiéis* (ML 67 bis (c.426?); cf. IG v.1 219.2 (C5)). The external individual use (on which see *supra*) is found in C6 in SEG 11 1180a (C6f) and 29 408+ (LSAG 199 no. 20; Olympia (c.C6s)); in C5 in SEG 28 724 (Eretria, C51) and IG xi.2 161.B.59 (Delos), votive by *Λυσάνδρου Λακεδαιμονίου* (Lysander was a *mothax*, see *supra* 570); and in C4 in Tod 135 (367); IG XII.5 542.18 (C4m). The external collective use is found in ML 22 (c.490–80); IvO 247 (C5e); IG I³ 522, 425; *F.Delphes* III.4 462.A.3 (375/4); *CID* II

4.11.48 (360); Hdt. 1.6.3; Thuc. 5.77.1 (certainly equivalent to *Spartiatiai* here); Xen. *Hell.* 1.2.18. Coupled with the wider ethnic “Dorian” it occurs in *CID* II 32.43: *Δωριέων Εὐθιππος Λα[κε]δαίμωνιος* (C41). For the use of the variant ethnic *Lakon*, see SEG 31 559 (Delphi, 369–368), weapons captured from *Λακόνων*; the external individual use is found in Xen. *An.* 2.1.5, 5.31.

The territory, when referred to as *ge* or *chora* in prose, is always that of the Lakedaimonians (Thuc. 8.58.3; Xen. *Hell.* 6.5.24; Ps.-Skylax 46; *F.Delphes* III.1 6, 369), never of the Spartans. Between C6s and 371 Sparta controlled two-fifths of the Peloponnese (Thuc. 1.10.2), an area of c.8,500 km² (Cartledge (1979) 7). (For Lakedaimon the region, and for *Lakonike*, see Introduction).

The Eurotas valley, with or without the hills of Vardounia and the coastal plain of Helos including Gytheion (no. 333) to its west, has sometimes been considered the Spartan “core territory”. Even if such an entity was not juridically defined or precisely bounded (which it may have been), it seems likely that Sparta had a contiguous territory which was ringed by those of perioikic *poleis*. In the Classical period it would have been bounded on the north by those of Pellana (no. 341) (Plut. *Agis* 8.1) and Sellasia (no. 343), on the east by that of Geronthrai (no. 332), to the south perhaps by that of Gytheion, and on the west by the crest of Taÿgetos and/or the area known as Dentheliatis. The Archaic and Classical territory of Sparta proper amounted to c.270 km², of which almost half was prime arable land (Catling (2002)). There are no ancient references to the so-called *Spartiatike ge*, a figment of modern scholarship. Instead, post-Classical authors refer to “the land belonging to the *asty*” (Plut. *Lyc.* 8.5) or “the civic land” (*πολιτικὴ γῆ*; Polyb. 6.45.3; see MacDowell (1986) 91–92; Hodkinson (1986) 385).

Notoriously, the Spartan land economy was based on extraction. The Spartans expropriated a large part of the agricultural produce of helot cultivators, mostly in Messenia but also in Laconia (Tyrt. fr. 6–7 *apud* Paus. 4.14.5; Myron (*FGrHist* 106) fr. 2 *apud* Ath. 657d; Plut. *Lyc.* 24.2; *Mor.* 239D–E). Their farms were allegedly assigned as *kleroi* (plots) to individual Spartiates from which to draw their contributions to the communal messes (*syssitia*). Lykourgos was believed to have allocated 9,000 *kleroi* to the Spartiates and 30,000 to the *perioikoi* (Plut. *Lyc.* 8.5). The Spartans supposedly held equal *kleroi* from the state (possibly called “the ancient portion”, Heracl. Lemb. 12; or “the anciently distributed portion”, Plut. *Mor.* 238E); but Hodkinson (2000) argues that it is the helots’ tribute, and doubts that the *kleros* system existed.

Spartiate numbers probably peaked in C5e; they may have increased after new farmland was opened up in C6m (Catling (2002) 210–11). Referring to 480, Hdt. 7.234.2 makes Damaratos say that the *polis* of Sparta contains approximately 8,000 men—possibly the only remotely reliable estimate of total Spartiate numbers. At Plataiai in 479 there were 5,000 Spartans (Hdt. 9.28.2), perhaps formally two-thirds of the total levy (Cartledge (1979) 207–8). Arist. *Pol.* 1270^a36–38 reports that there were “once” 10,000 Spartiatas. According to Diod. 11.63.1–2, the earthquake of c.465 and subsequent shocks killed more than 20,000 Lakedaimonians, but this is no basis for reliable statistics (Cartledge (1979) 218, 222). In 480, the total population in citizen families may have been c.35,000–40,000 (Cartledge (1979) 222). At Nemea in 394, there were some 6,000 Lakedaimonian hoplites (Xen. *Hell.* 4.2.16). At Leuktra in 371, there were only 700 Spartiates (Xen. *Hell.* 6.4.15), plus half as many left at home (6.4.17), suggesting a total Spartiate class of c.1,050. On the causes of the decline in Spartiate numbers, commonly called “oligantrophy”, see Hodkinson (1986), (2000) 406–23.

The Lakedaimonians were the leaders of the Hellenic League which defeated the Persian invasion of 480–479 (Thuc. 1.18.2; ML 27 coil 2; Brunt (1953)). They were likewise the leaders of the “Peloponnesian League” (a modern name), referred to in our sources as “the Lakedaimonians and the allies” (Thuc. 1.108.1) or “the Peloponnesians” (Thuc. 1.1.1). This system of alliances, often one-sided, probably came into being during C6 and functioned until the League was dissolved after the Spartans’ defeat at Leuktra (371), which caused the loss of most of Messenia and some of the *perioikoi*. (These alliances did not involve the *perioikoi*; as members of the Lakedaimonian *polis*, they and the Spartans formed a single party in treaties.) In 506 the Corinthians (no. 227) showed that allies could restrain Sparta, causing an expedition to be halted (Hdt. 5.91–93). Soon after, c.504, decision-making procedures were regularised (Cartledge (1979) 147–48). On the League, see Cartledge (2002); Salmon (1984) ch. 17; Gschnitzer (1978).

There are many references to the Lakedaimonian–Peloponnesian alliance (e.g. Thuc. 1.108.1) and to other alliances made by the Lakedaimonians (e.g. *Staatsverträge* II nos. 112, 144, etc.). An important epigraphic example from Sparta, dating from perhaps 460–380, is the treaty between the Lakedaimonians and the Aitolian Erxadieis (ML 67 bis (p. 312); SEG 26 461, 42 308 +; LSAG² 447G, 448), which contains the key phrase *ἡεπομῆνος ἡόπυι κα Λα[κεδαιμόνιο]ι ἡάγιονται* (for similar formulations, see Hdt. 1.151.3; Xen. *Hell.* 2.2.20, 4.6.2, 5.3.26; *Lac.* 15.2; Isoc. 12.180). When a treaty

or alliance involves Sparta, the contracting party is the *Λακεδαιμόνιοι*: I.Dél. 6–7 87 fr. a.1 (402–399): *ἡιάλε τὰ τέλε τὸν Λακεδαιμόνιον*; Thuc. 5.18.1: *σπονδὰς ἐποίησαντο Ἀθηναῖοι καὶ Λακεδαιμόνιοι καὶ οἱ ξύμμαχοι*.

Exiles are attested at Thuc. 5.72.1; Xen. *Hell.* 1.1.32, *An.* 1.1.9; and Theopomp. fr. 240.

The Spartans, with the Lakedaimonians, enjoyed the greatest military reputation of any hoplite army from the late Archaic period until their catastrophic defeat by the Thebans at Boiotian Leuktra in 371. On the Serpent Column celebrating victory over Xerxes, the Lakedaimonians head the list of Greek allies (ML 27). As in other matters, it is generally as Lakedaimonians, not Spartans, that the army takes the field (Hdt. 6.72.1; Thuc. 2.66.1, 5.33.1; Xen. *An.* 7.6.1; cf. IG I³ 86.d–g.14, 417; IG II² 107.43 (368/7)), and indeed the shield badge was often a Λ for *Λακεδαιμόνιοι* (Eupolis fr. 359, Kock; Theopomp. fr. 402; cf. Xen. *Hell.* 4.4.10, 7.5.20; see further Lazenby (1985) 30); booty is taken from the Lakedaimonians (*IvO* 247; *LSAG* 182 no. 4 (c.C5m?); Bauslaugh (1990); IG I³ 522, 425; *F.Delphes* III.4 462.A.3 (375/4)); Leuktra was remembered as a Lakedaimonian defeat (Parian Chronicle of 264/3: IG XII.5 444; Tod 205.84). It is possible that in practice each of the five divisions, *lochoi*, of the hoplite army was recruited primarily from one *oba* of the *polis* (*infra*), without there being any formal link (Singor (1999) 74–75). Chief command of the land army was normally held by one or both kings; that of the navy in the Classical period by a *nauarchos* (Thuc. 2.66.2; Xen. *Hell.* 1.5.1), sometimes with an *epistoleus*, secretary (*Hell.* 2.1.7). Further details of Spartan military organisation and its chronological development may be found in Lazenby (1985) and Sekunda and Hook (1998).

The *perioikoi* were integral to the army; at Plataiai there were 10,000 Lakedaimonians, of whom only half were Spartans (Hdt. 9.28.2). Until the late Classical period, however, they were probably brigaded separately from Spartiates (Lazenby (1985) 15–16). At times they exercised command in the navy (Thuc. 8.22.1). Helots also normally served: Hdt. 9.10.1 says that at Plataiai there were seven helots to each Spartan (no doubt an exaggeration; see further Hunt (1998) 33–39).

Spartans of military age were required to reside in the city (Xen. *Lac.* 5; Plut. *Lyc.* 15.3–4), but their private farms were presumably spread all over the core territory of Lakedaimon and probably the whole of *Lakonike*; perhaps their families resided there.

Envoys are regularly sent to and from Lakedaimon or the Lakedaimonians, not Sparta or the Spartans (though see

Hdt. 1.141.4, 6.85.1, 7.149.2, etc.): (a) *to Lakedaïmon*: Hdt. 9.7.1; Thuc. 3.85.3, 92.3; Xen. *Hell.* 3.2.12; cf. *IG* II² 1.45 (403/2); (b) *to the Lakedaïmonians*: Ktesias (*FGrHist* 688) T 7, cf. fr. 30; Dem. 20.73; Arist. *Ath. Pol.* 32.3; (c) *from Lakedaïmon*: Thuc. 1.139.3; *IG* II² 106.7 (368/7); (d) *from the Lakedaïmonians*: Hdt. 7.153.1; Thuc. 1.28.1; Xen. *Hell.* 5.4.22; Ktesias (*FGrHist* 688) T 7. The Lakedaïmonians acted as arbitrators between Elis (no. 251) and Lepreon (no. 306) in 421 (Thuc. 5.31.4).

Proxenia, too, is conducted in the name of the Lakedaïmonians. For *proxenoi* of the Lakedaïmonians in other *poleis*, see e.g. Thuc. 3.52.5 (Plataiai (no. 216)); 5.43.2 (Athens (no. 361)); 5.59.5 (Argos (no. 347)); Xen. *Hell.* 5.4.22 (Athens); 6.1.3 (Pharsalos (no. 413)). For Lakedaïmonians acting as *proxenoi* of other *poleis*, see *SEG* II 1180a (*LSAG* 199 no. 15 (C6f) (Elis (no. 251)); *SEG* 26 467 (C6?) (Elis); *IG* XII.5 542.18 (Karthaiia (no. 492)? (C4m)); Thuc. 5.76.3 (Argos). According to Hdt. 6.57.2, it was a royal privilege to appoint Spartans (*astoi*) to act as *proxenoi* of foreign states (Cartledge (1987) 108, 245–46); however, grants of proxeny to Lakedaïmonians by foreign *poleis* are attested, e.g. *IG* II² 106.14 (368/7).

Citizenship grants may have been enacted by allowing the sons of favoured *xenoi*, such as Xenophon (Diog. Laert. 2.54), to proceed through the *agoge* and join the Lakedaïmonian army (cf. the *τρόφιμοι* of Xen. *Hell.* 5.3.9). Poor Spartans could be sponsored through the upbringing (cf. Introduction). At times of crisis even helots might be offered citizenship in return for military service (Thuc. 4.80.3, 5.34.2; Xen. *Hell.* 6.5.28–29); some were selected for elevation to the citizen body as *νεοδαμώδεις* (Thuc. 7.19.3, 8.5.1; Xen. *Hell.* 3.1.4), presumably as members of the Lakedaïmonian *damos* rather than the Spartan. A grant of citizenship is attested prior to the Persian War by Hdt. 9.35.1.

In later political theory the Spartan constitution was famously “balanced”, containing elements of monarchy, oligarchy and democracy through the combination of kingship, council and popular assembly. To these were added five ephors elected annually by shouting. This constitution—the renowned *eunomia*—and the social organisation that went with it were attributed to Lykourgos, who, if he was not wholly legendary, may have enacted reforms in C7e (Forrest (1980) 55–58). (On Archaic developments see Hodkinson (1997).) The Great Rhetra, of which a seemingly genuine (C7e?) text in early Doric has come down to us (Plut. *Lyc.* 6), established (or recognised) the *phylai* and *obai* (tribes and villages), the *gerousia*, or council of elders (twenty-eight plus the two kings), and an *apella* or assembly of Spartan citizens. The *phylai* (civic tribes) may have been the standard

Dorian ones: Pamphyloi, Hylleis, and Dymanes (Tyrt. fr. 19, West; Jones, *POAG* 118). The peculiar social practices of Classical Sparta, however, were perhaps partly “reinstitutionalizations” (Finley (1981)) of traditional customs, given new meaning *c.*C6m in order to strengthen Sparta’s military security.

The C4 Athenian orator Lykourgos was able to produce a text of a Spartan law (*Leoc.* 129), so at least some laws were written down. New laws probably required the initial backing of an ephor, after which they were discussed by the *gerousia* and only then by the assembly (MacDowell (1986) 6–7). In the Archaic and Classical periods the Spartans inscribed few public documents, but important examples include the list of war contributions and the treaty with the Erxadieis, both cited above. A stele recording a treaty with Athens is to be put up at the Amyklaion (rather than Sparta), according to Thuc. 5.18.10 (cf. 5.23.6). Possibly the earliest preserved decree of the Lakedaïmonians is a C3 resolution in Doric dialect granting *asylia* to Kos (*SEG* 12 371 (Kos, 242)), beginning *Λακεδαιμονίων δόγμα*. It avoids, perhaps deliberately, the wordy formulas of normal Hellenistic decrees. Cf. Thuc. 5.77.

Spartan civic order was famously stable (Thuc. 1.18.1), but the accounts of the foundation of its colony at Taras (no. 71) in C8l include references to instability and *stasis* (Antiochos (*FGrHist* 555) fr. 13; Arist. *Pol.* 1306^b31).

On trial procedures and punishments, see MacDowell (1986) 135–50. Hdt. 6.57.4–5 states that the kings adjudicated cases concerning heiresses (cf. Hodkinson (2000) 94–95), adoption and public roads. Arist. *Pol.* 1285^a6–7 adds religious matters. Beyond that, the extent of kings’ functions is debatable (MacDowell (1986) 123–26; see *supra* on *proxenoi*). The *gerousia* was the ultimate capital court for *Spartiatatai* (Xen. *Lac.* 10.2; cf. Arist. *Pol.* 1294^b33–34, 1275^b10). Ephors could perhaps impose the death penalty on *perioikoi* (Isoc. 12.181), no doubt after due process. They probably did so upon the rebel Kinadon, apparently an inferior (Xen. *Hell.* 3.3.11). Probably the assembly did not try cases except those involving disputed royal succession, and then not automatically (MacDowell (1986) 133–35). A death sentence against a king is attested by Xen. *Hell.* 3.5.25 (on trials of kings, see de Ste Croix (1972) 350–53).

The eponymous official was the *ephoros* (*IG* v.1 213.66, 73–74, 81, 90 (C5s or C4e), 1228; Thuc. 2.2.1), who acted as chairman (Sherk (1990) 241–43) of the board of five (Arist. *Pol.* 1272a6). According to tradition, the high office of *ephoros* was instituted by Lykourgos (Hdt. 1.65.6) or by King Theopompos (Arist. *Pol.* 1313^a26ff). Ephors are attested in

manumission *stelai* from Tainaron, e.g. *IG* v.1 1228–33 (C51–C4e). The ephors were elected annually *ἐκ τοῦ δήμου παντός* (Arist. *Pol.* 1270^b7–8; see Rahe (1980); Rhodes (1981)). The ephors' official residence was the *ephoreion* (Xen. *Ages.* 1.36).

The council was called *γερονσία* (Dem. 20.107; Arist. *Pol.* 1270^b24, 1272^b37; Ar. *Lys.* 980 has *γερωχία*; Xen. *Lac.* 10.3 calls it *γεροντία*). It was composed of thirty members who held tenure for life and acted as the probouleumatic body: the two kings were members *ex officio*, and the remaining twenty-eight members were chosen by the assembly from among citizens above the age of 60 (Pl. *Leg.* 691D–692A; Plut. *Lyc.* 26; Michell (1952) 135–40).

The post of *kytherodikes*, magistrate in charge of Kythera (no. 336), was probably a special institution; there is no evidence that Sparta appointed *harmostai* as governors of peri-oikic *poleis* in the normal course of events (Cartledge (1979) 179; MacDowell (1986) 28–30). The existence of lesser magistrates seems certain from Xen. *Lac.* 8.3.

The existence of an assembly is attested already in the Great Rhetra (Plut. *Lyc.* 6.2). Meetings of the assembly are attested in Thuc. 6.88.18 (cf. 1.67.3, 87.1) and Xen. *Hell.* 2.2.19, 3.2.23, 5.2.11, etc. (Andrewes (1966) 6). The assembly was presided over by the ephorate (Thuc. 1.87.1–2; Andrewes (1966) 13–14). In Thuc. 5.77.1, a treaty with Argos voted by the assembly, the name is *ἐκκλησία τῶν Λακεδαιμονίων* (cf. Thuc. 1.87.2; 5.34.1; Aeschin. 1.180). Its early epichoric name was possibly *apella* (Plut. *Lyc.* 6.2), but see de Ste Croix (1972) 346–7. In Xen. *Hell.* 3.3.8 is a unique reference to *ἡ μικρὰ καλουμένη ἐκκλησία*.

The city of Sparta is 48 km from the sea, further than most major *poleis*. Its location is modern Sparti. The low acropolis (now Palaiokastro), “standing out to no conspicuous height” (Paus. 3.17.1), overlooks the northern end of the town. The layout of the town is increasingly well understood (Cartledge (1979) 102–29; Raftopoulou (1998); Kourinou (2000)). In Classical and even Hellenistic times the city had no regular street plan (Raftopoulou (1998) 127). It was, as Thucydides famously remarked (1.10.2), an unimpressive urban entity, discontinuously settled (*κατὰ κώμας*; cf. Hansen (1997) 34–35), but apparently somewhat densely built up in the 360s (Aen. *Tact.* 2.2). Only the completion of the city wall paved the way for the infilling of the *asty* (probably from C31 on: Kourinou (2000) 59–60, 277). Sparta comprised four neighbouring villages: Pitana in the northern and north-western part of the city, Limnai to the east, Mesoa in the south and south-west, and Kynosoura (Konooura, Konosoura) in the south-east (Kourinou (2000) 89–95,

279–80). (Xenophon mentions rich houses on the east bank of the Eurotas, *Hell.* 6.5.27; cf. 7.5.11.) A fifth village, Amyklai, lay c.6 km south at modern Amykles and included the sanctuary of Apollo Hyakinthios. These probably corresponded to the five Classical *obai* (civic subdivisions) of the *polis* (on which see Wade-Gery (1958) and Lazenby (1985) 51–52). The main roads and gates have been traced in part (Kourinou (2000) 67–75, 131–54, 277–78), as have the bridges across the Eurotas and its tributaries (Armstrong, Cavanagh and Shipley (1992); superseded by Kourinou (2000) 77–88, 278–79). The agora (Xen. *Hell.* 3.3.5; Paus. 3.11.2–11), once thought to lie east or south-east of the acropolis (Cartledge and Spawforth (1989) 128), has now been placed on its summit (Kourinou (2000) 99–129, 280, esp. 108). The C5 Persian stoa (Paus. 3.11.3) built to celebrate the victory over Xerxes may have lain on the north-western side of the agora (Kourinou (2000) 109–14, 281). The famous C6m Skias was designed by Theodoros of Samos (Paus. 3.12.10). The excavated “Round Building”, sometimes thought to be the Skias, is now tentatively dated C3/C2 and identified as the Choros (Paus. 3.11.9), successor to an earlier structure or space where the *Gymnopaidiai* took place (Kourinou (2000) 114–27, 281). *Palaistrai* are referred to at Pl. *Th.* 162B.

The Archaic and Classical town of Sparta was without a city wall (Xen. *Hell.* 6.5.28), a fact which contributed to Spartans' military reputation (Lys. 33.7). They apparently built a rudimentary one in 317 under the threat of invasion from Cassander (Just. *Epit.* 14.5.5, 7), though this is not archaeologically confirmed. The C3e ditches and palisades (Paus. 1.13.6; Plut. *Pyrrh.* 27.5; Polyb. 5.19.4) were expanded into walls with a circuit of 48 stades (Polyb. 9.26a.2), enclosing c.209 ha (Cartledge and Spawforth (1989) 133). (For details of the walls, see Kourinou (2000) 35–66.)

Burials took place at the margin of each of the four main *obai* and thus within the “urban” area, continuing for several generations after the single city wall was built in C3. The earliest burials are thus evidence for the boundaries of the *obai* (Kourinou (2000) 215–19, 283–84). One C6e–C5m cemetery contained two-storey tombs (Raftopoulou (1998) 134–35).

There is little evidence for the Classical management of water-supply and drainage before C3, only some C4 drains in different *obai* (Kourinou (2000) 229–33, 284–85).

The Rhetra of Epitadeus, alleged by Plut. *Agis* 5.2–4 (cf. Arist. *Pol.* 1270^a15–34) to be a C5 decree allowing land to be disposed by will, is probably fictitious (Hodkinson (1986) 389–91, (2000) 90–94). Spartans could certainly acquire and dispose of private land; on the mechanisms of inheritance, notably the effects of partible transmission, see MacDowell

(1986) 89–110; Hodkinson (1986), (2000). Sparta differed from many *poleis* in permitting women to own and bequeath land; Arist. *Pol.* 1270^a15–34 estimates that in his day two-fifths of the land belonged to them. (On other aspects of women's life in Sparta, see Cartledge (1981); Schaps (1979); MacDowell (1986) 71–88.) Some land in perioikic communities was assigned to the kings (Xen. *Lac.* 15.3). Land in *Lakonike* was sometimes granted to homeless groups of outsiders: at Methone (no. 319) to Nauplians (Paus. 4.24.4, 27.8), at Messenian Asine (no. 313) to the Argive Asinaians (Paus. 4.8.3, 14.3, 27.8, 34.9), and at Thyrea (no. 346) to the Aiginetans (Thuc. 2.27.2, 4.57.1.3). We do not know whether in such a case the perioikic community in question was consulted, but it is possible.

Spartan citizens made regular contributions in kind to the common messes (*syssitia*) (Arist. *Pol.* 1271^a26–37, 1272^a13–15; Hodkinson (2000) 190–99), and probably paid the cost of their sons' education (Ducat (1999) 48). A system of *eisphora* is mentioned (and criticised) by Arist. *Pol.* 1271^b11–15 (Hodkinson (2000) 189–90). It is disputed whether the *perioikoi* paid taxes; the account of Ephor. fr. 117 (*apud* Strabo 8.5.4) is not creditworthy (but see Hodkinson (2000) 188, 190). Helots, of course, paid a fixed proportion of their agricultural produce, or a fixed amount, to the Spartan state. On the realities of wealth and property in Classical Sparta, which recent research suggests was closer to “normal” Greek societies than previously thought, Hodkinson (2000) supersedes previous studies.

Despite the notorious secrecy of Sparta (Thuc. 5.68.2) and periodic expulsions of aliens (Ar. *Av.* 1012–13; Thuc. 1.144.2, 2.39.1), foreigners did reside there: Xen. *Mem.* 1.2.6 refers to *xenoi* “visiting Lakedaïmon” (ἐπιδημεῖν ἐν Λακεδαίμονι; cf. Hodkinson (2000) 337 with n. 6).

The Lakedaïmonians were proverbially pious (on cults see Wide (1893); Ziehen (1929); Parker (1989)). The *Dioskouroi* were among the most popular heroes. At Sparta, cult worship was also paid to Leukippides, Lykourgos, Agamemnon, Orestes, Talthybios and the ephor Chilon. The major festivals were devoted to Apollo: the Karneia (Hdt. 7.206.1, 8.72); Gymnopaïdia(i) (Thuc. 5.82.2, 3; Xen. *Hell.* 6.4.16); and Hyakinthia (Hdt. 9.11.1). Important Archaic and Classical cult places include the temple of Athena Chalkioikos, built on the acropolis by Gitiadas (Paus. 3.17.2; Dickins (1906–7); on Gitiadas, see Romano (1980) 129–32; he may have been active C6m). That of Athena Poliachos was the premier intra-urban cult site, shared by all five *obai* (Cartledge (1979) 55, 106). At the edge of the city, beside the river Eurotas, was the sanctuary of Artemis Orthia (first

temple c.700, second c.575–560; Dawkins (1929); Boardman (1963)). Other sanctuaries identified from archaeological evidence include those of Athena Alea (Xen. *Hell.* 6.5.27), Artemis Agrotera (converted to or combined with Artemis Kyparissia c.C3), Poseidon Tainarios and the Phoibaion (Hdt. 6.61.3; on these see Kourinou (2000) 155–213). There was another important cult of Apollo at Thornax just north of the city (Paus. 3.10.8; probably LS site H45, Geladari).

On a ridge overlooking the south-eastern part of the city across the Eurotas stands the Menelaion, or sanctuary of Menelaos and Helen, established c.700 near the site of a late Bronze Age mansion; the third Menelaion dates from C5e (Cartledge (1979) 120–21, 155). At Amyklai, Bathykses of Magnesia built the temple of Apollo known as the Amyklaion, where important public documents were lodged (Thuc. 5.18.11; Paus. 3.18.9; Tomlinson (1992)). Its colossal Archaic statue of Apollo, some 15 m high, was a key monument in Laconia (Parker (1989) 146). Amyklai was one of a ring of sacred sites protecting the city at a few kilometres' distance, such as Zeus Messapeus on the Tsakona ridge (Catling and Shipley (1989); Catling (1990)), another cult site of Messapian Zeus at Messapeai in the plain to the south, a hill-top sanctuary of unknown identity to the east at Phagia (LS site U3002), and the Eleusinion at Kalyvia Sochas to the south. Most or all of these were mutually inter-visible.

A regular calendar of festivals involving both Spartans and *perioikoi* took place around Laconia. (Agonistic culture within Laconia is discussed by Hodkinson (1999) 148–60.) The “Damonon inscription” *IG* v.1 213 (*SEG* 38 333+; *LSAG* 201 no. 52, addenda p. 448 (post-403)) records the victories of Damonon, and his son at several of them: the Pohoidaia for Poseidon (in Sparta, Thouria and Helos), the Athanaia (at Sparta), the Eleuhinia (at Kalyvia Sochas?), the Ariontiaia (probably at Sparta), the Lithedia (in the Malea peninsula?), the Parparonia in Thyreatis, and the Maleateia (probably at the sanctuary of Apollo Maleatas at modern Kosmas). *IG* v.1 222 (*SEG* 30 402+; *LSAG* 199 no. 22 (c.530–500?)), a votive to (Apollo) Karneios, commemorates a victor at the Athanaia.

The calendar appears to have been same throughout Lakedaïmon. It began in midsummer (Trümpy, *Monat.* 140). Months attested as Lakedaïmonian (never Spartan) in Archaic or Classical texts are Ἄρτεμίσσιος (Thuc. 5.19.1; also *IG* v.1. 11 (C1)), Γεράστιος (Thuc. 4.119.2) and Καρνεῖος (Thuc. 5.54.2; cf. Epidauros Limera (no. 329) (Hellenistic)).

The Spartans not infrequently consulted the Delphic oracle, for example in C8l (Parke and Wormell (1956) i. 71–73; ii. no. 46), C7e (Hdt. 1.65.2–4; Xen. *Lac.* 8.5; Plut. *Lyc.* 6), C6e

(Hdt. 1.66.2, 67.4), and in 426 (Thuc. 3.92.5). In C4, Lakedaimonians served the Delphic Amphiktyony as *naopoioi* (CID II 31.35, 356; 31.75, 345) and *hieromnamones* (CID II 32.43 (C41)).

Numerous Spartan victors at international games are known, particularly from Archaic and Classical times (*Olympionikai* 17–18, 21–22, 24, 30, 32, 34–35, 37, 40–47, 50, 55, 57, 59, 60–68, 70, 72–73, 75–76, 78, 80, 82–86, 91, 108, etc.; for the importance of Olympic competition to Spartans, see Hodkinson (1999) 160–76, (2000) 307–11, 319–23); two *peridonikai* are on record (Paus. 6.1.7, 2.1; Knab (1934) 8). In surviving victory dedications, victors use the ethnic *Λακεδαιμόνιος*, e.g. SEG II 1227 (c.500) (cf. SEG 32 217.3–4 (r628); 15 (r384)). In 420, Spartans were excluded from the Olympic Games by the Eleian authorities due to an alleged breach of the Olympic Truce (Thuc. 5.49.1–50.4, on which see Roy (1998); cf. Hodkinson (2000) 329 n. 10).

Communal dedications by the *Spartiatiai* are rare: see IvO 244 (C6f?). Those in the name of the Lakedaimonians include ML 22, a dedication to Zeus Olympios; cf. Hdt. 1.51.4; CID II 4.II.48 (360); 3.II.28 (358); 24.I.15 (336) (donations to Delphi).

Coinage, like luxuries generally, was proverbially eschewed by the late Archaic and Classical Spartans (Xen. *Lac.* 7.2; Plut. *Lyc.* 24.2), though Xen. *Lac.* 14.3 alleges that this law is no longer observed (cf. Hodkinson (2000) 154–76). Only under Areus I (309/8–265) and intermittently thereafter was coinage struck (Grunauer-von Hoerschelmann (1978)).

It is often asserted that Sparta founded only one overseas colony, at Taras (no. 71), founded according to tradition in 706 (Antiochos of Syracuse (*FGrHist* 555) fr. 13; see Cartledge (1979) 123–24; Malkin (1994) 115–42). Malkin (1994), however, has shown that the Spartans were active colonizers, both inside and outside the Peloponnese. According to Strabo 8.4.4, King Teleklos (c.760–740) established colonies at Poieëssa, Echeiai and Tragion in south-eastern Messenia some time before the main conquest of Messenia. Whether the perioikic towns of Messenia were colonies is debatable; Malkin (1994) 85 tentatively advances Thouria (no. 322) and Aithaia (no. 312) as possible C8 foundations. Both Geronthrai (no. 332) and Pharis (S67) are said to have been captured from their Achaian inhabitants (Paus. 3.2.6). Geronthrai was resettled by the “Dorians occupying Lakedaimon” (3.22.6), but Pharis may have gone out of existence (cf. 3.20.3). The Spartans settled Minyans in six Triphylian towns (Hdt. 4.148.4), of which Lepreon (no. 306) was resettled in 421 (Thuc. 5.31.4, 34.1). Sparta colonized

Herakleia in Trachis (no. 430) in 432 (Thuc. 3.92.1; Malkin (1994) 219–35). Links with Sparta as a *metropolis* were claimed by various communities. Thera (no. 527) was allegedly an *apoikia* of Lakedaimon (Hdt. 4.147.1), as were Knidos (no. 903) (Hdt. 1.174.2; Malkin (1994) 80–81), Kythera (no. 336) (Thuc. 7.57.6; Malkin (1994) 81–82), and Melos (no. 505) (Hdt. 8.48; Thuc. 5.84.2, etc.; Malkin (1994) 74–76). Several Cretan cities came to believe the same (Malkin (1994) 8, 78–80).

The Spartans and/or Lakedaimonians regarded themselves as an immigrant population, having arrived as Dorians (Thuc. 3.92.3) or, in a developed version of the myth, returned (a feature of Dorian ideology unique to Sparta) after the Trojan War together with the descendants of Herakles, the *Herakleidai* (Hdt. 9.26.2, 4; Malkin (1994) 15–45, esp. 43).

346. Thyrea Map 58. Lat. 37.25(?), long. 22.40. Size of territory: 1? Type: A. (S10). The toponym is *Θυρέα*, ἡ (Thuc. 4.56.2, 57.3), which is also a name for the surrounding area (cf. Hdt. 1.82.2; Thuc. 4.57.3, if the wording implies that the place captured was not the *polis* town). The plural form *Θυρέαι* seems to be used only of the district (e.g. Hdt. 1.82.2, who uses it despite having just given the singular form for the district; Isoc. 6.99). A city-ethnic is not attested in Classical evidence.

Although Thyrea is never quite explicitly called a *polis*, Thucydides in effect twice calls it a *polis* in the topographical sense (4.57.1 with 4.57.3).

Thuc. 2.27.2 and 4.56.2 says that the Lakedaimonians gave the exiled Aiginetans one of their own frontier possessions, Thyrea in Kynouria, as a new home. At 2.27.2 the expressions “Thyrea to live in (*οἰκεῖν*) and the land to cultivate . . . The land (named) Thyreatis . . .” clearly imply that Thyrea was *already* a nucleated settlement, and Thyreatis its territory. Later he tells how the Athenians attacked the Aiginetans as they were building a fort on the coast, whereupon they retreated *εἰς* . . . τὴν ἄνω πόλιν ἐν ἣ ὄκουν (4.57.1). Here, too, it is a reasonable inference that the inland town existed *before* the Aiginetans started building the coastal fort. When the Athenians “capture Thyrea and burn the *polis*” (4.57.3), this equally implies that the town was called Thyrea like the district, otherwise Thucydides would have given its name.

The “upper *polis*”, the main part of Thyrea, has been variously located (see Shipley (1997) 231, and cf. Shipley (1993)). The MSS of Thuc. place it c.10 stades (c.1.8 km) inland, which might suit Kastraki Kato Meligous, but archaeological confirmation is lacking (Phaklaris (1990) 104–5, late Hellenistic and

Roman sherds; Goester (1993) 93 and 99, Roman architectural fragments, pottery including Classical to Hellenistic). Other proposed locations are *LS* ii. 278, AA13, Elliniko (favoured by Phaklaris (1990) 78–90, Geometric to Roman; Goester (1993) 55–81, fortifications C4s), identified above as Eua (no. 331); 277, AA5, Eva Monis Loukous (Phaklaris (1990) 96–104, mainly Roman); 279, AA16, Marmaralona Xerokambiou (Phaklaris (1990) 111–17, prehistoric, Geometric to Classical). (See also Phaklaris (1990) 18–20 on Thyreatis; Pritchett (1965–91) vi. 94–101, vii. 215–22.)

The Aiginetan fort next to the sea must be one of three promontories in the bay of Astros. It is unlikely to be at Cherronisi in the centre of the bay, which is a small, rounded hill not easy to fortify; pottery may include Classical and probably Hellenistic pieces (Goester (1993) 88, 98, though Phaklaris (1990) 40–46 reports nothing later than C6). The fort may have been at Nisi Agiou Andréa (*LS* ii. 279, AA19; Phaklaris (1990) 51 fig. 12; Goester (1993) 84–88, 97–98), which has a street grid and a Classical circuit wall with towers. This could, however, be a late Classical to Hellenistic successor of the fort on the same site, since the Aiginetans had not completed their work when the Athenians attacked and may have had no opportunity to resume it. Alternatively, this site may be Anthana (no. 324), and the site of the Aiginetan fort might be Nisi Paralieu Astrous, where

there is a Classical circuit wall (Goester (1993) 91–93, undated; 99). Of course, no trace of the fort may survive at all.

The district of Thyrea is placed in Argolis by Hdt. 1.82.2 prior to c.545; at 6.76.2 it is a coastal place within reach of Tiryns and Nauplion. It is placed on the borders of Argeia and *Lakonike* by Thuc. 4.56.2 (cf. 8); in Kynouria by Thuc. 5.41.2.

Thuc. 2.27.3 suggests that Thyreatis (or Thyrea, cf. 4.56.2) is the *chora* of a *polis*. Hdt.'s *χώρος* . . . *Θυρέη* (1.82.1) and *Θυρέαι* (1.82.2), like Thuc.'s *Θυρέα* (2.27.2, 4.56.2, 5.41.2), *Θυρεάτις γῆ* (*supra*) and *χώραν* (4.57.2), will be different names for the *chora* of the *polis* of Thyrea, which existed before the Aiginetans came (though there may have been a time when the area was called Thyrea but did not contain a *polis*). The cult of Polemokrates at Eua (Paus. 2.38.6; modern Eva) and that of Parparos on a nearby mountain (Marmaralona, Xerokambi) may have been in the territory of Thyrea.

Though there is implicit evidence that the *polis* existed before the Lakedaimonians' grant to the Aiginetans, there is no written evidence that it survived later. Thucydides' juxtaposition of "Thyrea and the *polis* of Anthana" (no. 324) (5.41.2) could imply that Thyrea is not now a *polis*; perhaps it ceased to exist in 424. If, however, Thyrea was Nisi Agiou Andrea, it had a long post-C4 life.

ARGOLIS

MARCEL PIÉRART

I. The Region

The hinterland of the Argolic Gulf (ὁ Ἀργολικὸς κόλπος (Ps.-Skylax 49, 50)) comprises the Kynouria to the west, the Argive plain, or Argeia (*IG* IV 506.3 (C6m); Ps.-Skylax 49), to the north, and the peninsula known as the Argolic Akte (Ephor. fr. 18c; Diod. 12.43.1; Polyb. 5.91.8; cf. Jameson *et al.* (1994) 13–15) to the east.

At the western end of an alluvial plain of c.250 km², on the site where later the city of Argos grew up, habitation is attested from the Neolithic period. From MH onwards the site had become a nucleated settlement of some size, but not large enough to deserve the name of “city” or “town”. Further extended in LH, it was still smaller than Mykenai and Tiryns. The toponym Ἀργος, which was used in the following period, seems to be a Greek word, which is rather surprising for a site of that time (Leukart (1994) 307; but see Frisk (1960) s.v. “Unerklärt, sicher vorgriechisch” and Chantraine (1968) s.v.). In Homer, however, the toponym designates one of the cities of the Achaians in the broad sense of this term (Hom. *Il.* 2.115, 3.75, 4.52), and in particular the “capital” of the kingdom of Diomedes (*Il.* 2.559). In the poem, the plural of the corresponding ethnic (Ἀργεῖοι) is used metonymically about all the Greeks. It is not always easy to distinguish the mythical sources from those relating to the Dorian town. The earliest attestation of the adjective Ἀργεῖος used as a proper city-ethnic seems to be in C7m in Tyrtaios (fr. 23a.15, West). Later the inhabitants of Argos always claimed that they were the descendants of the *Argeioi* of the Homeric poems.

According to Hdt. 1.82.2, the Argives once controlled the entire western coast of the Argolic Gulf as far as Cape Malea and the island of Kythera (cf. no. 336); but this is extremely unlikely (Kelly (1976) 40, 73, 116–17). From C6m until 338, the plain of Thyrea or Kynouria was controlled by Sparta (Piérart (1997) 326–27, (2001) 34–36, for the name). In a study of the natural borders of the Argive plain, the watershed offers a reliable guide-line: to the north, the Tretos Pass separates the Corinthian Gulf from that of Argos; to the east

is the Arachnaion massif; to the west rises the range of the Arkadian mountains. It follows that Argos (no. 347) naturally tried to secure for itself the political control of the entire valley of the rivers Inachos and Charadros. The plan was implemented by destroying and incorporating Tiryns (no. 356) in C5m, Mykenai (no. 353) in C5m, Orneai (no. 354) in C5l and Kleonai (no. 351) with the sanctuary at Nemea in C4l. Furthermore, the following settlements were dependencies of Argos: Oinoe in the valley of Charadros, Lyrkeion in the upper valley of Inachos, Nauplia and Asine on the coast, and Hysiai situated in its own valley towards Arkadia.

The name of the region is Ἀργολίς, -ίδος, ἡ (Hdt. 1.82.2, 6.92.1; Aesch. *Suppl.* 236, adjective) with Ἀργόλας as a rare ethnic, attested only in poetry (Eur. *Rhes.* 41; Ar. fr. 311, *PCG*), and Ἀργολικός as the corresponding *ketikon* (Dem. 52.5; Ps.-Skylax 49; Polyb. 5.91.8). All are derived from Ἀργος, but not coined before the Dorian period (Leukart (1994) 307–8). In modern scholarship “Argeia and Akte together are known as the Argolid (Argolis in Greek)” (Jameson *et al.* (1994) 13); but the ancient Greek nomenclature was, in fact, more variable. *Argolis* (Paus. 8.1.2) and even *Argeia* (Paus. 8.1.1) designates sometimes the whole north-eastern part of the Peloponnese, including Corinthia and Sikyonia. The *periplooi* mention Kleonai (no. 351) (Ps.-Skylax 49) and Phleious (no. 355) (Ps.-Skymnos 523–24) as adjacent to the Argolic Gulf (Ps.-Skylax) and Akte (Ps.-Skymnos). Both dominated a fertile valley, traversed by a road of major commercial and military importance.

Epidaurus (no. 348) (Paus. 2.8.5) and Troizen (no. 357) (Paus. 2.8.5), Hermion (no. 350) (Hdn. III.2 724.2–3) and Halieis (no. 349) (Ephor. fr. 56), where the inhabitants of Tiryns (no. 356) were settled after their expulsion by the Argives, were all called Argolic cities. Thus, from Antiquity onwards, the toponym Ἀργολίς denoted the entire peninsula connected with the Argive plain, but the mountains divided the region into two parts: the territory of Argos itself and the peninsula called Akte, adjacent to the Saronic Gulf. In the sources it is not always easy to determine how many cities are included under the heading “the cities of Akte”. The

phrase *ὄσαι κατέχουσι τὴν Ἀκτὴν πόλεις* (Ps.-Skymnos 523) implies that there were several, but according to Paus. 2.8.5, the inhabitants of Argolid Akte (*οἱ τὴν Ἀργολίδα Ἀκτὴν οἰκοῦντες*) were the Epidaurians and the Troizenians only. Viewed from the sea, Akte lies at the south-eastern limit of the Saronic Gulf and separated from the Gulf of Hermion by Cape Skyllaion (Eudoxos, fr. 350.9, Lasserre; Polyb. 5.91.8). In addition to the cities mentioned above, Akte comprised the peninsula of Methana (cf. no. 352) and the island of Kalauria (cf. no. 360). On the island was a sanctuary of Poseidon which, according to Strabo 8.6.14, was the seat of an amphiktyony of seven cities, *viz.*, originally, Hermion (no. 350), Epidaurus (no. 348), Aigina (no. 358), Athens (no. 361), Prasieis (no. 342) (later replaced by Sparta (no. 345)), Nauplia (later replaced by Argos (no. 347)) and Boiotian Orchomenos (no. 213) (Tausend (1992) 12–19; Hall (1995) 584–85).

The historians tend to juxtapose Epidaurus, Troizen, Hermion (and Halieis), and the soldiers from these *poleis* often fought side by side (Hdt. 8.43, 72, 9.28.4, 31.3–4; Thuc. 1.27.2, 8.3.2; Xen. *Hell.* 4.2.16, 6.2.3, 7.2.2). But the solidarity attested in the army of the Peloponnesian League does not exclude fervent local disputes between neighbours (cf. Troizen and Epidaurus: *IG* iv².1 75 (cf. *SEG* 11 505, 31 328); Troizen and Hermion: *IG* iv 751, 791 (all late Hellenistic)).

The Argolic *poleis* supported themselves by agriculture and stock breeding, in the coastal regions supplemented by fishing (cf. Baladié (1980) 215–16). Stock breeding was normally confined to the border regions and resulted in disputes over boundaries, difficult to determine in mountainous terrain (Jameson *et al.* (1994) 596–606).

Both the date and the composition of the *periplous* ascribed to Ps.-Skylax are disputed, but the chapters on Argos and Argolis (49–52, 54) seem to reflect the period after the Tiryinthians (no. 356) had moved to Halieis (no. 349) in C5f: of the coastline of the Argolic Gulf, Argos (no. 347) controls 150 stades, Epidaurus (no. 348) 30, Halieis (no. 349) 100, Hermion (no. 350) 80, and Cape Skyllaion is in the territory of Troizen (no. 357) (Baladié (1980) 215; Jameson *et al.* (1994) 568–72). The inhabitants of the *poleis* on Akte in particular supported themselves by fishing (Baladié (1980) 211–20). Looking sea-wards, the cities of the peninsula were open to cultural influences from overseas communities, and as a result came to differ from the *polis* of Argos. Cut off from the sea by a belt of marshes along the coast, Argos became primarily an inland *polis*, whose policy was shaped, above all, by its opposition to neighbouring Sparta (no. 345), the great power of Greece.

Our written sources provide us with information about twenty-nine named settlements in Argolis of the Archaic and Classical periods. With one exception (Kerkas) they have all been identified, most beyond reasonable doubt, some with a certain amount of probability only. As against eleven *poleis* there are eighteen non-*polis* settlements.¹ Furthermore, we have remains of no fewer than thirty-two small nucleated settlements which cannot be convincingly matched with any of the toponyms found in the written sources.² Thus we know of sixty-one Archaic and Classical settlements altogether, of which eleven were *poleis* and are described below in the Inventory. With a few additions and omissions, the following list comprises those sites listed in *Barr.* as settlements of the Archaic and/or Classical periods.

1. Pre-Hellenistic Settlements not Attested as Poleis

Asine (*Ἀσίνη*) Hom. *Il.* 2.560; Strabo 8.4.4, 6.3, 10, 11, 17; Paus. 2.36.4. Captured by the Argives in C8l (Frödin and Persson (1938) 437) and reduced to the status of *komē*; cf. Vollgraaf (1916) 221.32 = *SEG* 19.317 (C4l): *Ἀσίνα*. *Barr.* AC.

Eileoi (*Ἐιλεοί*) Paus. 2.34.6 (*χωρίον*). Jameson *et al.* (1994) 30–33. *Barr.* AC.

Elaious (*Ἐλαιούσ*) Apollod. *Bibl.* 2.5.2; Steph. *Byz.* 263.23. Pritchett (1991) 170–73. *Barr.* AC.

Genesion (*Γενέσιον*) or **Genethlion** (*Γενέθλιον*) Paus. 2.38.4 (*χωρίον*), 8.7.2. Pritchett (1965) 131–34. Shipley (1997) 266 adduces Steph. *Byz.* 202.11: *Γενέση πόλις Λακωνικῆς*; a C5m dedication found at Xeropighado shows that the site was at that time in Argolis (Piérart (2001) 28–29). *Barr.* AC.

¹ Doubtful or spurious settlements, mostly mentioned in late sources only, are Argos (*Ἄργος*) (Steph. *Byz.* 112.24: *πόλις ... κατὰ Τροϊζήνα*); Dia (*Δία*) (Steph. *Byz.* 229.1–3: *πόλις ... Πελοποννήσου περὶ τὸ Σκύλλειον*); Dryope (*Δρυόπη*) (Steph. *Byz.* 239.23: *πόλις περὶ τὴν Ἐρμιόνα*); Eiones (*Ἡϊόνες*) (Hom. *Il.* 2.561; Strabo 8.6.13 (*κώμη, ναύσταθμον*)); Jameson *et al.* (1994) 121–22, 480; Genethlion (*Γενέθλιον*) = Genesion (Paus. 2.34.9 (*χωρίον*)), cf. Pritchett (1965) 131–34, settlement near Troizen; Halioussa (*Ἁλιούσσα*) (Paus. 2.34.8 (*λιμὴν*)); island near Spetsai); Hyrnethion (*Ἥρνηθιον*) (Paus. 2.28.3 (*χωρίον*)); settlement near Epidaurus); Kelenderis (*Κελένδερις*) (Paus. 2.32.9 (*λιμὴν*)); harbour near Troizen); Kyneteia (*Κυνέτεια*) (Steph. *Byz.* 393.7 (*πόλις Ἄργους*) citing Kallimachos (fr. 55, Pfeiffer)); Lampe (*Λάμπη*) (Steph. *Byz.* 410.5 (*πόλις ... τῆς Ἀργολίδος*), citing Philon); Melina (*Μέλινα*) (Steph. *Byz.* 442.11 (*πόλις Ἄργους*), citing Lycophron *Alex.* 403); Rhodoussa (*Ῥοδοῦσσα*) (Steph. *Byz.* 547.3 (*πόλις τῆς Ἀργείας*)); Saminthos (*Σάμινθος*) (Thuc. 5.58.5, a passage that offers no clue to whether Saminthos was a tract of land or a settlement); Sphairia (*Σφαιρία*) (Paus. 2.33.1; island near Kalauria, sometimes identified with Kalauria).

² The list includes only sites that are explicitly called “settlement”, “village” or “town” in the inventories of Faraklas (1972a and b), (1973); Foley (1988), Runnels and Munn (1994), and Mee and Forbes (1997). None of the settlements is recorded in *Barr.*

Hysia or **Hysiai** (Ἵσία, Ἵσιαί) Thuc. 5.83.2; Strabo 8.6.17; Paus. 2.24.7 (ἐρείπια Ἵσιῶν ἐστι πόλεως ποτε ἐν τῇ Ἀργολίδι), 2.27.1, 54.7. Cf. Vollgraff (1915) 372 D 10 = SEG 13 242 (C3s)). Pritchett (1980) 54–64. *Barr.* AC.

Kenchreai (Κεγχρεαί) Paus. 2.24.7 (χωρίον); Strabo 8.6.17. Pritchett (1980) 54–64; Pikoulas (1995) 270–71. *Barr.* AC.

Kerkas (Κερκάς) Suda A942 (πόλις) = FGrHist 2 T1; near Nauplia(?). Later attested as a *kome* (SEG 11 1084 (C4)); cf. Piérart (1997) 335). Not in *Barr.* Unlocated.

Lerna (Λέρνα) Aesch. *Prom.* 652, 677; *Tetr.* 15 D fr. 130; Eur. *Phoen.* 613; Strabo 8.6.2 (χωρίον); Paus. 2.36.6–7. Baladié (1980) 87–88, 111–12. *Barr.* AC.

Lessa (Λήσσα) Paus. 2.25.10 (κώμη). Rupp (1976). *Barr.* C.

Lyrkeia (Λύρκεια) Strabo 6.2.4, 8.6.17; Paus. 2.25.4–5; Hesych. A632 (Λυρκείου δῆμον... ἐστι δὲ καὶ ὄρος καὶ πόλις); SEG 17 143.3 (C3s) (Λύρκειον). Pritchett (1980) 12–17; Pikoulas (1995) 263–64. Prior to C5f, Lyrkeia may have been a dependent *polis*; cf. the sub-ethnic Λυρκειεύς (Piérart (1997) 334–35 (C6l/C5e)). No date in *Barr.*, but the inscription published by Piérart (1997) suggests AC.

Mases (Μάσης) Hom. *Il.* 2.562; Strabo 8.6.10, 17; Paus. 2.35.11, 36.1–3 (ἐπίγειον); Steph. Byz. 435.5 (πόλις). Jameson *et al.* (1994) 374–76: “If Mases ever reached the status of a *polis*, by the classical period it could only have been a subunit of Hermion” (376). *Barr.* AC.

Midea (Μιδέα) or **Mideia** (Μίδεια) Strabo. 8.6.11; Paus. 2.25.9, 6.20.7, 8.27.1 (πόλισμα). *Barr.* No date.

Mysia (Μυσία) Paus. 2.18.3 (χωρίον). *Barr.* AC(?).

Nauplia (Ναυπλία) See s.v. Argos (no. 347).

Oinoa (Οἰνόα) or **Oinoe** (Οἰνόη) or **Oine** (Οἶνη) IG IV 823.57 (C4); Paus. 1.15.1 (ἐν Οἰνόη τῆς Ἀργείας), 2.25.2–3 (cf. SEG 38 314), 10.10.4; Apollod. *Bibl.* 1.8.6, 2.5.3; Hsch. O316; Peditasimus, *De duodecim Herculis laboris* 8 (Myth. Graec. I). Pritchett (1980) 2–12, (1991) 222–26; Pikoulas (1995) 260–61. *Barr.* AC.

Philanorion (Φιλανόριον) IG IV².1 75.16, 34 (Φιλανορεία); Paus. 2.36.3. Jameson *et al.* (1994) 33–36, 596–606. *Barr.* AC.

Temenion (Τημένιον) Strabo 8.6.2; Paus. 2.38.1. Dorovinis (1997). *Barr.* AC.

Thermasia (?) Paus. 2.34.6 (ἱερὸν Δῆμητρος ἐστὶν ἐπίκλησιν Θερμασίας). Jameson *et al.* (1994) 121–22, 480. *Barr.* C.

2. Unidentified Settlements

Ano Phanari Faraklas (1972a) figs. 15a–b; Foley (1988) 172: 7 (settlement and watch-tower in the territory of Epidauros (no. 348)). C.

Ag. Ioannis Runnels and Munn (1994) F4 (village, region of Fournni). ACH.

Ag. Ioannis Faraklas (1972a) 12; Foley (1988) 176: 15. Settlement and sanctuary (territory of Epidauros (no. 348)). C.

Ag. Leonidhas Faraklas (1972a) 11; Foley (1988) 176: 16. Settlement and watch-tower (territory of Epidauros (no. 348)). C.

Berbati Foley (1988) 177:19. Settlement, in the Argive plain. C.

Brinies (or *Dherpeza*) Runnels and Munn (1994) 475: C42 (village (?), region of Koiladha). H.

Chinitsa Runnels and Munn (1994) 424: A 12 (village(?), region of Porto-Cheli (Halieis (no. 349))). C.

Choritsa Foley (1988) 177: 20. “In the C period, it was probably a town.” AC.

Fousia Faraklas (1973) figs. 12a–16b; Foley (1988) 193: 85 (unfortified settlement; territory of Troizen (no. 357)). AC.

Giftokastro Faraklas (1972a) 12; Foley (1988) 180: 31. Settlement (territory of Epidauros (no. 348)). AC.

Helliniko Faraklas (1972a) 12; Foley (1988) 181: 33. Fortified settlement in the territory of Epidauros (no. 348). C.

Iria (?) Faraklas (1972a) 13; Foley (1988) 182: 40 (fortified settlement(?) in the territory of Epidauros (no. 348)). A(?)C.

Kalloni (Ag. Yioryios) Faraklas (1972b) 15; Foley (1988) 182: 42 (settlement in the territory of Troizen (no. 357)). C.

Kapari Runnels and Munn (1994) 504: E78 (village(?), region of Hermioni). H.

Katsingri (Prophitis Ilias) Foley (1988) 183: 48 (temple and lower town in the territory of Argos (no. 347)). A.

Kinetta Hill-top west of Kinetta. Runnels and Munn (1994) 492: E36 (village, region of Hermioni). AC.

Korakia Island Runnels and Munn (1994) 463: B105 (village(?), region of Kranidhi). H.

Koroni Faraklas (1972*a*) 12; Foley (1988) 185: 58 (fortified settlement in the territory of Epidauros (no. 348)). C.

Koufo Runnels and Munn (1994) 522: G11 (village(?), region of Iliokastro). A(C).

Koukouras Runnels and Munn (1994) 431: A 49 (village(?), region of Porto-Cheli (Halieis (no. 349))). (C)H.

Lemonodhasos Faraklas (1972*b*) 15; Foley (1988) 185: 63 (settlement uncertain in C). C(?).

Loutro Runnels and Munn (1994) 444: B5 (village(?), region of Kranidhi). C.

Magoula sta Ilia Runnels and Munn (1994) 519: G1: (village(?), region of Iliokastro). AC.

Magoula Mee and Forbes (1997) 65, 68, 143–44: MS 60 (settlement of Methana Peninsula (no. 352)). AC.

Melindra (Milindra) Runnels and Munn (1994) 438: B20 (village, region of Kranidhi). H.

Oga Mee and Forbes (1997) 65, 68, 146–48: MS 67 (settlement of Methana Peninsula (no. 352)). C.

Panayitsa Runnels and Munn (1994) 438: B4 (village(?), region of Kranidhi). H.

Petrothalassa Faraklas (1973) 9; Foley (1988) 196: 105 (where it is called Thalassopetra); Runnels and Munn (1994) 483: E6 (village or small town, region of Hermioni). H.

Pigadhaki Faraklas (1972*a*) 11; Foley (1988) 193: 89 (fortified settlement in the territory of Epidauros (no. 348)). C.

Sambariza Magoula Runnels and Munn (1994) 484: E9 (village, region of Hermioni). A.

Thermisi Kastro Runnels and Munn (1994) 480: E3 (village, region of Hermioni). A(C).

Tracheia Faraklas (1972*a*) 12; Foley (1988) 198: 109 (fortified settlement in the territory of Epidauros (no. 348)). C.

370 (418–414); *IG* IV 583.1 (C41); on this name, see Hall (1995) 580). The city-ethnic is *Ἀργεῖος* (*SEG* 3 395 = *LSAG* 168.4 (C71/C6e); *NIEpi* 10.4–5 (470s); Bacchyl. *Ep.* 1.142, 2.4–5). Argos is called a *polis* in the urban sense (*SEG* 11 1084.6 (C41); Hdt. 6.82.1; Thuc. 5.59.3; Xen. *Hell.* 4.7.3), in the political sense (ML 42B.32–33 (C5m); *SEG* 11 1084.25 (C41); Thuc. 5.67.2; Aen. *Tact.* 11.8), and in the territorial sense (Xen. *Hell.* 4.7.2). *Πολιότης* is found in Hdt. 6.76.2. The oldest attestation of the city-ethnic in a historical context is in Tyrtaios (fr. 23a.15, West = *P Oxy.* 3316). The collective use is attested internally in *SEG* 13 239 (c.475), on coins (*infra*) and in a C41/C3e dedicatory inscription (*IG* IV 487) and externally in a dedication of Corinthian spoils at Olympia (*SEG* 11 1203 (c.500–480)), in the list of Argives killed at Tanagra in 458 (ML 35 = *IG* I³ 1149) and in literary sources (Hdt. 1.31.2; Thuc. 1.102.4; Arist. *Pol.* 1270^a2). The individual use is attested internally in a C3 honorific decree (*IG* IV 585) and externally on a bronze plaque found in Epidauros (*SEG* 26 449 (C5e)), in an honorific decree of Epidauros (*NIEpi* 10.5–6 (470s)) and in literary sources (Hdt. 9.75; Xen. *Hell.* 1.3.13). *Patris* is found in Thuc. 2.68.4 and *IG* IV².1 618 (C4).

The territory of Argos is referred to as *γᾶς τᾶς Ἀργείας* in a law of C6m (*IG* IV 506.3, 10 = *Nomima* I 100; cf. Thuc. 2.27.2) and as *ἡ Ἀργείων χώρα* at Hdt. 7.149.3; at Thuc. 4.133.2 the toponym *Ἄργος* designates the territory of the city (*ὁ νεὼς τῆς Ἦρας . . . ἐν Ἄργει*). The plain of Argos covers c.275 km² and is surrounded by mountains from which streams flow into the valley. The whole region covers almost 1,300 km², most of which is mountainous. To the north the divide between the hinterland of the Argolic Gulf and that of the Corinthian Gulf follows the Tretos range. The Arkadian mountains tower over the plain to the west: Lykeion, Artemision, Kreopolos and Parthenion. To the east is the Arachnaion massif, and to the south the plain ends at the Argolic Gulf. After the destruction of Asine in C8l and the conquest of Nauplia in C7, Argos dominated the entire valley, which seems to form a natural unit and is well suited to being the territory of one polity (Piérart (1997)). But the political status of some dependent communities remains obscure. Nauplia may just possibly have been a dependent *polis*: it is called *Ἀργείων ναύσταθμον* at Strabo 8.6.2; but Ps.-Skylax 49 calls it *πόλις καὶ λιμὴν*, thus suggesting that as late as C4 it may have been more than just a harbour town (cf. Hansen (1997) 36–37). There is, however, no other evidence to support Ps.-Skylax's classification of Nauplia as a *polis*, and the application of the term to Nauplia may be an error (cf. Hansen (2000) 196 n. 49). Others were allies—e.g. Orneai (no. 354) (Thuc. 5.47.1) and perhaps Mykenai (no.

II. The *Poleis*

347. Argos (Argeios) Map 58. Lat. 37.40, long. 22.45. Size of territory: 5. Type: A. The toponym is *Ἄργος*, *τό* (Hdt. 1.82.5; *IvO* 630.3 = *SEG* 11 1249 (480–475?); ML 77.15 = *IG* I³

353)—and some were perioikic cities—e.g. Lyrkeia and probably Tiryns (no. 356) (Piérart (1997) 334–36). From C5m the territory of Argos comprised Hysiai, Tiryns, Midea and Mykenai (Paus. 8.27.1). Orneai—almost certainly situated at Kato Belesi = modern Lyrkeia—was incorporated in C5l (Moggi (1974)) but was still a *polis* in 352/1 according to Diod. 16.34.3, 39.4. The boundary stones between Argos and Corinth (no. 227) were removed in 392 when the two *poleis* united (Xen. *Hell.* 4.4.6), but the occupation of Corinth by Argos was terminated in 387/6 by the King's Peace (Xen. *Hell.* 5.1.34). In c.C4l the territory of Argos grew to c.1,400 km² by the annexation of Kleonai (no. 351) (Piérart (1982); Perlman (2000) 148–49), which dominated the neighbouring valley of Nemea with the sanctuary of Zeus where one of the four Panhellenic festivals was celebrated every second year (Golden (1998) 11, table i). It is more difficult to assess the increase in territory due to the incorporation of Kynouria to the south-west. The toponym denotes both the plain of Thyrea and the plateau further south, which was probably acquired by the Argives in 338 as far as and including Zarax (Piérart (2001); but see Shipley (2000) 378). Argos was mainly an agricultural *polis* (Piérart (1997) 332), and according to Lehmann (1937) 77–78 the Argive plain may in Antiquity have produced some 320,000 hl of grain per year. Nevertheless, Argos was one of the principal recipients of grain from Kyrene (no. 1028) during the grain crisis of 330–326 (Tod 196.7).

For the size of population the only information we possess is some army figures. According to Hdt. 7.148.2, 6,000 Argives were killed in 494 at the battle of Sepeia, and the city suffered a severe shortage of manpower during the next generation (Hdt. 6.83.1). Nevertheless, at Nemea in 394, the Argives could muster c.7,000 hoplites (Xen. *Hell.* 4.2.17), to whom should be added a contingent of knights (Charneux (1991) 316 n. 126). A total of perhaps 7,500 hoplites and knights in the field army corresponds to some 12,000 adult male citizens of hoplite status (Hansen (1985) 11–13, 16–21).

The early history of Argos and the rule of King Pheidon (Hdt. 6.127.3; Arist. *Pol.* 1310^b26–28; Ephor. fr. 115) is too obscure to be told. Similarly, the existence of amphiktyonies dominated by Argos in the Archaic period is still a moot point (Tausend (1992) 8–12; Piérart (1995)). After the crushing defeat at Sepeia in 494 (Hdt. 6.77–80), Argos observed a strict neutrality and declined the invitation to join the Hellenic League against Persia (Hdt. 7.148–52). The Argive resentment of Sparta (no. 345) led to a *rapprochement* with Athens (no. 361), but after his ostracism Themistokles found refuge in Argos (Thuc. 1.135.3). Argos took advantage of the

weakening of Sparta during the revolt of the helots and succeeded in destroying Mykenai (no. 353) and expelling its population (Diod. 11.65; Paus. 2.16.5, 5.23.3, 7.25.5–6, 8.27.1, 33.2; Strabo 8.6.19; Piérart (1992) 377–82). A few years later Argos, now a democratic *polis*, concluded an alliance with Athens (Thuc. 1.102.4 (c.460)), and in 458, 1,000 Argives supported the Athenians in the battle of Tanagra (Thuc. 1.107.5). At the same time Argos played a dominant role in a treaty (ML 42 (C5m)) between Knosos (no. 967) and Tylisos (no. 992) and concluded alliances with neighbouring *poleis* (cf. Hdt. 9.35.2 implying a C5f alliance with Tegea (no. 297) and the decree SEG 11 1084 (C4l) renewing friendly relations with Pallantion (no. 289)).

In 451 a thirty years' peace was concluded between Argos and Sparta (Thuc. 5.14.4; *Staatsverträge* 144). It was strictly observed; but those Peloponnesians who in 421 were dissatisfied with the Peace of Nikias approached Argos, and a treaty was concluded with Mantinea (no. 281), Elis (no. 251), Corinth (no. 227) and the Chalkidians (Thuc. 5.28, 31 = *Staatsverträge* 190). After the breakdown of the attempt to renew the thirty years' peace, a new treaty was concluded in 420 with Mantinea, Elis and Athens (Thuc. 5.47.8; *IG* I³ 83 = *Staatsverträge* 193). According to Thucydides, the ensuing war between Argos and Epidauros (no. 348) was provoked by the Athenians for strategic reasons (Thuc. 5.26.2, 53–58, 75.4–5). It resulted in 418 in the battle of Mantinea (Thuc. 5.66–73) in which Argos, Orneai (no. 354) and Kleonai (no. 351) lost 700 men (Thuc. 5.74.3). A fifty-year alliance was concluded in 418 between Sparta and Argos, now dominated by a pro-Lakedaimonian faction (Thuc. 5.77–79 = *Staatsverträge* 194), but the restoration of the democratic regime at Argos led to a new *rapprochement* with Athens (Thuc. 5.82.5; *IG* I³ 86 = *Staatsverträge* 196).

By forming a quadruple alliance in 395 with Boiotia, Athens (no. 361) and Corinth (no. 227), Argos for the first time joined an organisation ruled by a *synedrion* (Diod. 14.82.1 = *Staatsverträge* 225). In the Corinthian War Argos was involved in numerous military operations, some of which took place in its own territory (Xen. *Hell.* 4.2.17–22, 3.15–21, 4.19, 7.2.1–4). In 392 the Argives annexed Corinth and forced their own laws on the Corinthians (Xen. *Hell.* 4.4.1–6), but Corinth regained its independence by the King's Peace in 387/6 (Xen. *Hell.* 5.1.34–36). Argos was a party to the *koine eirene* of 362 (*IG* IV 556 = *Staatsverträge* 292) and observed neutrality during the war against Philip of Makedon in 340–338 (Dem. 18.64), but in 338/7 the Argives joined the Corinthian League (Arr. *Anab.* 1.17.8), and in the 330s they were appointed arbitrators in a dispute referred to

the *syndrion* of the League by two of the members (*IG* XII.3 1259 = RO 82 = Ager (1996) 3). Argos recovered Thyrea (*supra*) and may for a short period have dominated Epidaurus (no. 348) (*IG* IV².1 69 and *SEG* 11 400, see *infra* 607). After the death of Alexander the Great, Argos joined the anti-Makedonian alliance (Diod. 18.11.2).

In the course of the Archaic and Classical periods the constitution of Argos changed from monarchy to oligarchy and then to democracy. According to tradition, the dynasty of Temenids was deposed two generations after Pheidon (in C6f, if one accepts the synchronism suggested at Hdt. 6.127.3). But the king (*βασιλεύς*) was kept as an eponymous official (ML 42.43 (C5m); cf. Hdt. 7.149.2). The principal body of government was now the *damiourgoi* (*δαμιοργοί*), a board of first nine and later six officials with judicial and financial powers (*IG* IV 614 = *Nomima* 1 87 (575–550); *SEG* 11 314 (C6) = *Nomima* 1 88). In spite of growing resentment among the commoners, the oligarchy was still upheld after the defeat at Sepeia (Diod. 10.26; cf. Gehrke, *Stasis* 24–25); but after the Persian Wars the constitution was changed into a democracy (Gehrke, *Stasis* 361–63), and ostracism was introduced in order to avoid a return to monarchy or a *dynasteia* (Arist. *Pol.* 1302b18–19). Apart from two short oligarchic episodes, the democracy lasted to the end of the Classical period. The democratic constitution was briefly overturned in 417 and was seriously under threat in 370 (Gehrke, *Stasis* 26–33). (1) During the Heraia celebrated in February 417 a pro-Lakedaimonian faction of Argives supported by the Lakedaimonians overthrew the democracy and introduced an oligarchic constitution (Thuc. 5.81.2; Arist. *Pol.* 1304^a25–27; Aen. *Tact.* 17.2–4, but see Labarbe (1974)). But only half a year later a counter-revolution brought the democrats back to power; some of the oligarchs were killed, and others were exiled (Thuc. 5.82.2; Diod. 12.80.3; Plut. *Alc.* 15.4). (2) After the battle of Leuktra, the oligarchs planned a *coup d'état*; but their plans were disclosed. In the aftermath 1,200 wealthy citizens were killed, and others exiled (Diod. 15.57.3–58.4). It is a moot point whether the *stasis* described at Aen. *Tact.* 11.7–8 refers to (1) or (2) (Stylianou (1998) 414).

During the democracy, decisions (called *δόκημα*, *SEG* 34 282.15 (330–300)) were made by the people (*ὁ δᾶμος τῶν Ἀργείων*, *SEG* 34 282.4; cf. Thuc. 5.28.1) meeting in assembly (*ἀλιαία τελεία*, *SEG* 30 355.1 (330–300); cf. *SEG* 34 282.6 (330–300)) at regular intervals, probably every month (*SEG* 30 355.1), but a meeting could be adjourned and held as an extraordinary meeting in the following month (*ἀμβόλιμος*, *SEG* 11 1084.1–2 (C41)). The assembly was chaired by the

president of the council (*ἀρήτευε βωλάς ὁ δεῖνα*, *SEG* 34 282.3), which indicates a probouleumatic procedure (Piérart (2000) 303, *pace* Rhodes, *DGS* 71). The council was assisted by a secretary (*γροφῆς βωλάς*) and seems to have had a term of office of six months (Tod 179.15; cf. Rhodes, *DGS* 71). Alongside the *βωλά* there was another council, called “The Eighty” (*ὀγδοήκοντα*, Thuc. 5.47.9), presumably subdivided into four sections of twenty, one for each of the four *phylai* (*Φικαδέες*; *SEG* 33 286 (C41)).

Other boards of officials were the five *strategoí* (Thuc. 5.59.5; *SEG* 29 361 (400)) and, as commanders of the cavalry, two *ilarchoí* from each *phyle* (*SEG* 11 293 (C4–C3); Charneux (1991) 314–17), further a board of four *hieromnemes*, one from each *phyle*, associated with the administration of the Heraion (*IG* IV 517 (C5)), and a board of *artynai* (*ἀρτῦναι*) mentioned in the treaty of 420 alongside the Council and the Eighty (Thuc. 5.47.9). See Piérart (2000) 305–6 for details.

After the destruction of Tiryns (no. 356) and Mykenai (no. 353), Argos possessed a large public domain, called *δαμοσία καὶ ἱερὰ χώρα* (*SEG* 41 282 (C1)) and presumably administered by the *phylai* (Kritzas (1992) 236–40; cf. *SEG* 41 284; Piérart (1997) 332–33). Argos had its own calendar, and nine months are known (Charneux (1990) 397–402; Trümpy, *Monat.* 143–44).

The Argive citizens were subdivided into the three Dorian *phylai* (Hylleis, Dymanes, Pamphyloi), to which a fourth *phyle* was added perhaps as late as C5m: *viz.* the Hyrnathioi (Ephor. fr. 15; *IG* IV 487–88 (C41/C3e) = *SEG* 11 293). Each *phyle* was further subdivided into twelve artificial units, probably called *phatrai* (*φάτραι*) and named after local heroes, e.g. *Τεμενίδαι* (*SEG* 29 361.111.18 (400); cf. Piérart (2000) 299). In each *phyle*, finances were handled by a board of twelve (*δωδέκα*), probably one from each *phatra* (*SEG* 41 284). In c.330 a new civic subdivision was added to the two others: in all probability the *pentekostys* (*πεντηκοστής*), e.g. *Κλεωναί* (*SEG* 30 355.3 (330–300)). Members of the same *phatra* might belong to different *pentekostyes*. Membership of the civic subdivisions was hereditary, but the subdivision into *pentekostyes* was at least to some extent territorial. From c.330 naturalised citizens had to be inscribed in a *phyle*, a *phatra* and a *pentekostys* (*ISE* no. 41.11–13 (C3f)). In personal names a sub-ethnic was sometimes added to the name and patronymic, first the *phyle* (*IG* IV 517 (C5)), later the *phatra* (*SEG* 30 355.4–5) or the *pentekostys* (*SEG* 30 355.3) or a combination of the two (*IG* IV 616 (C41) = *SEG* 33 288); for the whole system and its chronology, see Piérart (2000) 297–301.

In C4l block grants of citizenship were bestowed on the cities of Rhodos (no. 1000), Aspendos (no. 1001) and Soloi (no. 1011) (*SEG* 34 282.4–8). In C5f Argos granted proxeny to a citizen of Oinous (no. 338), one of the Lakedaimonian perioikic *poleis* (*SEG* 13 239), in C5s to a citizen of Sparta (no. 345) (Thuc. 5.76.3), and later in C4 to citizens of Athens (no. 361) (*SEG* 30 355), Pheneos (no. 291) (*SEG* 30 356) and Lampsakos (no. 748) (*SEG* 30 360). Argive citizens received grants of proxeny from Sparta (Thuc. 5.59.5), Athens (*IG* II² 78, ethnic restored), Epidauros (no. 348) (*SEG* 26 445 (C4m)) and Megara (no. 225) (*IG* VII 2 (C4)). Reception of envoys is recorded in Hdt. 7.148.1 and in Thuc. 5.31.1; *IG* IV².1 102B.ii.203 (400–350) records a payment to a *κάρυκι ἐς Ἄργος*. Sending of envoys is attested at Hdt. 7.151, 9.12; Thuc. 5.30.3 and Xen. *Hell.* 1.3.13 (cf. 4.7.3).

Metics (*πεδάφοικοι*) are attested in lists of C5 (*IG* IV 552, 615 (C5?); *Inv.* E 88 (C5m)). According to Hdt. 6.83, followed by Diod. 10.26, the slaves (*οἱ δοῦλοι*) seized power in Argos in 494 and married the widows of the Argives killed in the battle of Sepeia. They were later expelled by the descendants of the Argive citizens and found refuge in Tiryns (no. 356). However, Arist. *Pol.* 1303^a6–8, followed by Plut. *Mor.* 245F, calls them *περίοικοι* and asserts that many of them became citizens after the defeat at Sepeia. There is no clue to resolving this problem. Probably, the inhabitants of the dependent *poleis* had an inferior status and acquired the status of full citizens only with the introduction of the democracy in c.470–460 (Paus. 8.27.1; cf. Piérart (1997) 327–31).

The protective deity of Argos was Apollo Lykeios (Cole (1995) 302; Foley (1988) 139–40; *SEG* 13 240.9 (C4l/C3e)). His temple in the agora has not been found, but the remains of an altar, inscribed as belonging to Apollo Lykeios, have been recovered (Pariente *et al.* (1998) 218). Other important urban cults were those of Zeus Larisaios (Paus. 2.24.3; Piérart (1996)) and Athena Polias (*SEG* 11 314 (C6f)), both with their sanctuaries on the Larisa hill. On the south slope of the Deiras hill were the sanctuaries of Athena Oxyderkas (Paus. 2.24.2; Piérart (1996)) and the oracular shrine of Apollo Pythaeus or Deiradiotas (Paus. 2.24.1; *BCH* 33 (1909) 172; Foley (1988) 140; Piérart (1990)).

The territory of Argos was protected by the goddess Hera, whose principal sanctuary lay some 10 km north-east of Argos (Billot (1997)). The most famous festival of Argos was the Heraia celebrated at the Heraion in connection with a procession from the town (Hdt. 1.31.2; Pind. *Nem.* 10.24; Paus. 2.20.3; Hall (1995) 592–96). The Heraia were a Panhellenic festival announced by *theoroi*, since c.330 hosted in the various *poleis* by *theorodokoi*, of whom a fragmentary

list has been preserved (*SEG* 23 189 (c.330), see Perlman (2000) 100–4, 149–55). The festival of Hera Argeia included competitions called *Hekatombaia*, and a C5f bronze prize hydria from the games has been found in Sinope (no. 729) (*SEG* 30 1456; cf. *SEG* 30 52 (430–420), 366 (460–450), 367 (440), 648 (430–420) with Amandry (1980) 211–17). The priestesses of Argive Hera served for life, and the list of priestesses, collected by Hellan. fr. 74–84, served in C5s as a kind of Panhellenic chronology (Thuc. 2.2.1). After the subjection of Kleonai (no. 351), Argos assumed the presidency of the Nemean Games, and the C4l list of *theorodokoi* found at Nemea was probably drawn up by the Argives (*SEG* 36 331; Perlman (2000) 131–55).

Argive citizens were victorious in the Olympic Games (*Olympionikai* 204 (480), 210 (476), 222 (472), 241 (468), 260 (460), 298 (448), 335 (420) and 464 (328)); in the Pythian Games (Paus. 10.7.4 (586, 582, 578); Pind. *Nem.* 10.25); in the Isthmian Games (Pind. *Nem.* 10.26); in the Nemean Games (Paus. 1.29.5 (rC5f), 2.20.6); in the *Lykaia* (*IG* v 2 549 (C4s)); and in the *Amphiaraia* (*IG* VII 414 (C4s)). Argos made several communal dedications at Olympia (*IV*O 250 = *SEG* 11 1203 (500–480?), 251 (500–480); *SEG* 11 1203 nos. 3–5 (500–480): Corinthian spoils) and Delphi (Jacquemin (1999) nos. 71 (C6e), 72 (C6e), 74 (C5f), 70 (456), 68 (C5m), 67 (C5l), 69 (369)). Consultation of the oracle at Delphi is recorded by Hdt. 6.19.1.

The site of Argos is dominated by two hills, one much higher than the other: to the south, Larisa with escarpments rising to c.290 m (*ἄκρα*: Strabo 8.6.7; *ἀκρόπολις*: Strabo 8.6.9; Paus. 2.24.1), and to the north Profitas Elias, called Aspis (the shield), a rocky outcrop of less than 90 m. Its real name was almost certainly Deiras (Piérart (1990) 327–28). Larisa and Deiras were both surrounded by a defence circuit, of which only parts have been recovered. The oldest remains date from C6. In the Classical period the walls seem to have enclosed an area of over 200 ha (Lang (1996) 174 and Abb. 34). An attempt in 417/16 to construct a set of long walls down to the sea was stopped by Spartan intervention (Thuc. 5.82.5–83.2). The ancient town grew up on the south side of the Larisa hill. The habitation area was organised around the axes of the thoroughfares. The oldest of the city's two theatres was built into the eastern spur of Larisa hill, called Pron (the promontory). It had a nearly rectangular *koilon* of between thirty-seven and thirty-eight straight rows of seats accommodating c.2,700–3,000 persons, and it seems to have served as meeting-place of the assembly and the courts (*TGR* ii. 123). In C3e a curved theatre of the canonical type was constructed in its vicinity (Piérart (1998) 344–45;

Hansen and Fischer-Hansen (1994) 56–57; *TGR* ii. 125–26). The agora (Thuc. 5.47.11) occupied a low-lying area below the theatre. Here stood the temple of Apollo Lykeios, the most famous sanctuary of the city of Argos (Paus. 2.19.3), where public enactments were set up (Thuc. 5.47.11; *SEG* 34 282.16). The oldest known public political building is the hypostyle hall; it was constructed c.475–450 and probably served as *bouleuterion* (Bommelaer and des Courtils (1994)) (*SEG* 31 315, 41 284). East of this, some Archaic buildings apparently used for administrative purposes were replaced in the period 450–425 by a large building flanked by three colonnades. It was used as a *gymnasion* and served a number of other purposes. It contained a long narrow court flanked by a colonnade (Pariente *et al.* (1998) 213–14, 218). North of this building a C4s *stadion* 180 m (= 1 stade) long was laid out towards the east (*ibid.* 216, 218–19). The north and east sides of the agora were bordered by two stoas (*ibid.* 214–15). In, probably, 315 Kassander's general Apollonides had the *prytaneion* burnt down and killed 500 Argives who were gathered in the building (Diod. 19.63.2). The prison of Argos is mentioned in Arist. *Rh.* 1375^a5–6.

In literary sources (Ephor. fr. 115, 176) the invention of coinage is erroneously attributed to Pheidon, the C7f king of Argos. But Argos struck coins only from C5e (before c.480) and onwards. (1) Silver, from before 480 onwards; denominations: drachm, tetrobol, hemidrachm and smaller denominations down to tetartemorion; types: *obv.* forepart of wolf; *rev.* A in incuse. (2) These types are also found on a C5–C4 issue of iron coins. (3) Silver, from c.421 onwards; denominations: stater, drachm and smaller denominations; types: *obv.* head of Hera wearing *stephanos*; *rev.* various types, often two dolphins swimming in opposite direction, legend: on some *ΑΡΓΕΙΟΝ* or *ΑΡΓΕΙΩΝ*. (4) Bronze from C4 onwards with various types (for the date, see *IGCH* no. 11 and Kraay (1976) 96); Babelon, *Traité* ii.3. 447–75; *SNG Cop. Argolis* 1–66).

348. Epidaurios (Epidaurios) Map 58. Lat. 37.40, long. 23.10. Size of territory: 4. Type: A. The toponym is *Ἐπίδauρος* (Pind. *Isthm.* 8.68; *IG* IV².1 122.12 (C4)), either *ὁ* (Hom. *Il.* 2.561) or *ἡ* (Hdt. 3.52.7; Thuc. 2.56.4–5). The city-ethnic is *Ἐπίδαυριος* (ML 27.4 (479); *IG* IV².1 47.2–3 (C4); Hdt. 5.82–84). Epidaurios is called a *polis* both in the urban sense (Thuc. 5.75.5; Ps.-Skylax 54; *IG* IV².1 115.14, 25 (C4l)) and in the political sense (*IG* IV².1 48–51 (C4s–C3f); Xen. *Hell.* 6.5.29). The collective use of the city-ethnic is attested internally in an honorific decree (*NIEpi* 10.5–5 (470s); *τὸπιδαυριοί*) and in a dedication of an Argive (*SEG* 26

449 = *Nomima* II 28 (C5f)), and externally on the Serpent Column in Delphi (ML 23.4) and in literary sources (Hdt. 5.82–84; Thuc. 1.27.2; Xen. *Hell.* 4.2.16). The individual use is found internally in a dedication of an Epidaurian (*SEG* 11 438 (C4s)) and externally at Delphi, where an Epidaurian made a dedication to Apollo in C5 (*F.Delphes* III.4 195) and an Astias of Epidaurios served as *naopoios* in 356/5 (*CID* II 31.35), and in Olympia on a monument commemorating the Olympic victor Aristion (*IvO* 165 (C4m); *Olympionikai* 415). It is presumably called *patra* (= *patris*) in *IG* IV².1 619 (C4[?]).

The name of the territory is *ἡ Ἐπίδαυρία γῆ* (Thuc. 4.45.2) or *ἡ Ἐπίδauρος*, where the toponym denotes the territory (Thuc. 5.55.1, 77.1; Xen. *Hell.* 7.1.18; cf. Ps.-Skylax 50, 54: *ἡ Ἐπίδauρος χῶρα*). It covered 473 km² (Jameson *et al.* (1994) 18). The frontier between Epidaurios and Troizen (no. 357) was near Methana (no. 352) (Thuc. 4.45.2); to the west, the frontier towards Argos (no. 347) was at Mt. Arachnaion. The Epidaurians possessed part of the coast of the Argolic Gulf but had no harbour there (Ps.-Skylax 50). A C5 dedication found in the Iria plain indicates that the plain belonged to Epidaurios (*SEG* 24 274; cf. Jameson *et al.* (1994) 570).

In 480 Epidaurios provided eight triremes at Artemision (Hdt. 8.1.2) and ten at Salamis (Hdt. 8.43), as well as 800 men at Plataiai in 479 (Hdt. 9.28.4). Assuming that there is no overlap between the forces, Jameson *et al.* (1994) 556–59 estimates the military strength of Troizen at 2,800 men, and the total population at c.16,000 minimum and 23,500 maximum.

Epidaurios was a member of the Kalaurian amphiktyony (Strabo 8.6.14; Tausend (1992) 12–19). In C5e, after the Argive defeat at Sepeia, Epidaurios gave shelter to some Argive refugees (*SEG* 26 449 = *Nomima* II 28 (C5f); cf. Lambrinouidakis (1990)).

Epidaurios fought on the Greek side in the Persian War (Hdt. 8.1.2, 43, 9.28.4), and is recorded on the Serpent Column in Delphi (ML 27.4) and in Olympia (Paus. 5.23.1–2). It was a member of the Peloponnesian League (Thuc. 5.57.1). Alongside the Corinthians they defeated the Athenians at Halieis in 460/59 (Thuc. 1.105.1). In 435 the Epidaurians supported Corinth (no. 227) against Korkyra (no. 123) with five triremes (Thuc. 1.27.2). From 430 the Athenians ravaged the territory of Epidaurios (Thuc. 2.56.4–5, 4.45.2, 6.31.2).

Controlling a territory which bordered on the Gulf of Argos but also had an excellent harbour on the Saronic Gulf, Epidaurios occupied a strategic position and was an indispensable link in all relations between Athens (no. 361) and

Argos (no. 347). A war between Argos and Epidaurus was fought in 419–418, caused by a sacrifice owed by the Epidaurians to Apollo Pythaios (Thuc. 5.53.1). The territory of Epidaurus was repeatedly plundered by the Argives (Thuc. 5.54.3–55.4). The Epidaurians received a Lakedaimonian garrison, and an Argive attack on the town was called off (Thuc. 5.56). After the battle of Mantinea, the Athenians, being allied with the Argives, built a blockading wall around the town of Epidaurus, but in 418/17 a peace was concluded between Lakedaimon and Argos in which it was stipulated that the blockading wall be pulled down and the Argive and Athenian troops withdrawn from the territory of Epidaurus (Thuc. 5.77.1). After the Athenian defeat at Syracuse, Epidaurus took an active part in the mobilisation of a Peloponnesian fleet (Thuc. 8.3.2), and after the battle of Aigos potamoi in 405, a statue was set up in Delphi of the commander of the Epidaurian squadron (Paus. 10.9.10). Epidaurus fought on the Spartan side in the battle of Nemea (Xen. *Hell.* 4.2.16) and remained loyal to Sparta (no. 345) even after the battle of Leuktra (Xen. *Hell.* 6.2.3, 7.2.2). In 369 Epaminondas ravaged the territory of Epidaurus but failed to conquer the city (Diod. 15.69.1). Alongside Sparta and other members of the Peloponnesian League, Epidaurus concluded an alliance with Athens in 370/69 (Xen. *Hell.* 7.1.1, 2.2; Arist. *Rh.* 1411^a11–13; cf. *Staatsverträge* 274); but in 366/5 Epidaurus appears as an ally of Thebes (no. 221) (Isoc. 6.91; cf. *Staatsverträge* 285). After the battle of Chaironeia in 338, Epidaurus may have become a dependency of Argos (Burford (1969) 17), and there may have been an Argive klerouchy in Epidaurus (*IG* IV².1 69 and *SEG* 11 400, if restored: [ἐδεργέ]ταν εἶμεν τοῦ [δάμου Ἀργεῖων ἐν Ἐ]πιδαύρωι κα[τοικοῦντων. ἔλεξε] Πειθίλα[ς]). Epidaurus joined the revolt against Makedonia after the death of Alexander the Great (Diod. 18.11.2).

In C5s the sanctuary of Asklepios transformed Epidaurus into a Panhellenic site visited by pilgrims from all parts. Contacts with other *poleis* increased because of the pilgrims and the erection of monumental buildings in the sanctuary. Construction began in the second quarter of C4, and the accounts mention heralds sent not only to neighbouring *poleis* but even to some more remote cities, such as Athens, Tegea (no. 297) and Thebes (no. 221) (*IG* IV².1 102, 103), from which artisans came to Epidaurus (Burford (1969) 16–18). From the 350s, inscriptions attest to the sending out of *theoroi* and the appointment of *theorodokoi* in other *poleis*. We have preserved lists of *theorodokoi* in the various *poleis* recorded region by region in accordance with the itinerary of the *theoroi* (*IG* IV².1 94–95 = Perlman (2000) E1–2 (350s)),

decrees endowing individuals with the title of *theorodokos*, sometimes connected with the title of *proxenos* (*SEG* 26 445 = Perlman (2000) E12 p. 200 (C4m)), and chronologically organised surveys of such decrees passed by the Epidaurians (*IG* IV².1 96 = Perlman (2000) E3 (C3f)). For an account of the institution of *theorodokia*, see Perlman (2000) 81–95. Citizens of Epidaurus were appointed *proxenoi* by Karthaia (no. 492) (*IG* XII.4 542.15–16 (C4m)) and Megara (no. 225) (*IG* VII 13 (C4l)).

The Aristotelian collection of *politeiai* included a constitution of the Epidaurians (Arist. fr. 498), and the first entry in Plutarch's *Aitia Graeca* may stem from this work: there were in Epidaurus 180 enfranchised citizens; they constituted the *politeuma* from which were elected the councillors (*bouleutai*), in Epidaurus called *artynoi*. Most of the common people were settled in the countryside and nicknamed *κονίποδες*, i.e. those with dust on their feet (Plut. *Mor.* 291E). No date is indicated, but the narrow *politeuma* points to an oligarchy in the Archaic period. In C7s Epidaurus was ruled by a tyrant called Prokles, whose daughter was married to Periander, the tyrant of Corinth (no. 227) (Hdt. 3.50–52). The numerous decrees passed in C4 by *boule* and *demos* (Rhodes, *DGS* 74) point to a democratic constitution.

The Epidaurians were Dorians (Hdt. 1.146.1, 7.99.2–3), and in C4 the citizens were organised into four *phylai*: two of the old Dorian *phylai*, Dymanes and Hylleis, and two other *phylai*, Azantioi and Hysminatai (*IG* IV².1 106.III.37–40 (C4)). The subdivision into *phylai* was applied in the working of political institutions, the composition of boards of officials, and the organisation of the army. The four *phylai* were further subdivided into at least thirty-nine territorial units (Jones, *POAG* 107–11; Perlman (2000) 85–87). The names of these units were used as sub-ethnics to identify Epidaurian citizens) (see *IG* IV².1 58.5: *Τιμοκράτης Παγασίνα*). The combination of a personal and a territorial subdivision of the citizenry remains problematic. Perhaps the citizens were reassigned to the various *phylai* in accordance with their place of residence.

In C4 decrees were passed by the *boule* and the *demos* and authenticated by a magistrate called *κατάλογος βουλᾶς* (*SEG* 26 445 (C4m); cf. Rhodes, *DGS* 73–74). The priest of Asklepios served as eponymous official (*IG* IV².1 103; cf. Sherk (1990) 267–68). The Epidaurian calendar was of the Doric type, and all months are attested (Trümper, *Monat.* 140–43).

At Ps.-Skylax 54 (cf. Paus. 2.29.1) the urban centre is described as *πόλις καὶ λιμὴν*. It lay on the Saronic Gulf west of Aigina (no. 358) and the peninsula of Methana (no. 352).

The remains are partly submerged and have not been systematically explored. The town occupied a peninsula consisting of two hills, Nisi, with a harbour on either side. Pausanias saw six temples in the town, on the acropolis and near the harbour (2.29.1). The theatre was situated on the western slope of the acropolis and has been excavated (Deilaki-Protonotariou (1972), (1973)). It dates to C4–Hell. (TGR ii. 213), accommodated some 5,000–6,000 persons, and had seats inscribed with the names of magistrates and citizens of the period c.350–200 (SEG 26 452). A boundary stone inscribed ὄρος ἀγορᾶς found on the neck of the peninsula indicates that the agora was near the theatre (SEG 26 452). Epidaurus was fortified in C5 (Thuc. 5.56.5, 75.5).

The sanctuary of Asklepios was situated inland some 9 km south of the harbour. The peak of Mt. Kynortion, which rises behind the theatre, was consecrated to Apollo Maleatas, whose sanctuary was believed to be very old (Paus. 2.27.7). The remains indicate that it was in continuous use from C7s onwards (Paus. 2.27.7; Lambrinouidakis (1980)). Apollo Maleatas was persistently associated with Asklepios, originally a hero with healing powers, later worshipped as the god of medicine and the tutelary god of Epidaurus (Paus. 2.26.3). His cult can be traced back to C6 (IG IV².1 136 (C6I/C5e)). From C4f onwards the Epidaurians implemented an ambitious building programme. The accounts are partially preserved (IG IV².1 102–20 (C4–C3e)). Famous architects and sculptors were invited, among them Polykleitos the Younger, allegedly responsible for the plans of the theatre (TGR ii. 208–10) and the *tholos* (Paus. 2.27–8.1; cf. Roux (1961); Burford (1969)).

Several Epidaurian citizens were victorious in the Olympic Games (*Olympionikai* 19 (712), 74 (608), 77 (600), 223 (472), 415 (368)). Participation in the Nemean Games is indicated by the city's possession of an *oikos* in Nemea (SEG 26 420; Miller (1990) 71, 119). The Asklepieia can be traced back to C6I through the victory in boxing and *pankration* won by Themistios, the ancestor of Pytheas of Aigina, who was active c.490–480 (Pind. *Nem.* 5.53). Whereas Apollo Maleatas is closely associated with Asklepios in the healing inscriptions, there is no connection with the Games before C3m (Perlman (2000) 82). In the beginning the Games mostly attracted local contestants, but in C4 they acquired Panhellenic status. Thus, the rhapsode Ion of Ephesos (no. 844) took part in the games c.390 (Pl. *Io* 530B; cf. Sève (1993)).

Epidaurus struck coins of silver and bronze from c.350 onwards. (1) Silver on the Aiginetan standard, c.350–323 or later; denominations: drachm, hemidrachm, obol, tetarte-

morion; types: *obv.* head of Asklepios laureate; *rev.* E or EII within laurel wreath; or *obv.* head of Apollo; *rev.* Asklepios enthroned holding sceptre and extending his right hand over a serpent, with a dog beneath the throne (a depiction of the cult statue of Asklepios described in Paus. 2.27.2); legend: EII. (2) Bronze, after c.350; types: *obv.* head of Asklepios; *rev.* Epione (the wife of Asklepios) holding a *phiale*; legend: EII (Head, HN² 441–42; SNG Cop. Argolis 114–30).

According to Hdt. 7.99.3, Epidaurus colonised Kos (no. 499), Nisyros (no. 508) and Kalymna (no. 485); in the Archaic period the Epidaurians controlled Aigina (no. 358; Hdt. 5.83.1).

349. Halieis (Halikos) Map 58. Lat. 37.20, long. 23.10. Size of territory: 2. Type: A. The toponym is Ἀλιεῖς, οἱ (IG I³ 1147.3 (c.460); Xen. *Hell.* 6.2.3; Diod. 11.78.2), or Ἀλία, ἡ (Ps.-Skylax 50) or, in a late source only, Ἀλική (Paus. 2.36.1). The city-ethnic is, in the plural form, Ἀλιεῖς (Xen. *Hell.* 4.2.16), from *Ἀλιεύς which, however, is unattested (Steph. Byz. 73.12); instead we find the *ketikon* Ἀλικός (IG IV².1 122.69 (C4)), which is attested in the plural form as well (Bacchyl. fr. 4.49; IG IV².1 122.80: [ἄ πόλι]ς ἄ τῶν Ἀλικῶν). Halieis is called a *polis* implicitly in the urban sense (Ps.-Skylax 50; cf. Flensted-Jensen and Hansen (1996) 142) and explicitly in the political sense (IG IV².1 122.74, 80 (C4)). The external use of the city-ethnic is attested both collectively (IG I³ 75.6–7, 19, 27 (424/3); IG IV².1 122.80 (C4); Xen. *Hell.* 4.2.16, 7.2.2) and individually (IG IV².1 121.120 (C4), 122.69 (C4)). The internal collective use of the city-ethnic *Tiryinthioi* is attested on C5 coins (*infra*).

The territory is called γῆ Ἀλιάς (Thuc. 2.56.5, 4.45.2) and its area is estimated at 84 km² (Jameson *et al.* (1994) 18). The earliest community was probably Dryopian (Bacchyl. fr. 4.49; Callim. fr. 705, Pfeiffer; cf. Jameson *et al.* (1994) 63–65). Remains of a settlement at Halieis can be traced back to the Geometric period. The town flourished in the Archaic and Classical periods (Jameson *et al.* (1994) 435–37). It may have been a *polis* already in the Archaic period, but the absence of Halieis from the victory dedications at Olympia and Delphi (Paus. 5.23.1–2; ML 27) indicates that, if it was a *polis*, it must have been a dependent *polis*, dominated by, probably, Hermion (no. 350) as may be inferred from Ephor. fr. 56 (cf. Jameson *et al.* (1994) 75). In c.460 Halieis must have been ceded by Hermion to the Tiryinthians (no. 356) after they had been expelled from Tiryns by the Argives (Hdt. 6.83.1–2; Strabo 8.6.11–12; Paus. 2.25.8). They formed a community called Ἀλιεῖς οἱ ἐκ Τίρυνθος at Hdt. 7.137.2, though

on their coins they used their original city-ethnic: *TIPYNΘIΩN* (*infra*). In 460/59 a battle between the Athenians and the Peloponnesians was fought at Halieis (Thuc. 1.105; *IG* I³ 1147.3); the territory of Halieis was repeatedly ravaged by the Athenians during the Peloponnesian War (Thuc. 2.56.5, 4.45.2 (r425)), and in 425/4 the Halieis concluded an alliance with the Athenians in which they handed over a fortified port for the duration of the war (*IG* I³ 75 = *Staatsverträge* 184). Halieis was a member of the Peloponnesian League (Diod. 11.78.2; Xen. *Hell.* 4.2.16) until after the battle of Leuktra in 371. Halieis may have been among the *poleis* won over by Epameinondas in 369 (Diod. 15.69.1; cf. Jameson *et al.* (1994) 80).

The only known source for the constitution of Halieis is a bronze plaque inscribed in the Argive alphabet with a public enactment of C5f, allegedly found at Hermion but now commonly assigned to Halieis (*IG* IV 554 = *SEG* 11 315 = *Nomima* 1 107; cf. Jameson (1974) 68–69; *contra* Brandt (1992)). A tentative date of c.480, suggested at *LSAG* 169 no. 20, is probably too high. The document concerns the calling to account of officials in charge of the treasures of Athena and mentions an assembly (*haliaia*), a *boule*, and some magistrates (*synartyontes* and *tamiai*).

The natural harbour of Halieis (*limen* at Ps.-Skylax 50) was one of the best along the coast; the sea-ward approach stretched for 1,300 m and narrowed to less than 300 m. The town, today partly submerged, was situated on a small promontory dominating the southern bay of Porto-Cheli. A defence circuit connected the town with an acropolis on which there was a modest temple, perhaps to Athena (Jameson (1974) 73–74). Halieis was fortified in C5 (cf. *IG* I³ 75.11 (425/4)); the circuit was of mudbrick on conglomerate foundations with interval towers; fortification on the site can be traced back to at least C7 (Jameson *et al.* (1994) 435; Lang (1996) 176 with refs.). The walls enclosed an area of 18 ha, of which some 15 ha were suitable for habitation in C4m. Assuming a population density of 250 per ha, the town may in C4m have had some 3,750 inhabitants (Jameson *et al.* (1994) 551). The north-eastern quarter of the lower town was built on a grid plan from C6f (Rudolph (1984)). Outside the walls were found remains of a Classical *stadion* (Romano (1993) 36), a stoa and a C7e temple to Apollo (Jameson (1974) 71–72). In C4, after the miraculous cure of a citizen by a snake from the Asklepieion in Epidaurus, the *polis* of Halieis consulted the Delphic oracle and was instructed to build a temple with a statue of Asklepios (*IG* IV^{2.1} 122.69–82; cf. Edelstein and Edelstein (1945) 423.33). Excavations show that the town was abandoned in C3e at the latest (Jameson *et*

al. (1994) 436–37), but an inscription still uses the city-ethnic *Ἁλικός* in Epidaurus in 220/19 (*IG* IV^{2.1} 42.10–11). Fishermen may have used the site sporadically, as they had when the Tiryinthians settled in Halieis in C5f (Baladié (1980) 267).

Halieis struck bronze coins in C4. Types: *obv.* head of bearded Herakles or head of Apollo laureate; *rev.* palm tree or club; legend: *TI* or *TIPY* or *TIPYNΘIΩN* (Head, *HN*² 443; *SNG Cop. Argolis* 148–55).

350. Hermion (Hermioneus) Map 58. Lat. 37.25, long. 23.15. Size of territory: 4. Type: A. The epichoric form of the toponym is *Ἐρμιῶν, -όνος ἦ*, attested both in inscriptions (*IG* IV^{2.1} 102.107, 204, 228 (C4f)) and in literary sources (Hdt. 8.73.2; Xen. *Hell.* 6.2.4; Polyb. 2.52.2). The Ionic form *Ἐρμιώνη, ἦ* is mostly attested in literature (Hom. *Il.* 2.560; Aristocles in *Anth. Pal. App.* 4.45 (C3); Strabo 8.6.3; Paus. 2.32.7; but see also *IG* IV 619.5 (late?)). The city-ethnic is *Ἐρμιονεύς* (*IG* IV 683 = *Hesperia* 22 (1953) 148–54 no. 1 = *LSAG* 182.8 (C5m); *IG* I³ 31.2 (C5m)). Hermion is called a *polis* in the urban sense (Ps.-Skylax 51) and is repeatedly listed under the heading of *polis* used in the political sense (Hdt. 8.42.1, 43.1, 49.1; Thuc. 8.3.2). The collective use of the city-ethnic is attested internally in abbreviated form on coins from C4m on (*infra*) and externally in inscriptions (ML 27.5 (479); *Syll.*³ 32 = *LSAG* 182.7 (C5f); *IG* I³ 31.2 (C5)) and in literature (Hdt. 9.28.4; Thuc. 1.27.2; Xen. *Hell.* 4.2.16). The individual use is found internally in dedications to Demeter Chthonia (*Hesperia* 22 (1953) 148–54 nos. 1–4 (C5–C4)) and externally in inscriptions (*CID* II 5.1.12 (C4f)) and in literature (Hdt. 7.6.3 (rC6m)).

The name of the territory is *ἦ Ἐρμιονῆς γῆ* (Thuc. 2.56.5). It comprised the south-eastern part of Akte. Hermion bordered on Troizen (no. 357) to the north-east, on Epidaurus (no. 348) to the north-west, and on Halieis (no. 349) to the south-west (Thuc. 2.56.5). The territory covered 276 km² (Jameson *et al.* (1994) 18). It also comprised the islands of Pityoussa (Spetses), Aristera (Spetsopoula), Aperopia (Dokos) and Hydrea (Hydra) (Paus. 2.34.8–9). In C6s a group of Samian refugees bought the island of Hydra from Hermion for some money they had exacted from the Siphnians, whereupon they handed over the island in trust to the Troizenians (Hdt. 3.59.1). Prior to c.460, when the Tiryinthians settled at Halieis, that site may have been controlled by Hermion (Ephor. fr. 56; Jameson *et al.* (1994) 75).

Hermion provided three triremes at Salamis in 480 (Hdt. 8.43) and 300 men at Plataiai in 479 (Hdt. 9.28.4). Assuming that there is no overlap between the two forces, Jameson *et*

al. (1994) 556–59 estimate the military strength of Hermion at 900 men, and the total population at c.5,000 minimum and 7,500 maximum. During the grain crisis in 330–326 Hermion received 8,000 *medimnoi* from Kyrene (no. 1028) (Tod 196.40). A communal dedication at Delphi is attested by *Syll.*³ 32 (C5f); cf. Jacquemin (1999) no. 314.

Hermion was a Dryopian community (Hdt. 8.43, 78.2). It was a member of the Kalaurian amphictyony (Strabo 8.6.14; Tausend (1992) 12–19) and of the Peloponnesian League (Thuc. 8.3.2). It fought on the Greek side in the Persian War (Hdt. 8.43, 72, 9.28.4, 31.4), and is recorded on the Serpent Column in Delphi (ML 27.5) and in Olympia (Paus. 5.23.2). The importance of the cities on Akte for Athenian maritime interests resulted in an alliance between Hermion and Athens (no. 361), concluded either c.450 (*IG* 1³ 31 = *Staatsverträge* 150) or c.425 (Mattingly (1996) 34–35). In 435 Hermion supported Corinth (no. 227) against Korkyra (no. 123) with one trireme (Thuc. 1.27.2). During the Peloponnesian War the territory of Hermion was plundered by the Athenians (Thuc. 2.56.5). After the Athenian defeat at Syracuse, Hermion took an active part in the mobilisation of a Peloponnesian fleet (Thuc. 8.3.2), and after the battle of Aigos potamoi in 405, a statue was set up in Delphi of the commander of the squadron from Hermion (Paus. 10.9.10). Hermion fought on the Spartan side in the battle of Nemea (Xen. *Hell.* 4.2.16) and remained loyal to Sparta (no. 345) even after the battle of Leuktra (Xen. *Hell.* 6.2.3, 7.2.2). Hermion may have been among the *poleis* won over by Epameinondas in 369 (Diod 15.69.1; cf. Jameson *et al.* (1994) 80). Alongside Sparta and other members of the Peloponnesian League, Hermion concluded an alliance with Athens in 370/69 (Xen. *Hell.* 7.2.2; cf. *Staatsverträge* 274). Hermion joined the revolt against Makedonia after the death of Alexander the Great (Diod. 18.11.2). *IG* 1².1 102B.11.203 (400–350) records a payment to a *κάρυκι* . . . ἐς Ἐρμιόνα.

We have no information about the political institutions of Hermion, and there is no support in the sources for the view that the Aristotelian collection of *politeiai* included a constitution of the Hermionians (*pace* Arist. III p. 635, Gigon).

In Ps.-Skylax 51 Hermion is classified as a *πόλις καὶ λιμὴν*. The town lay on the Gulf of Hydra. In the Archaic and Classical periods it was situated at the tip of a headland between two well-protected natural harbours, but later, perhaps in C2 or C1, it was moved c.1 km westwards to the far end of the peninsula and to the lower slopes of Mt. Pron (Paus. 2.34.9; Jameson *et al.* (1994) 584–90). The older town

was fortified with a defence circuit in trapezoidal masonry. Some stretches of the wall and the remains of a round tower can still be seen. The wall has tentatively been dated to C4, perhaps C4l (Jameson *et al.* (1994) 585–86). The walls enclosed an area of 22.5 ha, of which some 8.5 ha were available for habitation in C6, and almost 17 ha in C4. Assuming a population density of 250 per ha, the town may in C4m have had some 4,200 inhabitants (*ibid.* 551). Paus. 2.34.10 records seven sanctuaries in the old town; that of Poseidon has been matched with the foundations of a temple of C6l (*ibid.* 589–90). The most famous cult was that of Demeter Chthonia, for whom Lasos of Hermion composed a dithyramb (fr. 702, *PMG* (C6s); Paus. 2.35.5–8; Ael. *NA* 11.4).

Hermion struck coins of silver and bronze from c.350. (1) Silver triobols and obols on the Aiginetan standard; types: *obv.* head of Demeter Chthonia wearing corn-wreath; *rev.* corn-wreath and, sometimes, torch(es); legend: *EP*. (2) Bronze: *obv.* head of Demeter Chthonia, sometimes facing; *rev.* torch and *EP* within corn-wreath (Head, *HN*² 442; *SNG Cop. Argolis* 136–44). The full form of the city-ethnic, *ΕΡΜΙΟΝΕΩΝ*, is attested on coins of the Roman period (*SNG Cop. Argolis* 145).

351. Kleonai (Kleoniaios) Map 58. Lat. 37.50, long. 22.45. Size of territory: 3. Type: B. The toponym is *Κλεωναί, αἱ* (Hom. *Il.* 2.570; Thuc. 6.95.1; Ps.-Skylax 49; *IG* 1².1 103.69 (C4f)). The city-ethnic is *Κλεωναίος* (*SEG* 11 290.6 (c.560?) = ML 9; Pind. *Nem.* 10.42). Kleonai is attested as a *polis* in late sources only (Polyb. 2.52.1, 2; Paus. 2.15.1), but its status as a *polis* in the Archaic and Classical periods is ensured by its mint, its control of the Nemean Games, its Panhellenic victors, and the proxeny decrees for Kleoniaian citizens (*infra*). The collective use of the city-ethnic is attested internally in abbreviated form on C5–C4 coins (*infra*) and externally on a C6f bronze plate from Olympia (*SEG* 31 365) and in literary sources (Pind. *Nem.* 10.42; Thuc. 5.67.2). The individual use is attested internally in a C6m dedication (*SEG* 11 290.6) and externally in two Athenian C4 proxeny decrees for citizens of Kleonai (*IG* 1² 63 and 365 (on which latter, see *infra*)).

Kleonai was squeezed in between Corinth (no. 227) and Argos (no. 347) (Paus. 2.15.1–2; Strabo 8.6.19). Its territory covered some 135 km², and its total population has been assessed at c.8,000 persons (Sakellariou and Faraklas (1971) 122, 125, 128). Hostile relations with Corinth (Plut. *Cim.* 17.1–2) made Kleonai an ally of Argos, and the Kleoniaians assisted the Argives when, in the 460s, they conquered and destroyed Mykenai (no. 353) (Strabo 8.6.19; cf. Diod. 11.65).

Some of the surviving Mykenaians settled in Kleonai (Paus. 7.25.6). During the Peloponnesian War Kleonai was still allied to Argos (Thuc. 5.67.2, 72.4, 74.3). A citizen of Kleonai was appointed *proxenos* by Athens prior to 378/7 (*IG* 11² 63). If the restoration [*Κλεωναί*]οῦν in an Athenian proxeny decree of 323/2 (*IG* 11² 365; cf. Piérart and Touchais (1996) 62–64) is accepted, the inference is that Kleonai was still a *polis* in C4l (Piérart (1982) 129) and that is further confirmed by the bronze coins struck by Kleonai in C4l (*infra*). But at some point in C4l Kleonai was incorporated into Argos and became a civic subdivision of that *polis* (*SEG* 30 355 (C4l); *IG* iv 616 (c.315)). Remains of a polygonal acropolis fortification with interval towers and a defence circuit of the lower town (Scheer (1989) 332) may antedate the incorporation of Kleonai into Argos.

The biennial Panhellenic games held in the sanctuary of Zeus in Nemea (on which see Hart (1977)) were controlled by Kleonai in C5f (Pind. *Nem.* 4.17, 10.42); they had probably been organised by Kleonai from their foundation in 573 (Euseb. 101b, Helm) and continued to be so until Kleonai was integrated into Argos in C4l. Citizens of Kleonai were victors in the Olympic Games in 732 and 456 (*Olympionikai* 12 and 273) and in the Nemean Games in C6m (*SEG* 11 290 = ML 9).

Paus. 2.15.1 records a sanctuary of Athena, apparently of the Archaic period. A sanctuary of Herakles is mentioned at Diod. 4.33.3. Remains found at Archaia Nemea have been tentatively identified with this sanctuary by Frickenhaus (Karo (1913) 114).

The sanctuary of Zeus in the valley of Nemea was excavated by S. Miller (1990), and in it was found a C4l list of *theorodokoi* for the Nemean Games, presumably drawn up by Argos when it took over control of the games c.315 (Perlman (2000) 105–55).

Kleonai struck coins of silver on the Aiginetan standard c.471–421 and of bronze in C4l. (1) Silver (C5); types: *obv.* head of Herakles (obol), or lion's skin (hemiobol), or bunch of grapes (tetartemorion); *rev.* incuse square; legend: *K*. (2) Bronze (C4l); types: *obv.* head of Herakles; *rev.* parsley wreath; legend: *KA* or *KAE* or *KAEΩ* (Babelon, *Traité* ii.3. 481–84; *SNG Cop. Argolis* 111–13). For the date of the bronze coins, see Miller (1976) 192). On later coins the city-ethnic is spelled out: *KAEΩΝΑΙΩΝ* (Head, *HN*² 441).

352. Methana (Methanaios) Map 58. Lat. 37.35, long. 23.20. Size of territory: 2. Type: A? The toponym is *Μέθανα*, ἡ (*IG* iv 853.20 (first century AD)), in the Ionic dialect *Μεθάνη*, ἡ (Ps.-Skylax 46; cf. *infra*) or *Μεθώνη*, ἡ (Thuc.

4.45.2 *bis*, but most editors emend the first occurrence and delete the second; see Maurer (1995) 75) or *Μέθανα*, τὰ (Thuc. 5.18.7; Strabo 8.6.15; Paus. 2.34.1, 3–4). The city-ethnic is *Μεθαναίος*, attested in the full form exclusively on coins of the Roman period, in abbreviated form on C4l/C3e coins (*infra*). Methana is called a *polis* in the urban sense (Ps.-Skylax 46), provided that Müller *ad loc.* is right in supposing that *Μεθάνα πόλις καὶ λιμὴν* is misplaced from the Argolic section and erroneously listed among the Lakedaimonian perioikic *poleis* (Shipley (1997) 226).

The territory of Methana was the volcanic peninsula on the south coast of the Saronic Gulf. The last attested eruption of the volcano was in C3f (Strabo 1.3.18; Paus. 2.34.1; cf. Baladié (1980) 158–63). The peninsula is separated from the continent by an isthmus 1,200 m long and 300 m wide. It was an ideal military base, and in 425 the Athenians (no. 361) occupied Methana and built a wall across the isthmus (Thuc. 4.45.2). The Peace of Nikias stipulated the restitution of the peninsula to the Lakedaimonians (no. 345) (Thuc. 5.18.7).

In C5 and probably C4 Methana was under Troizenian domination (Thuc. 4.118.4; cf. *HCT ad loc.*; Paus. 2.34.1). The classification of Methana as a *polis* in Ps.-Skylax (if correctly interpreted *supra*) and the C4 coins (*infra*) indicate that Methana was a dependent *polis* (Mee and Forbes (1997) 68–69). In the Hellenistic period Methana was controlled by the Ptolemaic kings (Robert (1960) 156–60) and renamed *Ἀρσινόη ἡ ἐν Πελοποννήσῳ* (*OGIS* 102; *SNG Cop. Argolis* 147).

The town was on the west coast of the peninsula; it covered an area of c.5 ha in the Archaic and c.8 ha in the Classical period. The acropolis was protected by a defence circuit partly in trapezoidal irregular and partly in isodomic ashlar masonry with square towers; it covered an area of c.1 ha. The probable date is C4s. Apart from the urban centre there were two large second-order settlements on the eastern side of the peninsula, one at Oga (c.6 ha) and one at Magoula (c.2 ha), neither of them recorded in *Barr*. Furthermore, the peninsula is dotted with smaller sites, some of which can be interpreted as farmsteads and some as small hamlets. The number of sites reached its peak in C5l, and there were considerably fewer sites in C4 (Mee and Forbes (1997) 57–69).

Methana struck bronze coins in C4l and C3e: *obv.* head of Hephaistos in conical *pilos*; *rev.* *ME* or *MEΘ* in corn-wreath (Gill (1997) 278–79; *SNG Cop. Argolis* 146).

353. Mykenai (Mykenaios) Map 58. Lat. 37.45, long. 22.45. Size of territory: 2? Type: A. The Doric form of the toponym

is *Μυκάνα*, ἄ (IG IV 498.11; cf. Mitsos (1949) 74) or, in the plural, *Μυκάναι*, αἱ (Pind. *Pyth.* 4.49). In the Ionic dialect the toponym is *Μυκῆνη* (Hom. *Il.* 4.52, 7.180, 11.46); in later literature, however, the preferred form is *Μυκῆναι* in the plural (Pind. *Pyth.* 4.49; Eur. *Heracl.* 85; Thuc. 1.10.1; Diod. 11.65.5; Strabo 8.6.10), first attested in the Catalogue of Ships (Hom. *Il.* 569). The Doric form of the city-ethnic is *Μυκανεύς* (ML 27.7 (479); IG IV 497 (C2e)); in literature it is *Μυκηναῖος* (Hom. *Il.* 15.638; Hdt. 7.202; Eur. *Heracl.* 187; Thuc. 1.9.2). The collective and external use of the city-ethnic is attested in inscriptions (ML 27.7) and in literature (Hdt. 7.202). The individual use of the adverbial equivalent is attested internally (IG IV 492.1–2: *Φρασιαρῖδας Μυκανεάθεν*; cf. SEG 40 334 (C5e)).

Mykenai is referred to as being a *polis* in a bronze plaque of C5e (IG IV 492.3, cf. SEG 40 334: *παρ' Ἀθαναίως ἐς πόλιος ἰκέτας ἔγεντο*), where *polis* is used either in the sense of acropolis (Lambrinoudakis (1990) 180) or in the urban sense (Marcadé *apud* Lambrinoudakis (1990) 183–85). Mykenai is not called a *polis* in any other Archaic or Classical source, but retrospectively by Diod. 11.65.5 (r468) and Paus. 5.23.3 (r480). *Polis* status in the political sense is strongly indicated by the role Mykenai played in the Persian War. At Hdt. 7.202.1 and 204.1 the Mykenaians are listed among the *poleis* that defended Thermopylai, and they are mentioned on the Serpent Column in Delphi (ML 27.7). There is no clue to the problem of whether Mykenai was a *dependent polis* in the Archaic period (Piérart (1997)). In the Hellenistic period Mykenai was a *kome* of Argos (no. 347) (IG IV 498.2 (C3–C2)).

After the battle of Sepeia, Mykenai dissociated itself from Argos. It provided 80 men at Thermopylai in 480 (Hdt. 7.202) and, together with Tiryns (no. 356), 400 men at Plataiai in 479 (Hdt. 9.28.4). As a result, Mykenai is recorded on the Serpent Column in Delphi (ML 27.7) and in Olympia (Paus. 5.23.2: *Ἀργείων οἱ Μυκῆνας ἔχοντες*). During this period Mykenai may have been in charge of the Argive Heraion (Kritzas (1992) 232). In c.460, taking advantage of the weakness of Sparta after the earthquake in 464, the Argives and their allies besieged the Mykenaians, who found refuge behind their Cyclopean walls (Diod. 11.65.3; Paus. 7.25.5–6). Mykenai was starved into surrender and exposed to an *andrapodismos* (Diod. 11.65.5) whereby the surviving Mykenaians were transferred, some to Kleonai (no. 351), some to Keryneia (no. 236), and some to Makedonia (Paus. 7.25.6). The city itself was demolished and its territory divided among Argos, Kleonai and Tenea (Diod. 11.65.2–5; Paus. 2.16.5, 5.23.3, 8.27.1; Strabo 8.6.19, where

Τενεατῶν is a convincing emendation of MS *Τεγεατῶν*; cf. Piérart (1992) 377–82). The walls were probably dismantled on this occasion (Boethius (1921–23) 415).

354. Orneai (Orneates) Map 58. Lat. 37.45, long. 22.35. Size of territory: 1–2. Type: C. The toponym is *'Ορνεαί*, αἱ (Ar. *Av.* 399; Thuc. 6.7.1–2) or *'Ορνειαί* (Hom. *Il.* 2.571). The city-ethnic is *'Ορνεάτης* (Thuc. 5.67.2; Plut. *Mor.* 401D, quoting a dedication of C4l), in Ionic *'Ορνεήτης* (Hdt. 8.73.3). The collective and external use is the only one attested in the sources (e.g. Hdt. 8.73.3; Thuc. 5.67.2). The only source in which Orneai is called a *polis* (in the urban sense) is Diod. 16.34.3 (r353/2) and 39.4 (r352/1: *ἐπὶ πόλιω 'Ορνεῶς τῆς Ἀργείας*). Paus. 8.27.1 (rC5) calls Orneai a *polisma*, but, referring to his own time, Strabo classifies Orneai as a *kome* (8.6.17; cf. Steph. Byz. 496.1). If Diodorus' classification of Orneai as a *polis* can be trusted, it must have been a dependent *polis* lying in Argive territory. Orneai's status as an ally of Argos (no. 347) (Thuc. 5.67.2) as well as the use of the collective city-ethnic in a C4l communal dedication set up in Delphi (Jacquemin (1999) no. 381, see *infra*) support the information obtained from Diodorus that Orneai was still a political community and not just an Argive municipality.

Pausanias (8.27.1) cites the Argive synoecism of Tiryns (no. 356), Hysiai, Orneai (no. 354), Mykenai (no. 353) and Mideia as a model for the synoecism of Megalopolis (no. 282) decided in 371/70 and carried out in 368. The Argive subjection of the other cities in Argolis, however, was a protracted process, not a proper synoecism, and Pausanias' information about Orneai is in conflict with other sources testifying to the *polis* status of Orneai in C4 (Demand (1990) 59–60; Piérart (1997) 334–38).

After the battle of Mantinea in 418, Orneai and Kleonai (no. 351) are described by Thucydides as being allies of Argos (Thuc. 5.67.2, 72.4, 74.3). In 416/15 a Lakedaimonian army invaded the territory of Argos. The Lakedaimonians conquered Orneai, fortified the place, settled it with exiled Argives, and left a garrison when they withdrew. But assisted by an Athenian expeditionary force, the Argive army attacked Orneai, chased the settlers away and demolished their settlement (Thuc. 6.7.1–2; Diod. 12.81.4–5). According to Paus. 2.25.6, the inhabitants were transferred to Argos (Moggi, *Sin.* 210–13). Subsequently, Orneai was resettled, and in 353/2 the Lakedaimonians defeated an Argive army in a battle near Orneai and conquered the town after a short siege (Diod. 16.34.3 and 39.4, where the same story is told once again, but in reverse order: at 39.4 the conquest of Orneai precedes the battle). According to Diod. 16.39.4, the

Lakedaimonians attacked Orneai because it was allied with Megalopolis (no. 282). In, probably, C4l the Orneatai defeated a Sikyonian invasion army and had their victory commemorated by a communal dedication in Delphi (Jacquemin (1999) no. 381; Paus. 10.18.5; Plut. *Mor.* 401D: Ὀρνεᾶται ἀπὸ Σικυωνίων).

Orneai has been located at Palaiokastraki, i.e. modern Lirkia (Paus. 2.25.5). Remains of a defence circuit in polygonal masonry are still visible; it is undated but perhaps of C4s (Pritchett (1980) 25–27; Pikoulas (1995) 267–70).

355. Phleious (Phleiasios) Map 58. Lat. 37.50, long. 22.40. Size of territory: 3. Type: A. The toponym is Φλειοῦς, -ντος, ὶ (Simon. 9.4, Maehler; Hdt. 7.202; Thuc. 5.58.1); the adverbial form Φλειφόνταθεν is attested in a C5f dedication from Olympia (SEG 11 1212). The city-ethnic is Φλειάσιος (Hdt. 8.72; CID II 31.78 (C4m)), or occasionally Φλειήσιος (CID II 4.1.49–53 (C4f)), in late sources often Φλιάσιος (Diod. 11.32.1). The epichoric form is [Φλει]φάσιος (SEG 26 415 (c.500)). Phleious is called a *polis* both in the urban sense (Xen. *Hell.* 4.4.15) and in the political sense (Xen. *Hell.* 5.3.10–12; IG IV².1 620 (C4–C3), where [ἄ πόλις] ἄ τῶν Φλειασίων is a plausible restoration). Phleious is called an *asty* at Xen. *Hell.* 7.2.6 and 15. The collective use of the city-ethnic is attested internally on C5 coins (*infra*) and externally in inscriptions (ML 27.5 (479); IG II² 112.3 (362/1); CID II 10.1.16 (357/6)) and in literature (Hdt. 9.28.4; Thuc. 4.70.1; Pl. *Phd.* 57A). The individual and internal use is found in SEG 29 415 (c.500), and the external use is found in IG IV².1 69 = SEG 11 400.5 (C4f)) and in Xen. *Hell.* 7.1.1.

The name of the territory was ἡ Φλειασία (Thuc. 5.83.3, 115.1, 6.105.3) or Φλειοῦς (Xen. *Hell.* 4.4.15). It covered c.135 km² of fertile plain (Meyer (1941) 272) along the upper reach of the river Asopos. The valley is ringed by mountains and it bordered to the south on Argos (no. 347) and Orneai (no. 354) (Xen. *Hell.* 7.2.1), to the east on Kleonai (no. 351) and the plain of Nemea (Xen. *Hell.* 7.2.5), to the north on Sikyon (no. 228) (Xen. *Hell.* 7.2.1) and to the west on Arkadia (Xen. *Hell.* 7.2.10). The roads through its territory gave access to the other regions of the Peloponnese, and its strategic importance is reflected in the sources.

Phleious provided 200 men at Thermopylai in 480 (Hdt. 7.202), 1,000 men at Plataiai in 479 (Hdt. 9.28.4), and 400 men to Brasidas' expedition in 424 (Thuc. 4.70.1). At *Hell.* 5.3.16 Xenophon quotes the Lakedaimonians for the statement that Phleious had 5,000 adult male citizens, probably an exaggerated figure (= a total population of 20,000 minimum, with 150 persons per km²!) and hardly compati-

ble with Prokles of Phleious' concession that Phleious was one of the small *poleis* (Xen. *Hell.* 6.5.44). On the other hand, if Xenophon is right that more than 1,000 pro-Spartan Phleiasians were in exile in 381 (*Hell.* 5.3.17), Phleious must have been among the most populous Peloponnesian *poleis*.

Phleious fought on the Greek side in the Persian War (Hdt. 7.202, 8.72, 9.28.4), and is recorded on the Serpent Column in Delphi (ML 27.5) and in Olympia (Paus. 5.23.2). It was a member of the Peloponnesian League (Thuc. 7.57.2; Xen. *Hell.* 5.2.8). Having Argos (no. 347) as its arch-enemy and being involved in numerous wars with the Argives, Phleious usually sided with Sparta (no. 345) and the members of the Peloponnesian League. Thus, in 435 the Phleiasians supported Corinth (no. 227) against Korkyra (no. 127) (Thuc. 1.27.2); 400 men joined Brasidas in 424 (Thuc. 4.70.1); and in 418, when Agis attacked Argos, the invasion army rallied at Phleious (Thuc. 5.57). After the oligarchic *coup d'état* in Argos in 417, Phleious sheltered the exiled Argives (Thuc. 5.83.3) and was subsequently exposed to several Argive incursions into its territory (Thuc. 5.83.3, 115.1, 6.105.3). At the beginning of the Corinthian War Phleious remained neutral (Xen. *Hell.* 4.2.16), but numerous raids by Iphikrates' mercenaries forced the Phleiasians to ask for and admit a Spartan garrison (Xen. *Hell.* 4.4.15, 5.3.15). The government imposed by the Spartans (*infra*) remained loyal to Sparta after Leuktra (Xen. *Hell.* 7.2.2). Together with Sparta the Phleiasians approached the Athenians in 369 (Xen. *Hell.* 7.1.1; *Staatsverträge* 274), and in 362/1 they concluded an alliance with the Athenians (IG II² 112; *Staatsverträge* 290). Phleious joined the Greek revolt against Makedonia after the death of Alexander the Great (Paus. 1.25.4).

Phleiasian citizens received grants of proxeny from Athens (no. 361) (IG I³ 80.14–16 (421/20)) and from Epidauros (no. 348) (SEG 11 400 (375–350)). Phleious granted proxeny to a citizen of Pellene (no. 240) and released him without ransom when he was taken prisoner (Xen. *Hell.* 7.2.16). The Phleiasians sheltered the Argive priestess of Hera who fled Argos after having set the temple on fire (Thuc. 4.133.3).

Information about diplomatic activities is sparse, but we hear about Phleiasian envoys to Sparta (Xen. *Hell.* 5.3.14, 24) and Athens (Xen. *Hell.* 7.1.1). Several Phleiasians served as *naopoioi* in Delphi (CID II 74.77 (337/6), 75.11.50 (336/5)). In 498 Timainetos of Phleious won the hoplite race in Nemea (Paus. 10.7.7), and another Nemean victor is celebrated by Bacchyl. 9, Maehler.

The only information we have about the constitution of

Phleious in the Archaic period is the tradition that in C6 the city was ruled by a tyrant called Leon, allegedly a friend of Pythagoras (Diog. Laert. 1.12, 8.8). There is no foundation for Gigon's view that the Aristotelian collection of *politeiai* included a constitution of Phleious (Arist. no. 142). In C4e Phleious seems to have been a democracy with *ekklesiai* attended by all citizens (Xen. *Hell.* 5.3.16; cf. *ψηφισάμενοι* at 5.3.21). In 395 some pro-Spartan citizens were exiled and had their property confiscated (Xen. *Hell.* 4.4.15, 5.2.10). With Spartan support they were repatriated in 384 (Xen. *Hell.* 5.2.9), but in 381 they appealed to Sparta once again because they could not recover the property confiscated in 395. A Lakedaimonian army under Agesilaos invaded Phleious and laid siege to the city assisted by more than 1,000 exiled Phleians whom he had trained and organised into *sysstia* (Xen. *Hell.* 5.3.10–17). The Phleians endured a siege of 20 months but were starved into surrender in 379. The judicial purge after the conquest was carried out by a commission of 100 men (50 of the exiles and 50 of the besieged); Agesilaos imposed a new constitution, presumably an oligarchy, and left a garrison in Phleious (Xen. *Hell.* 5.3.21–25; Isoc. 4.126; Diod. 15.19.3; cf. Gehrke, *Stasis* 127–31). A number of the besieged Phleians went into exile (Diod. 15.40.5; Xen. *Hell.* 7.2.5) but took possession of two strongholds in Phleiasian territory: with Sikyonian support they held Thyamia, and with Argive support they held Trikaranon (Xen. *Hell.* 7.2.1, 7.4.1, 11), from where they attacked Phleious in 374 (Diod. 15.40.5; Roy (1973); Stylianou (1998) 330–31) or perhaps in 370 (Buckler (1980) 292 n. 1). In 367/6, with the support of an army from Arkadia and Elis (no. 251), the exiles organised a major nocturnal attack on Phleious, which failed (Xen. *Hell.* 7.2.5–9), as did later attacks launched first by the Argives and the Arkadians and later by the Sikyonians (no. 228) and Pellenians (no. 240) (Xen. *Hell.* 7.2.10–15).

The only known public act is a sacred law, perhaps of C6f (*IG* IV 439 = *LSAG* 150 n. 1). A decree found on Delos was attributed to Phleious by Robert (1948) 5–15, but to Corinth (no. 227) by Jones (1980).

The town of Phleious lay on a ridge rising to c.60 m above the plain. On the top of the ridge was a citadel called *akra* (Xen. *Hell.* 4.4.15) or *akropolis* (Xen. *Hell.* 5.3.15); it was mostly uninhabited and used for growing grain (Xen. *Hell.* 7.2.8). An urban survey of the town indicates that it covered an area of c.60 ha (Alcock (1991) 428 fig. 3). The town was fortified with a defence circuit, c.4 km long, probably of mudbrick on a stone socle in ashlar masonry and with interval towers. Some stretches of the stone socle can still be seen in the

foundations of the “Corinthian Gate” (Xen. *Hell.* 7.2.11) in the north-east corner of the wall. The acropolis was separately fortified. The wall has tentatively been dated to C4e (Xen. *Hell.* 7.2.7–8; Alcock (1991) 435–37).

An agora has been identified at the western end of the acropolis ridge (Alcock (1991) 432). Of the monumental buildings only two antedate the Hellenistic period: the “Hypostyle Hall” tentatively dated to the Archaic period (Blegen (1925) 30–31; Biers (1971) 445), and the “Palati”, a rectangular “basilica” (c.34 × 26 m) with a courtyard surrounded by columns and open to the sky, probably of C5s. It may have had rows of seats arranged to look out on the central courtyard, and it may have been used as a *bouleuterion* and/or a *dikasterion* (Biers (1971), (1973)). A *πολεμάρχειος* *στοά* of c.500 is attested in literary sources (Ath. 210B; cf. Roux (1958) 161–70). A theatre north of the Hypostyle Hall may go back to C4 (*TGR* ii. 117).

The principal cult was that of Ganymede (Hebe), whose sanctuary on the acropolis is known exclusively from Paus. 2.13.3–4. An extra-urban sanctuary of Hera is mentioned by Xen. *Hell.* 7.2.1, 6, 11–13.

Phleious may have struck silver staters on the Euboic standard in C6, and undoubtedly struck coins of silver and bronze on the Aiginetan standard from c.431 to c.322. (1) Silver, C6; types: *obv.* Φ between the legs of a triskeles; *rev.* incuse square divided into eight triangles. (2) Silver and bronze, c.431 to c.322; denominations: drachm, hemidrachm, trihemiobol, obol and fractions in bronze; types: *obv.* bull or forepart of bull, first walking, then butting and later butting with head facing; *rev.* wheel, or ivy-wreath, or wavy exergue line (river Asopos). Some C4 bronze coins have *obv.* head of Asopos. Legends: on C5 drachms: *obv.* ΦΑΕΙΑ, *rev.* ΣΙΟΝ. Other denominations: *rev.* Φ. (Babelon, *Traité* ii.3. 509–16; Head, *HN*² 408–9; Kraay (1976) 100; *SNG Cop. Phliasia* 1–17.)

356. Tiryns (Tirynthios) Map 58. Lat. 37.35, long. 22.50. Size of territory: 2? Type: B. The toponym is *Τίρυνς -νθος*, ἦ (Hom. *Il.* 2.559; Hdt. 6.77.1, 83.2; Ps.-Skylax 49). A variant form, *Τίρυνθος*, is found in [Hes]. Sc. 81. The city-ethnic is *Τίρυνθιος* (ML 27.6 (479); Hdt. 9.28.4, 31.3); these examples testify to the collective and external use of the city-ethnic. For the external and individual use, see *P Oxy.* 222.1.42 (r468).

Apart from Pind. *Ol.* 10.68, where Tiryns is called a *polis* in a mythological context, Tiryns is classified as a *polis* in late sources only (Mosch. *Megara* 38; Paus. 2.25.8; Steph. Byz. 625.17); *asty* is found at Bacchyl. 10.57, Maehler, but again in a mythological context. *Polis* status in the Archaic and early

Classical periods, however, is strongly indicated by the sacred laws of c.600 (SEG 30 380; see *infra*) and by Tiryns' participation in the Persian War on a par with communities which were all *poleis* (ML 27.6). In the Archaic period Tiryns was probably a *polis* dependent on Argos (no. 347) (Piérart (1997) 335–36). After the battle of Sepeia, however, Tiryns was freed from Argive supremacy and, together with Mykenai (no. 353), it provided 400 men at Plataiai in 479 (Hdt. 9.28.4) and is recorded on the Serpent Column in Delphi (ML 27.6) and in Olympia (Paus. 5.23.2: ἐκ δὲ χώρας τῆς Ἀργείας Τίρυνθιοί). In Olympia in 468 a Tirynthian was the winning pugilist in the boys' category (*Olympionikai* 244; *P Oxy.* 222.1.42). Shortly afterwards Tiryns was taken over by Argive slaves (*douloi*; cf. *supra* 605) expelled from Argos by the sons of those who fell at Sepeia; after some years of peaceful relations, war broke out between Argos and the former slaves in Tiryns, who eventually were defeated by the Argives (Hdt. 6.83.1–2). They found refuge in Epidaurus (no. 348) and Hermion (no. 350), and settled Halieis (no. 349) (Hdt. 7.137.2; Strabo 8.6.11). Some of the inhabitants may have been incorporated into the population of Argos (no. 347) (Paus. 8.27.1). Tiryns was demolished, and part of the booty won by the Argives on this occasion could still be seen by Pausanias in the Argive Heraion and in the temple of Apollo Lykeios (2.17.5, 8.46.3).

The sacred laws of c.600, inscribed in “serpentine” style, are the oldest known documents in which *haliaia* and *demos* are juxtaposed (SEG 30 380, 1–4, 8–9: ἀλυσία, δᾶμος); and magistrates mentioned repeatedly in the laws are the *hieromnaimones* and the *plativoinarchos* (SEG 30 380 = *Nomima* 178: ἱερομνάμονες, πλατιφείναρχος).

In Pausanias' day only ruins were left of Tiryns, but the acropolis, called Likymna, with its Cyclopean walls was still impressive (Paus. 2.25.8, 9.36.5). The Archaic temple on the top of the acropolis has been attributed sometimes to Hera (Frickenhans (1912)), sometimes to Athena (Foley (1988) 145–47). An Archaic sanctuary of Herakles is attested in the serpentine inscriptions (SEG 30 380 n. 15). Further C6 architectural spolia from the acropolis include the probable remains of a *propylon* or stoa (Schwandner (1988)).

So far no remains of an Archaic settlement have been found on the plain below the acropolis. Evidence of a substantial post-Mycenaean settlement on the “Unterbürg” is well documented, and although occasional sections of post-Geometric walls have been found, along with a couple of C7 graves on the surrounding plain, the location of the related settlement(s) has yet to be securely established. This has tempted some historians to see Tiryns as a *polis* without an

urban centre (Koerner (1985)). It would, however, be most unwise, given the very limited extent of excavation on the surrounding plain, to draw negative conclusions about an absence of related settlement. The location of graves and settlement traces throughout the Early Iron Age (from LHIIIc onwards) suggests that the inhabitants of Tiryns lived in settlements clustered on the plain immediately surrounding the acropolis (Morgan and Coulton (1997) 93).

357. Troizen (Troizenios) Map 58. Lat. 37.30, long. 23.25. Size of territory: 4. Type: A. The epichoric form of the toponym is *Τροζάν-, -άνος, ἦ* (IG IV 748.3 (C4f)). The Ionic form *Τροζήν-, -ήνος, ἦ* is found in most of the literary sources (Hom. *Il.* 2.561; Hdt. 8.41.1; Thuc. 1.115.1; Xen. *Hell.* 6.2.3) and in inscriptions (ML 23.8; Michel 452.1 (C4l); IG IV 798.2 (Imp.)); variant forms are *Τροζήν* (Andoc. 3.3) and *Τροζήν* (IG IV 619.4 (late?)). Ps.-Skylax 52, 54 uses the toponym *Τροζηνία, ἦ*. The Doric form of the city-ethnic is *Τροζάνιος* (ML 27.5, 95h; IG IV².1 122.10 (C4); IG IV 748.6 (C4f)); the Ionic form is *Τροζήνιος* (Hdt. 3.59.1; Thuc. 1.27.2; Xen. *Hell.* 4.2.16); mixed forms are *Τροζήνιος* (Dem. *Ep.* 2.19; IG II² 1425.227 (C4f)), *Τροζάνιος* (SEG 9 2.43 (C4l); IG IV 727A.2 (C3)) and *Τροζείνιος* in a C3l Boiotian proxeny decree (SEG 23 286.2).

Troizen is called a *polis* in the urban sense (Dem. *Ep.* 2.18; Ps.-Skylax 52), in the political sense (Arist. *Pol.* 1335^a15, 20; Hyp. 5.32; Michel 452.6 (C4l)) and in the territorial sense (Hyp. 5.31). In the C4f accounts of the Delphic *naoroioi* the Troizenioi are recorded as contributors (*CID* II 4.1.9) under the heading *ταῖδε τᾶμ πολίων ἦνικαν* (*CID* II 4.1.3–4), where *polis* is used in the political sense (cf. also Diod. 12.78.2 (r419/18) and IG IV 750.12 = Bielman (1994) 19 (C3e)).

The collective use of the city-ethnic is attested internally in a citizenship decree of 369(?): ὁ δᾶμος ὁ *Τροζάνων* (IG IV 748.6, 17–18 = *Syll.*³ 162) and externally on the Serpent Column in Delphi (ML 27.5 (479)) and in Hdt. 3.59.1; Thuc. 8.3.2; Xen. *Hell.* 4.2.16. The individual and external use is attested in the thank-offering for the victory at Aigos potamoi (*Ἀπολλόδωρος Καλλιφώνος Τροζάνιος*; ML 95; Paus. 10.9.10 (r405/4)).

The name of the territory is *Τροζενία* (Thuc. 5.45.2) or *γῆ Τροζηνίς* (Thuc. 2.65.5); *χώρα* is found at IG IV 748.4. It covered 354 km² and included the west coast of the Saronic Gulf from Methana (no. 352) to Cape Skyllaion (Jameson *et al.* (1994) 18). After the death of Alexander the Great, Troizen lost the island of Kalauria (no. 360), which then became an independent *polis*.

Troizen provided five triremes at Salamis in 480 (Hdt.

8.43), and 1,000 men at Plataiai in 479 (Hdt. 9.28.4). Assuming that there is no overlap between the two forces, Jameson *et al.* (1994) 556–59 estimate the military strength of Troizen at 2,000 men, and the total population at c.11,500 minimum and 16,500 maximum. During the grain crisis in 330–326 Troizen received 6,000 *medimnoi* from Kyrene (no. 1028) (Tod 196.45). IG IV².1 102B.11.203 (400–350) records a payment to a *κάρυκι* . . . ἐς *Τροζάνα*.

Troizen presided over the Kalaurian amphiktyony (Strabo 8.6.14; Tausend (1992) 12–19) and was a member of the Peloponnesian League (Diod. 12.78.2 (r420)). It fought on the Greek side in the Persian War (Hdt. 8.1.2, 43, 9.28.4, 102.3, 105), and is recorded on the Serpent Column in Delphi (ML 27.5) and in Olympia (Paus. 5.23.2). During the Persian occupation of Attika the Athenians' wives and children found refuge in Troizen (Hdt. 8.41.1; Plut. *Them.* 10.5; ML 23.8, a C3 copy found in Troizen of a C4m text, quoted by Aischines in 348 (Dem. 19.303)). It was occupied by the Athenians in 460/59, but these had to surrender the city again in the peace of 446/5 (Thuc. 1.115.1, 4.21.3). In 435 the Troizians supported Corinth (no. 227) against Korkyra (no. 123) with two triremes (Thuc. 1.27.2). In 425 the Athenians occupied and fortified Methana (no. 352) and used it as a base for raids against the neighbouring communities. After the Athenian defeat at Syracuse, Troizen took an active part in the mobilisation of a Peloponnesian fleet (Thuc. 8.3.2) and in the naval operations (ML 95 (405)). Troizen fought on the Spartan side in the battle of Nemea (Xen. *Hell.* 4.2.16) and remained loyal to the Spartans even after the battle of Leuktra (Xen. *Hell.* 6.2.3, 7.2.2). In 369(?) Epaminondas ravaged the territory of Troizen but failed to conquer the city (Diod. 15.69.1). Alongside Sparta and other members of the Peloponnesian League, Troizen concluded an alliance with Athens in 370/69 (IG IV 748 (369); IG II² 1425.227, 230 (368/7); Xen. *Hell.* 7.2.2; cf. *Staatsverträge* 274). After the Greek defeat at Chaironeia, a pro-Makedonian faction came to control Troizen (Hyp. 5.31; Lycurg. 1.42; cf. Whitehead (2000) 340), possibly as the result of a *stasis*, since a number of citizens were sent into exile and at least some of them obtained citizen rights in Athens (Hyp. 3.31; Osborne (1983) T72). In 325 Demosthenes found refuge in Troizen (Dem. *Ep.* 2.18–19; Plut. *Dem.* 26.5), and after the death of Alexander the Great in 323, Troizen joined the revolt against Makedonia (Diod. 18.11.2; Paus. 1.23.3–5).

The Aristotelian collection of *politeiai* included a constitution of the Troizians (Arist. *fr.* 613–15). The only preserved *psephisma* of the Classical period is a citizenship decree proposed by a named citizen and passed by the *boule*

and the *demos* (IG IV 748 = *Syll.*³ 162 (369?)), apparently in accordance with a probouleumatic procedure (Rhodes, *DGS* 77–78). Another citizenship decree is referred to at Hyp. 5.31. A decree of C4l or C3e records the name of the proposer and of the *prostates* of the *boule*, and refers to a board of *damiourgoi* (Wilhelm (1974) i. 38). A C4 dedication of fourteen named *damiourgoi* and *prytaneis* (*δαμιοργοὶ καὶ πρυτάνεις*) is consecrated to *ταῖ ἡρώσσαι*, i.e. Phaedra (IG IV 764). Public enactments were set up in the sanctuary of Apollo Thearios (IG IV 748.15–16).

The citizens were organised into *phylai* (IG IV 748), of which there were at least three and presumably four. Of the three Dorian tribes, the Hylleis are attested (IG IV 750.8 (C3e)); the existence of the Dymanes is indicated at Steph. Byz. 74.8, and it is then a fair guess that the Pamphyloï were to be found in Troizen too. The Scheliadaï (*Σχελιάδας*; IG IV 748.24) constituted another *phyle*, which, *pace* Jones, *POAG* 111, cannot have contained all the non-Dorian citizens, since sortition conducted by a magistrate called *δεκαδεὺς* was used when a naturalised citizen was assigned to a *phyle* (IG IV 748.20–22). In c.390 exiles from Siphnos (no. 519) found refuge in Troizen (Isoc. 19.23). Two Troizians are attested as Athenian metics in C4s (IG II² 1673 = *SEG* 34 122.57–58). In C4l a citizen of Troizen was appointed *proxenos* by Megara (no. 225) (IG VII 7; cf. Rhodes, *DGS* 111).

Baukis of Troizen is attested as victor in the Olympic Games in 400 (*Olympionikai* 358), and in C6s Damotimos of Troizen won a race in Thebes (IG IV 801 = *LSAG* 181.2).

The calendar was of the Doric type, to judge from the months attested in Troizen: *viz.* Geraistios (Ath. 639C; cf. Trümpy, *Monat.* 199), Artemitios (IG IV 840.9 (C3)) and Apellaios (Wilhelm (1908) 73 (C3?)).

The urban centre was situated below Mt. Aderes and dominated a coastal plain c.2 km wide along the Gulf of Poros. The town had an acropolis with a sanctuary of Athena Sthenias (Paus. 2.32.5). In C6m a temple was built on the slopes of the acropolis (Jameson *et al.* (1994) 72), which Welter (1941) 20 tentatively identified as that of Aphrodite Akraia (Paus. 2.32.6). The agora was situated in the upper part of the habitation area, and the temple of Apollo Thearios in the agora was the oldest of all temples known to Paus. 2.31.6. A *prytaneion* is attested in a decree of C4l/C3e (Wilhelm (1974) i. 38). An extra-urban complex with a *stadion*, associated with Asklepios and Hippolytos, dates from C4l or C3e (Welter (1941) 35–38; Jameson *et al.* (1994) 83).

Troizen was apparently fortified in 369 (Diod. 15.69.1) but the sparse remains of a defence circuit in polygonal mason-

ry are tentatively dated to C3e (Welter (1941) 12), a date which, according to Maier (1959) no. 32, is pure guesswork. For the construction of a *diateichismos* in 146, see IG IV 757 = Maier (1959) no. 32.

At Ps.-Skylax 52 Troizen is classified as a *πόλις καὶ λιμὴν*. The name of the harbour was *Πύργων*, and the Greek fleet rallied there before the battle of Salamis (Hdt. 8.42.1; Strabo 8.6.14).

The foundation myth, like that of Athens, involved both Athena and Poseidon. According to Paus. 2.30.6, the myth was reflected in the oldest types of Troizenian coins, which combined the head of Athena with the trident of Poseidon. Troizen struck silver coins on the Attic standard from c.460 onwards. Denominations: drachm, pentobol, triobol, diobol, obol. Types: *obv.* head of Athena facing, or head of

Apollo (Thearios?); *rev.* trident, sometimes in incuse square; legend: *TPO* (Head, *HN*² 443; *SNG Cop. Argolis* 156–59).

Troizen was the *metropolis* of Halikarnassos (no. 886) (Hdt. 7.99.3; IG IV 750 = Bielman (1994) 19.27–28), Myndos (no. 914) (Paus. 2.30.9) and Theangela (no. 931) (Robert, *Coll. Froehner* 53 = Bielman (1994) 40.5–6 (c.200)). Continued close relations between the colonies and their *metropolis* are attested in several inscriptions (Wilhelm (1974) i. 39; Rostovtzeff (1931); Bielman (1994) 19, 40, 43). Furthermore, in collaboration with Achaians from Helike (no. 235), the Troizenians colonised Sybaris (no. 70), but were soon expelled (Arist. *Pol.* 1303^a29–30) and founded Poseidonia (no. 66) instead (Bérard (1957) 215–17).

THE SARONIC GULF

THOMAS J. FIGUEIRA

I. The Region

Enumeration of the Saronic Gulf islands was incorporated into ancient geographical surveys. Pliny, who does not distinguish the Saronic Gulf from the Gulf of Nauplia, mentions Calauria, Plateis, Belbina, Lasia and Baucidias as opposite Troizen (no. 357), and, opposite Epidauros (no. 348), Cecryphalos, Pityonesos and Aegina (*HN* 4.56–57). Moreover, off Cape Speiraion, lay Eleusa, Adendros, the two Craugiaie, the two Caeciae and Selacosa (Plin. *HN* 4.57); Aspis (Steph. Byz. 134.17) was off Cencreae (Plin. *HN* 4.57), and the Methouriaides (Steph. Byz. 440.12; *Methurides*, Plin.) in the bay of Megara (Plin.). Pomponius Mela notes Pitynussa and Aegina, adjoining the Epidaurian coast, and Calauria near the Troizenian shore (*Chor.* 2.109). Tiny size, lack of attestations, and a nomenclature in which naming after gross features predominates indicate the insignificance of these islands (Philipsson and Kirsten (1959) 42–46). Kekryphaleia was the largest of the Saronic islands lying between Aigina and Epidauros, and in 459 it was the site of a naval battle of the First Peloponnesian War in which Athens (no. 361) defeated Corinth (no. 227) and its allies (Thuc. 1.105.1; Diod. 11.78.2; Steph. Byz. 372.1–3). There is no evidence regarding its political status and history, which were probably linked with those of Aigina (Bürchner (1921)).

II. The *Poleis*

358. Aigina (Aiginatas) Map. 57. Lat. 37.45, long. 23.30. Size of territory: 2 (85.9 km²). Type: A. The toponym is *Aἰγίωα*, ἡ (Hom. *Il.* 2.562; Thuc. 1.105.2; *IG* iv².1 102.270 (C4f)). The city-ethnic is *Aἰγιωήτης* (*IG* i³ 259.vi.18), in Doric *Aἰγιώτας* (*IvO* 143.2 (488); *SEG* 46 474 (C5e)). Aigina is attested as a *polis* in the political sense (εὐνομος; Pind. *Isthm.* 5.22; Bacchyl. 13.185; Hdt. 2.178.3), in the urban sense (Hdt. 6.88.1; Dem. 23.211; Ps.-Skylax 53) and as totality of territory = *asty* + *chora* (Xen. *Hell.* 2.2.9). At Bacchyl.

13.71 (πόλιω ὑψιάγειαν) the reference is presumably to the acropolis. For a reference to Aigina as *asty*, see Bacchyl. 13.188. The collective use of the city-ethnic is attested internally on C4 coins (abbreviated as *ΑΙΓΙ* (Head, *HN*² 397)) and externally in inscriptions (ML 27.3 (479–478); *ATL* (*IG* i³ 259.vi.18)); the Spartan War Contribution Accounts (*SEG* 39 370.A3 (C5 or C4)), and in literature (Hdt. 3.59.4, 8.93.1; Thuc. 1.14.3; Xen. *Hell.* 5.1.2). The external individual use is found in Hdt. 4.152.3, 8.93.1; *IvO* 143.2 (488); *SEG* 46 474 (C5e); *CID* ii 31.78 (345)). *Patra* (= *patris*) is attested in Pind. *Ol.* 8.20 and *IG* ii² 7965 (C4m).

Aigina was structurally atypical because of high economic output from commerce (Arist. *Pol.* 1291^b24). It had two or three harbours (cf. Ps.-Skylax 53) and a flourishing *emporion* (Dem. 23.211; Ephor. fr. 176). Demographic indicators derive from fleet mobilisations. During the C5e acme, the total population was 35,000–45,000, with 7,000–10,000 slaves/freedmen and 1,500–2,500 males of or above hoplite rank (Figueira (1981) 22–52). This level was attained through assimilation of mainly servile immigrants. In spite of serious exaggeration, Arist. fr. 475.1 testifies to an exceptionally high number of slaves, and fr. 475.2 may imply a high number of foreigners (Figueira (1991) 84–86, (1993) 206–8). Naturalisation was limited or protracted. Even an *euergetes*, the *naukleros* Lampis (C4m), only achieved *ateleia* as a metic (Dem. 23.211). Refounded Aigina (C4) had a substantially lower population. Inscriptions attest to foreigners in residence (e.g. *IG* iv 50). For Aigina, geographical perceptions reinforced cultural affinities. On social structure, cf. Winterscheidt (1938).

For Aiginetan history, see the chronological table in Figueira (1993) 409–18 with refs.; also Amit (1973) 9–60. In C8m–C7l, Aigina had *sub-political* status under foreign hegemony. Hegemony by Argos (no. 347) was mediated through the cult league of Apollo Pythaeus (Hdt. 6.92.1–2; cf. Pheidon's apocryphal minting; Ephor. fr. 115). Aigina participated in the Kalaurian Amphiktyony (Strabo 8.6.14). In C7l, Aigina was controlled by Epidauros (no. 348) and became independent in a violent secession (Hdt. 5.83.1–2).

Hellenistic inscriptions mention a *pentapolis* that might indicate a synoecism (Felten (1975) 42–52). Subsequent Aiginetan membership in the Peloponnesian League is unlikely. In 506, the “Heraldless War” began with the Athenians (no. 361) (Hdt. 5.80.2). Aigina submitted to Persia before Marathon (Hdt. 6.49.1). Effective medising was precluded by a hostage taking by Kleomenes I (Hdt. 6.73.2). In the early 480s, *stasis* flared in an Athenian-inspired populist uprising under Nikodromos (an aristocratic exile). After brutal suppression, fugitives became Athenians, later assisting against Aigina (Hdt. 6.88–91); see Gehrke, *Stasis* 15–16. In 481, the Aiginetans joined the Hellenic League (Hdt. 7.145.1; ML 27.3), winning the *aristeia* at Salamis (Hdt. 8.93.1).

Remaining aloof from the Delian League until 457–456, Aigina was reduced to tributary status (Thuc. 1.108.4). It belonged to the Island district (*IG* I³ 270.v.37) and is registered in the tribute lists from 454/3 (*IG* I³ 259.vi.18) to 432/1 (*IG* I³ 279.1.88) a total of ten times, twice completely restored, paying a *phoros* of 30 tal. in all years except 450/49, when the payment was 26 tal., 1,200 dr. (*IG* I³ 263.iv.39, ethnic restored), and 432/1, when it was either 9 or 14 tal. Returning fugitives and pro-Athenians promoted a cult of Athena Polias (*IG* IV 29–32). Tributary status ended with an expulsion in 431. Aiginetans scattered, fled to Kydonia (no. 968), or were harboured in the Thyreatis (as a Spartan dependency: Thuc. 2.27.2); some assisted Spartan campaigning (4.57.1–4). An Attic *apoikia*, in which a remnant population was supplemented by reinforcing settlers, occupied Aigina, claiming to represent the Aiginetan *polis* (Thuc. 2.27.1; 8.69.3); the 5 per cent import/export tax was levied there (Ar. *Ran.* 362–64, 380–81 with schol.). See also Figueira (1991) 79–128.

In 405, Lysander refounded Aigina (Xen. *Hell.* 2.2.9). Under Spartan *harmostai*, Aigina fought in the Corinthian War (*Hell.* 5.1.1–24), causing damage that helped motivate Athens toward the King’s Peace (*Hell.* 5.1.29). When fighting flared up in 378, the Aiginetans resumed raiding (*Hell.* 5.4.61, 6.2.1) that is unclearly demarcated from later attacks (350–340s) probably taken in conjunction with Makedonia (Demades fr. 67).

Except for the Attic *apoikia*, politics was dominated by aristocratic clans or phratries (*patrai*), celebrated by Pindar (*Pyth.* 8.38), the status of whose members (*pakhees*: Hdt. 6.91.1; *dynatoi*: Paus. 3.4.2) is also witnessed by chamber tombs (see Jeffery (1974)). An Aristotelean *politeia* is attested (Arist. fr. 475). Two outstanding figures were Krios, who resisted Kleomenes (Hdt. 6.50.2–3), and his son Polykritos, a leader at Salamis (8.92.1–2). Aigina’s fleet was the predominant military instrument (Thuc. 1.14.3), supposedly mak-

ing the Aiginetans thalassocrats 490–480 (Diod. 7 fr. 11). An agreement with Athens (450–446) makes security arrangements (*IG* I³ 38). A notable C4e enactment mandated execution for Athenians taken on Aigina (Diog. Laert. 3.19 (r390s)). Significant Aiginetan diplomacy included the message of Polyarchos, probably a Spartan *proxenos*, that the walls of Athens were being reconstructed in 478 (Plut. *Them.* 19.2) and covert agitation at Sparta (no. 345) on the eve of the Peloponnesian War (Thuc. 1.67.2). In the 480s and later, Aigina was a haven for Attic ostracised (Dem. 26.6; *Adespota Comica* 3.40, Kock). Likely Aiginetan *proxenoi* at Athens were Aristeides and Thoukydides Melesiou. A *proxenos* at Plataia is attested (Hdt. 9.85.3). For a possible Aiginetan *proxenos* for Rhodos at Naukratis (no. 1023), see *Syll.*³ 110.

The *epinicia* of Pindar and the status of Aiakos as a judge of souls attest to the quality of the legal system (especially toward *xenoi*). The *Aegineticus* of Isokrates (19) was delivered in an Aiginetan court by a Siphnian exile. The *boule* and *demos* are attested in post-Classical inscriptions only (e.g. *IG* IV 1.1). The *theoroi* were a prestigious board, whose duties probably transcended cult supervision (schol. Pind. *Nem.* 3.122a–b with Figueira (1981) 314–21). A doubtful civic eponymous is the priest of Aphaia used to date Archaic construction at the sanctuary (*IG* IV 1580). Tribes and demes are attested in an inscription of 159–144 (*IG* IV 1.43–44).

Additional cults (with attested festival): Athena, Aiakos*, Aiakidai, Aphaia*, Aphrodite*, Apollo Pythios/Delphinios*, Apollo and Poseidon, Damia and Auxesia*, Poseidon Hippourios* and Zeus Hellanios*. The Hydrophoria was celebrated in the month Delphinios to Apollo Delphinios as *oikistes* (schol. Pind. *Nem.* 5.81a–b). At Salamis the Aiakidai were ritually summoned (Hdt. 8.64.2, 83–84). A doubtful Delphic consultation by the Aiginetan exiles none the less became proverbial (*CPG* 1.22–23). Gold stars were dedicated for the *aristeia* at Salamis (Hdt. 8.122). A *polyandrion*, commemorating casualties at Plataia, was dedicated in 469 (Hdt. 9.85.3). Aiginetans were prominent at Delphi after the Third Sacred War (Figueira (1993) 356–58). *IG* IV 39 and 1588 are inventories of dedications inscribed under the *apoikia*. Aiginetans are attested as victors at all the major Panhellenic games: the Olympic (Pind. *Ol.* 8), the Pythian (Pind. *Pyth.* 8), the Nemean (Pind. *Nem.* 3–8; Bacchyl. 12–13) and the Isthmian (Pind. *Isthm.* 5–6, 8–9). Aiginetans won altogether twenty-eight attested major victories (e.g. *SEG* 39 255). Note Praxidamas *Olympionikes* in 544, victorious in the Nemean and Isthmian Games as well, and the first to have his statue set up at Olympia (Pind. *Nem.* 6.15–18; Paus. 6.18.7); see further Mann (2001) 192–235.

Public architecture and art (on which Aigina lavished its wealth) can only be summarised. See Welter (1938b) and Walter (1993). Pausanias mentions a temple of Aphrodite, Aiakeion, Phokeion, *kryptos limen* and its mole, theatre, *stadion* (C5–C4 according to Krinzinger (1968)), temples of Apollo, Artemis and Dionysos, Asklepieion, a temple of Hekate, and extra-urban sanctuaries of Aphaia and Damia/Auxesia (2.29.6–30.5). The acropolis on Cape Colonna was impressive as excavations of (e.g.) the C61 Apollo temple(s) and Thearion have confirmed (published in the series *Alt-Ägina*). The *temenos* and temple of Aphaia have had a long history of excavation, since the recovery of sculptures by the Dilettanti in 1811 (Ohly (1976) pp. xi–xiii; Bankel (1993)). The Hellanion on Mt. Oros is demonstrated by excavation to have been another important sanctuary. The military harbour with its ship sheds (480s) was a “state of the art” facility (see Knoblauch (1972)). Remains have been found of the circuit of fortifications of the city, extended in C5e against the Attic threat (Welter (1938a) 480–85). The walls enclosed an area of c.52 ha (Figueira (1981) 39–40. Aigina was besieged in 460/59 (Thuc. 1.105.2; Lys. 2.49), and the walls demolished in 457 (Thuc. 1.108.4). Aigina is attested as a walled city in 389 (Xen. *Hell.* 5.1.2; cf. Aen. *Tact.* 20.5).

The mint was the earliest producer of silver (from 560 to 540). The Aiginetan standard was much imitated. Its “turtles”, the coins *par excellence* of the Peloponnesos (Poll. 9.74), minted in huge numbers and with high purity, were widely disseminated, dominating circulation in several regions (IGCH (1974) 394; Figueira (1998) 36–41, 116–27). Aiginetan money was critical in the monetisation of the Archaic economy. In C5m, the obverse design became a tortoise, while the reverse type remained a conventional incuse square. In C4, the city-ethnic in abbreviation (e.g. *AIII*) was affixed to the reverse. Denominations: didrachm stater, drachm, triobol, obol, hemiobol (C6–456); stater, drachm, triobol, obol, hemiobol (from C4e). Bronze coins were struck in C41 or C3; *obv.* two or three dolphins circling around the letter *A*; *rev.* incuse square divided into five compartments, sometimes with legend *AI* in upper compartments (Head, *HN*² 394–98; *SNG Cop. Attica-Aegina* 501–39; *SNG München, Attika, Megaris, Ägina*).

As a long-distance trading community, Aigina was not an active coloniser, but colonised Kydonia (no. 968) in 519, Adria (no. 75) c.C61, and Damastion in Illyria after 431 (Strabo 8.6.16). With Miletos (no. 854) and Samos (no. 864), Aigina was significant at Naukratis (no. 1023) (Hdt. 2.178.3).

The Aiginetan claim to autochthony (Hellan. fr. 27) rested on their identity as the Myrmidons metamorphosed

from ants by Zeus at the behest of his son Aiakos (Hes. fr. 205, MW; hence the toponym *Myrmidonia*: Steph. Byz. s.v. *Μυρμιδονία*). Historiography suggests successive waves of settlers (Paus. 2.29.5).

359. Belbina (Belbinites) Map. 58. Lat. 37.30, long. 23.55. Size of territory: 1 (c.7 km²). Type: A. The toponym is *Βέλβινα*, ἡ, the name of the island being identical with that of its *polis* (Ps.-Skylax 51; Strabo 8.6.16). The city-ethnic is *Βελβινίτης* (Hdt. 8.125.2) or *Βελβινείτης* (Teles, *Peri Phygēs* p. 27, Hense (C3f)). Belbina is called a *polis* in the urban sense by Ps.-Skylax 51. Its status as a *polis* in the political sense is indicated by its appearance among the members of the Delian League in the assessment decree of 425/4 (IG¹ 71.1.88), where the city-ethnic is used in the external and collective sense. For the individual sense, see the anecdote in Hdt. 8.125.2, where Themistokles admits that he would never have come to fame if he had been a Belbinites. For Belbina’s proverbial insignificance see also Teles (*supra*).

In the decree of 425/4 (*supra*) Belbina was assessed at the modest sum of 300 drachms. Poor and sparsely populated, Belbina may not have seemed worth assessing before, in which case 425 may be its first actual assessment. Or Belbina may have been assessed in an *apotaxis* from a larger neighbour, in which an overarching dependency on Athens weakened an earlier regional subordination. Remains of a nucleated settlement have not been excavated (Ross (1840–43) i. 4, ii. 172–73).

360. Kalaureia (Kalaureates) Map. 58. Lat. 37.30, long. 23.30. Size of territory: 2 (31 km²). Type: A. The toponym is *Καλαύρεα*, ἡ (*Syll.*³ 359.1–2 (C41)) or *Καλαύρεια* (Dem. 49.13) or *Καλαυρία* (Ps.-Skylax 52). According to the C3 historian Antikleides ((*FGrHist* 140) fr. 9) the island was originally called *Εἰρήνη*, but *Καλαύρεια* is attested as early as Hecat. fr. 125. The city-ethnic is *Καλαυρέατας* (*Syll.*³ 359.4–5). Kalaureia is called a *polis* in the urban sense at Ps.-Skylax 52 and in the political sense in a C4s decree: *ἔδοξε τῶν πόλι τῆν Καλαυρεατῶν* (*Syll.*³ 359.3–5) where the city-ethnic is used in the collective and internal sense. The external individual use is attested in C3 honorary decrees from Epidauros (no. 348) (IG¹ iv² 96.43) and Delphi (no. 177) (*SEG* 14 402).

From possibly C61 (Hdt. 3.59.1) and during C5–C41 Kalaureia was a possession of Troizen (no. 357); the Aristotelian constitution of the Troizenians treated Kalaureia (Arist. fr. 614), and the C51 sculptor Pison could be described as “from Kalaureia of the Troizenians” (*ἐκ Καλαυρείας τῆς Τροϊζηνίων*) (Paus. 10.9.8; cf. 6.3.5). The island served as a naval station: a fleet of Timotheos used it

in 374 (Dem. 49). After the Lamian War, the *polis* is presented as the political authority for a grant of *ateleia* to Siphnos in *IG* iv 839 = *Syll.*³ 359 (C41)). The eponymous magistrate was a *tamias* (*IG* iv 839, 841). [Plut.] *Mor.* 846F has been taken to imply the authority of local officials at Kalaureia just before the death of Demosthenes. In general, see Welter (1941) 53–57.

According to Ps.-Skylax 52, Kalaureia had a harbour (limen) and its urban centre contained an agora in which a (Hellenistic?) *bouleuterion* has been excavated (cf. *IG* iv 841.24). The nearby Heroon may be connected with both Asklepios and/or Demosthenes (*IG* iv 847; see Welter (1941) 51–52). At Kalaureia was located the sanctuary of Poseidon Kalauros, known from C8e with a temple from 6Cl, expanded in C5l–C4 (ibid. 45–50) and four stoas of C5l–C4l (Coulton (1976) 242–43). The sanctuary served as an asylum (Ephor. fr. 150), hence the alternative toponym *Eirene*. In refuge there, Demosthenes committed suicide; and his *μνήμα* stood within the sanctuary, perhaps represented by a circular foundation west of the temple (Attic decree cited in

[Plut.] *Mor.* 851C; [Dem.] *Ep.* 2.20; Plut. *Dem.* 29.1–30.6). At some point, probably during the First Peloponnesian War, a cult of *Ποσειδῶν Καλαυραέτης* was begun in Attica or cult treasures were transferred there from Kalaureia (note *IG* I³ 369.74; cf. Thuc. 1.115.1, 4.21.3; in general, see Wide and Kjellberg (1895); Welter (1941) 43–50).

The Kalaurian Amphiktyony centred on the sanctuary of Poseidon, having a membership of Hermion (no. 350), Epidauros (no. 348), Aigina (no. 358), Nauplia, Athens (no. 361), Prasiai (no. 342) and Minyan (Boiotian) Orchomenos (no. 213); cf. Strabo 8.6.14. Argos (no. 347) later participated for Nauplia, and Sparta (no. 345) for Prasiai. It may have originated c.700 (before the synoecism of Troizen) as a sacralized site for the ransoming of captives, redemption of property, and protected interaction. The amphiktyony existed in the Hellenistic period (*IG* iv 842 (C3 or C2)). See Wilamowitz-Moellendorff (1896); Harland (1925); Kelly (1966); Figueira (1981) 185–88, 219–20; Tausend (1992) 12–19; Hall (1995) 584–85). Cults of Aphrodite, Artemis, Asklepios, Athena Apaturia and Zeus Soter are also attested (Welter (1941) 62).

ATTIKA

MOGENS HERMAN HANSEN

I. The Region

The region is usually called ἡ Ἀττική (*SEG* 21 644.13 (C4s); Thuc. 1.2.5; Xen. *Hell.* 1.7.22; Lycurg. 1.115; Arist. *Ath. Pol.* 33.1; Men. *Dysc.* 1), to which γῆ (Hdt. 6.102) or χώρα (Hdt. 5.64.2) is sometimes added. But, seen as the territory of the Athenian polis, Attika is also called ἡ γῆ ἡ Ἀθηναίων (Thuc. 2.57). To the north, Attika bordered on Boiotia (Dem. 18.96; Xen. *Mem.* 3.5.25), and to the west on Megaris (Ps.-Skylax 57). Including the small islands but excluding Oropos, Attika covered c.2,550 km² (Busolt and Swoboda (1926) 758). Oropos covered some 110 km² and was contiguous to Attika (Thuc. 4.99.1); it was under Athenian domination in the years c.500–411, c.375–366 and 338–322, but never integrated into Attika (see *supra* 449). Moving westward from Oropos (Heracl. Cret. 7–8, *GGM* I 101), the Boiotian poleis bordering on Attika were Tanagra (Dem. 18.96), Hysiai (Hdt. 6.108.6) and Plataiai (Hdt. 6.108.3). In the years around 500, Hysiai was an Attic “deme” (Hdt. 5.74.2), and Plataiai may have been part of Attika as well (see *supra* 450). The northernmost Attic demes were Rhamnous (Paus. 1.33.2), Aphidna (Heracl. Cret. 6, *GGM* I 101), Dekeleia (Thuc. 7.19.2; Hdt. 9.15.1), Phyle (Strabo 9.2.11), Oinoe (Hdt. 5.74.2; Thuc. 2.18.1–2) and Eleusis (Thuc. 1.114.2; Ps.-Skylax 57). North of these demes, in the western part of Attika, lay three strongholds: Drymos, Panakton and Eleutherai. Drymos, still unlocated, was divided between Boiotia and Attika (Arist. fr. 405 = Harp. Δ81; cf. Dem. 19.326; *IG* II² 1672.271 (329/8)). Panakton was at first a bone of contention (Hellan. fr. 126), but in the Classical period it belonged to Attika (Thuc. 5.3.5, 42.1; cf. Rocchi (1988) 180–81). Eleutherai was originally a Boiotian settlement (Polemon fr. 2; Steph. Byz. 265.10) incorporated into Attika (Paus. 1.38.8) in, probably, 506 (Connor (1990) 8–16). It is a moot point whether it belonged to Boiotia once again in C4 (for: Camp (1991); against: Munn (1993) 8–9). On the roads leading from Attika into Boiotia, see Ober (1985) 111–29; Funke (2000).

Towards the Isthmus, the frontier with Megara ran along the ridge of Mt. Kerata (Van de Maele (1992)). Between

Attika and Megaris there was an untilled borderland, called Ἴερά Ὀργάς, which was sacred to the Eleusinian goddesses. After a dispute between the two poleis settled by arbitration, the Hieria Orgas was defined and marked with stone stelai in the years 352/1–350/49 (Dem. 13.32; Didymus, *In Dem. Comm.* 14.31–15.10 = Androtion (*FGrHist* 324) fr. 30; *IG* II² 204; cf. Rocchi (1988) 188–94).

Along the northern frontier major forts were placed at Rhamnous (Ober (1985) 7.1d), Aphidna (2a), Dekeleia (2b), Phyle (3a), Panakton (4a), Oinoe (4b) and Eleusis (8f). Dekeleia was conquered and garrisoned by the Peloponnesians during the second part of the Peloponnesian War, from 413 to 404 (Thuc. 7.18.1, 19.1–2; Xen. *Hell.* 1.1.33–35, 2.3.3). In the 370s a long wall (the so-called Dema wall) was built in north-west Attika to close the gap between Mt. Parnes and Mt. Aigaleos (Munn (1993)). In southern Attika, major forts were placed along the coast at Anaphlystos (Ps.-Skylax 57), Sounion (Thuc. 8.4; Ps.-Skylax 57) and Thorikos (Xen. *Hell.* 1.2.1; Ps.-Skylax 57).

The sources for the unification of Attika are conveniently collected and carefully discussed in Moggi, *Sin.* 44–81, who also gives a copious literature survey. For a recent judicious account, see Parker (1996) 11–17. The local myth was that, alongside Athens, there were eleven (Steph. Byz. 33.18–20; *Etym. Magn.* 352.53) or twelve (Philoch. fr. 94) other poleis in Attika which, eventually, were incorporated into Athens by Theseus. The other poleis included Tetrapolis (*sic*), Dekeleia, Eleusis, Aphidna, Brauron and Thorikos (Philoch. fr. 94). This tradition can be traced back to Hekataios (fr. 126; cf. Hansen (1997) 25–26); the unification of Attika is presupposed in the Homeric Catalogue of Ships (*Il.* 2.546–56), and it is described in Thucydides 2.15.1–2: originally Attika was divided between a number of poleis; but Theseus closed down the prytaneia and bouleuteria of all the other poleis, had their magistracies discontinued and created instead one centralised polis with one bouleuterion and one prytaneion. The settlement pattern continued unchanged, and Theseus’ alleged unification of Attika is in fact the only example in our sources of a political synoecism which was not

accompanied by a relocation of (part of) the population. In other sources the unification of Attika is described as a proper physical synoecism (Isoc. 10.35; Diod. 4.61.8; Plut. *Thes.* 24.1). In Classical Athens Theseus' synoecism of Attika was celebrated at a festival called *Synoikia* (Thuc. 2.15.2; *IG* I³ 244C.16; Deubner (1966) 36–38; Parker (1996) 14). Thucydides seems to have shared the Athenians' belief that the political unification of Attika took place almost a thousand years before the Peloponnesian War (in 1259 according to *Marm. Par.* A 20).

Modern historians are divided over the issue, and, by and large, there are three different positions. (1) There was a once-and-for-all synoecism in the Mycenaean period, and the core of Thucydides' account can be accepted, if stripped of its mythological dress (Padgug (1972)); (2) the unification of Attika was a piecemeal process that took place in C9 and C8 (Snodgrass (1982) 668; Whitehead (1986) 9; Hornblower (1991) 263–64); (3) the unification was an even more protracted process, and the subjection of Eleusis and the Tetrapolis took place in C7 (Hignett (1952) 35–37; Moggi, *Sin.* 68).

Re (1) The archaeological evidence does not lend much support to the idea of a C14 unification of Attika (Diamant (1982) 43; cf. Parker (1996) 11). And, if there was a unified Mycenaean kingdom of Attika, it probably collapsed towards the end of the Bronze Age (Andrewes (1982a) 362). Moreover, from the late Protogeometric through the Middle Geometric period, i.e. c.950–800, Athens seems to have been the only nucleated settlement in Attika, and the rest of the region may even have been uninhabited (Mersch (1996) 83).

Re (3) The evidence for a late incorporation of Eleusis and the Tetrapolis is thin. (a) The reference to a king of Eleusis in the Homeric Hymn to Demeter 96–97 concerns the Heroic period and is probably part of the later foundation myth; and Herodotus' story about a battle at Eleusis in which Tellos was killed need not refer to a battle against the Eleusinians (Padgug (1972) 136–40); (b) in the prevailing version of the Athenian foundation myth *τετραπόλις* is used not as an adjective meaning “with four *poleis*”, but as a proper name denoting one *polis*, allegedly created by some kind of *sympoliteia* between its four constituent parts: Marathon, Trikorinthos, Oinoe and Probalinthos (cf. *Syll.*³ 930 (C4m)). Tetrapolis is recorded as one only of the twelve original Attic *poleis* (Philoch. fr. 94). The citizens had their own city-ethnic **Τετραπολεύς*, of which (so far) only the plural form is attested (*IG* II² 1358.11.40 (C4m)). Tetrapolis had its own *archon* (ibid.), and its own representation in Delphi (*Syll.*³ 541 = *F.Delphes* III.2 18 (C31)) and on Delos

(Philoch. fr. 75). This foundation myth can be traced back to C5s (Eur. *Heracl.* 80). The Athenians obviously believed that the rites practised in the Classical period were the last vestiges of what had once been a *polis* in the proper sense, i.e. a self-governing polity. But we must not infer from the foundation myth that it reflects a historical fact and that Tetrapolis was an independent community in the Dark Ages. The absence of remains of settlements in north-east Attika before c.800 indicates that the tradition about the *polis* of Tetrapolis is an invention of C7–C6. The co-operation between the four communities and their common institutions may have been a result of the *stasis* in C7s and C6f (*infra* 628–29). Also, a modified version of Tetrapolis was an administrative unit in the Classical and Hellenistic periods, being the coastal *trittys* of Aiantis (*IG* I³ 1131 (C5m)), but Probalinthos was transferred to Pandionis. And the old unit of all four communities persisted as a cult organisation (*Syll.*³ 930 (C4m)).

Re (2) We are left with a piecemeal unification in C9–C8 as the most likely solution to the problem: the population of Attika, living in and around Athens in C10 and C9, grew rapidly in the course of C8–C7, and step by step it occupied the hitherto thinly populated or even uninhabited parts of Attika (Mersch (1996) 83–84). But then Athens must have been the only community in Attika in the Early and Middle Geometric period, and the unification of the region cannot have consisted in the incorporation into Athens of communities which were *poleis* with their own *bouleuteria* and *prytaneia*. An acceptance of the archaeological evidence as it stands today implies not just a downdating, but a rejection of Thucydides' account of the unification of Attika and of the Athenian foundation myth. It follows that there is no reason in this inventory to include separate entries for an Archaic Eleusis or an Archaic Tetrapolis.

The prevailing view of the settlement pattern of Attika in the late Archaic and Classical periods has been that each of the 139 Kleisthenic demes was centred on a nucleated settlement, either a village or in some cases a township (Whitehead (1986) 9–10, 29), and that there is no clear evidence of anyone living and farming out on his own in the country (R. Osborne (1985) 15–22: literary evidence; 22–36: archaeological evidence). An alternative view is that only a part of the population was settled in the nucleated centre and that a significant part of the population of a deme lived in isolated farmsteads (Langdon (1991)).

The latter view is supported (a) by the rapidly growing archaeological evidence, e.g. the isolated houses found during the excavations conducted at the new airport

(Steinhauer (2001)); (b) by a growing consensus that the towers and houses found in great numbers all over Attika must have been the homes of the cultivators and not just used for bivouacking (Hoepfner (1999) 247, 253, 259–60); (c) by a new study of the epigraphical evidence which shows that an *oikia* situated in rural Attika often denotes a residential house, and that both leases and security *horoi* provide us with ample evidence of isolated farmsteads (Jones (2000)); (d) by the hypothesis of alternating residence in town and countryside according to the seasons. Ownership of one *oikia* in Athens and one in the countryside is well attested, at least for wealthy Athenians, and double residence (cf. Pl. *Leg.* 745E) is an important but neglected problem (Hansen (1987a) 64).

The evidence for nucleated settlements in Attika is, in fact, more problematical than the evidence for dispersed settlement. In spite of intensive archaeological fieldwork conducted in all parts of Attika, only two other nucleated settlements of the Classical period, apart from Athens and the Peiraieus, have been found so far: Thorikos and Halai Aixonides (Hoepfner (1999) 247–56; Goette (1999) 162–64). The houses found in Rhamnous postdate the Classical period, and the houses found in Sounion are supposed to be directly connected with the administration of the sanctuary (Travlos (1988) 405; *contra* Goette (1999) 165–66). Remains of other nucleated centres of any importance are conspicuous by their absence. Conversely, the survey of one small coastal deme, Atene, seems to show that this deme cannot have had a nucleated centre (Lohmann (1993) 126–36); and Dem. 57.10 indicates that in C4m most members of the deme Halimous lived dispersed on their farms (Hansen (1997) 71 n. 111).

On the other hand, the written sources show that the typical Attic deme had a nucleated centre. Admittedly, no literary source refers to or describes the urban centre of any of the demes; and the ten relevant occurrences in Herodotos (Powell (1938) 85) do not substantiate the claim that *demos* in Herodotos is best translated as “village” (Whitehead (1986) 48); but Aristotle states that the Athenians used the word *demos* to denote what the Dorians call a *kome*, i.e. a village (*Poet.* 1448^a35–37; Hansen (1995) 71); a C4 deme decree about the demarcation of the *agora* of Sounion forbids the erection of houses inside the boundaries (*IG* II² 1180), and *archontes komes* are attested for Phaleron in the *rationes centessimarum* (*IG* II² 1598A.9, 18; cf. *IG* II² 3103). This piece of evidence fits what we know from a late source: that Peiraieus, Phaleron, Xypete and Thymaitadai formed what was called the Tetrakomos (Pollux 4.105: *τετράκωμος*; cf.

Lewis (1963) 33). Thus, in spite of the absence of physical remains, most Attic demes must have been centred on a nucleated settlement. It is superfluous in this publication to provide a list of the 139 Attic demes, for which see Traill’s directory to *Barr.* map 59, based on Traill (1986). According to Traill (*Barr.* 59) there were no settlements in Classical Attika other than the centres of the demes. Other sites of the Archaic and Classical periods are classified as forts, sanctuaries, tumuli, etc. On forts, see *supra*. The major extra-urban sanctuaries were those of Artemis at Brauron (Travlos (1988) 55–80), of Poseidon at Sounion (*ibid.* 404–29), and of Demeter and Persephone at Eleusis (*ibid.* 91–169). Theatres of the Classical period are found and/or attested outside Athens-Peiraieus in six demes: *viz.* Acharnai (*IG* II² 1206.6–7 (C4l)), Aixone (*IG* II² 1197.21 (C300); Isler (1994) 311–12 (C5l)), Eleusis (*IG* II² 1187.10–11 (C4m)), Ikaría (Isler (1994) 199 (C4)), Sphettos (*SEG* 36 187.10 (C4s)) and Thorikos (Isler (1994) 308–9 (C5e)).

II. The *Poleis*

361. Athenai (Athenaios) Map 59. Lat. 38.00, long. 23.45. Size of territory: 5. Type: A. The toponym is *Ἀθηναίαι, αἱ* (Hom. *Il.* 2.546; Ar. *Nub.* 207; Lys. 6.25; Pl. *Leg.* 753A; *IG* I³ 1178.1 (433/2)), in Doric *Ἀθᾶναι* (*IG* IV² 1 94.3 (359)). The toponym usually denotes the town (Dem. 56.9; Ps.-Skylax 57), but sometimes the town plus its hinterland (ML 23.4; Din. 2.25) and sometimes the political community (Thuc. 1.44.2; Pl. *Leg.* 753A; Arist. *Ath. Pol.* 19.4). The city-ethnic is *Ἀθηναῖος* (Solon fr. 4.30, West; Dem. 1.1; ML 15 (506), 27.2 (479/8); *CID* II 32.33 (C4m)), in the Doric dialect *Ἀθαναῖος* (*IvO* 30 (C5)).

Athens is called a *polis* in the territorial sense (Thuc. 2.48; Dem. 10.63; Din. 1.77; ML 23.4 (C4m)), in the urban sense (Hdt. 7.133.2; Thuc. 2.57; Dem. 18.204, 230; *IG* I³ 136.4 (413/12)), and in the political sense (Hdt. 6.106.2; Thuc. 1.70.6; *Hell. Oxy.* 9.3; Theopomp. fr. 88; Arist. *Pol.* 1304^a10; *IG* I³ 92.8 (416/15)). *Polis* in the sense of *akropolis* is used in fixed idioms down to C4e (*IG* I³ 4B.3 (485/4); *IG* II² 17.10 (394/3), see Henry (1982); Thuc. 2.15.6). The urban centre is called *asty* (Pl. *Phdr.* 230D; Dem. 42.7; *Hesperia* suppl. 29 p. 4.13), and during the civil war of 404/3 the oligarchs residing in Athens are frequently referred to as *οἱ ἐξ ἄστυος* (Lys. 12.55; Xen. *Hell.* 2.4.7; Dem. 20.12); the term *polisma* is found at Hdt. 1.143.2 and Aesch. *Eum.* 668. For Athens as the *patris* of the Athenians, see Solon fr. 36.8, West; Plato *Com.* fr. 217,

PCG; Isoc. 10.35). A C4 epigram describes an Athenian *klerouchos* as having a double *patris*: viz. Athens and Samos (CEG 594.10–11).

The collective sense of the city-ethnic is attested internally in abbreviated form on coins (*infra*), in inscriptions (IG I³ 14.22–24 (C5m); IG II² 1.3–4 (403/2)) and in literary sources (Solon fr. 4.30, West; Pl. *Euthphr.* 2A; Dem. 1.1) and externally in inscriptions (ML 25 (479); SEG 33 440A (375/4)) and literary sources (Pind. *Pyth.* 1.76; Hdt. 1.29.1; *Hell. Oxy.* 1.2). The individual use is in a few cases attested internally (Thuc. 1.1.1; Pl. *Prt.* 311C), whereas attestations of the external use abound (ML 27.2 (479/8); CID II 4.1.67 (361/60); IG XII.5 542.36–41 (C4m); Tod 196.5 (330–326)). Kleisthenes wanted membership of a *demos* (*infra*) to become part of an Athenian citizen's full name (Arist. *Ath. Pol.* 21.4), and in C4 this reform had caught on so that, inside Attika, a citizen was called by name, patronymic and demotic (IG II² 5228–7855; Whitehead (1986) 69–75). Klerouchies excepted (IG XII.6 252–76; Samos (366–322)), attestations of the demotic used outside Athens and Attika are rare (IG XII.5 113 (C4s from Paros)).

In the Classical period, Athens was probably the most populous of all the Hellenic *poleis*. In the Persian War, Athens provided 9,000 hoplites at Marathon (Nep. *Milt.* 5; *Suda* I545; cf. Paus. 10.20.2) and 8,000 at Plataiai (Hdt. 9.28.6). At Artemision they provided 127 ships (Hdt. 8.1.1), and 180 at Salamis (Hdt. 8.44.1). In 431 Athens had a field army of 15,800 men, of whom 13,000 were citizen hoplites; a defence force of 16,000, of whom 3,000 were metic hoplites, and a navy of 300 triremes (Thuc. 2.13.6–7; Hansen (1981)). There were altogether some 50,000–60,000 adult male citizens (Rhodes (1988) 271–77; Hansen (1988) 23–25). Due to the plague in 430–426, war casualties during the Peloponnesian War, and the siege of 405/4, the number of citizens dropped to some 25,000–30,000 in c.400 (Hansen (1988) 14–28). During C4 the number of Athenian citizens living in Attika must have been in the range of 30,000, ± a few thousand (Hansen (1985) 65–69; (1994)). The war effort in the Lamian War of 323/2 (Diod. 18.10.2, 11.3; IG II² 1631.167–74) presupposes that there must have been no fewer than 30,000 full citizens living in Attika (Hansen (1985) 37–40; (1994) 308–10). The result of a census conducted by Demetrios of Phaleron during the decade 317–307 was 21,000 Athenians and 10,000 metics (Ath. 272C). The census, called *exetasmos*, was probably a military review of able-bodied citizens of military age (Hansen (1985) 29–35; (1994) 301–2). For lower population figures, see Gomme (1933) 27: 43,000 in 431; Ruschenbusch (1984) and Sekunda (1992): c.21,000 in C4. Numbers of free

foreigners and slaves fluctuated constantly in accordance with trade and prosperity (Xen. *Vect.* 2.1–7; Hansen (1988) 10–12). Ten thousand metics were counted in Demetrios' census (Ath. 272C), perhaps an army figure rather than a population figure (Hansen (1985) 31–32), and comparing the number of C4 tombstones commemorating metics (650, of whom 40 per cent are women) with those commemorating citizens (2,110, of whom 35 per cent are women), we can infer that there must have been a sizeable population of metics (Nielsen *et al.* (1989) 419; Hansen *et al.* (1990) 26). Down to the end of C4, c.875 citizens of 149 different *poleis* (Abdera, Abydos, etc.) and c.150 persons from forty different regions and islands (Achaia, Aitolia, etc.) are attested as foreign residents of Athens (Osborne and Byrne (1996)). Classical sources testify to more than 100 citizenship decrees (Osborne (1981–83) D 1–25 and T 1–82), in most cases individual and purely honorific grants of citizenship to foreign notables, but foreign residents were naturalised too (T 30–31), and especially in C5 there were also some block grants to, for example, the Plataians in 427 (Dem. 59.104–5; D 1) and to the Samians in 405/4 (IG II² 1.51–5; D 4). We have no reliable evidence for the number of slaves, but rough, exaggerated estimates indicate that the number of slaves may even have equalled the number of free (Hyp. fr. 33, Sauppe; Ath. 272C; Isager and Hansen (1975) 15–18). However, the estimate of 30,000 slaves working in the silver mines in C4s is on the high side (Lauffer (1979) 155–62). Sallares (1991) 57 suggests 11,000 max. in C5m.

This is not the place to survey the history of Athens, and the rest of this entry comprises (A) the relations with other *poleis*; (B) the constitution, including the civic subdivisions; (C) the Athenian religion; (D) the urban centre of Athens, including Peiraieus; and (E) the Athenian coinage.

(A) Athenian membership of leagues and large alliances starts with the Hellenic League, formed in 481 against Persia (Hdt. 7.132.2, 145.1; *Staatsverträge* 130) and the Athenians are recorded among the victors on the Serpent Column in Delphi (ML 27.2) and in Olympia (Paus. 5.23.1). The Athenians were the hegemonic leaders of the Delian League, 478–404 (Arist. *Ath. Pol.* 23.5; Thuc. 1.95–97; *Staatsverträge* 132; Meiggs (1972); Schuller (1974)). In the years 404–395 they were members of the Peloponnesian League (Xen. *Hell.* 2.2.20; *Staatsverträge* 211). Between 378/7 and 338 they were the hegemonic leaders of the Second Athenian Naval League (IG II² 43; Paus. 1.25.3; *Staatsverträge* 257; Cargill (1981); Dreher (1995)), and in 338/7 they joined the Corinthian League (IG II² 236; *Staatsverträge* 403). Athens was a

member of the Delphic amphiktyony and provided *ex officio* one of the two Ionic *hieromnemes* (Aeschin. 2.116; *CID* II 94.4 (328/7); Lefèvre (1998) 63–69). The Athenians possessed a treasury in Delphi (Partida (2000) 48–70), and eight communal dedications by the Athenians have been found (Jacquemin (1999) 315–16). *SEG* 14 350 is a c.500 dedication at Olympia (Ἀθηναῖοι [τ]ῶν ἐγ Λέμν[ο]), and *SEG* 22 346 (C5f) is one of Persian spoils.

The Athenians sent out heralds (κῆρυκες, *ML* 45.9 (C5s)) and envoys, called first ἄγγελοι (Hdt. 5.73.1), from C5s mostly πρέσβεις (*IG* II² 43.72–77 (378/7)); the envoys were sent to other *poleis* (Thuc. 5.22.3) or to monarchs (Thuc. 2.67.2) or to federal governments (*IG* II² 116, 176: Thessaly in 361/60) or to international peace conferences (Xen. *Hell.* 6.3.1–3 (372/1)). Mostly boards of envoys were sent out, often ten at a time (Aeschin. 2.18 (347/6); Mosley (1973) 55–63). For an (incomplete) list of ninety-two attested embassies sent out from Athens in the Archaic and Classical periods, see Kienast (1973) 595–611. Conversely, foreign embassies were received in Athens by the *prytaneis* and admitted to the *boule* and the *ekklisia* (*IG* I³ 40.12–14 (446/5); Mosley (1973) 78–79). Two examples are envoys from Leontinoi in 433/2 (*IG* I³ 54) and envoys from Dionysios I of Syracuse in 368/7 (*IG* II² 105). Athenian *theorodokoi* hosted *theoroi* sent from Delphi in C5l (*Syll.*³ 90.16–17) and from Epidauros in 359 (*IG* IV²¹ 94.1a.3).

Athens had *proxenoi* in most Greek *poleis*. To the end of the Classical period close to 100 are attested in inscriptions. These *proxenoi* are citizens of sixty-three different Hellenic *poleis*, of two Phoenician city-states—Sidon (*IG* II² 141, 343) and Tyros (*IG* II² 342)—and three were the kings of Makedon (Walbank (1978) 1), of the Pelagonians (*IG* II² 190) and of the Messapians (Walbank (1978) 70; Marek (1984), excluding 5, 8, 14, 21, 42, 53, 59, 65, 68, 72, 76 and 80, but adding *SEG* 40 57, 72; *SEG* 45 59, 76). To these *proxenoi* must be added all those mentioned in literary sources (Thuc. 3.2.3; Dem. 7.38, etc.; Monceaux (1886) 321–23, fourteen attestations). Conversely, in the same period, Athenian citizens are attested as *proxenoi* appointed by different Hellenic *poleis*. Thus, in C4m, Karthaia on Keos lists a minimum of fifteen and perhaps twenty different Athenians as their *proxenoi* in Athens (*IG* XII.5 542.35–45). For attestations in literary sources, cf. Aeschin. 3.138 and Monceaux (1886) 323–25, fourteen attestations)

Athenians were victorious in all the Panhellenic games. In the Olympic Games, thirty-five victories are attested covering the period 696–328. Victors include Kylon (640?) (Hdt. 5.71.1), Miltiades (560) (Hdt. 6.36.1), Peisistratos (532) (Hdt.

6.103.2), Alkibiades (416) (Thuc. 6.16.2) and, perhaps, Demades (328) (*Suda* Δ414); see *Olympionikai* 56, 106, 124, 345, 467. In the Pythian Games, twenty victories from c.542 to 374. Victors include Chabrias in 374 (Dem. 59.34); see Kyle (1987) A3, 4, 15, 17, 29, 30, 42, 43, 58, 71, P95, 107; Krause (1841) 105–6). In the Nemean Games, thirty victories from C6l to C4e. Victors include Alkibiades (Paus. 1.22.6) and Lysis (Pl. *Lysis* 205C); see Kyle (1987) A1, 4, 15, 29, 42, 45, 57, 58, 64, 74, 78). In the Isthmian Games, twenty-four victories from C5e to C4f. Victors include, perhaps, Plato (*Proleg. Plat. Phil.* 2, p. 198, Hermann); see Kyle (1987) A1, 15, 18, 29, 42, 57, 74, 78, P86, P107 (Plato); Krause (1841) 222). The Athenians organised the Panathenaic Games, which were Panhellenic (*IG* II² 2311 (C4f); Pl. *Leg.* 833A–B; Arist. *Ath. Pol.* 54.7, 60.3; Kyle (1987) 33–39). In addition to Athenians, many foreigners are attested as victors (*IG* II² 2312 (C4); Kyle (1987) 38 n. 28).

(B) The *Constitution of the Athenians* is the only surviving one out of the 158 Aristotelian *politeiai* (Rhodes (1981); Chambers (1990); Keaney (1992)), and since its rediscovery in 1890 it has been the backbone of any reconstruction of the history of the Athenian constitution, starting with Wilamowitz-Moellendorff (1893).

According to the local traditions, Athens was originally ruled by hereditary *basileis* (Arist. *Ath. Pol.* 41.2, fr. 1–2; Hellan. (*FGrHist* 323a) fr. 23), and these traditions are usually believed to contain a core of truth (Carlier (1984) 359–72). Kingship was replaced by government by magistrates appointed from the rich and well-born (Arist. *Ath. Pol.* 3.1: ἀριστύνδην καὶ πλουτύνδην). The most powerful magistrates were the nine *archontes* (Thuc. 1.126.8; Arist. *Ath. Pol.* 13.3), of whom the chief was the eponymous official (*IG* I³ 4A.14–175 (485/4)). The Athenian list of *archontes*, published in C5l (*ML* 6), went back to the archonship of Kreon in 683/2 (Hieronymus p. 93, Helm), or 684/3 (Develin (1989) 27–28)). According to Herodotos (5.71.2), an important political assembly was the *prytaneis* of the forty-eight *naukrariai*; but we do not know what a *naukraria* was, nor even whether the word is connected with *naus* (“ship”) or *naos* (“temple”) (Billigmeier and Dusing (1981)). That Athens had an Assembly of the People is extrapolated from later evidence (Solon fr. 36.1–2; Andrewes (1982) 387). And the Athenians did not themselves know whether the Council of the Areopagos—composed of all ex-archons—had been instituted by Solon (Plut. *Sol.* 19; Arist. *Pol.* 1273^b35–41) or had existed long before his time (Arist. *Ath. Pol.* 1273^b41–74^a3; see Wallace (1989) 3–47).

During C7 growing social and economic tensions produced a series of political crises from about 630 to 530, of

which the most important resulted in the *coup* of Kylon, the laws of Drakon, the reforms of Solon, and the tyranny of Peisistratos. In 636 or 632 an Athenian called Kylon attempted to set himself up as *tyrannos* of the city. The *coup* failed, Kylon fled, and his followers were put to death (Hdt. 5.71; Thuc. 1.126.3–12; Welwei (1992) 133–37). A few years later, in 621 (Develin (1989) 31), Athens acquired its first written code of laws, compiled by Drakon (Arist. *Ath. Pol.* 7.1; Arist. *Pol.* 1274^b15–16). His law of homicide remained in force, with modifications (*IG* 1³ 104; Tulin (1996) 3–19), right down to the time of Demosthenes (Dem. 23.51); but the rest of his laws, whose penalties were “written not in ink but in blood” (Plut. *Sol.* 17.3; Arist. *Pol.* 1274^b15–18), were superseded in the very next generation by those of Solon (Arist. *Ath. Pol.* 7.1).

In 594, rich and poor united to give the archon Solon plenary power to dictate a compromise (Welwei (1992) 161–206). He began with a general amnesty (Plut. *Sol.* 19.4), then abolished enslavement for debt (Arist. *Ath. Pol.* 6.1) and gave freedom to those so enslaved, even those who had been sold abroad (Solon fr. 36.8–15). Next, he freed the indebted tenants, the *hektemoroï*, from the sixth-parts they paid to their landlords and allowed them to hold their land free of obligations (Arist. *Ath. Pol.* 6.1; Solon fr. 36.3–6); but he set himself against a redistribution of the land (Solon fr. 34; Arist. *Ath. Pol.* 11.2). Besides his economic reforms, Solon also reformed the administration of justice. According to later tradition he set up a People’s Court, called the *Heliaia* (Arist. *Pol.* 1273^b35–^a3; Arist. *Ath. Pol.* 7.3, 9.1), manned by sworn jurors (Arist. *Pol.* 1274^a3; Hansen (1983) 153–55, (1989) 242–49, 258–61 *contra* Ostwald (1986) 10–11) and gave every party to any lawsuit the right to appeal to the *Heliaia* against the award of the magistrates (Lys. 10.16; Arist. *Ath. Pol.* 9.1). Since Solon’s time the Athenians were divided into four property classes: *pentakosiomedimnoi* (men worth 500 *medimnoi* “measures” of natural produce), *hippeis* (knights), *zeugitai* (owners of a yoke of oxen) and *thetes* (literally “menials”, day-labourers) (Arist. *Ath. Pol.* 7.3). The *thetes* were excluded from all state offices (Arist. *Ath. Pol.* 7.3–4), and to the most important offices the electors—probably the People’s Assembly (Solon fr. 5.1–2)—could appoint only citizens from the top two classes (Arist. *Ath. Pol.* 8.1, 26.2, 47.1; Hignett (1952) 101–2). However, of Solon’s constitutional reforms the most important, according to the tradition, was his creation of a Council of Four Hundred, 100 from each of the four tribes (Arist. *Ath. Pol.* 8.4). Solon carried out a new codification of the laws (Solon fr. 36.18–20; Hdt. 1.29.1; Arist. *Ath. Pol.* 7.1; Rhodes (1981) 130–35; frag-

ments in Ruschenbusch (1966)), and “the Laws of Solon” were not revised till 410–399, when they were recodified.

Neither side was satisfied with Solon’s compromise (Solon fr. 34, 37), and the citizen body was soon split into three competing factions (*staseis*): the “Men of the Plain” (i.e. the plain around Athens) led by Lykourgos, the “Men beyond the Mountains” (i.e. beyond Hymettos and Pentelikon) led by Peisistratos, and the “Men of the Coast” led by the Alkmaionid Megakles (Hdt. 1.59.3; Arist. *Ath. Pol.* 13.4; Andrewes (1982b) 393–98). In 561 Peisistratos became tyrant in a *coup* (Hdt. 1.59.4–6; Arist. *Ath. Pol.* 14.1). Apart from two long periods of exile, he ruled Athens until 527 (Hdt. 1.59.3–64.3; Arist. *Ath. Pol.* 14.1–17.2). He was succeeded by his son Hippias (527–510), who met gradually increasing opposition from the aristocrats, many of whom were forced into exile (Hdt. 5.62.2; Thuc. 6.59.4; Arist. *Ath. Pol.* 19.3). Two of those who remained attempted a *coup* in 514: the young Harmodios and his lover Aristogeiton tried to murder Hippias at the Panathenaia festival, but succeeded only in killing Hippias’ younger brother, Hipparchos. They were instantly put to death (Hdt. 5.55–57; Thuc. 6.54–58; Arist. *Ath. Pol.* 18), and were later regarded as democratic heroes (Thuc. 1.20.2, 6.53.3; Ath. 695B). Statues of the tyrant-slayers were put up in 509 and again in 477 (Plin. *HN.* 34.17 (509); *Marm. Par.* (*FGrHist* 239) A54 (477)), and a cult for Harmodios and Aristogeiton was instituted (Arist. *Ath. Pol.* 58.1).

In 510 the Peisistratid tyrants were expelled from Athens, but the revolution ended in a power struggle between the returning aristocrats, led by Kleisthenes, and those who had stayed behind, led by Isagoras. With the help of the ordinary people (the *demos*), Kleisthenes successfully opposed Isagoras (Hdt. 5.66–73), and, reforming the Solonian institutions of 594, he made Athens a democracy. The term *demokratia* can be traced back to c.470 (*SEG* 34 199; Aesch. *Supp.* 604; Hansen (1986); *contra* Raaflaub (1998) 37) and may go back to Kleisthenes’ reforms of 508/7 (Hdt. 6.131.1). Kleisthenes’ major reforms were to divide Attika into 139 municipalities (*demoi*), which in turn were distributed among ten tribes (*phylai*). Citizen rights were linked to membership of a deme, and a Council of Five Hundred was introduced, with fifty representatives from each of the ten tribes and a fixed number of seats assigned to each of the demes (Arist. *Ath. Pol.* 21.2–6). Finally, to avoid a new tyranny (Arist. *Ath. Pol.* 22.3) or, rather, to avoid a repeat of the power struggle of 510–507, Kleisthenes introduced ostracism (Arist. *Ath. Pol.* 22.1, 3–4; Brenne (2001); Siewert (2002)).

During the next century the new democracy was buttressed by other reforms: in 501, command of the army and the navy was transferred from the polemarch to a board of ten popularly elected generals (*strategoí*) (Arist. *Ath. Pol.* 22.2). In 487/6 the method of selection of the nine archons was changed from election to selection by lot from an elected short list (Arist. *Ath. Pol.* 22.5). Ephialtes' reforms of 462 deprived the Council of the Areopagos of its political powers, which were divided between the Assembly (*ekklesia*), the Council of Five Hundred (*boule*) and the People's Court (*dikasterion*) (Arist. *Ath. Pol.* 25.2). Shortly afterwards, on the initiative of Perikles, political pay was introduced for the People's Court (Arist. *Pol.* 1274^a8–9) and the Council (*IG* 1³ 82.20), so that even poor citizens could exercise their political rights. Athenian citizenship became a much-coveted privilege, and in 451 Perikles had a law passed confining citizenship to the legitimate sons of an Athenian mother as well as father (Arist. *Ath. Pol.* 26.4; Patterson (1981); Hansen (1985) 73–76).

The defeats in the Peloponnesian War resulted in a growing opposition to democracy, and twice the anti-democratic factions succeeded for some months in establishing an oligarchy: in 411 an oligarchy led by a Council of Four Hundred (Thuc. 8.47–98; Arist. *Ath. Pol.* 29–33; Gomme, Andrewes and Dover (1981) 153–256), followed by an equally short-lived mixed constitution in 411/10 based on 5,000 enfranchised citizens (Thuc. 8.97.1–2; Arist. *Ath. Pol.* 33.1–2); and in 404/3 a radical oligarchy under a junta which fully earned the name “the Thirty Tyrants” (Xen. *Hell.* 2.2–4; Arist. *Ath. Pol.* 35–38; Diod. 14.3.7). In 403/2 democracy was restored in a modified form (Hansen (1999) 300–4; *contra* Bleicken (1994) 64–66). Legislation (in 403) and all jurisdiction in political trials (c.355) were transferred from the people in assembly to the panel of 6,000 jurors acting as both legislators (*nomothetai*) and judges (*dikastai*) (Hansen (1999) 167–68, 181–83). In the 330s a kind of minister of finance was introduced (*ho epi te dioikesei*) (*SEG* 19 119). He was elected for a four-year period and could be re-elected, and for twelve consecutive years the administration of Athens was entrusted to Lykourgos (Hyp. fr. 139, Sauppe; Burke (1985)). Most of these reforms were allegedly a return to the “ancestral” or “Solonian” democracy (Andoc. 1.83; Aeschin. 3.257; Hansen (1999) 296–300), but the gradual and moderate transformation of the democratic institutions came to an abrupt end in 322/1 when the Makedonians after their victory in the Lamian War abolished the democracy and had it replaced by a “Solonian” oligarchy (Diod. 18.18.4–5).

After the restoration of democracy in 403/2, more specifically in the age of Demosthenes (355–322), the Athenian

democracy was organised as follows (Hansen (1999) 55–295). Political rights were restricted to adult male Athenians. Women, foreigners and slaves were excluded (Dem. 9.3). An Athenian was inscribed into his father's *phratría* (*infra* 632) at the age of 3 or 4 (*P Oxy.* 2538.11.24–28), and at the age of 18 he became a member of his father's deme (Arist. *Ath. Pol.* 42.1; Dem. 30.15, 39.29), with his name inscribed in the deme's roster (the *lexiarchikon grammateion*: Aeschin. 1.103; Harp. *A17*); but as ephebes, most young Athenians (Lycurg. 1.76; Hansen (1988) 3–6, (1994) 302–4; *contra* Rhodes (1981) 503) were liable for military service for two years (Arist. *Ath. Pol.* 42; Burckhardt (1996) 26–75) before, at the age of 20, they could be inscribed in the roster of citizens who had access to the Assembly (the *pinax ekklesiastikos*: Dem. 44.35). Full political rights were obtained only at the age of 30, when a citizen was allowed to present himself as a candidate at the annual sortition of magistrates (Xen. *Mem.* 1.2.35) and of jurors (Arist. *Ath. Pol.* 63.3) (who served both as legislators and as judges).

In the People's Assembly (Hansen (1987a)), called *he ekklesia*, any citizen over 20 years of age had the right to speak and to vote (Xen. *Mem.* 3.6.1). The people (*demos*) met forty times a year (Arist. *Ath. Pol.* 43.3), mostly on the Phnyx hill (Aeschin. 3.34); a meeting was normally attended by at least 6,000 citizens, the quorum required for, among other things, ratification of citizenship decrees (Dem. 59.89), and a session lasted only a couple of hours (Aeschin. 1.112). The Assembly was summoned by the fifty *prytaneis* and chaired by the nine *proedroi* (Arist. *Ath. Pol.* 44.2–3). Apart from some obligatory items on the agenda, all matters debated by the people had to be debated first in the Council of Five Hundred and passed in the form of a *probouleuma* (Arist. *Ath. Pol.* 45.4). The debate consisted of a number of speeches made by the politically active citizens (Dem. 1–10, 13–16), and all votes were taken by a show of hands (*cheirotonia*), assessed by the *proedroi* without any exact count of the hands (Arist. *Ath. Pol.* 44.3). The Athenians distinguished between laws (general and permanent rules, called *nomoi*) and decrees (temporary and/or individual rules, called *psephismata*: Andoc. 1.87; *SEG* 26 72.55–56 (375/4)). The Assembly was not allowed to pass *nomoi* (Dem. 1.19, 3.10–11) but did, by decree, make decisions on foreign policy and on major issues of domestic policy (Arist. *Ath. Pol.* 43.6). Furthermore, the Assembly was empowered (a) to elect the military and financial magistrates (Arist. *Ath. Pol.* 43.1, 44.4), (b) to initiate legislation (*nomothesia*) by appointing a panel of legislators (*nomothetai*, Dem. 3.10–13), and (c) to initiate a political trial (*eisangelia eis ton demon*) by appointing a

panel of judges (a *dikasterion*: Arist. *Ath. Pol.* 43.4; Dem. 19.116).

Citizens over 30 years of age were eligible to participate in the annual sortition of a panel of 6,000 jurors (*hoi omomokotes*: Ar. *Vesp.* 662) who for one year served both as legislators (Dem. 24.21) and as judges (Dem. 24.148–51). When a *nomos* was to be enacted, the Assembly decreed to appoint for one day a board of, e.g., 1,000 legislators (*nomothetai*) selected by lot from the 6,000 jurors (Dem. 24.20–38; Aeschin. 3.38–40). Having listened to a debate, the *nomothetai* decided by show of hands about all amendments of “Solon’s laws”, i.e. the Solonian law code of 594/3 as revised and codified in 403/2 (Andoc. 1.82–85). Boards of *nomothetai* were appointed only infrequently, and to legislate once in a month was considered excessive (Dem. 24.142) (Hansen (1999) 161–77).

Jurisdiction was much more time-consuming (Hansen (1999) 178–224; Todd (1993)). The People’s Court (*dikasterion*) met c.200 days in a year. On a court day, members of the panel of 6,000 jurors came to the agora in the morning, and by sortition from among those who presented themselves were appointed a number of courts, made up of 201 or 401 judges each in private actions and 501 or more in public actions. Each court was presided over by a magistrate, and in a session of some eight hours the judges had to hear and decide either one public action or a number of private actions (Arist. *Ath. Pol.* 63–69). The two most important types of political trial were the public action against unconstitutional proposals (*graphe paranomon*), against proposers of decrees (Aeschin. 3.3–8), and the denunciation to the people in assembly (*eisangelia eis ton demon*: Hyp. 3.7–8), used most frequently against generals charged with treason and corruption (Dem. 13.5).

In addition to the decision-making organs of government (*ekklesia—nomothetai—dikasterion*), Athens had about 1,200 magistrates, called *archai* (Hansen (1999) 225–45; Develin (1989)). They were appointed from among citizens over 30 who presented themselves as candidates (Lys. 6.4). About 100 were elected by the *ekklesia* (Aeschin. 3.14), whereas the other 1,100 were picked by lot (Dem. 39.10): viz. 500 councillors and c.600 other magistrates, often organised in boards of ten with one representative from each tribe (IG II² 1388.1–12). The period of office was restricted to one year, and magistrates selected by lot could not hold the same office more than once (Arist. *Ath. Pol.* 62.3). Prior to entering office, magistrates had to undergo an examination (*dokimasia*) before a *dikasterion* (Arist. *Ath. Pol.* 55.2–5) and, when their term of office expired, they had

to render accounts (*euthynai*) before another *dikasterion* (Arist. *Ath. Pol.* 54.2, 48.4–5).

The magistrates’ principal tasks were to summon and preside over the decision-making bodies and to see to the execution of the decisions made (Arist. *Pol.* 1322^b12–17). Apart from routine matters, the magistrates could not decide anything but only prepare the decisions (Arist. *Pol.* 1298^a28–32). The Council of Five Hundred prepared business for the *ekklesia* (Arist. *Ath. Pol.* 45.4) and the *nomothetai* (Dem. 24.48), the other magistrates for the *dikasteria* (Aeschin. 3.29).

By far the most important board of magistrates was the Council of Five Hundred, called *he boule hoi pentakosioi* (Andoc. 1.96; Rhodes (1972)). It was composed of fifty persons from each of the ten *phylai*, who for a tenth of the year (a prytany of 36 or 35 days) served as *prytaneis*, i.e. as an executive committee of the Council, which in turn served as an executive committee of the Assembly. The Council met every day except holidays in the *bouleuterion* on the agora to run the financial administration of Athens and to consider in advance every matter to be put before the *demos* (Arist. *Ath. Pol.* 43.2–49.5).

Of the other boards of magistrates, the most important were the ten generals (*strategoï*) who commanded the Athenian army and navy (Arist. *Ath. Pol.* 61.1–2; Hamel (1998)); the Board for the Theoric Fund (*hoi epi to theorikon*), who in the 350s under Euboulos supervised the Athenian financial administration (Aeschin. 3.24–25); and the nine archons who in most public and private actions had to summon and preside over the People’s Court and supervised the major festivals, e.g. the Panathenaia and the Dionysia (Arist. *Ath. Pol.* 55–59).

In all matters the initiative was left to the individual citizen, in this capacity called *ton Athenaion ho boulomenos hois exestin* (SEG 26 72.34; Hansen (1999) 266–68). At any time about 1,000 citizens must have been active as speakers and proposers of *nomoi* and *psephismata* or as prosecutors and *synegoroi* before the People’s Court. But it was always a small group of about a score of citizens who more or less professionally initiated Athenian policy (Hansen (1999) 268–72). They were called *rhetores* (Hyp. 3.4, 8) or *politeuomenoi* (Dem. 3.29–31), whereas the ordinary politically active citizen is referred to as an *idiotes* (Dem. *Prooem.* 13). There were no political parties, and the people did not vote according to the crack of their leaders’ whip (Hansen (1999) 277–87). But by persuasion and charisma major political leaders sometimes succeeded in dominating the political assemblies for a longer period, as did Perikles from 443 to his

death in 429 (Thuc. 2.65.10), and Demosthenes in the period 341–338 (Dem. 18.320).

The ordinary citizens were reimbursed for their political activity as *ekklesiastai* or *nomothetai* or *dikastai* or *bouleutai* (Arist. *Ath. Pol.* 62.2; Dem. 24.21). Very few of the magistrates were paid on a regular basis (Hansen (1979); *contra* Gabrielsen (1981)), but many obtained perquisites instead (Isoc. 7.24–27; Hansen (1980a)). Speakers and proposers in the political assemblies were unpaid, and those who attempted to make a profit out of politics were regarded as sycophants and liable to punishment (Dem. 59.43).

The Council of the Areopagos was a survival of the Archaic period (Wallace (1989)), and in the period 461–404 mainly a court for cases of homicide (Philoch. fr. 64). In C4, however, the activity of the Areopagos was again progressively enlarged in connection with the attempts to revive the “ancestral” or “Solonian” democracy (Din. 1.62–63; Lycurg. 1.52; Hansen (1989)).

Athenian civic subdivisions comprise *phylai*, *trittyes*, *demoi* and *phratriai* (Jones (1999) 51–220). During the periods covered by our sources neither the *genos* (Parker (1996) 59–65) nor the *oikos* (Hansen (1998) 135–37) was a civic subdivision in the proper sense. In the Archaic period the Athenian citizens were organised into four *phylai*: *viz.* Geleontes, Argadeis, Aigikoreis and Hopletes (Hdt. 5.66.2). Each *phyle* was headed by a “king” (*phylobasileus*) and subdivided into three *trittyes* and twelve *naukrariai* (Arist. *Ath. Pol.* 8.3). This organisation was still maintained in C4 for religious purposes (*Hesperia* 4 (1935) 19–32 no. 2.33–35). In the years after 508/7 Kleisthenes implemented a new organisation whereby Attika was divided partly into three districts—the town of Athens with its immediate hinterland (*asty*), the coast (*paralia*), and the inland (*mesogeia*)—and partly into 139 municipalities of varying size, called *demoi*. Each *demos* was headed by a *demarchos*, and many had a nucleated centre where the members held their meetings, called *agorai* (Osborne (1985); Whitehead (1986)). Next, the 139 *demoi* were distributed over thirty *trittyes*, with ten *trittyes* in each of the three districts. Each *trittys* consisted of from one to ten *demoi* (Siewert (1982)). Finally, ten *phylai* were formed, each consisting of three *trittyes*, one picked by lot (Hansen (1987b)) from each of the three districts. The ten *phylai* were named after local heroes and called Erechtheis, Aigeis, Pandionis, Leontis, Akamantis, Oineis, Kekropis, Hippothontis, Aiantis and Antiochis (Jones (1999) 151–94). All these civic subdivisions were basically territorial, but membership was hereditary (Hdt. 5.69; Arist. *Ath. Pol.* 21.2–4; Arist. *Pol.* 1319^b19–27; Traill (1975), (1986)). According

to Traill (1986) 123, there were 140 demes, Acharnai being a divided deme, but see Whitehead (1987) 443. In the Archaic period, all Athenians were organised into *phratriai* (*IG* 1³ 104.18, 23 (C71)), gentilician groups with hereditary membership, but also locally based (Lambert (1993); Jones (1999) 195–220). This system persisted in the Classical period and was not co-ordinated with the distribution into demes. Thus, Theodoros of Dekeleia (*LGPN* no. 96) and Pantakles of Oion (*LGPN* no. 19) both belonged to the *phratria* of the Demotionidai (*IG* 11² 1237.2, 11 (396/5)).

(C) The patron divinity of Athens was Athena, in this function called “Athena who watches over Athens” (*Ἀθηνᾶ ἡ Ἀθηνῶν μεδέουσα*: ML 23.4–5 (C4m but r480)), or Athena Poliouchos (Ar. *Eq.* 581–85) or Athena Polias (Aeschin. 2.147), an epithet which originally denoted the *akropolis* rather than the *polis* (Cole (1995) 301–2). Athena was worshipped under many different forms, each specified by an epithet denoting function or origin, and each manifestation of Athena had its own sanctuary, its own personnel and its own rites. In the Archaic and Classical periods at least seventeen different manifestations are attested: *viz.* Athena Areia (Paus. 1.28.5), Boulaia (Ant. 6.45), Epi Palladio (*IG* 1³ 369.71 (423/2)), Ergane (*IG* 1² 561 (C4)), Hephaestia (*IG* 11² 223B.4 (343/2)), Hippiia (Paus. 1.30.4; cf. Thuc. 8.67.2), Hygieia (*IG* 1³ 506 (C5m)), Itonia (*IG* 1³ 383.151–52 (429/8)), Lemnia (Paus. 1.28.3), Nike (*IG* 1³ 36.5–6 (424/3)), Pallas (*IG* 1³ 647 (C61)), Pallenis (*IG* 1³ 383.121–22 (429/8)), Parthenos (*IG* 1³ 850 (C5f)), Phratria (*IG* 11² 2344.1 (C4e)), Polias (*IG* 1³ 375.6 (410/9)), Poliouchos (*IG* 1³ 775 (C5e)) and Zosteria (*IG* 1³ 369.92 (423/2)). For the other gods, see Nilsson (1967) 383–601.

In addition to the cults of all the gods, there were cults of heroes, of whom some 300 are attested in the sources (Kearns (1989) 139–207), ranging from Herakles (Dem. 19.125; Harp. *H*14; Woodford (1971)) to the poet Sophokles under the name of Dexion (*Etym. Magn.* 256.6–12; Kearns (1989) 154).

During the democracy many new cults were introduced. Some of them were purely or primarily political, *viz.* the cults of the tyrannicides Harmodios and Aristogeiton (Arist. *Ath. Pol.* 58.1), of the ten eponymous heroes (*IG* 11² 1140 (C4e); Kron (1976)), of Zeus Boulaios and Athena Boulaia in the *bouleuterion* (Ant. 6.45), of Zeus Eleutherios, connected with the victory over the Persians at Plataiai (Thuc. 2.71.2; Raaflaub (1985) 125–47), of Theseus in the (still unlocated) Theseion (Aeschin. 3.13), reformed c.475 with the recovery of his bones (Plut. *Thes.* 36.2) and culminating in

C4 with Theseus seen as the father of Athenian democracy (Dem. 59.75; Paus. 1.3.3–4; Garland (1992) 82–98), and in C4 of Demokratia, democracy personified (*IG* II² 1496.131–41 (332/1); Alexandri-Zahou (1986)). Other new cults were those of foreign gods, such as Thracian Bendis (Pl. *Resp.* 327A–28A; Simms (1988)), or cults of gods of foreigners, such as Phoenician Aphrodite worshipped by Kitians, or Isis worshipped by Egyptians (*IG* II² 337 = RO 91 (333/2)).

A substantial part of the Athenian law code consisted of a sacrificial calendar regulating all public sacrifices (*Hesperia* 4 (1935) 5–32; Lys. 30.18; Clinton (1982)), and of the c.600 civilian *archai*, some 200 were exclusively or principally engaged in the administration of the sanctuaries and organisation of the sacrifices and festivals in honour of the divinity of the sanctuary in question (Hansen (1980b) 155, 162–63). The rites were performed by priests (*hierais*) and priestesses (*hierelai*) who were not themselves *archai* (Dem. *Proem.* 55.2; Busolt and Swoboda (1926) 1171). In the Archaic period, all public priesthoods were filled for life from among members of the *gene*, hereditary groups of upper-class Athenians, based on descent in the male line and apparently subdivisions of the *phratryai* (Aeschin. 2.147; *IG* I³ 6 (C5f); Parker (1996) 56–66, 284–327). In the course of the Classical period the democratic *polis* took over, and an increasing number of priesthoods were filled from among all Athenians. The first attested example is the priestess of Athena Nike (*IG* I³ 35 = ML 44 (C5m)).

In a year of 354 days, some 60 days were devoted to annual festivals (Mikalson (1975)) paid for by the *polis* and organised by *polis* officials (Deubner (1966)). The Athenian festival calendar is different from, but closely related to, the Ionian calendar: the Athenian months of Poseideon and Anthesterion are found in many Ionian *poleis*, but Mounychion is peculiar to Athens, and the common Ionian months of Artemision and Apatourion are not found in Athens (Trümper, *Monat.* 6–18).

The major Athenian festivals were: (a) Panathenaia: a festival of the goddess Athena, celebrated in the days around her birthday on 28 Hekatombaion (schol. Pl. *Resp.* 327A). The Athenians distinguished between the Greater Panathenaia, introduced in 566/5 and held every four years (Arist. *Ath. Pol.* 18.2–3, 60.1–3; *IG* II² 2311–12 (C4f)), and the Lesser Panathenaia, celebrated in the other three years (*Agora* xv1 75 (C4s)). At the Greater Panathenaia Athena was honoured with a grand procession, Panhellenic athletic competitions (*IG* II² 2311–12 (C4f); Neils (1992)), and recitation of the Homeric poems (Lycurg. 1.102; Jensen (1980) 145–49). (b) The Eleusinian Mysteries: a festival of Demeter

and Persephone, celebrated in Athens and Eleusis in the month of Boedromion and restricted to those who had been, or wished to be, initiated into the Mysteries (with no distinction drawn between citizens, foreigners and slaves) (*SEG* 30 61 (C4m); Arist. *Ath. Pol.* 57.1; Andoc. 1.110ff; Clinton (1974)). (c) Thesmophoria: a fertility festival, celebrated in the month of Pyanopsion on the Pnyx by married women of citizen status in honour of Demeter (schol. Ar. *Thesm.* 80; Brumfield (1985) 70–103). (d) Apatouria: a festival celebrated in the *phratryai* in the month of Pyanopsion (schol. Ar. *Ach.* 146). On the third day of the festival citizens had their sons registered in their phratryes (Dem. 39.4), and their daughters were presented to the members (Isae. 3.73, 76, 79; Cole (1984) 233–37). (e) *Ta kat' agrous Dionysia*: the rural Dionysia were celebrated in the month of Poseideon in all the demes (*SEG* 33 147.31 (C4f)). The principal ceremony was a phallic procession (Ar. *Ach.* 241–83; Whitehead (1986) 212–22). (f) Anthesteria: a festival of Dionysos celebrated in the month of Anthesterion when the Athenians opened and drank the new wine (Plut. *Mor.* 655E) and celebrated a ceremonial wedding between Dionysos and the wife of the *archon basileus* (Dem. 59.74–84; Hamilton (1992)). (g) *Ta en astei Dionysia*: the Greater Dionysia, celebrated in the month of Elaphebolion for Dionysos Eleuthereus, whose sanctuary was situated on the south slope of the Acropolis. In addition to phallic and other processions, the Greater Dionysia were the setting for performances of tragedies, comedies, satyr plays and dithyrambs (*IG* II² 2319–23 (C3e, rC4); Pickard-Cambridge (1968)). (h) Thargelia: a festival of Apollo, celebrated in the month of Thargelion. Two scapegoats (*pharmakoi*) were driven out of the city. The festival included a procession and choral competitions for choirs of men and boys (Ant. 6.11–13; Harp. *Φ5*; Bremmer (1983)). (i) Dipolieia: a festival of Zeus Polieus, celebrated in the month of Skirophorion. The sacrifice of a bull with an axe was followed by a ceremonial homicide trial of the axe, conducted before the Court of the *Prytaneion* (Paus. 1.24.4, 28.10; Parke (1977) 162–67).

(D) Settlements beneath the Acropolis can be traced back to C8 (Lang (1996) 152–63), and Snodgrass (1987–89) 60–62 has classified Athens as an instance of his “Model B” (56), viz. “a sprawling loose-knit group of settlements” which over time grew to form a conurbation. The change from a group of small villages to a conurbation took place when the lower town was enclosed with a defence circuit (*infra*). The agora of the Archaic town with the *prytaneion* and the Theseion (Paus. 1.17–18) lay north-east of the Acropolis (Dontas

(1983)). Both the Acropolis and the lower town were sacked and burnt down by the Persians in 480 (Hdt. 8.53.2) and again in 479 (Hdt. 9.13.2). For archaeological remains of the Persian destruction of the Akropolis, see Hurwit (1999) 136.

During the Dark Ages and the early Archaic period the only fortification was the C13l cyclopean walls of the Acropolis (Hurwit (1999) 74–80). In C6l, however, the town had a separate defence circuit (Thuc. 6.57.1–3), demolished by the Persians in 480/79 (Hdt. 9.13.2; Thuc. 1.89.3, 93.2). This wall may have been constructed in C6f (Vanderpool (1974); Weir (1995)), but no traces have yet been found. In spite of Spartan protests, a new larger wall was built in 479/8 (Thuc. 1.89.3–93.2). This so-called Themistoklean wall was built of mudbrick on a stone socle with seventeen gates and numerous interval towers (Wycherley (1978) 11–18; Judeich (1931) 124–44). It was repaired twice in the Classical period: in the years 395/4–392/1 at the instigation of Konon (Xen. *Hell.* 4.8.9–10) and again in 338/7 at the instigation of Demosthenes (Aeschin. 3.27; Dem. 18.300); both repairs are visible in the preserved part of the wall at Kerameikos (Ohly (1965) 360–76). The line of the Themistoklean wall has been accurately traced, and it can be established that it enclosed an area of almost 211 ha. The walls of Peiraieus were first built by Themistokles during his archonship in 493/2 (Thuc. 1.93.3), but demolished in 480/79 (*supra*), then rebuilt in 479/8 (Thuc. 1.93.3–8). The walls, of polygonal masonry (Garland (1987) 163–65), were 60 stades long (Thuc. 2.13.7) and enclosed an area of c.305 ha. The Long Walls were built in the years 458–457. The northern wall ran from Athens to Peiraieus, the southern wall from Athens to Phaleron (Thuc. 1.107.1 and 108.2). A new wall, running parallel to the northern wall, c.184 m to the south, was built c.445 (Harp Δ 44; Pl. *Grg.* 455E; Judeich (1931) 155–60). The Long Walls and the walls of Peiraieus were demolished in 404 (Xen. *Hell.* 2.2.20, 23), but rebuilt, in ashlar masonry (Garland (1987) 165–67), in the years 395/4–392/1 (Xen. *Hell.* 4.8.9–10; *IG* II² 1656–64) and repaired in the years after 338/7 (*IG* II² 244; Maier (1961) nos. 1–10). For a preserved section of the Long Walls, see AAA 5 (1972) 339–46. The Acropolis was besieged by the Athenians opposing Kylon c.636 (Thuc. 1.126.9), by the Lakedaimonians and the Athenians opposing Hippias in 510 (Hdt. 5.64.2), by the Athenians opposing Isagoras in 508 (Hdt. 5.72.2), and by the Persians in 480 (Hdt. 8.52). Athens with Peiraieus was besieged by the Lakedaimonians and their allies in 405/4 (Xen. *Hell.* 2.2.4, 10–20).

Most of the buildings serving the major Athenian political institutions have been located, and of several, substantial remains are still visible. The *prytaneion* lay somewhere

north-east of the Acropolis (Plut. *Sol.* 19.4, quoting a Solonian law of C6e; *SEG* 33 115 (C3m); Dontas (1983) 60–62). The *bouleuterion* has been found on the west side of the agora (Arist. *Ath. Pol.* 48.1; Wycherley (1957) 128–37; Thompson and Wycherley (1972) 29–38). The “Old *Bouleuterion*” of c.500 (Shear (1995); *contra* Miller (1995)) was from c.400 used as a *Metroon* and housed the public archives (Dem. 19.129; Sickinger (1999)) and was replaced by the new *bouleuterion* (Thompson and Wycherley (1972) 31–34). South of the *bouleuterion* was a building called *tholos* (Andoc. 1.45) or *prytanikon* (Agora xv 89.40 (C3m)) where the fifty *prytaneis* resided (Wycherley (1957) 179–84; Thompson and Wycherley (1972) 41–46). In front of this complex lay the monument of the ten eponymous heroes where bills and some public enactments were set up (Isae. 5.38; Wycherley (1957) 85–90; Thompson and Wycherley (1972) 41–46).

Athens was one of the few *poleis* that had a separate meeting-place of the popular assembly. Since c.500 or perhaps c.460 it was placed on the hill of the Pnyx (Pnyx I), and it was twice reconstructed: c.400 (Pnyx II) and again in the 330s (Pnyx III) (Thompson (1982); Hansen (1989) 129–65; Forsén and Stanton (1996)).

No remains have been found of the homicide courts (Arist. *Ath. Pol.* 57.3). The most important was the Areopagos, meeting on the Hill of Ares (Dem. 23.65–66), the Palladion, presumably in Phaleron (schol. Aeschin. 2.87), the Delphinion near the Olympieion (Paus. 1.19.1), and a court *en Phreatto* near the Zea harbour in Peiraieus (Boegehold (1995) 43–50). The People’s Court had its principal rooms in the agora (Ant. 5.10–11; Lys. 19.55). In the north-east corner of the agora beneath the stoa of Attalos have been found the foundations of a large square peristyle of c.300, and beneath that the foundations of five buildings (A–E). Building A of C5l had a floor area of 900 m² and may have been the so-called *Heliaia* (Dem. 47.12), i.e. the *Heliaia* of the *Thesmothetai* (*IG* I³ 75.6) (Hansen (1989) 232–37; Boegehold (1995) 11–15). In the Lykourgan period there was a central law court (Arist. *Ath. Pol.* 63.2), probably a predecessor of the square peristyle (Boegehold (1995) 15–16, 108–13). Other public buildings used as court-rooms were the Stoa Poikile (*IG* II² 1641B.38–40 (C4m)) and the Periklean Odeion (Dem. 59.52), which is in fact the only known building large enough to accommodate the occasional panels of 2,000 or even 2,500 *dikastai* (Lys. 13.35; Din. 1.52). Associated with the lawcourts was the prison (*desmoterion*) (Pl. *Phd.* 59D; Hunter (1997)), perhaps to be identified with a building of C5m in the south-west corner of the

agora (Camp (1986) 113–16). Some of the offices serving (boards of) magistrates are known from written sources (Wycherley (1957) 20–25, 126–84) and/or from archaeological evidence (Camp (1986) 100–35), viz. the *Stoa Basileios* (Dem. 25.23), the *Thesmotheteion* (Arist. *Ath. Pol.* 3.5), the *Strategion* (Dem. 42.14), the *Poleterion* (Dem. 25.57) and the *Argyrokopion* (IG I³ 1453.5, 8, 11).

Apart from the walls and the purely political architecture, Athens had an abundance of monumental buildings erected by the *polis*, including temples and shrines and elaborate edifices serving the navy. In this context it suffices to single out three peaks of building activity: the first under Peisistratos and his sons in C6s, the second under Perikles in C5s, and the third under Lykourgos in C4s.

(1) On the Acropolis the Peisistratids' principal activity was the renovation of the temple of Athena Polias (Boersma (1970) no. 48); in the agora they were responsible for the altar of the Twelve Gods (Thuc. 6.54.6–7; Gadbery (1992)), the *enneakrounos* which was the most famous fountain of Athens (Thuc. 2.15.5; Boersma (1970) no. 100) and, on the west side, a trapezoidal building with a columned courtyard (Building F, Boersma (1970) no. 144), believed by some to have served the Solonian *boule* (Rhodes (1972) 18–19), by others to have housed the Peisistratid family (Camp (1986) 45). East of the Acropolis they laid the foundations of a giant dipteral temple for Zeus Olympios (Arist. *Pol.* 1313^b23; Boersma (1970) no. 70).

(2) The monuments invariably associated with Perikles are the temples on the Acropolis (Thuc. 2.13.3; Lycurg. fr. 58; Hurwit (1999) 154–221, 313–18): the Parthenon (447–432), the Propylaia (437–432) and, after his death, the temple of Athena Nike (427–422) and the Erechtheion (421–407). Furthermore, the Odeion south of the Acropolis (c.440–430; Hurwit (1999) 216–17, 317), and the Hephaisteion, west of the agora (450–440?: Boersma (1970) 59–61, no. 58). The most expensive single item of Perikles' building programme, however, was the construction of ship sheds for the triremes in Peiraieus (*neosoiikoi*: Dem. 22.76), which presumably cost 1,000 tal. but were demolished under the Thirty in 404/3 (Isoc. 7.66).

(3) A building programme begun under Euboulos was interrupted by the war against Makedon, but resumed and finished under Lykourgos during the twelve years he was in charge of the Athenian finances (Hintzen-Bohlen (1997)). The programme is attested in a posthumous honorary decree for Lykourgos of 307/6 which singles out, in the Peiraieus, the completion of altogether 372 ship sheds, *neosoiikoi* (IG II² 1627.398–405) and the Arsenal, *skeuotheke*

(IG II² 1668 (347/6)); in Athens, the erection of a Panathenaic *stadion*, the furnishing of the theatre of Dionysos with a grand auditorium (*koilon*) in marble, the gymnasium at the Lykeion (IG II² 457.5–9; Plut. *Mor.* 852C), and, we can add, the rebuilding and extension of the assembly place on the Pnyx (= Pnyx III, *supra*).

C.600 the agora was moved to its later place, and c.500 it was marked with *horoi* (IG I³ 1087–89; Camp (1986) 38). In addition to sanctuaries and buildings serving the Council and the courts, the agora was adorned with a number of stoas: the Stoa Basileios from perhaps C6m (Lang (1996) 152–53), the Stoa Poikile from C5f (Camp (1986) 68–72), the Stoa of Zeus Eleutherios from c.430–420 (Camp (1986) 105–7), and the South Stoa from c.430–420 (Camp (1986) 122–28). Finally, the large square building formerly called the *Heliaia* was probably a shrine of Aiax and in C4f was used as storeroom for large quantities of imported grain (Stroud (1998) 85–108).

In Athens and Peiraieus there were at least three theatres: the famous theatre of Dionysos on the south slope of the Acropolis (IG II² 410.39 (335/4); Pickard-Cambridge (1946)), an unlocated theatre known exclusively from a C4s account of leases (*Agora* XIX L6.147–48), and the theatre in Mounichia (Lys. 13.32; McDonald (1943) 51–54; Garland (1987) 161).

In addition to private *gymnasia* (Xen. *Ath. Pol.* 2.10), Athens had three major public *gymnasia* (Dem. 24.114; Hyp. 1.26.22–4), all placed outside the walls in the suburbs of Athens (Kyle (1987) 71–92): Akademeia (IG I³ 1091; Harp. A56), where Plato had his school (Diog. Laert. 3.5–7), Lykeion (IG II² 457B.7–8 (307/6); Harp. A30) where Aristotle taught (Diog. Laert. 5.2, 10) recently found in the excavations of Odos Rigilles (AR (2001–2) 8), and Kynosarges (IG I³ 134; Plut. *Them.* 1.3) frequented by Antisthenes (Diog. Laert. 6.13). There was no monumental *stadion* in Athens until Lykourgos had one built near the river Ilissos for the Great Panathenaia of 330 (IG II² 351.16–20 (330/29); Plut. *Mor.* 841D; Kyle (1987) 92–95). There was also a hippodrome (Dem. 47.53; Xen. *Hipparch.* 3.14) which lay outside the city near Echelidai (*Etym. Magn.* 340.53) and was not necessarily a monumental building (Kyle (1987) 95–97).

Very little is known about the residential quarters of Athens in the Classical period (Hoepfner (1999) 239–45), and the best evidence is still part of an industrial quarter between the agora and the Pnyx, excavated in the 1950s (Thompson and Wycherley (1972) 173–82).

The inhabitants of Athens were buried outside the walls. Graves lined all the major roads, and several large cemeteries

were placed along the northern part of the walls stretching from the Sacred Gate in the north-west to the Diocharian Gate in the north-east (Kurtz and Boardman (1971) 91–96). From C6 onwards the main cemetery was at Kerameikos (Knigge (1988)).

In the Archaic period, the Athenian harbour was at Phaleron (Hdt. 6.116). In the Classical period, Athens had three harbours, all in Peiraieus (Ps.-Skylax 57): two smaller ones, *Zea* (SEG 19 80.10 (C3s)) and *Mounichia* (SEG 41 13 (C5f)), both east of the Akte peninsula, and a larger one, *Kantharos* (schol. Ar. *Pax* 145), west of the peninsula (map in Travlos (1988) 347). *Zea*, *Mounichia* and the southern side of *Kantharos* were military harbours (IG II² 1627.401–5 (330/29)). The commercial harbour, the *emporion*, (SEG 26 72.21; IG I³ 1101.A–B (C5m)) stretched along the eastern and northern sides of *Kantharos* (Garland (1987) 83–95). The *emporion* was reserved for overseas commerce (Dem. 34.26–28, 42–44; Arist. *Ath. Pol.* 51.4; Gauthier (1981) 7–13). The *emporion* included five large pillared halls (schol. Ar. *Pax* 145). The Great Stoa, or Barley Hall, was the storage place for imported grain (schol. Ar. *Ach.* 548). The second, called *Deigma*, was a market-hall for merchants and bankers (Xen. *Hell.* 5.1.21). The urban centre of Peiraieus was laid out by Hippodamos of Miletos in C5f (Arist. *Pol.* 1267^b22–23). The residential area was laid out on a grid plan with *insulae* subdivided into plots of equal size, on which were built roughly similar terrace houses (Hoepfner and Schwandner (1994) 22–50).

Only a very rough guesstimate can give us an idea of the size of the urban population. The walls of Athens and Peiraieus enclosed altogether 600 ha (Athens: 211 ha, Peiraieus: 300 ha; the space between the Long Walls: 100 ha). The space between the Long Walls was probably uninhabited except during the Peloponnesian War (Thuc. 2.17.3). If we assume that half of the remaining 500 ha were inhabited, and that the population density was 250 persons per ha (Jameson *et al.* (1994) 549–51), the result is an urban population of c.62,500 persons to which must be added the population of the suburbs (Isoc. 16.13). Now, tombstones and bouletic quotas indicate that in C4 c.7.5–9 per cent of the citizens belonged to the six urban demes (Hansen *et al.* (1990) 32–35). Let us assume that they lived in the urban area; that, say, twice as many had migrated from Attika into Athens (Hansen (1989) 87–90); and that the number of metics and slaves living in Athens-Peiraieus equalled the number of citizens. The result is an urban population of between 47,000 and 56,000 persons in the age of Demosthenes.

(E) Athens had its own mint from c.550. The first series of coins, the so-called *Wappenmünzen*, may have been struck from silver imported from Thrace (Kraay (1962) 33); the silver used for the so-called owls came from the Laureion mines (Ar. *Av.* 1106: *γλαῦκες Λαυρειωτικά*). (1) Silver coins on the Euboic standard c.550–525, the so-called *Wappenmünzen*. Denominations: mostly didrachm, but in the later phase also tetradrachm, drachm and obol. Types: *obv.* a great variety of types including triskeles, amphora, owl, wheel, Gorgoneion, *etc.*; *rev.* incuse square, sometimes diagonally quartered and sometimes with head of panther. (2) Silver coins on the Attic standard c.520 onwards, the so-called owls. Denominations: decadrachm (only in C5f), tetradrachm, didrachm, drachm, triobol, diobol, obol and (in C4) fractions down to hemitartemorion. Types: *obv.* head of Athena in helmet adorned with three olive leaves; *rev.* owl in incuse square with olive branch in top left corner. Legend: *AΘE*. The minting of silver coins was interrupted during the Decelean War and resumed not later than c.393 (Ar. *Ecl.* 819). During this period the Athenians struck coins of gold and bronze with similar types, the gold coins probably in 407/6, the bronze coins down to 393. The minting of silver coins was resumed in C4e, and the C5 types were used with small stylistic changes, the most important being that Athena's full face eye was replaced by a profile representation. (3) In C4s the small fractions were replaced by bronze coins with similar types (Starr (1970); Kraay (1976) 55–77; Kroll and Walker (1993); *SNG Cop. Attica* 1–82). In C5–C4 imitations of Athenian silver coins were struck in Egypt, in Phoenicia, in Asia Minor and in India (Mørkholm (1974); Kraay (1976) 73–74, 76–77, 292–93; Buttrey (1982); *SNG Cop. Attica* 105–10; *Suppl.* 1244–45). Athenian coins and imitations in great numbers have been found in Sicily, in Egypt, along the Syrian coast, and in southern Asia Minor. None has been found in the Pontic region and in the Propontis, and very few in Thrace and along the west coast of Asia Minor (Isager and Hansen (1975) 46–49, 215–17, 222).

That Athens did not take part in the Archaic colonisation is a widespread but seriously misleading belief. In the Archaic period Athens colonised Sigeion (no. 791) (C7l); Elaiou (no. 663) (C7l and C6m); Chersonesos (no. 661) (C6m); Paktye (no. 671) (C6m); Sestos (no. 672) (C6m); Kardia (no. 665) (C6m); Lemnos (nos. 502–3) (c.500); Imbros (no. 483) (c.500), and sent klerouchs (?) to Chalkis (no. 365) (506–C5e). In C5 Athens sent colonists and/or klerouchs to Skyros (no. 521) (476/5); Eion (no. 630) (476); Neapolis (no. 677) (C5?); Neapolis (no. 63) (C5m); Andros (no. 475) (C5m); Sybaris 3 (no. 70) (446/5); Thourioi (no. 74)

(444/3); Brea (no. 624) (c.445); Chersonesos (no. 661) (C5m); Hestiaia (no. 372) (446–404?); Karystos (no. 373) (C5m); Amphipolis (no. 553) (437/6); Astakos (no. 737) (435/4); Amisos (no. 712) (430s); Sinope (no. 729) (430s); Aigina (no. 358) (431–405); Naxos (no. 507) (C5m); Poteidaia (no. 598) (430–404?); Kolophon (no. 848) (427); Antissa (no. 794) (427); Eresos (no. 796) (427); Mytilene (no. 798) (427); Pyrrha (no. 799) (427); Skione (no. 609) (421); Melos (no. 505) (415); Miletouteichos (no. 751) (c.410); Plakia (no. 757) (?); Skylake (no. 761) (?). In C4 Athens sent colonists and/or klerouchs to Poteidaia (no. 598) (362/1); Chersonesos (no. 661) (C4f); Elaious (no. 663) (353–43); Sestos (no. 672) (353/2); Samos (no. 865) (365–22); *naustathmon* in the Adriatic (IG II² 1629.165–272) (425/4).

362. Eleusis Map 59. Lat. 38.05, long. 23.35. Size of territory: 1 or 2. Type: B. The toponym is Ἐλευσίς, -ῖνος, ἡ (Arist. *Ath. Pol.* 39.1; Xen. *Hell.* 2.4.43; Diod. 14.35.6). No city-ethnic is attested, but the official name of the polity seems to have been οἱ Ἀθηναῖοι οἱ Ἐλευσῖνι κατοικοῦντες (Arist. *Ath. Pol.* 39.2, 5, 40.4). There is no reason to assume that Eleusis was a *polis* in the early Archaic period, but in the years 403–401 it was a self-governing polity settled with the core of the oligarchic faction in the civil war 404/3. It is not called a *polis* in any source, but it seems to have had the same status as a klerouchy. The Eleusinians remained Athenian citizens and are described as *epitimoí* and *Athenaíoi*. The official name of the polity seems to have been οἱ Ἀθηναῖοι οἱ Ἐλευσῖνι κατοικοῦντες (*supra*), just as the C4 klerouchs in Poteidaia were called οἱ Ἀθηναῖοι οἱ ἐν Ποτειδαίᾳ κατοικοῦντες (Dem. 7.10). Like klerouchs, they could return to Athens and reactivate their full Athenian citizenship. Considering the full self-government enjoyed by the community, Eleusis in 403–401 must be included in this inventory as a *polis* type B.

During the oligarchic regime in 404/3, the Thirty wanted to secure Eleusis for themselves as a possible refuge and had many of the Eleusinians executed (Xen. *Hell.* 2.4.8–10). In connection with the restoration of the democracy in 403, it was decided that those of the oligarchs from Athens who so wished could leave Athens and have Eleusis as their residence alongside those of the Eleusinians whom they wanted to retain. Thus, the new *polis* was created by a synoecism of oligarchs from both communities (Arist. *Ath. Pol.* 39.3; *συνοικεῖν*). The oligarchs in Eleusis were banned from Athens, and the democrats in Athens from Eleusis. The Eleusinian oligarchs were still Athenian citizens (ἐπίτιμοι), but self-governing (κυρίουσ καὶ αὐτοκράτορας ἑαυτῶν

καὶ τὰ ἑαυτῶν καρπουμένους). They were explicitly banned from holding office in Athens, unless they left Eleusis and registered as ordinary Athenian citizens once again. Eleusis was to be a member of the Peloponnesian League like Athens, and the Eleusinians and Athenians were to share the Eleusinian sanctuary and the mysteries (Arist. *Ath. Pol.* 39.1–5; Diod. 14.35.6; Cloché (1915) 256–59, 278–95; Loening (1987)).

Soon afterwards it was reported to Athens that the oligarchs in Eleusis had begun to hire mercenaries (Xen. *Hell.* 2.4.43), and, according to a late source (Just. *Epit.* 5.10.8–11), they even attacked Athens. In 401/0 (Arist. *Ath. Pol.* 40.4) the Athenians marched out in full force (Xen. *Hell.* 2.4.43) and laid siege to Eleusis (Lys. 25.9). Some of the oligarchs deserted and joined the Athenian democrats (*ibid.*). During a meeting between the two sides, the Athenians killed the Eleusinian *strategoí* and persuaded the Eleusinians to give up Eleusis and move back to Athens, where a new amnesty was declared (Xen. *Hell.* 2.4.43; Arist. *Ath. Pol.* 40.4).

The bronze coins struck in C4–C3 and inscribed ΕΛΕΥΣΙ were for the requirements of the Eleusinian festivals and have no relation to the oligarchic *polis* of 403–401. Types: *obv.* Triptolemos in winged car drawn by snakes; *rev.* pig standing on bacchos. Legend: ΕΛΕΥΣΙ and, on one, ΑΘΕ (Head, *HN*² 391; *SNG Cop. Attica* 414–19). The legend is probably an abbreviated form not of the ethnic ΕΛΕΥΣΙ(ΝΙΩΝ) but of the *ketikon* ΕΛΕΥΣΙ(ΝΙΑΚΟΝ), and the coin inscribed ΑΘΕ reveals that such coins were struck by the Athenian mint for the festival of the Mysteries, not by the Eleusinians (Kroll and Walker (1993) 26–28).

363. Salamis (Salaminius) Map 59. Lat. 38.00, long. 23.35. Size of territory: 2 (93 km²). Type: A. The toponym is Σαλαμίς, -ῖνος, ἡ (Hom. *Il.* 2.557; Aesch. *Pers.* 273; Thuc. 2.93.4; IG I³ 1.2 (C61)), denoting both the island (Hdt. 8.76.2) and the town (Ps.-Skylax 57; cf. Strabo 9.1.9). An older toponym is Κυχρεία (Aesch. *Pers.* 570; SEG 26 121.32 (C11); Strabo 9.1.9). The city-ethnic is Σαλαμίνιος (IG I³ 748 (C5e); Dem. 19.251). Salamis is called a *polis* in the urban sense at Ps.-Skylax 57, and in the territorial sense (but in a mythological context) at Cratinus fr. 246. Salamis is called the *metropolis* of Cypriote Salamis at Aesch. *Pers.* 894. The collective use of the city-ethnic is probably attested internally in abbreviated form on coins (*infra*) and externally in an Athenian decree of C41 (IG II² 1260.19) and in literature (Aeschin. 1.25; Dem. 19.251). The individual use is attested internally in sepulchral monuments found on Salamis (IG II² 10173, undated) and externally in those found in Attika

(*IG* II² 10176 (C4m)) and in literary sources (*Λέων* ὁ *Σαλαμίνιος*, killed by the Thirty in 404 (Xen. *Hell.* 2.3.39)).

In C6e a war between Athens and Megara over Salamis (Solon frs. 1–3, West; Plut. *Sol.* 8) ended with an Athenian victory and the conquest of Salamis. The credit for the victory goes in some sources to Solon (Plut. *Sol.* 9; Dem. 19.25; Arist. *Ath. Pol.* 17.2), in others to Peisistratos (Aen. *Tact.* 4.8–12). During the *stasis* in C6f Athens seems to have lost Salamis once again to the Megarians (Plut. *Sol.* 12.5), and the dispute over Salamis was eventually submitted to Lakedaimonian arbitration. The Athenians seem to have invoked an allegedly interpolated line about the Athenians in the Homeric Catalogue of Ships (*Il.* 2.558), and the Lakedaimonians found for the Athenians (Plut. *Sol.* 10; Arist. *Rh.* 1375^a29–30). In the sources the Athenian side was represented by either Solon or Peisisteros (Strabo 9.1.10), but modern historians prefer a date of c.520–510, associating the Lakedaimonian arbitrator Kleomenes (Plut. *Sol.* 10.6) with King Kleomenes of Sparta. For a full account, see Taylor (1997) 21–47.

In C6l Salamis was settled with a contingent of Athenians who were liable to pay taxes and give military service to Athens (*IG* I³ 1). The commonly accepted view is that these Athenians were *klerouchs*, although perhaps of a peculiar kind (Cargill (1995) pp. xxiv, 60; for a different view see Taylor (1997) 63–74). The only explicit evidence is schol. Pind. *Nem.* 2.19. In the C6l Athenian decree concerning Salamis, τ[ὸς ἐ] Σ[αλαμ]ῖνι κλερόχ[ο]ς has been restored by most editors (*IG* I³ 1.1 = ML 14; Koerner (1993) 1). More important is that a lease of confiscated property on Lemnos of 387/6 compares “*klerouchs* on Lemnos” to “those on Salamis” (*Agora* XIX L3.33–34: γῆν τὸς κλερόχος καὶ [--- κατά]περ τοῖς ἐς Σαλαμ[ίνα]. And in an honorary inscription of c.325, Ἀθηναίων ὁ δῆμος ὁ ἐν Σαλαμῖνι appears alongside Ἀθηναίων ὁ δῆμος ὁ ἐν Ἰμβρωι (*IG* II² 3206; *SEG* 46 261; cf., however, Salomon (1997) 96–101).

The epigraphic evidence, principally sepulchral monuments, shows that, in addition to metics and slaves (*IG* II² 1570.11.42 (c.330)), the population of Salamis consisted partly of Athenians registered with their demotics and partly of so-called Salaminioi. A good many tombstones found on Salamis commemorate Athenians with ordinary demotics (*IG* II² 7101 (C4, etc.); *Lys.* 13.44; see Taylor (1997) 267–316, nos. 9, 10, 16, 18, 29, etc.). Some two score tombstones with known provenance were set over Salaminioi; a few were found on Salamis, but the majority in Attika (*IG* II² 10171–215 with addenda in Taylor (1997) 263–316). Who these Salaminians were is still a moot point. No link can be

established between the *genos* of the Salaminioi attested in Athens in C4 (*IG* II² 1232 (C4l); *Agora* XIX L4a (363/2)) and the Salaminioi who were named after the island of Salamis (Taylor (1997) 47–63; Parker (1996) 312). Salaminians named after the island of Salamis must be distinguished from Salaminioi from the *polis* on Cyprus. The latter are sometimes specified as being *Σαλαμῖνιοι ἀπὸ Κύπρου* (*IG* II² 10217–18 (C4)). Pace Taylor (1997) 136, 264, it is unbelievable that all the tombstones found in Attika commemorate Salaminioi from Cypriot Salamis. Most of them, perhaps all, are probably Salaminioi from the island in the Saronic Gulf (so also Osborne and Byrne (1996) 272–76). Finally, in spite of all the prosopographical information we possess, there is not one single attestation of a person who is recorded both as a Salaminian and as belonging to one of the Athenian demes. The only evidence of an Athenian who is both a Salaminian and a member of a deme is Moirokles of Eleusis (*SEG* 28 103.6–7 (332/1); cf. *SEG* 31 109A), who is presumably identical with *Μοιροκλῆς Σαλαμῖνιος* at Harp. *M*36. He may be a Salaminios naturalised by the Athenians, like *Ἡρακλεΐδης ὁ Κλαζομένιος* (Arist. *Ath. Pol.* 41.3), or he may be one of the Athenians living on Salamis. The sources do not support Taylor’s view that the ethnic *Salaminios* designates a full Athenian citizen who happens to reside on Salamis and that all Salaminians were inscribed in the 139 demes ((1997) 123–58). The population of Salamis was probably divided into Salaminians and Athenians (for a parallel, see *IG* XII.8 668, a decree mentioning side by side the Athenian *demos* (sc. on Skyros) and those who live on Skyros, *infra* 774). The presumption is that the so-called Salaminians were never integrated into the Athenian state. They had no representation in the Council of Five Hundred, and never filled any other Athenian office (Develin (1989)); they are not attested as jurors in the People’s Court (Kroll (1972)), and were presumably excluded from the *ekklesia* as well. Both groups were entitled to pass decrees, both the *demos* of the Athenians on Salamis (*IG* II² 3206 (c.325)) and the *demos* of the Salaminians (*IG* II² 1260.19 (C4l); *IG* II² 1225.4 (C3m)). The eponymous official was the *ἀρχων εἰς Σαλαμῖνα* (*IG* I³ 1.7–12 (C6l); *IG* II² 3093 (C4e); *IG* II² 1227.1 (C2s)), who was an Athenian magistrate, selected by lot (Arist. *Ath. Pol.* 54.8) and paid by the Athenians (*Ath. Pol.* 62.2) like other overseas magistrates.

The rural Dionysia were celebrated on Salamis (Arist. *Ath. Pol.* 54.8; *IG* II² 3093 (C4e)), and there were cults of the nymph Salamis (*IG* II² 1955 (c.320); *obv.* of C4 coins (*infra*)), of Aias (Hdt. 8.64.2; *SEG* 26 121.32 (C1l); *rev.* of C4 coins (*infra*)), and of Athena Skiras (Hdt. 8.94.2).

The town was situated on the eastern side of the island, north of Kynousura. It was fortified, but the C4 circuit wall was rebuilt in C3m (*IG* II² 1225.11–12) and later, but today only the faint outline of the walls can be observed (Haider (1989) 596). In the town was an agora with a C4e statue of Solon (Aeschin. 1.25; Dem. 19.251) and one of three monuments commemorating the battle of 480 (Paus. 1.36.1; schol. Aesch. *Pers.* 303; Lycurg. 1.73; *IG* II² 1228.27–28 (C1)); another was on Kynousura, where remains of it were seen by Stewart and Revett (Hammond (1973) 304–10). On the north-west tip of the island at Boudoron was a fortress mentioned in connection with the Peloponnesian raid on Salamis in 429/8 (Thuc. 2.93.4, 94.3, cf. 3.51.2).

The Salaminians struck bronze coins in C4. Types: *obv.* female head (nymph Salamis?); *rev.* Boiotian shield and sword in sheath with strap (shield of Aias?). Legend: ΣΑΛΑ. The beginning of this coinage is now dated *c.*400 (Kroll and Walker (1993) 215). The legend is probably the abbreviated form of the ethnic, Σαλα(μνίωv), indicating that the coins were struck on Salamis by the Salaminians. Taylor (1997) 193–95 suggests as an alternative that the legend is Σαλα(μίνος) or Σαλα(μνιαικόv), and that the coins were struck in Athens (Head, *HN*² 392; *SNG Cop. Attica* 455–58).

EUBOIA

KARL REBER, MOGENS HERMAN HANSEN, PIERRE DUCREY

I. The Island

The name of the island is *Ἐὐβοία*, ἡ (Hom. *Il.* 2.535–36; Pind. *Ol.* 13.112; Hdt. 4.33.2; Dem. 19.87; Aeschin. 3.88; *IG* I³ 40.77 (C5s); *IG* XII.9 207.44 (C3e)), meaning “rich in cattle”; cf. the *obv.* types of the coins of Eretria (no. 370) and Karystos (no. 373). Alternative toponyms are *Μάκρις*, “Long Island”, because it stretched for 1,200 stades from Cape Kenaion to Cape Geraistos (Callim. *Hymn* 4.20; Strabo 10.1.2; Steph. Byz. 283.20) or *Ἀβαντίς* (Hes. fr. 296, MW; cf. Hom. *Il.* 2.536: *Ἀβαντες*) or *Ἑλλοπία*, after the people inhabiting the northern part of the island (Strabo 10.1.3; Steph. Byz. 268.17), or *ἽΟχη*, after the mountain near Karystos (Strabo 10.1.3; but see Knoepfler (1997) 353 n. 14). The ethnic is *Ἐὐβοεὺς* (Hdt. 8.20.1; Thuc. 1.113.2; Hyp. 6.11) or *Ἐὐβοιεύς* (*IG* II² 149.6 (C4m); *IG* XII.9 207.72 (C3e)). In poetry the term *polis* is sometimes used about the whole island (Eur. *Ion* 294; fr. 658; cf. Hansen (1998) 130–31). The collective use of the ethnic is found internally on C4 coins (*infra*) and in inscriptions (*IG* XII.9 207.72 (C3e)), and externally in inscriptions (*CID* II 129A.3 (C3)) and in literary sources (Hdt. 8.4.2; Dem. 22.72). The individual and external use is found in inscriptions (*CID* II 74.II.26 (337/6)).

In the Homeric Catalogue of Ships (*Il.* 2.536–39) Euboia is inhabited by the Abantes, and they are settled in seven cities: Chalkis (no. 365), Eretria (no. 370), Histiaia (no. 372), Kerinthos, Dion (no. 368), Karystos (no. 373) and Styra (no. 377). Five others are recorded in the Athenian tribute lists: *viz.* Athenai Diades (no. 364), Grynchai (no. 371), Posideion (no. 376), the Diakrioi en Euboia (no. 366) and the Diakreis at Chalkis (*Διακρῆς ἀπὸ Χαλκιδέων* (no. 367)). Kerinthos, on the other hand, is missing from the lists. Two settlements not recorded in the tribute lists are called *polis* in sources of the Classical period: *viz.* Orobiai (no. 374) (Thuc. 3.89.2) and

Dystos (no. 369) (Theopomp. fr. 149). Altogether thirteen communities deserve inclusion in the inventory as having been *poleis*, or having possibly been *poleis*, in the period down to C4m. By then Euboia had become a *tetrapolis* island (Ps.-Skylax 58; cf. Dem. 23.213), divided between Chalkis, Eretria, Histiaia/Oreos and Karystos (*IG* II² 124.8, 16; cf. Knoepfler (1997) 352).

On the basis of some coins issued in Chalkis (no. 365) and inscribed *EY* or *EYB*, it is still a widespread belief that there was an Euboian federal state in C4e and perhaps even in C5l (Wallace (1956); Brunt (1969); Cawkwell (1978); Picard (1979)). However, following Larsen (1968) 97–103 and Beck (1997) 28, we prefer to believe that, apart from a short-lived or even abortive attempt to organise a *koinon* in 340, there was no Euboian federation before C2e (Knoepfler (2001) 122 with n. 97).

In addition to these four *poleis* there were about 100 other settlements, principally attested as demes of Eretria (no. 370) and Histiaia/Oreos (no. 372).

In the Hellenistic period Eretria was subdivided into some fifty-five to sixty demes (*infra* 652). Most of them are first attested in inscriptions of C3e, but several have a history that stretches back into the Classical period, occasionally even into the Archaic period. Some of them were originally *poleis* (Dystos (no. 369), Grynchai (no. 371), Peraia (no. 375) and Styra (no. 377)), but others were probably demes from the outset. Of all these demes, some were centred on a nucleated settlement, but we cannot be sure that all had such a settlement; dispersed settlement may have dominated in some of the demes.

In the Hellenistic period Histiaia/Oreos was subdivided into some thirty demes, of which only a few can be traced back to the Classical period (*infra* 656), principally those which were originally *poleis* (Athenai Diades (no. 364), Dion (no. 368), Orobiai (no. 378) and Posideion (no. 376)). Herodotos, however, mentions a number of *komai* (8.23.2), and the presumption is that in the Classical period there were quite a few second-order settlements in Histiaian territory, in addition to the *poleis* mentioned above.

This chapter is written jointly by Karl Reber and Mogens Herman Hansen, except for the description of Eretria (no. 370), which is by Mogens Herman Hansen (651–54 and 655) and Pierre Ducrey (654–55). We are grateful to Denis Knoepfler for his numerous and very helpful notes on our manuscript.

Only one single deme of Chalkis is known (*infra* 648), and none of Karystos (*infra* 658), but the presumption is that these two *poleis* were organised like Histiaia/Oreos and Eretria.

The inference is that on the island of Euboia there may have been over 100 nucleated settlements, of which only a dozen or so were *poleis* in the Archaic and early Classical periods, and only four were left by C4m. Thus, like Attika but unlike most other regions, there was in Euboia an astonishing number of second-order settlements compared with *poleis*. With a few additions and omissions, the following list comprises those listed in *Barr.* as settlements of the Archaic and/or Classical periods.

1. Pre-Hellenistic Settlements not Attested as Poleis

Aidepsos (*Αἰδηψός* or *Αἰδηψος*) Strabo 10.1.3, 9.4.2; Steph. Byz. 45.13 (*πόλις*); Plin. *HN* 4.64; Ath. 73C; Arist. *Mete.* 366^a29; Plut. *Mor.* 668C; Plut. *Sulla* 26.5. Prehistoric settlement at modern Koumbi. Later moved south to the region near the sulphur springs. Settlement in the territory of Histiaia/Oreos (no. 372) which obtained *polis* status only after the reign of Gordian III (Papavasiliou (1907); Geyer (1903) 89–91; Gregory (1979)). *Barr.* AC.

Aigai (*Αἰγαί*) Hom. *Il.* 13.21 and *Od.* 5.381; Theophr. *Hist. pl.* 9.20.5; Strabo 9.2.13, 8.7.4; Steph. Byz. 39.3; Nonnus, *Dion.* 13.164. Not precisely located, possibly situated near the monastery of Galataki at modern Limni. A deme of Chalkis (no. 365) attested in a Delphic proxeny decree of C4l–C3e (*F.Delphes* III.1 424; cf. Knoepfler (1997) 406 n. 11). A sanctuary of Poseidon is attested (Strabo 9.2.13, but see Knoepfler (2000) 338. According to Bakhuizen (1985) 125–27, not a settlement but the name of Mt. Kandili (Geyer (1903) 91–93). *Barr.* AC.

Aigilea (*Αἰγίλεα*) Hdt. 6.101.1 (*χωρίον*). *Pace Barr.* not an island but a site on the coast of Euboia near Eretria (Knoepfler (1997) 402); the name of the small island west of Styra (no. 377) is Aigleia (Hdt. 6.107.3). Perhaps to be identified with Aigalea (Knoepfler (1997) 425 n. 142), an Eretrian deme belonging to the first district (Knoepfler (1997) 379) and second *phyle* (*IG XII.9* 246A.5). *Barr.* C.

Aiglepheira (*Αἰγλέφειρα*) *IG XII.9* 249B.333. Aiglepheira is attested in C3e as a deme of Eretria (no. 370) belonging to the fourth *phyle* and the first district, and probably situated near nineteenth-century Aglephira (Knoepfler (1997) 366, 403). *Barr.* C.

Amarynthos (*Ἀμάρυνθος*) *IG XII.9* 188.17–18 (c.400); Strabo 10.1.10 (*κώμη*); Steph. Byz. 83.17 (*νησος* (corruption)); Paus. 1.31.5; Ael. *NA* 12.34. A deme of Eretria (no. 370) attested in lists of citizens of C3e (*IG XII.9* 247; Knoepfler (1997) 397). The famous sanctuary of Artemis Amarysia was probably situated somewhere north of the hill of Palaiokklesias, where there are remains of an ancient settlement (Sapouna-Sakellaraki (1992); Knoepfler (1988), (2001) 139 n. 201). *Barr.* AC.

Argoura (*Ἄργουρα*) Dem. 21.132, 164; Harp. *A222* (*πόλις*); Steph. Byz. 37.19 (*πόλις*), 114.1 (*τόπος*). Situated in the territory of Chalkis (no. 365) (Harp.), but precise location unknown. Whereas Baumeister places Argoura north of Chalkis (Geyer (1903) 44–45), Knoepfler prefers to identify Argoura with modern Lefkandi on the estuary of the Lelas river (Knoepfler (1981), (1997) 353 with n. 12). Bérard (1985), however, favours the neighbouring “bay of Shelman”. Tritle (1992) points to the ancient remains on the hill of Vrakchos at Vasiliko; cf. Coulton (1996). *Barr.* C.

Choireai (*Χοιρέαι*) Hdt. 6.101.1. Situated in the territory of Eretria (no. 370) (Hdt.) and in C3 attested as a deme of Eretria (*IG XII.9* 222.1) situated somewhere in the first district (Knoepfler (1997) 359, 403; cf. Knoepfler (2001) 103–4). Undated in *Barr.* but AC are attested in Hdt.

Ellopia (*Ἐλλοπία*) Hdt. 8.23.2 (*τῆς Ἐλλοπίας μοίρας*; cf. Müller (1987) 320); *P Oxy.* 2528.5–12; Steph. Byz. 268.17 (*χωρίον*); Eusth. *Il.* 1.431.13. Unlocated. Part of the territory of Histiaia/Oreos (no. 372) (Hdt. 8.23.2), but treated as a separate circuit of jurisdiction in the Athenian regulations for Hestiaia of C5s (*IG I³* 41.102–3; Koch (1991) 203). The tyrant Philistides forced the Ellopians to move to Histiaia/Oreos (Strabo 10.1.3, perhaps quoting Theopomp. fr. 387), describes the migration as a *metoikesis* which took place after the battle of Leuktra [*sic*]. Undated in *Barr.* but C attested.

Elymnion (*Ἐλύμνιον*, *Ἐλυμνία*) Ar. *Pax* 1126 with schol.; Soph. fr. 437, 888; erroneously described as an island by Steph. Byz. 269.19 (*νησος Ἐὐβοίας πόλιν ἔχουσα*) and Hesych. (*E2226*). Tentatively located at modern Limni (Knoepfler (1997) 418 n. 102). In the Archaic period Elymnion belonged to Chalkis (no. 365), and Elymnians were allegedly among those who colonised Kleonai (no. 580) on Athos (Heracl. Lemb. 62), but in the Hellenistic period Elymnion is attested as a deme of Histiaia/Oreos (no. 372) (*IG XII.9* 1187.2 (C3); cf. Gehrke (1994) 339–40; Reber (2002) 42). *Barr.* AC.

Geraistos (*Γεραιστός*) Hom. *Od.* 3.177; Hdt. 8.7.1; Thuc. 3.3.5; Eur. *Cyc.* 295; Dem. 4.34; Arist. *Ath. Pol.* 22.8; Strabo 10.1.2, 7 (*κατοικίαν ἀξιόλογον*); schol. Lucian 21.25 (*πόλις*). The southern promontory of Euboa (*ἀκρωτήριον*, Philoch. fr. 30) with a harbour (Thuc. 3.3.5; schol. Hom. *Od.* 3.177) and a sanctuary of Poseidon (Ps.-Skylax 58; *IG XII.9* 44.14 = *Hesperia* 37 (1968) 189.39ff = *SEG* 44 710 (C3s); Schumacher (1993)). Situated in the territory of Karystos (no. 373) (Hdt. 9.105) at modern Kastri (*Hesperia* 37 (1968) 185). *Barr.* AC.

Harpagion (*Ἄρπάγιον*) Ath. 601F (*τόπος*). Unlocated settlement probably situated in the territory of Chalkis (no. 365) (Geyer (1903) 44) perhaps near Vatonda (Ulrichs (1863) 224) or modern Nea Lampsakos (Themelis (1969), *pace* Bakhuizen (1985) 142 n. 59). *Barr.* C.

Kerinthos (*Κήρινθος*) Hom. *Il.* 2.538; Theogn. 891; Ps.-Skymnos 576; Strabo 10.1.3, 5 (*πολεῖδιον*); Plin. *HN* 4.64 (*urbs*). Located to a hill near the sea at modern Krya Vrysi, north of Mantoudi and east of modern Kerinthos, on the estuary of a river identified with the ancient Boudoros (Ulrichs (1863) 227; Pernier (1921); Sampson (1975)). Homer's mention of Kerinthos in the Catalogue of Ships indicates that it was an independent community (Gehrke (1994) 338). According to Strabo 10.1.3, Kerinthos was conquered by the Ellopians and is sometimes classified as a deme of Histiaia/Oreos (no. 372) (Vischer (1877) 598ff; Bakhuizen (1985) 127). A preferable view is that, from the Archaic period on, Kerinthos belonged to Chalkis (Theogn. 891; cf. Gehrke (1994) 338; Knoepfler (1997) 353). *Barr.* AC.

Kotylaion (*Κοτύλαιον*) Nonnus, *Dion.* 13.163. A deme of Eretria (no. 370) (*IG XII.9* 249B.31–44, 368–69; Knoepfler (1997) 368, 384). Named after the neighbouring mountain (Aeschin. 3.86; Steph. Byz. 379.11). The exact location is disputed. Gehrke (1988) 20–30 locates Kotyalaion in the region of Mt. Servouni, whereas Knoepfler (1997) 368 prefers a location at modern Vrysi/Episkopi where the mediaeval castle of La Cuppa (Koder (1973) 105–6) stands on top of C4 fortification walls. *Barr.* C.

Kyme (*Κύμη*) Steph. Byz. 392.22 (*πόλις*). The existence of an Euboian Kyme is doubted by some scholars (Knoepfler (1997) 358 and n. 47). According to Gehrke (1994) 341–42, however, the toponym can be traced back to the fifteenth century, which supports the attestation in the sources of an ancient Kyme and indicates a location near modern Kyme on the east coast of Euboa (cf. Reber (2001) 453–54). Possible locations are the hill of Kastro at Ano Potamia

(Sampson (1981) 42–45) or the hill of Viglatouri at Oxylythos (Sapouna-Sakellaraki (1998) 59–61). Not in *Barr.*

Kyrnos (*Κύρνος*) Hdt. 9.105. Kyrnos lay in the territory of Karystos (no. 373) but is still unlocated. Herodotos connects the toponym with the battle between the Athenians and the Karystians in the years 476–469. Since Kyrnos is not explicitly called a settlement by Herodotos, it is only hesitatingly included in this list (cf. Geyer (1903) 107; Keller (1985) 200). Not in *Barr.*

Marmarion (*Μαρμάριον*) Strabo 10.1.6; Steph. Byz. 434.2 (*πόλις*); Nonnus, *Dion.* 13.164. Settlement in southern Euboa between Styra (no. 377) and Karystos (no. 373), lying in the territory of Karystos. Renowned for its marble quarries and a sanctuary of Apollo Marmarios. Undated in *Barr.*

Metropolis (*Μητρόπολις*) Steph. Byz. 451.8 (*πόλις*). An unlocated site situated on an eminence in the territory of Histiaia/Oreos (no. 372), fortified and garrisoned by Chabrias in 377/6 (Diod. 15.30.5; see Bakhuizen (1985) 39). Bakhuizen's view ((1972) 137–38, repeated (1985) 39) that Metropolis was the urban centre of Chalkis (no. 365) is correctly rejected by Picard (1979) 253–55, who takes Metropolis to be a small unlocated fortress. However, the name Metropolis suggests that it was the original urban centre of the *polis* of Histiaia (no. 372) before the *metoikesis* to Oreos (Kastro); see *infra* 657. Undated in *Barr.* but C attested by Diod.

Oichalia (*Οἰχάλια*) Hecat. fr. 28 (as emended by Knoepfler (1997) 386–87); Strabo 10.1.10 (*κώμη*); Steph. Byz. 488.2 (*πόλις*); Plin. *HN* 4.64. In the myths Oichalia was a *polis* ruled by Eurytos and destroyed by Herakles (Soph. *Trach.* 74–75, 244, 351–65; Strabo 10.1.10). It is attested in C3e as a deme of Eretria (no. 370) belonging to the first *phyle* (*IG XII.9* 245B.12). It also belonged to the fifth district and has tentatively been located near modern Kyme (Knoepfler (1981) 312, (1997) 385–87). *Barr.* C, but A is attested by Hecat. fr. 28.

Panakton (*Πάνακτον*) Knoepfler (2001) 11.1 (C3–C2). It is attested in C3e as a deme of Eretria (no. 370) belonging to the third *phyle* (*IG XII.9* 247.1.1). It also belonged to the third district and has tentatively been located in the valley of Prasino (Knoepfler (1997), (2001) 155–58). Undated in *Barr.*

Parthenion (*Παρθένιον*) Steph. Byz. 503.19 (*πόλις*). It is attested in C3e as a deme of Eretria (no. 370) belonging to the fourth *phyle* (*IG XII.9* 249B.218–19). It also belonged to the third or fourth district and has tentatively been located at modern Partheni (Knoepfler (1997) 366, 402). *Barr.* C.

Porthmos (*Πορθμός*) Harp. *Π*82 (*πόλις*); schol. Dem. 9.33, no. 37, Dilts (*ἐπίνειον τῆς Ἐρετριάς*); *Suda* *Π*2074 (*πόλις*). A fortified settlement destroyed by Philip II in 342 (Dem. 9.58, 10.8) situated in the territory of Eretria (no. 370) (Dem. 9.33), but not (yet?) attested as a deme (Knoepfler (1997) 358). On the basis of the similarity with the mediaeval toponym Protimo, a location near modern Aliveri is commonly assumed (Knoepfler (1997) 354, 358); cf. also *IG* XII.9 99 (C2), found in Aliveri and restored [*Πορθ*]μέων in Lauffer and Kirsten (1953) 344. *Barr. C.*

Tamynai (*Ταμύναι*) Aeschin. 3.88; Dem. 21.162; Strabo 10.1.10 (*πόλις*); Harp. *T*3 (*πόλις*); Steph. Byz. 600.6 (*πόλις*); *Suda* *T*66 (*πόλις*). Situated in the territory of Eretria (Strabo). In C3e attested as a deme of Eretria (no. 370) (*IG* XII.9 249B.87) belonging to the fourth *phyle* and the fourth district and situated at modern Palaiokastros near modern Avlonari (Knoepfler (1997) 403, 438 n. 236). Strabo mentions a sanctuary of Apollo, and Aischines mentions a hippodrome. In 348 a battle was fought at Tamynai between an Athenian force under Phokion and a faction of the Eretrians under Kleitarchos (Aeschin. 2.169; Plut. *Phoc.* 12; cf. Knoepfler (1981); Tritle (1992)). *Barr. AC.*

Teleidai (*Τηλείδαι*) *IG* XII suppl. 555.I.21. Teleidai is attested in C3e as a deme of Eretria (no. 370) belonging to the first *phyle* (*IG* XII.9 245B.306). It also belonged to the fifth district and has tentatively been located near C19 Tilida (Gehrke (1994) 332; Knoepfler (1997) 385). *Barr. C.*

Zarex (*Ζάρητρα*, presumably a corruption of **Ζάρηκα*, Knoepfler (1997) 418 n. 106). Plut. *Phoc.* 13.4. A deme of Eretria (no. 370) (*IG* XII.9 191C.7 (C41)) belonging to the first *phyle* (*IG* XII.9 245A.7) and the second district (Knoepfler (1997) 403) and situated near modern Zakra/Zarakes (ibid. 357). For recently recovered remains of the Archaic period, see *BCH* 123 (1999) 793–94. *Barr. AC.*¹

¹ A number of unlocated and undated settlements, some of them presumably spurious, are attested in late sources only: Akontion (*Ἀκόντιον*), Steph. Byz. 61.16 (*πόλις*); Akra (*Ἄκρα*), Steph. Byz. 62.5 (*πόλις*); Akragas (*Ἀκράγας*), Steph. Byz. 62.16 (*πόλις*); Ares Aretos (*Ἄρης Ἄρητος*), Steph. Byz. 117.18, quoting Theopomp. fr. 148 (*χωρίον*), cf. Knoepfler (1997) 411 n. 49; Arethousa (*Ἀρέθουσα*), Steph. Byz. 116.5 (*πόλις*), erroneously mixed up with the fountain near Chalkis (Knoepfler (1997) 353 n. 13); Chios (*Χίος*), Steph. Byz. 693.14 (*πόλις*); Dia (*Δία*), Steph. Byz. 229.2 (*πόλις*), erroneously mixed up with Thessalian Dia (Hatzopoulos and Psoma (1998–99)); Eteonos (*Ἐτεωνός*), Steph. Byz. 283.8 (*πόλις*); Kaphereus (*Καφηρεύς*), Steph. Byz. 370.12 (*ἐπίνειον*); Methone (*Μεθώνη*), Steph. Byz. 441.2 (*πόλις*); Nysa (*Νύσαι*), Steph. Byz. 479.10 (*πόλις*) and Plin. *HN* 4.64; Oreste (*Ὀρέστη*), Steph. Byz. 495.7 (*πόλις*); Rynchai (*Ῥύχαι*), Steph. Byz. 547.17 (*χωρίον*); cf. no. 371; Siris (*Σίρις*), Nonnus, *Dion.* 13.163 (*ἔδρα*); Skia (*Σκιά*), Steph. Byz. 574.15 (*πολίχνησον*); Styga (*Στύγα*), Nonnus, *Dion.* 13.163; Sphekeia (*Σφηκεία*), Steph. Byz. 595.7 (*πόλις*); Trychai (*Τρύχαι*), Steph. Byz. 639.15; cf. no. 371.

2. Unidentified Settlements of the Archaic and Classical Periods²

Ag. Ilias Classical sherds at the top of a prominent hill near modern Psachna (Sackett *et al.* (1966) 54 no. 30). *Barr. AC.*

Ag. Paraskevi Classical sherds and tombs, walls of monumental building (temple?) (Sackett *et al.* (1966) 56 no. 33) *Barr. AC.*

Ag. Triada Sackett *et al.* (1966) 66 notes a Classical tomb. The modern village of Triada is about 5 km east of Paschna, called Kriezoti in memory of Nikolaus Kriezoti. *Barr. C.*

Ag. Vasileios Abundant evidence of a Classical fortified settlement (Sackett *et al.* (1966) 44–45 no. 14). *Barr. C.*

Arkhampolis The ancient name is not known. M. Wallace (in Keller (1985) 265) suggests Aigai. It is an Archaic and Classical settlement situated in a deep gorge near modern Evangelismos. It covers an area of c.1.6 ha and was fortified with walls and towers. Remains of houses, temples and terrace walls are visible (Keller (1985) 263; Panagopoulou (1995); Reber (2001) 451–53). A large quantity of slag testifies to an iron industry from the Archaic period through late Antiquity. *Barr. C.*

Helleniko According to Sackett *et al.* (1966) 42 no. 11, a minor farming settlement, but at Kastradaxhi there are remains of a fortification wall. Possibly the site of Posideion (no. 376). *Barr. AC.*

Khironisi A fair-sized Classical site, perhaps to be identified with ancient Dion (no. 378) (Sackett *et al.* (1966) 38–39 no. 4). *Barr. AC.*

Lefkandi A very large settlement from the LH IIIC period through the Geometric period. Deserted c.700 (Popham *et al.* (1980); Popham *et al.* (1990–93); Popham and Lemos (1996); see also Morris (2000) 218–56) and Argoura (*supra* 644).

Palaiochori Classical sherds and remains of walls with blocks in position (Sackett *et al.* (1966) 48 no. 20). See Orobiai (no. 374). *Barr. AC.*

Philagra A Classical–Hellenistic fortified site on a hill on the east coast of Euboeia near modern Giannitsi. Under the walls of the Venetian castle remains of Classical and

² We have omitted two sites recorded as settlements in *Barr.* (1) *Graia*, according to *Barr.* unlocated settlement near Eretria in A and C. (2) *Khili*, *Barr.*'s reference is Sackett *et al.* (1966) 83. According to Knoepfler (1997) 388, *Khili* is a cape.

Hellenistic fortification walls are visible, and the surface is scattered with sherds of these two periods. It is either a fort or a settlement of C4l or C3e (Reber (2001) 454–56).

Prokopion, Kastro A substantial settlement in the Classical period (Sackett *et al.* (1966) 45–46 no. 16). *Barr. C.*

II. The *Poleis*

364. Athenai Diades (Athenites) Map 55. Lat. 38.50, long. 23.00. Size of territory: 1? Type: [A]. The toponym is *Ἀθηναὶ Διάδες*, *αἱ* (Aesch. fr. 61, Mette; *IG* 1³ 268. v.28; Strabo 10.1.5). The city-ethnic is *Ἀθηναίων* (*IG* 1³ 71.1.79; *IG* 11² 43.90) or, once, *Ἀθηναίωνης* (Eratosthenes fr. 111B 102, Berger) or *Ἀθηναίως* (*IG* 1³ 264.IV.20). Athenai Diades is called a *polis* in the urban sense by Ephor. fr. 24, but only in a mythological context: Ephoros states that the *polis* was founded by Dias, the son of Abas. The political sense is attested in *IG* 11² 43.78 and 90, where the Athenitai under the heading *πόλις* are listed as members of the Second Athenian Naval League. The collective and external use of the city-ethnic is attested in the Athenian tribute lists (*supra*). In C3m the ethnic appears as a demotic (*IG* 11.9 1186.2).

According to Strabo 10.1.5, Athenai Diades was situated at Cape Kenaion near Oreos. However, the urban centre has not yet been precisely located. Ulrichs (1863) 237 identified Athenai Diades with Dion (no. 368) and suggested a location at modern Lichas. The separate listing of Dion and Athenai Diades in the Athenian tribute lists disproves the identification, and, following Vischer (1857) 661, the prevailing view is that Athenai Diades should be identified with the hill of Kastelli at Gialtra Loutra (Sackett *et al.* (1966) 37 no. 3). Nothing is known about the size of the territory; but since the Kenaion peninsula accommodated both Athenai Diades and Dion, the territory can hardly have exceeded 25 km². The hill of Kastelli at Gialtra Loutra has never been excavated. It seems appropriate for an acropolis, and remains of walls can be seen at various places. Surface finds indicate that the site was settled continuously from the Neolithic until the Roman period (Sackett *et al.* (1966) 37 no. 3; Reber (2001) 456 fig. 13).

Athenai Diades was a member of the Delian League and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (*IG* 1³ 269. v.26) and is recorded in the tribute lists mostly by toponym (*IG* 1³ 263.IV.32) but sometimes by city-ethnic (*IG* 1³ 279.I.85) from 452/1 (*IG* 1³ 261.III.26) to 416/15 (*IG* 1³ 289.I.12), a total of

thirteen times, three times completely restored, paying a *phoros* of 2,000 dr. (*IG* 1³ 264.IV.20) raised to 4,000 dr. (*IG* 1³ 268. v.28) in, probably, 445/4 (*IG* 1³ 267.IV.28), reduced to 2,000 dr. in 443/2 (*IG* 1³ 269. v.26) and raised again to 4,000 dr. in 416/15 (*IG* 1³ 289.I.12). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.79 (1 tal.)). Athenai Diades (and Dion (no. 368)) are attested as dependencies of Histiaia/Oreos (no. 372) in the last decade of C5 (*IG* 11.9 188.18–19 = *Staatsverträge* 205: post-411; Knoepfler (2001) nn. 338–39; post-404).

Athenai Diades must have recovered its independence in C4e since it is recorded among the original members of the Second Athenian Naval League (*IG* 11² 43.90), whereas the Histiaians are recorded somewhat later (B18). The Athenitai may have left the League together with Thebes (no. 221) in 371 or shortly afterwards (Dreher (1995) 173).

Thus the presumption is that Athenai Diades was a *polis* in the political sense down to C4f. In Ps.-Skylax 58, however, Euboia is described as a *tetrapolis*, cf. Dem. 23.213 and lines 14–15 of *IG* 11² 124 which seem to presuppose a total of four *poleis* on Euboia in 357. The inference is that by C4m Athenai must have been incorporated into Histiaia/Oreos (no. 372) (Knoepfler (1997) 352), and in C3m it is duly attested as a Histiaian deme (*IG* 11.9 1186.2).

365. Chalkis (Chalkideus) Map 55. Lat. 38.25, long. 23.35. Size of territory: 5. Type: A. The toponym is *Χαλκίς*, *-ίδος*, *ἡ* (Hom. *Il.* 2.537; Hecat. fr. 129; Aeschin. 3.89; *IG* 1³ 41.71). In order to distinguish Euboian Chalkis from homonymous cities, it is sometimes called *Χαλκίς ἡ ἐν Εὐρώπῳ* (Aen. Tact. 4.1). According to Hecat. fr. 129 the toponym was originally *Εὐβοία*, perhaps to be identified with modern Lefkandi (Bakhuizen (1985) 96). The city-ethnic is *Χαλκιδεύς* (Aeschin. 3.89; *CEG* 179.3 (c.505)), sometimes further specified: *Χαλκιδεύς τῶν ἀπ' Εὐρώπου* (*IG* 11.6 42.15 (C4l)) or *Χαλκιδεὺς οἱ ἐξ Εὐβοίας* (Xen. *Hell.* 4.2.17). Chalkis is called a *polis* both in the political sense (*IG* 1³ 40.5; *IG* 11² 44.14; Philiskos fr. 3, *CGF*) and in the urban sense (Hecat. fr. 129; Eur. *Iph. Aul.* 168; Aen. Tact. 4.1; Ps.-Skylax 58). The collective use of the city-ethnic is attested internally in abbreviated form on C6–C5 coins (*infra*) and externally in inscriptions (*CEG* 179.3; *IG* 1³ 40.5, 21) and in literary sources (Hdt. 5.99; Arist. *Pol.* 1289^b39). The individual and external use is attested in inscriptions (*CID* 11 31.79 (345/4)) and in literary sources (Aeschin. 3.89).

The territory of Chalkis is called *ἡ ἐν Εὐβοίᾳ Χαλκιδικῆ* (Arist. *Hist. an.* 496b25–26). To the south Chalkis bordered on Eretria (no. 370), and according to Bakhuizen (1985) 127–31 the frontier followed the mountain

ridge of Voudochi, Olympos, Xirovouni and Skoteini, ending at modern Kimi. According to Knoepfler, however, it ran east of the river Lelantos, and the territory of Chalkis included Argoura, now located south of the river (Knoepfler (1997) 353; cf. (1981)). To the north Chalkis bordered on Histiaia/Oreos (no. 372). The frontier was at Mts. Kandili and Pyxaria (Bakhuizen (1985) 127–31), but, at least in the Archaic period, the territory included Kerinthos north of Pyxaria (Thgn. 891–94; Gehrke (1994) 336–39; Knoepfler (1997) 352–53 with n. 10) but not Elymnion (Gehrke (1994) 339–40; Knoepfler (1997) 418 with n. 102). In C4 it covered c.825 km².

Part of Euboia was called *Διακρία* (*Etym. Magn.* 268.3; schol. Lycoph. *Alex.* 374), presumably to be located in Chalkidian territory north-east of Chalkis (Geyer (1903) 45; Knoepfler (1997) 376 with n. 194). This region seems, at least in C5, to have been the home of two different communities, which, in the Athenian tribute lists, are recorded separately from the *Χαλκιδῆς* (*IG* I³ 71.1.71), sc. the *Διακρῆς ἀπὸ Χαλκιδέων* (no. 367; *IG* I³ 71.1.83–84) and the *Διάκριοι ἐν Εὐβοίαι* (no. 366) (*IG* I³ 71.1.93–94); see *infra* 650.

Like most other Euboian *poleis*, Chalkis was subdivided into *demoi*, of which only one is attested: a Delphian decree of c.315–285 (*F.Delphes* III.1 424.1–2) bestows proxeny on [K]leochares of Chalkis of the deme of Aigai, (*δήμου Αἰ[γ]αίων*, a restoration of *ΑΙ.ΑΙΩΝ*; cf. Strabo 8.7.4, 9.2.13; see Jones, *POAG* 73; Knoepfler (1997) 406 n. 11).

Next to nothing is known about the history of Chalkis before 506. Apart from colonisation (*infra* 649), the only event reported in the sources is the semi-mythical Lelantine War, fought in C8s or C7f between Eretria (no. 370) and Chalkis and their allies over the possession of the Lelantine Plain (Parker (1997); *infra* 652). In 506 the Chalkidians joined the Peloponnesians and the Boiotians in an abortive attack on Athens (no. 361) (Hdt. 5.74.2). The Athenians then invaded Euboia and inflicted a defeat on the Chalkidians; they confiscated the land belonging to the *hippobotai* and gave it to 4,000 klerouchs (Hdt. 5.77; *CEG* 179). In 480 the Athenians handed over twenty hulls of triremes to the Chalkidians on which they fought in the battles of Artemision (Hdt. 8.1.2) and Salamis (Hdt. 8.46.2). They are recorded on the Serpent Column (ML 27.8). Chalkis was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (*IG* I³ 269.v.31) and is recorded in the tribute lists from 448/7 (*IG* I³ 264.IV.23) to 416/15 (*IG* I³ 289.1.31, partly restored), a total of eleven times, three times completely restored, paying a *phoros* of 5 tal. in 448/7 (*IG* I³

264.IV.23), reduced (*sic*) to 3 tal. after the revolt of 446 (*IG* I³ 270.v.32 (442/1)). It was assessed for tribute in 425/4 (*IG* I³ 71.1.71, 10 tal.), and in 413 Chalkis was still listed among the paying members (Thuc. 7.57.4). In 446 Chalkis defected from Athens; but the revolt was quenched by an Athenian army under Perikles (Thuc. 1.114.1–3; Plut. *Per.* 23.4). Chalkis may have defected once again in 424/3 together with other Euboian *poleis* (Philoch. fr. 130). The treaty between Athens and Chalkis (*IG* I³ 40) by which Chalkis was brought back into the League may belong in either year. It is dated to 446/5 in *IG* I³ but to 424/3 by Mattingly (1996) 53–67, 161–62, 372–77, 391–94. The treaty prescribed that the Chalkidians swear loyalty towards Athens (21–23) and give hostages (47); moreover, their self-government in administration of justice was restricted in matters punishable by death, exile or loss of rights (74–76); cf. Balcer (1978). Chalkis was still loyal to Athens in 411 (Thuc. 8.95.6) but defected after the Athenian defeat at Eretria (Thuc. 8.95.7; Arist. *Ath. Pol.* 33.1; Diod. 13.47.3). During the rule of the Thirty, many Athenian democrats fled to Chalkis (Lys. 24.25).

Chalkis was among the original members of the Second Athenian Naval League (*IG* II² 43.80; Diod. 15.30.1), and a treaty between Athens and Chalkis was concluded in 378/7 (*IG* II² 44). But together with Thebes (no. 221) and the other Euboian *poleis*, Chalkis left the League in 371 (Xen. *Hell.* 6.5.23; Dreher (1995) 173) and fought against the Athenians at Mantinea in 362 (Diod. 15.85.2, 6). In 357, Chalkis was torn by *stasis* between a pro-Theban and a pro-Athenian faction (Aeschin. 3.85–86; Diod. 16.7.2), and was presumably conquered by exiles operating from Eretria (Aen. *Tact.* 4.1–4). Both the Thebans and the Athenians invaded Euboia; the Thebans were expelled from Euboia (Dem. 22.14); a new treaty was concluded, and Chalkis rejoined the Naval League (*IG* II² 124.16, 147; Aeschin. 3.85). In 349/8 an Athenian army under Phokion was sent to assist Ploutarchos of Eretria. It landed at Argoura on Chalkidian territory (Dem. 21.132) and was opposed by an Euboian army under Kallias of Chalkis (Aeschin. 3.86–87). Phokion won the battle of Tamynai (Aeschin. 2.169–70; Plut. *Phoc.* 12–13), a peace was concluded, and Chalkis rejoined the Naval League (*IG* II² 125; Aeschin. 2.12, 3.88). In 340 some kind of short-lived league with a common council was established under the leadership of Kallias of Chalkis (Aeschin. 3.89, 94; *Staatsverträge* 342); it included Chalkis, Eretria (no. 370) and Histiaia/Oreos (no. 372). Because of the contemporary issue of a common Euboian coinage (*supra* 643; *infra*) the union has sometimes been interpreted as a federation (*Staatsverträge* 342; Picard (1979)), but see Beck (1997) 28.

The constitution of Chalkis (Gehrke, *Stasis* 37–41) was among the 158 *politeiai* described by Aristotle and his pupils (fr. 618–20). In the Archaic period oligarchy alternated with tyranny (Arist. *Pol.* 1316^a31–32; Hes. *Op.* 654–57), and in one case a tyranny may even have been followed by what Aristotle classifies as a democracy (Arist. *Pol.* 1304^a29–31; see Aubonnet *ad loc.* and LGPN I s.v. Φόξος). In C61 Chalkis was an oligarchy governed by a class of *hippobotai* (Arist. *Pol.* 1289^b36–39; Hdt. 77.2), in another context described as an aristocracy based on a census requirement (Arist. fr. 618). After the Athenian victory in 506, the *hippobotai* were expelled, and their property handed over to 4,000 Athenian klerouchs (Hdt. 5.77.2). A brief democratic interlude may have followed (Thgn. 893–94); but the *hippobotai* returned when the Athenian klerouchs were withdrawn in 490 in connection with the Persian invasion of Euboia (Hdt. 6.100), and they were still in power when Perikles invaded Euboia in 446 (Plut. *Per.* 23.4). After the surrender of Chalkis, the *hippobotai*'s property was confiscated, divided into 2,000 *kleroi* and given to, probably, the other Chalkidians and some foreigners (Ael. *VH* 6.1). It is unlikely that the Athenians sent klerouchs to Chalkis as they did to Histiaia/Oreos (no. 372) (Figueira (1991) 256–60). There is no direct evidence, but the ensuing treaty between Athens and Chalkis (*IG* I³ 40) indicates that from now on Chalkis had a democratic constitution (Gehrke, *Stasis* 40). In 357 there may have been an outbreak of *stasis* in Chalkis as there was in the other Euboian *poleis* (Diod. 16.7.2). In the 340s Chalkis was ruled by Mnesarchos and his sons, Taurosthenes and, especially, Kallias. They were probably democratic leaders, and there is no reason to trust Aischines' allegation that they were tyrants (3.89, 92). Both obtained Athenian citizenship (Hyp. 1.20; Din 1.44), probably in 341/40 (Osborne (1983) T 73).

Together with the other Euboian *poleis*, Chalkis was a member of the Amphictyonic League (Lefèvre (1998) 59–63) and provided in some years one of the two Ionian *hieromonemes* (*CID* II 32.44; 74.1.34–35). Athenian envoys were sent to Chalkis (*IG* II² 124.16), and Chalkidian envoys were sent to Athens (*IG* I³ 40.12–17; *IG* II² 44.8; Aeschin. 3.91).

No public enactment antedating the Hellenistic period is preserved and the only attested political institution is a *boule* referred to as a decision-making institution in 446/5 (*IG* I³ 40.62–63).

The only cults attested in classical sources are those of Zeus Olympios (*IG* I³ 40.35, 61–62) and Athena (*IG* II² 44.17). Two Chalkidian citizens are attested as victors in the Olympic Games (*Olympionikai* 121 in 532 and 459 in 332) and one in the Pythian games (Plin. *HN* 35.35 (C5)). In C4m

Chalkis was a walled city with an agora (Aen. *Tact.* 4.1–4; cf. Strabo 10.1.8 (r334)) and, in the agora, a funeral monument of C6? set over Kleomachos of Pharsalos (Plut. *Mor.* 761A; Bakhuizen (1985) 24–25). The acropolis was at Mt. Vathrovounia in the south-east part of the city. The acropolis and part of the city as well were protected by a C4e circuit wall of c.2 km enclosing an area of c.12.5 ha. In 411 the town of Chalkis was connected with the mainland by a bridge, and in 334 a fortress was erected on a hill immediately west of the bridge near Aulis (Diod. 13.47.3–6; Strabo 10.1.8; Bakhuizen (1985) 48–52). The harbour is mentioned at Ps.-Skylax 58; cf. Thuc. 8.95.6. At Chalkis there are a number of natural harbours, but no ancient remains have been found (Bakhuizen (1985) 54–57). A rock on the Kallimani hill is inscribed ΦΟΙ: ΟΡΟΣ, probably a boundary mark of C4e (*ArchDelt* 31 (1976) 147).

Chalkis struck silver coins c.550–506, c.490–465, and coins of silver and bronze c.337–308. Coins were struck first on the Euboic standard (tridrachm, drachm, hemidrachm), later on the Attic standard (tetradrachm, didrachm and tetrobol). (1) Silver C6: *obv.* facing quadriga (tridrachm) or facing horseman and horse (drachm) or facing horseman (hemidrachm); *rev.* incuse of mill-sail pattern. (2) Silver C6–C5: *obv.* eagle in flight, sometimes carrying a snake; *rev.* wheel in square or triangular incuse. Legend: ΨΑΛ. (3) A small issue of tetradrachms of probably 506 has *obv.* Boiotian shield. Legend: Ψ. *Rev.* wheel of Chalkis (Kraay (1976) 90). (4) Silver (drachm, hemidrachm, obol, hemiobol) and bronze 337–308; *obv.* head of the nymph Chalkis (silver) or bust of Hera (bronze); *rev.* eagle carrying a snake. Legend: ΧΑΛ (Picard (1979) 16–54). (5) “Federal” issues of C4. Silver (tetradrachm, didrachm, drachm): *obv.* head of nymph Euboia; *rev.* bull. Bronze: *obv.* head of nymph Euboia or bull; *rev.* grapes. Legend: ΕΥ or ΕΥΒ (Head, *HN*² 357–59; Kraay (1976) 89–91; *SNG Cop. Aetolia-Euboea* 432–46; for the “federal” issues, see Wallace (1956); Kraay (1976) 93; Picard (1979); Brunner (1998)).

Chalkis was involved in the colonisation of Naxos (no. 41), Zankle (no. 51), Kyme (no. 57), Neapolis (no. 63), Pithekoussai (no. 65), Rhegion (no. 68), Kleonai (no. 580) and possibly Skiathos (no. 520). Furthermore, on the basis primarily of onomastic similarity, Chalkis is often assumed to have been heavily involved in the colonisation of the Chalkidic peninsula; see further Flensted-Jensen (1998) 57–70 with refs. and (2000) 125–31 with refs.

366. Diakrioi en Euboia Map 55. Unlocated, not in *Barr.* Type: C. Διακρία (*Etym. Magn.* 268.3) or Διακρια (schol.

Lycoph. *Alex.* 374) denotes the Euboian mountain district north-east of Chalkis (no. 365) (Bakhuizen (1985) 141 n. 49). This region was inhabited by the *Διάκριοι* (*IG* 1³ 71.1.94; Lycoph. *Alex.* 375) and the *Διακρῆς* (no. 367) (*IG* 1³ 71.1.83; see *supra* 643).

The *Διάκριοι ἐν Εὐβοίαι* were members of the Delian League. They belonged to the Island district (*IG* 1³ 71.1.93–94) and are recorded twice in the tribute lists, in 429/8 (*IG* 1³ 282.III.24) and in 417/16 (*IG* 1³ 288.1.2–3), in both cases heavily but plausibly restored, paying a *phoros* of 1 tal. and 2,000 dr. (*IG* 1³ 282.III.24). They were assessed for tribute in 425/4 (*IG* 1³ 71.1.94: 1 tal., 2,000 dr.).

Membership of the Delian League indicates that the Diakrioi constituted a self-governing political community, but there is no indication that it was centred on a nucleated settlement. For the possible identification of the Diakrioi in Euboia with the Eretrian deme of Peraia, see no. 375.

367. Diakres apo Chalkideon Map 55. Unlocated. Type: [A]. On Diakria, see no. 366. The Athenian assessment decree of 425/4 records both the *Διακρῆς ἀπὸ Χαλκιδέων* (*IG* 1³ 71.1.83–84) and the *Διάκριοι ἐν Εὐβοίαι* (no. 366) (*IG* 1³ 71.1.93–94). The Diakres must accordingly have been different from the Diakrioi, and formed perhaps a short-lived splinter community of Chalkis (no. 365) settled in the Diakria in the northern part of the territory of Chalkis in the years after 446 when Chalkis was controlled by Athens (no. 361) (Geyer (1924) 224). The Diakres are recorded in the tribute lists from 434/3 (*IG* 1³ 278.VI.25–26) to 416/15 (*IG* 1³ 289.1.15–16), a total of six times, twice completely restored, paying a *phoros* of first 800 dr. (*IG* 1³ 278.VI.25) but 3,000 dr. in 416/15 (*IG* 1³ 289.1.15–16). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.83–84: 2,000 dr.). In 434/3 the Diakres appear as the fourth of thirteen communities listed under the heading *πόλεις* (*IG* 1³ 278.VI.18 and 25–26).

Membership of the Delian League indicates that the Diakres constituted a self-governing political community, but there is no indication that it was centred on a nucleated settlement.

368. Dion (Dieus) Map 55. Lat. 38.50, long. 22.50. Size of territory: 1? Type: [A]. The toponym is *Δίον, τό* (Hom. *Il.* 2.538; Strabo 10.1.5; Steph. Byz. 232.2). The city-ethnic is *Διεύς* (*IG* 11² 43.88). Apart from *πολλίεθρον* at Hom. *Il.* 2.538, Steph. Byz. is the only source in which Dion explicitly is called a *polis*; but the political sense is implicitly attested in *IG* 11² 43.78 and 88, where the Dieis under the heading *πόλεις* are listed as members of the Second Athenian Naval League; and membership of the Delian League and the

Second Athenian Naval League strongly indicates *polis* status until, at least, 371 (*infra*). The external use of the city-ethnic/demotic is attested collectively in the Athenian tribute lists (*IG* 1³ 263.IV.31) and individually in Hellenistic inscriptions (*IG* XII.9 1187.3 (C3m); *SEG* 34 909.52 (C2–C1)).

According to Strabo 10.1.5, Dion was situated at Cape Kenaion near Oreos. However, the urban centre has not yet been precisely located. Following Ulrichs ((1863) 237, see *supra* 647), Geyer (1903) 99 suggested a location at modern Lichas. Sapouna-Sakellaraki (1994–95), followed by Barr., prefers the hill of Kastri on the western shore of the Kenaion peninsula. But Homer describes Dion as an *αἰπὺ πτολίεθρον* (Hom. *Il.* 2.538; cf. Nonnus, *Dion.* 13.161: *κραναὸν πέδον*), and in the Athenian tribute lists the Dians are often specified as *Διῆς ἀπὸ Κεναίο* (*IG* 1³ 279.1.86). The presumption is that Dion was situated somewhere on Mt. Kenaion. Lichas would fit, but autopsy (Reber) revealed nothing but remains of the Byzantine period. An alternative location is Khironisi, whose position fits the information given by Ptol. *Geog.* 3.15.25 (cf. Reber (2001) 456–60).

Dion was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (*IG* 1³ 269.V.25) and is recorded in the tribute lists from 451/50 (*IG* 1³ 262.1.28) to 432/1 (*IG* 1³ 280.1.80), a total of twelve times, once completely restored, paying a *phoros* of 1,000 dr. in 451/50, but in all subsequent years 2,000 dr. (*IG* 1³ 264.IV.31). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.78). From the Athenian regulations for Hestiaia/Oreos (no. 372) of C5s it appears that Dion was a deme of Hestiaia/Oreos, but was a separate circuit of jurisdiction (*IG* 1³ 41.100–2 = *SEG* 32 3; Koch (1991) 175, 202). Similarly, Dion (and Athenai Diades (no. 364)) are attested as dependencies of Hestiaia/Oreos in the last decade of C5 (*IG* XII.9 188.18–19 = *Staatsverträge* 205, post-411; Knoepfler (2001) nn. 338–39, post-404). Thus, in C5s, Dion seems to have had a double status partly as a *polis* depending on Hestiaia/Oreos and partly as a *demos* of Hestiaia/Oreos.

Dion must have recovered its independence in C4e, since it is recorded among the original members of the Second Athenian Naval League (*IG* 11² 43.88), whereas the Hestiaians are recorded somewhat later (B18). Dion may have left the League together with Thebes (no. 221) in 371 or shortly afterwards (Dreher (1995) 173). The presumption is that Dion was a *polis* in the political sense down to C4f. In Ps.-Skylax 58, however, Euboia is described as a *tetrapolis*; cf. Dem. 23.213 and the treaty with Athens of 357 (*IG* 11² 124.15–16), which testifies to a total of four *poleis* on Euboia in 357. The inference is that by C4m Dion had been incorporated into

Histiaia/Oreos (no. 372) (Moggi, *Sin.* 290–92). In C3m Dion is attested as a deme of Histiaia/Oreos (*IG* XII.9 1187.3).

369. Dystos Map 55. Lat. 38.20, long. 24.10. Size of territory: 1? Type: A. The toponym is Δύστος, ὄ (Theopomp. fr. 149; *IG* XII.9 88.3, Rom.). Steph. Byz. 246.5 suggests an ethnic Δύστιος, but inscriptions invariably record the ablative form of the toponym: Δυστό(θεν) (*IG* XII.9 191.9; cf. Knoepfler (2001) 357), mostly in an even more abbreviated form: either Δυστ or Δυσ or Δυ (ibid.).

Dystos is called a *polis* in the urban sense by Theopomp. fr. 149: Θεόπομπος ἐν Φιλιππικῶν κδ “ἀποστήσας δὲ τοῦς ἐν αὐτῇ τῇ περιοκίδι τῶν Ἐρετριέων ἐστράτευσεν ἐπὶ πόλιν Δύστον”. Since the fragment comes from the fourteenth book of the *Philippika*, the year must be 349/8. Following Knoepfler (1981) 301, we believe that the subject of the verb is probably Kleitarchos, the exiled political leader who with a contingent of Phokian mercenaries and supported by Eretrian citizens attacked the tyrant Ploutarchos, controlled the Eretrian *perioikis*, and attacked the *polis* of Dystos. Theopompos’ use of the term *polis* is open to three different interpretations: (1) *Polis* is used in the sense of town without any implications about the political status of the community (thus Knoepfler (1997) 332). (2) Theopompos was misinformed and believed, erroneously, that Dystos was a *polis* (a possibility suggested by Hansen and Nielsen (2000) 145). (3) Like Grynchai (no. 371) and Styra (no. 377), Dystos had once been a *polis*, but was transformed into an Eretrian deme in, probably, C5f, and now combined the status of being an Eretrian civic subdivision with being a kind of dependent *polis* (thus Hansen and Nielsen (2000) 145–46; cf. Hansen (2000) 209–10). This view is supported by the fact that Dystos was the dominant, perhaps even the only deme of the sixth Eretrian *phyle* (cf. Knoepfler (1997) 403).

The size of the territory is unknown. At the southern end of the valley of Dystos is a rock inscription ΟΡΟΣ ΔΗΜΟΥ (Apostolidis and Apostolidis (1990–91), and a boundary stone with the same inscription was found at the foot of the hill near the chapel of Ag. Giorgios (*IG* XII.9 78 (C5–C4); Apostolidis and Apostolidis (1990–91)). Dystos is attested as a settlement in the prehistoric period (Sackett *et al.* (1966) 76 no. 84) and was refounded in the Archaic period (Hoepfner (1999) 352). Dystos may have been a Dryopian settlement (Geyer (1903) 111). In C4 it was an Eretrian deme belonging to the second district (Knoepfler (1997) 381).

The characteristic hill in the valley of Dystos accommodated both the acropolis and the settlement. Long stretches are preserved of a C4 defence circuit with interval towers

and a gate in the eastern part. The circuit encloses an area of c.5 ha. From the gate a road leads to a large terrace in the northern part of the town where, probably, the agora was situated. Many of the houses are well preserved and in some cases a second storey can be traced. House K dates from C6, and the more elaborate house J probably from C4. The acropolis on the top of the hill was fortified with a separate defence circuit. Some foundations of buildings not yet excavated may be remains of sanctuaries. An undated subterranean gallery was discovered in 1998 (*BCH* 123 (1999) 794). The cemeteries lay at the foot of the hill (Hoepfner (1999)). West of the hill was a lake, now drained. This lake has traditionally been identified as the lake drained by Chairephanes (*IG* XII.9 191 (322–308)), but Knoepfler (1997) 380–81 has pointed out that this lake was situated near Ptechai, which belonged to a different district from that of Dystos; cf. Knoepfler (2001) 191–94.

370. Eretria (Eretrieus) Map 55. Lat. 38.25, long. 23.50. Size of territory: 5. Type: A. The toponym is Ἐρέτρια, ῆ (*IG* XII.9 196.10, 12 (C4s); Hdt. 1.61.2; Lys. 20.14). The toponym usually denotes the urban centre (Ps.-Skylax 58) but sometimes the city plus hinterland = the territory of Eretria (*IG* XII.9 197.12–14 (C4); cf. Knoepfler (2001) 53). The city-ethnic is Ἐρετριεύς (*IvO* 248 (C5e); *ML* 27.8 (479); *IG* XII.9 188.17 (c.400); *Xen. An.* 7.8.8; *Arist. Pol.* 1289^b39). Variant forms of the city-ethnic are Ἐρέτριος or Ἐρετριαῖος or Ἐρετριάτης. But they are found only in late lexicographers and have no authority (Steph. Byz. 276.8–9; *Etym. Magn.* 371.7; *Phot. Lex.*).

Eretria is called a *polis* both in the urban sense (*IG* XII.9 196.10–11; *Thuc.* 8.95.3, 6; *Dem.* 9.57; *Ps.-Skylax* 58) and in the political sense (*IG* XII.9 187.9 (c.410); *IG* II² 16.B.2 (394/3); Knoepfler (2001) 1.6–7 (C4s), 3.7 (330–320); Hdt. 6.106.2; *Aeschin.* 3.94). In an inscription of C6s, *polis* denotes the urban centre rather than the acropolis (*SEG* 41 725B = *Nomima* I 91; cf. Flensted-Jensen *et al.* (2000) 165). The community is described as *patris* in one of Plato’s epigrams (*AG* 7 256 = Diehl fr. 10, but perhaps spurious) and the town as an *asty* (*Thuc.* 8.95.4). The collective use of the city-ethnic is attested internally in Eretrian citizenship and proxeny decrees (Knoepfler (2001) 1.10–11; *IG* XII.9 187B.12 (C4f), 195.5 (C4s)) and externally in a C5e dedication in Olympia (*IvO* 248) and on the Serpent Column (*ML* 27.8). The individual and external use is attested in a casualty list of 424/3(?) from Tanagra (*IG* VII 585.1.16–17), in a Delphic list of *tamiai* of 337/6 (*CID* II 74.47), and in a C4m list of *proxenoi* of Karthaia (no. 492) (*IG* XII.5 542a8).

The territory of Eretria is called ἡ Ἐρετρία (Thuc. 8.60.1, 8.95.6) or ἡ Ἐρετρικὴ χώρα (Hdt. 6.101.1; cf. Pl. *Leg.* 698D). In C4m it covered c.1500 km² and was subdivided into five districts (Knoepfler (1997) 371–73, map on 402), called χῶροι (*IG* XII.9 189.24–25; Knoepfler (1997) 376). To date, only one district is known by name: viz. Μεσόχωρος (*IG* XII.9 241.37; Knoepfler (1997) 375–77). Each district was further subdivided into a number of territorial demes (*IG* XII.9 241; Wallace (1947) 119–24; Knoepfler (1997) 371), actually called δῆμοι (*SEG* 41.723; Knoepfler (1997) 374) and each headed by a demarch (*Δήμαρχος*, *IG* XII.9 189.23–24). There were altogether some fifty-five to sixty demes (Knoepfler (1997) 358), of which more than fifty are attested in the preserved inscriptions (Jones, *POAG* 75–76 with *corrigenda* in Knoepfler (1997) 355–58). Some of the demes were former *poleis* which had been incorporated into Eretria and reduced to the status of *demoi*. Such were Styra (no. 377), possibly, Grynchai (no. 371) and Dystos (no. 369) and, perhaps, Peraia (no. 375).

The Eretrian citizen body was subdivided into, probably, six tribes (Knoepfler (1997) 390–92), called *phylai* (*SEG* 45 1141). Two of them are known by name: viz. Μηκιστίς (*IG* XII *suppl.* 548.4–5 = *Nomima* I 39 (C5e)) and Ναρκίτις (*REG* 108 (1995) p. xxxix). A third was probably called Μελανηίς (Strabo 10.1.10; Knoepfler (1997) 393). They were named after local heroes and were thus different from the six old Ionian *phylai* (Knoepfler (1997) 392–93). Each *phyle* was composed of a number of demes drawn from all five *choroi*. Thus, one *phyle* comprised all citizens from twelve demes plus some citizens from the demes of Grynchai, Pereaia and Styra whose members were divided between all six Eretrian *phylai* (*IG* XII.9 245 and *Suppl.* 555; Knoepfler (1997) 393–400). Whereas the organisation into *phylai* must go back to c.500 or earlier, the subdivision into five districts must have been introduced some time in C4f (Knoepfler (1997) 392).

According to Strabo 10.1.10, Eretrias' military strength was recorded on an ancient *stèle* set up in the sanctuary of Artemis Amarysia. The figures he reports are 3,000 hoplites, 600 *hippeis* and 60 chariots. For the *andrapodismos* of 490, see *infra*. In C4l Eretria had some 6,000 adult male citizens, as can be inferred retrospectively from a cluster of lists of names of c.280 (Knoepfler (1997) 395). (a) From a fragmentary list of ephebes organised into the five districts (*IG* XII.9 241 = Wallace (1947) 120 (C4l–C3e)) it can be inferred that a year class of ephebes numbered some 150–200 young Eretrians, both hoplites and *psiloi* (cf. Knoepfler (1997) 404). (b) Some large lists of names with patronymics and demotics are probably a roster of Eretrians organised into

their *phylai* (I: *IG* XII.9 245; II: *IG* XII.9 246; III: *IG* XII.9 247 + 252 + unpublished fragment (Knoepfler (1997) 397); IV: unpublished fragment (Knoepfler (1997) n. 318); V–VI: no lists preserved)); see Knoepfler (1997) 395–400. *IG* XII.9 245 is almost complete and has 869 names preserved, plus about sixty names now lost = a total of 930 names. On the assumption that there were six *phylai* of equal size, c.5,500 Eretrians were recorded on the lists. A year class of 150–200 ephebes corresponds to a force of some 4,200–5,000 citizens of military age (18–59) and fit for military service, and to a total adult male citizen population of c.5,750–6,850 minimum, including those over 60 and those unfit for military service (Hansen (1985) 12). Since the army seems to have been organised in accordance with the five districts, the presumption is that the lists organised into *phylai* were a roster of all adult male Eretrian citizens.

Next to nothing is known about the history of Eretria before c.500. Apart from colonisation (*infra*), the only event reported in the sources is the semi-mythical Lelantine War, fought in C8s or in C7f (Plut. *Mor.* 868E; Parker (1997)) between Eretria and Chalkis (no. 365) and their allies over the possession of the Lelantine Plain (Thuc. 1.15.3; Hdt. 5.99.1; Strabo 10.1.12; Hes. *Op.* 654 and Plut. *Mor.* 153F, 760E–761A; cf. *Staatsverträge* 102). In 499 Eretria supported the Ionian revolt with five triremes (Hdt. 5.99.1). Their crews assisted in the capture of Sardes, and their *strategos* was killed in the ensuing battle of Ephesos (Hdt. 5.102.3; cf. also Lysanias (*FGrHist* 426) fr. 1). Therefore, Eretria was the first main target of the Persian punitive expedition against Hellas in 490 (Hdt. 6.98.1). Having pillaged the countryside, the Persians laid siege to Eretria, and on the seventh day the city was betrayed by two leading citizens and conquered (Hdt. 6.100–1); the sanctuaries were burnt down, and the population exposed to *andrapodismos*: men, women and children were sent to Sousa and were settled in the neighbourhood where their descendants still lived in C5m (Hdt. 6.106.2, 107.2, 115, 118–19; Pl. *Menex.* 240A; Philostr. *VA* 1.24, probably based on Ktesias (letter from Knoepfler)). In spite of the *andrapodismos* the Eretrians were capable of fighting with seven triremes at Artemision (Hdt. 8.1.2) and at Salamis (Hdt. 8.46.2). Together with Styra (no. 377) they provided 600 hoplites at Plataiai (Hdt. 9.28.5) and are duly recorded on the Serpent Column (ML 27.8).

Eretria was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (*IG* I³ 269.v.30) and is recorded in the tribute lists from 448/7 (*IG* I³ 264.IV.11) to 430/29 (*IG* I³ 281.II.51), a total of nine times, twice completely

restored, paying a *phoros* of, perhaps, 6 tal. (*IG* 1³ 264.1C.11) but later 3 tal. (*IG* 1³ 281.11.51), perhaps from 441/40 (*IG* 1³ 271.11.97). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.67: 15 tal.), and in 413 Eretria was still listed among the paying members (Thuc. 7.57.4). In 446 Eretria joined Chalkis in defecting from Athens; but the revolt was quenched by an Athenian army under Perikles (Thuc. 1.114.1–3). The conditions imposed on Eretria seem to have been similar to those of Chalkis (*IG* 1³ 39; 40.40–43; *supra* 648), and no *klerouchy* is attested (Gehrke, *Stasis* 64 n. 9). On the other hand, a decree of 442/1 ordered that the sons of the richest Eretrians be sent to Athens as hostages (Hesych. *E*5746; Phot. *E*1908). The assessment in 425/4 resulted in yet another Euboian revolt, which Eretria probably joined (Philoch. fr. 130; Paus. 1.29.2; cf. Knoepfler (1996)). After initial contacts with Sparta (no. 345) in 413 (Thuc. 8.5.1), Eretria defected from Athens once again in 411 in connection with the Athenian defeat in the naval battle fought outside the harbour of the city (Thuc. 8.95.3–6).

In c.400 Eretria concluded an alliance with Histiaia/Oreos (no. 372) (*IG* XII.9 188 = *Staatsverträge* 205; cf. Knoepfler (2001) 82), and in 394 one with Athens (no. 361) (*IG* II² 16 = *Staatsverträge* 229). In C4e a *sympoliteia* agreement was concluded with Keos (*SEG* 14 530 = *Staatsverträge* 232; but see Cargill (1981) 136 n. 14). The Eretrians were among the original members of the Second Athenian Naval League (*IG* II² 43.81). But they probably left the League together with Thebes (no. 221) in 371 or shortly afterwards (Dreher (1995) 173; Knoepfler (1995) 331–33). In any case, Eretria cannot have been a member of the League when in 366 Themison, the tyrant of Eretria, dispossessed Athens of Oropos (no. 214) (Diod. 15.76.1). Like the other Euboian *poleis*, however, Eretria was torn by *stasis* between a pro-Theban and a pro-Athenian faction (Gehrke, *Stasis* 65). In 357 both Athenian and Theban forces invaded the island and clashed in several battles and skirmishes. The Athenians won, and the Euboian *poleis* rejoined the League (Diod. 16.7.2; Aeschin. 3.85; Dem. 8.74; *IG* II² 124.16 = Tod 153, improved readings in Knoepfler (1995) 335–37; Brunt (1969) 247–48). In 349/8 an Athenian army under Phokion came to the rescue of Ploutarchos, the tyrant of Eretria, who, however, betrayed the Athenians (Plut. *Phoc.* 12–13; Gehrke (1976) 7–11). After the Athenian victory at Tamynai, Eretria joined the League again, as attested in the Athenian decree of, probably, 343 (*IG* II² 125; cf. *SEG* 34 67, 45 1210). The Eretrians provided *synedroi* for the *synedrion* and contributed a *syntaxis* of 5 tal. (Aeschin. 3.94, 100). In the same period Philip of Makedon seems to have infiltrated Eubolia

(Dem. 9.57, 10.8; Brunt (1969) 251–52), and in 342 he had the leaders of his faction in Eretria installed as tyrants (*infra*). After their expulsion in 341 a new alliance between Athens and Eretria was concluded (*IG* II² 230; see Knoepfler (1985)). In 340 some kind of short-lived league with a common council was established under the leadership of Kallias of Chalkis (Aeschin. 3.89, 94; *Staatsverträge* 342); it included Eretria, Chalkis (no. 365) and Histiaia/Oreos (no. 372). Because of the contemporary issue of a common Euboian coinage (*supra* 643) the union has sometimes been interpreted as a federation (*Staatsverträge* 342; Picard (1979)), but see Beck (1997) 28.

The Eretrian constitution was one of the 158 *politeiai* described by Aristotle and his pupils (Heracl. Lemb. 40 = Arist. no. 45, Gigon; cf. Plut. *Mor.* 293A, 298B). In the Archaic period Eretria was an oligarchy governed by the class of *hippeis* who formed the core of the Eretrian army (Arist. *Pol.* 1289^b33–39, 1306^a33–39; *Ath. Pol.* 15.2). This constitution was overturned in C6s and perhaps before 510 (*IG* XII.9 p. 147.111–24) at the instigation of a certain Diagoras (Arist. *Pol.* 1306^a35–36; Heracl. Lemb. 40), and it was replaced by “a democracy” (Gehrke, *Stasis* 63; cf. *IG* XII *Suppl.* 549A: [ἔδοξε τῆι βουλῆ]ι καὶ τῶι [δῆμῳ]ι) (C5e); cf. Knoepfler (2001) 74 n. 293). The common view that, in 446, a democratic constitution was either maintained or, alternatively, imposed by the Athenians (Balcer (1978) 56; Gehrke, *Stasis* 64) is based on an analogy with a not altogether convincing interpretation of the Athenian regulations for Chalkis (*ATL* iii. 150 no. 15). An honorary decree of c.411, passed by the *boule* alone and not by (the *boule* and) the *demos*, indicates that the defection from Athens in 411 was followed by the introduction of an oligarchic constitution (*IG* XII.9 187A). But a somewhat later honorary decree inscribed on the same *stèle* is passed by the *boule* and the *demos*, suggesting a democracy in C4e (*IG* XII.9 187B).

Later in C4 Eretria was ruled by a number of tyrants (Berve (1967) 301–2): Themison from before 366 to 357 (Aeschin. 3.85; Dem. 18.99; Diod. 15.76.1), Menestratos in 352 (Dem. 23.124), Plutarchos from before 350 to 348 (Dem. 5.5, 9.57, 21.110, 200; Aeschin. 3.86; Plut. *Phoc.* 12–13). Plutarchos was deposed by the Eretrian *demos* led by Kleitarchos (schol. Dem. 5.5), but after a short period of democratic government (Dem. 9.57), Kleitarchos was himself in 342 installed by Philip of Makedon as *tyrannos* of Eretria together with Hipparchos and Automedon (Dem. 9.58; cf. 18.71, 79–81, 295; Aeschin. 3.103; Harp. *I*5; Gehrke (1976)). In the following year, however, Eretria was besieged and conquered by an Athenian force (Philoch. fr. 160), and the tyrants were expelled again

(schol. Aeschin. 3.85; Diod. 16.74.1). A democracy was set up (Philoch. fr. 160), an anti-tyranny law passed by the Eretrian people (*IG XII.9 190* (c.340)), and a sacred law belongs in the same context (*IG XII.9 189* = *LSCG 92*). Decrees passed under the new democratic regime are introduced with the formula *ἔδοξεν τεῖ βουλευεῖ καὶ τοῖ δήμοι* (*IG XII.9 189.4* (c.340)), or *ἔδοξεν τοῖ δήμοι* (Knoepfler (2001) 2 (330–320)) or, once, *ἔδοξε τεῖ ἐκκλησίῃ* (Knoepfler (2001) 1.2–3), and bills are often moved by a board of *probouloi* (*IG XII.9 191.35*).

The eponymous officials were a board of three *archontes* (*LSAG 84* no. 9; *SEG 34 898* (C61); *IG XII.9 191.A.8* (C41); cf. Sherk (1990) 238). The principal military officials were a board of *strategoī* (*IG XII.9 191.44*; Hdt. 5.102.3) and a board of five *taxiarchoi* (*IG II² 230b.12–17*), each presumably commanding a regiment provided by one of the five districts (Knoepfler (1997) 372). Alongside the five(?) *taxeis* there was a cavalry of, probably, 500 *hippeis* = 100 per district (*IG II² 230a.3–4* as restored by Knoepfler (1985) = *SEG 35 59*).

Together with the other Euboian *poleis* Eretria was a member of the Amphiktyonic League (Lefèvre (1998) 59–63), and provided in some years one of the two Ionian *hieromnemes* (Aeschin. 2.116; *CID II 102.1.9*), in other years a *tamias* (*CID II 74.47*). Athenian envoys were sent to Eretria in 357/6 (*IG II² 124.16*) and in 340 (Aeschin. 3.100). Eretrian envoys were sent to Athens (*IG II² 230b*). Eretria granted citizenship to a man of Sikyon (no. 228) (Knoepfler (2001) 1 (C4s)) and *proxenia* to citizens of Opous (no. 386) (Knoepfler (2001) 4 (C4l)) and Taras (no. 71) (*IG XII.9 187A* and *B* (C5–C4) = Knoepfler (2001) ii–iii); see also Knoepfler (2001) 2 (330–320). Eretrian citizens received *proxenia* from Delphi (no. 177) (*SEG 16 319* (C4–C3)) and Karthaia (no. 492) (*IG XII.5 542.8* (C4m)). In C4s Eretria had a *theorodokos* to host *theoroi* from Nemea (*SEG 36 331.B.41–43* (331/0–313)).

Only one Eretrian citizen is attested as victor in the Olympic Games (*Olympionikai 177* (c.492)), and none in any of the other major Panhellenic games.

The Pantheon of Eretria in the Classical period is almost exclusively known from inscriptions and archaeological evidence (Schachter (1992) 18–21; Novaro (1996)). The tutelary god of Eretria was Apollo Daphnephoros (*IG XII.9 191.10, 49*; Knoepfler (2001) 17), in whose sanctuary public enactments were published (*IG XII.9 210.26–29*). Divinities worshipped in the town itself were Aphrodite? (Themelis (1982) 179), Asklepios (*IG XII.9 194* (C4–C3); *LSCG 93*), Dionysos (*IG XII.9 192, 207.45* with *SEG 34 896* (C3e?)), Hera (*IG XII.9 189.27*), Poseidon (Knoepfler (2000)) and Demeter, for whom *thesmophoria* are attested (Plut. *Mor.* 298B, probably derived from the Aristotelian *Politeia*; cf.

Metzger (1985); Willers (1991)). The two major extra-urban cults were those of Artemis Amarysia at Amarynthos with musical contests (*IG XII.9 189* = *LSGC 92*; *IG XII.9 191.57, 59, 195.10–12*; Knoepfler (1988) 383–91) and Apollo at Tamynai (Harp. *T3*; Strabo 10.1.10; *IG XII.9 90–92*).

The Eretrian calendar is typically Euboian. The month Antestherion is attested in C4s (*IG XII.9 189* = *LSCG 92*), and the months Apatourion, Lenaion and Heraion in the C3 law concerning the Dionysian artists (*IG XII.9 207*; see Trümpy, *Monat.* 39–41).

The city of Eretria is bordered to the south by the sea, to the west by a stream, to the north by a hill which naturally became the acropolis; to the east was an area of marshy ground. The ancient port lay partly in the same vicinity as the modern port.

The urban area of modern Eretria in the 1960s gives some idea of its extent in C4. At that time, it was surrounded by a high city wall which, starting from the sea in the west, followed the western side of the acropolis, then ran along its steepest slope on the north, then turned south to the sea to complete the circuit. The port itself was fortified by a curtain-wall and towers. At intervals along the city wall were posterns, a monumental gate to the west (Krause (1972)) and an eastern gate that has not been found. We know that the city was protected by a wall in 490, since the Persians had to lay siege for six days, and Eretria fell only because of treachery (Hdt. 6.101.2), whereafter the walls were demolished (Strabo 10.1.10). In our current state of knowledge it is impossible to date the first fortifications with any certainty. The existing wall, with its gates, posterns and towers, dates from C4. It was about 4,260 m in length; the total area enclosed by the wall was about 81.5 ha. The top of the acropolis was 123 m from the sea. Eretria was besieged in 341 (Philoch. fr. 160).

The first traces of occupation on the acropolis date to the second millennium (*AntK* (1994) 94–96, (1995) 108–19, (1996) 107–11). Middle Helladic remains have been found in the plain, not far from the future agora. During the Protogeometric period (C9), only the tombs attest to some sort of human presence (*AntK* (2000) 134–45). The first evidence of settlement, dating from C8, comes from three areas: near the port, on the site of the later sanctuary of Apollo, and at several places at the foot of the acropolis. The buildings were oval or apsidal in plan, with the entrance on the short side (*AntK* (1981) 85–86, (2000) 128–30, (2001) 84–87). A group of tombs also dates from C8; their location was marked on the ground by a triangular stone structure, and they contained exceptionally rich grave-goods (bronze

cauldrons, gold jewellery, iron weapons, a bronze spear-head). They have been interpreted as a heroon. The remains of later buildings nearby have been attributed to a heroic cult (Bérard (1970)).

The oldest buildings in the area of the sanctuary of Apollo Daphnephoros, apsidal in plan, were followed at the end of C8 by a longer edifice (a *hekatompodon*), also with an apse. Because of the altar at its east end and the finds of offerings and pottery, this has been identified as the first temple of Apollo, the city's chief divinity. A second temple, rectangular in plan, perhaps Ionic, preceded the large Doric hexastyle temple of C6I which was burned down by the Persians in 490 (Hdt. 6.101.3; Auberson (1968)).

To the north of the temple of Apollo, a sacrificial area with a deposit of sacred objects has yielded numerous offerings, the earliest dating from C8; some came from the Middle East, others from Egypt and from the West. The cult celebrated there was perhaps dedicated to a female divinity (Huber (2003)). The foundations of another sanctuary were discovered cut in the rock at the top of the acropolis; they were accompanied by offerings similar to those found in the sacred deposit in the sacrificial area. The divinity honoured is uncertain, but the offerings suggest that it may have been female (*AntK* (1994) 97–99).

Among the other religious buildings for which there is archaeological evidence, the temple of Dionysos, located next to the theatre (Auberson (1976)), may date from C4e, while the siting of a *thesmophorion* on the south slope of the acropolis is controversial (Metzger (1985); Muller (1996) 165–68; Willers (1991)). Several clues suggest that a sanctuary of Asklepios was situated in the neighbourhood of the House of the Mosaics. The large sanctuary of Artemis Amarynthia lies outside the city but in the *chora*, about 10 km to the south. Its approximate location is known, but the temple proper has not yet been found (Knoepfler (1988)).

No public or official buildings have yet come to light. However, we do know the location of the agora from the Archaic and Classical periods, which was near the sanctuary of Apollo Daphnephoros. The porticos along four sides have been located or partially cleared. The function of an elegant circular building (*tholos*) on the east side of the agora remains unknown. To the north of the agora a large fountain provided a public water-supply; long sections of the conduits have been uncovered. Other conduits for supplying fresh water and carrying away waste have been found under several streets.

The main street linked the west gate to the east gate, passing to the south of the theatre and along the southern flank

of the acropolis. Halfway between the two gates, another street branched off towards the agora, skirting the sanctuary of Apollo on the way. Other streets have been found in various parts of the city, the longest in the western quarter (Reber (1998)).

Eretria had a huge theatre (*TGR* ii. 215–16), and some of the earliest phases may date to C4; cf. *IG* XII.9 193.6 (C4I), a gymnasium, a palaestra and baths. Although the visible remains of these buildings are no older than the Hellenistic period, it is reasonable to suppose that they were already functioning in C4 or even earlier.

The Classical and Hellenistic areas of the city are well known thanks to the systematic exploration of the vast houses, some of which are particularly luxurious (Reber (1998); Ducrey *et al.* (1993)).

Eretria struck silver coins on the Aiginetan standard, c.525–446 and c.411–400. Denominations: tetradrachm, didrachm, drachm, diobol, obol, hemiobol. The most common types are *obv.* cow scratching itself, sometimes with a bird on its back; *rev.* octopus in incuse square. The legend *EPETPIEQN* is found only on C2 bronze coins (Head, *HN*² 360–64; Kraay (1976) 91–92; *SNG Cop. Aetolia-Euboea* 468–96). It is not known whether the C4 and C3 “federal” issues were struck by Eretria (Wallace (1956)) or by Chalkis (no. 365) (Picard (1979)); see also Brunner (1998) and *supra* 649.

Eretria was involved in the colonisation of Dikaia (no. 568), Mende (no. 584), Methone (541), Okolon (626), Pharbelos (no. 591), Pithekoussai (no. 65) and Skabala (no. 607).

371. *Grynchai (Gryncheus) Map 55. Lat. 38.25, long. 24.10. Size of territory unknown but presumably 1 or 2. Type: B. The toponym is **Γρύχαι* or **Γρύνχαι*, *αί* (reconstructed from the form *Γρυνχῆθεν* (*IG* XII.9 249B.361 (C3)) combined with the variant forms; cf. Knoepfler (1997) 359); variant forms are *Ψύγκαι* (Steph. Byz. 547.17) and *Τρύχαι* (Steph. Byz. 639.15). The city-ethnic is *Γρυνχεύς* (*IG* I³ 270.v.22) or *Γρυνχεύς* (*IG* I³ 71.I.81) or *Βρυνχεύς* (*IG* I³ 264.IV.12) or *Βρυνχεύς* (*IG* I³ 265.II.69). Grynchai is not called a *polis* in any source, but the attestation of the community in the Athenian tribute lists is an indication of *polis* status, as is the peculiar incorporation of the Gryncheis into all six Eretrian *phylai* (*infra*). Grynchai has been located near modern Krieza, where tombs and architectural fragments have been found (Gehrke (1988) 33–34; Knoepfler (1997) 384 with n. 250).

Grynchai was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It

belonged to the Island district (*IG* I³ 270.v.22) and is recorded in the tribute lists from 451/50 (*IG* I³ 262.I.24) to 416/5 (*IG* I³ 289.I.23), a total of thirteen times, three times completely restored, paying a *phoros* of 1,000 dr. (*IG* I³ 262.I.24). It was assessed for tribute in 425/4 (*IG* I³ 71.I.81: 2,000 dr.).

In C51 (Knoepfler (1997) 354), Grynchai became a deme of Eretria (no. 370), belonging to the third district (Knoepfler (1997) 384, 402). The Gryncheis were divided among all six Eretrian *phylai* (*IG* XII.9 245A.158, 246A.181ff, 247.I.9; Knoepfler (1997) 393–400).

372. Hestiaia (Hestiaieus)/Oreos (Oreites) Map 55. Lat. 38.55, long. 23.05. Size of territory: down to C4m probably 4, in C4m 5. Type: A. The toponym is first *Ἰστίαια*, ἡ (Hom. *Il.* 2.537; Strabo 10.1.3); or *Ἰστιαία*, ἡ (*IG* XII.5 594.2; Hdt. 8.66.1); or *Ἐστίαια*, ἡ (Thuc. 7.57.2; Ps.-Skylax 58; Arist. *Pol.* 1303^b33; *IG* I³ 41.89); later it is *Ὀρεός* (Aeschin. 3.103; Arist. *Ath. Pol.* 33.1; Dem. 18.79; *IG* II² 682.14 (C3e)), either ἡ (Thuc. 8.95.7; Paus. 7.26.4) or ὁ (Xen. *Hell.* 5.4.56; Strabo 10.1.3, 5). The corresponding city-ethnics are *Ἰστιαίειός* (Hdt. 8.23.1; Xen. *Hell.* 2.2.3; *CID* II 75.II.47 (336/5); *IG* II² 8939 (C4)), *Ἐστιαίειός* (Thuc. 7.57.2) and *Ὀρείτης* (Xen. *Hell.* 5.4.56; *SEG* 27 17.5 (C4m); *IG* IV 617.3 (C4l); *CID* II 93.51 (329/8)). The change of name (Robert (1951) 179 n. 2) is explicitly mentioned in several sources (Paus. 7.26.4; schol. Thuc. 1.114), and at Strabo 10.1.3 it is connected with the establishment of an Athenian klerouchy in 446. But the sources testify to a considerable overlap between the two names (cf. Strabo 10.1.4). Both toponyms are attested in Thucydides, Hestiaia at 7.57.2 and Oreos at 8.95.7. The earliest attestation of the toponym Oreos is in Ar. *Pax* 1047, 1057, whereas the toponym Hestiaia (in a contemporary context) is attested as late as C4f (*IG* XII.5 594.12 = *Staatsverträge* 287), and the city-ethnic Hestiaieus in inscriptions of C3 (*CID* II 126.2 (C3f); *IG* XII.9 1186.12 (C3s)) and on coins of C2 (Head, *HN*² 364–65). Hestiaia/Oreos is called a *polis* both in the urban sense (Hdt. 8.23.2; Ps.-Skylax 58; Dem. 9.61, 62) and in the political sense (Xen. *Hell.* 5.4.57; Dem. 9.59–60; Aeschin. 3.94; Arist. *Pol.* 1303^b32–3; *IG* XII.5 594.3 (C4f); *IG* XII.9 188.6–7 (C4f)). *Πολίτης* is found in Semon. 9.62. The collective sense of the city-ethnic is attested internally on C4 coins (*infra*) and externally in inscriptions (*IG* XII.5 594.15 (C4f)) and in literature (Hdt. 8.23.2; Thuc. 7.57.2; Dem. 23.213). The individual and external use is attested in inscriptions (*IG* XII.9 7.9 (C4m); *CID* II 93.51 (329/8)) and in literature (Hdt. 8.23.1; Aeschin. 3.223).

The territory is called ἡ γῆ ἡ *Ἰστιαιωτίς* (Hdt. 7.175.2, 8.23.2). From C4m it comprised all of northern Euboea,

some 850 km², and bordered on the territory of Chalkis (no. 365). At 23.213 Demosthenes claims that the Oreitans inhabited a quarter of the island (*μέρος τέταρτον*). The exact frontier is unknown, but it seems to have crossed the island north of Kerinthos but south of Elymnion (Gehrke (1994) 336–41). Down to C4f Dion (no. 368) and Athenai Diades (no. 364), both on the Kenaion peninsula, were self-governing *poleis*, and so were, probably, Orobiai (no. 374) on the west coast of Euboea and Poseidion (no. 376) on the east coast (*infra* 660). In the Hellenistic period all four are attested as demes of Oreos: Athenai Diades (*IG* XII.9 1186.2), Dion (*IG* XII.9 1187.3), Orobiai (*IG* XII.9 1186.3) and Poseidion (*IG* XII.9 1189.20, 28, 39). Some thirty demes are recorded in Hellenistic inscriptions (*IG* XII.9 1186–89; Jones, *POAG* 77–78). We hear about Hestiaian demes already in C5s (*IG* I³ 41.100), and in C4m the citizens of Hestiaia/Oreos were organised into tribes and demes (*IG* XII.5 594.10 = *Staatsverträge* 287). The board of six *archontes* (*infra*) indicates that there were six *phylai* as in Eretria (no. 370) (Knoepfler by letter). Oreos (Theopomp. fr. 387) and Dion (*IG* I³ 41.101) are the only named Hellenistic demes which can be traced back to the Classical period (*supra*). In 480, however, the core territory of Hestiaia/Oreos comprised a number of *komai* along the coast (Hdt. 8.23.2), of which two may have been Khironisi and Oreos (Sackett *et al.* (1966) 111; for Khironisi/Dion, see also Reber (2001) 456–60).

After the battle of Artemision in 480 Hestiaia/Oreos was conquered by the Persians, and its territory was ravaged (Hdt. 8.23.2). Hestiaia/Oreos was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It is recorded in the tribute lists in 450/49 (*IG* I³ 263.IV.34), 448/7 (*IG* I³ 264.III.6) and 447/6 (*IG* I³ 265.II.36), paying a *phoros* of 1,000 dr. (*IG* I³ 265.II.36).

In 446 Hestiaia joined the other Euboian *poleis* and defected from Athens; but the revolt was soon quenched by an Athenian army under Perikles; the Hestiaians were expelled from their city and sent to Makedonia, while Hestiaia/Oreos was settled with Athenians (Thuc. 1.114.1–3, 7.57.2, 8.95.7; Theopomp. fr. 387; Philoch. fr. 118; Diod. 12.7.1, 22.2; Plut. *Per.* 23.4). The Athenians are described as colonists (*apoikoi*, Thuc. 7.57.2; Figueira (1991) 223) and numbered 2,000 (Theopomp. fr. 387) rather than the 1,000 reported at Diod. 12.22.2, where, probably, *κατεκληροούχησαν* is used in a non-technical sense (cf. Ael. *VH* 6.1 with Figueira (1991) 258–60). The Athenian regulations for the new colony include references to a Hestiaian *boule*, a *dikasterion* and an *archon* (*IG* I³ 41; cf. Koch (1991)

181–82, 192–93). They also show that a part of the original population remained in the territory (ibid. 182–83). In 415 a contingent of the Athenian colonists joined the expedition to Sicily (Thuc. 7.57.2), and in 411 Histiaia/Oreos remained loyal and did not join the other Euboian cities in defecting from Athens (Thuc. 8.95.7; Arist. *Ath. Pol.* 33.1). At the end of the Peloponnesian War, the Athenian colonists in Histiaia/Oreos were undoubtedly among those sent back to Athens (Plut. *Lys.* 13.3), and Histiaia/Oreos was probably given back to the citizens expelled in 446.

In the Corinthian War, the Oreitans must have been among the Euboians who fought against Sparta (no. 345) in the battle of the Nemea in 394 (Xen. *Hell.* 4.2.17). In c.380 Iason of Pherai had a certain Neogenes set up as tyrant of Histiaia/Oreos. Two years later he was deposed by a Lakedaimonian force (Diod. 15.30.3–4). A Lakedaimonian garrison was placed on the acropolis (Xen. *Hell.* 5.4.56; Plut. *Mor.* 773F). In 377 the Athenians ravaged the territory of Histiaia/Oreos (Diod. 15.30.2, 5) and later in the same year the Lakedaimonians were expelled from Oreos (Xen. *Hell.* 5.4.57). Histiaia/Oreos joined the Second Athenian Naval League in 375 or shortly after (*IG* II² 43.B.18). It left the League after the battle of Leuktra (Xen. *Hell.* 6.5.23), but joined once again in 357 (*IG* II² 124.16). The Oreitans provided *synedroi* for the *synedrion* and contributed a *syntaxis* of 5 tal. (Aeschin. 3.94, 100). In 340 some kind of short-lived league with a common council was established under the leadership of Kallias of Chalkis (Aeschin. 3.89, 94; *Staatsverträge* 342); it included Histiaia/Oreos, Chalkis (no. 365) and Eretria (no. 370). Because of the contemporary issue of a common Euboian coinage (*supra* 643) the union has sometimes been interpreted as a federation (*Staatsverträge* 342; Picard (1979)), but see Beck (1997) 28.

After the Persian War Histiaia/Oreos was an oligarchy. At one point a dispute between two brothers belonging to the *gnorimoi* resulted in a *stasis* in which one brother rallied the wealthy (*euporoi*), the other the commoners (*demotikoi*) (Arist. *Pol.* 1303^b31–37; cf. Gehrke, *Stasis* 73). The Athenian colony of 446 or the 420s (Mattingly (1996) 246–48) was organised as a democracy (*IG* I³ 41). After the Peloponnesian War the constitution was an oligarchy, which, in c.395, without any *stasis* or revolution, was changed into a constitution described by Aristotle as a *politeia* or a *demokratia* (*Pol.* 1303^a16–20). Apart from a short period of tyranny in 380–378 under Neogenes (Diod. 15.30.3), the constitution was democratic (Aeschin. 3.103). In 357 Histiaia/Oreos, like the other the Euboian *poleis*, was torn by *stasis* between a pro-Theban and a pro-Athenian faction (Diod. 16.7.2), and

in the 340s Histiaia/Oreos was split between a pro-Makedonian faction, headed by Philistides and an anti-Makedonian faction, headed by Euphraios, a pupil of Plato (Trampedach (1994) 96–97). The majority of the Oreitan *demos* supported the pro-Makedonian faction, and Euphraios was imprisoned (Dem. 9.59–62; cf. Ath. 506E, 508D). In 342 Philip of Makedon succeeded in making Philistides tyrant of Histiaia/Oreos (Dem. 9.33, 18.71; Theopomp. fr. 387). But a year later, on the motion of Demosthenes, the Athenians sent a force against Histiaia/Oreos; the city was conquered, Philistides killed, and democracy restored (Dem. 18.73; Charax (*FGrHist* 103) fr. 19; schol. Aeschin. 3.85). Strabo reports that Philistides during his short reign had the population of Ellopia transferred to Oreos (10.1.3; cf. Moggi, *Sin.* 351–54).

The only known public enactment of the Classical period is a decree of the people (*psephisma tou demou*) whereby the Oreitans pledged the public revenue of Histiaia/Oreos as security for 1 tal., which the *polis* owed to Demosthenes (Aeschin. 2.104 and 105, where the *psephisma* (now lost) was read out to the jurors; Migeotte (1984) 244–45). The eponymous officials were a board of six *archontes* (*SEG* 29 817.8–12 (c.300); *IG* XII.9 1187.1–5 (C3m)). A Histiaian citizen is recorded as lending money at interest to the city of Karystos (no. 373) (*IG* XII.9 7.5–11). An *isopoliteia* treaty was concluded between Histiaia/Oreos and Keos c.364 (*IG* XII.5 594 = *Staatsverträge* 287). Athenian envoys were sent to Histiaia/Oreos in 357/6 (*IG* II² 124.16) and in 341/40 (Aeschin. 3.100). Histiaia/Oreos granted *proxenia* to Aeschines of Athens (no. 361) (Dem. 18.82) and to Kallikles of Larisa (no. 401) (*SEG* 29 817 (c.300)), and Oreitan citizens received *proxenia* from Athens (no. 361) (*IG* II² 149.10 (c.375); Knoepfler (1995) 324ff).

Histiaia/Oreos possessed an extra-urban sanctuary of Artemis Proseoea at Artemision (Hdt. 7.176.1; Plut. *Them.* 8.4; Lolling Symposium 1994, forthcoming); the cult included Pyrrhic games (*SEG* 33 716, C5f; *IG* XII.9 1190; Ceccarelli (1998) 94–95); a cult of the nymph Histiaia can be inferred from the C4 coins (*infra*).

The exact location of the urban centre of Histiaia is unknown, but it was probably in the neighbourhood of modern Histiaia (Xerochori). After 446 the urban centre was moved to Oreos at modern Kastro, and the inhabitants of the two settlements were merged by an *synoikismos* (Strabo 10.1.4; Moggi, *Sin.* 114–20). So far, only scanty remains have been found (*ArchDelt* 29 (1973–74) 487–90). We know from literary sources that the town had an acropolis (Xen. *Hell.* 5.4.56) and a harbour (Ps.-Skylax 58). In the

earthquake of 426, 700 houses and part of the walls were destroyed (Demetrius of Kallatis (*FGrHist* 85) fr. 6), but the town was fortified again in C4m (Dem. 9.61). The stronghold called Metropolis which was fortified by Chabrias in 377/6 (Diod. 15.30.2, 5) may have been the original urban centre of Histiaia/Oreos, deserted after the *metoikesis* in C5m; see *supra* 657. The prison of Oreos is mentioned at Dem. 9.60.

In C4m Histiaia/Oreos struck coins of silver and bronze on the Euboian standard. Types: *obv.* head of nymph Histiaia wearing vine wreath; *rev.* heifer and vine. Legend: *ΙΣΤΙ* or, once, *ΙΣΤΙΕ*. An issue of silver coins on the Attic standard has *rev.* Histiaia seated on the stern of a ship and holding a naval standard inscribed *AΘANA*. Legend: *ΙΣΤΙΑΙΕΩΝ* (Head, *HN²* 364; Robert (1951) 179ff; Kraay (1976) 93–94; Picard (1979) 176–78; *SNG Cop. Aetolia-Euboea* 510–16).

373. Karystos (Karystios) Map 58. Lat. 38.00, long. 24.25. Size of territory: 4. Type: A. The toponym is *Κάρυστος*, ἡ (Hom. *Il.* 2.539; Hdt. 4.33.2; Archastratos fr. 51.2; Eust. *Il.* 1.432.7; *IG XII.9* 207.14 (C3e)). Quoting the C3 poet Theodoridas (fr. 746, *Suppl. Hell.*), Steph. Byz. lists *Χειρωνία* as an alternative toponym (362.14); yet another alternative toponym is *Αἰγάια* (Steph. Byz. 363.1; schol. Ap. Rhod. 1.1165). The city-ethnic is *Καρύστιος* (Hdt. 4.33.2; Thuc. 1.98.3; Ar. *Lys.* 1059; *IG XII.9* 7.20 (C4f)). Karystos is called a *polis* both in the urban sense (Ps.-Skylax 58: *τετράπολις*, where the political sense may be a connotation) and in the political sense (*IG XII.9* 12.1 = *ArchDelt* 26 (1971) *Chron.* 262 no. 13 (C5–C4); *IG II²* 12.11–12; Hdt. 4.33.2, where the urban sense may be a connotation). The collective use of the city-ethnic is attested internally in inscriptions (*IG XII.9* 7.20 (C4f)) and in abbreviated form on C6–C4 coins (*infra*), and externally in inscriptions (*I.Délos* 98B.10 (377–373)) as well as in literary sources (Hdt. 6.99.2; Thuc. 4.42.1). The individual and external use is attested in inscriptions (*CID II* 4.111.9 (C4f)) as well as in literary sources (Hdt. 7.214.1; Dem. 35.8–10). *Patris* is restored in *IG II²* 467.21 (306/5).

The territory is called ἡ *Καρυστήν χωρῆν* (Hdt. 9.105) or ἡ *Καρυστία* (Theophr. *Hist. pl.* 8.4.4). In C4 it bordered on that of Styra (no. 377), then an Eretrian deme (*infra* 660), and comprised the southern part of Euboea, altogether some 450 km². The principal site in the territory of Karystos is the harbour of Geraistos with a sanctuary of Poseidon (Ps.-Skylax 58; Arr. *Anab.* 2.1.2; Schumacher (1993) 77–80). The only other known Archaic and Classical settlements are

Kyrnos (Hdt. 9.105) and Marmarion (Strabo 10.1.6), which may have existed in C4 (Knoepfler by letter), and the archaeological sites at Arkhampolis (*Barr.* 55, C, *supra* 646) and Philagra (*Barr.* 55, C, *supra* 646–47).

Coins of C6m (*infra*) and a Panhellenic victor of C6s (*infra*) are the only evidence we have for Karystos before the Persian War. In 490 the Persian forces laid siege to Karystos, ravaged its territory and forced the Karystians to surrender (Hdt. 6.99.2). In 480 the Karystians joined the Persian army (Hdt. 8.66.2), and after Salamis they were forced by Themistokles to pay an indemnity (Hdt. 8.112.2) and had their territory ravaged by the Greek army (Hdt. 8.121.1). Nevertheless, the Karystians dedicated a bronze bull in Delphi from spoils taken in the Persian War (Paus.10.16.6). In a war between Athens and Karystos c.476–469 (Thuc. 1.98.3; Brock (1996) 359), the Karystians were defeated in a battle at Kyrnos (Hdt. 9.105) and forced to join the Delian League. Karystos belonged to the Island district (*IG I³* 270.v.21) and is recorded in the tribute lists from 454/3 (*IG I³* 259.11.16) to 416/15 (*IG I³* 289.1.22), a total of eleven times, once completely restored, paying a *phoros* of 12 tal. in 454/3, reduced to 7½ tal. in 451/50 (*IG I³* 262.1.23), and further reduced to 5 tal. in 450/49 (*IG I³* 263.1v.26). It was assessed for tribute in 425/4 (*IG I³* 71.1.70: 5 tal.) and in 410/9 (*IG I³* 100.1.4). In spite of Thuc. 1.114.2, the silence of our sources indicates that Karystos did not join the other Euboian *poleis* in defecting from the Delian League in 446. But, in addition to the reduction in *phoros*, there is some archaeological evidence to support the view that one of the C5m Athenian klerouchies on Euboea (Diod. 11.88.5; Paus. 1.27.3; schol. Ar. *Nu.* 213) was placed in Karystos (Figueira (1991) 225, y; Brock (1996) 365–66; Salomon (1997) 209). In 413 Karystos was still listed among the paying members (Thuc. 7.57.4). The constitution of Karystos seems to have been changed into an oligarchy in consequence of the revolution in Athens in 411 (Thuc. 8.64.1, 65.1, 69.3; cf. Gehrke, *Stasis* 76).

Karystos was among the original members of the Second Athenian Naval League (*IG II²* 43.84), but probably left the League together with Thebes (no. 221) in 371 or shortly afterwards (Xen. *Hell.* 6.5.23; Dreher (1995) 173). In 357 Karystos, like the other Euboian *poleis*, was torn by *stasis* between a pro-Theban and a pro-Athenian faction (Diod. 16.7.2), and when the Thebans had been expelled from Euboea by the Athenians, a new treaty was concluded between Athens (no. 361) and Karystos (*IG II²* 124; cf. *SEG* 45 54). It is not known whether Karystos in the 340s was a member of the ephemeral Euboian league or federation. In 323/2 Karystos was the only Euboian *polis* to support Athens in the Lamian War

(Diod. 18.11.2; Paus. 1.25.4).

In C4 Karystos had close relations with Histiaia/Oreos (no. 372) and Thebes (no. 221), and had taken up some loans from citizens of these two *poleis*. Payments on these loans are attested in an inscription of c.370 (*IG XII.9 7* = Migeotte (1984) no. 73) which shows that the eponymous official in Karystos was an *archon* and that there was a board of *tamiai*. An undated (C4–C3?) public enactment mentions a board of *strategoí* and, probably, a popular assembly (*IG XII.9 1*). A citizen of Karystos was granted *proxenia* by Eretria (no. 370) in C4 (*IG XII.9 211*; cf. Knoepfler (2001) 212). During the grain crisis of 330–326 Karystos obtained 15,000 *medimnoi* from Kyrene (no. 1028) (*SEG IX 2* = Tod 196.21; cf. *SEG 38 1880*). Karystos was a member of the Delian amphiktyony (Hdt. 4.33.2; *I.Délos 98.120* (377–373)) and had a treasury on Delos (*IG XI.2 144.A.88*).

In the Archaic period the urban centre was situated on the Plakari hill (Keller (1985) 200–1), and it may have remained there during C5. In C4, if not before, it was moved to Palaiochori. From the siege of Karystos in 490 it can be inferred that the city was fortified (Hdt. 6.99.2). There are few remains. There was a fortified acropolis (Livy 32.17) on the Montofoli hill (Keller (1985) 218), and a large cemetery to the south. A temple of Dionysos is attested (Keller (1985) 217).

Karystos had one citizen who distinguished himself in all the four major Panhellenic games: *viz.* Glaukos the pugilist (Simon. fr. 4, *PMG*; Dem. 18.319) who in 520 won one victory in the Olympic Games (*Olympionikai* 134), and then two in the Pythian, eight in the Nemean, and eight in the Isthmian Games (Paus. 6.10.1–3).

Karystos struck coins of silver c.550–445 and of silver and bronze c.411–336 (the chronology is based on the traditional date of the Athenian Coinage Decree and on the belief that Greek *poleis* stopped minting coins during the Makedonian supremacy). (1) Silver: denominations: tetradrachm, didrachm, drachm, hemidrachm and fractions down to trite-morion. Types: *obv.* ox scratching itself with its horns or cow suckling calf or forepart of bull or bull's head; or head of Herakles; *rev.* incuse square or cock in incuse square or bull or palm tree(s). Legend: *KAPYΣ* or shorter forms down to *K*. The *obv.* of one Archaic tetradrachm has *KAPYΣTIO[N]*. (2) Bronze in C4: *obv.* head of Herakles or head of Athena; *rev.* bull's head or palm. Legend: *KA* (Head, *HN² 356–57*; Wallace (1968); *SNG. Cop. Aetolia-Euboea 414–18*).

374. Orobiai (Orobieus) Map 55. Lat. 38.50, long. 23.15. Size of territory: 1? Type: A. The toponym is *'Oροβιαί, αί* (Thuc. 3.89.2; *IG I³ 418a.6*). The city-ethnic is *'Oροβιεύς* (*IG XII.9*

923.2–3). In the notes to the Budé edn. of Diod. 15, Vial suggests that *'Ωρωπίων* (30.3) and *'Ωρωπίους* (30.4) may be corruptions of *'Oροβίων* and *'Oροβίους*. It seems better to obelise the MSS readings and to leave the mystery unsolved. Orobiai is called a *polis* in the urban sense at Thuc. 3.89.2.

Orobiai was situated at modern Rovies and was famous for its oracle of Apollo Selinuntios (Strabo 10.1.3; Steph. Byz. 376.3–4). At Thuc 3.89.2 Orobiai is described as a *polis* which was partly engulfed by the great seismic sea wave of 426. We know from other sources that a large part of Histiaia/Oreos (no. 372) was destroyed by the same disaster (Demetrias of Kallatis (*FGrHist 85*) fr. 6; Fossey (1990) 183–84).

An Attic inscription of c.430–410 shows that Orobiai was situated in the territory of Histiaia/Oreos (no. 372) (*IG I³ 418a.6*). The individual use of the ethnic *'Oροβιεύς* is attested twice in a C5 inscription (*IG XII.9 923.2–3*; *AE* (1963) 5). Histiaia/Oreos was organised into tribes and demes (*supra* 656); but the stone inscribed with *IG XII.9 923* was found in Chalkis (no. 365), not in the Histiaia/Oreos area, which points to the ethnic being a city-ethnic rather than a demotic. Knoepfler (by letter) suggests that it may be a *pierre errante*, inscribed by the Athenians settled in Histiaia/Oreos. In Hellenistic inscriptions from the Histiaia/Oreos area, however, *'Oροβιεύς* is attested again, and now indisputably as a demotic (*IG XII.9 1186.3, 1189.27, 37*). Like Athenai Diades (no. 364), Dion (no. 368), Poseidion (no. 376), and perhaps some others as well, Orobiai may in C5 have been a dependent *polis* lying inside the territory of Histiaia/Oreos but transformed into a Histiaian deme in the course of C4 or C3 (Hansen (1997) 31, (2000) 209–10).

Some ancient remains have been found in the neighbourhood of Palaiochori, Ag. Iannako, but there are a few traces only of the ancient town. It was probably situated at Ag. Ilias north of Rovies where some sherds of C4 have been found (Sackett *et al.* (1966) 46–47, fig. 5).

375. *Peraia (Peraeus) Map 55. Unlocated. Type: C. The toponym **Περαία* is not attested in any source but reconstructed from the demotic *Περαεῖς* (*IG XII.9 249B.138* (C3)) and the adverbial form *Περαόθεν* (*IG XII.9 249B.445*). Peraia was a deme of Eretria (no. 370) and is not called a *polis* in any source, but an analogy with Grynchai (no. 371) and Styra (no. 377) indicates that it was a *polis* down to c.400.

The Eretrian C3e lists of citizens show that the members of three of the demes, *viz.* Grynchai, Peraia and Styra, did not belong to one *phyle* but were distributed among all the six *phylai* (Knoepfler (1997) 396–403). The evidence for Peraia is *IG XII.9 245A.11* (*phyle* 1), 246A.6 (*phyle* 2), 247.2

(*phyle* 3), 249B.138–49 (*phyle* 4). In the case of Styra and Grynchai the most likely explanation of this anomaly is that both settlements had been *poleis* which were amalgamated with Eretria in C5l–C4e and integrated into the pre-existing organisation of Eretrian citizens into six tribes. By analogy, it seems reasonable to infer that Peraia too was once a *polis* which had been absorbed by Eretria c.400. By contrast with Grynchai and Styra, however, Peraia is not recorded in the Athenian tribute lists as a member of the Delian League. By letter, Knoepfler suggests a possibility that Peraia be identical with the *Διάκριοι ἐν Εὐβοίαι* (no. 367), attested as members of the Delian League.

376. Posideion (Posideites) Map 55. Lat. 39.00, long. 23.20, but Knoepfler (1999) 230 n. 3 now suggests locating Posideion further north at modern Helleniko. Size of territory: unknown but presumably 1 or 2. Type: C. The toponym is *Ποσίδειον, τό* (IG I³ 71.1.91–92). The city-ethnic is *Ποσειδότης* (IG XII.9 1189.20, 28, 39 (C2)). Posideion is not called a *polis* in any source, but the attestation of the community in the C5 Athenian assessment decrees is an indication of *polis* status. Posideion, further described as *Ποσίδειον ἐν Ἐυβοίαι*, was assessed for *phoros* in 425/4 (IG I³ 71.1.91–92: 100 dr.). The only other reference to the community is in a C2 catalogue of citizens of Histiaia/Oreos (no. 372), in which *Ποσειδότης* appears as a demotic (IG XII.9 1189.20, 28, 39 (C2)). The change from *polis* to deme of Histiaia/Oreos may have taken place in C4f (Moggi, *Sin.* 236–37; see *supra* 656). The precise location is unknown. Philippson (1951) 577 n. 1 and Sackett *et al.* (1966) 42, followed by Barr., suggest Vasilika, Palaiokastro.

377. Styra (Styreus) Map 58. Lat. 38.10, long. 24.15. Size of territory: unknown but presumably 1 or 2. Type: [A]. The toponym is *Στύρα, τά* (Hom. *Il.* 2.539; Dem. 21.167; Strabo 10.1.6). The city-ethnic is *Στυρεύς* (ML 27.9, 479; Hdt. 8.46.4; Thuc. 7.57.4). Steph. Byz. 588.14 is the only source in which Styra is explicitly called a *polis*; but at Hdt. 8.46.4 it is subsumed under the heading *polis*, where *polis* occurs in the political sense (Hdt. 8.42.1, 49.1). Furthermore, the attestation of the community in the Athenian tribute lists is an indication of *polis* status, as is the peculiar incorporation of the Styreans into all six *phylai* of Eretria (no. 370) (*infra*). The collective and external use of the city-ethnic is attested on the Serpent Column (ML 27.9), in the Athenian tribute lists (*infra*) and in literature (Hdt. 8.46.4; Thuc. 7.57.4). The individual and external use is attested only as a demotic (*infra*).

The exact location of Styra is not known, but it must have been situated near modern Nea Styra (Knoepfler (1997) 365;

Reber (2002) 43–45). The size of the territory is unknown. The northern frontier towards Zarex and Dystos (no. 369) cannot be determined. The southern frontier, on the other hand, is attested by a boundary stone inscribed on a rock south-east of modern Styra (*ΟΡΟΣ ΔΗ[μου]*: Moutsopoulos (1982) 340, where the Δ is misread as a Λ; cf. Reber (2002) 45). Styra controlled a small island called Aiglea (Hdt. 6.107.2). At Mt. Ag. Nikolas/Kliosio, east of Styra, are the remains of an ancient fortification wall and a gate, probably a fortress for the defence of the southern frontier of Styra and perhaps of the territory of Eretria (Reber (2002)). Cults of Zeus Hypsistos (IG XII.9 59) and Zeus Soter (IG XII.9 58) are attested, as well as a cult of Asklepios (IG XII.9 57 (C4)) and of the Kytherian goddess, i.e. Aphrodite (Knoepfler (2001) 244–45 with n. 337 (C4?)).

In 480 the Styreans provided two triremes at Artemision (Hdt. 8.1.2) and at Salamis (Hdt. 8.46.4). Together with Eretria (no. 371) they provided 600 hoplites at Plataiai (Hdt. 9.28.5) and are duly recorded on the Serpent Column (ML 27.9).

Styra was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (IG I³ 269.v.29) and is recorded in the tribute lists from 450/49 (IG I³ 263.iv.28) to 429/8 (IG I³ 282.III.21), a total of eleven times, three times completely restored, paying a *phoros* of 1 tal. (IG I³ 263.iv.28). It was assessed for tribute in 425/4 (IG I³ 71.1.74: 2 tal.), and in 413 Styra was still listed among the paying members (Thuc. 7.57.4).

Some 500 lead tablets were found in 1860 in the territory of Styra (IG XII.9 56 with add. p. 176; cf. *SEG* 42 794). They were inscribed in C5f with names, mostly in the nominative. Sometimes another name is added (a patronymic in the nominative?) and/or an abbreviation which presumably indicates a kind of civic subdivision (e.g. *MA* or *MAP*, nos. 167, 210, 395, 405, 433). There are signs of reuse. The tablets are probably identification cards of Styrean citizens, to be used for sortition and similar purposes (Masson (1992) 61–72; Murray (1997) 499).

In the Hellenistic period Styra is attested as a deme of Eretria, belonging to the second district (Knoepfler (1997) 383, 402). The Styreans were divided among all six Eretrian *phylai* (IG XII.9 245A.36, 246A.36, 247.1.17 (C3e); cf. Knoepfler (1997) 393–400). In the Athenian decree of 378/7 (IG II² 43) the Styreans are not listed as members of the Second Athenian Naval League, and the presumption is that the change of status from *polis* to deme took place in C5l or C4e (Knoepfler (1971) 242–44; Moggi, *Sin.* 227–33). During the Lamian War (323/2) Styra was conquered and destroyed by the Athenians (Strabo 10.1.6; cf. Knoepfler (1971)).

EAST LOKRIS

THOMAS HEINE NIELSEN

I. The Region

The name of the region is *Λοκρίς*, ἡ (without attribute), mostly used in such a way that it is clear from the context that the reference is not to West Lokris (Thuc. 2.32.1; Ar. *Av.* 152; Xen. *Hell.* 3.5.3). The ethnic is *Λοκρός*. Collectively and unqualified it is used in Hom. *Il.* 2.527, Hdt. 7.132.1 (on which see Macan *ad loc.*), Thuc. 2.9.2 (on which see *HCT*) and Xen. *Hell.* 3.5.4, again mostly in such a way that confusion with the West Lokrians is avoided. However, the collective ethnic is often qualified: *Λοῦροὶ οἱ ὑποκναμίδιοι* is found internally (and presumably in opposition to *Λοῦροὶ οἱ Φεσπάριοι*) in ML 20 (500–450) and on C41 coins (*BMC* Locris nos. 38–40; Babelon, *Traité* ii.3 no. 438); less well attested is *Λοκροὶ οἱ Ἐπικναμίδιοι*, which may, however, have been used by Hellan. fr. 12 (= Steph. Byz. 78.16–17), and is found in Diod. 16.38.3 (r352) and on C41 coins (*BMC* Locris nos. 71–76; Babelon, *Traité* ii.3 no. 456; *SNG Cop. Aetolia-Euboea* nos. 74–76); finally, *Λοκροὶ οἱ Ὀπούντιοι* is found in the historians (Hdt. 7.203.1, 8.1.2; Thuc. 1.108.3, 2.32.1, 3.89.3; Xen. *Hell.* 3.5.3, 4.2.17; Ephor. fr. 138a (*apud* Strabo 6.1.7), fr. 138b (= Ps.-Skymnos 312); Diod. 11.83.2 (r456)). The latter designation is used by outsiders, certainly in recognition of the predominance of Opous (no. 386) within the region; of the two former designations, *Ἐπικναμίδιος* may have been used both broadly to refer to all East Lokrians and more narrowly to refer to those living in that part of the region that lay north-west of Opous (for details, see Nielsen (2000) 103–7), whereas *Ἐπικναμίδιος* may have been used narrowly about the region around Opous (cf. *Etym. Magn.* 360.32); in any case, it cannot be shown that the Epiknemidians and the Hypoknemidians formed two separate political groups within the region in the Archaic and Classical periods (Nielsen (2000) 108–18).

I would like to thank Dr. B. Forsén and Dr. M. H. Hansen for commenting on a draft of this inventory; Prof. T. V. Buttrey for help with the coins noted under Larymna, and mag. art. R. Frederiksen for discussing the walls of Halai with me. I dedicate this contribution to my teachers Gorm Tortzen and Mogens Herman Hansen, the best there are.

In order for us to be able to distinguish an individual described as a *Λοκρός* as an East Lokrian in contradistinction to a West Lokrian, *Λοκρός* must be qualified by, e.g., the city-ethnic of an East Lokrian city; such qualifications of the ethnic are fairly frequent: *CID* II 43.22: *Λοκρών· Σμῆ[νου] Ὀπουντίου* (340/39); *CID* II 97.24–25: *Ἀγησίλαι Αἰνησία [Λο]κρῶι Ὀπουντί[ω]ι, Ἀγίαι Ἀριστάρχου Λοκρῶι Θρονιεῖ* (327/6); see also *CID* II 74.I.37, 51, II.28 (337/6); *CID* II 76.II.30 (335); *CID* II 82.24 (333/2).

Χώρα is used about the territory at Ps.-Skylax 60 and Diod. 12.65.5 (r424), and *γῆ* at Diod. 16.25.2 (r353); apart from Ps.-Skylax 60, no Archaic or Classical source applies the term *ἔθνος* explicitly to the East Lokrians, but they were probably considered an *ethnos* like the West Lokrians (*Hell. Oxy.* 21.3, Chambers) and must be included among the Lokrians mentioned at Aeschin. 2.116 as an *ethnos* which was a member of the Delphic Amphiktyony; the Lokrians sent two *hieromnemes* to the Amphiktyonic Council (e.g. *CID* II 36.I.30–1 (343–340)); of these two, one came from West Lokris, and one from East Lokris (e.g. *CID* II 43.22–23 (340/39); *CID* II 74.I.37–38, II.28–29 (337/6); *CID* II 76.I.22–23 (335)), and in C4 he came invariably from Opous (no. 386), the chief city of the region (see further Nielsen (2000)).

According to Hdt. 7.216, Alponos (no. 379) was the first of the *Lokrides poleis* as one approached from Malis, which means that the border must have run between Anthele (no. 427) and Alponos. There is no explicit evidence for the border with Boiotia, but it must have run north of Boiotian Hyettos (no. 207) and Kopai (no. 209) (cf. 431); Kyrtones, which is treated as Boiotian in the present work (see *supra* 435; for the proposed sites, see Fossey (1990) 52–57, and Katsonopoulou (1990) 71–86), is indeed described as Boiotian by late sources (Paus. 9.24.4; Steph. Byz. 398.9); but since regional affiliations are known to have been subject to changes in southern East Lokris (Lokrian sites becoming Boiotian: Goldman and Walker (1915) 420–22), Kyrtones may perhaps have been East Lokrian in the Classical period, but certainty is impossible. The same is

true of Korseia, which is counted as East Lokrian here (cf., however, Étienne and Knoepfler (1976) 37–38, 39). In the south-west, Ps.-Skylax 60 lists Larymna (no. 383) as the first East Lokrian *polis* μετὰ . . . Βοιωτούς; however, Anchoe further south must have belonged to East Lokris as well (Fossey (1990) 27–32). The border with Phokis was Mt. Knemis. On the southern ridge of Mt. Knemis were the sanctuaries of Athena Kranaia and of Artemis Elaphebolia; the former belonged to Phokian Elateia (no. 180) (Philipsson (1951) 351), the latter to Phokian Hyampolis (no. 182) (*SEG* 37 422–23). According to Strabo (9.3.1, 3.17), Daphnous, a coastal site in East Lokris, once belonged to Phokis. Unfortunately, the Phokian seizure of Daphnous cannot be dated (cf. *RE* suppl. iii, s.v. Daphnous col. 326). It should, however, be noted that Ps.-Skylax 61 gives the following list of Phokian (*sic*) *poleis*: Θρόνιον, Κνήμις, Ἐλάτεια, Πανοπέυς. Since Thronion (no. 388) is commonly regarded as East Lokrian (Thuc. 2.26.2), but is here treated as Phokian, it is possible that Phokis at the time of composition controlled Thronion, and thus presumably Daphnous, etc., at the same time and then in C4. Another possibility is that the transmitted text of Ps.-Skylax is not sound, and that Θρόνιον is a corruption of Τιθρόνιον (cf. Nielsen (2000) 108); if that is accepted, we will have a list of exclusively Phokian localities, opening with a *polis* (Teithronion (no. 194)), going on to a mountain (Knemis), and ending with two *poleis* (Elateia (no. 180) and Panopeus (no. 190)), a list which then resembles, e.g., the one found in Ps.-Skylax 62: *Thermopylai* (a pass), *Trachis* (a *polis* (no. 432)), *Oite* (a mountain), *Herakleia* (a *polis* (no. 430)), *Spercheios* (a river); see further Flensted-Jensen and Hansen (1996) 141. This emendation will remove the only scrap of (indirect) evidence for the date of the Phokian seizure of Daphnous.

Our written sources provide us with information about eighteen¹ East Lokrian settlements of the Archaic and Classical periods.² Of these, seventeen have been identified,

¹ Pritchett (1985) 171 suggests “that Homeric Tarphe and Classical Naryka are the same, and that Pharygai did not exist as a Lokrian city”. But see Buckler (1989) 95–96, who also denies Pharygai to East Lokris, and doubts the existence of Tarphe in historical times. The number eighteen for known settlements includes Mendentsa, tentatively identified as Argolas, following Buckler (1989) 41–42. *I.Delphes* III.1 102 is a Delphic proxy decree of c.315–280 for a man described as Λοκρὸς ἐγ Βουμάτου; it is uncertain whether Boumatos was West or East Lokrian; cf. Lerat (1952) i.72. In *Certamen Homeri et Hesiodi* 226–32 an *Oiónē* is ascribed to East Lokris, certainly by mistake; cf. Lerat (1952) i.45.

² Two sites mentioned in the Homeric Catalogue of Ships are not mentioned by other Archaic or Classical sources and have not been located: (1) Augeiai (*Ἀύγειαί*); it is believed that this site may be referred to in C4 in *BCH* 19 (1895) p. 402 l. 16, but the toponym is heavily restored; (2) Bessa (*Βήσσα*) (Hom. *Il.* 2.532); for a possible candidate with C remains, see Dakoronia (1993) 126. In

with very varying degrees of certainty (Buckler (1989) 93; Fossey (1990) 94–95; Pritchett (1982) 123–75, (1985) 166–89, (1992) 145–55; Dakoronia (1993); Coleman (1998)), the topography of the area being far from completely clear. One ancient toponym is still unlocated,³ whereas we have remains of a Classical settlement⁴ that cannot be convincingly matched with any ancient toponym.⁵ Thus we know of nineteen Archaic and Classical settlements altogether.⁶ Eleven are described in the Inventory below, which comprises every East Lokrian settlement that was certainly (type A), probably (type B), or possibly (type C) a *polis*. The other eight settlements are as follows.

1. Pre-Hellenistic Settlements not Attested as Poleis

Anastasis (AC toponym unknown, late toponym perhaps *Ἀνάστασις*) Hierokles *Synekedsmos* (*πόλις*); Fossey (1990) 62–65, but see also Coleman (1998); cf. also Blegen (1926) and Dakoronia (1993) 117. *Barr.* AC.

Anchoe (*Ἄγχόη*) Strabo 9.2.18 (*τόπος*); Fossey (1990) 27–32. C.

***Boumelitaia** (ancient toponym not transmitted; *F.Delphes* III.1 362 + III.4 354 (C2) has τῆι πόλει Βου[μελιταί]ων) *F.Delphes* III.1 362 + III.4 354 (*πόλις* (C2)); *RE* suppl. iii. 219–20; Étienne and Knoepfler (1976) 41–44; Fossey (1990) 44–50; Katsonopoulou (1990) 100–12. *Barr.* AC.

addition, Lycoph. *Alex.* at 1147 mentions *Φαλωρίας* (= Steph. Byz. 657.3: *Φαλωρίας, πόλις Λοκρίδος*) and at 1149 *Πυρωναία* (= Steph. Byz. 541.13: *Πυρωναία, πόλις Λοκρίδος*, and 541.7: *Πυρρηναία, πόλις Λοκρίδος*, “an obvious doublet” (Fossey (1990) 172)). Since neither of these can be matched with a known site (Fossey (1990) 168), it is impossible to know whether they existed in our period, or whether they are legendary.

³ This is Skarpeia, probably in the plain of Molos; *Barr.* 54 has tentatively placed Skarpeia at modern Molos, a site with AC remains. See, however, Buckler (1989) 94–95; cf. Pritchett (1992) 145–48.

⁴ At Rousiana, see Dakoronia (1993) 126, who thinks it may be Homeric Bessa. This may be Fossey’s Golemi (Fossey (1990) 180–82).

⁵ Fossey (1990) discusses several sites which have not made it on to *Barr.* map 55. Some of these are probably left out because their toponym is unknown or because they formed part of a larger settlement; see e.g. the discussion of the site at Martinon (Fossey (1990) 33–35), believed to be a part of Larymna; such sites I have not counted here, though they are mentioned in the Inventory if appropriate. See further Fossey (1990) 49 (Tragana), 50 (Mito peninsula: C), 51 (Anderas), 76–78 (Megaloplatanos), 79–80 (Skanderaga: AC), 85–86 (Villovo: AC), 87 (Palaiokastro Livanaton), 88–90 (Arkitsa).

⁶ In addition to settlements, we have some information on military installations, e.g. *Oion* (*Οἶον*): Strabo 1.3.20 (*φρούριον* (r426); C (Fossey (1990) 66–67); *Prophitis Elias* at *Megaloplatanos* (ancient toponym unknown): C (Fossey (1990) 78); Fossey (ibid.) calls the site an “obviously temporary and essentially military” one. On military installations etc. in the southern part of the region, see Fossey (1990) 138–50.

Daphnous (*Δαφνοῦς*) Strabo 9.3.1 (*πόλισμα*), 9.3.17 (*πόλις*); Steph. Byz. 222.14 (*πόλις*). *Barr.* AC.

Kalliaros (*Καλλίαρος*) Hom. *Il.* 2.532; Hellan. fr. 13 (= Steph. Byz. 349.8: *πόλις Λοκρῶν κτλ.*). Fossey (1990) 75; cf., however, Dakoronia (1993) 120–24. *Barr.* CH.

Korseia (*Κόρσεια*) Taken to be East Lokrian by Oldfather in *RE* xi. 1438; see also Coleman (1998); cf., however, Étienne and Knoepfler (1976) 37–38, 39; Paus. 9.24.5 calls it a *πόλισμα*, but presumably takes it to be Boiotian; see the remarks about Kyrtones above. For Dem. 19.141, see Hansen (1996) 83. Fossey (1990) 58–61; Katsonopoulou (1990) 86–99. *Barr.* C.

2. Unidentified Settlements

Mendenitsa (possibly the ancient toponym was *Ἀργόλας* (Diod. 16.30.4 with Buckler (1989) 41–42)) Diod. 16.31.1 (for which see Buckler (1989) 41–42). Pritchett (1982) 167–68, Buckler (1989) 41–42. *Barr.* C.

Roustiana Dakoronia (1993) 126. Not in *Barr.*; C.

It is difficult to say whether any of these sites were *poleis*; the site identified as Anastasis is perhaps a candidate, since it was clearly a substantial town (Dakoronia (1993) 117), but it must be emphasised that it is extremely difficult to deduce *polis* status from archaeological evidence. On the other hand, some of the communities described as *poleis* in the Inventory below might perhaps be omitted: *viz.* Knemides (no. 381) and Nikaia (no. 385). But even allowing for some uncertainty, the Inventory points to the conclusion that more than two-thirds of all known East Lokrian settlements were organised as *poleis* either throughout the Classical period or at least for some time within that period.

The plurality of *poleis* in East Lokris is acknowledged by several sources (ML 20 with Larsen (1968) 51–52; Hdt. 7.216; Ps.-Skylax 60; Diod. 16.38.3 (r352); see also Ap. Rhod. 4.1780: *῾Οπούντιά τε ἄστρα Λοκρῶν*). It is commonly assumed that these *poleis* were united in a confederacy (on which see Larsen (1968) 48–58) that probably comprised the whole region (Nielsen (2000) 117, although pointing out that the nature of the organisation attested in ML 20 is not clear (115)). ML 20 shows that this “confederacy” was in existence by 500–450, and Fossey (1990) 161 thinks that this unit possibly existed by the later Archaic period, which is clearly the implication of *SEG* 41 506 (C6–C5) if the Lokrians who concluded that treaty with the Boiotians were the East Lokrians. The leading *polis* of the region and of the “confederacy” was

without doubt Opous (no. 386), and this city may have turned (some of) the other *poleis* into its dependencies (Nielsen (2000) 111–14; *infra* s.v. Alponos (no. 379)).

During the Persian Wars the attitude of the East Lokrians was ambiguous: according to Hdt. 7.132 the East Lokrians gave earth and water to Xerxes, but they nevertheless fought *πανστρατιῆ* at Thermopylai (Hdt. 7.203.1) and supplied seven *pentekonteroi* for the Artemision campaign (Hdt. 8.1.2); after Thermopylai they joined the Persians (Hdt. 8.66.2). During the Peloponnesian War the East Lokrians were allied to Sparta (no. 345) (Thuc. 2.9.2–3, on which see *HCT*), but they joined the anti-Spartan side in the Corinthian War (Xen. *Hell.* 4.2.17, 3.15). In the Third Sacred War the East Lokrians opposed the Phokians, and their territory saw much hard fighting (Diod. 16.29.1; Buckler (1989), e.g. at 93–97).

On the status of those settlements which were not *poleis* we can only hypothesise. A fair hypothesis would be that they were *komai*: *kome* is actually applied to Alponos (no. 379) by Herodotos (7.176.5), and though Alponos was probably a *polis* (see Inventory), other settlements may well have been *komai*, although no individual settlement is so described; however, Lerat (1952) II.44 and Tuplin (1993) 69 n. 13 take the general reference to Lokrian *komai* at Xen. *Hell.* 4.3.22 to refer to East Lokris.

II. The *Poleis*

378. Alope (Alopaioi) Map 55. Lat. 38.45, long. 22.55 (Fossey (1990) 91–92). Size of territory: probably 1, perhaps 2. Type: [A]. The toponym is *Ἀλόπη, ἡ* (Thuc. 2.26.2). The city-ethnic is *Ἀλοπαίως* (*IG* IX.1 222 (C3–C2); cf. Lerat (1952) i.15 n. 1).

At Ps.-Skylax 60, where *polis* is used in the urban sense, Alope is the last of four toponyms listed between the heading *πόλεις αἴδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πολλαὶ Λοκροῖς*. For a retrospective attestation of *polis* in the urban sense, see Diod. 12.44.1 (r430). The only occurrence of the ethnic is external and individual (*IG* IX.1 222 (C3–C2)), a grant of proxeny to an *Alopaioi* by Teithronion (no. 194).

Thuc. 2.26.2 suggests that the toponym (*Ἀλόπη*) may have designated the territory as well; a battle (*μάχη*) was fought there in 431 (*ibid.*), but apart from that we have no evidence about the territory and only a little about the city. According to Demetrios of Kallatis (*FGrHist* 85) fr. 6 = Strabo 1.3.20, Alope suffered seriously from the earthquake of 426 (Fossey (1990) 183–84). The city was centred on

a flat-topped, fortified hill; the polygonal circuit wall has not been dated, but may belong to C6 (ibid. 140–41); it enclosed an area measuring $c.165 \times 70$ m, within which building remains and Archaic and Classical sherds as well as tiles attest to activity (Pritchett (1982) 148–49; Fossey (1990) 91–92). The lower city lay at the northern foot of the hill and shows extensive Archaic and Classical structures (Haas (1998) 110–12).

379. Alponos (Alponios) Map 55. Lat. 38.50, long. 22.35. Size of territory: 1 or 2. Type: A. Herodotos gives the toponym as *Ἀλπηνοί*, *οἱ* at 7.176.2, but as *Ἀλπηνός*, *ῆ* at 7.216; *Ἀλπωνός* is found in Aeschin. 2.132, 138, and was possibly used by Hellan. fr. 12 (= Steph. Byz. 78.15–16) and Demetrios of Kallatis (*FGrHist* 85) fr. 6 = Strabo 1.3.20. An ethnic derived from the latter toponym, *Ἀλπώνιος*, is found in *CID* II 126.1 (C3) and *Syll.*³ 419 (C3f), both external and individual uses.

Alponos is described as a *polis* at Hdt. 7.216.2, but as a *kome* at Hdt. 7.176.5, an inconsistency which is difficult to explain. Another site in the same general area, Anthele (no. 427), is similarly described both as a *polis* (Hdt. 7.176.2) and a *kome* (Hdt. 7.200.2). So, if there is an explanation, it may be one that is peculiar to this general area, such as the modest size of the settlements. In the case of Alponos, it is also possible that its classification as a *kome* is a reflection of dependent status (cf. Hansen (1995a) 73–75), and it may be suggested that the city was dependent on Opous (no. 386), the leading city of the East Lokrian “confederacy” (see *infra*). Strangely, though, Steph. Byz. 78.12–13 reports (without source reference) that Alponos was *μητρόπολις Λοκρῶν*. The city served as a base for the Greeks during the Thermopylai campaign (Hdt. 7.176.5, 229.1).

Alponos is poorly attested: there is no evidence about its territory, and only a little about the city. According to Demetrios of Kallatis (*FGrHist* 85) fr. 6, as reported by Strabo 1.3.20, Alponos suffered seriously from the earthquake of 426 (Fossey (1990) 183–84). The fragment, moreover, refers to a *pyrgos*, which was one of several such constructions at the harbour of Alponos (*πύργον τῶν ἐλλιμενίων*). The reference may indicate that the city was walled (Pritchett (1982) 160). In C5 Alponos was probably centred on a walled acropolis to the east of Thermopylai (for which see Pritchett (1982) 160–61 and (1992) 148–50), but the city was possibly relocated uphill to a new site after the earthquake of 426 (Pritchett (1982) 164; but see Buckler (1989) 93–94); Pritchett (1982) 164–66 describes the probable new site as a walled city.

The celebration of *Thesmophoria* is attested in Demetrios of Kallatis (*FGrHist* 85) fr. 6 = Strabo 1.3.20 (r426).

380. Halai (Haleeus) Map 55. Lat. 35.40, long. 23.10. Size of territory: probably 2. Type: B. The toponym is not found in Archaic or Classical sources, but Strabo 9.2.13 and 4.2 (MS *ἄλλαι*) has been emended to read *Ἁλαί*, *αἱ* (cf. Plut. *Sull.* 26.3–4; Paus. 9.24.5; Steph. Byz. 68.5). The ethnic is *Ἁλεεύς* (*AJA* 19 (1915) 442–44 no. 2 (C5f)).

The earliest sources to classify Halai as a *polis* are two Hellenistic inscriptions: *AJA* 19 (1915) no. 3.2 (206/5) and no. 4.2 (208/7, restored), where the term is used in the political sense; however, the city deserves inclusion in this Inventory as a type B since (i) *AJA* 19 (1915) 442–44 no. 2 (C5f) testifies to the existence of a board of three eponymous *archontes* (cf. Sherk (1990) 244); (ii) the internal collective use of the ethnic is attested in the same inscription and sub-ethnics are unknown in East Lokris; (iii) the city had a cult of Athena Poliouchos in C6s (*AJA* 19 (1915) 439–42 no. 1); though the *polis* element of this (and similar) epithet(s) may originally have meant *akropolis* (Cole (1995) 301–5), the absence of a proper acropolis at Halai (see *infra*) indicates that *Poliouchos* should here be taken as the “Possessor of the *polis*”, not of the *akropolis* (Hansen (1995b) 32–33).

Halai must originally have formed part of East Lokris,⁷ but in C3 the city was part of Boiotia (cf. *AJA* 19 (1915) no. 3); exactly when the regional affiliation changed is unknown, but it may have been as early as C4m (so Goldman and Walker (1915) 420–21; cf. Argoud (1997) 254). The evidence on Halai relates mostly to the city, not the territory. The “acropolis” of Halai “hardly deserves the name of acropolis, for at no point does it rise more than four metres above the level of the bay” (Goldman (1940) 382; cf. Argoud (1997) 255–56). This “acropolis” was fortified, and the preserved remains belong to two main periods of construction. The earlier fortification was built *c.*600 or slightly earlier (Goldman (1940) 430; cf. Fossey (1990) 40) at the “foundation” of the site. Constructed in large rough polygonal blocks of limestone, the wall had an average width of 3.10 m and had at least three circular towers. It enclosed *c.*0.7 ha (calculated on the basis of fig. 6 in Fossey (1990)). This initial fortification was repaired in C5 (McFadden (2001) 62), and the second main period of construction, dating to *c.*350–330 (Goldman (1940) 396; McFadden (2001) 68) or

⁷ This is generally (and rightly) assumed, though no Archaic or Classical source states so explicitly; it can, however, be deduced from Ps. Skylax 60, which enumerates the cities of the (East) Lokrians from south to north, beginning with Larymna and ending with Alope; if Larymna was Lokrian, so must Halai, situated between Larymna and Alope, have been.

C41 (Fossey (1990) 41; McFadden (2001) 62, 68) enlarged the enclosed area to c.0.85 ha (Goldman (1940) 388), the new sections being constructed in isodomic ashlar in *emplektron*. The acropolis was bisected by a street running from north-west to south-east in the Archaic period. Buildings aligned with both the main street and the Archaic fortification wall have been found, suggesting the existence of a substantial Archaic community within the acropolis circuit (Coleman (1992) 274–75; cf., however, *AR* (1992–93) 49–50). No Classical remains have yet been found on the acropolis (Coleman (1992) 275). The surface survey carried out by the Cornell Halai East Lokris Project team revealed traces of a C4 or Hellenistic circuit wall surrounding a lower town and enclosing an area of c.12–13 ha (Coleman (1992) 268 with fig. 2). The cemetery was situated to the north and east of the acropolis, probably along the main route to the site; here more than 280 graves have been found, with the earliest dating to C6m and several to C5 (Goldman and Walker (1915) 424, 429; cf. also *ArchDelt* (1987) B.1 *Chron.* 228–31).

The epithet [Πολι]δ[ο]χ[ος] is found in a C6s inscription (Goldman (1940) 401 = *AJA* 19 (1915) 439–42 no. 1), from a C6e precinct of Athena on the acropolis that included a small C6e temple. This sanctuary was completely reconstructed in C6l–C5e, and a new splendidly decorated temple was erected on a bastion engaging the western part of the circuit (Goldman (1940) 452–54; cf. Wren (1996) 17–59, arguing that the temple was destroyed c.480, possibly by the Persians); the dedication of the temple is commemorated by *AJA* 19 (1915) 442–44 no. 2: *Ἡαλέες ἀνέθεσαν τ' Ἀθάναι* (C5f). For the possibility of a hero cult of the city-founder on the acropolis, see Wren (1996) 60–84.

381. Knemi(de)s Map 55. Lat. 38.45, long. 22.50. Size of territory: probably 1. Type: [A] (?). Knemis was the mountain range dividing Phokis from East Lokris (Oldfather (1922b) 909), but also the name of a promontory (Serv. *Aen.* III 399). According to Strabo 9.4.4, there was on the coast of East Lokris a *χωρίον ὄχυρόν* by the name of *Κνημίδες*; in Ps.-Skylax 61 we find the following list of Phokian (*sic*) *poleis*: *Θρόνιον, Κνήμις, Ἐλάτεια, Πανοπέυς*. Unless we accept the emendation proposed above (665), then, since Thronion (no. 388) was in East Lokris (Thuc. 2.26.2), the Knemis listed here may be Strabo's Knemides, and unless Ps.-Skylax has here included a promontory in a list of *poleis*, which is not at all impossible (cf. Flensted-Jensen and Hansen (1996) 140–42), it may be presumed that he has confused the name of the promontory with the name of a settlement (so Oldfather (1922a) 908). If so, he classifies

Knemides as a *polis*. There is, however, no evidence to support this classification. For the probable site, see Pritchett (1985) 187–89 with fig. 9.

382. Kynos (Kynios) Map 55. Lat. 38.45, long. 23.05. Size of territory: 1 or 2. Type: A. Location: see *infra*. The toponym is *Κύνος, ἡ* (Hom. *Il.* 2.531). According to Steph. Byz. 393.22–23, the city-ethnic was *Κύνιος* or *Κυναιός*; attested only in a Roman-date epitaph from Attika commemorating *Ἀρμωδία Κυνία* (*IG* II² 9118).

Kynos is called a *polis* in the urban sense by Hecat. fr. 131 (for which see Hansen (1997) 17, 23–24) and by Ps.-Skylax 60, where, reading *Κύνος, Ὀπούς* for MS *Κυνοσοῦρος*, Kynos then appears as the second of four toponyms listed between the heading *πόλεις αἶδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πολλαὶ Λοκροῖς*.

Kynos is poorly documented, and its location is debated. According to Fossey (1990) 81, the focus of ancient Kynos was the Pyrgos hill 2 km north of modern Livanates (and the city may have included the sites at Arkitsa and Villovo; cf. Fossey (1990) 85–90). The Pyrgos hill-top measures 200 × 70 m and is crowned by a Hellenistic fortification wall; a harbour lies just north of Pyrgos and may have included a temple (Fossey (1990) 81–83). Hope Simpson and Lazenby (1970) 47 reported Archaic and Classical sherds from the Pyrgos area. However, Dakoronia (1993) 125–26 suggests that Pyrgos was simply the harbour site of Kynos, while the city proper was at Palaiokastro, 2.5 km south-east of Pyrgos: here are “many rich graves of the Classical period” and an extensive and fortified acropolis which was the centre “of a large and important town”. According to Demetrios of Kallatis (*FGrHist* 85) fr. 6 *apud* Strabo 1.3.20, Kynos suffered seriously from the earthquake of 426 (Fossey (1990) 183–84).

Late sources such as Strabo 9.4.2 and Paus. 10.1.2 describe Kynos as merely the harbour of Opous (no. 386), but Oldfather (1925) 32 believes that Kynos was originally more than that. According to a tradition preserved in Strabo 13.1.68, Kanai on Lesbos was a *πολίχμιον Λοκρῶν τῶν ἐκ Κύνου*.

383. Larymna (Larymnaios) Map 55. Lat. 38.35, long. 23.15. Size of territory: 1 or 2. Type: [A]. The toponym is *Λάρυμνα, ἡ* (Ps.-Skylax 60; *SGDI* 2593 (273)). The city-ethnic is *Λαρυμναῖος* in *CIG* II 1936 (Hell.) and *Λαρυμνεύς* in *IG* IX.1 235.4 (C2–C1).

In Ps.-Skylax 60, where *polis* is used in the urban sense, Larymna is the first of four toponyms listed between the heading *πόλεις αἶδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πολλαὶ Λοκροῖς*. *IG* IX.1 235.6 (Hell.) uses *polis* in the

personal sense; *ἄστος* is used about the citizens in *IG* 1x.1 235.3 (Hell.), and *πατρίς* is applied to the city in *BCH* 26 (1902) 330 no. 35c.16 (Hell.). The internal collective use of the city-ethnic is found abbreviated as *ΛΑ* on a C4 coin (*infra*).

The name and size of the territory are unknown, but it must have included the plain at the bay of Larmes (Fossey (1990) 22). Fossey (1990) 35 argues that the Classical sites at *Bazaráki*, probably ancient *Ἀγχόνη* (for which see Fossey (1990) 27–32) and *Palaiokhóri* (for which see *ibid.* 33–35) situated 2.5 km south and 6 km west of Larymna respectively, were “satellites” of Larymna; in that case, Larymna had a territory measuring at least 20 km², although it was probably larger. A Hellenistic metric epitaph includes the expression [ἐ]γ χθονὶ . . . / Λαρύμνας (*BCH* 26 (1902) 330 no. 35c.1–2).

Larymna was originally a part of East Lokris (Ps.-Skylax 60; *SGDI* 2593 (273)), but later it ranked as Boiotian (Paus. 9.23.7); exactly when the regional affiliation changed is unknown, but Goldman and Walker (1915) 420–21 assume it occurred in C4m; however, *SGDI* 2593 is a Delphic grant of proxeny from 273 to *Εὐβίος Ἀλύπου Λοκρὸς ἐγ Λαρύμνας*.

The pantheon of Larymna is unknown, but Fossey (1990) 154 suggests that Dionysos was an important divinity here.

Larymna is situated in the bay of Larmes and is centred on a small peninsula with a harbour on its south-east (cf. Schäfer (1967) 540; Lawrence (1979) 472; Haas (1998) 101–2). An elevation of a few metres height on the peninsula served as “acropolis” (Schäfer (1967) 530). Fortifications and ancient remains indicate the existence of the ancient settlement on the peninsula and on the mainland, but modern constructions impede observation of the degree of urbanisation; there are both Archaic and Classical sherds at the site (Fossey (1990) 22–24; see fig. 4 for a plan of the site), enough to indicate “significant Classical period habitation” (Haas (1998) 106). Schäfer (1967) 533 suggests that originally the town occupied only the peninsula (i.e. slightly more than 1 ha). This peninsula was fortified, and the remains of fortification date to two different periods. The oldest remains, in “Cyclopean” and polygonal styles, are possibly late Archaic (*ibid.* 542). The second phase was in isodomos style and probably dates to C4 (*ibid.*). It seems that the enclosed area was now enlarged to cover land outside the peninsula (see the probable line of the circuit in Schäfer (1967) Abb. 1 at 528, indicating that the enclosed area grew to c.6.5 ha). The fortifications at Larymna were all constructed in local breccia stone (Schäfer (1967) 530–31).

The J. Hirsch auction catalogue of 15 May 1905 mentions that the collector attributed two silver coins (nos. 1628–29) to Larymna; no. 1628 is a hemiolos: *obv.* bearded male; *rev.*

grapes; legend: *KP*, which rather suggests [*ΛΟ*] *KP*(*ᾶν*); but no. 1629, likewise a hemiolos: *obv.* beardless youth; *rev.* grapes, has the *rev.* legend *ΛΑ*, which may possibly abbreviate the ethnic of Larymna; Oldfather (1908) 470 accepts the attribution without discussion and assigns no. 1628 to C4, and no. 1629 should be contemporary with it.

384. Naryka (Narykaios) Map 55. Lat. 38.45, long. 22.45. Size of territory: 1 or 2. Type: B. The toponym is *Ναρύκα*, *ἡ* in *IG* 1x.1² 3 706A (C3f); Steph. Byz. 470.4–5 gives *Νάρυξ*, *Ναρύκη* and *Ναρύκιον*, but without source reference (see further Oldfather (1935) 1773); Pritchett (1985) 169–71 suggests that Naryka is the descendant of Homeric Tarphe (Hom. *Il.* 2.533). The ethnic is *Ναρυκαῖος* (*IG* 1x.1² 3 706A.1 (C3f); Diod. 16.38.5 (r352)).

Naryka is called a *polis* in the political sense in *IG* 1x.1² 3 706A.1 (C3f), and in the urban sense at Diod. 16.38.5 (r352); Lycoph. *Alex.* 1148 refers to *Ναρούκειον ἄστυ*. The internal collective use of the ethnic is found in *IG* 1x.1² 3 706A.1 (C3f), the external use at Diod. 16.38.5 (r352).

The name of the territory is unknown, but Diod. 14.82.8 (*καταστρατοπεδεύσαντος . . . εἰς Νάρυκα* (r395)) may suggest that the toponym could designate the territory. According to Pritchett (1985) 168–69, Naryka was an extensive and thriving city in C4; he notes that the acropolis “is covered with blocks and sherds”, and furthermore mentions a possible theatre. In 352 the city was besieged (Diod. 16.38.5) and must thus have been walled; a fortification on the acropolis is briefly mentioned in Pritchett (1985) 168–69. In 352 the city was destroyed by the Phokian Phayllos (Diod. 16.38.5: *τὴν δὲ πόλιν ἔλὼν κατὰ κράτος διήρπασε καὶ κατέσκαψεν*); however, the city emerges again in C3f in *IG* 1x.1² 3 706A. This document is the earliest surviving public enactment of the city: it is a law of Naryka and the *Aianteioi* laying down regulations concerning the Lokrian Maiden Tribute which went to Ilios to atone for Lokrian Aias’ outrage of Cassandra (see e.g. Hughes (1991) 166–84); Naryka was presumably involved because this city was considered the hometown of Lokrian Aias (Diod. 14.82.8; Strabo 9.4.4; cf., however, Eur. *IA* 263–64, suggesting Thronion (no. 388) as the home of Aias).

A *Λοκρὶς Αἰαντὶς*, attested in *IG* 1x.1² 3 706A (C3f), is possibly Athena in epichoric dress (Oldfather (1935) 1775; but see Lerat (1952) ii.157).

385. Nikaia (Nikaeus) Map 55. Lat. 38.50, long. 22.35. Size of territory: 1 or 2. Type: C. The toponym is *Νίκαϊα* (or possibly *Νεΐκαϊα*, cf. Oldfather (1937) 222), *ἡ* (Aeschin. 2.132; Dem. 11.4; Diod. 16.59.2). The ethnic is given as *Νικαεὺς* by Memnon (*FGrHist* 434) fr. 28.10 (rC4l).

Nikaia is called a *polis* in the urban sense by the C₃ writer Timosthenes, *Peri limenon*, quoted verbatim in Didymos *In Dem. Comm.*, Pearson and Stephens, col. 11.33; *πατρίς* is used twice in Memnon (*FGrHist* 434) fr. 28.10 (rC4l); the same fragment uses the ethnic about survivors of the destruction of the city (see *infra*).

Oldfather (1937) 225–26 argues that Nikaia was founded only after 426 and probably in C₄ by Thebes (no. 221) under Epameinondas; schol. *Dem.* 11.12 calls the city an *ἄποικος* of the Thebans. From Didymos *In Dem. Comm.*, Pearson and Stephens, col. 11.26–51, it appears that in C₄ the city was held by Philip II and the Thebans at different points, and Phokian occupation is attested by Diod. 16.59.2 (cf. Pritchett (1982) 162). The site is briefly described in Pritchett (1982) 162–66 and Buckler (1989) 93–94.

The city was destroyed by the Phokians (Memnon (*FGrHist* 434) fr. 28.10: the terms used are *καταστροφή* and *ἀφανισμός*), probably in 353 (Oldfather (1937) 224), but it is referred to again in 339 as held by Thebes (Philoch. fr. 56b) and is mentioned by Timosthenes as well (see *supra*); survivors of the destruction seem to have served with Alexander the Great in Asia (Memnon (*FGrHist* 434) fr. 28.9), where they reportedly founded Nikaia in Bithynia (*ibid.*).

386. Opous (Opountios) Map 55. Lat. 38.40, long. 23.00. Size of territory: 2 or 3. Type: A. Located at modern Atalandi (Fossey (1990) 71–74); but see Dakoronia (1993) 117–20. The toponym is *᾽Οπόεις*, ἦ (Hom. *Il.* 2.531; Pind. *Ol.* 9.14; ML 20 l. 33 (500–450)) or *᾽Οπούς* (Thuc. 2.32.1; Arist. *Hist. an.* 576^b25). The city-ethnic is *᾽Οπόντιος* (ML 20 l. 14 (500–450; *SEG* 23 415 (450–425)) or *᾽Οποέντιος* (*SEG* 23 420 (C₄)) or *᾽Οπούντιος* (*CID* II 97.25 (327/16)).

Opous is called a *polis* in the political sense by Pind. *Ol.* 9.21 and in the urban sense by Ps.-Skylax 60, where, reading *Κύνος*, *᾽Οπούς* for MS *Κυννοσούρος*, Opous then appears as the third of four toponyms listed between the heading *πόλεις αἰδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πολλαὶ Λοκροῖς. πολῖται* is found in Arist. fr. 561, Rose, which Rose believes is a Plutarchean paraphrase of a passage in Aristotle's *᾽Οπουντίων πολιτεία* (Rose fr. 560–64); *μητρόπολις* is applied to Opous in a C₅ inscription quoted by Strabo 9.4.2; *Klio* 15 (1918) 66 no. 94 (cf. *AM* 67 (1942) 269 (345–310)), and *CEG* II 651 (C₄?) use *πατρίς* and *ἀκρόπολις* is found in the latter as well. *ἄστυ* is found Pind. *Ol.* 9.42 (cf. Gerber (2002) *ad loc.*).

The internal collective use of the city-ethnic is found on C₄ coins (Head, *HN*² 336), whereas the use of *᾽Οπόντιος* in

ML 20 (500–450) is ambiguous: it may be used to refer to the East Lokrians in general (Larsen (1968) 51), or it may be the city-ethnic of Opous (Nielsen (2000) 111ff). The external collective use is found in Ar. Av. 152; Tod 196.25–26 (330–326); and *IG* II² 572.6 (C₄l). The external individual use is found in *SEG* 27 18.5 (352/1), *SEG* 27 18–19 (C₄m) and *SEG* 23 420 (C₄).

Opous was without doubt the leading city of East Lokris and the centre or “capital” of the East Lokrian “confederacy”, as is clearly borne out by ML 20 (500–450) (Gschnitzer (1958) 56–59; Larsen (1968) 51–54; Nielsen (2000) 109–14, all commenting on the inscription); Opous may even have turned the other East Lokrian *poleis* into dependencies (Nielsen (2000) 111ff, and *supra* under Alponos (no. 379)). Evidence confirming this Opountian predominance is found in an inscription from Thermopylai quoted by Strabo 9.4.2 in which Opous is called *μητρόπολις Λοκρών*; the epigram commemorates warriors who died *ὑπὲρ Ἑλλάδος ἀντία Μήδων*, and so probably dates to C₅ (see further Lorenz (1976) no. 9 and Molyneux (1992) 182–83); Pindar, too, in *Ol.* 9.20 calls Opous *Λοκρών... ματῆρ*, and the fragments of the Aristotelian *᾽Οπουντίων πολιτεία* likewise point to Opountian predominance within Lokris; thus, fr. 561–62, Rose, relate myths about how West Lokrian cities were founded from Opous. Furthermore, *CIG* II 789 (312–280) closely associates Opous and the Lokrians as if there was no difference between these two entities, and finally, as pointed out *supra*, all C₄ *hieromnemes* from East Lokris came from Opous. See also *infra* on coins. It was certainly this predominance that gave rise to the literary expression *Lokroi hoi Opountioi* (Nielsen (2000) 102).

At *Ol.* 9.15 Pindar describes Opous as the possession of *Θέμις θυγάτηρ τέ οἱ σώπειρα... μεγαλόδοξος Ἐννομία* (Gerber (2002) 28), thus pointing to an oligarchic or aristocratic constitution in Opous; it is also possible that Aristotle at *Pol.* 1287^a5–8 refers to Opous as an example of *aristokratia*; Aristotle here points out that *πολλοὶ ποιούσιν ἓνα κύριον τῆς διοικήσεως*, and gives Opous as an example of this; he adds, however, that at Opous this was *κατά τι μέρος ἔλαττον* “to a certain smaller extent” (Newman *ad loc.*). Another official is mentioned by Plutarch: *Quaest. Graecae* 293b11 mentions a *κριθόλογος* among the Opountians; there is no indication of the date, but the passage may rely on Aristotle's *᾽Οπουντίων πολιτεία* or Philippos of Opous' (C₄) *Περὶ Λοκρών τῶν ᾽Οπουντίων* (*RE* xix. 2354–55; Giesen (1901) 465–66 and Lasserre (1987) 600.)

Envoys of the city are mentioned in *IG* II² 572.9 (C₄l) (an honorary decree for [πρέσ]βεις). *SEG* 23 415 (450–425) is a

grant of proxeny by Thessalian Pherai (no. 414) to a citizen of Opous; *SEG* 23 420 is one of C4. The earliest surviving enactment of the city itself (i.e. apart from ML 20) is *IG* 1x.1 268 (Hell.), a grant of proxeny that refers to an eponymous *archon* and possibly to the assembly and council.

CEG 11 651 (C4?) refers to the *ἄκρόπολις*; for the poor remains of what is probably the acropolis, see Fossey (1990) 68–70. According to Diod. 19.78.5, Opous was subjected to a *poliorkia* in 313. The existence of an extensive C4–C3 fortification wall is now securely established (Dakoronia (1993) 120 with fig. 4 at 122). There are Archaic and Classical sherds at Opous (Fossey (1990) 70). Inside the wall, remains of Classical buildings have been found, enough to establish that the site was “a great city” (Dakoronia (1993) 120). For two kilns that seem to have been producing in C4, see Lambropoulou (1983). According to Demetrios of Kallatis (*FGrHist* 85) fr. 6 *apud* Strabo 1.3.20, Opous suffered seriously from the earthquake of 426 (Fossey (1990) 183–84). The city received grain from Kyrene in 330–326 (Tod 196.26).

On a C4 (*IG* 1x.1 280) statue base, Dionysos and Apollo are mentioned, and presumably they were honoured by the dedication. Opous seems to have celebrated *Aianteia*; cf. Pind. *Ol.* 9 with scholia.

Promanteia is granted to a man of Opous by *F.Delphes* III.1 92 (318–306). An Opountian won the Olympic *pankration* contest in 536 (Moretti no. 119); *Νικέας Λοκρός* ἐξ Ὀπούντος won the *stadion* race in 500 (Dion. Hal. *AR* 5.50.1); and Pind. *Ol.* 9 was composed for Epharmostos of Opous, who won the Olympic wrestling contest in 468 (*FGrHist* 415 fr. 1.38) and in addition achieved victories in the three other Panhellenic games (Pythian: *Ol.* 9.12, 17; Isthmian: *Ol.* 9.84–86; Nemean: *Ol.* 9.87; with Gerber (2002) *ad locc. citt.*) as well as in numerous other games (Pind. *Ol.* 9.88ff lists victories at Argos, Athens, Mt. Lykaion and Pellene). Also in 468, Menalkes of Opous was victorious at Olympia in boxing (*FGrHist* 415 fr. 1.39). According to the schol. 123c Pind. *Ol.* 9., the Isthmionikian (Pind. *Ol.* 9.84) athlete Lampromachos was also *proxenos* of Thebes (no. 221) at Opous in C5f (Gerber (2002) 57–58 with refs.). Plut. *De Pyth. or.* 401f5ff mentions a C4 dedication at Delphi by the Opountians.

Opous struck coins from C5 onwards. From C5 come silver trihemioibols and obols on the Aiginetan standard: *obv.* amphora; *rev.* O in incuse square (Babelon, *Traité* ii.3 nos. 423–44). C4 silver coins (*obv.* amphora with grapes, *OIION*; *rev.* star; Babelon, *Traité* ii.3 nos. 436, 436 *bis*) are similar and confirm that the C5 coins belong to Opous. It is interesting that coins of the same appearance are struck, in the name not of the Opountians, but of the Lokrians; thus a

coin of, probably, C5 has the amphora on the *obv.*, and *Λ(οκρών)* in a border of dots on the *rev.* (Babelon, *Traité* ii.3 no. 425). The legend confirms the impression that there was no real difference between the two entities of “Opous” and “the Lokrians”. Similarly, the C4 coins inscribed *OIION* (*supra*) have close parallels in later coins inscribed *ΛΟ* or *ΛΟΚΡ* (Babelon, *Traité* ii.3 nos. 442–43). One coin even has the legend *OIION* on the *obv.* and *ΛΟ(κρών)* on the *rev.* (Babelon, *Traité* ii.3 no. 435). In C4 Opous struck a well-known series of silver coins: *obv.* head of Demeter r. or l.; *rev.* Lokrian Aias in fighting attitude; legend: *OIIONTIΩN* (Head, *HN*² 336 fig. 190). These coins, again, are paralleled later in C4 by coins inscribed *ΛΟΚΡΩN* (Babelon, *Traité* ii.3 no. 451), or *ΛΟΚΡΩN ΥΠΟ(κνημιδίων)* (Babelon, *Traité* ii.3 nos. 438, 439–41), again suggesting that “Opous”, “the Lokrians” and “the Hypoknemidian Lokrians” were more or less the same thing. A C4s issue of bronze coins have *obv.* Athena; *rev.* grapes; legend: *OIIONTIΩN* or *ΛΟΚΡΩN* (Head, *HN*² 336–37; Babelon, *Traité* ii.3 nos. 362–78; *SNG Cop. Aetolia-Euboea* 42–58).

The foundation myth of Opous is reinterpreted by Pindar in *Ol.* 9 (for which see the Introduction in the translation by Nisetich (1980) 122–23).

387. Skarpheia (Skarpheus) Unlocated, but presumably in the plain of Molos (Pritchett (1982) 166–67, (1992) 145–48; Buckler (1989) 94–95). Type: B. The toponym is *Σκάρφη*, ἡ in Hom. *Il.* 2.532; *Σκάρφεια*, ἡ is found in Lycoph. *Alex.* 1147, Strabo 1.3.20 and *BCH* 45 (1921) col. III.139 (230–210); see further Oldfather (1929) 460–61. *Σκαρφεύς* is the ordinary form of the city-ethnic and is found in *CID* II 43.65 (340/39) and *Syll.*³ 270 (335/4), and C4 coins carry the legend *ΣΚΑΡΦΕΩN* (Head, *HN*² 337). On the basis of Steph. Byz. 574.3, [*Σκ*]αρφ[αί]ος has been tentatively restored in *IG* II² 3045 (C4m); *Σκαρφαιεύς* is found in *Anth. Pal.* 7.639.4.

The earliest source to describe Skarpheia as a *polis* is *IG* 1x.1² 3 750.5 of C2f, but the external individual use of the ethnic is found in *CID* II 43.65 (340/39) and *Syll.*³ 270 (335/4), a Delphic grant of proxeny, etc., to citizens of Skarpheia, while the internal collective use is attested on C4 coins, and the external use in C3m (*CID* II 130.2).

If Demetrios of Kallatis (*FGrHist* 85) fr. 6 is correctly reported at Strabo 1.3.20, then 1,700 persons (*σώματα χιλίων καὶ ἑπτακοσίων οὐκ ἐλάττω*) living in Skarpheia were drowned during the great earthquake of 426 (Fossey (1990) 183–84). It is impossible to know how precise this figure is, and if precise, how many of the victims were of citizen status.

The earliest reference to a public enactment by the city is *I. Magnesia* 31.3.9 (C3l).

Skarpheia struck bronze coins in C4: *obv.* Lokrian Aias, legend: ΣΚΑΡΦΕΩΝ; *rev.* female head (Head, *HN*² 337; *SNG Cop. Aetolia-Euboea* 81). Hsch. *E*7145.1 mentions Demeter Euryodeia, but that completes the information on the pantheon of Skarpheia.

388. Thronion (Thronieus) Map 55. Lat. 38.45, long. 22.45. Size of territory: 1 or 2. Type: A. The toponym is Θρόνιον, τό (Hom. *Il.* 2.533; Thuc. 2.26.2). The city-ethnic is Θροნიεύς (*CID* II 31.79 (C4l)), abbreviated to ΘΡΟΝΙ on C5 coins (Head, *HN*² 337). Steph. Byz. 318.12 furthermore gives Θρόνιος, which is possibly used in *SEG* 30 42.2 ([Θρ]ονίοισι (c.450)).

Thronion is called a *polis* in the urban sense by Eur. *IA* 264 (Θρονιαῖς πόλις) and by Ps.-Skylax 61, where Thronion is the first of four toponyms listed between the heading πόλεις αἴδε and the addendum εἰσὶ δὲ καὶ ἄλλαι πόλεις αὐτοῖς ἐν μεσογείᾳ, but see the remarks *supra* 665); cf. also Diod. 12.44.1 (r431); the earliest use of *polis* in the political sense is in a C3l inscription from Tenos, but this is wholly restored (*IG* XII.5 812.9).

The internal collective use of the city-ethnic is found in abbreviated form on C5 coins (Head, *HN*² 337); the external collective use is possibly attested in *SEG* 30 42.2 ([Θρ]ονίοισι, c.450). The external individual use is found *CID* II 31.79, 32.37, 97.25 (C4).

The name of the territory is unknown; it is termed ἡ τῶν Θρονιέων χώρα at Polyb. 9.41.11, and a strip of coast belonging to it is referred to at 18.9.3; according to Strabo 9.4.4, there was a *limen* here. According to Hom. *Il.* 2.533 and Theopomp. fr. 298 (*apud* Harp. s.v. Θρόνιον) and (implicitly) Thuc. 2.26, Thronion was a Lokrian city, but Ps.-Skylax lists it in his Phokian chapter (61), presumably a reflection of the Phokian annihilation of the town in 353 (Diod. 16.33.3); however, see *supra* 665 for another explanation of this passage.

In 1840 the ruins of Thronion supplied stone material for the building of a factory (Pritchett (1982) 152–53). According to Pritchett (1982) 154, the site is large and has many sherds. The literary sources (Diod. 12.44.1 (r431) and 16.33.3 (r353)) indicate that the city was walled: Oldfather (1936) 613 states that by 1928 the course of the wall could no longer be traced in its entirety; he also mentions foundations of buildings and a temple in the city (*ibid.*). According to Strabo's account of Demetrios of Kallatis' description of an earthquake (*FGrHist* 85 fr. 6), probably that of 426 (Fossey (1990) 183–84), c.850 people were engulfed (καταδύναι) at Thronion. It is impossible to know how precise this figure is, and if precise, how many of the victims were of citizen status.

In 431 the city was captured by Athens (no. 361) and had to provide hostages (δμήρους . . . ἔλαβεν αὐτῶν (sc. the people of Thronion)). According to Diod. 12.44.1, the city fell after a siege (ἐξεπολιόρησε). In 353 Thronion was subjected to *exandrapodismos* by the Phokian general Onomarchos (Θρόνιον μὲν ἐκπολιορκήσας ἐξηνδραποδίσαστο, Diod. 16.33.3), but the city was in existence once again in C4l (*CID* II 31.79, 32.37).

The earliest preserved public enactments are two Hellenistic decrees (*IG* IX.1 308–9); the earliest recorded communal *action* is the giving of hostages to the Athenians in 431 (Thuc. 2.26.2).

The pantheon of Thronion is virtually unknown (Oldfather (1936) 612 sets out the meagre evidence). For speculations that the city was active as coloniser, see Oldfather (1936) 610; see also *SEG* 15 251 with Paus. 5.22.3.

In C5f Thronion struck silver obols on the Aiginetan standard: *obv.* bearded male head; *rev.* greave; legend: ΘΡΟΝΙ (*knemis*) in incuse square, presumably a reference to Mt. Knemis in Lokris (Rauch (1846) no. 12; *BMC* Thronion no. 1; Head, *HN*² 337; Babelon, *Traité* ii.3 no. 460). The full form of the city-ethnic is attested on C3–C2 bronze coins (*SNG Cop. Aetolia-Euboea* 82).

DORIS

DENIS ROUSSET

I. The Region

The name of the region is Δωρίς (Hdt. 8.31.1), and it is described as a χώρα (Hdt. 8.31.1, 43.1; Diod. 11.14.2 (r480); 16.33.4 (r353)). Due to the common belief that the region accommodated the Dorians during their migration to the Peloponnese, it is often called the Metropolis of the Dorians (Andron (*FGrHist* 10) fr. 16a) or the Metropolis of the Lakedaimonians (Thuc. 1.107.2, 3.92.3).

The ethnic is Δωριεύς (Hdt. 8.66.1; Thuc. 1.107.2; Aeschin. 2.116). The external and individual use is attested in the lists of *hieromnemonēs* of the Delphic Amphiktyony: Δωριεύς ἐγ Ματροπόλιος (*CID* II 36.1.25 (343)) or Ματροπολίτας (*CID* II 74.1.33 (337)). For the external and collective use, see *CID* II 7.B.4 (c.357). The internal and collective use is found in a letter of 206/5 (*SEG* 38 1476.88).

Doris lay west of Phokis in the valley of Kephisos (Hdt. 8.31–2). There is no agreement in the sources about the other neighbouring communities and their frontiers with Doris: Malians (Hdt. 8.31.1), Aitolians, East Lokrians, West Lokrians and Oitaians (Strabo 9.3.1, 4.10; cf. Rousset (1989) 203, 235–6). The frontier between Oitaia and Doris must have changed over time, since the city of Akyphas/Pindos seems to have belonged now with the Oitaians, now with the Dorians (*infra*). The alternating regional affiliation of Akyphas/Pindos explains the two opposed traditions of describing Doris as being either *tripolis* (Andron (*FGrHist* 10) fr. 16a; cf. Thuc. 1.107.2) or *tetrapolis* (unnamed historians quoted by Strabo at 9.3.1, 4.10, 10.4.6; see Rousset (1989) 235).

The Dorian *poleis* are hardly ever mentioned in the Archaic and Classical sources and have left very few physical traces of their existence. Only Kytinion has been securely identified thanks to the discovery of some Hellenistic decrees (*SEG* 40 440–2). The locations of the other *poleis* have to be deduced from the not very precise indications found in the literary sources. Remains of city walls are too scanty to be dated or to provide us with an idea of the extent of the urban centres in the Archaic and Classical periods.

Chlomo is the only site which has substantial remains of fortifications. The masonry is Lesbian with curved joints and may date from the Archaic period. Nevertheless, it has been impossible to identify the site with any of the settlements mentioned in the sources (Rousset (1989) 210–11 and 229). The Dorians of the Metropolis supplied one of the *hieromnemonēs* (*CID* II 36.1.25 (343) and Aeschin. 2.116), but, apparently, the *poleis* were not amalgamated to form a federation until after the Aitolian domination of the region had come to an end c.165 (*Syll.*³ 653; cf. Rousset (1989) 239 n. 168; cf. *F.Delphes* III.1 490 and Rousset (1994) 370 n. 39).

The estimated sizes of the *polis* territories indicated *infra* are based on the assumptions that the whole region covered c.100 km² and that we know all *poleis* within the region.

II. The Poleis

389. Akyphas/Pindos Map 55. Lat. 38.40, long. 22.20. Size of territory 1. Type: B. Of the two toponyms, Πίνδος, ἡ is the more common (Hdt. 8.43.1; Plin. *HN* 4.28: Pindus; Strabo 9.4.10 adds τινὲς δ' Ἀκύφαντα λέγουσι τὴν Πίνδον). The toponym Ἀκύφας is attested in Theopompos (*FGrHist* 115) fr. 364. There is no city-ethnic matching the toponym Pindos, but the city-ethnic Ἀκυφάνιος is attested in Hellenistic inscriptions (*SEG* 27 123.12 (191/0), restored in *IG* IX 1 227 (C2f); Rousset (1989) 223).

Pindos is implicitly classified as a *polis* by the term τετράπολις used by the unnamed historians quoted by Strabo at 10.4.6. Ps.-Skymnos 594 counts Pindos as the fourth Dorian *polis*; and Strabo 9.4.10 lists four *poleis*: Erineos, Boion, Pindos and Kytinion.

Quoting Theopompos ((*FGrHist* 115) fr. 364) Steph. Byz. 66.3–4 classifies Akyphas as a Dorian *polis*; we cannot be sure, however, that the site-classification *polis* is part of the quote. At Strabo 9.5.10 Akyphas is placed in Oitaia. The individual and external use of the city-ethnic Ἀκυφάνιος is attested in a Delphic inscription (Rousset (2002) 252.12 (191/0)). It is also

restored in two C2f inscriptions, one from Phokis mentioning some Oitaian magistrates (*IG* ix 1 227; cf. *BCH* 113 (1989) 223), the other from Pharsalos (*Inscriptions de Thessalie, i: Vallée de l'Énipeus* (1995) no. 101).

It seems that the city called sometimes Pindos, sometimes Akyphas, changed its regional affiliation a couple of times. It was probably not part of Doris in C5s, when the region had only three cities (Thuc. 1.107.2; Diod. 11.79.4). It became part of Doris in C4 (Theopomp. and Ps.-Skymnos). By C2s it belonged to Oitaia (*IG* ix 1 227), but may have become Dorian once again at the end of the Hellenistic period (Strabo 9.4.10); see Rousset (1989) 231–3, (1994) 367. The only remains of the urban centre are a section of an undated defence circuit (Rousset (1989) 217).

390. Boion (Boiaios) Map 55. Lat. 38.40, long. 22.25. Size of territory 1. Type: A. The toponym is *Βοίων, τό* (Thuc. 1.107.2; Steph. Byz. 172.18), and some later authors also use the form *Βοίων* (Strabo 9.4.10) or *Βοιαί* (Steph. Byz. 172.19). In inscriptions the toponym, not attested before C1, is *Βοαί* (*CID* v 826). The individual and external form of the city-ethnic *Βοαῖος* is found from C2e onwards (*CID* v 6). *Βοαῖος* is attested in Ephoros ((*FGrHist* 70) fr. 231).

Boion is classified as a *polis* at Thuc. 1.107.2, but a few lines further on *polis* is used synonymously with *polisma*. Andron (*FGrHist* 10) counts Erineos among the three *poleis* of the Dorians (fr. 16a: *τρίπολις*); cf. also Diod. 11.79.4–6 (r457). The only remains of the urban centre are a section of an undated defence circuit with a tower (Rousset (1989) 213).

391. Erineos (Erinaios) Map 55. Lat. 38.40, long. 22.25. Size of territory 1. Type: A. The toponym is *Ἐρινεός* (Hdt. 8.43; Thuc. 1.107.2), *ὄ* (Tyrt. fr. 2.13, West) or *ῥή* (Andron (*FGrHist* 10) fr. 16a). The oldest epigraphical attestation of

the toponym is in *CID* v 322 (C2f). The city-ethnic *Ἐριναῖος* is attested in the external and individual sense at *CID* ii 43.19 (341) and 74.1.45 (337).

Erineos is classified as a *polis* at Thuc. 1.107.2, but a few lines further on *polis* is used synonymously with *polisma*. Andron (*FGrHist* 10) counts Erineos among the three *poleis* of the Dorians (fr. 16a: *τρίπολις*); cf. also Diod. 11.79.4–6 (r457). Tyrtaios calls it an *asty* (fr. 2.13). The only remains of the urban centre are a section of an undated defence circuit with a tower (Rousset (1989) 214).

392. Kytinion (Kytinieus) Map 55. Lat. 38.45, long. 22.30. Size of territory 1. Type: A. The toponym is *Κυτίνιον, τό* (Thuc. 1.107.2, 3.95.1, 102.1; Aeschin. 2.116) or, in inscriptions, *Κυτένιον, τό* (*IG* vii 3055.12 (C4m)). The city-ethnic is *Κυτινιεύς* (*CID* ii 102.1.47 (324)) or *Κυτενιεύς* (*CID* ii 123.10 (C3f)).

Kytinion is classified as a *polis* at Thuc. 1.107.2, but a few lines further on *polis* is used synonymously with *polisma*. Andron (*FGrHist* 10) counts Kytinion among the three *poleis* of the Dorians (fr. 16a: *τρίπολις*); cf. Diod. 11.79.4–6 (r457). The earliest mention of a *πόλις τῶν Κυτενιέων* in epigraphical sources is in *IG* ix².1 68 (C3). The collective use of the city-ethnic is attested internally in some C2m proxeny decrees (*SEG* 40 440–2) and externally on a statue base from Thermos (*IG* ix².1 68 (C3)). The city-ethnic is attested in the individual and external sense at *CID* ii 102.1.7 (324).

Being mentioned more frequently in the sources than the neighbouring Dorian *poleis*, Kytinion was probably the most important of the *poleis*. The only remains of the urban centre are a section of an undated defence circuit with a tower (Rousset (1989) 208). On remains of the urban centre, see Rousset (1999) 73.

THESSALIA AND ADJACENT REGIONS

JEAN-CLAUDE DECOURT, THOMAS HEINE NIELSEN, BRUNO HELLY

(with the assistance of Richard Bouchon, Laurence Darmezine, Gérard Lucas, Isabelle Pernin)

I. The Regions

As a geographical term, *Thessalia* was used with a wide variety of meanings in Antiquity.¹ In the narrow sense it designated simply the four *tetradés* of the Thessalian Confederacy (Pelagiotis, Hestiaiotis, Thessalotis and Phthiotis (Arist. fr. 497, Rose; Andron (*FGHist* 10) fr. 16a)); whereas in a broader sense it came to include areas such as Ainiis, which supplied the Thessalian Confederacy of the Roman era with at least one *strategos* (cf. *IG IX.2 p. xxv*; see also *infra* on Strabo's conception of the region). It has become common modern practice to use the term in this broader sense; thus Kip's book of 1910, *Thessalische Studien*, offers basic discussions of the areas of Ainiis, Oitaia, Malis, Achaia, Magnesia, Perrhaibia and Dolopia; Stählin's book of 1924, *Das hellenische Thessalien*, includes chapters on Perrhaibia, Magnesia, Dolopia, Achaia, etc.; and the published proceedings of the 1990 conference *Θεσσαλία (= Dekapente Chronia)* include contributions on Proerna and Thebai in Achaia, on Magnesia as such and on Demetrias and Meliboia in particular, on Ainiis as such and on Sosthenis in particular, as well as on Oloosson in Perrhaibia. The present chapter, again, is devoted to Thessalia in the broader sense. However, both introduction

and inventory are subdivided into sections dealing with (1) Thessalia proper and (2) Adjacent regions: (2.1) Dolopia, (2.2) Ainiis, (2.3) Oita, (2.4) Malis, (2.5) Achaia, (2.6) Magnesia, (2.7) Perrhaibia and (2.8) Athamania.

This subdivision of the exposition reflects the fact that each adjacent area was in fact considered to be an individual entity and not part of Thessalia in the Classical period, as is readily apparent from Classical authors. *Re* (2.1): the toponym *Dolopia* is found in Thuc. 2.102.3, and the corresponding ethnic *Dolops* is found in its external collective application in Herodotos' list of medisers at 7.132.1, where the Dolopians are explicitly distinguished from the *Thessaloi*, who are also listed. *Re* (2.2): again, the Ainiianes are found in Herodotos' list of medisers and are there distinguished from the Thessalians (7.132.1; cf. Ps.-Skylax 62); no Classical source preserves the toponym *Ainiis* (*IG IX.2 5b.10* (150–125)), but Theopomp. fr. 80 may have used the expression *Αἰνιάνων χώρα*. *Re* (2.3): the toponym *Oitaia* is not securely attested in a Classical source, but it may have to be restored as *Οἰταίη* at Hdt. 7.185 (cf. Legrand (1951) 184 app. crit. and 185 n. 3); the collective ethnic occurs at Hdt. 7.217 and Thuc. 3.92.3 and 8.3.1, where it seems to be implicitly distinguished from that of the *Thessaloi*. *Re* (2.4): the toponym *Malis* is found in Hdt. 7.198.1, where it is explicitly distinguished from the toponym *Thessalie*, and the collective ethnic occurs in Herodotos' list of medisers at 7.132.1, where it is explicitly distinguished from the ethnic *Thessaloi*; Ps.-Skylax devotes a separate chapter to the Malians (62) as well as one to Thessalia proper (64). *Re* (2.5): the toponym *Achaie* is found explicitly distinguished from *Thessalie* in Hdt. 7.173.1 and 7.198.1; the collective ethnic *Achaioi* is found explicitly distinguished from the ethnic *Thessaloi* in Herodotos' list of medisers at 7.132.1; Ps.-Skylax devotes a separate chapter to the Achaians (63) as well as one to Thessalia proper (64). *Re* (2.6): the toponym *Magnesia* is

¹ Daux (1936) 673: "Aucun terme géographique n'est, je crois, susceptible d'acceptions aussi diverses que celui-ci. Au sens étroit la Thessalie ne désigne que les 'tétradés' (Pelagiotide, Hestiaiotide, Thessalotide, et Phthiotide); au sens large elle englobe ou peut englober les Perrhèbes, les Magnètes, les Dolopes et l'Achaie Phthiotide, et même la vallée du Sperchios avec les Éniannes, l'Oitaia et la Malide." Helly (2001b) discusses the "ambiguïté de l'appellation 'Thessalie, thessalien'" and proposes to use (a) the term "Thessalia" (*Thessalie*) in an exclusively geographical sense, to refer to the extent given to it by ancient sources; (b) the phrase "Thessalian state" (*État thessalien*) to denote "l'espace organisé à l'époque historique sur la base des quatre tétradés"; (c) *Thessaloi* to designate "le groupe envahisseur de l'époque submycénienne"; (d) and, finally, "Thessalians" (*Thessaliens*) to denote the totality of the "habitants de la Thessalie, quelle que soit leur origine ou l'époque considérée" with specifications such as Achaian, Perrhaibian, etc., if necessary.

found explicitly distinguished from *Thettalia* in Aeschin. 3.83; and the collective ethnic *Magnetes* is explicitly distinguished from the ethnic *Thessaloi* in Herodotos' list of *medisers* at 7.132.1; Ps.-Skylax devotes a separate chapter to the Magnesians (65) as well as one to Thessalia proper (64). *Re* (2.7): the toponym *Perrhaibia* is found implicitly distinguished from that of Thessalia in Thuc. 4.78.6, a passage which explicitly distinguishes the *Perrhaiboi* from the *Thessaloi*. *Re* (2.8): the toponym *Athamania* is not attested prior to C3 (Antig. Car. *Mirabilia* 148.1; *BCH* 45 (1921) III.34 (230–220)), but the collective ethnic *Athamanes* is found in Heracl. Lemb. 53, and the existence of an Aristotelian *Ἀθαμάνων πολιτεία* (Gigon no. 4) is extremely significant when contrasted with the *Κοινὴ Θετταλῶν πολιτεία* (Gigon no. 60). So, for seven of the eight adjacent areas treated in this chapter a toponym is attested by Classical sources, and for all eight an ethnic is attested. It may also be noted that in C4 the Dolopians, the Ainians, the Malians, the Achaians, the Magnesians and the Perrhaibians were all separate members of the Amphiktyonic League (cf. Lefèvre (1998)). Accordingly, there cannot be any doubt that the adjacent areas were conceived of as individual regions and were distinct from Thessalia in the Classical period.

1. Thessalia

The name of the region is *Θεσσαλία*, ἡ (Anac. fr. 107, Diehl;² Pind. *Pyth.* 10.2; Thuc. 1.111.1; *CEG* II 637.2 (C5m); *F.Delphes* III.4 460.5.2 (337–333)); *Θετταλία* in Attic (*IG* II² 116.19 (361/60); Xen. *Hell.* 2.3.4) and *Θεσσαλίη* in Ionic (Hdt. 3.96.1).³ The corresponding ethnic is *Θεσ(σ)αλός* (Alkman fr. 16.1.3; Simon. fr. 6.1b, Page; Pind. *Pyth.* 10.70; Aesch. *Pers.* 489; *SEG* 26 475 (C5f); *IG* I³ 1375 (C5l)), in Attic *Θετ(τ)αλός* (*IG* I³ 92.1 (416/15); *IG* II² 109a.16 (363/2); *IG* II² 8850.1 (C4m)). The epichoric form of the ethnic is *Πετθαλός* (*AM* 59: 57, 15.2 (C4 proxeny decree); C4 bronze coins (Rogers (1932) 16)), which is found abbreviated as *ΦΕΘΑ*, *ΦΕΤΑ* and *ΠΕΘΑ* on silver coins on the Aiginetan standard dating to 470–450. The ktetic adjective is *Θεσσαλικός* (Hdt. 7.128.1: ὄρεα τὰ Θεσσαλικά; *IG* II² 1641.C.47 (C4m)), in Attic *Θετταλικός* (*IG* II² 1421.IV.104 (374/3); Xen. *Hell.* 6.1.3).

² For which see Helly (1995) 43–44.

³ The toponym is unknown to Homer; it may just possibly have been used by Hes. fr. 6, MW, though certainty is impossible; no fragment of Hekataios employs the toponym in a way which proves that he used it (cf. Hecat. fr. 2–3, 14, 119, 133–66, 168, 224, 372). The earliest epigraphical evidence for the existence of the toponym is a C6l/C5e epitaph from Perrhaibian Oloosson for a girl named “Thesalia” (Lorenz (1976) no. 10); the employment of the term as a personal name presumably presupposes its use for the name of the region.

Thessalia is called *polis* at [Lys.] 6.6 (on which see Hansen (1998) 126, 131) and in Arist. fr. 498, Rose (on which see Larsen (1968) 17 and Hansen (1998) 129, 132; Helly (1995) 153–54 argues that the text refers to the city of Larisa, not to Thessalia). The region is called ἡ *Θεσσαλῶν γῆ* at Thuc. 4.78.4 and is termed *χώρα* by Isoc. 8.117 and Simon. *De re equestri* 1; the people are called an *ἔθνος* at Thuc. 5.51.2 and in Aeschin. 2.116; as an *ethnos*, the Thessalians were among the members of the Amphiktyonic League (Aeschin. 2.116), and provided two *hieromnemes* who in C4 were sent by Pelinna, Pharsalos and Pherai (Lefèvre (1998) 24). The internal collective use of the ethnic is found (abbreviated as *ΦΕ*, *ΦΕΘΑ*, *ΦΕΤΑ*, *ΠΕΘΑ*) on C5 silver coins on the Aiginetan standard (Franke (1970)), on C4 bronze coins (Rogers (1932) 16), and in *AM* 59: 57, 15.2 (C4). The external collective use is found in *SEG* 26 475 (C5f); *IG* II² 116 *passim* (361/0); and Hdt. 5.94.1; Thuc. 1.102.4; Xen. *Hell.* 2.3.4. The external individual use of the ethnic is found in *IG* II² 1388B.59 (398/7); *IG* IV².1 121.48 (C4s); Xen. *An.* 1.1.10. In its external uses the ethnic is very often accompanied by a specification referring to a local community, both in the collective use: *Ματροπολίται Θεσσαλοί* (*CID* II 5.11.33 (358)); and in the individual use: *Θεσσαλός ἐξ Ἄτραγος* (*Philologus* (1921) 195, 2 (c.345)); *Θεσσαλός ἐκ Γόμφων* (*I.Iasos* 57 (C4l–C3e)); *Θετταλός Γυρτώνιος* (*IG* I³ 92.6 (416/15)); *Θεσσαλός ἐν Λαρίσας* (*F.Delphes* III.1 401.3 (333/2), III.4 378.4 (342/1); *CID* II 25.1.2 (C4m); *IG* IX.2 60 (C4)); *Θεσσαλός ἐξ Ὀρθου* (*CID* II 12.1.67 (341/40)); *Θετταλός Σκοτοσσαῖος* (*IG* II² 8843 (C4f)); *Θεσσαλός ἐξ Σκοτούσσης* (*F.Delphes* III.5 p. 321 nn. 1–2 (C4l)); *Θεσσαλός ἐκ Φαρσάλου* (*IG* XII.3 251.5 (C4m)); *Θεσσαλός ἐκ Φερῶν* (*IG* V.1 948.2 (C4); *F.Delphes* III.4 385.1 (338–320)).

Kritias wrote a work entitled *Πολιτεία Θετταλῶν* (fr. 31, DK); Hellanikos a *Θετταλικά* (*FGrHist* 4 fr. 52); and there was a *Κοινὴ Θετταλῶν πολιτεία* among the constitutions described by Aristotle (fr. 495–500, Rose). Thessalia is absent from Homer. The poet does, however, mention nine kingdoms occupying the later Thessalia as well as some perioikic territory; twenty-nine cities are mentioned, of which some are the direct ancestors of *poleis* (e.g. Triikka: *Il.* 2.729); others may have changed their name (e.g. Asterion: *Il.* 2.735). Some of these Homeric sites have been located with certainty (e.g. Pherai: *Il.* 2.711), whereas others remain unlocated (e.g. Oichalie: *Il.* 2.730). In addition, Homer refers to four of the later perioikic peoples: the Ainians, the Perrhaibians, the Magnesians (*Il.* 2.749, 756) and the Dolopians (*Il.* 9.484). Finally, he mentions *Φθίη* and *Ἑλλάς*; it is debatable

whether these toponyms should be understood as designating towns or regions (Stählin (1924a) index s.vv.; Decourt (1990) 212–14). The earliest geographical sketch of Thessalia is chapter 64 of Ps.-Skylax; Thessalia is there described as consisting of the inland plains above Ainis, Dolopia, Malis, Achaia and Magnesia, and as extending as far as Tempe. The only stretch of coastline is at the Pagasitic Gulf, where the cities of Amphanaion and Pagasai were situated. Ps.-Skymnos 614–19 describes Thessalia as bordered by Athamania, Dolopia, Perrhaibia, Ainis and Makedonia. The most complete ancient description of the region is provided by Strabo; he begins (9.5.1) by placing the borders as they were in his day: to the north, Makedonia; to the east, from Thermopylai to the Peneios delta, the sea; to the south, the mountainous massifs of Oita and Aitolia; to the west, the countries of the Aitolians, the Akarnanians and the Amphiloichians, as well as of a number of Epeirote tribes which he groups under the heading *οἱ περὶ Πίνδον*.

Ps.-Skylax names eight *poleis* in the *mesogeia* but adds *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θετταλῶν ἐν μεσογείᾳ*. Other sources describing Thessalia as a region settled in *poleis* are, e.g., Pind. *Pyth.* 10.72; Aesch. *Pers.* 489; Thuc. 2.22.3; Xen. *Hell.* 6.1.14, 19. The Inventory below describes twenty-five *poleis* of Thessalia in the proper sense. These *poleis* have been identified with remains on the ground with very varying degrees of certainty: only one city is known from full excavations: Larisa. Moreover, inscriptions with city-ethnics are not very numerous. Under these circumstances, locations often rely on analysis of literary testimonies, in particular descriptions of military campaigns (Helly (1991) 30–31; Decourt (1990)), or on numismatic material (e.g. Orthos: Helly (1992) 78), on epigraphy (e.g. Matropolis: *IG IX.2* 284, found on site), or on employment of models borrowed from human geography (Decourt (1992)).

In addition to the twenty-five *poleis*, there were in Archaic and Classical Thessalia the following settlements which cannot be shown to have been *poleis*.⁴

⁴ A number of toponyms are left out of consideration here, since they cannot be shown to denote historical settlements in existence in the Archaic and/or Classical periods or because they are incorrectly ascribed to Thessalia *vel sim*. They include Aiginion: *IG IX.2* 329 (*πόλις Ἀϊγινέων* (C31)); Strabo 7.7.9; Steph. Byz. 43.11; *Barr.* H. Alea: Harp. s.v. *Ἀλέας*; Steph. Byz. 69.20: confusion with Halos in Achaia. Aloiion: known exclusively from Steph. Byz. 79.20. Antheia: Hes. *Scut.* 381, 475 (*πόλις*); unlocated; cf. Stählin (1924a) 227 no. 3. Aperantheia: Steph. Byz. 104.11; fabrication on the basis of or misunderstanding of the regional name *Aperantia*; cf. Polyb. 21.25.3; Livy 36.33.7; Plut. *Flam.* 15.6. Argos Pelasgikon: Hom. *Il.* 2.680, on which see REii. 789; not certainly a settlement, not certainly historical. Deipnias: Callim. fr. 87, Pfeiffer; Steph. Byz. 223.12: *κόμη Θεσσαλίας περὶ Λάρισσαν*; not certainly Classical; Helly (1987) 140–41 for location. Dodone: Steph. Byz. 246.9–10; non-existent, cf. Helly (1973) 58. Dotion: Steph. Byz. 256.14; not a historical city but a fabrication on the basis of the *Dotion pedion*; cf. Helly (1987). Elateia: *BCH* 45 (1921) 111.36 and 133 (230–220): *ἐν*

1. Pre-Hellenistic Settlements not Attested as Poleis

Armenion (*Ἀρμένιον* or *’Ορμένιον*) Strabo 11.4.8 (*πόλις*), 11.14.12 (*πόλις*). Cf. Perlman (2000) E.1 I. 44 (post-316): an Epidaurian *theorodokos* at Orminion, where

’Ελεταίος; Ptol. *Geog.* 3.12.39; unlocated; Stählin (1924a) 88–89. Erineos: Strabo 9.5.10; Steph. Byz. 277.7; unlocated; cf. Stählin (1924a) 167 n. 2, 185 n. 4. Eurymenae: known only from Livy 39.25.3; unlocated, and the very existence of a Thessalian (in contradistinction to a Magnesian) Eurymenai is not beyond doubt, since the MSS of Livy present various corruptions. Helike: Hes. *Scut.* 381, 475; Strabo 8.7.2; Steph. Byz. 267.4; unlocated; cf. Stählin (1924a) 227 no. 5. Hellas: Hom. *Il.* 2.683, 9.395, etc.; *Od.* 11.496; not certainly a city, not certainly historical; Hope Simpson and Lazenby (1970) 128–30; *Neue Pauly* v. 297–98. Ichnai: Strabo 9.5.14; Steph. Byz. 152.16 (*πόλις*); unlocated. Ilion: Steph. Byz. 330.18, 20–21: *Ἴλιον . . . τετάρτη Θεσσαλίας*; cf. Stählin (1924a) 227 no. 10; unlocated. Iope: Steph. Byz. 333.13, 18: *Ἰόπη . . . ἔστι καὶ Θεσσαλίας ἄλλη*; cf. Stählin (1924a) 227 no. 11; unlocated. Kyphos: Steph. Byz. 399.18. Kytina: Steph. Byz. 399.7: *Κύτινα, πόλις Θεσσαλίας, ὡς Θέων ἐν ὑπομνήματι Λυκόφρονος*; cf. Stählin (1924a) 227 no. 15: “*Κύτινα*, Steph. s.v. nach Theon zu Lykophr. 1389. Dort ist *Κυτιναῖοι* des Metrus halber für das unbequeme *Κυτινωῖτες*, das gebräuchliche Ethnikon des dorischen Kytinion, genommen. Theon aber schloß daraus irrtümlich auf eine thessalische Stadt Kytina, vgl. Holzinger zu Lyk. 1389”. Laphite: known exclusively from the note at Steph. Byz. 412.9: *Λαπίθη, πόλις Θεσσαλίας, ὡς Ἐπιφρόδιτος ἐν τοῖς Ὀμηρικοῖς*. Makkarai: Theopomp. fr. 55 *apud* Steph. Byz. 428.16–17: *Μακκαῖραι, χώρα ὑπὲρ Φάρσαλον*; this place may, as suggested by Heuzey and Daumet (1876) 425–28, be identical with the Makouniai: mentioned in *I.Thessalie* 1 50.3 (C31), though this remains conjecture (Decourt (1990) 183); on Pharsalian territory but not precisely located; treated as a fort/tower by Barr. Megara: Steph. Byz. 438.13, 439.8–9: *Μέγαρα . . . ἔστι καὶ Μέγαρα ἐν Θετταλίᾳ*; cf. Stählin (1924a) 227 no. 17 and RE xv. 205; unlocated. Meliboia: unlocated community known exclusively from Livy 36.13. Minye: Steph. Byz. 454.1–4; *IG IX.2* 521.10 (C3); unlocated; cf. Stählin (1924a) 93. Oichalie: mentioned in Hom. *Il.* 2.730, but not traceable in the historical period, *Neue Pauly* viii. 1127(2). Omarion: at Theopomp. fr. 137: *Ὀμάριον, πόλις Θετταλίας: Θεόπομπος Φιλιππικῶν κβ’*, *apud* Steph. Byz. 491.22: *Θετταλίας* should probably be emended to *Ἰταλίας* (Meineke, app. crit.), which will eliminate all evidence for a Thessalian Omarion. Pele: two sites known exclusively from Steph. Byz. 514.18: *Πέλη, πόλις Θεσσαλικῆς διττῆς*; cf. Stählin (1924a) 228 no. 20. Pelion: Steph. Byz. 521.4: *Πήλιον, πόλις Θεσσαλίας*; unlocated; cf. Stählin (1924a) 43 with n. 6. Pella: Clem. Al. *Protr.* 3.42.4: *Πέλλη ἡ Θετταλίας*; Steph. Byz. 515.6: *Πέλλα, πόλις . . . Θεσσαλίας*; unlocated; cf. Stählin (1924a) 228 no. 21. Pelousion: known only from Steph. Byz. 521.17: *ἔστι καὶ Πηλοῦσιον λιμὴν Θεσσαλίας*; unlocated; cf. Stählin (1924a) 228 no. 22. Perrhaibos: Steph. Byz. 518.5: unlocated elsewhere and probably a simple error. Phaecca: known only from Livy 32.14.1; not precisely located though Barr. locates it at the HR site of Pheke (formerly Varybopi). Phthia: Hom. *Il.* 1.155, 2.683, etc.; *Od.* 11.496; not certainly a city, not certainly historical; Hope Simpson and Lazenby (1970) 128–30; *Neue Pauly* ix. 975. Pialeia: *pace Barr.*, which locates Pialeia at Skoumbos, the precise location of this town remains unresolved, thus, all evidence pertaining to it is late: *Anth. Pal.* 9.264 (*Πιαλεῖς*) and Steph. Byz. 522.2: *πόλις Θεσσαλικῆς*. Proana: Steph. Byz. 537.11: *Πρώανα, πόλις Θεσσαλικῆς*; otherwise unknown and possibly a ghost toponym arisen from a misreading of a source referring to Proerna in Achaia. Silana: known only from Livy 36.13.6; unlocated but in Hestiatiotis. Tenos: known only from [Arist.] *Mir. ausc.* 151. Thegonion: known only from Hellan. fr. 8 *apud* Steph. Byz. 313.7: *Θηρώνιον, πόλις Θεσσαλίας. Ἑλλάνικος πρώτη Δευκαλιονείας*, where it is in all probability a corruption of *Θητόνιον*; cf. the entry for Thetonion. Thespeia: Steph. Byz. 310.17: *Θέσπεια . . . δευτέρα Θεσσαλίας*; Pherecydes (*FGrHist* 3) fr. 107: *Θέσπεια δὲ καὶ πόλις Θεσσαλίας. Φερεκύδης δὲ Ποτινεία ἰστορεῖ τὸν Τίφυν*; obviously, Pherecydes is not cited for a reference to a Thessalian Thespeia, but for a detail on Tiphys; unlocated; cf. Stählin (1924a) 227 no. 9. Thetideion: a sanctuary in Pharsalian territory; cf. *CPCPapers* 5 (2000) 148–49. Titaron: Steph. Byz. 627.3; Lycoph. *Alex.* 905 (implicitly); unlocated; cf. Lucas (1997) 30–31.

the reference could possibly be to the present settlement; but see Magnesian Orminion *infra* 689. *Barr.* AC.

Asbotos (Ἀσβωτος) Steph. Byz. 130.8 (πόλις); ἐξ Ἀσ[βώτου] is possibly to be restored in *IG* IV 617.14 (cf. *AJA* 98 (1986) 211), a list of payments made by Thessalian polities to Argive *theoroi* and dating to 316–293 (Perlman (2000) 74–75); Plassart reads ἐν [Ἀ]σβωτ[ε]λαί in *BCH* 45 (1921) col. vD(b).6 = p. 30 l. 6 (230–220); Euphorion fr. 25.1 (v. Groningen)/31.1, de Cuenca). Unlocated, but in Thessalia (Steph. Byz. s.v.); cf. Stählin (1924a) 227 no. 4. *Barr.* dates it L, but it probably existed H and perhaps even C (*supra*); if its name is correctly restored in *IG* IV 617, then it may even have been a *polis* in C4/C3e, and so possibly even in C4 prior to 323.

Boibe (Βοίβη) Hom. *Il.* 2.712; Strabo 9.5.15, 5.18: πολίχνη; Steph. Byz. 172.9: πόλις Θεσσαλίας. *RE* iii. 628. *Barr.* A, but the fact that it existed in 293 (Strabo 9.5.15) indicates C as well.

Callithera (*Callithera*) Mentioned only by Livy 32.13.11, but possibly to be identified with the C site at Paliouri: Helly (1992) 85–88, followed by *Barr.*

Chalkai (Χαλκαί) Theopomp. fr. 34 (on which see Martin (1982)). D. Kontogiannis (1992); Helly (1995) 293. *Barr.* C.

Eretria (Ἐρέτρια) Polyb. 18.20.5; Ptol. *Geog.* 3.13.43; *IG* IX.2 176 (C3). Steph. Byz. 276.6 (πόλις); Strabo 9.5.10 (κατοικία). Kip (1910) 28; Blum (1992). *Barr.* AC.

Euhydrium (*Euhydrium*) The toponym was presumably **Εὐύδριον*: it is not attested in Greek sources but may be reconstructed from its Latin form *Euhydrium* (Livy 32.13.9). *I.Thessalie* 35 (κατὰ τὸ τῆς πόλεως ψήφισμα (Hell.)). Béquignon (1932) 125–29, 140–43, 194; Decourt (1990) 196–98, 214–15. *Barr.* C.

Ithome, Thamiiai (Ἰθώμη/Θαμίαι) Hom. *Il.* 2.729; *SEG* 37 494 (230–200), 43 290; Strabo 9.5.17 (πολίχμιον); Steph. Byz. 306.9 (πόλις), 329.1 (πόλις). On onomastics, see Helly (1971). *Barr.* AC.

Kelaitha (Κελαίθα) *BCH* 45 (1921) III.28 (230–220); *IG* IV 617.9 (316–293): [ἐκ Κε]λαίθας (Cabanes (1976) 124). In *SEG* 15 384 (370–368), a man described as *Εὐστρατος Κελαίθων* (“Eustratos of the Kelaithoi”) is listed as *damiorgos* of the Molossian Federation (though it is commonly accepted that the community was situated in or near western Thessalia (Cabanes (1976) 124)). The toponym *Κελαίθα*

is probably to be connected with the ethnic *Κελαίθος* found here (ibid.); but whereas the Kelaithans presumably constituted a *polis* in the Hellenistic period (donating money to the Argives (*IG* IV 617) and having a Delphic *theorodokos* (*BCH* 45 (1921))), it is not certain that they formed a *polis* already by c.370: Rhianos (*FGrHist* 265) fr. 18 *apud* Steph. Byz. 372.6 describes them as an *ἔθνος* (Cabanes (1976) 123–24), and this classification is accepted by Hammond (1967) 526. Helly (1992) 85–88. *Barr.* H, but see *supra*.

Lakereia (Λακέρεια) Pherecydes (*FGrHist* 3) fr. 3a; Pind. *Pyth.* 3.34; Hellan. fr. 10 *apud* Steph. Byz. 408.8–9 (πόλις). *RE* xii. 523–24; Helly (1987). *Barr.* A.

Limnaeum (*Limnaeum*) Toponym known only from Livy 36.13.9, 14.1–2. Probably to be identified with the city site at Strongylovouni/Keusseukli-Dag, Vlochos (Decourt (1990) 120–21, 159–63). The preserved urban remains are mostly Hellenistic and later, but certain remains are C4 or even C5, and the site has yielded Archaic and Classical inscriptions (*I.Thessalie* 1–3, 6–7). *Barr.* AC.

Misgomenai (Μισγομεναί) Hellan. fr. 9 *apud* Steph. Byz. 454.12: Μισγομεναί, πόλις Θεσσαλίας. Ἑλλάνικος πρῶτω Δευκαλιωνείας. Unlocated (cf. Stählin (1924a) 227 no. 18). No date in *Barr.* but the occurrence of the toponym in Hellan. fr. 9 suggests C.

Onthyrion (Ὀνθύριον) Strabo 9.5.17 (πολίχμιον, πόλις); Rhianos (*FGrHist* 265) fr. 24 *apud* Steph. Byz. 493.12: Ὀνθύριον, πόλις Θεσσαλικῆ περι τὴν Ἄρνην. τὸ ἐθνικὸν Ὀνθυριεύς. Πιανὸς ὀγδόω. Unlocated by *Barr.* (but possibly at Kallithiro (formerly Seklitsa); cf. Indzesiloglou (1997) 58. According to Strabo 9.5.15, Onthyrion was one of three insignificant settlements (πολίχμια ἄσημα) merged by synoecism to produce Metropolis (of which it was a *phyle* in Hellenistic times (Habicht (1978–79))). The *terminus ante quem* for this synoecism is 358 (see entry *infra*), and if Strabo’s report is historical, Onthyrion must have existed prior to the Hellenistic period, but nothing is known about its political status. *Barr.* AC.

Palaipharsalos (Παλαιφάρσαλος) Strabo 9.5.6, 17.1.11; Livy 32.13.9 (*oppidum*). On the site, see Decourt (1990) 184–223. *Barr.* AC.

Phayttos (Φάυττος, Φαιστός) *IG* IX.2 489 (Hell.): πόλις; Ptol. *Geog.* 3.12.41. *Barr.* AC.

Photinaion (Φωτίναιον) Hecat. fr. 134 *apud* Steph. Byz. 676.7–8: Φωτίναιον . . . πόλις Θεσσαλίας, ὡς Ἐκαταῖος περιηγῆσει Εὐρώπης. Not in *Barr.*; Hecat. fr. 134 proves A.

Phyllos (Φύλλος) Rhianos (*FGrHist* 265) fr. 25; Strabo 9.5.14; Steph. Byz. 674.14 (πόλις). Decourt (1990) 148–52, 174–80. *Barr. AC*.

Sykyrion (Συκύριον) Polyb. 27.8.15. An acropolis with C5 fortification, no circuit around the lower city (autopsy by B. Helly). *Barr. AC*.

Symaitha (Σύμαιθα) Unlocated, but in Thessalia, according to Steph. Byz. 591.13–14: Σύμαιθα, πόλις Θεσσαλίας. ὁ πολίτης Συμαιθέυς, ὡς Θεόπομπος Φιλιππικῶν εἰκοστῷ δευτέρῳ; for Stephanos' use of *polites*, see Whitehead (1994) 124. *Barr.* dates it only H, but Theopomp. fr. 138 proves C.

Tripolis Larisaia (*Tripolis*) Livy 42.55.6, on which see Helly (1995) 161 n. 85. *Barr. AC*.

On the status of these communities nothing is known; some may have been *poleis* (cf. the comments on Asbotos), others civic subdivisions (cf. the comments on Onthyron).

A common political organisation comprising the communities of Thessalia becomes visible in the later sixth century. Common political and military action is attested for this period by e.g. Hdt. 5.63.3, where it is stated that the Θεσσαλοί sent military support to the Peisistratidai in accordance with a treaty of *συμμαχίη* and after having voted to send the reinforcement: ἀπέπεμψαν κοινῇ γνώμη χρεώμενοι χιλίην . . . ἵππων. A war waged by the Θεσσαλοί and their σύμμαχοι against Phokis is briefly mentioned at Hdt. 8.27 and dated “not many years before” Xerxes' invasion of Greece. During the Persian Wars, the Thessalians at first collaborated with the Hellenic League (Hdt. 7.172–74); later, however, when the large Greek army sent to Thessalia had left, possibly due to medism on the part of the Aleuadai, the Thessalians as such medised (Hdt. 7.174, 9.31.5; see further Robertson (1976)). A *symmachia* with Athens in 461 is attested at Thuc. 1.102.4. External collective dedications by the Thessalians are attested in *BCH* (1958) 329, 1 (458/7), and *BCH* (1963) 206–7, no. 6 (c.369). In C5f, the Thessalians were party to a dispute adjudged by Elis (no. 251) and involving also Athens (no. 361), Thespiiai (no. 222) and the Boiotians (*SEG* 26 475, 31 358).

In form, this political organisation was presumably a federal state (Larsen (1968) 12–26, 281–94; Beck (1997) 119–34). Federal citizenship, in addition to *polis* citizenship, is not explicitly attested, but may be assumed if there was a regional primary assembly, as argued by Larsen (1968) 19 with n. 4, and Beck (1997) 126, both referring to Hdt. 5.63.3 (quoted *supra*) and Thuc. 4.78.3: τὸ πάντων κοινόν with *HCT ad*

loc. (cf. also *IG* II² 116.18 (361/60) attesting election of the chief magistrate, presumably by an assembly, and *AM* 59: 57, 15.2, a C4 grant of proxeny by the *Petthaloi* which mentions *prostatai*; cf. also the use of *συμπολιτεύεσθαι* in *Insc.* 5.20). For the purpose of federal administration, the region was divided into four units, *tetrades*: Thessaliotis, Phthiotis, Pelasgiotis and Hestiaiotes (Hellan. fr. 52; on these units, see further *infra*). The *tetrades* were created by Aleuas the Red (Arist. fr. 497, Rose; cf. Helly (1995) 150–67); the *terminus ante quem* for their creation would be c.500 if the word *Πελασγιώτιδος* in *Hecat.* fr. 133 *apud* Steph. Byz. 381.21 is derived from *Hekataios*—which is, however, far from certain; a date in C6 is, on the other hand, commonly assumed (cf. Helly (1995) 170–75). The chief function of the tetradic system seems to have been as units of military conscription (Gschnitzer (1954); Beck (1997) 125). Other attested federal institutions include coinage (Martin (1985) 37–40); a board of *polemarchoi* (*SEG* 17 243 (c.458/7); *IG* II² 116.23 (361/60); *IG* II² 175.6 (C4m)) selected on a tetradic basis (*IG* II² 175.5–8), a board of *hipparchoi* (*IG* II² 116.24), a board of *hippeis* (*IG* II² 116.24), a board of *pezarchoi* (*IG* II² 175.8), a board of *hieromnemes* (*IG* II² 116.24), *presbeia* (*IG* II² 116.8–9) and *proxenia* (*AM* 59: 57, 15.2 (C4)). The chief magistrate of the federation is called *ταγός* in *Xen. Hell.* 6.1.18, but this title is not attested prior to the era of Jason (Helly (1995) 67). The usual title of the highest magistrate was presumably *ἀρχός* (Anac. fr. 107, Diehl; cf. *Dion. Hal. Ant. Rom.* 5.74.3), *ἀρχων* (*IG* II² 116.18 (361/60)), or *τέτραρχος* (*CEG* II 795i (rC5)); on these titles, see Helly (1995) 39–68. The *tetrarchoi* are sometimes conceived of as heads of the *tetrades* (Beck (1997) 125), but see the discussion by Helly (*loc. cit.*); according to Theopomp. fr. 208, Philip II of Makedon installed an archon at the head of each *tetras* (Helly (1995) 56–57). The office of *archos*, i.e. the chief office of the federation, was elective in 361/60 (*IG* II² 116.18) and presumably long before that date (Larsen (1968) 14–15); the office was held for life (Larsen (1968) 13; cf. *CEG* II 795.16 (330s) for a reign of 27 years).

Despite the existence of a federal structure, Thessalia was not always *de facto* firmly united; cf. e.g. *Xen. Hell.* 2.3.4 for a battle fought between Lykophron I of Pherai and forces from (among others) Larisa, a battle fought over the hegemony of Thessalia (*ἄρξαι ὅλης τῆς Θεσσαλίας*). However, when the region was firmly united, it was capable of controlling the minor adjacent regions; cf. *Xen. Hell.* 6.1.9–12 where Xenophon has Jason say that when Thessalia is governed by a *tagos*, all the surrounding peoples (*πάντα τὰ κύκλῳ ἔθνη*)—commonly referred to as *perioikoi* in

modern literature (Martin (1985) 69–73; Helly (1995) 181ff)—are its subjects (*ὑπήκοοι*; cf. 6.1.19 for the expression *οἱ περίοικοι* to refer to these peoples). Not much is known about the position of these dependent peoples (*perioikoi*) *vis-à-vis* the Thessalians, but the following seems reasonably clear.

(1) The subjection of the adjacent regions was completed before the end of C6; this appears from (a) the fact that the Thessalians in 510 offered Iolkos on the coast of the Pagasitic Gulf to Hippias of Athens (Hdt. 5.94.1) and thus must have controlled this region (Kip (1910) 11; Gschnitzer (1958) 2 n. 3; Martin (1985) 70); and (b) the probability that the subjection had taken place before the prolonged conflicts between Thessalia and Phokis (Kip (1910) 10; Lehmann (1983); McInerney (1999) 145–46, 174–78) and Boiotia (Buck (1979) 107–20), which antedate the Persian Wars (Gschnitzer (1958) 2 n. 3). That the subjection was effected by force of arms is a reasonable inference from Aristotle's reference to ancient warfare between the Thessalians and the Achaians, Perrhaibians and Magnesians (*Pol.* 1267^b5–7).

(2) Among the subjected peoples were (a) *the Achaians*: at 8.3.1, Thucydides refers to the Achaians as among the *hypekooi* of the Thessalians (cf. Arist. *Pol.* 1267^b5–7 for ancient warfare between the Achaians and the Thessalians); (b) *the Magnesians*: at 5.94.1, Herodotos relates that the Athenian tyrant Hippias, upon his expulsion from Athens, was offered Iolkos on the coast of the Pagasitic Gulf by the Thessalians, and this suggests that the area around Iolkos was subjected to the Thessalians by C6s (cf. Martin (1985) 70); at 2.101.2, Thucydides refers to *hypekooi* of the Thessalians and names the Magnesians as among them (cf. Arist. *Pol.* 1269^b5–7 for ancient warfare between the Magnesians and the Thessalians); (c) *the Perrhaibians*: at 4.78.6, Thucydides describes the Perrhaibians as *hypekooi* of the Thessalians (cf. Arist. *Pol.* 1269^b5–7 for ancient warfare between the Perrhaibians and the Thessalians). These are the only specifically named dependants, but there may well have been others: (i) at 3.93.2, Thucydides describes the Thessalians as in control of the areas in which Herakleia Trachinia was founded in 426 (i.e. presumably areas such as Ainis, Malis and Trachis); (ii) Xen. *Hell.* 6.1.9 has Jason say that *all* (*πάντα*) neighbouring *ethne* were subjects of the Thessalians, and this may include, e.g., the Athamanians and the Dolopians; (iii) Thucydides twice (2.101.1, 8.3.1) uses *οἱ ἄλλοι* to refer to unspecified subjects.

(3) The dependent peoples (i) paid *phoros* to the Thessalian Confederacy (Kip (1910) 12): (a) Jason fixed the tribute to be paid (Xen. *Hell.* 6.1.19) by putting it at the level

it had been (b) in the time of Skopas; the date and identity of this Skopas is unknown, but he is often placed in C6 (Larsen (1968) 18; cf. Helly (1995) 171–72, 183–86); (ii) were obliged to render military service, as is clear from Xen. *Hell.* 6.1.9 (cf. Kip (1910) 12).

(4) The dependent peoples continued to constitute political communities of their own and were not absorbed by the Thessalians; this is clear (a) from Herodotos' list of those who gave earth and water to the Great King (7.132.1), which in addition to the Thessalians includes (i) the Perrhaibians, (ii) the Magnesians, (iii) the Achaians, as well as (iv) the Dolopians, Ainians and Malians, who may also have been subjects of the Thessalians; (b) from the fact that (i) the Perrhaibians (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 43.45, 44.8), (ii) the Magnesians (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 43.24, 49), (iii) the Achaians (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 36.1.31, 43.24), as well as (iv) the Dolopians (Aeschin. <2.116>; Theopomp. fr. 63; *CID* II 43.46), Ainians (Theopomp. fr. 63; *CID* II 43.25) and Malians (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 71.46) were members in their own right of the Amphiktyonic League; (c) from the fact that, despite Thessalian protests, the Achaians (and other subjects) entered into bilateral relations with Sparta in 413/12 (Thuc. 8.3.1); (d) from the fact that four of these peoples struck their own coins: the Achaians (*BMC* 1963: 48 (C41/C3e); cf. *infra*), the Ainians (Head, *HN*² 291; cf. *infra*), the Oitaians (Head, *HN*² 302; cf. *infra*) and the Perrhaibians (Head, *HN*² 304; cf. *infra*); and finally (e) from the fact that the Oitaians, the Malians, the Ainians, the Dolopians and the Perrhaibians joined the Corinthian League of 338/7 (*IG* II² 236b (338/7)). Moreover, *poleis* are found in all of these regions (see sections 2.1–8 *infra*).

Exactly what the formal status of the subjects was is unknown. The story of the offer of Iolkos to Hippias (Hdt. 5.94.1) suggests that the Thessalians could on occasion consider perioikic land as Thessalian possession (cf. Soph. fr. 915 with Helly (1995) 137–40), but this reveals little about formalities. One possibility is that the *perioikoi* were in fact *symmachoi*: (1) at 8.27.2, Herodotos states that at a point “not many years before” the Persian War the *Θεσσαλοὶ καὶ οἱ σύμμαχοι* made an attack on Phokis; these *symmachoi* may possibly have been the subjects discussed here, and the formula “the Thessalians and the allies” is reminiscent of such formulas as “the Lakedaimonians and the allies” and may suggest that the Thessalians were leaders of a hegemonic alliance (cf. Nielsen (1997) 139–41); (2) a similar suggestion may be made on the basis of *IG* II² 116.13–14: this is a treaty of *symmachia* between Athens and the Thessalian

Confederacy, and it stipulates that all allies of the Thessalians are to be allies of Athens; this suggests that the Thessalians had dependent allies in 361/0, the date of the treaty (though, as pointed out by Kahrstedt (1925) 150, the Magnesians and the Achaians were probably not among them at this date).

As already mentioned, Thessalia proper was subdivided into four *tetradēs*: Thessaliotis, Phthiotis, Pelasgiotis and Hestiaiotis (on which see in general Gschnitzer (1954) and Helly (1995)).

Thessaliotis The toponym is *Θετταλιώτις*, ἡ (Hellan. fr. 52 *apud* Harp.; Strabo 9.5.17), called ἡ γῆ ἡ νῦν *Θεσσαλιώτις καλεομένη* at Hdt. 1.57.1. The corresponding “ethnic” is *Θετταλιώτης* (IG II² 175.7 (*Θετ[ταλιωτῶν]* (C4m)) or *Θεσσαλιώτης* (SEG 34 558.34 (C2s)). This “ethnic” is attested by only one Classical source, which clearly shows that it is not an ethnic proper but a term used to refer to an administrative/geographical unit of the Thessalian state (*supra*): [οἶδε] ὤμοσαν *Θετταλῶν* [---] [π]ολέμαρχοι· *Πελασγιωτ[ῶν ---]* [Φθιωτῶν· *Μεγάλος. Θετ[ταλιωτῶν ---]* [‘Ε]στ[ι]ωτ[ῶ]ν· *Εἴρων* (IG II² 175.5–8 (C4m)). For the origin of the term, see Gschnitzer (1954) and Helly (1995) 159–60.

The *tetras* of Thessaliotis and its “ethnic” is not as frequently attested as the other *tetradēs*, and the reason is presumably the similarity between the names *Θεσσαλία* and *Θεσσαλιώτις* and the confusion to which this similarity could potentially give rise: Ptol. *Geog.* 3.12, e.g., knows the correct names of the other *tetradēs*, but for Thessaliotis gives simply *Θεσσαλῶν* (followed by an absurd list of cities); and Steph. Byz. 310.23–24 treats *Θεσσαλιώτης/Θετταλιώτης* as a variant form of *Θεσσαλός*.

Thessaliotis occupies the southern part of the western plain of Thessalia. For a suggestion of which four communities constituted the administrative unit created by Aleuas the Red in C6, see Helly (1995) 177: Methy lion, Limnaion, Kieron and Thetonia. The Inventory below describes the following six *poleis* situated in Thessaliotis: Kierion, Methy lion, Orthos, Peirasia, Phakion and Thetonia.

Phthiotis The toponym is *Φθιώτις*, ἡ (Hellan. fr. 52), to which the corresponding “ethnic” is *Φθιώτης* (IG II² 175.7 (C4m); SEG 34 558.34 (C2s)). Like *Thettaliotes*, *Phthiotes* is attested only once in Classical inscriptions (IG II² 175, cited *supra*); the inscription demonstrates that it is not an ethnic proper but a term used to refer to an administrative/geographical unit of the Thessalian state (*supra*). For the origin of the term, see Gschnitzer (1954) and Helly (1995) 159–60.

Most instances of the terms *Φθιώτις* and *Φθιώτης* do not refer to the *tetras* of the Thessalian state, but to the Phthiotic Achaians (Thuc. 8.3.1: *Ἀχαιοὶ οἱ Φθιώται*; IG II² 132.56: *Ἀχαιοὶ Φθιώται* (278/7); cf. *infra* 2.5) or to mythological matters (Hdt. 1.56.3: *Φθιώτις*; Thuc. 1.3.2–3: *Φθιώτις*; Eur. *Andr.* 664: *Φθιώτις*; Tro. 187: *Φθιώται*).

Phthiotis was the smallest of the four *tetradēs*, occupying the lower and middle valley of the river Enipeus (Decourt (1990)). For a suggestion as to which four communities constituted the administrative unit created by Aleuas the Red in C6, see Helly (1995) 177: Peirasia, Pharsalos, Phyllos and Euhydriion; possibly, Eretria too was considered part of Phthiotis. The Inventory below describes one *polis* situated in Phthiotis: Pharsalos.

Pelasgiotis The toponym is *Πελασγιώτις*, ἡ (Hellan. fr. 52; Hecat. fr. 133); Dicaearchus fr. 61, Wehrli, *apud* Steph. Byz. 251.9–10 has ἡ *Πελασγιώτις χώρα* (but not obviously in reference to the area of the Thessalian *tetras*); Diod. 4.37.4 has ἡ *Πελασγιώτις γῆ*. The corresponding “ethnic” is *Πελασγιώτης* (IG II² 175.6 (C4m); cf. Simon. fr. 632, Page, where it is used in a, presumably, mythological context); like *Thettaliotes* and *Phthiotes*, *Pelasgiotes* is attested only once in Classical inscriptions (IG II² 175, cited *supra*); the inscription demonstrates that it is not an ethnic proper but a term used to refer to an administrative/geographical unit of the Thessalian state (*supra*). For the origin of the term, see Gschnitzer (1954) and Helly (1995) 159–60.

Pelasgiotis bordered on all three other *tetradēs* as well as on three perioikic areas: Perrhaibia, Magnesia and Achaia. By and large, it consisted of the plain of Larisa with its extension towards Pherai and the Pagasitic Gulf. For a suggestion as to which four communities constituted the administrative unit created by Aleuas the Red in C6, see Helly (1995) 177: Larisa, Pherai, Krannon and Skoutoussa. The Inventory below describes the following eleven *poleis* situated in Pelasgiotis: Amphanai, Argoussa, Atrax, Gyrtion, Kondaia, Krannon, Larisa, Mopsion, Pagasai, Pherai and Skoutoussa.

Hestiaiotis The toponym is *Ἑστιαιώτις*, ἡ (Hellan. fr. 52; Andron (FGRHist 10) fr. 16a); Steph. Byz. 254.10 (citing Andron) gives *Ἰστιαιώτις*, and Hdt. 1.56.3 has *Ἰστιαιώτις* (but not in reference to the area of the historical *tetras*; Helly (2001a)). The corresponding “ethnic” is restored as *Ἑστώτης* in IG II² 175.8 (C4m); the inscription demonstrates that it is not an ethnic proper but a term used to refer to an administrative/geographical unit of the Thessalian state (*supra*). For the origin of the term, see Gschnitzer (1954) and Helly (1995) 159–60.

Hestiaiotes was the north-western *tetras*; for a suggestion as to which four communities constituted the administrative unit created by Aleuas the Red in C6, see Helly (1995) 177: Triikka, Pharkadon, Gomphoi and Pelinna. The Inventory below describes the following six *poleis* situated in Hestiaiotes: Gomphoi, Metropolis, Pelinna, Phaloria, Pharkadon and Triikka.⁵

2. Adjacent Regions

2.1 Dolopia

The toponym is Δολοπία, ἡ (Thuc. 2.202.2; Teles, *De exilio* 22.10, Hense). The corresponding ethnic is Δόλοψ (Hdt. 7.132.1), of which the external individual use has been restored in IG II² 546 (C41) (cf. *JHS* 104 (1984) 153 n. 16); in Amphiktyonic documents, individuals are listed under the heading Δολόπων, mostly without a city-ethnic (e.g. CID II 43.46 (340/39), 96.7 (327/6)), but sometimes with one (CID II 74.1.48–49: *Κτυμεναῖος* (337/6)). The external collective use of the ethnic is found in Hdt. 7.185.2; Thuc. 5.51.1; Xen. *Hell.* 6.1.7; Ps.-Skylax 64 and IG II² 236b.10 (338/7). The Dolopians are classified as an *ethnos* by Hdt. 7.185.2 and Thuc. 5.51.2. As an *ethnos*, the Dolopians were a member of the Amphiktyonic League (Theopomp. fr. 63; CID II 43.46 (340/39)); they provided a single *hieromnemon* who in C4 was sent by Ktimene (CID II 32.45, 102.11.fr.A.9; Lefèvre (1998) 84–85).

The only explicit evidence that the Dolopians were subjected to the Thessalians is at Xen. *Hell.* 6.1.9, where Jason of Pherai is made to claim that the Dolopians were his *hypekooi*; it may, however, be assumed that the Dolopians were among the peoples commonly subjected to the Thessalians when these were effectively united (*ibid.*). Even so, the Dolopians seem to have constituted an individual political entity; thus, they gave earth and water to the Great King and sided with the Persians in 480 (Hdt. 7.132, 185; cf. Diod. 11.3.2); in 420/19 they waged war on Herakleia Trachinia with the Ainians and some Thessalians (Thuc. 5.51.1; Diod. 12.77.4, who substitutes Malians for Thucydides' *Θεσσαλῶν τινάς*; cf. Diod. 16.29.1 (the Sacred War) and 18.11.1 (the Lamian War)); and in C4 they joined the Corinthian League of Philip II (IG II² 236b.10 (338/7)).

Dolopia is not well explored, and its borders are imprecisely known. In the historical period, they occupied a large part of southern Mt. Pindos (Flacelière (1937) 23), south of Thessalia proper, bordering on the east on Achaia (Helly (1992) 81), to the south on Ainis, and to the north-west on Athamania. Only two Dolopian communities, Angeia and Ktimene, are known in the Archaic and Classical periods (Helly (1992)); they are both described in the Inventory below.

2.2 Ainis

The toponym is *Αἰνίς*, ἡ (Plut. *Quaest. Graec.* 26; IG IX.2 5b.10 (150–125)); it does not occur prior to the Roman period; in the Archaic and Classical periods, only the ethnic is found: it is *Αἰνιάων* in Thuc. 5.51.1; Xen. *Hell.* 4.13.15; Ps.-Skylax 35; and *Ἐννήν* (v.l. *Αἰνήν*; cf. *Hym. Hom. Ap.* 217) in Hdt. 7.132, 198.

Theopomp. fr. 80 may possibly have used *Αἰνιάων* χώρα about the territory which is called *Αἰνιαική* χώρα in Arist. *Mir. ausc.* 843^b17. The Ainians are classified as an *ethnos* by Hdt. 7.185 and Thuc. 5.51.2, and as an *ethnos*, they were a member of the Amphiktyonic League (Theopomp. fr. 63; CID II 36.1.8 (343–340), etc.); they provided two *hieromnemones* who in C4 came, at least sometimes, from Korophe and Phyrax (Lefèvre (1998) 21–23).

The internal collective use of the ethnic is found on C4 coins (Head, *HN²* 291; Babelon, *Traité* II.4 nos. 451–53) and in IG IX.2 3b (shortly after 323), a grant of proxeny to a man of Athens by [τὸ κοινὸν] τῶν Αἰνιάων. The external individual use of the ethnic is found in Diod. 18.7.2 (r323); CID II 43.58 (340/39); and SEG 8 513 (C4). The external collective use is found in Thuc. 5.51.1; Xen. *Hell.* 3.5.6; Ps.-Skylax 62; and Philoch. fr. 56. In its external uses, the regional ethnic may be specified by a city-ethnic *vel sim.*: *Αἰνιάων* . . . *Καφελεύς* (CID II 74.1.55–56 (337/6)); *Αἰνιάων* . . . *Κοροφαῖος* (CID II 97.64 (327/6)); *ἐκ Ταλάνας* . . . *Αἰνιάων* (CID II 1.1.45 (362/1)); [*A*]ἰνιάων *Ἰπαιταῖοι* (CID II 3.7 (362–357)); *Αἰνιάων Φυρράγιος* (CID II 1.1.40 (362/1)).

There is no direct evidence that the Ainians were subjected to the Thessalians, but two passages in Thucydides indicate that they were within the Thessalian sphere of interest and power: (i) at 3.93.3 he describes the Thessalians as in control (*ἐν δυνάμει ὄντες*) of the areas in which Herakleia Trachinia was situated, and (ii) at 5.51 he describes the Ainians as an *ethnos* bordering on Herakleia and thus as within the areas of Thessalian control and interest.

A C4 *koinon* of the Ainians is suggested by silver coins struck in the name of the *ethnos* (triobols and obols on the

⁵ A few polities cannot be assigned to any specific *tetras*: Asbotos (Thessalian, according to Steph. Byz. 130.8); Oxynton, which may have been in Hestiaiotes, or in Perrhaibia (Strabo 7.7.9). In the Inventories below they are both described s.v. Thessalia.

Aiginetan standard). Types: *obv.* head of Zeus; *rev.* warrior hurling javelin, or sword in sheath and javelin. Legend: *AINI*AN, *AINI*ANΩN (Head, *HN*² 291; Babelon, *Traité* ii.4 nos. 451–53). It is also suggested by *IG* ix.2 3b, a grant of proxeny passed by the Ainians shortly after 323.

During Xerxes' invasion, the Ainians medised (Hdt. 7.132, 185; Diod. 11.3.2); in 420/416, the Ainians, with the Dolopians and some Thessalians, waged war on Herakleia Trachinia (Thuc. 5.51; Diod. 12.77.4, who substitutes Malians for Thucydides' *Θεσσαλῶν τινάς*). A treaty with the Lakedaimonians is attested by Xen. *Hell.* 3.5.6 and Diod. 14.82.7 (r395); the Ainians joined the anti-Spartan alliance in the Corinthian War (Xen. *Hell.* 4.3.15) and were allied to Boiotia at the battle of Mantinea in 362 (Diod. 15.85.2 (r363/2)); *IG* ii² 236b.10 (338/7) has been restored [*Αἰνιάνων*], thus indicating membership of the Corinthian League of Philip II; in the Lamian War, the Ainians joined the Greek alliance (Diod. 18.11.1 (r323)).

Ainis was constituted by the basins of the middle and upper Spercheios valley (cf. Hdt. 7.198) and its principal tributary, Inachos. To the east, Ainis bordered on Malis and Oita, to the south on Aitolia, and to the north on Dolopia and Achaia. The Inventory below describes five *poleis* situated in Ainis (Hypata, Kapheleis, Korophaioi, Phyrhagioi and Talana); in addition there were in the area in the pre-Hellenistic period the following settlements.⁶

1. Pre-Hellenistic Settlements not Attested as Poleis

***Erythrai** (*Ἐρυθραῖος*) A toponym is not explicitly attested, but the city-ethnic *Ἐρυθραῖος* suggests *Ἐρύθραι*. *F.Delphes* 111.1 514 (c.278): ἡ πόλις *Ἐρυθ[ραίων]*; *IG* ix.2 7a (C2m): ἡ πόλις *Ἐρυθρηγίων*; *I.Erythrai* 1 36 (C3m); *Syll.*³ 492 (C3s). Stählin (1924a) 222; Helly (1978). *Barr.* C.

Macra Come (*Macra Come*) Mentioned only by Livy 32.13.10 and probably to be identified with the site at Varybopi. Béquignon (1937b) 316–22; Roux (1954); classified as a fort/tower by *Barr.* *Barr.* C?.

Side (*Side*) *CIL* 586.8. Kip (1910) 47; *RE*² II 2208; classified as a fort/tower by *Barr.* *Barr.* C.

⁶ A number of toponyms are left out of consideration here since they cannot be shown to denote historical settlements in existence in the Archaic and/or Classical periods or because they are incorrectly ascribed to Ainis *vel sim.* They include *Apeitheion*: *BCH* 45 (1921) 111.126 (230–220) and *IG* ix.2 6a.7 (C2m) with A. Kontogiannis (1990) 87; unlocated; no date in *Barr.*; Latyia: a *polis* known exclusively from a post-Classical inscription (*IG* ix.2 59).

Sosthenis (*Σωσθενίς*) *BCH* 45 (1921) 111.128 (230–220); *IG* ix.1² 34 (C2f); Ptol. *Geog.* 3.12.42. Kontogiannis (1994). *Barr.* C.

Spercheiai (*Σπερχεῖαι*) *BCH* 45 (1921) 111.20 (230–220); Ptol. *Geog.* 3.12.14. Béquignon (1937b) 313–15; classified as a fort/tower by *Barr.* *Barr.* C.

2. Unidentified Settlements

Ano Pheri Béquignon (1937b) 305–6; Philippson (1950) 244. *Barr.* C?.

Vounous Kase (1991) 47. *Barr.* C.

On the status of these communities in the Archaic and Classical periods, nothing is known. Some of them may possibly have been *poleis*, as Erythrai certainly was in C3m (*supra*).

2.3 Oita

In Strabo 9.5.10, the toponym is *Οἰταία*, ἡ; this toponym may have to be restored (as *Οἰταίης*) at Hdt. 7.185 (cf. Legrand (1951) 184 app. crit. and 185 n. 3), and *Οἰταία χθών* is found in Soph. *Phil.* 479; *IG* ix.1 227.1 (C2f) has *Οἴτα*, ἡ. The ethnic is *Οἰταῖος* on C4f coins (Babelon, *Traité* ii.4 nos. 438, 442); *Οἰταῖος* is found in Aeschin. 2.116; *IG* ii² 236b.9 (338/7); and Babelon, *Traité* ii.4 no. 439 (C4f), etc.

The internal collective use of the ethnic is found on C4 coins (Head, *HN*² 302; Babelon, *Traité* ii.4 nos. 227–30). The external collective use of the ethnic is found in Hdt. 7.217; Thuc. 3.92.2; Aeschin. 2.116, 142; [Dem.] 59.101; *IG* ii² 236b.9 (338/7). The external individual use is found in Xen. *An.* 4.6.20 and *Tit. Cal.* 3.5 (C4).

In Aeschin. 2.116, the Oitaian are described as an *ethnos* and are listed as a member of the Amphiktyonic League; they are, however, absent from the list of Amphiktyonic members found in Theopomp. fr. 63, and they do not appear in C4 Amphiktyonic documents (Lefevre (1998) 92; cf. Kip (1910) 19–20).

Oitaian subjection to the Thessalians is not explicitly attested, but may perhaps be inferred from Thuc. 3.93.2, where the Thessalians are described as in control of (*ἐν δυνάμει ὄντες*) the areas in which Herakleia Trachinia was founded.

The Oitaian as such presumably formed a political unit, as is suggested by the following evidence. (1) In C4f, they struck silver and bronze coins: silver (triobols and obols on the Aiginetan standard): *obv.* head of lion, spear in mouth,

or laureate head of Apollo; *rev.* naked Herakles with club, or lion's head, or spear and knife, or bow and quiver; legend: *OIT, OITA, OITAΩN, OITAIΩN*. Bronze: *obv.* lion's head, spear in mouth, or head of Apollo, or head of young Herakles crowned with vine wreath; *rev.* spear and knife, or spearhead and jawbone of boar and bunch of grapes; legend: *OIT, OITAΩN, OITAIΩN* (Head, *HN*² 302; Babelon, *Traité* ii.4 nos. 227–30; Rogers (1932) nos. 414–20). (2) Warfare by the *Oitaioi* is attested at Thuc. 3.92.3 (a war with the Malians) and Xen. *Hell.* 1.2.18 (a war against Herakleia Trachinia and the Achaians). (3) In 370, Jason of Pherai handed over to the Oitaians and the Malians the city of Herakleia Trachinia (Xen. *Hell.* 6.4.27; Diod. 15.57.2). (4) *Πραξιτέλης Ἰσχομ[ά]χου Οἰταῖος* was granted proxeny by Kalymna in C4 (*Tit. Cal.* 3) and Phylarchos (*FGrHist* 81) fr. 70 (r350s) *apud* Part. *Amat. narr.* 25 describes a man as *Οἰταίων προστάτης*. (5) Treaties/alliances are attested as follows: (a) a treaty with the Lakedaimonians is implied by Xen. *Hell.* 3.5.6; (b) membership of the Corinthian League of Philip II is attested by *IG* II² 236b.9 (338/7); and (c) except for Herakleia Trachinia, the Oitaians joined the Greek alliance set up for the Lamian War (Diod. 18.11.1 (r323)).

The Oitaians seem to have been a group composed ethnically of Dryopes, Malians and Ainians (Béguignon (1937b) 168–69; Baladié (1996) 277); they originally occupied the upper valley of the river Asopos (Flacelière (1937) 16), and later controlled the eastern part of Mt. Oita as far as the southern bank of the river Spercheios. Their only well-known *polis* is Herakleia Trachinia, which was founded in order to protect the Malians against the Oitaians (Thuc. 3.92) but was handed over to the Oitaians and the Malians by Jason of Pherai in 370 (Xen. *Hell.* 6.4.27; Diod. 15.57.2) and is described as Oitaian in reference to 323 by Diod. 18.11.1 (but is Malian in C4 Amphiktyonic documents, e.g. *CID* II 43.27 (340); see, however, Kip (1910) 19, 39–41, and Lefèvre (1998) 92, suggesting that this may be mere Amphiktyonic chancellery style, obscuring the fact that the Oitaians were represented by Herakleia). In addition to Herakleia, the Inventory below describes two other Oitaian *poleis* (Chen and Parasopioi). Finally, the area comprised the following pre-Hellenistic settlement, which cannot be shown to have been a *polis*, although it is unknown what status it did have.⁷

⁷ A number of toponyms are left out of consideration here, since they cannot be shown to denote historical settlements in existence in the Archaic and/or Classical periods or because they are incorrectly ascribed to Oita *vel sim.* They include *Kottai: a community attested by its ethnic (*Κοτταεύς*) in some C3 inscriptions and possibly to be located in Oita (Lefèvre (1998) 92 n. 448); Oite: a city called *Οἴτη* is sometimes (cf. refs. in Kip (1910) 38 n. 6) assumed on the basis, e.g., of Ps.-Skylax 62: *ἐνταῦθα Θερμοπύλαι, Τραχίς, Οἴτη, Ἡράκλεια, Στερχειός*

1. Pre-Hellenistic Settlement not Attested as a Polis

Homilai (**Ομυλαιοί*) *SGDI* 2527.7 (C31); *IG* IX.1 227, 229, 230 (C2m); Ptol. *Geog.* 3.12.15. Stählin (1924a) 210–11; Béguignon (1937b) 260–63; Kase (1991) 49–50. *Barr.* AC.

2.4 Malis

The toponym is *Μηλῖς*, ἡ (Hdt. 7.198.1, 201, 8.31). The corresponding ethnic is *Μηλιεύς* (Hdt. 7.132.1; Thuc. 3.93.1) or *Μαλιεύς* (Aeschin. 2.116; Ps.-Skylax 62; *CID* II 43.26 (340)).

The territory is called ἡ *Μηλῖς γῆ* in Hdt. 7.198.1 and ἡ *Μαλιέων χώρα* in Ps.-Skylax 62. The internal collective use of the ethnic is found on C4 coins (Head, *HN*² 296; Babelon, *Traité* ii.4 nos. 458, 462). The external individual use of the ethnic is found in Hdt. 7.213.1, and C4 Amphiktyonic documents list individuals under the heading *Μαλιέων*, sometimes without a city-ethnic (e.g. *CID* II 69.25), sometimes with the addition of *Λαμιεύς* or *Ἡρακλειώτας* (e.g. *CID* II 32.49 (358/7)). The external collective use of the ethnic is found in Hdt. 7.132.1, 9.31.5; Thuc. 3.93.1, 5.51.1; Xen. *Hell.* 3.5.6, 4.2.17; and *IG* II² 236b.9 (338/7).

Thuc. 5.51.2 describes the Malians as an *ethnos*, and as an *ethnos* they were a member of the Amphiktyonic League (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 43.26 (340)). According to Thuc. 3.93.2, the Malians were subdivided into three parts (*τρία μέρη*): the *Παράλιοι*, the *Ἰριῆς* (on which form see *HCT ad loc.*) and the *Τραχίνιοι*; the latter were the neighbours of the Oitaians (Thuc. 3.92.2), but apart from that these groups cannot be located.

A plurality of *poleis* in Malis is securely attested, e.g. (1) by Hdt. 7.198–99, who mentions first Antikyre and then Trachis as *poleis*; at 7.176.2, he furthermore calls Anthela *polis* (a city which, by implication, he considers Malian; cf. 7.216 describing Alpenos as the first East Lokrian *polis* after Malis; it is called *kome* at 7.200.2); and (2) by Ps.-Skylax 62, who names Lamia and Echinon and adds *εἰσὶ δὲ καὶ ἄλλαι πόλεις Μαλιέωσι*. Thus, Malis was a region subdivided into *poleis*. But the region as such may also have constituted a

ποταμός; however, *Οἴτη* here is probably the mountain, just as Mt. Knemis is listed in the preceding chapter: *καὶ πόλεις αὐτοῖς εἰσὶν αἰεὶ Θρόνιον, Κνήμις, Ἐλάτεια, Πανοπέυς* (cf. Nielsen (2000) 108). Cf. Müller's remark: "Inepte (Eta mons inter Trachinis et Heracleæ mentionem intruditur" and Kip (1910) 38–39. Accordingly, the present text takes no account of a city of Oita; Olea: *IG* IX.1 227 (C2m) lists as an Oitaian official a man named *Μενεκράτης Ὀλεαῖος*; *Olea is unlocated and otherwise unknown. Kip (1910) 26; Phalaron: Steph. Byz. 656 s.v. *Φάληρον*: *ἔστι καὶ Θεσσαλίας ἄλλη πρὸς τῇ Οἴτῃ Ῥιανὸς*... (= Rhianos (*FGrHist* 265) fr. 36); probably confused with Phalara in Malis (see entry for Lamia).

political unit, as is indicated by the following: (1) the fact that the Malians as such are described as medisers by Hdt. 7.132.1; (2) in 420/19, the Malians as such, according to Thuc. 5.51.1, were involved in a war against Herakleia Trachinia; (3) a treaty with the Lakedaimonians is implied by Xen. *Hell.* 3.5.6, one with the anti-Spartan alliance during the Corinthian War is implied by *Hell.* 4.2.17, and one with the Boiotians by *Hell.* 6.5.23. Membership of the Corinthian League of Philip II is attested by *IG II² 236b.9* (338/7), and the Malians excluding the Lamians joined the Greek alliance during the Lamian War (Diod. 18.11.1); (4) the Malians' *politeia* was described in an Aristotelian treatise (Arist. *frr.* 553–54, Rose). Furthermore, a detail is given at Arist. *Pol.* 129^b14–16, where it is stated that at an unspecified point in the past the *politeia* (citizenry or constitution) of the Malians had consisted of both active and superannuated hoplites, whereas the magistracies had been open only to those actually serving in the ranks; (5) in C₄, the Malians struck both silver and bronze coins. Silver (triobols on the Aiginetan standard). Types: *obv.* head of young Dionysos; *rev.* amphora; legend: ΜΑΛΙΕΩΝ. Bronze: *obv.* head of Athena; *rev.* Philoktetes with bow; legend: ΜΑΛΙΕΩΝ (Head, *HN² 296*; Babelon, *Traité* ii.4 no. 462; Rogers (1932) no. 384).

Thucydides' account of the antecedents of the founding of Herakleia Trachinia, however, suggests that Malian unity was not always equally strong: the Trachinians, a *meros* (= *polis*; cf. Trachis (no. 432)) of the Malians, were hard pressed by the Oitaians and thus, apparently on their own, first contemplated an alliance with Athens, but then elected an ambassador and sent him to Sparta in the company of, not other Malians, but metropolitan Dorians (3.93.1–3).

According to Hdt. 8.31, to the south-west Malis bordered on Doris; according to Thuc. 3.92.2, the Malian Trachinians bordered on the Oitaians to the west, and according to Hdt. 7.126, East Lokris was also a southern neighbour, the last Malian community in this direction being Anthela; the neighbours *ἄνωθεν ἀπὸ μεσσογείας* were the Ainians (Ps.-Skylax 63), and the northern neighbours were the Achaiaans (Ps.-Skylax 63 continues with Achaia). The area of Malis was modest, and its extent was limited further by the Spartan foundation of Herakleia on Malian territory in 426. None the less, it was an area subdivided into *poleis* (*supra*), and the Inventory below describes six Malian *poleis* (Anthele, Antikyre, Echinon, Herakleia (on which see *supra* s.v. Oita), Lamia and Trachis). Finally, the area comprised the following pre-Hellenistic settlements which cannot be shown to

have been *poleis*, though it is not known what status they did have.⁸

1. Pre-Hellenistic Settlements not Attested as Poleis

Aia (*Αἶα, Αἶαία*) Soph. *frr.* 915, Pearson, *apud* Steph. Byz. 37.2; Callim. *Hymn.* 4.287 (cf. White (1984b)); inscribed C₅ hydria (Helly (1995) 137); unlocated, but presumably a harbour settlement (Helly (1995) 137–40); no date in *Barr.*, but the written evidence attests to C.

Aigoneia (*Αἰγώνεια, Αἰγώνη*) Hecat. *frr.* 132 *apud* Steph. Byz. 45.8–10: *Αἰγώνεια, πόλις Μηλιέων. Λυκόφρων* “ὄν οἱ μὲν Αἰγώνειαν ἄθλιοι πάτραν”. καὶ Ἑκαταίος. *RE* i. 977. Not in *Barr.*, but Hecat. *frr.* 132 indicates A.

Kolakeia (*Κολακεία*) Theopomp. *frr.* 170 *apud* Ath. 6.254F: *τὴν καλουμένην πόλιν Κολακείαν ἣν Μηλιεῖς ἐνέμοντο*; *IG IX.1 230.2* (C_{2m}). Described as ἐν Οὔρα in *IG IX.1 230*. Béquignon (1937b) 305, 361. Not in *Barr.* but Theopomp. *frr.* 170 indicates C.

Phalara (*Φάλαρα*) Polyb. 20.10.16; Steph. Byz. 656.3. Probably the harbour settlement of Lamia. Not precisely located (cf. entry for Lamia). *Barr.* C.

2.5 Achaia

The simple toponym is *Ἀχαιία*, ἡ (Thuc. 4.78.1; cf. Kip (1910) 54–55), in Ionic *Ἀχαιίη* (Hdt. 7.198.2); toponyms denoting cities often make clear that the reference is not to the Peloponnesian Achaia (*τῆς Ἀχαιῆς Ἄλος* (Hdt. 7.173.1, 197.1); *Μελίτεια τῆς Ἀχαιῆς* (Thuc. 4.78.1)), but the toponym itself is sometimes qualified by *Φθιώτις* (Diod. 5.50.5: ἡ *Φθιώτις Ἀχαιία*; *IG VII 288.5* (240): [*Ἀχαιί*] *as τῆς Φθιώτιδος*). The corresponding ethnic is *Ἀχαιός* (Hdt. 7.185.2; *CID II 31.1.31* (343/2)), which is used either on its own (Hdt. 7.197.2; Xen. *Hell.* 1.2.18; Arist. *Pol.* 1269^b6; *CID II 43.2* (340/39)) or qualified by *Φθιώτης* (Hdt. 7.132.1; Thuc. 8.3.1; Ps.-Skylax 63; Theopomp. *frr.* 63; *IG II² 1132.56*). Aeschin. 2.116 uses simply *Φθιώται*.

The internal collective use of the ethnic is found on C₄/C_{3e} coins (*BMC* 1963: 48). The external collective use is

⁸ Paralos in Steph. Byz. 503.1 (*ἐν Θεσσαλίᾳ πόλις τῶν Μηλιέων*) must be a fabrication on the basis of the name of the *Παράλοι* (on whom *supra*); likewise, Iros (Lycoph. *Alex.* 905; Steph. Byz. 337.8)/Ira (Steph. Byz. 337.2) is probably a fabrication based on the name of the *Ἴριος* (on whom see *supra*).

found in Hdt. 7.185.2; Thuc. 8.3.1; Xen. *Hell.* 1.2.18; Theopomp. fr. 63 and Ps.-Skylax 63. The external individual use is found in *CID* II 118.5–6 (365–360), and Amphiktyonic documents list individuals under the heading Ἀχαιῶν either without (*CID* II 36.1.6 (341/0), 43.2 (340/39), 72.8 (327)) or with a city-ethnic (Λαρισαῖος: *CID* II 32.47 (340/39), 76.1.23 (335), 84.A.2–3 (332/1); or Μελιταιεὺς: *CID* II 32.47 (340/39), 74.1.39 (337/6), 76.1.24 (335)).

The territory is termed χῶρη at Hdt. 7.197.3, and the people are called an ἔθνος at Hdt. 7.185.2; Theopomp. fr. 63; and Aeschin. 2.166, and as an *ethnos* the Achaians were a member of the Amphiktyonic League (Theopomp. fr. 63; Aeschin. 2.116; *CID* II 36.1.6, 43.2, 72.8). They provided the Amphiktyonic League with two *hieromnemones* who in C4 were sent by Larisa and Melitaia (Lefèvre (1998) 87).

At *Pol.* 1267^b5–7, Aristotle refers to ancient warfare between the Achaians and the Thessalians, and it is very probable that this warfare led to Achaian subjection to Thessalia: at 8.3.1, Thucydides mentions the Achaians as among the *hypekooi* of the Thessalians. However, it seems that Achaia was not absorbed by Thessalia, but continued to constitute an individual political unit; thus, they are listed individually in Herodotos' list of medisers (7.132); in 413/12, the Achaians, despite Thessalian protests, entered into bilateral relations with Sparta; an alliance with Herakleia Trachinia seems implied for 409/8 by Xen. *Hell.* 1.2.18; and in C41/C3e, the Achaians struck coins inscribed ΑΧΑΙΩΝ (*BMC* 1963: 48). Furthermore, a number of *poleis* existed in Achaia: the Inventory below describes twelve Achaian *poleis* (Antron, Ekkarra, Halos, Kypaira, Larisa, Melitaia, Peuma, Phylake, Proerna, Pyrasos, Thaumakoi and Thebai).

In essence, Achaia was constituted by the Othrys massif and its northerly extensions. It stretched from the Pagasitic Gulf in the east to the territory of Pharsalos and the *tetras* of Thessaliotis in the west; to the north-west, it bordered on the *tetras* of Pelasgiotis with the territory of Pherai; to the south, the neighbours were Malis, Ainis and Dolopia. As stated above, there were several *poleis* in this area; in addition, the area comprised the following pre-Hellenistic settlements which cannot be shown to have been *poleis*.⁹

⁹ The toponym Karandai (*IG* 1x.2 205.13 (C3s); treated as a fortress by *Barr.* which dates it H) is left out of consideration here, since it cannot be shown to denote a historical settlement in existence in the Archaic and/or Classical periods. Phorbas is likewise left out; it is known exclusively from Steph. Byz. 670.5: πόλις τῶν ἐν Θεσσαλίᾳ Ἀχαιῶν.

1. Pre-Hellenistic Settlements not Attested as Poleis

Alope (Ἀλόπη) Hom. *Il.* 2.682; Strabo 9.4.9; Pherecydes (*FGrHist* 3) fr. 147 *apud* Steph. Byz. 77.8–9 (πόλις). *REi.* 1595. *Barr.* AC.

***Chalai(on)** (Χαλαῖος) A toponym is not attested and must be reconstructed from the ethnic Χαλαῖος (*F.Delphes* III.4 351 (C3f); Ager (1989) 109, (1996) 99–101). Stählin (1924a) 169–70 and Cantarelli (1995) locate Chalai(on) at Tsournati Vrysi (AC), whereas *Barr.* (following Kirsten, *RE* suppl. vii. 885–92) locates it at the AC site near Petroto (formerly Tsatma); cf. Helly (2001b) 241–49.

Dion (Δίον, Δία, *Δία) Diod. 20.110.3 (r302) (πόλις); Steph. Byz. 229.1 (πόλις). According to Diod. 20.110.3, in 302 Cassander planned to metoecise (the population of) Dion to Phthiotic Thebes (a metoecism prevented by Demetrios); though the city is unlocated, it may be assumed that if it was a candidate for metoecism in 302, it existed in the Classical period. The same would follow if C4 coins inscribed ΔΙΑΩΝ (Demetriadi (1998)) belong to this Dion (Hatzopoulos and Psoma (1998–99)). Unlocated in *Barr.* but see A. Batziou-Eustathiou, *Deltio Othryos* (1997) B.1: 69–85; *ArchDelt* 49 (1994) *Chron.* 325–26 for a possible location.

Koroneia (Κορώνεια) *Syll.*³ 240.O.10 (308): [Κο]ρωνειεῖς; Ptol. *Geog.* 3.12.43; Strabo 9.5.10; Steph. Byz. 377.16–17. Unlocated. Stählin (1924a) 167 n. 2 and 185; *RE* xi. 1431; White (1984a). *Barr.* dates it AC, but it is in fact not attested till c.308 (*Syll.*³ 240.O.10); however, if it really donated money towards the rebuilding of the temple at Delphi in C41, it may be assumed to have existed prior to that date and thus at least in the Classical period.

Narthakion (Ναρθάκιον) Xen. *Hell.* 4.3.9; *BCH* 45 (1921) IV.28; *IG* 1x.2 89.31 (c.140). Béquignon (1937b) 286–92. *Barr.* C. There may just possibly be some evidence that Narthakion was constituted as a *polis* in C4; an inscription of c.140 (Ager (1996) no. 156) records a verdict by the Senate in a territorial conflict between Narthakion and Melitaia, which was a *polis* in C4 (see entry *infra*); the evidence presented by the Melitaians before the Senate refers retrospectively to what may possibly be a C4 verdict in a similar conflict (Ager (1989) 108). If Narthakion really had a territorial conflict with Melitaia settled by international arbitration in C4, then it must have been a *polis*.

Orchomenos (Ὀρχομενός) Diod. 20.110.3 (r302) (πόλις). According to Diod. 20.110.3, in 302 Cassander planned to metoecise (the population of) Orchomenos to Phthiotic Thebes (a metoecism prevented by Demetrius); though the city is unlocated and unattested prior to this date, it may be assumed that if it was a candidate for metoecism in 302, it existed in the Classical period. Not in *Barr.*

Pereia (Πήρεια) IG IX.2 205.19 (C31): πόλις; *F.Delphes* III.4 351 (C3f) (collective city-ethnic). Located at the AC site near Petroto (formerly Tsatma) by Stählin (1924a) 167; *Barr.* follows Kirsten, *RE* suppl. vii. (1940) 885–92 and Philippson (1950) 200, 272, in preferring the AC site at Tsournati Vrysi, where Cantarelli (1995) and Helly (2001b) 241–49 place Chalai(on).

Phyliadon (Φυλιαδών) *F.Delphes* III.4 351.18–19 (C3f): Φυλλαδόνοιοι; IG IX.2 205.13 (C31). Stählin (1924a) 168; Lauffer (1989) 549; Cantarelli (1995) 320–21. *Barr.* treats Phyliadon as a fortress, but in C3f it had a territorial conflict with Peuma settled by international arbitration (Ager (1996) no. 31), and the record of the verdict describes Phyliadon by the collective city-ethnic. These two facts suggest that Phyliadon was, in C3f, not a fortress but a community of citizens. *Barr.* C?

Pras (Πρᾶς) Xen. *Hell.* 4.3.9; Steph. Byz. 534.12 (πόλις). Presumably to be identified with the fortified Classical site (fortress?) at Divri, for which see Stählin (1924a) 39 n. 3, 187, 228; Béquignon (1937b) 287ff; *RE* suppl. x. 651–52. Unlocated in *Barr.*

Pteleon (Πτελεόν) Hom. *Il.* 2.697; Diod. 20.110.3 (r302); Strabo 9.5.8; Steph. Byz. 537.20 (πόλις); Eust. *Il.* 1.505.28 (πόλις); IG IX.2 520 (C2f): ἡ πόλις τῶν [Πτε]λειῶν. Stählin (1924a) 181; *Prakt* (1951) 129–54, (1952) 164–85, (1953) 120–32. *RE* xxiii.2. 1481–82. *Barr.* AC.

Xyniai (Ξυνίαι) IG IX.1² 177 (214/13) = Ager (1996) no. 55; Polyb. 9.45.3 = Steph. Byz. 481.19 (πόλις). *Barr.* AC.

2. Unidentified Settlements

Ano Ktimeni Helly (1992) 49–58. *Barr.* C.

Karatsadagli Philippson (1950) 180; Helly (2001b) 241–49. *Barr.* C.

It is unknown what status these communities had. Some of them, such as Dion and Narthakion, may have been *poleis*, as, e.g., Pteleon was in the Hellenistic period (*supra*).

2.6 Magnesia

The toponym is *Μαγνησία*, ἡ (Aeschin. 3.83; Dem. 1.13; IG IX.2 1101.4 (C2)); the Ionic form is *Μαγνησίη* (Hdt. 7.176.1). The corresponding ethnic is *Μάγνης* (Hdt. 7.132; Thuc. 2.101.2; Xen. *An.* 6.1.7; *CID* II 12.1.68 (341)).

The external collective use of the ethnic is found in Hdt. 7.132, 185; Thuc. 2.101.2; Isoc. 5.21; and Arist. *Pol.* 1269^b7. In addition, *Μάγνητες* is used in conjunction with collective city-ethnics: *Μάγνητες Κροκαῖοι* (*CID* II 5.11.36 (358)); *Μάγνητες Μεθωναῖοι* (*CID* II 5.11.39); *Μάγνητες Ὀξωνιαῖοι* (*CID* II 5.11.42). The external individual use of the ethnic is found in *CID* II 12.1.68–72 (341), which list three individuals; furthermore, Amphiktyonic documents list individuals under the heading *Μαγνήτων*, either without (*CID* II 36.1.7, 33, II.21 (341/0), 43.2 (341/0), 102.11.A.32 (324/3)) or with a city-ethnic (*Κ(ο)ροκαῖος*: *CID* II 32.48 (C4)); *Μεθωναῖος*: *CID* II 74.1.55 (337/6); *Ὀλιζώνιος*: *CID* II 84.A.4 (332/1); *Ὀμολιεύς*: *CID* II 74.1.39 (337/6)).

The territory is called ἡ *Μαγνησίη χώρα* at Hdt. 7.183.3, 188.1, and *Μαγνητικὴ γαῖα* at Aesch. *Pers.* 492. The people are called an *ethnos* in Hdt. 7.132, and as an *ethnos* the Magnesians were a member of the Amphiktyonic League (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 36.1.33 (341/40)); they provided the Amphiktyonic League with two *hieromnemones* who in C4 were sent by Homolion and either Methone, Korakai or Olizon (Lefèvre (1998) 89).

The Magnesians are described as among the *hypekooi* of the Thessalians by Thuc. 2.101.2; it would appear from Arist. *Pol.* 1267^b5–7, mentioning ancient warfare between the Magnesians and the Thessalians, that the subjection of the Magnesians was effected by force of arms, and from Hdt. 5.94.1 (on which see Kip (1910) 11; Gschnitzer (1958) 2 n. 3 and Martin (1985) 70), mentioning a Thessalian offer of the Pagasitic city of Iolkos to Hippias after his expulsion from Athens, that it had been carried out before 510. However, the Magnesians were not absorbed by the Thessalians, as is indicated by the fact that they are listed individually in Herodotus' list of medisers at 7.132 and the fact that they formed a member of the Amphiktyonic League (Aeschin. 2.116; Theopomp. fr. 63; *CID* II 36.1.33 (341/40)). In addition, there were several *poleis* in Magnesia; the Inventory below describes fourteen Magnesian *poleis* (Amyros, Euraioi, Eurymenai, Homolion, Iolkos, Kasthanaie, Kikynethos, Korakai, Meliboia, Methone, Olizon, Oxoniaioi, Rhizous and Spalauthra).

In the Archaic and Classical periods, the area of Magnesia corresponded to the peninsula traditionally called Magnesia,

except for the western coast of the Pagasitic Gulf with the Thessalian cities of Amphanoi (no. 393) and Pagasai (no. 407), and Pyrasos (no. 442) in Achaia. In this area there were, in addition to the *poleis* listed above, the following settlements which cannot be shown to have been *poleis* and about whose status nothing is known.¹⁰

1. Pre-Hellenistic Settlements not Attested as Poleis

Aphetai (Ἀφέται) Hdt. 7.193, etc.; Hellen. fr. 130 *apud* Steph. Byz. 149.6: πόλις Μαγνησίας. Ἑλλάνικος. Müller (1987) 305–8. *Barr.* AC.

Glyphyrai (Γλάφυραι) Hom. *Il.* 2.712; *BCH* 95 (1971) 555 l. 9 (C2s); Steph. Byz. 209.2 (πόλις). Wace (1906); Stählin (1924a) 61; di Salvatore (1994) 106–7; *PECS* 357. *Barr.* AC.

Isai Limen (Ἴσαι λιμὴν) Ps.-Skylax 65. Unlocated; cf. Stählin (1924a) 56. Not in *Barr.* but Ps.-Skylax 65 attests to C.

Kerkinion (Κερκινέον) Livy 31.41; Procop. *Aed.* 4.4.163; *EAM* no. 47 (C2–C1). *RE* xi. 1279; *ArchEph* (1931) 175. *Barr.* AC.

Korope (Κορόπη) Steph. Byz. 375.8 (πόλις). Settlement with major sanctuary of Apollo. Stählin (1924a) 53–54; Papachatzis (1960); *PECS* 463–64; Lauffer (1989) 346. *Barr.* AC.

Neleia (Νήλεια) Strabo 9.5.15 (r293) (πολίχνη). According to Strabo (*loc. cit.*), Neleia was in 293 synoecised into Demetrias and became a *kome* of the new *polis*. Prior to that, it was probably the port of Iolkos (Baladié (1996) on

Strabo 9.5.15 in *Lexique des noms de lieux* 275). *Barr.* treats it as unlocated, but it may have been situated on the hill of Pevkakia (formerly Tarsanas); cf. Baladié (*loc. cit.*). However, excavations here have unearthed only prehistoric material (cf. *Die deutschen Ausgrabungen auf der Pevkakia-Magula in Thessalien* i–iii.2 (1989–92)). However, since it existed in 293 when it was merged into Demetrias, the presumption is that it existed in C4 as well. Cf. however Bakhuizen (1996), seriously questioning the existence of Neleia by suggesting that it is a metonymic appellation for Iolkos (“city of Neleus”), and thus providing an excellent reason for the unresolved location. *Barr.* HR, but see *supra*.

Orminion (Ὀρμίνιον, Ὀρμίνιον, Ὀρμένιον) Perlman (2000) E.1 l. 44 (post-316): an Epidaurian *theorodokos* at Orminion (though the reference could well be to Armenion/Ormenion (*supra* 678)); Strabo 9.5.15 (r293): Orminion, a *polichne* synoecised into Demetrias; Strabo 9.5.18. Unattested in the Classical period, but the fact that it existed in C4/C3e (*supra*) suggests that it existed prior to the death of Alexander. Unlocated (cf. Indzesiloglou (1994)). Undated by *Barr.*

Sepias (Σηπιάς) Strabo 9.5.15 (r293): πολίχνη; McDevitt (1970) no. 683 (second century AD). Stählin (1924a) 52; Wisse (1994) 3–4; treated as a fort/tower by *Barr.* *Barr.* AC.

Thaumakie (Θαυμακίη) Hom. *Il.* 2.716. *RE* v.A. 1331. *Barr.* AC.

2. Unidentified Settlements

Dimini Identified with Aison by *Barr.*, but see Bakhuizen (1996). Possibly the site of Iolkos (Adrimi-Sismani (1994)). *Barr.* C.

Goritsa Bakhuizen (1986), (1992). A major urban site of c.325–300, whose fortification wall encloses an area of 33 ha, its ancient name is unknown, but it may possibly have been the site of Methone (no. 454) (Helly (2001b)). *Barr.* C?

It is unknown what status these communities had. Some of them may possibly have been *poleis*; e.g. Orminion seems to have been a *polis* in C4 when it had an Epidaurian *theorodokos* (*supra*).

2.7 Perrhaibia

The toponym is Περραιβία, ἥ (Thuc. 4.78.6; Theophr. *De lapidibus* fr. 2, Wimmer; Diod. 15.57.2 (r370/69)); the

¹⁰ A number of toponyms are left out of consideration here, since they cannot be shown to denote historical settlements in existence in the Archaic and/or Classical periods or because they are incorrectly ascribed to Magnesia *vel sim*. They include Aison(ia): Pherecydes (*FGRHist* 3) 103b; Steph. Byz. 54.16 (πόλις); but see Bakhuizen (1996) 92–93; Aixoneia: Steph. Byz. 52.12: Αἰξώνεια, πόλις Μαγνησίας; unlocated; cf. Stählin (1924a) 78 n. 2 no. 2; and Kip (1910) 84–85; Amolbos: Balagros (*FGRHist* 773) fr. 1 *apud* Steph. Byz. 86.7: Ἄμολβος, πόλις Μαγνησίων, ὡς Βάλαγρος Μακεδονικῶν β; unlocated; cf. Stählin (1924a) 78 n. 2 no. 3; Boudeion: Hom. *Il.* 16.572; Steph. Byz. 180.3: Βούδεια, πόλις ἐν Μαγνησίᾳ ... Ὀμηρος Βούδειον ἔφη; unlocated; cf. Stählin (1924a) 78 n. 2 no. 4; Corynthia: Stählin (1924a) 78 n. 2 no. 5 refers to Pomponius Mela 3.35 for a Magnesian toponym *Corudra* or *Corynthia*; however, standard editions of Pomponius vary here: (a) Silberman prints: *a Peneo ad Sepiada Eurymenae, Meliboea, Castanea . . .* with the following variant in the app. crit.: *Erymne, Ciacconius, Corynthia*; (b) Ranstrand prints: *a Peneo ad Sepiada Corynthia, Meliboea Castanaea*. So, Corynthia is nothing but an uncertain reading; Eurympos: Steph. Byz. 286.19: Εὐρύμπος, πόλις Μαγνησίας. Lycoph. *Alex.* 900: Ἀμφρυσίων σκηπτοῦχον Εὐρυαμπίων; unlocated; cf. Stählin (1924a) 78 n. 2 no. 6; Magnesia: *pape*Papachatzis (1959) and others, this is a ghost city; cf. Stählin (1924a) 69–70; Peiresiai (Πειρεσίαι): *Hymn. Hom. Ap.* 32; *Ap. Rhod.* 1.584; Steph. Byz. 514.8; unlocated; not in *Barr.*

corresponding ethnic is *Περ(ρ)αιβός* (*Hym. Hom. Ap.* 218; Hecat. fr. 137); an undated inscription from Koroneia has *Περρηβός* (*IG VII* 2858). The internal collective use of the ethnic is found abbreviated as *Π*, *ΠΕ*, *ΠΕΡ*, *ΠΕΡΑ* on silver coins dating to 480–400 (drachms, triobols, trihemibols, obols, hemiobols on the Aiginetan standard) with types: *obv.* man restraining bull, or forepart of bull, or horseman, or head of Athena; *rev.* galloping horse, or forepart of horse, or Athena seated or running with spear, or horse's head, or nymph (Head, *HN*² 304; Babelon, *Traité* ii.4 nos. 571–80; Liampi (1996) 109–10; *SNG Cop. Thessaly* 193–95). The ethnic is given in full as *ΠΕΡΡΑΙΒΩΝ* on C4f bronze coins: *obv.* laureate head of Apollo, or veiled head of Hera, or head of Zeus; *rev.* head of nymph, or naked hero, or Hera seated (Babelon, *Traité* ii.4 nos. 581–82; Rogers (1932) nos. 437–39; *SNG Cop. Thessaly* 196). The external collective use is found in Thuc. 4.78.6; Isoc. 5.21; Ps.-Skylax 65; *IG II*² 236b.11 (338/7) and in *CID II* 9.4 (C4m), where it is coupled with a city-ethnic (*Παρραιβοὶ Ἐρικνεῖς*); and the external individual use is found in *CID II* 12.1.59, 66 (341/40), 31.78 (345/4), etc. In Amphiktyonic lists, individuals are listed under the heading *Περραιβῶν* (e.g. *CID II* 43.45 and 44.8 (339/8)), sometimes with the addition of the city-ethnic of Phalanna (*CID II* 96.6–7 (327/6) and 97.60 (327/6)).

The Perrhaibians are described as an *ethnos* at Hdt. 7.185.2, and as an *ethnos* they were a member of the Amphiktyonic League (Aeschin. 2.116; Theopomp. fr. 63; *CID II* 43.45 and 44.8); they provided the Amphiktyonic League with a single *hieromnemon* who in C4 was sent by Phalanna (Lefèvre (1998) 85). Thuc. 4.78.6 describes the Perrhaibians as *hypekooi* of the Thessalians, and Arist. *Pol.* 126^b5–7, mentioning ancient warfare between the Perrhaibians and the Thessalians, suggests that the subjection was initially effected by force of arms. However, the Perrhaibians were not absorbed by the Thessalians, as is apparent not only from their membership of the Amphiktyonic League, but also by the facts (1) that Herodotos records the Perrhaibians individually in his list of *medisers* at 7.132.1; (2) that the Perrhaibians struck coins in C5 and C4 (*supra*); (3) that in 375–350 the Perrhaibian *poleis* (*infra*) made a joint dedication to Apollo Pythios at Oloosson (*SEG* 29 546, on which see Helly (1979b)); (4) that they joined the Corinthian League of Philip II as a separate entity (*IG II*² 236b.11 (338/7)); (5) and that a plurality of *poleis* is attested by Diod. 15.57.2 for 370/69, by which time Jason of Pherai had subjected them by a combination of force and negotiation. The Inventory below describes eleven

Perrhaibian *poleis* (Azoros, Chyretiai, Doliche, Ereikinion, Gonnos, Malloia, Mondaia, Mylai, Oloosson, Phalanna and Pythoion). Nos. 1–4 also suggest that the Perrhaibians as such constituted a political unit (cf. Helly (1979b) 184–88 on no. 4).

Perrhaibia is bounded on the north by Makedonia and to the south-east and south-west by the *tetradēs* of Hestiaiotis and Pelasgiotis. In Perrhaibia there were, in addition to the *poleis* listed above, the following pre-Hellenistic settlements which cannot be shown to have been *poleis*:¹¹

1. Pre-Hellenistic Settlements not Attested as Poleis

***Askyris** (no toponym attested; the ethnic is *Ἀσκυριεύς*; *IG IX.2* 521 (C3e)) Lucas (1991). *Barr. C?*

Condylus (*Condylus*) Livy 44.6.10. Helly (1973) 44–46. *Barr. C.*

Leimone (*Λειμώνη*) The earlier name was *Ἡλώνη* (cf. Hom. *Il.* 2.739), according to Strabo 9.5.19; Steph. Byz. 301.11 (*πόλις Περραιβική*). *Barr. AC.*

Olympias, Gonnocondylos Livy 39.25.16. Helly (1973) 39–44. *Barr. C.*

It is unknown what status these settlements had. Gonnocondylus and Condylus were presumably second-order settlements of Gonnoi (Helly (1973) 46: “Gonnocondylus et Condylus . . . ne sont pas des cités, πόλεις, mais des villages. Les ruines qu'on y trouve, comme les inscriptions, montrent qu'ils étaient des κώμαι, dispersées sur le territoire de Gonnoi.”). About the remaining two nothing is known.

2.8 Athamania

The toponym is *Ἀθαμανία*, ἡ (Antig. Car. *Mirabilia* 148.1; *BCH* 45 (1921) III.34 (230–220)); the corresponding ethnic is *Ἀθαμάν* (Heracl. Lemb. 53; *IG II*² 1956.III.156 (c.300); *SEG* 8

¹¹ Oxynton (Strabo 7.7.9) may have belonged to Perrhaibia or to Hestiaiotis. Bodone (Steph. Byz. 190.20; Cineas (*FGRHist* 603) fr. 2; as it is unknown in what context Cineas (c.355/277? according to Jacoby) discussed Bodone, and since this city has left no other literary, epigraphical or archaeological trace, it is better considered unhistorical, possibly a confusion with Homeric Dodone (*infra*); Helly (1973) 58; Dodone: Hom. *Il.* 2.749; Steph. Byz. 246.9; has no historical existence; cf. Helly (1973) 58; Gonoussa (Steph. Byz. 211.4; schol. in Lycoph. *Alex.* 870, 906) is merely a corruption of *Gonnoi* (Helly (1973) 63). Kyphos: Hom. *Il.* 2.748; Lycoph. *Alex.* 897; Strabo 9.5.20; Steph. Byz. 399.15; has no historical existence (Helly (1973) 51–71).

518 (C₃–C₂). The territory is called *χώρα* in Heracl. Lemb. 53, and the people are called an *ethnos* at Diod. 16.29.1 (r354/3) and Strabo 7.7.1 (cf. *gens* at Nep. *Timoth.* 2.1). The external collective use of the ethnic is found in Heracl. Lemb. 53 and Diod. 14.82.7 (r395), 16.29.1 (r354/3); in *IG* 11² 1956, an Athenian catalogue of mercenaries of c.300, a man is listed under the heading *Ἀθαμᾶνες* (III.156).

An Athamanian *koinon* is attested by Hellenistic inscriptions (*Syll.*³ 657A.7; *IG* IX.2 613) and coins (Head, *HN*² 320). Presumably, the Athamanes as such also constituted a political unit in C₄, as is indicated by (1) the report of Diod. 14.87.2 that in 395 they left their alliance with Sparta and joined the anti-Spartan league of the Corinthian War, a report which implies the existence of at least two treaties of alliance; (2) the report of Nep. *Timoth.* 2.1 that in 375 they allied themselves with Athens; (3) the fact that they joined the anti-Phokian faction in the Third Sacred War as an individual unit (Diod. 16.29.1); (4) the fact that they joined the anti-Makedonian alliance during the Lamian War as an individual unit (Diod. 18.11.1); and (5) the fact that their *politeia* was described in an Aristotelian treatise (Heracl. Lemb. 53).

According to Ps.-Skymnos 614, Athamania bordered on Thessalia (τῆ Θεσσαλία δ' ἔσθ' ὄμορος Ἀθαμανία); Steph. Byz. 33.10 describes it as part of Illyria, but notes that others treated it as part of Thessalia (Ἀθαμανία, χώρα Ἰλλυρίας, οἱ δὲ Θεσσαλίας); Strabo 7.7.1 lists the Athamanes under the heading Ἱππειρωτικὰ ἔθνη. In Strabo's day, the Athamanes no longer existed as an individual people (9.4.17) but had been absorbed by the Thessalians (9.5.11). Athamania was constituted by the mountainous (cf. Strabo 7.7.8) upper valley of the river Acheloos. To the north it was bordered by Aithikia, to the east by the Thessalian *tetrades* of Hestiaiotis and Thessaliotis, to the south by Amphilochia, and to the west by Epeiros (Maps 54 and 55). The Inventory below describes one Athamanian *polis*, Argethia; only one other settlement is attested by Classical sources: *viz.* the unlocated Krannon (not in *Barr.*) which, according to Steph. Byz., was mentioned by Theopompos: *Κραννῶν . . . πόλις Ἀθαμανίας, ἀπὸ Κράννωνος τοῦ Πελαγοῦ. ἐν ταύτῃ δύο κόρακας εἶναι φασι μόνους, ὡς Καλλίμαχος ἐν τοῖς Θαυμασίοις καὶ Θεόπομπος* (Theopomp. fr. 267b *apud* Steph. Byz. 382.1–4).¹² On its status nothing can be said.

¹² The following sites in the border area between Athamania and Gomphoi are known only from Livy 32.14.3: Athenaeum, Argenta, Lampsus, Ligyndae, Pherinium, Poetaeum, Strymo, Tetraphylia, Theudoria and Timarum.

II. The *Poleis*

1. Thessalia

393. Amphanai (Amphanaieus) Map 55. Lat. 39.20, long. 22.55. Size of territory: ? Type: [A]. The toponym is *Ἀμφαναί, αἱ* (Hecat. fr. 3) or *Ἀμφαναία, ἡ* (Theopomp. fr. 54) or *Ἀμφαναῖον, τό* (Ps.-Skylax 64). A city-ethnic is attested only in late sources: *IG* IX.1 227.5 (C₂) has [Ἀμ]φάνιος; Polemon 1 (1929) 126–27 no. 423 (C_{2s}) has *Ἀμφαναίεύς*; Steph. Byz. 89.5 adds *Ἀμφαναῖος* to the latter. In Ps.-Skylax 64, where *polis* is used in the urban sense, Amphanai is the first of nine toponyms listed between the heading *πόλεις αἷδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θεσσαλῶν*.

The city remains unlocated, though the *palaiokastro* of Sesklou, proposed by di Salvatore (1994) 115–16, seems the best candidate (*infra*). Several locations have been proposed for Amphanai. (1) Soros, above Alykes Volou, proposed by e.g. Stählin (1924a) 68; Indzesiloglou (1994) 46; and Triantophyllopoulou (2000), followed by *Barr.* Soros has commonly been identified with Amphanai, but recent excavations (AAA 7 (1974) 60–75) have made it more likely that Soros is to be identified with Pagasai; cf. Marzolf (1994b) 274 n. 10. (2) Damari or Velanidia, proposed by Bakhuizen (1987) 323 n. 2. (3) Palio-Alikes, proposed by Marzolf (1994a) 70 n. 6. (4) The *palaiokastro* Sesklou, proposed by di Salvatore (1994) 115–16. It would be reasonable to begin by locating the harbour. The harbour must have been situated on the southern shore of the peninsula terminated by Cap Ankistri. The site most suitable for a harbour is found at the inlet of Chrysi Akti Panaghia (formerly Kandir Aga). The urban centre proper must be sought in the hinterland at a place which satisfies the socio-economic needs of the community; the site at Palio Alikes does not fulfil this requirement, and the *palaiokastro* Sesklou is a preferable site within reasonable distance of the proposed location of the harbour.

Hekataios may have described Amphanai as a Dorian city (*FGrHist* 1 fr. 3 = Steph. Byz. 89.4–5), but presumably in reference to the Heroic Age (cf. Jacoby, *comm. ad loc.*; cf. however Helly (2001b), dating it to the early first millennium). Ps.-Skylax 64 puts it in Thessalia (Pelasgiotis; cf. *infra* on Pagasai). Philip II of Makedon presumably handed over Amphanai (with Pagasai) to the Magnesians (see the entry for Pagasai).

394. Argoussa (Argoussios) Map 55. Lat. 39.40, long. 22.20. Size of territory: 2. Type: B. The toponym is *Ἀργουσσα*,

ἡ (Hom. *Il.* 2.738), later Ἀργουσσα (Strabo 9.5.19: Ἀργισσα, ἡ νῦν Ἀργουσσα); Steph. Byz. 113.19 (followed by Barr.) mistakenly gives Ἀργουρα, presumably by confusion with the Euboian Argoura mentioned at 114.1 (Knoepfler (1981) 315–16). The city-ethnic is Ἀργουσίσιος (*IG IX²* 1.1 31.A.103; cf. *SEG* 33 447 (C3)).

No Archaic or Classical source calls Argoussa a *polis*, but it deserves inclusion in this Inventory as a probable *polis* on account of the C5f inscription published in *ArchEph* (1934–35) 140–45 (cf. Helly (1979a)): it describes itself as a θεβμός of the *damos* (l. 1), refers to a local board of *tagoi* (ll. 7–8) and to Athena Polias (ll. 11–12). Cf. Helly (1995) 30–31. The internal collective use of the city-ethnic is found in the abbreviated legends (*APT*) of C3 coins (Franke (1955)). The external individual use is found in *IG IX²* 1.1 31.A.103 (cf. *SEG* 33 447), a C3l grant of *politeia* by the Aitolians to a citizen of Argoussa.

Argoussa was situated in the *tetras* of Pelasgiotis (Strabo 9.5.19). At the site are remains of a C5–C4 isodomic circuit wall with square towers; the agora has been located, and temples identified (AA (1955) 191–219, (1956) 166–79, (1957) 37–51, (1959) 74–76). The ceramic material covers C7 to the third century AD (Hanschmann (1981) 120). In addition to Athena Polias, Hellenistic dedications attest to cults of Apollo Pythios and Artemis (Helly (1979a) 250).

395. Atrax (Atragios, Atrakios) Map 55. Lat. 39.35; long. 22.10. Size of territory: 2. Type: A. The toponym is Ἄτραξ, -αγος (*SEG* 34 560.3 (c.450); *IG IV* 617.7 (316–293)) or -ακος (Strabo 9.5.20; Steph. Byz. 143.5–10); Steph. Byz. 143.5 also has Ἄτρακία. The Epidaurian catalogue of *theorodokoi*, *IG IV²*.1 94.b.3 (360/59), has the unique nominative form Ἄδρακος (cf. Perlman (2000) 178, E.1 b.3). The city-ethnic is Ἄτράγιος (C4f coins (*infra*); *CID II* 100.11.5 (325); Tod 196.24 (330–326)); Ἄτράκιος (cf. *Suda* s.v. *Κιλίκιος*) and Ἄτραξ are given as variant forms by Steph. Byz. 143.7.

Atrax is called a *polis* in the political sense in a funerary epigram of c.450 (*SEG* 34 560). The internal collective use of the city-ethnic is found on C4f coins (*infra*), the external collective use in Tod 196.24 (330–326), and the external individual use in *CID II* 100.11.5 (325).

Atrax was a Thessalian community (Marcadé, *Signatures I* no. 35 (C4m)), situated in the *tetras* of Pelasgiotis (Steph. Byz. 143.5). Prior to the expansion of the Thessalians, the area was Perrhaibian (Strabo 9.5.19–20). To the north its territory was bounded by that of Phalanna, and to the north-east by that of Argoussa; and to the south-east by Krannon.

A board of *tagoi* is attested by *SEG* 45 553 (C6–C5) (Helly (1995) 31–32, 148). *SEG* 27 184 (C4e) lists ἀρχοντες (cf. *SEG* 35 494). During the crisis of 330–326 Atrax received 10,000 *medimnoi* of grain from Kyrene (Tod 196.24).

A survey by the Institut Courby and the ephorate of Larisa in 1977 produced evidence of public architecture, all presumably of C4 and Hellenistic times, including remains of sanctuaries of unidentified divinities (cf. *infra* on cults) as well as remains of a theatre. In C5e the acropolis and the slope of the hill were enclosed by a polygonal circuit, which was rearranged in C4m in connection with new construction work. C4 saw reconstruction on the summit of the acropolis: a quadrangular main tower and strengthening by a new wall with five towers, one of them including a fortified gate. The eastern part of the wall on the slope was reinforced by serration dated to C4m on account of its similarity with constructions at Halos (Reinders (1988) 54). The lower city proper was enclosed by a C4 isodomic wall with quadrangular towers. The wall ran for 3 km and enclosed an area of c.64 ha. The main gate was to the north-west above the level of the plain, and access was provided by a long ramp supported by a polygonal retaining wall.

Attested cults include those of Apollo Hebdomaios (*SEG* 33 454 (C4–C3)), Athena Agoraia (*SEG* 27 184 (C5)), Themis Agoraia (*SEG* 27 183 (C5)), Zeus Kataibates (*ArchDelt* 48 (1993) *Chron.* 255 no. 27 (C4); *SEG* 47 674), Zeus Thaulios (*SEG* 32 569 (450–425)), Zeus Homoloios (*SEG* 35 493 (C5)) and Zeus Tritodios (*SEG* 34 494 (c.300)).

IG IV².1 94b.3 (360/59) lists a man of Atrax as *theorodokos* of Epidauros (Perlman (2000) 178). *IG IV* 617.7 (316–293) records a monetary donation by Atrax “to the θεωροί sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29). Cf. *CID II* 100.11.5ff (325), presumably a collective donation towards the rebuilding of the temple at Delphi.

Atrax struck coins in both silver and bronze from C4f. (1) Silver (triobols and obols on the Aiginetan standard). Types: *obv.* head of nymph r; *rev.* galloping horse; legend: *ATPAION*; or *obv.* prancing horse; *rev.* monogram in wreath of laurels. (2) Bronze: *obv.* bearded head (of Atrax?), or laureate Apollo, or prancing horseman, or head of nymph; *rev.* drinking cup, or butting bull, or free horse standing or feeding, or horseman in *chlamys*; legends: *ATPA*, *ATPAION*, *ATPAIONN* (Head, *HN²* 292; Babelon, *Traité* ii.4 nos. 736–40; Rogers (1932) nos. 159–68; *SNG Cop. Thessaly* 27–31).

396. Gomphoi (Gompheus) Map 55. Lat. 39.25; long. 21.40. Size of territory: 2. Type: B (classified as a fort/tower

by Barr., but see *infra*). The toponym is *Γόνφοι, οἶ* (IG IV 617.10 (316–293)) and *Γόμφοι* (BCH 45 (1921) III.32 (230–220); App. B Civ. 2.10.64); the city-ethnic is *Γομφεύς* (C4m coins, *infra*) or *Γομφίτης* (C4l coins, *infra*). According to Steph. Byz. 666.7, the name was changed to *Φίλιπποι*, and this is borne out by C4m coins inscribed *ΦΙΛΙΠΠΟΠΟΛΙΤΩΝ* (*infra*); Livy 39.25 has *Philippopolis*, presumably a reference to Gomphoi.

No Archaic or Classical source calls Gomphoi a *polis*, but it may be included here on account of its C4 coins and its monetary donation “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (IG IV 617.10 (C4l); cf. Perlman (2000) 74, 127–29); in addition, the use of *-πολίτας* for the city-ethnic of the renamed community may be significant. Later sources variously describe it as a *polis* (IG IX.2 287 (C1); Plut. *Caes.* 41.7; App. B Civ. 2.10.64), as a *polichne* (Cass. Dio 41.51.4) and as a *phourion* (Strabo 9.5.17). The only attested Classical usage of the city-ethnic is the internal collective use found on C4 coins (*infra*).

Gomphoi was situated in Thessalia (Plut. *Caes.* 41.7), more specifically in Hestiaiotis (Strabo 9.5.17). It is located at Episkopi (Turkish Rapsista), about 5 km north-east of Mouzaki and 10 km south-west of Trikala, on the eastern side of Mt. Kerketion, close to the border with Epeiros (Caes. B Civ. 3.80), i.e. via Athamania. The remains at the site, which include foundations of public buildings, fortifications and habitation, are essentially of Roman date.

Gomphoi struck coins of silver and bronze from C4m onwards. (1) Silver, C4m. Denominations: didrachm and drachm on the Aiginetan standard. Types: *obv.* head of Hera facing; *rev.* Zeus Akraios; legend: *ΦΙΛΙΠΠΟΠΟΛΙΤΩΝ*. (2) Bronze, C4s–C3e: *obv.* head of Hera, or head of Apollo; *rev.* Zeus seated; legend: *ΓΟΜΦ* or *ΓΟΜΦΕΩΝ* or *ΓΟΜΦΙΤΟΥΝ* (Head, *HN*² 295; Babelon, *Traité* II.4 nos. 531–37; Rogers (1932) no. 214; Martin (1985) 39, 56; *SNG Cop. Thessaly* 50).

397. Gyrton, Gyrtone (Gyrtonios) Map 55. Lat. 39.50, long. 22.35. Size of territory: 2. Type: [A]. The toponym is *Γυρτώνη* in Hom. *Il.* 2.738 (cf. Steph. Byz. 215.20) but otherwise *Γυρτών*, ἡ (IG IV².1 94b.4 (360/59); Ephor. fr. 93; Strabo 9.5.19). The city-ethnic is *Γυρτώνιος* (Thuc. 2.22.3; IG I³ 92.6 (c.416); *CID* II 31.72 (345/4)), or *Κυρτώνιος* (*CID* II 102.Π.Β.20 (324/3), 119 (C4l)).

Gyrton is listed as a *polis* in the political sense at Thuc. 2.22.3; it is called *ἄστυ* in a mythological context in *Orphica Argonautika* 145. The internal collective use of the city-eth-

nic is found on C4 coins (*infra*); the external collective use is found in Thuc. 2.22.3; the external individual use is found in e.g. IG I³ 92 (c.416) and *CID* II 31.72 (345/4), 85 (344/3).

The mythological people *Phlegyai* were associated with Gyrton (Pherecydes (*FGrHist* 3) fr. 41e), and Strabo describes it as both Perrhaebian and Magnesian (7a.1.14, 9.5.19; cf. Steph. Byz. 215.20); however, by the Classical period Gyrton was definitely a Thessalian community (Thuc. 2.22.2–3; IG I³ 92 (c.416)) in the *tetras* of Pelasgiotis.

A citizen of Gyrton was awarded hereditary *proxenia* by Athens in c.416 (IG I³ 92). In 360/59, a citizen of Gyrton served as Epidaurian *theorodokos* (IG IV².1 94b.4). For citizens of Gyrton serving the Amphiktyonic League as *naopoioi*, see *CID* II 31.72 (345/4), 85 (344/3), 74.1.67 (337/6), 75.Π.41 (336), 76.Π.16 (335), 79A.1.10 (334/3), 102.Π.Β.20 (324/3). A Gyrtonian cavalry contingent and its commanders (*ἄρχοντες*) are mentioned at Thuc. 2.22.2–3.

Both the acropolis and the lower city were fortified, possibly already in the Archaic period, and both fortifications were built of slate (Stählin (1924a) 88–89 (the site is not identified as Gyrton here)). A cult of Zeus may be inferred from C4s coin types (*infra*).

Gyrton struck coins of silver and bronze in C4. (1) Silver (Aiginetan standard): Head, *HN*² 295 and Babelon, *Traité* II.4 no. 741 describe a C4f triobol: *obv.* head of nymph facing; *rev.* horse feeding; legend: *ΓΥΠΤΩΝΙΩΝ*. (2) Bronze, C4s: *obv.* youthful Gyrton beside horse's head, or Apollo, or Zeus laureate; *rev.* nymph Gyrtone, or bridled horse; legends: *ΓΥΠΤΩΝΙΩΝ*, *ΓΥΠΤΩΝΙΩΝ* or *ΓΥΠΤΩΝΙΩΝ* (Head, *HN*² 295; Babelon, *Traité* II.4 nos. 741–44; Rogers (1932) nos. 227–37; Moustaka (1983) 101, 112, 119 and 125; *SNG Cop. Thessaly* 55–61).

398. Kierion (Kierieus) Map 52. Lat. 39.20, long. 22.05. Size of territory: 2. Type: [A]. The toponym is *Κιέριον*, τό (IG IV 617.8 (316–293)); at Ps.-Skylax 64, Müller (*GGM* 1) prints *Κιέρων* (an emendation from *ιέρων*); Strabo 9.5.14 has *Κιέρως*; *I.Thessalie* 15.2 (C2e) has *Κιάριον*. Tradition claims that before the arrival of the Thessalians the city was called *Ἄρνη* (Steph. Byz. 123.22). The city-ethnic is *Κιεριεύς* (Head, *HN*² 292–93 (c.400–344)), or *Κιάριος* (*I.Thessalie* 14 (C3–C2)).

In Ps.-Skylax 64, where *polis* is used in the urban sense, Kierion is one of nine toponyms listed between the heading *πόλεις αἰθε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θεσσαλῶν*; it is also called a *polis* in, e.g., *I.Thessalie* 15.13 (C2e). [*Δα*]μόσιον is found in IG IX.2 269 (C4?). The internal and collective use of the city-ethnic is found on coins

(Head, *HN*² 292–93 (C4)). In C3s a citizen of Kierion served as Delphic *theorodokos* (*BCH* 45 (1921) III.26 (230–220)).

According to Ps.-Skylax 64, Kierion was situated in Thessalia, and according to Strabo 9.5.14, it belonged to the *tetras* of Thessaliotis (Helly (1995) 165). Because the city lay in very flat and open land, its boundaries are not clearly defined.

At Kierion are remains of a circuit wall, the earliest phases of which go back to the Classical or perhaps the Archaic period. On the acropolis a Hellenistic *kastro* is visible, but earlier activity there cannot be excluded. Otherwise, practically nothing is known about the lower town, which was probably situated on the eastern side of the hill (Stählin (1924a) 130–32; autopsy by J.-C. Decourt).

Kierion struck silver coins on the Aiginetan standard from c.400. Denominations: didrachms, triobols, trihemibols, obols and hemiobols. Types: *obv.* head of Zeus, or Arne, or Poseidon, or Apollo, or horse feeding or galloping; *rev.* youthful male god (Asklepios?) seated on a throne or rock, or nymph Arne kneeling, or head of Arne, or naked hero warrior fighting; legend: *KI, KIE, KIEPIE, KIEPIAION, KIEPIEION*. Bronze coinage likewise begins c.400. *Obv.* head of Poseidon, or head of Zeus laureate, or head of Apollo; *rev.* Arne kneeling, or bridled horse prancing, or naked Zeus standing holding eagle; legends: *KIE, KIEP, KIEPI, KIEPIEON, KIEPIEION, KIEPION*. Head, *HN*² 292–93; Babelon, *Traité* II.4 nos. 507–18; *SNG Cop. Thessaly* 32–37; Rogers (1932) nos. 173–78. In addition to these divinities there is evidence of cults of Artemis (*IG* IX.2 271 (C5)), Herakles (*I.Thessalie* 15 (C2e)), and Poseidon Kouerios (*I.Thessalie* 20 (C3–C2)).

399. *Kondaia (Kondaieus) Map 55. Lat. 39.50, long. 22.25, but see *infra*. Size of territory: 2. Type: C (classified as a fort/tower by Barr., but see *infra*). A toponym is not attested, but **Kondaia* may be assumed (cf. *infra* Mondaia); it has been proposed to emend MS *Koniaios* at Hdt. 5.63.3 to *Kondaios* (cf. Helly (1995) 103), but the city-ethnic found in Hellenistic sources is *Kondaieus* (*Gonnoi* II no. 3.3 (C3f)).

The location is uncertain, but the community should probably be located at the ancient site at Orthe Magoula, near the modern village of Phalanni Larisis (Helly (1999)); Barr. locates it at Bakrina. Both locations put it in the *tetras* of Pelasgiotis.

At 5.63.3 Herodotos states that the *Θεσσαλοὶ . . . ἀπέπεμφαν κοινῇ γνώμῃ χρεώμενοι χιλίην τε ἵππων καὶ τὸν βασιλέα σφέτερον Κινέην ἄνδρα Κονιαίων* to support the Peisistratidai of Athens. *Koniaios* is most probably a corruption of a Thessalian city-ethnic, and it has been

proposed to restore *Κονδαίος*, to be interpreted as the city-ethnic of Kondaia (Helly (1995) 103). Since there is no other evidence for the political status of Kondaia in the Archaic (or Classical) period, the inclusion of Kondaia in this Inventory depends upon acceptance of this emendation, which would provide an attestation of the external individual use of the city-ethnic; such a usage is often indicative that the site to whose toponym the ethnic is related was a *polis* (Hansen (1996) 182–87). In C3 Kondaia was undoubtedly a *polis*: *Gonnoi* II no. 3 is a C3f grant of proxeny by *Gonnoi* to *Χέναρχος Ἴπ[πάρχου] Κονδαίεως*.

At the site identified with Kondaia (*supra*) ancient architectural elements have been found, as well as a temple foundation (Helly (1977)).

400. Krannon (Krannonios) Map 55. Lat. 39.30, long. 22.20. Size of territory: 3. Type: [A]. The toponym is *Κράννων -ωνος, ἡ* ([Arist.] *Mir. ausc.* 842^b10; Theopomp. fr. 267a), *Κραννών* (Hecat. fr. 133), *Κράννων* (Hdn. III.1 261.17) or *Κράννου*s (Kineas (*FGrHist* 603) fr. 1). The city-ethnic is *Κραν(ν)ούνιος* (Head, *HN*² 293–94 (C5–C4); *SEG* 23 421 (C4)), *Κρανώνιος* (Hdt. 6.127; Head, *HN*² 293–94), or *Κρανώνιος* (Diog. Laert. 2.25). Tradition claims that before the arrival of the Thessalians the city was called *Ἐφύρη* or *Ἐφύρα* (Kineas (*FGrHist* 603) fr. 1) or *Ἐφυροί* (Apollodoros (*FGrHist* 224) fr. 179).

Krannon is listed as a *polis* in the political sense at Thuc. 2.22.3; in Ps.-Skylax 64, where *polis* is used in the urban sense, Krannon is one of nine toponyms listed between the heading *πόλεις αἰδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θετταλῶν*. Cf. also [Arist.] *Mir. ausc.* 842^b10 and Diod. 15.61.5 (r369); *πολιται* is found in Polyae. 2.34 (possibly rC4) (cf. *RE* xi. 1583); and at Hdt. 6.126, 127, *πάτρις* is used about Krannon. The earliest epigraphical reference to a *πόλις Κραννουίνιον* is in a C3s honorific decree (*IG* IX.2 458). The collective use of the city-ethnic is attested internally on coins (Head, *HN*² 293–94 (C5–C4)) and in the decree *IG* IX.2 458 (C3s); externally it is attested in Thuc. 2.22.3; Xen. *Hell.* 4.3.3; and *CID* II 7B.2 (c.357). The external and individual use is found, e.g., at Hdt. 6.127.4, in *SEG* 23 421 (C4) and in *CID* II 24.1.14 (c.336–323). Krannon is implicitly described as *patre* (= *patris*) in Hdt. 6.127.1–4.

Krannon was situated in Thessalia (Hdt. 6.127.4; Thuc. 2.22.3), and more precisely in the *tetras* of Pelasgiotis (Simon. 127, Page; Hecat. fr. 133; cf. Helly (1995) 166). The territory is called *πεδίον Κρανώνιον* in Callim. *Hymn* 4.138. To the north, it was bounded by the territory of Larisa, to the west by that of Atrax, to the east by that of Skoutoussa, while to the south the crest line of the Revenia hills separated it

from the Enipeus valley (Decourt (1990) fig. 27).

In C6 the most prominent family in the political life of the city was the Skopadai (*RE* iiiA. 567–69; Helly (1995) 107–12). Cavalry and an anonymous cavalry commander are attested in Thuc. 2.22.3, when Krannon was allied with Athens alongside other Thessalian cities. Xen. *Hell.* 4.3.3 mentions Krannon among the allies of the Boiotians, again alongside other Thessalian cities. If the story about Deinias in Polyaeen. 2.34 refers to C4 (cf. *RE* xi. 1583; Berve (1967) 294–95), the city experienced a tyranny in this period. (The same source refers to Krannonian farming out of ἡ φυλακὴ τῆς πόλεως and ἡ τοῦ σίτου δεκάτη.) In 369, Krannon joined Alexander II of Makedon, who had been called in by the Aleuadai of Larisa in their struggle against Alexander of Pherai, and the city was presumably garrisoned by the Makedonian king (Diod. 15.61.5); the garrison was probably removed, as was a similar one at Larisa, when Pelopidas arrived at the head of a Boiotian army later in the year (Diod. 15.67.4).

SEG 23 421 is probably a C4 grant of *proxenia* by Pherai to two citizens of Krannon. Krauxidas of Krannon was victorious in the horse-race at Olympia in 648 (Paus. 5.8.8; *Olympionikai* 53).

At an unknown date Krannon became a walled and fortified city, but almost nothing is known about the acropolis and the urban centre, except for a possible temple of Athena Polias on the acropolis (Arvanitopoulos (1922–24)).

The main cults of the Krannonians seem to be those of Athena (*IG* ix.2 460 (C2); cf. Arvanitopoulos (1922–24) 37), Asklepios (*ArchDelt* 43B: 280 (C3); *IG* ix.2 461 (C2)) and Apollo (Prounrios: Habicht (1981) (c.200); Tempeitas: *Prakt* (1915) 17 (C3?)). Other cults: Ennodia (*LIMC* II 882 (C4s)), Poseidon (Head, *HN*² 293–94 (C4)) and Zeus (Megas: *ArchDelt* 43B: 280 (C3?); Notios: *ArchDelt* 16B: 182 (C4)).

Krannon struck silver coins in C5 and bronze coins in C4. (1) Silver, 480–400. Denominations: drachms, tetrobols, triobols, obols and hemiobols on the Aiginetan standard. Types: *obv.* naked man subduing a bull, or bull's head, or bull's hoof; *rev.* forepart of galloping horse and trident in incuse square, or horse's head; legend: *KPA* or *KPAN* or *KPANO*. For similarities between these coins and contemporary coins of Larisa, the Perrhaibians, Pharkadon, Triikka, Pherai and Skoutoussa, see Kraay (1976) 114–16 and Martin (1985) 36–37. (2) Bronze, c.400–344, or later. *Obv.* Poseidon laureate, or Thessalian horseman; *rev.* Thessalian horseman, or rushing bull, or hydria on wheel; legend: *KP*, *KPA*, *KPAN*, *KPANNO*, *KPANΩNIΩN*,

KPANNOYNIΩYN (Head, *HN*² 293–94; Babelon, *Traité* ii.1 nos. 1425–26, ii.4 nos. 634–40; Rogers (1932) 179–204; Liampi (1996) 106, 111–12; *SNG Cop. Thessaly* 38–44).

401. Larisa (Larisaios) Map 55. Lat. 39.40, long. 22.25. Size of territory: 3. Type: A. The toponym is *Λάρισ(σ)α*, ἡ (Bacchyl. 16.8, Maehler; Thuc. 4.78.2; Xen. *Hell.* 6.4.31; Ps.-Skylax 64; *IG* iv².1 94b.5 (360/59); *SEG* 31 585 (C4)). The city-ethnic is *Λαρι(σ)αῖος* (Thuc. 2.22.3; Xen. *Hell.* 2.3.4; Tod 196.8 (330–324); *IG* ix.2 518.2 (undated); Diod. 14.19.8). Some early coins are inscribed *ΛΑΡΙΣΑΕΩΝ* as if from *Λαρισαεύς* (Head, *HN*² 298; Babelon, *Traité* ii.1 no. 1412). The Ionic form is *Ληρισαῖος* (Hdt. 9.1).

Larisa is implicitly called a *polis* in the political sense in Thuc. 2.22.3; in Pl. *Meno* 70B, *polis* is used in the urban sense, and in Ps.-Skylax 64, where *polis* is again used in the urban sense, *Λάρισσα* is the second toponym listed between the heading *πόλεις αἰδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θετταλῶν*. *Polis* is found in Pl. *Meno* 70B; *akropolis* is found in Antiochos (*FGrHist* 29) fr. 2; *asty* is found in Theophr. *Caus. pl.* 5.14.3; and *Φαστικά* appears as *epiklesis* of the goddess Enodia in *IG* ix.2 574 of 450–425; *patris* is found in *SEG* 31 585 (C4) (cf. *CEG* II 639).

The internal collective use of the city-ethnic is found on C5f coins (*infra*); the external collective use is found in Thuc. 2.22.3; Xen. *Hell.* 4.3.3; *CID* II 68.11.14 (338–330); Tod 196.8 (330–324); and the external individual use in Hdt. 9.1, 9.58.1; *CID* II 4.1.44 (360); *SEG* 26 327 (c.350); *IG* VII 414.14 (C4m–s); *IG* II² 353.11 (329/8).

Larisa was a Thessalian community (*F.Delphes* III.4 378 (342/1)) and belonged to the *tetras* of Pelasgiotis (schol. Ap. Rhod. 1.40). The name of the territory was ἡ *Λαρισσαία* (Theopomp. fr. 34; on this fragment, see Martin (1982)); it is termed *χώρα* in Theophr. *Caus. pl.* 5.14.2. Theopomp. fr. 34 mentions a site called *Χαλκαί* in the territory; it is probably to be located at Nikaia Larisis, a site with Classical material (D. Kontogiannis (1992) 386). Apollo Leschaios was worshipped in the territory (*IG* ix.2 1027 (C5l)). On the territory, see further Helly (1984).

The resemblance of the C5 coinage of the Perrhaibians (see entry for Oloosson) to that of Larisa (see *infra*) has been taken to indicate that Larisa may have brought the Perrhaibians into dependence upon itself (Martin (1985) 72–73).

Early in the Peloponnesian War, Larisaian cavalry assisted the Athenians (Thuc. 2.22.3) alongside other Thessalian *poleis* which were allied to Athens. In the 390s, Larisa, alongside other Thessalian *poleis*, was allied to Boiotia (Xen. *Hell.*

4.3.3). In 404, forces from Larisa and other unspecified Thessalian polities were defeated by Lykophron I of Pherai, who struggled for pan-Thessalian hegemony (Xen. *Hell.* 2.3.4). The conflict continued into the 390s, when, during the Corinthian War, Medeios of Larisa was supported by the anti-Spartan alliance (Diod. 14.82.5 (r395)) and captured Pharsalos. In 369, the Aleuadaí of Larisa called in the Makedonian king Alexander II to support them in their struggle with Alexander of Pherai; the king, however, took the city by force and placed a garrison on the acropolis (Diod. 15.61.3–5), a garrison which was withdrawn at the arrival of Theban troops under Pelopidas (Diod. 15.67.4 (r369/8)). In 357/6, the Aleuadaí again called upon the king of Makedon, Philip II, who responded favourably and thus started his interference in Greek politics (Diod. 16.14.2).

During the crisis of 330–324, Larisa received 50,000 *medimnoi* of grain from Kyrene (Tod 196.8). A man from Larisa is listed in an Athenian catalogue of mercenaries (*IG* II² 1156.1.61–63 (c.300)).

A refugee is attested in 399 by Arist. *Pol.* 1311^b17; as *tagos* of Thessalia, Polyphron II of Pherai (370/69) had many citizens of Larisa sent into exile (Xen. *Hell.* 6.4.34). Reception of envoys, sent by Agesilaos of Sparta during his march home from Asia Minor in 394, is recorded in Plut. *Ages.* 16; the Larisaíans, allied to Sparta's enemies, arrested these envoys, who were released only after a truce had been negotiated. Citizens of Larisa were appointed *proxenoi* by Delphi in 342/1 (*F.Delphes* III.4 378) and 333/2 (*F.Delphes* III.1 401), by Lamia in C4l (*IG* IX.2 60), and by Gonnoi in C4l/C3e (*Gonnoi* II 1); but note that Aristonous of Larisa (for whom see Thuc. 2.22.3) was, presumably, appointed *proxenos* by Athens c.430 (*IG* I³ 55 with Walbank (1978) 158–66) and that *IG* II² 39.13 (379/8) has been restored [*Λαρι*]₁*σα*[*1*οις], which, if accepted, is an Athenian grant of proxeny to four citizens of Larisa.

A mass grant of citizenship by Larisa seems to be implied by Arist. *Pol.* 1275^b29ff (Helly (1984) 229). Residence of free non-citizens is implied by Pl. *Meno* 70B. Grants of citizenship to citizens of Larisa are attested by *F.Delphes* III.4 378 (342/1); *IG* II² 558 (c.303/2), and *IG* IX.2 60 (C4l) (Lamia). *IG* IV².1 94b.5 (360–359) lists a citizen of Larisa as *theorodokos* of Epidauros. A monetary donation by Larisa to “*theoroi* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” is recorded by *IG* IV 617.6 (316–293); Perlman (2000) 74–75, 127–29.

According to Arist. *Pol.* 1305^b22–30 and 1306^a20–30, Larisa was an oligarchy; the most powerful family was that of the Aleuadaí (*RE* i.2. 1372–74; Helly (1995) 112–24), who domi-

nated Larisaian, and Thessalian, politics for long periods. A board of *demiourgoi* is implied by Arist. *Pol.* 1275^b29; *politophylakes* are mentioned at *Pol.* 1305^b29; they were elected by the assembly (*ibid.*). An ἄρχων μεσιδῖος in, possibly, C4m (cf. Dem. 18.48; but see Martin (1985) 255–60) is mentioned at *Pol.* 1306^a28–30. A *stasis* is attested for C5l (Xen. *An.* 1.1.10; *RE* xii. 850); one faction in this *stasis* may have sought the support of Archelaos of Makedon: Thrasymachos fr. 2, DK, obviously suggests Makedonian interference at Larisa (Westlake (1935) 51ff; Hammond and Griffith (1979) 140–41; Martin (1985) 89). Further outbreaks of *stasis* are attested in 370/69 (Xen. *Hell.* 6.4.34) and c.344/3 (Arist. *Pol.* 1306^a26–30; Callim. fr. 588, Pfeiffer; cf. Gehrke, *Stasis* 189–97).

At *Pol.* 1331^a30ff, Aristotle describes as Thessalian the institution of the *eleuthera agora*: that is, an agora from which artisans and traders were banned and to which they could have access only if invited by the magistrates. An *eleuthera agora* may have been identified at Larisa, south of the acropolis (Tziaphalias (1994b) 158–59, 169–70, 173–74, cf. plan 155). A “commercial agora” was probably located to the west on the bank of the river Peneios (Tziaphalias (1994b) 159, plan 155). A C4 amphora stamp (ΘΑΣΙΩΝ) indicates trade (*SEG* 35 635).

A temple of Athena on the acropolis is mentioned by Antiochos (*FGrHist* 29) fr. 2; in it was the grave of the mythical founder of the city, Akrisios (cf. schol. Ap. Rhod. 1.40; Paus. 2.16.2); on the acropolis are traces of a Classical road and remains of buildings constructed in mudbrick (Tziaphalias (1994b) 157–58); there are no remains of a separate fortification of the acropolis, but at 15.61.4 (r369/8) Diodorus mentions a siege of the acropolis which suggests that it was fortified.

The *teichos* is mentioned by Diod. 15.61.4 (r369). The undated circuit wall runs for some 4,000 m, but is not known for its entire course, and accordingly the area enclosed by it cannot be estimated. The wall is constructed in mudbrick on a stone socle (Tziaphalias (1994b) 177–78, plan 155). Since the ancient city is overlaid by the modern, not many remains are visible, and it cannot be ascertained whether it was built on a grid plan (*ibid.* 158). In the city are remains of what was probably a C4 Doric temple of Apollo Kerdoios; here public documents were displayed (*ibid.* 169–70). The cemeteries span the period from C5 onwards (*ibid.* 177–78).

Attested cults include those of Athena Polias (*IG* IX.2 592 (C3)), but cf. Antiochos (*FGrHist* 29) fr. 2), Apollo Leschaios (*supra*), Dionysos Karpios (*SEG* 35 590 (450–425)), Enodia Wastika (*IG* IX.2 575 (450–425)), Gaia (*SEG* 29 533 (C4)),

Herakles (*IG* ix.2 580 (C4)), Poseidon Patroios (*SEG* 35 647, 650 (both c.300)), and Zeus Thaulios (*SEG* 35 613 (c.300)).

Three citizens of Larisa achieved Olympic victories: Echekratidas in 464 (*Olympionikai* 258), Lykos in 452 (*Olympionikai* 281) and Krokinas in 404 and 396 (*Olympionikai* 351, 367a). In 366–338, Epikrates of Larisa won the pentathlon for *ageneioi* at the Amphiararaia at Oropos (*IG* vii 414.14); Lykormas was victorious at the Pythian Games in 310 (Paus. 10.7.8).

Several citizens of Larisa served the Amphiktyonic League as *naopoioi* (*CID* ii 10A.1.7 (357/6); 31.73, 96 (345/4); 32.3 (341/40), etc.). After the Third Sacred War, the Larisaans rented one of the houses confiscated from exiled pro-Phokian Delphians (*CID* ii 68.1.13 and ii.14 (338–330)).

Larisa was the first Thessalian polity to strike coins. The earliest silver issues of drachms, triobols, trihemiohols and obols antedate the Persian War and are on the Persian standard (Lavva (2001) 42). Types: *obv.* horse biting its foreleg, or head of Jason, or head of nymph, or bull's head, or horseman with two spears; *rev.* sandal of Jason (sometimes with double axe above) in incuse square, or horse's head in incuse square, or bearded male figure seated in incuse square; legends: ΛΑ, ΛΑΠΙ, ΛΑΠΙΣΑ, ΛΑΠΙΣΑΙΟΝ, ΛΑΠΙΣΑΕΟΝ (Head, *HN*² 298; Babelon, *Traité* ii.1 nos. 1410–16; Kraay (1976) 115; *SNG Cop. Thessaly* 89–92; Martin (1985) 34–35).

Immediately after the Persian War the city switched to the Aiginetan standard and initially used the same types and even the same dies (cf. *SNG Cop. Thessaly* on no. 89). From this point onwards until its issues ceased c.320 (Martin (1985) 52, 163), Larisa was the most important mint of Thessalia and struck didrachms, drachms, triobols, diobols, trihemiohols, obols and hemiohols. *Obv.* types depict youth restraining bull, horseman, horse (C5); head of nymph Larisa, or running bull (C4), etc.; *rev.* types depict free horse, seated nymph Larisa, or Asklepios (C5, in incuse square); and galloping horse or galloping horseman, etc.; legends: ΛΑ, ΛΑΠΙ, ΛΑΠΙΣΑ, ΛΑΠΙΣΑΙ, ΛΑΠΙΣΑΙΑ, ΛΑΠΙΣΑΙΟΝ, ΛΑΠΙΣΑΙΩΝ. Some coins of c.370–360 carry on the *rev.* the inscription ΣΙΜΟΣ in tiny script, but the significance of the inscription is unclear (Martin (1985) 103; cf. Martin (1983) 13–16); another C4 issue has *obv.* male head + ΑΛΕΥΑ (i.e. presumably a depiction of Aleuas the Red); *rev.* eagle on fulmen + ΕΛΛΑ and ΛΑΠΙΣΑΙΑ; the message intended is disputed, see Helly (1995) 119–20 (Head, *HN*² 298–99; *SNG Cop. Thessaly* 93–135; Hermann (1924–25); Martin (1983)). For similarities between the C5 coins with *obv.* youth restraining bull; *rev.* horse, and con-

temporary coins of Krannon, the Perrhaibians, Pharkadon, Triikka, Pherai and Skotoussa, see Kraay (1976) 115–16 and Martin (1985) 36–37.

The bronze issues of Larisa began c.400: *obv.* head of fountain nymph Larisa; *rev.* horse trotting or feeding, or horseman with *petasos* and lance, or head of Asklepios, bearded and laureate; various letters, symbols and monograms; legends: ΛΑΠΙΣΑ, ΛΑΠΙΣΑΙ ΛΑΠΙΣΑΙΩΝ (Head, *HN*² 297–99; Babelon, *Traité* ii.1 nos. 1009–18, ii.4 nos. 367–410; *SNG Cop. Thessaly* 136–46, *Suppl.* 245–47; Rogers (1932) 93–100; Liampi (1996) 101–5, 110–11).

402. Methyilion (Methylieus) Map 55. Unlocated, but see *infra*. Type: B. The toponym is Μεθύλιον, τό (*BCH* 45 (1921) iii.29 (230–220)). The city-ethnic is Μεθυλιεύς (C5–C4 coins (*infra*)).

No Archaic or Classical source calls Methyilion a *polis*, but it merits inclusion in this Inventory because (1) it minted coins in C5–C4 (*infra*); (2) a man of Methyilion served as Delphic *theorodokos* in 230–220 (*BCH* 45 (1921) iii.29); (3) some C3 tiles are stamped with the collective city-ethnic (*infra*); cf. also Biesantz (1965) 140 n. 235 for an—undated—inscription: Μεθυλιέων δημόσιον (C5?). The only Classical source attesting to the existence and status of Methyilion is its C5–C4m coinage.

Methyilion was situated in Thessalia (Steph. Byz. 440.16 s.v. Μεθυδρίον, where the passage καὶ ἕτερα πόλις Θεσσαλίας, ὡς Φίλων possibly refers to Methyilion), more precisely in Thessaliotis (Heyman (1970); Helly (1995) 165, 229–30). It is probably to be located at the village of Myrina near Prodomos Karditsis, whence come C3 tiles stamped Μεθυλιέων (information kindly provided by C. Indzesiloglou). A cult of Athena is presumably indicated by the coin types depicting this goddess (Heyman (1970) nos. 6–7).

Methyilion struck coins in silver and bronze in C4; a drachm on the Aiginetan standard is presumably C5. It shows *obv.* forepart of horse; *rev.* grain (MEΘY); for similarities between this coin and coins of Skotoussa and coins struck in the name of “the Thessalians” (possibly by Pherai), see Kraay (1976) 116 and Martin (1985) 37–38. C4 obols: *obv.* male head, or Nike; *rev.* female head, or a warrior, or Athena; legend: MEΘY, MEΘYAIΕΩΝ. Bronzes: *obv.* young male head, or head of nymph; *rev.* Nike, or horseman with spear; legend: MEΘYAIΕΩΝ (Head, *HN*² 301–2; Babelon, *Traité* ii.4 nos. 505–7; Heyman (1970)).

403. Metropolis (Matropolis) Map 55. Lat. 39.20, long. 21.50. Size of territory: 2. Type: [A]. The toponym is

Ματρόπολις, ἡ (BCH 45 (1921) III.30 (230–220)); the city-ethnic is *Ματροπολίτας* (CID II 5.11.32 (358)) or *Μητροπολίτης* (C4f coins, *infra*).

Metropolis is listed as a *polis* in the political sense under the heading *ταῖδε τᾶμ πολίων ἦνικαν* in CID II 5.11.25–26, 32–33 (358). The internal collective use of the city-ethnic is found on C4f coins (*infra*) and the external collective use in CID II 5.11.32–33 (358).

According to Strabo 9.5.17, Metropolis was founded by a synoecism (*συνώκιστο*) of *τριῶν . . . πολικνίων ἀσήμεων*. The *terminus ante quem* for this synoecism is 358, the year in which the city is mentioned in the naopic accounts in Delphi (CID II 5.11.32–33; Diod. 15.30.5 (1377)) does not refer to Thessalian Metropolis; cf. Stylianos (1998) 280). The circular fortifications, running for 5 km, are located in the plain and encompass an isolated hill; the masonry style of the circuit (isodomic with moat) points to a date in C4f for its construction (C. Indzesiloglou, pers. comm.). The earliest coins of the city are likewise dated to C4f (*infra*). Among the communities originally participating in the synoecism were Onthyrion (Strabo 9.5.17) and probably Polichnai (cf. Helly in BCH 94 (1970) 187), but the city expanded after the foundation (Strabo 9.5.17: *ὑστερον δὲ καὶ πλείους προσελήθησαν*). Remains are reported in *ArchDelt* 35 ([1980] 1988) *Chron.* 268–69 and 36 (1981) *Chron.* 254; BCH 113 (1989) *Chron.* 637 and fig. 116.

Metropolis was a Thessalian community (CID II 5.11.32–33) situated in Hestiaiotis (Strabo 9.5.17). To the north the neighbours were Ithome, which was eventually absorbed by Metropolis (Strabo 9.5.17), Gomphoi and Pelinna; to the east were Methyilion and Kieron; to the south was Onthyrion, which was also absorbed by Metropolis (*supra*); to the west was the Pindos range.

The entry *Ματροπολίται Θεσσαλοί* in CID II 5.11.32–33 (358) presumably indicates membership of the Thessalian Confederacy. A grant of C3l proxeny, etc. to a citizen of Krannon is published by Habicht in *Klio* 52 (1970) 143; the inscription also testifies to a system of *phylai* and boards of magistrates. A cult of Aphrodite, the patron divinity, is attested by coins (no. (1) *infra*) and Strabo 9.5.17 (citing Callim. fr. 200a, Pfeiffer); public documents were displayed at the temple of Aphrodite (cf. PECS 576); Apollo is likewise attested by coins, and a C6s suburban temple dedicated to Apollo Hekatombios has been excavated by C. Indzesiloglou.

A collective donation of 120 dr. towards the rebuilding of the temple at Delphi is recorded in CID II 5.11.32–33 (358); IG IV 617.9 (316–293) has been restored *Μα[τροπολίται]*

(Foucard, accepted by Perlman (2000) 75); the inscription records monetary donations by Thessalian cities “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (IG IV 617.10 (C41)); cf. Perlman (2000) 74, 127–29). Cf. CID II 100.11.5ff (325), presumably another collective donation towards the rebuilding of the temple at Delphi.

Metropolis struck silver coins on the Aiginetan standard c.400–c.344. (1) Diobol: *obv.* head of Aphrodite facing, bird to the right, Nike crowning her; *rev.* standing Dionysos; legend: *ΜΗΤΡΟΠΟΛ[ΑΙΤΩΝ]*. (2) Trihemiobol: *obv.* as (1), *rev.* Apollo Kitharoidos; legend: *ΜΗΤΡΟΠΟΛΑΙΤΩΝ*. (3) Obol: *obv.* bearded head facing; *rev.* figure (Aphrodite?) holding thyrsos and seated on rock under tree; legend: *ΜΗΤΡΟΠΟΛ* (Head, *HN*² 302; Babelon, *Traité* ii.4 520–22; Martin (1985) 39).

404. Mopsion (Mopseus) Map 55. Lat. 39.50, long. 22.25. Size of territory: 2. Type: B. The toponym, *Μόψιον*, τό is attested only in post-Classical sources (Strabo 9.5.22; Steph. Byz. 480.11). The city-ethnic is *Μοψεύς* (C4f coins, *infra*; *Horos* 10–12 (1992–98) 356 l. 2 (C3m)) or *Μοψε(ι)άτας* (C4f coins, *infra*; *Horos* 10–12 (1992–98) 356 l. 14).

No Archaic or Classical source calls Mopsion a *polis*; it is included as a probable *polis* here on account of its C4f coinage (*infra*). The community refers to itself as a *polis* in the political sense in *Horos* 10–12 (1992–98) 356 l. 2, a C3m grant of *politeia* and other privileges to three men of Atrax (cf. IG IX.2 1056 (C3)). The internal collective use of the city-ethnic is found on C4f bronze coins (*infra*); the external individual use of the city-ethnic is found in IG IX.2 521.21 (C2m).

Mopsion was a Thessalian community in the *tetras* of Pelasgiotis (Steph. Byz. 480.11), situated 0.5 km inside the pass of Rhodia (Helly (1999) 102–3). Archaeological investigations of the site remain unpublished.

Mopsion struck bronze coins in C4f. Types: *obv.* head of Zeus facing with fulmen to the right; *rev.* Lapith fighting centaur; legend: *ΜΟΨΕΙΩΝ* or *ΜΟΨΕΑΤΩΝ*; or *obv.* draped female bust r.; *rev.* standing Aphrodite with dove in hand; legend: *ΜΟΨΕΙΩΝ* (Head, *HN*² 302; Babelon, *Traité* ii.4 no. 744a; Rogers (1932) nos. 412–13). The coin types point to cults of Zeus and Aphrodite.

405. Orthos (Orthieus) Map 55. Lat. 39.15, long. 22.00. Size of territory: ? Type: B. The toponym is *Ὀρθος* or *Ὀρθοι* or *Ὀρθα*; the genitive *Ὀρθου* is found in CID II 12.1.68 (C4m); and the forms *ἐν Ὀρθαι* and *ἐν Ὀρθοις* are both found in the Delphic catalogue of *theorodokoi* of c.230–220

(*BCH* 45 (1921) III.27, IV.25). The city-ethnic is Ὀρθιεύς (coins, *infra*).

No Archaic or Classical source calls Orthos a *polis*, but it deserves inclusion in this Inventory as a probable *polis* on account of its late Classical bronze coinage (*infra*). In addition, *CID* II 12.1.68 records a contribution by a man described as Θεσσαλὸς ἐξ Ὀρθου (C4m).

The site of Orthos—not to be confused with the Homeric Orthe, the probable ancestor of Phalanna—lay north-east of the village of Kedros (Helly (1992) 78) and so in the *tetras* of Thessaliothis. However, there is no published material on this site. A cult of Athena may be assumed on the basis of the coin types (see *infra*), and outside the walls is a sanctuary of Demeter (C. Indzesiloglou, pers. comm.).

Orthos struck bronze coins c.350/340–200. *Obv.* Athena; *rev.* springing horse in wreath of olive, or trident in wreath of olive; legend: ΟΡΘΙ or ΟΡΘΙΕΩΝ, ΟΡΘΙΕΙΩΝ (Head, *HN*² 303; Babelon, *Traité* II.4 nos. 595–96; Rogers (1932) nos. 421–25; *SNG Cop. Thessaly* 183–84).

406. Oxynion Map 55. Unlocated. Type: C. The toponym is Ὀξύνιο[ν] (*IG* IV².1 94.b.1 (359)) or Ὀξύνεια, ἡ (Strabo 7.7.9). A city-ethnic is not attested.

No Archaic or Classical source calls Oxynion a *polis*, though Strabo 7.7.9 does. The reason for including it in this Inventory is the attestation in 359 of an Epidaurian *theorodokos* (*IG* IV².1 94.b.1); note, however, that Perlman (2000) E.1 fr.b.1 prints Πέλω[να], not Ὀξύνιον as *IG*. Nothing further is known about the city.

Oxynion has traditionally been located at Meritsa (modern Oxyneia) north-west of Kalambaka, but this location does not fit the indications provided by Strabo 7.7.9 that it was 120 stades from Azoros. The same applies to the site at Nea-Smolia (Darnezin (1992)). A site near Dasochori may fit: a hill on the left bank of the river Paliomandano at Paliogourtsia, with some architectural remains on the surface and ceramics covering C4 to Roman times; however, epigraphical confirmation is lacking (Darnezin (1994)).

407. Pagasai (Pagasitas) Map 55. Lat. 39.20, long. 22.55. Size of territory: 2. Type: [A]. The toponym is Παγασαί, αἰ (Hdt. 7.193.2; Dem. 1.9; Xen. *Hell.* 5.4.56). The city-ethnic is Παγασίτας (*CID* II 100.11.8 (325)) or Παγασαῖος (*IG* IV 617.4 (316–293)).

In Ps.-Skylax 64, where *polis* is used in the urban sense, Pagasai is one of nine toponyms listed between the heading πόλεις αἰδε and the addendum εἰσὶ δὲ καὶ ἄλλαι πόλεις Θεσσαλῶν. Theopomp. fr. 53 described it as the *epineion* of Pherai (cf. Plut. *Them.* 20.1). The external collective use of

the city-ethnic is found in *IG* IV 617.4 (316–293), and the external individual use in *CID* II 100.11.8 (325).

Theopompos' description of Pagasai as the *epineion* of Pherai (*FGrHist* 115 fr. 53) does not mean that it cannot have been a *polis* (Hansen (1997) 36–37); the exact relationship between the two cities is unknown, but Pagasai may possibly have been a dependent *polis* of Pherai serving as its harbour (cf. *ibid.* for parallels); or Theopompos' statement may simply mean that the city was within the general sphere of Pheraian influence (a brother of Jason resided there: Polyae. 6.1.6).

Ps.-Skylax 64 describes Pagasai as Thessalian (cf. *CID* II 100.1.20, 11.8), and Theopompos' description of it as ἐπίγειον Φεραίων puts it in Pelasgiotis (*FGrHist* 115 fr. 53). Dem. 1.12, 22, 2.11 (cf. Ath. 43A; Polyae. 6.2.1) distinguishes between Pagasai and Magnesia, so Pagasai was accordingly not Magnesian; but in 353 the city was taken by Philip II (presumably after a siege: Dem. 1.9) and forced into submission (ἡνάγκασεν ὑποταγῆναι, Diod. 16.31.6; cf. Dem. 1.22, 2.11). Presumably from then on it was regarded as Magnesian and may have been handed over to the Magnesians by Philip (*RE* xviii. 2308), though according to schol. Dem. 1.22 the incomes from the harbours and the agora were given to Philip himself; Philip probably installed a garrison at Pagasai (Martin (1985) 97).

Hes. *Scut.* 70 mentions a *bomos* of Apollo Pagasaïos, and a C5–C4 temple of Apollo and a stoa have been found outside the circuit on the saddle south of the acropolis (Milojčić (1974)). The rocky summit of the hill of Soros, the acropolis of Pagasai, was crowned by a presumably C61–C5e circular wall, and the lower city was surrounded by a contemporary triple wall (*Prakt* (1909) 165–70) which enclosed an area of c.6–7 ha. For a plan, see Marzolf (1994b) 256 fig. 1. The earliest indications of occupation are late Archaic, and there are no Hellenistic sherds either in the city proper or in the extramural sanctuary, or in the graves (Triantaphyllopoulou (2000) 60), a fact which fits the report of its relocation to Demetrias in 293 (Strabo 9.5.15).

The central social and economic feature of Pagasai was, it seems, its harbour. In 477/6 a Delian League fleet wintered at the harbour (Plut. *Them.* 20.1), and Pagasai was a trading port exporting grain (Xen. *Hell.* 5.4.56), meat (Plut. *Mor.* 193DE) and slaves (Ar. *Plut.* 521; Hermippos fr. 63.19 (*PCG*)).

The cult of Apollo Pagasaïos is frequently mentioned (*RE* xviii.2. 2303). A cult of Poseidon is attested by a C5f dedication (*ArchEph* (1932) 27 no. 12), and a cult of Artemis may be inferred from *IG* IX.2 1123 (C3e); a cult of Dionysos Pelagios is attested in Theopomp. fr. 352, and Alexander of Pherai

may possibly have been worshipped as a hero at Pagasai (*RE* xviii. 2307).

IG IV 617.4 (316–293) records a monetary donation by the Pagasaïans “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraïa” (Perlman (2000) 74, 127–29); cf. *CID II* 100.11.5ff (325), presumably a collective donation towards the rebuilding of the temple at Delphi.

408. Peirasia (Peirasieus) Map 55. Lat. 39.30, long. 22.15. Size of territory: 1. Type: [A]. The toponym is *Πειρασία* in *Ap. Rhod.* 1.37, the earliest attestation, but the city-ethnic regularly uses a stem in *-ρα* for *-ρε*: *Πειράσιος* (Thuc. 2.22.2), or *Πειρασιεύς* (C4 coins, *infra*).

Peirasia is listed as a *polis* in the political sense at Thuc. 2.22.2. Similarly, in the Delphic *ναοροιοῖς* accounts the Peirasians are recorded in a fragmentary list (*CID II* 8.11.6), the heading of which undoubtedly included the formula: *ταῖδε τᾶμ πολλῶν ἦνικαν* (*CID II* 5.11.25–26) *vel sim.* The internal collective use of the city-ethnic is attested on C4 coins (*infra*), and the external collective use in Thuc. 2.22.2 and *CID II* 8.11.6 (c.360/59).

Peirasia was Thessalian (Steph. Byz. 138.17; Livy 32.13.9) and most probably belonged to the *tetras* of Thessaliotis. Cavalry and an unnamed cavalry commander are attested in Thuc. 2.22.3. A contribution of more than 200 dr. to the naopic board at Delphi is recorded in *CID II* 8.11.6 (c.360/59).

The fortification of the acropolis and lower town is very badly preserved, difficult to describe and impossible to date (Decourt (1990) 157); the habitation area seems to have been situated to the south-west of the lower city, close to the valley of the Enipeus (autopsy by J.-C. Decourt).

Peirasia struck silver trihemiobols on the Aiginetan standard c.400–344. Types: *obv.* head of Athena; *rev.* horseman; legend: *ΠΕΙΡΑΣΙΕΩΝ* (Head, *HN*² 303; Babelon, *Traité* ii.4 no. 519).

409. Pelinna(ion) (Pelinna(i)eus) Map 55. Lat. 39.35, long. 22.00. Size of territory: 2. Type: [A]. The toponym is *Πελινναῖον*, τό (*Pind. Pyth.* 10.4; Ps.-Skylax 64); *Πέλινα*, ἡ is found in Arr. *Anab.* 1.7.5; Steph. Byz. 515.4. *IG IV* 617.11 (316–293) has been restored [ἐ]κκ Πελ[ί]νν[α]ς, while Perlman (2000) E.1 fr. b1 prints *Πέλιν[να]* (note, however, that *IG IV*².1 94/95.1b.1 prints this entry as Ὀξύτιον). The city-ethnic is variously *Πελινναίεύς* (*CID II* 31.73 (345/4)), *Πελινναεύς* (coins c.300, *infra*), and *Πελινναῖος* (coins c.300, *infra*; Diod. 18.11.1 (r323); Polyae. 4.2.19 (r356)).

In Ps.-Skylax 64, where *polis* is used in the urban sense,

Pelinna(ion) is the seventh of nine toponyms listed between the heading *πόλεις αἰδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θεσσαλῶν*, and Diod. 18.11.1 (r323) by implication describes Pelinna(ion) as a *polis* in the political sense. Strabo 9.5.17 calls it a *phourion* in an achronic reference. The internal collective use of the (abbreviated) city-ethnic is found on C4 coins (*infra*); the external collective use of the city-ethnic is found in Polyae. 4.2.19 (r356) and Diod. 18.11.1 (r323). The external individual use is found repeatedly in *CID II*, e.g. 24.1.13 (336/5), 31.73 (345/4), 32.10 (340/39).

Pelinna(ion) was a Thessalian city (Ps.-Skylax 64); Steph. Byz. 515.3 locates it in Phthiotis, but Strabo 9.5.17 in Hestiaiotes, which is more likely to be correct. It was situated at Palaïogardiki on the left bank of the Peneios, 3 km north-east of Petroporo and 14 km east of Trikala (see, however, *infra* Pharkadon). The acropolis was separately walled: the wall is a C5 polygonal structure running for 1,630 m and has square towers (Stählin (1938); Tziaphalias (1992) 124–31). The lower city was enclosed by a C4 wall descending from the northernmost point of the acropolis wall; it runs for 2,600 m and encloses an area of 59 ha south of the acropolis (Stählin (1938) 335); it has numerous towers and three gates (Stählin (1938); Tziaphalias (1992) 124–31). In the lower city are undated remains of such public constructions as stoas (Stählin (1938)), temples (*ibid.*; Tziaphalias (1992) 125–27), cisterns (Tziaphalias (1992) 125), and possibly a theatre (Stählin (1938) 335). Traces of a C4 Hippodamian grid plan are found as well (Tziaphalias (1992) 126–27).

The history of the city is almost unknown, but Polyae. 4.2.19 (r356) mentions a war between Pelinna(ion) and Pharsalos (in which both seem to have had allies and in which Philip II of Makedon played a part (Hammond (1994) 48)), and according to Diod. 18.11.1, Pelinna(ion) was the only Thessalian city that did not join the Hellenic alliance in the Lamian War; so it seems to have favoured Makedonia. *IG IV* 617.11 (316–293) records a monetary donation by Pelinna “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraïa” (Perlman (2000) 74, 127–29). A citizen of Pelinna possibly served as *theorodokos* for Epidauros in 360/59 (Perlman (2000) E.1 fr. b1, printed as *Πέλιν[να]*; note, however, that *IG IV*².1 94/95.1b.1 prints this entry as Ὀξύτιον).

Citizens of Pelinna(ion) served the Amphiktyonic League in various capacities: *ἀργυρολογέων* (*CID II* 24.1.13 (336/5)); *ναοροῖος* (*ibid.* 31.73 (345/4), 32.10 (340/39)); *hieromonemon* (*ibid.* 96.3, 97.57 (both 327/6), 32.42 (C4)). In 498, Hippokleas of Pelinna(ion) was victorious in the Pythian double stadium race (*Pind. Pyth.* 10); in C6l his father

Phrikias was a double *Olympionikes* (*Olympionikai* 150, 156), and Hippokleas himself later likewise became a double *Olympionikes* (*Olympionikai* 175, 184).

Coin types indicate a cult of the sibyl Manetho, and ivy-shaped gold leaves one of Dionysos (Tziaphalias (1992) 136–37).

Pelinna struck silver coins on the Aiginetan standard in C5f. Obols: *obv.* youth restraining bull, or forepart of bull; *rev.* horse's head; legend: ΠΕΛ, [ΠΕ]ΛΙΝ. Hemiobols: *obv.* bull's hoof; *rev.* horse's head; legend: ΠΕΛΙ. In C4, the city struck in both silver and bronze. (1) Silver (drachm, triobol, trihemiobols). *Obv.* horseman galloping or spearing prostrate foe; *rev.* armed warrior; legends: ΠΕΛΙΝ, ΠΕΛΙΝΝΑ, ΠΕΛΙΝΝΑΙ or ΠΕΛΙΝΝΑΙΚΟΝ. (2) Bronze, C4. Same types and legends but sometimes [ΠΕΛΙΝ]ΝΕΑΩΝ. (3) Bronze, C3: *obv.* horseman; *rev.* sibyl Manetho in different poses or head alone; legend: ΠΕΛΙΝΝΑ or ΠΕΛΙΝΝΑΙ or ΠΕΛΙΝΝΑΙΕ or ΠΕΛΙΝΝΑΙΩΝ (Head, *HN*² 303; Babelon, *Traité* ii.4 nos. 523–30; Rogers (1932) 140–42 nos. 426–35; Liampi (1996) 109, 112; *SNG Cop. Thessaly* 185–87).

410. Phakion (Phakiastas) Map 55. Unlocated (cf. Decourt (1990) 155–58) but presumably in Thessaliotis (Helly (1995) 165). Size of territory: ? Type: [A]. The toponym is Φάκιον, τό (Thuc. 4.78.5); cf. *Phacium* at Livy 32.13.9. The city-ethnic is Φακιαστάς (C3 coins, *infra*). No Archaic or Classical source calls Phakion a *polis*, but Phakion seems to be indirectly attested as a *polis* in the political sense in the Delphic accounts of 337/6 (*CID* II 74): if the restoration Φ[ακ]ι[α]στάς is accepted in 1.43 (cf. 77.1.4 and the index p. 305) it follows that a *tamias* of Phakion is recorded after the heading τὸν ταμίαν ἀποπέμπειν τὰς πόλεις in 1.4. A citizen of Phakion served as Delphic *theorodokos* in 230–220 (*BCH* 45 (1921) III.25), and Phakion struck bronze coins in C3. Types: *obv.* head of crowned nymph; *rev.* horseman; legend: ΦΑΚΙΑΣΤΩΝ (Head, *HN*² 304; Rogers (1932) 146 nos. 444–45).

411. Phaloria (Phaloriastes) Map 55. Lat. 39.50, long. 21.30, but see *infra*. Size of territory: ? Type: C. Steph. Byz. 657.1 gives the toponym as Φαλώρη, but cites Rhianos (*FGrHist* 265) fr. 37 for the form Φαλωρία; the 230–220 Delphic list of *theorodokoi* (*BCH* 45 (1921)) has Φαλορία or Φαλορέα (Oulhen) at III.35, but Φαλευρία at v.C.7 (*BCH*; Oulhen reads Φαλε[.]ίαι). The city-ethnic is Φαλωριαστάς, attested in inscriptions (*IG* IX.1² 13.31 (271/70)) and on coins (*infra*). Steph. Byz. suggests Φαλωρεύς and Φαλωρείτης, but neither form is attested in any other source.

The exact location of Phaloria is unknown, but it must have been situated in Hestiaiotes. Some travellers (e.g. Bursian (1862) 49; Heuzey and Daumet (1876) 413) located it at the site of Skoumbos near Megarchi, south of Kalambaka. At the site are important architectural remains (of walls, a tower, a lower city) and a cemetery; these remains attest to the existence of a city, occupied at least during the Classical period. However, most travellers (e.g. Stählin (1924a) 124; Philippson (1950) 275; Meyer, *RE* suppl. x s.v.) have identified this site with Pialeia (cf. n. 4). Following Philippson (1950) 305 (who himself followed Stählin (1924a) 114), who seems not to have examined the site), *Barr.* prefers a location at Meritsa (now Oxynia) where, however, (unpublished) surveys conducted in 1991–92 by Darmezín, Decourt *et al.* failed to locate ancient remains. Another possible location is at Nea Koutsouphliani near Malakasi (cf. Hammond (1967) 260 and 681), where quarrying has unfortunately destroyed the ancient site (unpublished survey by Darmezín, Decourt *et al.*).

No Archaic or Classical source calls Phaloria a *polis*, and the reason for its inclusion in this Inventory is the existence of bronze coins dated to 302–286 by both Head, *HN*² 305 and Rogers (1932) 149–50; if these coins are correctly dated to C4l, the presumption is that Phaloria possibly existed as a *polis* prior to their minting, i.e. in C4s. In 271–270 a *Thessalos Phaloriastas* was awarded proxeny by the Aitolian *koinon* (*IG* IX.1² 13.31), and in 230–220 a Delphic *theorodokos* resided in the city.

The internal collective use of the city-ethnic is attested on the rare bronze coins dated to 302–286. (1) *Obv.* head of Athena; *rev.* wolf running; legend: ΦΑΛΩΡ. (2) *Obv.* head of Apollo; *rev.* Apollo seated on a rock holding an arrow; legend: ΦΑΛΩΡΙΑΣΤΩΝ (Head, *HN*² 305; Rogers (1932) nos. 459–61). The types suggest cults of Athena and Apollo.

412. Pharkadon (Pharkadonios) Map 55. Lat. 39.35, long. 22.05, but see *infra*. Size of territory: 2(?). Type: B. The toponym is Φαρκαδών (*IG* IV².1 94.B.1.2 (359); Theopomp. fr. 82) or Φαρκηδών (Polyaen. 4.2.18 (r356)). The city-ethnic is Φαρκαδόνιος (C5 coins, *infra*) or Φαρκαδώνιος (Diod. 18.56.5 (r319)) or Φαρκηδόνιος (Polyaen. 4.2.18 (r356)). No Archaic or Classical source calls Pharkadon a *polis*, but it deserves inclusion here as a probable *polis* on account of its C5–C4 coinage and the fact that in 360/59 an Epidaurian *theorodokos* resided at Pharkadon (*IG* IV².1 94.B.1.2). The collective use of the city-ethnic is attested internally on C5 coins (*infra*) and externally in Polyaen. 4.2.18 (r356) and Diod. 18.56.5 (r319).

Pharkadon was a Thessalian city (Polyaen. 4.2.18 (r356)) situated in the *tetras* of Hestiaiotis (Strabo 9.5.17). It has traditionally been located on a double-peaked hill, Sykia, above the modern village of Klotoko, about 20 km east of Trikkala (PECS followed by Barr.). However, the find of an inscription referring to τὸ κοινὸν Φαρκαδονίων at Palaiogardiki (Tziaphalias (1992) 116–20), a site normally identified as Pelinna, may cast some doubt on the identification of Pharkadon with Sykia and serve as a reminder that the ancient topography of this part of Hestiaiotis is still not completely understood. For the site at Palaiogardiki, see *supra* s.v. Pelinna.

At the site of Sykia are remains of Classical and later fortifications enclosing both peaks and a lower city (Kirsten (1938) with a plan at 1836). Polyaen. 4.2.18 (r356) mentions a *poliorkia* of Pharkadon by Philip II of Makedon and uses such terms as *teichos* and *pyrgos* to describe the fortifications. The account refers to *stegai* as well, and thus implies the existence of buildings inside the wall; there are, however, no remains of such buildings. In 319, Pharkadonian exiles were explicitly excluded from the general amnesty decreed by Polyperchon (Diod. 18.56.5; cf. Martin (1985) 104). Nothing further is known about these exiles, but their very existence indicates a defined body of citizens. A C3l inscription refers to τὸ κοινὸν Φαρκαδονίων and a system of *phylai* (Tziaphalias (1992) 116–20). Philip's siege and the fact that exiles from Pharkadon were explicitly excluded from Polyperchon's general amnesty of 319 (Diod. 18.56.5) suggest that the city had followed an anti-Makedonian line of policy (Martin (1985) 194; Hammond (1994) 48). The silver coin depicting Athena (*infra*) suggests a cult of Athena.

Pharkadon struck silver coins on the Aiginetan standard c.480–400, and bronze coins in C4f. (1) Silver. Denominations: triobols, obols and hemiobols. Triobols: *obv.* youth restraining forepart of bull; *rev.* forepart of horse in incuse square; legends: ΦΑΡΚ, ΦΑΡΚΑΔΟ, ΦΑΡΚΑΔΟΝΙ (for similarities between coins with these types and contemporary coins of Krannon, Larisa, the Perrhaibians, Triikka, Pherai and Skotoussa, see Kraay (1976) 115–16 and Martin (1985) 36–37). Obols: *obv.* free horse walking; *rev.* Athena standing; legends: ΦΑΡΚΑ, ΦΑΡΚΑΔ, ΦΑΡΚΑΔΟ, ΦΑΡΚΑΔΟΝΙΟΝ; or *obv.* bull's head; *rev.* horse's head; legend: ΦΑΡ; or *obv.* bull's head; *rev.* horse's head and trident, or ram; legend: ΦΑ, ΦΑΡ, ΦΑΡΚ. Hemiobols: *obv.* bull's head; *rev.* ram; legends: ΦΑ, ΦΑΡΚ. (2) Bronze: *obv.* head of nymph; *rev.* horseman; legend: ΦΑΡΚΑ, ΦΑΡΚΑΔ (*retrogr.*); or *obv.* horse feeding; *rev.* star beneath inverted crescent; legend:

ΦΑΡΚΑΔΟΝΙΟΝ; or *obv.* feeding horse; *rev.* thyrsos below inverted crescent; legend: ΦΑΡΚΑΔΟΝΙΟΝ (*retrogr.*) (Head, *HN*² 305; Babelon, *Traité* ii.4 nos. 560–71; Rogers (1932) nos. 462–63; Liampi (1996) 108–9; *SNG Cop. Thessaly* 209–16).

413. Pharsalos (Pharsalios) Map 55. Lat. 39.15, long. 22.20. Size of territory: 3. Type: A. The toponym is Φάρσαλος, ἡ (Pherecydes (*FGrHist* 3) fr. 1; Thuc. 1.111.1; Xen. *Hell.* 6.1.8). The regular city-ethnic is Φαρσάλιος (Xen. *Hell.* 4.3.3; *I.Thessalie* 56 (C4); and on coins, *infra*, though Hippoc. *Epid.* 6.8.18 has Φάρσαλος; Φαρράλιος is found in Hdn. III.1 123.8.

Pharsalos is called a *polis* in the urban sense by Thuc. 1.111.1, and in Ps.-Skylax 64 Pharsalos is the fifth of nine toponyms listed between the heading πόλεις αἶδε and the addendum εἰσὶ δὲ καὶ ἄλλαι πόλεις Θετταλῶν; *asty* is found in Anac. fr. 107, Diehl (see Helly (1995) 43–44). *Polis* in the political sense is found in Xen. *Hell.* 6.1.5 and implicitly at Thuc. 2.22.3. In the C4 dedication *I.Thessalie* 56 *polis* is restored: [Ϝ]μῆρον Φαρσαλίων ἡ [πόλις]; the earliest certain epigraphical reference to a πόλις Φαρσαλίον is in a C3 decree (*I.Thessalie* 50). Arist. *Pol.* 1306^a11 has the phrase ἡ ἐν Φαρσάλῳ πολιτεία; πολῆται is found at Xen. *Hell.* 6.4.34, and πατρις in *I.Thessalie* 57.4 (330s); *CEG* II 795 (330s); Xen. *Hell.* 6.1.13.

The collective use of the city-ethnic is attested internally on C5–C4 coins (Head, *HN*² 306) and in *I.Thessalie* 56 (C4), and externally in the Delphic *naopoiōtēs* accounts of 357/6 (*CID* II 8.1.8), in a dedication at Delphi (*SEG* 1 210 (C4m)), and in Thuc. 2.22.3. The external and individual use is found in Thuc. 8.92.8; *IG* II² 26 (394–387); and *CID* II.4.1.31 (c.360).

Pharsalos was situated in Thessalia (Thuc. 1.111.1), more precisely in Phthiotis (Strabo 9.5.3, 10; Kip (1910) 68). The territory is referred to as γῆ at Thuc. 1.111.1; it was bounded to the north-east by the territory of Skotoussa and Eretria Phthiotis (Strabo 10.1.10 says explicitly that Eretria was near Pharsalos, and Polyb. 5.9.3 that it was near Thebai Phthiotis), to the south by the territories of Peuma and Proerna; and to the west by that of Euhydriion. In the territory were the rivers of Apidanos (Thuc. 4.78.5), Enipeus (Strabo 9.5.6) and Louerchos (*I.Thessalie* 50). The Thetideion was situated near the eastern border of the *Pharsalion pedion* (Eur. *Andr.* 16 with Decourt (1990) 205–8), and it was most probably the same (on the other bank of the Enipeus) for the place called *Palaipharsalos* by Strabo 9.5.6, 17.1.11 (Decourt (1990) 200–23). Two other toponyms are known, but not precisely located: Makouniai

(*I.Thessalie* 50 (C3l)), possibly near modern Rizzi; and Makkarai (Theopomp. fr. 55); they may refer to the same place. The ruins called Hellas by Strabo 9.5.6 were, in his day, 60 stades from Pharsalos, with the two springs of Messeis and Hypereia close to them. When Philip II of Makedon had destroyed Halos, it was handed over to Pharsalos (Dem. 11.1 with schol.).

The political system of Pharsalos was clearly a narrow oligarchy: *δυναστεία μάλλον ἢ ἰσονομία* (Thuc. 4.78.3), *ὀμοιοῦσα ὀλιγαρχία* (Arist. *Pol.* 1305^b; cf. 1306^a11–12); and some families, especially the Daochids and the Menonids (on whom see Larsen (1968) 22), are well known from the literary and epigraphical record (on Daochids see, e.g., Béquignon (1970) 1053–56; Helly (1995) 51–52, 63–67; on Menonids: Helly (1995) 233–35, 263–64, 303–6). A *stasis* is mentioned by Xen. *Hell.* 6.1.2, and this conflict seems to have been solved by granting exceptional powers to a single individual, Polydamas (Gehrke, *Stasis* 126), who was subjected to an annual rendering of accounts (*Hell.* 6.1.2: *ἀπελογίζετο κατ' ἐνιαυτόν*). A set of laws (*νόμοι*) that specified (*inter alia*?) public incomes is referred to at Xen. *Hell.* 6.1.2.

The Thessalian cavalry took part in the Lelantine War under the Pharsalian Kleomachos (Arist. fr. 98, Rose). The city was attacked by Athenians with allies in 457/6, but these forces did not manage to capture the city (Thuc. 1.111.1). Cavalry and an anonymous cavalry commander from Pharsalos are attested in Thuc. 2.22.3, when the city was allied with Athens (alongside other Thessalian cities); a *hipparchos* is also mentioned at Xen. *Hell.* 4.3.8 and *polemarchoi* in *SEG* 1 210 (C4m). With Larisa, Krannon and Skotoussa, Pharsalos is mentioned as being allied with the Boiotians in 395/4 (Xen. *Hell.* 4.3.3). In 374, Polydamas failed to gain help from Sparta and accordingly had to ally Pharsalos with Jason of Pherai (Xen. *Hell.* 6.1.19); as *tagos*, Polyphron II of Pherai had nine citizens of Pharsalos, including Polydamas, executed (Xen. *Hell.* 6.4.34). A war against Pelinna(ion) in the time of Philip II is mentioned in Polyæn. 4.2.19; Pharsalos was allied with Philip II of Makedon against the Achaian city of Halos (Dem. 11.1; Strabo 9.5.8), and Kottiphos of Pharsalos was the *strategos* of the Amphiktyonic League against Amphissa (Aeschin. 3.128). Pharsalian cavalry fought with Alexander the Great in Asia (Arr. *Anab.* 3.10.11).

According to Diod. 14.82.6, Pharsalos, though garrisoned by Lakedaimonians, was captured by Medios of Larisa in 395, and the inhabitants (*τοὺς ἐν αὐτῇ κατοικοῦντας*) were sold off as booty (*λαφυροπωλεῖν*). Medios may have

placed a mercenary garrison in Pharsalos after his capture of the city: Arist. *Hist. an.* 618^b13–14 refers to “the time when Meidios’ mercenaries were killed at Pharsalos”.

In 374 Pharsalos may have ruled over an unknown number of unidentifiable but presumably minor *poleis*: at *Hell.* 6.1.8 Xenophon has Jason of Pherai state that if he is joined by Pharsalos and *αἱ ἐξ ὑμῶν* (sc. *τῶν Φαρσαλίων*) *ἡρτημέναι πόλεις* he will easily become *tagos* of Thessalia. Thessalian allies of Pharsalos are implied by Polyæn. 4.2.19 (r time of Philip II).

Thoukydides of Pharsalos was *proxenos* of Athens (Thuc. 8.92.8), and Polydamas was hereditary *proxenos* of Sparta (Xen. *Hell.* 6.1.4); in C4 Daochos was *proxenos* of Anaphe (*IG* XII.3 251 (c.345–330)), and Iphitos was honoured by Athens (*IG* II² 26). Reception of an Athenian embassy seems implied by Ar. *Vesp.* 1271.

The patron divinity of Pharsalos was probably Zeus: Olympios (*I.Thessalie* 58 (C4e)); Soter (ibid. 1 59 (C3l) and 60 (C3s)) or Thaulios (ibid. 1 62–63 (C4)). The Pharsalians also had cults of Aphrodite Peitho (ibid. 1 67 (450–430)), Apollo (ibid. 1 65 (C4s)), Artemis (ibid. 1 66 (C3)), Athena (coins, *infra*; cf. Lavva (2001) 31–32, stressing the importance of this goddess), Demeter (Daffa-Nikonanou (1973) 27–28), Hestia and Symmachos (*I.Thessalie* 68 (C4f)), Hermes (ibid. 1 69 (C5m)), Pan and the Nymphs (ibid. 1 72 (C5f), 73 (C4)). The locations of the cult sites are uncertain, except that of Pan and the Nymphs in the so-called Alogopati grotto (ibid. 1 72–73) and perhaps that of Demeter at Ambelia Pharsalou (*ArchDelt* 43B1: 273 (C6l–C5m)), and, of course, the Thetideion (*supra*); the Thetideion is actually called a *polis* by Pherecydes (*FGrHist* 3) fr. 1a, but in a purely mythological context and without implications for its status in the Classical period (cf. Hansen and Nielsen (2000) 148–49).

Several Pharsalians are known as victors in the Panhellenic games: in the Olympic Games victories were won by Phaidros (*Olympionikai* 107, in 556) and Agias (*Olympionikai* 192, in 484); Pythian victories were won by Agias (*I.Thessalie* 57, in c.490–480) and Telemachos (*Olympionikai* 190 (C5)); and Agias and Telemachos were both *periodonikai* (Knab (1934) nos. 11–12). In 366–338, Melanippos of Pharsalos was victorious in the hoplite race at the Amphiarraia at Oropos (*IG* VII 414.27–28).

I.Thessalie 56 (C4) is an internal communal dedication, while *SEG* 1 210 (C4m) is a dedication to Pythian Apollo. Donations of money to Delphi and Argos are attested in *CID* II 8.1.8 (C4m) and *IG* IV 617 (316–293). Citizens of Pharsalos served the Amphiktyonic League in various capacities: as *argyrologos* (*CID* II 11A.5, B.6); *hieromnemon*

(*CID* II 32.42, 89.6, 94.2); *naopoios* (*CID* II 31.72, 32.30, 33.8, 74.1.66–67, 79A.1.9, 95.6) and *tamias* (*CID* II 74.1.42, 77.1.4).

The acropolis of Pharsalos is mentioned by Xen. *Hell.* 6.1.2, 18; it was located on the Profitis Ilias hill, and was c.500 m long (east–west) and 50 m wide; the preserved walls are all Byzantine. The upper (c.750 × 400 m) and the lower (c.1,500 × 1,200 m) town were situated on the northern slope of the hill and in the plain near the Apidanos spring. The walls (polygonal and trapezoidal or rectangular isodomic), not well preserved except near the acropolis itself, are between 2.70 m and 4.0 m wide. There are remains of four gates and a postern, as well as at least twenty-four towers. Part of the city wall was constructed in C5e (cf. Diod. 11.83.3–4 for a *poliorkia* in 457/6), but most of it dates to C4s (Stählin (1924a) 139–41; Katakouta and Toufexis (1994)). A C6l tholos tomb was found outside the circuit wall (*Prakt* (1951) 155–63, (1952) 185–202, (1953) 127–32), but almost nothing is known about the degree of urbanisation during the Archaic and Classical periods: some houses have been excavated, but they all date to the Hellenistic or Roman periods (see further Lavva (2001) 4–10). An extensive Archaic–Classical cemetery is located west of the city (*ibid.* 9).

Pharsalos struck coins in silver on the Aiginetan standard and bronze between c.480 and c.320. Denominations: drachms, triobols, trihemibols, obols, hemiobols and fractions in bronze (from C5l). The most common types are: *obv.* head of Athena, in C4 facing; *rev.* forepart of horse, or horse's head, or horseman (cf. Lavva (2001) 19ff); legends: *ΦΑΡ* or *ΦΑΡΣ* or *ΦΑΡΣΑ* or *ΦΑΡΣΑΛΙΩΝ* (Head, *HN*² 306; for the end of minting, see Martin (1985) 161; Babelon, *Traité* ii.1 nos. 1422–23, ii.4 nos. 476–504; Rogers (1932) 151–61; Lavva (2001); *SNG Cop. Thessaly* 217–33).

414. Pherai (Pheraios) Map 55. Lat. 39.25, long. 22.45. Size of territory: 2. Type: A. The toponym is *Φεραί, αί* (Dem. 1.13; *IG* v.1 948.2 (C4); Diod. 15.61.5). The city-ethnic is *Φεραίος* (Xen. *Hell.* 2.3.4; *SEG* 23 416 (450–425); *IG* IV 617.4 (316–293)).

Pherai is called a *polis* in the political sense in *SEG* 23 433.5 (C4) and is listed as a *polis* in this sense at Thuc. 2.22.3; *polis* in the urban sense is found in Dem. 7.32; at Ps.-Skylax 64, Pherai is the first toponym listed between the heading *πόλεις αἰδέε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Θερταλῶν*; *akropolis* is found in Dem. 7.32.

The internal collective use of the city-ethnic is found in *SEG* 23 416.1 (450–425) and 417.3 (C5l); the external collective use is found in Thuc. 2.22.3; Xen. *Hell.* 6.4.31; *CID* II 1.1.47 (362/1); *IG* IV 617.4 (316–293); and the external individual use in Xen. *Hell.* 2.3.4; *CID* II 31.73 (345); *IG* IV².1 122.26 (C4).

Pherai was a Thessalian community (*IG* v.1 948.2 (C4)), belonging to the *tetras* of Pelasgiotis (Strabo 9.5.10). Archaeological material demonstrates the existence of several military installations and second-order settlements (often fortified) in the territory in the Archaic and Classical periods; for details, see Di Salvatore (1994). Pagasai is described as the *epineion* of Pherai by Theopomp. fr. 53 (see further the entry for Pagasai, *supra*). A C4 decree (*SEG* 23 418), by extending privileges granted to *ῥσσ[ας γὰς] Φεραῖοι ἄρχοντι*, suggests that the city controlled territory other than the civic territory proper.

Early in the Peloponnesian War, Pheraian cavalry assisted the Athenians (Thuc. 2.22.3) alongside other Thessalian *poleis* which were allied to Athens. The C5l–C4 history of Pherai, as it appears from our sources, was dominated by a series of powerful individuals who struggled for pan-Thessalian hegemony, made extensive use of mercenary forces (Parke (1933) 100ff), and were referred to as *tyrannoi* (e.g. Ephor. fr. 95; Berve (1967) 283–95). The first of these was Lykophron I, who in 404 defeated the Larisaans and other Thessalians in battle *βουλόμενος ἄρξαι ὄλης τῆς Θερταλίας* (Xen. *Hell.* 2.3.4; Westlake (1935) 54–55); conflict between Lykophron and Larisa continued into the 390s (Diod. 14.81.5 (r395)), and Lykophron seems to have had Spartan support (Xen. *Hell.* 6.4.24; Cartledge (1987) 354; *Neue Pauly* vii. 568). Nothing is known about the end of Lykophron's rule; he may have been succeeded by a certain Polyalkes, who may have been a relative of his (Westlake (1935) 68; Berve (1967) 285), but his true successor was his son (Westlake (1935) 68), the famous Jason of Pherai (on whom see Mandel (1980) and Sprawski (1999)). He appears for the first time c.382–379, when he assisted Neogenes of Histiaia in establishing a tyranny (Diod. 15.30.3; Stylianou (1998) *ad loc.*). By the middle of the 370s, he possessed a mercenary army of 6,000 foot and had by force of arms subdued not only Alketas of Epeiros (Xen. *Hell.* 6.1.7; cf. Hammond (1967) 524 and Mitchel (1984) 57–58) but also most of the *poleis* of Thessalia and made them *symmachoi* (Xen. *Hell.* 6.1.5). During the fighting, he was regularly opposed by Pharsalos (*ibid.*), but Pharsalos itself (presumably with its dependent *poleis*) was made a *symmachos* not by force of arms but by negotiation (Xen. *Hell.* 6.1.2–18), after a Pharsalian plea for Spartan assistance had been rejected (*ibid.*). After this, presumably in 375/4, Jason was elected *tagos* of Thessalia and went on to organise the military and economic affairs of the Thessalians (Xen. *Hell.* 6.1.18; Helly (1995) 345–53); his command of a fleet of triremes is attested by Xen. *Hell.* 6.4.21, but it is unclear whether the reference is

to a Pheraean, a Thessalian, or even a personal navy. His extra-Thessalian policy seems to have been to oppose Sparta (Xen. *Hell.* 6.1.10; Mandel (1980) 54), and he became an ally of Athens ([Dem.] 49.10) and possibly a member of the Second Athenian Naval League (*IG* II² 43.B.15; Jehne (1991); Dreher (1995) 173–74; see, however, Mitchel (1984), who restores *IG* II² 43B.1–2 as [$\Phi\epsilon$]ραίων [ὁ δὲ] ἥμος and argues that the Pheraians as such, and not Jason, were enrolled as a member of the League; Jason also concluded a treaty of *symmachia* with King Amyntas of Makedon (Diod. 15.60.2; Stylianou (1998) *ad loc.*). As an ally of Thebes, Jason negotiated *spondai* between the Boiotians and the Lakedaimonians after the battle of Leuktra (Xen. *Hell.* 6.4.19–25); on his foreign policy, see in general Westlake (1935) 84–102. Jason was assassinated in 370/69 (Xen. *Hell.* 6.4.31). On his successors, see Westlake (1935) 126–95 and Berve (1967) 289–95. In 353/2 the tyrants Lykophron II and Peitholaos handed over Pherai to Philip II of Makedon and left the city (Diod. 16.37.3, 38.1; on chronology, see Martin (1981)). Peitholaos may have returned only to be driven out by Philip, according to Diod. 16.52.9, 349/8 (Westlake (1935) 183; Berve (1967) 294; Buckler (1989) 106–7). In 344, Philip defeated a rebellious Pherai and installed a permanent garrison on its acropolis (Dem. [7.32], 8.59, 9.12; Westlake (1935) 192).

Pherai made grants of proxeny to citizens of Opous (*SEG* 23 415 (450–425); *SEG* 420 (C4)), Proerna (*SEG* 23 416 (450–425)), Thebes (*SEG* 23 417 (C5I–C4); *SEG* 422 (C4)), Skotoussa (*SEG* 23 419 (C4)) and Krannon (*SEG* 23 421 (C4)). *F.Delphes* III.4 385 (338–320) is possibly a grant of proxeny by Delphi to a citizen of Pherai.

Pheraean cavalry are attested at Thuc. 2.22.3 and Xen. *Hell.* 6.4.31 (τὸ Φεραίων ἱππικόν).

The earliest preserved public enactments are two grants of proxeny dating to 450–425 (*SEG* 23 415–16); the term ψε[φίσματα] is found in *SEG* 23 424.6 (C4). A board of *tagoi* is attested by *SEG* 23 425.6 (C4). *SEG* 23 420 (C4) contains a grant of *προδικία* to a man of East Lokrian Opous. The raising of taxes is implied by several grants of ἀτέλεια (cf. *SEG* 23 418, 419, 420, 422, 425 (all C4)). *SEG* 23 418 (C4) extends privileges granted to ὄσσ[ας γὰς] Φεραῖοι ἄρχοντι. Grants of *epinomia* are found in *SEG* 23 422 and 424 (both C4).

There are few remains of the ancient city of Pherai (*RE* suppl. vii. 993–94; *PECS* 702), the most important being the remains of a suburban temple of En(n)odia (or En(n)odia and Zeus Thaulios; it was erected in the Doric style in C6ε (Béquignon (1937a) 44–47), and rebuilt in C4I with a peri-

style of 6 × 12 columns (Østby (1992), (1994)). A Dioskoureion in the city is mentioned at Dem. 19.158 (cf. Chrysostomou (1983)). A C5e marble statue of Athena was found on the acropolis, which may indicate a sanctuary of the goddess there (*PECS* 702).

Dem. 8.59 and 10.61 refer to the τεῖχος of Pherai; the city wall was constructed in C4f (Camp (2000) 43); it is 3–5 m thick, built of rough-faced rectangular and trapezoidal blocks laid in fairly regular courses (*PECS* 702) and runs for c.5 km; at the Athanassios hill, a gate and six towers have been identified (Kakavoyiannis (1977)); the area enclosed measures at least 82 ha (= the upper city) but perhaps as much as c.120 (including the lower city; M. Di Salvatore, pers. comm.); to the south-west, there may have been a second wall; to the south it was an *emplektron* wall (*ArchDelt* 50 (1995) B.1: 363).

The patron divinity was En(n)odia, who is depicted on Classical coins (*infra*; Chrysostomou (1998); *LIMC* III.1 744). Other cults include those of Artemis (*IG* IX.2 417.2 (C4)), the Dioskouroi (Dem. 19.158), Poseidon (Chrysostomou (1998) 249), Zeus Thaulios (Béquignon (1937a) 92, 66.2 (Archaic)), as well as those of Aphrodite, Athena, Demeter, Hestia and Themis (Chrysostomou (1998) 48–49).

Citizens of Pherai served the Amphiktyonic League in the capacities of *naopoios* (*CID* II 31.73, 85 (345), 74.I.69 (337/6), 75.II.40 (336/5), etc.) and *hieromnemon* (*CID* II 102.II.A.25 (324/3); cf. 118.1). A monetary donation by Pherai towards the rebuilding of the temple at Delphi is recorded in *CID* II 1.I.47 (362/1) and one to “*theoroi* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” is recorded by *IG* IV 617.4 (316–293; Perlman (2000) 74–75, 127–29).

Pherai began minting silver coins in C5f, striking drachms, triobols, obols and hemiobols on the Aiginetan standard. Types: *obv.* Thessalian subduing bull, or head and neck of bull clasped by bull-fighter, or bull’s hoof; *rev.* horse with loose rein and lion’s head fountain in incuse square, or horse springing from rock in incuse square, or naked rider in incuse square, or horse’s head in incuse square; legends: ΦΕ, ΦΕΡ, ΦΕΡΑ, ΦΕΡΑΙ, ΦΕΡΑΙΟΝ. For similarities between these coins and contemporary coins of Krannon, Larisa, the Perrhaibians, Pharkadon, Triikka and Skotoussa, see Kraay (1976) 115–16 and Martin (1985) 36–37. Pherai may, in addition, have been the city that struck coins in the name of the Thessalians c.470–450; see Kraay (1976) 116 and Martin (1985) 37–38. For similarities between these putative coins of Pherai and contemporary coins of Skotoussa and

Methylion, see *ibid.*; see, however, Helly (1995) 229–30 and Liampi (1996) 124–25.

In C4, drachms and triobols were minted: *obv.* head of nymph Hypereia, or head of Ennodia, or lion's head; *rev.* Ennodia with two torches riding on a galloping horse, or standing nymph Hyperia with her hand on lion's head fountain, or lion's head fountain; legends: Φ EPAION, Φ EPAIOYN. Bronze coins appear c.400: *obv.* head of Ennodia, or lion's head; *rev.* lion's head fountain, or Ennodia with torches riding on a horse (two denominations); legend: Φ EPAION. Two of Jason's successors struck coins in their own name. Alexander (369–357) struck both silver and bronze coins. Silver (didrachms, drachms, triobols, and obols): *obv.* head of Ennodia (sometimes with ENNOΔΙΑΣ added), or young male head in *petasos*, or wheel; *rev.* armed horseman prancing, or lion's head, or leg and foot of horse, or double axe; legends: AAE, AAEΕΑΝΔΡΕΙΑ, AAEΕΑΝΔΡΕΙΟΝ, AAEΕΑΝΔΡΕΙΟΣ, AAEΕΑΝΔΡΟΥ (of which the adjectival forms denote denominations). Bronze: *obv.* young male head in *petasos*, or forepart of rushing bull; *rev.* leg and foot of horse, or forepart of horse; legend: AAEΕΑΝΔΡΟΥ. Teisiphonos struck bronze coins (two denominations): *obv.* forepart of rushing bull; *rev.* forepart of horse; legend: ΤΕΙΣΙΦΟΝΟΥ (Head, *HN*² 306–9; Babelon, *Traité* ii.1. 1023–30, ii.4. 339–58; Rogers (1932) 162–68; Liampi (1996) 107–8, 112; *SNG Cop. Thessaly* 234–47).

415. Skotoussa (Skotoussaïos) Map 54. Lat. 39.25, long. 22.35. Size of territory: 2. Type: [A]. The toponym is Σκοτούσσα, ἡ (Simon. fr. 127, Page), Σκοτούσα (Ps.-Skylax 64), Σκοτούσαι (Arist. *Mir. ausc.* 841^b) or Σκοτόεσσα (Paus. 7.27.6). The city-ethnic is Σκοτουσσαίος (*IG* II² 8843 (C4f); *SEG* 23 419 (C4)), Σκοτουσσαίος (Xen. *Hell.* 4.3.3; *SEG* 34 452 (C4)), Σκοτουσσαίος (*SEG* 43 310 (C3)); Steph. Byz. 578.2 gives Σκοτουσσαίος.

In Ps.-Skylax 64, where *polis* is used in the urban sense, Skotoussa is one of nine toponyms listed between the heading πόλεις αἰθε and the addendum εἰσὶ δὲ καὶ ἄλλαι πόλεις Θετταλῶν. The political sense is found at Diod. 15.75.1 (r367). The earliest epigraphical reference to a πόλις Σκοτουσσαίου is in a citizenship decree of C4l–C3e (*SEG* 43 310). The collective use of the city-ethnic is attested internally on coins of C5–C4 (*infra*) and in the decree *SEG* 43 310; externally it is found at Xen. *Hell.* 4.3.3. The external individual use is found in *SEG* 34 452 (C4) and *CID* II 10.A.1.8 (357/6).

Skotoussa was situated in Thessalia (*IG* II² 8843 (C4f); Xen. *Hell.* 4.3.3), more precisely in Pelasgiotis (Simon. fr. 127,

Page; Kineas (*FGrHist* 603) fr. 3). Its territory included the river Onchestos (Polyb. 17.20.5), Kynos Kephalaï (hills and/or *kome*: Polyb. 18.22.9; Strabo 9.5.20), Melambion (another *kome*?: Polyb. 18.20.6) and a hill, Phagoëis (schol. Hom. *Il.* 16.233a); none of these toponyms can be equated with sites on the ground. Skotoussa was bounded to the north by the crest line of the Revenia hills, to the east by the territory of Pherai, and to the south by the territories of Eretria Phthiotis and, in particular, Pharsalos (Decourt (1990) fig. 27).

Alongside Larisa, Krannon and Pharsalos, Skotoussa is mentioned by Xen. *Hell.* 4.3.3 as being allied to the Boiotians in 395/4. Later in C4 Skotoussa was conquered by Alexander of Pherai, who in 367/6 summoned a meeting of the *ekklesia* (Diod. 15.75.1) to be held in the theatre (Paus. 6.5.2; cf. Stählin (1924a) 109, and Dilke (1948) 138–39), whereupon he had his mercenaries kill all the participants.

A citizen of Skotoussa was appointed as *proxenos* by Pherai in C4 (*SEG* 23 419), and one by Delphi c.320 (*SEG* 18 179).

Skotoussa was a walled and fortified city in 367 (Diod. 15.75.1), but there are no visible remains of the Classical wall, the preserved remains being Hellenistic (Missailidou-Despotidou (1993)). Remains of a wall enclosing the acropolis in the south-western corner of the city could still be seen by Leake in 1809, but were already badly preserved (Leake (1835) iv. 454ff).

Skotoussa had cults of Apollo Kerdoios (Missailidou-Despotidou (1993) A71), Asklepios (*ibid.* A1), Demeter (Moustaka (1983) 94 (C5s)), Dionysos (*ibid.* 106 (C4m)), Herakles (*ibid.* 162, 163, 199 (C5l, C4m, C3)); Peek (1974) 26 (C5); Missailidou-Despotidou (1993) B4–5 (C2)), Pan and the Nymphs (Volos Museum A 764 (C4)), Poseidon (*ArchDelt* 48B: 257 (C3?)), and Zeus (schol. Hom. *Il.* 16.233a).

Poulydamas of Skotoussa achieved an Olympic victory in the *pankration* in 408 (*Olympionikai* 348).

Skotoussa struck silver coins on the Aiginetan standard c.480–400 and coins of silver and bronze from c.400 to, probably, 367. (1) Silver, C5 (drachm, triobol, obol): (i) *obv.* man wrestling bull; *rev.* forepart of horse; or *obv.* bull's head; *rev.* horse's head; legend: ΣΚΟ (on similarities between these coins and contemporary coins of Krannon, Larisa, the Perrhaibians, Pharkadon, Pherai and Triikka, see Kraay (1976) 115–16 and Martin (1985) 36–37); (ii) *obv.* forepart of horse; *rev.* corn-grain in deep incuse square; legend: ΣΚΟ; on similarities between these coins and contemporary coins of Methylion and coins struck in the name of “the

Thessalians” (possibly by Pherai, *supra*), see Kraay (1976) 116 and Martin (1985) 37–38. (2) Silver, 400–367 (triobol, trihemibol); *obv.* head of bearded Herakles; *rev.* forepart of horse; legend: ΣΚΟ; or *obv.* head of young Herakles; *rev.* Demeter(?); legend: ΣΚΟΤΟΥΣΣΑΙΩΝ. (3) Bronze, c.400–367: *obv.* head of young Herakles, or female head facing; *rev.* forepart of horse, or vine-branch with grapes; legend: ΣΚΟ or ΣΚΟΤΟΥΣΣΑΙΩΝ. Babelon, *Traité* ii.1. 1030–31, ii.4 nos. 626–33; Head, *HN*² 309; Rogers (1932) nos. 539–545; Liampi (1996) 107; *SNG Cop. Thessaly* 250–52.

416. Thetonion (Thetonios) Map 55. Lat. 39.20, long. 22.10. For the location, see Helly (1992) 84. Size of territory: 2. Type: B. The toponym is presumably Θητώωνιον, τό (cf. Hellen. fr. 8 and Keil (1899) 192). The city-ethnic is Θετόνιος in *IG IX.2* 257.2 (C5m).

No Archaic or Classical source calls Thetonion a *polis*, but it deserves inclusion in this Inventory because of an honorific decree passed by the Thetonians in C5m (*IG IX.2* 257) which (1) attests an eponymous official, a *hyloros* (cf., however, Sherk (1990) 259); (2) has the internal collective use of the city-ethnic; (3) grants a foreigner ἀσυλία and ἀπέλεια; (4) bestows the title of εὐφεργέτας upon him; and (5) records the magistracy of πάγος in the community itself (see Helly (1995) 29–35). The expression Θετόνιοι ἔδοκαν points to a session of an assembly. Finally, the inscription attests to a cult of Apollo Delphinios (ll. 10–11). Thetonion probably belonged to the *tetras* of Thessaliothis (Helly (1995) 165).

417. Triikka (Triikkaios) Map 55. Lat. 39.35, long. 21.45. Size of territory: 2 or 3. Type: [A]. The toponym is Τρίκ(κ)η, ἡ (Hom. *Il.* 2.729, 4.202; Strabo 9.5.17) or Τρίκκα (*IG IX.2* 301.2 (C2); Ptol. *Geog.* 3.12.41). The city-ethnic is Τρικκαῖος (*CID II* 1.1.16; Diod. 18.56.5 (r319)).

In the Delphic *naopoiōi*’s accounts of 362/1 (*CID II* 1) the Triikkaians are recorded (1.16) under the heading ταῖδε τῶν πολιῶν ἦνικαν (1.11); Strabo 9.5.17 calls it a *phourion*.

The collective use of the city-ethnic is found internally on C5 coins (*infra*) and externally in *CID II* 1.1.16 (362/1) and Diod. 18.56.5 (r319); the external individual use is found in *CID II* 48.1.46 (338/7), 79.A.1.46 (334/3).

Triikka was situated in Thessalia (*IG IV*².1 128.29 (c.280); *IG XI.4* 606 fr. b.8 (C3f)), more specifically in Hestiaotis (Strabo 9.5.17). It is located in north-western Thessalia at modern Trikala. The site was inhabited in the Archaic and Classical periods, but the preserved building remains are all from a later date (Tziaphalias (1988) 186–92).

Diod. 18.56.5 reports that Triikkaian exiles were explicitly excluded from the general amnesty decreed by Polyperchon

in 319, and this suggests that the city had followed a policy opposed to Philip II of Makedon (Martin (1985) 104; Hammond (1994) 48). Nothing further is known about these exiles, but their very existence indicates a defined body of citizens.

The patron divinity was Asklepios, who, according to Strabo, was born at Triikka (14.1.39) and there had his oldest and most famous sanctuary (9.5.17); the Asklepieion has not yet been identified (Tziaphalias (1988) 188–92). Coin types (*infra*) suggest cults of Athena and the eponymous nymph.

Triikka struck coins in both silver and bronze; the silver issues are dated to 480–400, the bronze issues to 400–344. (1) Silver (Aiginetan standard). Triobols: *obv.* Thessalian subduing bull or forepart of bull; *rev.* forepart of horse in incuse square; legend: ΤΡΙΚ, ΤΡΙΚΚΑ, ΤΡΙΚΚΑΙ, ΤΡΙΚΚΑΙΟ, ΤΡΙΚΚΑΙΟΝ or ΤΡΙΚΚΑΙΩΝ; on similarities between these coins and contemporary coins of Krannon, Larisa, the Perrhaibians, Pharkadon, Pherai and Skotoussa, see Kraay (1976) 115–16 and Martin (1985) 36–37. Trihemibols: *obv.* horseman; *rev.* nymph Triikka seated with phiale and mirror; legend: ΤΡΙΚΚΑΙΟ. Obols: *obv.* horse; *rev.* nymph engaged in various activities, or Athena running; legend: ΤΡΙΚΚ, ΤΡΙΚΑ, ΤΡΙΚΚΑ, ΤΡΙΚΚΑΙΟΝ. Hemibols: *obv.* bull’s hoof; *rev.* forepart of horse; legend: ΤΡΙΚΚΑΙΟΝ. (2) Bronze: *obv.* head of nymph Triikka; *rev.* armed warrior advancing, or Asklepios seated with serpent and serpent erect below chair or serpent erect before chair being fed a bird by the god; legend: ΤΡΙΚΚΑ, ΤΡΙΚΚΑΙΟΝ, ΤΡΙΚΚΑΙΩΝ (Head, *HN*² 310–11; Babelon, *Traité* ii.1 no. 1443, ii.4 nos. 538–59; Rogers (1932) 176–78; Liampi (1996) 112; *SNG Cop. Thessaly* 262–67).

2. Adjacent Regions

2.1 Dolopia

418. Angeia (Angeieus) Map 55. Lat. 39.05, long. 22.40. Size of territory: 2? Type: [A] (classified as a fort/tower by *Barr.*, but see *infra*). The toponym has been restored as Ἀγγεία, ἡ (ἐν Ἀγγ[υ]αίαι) in a C3s catalogue of *theorodokoi* from Delphi (*CID II* p. 26). The city-ethnic is Ἀνγειεύς (*CID II* 8.11.16 (C4f)) or Ἀγγειάτης (*F.Delphes* III.2 68.10 (C2f)).

No Archaic or Classical source calls Angeia a *polis*; but in the Delphic *naopoiōi*’s accounts the Ἀνγειεύς are recorded in a fragmentary list (*CID II* 8.11.16), the heading of which undoubtedly included the formula ταῖδε τᾶμ πολιῶν ἦνικαν (cf. *CID II* 5.11.25–26) *vel sim.* Ager (1996) no. 65 is a

C3/C2e arbitration between Ktimene and Angeia, which refers to both these communities as *poleis* (ll. 21, 25). Since the external collective use of the city-ethnic occurs in *CID* II 8.16 (C4f) to record a collective donation by the Angeians of 100 dr. towards the rebuilding of the temple at Delphi, it was possibly a *polis* in C4. Angeia was a Dolopian community (*IG* II² 1132.59 (C2)), but it apparently did not provide the Amphiktyonic League with Dolopian *hieromnemes* in C4 when these were provided by Ktimene (Lefèvre (1998) 85). At the site (for which see Helly (1992)) are remains of a polygonous circuit with *diateichisma*, gate and towers (Stählin (1924a) 149).

419. Ktimene (Ktimenaios) Map 55. Lat. 39.05, long. 22.00. Size of territory: 2. Type: [A]. The toponym is *Κτυμένη, ἡ* (Ap. Rhod. 1.68; Steph. Byz. 388.17); in *REG* 62 (1949) 28 l. 16 (C2) Daux restored the plural form *ἐν Κτυμέν[ραις]*. The city-ethnic is *Κτυμεναίος* (*CID* II 74.1.49 (337/6)).

Ktimene is not explicitly called a *polis* in any Archaic or Classical source, but the political sense is indirectly attested in the Delphic accounts of 337/6 (*CID* II 74), where a *tamias* of Ktimene is recorded (1.49) after the heading *τὸν ταμίαν ἀποπέμπειν τὰς πόλεις* (1.4). For an explicit attestation, see Ager (1996) no. 65, a C3/C2e arbitration between Ktimene and Angeia which refers to both these communities as *poleis* (ll. 21, 25). The external and individual use of the city-ethnic in C4s (*CID* II 32.45, 74.1.49, 77.1.10, 100.1.10, 102.1.A.11) is further proof of *polis* status in this period.

Ktimene was a Dolopian community (*CID* II 74.1.49; Ap. Rhod. 1.68) and as such sometimes provided the Amphiktyonic League with the Dolopian *hieromnemon* (*CID* II 32.45 (C4l)).

At Ktimene, a C3 wall crowns the acropolis (Stählin (1924a) 148), and a second fortified place was found “1/2 Stunde südöstlich” from Rentina (*ibid.*).

2.2 Ainis

420. Hypata (Hypataios) Map 55. Lat. 38.50, long. 22.15. Size of territory: ? Type: [A]. The toponym is ‘*Υπάτα, ἡ*’ (*BCH* 45 (1921) III.127 (230–220); *ArchEph* (1914) 88, 2.9 (C3)) or ‘*Υπάτη*’ (Arist. *Mir. ausc.* 843^b16). The city-ethnic is ‘*Υπαταίος*’ (*CID* II 3.8 (362–357); C4f coins (*infra*); *IG* IX.2 3a.1 (C4)), and ‘*Υπαταίεύς*’ (*IG* IV 617.2 (316–293)).

If [τ]α[ἶδε τᾶν πολίων] and [‘Υ]πα[ταίτοι] are correctly restored in *CID* II 3.1 and 8, then Hypata is there listed as a *polis* in the political sense; later sources frequently apply

polis in the political sense to the city (e.g. *IG* IX.2 7a, *passim*). The internal collective use of the city-ethnic is found in *IG* IX.2 3a.1 (C4) and on C4f coins (*infra*). The external collective use is found in *CID* II 3.8 (362–357, heavily restored) and *IG* IV 617.2 (316–293); see further Perlman (2000) 74, 127–29. The individual use of the city-ethnic is attested only in Hellenistic sources, e.g. *F.Delphes* III.4 363.2 (225–210).

Hypata was an Ainiian city (Arist. *Mir. ausc.* 843^b16). At the site are remains of an acropolis wall (Béquignon (1937b) with fig. 13) and a circuit wall, certain parts of which date to C4–C3 (Stählin (1924a) 211; Béquignon (1937b) 310–11). Inside the walls are undated remains of walls (Béquignon (1937b) 310).

A C4 grant of proxeny (along with *epinomia* and *enktesis*) by Hypata is recorded in *IG* IX.2 3a, which also attests to the existence of a board of *ἄρχοντες* (3a.4).

Coin types suggest cults of Zeus and Athena; Hermes is attested by *IG* IX.2 31 (Hell.?). Apollo Hypataios is attested outside the city itself in Epidaurus (*IG* IV².1 451 (C3)), and Asklepios Hypataios on Paros (*IG* XII.5 156 (“late”) and Thera (*IG* XII.3 suppl. 1330 (C2))). Relations to Panhellenic sanctuaries are attested by a collective donation of money by the city towards the rebuilding of the temple at Delphi (*CID* II 3.8 (362–357), heavily restored). *IG* IV 617.2 (316–293) records a monetary donation by the Hypataians “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29).

Hypata struck bronze coins in C4f. Types: *obv.* laureate head of Zeus and thunderbolt within border of dots; *rev.* Athena Nikephoros with spear and shield; legend: *ΥΠΑΤΑΙΩΝ* (Head, *HN*² 296; Babelon, *Traité* II.4 no. 454; Rogers (1932) nos. 267–68; *SNG Cop. Thessaly* 74).

421. (Kaphleis) Unlocated. Not in *Barr.* Type: [A]. A toponym is not attested. The city-ethnic *Καφλεεύς* is attested only once in a Classical source: *viz.* in the Delphic accounts of 337/6 (*CID* II 74), where a Kaphelian *tamias* is recorded (1.56) after the heading *τὸν ταμίαν ἀποπέμπειν τὰς πόλεις* (1.4). The same source assigns the community to Ainis.

422. (Korophaioi) Map 55. Unlocated. Not in *Barr.* Type: C. A toponym is not attested. The city-ethnic is *Κοροφαίος* (*CID* II 97.64 (327/6)). The community is mentioned in a single type of source: the Delphic naopic accounts, which four times mention *Κέλων Κοροφαίος* as Ainiian *hieromnemon* (*CID* II 92.5 (328), 94.8 (328/7), 96.10 (327/6), 97.64 (327/6)).

423. (Phyrrhagioi) Map 55. Unlocated. Not in *Barr.* Type: [A]. A toponym is not attested. The city-ethnic is *Φυρράγιος* (*CID* II 1.1.40 (362/1)). *Polis* in the political sense is indirectly attested in the Delphic accounts of 337/6 (*CID* II 74), where a *tamias* of the *Phyrrhagioi* is recorded (1.57) after the heading τὸν ταμίαν ἀποπέμπευ τὰς πόλεις (1.4). Cf. also *CID* II 1 (362/1), a list of contributions towards the rebuilding of the temple at Delphi headed by the phrase ταῖδε τῶν πολίων ἤνικαν (1.28): one donation is described as handed in by an *Αἰνιῶν Φυρράγιος Στράτων* (1.40), which shows that the *Phyrrhagioi* were conceived of as a *polis*. Other *Phyrrhagioi* were mentioned in the Delphic naopic accounts as Ainian *hieromnemones*: Agion *Phyrrhagios* in 331/30 (*CID* II 86.18) and *Nikanor Phyrrhagios* in 328 (92.5), 327 (94.8) and 327/6 (96.11, 97.64). Nothing else is known about the community.

424. Talana Unlocated, not in *Barr.* Type: [A]. The toponym is *Ταλάνα*, ἡ (*CID* II 1.1.44 (362/1)). No city-ethnic is attested, unless *Ταλάωνος* in *IG* XI² 31.126 (C3l) is to be associated with Ainian Talana.

In the Delphic *naoroiōi*'s accounts of 362/1 (*CID* II 1) Talana is recorded (1.44) under the heading ταῖδε τῶν πολίων ἤνικαν (1.11), and its gift of 67 dr. is handed in by *Ἀθανάδας Αἰνιῶν*. Nothing else is known about this Ainian community, unless in *IG* XI² 31.126, a C3l grant of privileges by the Aitolian Confederacy to *Dokimos Antiochou Talaonos*, *Ταλάωνος* refers to Ainian Talana.

2.3 Oita

425. Chen (Cheneus) Map 55. Unlocated. Type: C. The toponym is *Χήν* (Diog. Laert. 1.106) or *Χήναι*, αἱ (Paus. 10.24.1; cf. Diod. 9.6). The city-ethnic is *Χηνεύς* (Pl. *Prt.* 343A; Paus. 10.24.1; Diog. Laert. 1.106) or *Χηναῖος* (Musonius Rufus 11.39; Stob. *Flor.* 4.15a.18.46).

Chen is always mentioned in connection with Myson, one of the Seven Sages of the Archaic period (Pl. *Prt.* 343A). According to Diog. Laert. 1.107–8, the location of Chen was subject to dispute already in Antiquity, but there is a reasonably consistent tradition associating it with the area of Oita and Malis (Diod. 9.6; Paus. 10.24.1; Diog. Laert. 1.106). Its only claim to inclusion in this Inventory is the existence of an ethnic closely related to the toponym and used as a part of Myson's name as early as Plato (*Prt.* 343A); such a usage is often indicative that the site to whose toponym the ethnic is related was a *polis* (Hansen (1996) 182–87), especially in external contexts. If *Χηνεύς/Χηναῖος* is not a sub-ethnic

(*ibid.* 171–73, 182), then Chen was possibly a *polis*. However, *Χηνεύς/Χηναῖος* may very well be a sub-ethnic: our sources consistently describe Chen as a *kome* (Diod. 9.6; Paus. 10.24.1; Diog. Laert. 1.106), and Aristoxenos is cited by Diogenes as saying that Myson the Sage did not live in a *polis* but a *kome* (Aristox. fr. 130, Wehrli = Diog. Laert. 1.107); if it was a *kome*, it is not known to which *polis* it belonged.

426. Parasopioi (Parasopieus) Map 55. Unlocated (described by Strabo 9.2.23 as ἐν Ἡρακλείᾳ τῇ Τραχυνίᾳ). Type: B. The toponym is *Παρασώπιοι* (*F.Delphes* III.2 183.3 (c.300); Strabo 8.6.24, 9.2.23) or *Παρασωπιᾶς* (Strabo 9.5.10). The city-ethnic is *Παρασωπιεύς* (*F.Delphes* III.1 118.3 (324/3)).

No Archaic or Classical source calls *Parasopioi* a *polis* (Strabo 8.6.24, 9.2.23 calls it a *kome* in reference to his own day); but it may be included as a probable *polis* here on account of two Delphic grants of proxeny to men from the community: *F.Delphes* III.1 118 is a grant of 324/3 to a man described as *Παρασωπιεύς*, and *F.Delphes* III.2 183 one of c.300 to an [Οἶ]ταῖος ἐκ Παρασωπιῶν. It was thus an Oitaian community.

2.4 Malis

427. Anthele Map 55. Lat. 38.45, long. 22.30. Size of territory: 1 or 2. Type: A. The toponym is *Ἀνθήλη*, ἡ in Hdt. 7.176.2, 200.2. No city-ethnic is attested. At 7.176.2, Herodotos describes Anthele as a *polis* in the urban sense; at 7.200.2, however, he describes it as a *kome* associated with the sanctuary of Demeter Amphiktyonis. There is no obvious explanation for these two different classifications (Hansen (2000) 197), and there is no evidence either to support or to reject Herodotos' *polis* classification. Hdt. 7.216 implicitly places Anthele in Malis. For the site, see Béquignon (1937b) 181–91; Thalmann (1980).

428. Antikyre (Antikyritas) Map 55. Lat. 38.50, long. 22.25. Size of territory: 2. Type: A. The toponym is *Ἀντικύρη*, ἡ (Hdt. 7.198.2). The city-ethnic is *Ἀντικυρεύς* in Hdt. 7.214.1, 8.21.1, or *Ἀντικυρίτας* (*IG* IX.1 227 (C2m)). The only Classical source to mention Antikyre is Herodotos, who at 7.198.2 calls it a *polis* in the urban sense, and at 7.214.1 and 8.21.1 applies the city-ethnic to two individuals of the city.

Antikyre has not yet been securely located, but it was in Malis (Hdt. 7.198.1–2) and most probably lay on the southern bank of the river Spercheios, between Komma and Phrantzi, upstream from the confluence with the

Gorgopotamos, possibly at Kostalexi (Béquignon (1937b) 305–6; Kase (1991) 78, followed by Barr.).

429. Echinios (Echinaios) Map 55. Lat. 38.55, long. 22.45. Size of territory: ? Type: A. The toponym is Ἐχίνοδος, ὄ (Ar. *Lys.* 1169) or Ἐχίνος (Dem. 9.34; *IG* IV 617.2 (316–293)) or Ἐχινέος (*BCH* 45 (1921) III.131 (230–220)). The city-ethnic is Ἐχινάιος (*CID* II 67.27 (C4s)).

Echinios is called a *polis* in the urban sense by Ps.-Skylax 62 (cf. Flensted-Jensen and Hansen (1996) 145, 154), but apart from that the earliest references to a πόλις Ἐχινάϊων are *SEG* 25 642 (C2f) and Polyb. 9.42.1 (r210). The C3 poet Rhianos (*FGrHist* 265) fr. 34 uses ἄστνυ about Echinios. The external and collective use of the city-ethnic is found in *CID* II 67.27, 71.28 (C4s). The external and individual use of the city-ethnic is attested in *F.Delphes* III.4 377 (346). *IG* IV 617.2 (316–293) records a monetary donation by Echinios “to the θεωροί sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29).

Not much is known about the history of Echinios: *F.Delphes* III.4 377 = *Syll.*³ 222 (346) is a grant of proxeny by Delphi to an Echinian, and Dem. 9.34 implies Theban control of, or influence at, Echinios in the time of Philip II, brought to an end by Philip.

Echinios was situated in Malis according to Ps.-Skylax 62; the territory is described as γῆ πάμφορος by Polyb. 9.41.11. The urban history of Archaic/Classical Echinios is unknown, most remains being Hellenistic; but a piece of isodomic circuit wall undoubtedly dates from C4 (*ArchDelt* 43 ([1988] 1992) B.1: 211–16). According to Demetrios of Kallatis (*FGrHist* 85) fr. 6 (*apud* Strabo 1.3.20), Echinios suffered terribly from an earthquake, presumably the one in 426 (Fossey (1990) 183–84).

430. Herakleia (Herakle(i)otes) Map 55. Lat. 38.50, long. 22.25. Size of territory: 2. Type: A. The toponym is Ἡράκλεια (Thuc. 3.92.6; Xen. *Hell.* 6.4.27; Diod. 12.59.3 (r426)), distinguished from homonyms by the addition of ἡ Τραχινία (*IG* XII.5 542.33 (C4m); Xen. *Hell.* 1.2.18; Theophr. *Hist. pl.* 4.15.2), ἡ ἐν Τραχινίᾳ (Thuc. 3.92.1; Diod. 15.57.2 (r370)), ἡ ἐν Τραχίνι (Thuc. 4.78.1), or ἡ περὶ Τραχίνα (Diod. 14.38.4 (r399)) *vel sim.* The city-ethnic is Ἡρακλεώτης (Thuc. 5.51.2; Xen. *Hell.* 6.5.23; *CID* II 32.49 (C4l)), or Ἡρακλειώτας (*CID* II 36.1.9 (340s)), distinguished from that of homonyms by the addition of ὁ ἐν Τραχίνι (Thuc. 5.51.1).

Herakleia is called a *polis* in the urban sense at Thuc. 3.92.6, 93.1 and Hermippos fr. 4.21, West; it is called κτίσμα

at Strabo 9.4.13; *polis* in the political sense is found at Thuc. 3.92.4, 5.51.1–2; it is called ἀποικία at Thuc. 3.92.1.

The C4e coin legend *HPAK* (*infra*) is presumably an abbreviation of the internal collective city-ethnic; the external collective use of the city-ethnic is found at Thuc. 5.51.1–2; Xen. *Hell.* 3.5.6, 6.5.23; and *IG* IV 617.1 (316–293). The external individual use is found at, e.g., *CID* II 36.1.9, 35 (340s).

Herakleia was founded in 426 by the Lakedaimonians (Thuc. 3.92.1), who provided the three oecists Leon, Alkidas and Damagon (Thuc. 3.92.5). Pressed in war by the Oitaians (πολέμῳ ἐφθαρμένοι: Thuc. 3.92.2; τοὺς πλείους τῶν πολιτῶν ἀπέβαλον... ἐρήμουν οὕσης τῆς πόλεως: Diod. 12.59.4), the Trachinians (one of the three *mere* of the Malians; cf. the entry on Trachis *infra*) and the Dorians of central Greece had sent an embassy to Lakedaimon (Thuc. 3.92.2–3). Neither Thucydides nor Diodorus states exactly what was asked of the Lakedaimonians (cf. Malkin (1994) 221), but they decided to grant help in the form of a colony (Thuc. 3.92.4) and proceeded to consult the Delphic oracle, which recommended the foundation (Thuc. 3.92.5). The settlers were drawn from the Spartans themselves, from the *perioikoi* and from other Hellenes to the exclusion of certain *ethne* such as the Achaians and the Ionians (Thuc. 3.92.5); Diod. 12.59.4 says that the settlers were drawn from Lakedaimonians, Peloponnesians and other Hellenes.

Thuc. 3.92.6 presumably means that Herakleia was a new foundation (cf. *HCT ad loc.*; Malkin (1994) 221), and Strabo’s statement that Herakleia was 6 stades from the site of Trachis (9.4.13) confirms this if the reference is to the original site; however, Diod. 12.59.3 says that Trachis was renamed Herakleia (cf. Strabo 9.4.13) whereby he possibly means to locate the city at the site of Trachis. If Strabo’s statement about the location of Herakleia is accepted as referring to the original site, then Diodorus must be wrong, or his statement about the renaming must be taken to refer to the *community*, not the *site*, of old Trachis. That would indicate that the Trachinians themselves were enrolled as citizens of Herakleia (cf. Diod. 14.82.6; Polyæn. 2.21), as would the fact that a new distribution of land followed the foundation (Diod. 12.59.5). Cf. also Paus. 10.22.1 (r280), who distinguishes the ruins of old Trachis from the city of Herakleia; and Stählin (1924a) 208 with fig. 27 at 206, who locates old Trachis in the lower city of Herakleia. See also Béquignon (1937b) 244, who locates old Trachis on the later acropolis of Herakleia; both locations imply that Trachis was merged with Herakleia at the latter’s foundation. (Ps.-Skylax 62 lists Τραχίς alongside Ἡράκλεια. However, this is presumably irrelevant for the discussion above, since it is

likely that the compiler has merged sources of different dates.)

From the outset the ethnic identity of the city was mixed (see *supra*). In the context of the Amphiktyonic League, Herakleia counted as Malian, at least in C4s when its citizens are seen serving the Amphiktyony as Malian *hieromnemones*, of which Herakleia regularly provided one (CID II 36.1.9, 35, II.23 (340s), 43.27 (340), 76.I.27 (335), 77.1.2 (334/3), 97.65 (327/6), 102.I.17 (324/3), 102.II.A33 (324/3), 32.49 (C4)); cf. 74.I.58 (337/6) for one serving as *tamias*, the other being provided by Lamia. However, Diod. 18.11.1 (r323) describes it as Oitaian (cf. Diod. 15.57.2), and so does Strabo (9.5.10).

According to Thuc. 3.93.2, the city was originally populous (*πάνυ πολλούς*); Diod. 12.59.5 (cf. Ps.-Skymnos 597) gives the number of settlers as 10,000 (4,000 Lakedaimonians and other Peloponnesians, and 6,000 from the rest of the Hellenes; but see Schaefer (1961)). However, the city was soon depopulated due to Spartan maladministration (Thuc. 3.93.2, 5.52.1): the Spartans sent out *ἀρχοντες* to govern Herakleia, which was clearly treated as a Spartan dependency (Thuc. 3.93.2; cf. Xen. *Hell.* 1.2.18, where such a Spartan officer is termed *ἀρμοστής*; cf. the sketch of the political history *infra*). Ten thousand settlers (Diod.; Ps.-Skymnos) is probably not a historical figure, but an ideological number (Schaefer (1961); for another view, see Helly (1995) 280–87, a discussion of Thessalian military figures). For information on the level of population there are only hoplite numbers *vel sim.*: in 426, 500 hoplites served with Sparta (Thuc. 3.100.2), and in 409/8, 700 hoplites fell in battle against the Oitaians (Xen. *Hell.* 1.2.18); in 399, 500 citizens were executed during a *stasis* (Diod. 14.38.4). But the composition of the population underwent several modifications as the city was drawn into the power struggles of the larger *poleis*.

In 422/1 a Spartan army on the march for Thrace interfered in the political life of the city (Thuc. 5.12). In 420/19, the Herakleots were defeated in battle by the Ainians, Dolopians, Malians and some Thessalians (Thuc. 5.51.2; Diod. 12.77.4 reporting heavy losses); these people had been hostile towards the foundation from the beginning (Thuc. 5.51.2). In 419/18 the Boiotians (possibly sent for by Herakleia itself, cf. Diod. 12.77.4) took over the city and expelled the Spartan archon Agesippidas (Thuc. 5.52.1); however, by 395 it was apparently once again a Spartan ally (Xen. *Hell.* 3.5.6). In 409/8, the Herakleots again fought the Oitaians, losing 700 men due to betrayal by their Achaian allies (Xen. *Hell.* 1.2.18). A *stasis* is attested for 399 (Diod. 14.38.4 and *infra*); citizens exiled by the Lakedaimonians are reported for 395 (Diod. 14.82.6), and they may have been

exiled on this occasion. In 399, the Spartan officer Herippidas successfully fought off the Oitaian threat (Diod. 14.38.5). In 395 the city was captured (with inside help) by the Boiotians and Argives, who killed captured Lakedaimonians, sent off other Peloponnesians, and restored citizens previously exiled by the Lakedaimonians (Diod. 14.82.6–7). In 371/70, Jason of Pherai took the city by treachery, razed the walls (Xen. *Hell.* 6.4.27), made it *anastatos*, and handed over the territory to the Oitaians and the Malians (Diod. 15.57.2). The community must, however, have been reconstituted, since it appears in C4s: cf. the Delphic inscriptions cited *supra* and Diod. 18.11.1, 56.5.

The city was initially an ally of Sparta (Thuc. 3.100.2), and again on later occasions such as the battle of Leuktra (Xen. *Hell.* 6.4.9); an alliance with the Phthiotic Achaians is implied by Xen. *Hell.* 1.2.18. An alliance with Boiotia is attested by Xen. *Hell.* 6.5.23.

A *stasis* occurred in 399 (Diod. 14.38.4): the Lakedaimonians sent out Herippidas to settle the problems; he called a meeting of the *ekklesia* and proceeded to execute 500 citizens (Diod. 14.38.4); Polyæn. 2.21 describes the citizens here executed as *Trachinioi*; the exiles restored by the Boiotians and Argives in 395 are likewise described as *Trachinioi* (Diod. 14.82.7), and this suggests that the city experienced severe difficulties in integrating the Trachinians and the new settlers (Gehrke, *Stasis* 73; Malkin (1994) 221–27). Exiles are attested in 395 (Diod. 14.82.6) and again in 319, when they were explicitly excluded from the general amnesty issued by Philip Arrhidaios (Diod. 18.56.5).

A citizen of Herakleia is listed as *proxenos* of Karthaia on Keos in IG XII.5 542.33 (C4m).

Herakleia was situated at a distance of 20 stades from the sea, 40 stades from Thermopylai (Thuc. 3.92.6), and 6 stades from the site of Trachis (Strabo 9.4.13). To the west the neighbours were Ainis and Oitaia, to the north Malis and Lamia, and to the south was Doris, and to the south-east Thermopylai. In Strabo's day Parasopias was a *kome* in the territory (8.6.24, 9.2.23); in the Classical period it was possibly a *polis* (see the entry for Parasopioi).

Herakleia was fortified at its foundation (Thuc. 3.92.6; cf. Xen. *Hell.* 6.4.27); traces of fortifications (acropolis wall and city wall) are briefly mentioned by Stählin (1924a) 207. Docks (*νέωρια*) were constructed at the foundation as well (Thuc. 3.92.6). The agora is mentioned in IG IX.2 103.9 (C2m). Demetrios of Kallatis (*FGrHist* 85) fr. 6 (*apud* Strabo 1.3.20) reports that the city was badly damaged by an earthquake, presumably the one in 426 (Fossey (1990) 183) and thus at or shortly after the foundation.

The chief cult was presumably that of Herakles (Diod. 12.59.4); other attested deities are Artemis (Livy 36.22) and Asklepios (A. Kontogiannis (1997) 176). A festival called *Herakleia* is attested by *IG IX.1.229.10* (C2).

IG IV 617.1 (316–293) records a monetary donation by the Herakleots “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29). Donations, presumably by individual Herakleots, towards the rebuilding of the temple at Delphi are recorded by *CID II 12.1.54*, 56 (341/40).

Herakleia struck coins in silver and bronze from C4e. (1) Silver: denominations: obol, hemiobol, tetartemorion on the Aiginetan standard; types: *obv.* lion’s head; *rev.* club with different symbols, or bow and quiver; legend: *HPA*, *HPAK*. (2) Bronze: *obv.* lion’s head, or head of nymph; *rev.* club with different symbols, or lion’s head; legend: *HPA* (Head, *HN*² 296; Babelon, *Traité* ii.4 nos. 444–50; Rogers (1932) nos. 247–53; *SNG Cop. Thessaly* 66–69).

431. Lamia (Lamieus) Map 55. Lat. 38.50, long. 22.25. Size of territory: 2. Type: A. The toponym is *Λαμία*, ἡ (Ps.-Skylax 62; Hyp. 6.18; *CID II 118.3* (c.365–360); *BCH* 45 (1921) III.135 (230–220)); the city-ethnic is *Λαμιάς* (*CID II 8.11.13* (before 356), 32.49 (325)).

Lamia is called a *polis* in the urban sense at Ps.-Skylax 62 (ἔστι δὲ Μαλιεύσιν ἡ πρώτη πόλις Λαμία) and Diod. 18.12.4 (r323); in the political sense, *polis* is indirectly attested in the Delphic accounts of 337/6 (*CID II 74*), where a *tamias* of Lamia is recorded (1.57) after the heading τὸν ταμίαν ἀποπέμπειν τὰς πόλεις (1.4). The internal collective use of the city-ethnic is found on C4f coins (*infra*) and in *IG IX.2 60* (C41); the external collective use is found in *CID II 8.11.13* (before 356), Demetrios of Kallatis (*FGrHist* 85) fr. 5 (r426) (cf. Fossey (1990) 183–84) *apud* Strabo 1.3.20, and Diod. 18.11.1 (r323/2); and the external individual use is found in *CID II 36.1.10* (343–340), 43.5 (340).

Lamia was a Malian community (Ps.-Skylax 62; Diod. 18.11.1 (r323); cf. *infra* on coins) and regularly provided the Amphiktyonic League with one of the Malian *hieromonemes* (*CID II 32.49* (325), 36.1.10 (343–340), 36.1.36 (343–340), etc.), the other being provided by Herakleia (Stählin (1924b) 554). (For the possibility that Lamia belonged to Achaia prior to 413, see Kip (1910) 42–43 and Stählin (1924b) 553). A citizen of Lamia served the Amphiktyonic League as *tamias* (*CID II 74.1.57* (337/6)), and another fulfilled an unidentifiable function (*CID II 118.2–3* (c.365–360) with comm.). A collective donation by Lamia of

600 dr. towards the rebuilding of the temple at Delphi is recorded in *CID II 8.11.13* (before 356).

In contradistinction to the other Malians, the Lamians did not join the Greek alliance during the Lamian War (Diod. 18.11.1) but served Antipatros as a refuge (Diod. 18.13).

A grant of *politeia* and *proxenia* to two men of Larisa is attested by *IG IX.2 60* (C41). The same decree attests to the existence of a board of archons, a *strategos*, a *hipparchos* and a *grammateus* (13–18); cf. *SEG* 16 373 (C3f) attesting to the same magistracies. A grant of ἐνκτῆσι[ι]ς γᾶς καὶ οἰκίας is included in *IG IX.2 60.7–8* (C41) as well.

According to Demetrios of Kallatis (*FGrHist* 85) fr. 6, as transmitted by Strabo 1.3.20, the city of Lamia suffered considerably from the earthquake of 426 (cf. Fossey (1990) 183–84), but no details are given. The earliest urban remains at the site are on the acropolis, which rises to 173 m; there are remains of a C6 polygonal fortification wall and of a second phase dating to C5–C4 (Stählin (1924b) 548; Scranton (1941) 91–92; Lauffer (1989) 365–66). During the Lamian War, Antipatros was besieged by Leosthenes in Lamia (Hyp. 6.12), but its city walls, whose fine construction Diodorus emphasises (τείχους πολυτελοῦς κατεσκευασμένου), were able to withstand the assaults (Diod. 18.13.1–3). The course of these walls can be traced or reasonably hypothesised for its entirety. The Classical fortification (c.400) consisted of an inner and an outer wall, the inner running for c.3 km and the outer for c.4 km (see the plan in Stählin (1924b) 549–50), and enclosed an area of 80 ha (ibid. 552). Polyaeon. 4.4.2 refers to houses (*oikiai*) in Lamia during the Lamian War.

Phalara (τὰ Φάλαρα: Polyb. 20.10.16) was, according to Steph. Byz. 656.3, a place πλησίον Λαμίας; it is described by Livy 27.30.3 as having a “good harbour” (*egregius portus*) and so was probably the harbour of Lamia; its precise location is disputed (cf. Stählin (1924a) 217; Béquignon (1937b) 295–97; *PECS* 697; Lauffer (1989) 533); it is mentioned as existing in 426 by Strabo 1.3.20.

The principal divinity was presumably Dionysos, who is depicted on coins (*infra*) and whose sanctuary seems to have been used for publishing official documents (*IG II*² 861.28 (C31)).

Babelon, *Traité* ii.4 no. 464 is a silver diobol: *obv.* naked and bearded Herakles seated on rock holding kantharos in extended right hand and club in left; legend: ΛΑ(ΜΙΕΩΝ?); *rev.* hydria in incuse square; legend: ΤΡ(ΑΧΙΝΙΩΝ?). If the legends are correctly understood as abbreviations of the city-ethnics of Lamia and Trachis, then this coin may represent a joint issue of these two Malian cities (in which case the coin should predate 426,

which fits Babelon's date of C5m; cf. Babelon, *Traité* ii.4 nos. 465–66 for two other coins possibly to be ascribed to Lamia). However that may be, Lamia is known to have struck in both silver and bronze from c.400. Silver (triobols and obols on the Aiginetan standard): *obv.* head of young ivy-crowned Dionysos; *rev.* amphora; legend: ΛΑΜΙΕΩΝ. The legend is sometimes ΜΑΛΙΕΩΝ, presumably indicating a leading role for Lamia in the Malian *ethnos*. Also *obv.* head of nymph (Lamia?); *rev.* Philoktetes wearing pilos seated on rock, or Philoktetes kneeling and shooting with bow; legends: ΛΑΜΙ, ΛΑΜΙΕΩΝ. Bronze: *obv.* head of nymph (Lamia?); *rev.* Philoktetes on one knee or kneeling on rock shooting with bow; legend: ΛΑΜΙΕΩΝ; or *obv.* head of nymph (Lamia?); *rev.* naked Philoktetes seated on rock, bow in front, or sitting on island with dolphin swimming in sea; legend: ΛΑΜΙ; or *obv.* head of nymph (Lamia?); *rev.* Philoktetes kneeling, sometimes on rock, and shooting with bow; legends: ΛΑΜ, ΛΑΜΙΕΩΝ; or *obv.* head of nymph; *rev.* amphora with ivy leaf above; legend: ΛΑΜ; or, finally, *obv.* head of Athena; *rev.* standing Philoktetes shooting with bow; legend: ΜΑΛΙΕΩΝ (cf. *supra*). Head, *HN*² 296; Babelon, *Traité* ii.4 nos. 455–62; Rogers (1932) nos. 385–88; *SNG Cop. Thessaly* 75–81.

432. Trachis (Trachinios) Map 55, location as Herakleia (q.v.). Size of territory: 1 or 2. Type: A. The toponym is *Τρηχίς* in Hdt. 7.199, and *Τραχίς* in Ps.-Skylax 62 and Strabo 9.5.8. The city-ethnic is *Τραχίνιος* (Thuc. 3.92.2) or *Τρηχίνιος* (Hdt. 7.175.2). Trachis is called a *polis* in the urban sense in Hdt. 7.199, a passage which also uses the verb *πεπόλισται* about the city. At Thuc. 3.92.2 the *Τραχίνιοι* are described not as a *polis*, but as one of three *μέρη* into which the Malians were subdivided; however, the use of *meros* need not mean that Trachis was not a *polis*, as is clear from Hdt. 1.145, where *merea* is used to describe twelve communities in Peloponnesian Achaia which were all *poleis* in the Classical period. Moreover, Diod. 12.59.3 (r426) describes the *Trachinioi* as the *politai* of Trachis, and Diod. 14.82.7 and Polyæn. 2.21 use *Trachinios* in a manner which indicates that it was in fact the city-ethnic of Trachis. On the assumption that *Trachinios* is a city-ethnic, the following should be noted: the internal collective use is possibly found abbreviated as *TP* on C5m coins which may be a joint issue of Trachis and Lamia (*infra*). The external collective use of the city-ethnic is found in Hdt. 7.175.2, 217.1; Thuc. 3.92.2; and Ctesias (*FGrHist* 688) fr. 13.128 (which also implies some social stratification: *Τραχινίων οἱ δυνατοί, Καλλιάδης καὶ Τιμαφέρνης*). The external individual use is found at

Hdt. 7.213.3, 214.2. Thuc. 3.92.2 attests to a war fought by the Trachinians (*πολέμῳ ἐφθαρμένοι*), which implies the existence of armed forces, as may—for what it is worth—Ctesias (*FGrHist* 688) fr. 13.128 (*Θώραξ δὲ ὁ Θεσσαλὸς καὶ Τραχινίων οἱ δυνατοί, Καλλιάδης καὶ Τιμαφέρνης, παρήσαν στρατιὰν ἔχοντες*). The sending of an embassy to Lakedaimon is attested by Thuc. 3.92.2. The territory is referred to as *ἡ γῆ ἢ Τραχινίη* at Hdt. 7.199 and as *τῆς Μηλίδος ἢ Τραχινίη* at 7.201.

In 426, the city was either renamed Herakleia or absorbed by a new Sparta-sponsored foundation of that name (see further the entry for Herakleia). Babelon, *Traité* ii.4 no. 464 is a C5m silver diobol on the Aiginetan standard: *obv.* naked and bearded Herakles seated on rock holding kantharos in extended right hand and club in left; legend: ΛΑ(ΜΙΕΩΝ?); *rev.* Hydria in incuse square; legend: ΤΡ(ΑΧΙΝΙΩΝ?). If the legends are correctly understood as abbreviations of the city-ethnics of Lamia and Trachis, then this coin may represent a joint issue of these two Malian cities.

2.5 Achaia

433. Antron Map 55. Lat. 38.55, long. 22.55. Size of territory? Type: [A]. The toponym is *Ἄντρον* (Hom. *Il.* 2.697), either *ὄ* (Strabo 9.5.8) or *ἡ* (Eust. *Il.* 2.697), or *Ἄντρονες* ([Dem.] 10.9; Ps.-Skylax 63; Strabo 9.5.7). A city-ethnic is not attested except in late sources, such as the entry in Steph. Byz. 101.16.

In Ps.-Skylax 63, where *polis* is used in the urban sense, Antron is the first of five toponyms listed between the heading *Ἀχαιῶν πόλεις αἶδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Ἀχαιοῖς*; *polis* in the political sense is not attested, but is possibly implied by Diod. 20.110.3 (r302). A citizen of Antron served as Delphic *theorodokos* in 230–220 (*BCH* 45: v.C(b).3).

The history of Antron is almost completely unknown; [Dem.] 10.9 states that Philip II “bought” (*ἐπρίατο*) the city, and Diod. 20.110.3 (r302) that it joined Demetrios after his capture of Larisa Kremaste.

Antron was situated in Achaia (Ps.-Skylax 63; Strabo 9.5.8). At the site of the city are traces of both an extremely badly preserved acropolis wall (Stählin (1924a) 182) and a polygonal circuit wall (*ibid.*). At modern Phano a cemetery of Classical and later times has been identified (*ArchDelt* 41 ([1986] 1990) *Chron.* 74; 42 ([1988] 1993) B.1: 223 and later issues).

434. *Ekkarra (Ekkarreus) Map 55. Lat. 39.05, long. 22.10. Size of territory: ? Type: B. The toponym is Ἐκκαρρα in Steph. Byz. 58.9, who ἐκ τῆς τέχνης suggests the city-ethnics Ἐκκαρραῖος and Ἐκκαρράτης; C4s coins, however, have Ἐκκαρρεύς.

No Archaic or Classical source calls Ekkarra a *polis*, but *polis* status is suggested by the bronze coinage of C4s (*infra*). IG IX.2 223 is a C3(?) proxy decree by Ekkarra which uses *polis* and attests to the existence of archons.

Ekkarra was situated in Achaia (Steph. Byz. 58.9; Livy 32.13.13), and has been located at Kaisa (Helly (1992) 85–89, *pace* Stählin (1924a) 154). The site at modern Ano Ktimeni (formerly Ano Dranista) was probably a second-order settlement in its territory. At the site of Ekkarra itself is a C4 circuit wall running for 775 m and with quadrangular towers; the acropolis was separately walled (Stählin (1924a) 159; Béquignon (1928) 463–65).

Ekkarra struck bronze coins in C4s: *obv.* head of Zeus, or Apollo; *rev.* Artemis standing; legend: ΕΚΚΑΡΡΕΩΝ (Head, *HN*² 294; Babelon, *Traité* ii.4 no. 475; Rogers (1932) nos. 207–9; *SNG Cop. Thessaly* 47–48, *Suppl.* 244).

435. Halos (Haleus) Map 55. Lat. 39.10, long. 22.50, but see *infra*. Size of territory: 2. Type: A. The toponym is ἅλος (Hom. *Il.* 2.682; Hdt. 7.173.1), ἅλος, ὁ (Dem. 19.163); cf. Strabo 9.5.8: ὁ ἅλος ἢ ἡ ἅλος, λέγεται γὰρ ἀμφοτέρως. The city-ethnic is ἅλειος (Dem. 19.36, 39; coins, *infra*); Steph. Byz. 78.6 cites Sophokles (fr. 998, Pearson) for the form ἅλοῦσιος and *glossographoi* for ἅλιος.

Halos is called *polis* in the urban sense at Dem. 19.39, and the political sense is presumably implied at Dem. 19.36. The internal collective use of the city-ethnic is found on C4–C3 coins (*infra*), and the external collective use is found in Dem. 19.36, 39.

Halos was situated in Achaia (Hdt. 7.173, 197; cf. C3 bronze coins with AX in monogram: Head, *HN*² 295). Its location, certainly close to the sea (Hdt. 7.173.1; Dem. 19.163), remains unknown; Reinders (1988) 159–63 proposes to locate it at Magoula Plataniotiki. In its territory were some minor settlements, presumably villages (Stählin (1924a) 176–77; Reinders (1988) 155–57, 161, 172), and a temple with Geometric pottery (Stählin (1924a) 177). Several military installations are attested as well (Stählin (1924a) 177, 185; Reinders (1988) 171; Haagsma *et al.* (1993); *ArchDelt* 49 (1994) *Chron.* 325–26; Malakassioti *et al.* (1994)), some of them with C4 phases.

The urban centre itself, then, remains unlocated (*Barr.* follows e.g. *PECS* in putting it at modern Halmyros, which is

unlikely). At 7.197.2, Herodotos mentions a *prytaneion* (called λῆιτον in the local dialect), but it is unclear whether it is thought of as belonging to the local community of Halos (so Miller (1978) no. 324 and Hansen and Fischer-Hansen (1994) 32) or to the Achaians as such. From the mention of a siege by Parmenion at Dem. 19.163 (ἅλου πολιορκουμένου) it may be inferred that Halos was fortified by C4m; upon its capture, it became depopulated (ἀνάστατος . . . γέγονεν, Dem. 19.39) and the territory was handed over to the Pharsalians (Dem. 11.1) with whom Halos had had a conflict prior to its capture (Dem. 19.36). It was refounded in the early Hellenistic period (c.302) on the initiative of Demetrios Poliorketes. See Reinders (1988).

A sanctuary of Zeus Laphystios is mentioned by Hdt. 7.197.1, where a legend associated with it is recounted. The patron divinity was presumably Artemis Panachaia (IG IX.2 *add.* 205.1.A.22, B.49 (Hell.)).

Halos minted in bronze in C4–C3. Types: *obv.* Zeus Laphystios; *rev.* Phrixos or Helle with ram; legend: ΑΛΕΩΝ (Head, *HN*² 296; Babelon, *Traité* ii.4 nos. 467–69; Rogers (1932) nos. 238–40; Reinders (1988) 236–51; *SNG Cop. Thessaly* 62–65).

436. Kypaira (Kypharreus) Map 55. Lat. 39.00, long. 22.05. Size of territory: 2. Type: [A]. The toponym is Κύφαιρα, ἡ (BCH 45 (1921) III.138 (230–220)), or Κύπαιρα (Ptol. *Geog.* 3.12.42). The city-ethnic is Κυφαρρεύς (CID II 2.1.21 (C4m)).

Kypaira was situated at Kydonia according to Helly (1992) 79–80 (followed by *Barr.*), who rejects Kaisa (championed by Stählin (1924a) 159–60 and Béquignon (1937b) 336). At Kydonia are undated remains of an upper circuit measuring 120 × 40 m with a width of 2–2.5 m, constructed in rectangular blocks in regular courses; three towers are preserved; to the south is a poorly preserved lower circuit (Béquignon (1937b) 326–29, fig. 17). According to Ptol. *Geog.* 3.12.42, Kypaira was situated in Thessaliotis, but its geographical position puts it in Achaia (cf. Kip (1910) 73). Kypaira is listed as a *polis* in the political sense in CID II 4.3–4, 12 (C4m); cf. 1.1.11, 21 (C4m). These same sources attest to the external collective use of the city-ethnic. Apart from these inscriptions, the information on Kypaira postdates our period, but worth noting is BCH 45 (1921) III.138 (230–220) listing ἡ πόλις as *theorodokos* of Delphi.

437. Larisa (Larisaïos) Map 55. Lat. 38.55, long. 22.50. Size of territory: ? Type: [A]. The toponym is Λάρισσα (Ps.-Skylax 63), specified as Λάρισσα ἡ Κρεμαστή by Heracl. Cret. 3.2 (*GGM* I 109) and Polyb. 18.38.3; Strabo 9.5.13 men-

tions another epithet: *Πελασγία* (cf. Steph. Byz. 412.19). The city-ethnic is *Λαρισαῖος* (*CID* II 78.1.54 (337/6)), specified as *[Λα]ρισαῖος ἐκ Φθι[ώτιδος]* in *IG* XII.5 542.32 (C4).

In Ps.-Skylax 63, where *polis* is used in the urban sense, Larisa is the second of five toponyms listed between the heading *Ἀχαιῶν πόλεις αἶδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Ἀχαιοῖς*; the urban sense of *polis* is found in *Diod.* 20.110.2 (r302) as well. The political sense is indirectly attested in the Delphic accounts of 337/6 (*CID* II 74), where a *tamias* of Larisa is recorded (1.54) after the heading *τὸν ταμίαν ἀποπέμπειν τὰς πόλεις* (1.4). For an explicit attestation, see an undated inscription from the city itself (*IG* IX.2 94.5). The internal collective use of the city-ethnic is found on C4/C3e coins (Rogers (1932) no. 312), the external use in *Demetrios of Kallatis* (*FGrHist* 85) fr. 6 *apud* *Strabo* 1.3.20 (r426) (cf. Fossey (1990) 183–84) and *Diod.* 20.110.2 (r302). The external individual use is found in, e.g., *CID* II 118.6–7 (365–360), 78.1.38 (337/6); *IG* XII.5 542.32 (C4). A citizen of Larisa is listed in a C4 catalogue of *proxenoi* from *Karthaia* on *Keos* (*IG* XII.5 542.32).

Larisa was situated in Achaia (Heracl. Cret. 3.2; *IG* XII.5 542.32 (C4); *Syll.*³ 492.36 (232)) and was thus an Achaian community (*CID* II 78.1.38 (337/6)); the city regularly provided the Amphiktyonic League with one of the Achaian *hieromnemes* (*CID* II 32.47, 74.1.38, 76.1.23, 86.16, 118.6), the other being provided by *Melitaia*.

According to *Strabo* 9.5.13, Larisa was situated 20 stades from the coast; *Diod.* 20.110.2 (r302) mentions a harbour (*limen*) at Larisa. The Archaic/Classical urban history of Larisa is almost unknown, all remains being Hellenistic (*Stählin* (1924a) 182–84), but a city was presumably in existence in C5I since, according to *Demetrios of Kallatis* (*FGrHist* 85) fr. 6 (*apud* *Strabo* 1.3.20), Larisa suffered seriously from an earthquake, certainly the one in 426 (Fossey (1990) 183–84).

Larisa struck bronze coins in C4I/C3e; types vary, the most interesting being *obv.* head of, presumably, Achilles; *rev.* Thetis riding on a sea-horse and carrying the shield of Achilles; legend: *ΛΑΠΙ*, *ΛΑΠΙΣΑΙΩΝ* and *ΑΧΑΙΩΝ* in monogram (Rogers (1932) no. 312; *SNG Cop. Thessaly* 151–52). For a possible C4 bronze state seal of the city depicting *obv.* riding Thetis bringing shield + *ΛΑ*; *rev.* *Skylla*, see *Robinson* (1934).

438. Melitaia (*Melitaieus*) Map 55. Lat. 39.00, long. 22.25. Size of territory: 2. Type: [A]. The toponym is *Μελιταιά*, ἡ (Ps.-Skylax 63), *Μελίτεια* (*Thuc.* 4.78.1; *Theopomp.* fr. 373),

or *Μελιτέα* (*CID* II 118.6 (C4m)). The city-ethnic is *Μελιταιεύς* (*Ephor.* fr. 95.4; *CID* II 74.1.38; C4 coins, *infra*).

In Ps.-Skylax 63, where *polis* is used in the urban sense, *Melitaia* is the third of five toponyms listed between the heading *Ἀχαιῶν πόλεις αἶδε* and the addendum *εἰσὶ δὲ καὶ ἄλλαι πόλεις Ἀχαιοῖς*. The political sense is indirectly attested in the Delphic accounts of 337/6 (*CID* II 74), where a *tamias* of *Melitaia* is recorded (1.53) after the heading *τὸν ταμίαν ἀποπέμπειν τὰς πόλεις* (1.4). An explicit attestation of the political sense is found in *IG* IX.2.208.3 (C3e). The internal and collective use of the city-ethnic is found on C4m coins (Head, *HN*² 301). The external and individual use is found in *CID* II 32.47 (C4I), 74.1.38 (337/6). The external and collective use is found in *Ephor.* fr. 95.4.

According to *Ephor.* fr. 95, the *Melitaia*ns had at one point entertained friendly relations with the tyrants of *Pherai*, but apart from that the political history of the city is unknown; a citizen of *Melitaia* was granted proxeny by *Delphi* in 271 (*F.Delphes* III.2 187). An inscription of c.140 (Ager (1996) no. 156) refers retrospectively to a possibly C4 arbitration between *Melitaia* and *Narthakion* (Ager (1989) 108).

Melitaia was situated in Achaia (*Thuc.* 4.78.1; Ps.-Skylax 63; *CID* II 118.5–6 (C4m)). The city regularly provided the Amphiktyonic League with one of the Achaian *hieromnemes* (e.g. *CID* II 32.47 (C4I), 79A.II.14 (334/3)), the other being provided by Larisa. The territory is referred to as ἡ τῶν *Μελιταιῶν* χώρα at *Polyb.* 18.6.4; c.270–260 its borders were regulated by international arbitration (Ager (1996) no. 30). At the site of the city, traces of a circuit wall, running for c.4 km, are visible, constructed in irregular rectangular blocks (*Stählin* (1924a) 162). At modern *Haloni* a C4 sanctuary of *Asklepios* has been found (*BCH* 96 (1972) 711).

In C4m *Melitaia* struck coins in both silver and bronze. (1) Silver. Denominations: drachm, diobol, obol on the *Aiginetan* standard. *Obv.* head of Zeus, or of young *Dionysos*; *rev.* bull, or lion's head, or bee (alluding to the name of the city); legends: *ME*, *MEA*, *MEAI* and *MEAITAIΩN*. (2) Bronze. *Obv.* head of Zeus; *rev.* bee; legend: *MEAI*, *MEAITAIEΩN* (Head, *HN*² 301; *Babelon, Traité* II.4 nos. 470–74; Rogers (1932) nos. 394–401; *SNG Cop. Thessaly* 172–73).

439. Peuma (*Peumatios*) Map 55. Lat. 39.10, long. 22.30. Size of territory: 1. Type: C. The toponym is *Πεῦμα*, τό (*BCH* 45 (1921) IV.39 (230–220)). The city-ethnic is *Πευμάτιος* (C3e coins, *infra*; *Arvanitopoulos* (1909) 451 (c.300); *I.Thessalie* 131 (C2e)).

Peuma is called a *polis* in the political sense in a C2e honorific decree (*I.Thessalie* 131) and implicitly in *F.Delphes* III.4 351 (C3m). In *I.Thessalie* 131 *πολιῆται* is found as well as the internal collective use of the city-ethnic. The external collective use is found in *F.Delphes* III.4 351, and the external and individual use is attested in, e.g., Arvanitopoulos (1909) 451 (Demetrias, c.300). On a retrospective interpretation of these sources it can be presumed that Peuma was a *polis* in C4s.

Peuma was situated in Achaia. *F.Delphes* III.4 351 (C3m) records a boundary and territorial conflict between Peuma and at least two of its neighbours, Meliteia and Chalai, a conflict which the city lost by arbitration (cf. Cantarelli (1995)). In 230–220, two Delphic *therorodokoi* resided in Peuma (*BCH* 45 (1921) IV.39, v.25).

The well-preserved remains of Peuma at Kallitheia/Kislar date to the very end of C4 or, better, to the beginning of C3. The fortification comprises a circuit wall c.2,400 m long, with many towers and several gates, a *diateichisma* and a small acropolis with towers, perhaps of an earlier date. Remains of civic buildings (agora and cisterns) and houses as well as streets are still visible on the top of the flat hill.

Peuma struck bronze coins c.302–286. Types: *obv.* head of nymph; *rev.* helmet and Achaean monogram; legend: ΠΕΥΜΑΤΙΩΝ (Head, *HN*² 304; Rogers (1932) nos. 442–43; *SNG Cop. Thessaly* 198).

440. Phylake Possibly a *polis* (type B) more or less at the site of the later Thebai (no. 444), with which it was merged by synoecism in C4s; see further the entry for Thebai.

441. Proerna (Proernios) Map 55. Lat. 39.15, long. 22.15. Size of territory: 2. Type: [A]. The toponym is *Προέρνα*, ἡ (Daffa-Nikonanou (1973) 34–35 (C2); Strabo 9.5.10). The city-ethnic is *Προέρνιος* (*CID* II 8.1.12 (338/7)) or *Πρωέρνιος* (coins (c.300–200), *infra*); in *SEG* 23 416.7 (450–425), *Προέλνιος* is presumably a variant form of the city-ethnic.

No Archaic or Classical source explicitly calls Proerna a *polis*, but it merits inclusion here on account of (1) *SEG* 23 416 (450–425), a grant of proxeny by Pherai to men described as *Προέλνιοι* (= external individual use of the city-ethnic), and thus presumably citizens of Proerna (*supra*); (2) in the Delphic *naopoiōi*s accounts the Proernians are presumably recorded in a fragmentary list (*CID* II 8.1.12: [*Προέρ*]νιοι (= external collective use of the city-ethnic)), the heading of which undoubtedly included the formula: ταῖδε τὰμ πολίων ἡνικαν (*CID* II 5.11.25–26) *vel sim.*; (3) furthermore, coins dated c.306–283 (Rogers

(1932) no. 534) indicate the prior existence of the community in C4s; (4) the fact that a man of Proerna served as Delphic *therorodokos* in C3 may also be of some significance (see the note on Proerna in *CID* II p. 26).

Proerna probably belonged to Achaia (Strabo 9.5.10; Kip (1910) 70–71). At the site are remains of a trapezoidal circuit wall in grey limestone with an average width of c.2.5 m and at least three gates or posterns; it may go back to C4 but has seen many repairs. The acropolis itself was walled as well (Daux and La Coste Messelière (1924) 356–59; Stählin (1924a) 157–58). Some remains of the lower city have been excavated to the south of the Tapsi hill (Papakonstantinou (1994) 236–38). Outside the city-wall too is a C5–C4 sanctuary of Demeter, where numerous votives, etc., have been found (Daffa-Nikonanou (1973)).

Proerna struck bronze coins c.306–283. Types: *obv.* head of nymph facing; *rev.* Demeter with torch and corn-ears; legend: ΠΡΩΕΡΝΙΩΝ (Head, *HN*² 309; Rogers (1932) no. 534; *SNG Cop. Thessaly* 248).

442. Pyrasos (Pyrasios) Map 55. Lat. 39.15, long. 22.50. Size of territory: 2. Type: [A]. The toponym is *Πύρασος*, ἡ (Hom. *Il.* 2.695; Strabo 9.5.14); the city-ethnic is *Πυράσιος* (Thuc. 2.22.3 with Helly (1995) 233 n. 88). Strabo 9.5.14 gives *Δημήτριον* as the contemporary name of Pyrasos and a *Δημήτριον* is listed by Ps.-Skylax 63 among the cities of Achaia.

Pyrasos is listed by Thuc. 2.22.3 (for which see Helly (1995) 233 n. 88) as a *polis* in the political sense. In Ps.-Skylax 63, Demetrios is the fourth of five toponyms listed after the heading *Ἀχαιῶν πόλεις αἰδε* and followed by *εἰσὶ δὲ καὶ ἄλλαι πόλεις Ἀχαιοῖς*, but here the reference may be to the community as absorbed by the synoecism of Thebai Phthiotides (Stählin (1924a) 174; *RE* xxiv. 12). The external collective use of the city-ethnic is found in Thuc. 2.22.3.

Given its geographical location in Achaia, compared with Thucydides' description of it as Thessalian (2.22.3), a good parallel to the status of Pyrasos (i.e. a *polis* of Thessalian Pelasgiotis geographically situated in Achaia) would be Pagasai (cf. Helly (1995) 233 n. 88 with refs.). Ps.-Skylax describes it as belonging to the Achaians (cf. Steph. Byz. 541.2), and it seems that the city was synoecised into Thebai Phthiotides (no. 444) some time in C4 (Stählin (1924a) 174; *RE* xxiv. 12). See further the entry for Thebai Phthiotides. According to Strabo 9.5.14, Pyrasos had been (ἦν) a *polis* with a good harbour and a sanctuary of Demeter.

443. Thaumakoi (Thaumakos) Map 55. Lat. 39.10, long. 22.20. Size of territory: 2 or 3. Type: B(?). The toponym is

Θαυμακοί (Strabo 9.5.10), or, by confusion with the Homeric Θαυμακίη in Magnesia (Hom. *Il.* 2.716), Θαυμακία (AG 7 544.2; Steph. Byz. 307.5). The city-ethnic is Θαυμακός (IG ix.2 216.1 (C3e)). Possibly the external individual use is attested already in *ArchDelt* 26 (1971) B.1 237.4: ΘΑΥΜΑΚΩ vac. (C4).

The earliest attestation of a πόλις Θαυμακῶν is in IG ix.2 216.1, 12 (C3e), an inscription that records two grants of proxeny and other privileges, and refers to a board of archons. However, an inscription of C4 (*ArchDelt* 26: B.1 237) is possibly a grant of proxeny, etc. to a citizen of Thaumakoi; so Thaumakos may be included in this Inventory as a possible polis. An unattributed epigram of the *Anthologia Graeca* (7 544.2) refers to Thaumakoi as a πόλις ἀρχαία.

Thaumakoi was situated on the main road between the Spercheios valley to the south and the Koile to the north, in Achaia (Strabo 8.8.5; AG 7 544; Steph. Byz. 307.5; Eust. *Il.* 513.). According to Strabo 8.8.5 (quoting Artemidoros), Thaumakoi was 500 stades from Kirrha via Herakleia, and 340 from Larisa.

The acropolis is situated under the mediaeval *kastro* (rising to 639 m), immediately west of the road (Daux and de La Coste Messelière (1924) 354; *RE*² v.2. 1332); it has a rough rectangular shape measuring c.100 × 70 m. The upper town was enclosed by a circuit running for c.800–900 m; it is constructed in polygonal or rectangular isodomic masonry, but is not very well preserved; there is evidence for two semicircular towers; short stretches of the circuit wall date to C4, but the remains are mainly later (*PECS* 324; Papakonstantinou (1994) 235). A lower city probably existed, but nothing is known about it.

444. Thebai (Thebaios) Map 55. Lat. 39.15, long. 22.45. Size of territory: 4 (*RE*² v.2. 1584). Type: [A]. The toponym is Θῆβαι, αἱ (Ps.-Skylax 63; Diod. 20.110.3 (r302)), distinguished from that of homonyms by the addition of αἱ Ἀχαίδες (Heracl. Cret. 3.2 (GGM 1)), or (αἱ) Φθιώτιδες (Diod. 26.9; Strabo 9.5.6) or Φθιώτιδος (Ptol. *Geog.* 3.12.14); according to Steph. Byz. 666.6, it was also called Φίλιπποι (ἐκλήθησαν Φίλιπποι καὶ αἱ Θῆβαι Θεσσαλίας). The city-ethnic is Θηβαῖος (Diod. 18.11.1 (r323)); in *SEG* 12 375.5 (242) it was specified in some way now lost; in IG vii 288 (C3m) it is distinguished from that of homonyms by the addition of ἐξ Ἀχαΐας τῆς Φθιώτιδος.

In Ps.-Skylax 63, Thebai is the last of five toponyms listed between the heading Ἀχαιῶν πόλεις αἶδε and the addendum εἰσὶ δὲ καὶ ἄλλαι πόλεις Ἀχαιοῖς. Thebai refers to

itself as a polis in the political sense in *SEG* 12 372 (242). The collective use of the city-ethnic is found internally on coins of C4l (*infra*) and externally in Diod. 18.11.1 (r323). The external individual use is found in IG vii 288 (C3m).

Thebai belonged to Achaia (Ps.-Skylax 63; Diod. 18.11.1 (r323)). To the north the neighbour was Pherai, to the north-east it was Amphanaï, to the east (until C4s) Pyrasos, to the south Halos, to the south-west Peuma, and to the west Eretria and Pharsalos. On the territory, see di Salvatore ((1994): minor settlements and fortresses). On the frontier with Halos was a sanctuary of Athena shared by the two adjoining cities (*BCH* 59 (1935) 208–9).

In contradistinction to the rest of the Achaians, the Thebans did not join the Greek alliance opposing Makedonia in the Lamian War (Diod. 18.11.1). A board of ἀρχέσκοποι is attested by a C4l dedication (IG ix.2 1322; cf. *Prakt* (1907) 165).

Recent rescue excavations have revealed a city with cemetery, antedating C4f and situated on the western slope of the hill on which Thebai itself lay (*ArchDelt* 47 (1992) 222–29); Heracl. Cret. 3.2 (GGM 1) claims that Φυλάκη was an earlier name of Thebai, and the present site may possibly be that of Phylake; a synoecism of Phylake and Pyrasos is commonly assumed to have occurred in C4s (*RE*² v.2. 1587–88) and is presumably to be regarded as the founding of Thebai (in which case the pre-C4s evidence from the site, notably that belonging to the cult of Athena Polias, strictly speaking belongs to Phylake, which must then be regarded as a polis (type B) in its own right prior to the synoecism); a Demetrium is listed as a polis in the urban sense under the heading πόλεις αἶδε by Ps.-Skylax 64, and the reference may be to Pyrasos (renamed as Demetrium at one point; cf. Strabo 9.5.14) as absorbed by the synoecism of Thebai (Stählin (1924a) 174; *RE* xxiv. 12) and functioning as the harbour of Thebai (cf. Hansen (1997) 36–37). Cf. Diod. 20.110.3 for a planned C4l expansion of the synoecism attempted by Kassandros but prevented by Dionysios Poliorketes.

A cult of Athena Polias is attested by a C4l dedication (IG ix.2 1322; cf. *Prakt* (1907) 165); by C6 she had a temple on the acropolis (*Prakt* (1907) 161, (1908) 163), which was rebuilt in C5 and again in C4 (*ArchDelt* 49 (1994) 324). The acropolis itself measures 1.9 ha (*RE*² v.2. 1584) and shows remains of a “sehr altertümlischen kyklopischen Mauer” (*RE*² v.2. 1584). On the north and west sides an isodomic wall was added in the early Hellenistic period (*RE*² v.2. 1584–85).

The C4l/C3e (*RE*² v.2. 1589) circuit wall runs for 2,400 m and encloses an area of 40 ha (*RE*² v.2. 1585). It consisted of

an isodomic stone socle supporting a mudbrick wall; some forty towers are discernible. For a recent plan, see *ArchDelt* 47 (1992) *Chron.* 224. Outside the circuit are cemeteries (Adrimi-Sismani (2000)). A C4–C3 stoa with wooden columns is reported in *Prakt* (1907) 162. In C4m a theatre was constructed (*ArchDelt* 47 (1992) *Chron.* 222–25).

In addition to Athena Polias, cults included those of Athena Illais (*Prakt* (1908) 171–72, 175 (C4)), Demeter Panachaia (*SEG* 25 643 (Hell.); coins, *infra*), Protesilaos (Pind. *Isthm.* 1.58; coins, *infra*), Nika (*Prakt* (1907) 171–72, 175 (C4)) and Leukothea (*ibid.* (C4–C3)).

Thebai struck triobols of silver (Aiginetan standard) and small fractions of bronze c.302–286. Types: *obv.* Demeter veiled; *rev.* Protesilaos; legend: ΘΗΒΑΙΩΝ (Head, *HN*² 310; Rogers (1932) 174–75 nos. 550–52; *SNG Cop. Thessaly* 259–60).

2.6 Magnesia

445. Amyros (Amyreus) Map 55. Lat. 39.40, long. 22.40. Size of territory: ? Type: [A]. For the location, see Helly (1987) 152–53 and Tziaphalias (1994a). The toponym is Ἀμυρος, ἡ (Hes. fr. 59.3; Steph. Byz. 88.11); according to Steph. Byz. 89.2–3, the C4–C3 writer Suidas used the toponym Ἀμυρικῆ (= *FGrHist* 602, fr. 4). In Ps.-Skylax 65, Μύραι is presumably a corruption of Ἀμυρος. The city-ethnic is Ἀμυρεύς (*IG* II² 5227 (C4/C3e?)); according to Steph. Byz. 88.15, Eupolis (= fr. 423 (*PCG*)) used the city-ethnic Ἀμυρος (= Ἀμύριος?; cf. 708.12); Steph. Byz. 88.16 suggests Ἀμυραῖος as an alternative.

No Archaic or Classical source calls Amyros a *polis*, but as paraphrased by Steph. Byz. (89.2), Suidas (*FGrHist* 602) fr. 4 may have classified Amyrike as a *polis* (καὶ τὴν πόλιν Ἀμυρικὴν καλεῖ), and if the restoration of Ἀμυρος in Ps.-Skylax 65 is accepted, Amyros is there one of the cities mentioned under the heading πόλεις αἰῶδε. That Amyros was a *polis* is also indicated by the occurrence of the external collective city-ethnic (Eupolis fr. 423 (*PCG*)) and *IG* II² 5227 (C4–C3e(?)), a sepulchral inscription set up by the city of Kasthanaie to commemorate Μαγνήτων Ἀμυρεῖς, who had fallen in battle; the external collective use of the city-ethnic and the existence of Amyrian troops both indicate that it may have been a *polis* in C4/C3e, and since the city certainly existed prior to C4l, it may possibly have been a *polis*. However, the site identified as Amyros was abandoned c.400, and no new site of the Amyreis has been identified; the community may possibly have been installed somewhere else, perhaps at Kasthanaie. It was a Magnesian community

(*IG* II² 5227 (C4–C3e) and Ps.-Skylax 65 if the restoration Ἀμυρος for Μύραι is accepted).

446. (Eureaioi) Map 55. Unlocated, not in *Barr.* A possible location is at Kato Polydendri-Skiatha (Helly (forthcoming (a))). Type: C. The Εὐρεαῖοι are known solely from very rare C4m bronze coins: *obv.* head of maenad in border of dots; *rev.* vine branch with grapes and letter Α above or below; legend: ΕΥΡΕΑΙΩΝ (Head, *HN*² 294; Babelon, *Traité* ii.4 no. 745; Rogers (1932) 74–75 nos. 210–11; *SNG Cop. Thessaly* 49). On the basis of the types (which recall those of Larisa, as Stählin (1924a) 227 noted) the Eureaioi may possibly be assigned to Pelasgiotis; but, also on the basis of the types, Moustaka (1983) 45 assigned them to Magnesia (cf. Westlake (1935) 4 with n. 2). The Dionysiac iconography and the style of the coins along with the letter Α do in fact associate these coins with those of Eurymenai, and it is not impossible that they indeed belong to this city. However, if they belong to an otherwise unattested community, this community may be classed as a possible *polis* in C4m.

447. Eurymenai (Eurymenios) Map 55. Unlocated, but see *infra*. Type: [A]. The toponym is Εὐρυμεναί, αἱ (Hecat. fr. 136 = Steph. Byz. 287.1; Ps.-Skylax 65). The city-ethnic is Εὐρυμεναῖος (C4f coins, *infra*).

No Archaic or Classical source calls Eurymenai a *polis*, but in Ps.-Skylax 65 Eurymenai is one of the toponyms listed after the heading πόλεις αἰῶδε, where *polis* is used in the urban sense. That it was a *polis* in the political sense too is indicated by its C4f bronze coinage (*infra*).

Eurymenai was a Magnesian city (Ps.-Skylax 65). For the location, Ap. Rhod. 1.594–95 is decisive, and Eurymenai should be located at the entrance to the Tempe valley at the site traditionally identified with Homolion (*Barr.* lat. 39.50, long. 22.50). The acropolis was enclosed by a wall constructed in irregular slabs of slate; on it has been found the remains of a temple with which were associated C5–C4 black-glazed sherds and a foot of a colossal statue (Stählin (1924a) 47). The lower city was fortified as well (*ibid.*).

Eurymenai struck bronze coins in C4f. Types: *obv.* head of Dionysos; *rev.* grapes, sometimes with letter Α; legend: ΕΥΡΥΜΕΝΑΙΩΝ. Babelon, *Traité* ii.4 no. 428; Rogers (1932) 75–76 nos. 212–13. Cf. also the entry on Eureaioi.

448. Homolion (Homolieus) Map 55. Lat. 39.55, long. 22.40, but see *infra*. Size of territory: 2. Type: A. The toponym is Ὁμόλιον, τό (Ps.-Skylax 33; *IG* IV².1 94.1.b.6 (C4m–s)). The city-ethnic is Ὁμολιεύς (*CID* II 1.1.18 (362/1)).

Homolion is called a *polis* in the urban sense at Ps.-Skylax 33. The political sense is indirectly attested in the Delphic accounts of 362/1 (*CID* II 1), where the city is listed (1.18) under the heading [τᾶμ πολίων ἤνικ]αν (1.11), and those of 337/6 (*CID* II 74), where a *tamias* of Homolion is recorded (1.55) after the heading τὸν ταμίαν ἀποπέμπευ τὰς πόλεις (1.4). The internal collective use of the city-ethnic is found on C4 coins (*infra*); the external collective use is found in *CID* II 1.1.18 (362/1). The external individual use is found in *CID* II 32.48 (C4I) and 74.1.55 (337/6).

Homolion was a Magnesian city (Ps.-Skylax 33; *CID* II 74.1.55 (337/6)); for the location, Ap. Rhod. 1.594–95 is clear, and *pace* Stählin (1924a) 46–47 and Giesinger (1956), it should be located at Palaiokastros Karitsas, though the only evidence there is a Byzantine wall (Helly (forthcoming (b))), and not in the immediate vicinity of Tempe at modern Homolion, formerly Laspochori (*PECS*, etc., followed by *Barr.*). Homolion regularly provided the Amphiktyonic League with one of the Magnesian *hieromnemes* (e.g. *CID* II 32.48 (C4I), 74.40 (337/6); see Lefèvre (1998) 89), the other being provided by Korakai, Methone or Olizon; an Amphiktyonic *tamias* provided by Homolion is listed in *CID* II 74.55 (337/6). A donation of 300 dr. toward the rebuilding of the temple at Delphi is attested by *CID* II 1.1.18 (362/1), and *IG* IV 617.13 (316–293) records a monetary donation by Homolion “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29). In 360/59, a citizen of Homolion served as Epidaurian *theorodokos* (*IG* IV².1 94 1.b.6).

In C4, Homolion struck bronze coins. Types: *obv.* head of Philoktetes; *rev.* snake; legend: *ΟΜΟΛΙΕΩΝ* or *ΟΜΟΛΙΚΟΝ* (Head, *HN*² 296; Babelon, *Traité* ii.4 nos. 754–56; Rogers (1932) nos. 257–66; *SNG Cop. Thessaly* 70–73).

449. Iolkos (Iolkeus) Map 55. Lat. 39.20, long. 22.55. Size of territory: 1 or 2. Type: [A]. The toponym is *Ἰαολκός* (Pind. *Pyth.* 4.77), *Ἰαωλκός* (*Hymn. Hom. Ap.* 218), or *Ἰωλκός* (Hdt. 5.94.1; Ps.-Skylax 65), ἦ (Pind. *Pyth.* 4.77) and ὀ (schol. Pind. *Nem.* 3.57). The city-ethnic is *Ἰωλκεύς* on C4f coins (*infra*) and *Ἰώλκιος* in a decree of 276–236 (Meyer (1936)).

Iolkos is primarily connected with Thessalian mythology (Bakhuizen (1996) 89–90), and evidence for the historical community is exiguous (*ibid.* 103). By C6I at the latest, it must have been a dependency of the Thessalians: it is reported by Hdt. 5.94.1 that the Thessalians offered Iolkos to the Athenian tyrant Hippias upon his expulsion from Athens in

511/10. The evidence for its *polis* status is C4s: in Ps.-Skylax 65 Iolkos is the first toponym listed after the heading πόλεις αἰῶε, where *polis* is used in the urban sense, and the city struck coins inscribed *ΙΩΛΚΕΩΝ* (A. Furtwängler and K. Liampi, pers. comm.; no further details).

In C4s, Iolkos was a Magnesian city (Ps.-Skylax 65), and it is commonly located at Kastro Volou (so *Barr.*; cf. Indzesiloglou (1994)). Here is a settlement with which are associated *inter al.* C6 and C5 graves (Laufer (1989) 709) and remains of a temple (*RE* ix. 1853). The principal divinity was Artemis (Meyer (1936) 371).

450. Kasthanaie (Kassanaeus) Map 55. Lat. 39.35, long. 22.55. Size of territory: 2. Type: A. The only Classical source for the toponym is Herodotos, who gives *Κασθαναίη*, ἦ (7.183.3, 188.1, 3); later sources have *Κασθαναία* (Strabo 9.5.22), *Κασθανέα* (Hsch. *K* 967) and *Κασταναία* (Lycoph. *Alex.* 907; Steph. Byz. 366.11). The city-ethnic is *Κασσαναεύς* (*IG* II² 5227.1 (C4I/C3e)); Steph. Byz. 366.13 has *Κασταναίως*.

Kasthanaie is called a *polis* in the urban sense by Herodotos (7.183.3, 188.1). The (external?) collective use of the city-ethnic is found in *IG* II² 5227.1 (C4I/C3e), a sepulchral inscription set up by the city of Kasthanaie to commemorate *Μαγνήτων Ἄμυρceis*, who had fallen in battle.

Kasthanaie was a Magnesian city (Hdt. 7.183.3), situated right on the coast. At the site are remains of C5 isodomic fortifications of both the acropolis and the lower city (Stählin (1924a) 51–52; Pritchett (1963) 3; Müller (1987) 332–34 with Abb. 1–3).

451. Kikynethos Map 55. Lat. 39.10, long. 23.05. Size of territory: 1 (= size of island: 4.25 km² (*RE* xi. 382)). Type: A. The toponym is *Κικύνηθος* (Ps.-Skylax 64; Strabo 9.5.15). No city-ethnic is attested. Unlocated, but on homonymous island (Ps.-Skylax 64; Strabo 9.5.15). This *polis* is known exclusively from Ps.-Skylax 64 (ἐν δὲ τῷ Παγασητικῷ κόλπῳ ἐστὶ νῆσος Κικύνηθος καὶ πόλις) and Strabo 9.5.15, citing Artemidoros (ἐν δὲ τῷ κόλπῳ φησὶν εἶναι τὴν Κικύνηθον νῆσον καὶ πολίχνην ὀμώνυμον).

452. Korakai (Korokaios) Map 55. Unlocated, but see *infra*. Type: [A]. In Ps.-Skylax 65 is a reference to a Magnesian settlement by the name of *Κορακαί*, listed between Methone and Spalauthra. Delphic inscriptions mention a Magnesian ethnic as *Κορακαῖος* (*CID* II 5.III.36 (362–360)) or *Κοροκαῖος* (*CID* II 32.48 (C4I)), and it seems reasonable to regard the *K(o)rokaioi* as the inhabitants of *Korakai* (cf. Stählin (1921) 1371). *Korakai* is listed as a *polis* in

the urban sense in Ps.-Skylax 65 under the heading *πόλεις αἰῶς*; in *CID* II 5.11.25, 36 (362–360) the community is listed as a *polis* in the political sense under the heading *ταῖδε τᾶμ πολίων ἦνικαν*. The external collective use of the city-ethnic is found in *CID* II 5.11.36 (362–360), and the external individual use in *CID* II 74.11.30 (337/6).

Korakai is possibly to be located at Nevestiki near Lechonia, a hill with a pre-C4 fortification and black-glazed pottery (Wace (1906) 153–54); this site was presumably Thessalian until C4m; a parallel is provided by Iolkos and Pyrasos and by Pagasai and its sanctuary of Apollo Aktios (or Pagasites), situated on the southern shore of the bay of Volos opposite Korope. Pagasai is described as Thessalian by Ps.-Skylax 64 (see further the entry for Pagasai). This part of the Gulf of Pagasai, then, was Thessalian in the Classical period until the arrival of the Magnesians in this part of Thessaly, when it was detached from the Thessalians by Philip II (cf. Pagasai (no. 407)). The identification is, however, uncertain, and the site has also been identified as that of Magnesian Methone (Masson (1968) 97 n. 5; Barr.).

Korakai was a Magnesian community (Ps.-Skylax 65), and it sometimes provided the Amphiktyony with one of the Magnesian *hieromnemes* (*CID* II 32.48 (C41), 74.1.39, 11.30 (337/6), 76.1.25 (324/4), 100.1.16 (325/4), 102.1.15 (324/3)), the other being provided by Homolion (and by Methone or Olizon when Korakai did not provide one). An Archaic inscription (*SEG* 17 287 (c.550)) from the possible site of Korakai (see *supra*) records building activity, presumably connected with a public construction, and describes a man as *δικαστορεύων* (see further Masson (1968) and *idem* in *RPhil* 54 (1980) 226–27).

453. Meliboia (Meliboieus) Map 55. Unlocated, but see *infra*. Size of territory: 2. Type: A. The toponym is *Μελίβοια*, ἦ (Hom. *Il.* 2.717; Hdt. 7.188.3; Ps.-Skylax 65; *I.Iasos* 54.7 (C41)). The city-ethnic is *Μελιβοιεύς* (*IG* II² 9331 (C4m); *I.Iasos* 54.5 (C41) and on C4f coins (*infra*) or *Μελιβοεύς* (Theopomp. fr. 372; Tod 196.13, 37 (330–326) and on C4f coins, *infra*).

Meliboia is called a *polis* in the territorial sense by Hdt. 7.188.3, and in Ps.-Skylax 65 it is one of the toponyms listed after the heading *πόλεις αἰῶς*, where *polis* is used in the urban sense. It is called a *polis* in the political sense at Plut. *Pel.* 29.4 (r367–366). The internal collective use of the city-ethnic is attested by C4f coins and on undated tiles stamped *Δημ[οσ]ία Μελιβοιέων* (Stählin (1924a) 50); the external individual use is attested by *IG* II² 9331 (C4m); *I.Iasos* 54.5 (C41), and the external collective use by Tod 196.13

(330–326). During the crisis of 330–326 Meliboia received 28,500 *medimnoi* of grain from Kyrene (Tod 196.13, 37). Meliboia was a *polis enspondos* of Alexander of Pherai, who nevertheless massacred those attending an *ekklesia* in 367–366 (Plut. *Pel.* 29.4). A citizen of Meliboia was granted proxeny by Iasos in C41 (*I.Iasos* 54).

Meliboia was a Magnesian city (Ps.-Skylax 65) and was probably situated at Kastro Velika near Velika, north of the Agiokambos plain (Tziaphalias (1994a)), a site which remains to be archaeologically investigated. C5 cults are attested for Apollo, Poseidon and Athena (*ArchEph* (1930) 19 nos. 2–4).

In C4f, Meliboia minted in both silver and bronze. (1) Silver (obols on the Aiginetan standard): *obv.* head of nymph facing crowned with grapes; *rev.* grapes; legend: *ΜΕΛΙΒΟΕ*. (2) Bronze: *obv.* head of Dionysos, or of nymph; *rev.* grapes; legends: *ΜΕΛ*, *ΜΕΛΙ*, *ΜΕΛΙΒΟΕ*, *ΜΕΛΙΒΟΙΕΩΝ* (Head, *HN*² 301; Babelon, *Traité* ii.4 nos. 749–51; Martin (1985) 39; *SNG Cop. Thessaly* 170–71).

454. Methone (Methoniaios) Map 55. Lat. 39.20, long. 23.05. Size of territory: 1 or 2. Type: [A]. The toponym is given as *Μοθώνη* by the MS of Ps.-Skylax 65, usually emended to *Μεθώνη*, ἦ, the form suggested by the city-ethnic (which is *Μεθωναῖος* (*CID* II 5.11.39)) and transmitted in Strabo 9.5.16; Hom. *Il.* 2.716 has *Μηθώνη*, and Strabo 9.5.16 obviously took this passage to refer to Magnesian Methone.

In Ps.-Skylax 65, Methone is the second toponym listed after the heading *πόλεις αἰῶς*, where *polis* is used in the urban sense; in the political sense *polis* is attested in *CID* II 5.11.25–26, 39 (358), where *Μάγνητες Μεθωναῖοι* (39) are listed under the heading *ταῖδε τᾶμ πολίων ἦνικαν* (25–26) (cf. *CID* II 74.1.4, 55), and in *CID* II 74, where a *tamias* of Methone is recorded (1.55) after the heading *τὸν ταμίαν ἀποπέμπεω τὰς πόλεις* (1.4). The external collective use of the city-ethnic is found in *CID* II 5.11.39 (358), and the external individual use is found in *CID* II 74.1.55 (337/6) and 97.63 (327/6), etc.

Methone was a Magnesian city (Ps.-Skylax 65; *CID* II 5.11.39 (358)), and it often provided the Amphiktyonic League with one of the Magnesian *hieromnemes* (*CID* II 79A.11.15 (334/3), 86.18 (331), 89.14 (329/8), 92.4 (329/8), 94.7 (328/7), 96.10 (327/6), 97.63 (327/6)), the other being provided by Homolion (and by Korakai or Olizon when Methone did not provide one). A citizen of Methone served the Amphiktyony as *tamias* (*CID* II 74.1.55 (337/6)). A collective donation by Methone of 306 dr. towards the rebuilding of the temple at Delphi is recorded in *CID* II 5.11.39 (358).

The location of Methone on the Pagasitic Gulf is not beyond dispute, but it is most often located at Nevestiki near Lechonia (Stählin (1924a) 53; *Barr.*); on the hill of Nevestiki are remains of a pre-C4 fortification wall and black-glazed pottery (Wace (1906) 153–54); if not Methone, this site may possibly be that of Korakai (see entry *supra*). Helly (2001b) suggests that it could be located at Goritsa. An Archaic inscription (*SEG* 17 287 (c.550)) from the site of Nevestiki, a possible location for Methone (*supra*), records building activity, presumably connected with a public construction, and describes a man as *δικαστορεύων* (see further Masson (1968) and *idem* in *RPhil* 54 (1980) 226–27).

455. Olizon (Olizonios) Map 55. Lat. 39.10, long. 23.15. Size of territory: 2. Type: [A]. The toponym is Ὀλιζών, ἦ (Hom. *Il.* 2.717; Hecat. fr. 135 = Steph. Byz. 489.14; Ps.-Skylax 65). The city-ethnic is Ὀλιζώνιος (*CID* II 84.A.4 (332)).

In Ps.-Skylax 65 Olizon is the fifth toponym listed after the heading πόλεις αἰῖδε, where *polis* is used in the urban sense. It is called a *polichne* by Strabo 9.5.15 in reference to C3e. The external individual use of the city-ethnic is found in *CID* II 84.A.4 (332).

Olizon was a Magnesian city (Ps.-Skylax 65; *CID* II 84.A.4) and as such sometimes provided the Amphiktyonic League with a *hieromnemon* (*CID* II 84.A.4 (332)), the other being provided by Homolion (and by Methone or Korakai when Olizon did not provide one). At the site are remains of “a wall built of big blocks in irregular courses . . . the wall went all around the hill” (Wace (1906) 148) and possibly of a small prostyle marble temple (*ibid.* 149).

456. (Oxoniaioi) Map 55. Unlocated, but a Magnesian community (*CID* II 5.II.42 (358)). Size of territory: ? Type: [A]. No toponym is attested (but cf. Kip (1910) 84–85). The city-ethnic is Ὀξωνιαῖος (*CID* II 5.II.42 (358)). The *Oxoniaioi* are known from a single source: *CID* II 5.II of 358, where the *Μάγνητες Ὀξωνιαῖοι* (42) are listed under the heading ταῖδε τᾶμ πολλῶν ἤμικαν. The Oxoniaian donation amounted to 19 dr. and 3 obols.

457. Rhizous (Rhizousios) Map 55. Lat. 39.50, long. 22.50. Size of territory: 2. Type: [A]. The toponym is Ῥιζοῦς, -οῦντος, ὁ (Ps.-Skylax 65; Strabo 9.5.22). The city-ethnic is Ῥιζοῦσιος (C4m coins, *infra*); Steph. Byz. 545.4 gives Ῥιζοῦντιος.

No Archaic or Classical source calls Rhizous a *polis*; but in Ps.-Skylax 65 it is one of the toponyms listed after the heading πόλεις αἰῖδε, where *polis* is used in the urban sense. It is called *polichne* by Strabo 9.5.15 in reference to C3e. That it

was a *polis* in the political sense too is indicated by its C4f bronze coinage (*infra*).

Rhizous was a Magnesian community (Ps.-Skylax 65). It struck bronze coins in C4m. Types: *obv.* head of Zeus, or of Artemis; *rev.* star, or vine branches; legend: ΠΙΖΟΥΣ or ΠΙΖΟΥΣΙΩΝ (Head, *HN*² 309; Babelon, *Traité* ii.4 nos. 746–48a; Rogers (1932) nos. 535–38; *SNG Cop. Thessaly* 249).

458. Spalauthra (Spalauthreus) Map 55. Lat. 39.10, long. 23.15. Size of territory: 2. Type: [A]. The toponym is Σπάλαυθρα, τὰ (Ps.-Skylax 65; *IG* IX.2 1111.35 (c.130)); Steph. Byz. 583.13 has Σπαλέθρη but cites Hellen. fr. 201 for a form which Jacoby prints as Σπαλάθραν and Meineke (*loc. cit.*) as Σπάλαθρον (cf. Meineke’s app. crit. *ad loc.*). The city-ethnic is Σπαλαυθρεύς (*IG* IX.2 1111.1 (c.130)).

Spalauthra is listed as a *polis* in the urban sense in Ps.-Skylax 65 under the heading πόλεις αἰῖδε. The city-ethnic is attested only at a time when the city was a constituency of Demetrias (*IG* IX.2 1111 (c.130)).

Spalauthra was a Magnesian city (Ps.-Skylax 65). To the south the neighbour was Olizon, to the north-west Korope and Korakai. Although it does not appear in Strabo’s account of the synoecism of Demetrias (9.5.15 (r293)), it appears as a constituent community of Demetrias in Hellenistic and later inscriptions (*IG* IX.2 1111 (c.130); *SEG* 23 405 (first to second centuries AD)) and so was included in the synoecism at some point. On top of the hill of Chortokastro the church of Ag. Nikolaos presumably stands on the site of an ancient temple (Koder and Hild (1976) 140); if so, this hill was probably the acropolis of Spalauthra.

2.7 Perrhaibia

459. Azoros (Azoristas) Map 55. Lat. 40.00, long. 22.05. Size of territory: 2. Type: C (classified as a fort/tower by *Barr.*, but see *infra*). The toponym is Ἄζωρος (*Gonnoi* 93.B.28 (C3l)) or Ἄζώριον, τό (Polyb. 28.13.1; *IG* XII.8 178.a.2 (C2)); Rhianos *apud* Steph. Byz. 32.19 uses Ἄζώρεια; Steph. Byz. 32.18 states that a plural form was also found (ἐν Ἄζώροις). The city-ethnic is Ἄζωριαστᾶς (*IG* IX.1 689.17 (C2e)).

No Archaic or Classical source calls Azoros a *polis*, but it may possibly have been one: according to Livy 42.53.5, it was one of the three *oppida* making up the Perrhaibian *Tripolis* (<Perseus> *descendit ad Azorum, Pythoum, Dolichen: tripolim vocant incolentes haec tria oppida*), an association for which C4f bronze coins are attested (*infra*). If the name *Tripolis* means that the constituent communities were

poleis, then Azoros was a *polis*. (See also the entries for Doliche and Pythoion.) Furthermore, the name of the city has been restored at Diod. 19.52.6, and this passage uses *polis* in the urban sense retrospectively in reference to 316; Strabo 7.7.9 uses *polis* about it retrospectively too, but with no precise indication of date. It is also called *polis* in a C3l inscription (*Gonnoi* 93.B.28). The city-ethnic is attested only in the Hellenistic period: the external collective use is found in *IG* IX.1 689.17 (C2e), and the external individual use in *ArchEph* (1923) 144, 379.C.16 (first century AD).

The territory of Azoros to the north bordered on that of Doliche (a fellow member of the *Tripolis*), to the east on the territories of Askyris and Oloosson, to the south on that of Malloia, and to the west on that of Mondaia. See the map in Lucas (1995) 130. On the territory, see further Lucas (1997) 149–51.

Azoros was situated in Perrhaibia (Diod. 19.52.6; Polyb. 28.13.1; *IG* IX.1 689.5 (C2)) or Pelagonia (Strabo 7.7.9); Ptol. *Geog.* 3.12.39 places it in Pelasgiotis. With Pythoion and Doliche, Azoros formed the Perrhaibian *Tripolis* (Livy 42.53.5, quoted *supra*; *IG* XII.8 178.a.2 (C2); Strabo 7.7.9; Steph. Byz. 32.16, 637, s.v. *Τρίπολις: καὶ ἄλλη Περραιβίας*). Like Doliche and Pythoion—fellow members of the *Tripolis*—Azoros is absent from the list of Perrhaibian polities in *SEG* 29 546 (375–350); this fact (and the fact that the dispute between Doliche and Eleimiotis was settled by the Makedonian king, Amyntas, see s.v. Doliche) suggests that in C4e the *Tripolis* was under Makedonian rule (Lucas (1997) 80–81, 211–16).

The acropolis was separately walled (Lucas (1997) 162–65). The preserved remains of the circuit wall are of the later Hellenistic period (*ibid.*), but Diod. 19.52.6 (r316) mentions a siege of Azoros and thus implies the existence of fortifications. There are numerous traces of buildings at Azoros, but in the absence of excavation they cannot be identified (Lucas (1997) 166–68).

A few divinities are known from dedications: Apollo Lykeios (C4–C3, unpublished), Apollo Doreios (C3–C2, unpublished), Apollo Pythios (Peck (1974) 7 (C3–C2)), and Asklepios (C3f, unpublished), but the patron divinity has not been identified.

The *Tripolis* of Azoros, Pythoion and Doliche struck bronze coins in C4f. Types: *obv.* Apollo; legend: *ΤΡΙΠΟΛΙΤΑΝ*; *rev.* tripod (Liampi (1990)).

460. Chyretiai (Chyretiaios) Map 55. Lat. 39.50, long. 22.10. Size of territory: 2. Type: C. The toponym is *Χυρειαίαι, αἱ* (Ptol. *Geog.* 3.12; *ArchEph* (1917) 1, 301.3 (C2e)). The city-

ethnic is *Χυρειαῖος* (*SEG* 29 546.10–11 (375–350)) or *Χυρειαῖός* (*EAM* 40.8 = *GVI* 40.8 (C3l/C2e)).

No Archaic or Classical source calls Chyretiai a *polis*, but two men from the city are listed under the heading *Χυρειαίων* in an inscription of 375–350 which has been interpreted as a catalogue of Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson and which includes such Perrhaibian communities as Phalanna and Gonnoi (*SEG* 29 546 (375–350)). It is called *polis* in the political sense in Hellenistic documents, e.g. *ArchEph* (1917) 1, 301.8 (*ἔδοξε τῇ Χυρειαίων πόλει* (191)). The external individual use of the city-ethnic is found on a C3 tombstone (*EAM* 40.8 = *GVI* 40.8 (C3l/C2e)).

Chyretiai was situated in Perrhaibia (*SEG* 29 546, by implication; see the map in Lucas (1995) 130), though Ptol. *Geog.* 3.12 places it in Pelasgiotis. (For C5 coins of the Perrhaibians, see the entry for Oloosson.) Stählin (1924a) 25 briefly mentions an acropolis wall and traces of an isodomic city wall.

461. Doliche (Dolichaios) Map 50. Lat. 40.05, long. 22.10. Size of territory: 2. Type: C. The toponym is *Δολίχη, ἡ* (Polyb. 28.13.1; *IG* IX.2 1296 (C1)); the city-ethnic is *Δολιχαῖος* (*EAM* 6.2 (C1)). No Archaic or Classical source calls Doliche a *polis*, but it may possibly have been one: according to Livy 42.53.5, it was one of the three *oppida* making up the Perrhaibian *Tripolis* (<Perseus> *descendit ad Azorum, Pythoum, Dolichen: tripolim vocant incolentes haec tria oppida*), an association for which C4f bronze coins are attested (*infra*). If the name *Tripolis* means that the constituent communities were *poleis*, then Doliche was a *polis*. (See also the entries for Azoros and Pythoion.) Furthermore, C4f possession of a territory by Doliche is attested by a document dating to the reign of Trajan: the document concerns a territorial conflict between Doliche and the Elimiotis and refers to a similar conflict between the same communities during the reign of Amyntas III (390–371), the father of Philip II (Wace and Thompson (1910–11) 195, ll. 16–18, 198; Lucas (1992) 132–34, (1997) 148–49). The external individual use of the city-ethnic is found in C1 (*EAM* 6.2). The external collective use of the ethnic may have been used on the stele of Amyntas' arbitration which was set up in the *forum* at Doliche (l. 13) and was pronounced *inter Dolichanos et Eleimiotis* (ll. 18–19; Wace and Thompson (1910–11)).

Doliche was situated in Perrhaibia (Polyb. 28.13.1; cf. Ptol. *Geog.* 3.12.39, who places it in Pelasgiotis). Like Azoros and Pythoion (with whom Doliche formed the Perrhaibian

Tripolis), it is absent from the list of Perrhaibian polities in *SEG* 29 546 (375–350); this fact (and the fact that the dispute between Doliche and Eleimiotis was settled by the Makedonian king, see *supra*) suggests that in C4e the *Tripolis* was under Makedonian rule (Lucas (1997) 80–81, 211–16). To the south its territory bordered on that of Azoros (a fellow member of the *Tripolis*), to the west on that of the Elimiotis, and to the east on that of Pythion (a fellow member of the *Tripolis*). See the map in Lucas (1995) 130. In C4f Doliche had a territorial conflict with the Elimiotis (Wace and Thompson (1910–11); Lucas (1992) 132–34, (1997) 148–49).

The acropolis was separately walled, but the wall, built of quadrangular blocks, has been destroyed by modern constructions (Lucas (1997) 175–77). Since the publication of Lucas (1997) new archaeological investigation has (1) demonstrated the existence of a C4–C3 city wall, and (2) unearthed several remains of buildings (possibly the agora); *ArchDelt* 51 (1996) 363–64.

The *Tripolis* of Azoros, Pythion and Doliche struck bronze coins in C4f. Types: *obv.* Apollo; legend: *ΤΡΙΠΟΛΙΤΑΝ*; *rev.* tripod (Liampi (1990)).

462. *Ereikinion (Ereikineus) Map 55. Lat. 39.45, long. 22.00. Size of territory: 2. Type: [A]. The toponym is probably **Ἐρεικίνιον* reconstructed from Latin *Ericinium* (Livy 36.13.6) and the city-ethnic *Ἐρεικινεύς* (*SEG* 29 546; cf. 33 457 (375–350)) or *Ἐρεικινεύς* (*CID* II 9.4 (C4m)).

No Archaic or Classical source calls **Ereikinion* a *polis*, but in the Delphic *ναρποιοῖς* accounts the *Ἐρεικινεῖς* are recorded in a fragmentary list (*CID* II 9.4), the heading of which undoubtedly included the formula *ταῖδε τὰμ πολίων ἤνικαν* (*CID* II 5.11.25–26) *vel sim.* Furthermore, two men from the city are listed under the heading *Ἐρεικινεῖων* in an inscription of 375–350 which has been interpreted as a catalogue of Perrhaibian polities making a dedication to Apollo Pythios at Oloosson and includes such Perrhaibian communities as Phalanna and *Gonnoi* (*SEG* 29 546). Furthermore, *CID* II 9.4 (C4m) records a donation by the *Ἐρεικινεῖς*. A C2 inscription attests the external individual use of the city-ethnic (*Gonnoi* 42).

**Ereikinion* was situated near the village of Mega-Eleftherochori (formerly Kebir); cf. Lucas (1995). It was a Perrhaibian city (*CID* II 9.4 (C4m)); see the map in Lucas (1995) 130 and is listed in *SEG* 29 546 (375–350). (For C5 coins of the Perrhaibians, see the entry for Oloosson.)

463. Gonnos (Gonneus) Map 55. Lat. 39.50, long. 22.30. Size of territory: 3. Type: A. The toponym is *Γόννος*, ἡ (Hdt.

7.128.1; Eust. *Il.* 2.739) or *Γόννοι* (*BCH* 45 (1921) III.39 (230–220)). The city-ethnic is *Γοννεύς* (C4 coins, *infra*; *SEG* 29 546.16 (375–350); cf. 33 457); Steph. Byz. 211.3 gives *Γοναράς* and *Γόννιος*, both unattested.

Gonnos is called *polis* in the urban sense at Hdt. 7.128.1, 173.4; *polis* in the political sense occurs in *SEG* 35 566 (c.300) and frequently in Hellenistic decrees of the city, e.g. *Gonnoi* 2.8 (C3e), which also has [*politai*] (l. 9). *Patris* is found in *Gonnoi* 211 (C3). The internal collective use of the city-ethnic is found on C4 coins (*infra*) and in, e.g., *Gonnoi* 1.3 (C4/C3e). The external collective use is attested in *SEG* 29 546.16 (375–350) and *IG* IV 617.13 ([*Γον*]νεῖς (C4)). At Hdt. 5.63.3, the transmitted *Κονιαῖος* is sometimes emended to *Γονναῖος* (e.g. How and Wells (1928) *ad loc.*), but see Helly (1995) 103. The external individual use is found in *IG* II² 1132.66 (c.278).

Gonnos was situated in Perrhaibia (Hdt. 7.128.1, 173.4; *IG* II² 1132.66 (130/29)), and is recorded in *SEG* 29 546 (375–350), a list of Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson. (For C5 coins of the Perrhaibians, see the entry for Oloosson.)

On military matters, all evidence is Hellenistic (see Helly (1973) 145–46); evidence on the political organisation is likewise Hellenistic (Helly (1973) 138–45). *Gonnoi* 1 (C4/C3e) is a grant of proxeny to a man from Larisa. *Gonnoi* 5 (C3) combines proxeny with *enktesis*, *epinomia*, etc. *IG* IV 617.13 (316–293) records a monetary donation by Gonnos “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29).

Situated on the end of a ridge on the lower slopes of Mt. Olympos, the city of Gonnos was centred on three hills, the northernmost of which formed the acropolis with a temple of Athena Polias constructed 650–600 (Helly (1973) 72 with map i); in this sanctuary public documents were published; it was restored in C4l (ibid. 95). The acropolis was separately walled, possibly from the Archaic period (*PECS* 359). In the Hellenistic period (*PECS* 360) the city was protected by a fortification wall (for which see Helly (1973) 23–28 with map i) which incorporated all three hills in the fortified area. The area enclosed measured c.6 ha. For two Classical second-order sites in the territory, see Helly (1973) 39–47.

Gonnoi 147 (C3?) attests to a cult of Athena Polias and *SEG* 35 567 (c.300) to one of Athena Patroia; *Gonnoi* 158 (C4f) is a dedication to Apollo Pythios, and *Gonnoi* 162 (C4/C3e) is one to Artemis. Asklepios is attested by *SEG* 35 565 (C4) and *Gonnoi* 199 (C3), Ennodia by *Gonnoi* 201 (C3) and Herakles by 202 (C3).

Gonnos struck bronze coins in C4. Types: *Obv.* female head (nymph?) in border of dots; *rev.* lion standing; legend: *ΓΟΝΝΕ, ΓΟΝΝΕΩΝ* (Rogers (1932) 79–80 nos. 223–26; Helly (1973) 155; *SNG Cop. Thessaly* 53–54).

464. *Malloia (Malloiatas) Map 55. Lat. 39.55, long. 22.05. Size of territory: 2. Type: C (classified as a fort/tower by *Barr.*, but see *infra*). The toponym is not recorded in Greek sources, but is given as *Malloea* by Livy 31.41, 36.10, etc., which with the city-ethnic (*infra*) suggests *Μαλλοία, ἡ*. The city-ethnic is *Μαλλοιάτας* (*SEG* 29 546.13 (375–350)).

No Archaic or Classical source calls Malloia a *polis*, but two men from the city are listed under the heading *Μαλλοιατᾶν* in an inscription of 375–350 which has been interpreted as a catalogue of Perrhaibian polities making a dedication to Apollo and which includes such Perrhaibian communities as Phalanna and Gonnoi (*SEG* 29 546); note also *SEG* 35 636 (C5s), an epitaph that uses *ἄρχων* about the deceased, which presumably indicates that he died while in office and suggests the existence of magistracies at Malloia.

Malloia was a Perrhaibian city (Livy 31.41, 36.10, etc.) situated at the site of Margara north-west of the village of Palaiokastro (Lucas (1995) 124 and map at 130). It is recorded in *SEG* 29 546 (375–350), a list of Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson. A circuit wall is visible at the site, but the city remains to be investigated archaeologically. (For C5 coins of the Perrhaibians, see the entry for Oloosson.)

465. Mondaia (Mondaieus) Map 55. Lat. 40.00, long. 21.55. Size of territory: 2. Type: B. The toponym is *Μονδαία* (*BCH* 45 (1921) v.C(b).6 (230–220); cf. *infra*). The city-ethnic *Μονδαιάτας* was originally restored in *SEG* 29 546.14 (*Μονδα[ιατᾶ]ν*), and this form is found also in *Syll.*² 793 (presumably C3e); however, Knoepfler has suggested restoring *Μονδαιεύς* (*Μονδα[ιεύ]ν*; cf. *SEG* 33 457), a form also found in C4s (*BE* (1994) 111); apart from *Syll.*² 793 (presumably C3e), later sources invariably have *Μονδαιεύς* (*IG* ix.1 689.9; *Gonnoi* 69.6 (both C2e)).

No Archaic or Classical source calls Mondaia a *polis*, but two men from the city are listed under the heading *Μονδα[ιατᾶ]ν* vel *Μονδα[ιεύ]ν* in an inscription of 375–350 which has been interpreted as a catalogue of Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson and which includes such Perrhaibian communities as Phalanna and Gonnoi (*SEG* 29 546). Mondaia is called a *polis* in the political sense in *Gonnoi* 69.7 (178) while *Syll.*² 793 (presumably C3e) terms the community *Μον[δ]αιατᾶν τὸ κοινόν*. The external collective use of

the city-ethnic occurs on C4s stamped tiles found in Pella (*BE* (1994) 111), as well as in *SEG* 29 546 (375–350). In 230–220 a citizen of Mondaia may have served as Delphic *theorodokos* (*BCH* 45 (1921) v.C(b).6), but certainty is impossible, since the first letter is illegible, which means that [*K*]ondaia, a city of the Larisaian plain, is also a possible reading (Lucas (1997) 87).

Mondaia was a Perrhaibian city and is recorded in *SEG* 29 546 (375–350), a list of Perrhaibian polities making a joint dedication to Apollo Pythios. It was situated at the site of Kastri, east of the village of Loutro Ellassonas (Lucas (1997) 155, 199–201 with map at 130). At the site, remains of walls are visible on the acropolis and in the lower city; on the acropolis are remains of fine buildings as well (autopsy by G. Lucas).

The patron divinity was presumably Themis, in whose sanctuary documents were published (*Gonnoi* 69; cf. *Syll.*² 793). *Syll.*² 793 (presumably C3e) records a consultation by Mondaia of the oracle at Dodona. (For C5 coins of the Perrhaibians, see the entry for Oloosson.)

466. Mylai (Mylaios) Map 55. Lat. 39.45, long. 22.05. Size of territory: 2. Type: C (classified as a fort/tower by *Barr.*, but see *infra*). The toponym is *Μυλαί, αἱ* (*BCH* 45 (1921) III.134 (230–220); Steph. Byz. 461.9). The city-ethnic is *Μυλαῖος* (*SEG* 29 546.9 (375–350)).

No Archaic or Classical source calls Mylai a *polis*, but three men from the city are listed under the heading *Μυλαίων* in an inscription of 375–350 which has been interpreted as a catalogue of Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson and which includes such Perrhaibian communities as Phalanna and Gonnoi (*SEG* 29 546). In 230–220, a citizen of Mylai served as Delphic *theorodokos* (*BCH* 45 (1921) III.134).

Mylai was a Perrhaibian city, and it is recorded in *SEG* 29 546 (375–350), a list of Perrhaibian polities making a joint dedication to Apollo Pythios. (For C5 coins of the Perrhaibians, see the entry for Oloosson). Mylai was situated at Kastri, north of the village of Vlachogianni (Lucas (1995) 122). To the north its territory bordered on that of Malloia, to the north-west on that of Chyretiai, to the south-east on that of Phalanna, to the south on that of Erikinion, and to the west on the territories of Phakion and Oxyneia. See the map at Lucas (1995) 130. The acropolis of Mylai was enclosed by a wall; it runs for c.400 m and is constructed in large irregular blocks which do not join; there may have been an entrance in the south-east, and gates or sally-ports were possibly located to the south and north-west; and a

ruined square tower (possibly Hellenistic) was found on the highest point of the wall (autopsy by G. Lucas). To the north a wall is seen descending towards the city wall, though no trace of the latter has been found (autopsy by G. Lucas). In the centre of the acropolis are the foundations of a rectangular building; and there are numerous traces of habitation to the west, north-west and south-west (autopsy by G. Lucas).

467. Oloosson (Oloossonios) Map 55. Lat. 39.55, long. 22.20. Size of territory: 2. Type: B. The toponym is Ὀλοοσσών, ἡ (Hom. *Il.* 2.739; Eust. *Il.* 520.25), Ὀλόσσων (Gonnoi 93.B.23 (C3l); Strabo 9.5.19). The city-ethnic is Ὀλοσσόνιος (Gonnoi 11.3 (C3f), and presumably C4 coins (*infra*)).

No Archaic or Classical source calls Oloosson a *polis*, but it is included as a probable *polis* here because (1) it struck coins in C4, and (2) it is highly likely that [Ὀλοσσόνιον (gen. pl.)] should be restored in SEG 29 546.4, an inscription of 375–350 found at Oloosson which has been interpreted as a catalogue of Perrhaibian polities making a dedication to Apollo Pythios and which includes such Perrhaibian communities as Phalanna and Gonnoi. Oloosson is called a *polis* in the political sense in Gonnoi 18.14 (C3l). The internal collective city-ethnic is abbreviated on C4 coins (*infra*) and has been restored at SEG 29 546.4 (375–350). The external individual use is found in Gonnoi 11.3 and SEG 23 455 (both C3f). In C3s Gonnoi conferred *proxenia* and other privileges upon two citizens of Oloosson (Gonnoi 11, 18).

Oloosson was Perrhaibian (Strabo 9.5.19; though Steph. Byz. 490.11 places it in Magnesia, presumably confusing it with Magnesian Olizon, which at 489.14 he places in Thessalia). It was situated at modern Elasson, and in 375–350 it was probably listed in SEG 29 546 (cf. app. crit.), a list found at Oloosson itself and cataloguing Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson. Oloosson was presumably a leading city of the Perrhaibian *ethnos* if the hypothesis that the C5 silver coinage of the Perrhaibians (*infra*) was struck by Oloosson is accepted (Babelon, *Traité* ii.4 327–28; Liampi (1996) 119); for the similarities between these coins and contemporary coins of Krannon, Larisa, Pharkadon, Triikka, Pherai and Skotoussa, see Kraay (1976) 115–16 and Martin (1985) 36–37.

An unpublished inscription (C3s) mentions a sanctuary of Asklepios, and on the basis of coin types a cult of Zeus may be assumed as well. SEG 29 546, a joint dedication to Apollo Pythios by the Perrhaibian polities, was found in

Oloosson. On the northern slope of the acropolis traces of an isodomic wall are visible (Stählin (1924a) 24).

The C5 silver and C4 bronze coinage of the Perrhaibians was probably struck by Oloosson (Babelon, *Traité* ii.4 327–28): (1) Silver, denominations: drachm, triobol, tri-hemiobol, obol and hemiobol on the Aiginetan standard; types: *obv.* young man restraining a bull, or forepart of bull, or horseman, or galloping horse, or head of Athena; *rev.* galloping horse, or forepart of horse, or Athena running, or horse's head; legend: *ΙΙΕ* or *ΙΙΕΡΑ*. (2) Bronze: *obv.* veiled Hera facing; *rev.* Zeus; legend: *(ΙΙ)ΕΡΡΑΙΒΩΝ* (Head, *HN*² 304; Rogers (1932) nos. 437–39; Gardner (1963) 39; Liampi (1996) 109–10; *SNG Cop. Thessaly* 193–97). In C4 Oloosson struck its own bronze coins: *obv.* horseman; *rev.* Zeus brandishing thunderbolt; legend: *ΟΛΙΟΣΣΟΝ(ΙΩΝ)* (Lavva (1994)).

468. Phalanna (Phalannaios) Map 55. Lat. 39.45, long. 22.10. Size of territory: 2. Type: [A]. The toponym is Φάλαννα, ἡ in SEG 38 649 (C4) (cf. Voutiras (1991)); *BCH* 45 (1921) v.43 (230–220); and Strabo 9.5.19. According to Steph. Byz. 655.20, Ephoros (= *FGrHist* 70) fr. 62 used the toponym Φάλλαννος (cf. Eust. *Il.* 520.18: ἡ Φάλλαννος). Hecat. fr. 5 is quoted by Steph. Byz. 655.19 for the variant name Ἰππία, which is taken by Jacoby (*ad loc.*) to be a variant name not of the city, but of the eponymous heroine Phalanna. According to Strabo 9.5.15, “some” (τινές) used the toponym Ὀρθη (cf. Hom. *Il.* 2.739) about the acropolis of Phalanna, whereas Ael. Herod. *De pros. cath.* 3.1, 321.5 takes Ὀρθη to be a πόλις Περραιβίας ἢ Θετταλίας, καλουμένη, φασί, καὶ Κορσέα. However, according to Eust. *Il.* 1.520.28, Korsea was another name for the acropolis. The city-ethnic was Φαλανναῖος (C4 coins, *infra*; SEG 29 546.6 (375–350); *CID* II 32.45 (C4l)); an inscription from Argos uses Φαλαννεύς (*IG* IV 617.12 (316–293)).

No Archaic or Classical source explicitly describes Phalanna as a *polis*; but the political sense is indirectly attested in the Delphic accounts of 337/6 (*CID* II 74), where a *tamias* of Phalanna is recorded (1.48) after the heading τὸν ταμίαν ἀποπέμπειν τὰς πόλεις (1.4). For an explicit attestation, see *ArchEph* (1916) 18, 272, 1 (C3e); *IG* IX.2 1228.a13, b17 (C3) has πολιτεία in ll. 17–18. The term ἀστός (= *Φασστός*) in the sense of “citizen” is found in a C5 law (*IG* IX.2 1226.a3) which describes itself as a νόμος (a1) and refers to κοινὰ χ[ρ]έματα (a6–7). Phalanna is described as πατρις in SEG 38 649 (C4); cf. Voutiras (1991).

The internal collective use of the city-ethnic is found on C4 coins (*infra*) and in *ArchEph* (1916) 18, 272, 1 (C3e). The

external collective use is found in *SEG* 29 546.6 (375–350) and *IG* IV 617.12 (316–293), an inscription recording a collective donation of money by the Phalannians (see further Perlman (2000) 74, 127–29). The external individual use is found in *CID* II 32.45 (C41), 74.1.48 (337/6), 77.1.9 (334/3), 96.7 (327/6), 100.1.9 (325/4), 102.1.10 (324/3).

Phalanna was a Perrhaibian city (*CID* II 77.1.9, 96.7), and it is listed in *SEG* 29 546 (375–350), a list of Perrhaibian polities making a joint dedication to Apollo Pythios at Oloosson. (For C5 coins of the Perrhaibians, see the entry for Oloosson.) It was probably situated at Damasi (Lucas (1995) 122 with map at 130).

Citizens of Phalanna served the Amphiktyonic League on behalf of the Perrhaibians as *hieromnemes* (*CID* II 32.45 (C41), 96.7 (327/6), 100.1.9 (325/4), 102.1.10 (324/3)) and as *tamiai* (*CID* II 74.1.9 (337/6), 77.9 (334/3)). With the other Perrhaibian communities, Phalanna in 375–350 made a dedication to Apollo Pythios at Oloosson (*SEG* 29 546). *IG* IV 617.4 (316–293) records a monetary donation by Phalanna “to the *θεωροί* sent out from Argos to announce the celebration of the Nemean Games and the Heraia” (Perlman (2000) 74, 127–29). In 230–220 a citizen of Phalanna served as Delphic *theorodokos* (*BCH* 45 (1921) v.43).

The earliest public enactment is a C5 law (*νόμος*) concerning public finances (*IG* IX.2 1226). Hellenistic inscriptions refer to several officials (*ArchEph* (1916) 18, 272, 1 (C3e); *IG* IX.2 1233 (C3)).

A theatre is mentioned in a C2 inscription (*IG* IX.2 1230), and recent explorations have revealed traces of a polygonal wall on the acropolis (autopsy by G. Lucas), but apart from that there is no evidence for the urban centre.

Phalanna minted in both silver and bronze in C4. (1) Silver, denominations: drachms, triobols, trihemioobols, obols on the Aiginetan standard; types: *obv.* young man with short hair (Ares?), or Hekate holding two torches seated on lion (beneath *ΠΟ*); *rev.* bridled horse, or hunter with dog; legend: *ΦΑΛΑΝΝΑΙΩΝ*. (2) Bronze: *obv.* head of young man (Ares?), or Zeus, or nymph; *rev.* head of nymph, or horseman, or the eponymous heroine Phalanna seated, her left hand stretched toward a stork; legend: *ΦΑΛΑ* or *ΦΑΛ-ΩΝ* or *ΦΑΛΑΝΝΑ* or *ΦΑΛΑΝΝΑΙΩΝ* (Head, *HN*² 305; Babelon, *Traité* II.4 nos. 583–94; Rogers (1932) 147–49 nos. 446–58; Gardner (1963) 41; *SNG Cop. Thessaly* 199–208).

469. Pythoion (Pythoiastas) Map 50. Lat. 40.05, long. 22.15. Size of territory: 2. Type: C. The toponym is *Πύθιοιον*,

τό (*IG* IV².1 94.b.II.39 (post-316)) or *Πύθειον* (*F.Delphes* III.4 417.III.5 (c.257/3)); *Πύθιοιον* is found in late literary sources (Plut. *Aem.* 15.2; Ptol. *Geog.* 3.12.39). The city-ethnic is *Πυθουιάστας*, but attested only in the Hellenistic period (*SEG* 36 554.4 (C2f)).

No Archaic or Classical source calls Pythoion a *polis*, but it may possibly have been one: according to Livy 42.53.5, it was one of the three *oppida* making up the Perrhaibian *Tripolis* (<Perseus> *descendit ad Azorum, Pythoum, Dolichen: tripolim vocant incolentes haec tria oppida*), an association for which C4f bronze coins are attested (*infra*). If the name *Tripolis* means that the constituent communities were *poleis*, then Pythoion was a *polis*. Furthermore, in C41 a citizen of Pythoion served as Epidaurian *theorodokos* (*IG* IV².1 94 I.b.39). Pythoion calls itself *ἡ πόλις ἡ Πυθουιαστῶν* in a C2f proxeny decree (*SEG* 36 552.4). A coin inscribed *ΠΥΘΙΑΤΩΝ* is a forgery (Lucas (1997) 77).

Pythoion was situated on the hill of Ag. Apostoli south of the present village of Pythion, formerly Selos (Lucas (1997) 182–85). Though geographically located in Perrhaibia (Plut. *Aem.* 15.2), Pythoion (like Azoros and Doliche, with which it formed the Perrhaibian *Tripolis*) is absent from the list of Perrhaibian polities in *SEG* 29 546 (375–350; cf. Lucas (1997) 80–81); this fact (and the fact that the dispute between Doliche and Eleimiotis was settled by the Makedonian king, s.v. Doliche) suggests that in C4e the *Tripolis* was under Makedonian rule (Lucas (1997) 80–81, 211–16). In addition, the Epidaurian list of *theorodokoi* (*IG* IV².1 94 I.b.39 (post-316)) seems to record Pythoion in the Makedonian section (Lucas (1997) 81–82), and *F.Delphes* III.4 417.III.5 (c.257–253) is a grant of proxeny to a man described as *Μακεδῶν* *Ἐ[λ]ειμιώτ[ης] ἐκ Πυθείου*; Steph. Byz. 538.21 also locates it in Makedonia; another passage of Steph. Byz. (157.12–13) possibly attests to the settlement of Makedonians in Pythoion in C4–C3: *Θεαγένης ἐν Μακεδονίᾳ “Βαλλαίου μεταγαγὼν εἰς τὸν νῦν λεγόμενον Πύθιον τόπον”* (see Lucas (1997) 76, 216).

A temple of Apollo Pythios, the patron divinity, is mentioned in a C2m inscription (*SEG* 36 552; cf. Plut. *Aem.* 15.10), and recent excavations have unearthed two temples of Roman date (*ArchDelt* 51 ([1996] 2001) 364).

The acropolis was surrounded by a wall constructed in small flat stones (Lucas (1997) 183–84). A wall surrounding the lower city, probably isodomic to judge from the visible remains, has recently been located, but is as yet unpublished and undated. To the south and south-west are numerous traces of occupation (*ibid.* 184).

The Tripolis of Azoros, Pythoion and Doliche struck bronze coins in C4f. Types: *obv.* Apollo; legend: ΤΡΙΠΟΛΙΤΑΝ; *rev.* tripod (Liampi (1990)).

2.8 Athamania

470. Argethia (Argethies) Map 55. Lat. 39.20, long. 21.30. Size of territory: ? Type: B. The toponym is Ἀργεθία, ἡ (BCH 45 (1921) III.132 (230–220)). The city-ethnic is Ἀργεθειεύς (SGDI 1341 (C4s)).

No Archaic or Classical source calls Argethia a *polis*, but it

is included as a possible *polis* here on account of SGDI 1341, a C4s grant of proxeny by the Molossoi to a man of Argethia ([Θε]όδωρον Στομίου Ἀργεθιῆ Μολοσσοῖ πρόξε[νον] ἐποίησαν). In c.230–220, a citizen of Argethia served as Delphic *theorodokos* (BCH 45 (1921) III.132).

The city was situated on the east side of Mt. Pindos, in Athamania (or Thessalia, the exact border between the two regions being unclear); the site is at Hellinika, c.2 km west of modern Argitheia (formerly Knisovo, in the *nomos* of Karditsa). There are traces of a Hellenistic circuit wall (Indzesiloglou (1987) 345) and a Classical–Hellenistic cemetery (ArchDelt 43 ([1988]) 252).

THE AEGEAN

GARY REGER

I. The Region

The islands of the Aegean, which number in the thousands, no more formed a logical unit in the Archaic and Classical periods than they do today. The two main groupings are the *Kyklades* (Κυκλάδες) and the *Sporades* (Σποράδες). The designation “*Kyklades*” is attested in Classical sources (Eur. *Ion* 1583; Hdt. 5.31.2; Thuc. 1.4; Isoc. 4.136; Ephor. fr. 63; Ps.-Skylax 48, 58). “*Sporades*” is apparently a Hellenistic invention (Ap. Rhod. *Argon.* 4.1711; Strabo 2.5.21, 10.4.1; Arist. [*Mund.*] 393^a14). Both names were geographical terms only, embracing different islands at different times and according to different authors. These groupings posed difficult problems for ancient geographers, especially when they tried to insert discussions of the islands into larger geographic texts; this explains why treatment of islands that are neighbours may occur far apart in a text (e.g., Ps.-Skylax treats Amorgos at chapter 58 but Astypalaia at 48; see generally now Counillon (2001)). It is rare, however, that geographical groups corresponded to political associations. For example, while both Melos and Thera counted among the *Kyklades* for Thucydides (1.4, 2.9.4), both avoided Athenian domination until almost the 420s or later; in both cases, this resistance was probably connected with the islands’ foundations as Doric colonies, in contrast to the Ionic *Kyklades*, many of which recognised Athens as metropolis. Of the neighbouring northern *Sporades*, Skyros and Ikos, the one was

subjected to direct Athenian control, probably from 476/5, while the other remained an independent *polis* (or two). These examples could be multiplied.

Perhaps no man is an island, but every island is potentially a *polis*, or more than one (Reger (1997)). The Inventory that follows includes fifty-seven certain or likely *poleis* distributed among forty-two islands. None of them is unlocated (except, in a few cases, where a secondary *polis* attested on an island like Ikos has yet to be associated with a site). However, these represent only a very small number of potentially inhabitable islands in the Aegean Sea. If we can be confident, even without direct evidence, that a mass of rocks like the *Melanteioi Skopeloi* east of Mykonos was always uninhabited, the same is not true for many other islands. Some islands may have been used only as pasturage, such as perhaps the three small islands disputed between Kimolos and Melos in C41 (*IG* XII.3 1259 = Ager (1996) no. 3 = Magnetto (1997) no. 1). Cycles of population growth and depopulation are characteristic of the Aegean Islands over the *longue durée*, although recent work has suggested that the Archaic and especially the Classical period constituted a high point in island populousness and prosperity (see especially Brun (1993), (1996)). For example, Donoussa supported a habitation site in the Geometric period, but whether the island continued to be occupied into historical times is not known (Ph. Zapheiroupolou (1973)).

Even when islands were inhabited, it is not always clear whether they were *poleis*. Here are two examples. The *Korsiai* are a cluster of islands between Samos (no. 864) and Ikaros (Map 61; lat. 37.35, long. 26.30; 45 km² total area of group; main island, 30 km²). The toponym, which has a number of variants, is attested as *Κορσεαί* as early as Hecat. fr. 143 (for the variants, see *infra*). The ethnic is attested as *Κορσηίτης* or *Κορσηιτός* in an undated rock-cut inscription of C51 or C4 found on the island on the hill of Ag. Giorgios (*IG* XII.6 1213.x1); the version in Steph. Byz. 376.12 differs. This evidence suffices to show that the islands, or at least the chief one, were inhabited. The fact that marble seems to have been quarried here for use on Samos in C6 implies occupation at

I would like to thank Paula Perlman for suggesting my participation in the work of the Polis Centre many years ago. In the course of writing my contribution, I have incurred many debts. The staff of the Interlibrary Loan office at the Trinity College Library have been indispensable in tracking down and securing many obscure publications. Patrice Brun readily agreed to read a penultimate draft of this chapter. His deep knowledge of the Aegean Islands saved me from many errors and omissions; he also generously shared with me his own private research files. Thomas Heine Nielsen has provided much editorial help. My greatest debt, however, I owe to Mogens Herman Hansen. In 1997 he stepped in for me to proofread my paper on multipolate islands (Reger (1997) 450–92) when a sudden medical problem prevented me from doing so, and he has read and improved every line of my contribution here. I thank him for accepting me in the Polis Centre, for his hospitality in Copenhagen, but most of all for the intellectual guidance he has provided over the years. I would like to dedicate my contribution to my wife Edith Folta and our daughters Alison and Caroline.

least that early (Shipley (1987) 21 n. 82). But were they a *polis*? The rock cut inscriptions show that these islands were controlled by Samos (no. 864) during the Classical period, and that at some point there was a Samian garrison on the acropolis (Rehm (1929) 20; Dunst (1974) 137, and see the tantalising inscription at 118–21 no. 2; Ehrhardt (1983) 17 with 200 n. 63). On mistaken grounds, Haussoulier suggested ((1902) 142; cf. Dunst (1974) 137) that perhaps earlier they were under Milesian control. Rehm (1929) 19–20 argued that as long as the Milesians controlled Leros and Patmos, they could assure passage to the Aegean via the strait between those islands, which was more important for them than the strait between Patmos and Korsiai. As the evidence stands, it is impossible to decide whether the Korsiai were a dependent *polis* under Samian control or just a Samian possession.

The other example is Gyaros (*Γύαρος*), an island of 17 km². In 31 Strabo visited it and found “a village inhabited by fishermen” (*κώμιον ὑπὸ ἀλιέων συνοικούμενον*) who were sending an ambassador (*πρεσβευτής*) to Octavian to ask for a reduction of a payment of tribute of 150 dr. they could not afford (10.5.3). The ethnic, attested in Steph. Byz. 214.2 as *Γυαρεύς*, has now been found on rock-cut inscriptions of early Byzantine date (C5–C7) on Syros as *Γυαρίτης* (Kiourtzian (2000) 153 no. 80, 181 no. 117, 184 no. 121 (much improved versions respectively of *IG XII.5 712 84B*” and *86B*”; for the date, p. 142). The inscriptions originated with sailors who anchored in the bay beside which they were carved (*ibid.* 135–38). Thus it is clear that, at least in the late Hellenistic and Roman periods, Gyaros was inhabited; perhaps the same can be inferred for an earlier period from Strabo’s citing Aratos as calling Gyaros “worthless”. Moreover, Strabo’s story shows that in his day the island was not subject to another authority. There is a C2? proxeny decree passed by the Gyarioi (*IG XII.6 470*), and there are bronze coins of C1 (Head, *HN*² 486). Thus, there can be little doubt that Gyaros was a *polis* in the later Hellenistic period (though Strabo’s use of *komion* remains striking). But there is no warrant for retrojecting this status into the Archaic and Classical periods.

Of the many islands mentioned one way or another in our sources, here are some of the more important which were probably inhabited. In no case is there evidence to show, or even suggest, that these islands were *poleis*, but it is possible that some of them were.¹

Araiai or Arai (*Ἄραιαί*) Map 61. Lat. 37.05, long. 27.10. Dieuchidas (*FGrHist* 485) fr. 7.

Askania (*Ἀσκανία*) Map 61. Lat. 36.15, long. 25.05. Hom. *Il.* 2.862–63, 13.793.

Gyaros (*Γύαρος*) Map 57. Lat 37.35, long. 24.45. Plut. *Mor.* 602C; *IG XII.5 651* (undated); *IG XII suppl.* p. 117 = *IG XII.6 470* (C2?); Strabo 10.5.3; Steph. Byz. 213.18; Kiourtzian (2000) 153 no. 80, 181 no. 117, 184 no. 121.

Halonnesos (*Ἁλόνησος*) Map 57. Lat. 39.30, long. 25.00. Dem. 7.2, 12.12, 18.69; Aeschin. 3.83; Plut. *Dem.* 9.5; Dion. Hal. *Dem.* 9, 13; Ath. 6 223D–224B; Strabo 9.5.16; Pompon. 2.106; Harp. *A80*.

Istros (*Ἴστρος*) Map 61. Lat. 27.10, long. 27.40. Steph. Byz. 341.7.

Kinaros (*Κίναρος*) Map 61. Lat. 37.00, long. 26.15. Plut. *Mor.* 602C; Semos of Delos (*FGrHist* 396) fr. 17; Pompon. 2.111; *Stadiasmus* 282; *IG XII.7 510* (C4).

Korseai (*Κορσεαί*, but with many variants) Map 61. Lat. 37.35, long. 26.30. Hecat. fr. 143 = Steph. Byz. 376.10; Strabo 10.5.13 (*Κορασσίαι*); *Stadiasmus* 283–84 (*Κορσίαι*); Steph. Byz. s.v.; Plin. *HN* 5.135; Dunst (1974) 116–18 no. 1 ([*ἐν Κορσίαι[ς]*, Hellenistic of perhaps C4). The ethnic *Κορσηίτης* is attested in an inscription of C5l or C4 which shows that a garrison of Samian and foreign mercenaries held the acropolis (*IG XII.6 1213.XI*, cf. VI and X). See Ehrhardt (1983) 17 with 200 n. 63. Given the attestation of an ethnic, it is possible that a dependent *polis* was located here. *Barr.* C(?).

Lebinthos (*Λέβυνθος*) Map 61. Lat. 37.00, long. 26.25. Strabo 10.5.12; Pompon. 2.7; Steph. Byz. 238.16; Hsch. *A486*; *Stadiasmus* 281; Plin. *HN* 4.70.

***Lepsia** (*Lepsia*) Map 61. Lat. 37.20, long. 26.45. Lycoph. *Alex.* 1207 (*Λέψιος*), 1454 (*Λεψιεύς*); Plin. *NH* 5.133 (*Lepsia*); Manganaro (1963–64) 317–29; Ehrhardt (1983) 16–17. *Barr.* AC.

Patmos (*Πάτμος*) Map 61. Lat. 37.20, long. 26.35. Thuc. 3.33.3; Strabo 10.5.13; *Stadiasmus* 280, 283; Plin. *HN* 4.69; Manganaro (1963–64) 329–46; *Syll.*³ 1068, 1152; Saffrey (1975); Ehrhardt (1983) 17, 149–51. *Barr.* AC.

Pharmakoussa (*Φαρμακούσσα*) Map 61. Lat. 37.15, long. 27.05. Plut. *Caes.* 1.4; Suet. *Caes.* 4; Steph. Byz. 659.1–2.

Tragia (*Τραγία*) Map 61. Lat. 37.30, long. 27.00. Thuc. 1.116.1; Plut. *Per.* 25; Steph. Byz. 630.6–7; possibly Eupolis fr. 487 (*PCG*) (*Τραγίαί*); Rehm (1929) 22 finds it hard to believe that the island was inhabited.

¹ Islands mentioned in the main text as dependencies or part of the territory of other *poleis* are not included here.

II. The *Poleis*

AMORGOS (AMORGIOS) Map 61. Lat. 36.50, long. 25.55. Size of island: 124 km². The toponym is Ἀμοργός, ἡ (Thuc. 8.28.5; IG XII.7 69.23 (C4l–C3e)). The ethnic is Ἀμόργιος (IG II² 43.B28; Ath. 480D: Σιμωνίδης ὁ Ἀμόργιος). The alternative forms Ἀμοργίνος and Ἀμοργίτης are attested only in late sources (*Suda* Σ446; Steph. Byz. 86.12–13). Stephanos 86.9 makes the island one of the *Kyklades*. Amorgos was divided among three *poleis* (Ps.-Skylax 58: τρίπολις; IG XII.7 68.1–2 = Migeotte (1984) 189–92 no. 54 (C4l/C3e): ἡ πόλις [ἡ Ἀρκεσινίων καὶ ἡ πόλις ἡ Αἰγιαλέων καὶ [ἡ πόλις ἡ Μινοητῶν]). They were allegedly founded by the poet Semonides as a Samian colony more than 400 years after the Trojan War ((*FGrHist* 534) T 1a–b). The view that the three Amorgian *poleis* were Samian colonies may derive some support from the names of the months (Loukopoulou (1989) 116–17 n. 2). They paid tribute to the Athenians in C5 as a *synteleia* (IG I³ 278.vi.10, 279.ii.80, 280.ii.73, 281.iii.58, 282.ii.41) and were united once again in joining the Second Athenian Naval League (IG II² 43.B28). An Aristotelian *Constitution of the Amorgians* is attested (Heracl. Lemb. 47). The collective use of the ethnic is attested internally on coins: *AMO* (Head, *HN*² 481 (C4)) and externally in the Athenian tribute lists and on the *stela* listing the members of the Second Athenian Naval League (*supra*). The individual ethnic is used externally on Delos in 364/3 (Ἀμοργίη, *I.Délos* 104.72) and in Eretria c.300 (Ἀμόργιος, IG XII.9 799). Thus, persons from the island were often regarded as simply Amorgioi, regardless of their *polis* of origin or the precise political situation of the island. Loukopoulou (1989) 116–19 argues that the three *poleis* used the same calendar, but the evidence for several months is Hellenistic (Trümper, *Monat.* 73–78). It is clear that the *poleis* of Amorgos combined for various purposes in C5 and C4, especially when dealing with outside powers. But there is ample evidence that on land the *poleis* retained their individual identities. For the political institutions of the *poleis*, with reservations, see Ruppel (1927) 313–19.

Amorgos struck bronze coins in C4s. Types: *obv.* star and crescent, or head of Asklepios, or cupping vessel; *rev.* two thyrsos crossed, or bee; legend: *AMO* (Head, *HN*² 481).

471. Aigiale (Aigialeus) Map 61. Lat. 36.55, long. 26.00. Size of territory: 2. Type: A. The toponym is Αἰγιαλή, ἡ (IG XII.7 515.56 (C2)), but Αἰγιαλός/-όν, ὁ/τό is also reported

(IG XII.7 388.35 = Migeotte (1984) 196–98 no. 56 (C2)). According to Steph. Byz. 121.2, an alternative toponym was *Μελανία*. The city-ethnic is Αἰγιαλεύς (IG XII.7 68.1 (C4/C3)). Aigiale is referred to as a *polis* in the urban sense by the term *τρίπολις* at Ps.-Skylax 58, and is called *polis* in the political sense in IG XII.7 68.1 (C4/C3), where the internal and collective sense of the city-ethnic is used. The external use seems to be unattested until C2l, when the collective use is found in an inscription of Magnesia (*Syll.*³ 562.83). Aigiale was situated at the eastern end of Amorgos; there are walls of Archaic or Classical date, and sherds testify to occupation until C4l (Leekley and Noyes (1975) 40). The territory of Aigiale bordered on that of Minoa (no. 573). In light of the limited archaeological work in the Amorgian countryside, nothing can be said with confidence about the extent of the territory, but it seems to have been larger than 25 km². The protective divinity of Aigiale was Athena Polias, who had a sanctuary where *stelai* were sometimes erected (IG XII.7 386.42 = *Syll.*³ 521 (C3)); she is once attested as sharing a sanctuary with Zeus Polieus (IG XII.7 387.23 (C3)).

472. Arkesine (Arkesineus) Map 61. Lat 36.50, long. 25.50. Size of territory: 2. Type: A. The toponym is Ἀρκεσίνη, ἡ (IG XII.7 53.38 (C1)) or Ἀρκεσίνα (IG XII.7 50.2 (C2)). Steph. Byz. 121.2–3 quotes Polybios as regarding it as masculine (fr. 20). The city-ethnic is Ἀρκεσινεύς (IG XII.7 5.2, 22.10 (C4m)). Arkesine is referred to as a *polis* in the urban sense by the term *τρίπολις* at Ps.-Skylax 58 (cf. IG XII suppl. 330 (C2)) and is called *polis* in the political sense in IG XII.7 5.4, 6, 7–8, 10, 12, 22. The collective use of the city-ethnic appears internally in C4 decrees (IG XII.7 5.2). Arkesine was situated toward the western end of Amorgos, and its territory bordered on that of Minoa (no. 473). The size of the territory was between 25 and 100 km².

The eponymous official was an archon serving as chief of a board of archons (IG XII suppl. 331 (C4); IG XII.7 55 = *Syll.*³ 1200 (C4/C3); Sherk (1990) 262). Of other officials the most important is a *strategos* (IG XII.7 69.47 (C4l/C3e)). Laws and decrees (IG XII.7 69.47 (C4l/C3e)) were proposed in accordance with a probouleumatic procedure (IG XII.7 46 + add (C4)) and passed by a *boule* and a *demos* (IG XII.7.1.1 (C5), 2.1 (C4)) presided over by a board of *prytaneis* (IG XII.7 3.37, 4.6 (C4)). A number of honorific decrees of C4 or C4l–C3e grant *proxenia* to citizens of Athens (no. 361), Thera (no. 527), Rhithymnos (no. 987) and Rhodos (no. 1000) (IG XII.7 5–11). Public enactments were stored in an archive (*δημόσιον*) and in the sanctuary of Hera (IG XII.7 67.83

(C4/C3e)). Trials were brought before an official called *ἐσαγωγεὺς* (IG XII.7 3.39, 42 (C4f)) and heard by a *dikasterion* situated in the urban centre (τὸ ἀστικὸν δικαστήριον) (IG XII.7 3.32, 49–50). The protective deity is not known. The cults of Athena Itonia were very important in the Hellenistic period (IG XII.7 22–23, 33–35), but in the Classical period the cult may have been that of Hera (IG XII.7 1, 2), in whose sanctuary public enactments were kept (IG XII.7 30.5–8 (C3/C2e), 67.83 (C4/C3e), 69.52 (C4/C3e)); a public law forbidding access to foreigners is preserved (IG XII.7 2 (C4); cf. Butz (1996) 86–88). The acropolis of Arkesine was called *Aspis* (IG XII.7 57.5 (C3)). Four months of the calendar, in order, are known from C4: Eiraphion, Anthesterion, Taureion and Thargelion (IG XII.7 62.28, 9, 10, 4, 49; Trümper, *Monat.* 73–77). The fortification walls are probably Hellenistic (Rougémont *et al.* (1993) 104–12) but may go back to C4s (Brun (1996) 151).

473. Minoa (Minoetes) Map 61. Lat 36.50, long. 25.55. Size of territory: 2. Type: A. The toponym is *Μινώα, ἡ* (IG XII.7 228.10 (C2)). The city-ethnic is *Μινωήτης* (IG XII.7 68.2 = Migeotte (1984) 189–92 no. 54 (C4/C3)) or *Μινωήτης* (IG XII.7 223.6 (C2)) or *Μινωίτης* (Androtion (*FGrHist* 324) fr. 22). Minoa is referred to as a *polis* in the urban sense by the term *τρίπολις* at Ps.-Skylax 58 and is called *polis* in the political sense in IG XII.7 68.2 (C4/C3), where the collective and internal use of the city-ethnic is attested. The external use is attested collectively in Androtion (*FGrHist* 324 fr. 22) and individually in a C3 proxeny decree from Tenos (IG XII.5 821.3). A board of *prytaneis* is attested in a citizenship decree of C5–C4 (IG XII.7 219). A cult of Apollo Pythios (or possibly Delios), who may have been the protective deity, is known from a sacred *nomos* of C5–C4 (IG XII.7 220). The urban centre was walled starting in the Geometric period (Marangou (1990)). The walls enclosed an area of c.20 ha. A separately walled acropolis inside the *polis* covered an area of c.4.5 ha. (AR 47 (2000–2001) 122). There are remains of a C4 gymnasium (Marangou (1987) 255).

474. Anaphe (Anaphaios) Map 61. Lat. 36.20, long. 25.45. Size of territory: 2 (40 km²). Type: B. The toponym is *Ἀνάφη, ἡ* (Ap. Rhod. 4.1717; Ath. 400E = Hegesandros (*FHG* IV 421) (C3)). The city-ethnic is *Ἀναφαῖος* (IG I³ 71.1.85; IG XII.3 251) or *Ἀναφαίεος* (IG I³ 283.11.31). The earliest explicit attestation of Anaphe as a *polis* is in a decree of C2 (IG XII.3 248), but the island's status as a *polis* is strongly indicated by membership of the Delian League combined

with the C4 network of *proxenoi* in other *poleis* (*infra*). The collective use of the city-ethnic is attested internally in C4 lists of *proxenoi* (IG XII.3 250.15, 251 *passim*) and externally in the Athenian tribute lists (*supra*). The individual and external use is attested in a C3m citizenship decree from Kalyмна (*Tit. Cal.* 41.2).

Strabo classes Anaphe among the islands in the Cretan Sea (10.5.1), but Ap. Rhod. *Argon.* 4.1711 and 1717 and Steph. Byz. 93.10 among the Sporades. The territory of Anaphe was coterminous with the island. Anaphe was a member of the Delian League. It belonged to the Island district (IG I³ 287.1.9) and is recorded three times in the tribute lists, in 428/7 (IG I³ 283.11.31), in 418/17 (IG I³ 287.1.9) and in 416/15 (IG I³ 289.1.9), paying a *phoros* of 1,000 dr. (IG I³ 283.11.31). It was assessed for tribute in 425/4 (IG I³ 71.1.85) (1,000 dr.). It has been suggested that the island was brought into the League only in 428/7 by Lysikles (Thuc. 3.19.2; Mattingly (1996) 77 with n. 27), and also to restore Anaphe as a member of the Second Athenian Naval League (Accame (1941) 79 and 82 at IG II² 43.86, but see Cargill (1981) 35).

Three fragmentary inscriptions contain lists of *proxenoi* of Anaphe. The two first are of C4 and record *proxenoi* in Olynthos (no. 588), Thessalian Pharsalos (no. 413), Mykonos (no. 506), Knidos (no. 903), Paros (no. 509), Chios (no. 840) and Telemessos (no. 936) (IG XII.3 250–51).

The protective deity was Apollo Asgelatas—by lapsus Agelatos on the map—(IG XII.3 248.8 (C2)), or Aigletes (Callim. fr. 7.19, etc.), whose sanctuary was located a few kilometres east of the *polis* centre and was connected to the *polis* centre by a sacred way (Hiller von Gaertringen (1899–1909) i. 352–53). The sanctuary and the cult are attested in dedications of the Classical period (IG XII.3 256 (C4 or C3), 257 (C4), 258 (C4/C3)). The *polis* centre had temples of Apollo Pythios and Artemis Soteira (IG XII.3.268–71 (Hell.)); there was also a sanctuary for Asklepios (IG XII.3 248.29). Remains of fortification walls and harbour are probably Hellenistic (Hiller von Gaertringen (1899–1909) i. 351–58). For an updated description of the archaeological remains and especially the fortification walls, see Matthaïou and Pikoulas (1990–91).

Some anepigraphic coins on the Milesian–Phoenician standard have been dated to C5e and assigned to Anaphe. Denominations: half-stater and quarter-stater. Types: *obv.* amphora; *rev.* four-part incuse square. The attribution to Anaphe is not secure (Erxleben (1970) 69–70; Figueira (1998) 577).

475. Andros (Andrios) Map 60 (inset). Lat. 37.20, long. 24.50. Size of territory: 4 (380 km²). Type: A. The toponym is Ἄνδρος, ἦ (Hdt. 5.31.2; *IG* II² 123.20 = Tod 156.20 (356)), denoting both the island (Hdt. 5.31.2) and the town (Hdt. 4.33.2). The city-ethnic is Ἄνδριος (Pl. *Ion* 541D; *IG* II² 123.9). Hdt. 5.31.2 classes Andros among the Kyklades; cf. Strabo 10.5.3. Andros is called a *polis* both in the urban sense (Xen. *Hell.* 1.4.22; Ps.-Skylax 58) and in the political sense (Hdt. 4.33.2; Arist. *Pol.* 1270^b12–13; *SEG* 12 390.6, 31, 44 (c.320); for the date see *SEG* 30 1070). The territory, which was coterminous with the island itself, is called ἡ Ἄνδρῖα χῶρα by Xenophon (*Hell.* 1.4.22). The collective use of the city-ethnic appears externally in the Athenian tribute lists (*infra*) and on Delos in 377/6 (*I.Délos* 98.B.9–10). Internally its first appearance is in a decree of C4f (*IG* XII suppl. 245.3). The individual and external use is attested in Athens in C5s (*IG* I³ 1342–43; Pl. *Ion* 541D), in Epidauros (*IG* IV².1 323) and in Delphi in C5 (*CID* 17 Aa6) and in C4 (*CID* II 22–23).

Andros was said to be under Naxian control in 494 (Hdt. 5.31.2). Herodotus reports Andrians participating in Xerxes' invasion of Greece (Hdt. 8.66.2; Aesch. *Pers.* 887). The island was besieged by Themistokles after an unsuccessful attempt at extortion (Hdt. 8.111–12). Andros was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (*IG* I³ 270.v.20) and is recorded in the tribute lists from 451/0 (*IG* I³ 262.1.19) to 416/15 (*IG* I³ 289.1.21), a total of fourteen times, twice completely restored, paying a *phoros* of first 12 tal. (*IG* I³ 262.1.19), reduced to 6 tal. in 450/49 (*IG* I³ 263.IV.22), but raised to 7 tal. in 416/15 (*IG* I³ 289.1.21). It was assessed for tribute in 425/4 (*IG* I³ 71.1.64) (15 tal.). Plutarch (*Per.* 11.5) mentions the dispatch of 250 Athenian *klerouchoi*, plausibly dated to c.453–448 (Figueira (1991) 220 with note W). Naval forces, probably with marines, participated in actions during the Peloponnesian War (Thuc. 4.42.1, 7.57.4, 8.69.3). In the last phase of the war they fought on the Spartan side (Diod. 13.69.4–5; Xen. *Hell.* 2.1.31). In C4 Andros joined the Second Athenian Naval League (*IG* II² 43.B.16). In 356 the Athenians had a garrison and a general on Andros whose position was called an *arche* (Aeschin. 1.107; *IG* II² 123 = Tod 156); see Reger (1994a) 314–15). In the 370s and later the Andrians participated closely enough with the Athenians in the administration of the amphiktyony on Delos to be punished by the Delians in 314 (Tréheux (1987) 386).

In 411 a contingent of Andrian soldiers supported the Four Hundred in Athens (Thuc. 8.69.3), and from this Gehrke, *Stasis* 22 infers that Andros must have been one of the *poleis* in which the constitution was changed from a

democracy to an oligarchy after the oligarchic revolution in Athens (cf. Thuc. 8.64.1). The Athenian decree on Andros of 357/6 (*IG* II² 123.9) indicates that the constitution had changed back to a democracy, probably in C4e. The only known public enactments of the Classical period are a treaty with Delphi (no. 177) about *theoroi* (*CID* 17 (C5s)) and a citizenship decree of C4 (*IG* XII suppl. 245). We hear about a *boule* with a *grammateus* and a board of *tamiai* attached (*CID* 17; *IG* XII suppl. 245). The eponymous official was an archon, indisputably attested from C3 onwards (*IG* XII.5 715), but probably referred to already in the Classical period (*CID* 17A.9, cf. p. 22; Sherk (1990) 263). The Andrians dedicated at Delphi a statue of their oecist Andreus (Paus. 10.13.4; for the date, 412/11 or 308, see Jacquemin (1999) 313 no. 63). Andros bestowed *proxenia* on a citizen from an unknown *polis* (*IG* XII suppl. 245 (C4)), and a citizen of Andros was appointed *proxenos* by Karthaia (no. 492) (*IG* XII.5 542.b.3–7 (C4m)). C.330 a *theorodokos* was appointed to host *theoroi* from Argos (no. 347) (*SEG* 23 189.II.13).

The protective deity was probably Apollo Pythios (*IG* XII suppl. 245.14), though explicit testimony from the Archaic and Classical periods is absent. A *stèle* recording a C4 proxeny decree was erected in his sanctuary (*IG* XII suppl. 245.14). An inscription of perhaps C4 mentions a cult of Zeus Meilichios (*IG* XII.5 727). The Andrians dedicated an *oīkos* on Delos (*I.Délos* 104–24.36; cf. Tréheux (1987) 381–83). Two Andrians are attested as victors in the Olympic Games (*Olympionikai* 339, 588; Hdt. 9.33.2; Paus. 3.11.6, 6.14.13). An Andrian boy is attested as victor at Oropos in, probably, 329/8 (Petraikos (1997) 409–15 no. 520.19 = *IG* VII 414; Knoepfler (1993) for the date).

The *polis* centre was located on the south-western coast of the island at the unoccupied site called Palaiopolis. It still has magnificent walls, which undoubtedly belong to C4 (so Sauciuc (1914) 10–16) rather than to the Hellenistic period (so Tzedakis (1975) 323). The walls are implied in connection with the siege in 480 (Hdt. 8.112) and Alkibiades' attack in 408 (Diod. 13.69.4). Remains of the western wall stretch from the coast to the acropolis, c.1600 m from the coast. Nothing is left of the other walls but, to judge from burials, the circuit must have enclosed an area of over 100 ha (Sauciac (1914) 10–16). For the urban centre, see Palaiokrassa-Kopitsa (1996). The Pythion, attested in C4 (*IG* XII suppl. 245), is probably the same as the sanctuary of Apollo (τὸ ἱερόν τοῦ Ἀπόλλωνος) mentioned repeatedly in Hellenistic inscriptions (e.g. *IG* XII.5 715 8 (C3)). A stoa of Classical date has been reported (*ArchEph* (1964) 2–4). A rock-cut inscription of perhaps C4e bearing the words *μη*

ἡέλειν γυναιῶκα (Palaiokrassa (1993) 125–26) may indicate a sanctuary dedicated to a female deity (Sève, *BE* (1995) 451). At least two important settlements are known outside the *polis* centre at Andros, one to the east at Zagora (Cambitoglou *et al.* (1971), (1988)), the other west at Hypsele (Televantou (1996), (1999)), both of which began in the Geometric period but continued to be occupied later. Hypsele had a temple (cf. Reger (1997) 469). A *phrourion* at Gaurion on the north-east coast was fortified by Alkibiades in 408 (Diod. 13.69.4).

In the Archaic period Andros struck silver coins on the Aiginetan standard. Denominations: stater (didrachm), drachm and fractions. Types: *obv.* amphora; *rev.* incuse square (Paschalis (1898)). The coinage stopped c.478 (Figueira (1998) 577). Later coins have been attributed to C4f (Paschalis (1898) 348; Sauciuc (1914) 77; Erxleben (1970) 70), but are perhaps better seen as Hellenistic (Head, *HN*² 482).

The Andrians founded colonies at Argilos (no. 554), Stagiros (no. 613), Akanthos (no. 559) and Sane (no. 600) (Thuc. 4.84.1, 88.2, 103.3, 109.3, 5.6.1). A disagreement with Chalkis (no. 365) over the distribution of territory in the colony at Sane led to arbitration by Erythraians (no. 845), Samians (no. 864) and Parians (no. 509) (Plut. *Mor.* 298A–B; Piccirilli (1973) 7–11 no. 2).

476. Astypalaia (Astypaleieus) Map 61. Lat. 36.35, long. 26.20. Size of territory: 2 (97 km²). Type: B. The toponym is Ἀστυπάλαια, ἡ (Ps.-Skylax 48; Arist. fr. 366, Rose; *IG* XII.3 172.3 (C3); cf. *SEG* 27 503). The city-ethnic is Ἀστυπάλαιεύς (*IG*¹ 1046 with *IG*³ p. 973 (C4); *Ant. Pal. App.* 6.44 (r492)). The earliest reference to Astypalaia as a *polis* (in the political sense) is in *I.Priene* 8.48–49, traditionally dated to the 320s, but now downdated to the 280s; see *SEG* 46 1479. *Polis* status in the Classical period is indicated by Astypalaia's membership of the Delian League (*infra*), and by the C4 grant of *ateleia* obtained from Epidauros (*infra*). The collective use of the city-ethnic is attested internally on Hellenistic coins (Head, *HN*² 630) and in inscriptions (*IG* XII.3 215 (C3); Peek (1969) 38–40 no. 87.11–12), and externally in the Athenian tribute lists (*infra*). The individual and external use is attested in an Epidaurian proxeny decree (*IG* IV².1 48 (c.300)), in a private dedication from Delphi (Pomtow (1918) 64 no. 90 (C4m)), in a grant of citizenship (*IG* IV².1 615 (C4)), both for citizens of Astypalaia and for a group of individuals at Arkesine on Amorgos (*IG* XII.7 67.A.3–4 = Migeotte (1984) 183–87 no. 51 (C4/C3e)). Alexander the Great's steersman Onesikritos was from Astypalaia (*FGrHist* 134 T 1 (some say he was from Aigina), T 4; cf. Giannantoni (1990)

ii.511–12). *Patris* is found in *IG* XII.3 211 = *CEG* II 866 (C4/C3e).

According to Ps.-Skymnos 551, Astypalaia was a colony of Megara (no. 225), but a C4 inscription claims Epidauros (no. 348) as the *metropolis* (*IG* IV².1 47). Astypalaia was a member of the Delian League. It belonged to the Karian district (*IG*¹ 269.IV.17) and is recorded in the tribute lists from 454/3 (*IG*¹ 259.III.14) to 428/7 (*IG*¹ 283.II.29), a total of thirteen times, three times completely restored, paying a *phoros* of 2 tal. (*IG*¹ 259.III.14), reduced to 1½ tal. in 443/2 (*IG*¹ 269.IV.17) but raised to 2 tal. again in 433/2 (*IG*¹ 279.I.18). It was assessed for tribute in 425/4 (*IG*¹ 71.I.143). In C4s the Astypalaiaians obtained a grant of *ateleia* from Epidauros (*IG* IV².1 47). Astypalaia received grain from Kyrene (no. 1028) c.330–326 (Tod 196.47 = *SEG* 9.2.47). Citizens from Astypalaia were appointed *proxenoi* by Epidauros (*IG* IV².1 48 (c.300)) and by Chios (no. 840) (*PEP Chios* 50 (C4)).

Aristotle wrote of ἡ Ἀστυπάλαιέων γῆ (*De anim.* fr. 4 (C4m)). The earliest attestation of the eponymous official, a *demiourgos*, dates to C4l or C3e (*IG* XII.7 67.A.8 = Migeotte (1984) 183–87 no. 51; Sherk (1990) 263). A sacred law of C4 is preserved in an inscription (*IG* XII.3 183, which gives a date of c.300; Le Guen-Pollet (1991) 80–81 no. 24). A single month of the calendar, Artamitios, is known (*IG* XII.7 67.A.7 = Migeotte (1984) 183–87 no. 51; cf. Trümper, *Monat.* 197–98).

Pausanias reports a sanctuary of Athena in the story he tells of the Olympic victor Kleomedes of Astypalaia, who in 492 killed his opponent wrestling and went mad; he pulled down the roof of a school so that it fell upon sixty children, but he was later made a hero on the basis of advice from the oracle at Delphi (Paus. 6.9.6–8; *Anth. Pal. App.* 6.44; *Olympionikai* 397). For a cult of Athena in C4, see *IG* XII.3 184. Apollo had a sanctuary with at least one *oikos* and a cult statue (Peek (1969) 43 no. 89 (c.400); cf. *IG* XII.3 185). A sanctuary of Artemis Lochia is reported in C4 (Peek (1969) 44 no. 92), and a cult of Hera in C4 (or C3) is also attested (*IG* XII.3 196).

The ancient urban centre was located at modern Chora; a small site dated to the Classical period has been reported at Armenochori (perhaps a farm?: Hope Simpson and Lazenby (1973) 159–62).

To Astypalaia have been assigned some silver coins dated C5e to c.460. Denominations: stater, obol and fractions. Types: *obv.* amphora (stater), or vessel with handle (obol), or rose (tetartemorion); *rev.* oinochoe with lyre; legend: ΑΣΤΥ in incuse square (stater); *obv.* oinochoe with Α (obol); *rev.* incuse square with Α (tetartemorion). A different, anepigraphic series of staters on the Aiginetan standard

has recently been assigned to the island. Types: *obv.* two dolphins; *rev.* two incuse squares in four compartments (Boutin (1986) 6–10; as belonging only to an island in the Dodecanese, Hackens (1973) 210; see also Sheedy (1998a) 321). Another series of anepigraphic hemidrachms has been assigned to C4. Types: *obv.* head of Helios; *rev.* Bow (E. S. G. Robinson (1949) 330; see Erxleben (1970) 83; Figueira (1998) 580).

477. Chalke (Chalkeates) Map 60 (inset). Lat. 36.15, long. 27.35. Size of territory: 2 (28 km²). Type: B. The toponym is *Χάλκη*, ἡ (Thuc. 8.55.1, 60.3; Steph. Byz. 682.1) or *Χαλκία* (Theophr. *Hist. pl.* 8.2.9; Strabo 10.5.14–15) or *Χάλκεια* (Ps.-Skylax 99), denoting both the island and the town (Strabo 10.5.15). The city-ethnic is *Χαλκεάτας* (*I.Knidos* 605 (C4m); *IG*¹ 280.1.54) or *Χαλκειάτης* (*IG*¹ 270.1v.7); *Χαλκήτας* is attested in C3 and later (Susini (1963–64) 259 nos. 1–2; *Tit. Cam.* 3 D c 54, 4.b.8 and 11, 109.4–5; *IG* XII.1 844.33–34 (C1)). Chalke is not called a *polis* in any source, but its membership of the Delian League (*infra*) and a C4m treaty concluded with Knidos (*infra*) strongly suggest that Chalke was a *polis* in C5–C4. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*IG*¹ 280.1.54) and in the inscription from Knidos (*I.Knidos* 605). The individual use is attested internally (*IG* XII.1 216 (Hell.)) and externally at Kameiros (*Tit. Cam.* 3 Δ c 54 (C11)).

Chalke was a member of the Delian League. It belonged to the Karian district (*IG*¹ 269.1v.6) and is recorded in the tribute lists from 450/49 (*IG*¹ 263.1.10) to 427/6 or 426/5 (*IG*¹ 284.19), a total of seventeen times, three times completely restored, paying a *phoros* of first 3,000 dr. (*IG*¹ 263.1.10), reduced to 2,000 dr. (*IG*¹ 267.111.22) in 445/4 or possibly already in 446/5 (*IG*¹ 266.111.27, completely restored). It was assessed for tribute in 425/4 (*IG*¹ 71.11.104, 2,000 + dr.).

In C4m the Chalkeatai concluded what is presumably an *isopoliteia* treaty with Knidos (no. 903) (*I.Knidos* 605; cf. Gawantka (1975) 209 no. 11 and 38 n. 79). The Knidians granted the Chalkeatai the right to purchase landed property and to participate in Knidian citizenship (*politeia*). The last preserved line of the inscription records the beginning of the decree of the Chalkeatai which presumably granted the Knidians the same privileges.

By C4l, however, Chalke had become part of the Rhodian state, for Theophrastos calls it *Χαλκίαν τὴν νήσον τὴν Ποδίων* (*Hist. pl.* 8.2.9). More specifically, it was turned into a deme of Kameiros (no. 996) (*Tit. Cam.* 109 (C4l)); in C3 lists of *damiourgoi*: *Tit. Cam.* 3 Δ c 54 (C11), 4.b.8, 11 (first century AD)), although perhaps the process of incorporat-

ing its inhabitants into the political structure of Kameiros had not yet been completed by about 325, since the Chalkeatai are treated as exceptions in a law of approximately that date (*Tit. Cam.* 109.4–5).

According to Strabo (10.5.15), the island had a harbour (*limen*); its location has been a matter of dispute (see Susini (1963–64) 249). Strabo also mentions a sanctuary of Apollo, who may have been the protective deity. A dedication to Asklepios is known from C4 or perhaps C3 (*IG* XII.1 956); mention of Zeus and Hekate is likely to have been late (*IG* XII.1 958). The *polis* centre lay to the north and east of the modern settlement, which occupies the acropolis with its castle of the Knights of St John (Hope Simpson and Lazenby (1973) 156; Susini (1963–64) 247). The preserved wall includes sections that have been dated to C6, but much of it is undoubtedly Hellenistic (Susini (1963–64) 248). No coinage is known.

Some C4 coins inscribed *XA* may belong to the present community or to Karian Chalketor (no. 881); *obv.* female head, *rev.* spearhead (*BMC* 18 (Caria and Islands)).

478. Delos (Delios) Map 61. Lat. 37.25, long. 25.15. Size of territory: 1 (3 km²). Type: A. The toponym is *Δῆλος*, ἡ (Hom. *Od.* 6.162; *Hymn. Hom. Ap.* 27; Hdt. 1.64.2; *IG*¹ 402.15, 1460.9, 1461.6), in Doric *Δᾶλος* (Pind. *Ol.* 6.59), denoting both the island (Thuc. 3.104.1) and the town (Ps.-Skylax 58). The city-ethnic is *Δήλιος* (*I.Delos* 98A.16 (377/6)). Delos is called a *polis* in the political sense throughout C4 (*I.Delos* 36.2 = *CEG* II 836; *I.Delos* 74.15–16: *τῆς πόλεως τῆς Δηλίων*). In Ps.-Skylax 58 *Δῆλος* is one of the toponyms listed after the heading *πόλεις αἶδε ἐν ταῖς νήσοις*. The collective use of the city-ethnic is attested internally in inscriptions (*IG*¹ 1460.14 (410/9); *I.Delos* 71.2 (C5/C4), 74.7 (C4s)) and on coins (*infra*) and externally in inscriptions (*IG*¹ 130.19 (c.432)) and in literary sources (Hdt. 6.97.1; Thuc. 5.1; Hyp. fr. 74, Sauppe). The individual use is attested both internally (*I.Delos* 98A.16 (377/6)) and externally at Athens and Karthaia on Keos (*IG*¹ 1349 (c.530); *IG* XII.5 542.49 (C4)).

Strabo (10.5.1) carefully excludes Delos from the Kyklades, which are, rather, the islands around it. The territory of Delos was of course fundamentally the island itself, but ever since Polykrates of Samos attached Rheneia (no. 514) to Delos by a chain (Thuc. 3.104.2, cf. 1.13.6; Shipley (1987) 94–97), the Delians controlled the southern half of Rheneia below the isthmus which divides the island into two unequal halves, as well as the eastern part of the half above the isthmus (see the sketch map in Kent (1948) 248 fig. 3).

This land supported several sanctuaries (see *infra*) and the necessary Delian cemeteries, given the prohibition against burial on the sacred island (see Couilloud (1974)). By C4 the rest of Delian territory on Rheneia was divided into eleven sacred estates (*temene*), which were rented out on contract; these no doubt were established soon after the Rheneian territory came into Delian possession (*I.Délos* 89, 104–11A; Kent (1948) 245–52; Charre and Couilloud-Le Dinahet (1999)). The Delians also owned property on Syros (*I.Délos* 104–11A21) and Tenos (*I.Délos* 104–8B46 (C4s); cf. *I.Délos* 104–32.4, apparently under an entry referring to houses rented out: ἐν Τήνωι ἐν ἄσ[τρι] ---), perhaps having come into Delian possession as a result of foreclosure for unpaid loans (Étienne (1990) 183; *contra* Reger (1994b) 227–28, and *infra*).

In the Archaic period Delos was under the sway of the Naxians (no. 507) (generally, see Gallet de Santerre (1958)), though there is no reason to believe that the Delians thereby ceased to enjoy the status of a *polis*. Under Peisistratos the Athenians claimed Delos and carried out a purification (cf. Lanzillotta (1996) 275–79). When Datis passed by Delos in 490, the islanders fled to Tenos, but he respected the sanctity of the island and called them back (Hdt. 6.97.1). After the end of the Persian War the Athenians chose Delos as headquarters of the Delian League; meetings were held in the sanctuary (Thuc. 1.96.2). The sanctuary was controlled by an amphiktyony under the Athenians (478?–404). In 426/5 the Athenians carried out renewed purifications (Thuc. 1.8.1, 3.104), and in 422 they expelled the Delians, who were permitted by the Persians to live at Adramyttion (no. 800) (Thuc. 5.1, 8.108.4: calling the action a *metoikismos*; Paus. 4.27.9); but at least some of them were brought back to Delos in 421 (Thuc. 5.32.1). After the end of the Peloponnesian War the Delians enjoyed political autonomy from 404 to 394, though subject to a subordinate treaty with the Spartans (no. 345) (*I.Délos* 87 = *Choix* no. 8 (402–399); see Prost (2001)). In 394 the Athenians again secured control over the sanctuary (though not the Delian *polis*), which they held and administered through another amphiktyony until 314, sometimes with the co-operation of the Andrians (no. 475) (see e.g. *I.Délos* 97.5; 97bis 1–2; 98.A63, 64, 96; 100.7, 10, Andrian *amphiktyoneis*).

Aristotle wrote a *Constitution of the Delians* (no. 38 and fr. 495–97, Gigon). Several Delian laws have been preserved epigraphically, including an exclusion of *xenoi* from a sanctuary, perhaps the *temenos* of the Archegetes (*I.Délos* 68 (C4), with Butz (1996) 78–82; Le Guen-Pollet (1991) 77–79 no. 22, and Vallois (1929) 209 n. 2), and a regulation to keep a

spring clean (*I.Délos* 69 (C4f); Le Guen-Pollet (1991) 61–62 no. 14 (C5)). A grant of *ateleia* is known (*I.Délos* 71 = *Choix* no. 6 (C4?)). In 376/5 a fine and permanent exile was imposed on Delians who had seized *amphiktyoneis* in the sanctuary of Apollo, dragged them out, and beaten them (*I.Délos* 98B24–52). A *stasis* between a pro-Athenian and an anti-Athenian faction in the 330s can be inferred from an Athenian citizenship decree to an exiled citizen of Delos and his family (*IG* II² 222; cf. Gehrke, *Stasis* 49). A fragment of Hyperides' Delian Speech (fr. 74) recounts a lawsuit between the Delians and the Rheneians over responsibility for the deaths of Aiolian visitors on Rheneia.

The Delians bestowed *proxenia* on citizens of Athens (no. 361) (*I.Délos* 74 (C4l)), Ios (no. 484) (*I.Délos* 76), and Kition (*IG* XI.4 512 (C4l)), and *proxenia* combined with citizenship on a citizen of Byzantion (no. 674) (*IG* XI.4 510 (C4l)). Delian citizens were appointed *proxenoi* by Athens (*I.Délos* 88 (368)), Karthaia (*IG* XII.5 542.49 (C4m)); see Marek (1984) 71–73, 247–80.

The eponymous official of Delos was an archon (*IG* I³ 1460.9–10 (410/9); *I.Délos* 87 (c.403); Sherk (1990) 269–70). We hear of *prytaneis* (*I.Délos* 88 = *Choix* 10 (369/8)), a *boule* (*I.Délos* 71 (C5/C4), 72) and an assembly (*I.Délos* 88 (369/8)). Decrees were passed typically by the *boule* and the *demos* (*I.Délos* 71–73 (C5/C4–390s)), the latter sometimes simply as *ἄγριοι* (*I.Délos* 71); occasionally a named person moved the decree (*I.Délos* 73 (390s), 74 (C4e)). Other known officials include an *arxas stephanephoros* (*I.Délos* 37 (C4)), *hieropoioi* (*I.Délos* 73 (390s)), *grammateus* of the *boule* (*I.Délos* 88), an *epistates* (*I.Délos* 88), and *strategoï* (*I.Délos* 88). *Neokoroi* appear as helpers of the *amphiktyoneis* until 409 or 408; thereafter they are called *episkopoi* or *epitropoi* (*I.Délos* 93.10–15 and 94.4). The civic subdivisions (clearly modelled on Athens) (Jones, *POAG* 211–12) comprised four *phylai* (only *Ἀργαδεῖς* is known by name: *IG* XI.4 1155.3 (C3f)), several *trittyes* (e.g. *ἡ τριττὺς ἡ Μαψιχιδῶν* (*IG* XI.2 199A.12 (275); cf. Bruneau and Ducat (1983) 123). The protective deity was of course Apollo Delios (Ananios 1.1, West²; *Hymn. Hom. Ap. passim*; Pind. *Pae.* 5, Race; on Pindar's connections with Delos, see Simon (1997); on the tradition of Apollo's birth, see Le Roy (1973)). The cult statue of Apollo made by Tektaios and Angelion (Paus. 2.32.5, 9.35.3) replaced a *xoanon* taken to Epidelion (Paus. 3.23.3). There was also a *xoanon* of Aphrodite (Paus. 9.40.3–4). The dedication to Athena Polias (*I.Délos* 15 = *LSAG* 306 no. 42 (C6l)), which is carved on a column of the *bouleuterion*, should probably be attributed to the Athenians.

Apollo's sanctuary, which can be traced back to Bronze Age roots, was the chief *ἱερόν* of Delos (Courby (1931) 1–106; Bruneau and Ducat (1983) 130–33), but of course the tiny island was saturated with sanctuaries. These include an Artemision on Delos which dates in its original form to C7 (*I.Délos* 73 (390s); Bruneau and Ducat (1983) 154–59) and an *Ἀρτεμίσιον ἐν νήσῳ* recently shown to have been located on Rheneia (Tréheux (1995)); a Heraion dating from C7 (Plassart (1928); Bruneau and Ducat (1983) 230–31); a Letoon built c.540 (Gallet de Santerre (1959) 37–72; Bruneau and Ducat (1983) 168–71); a Dodekathion to the Twelve Gods, but which had only altars in C5–C4 (Will (1955); Bruneau and Ducat (1983) 165–66); an Archesion for Anios, the founder of Delos, of C6e (F. Robert (1953); Bruneau and Ducat (1983) 200–1; Bruneau (1970) 413–30 on the cult); an Aphrodision which was consecrated C4l (Roussel (1987) 240–42; Bruneau (1970) 331–44; Bruneau and Ducat (1983) 213–14). Delos is also rich in public buildings: the *ekklesiasterion* dates from C5e (Hansen and Fischer-Hansen (1994) 61–62; Vallois (1929) 278–302; Bruneau and Ducat (1983) 159); the *bouleuterion* from C6f (Gneisz (1990) 45–46, 315 no. 17; cf. *I.Délos* 84 (c.300)); the *prytaneion* was begun before C4m (Étienne (1997); Bruneau and Ducat (1983) 135–37; S. G. Miller (1978) 67–78, as C5; cf. also *IG XI* 2.144.A.98, 101); the *hieropoion* is C4l (Tréheux (1987)). The impressive theatre (*TGR* ii. 192–94) goes back to C4 but was not finished till C3m (*IG XI*.2 287.A 92–93, work still going on in 250; Vallois (1944) 220–38).

As a sacred site Delos was always unwallled (see Rigsby (1996) 51–53); for Datis, see *supra*; on the “battle of Delos” inferred from Hippoc. *Epid.* 5.61 and 7.33, see F. Robert (1973)). The city seems originally to have occupied land north of the sanctuary; the habitation quarter known as the Quartier du Théâtre was a C3 development (Chamonard (1922)), and of course the great period of expansion on Delos fell in the decades after the Romans gave Delos back to the Athenians in 167 (Roussel (1987) *passim*; Habicht (1997) 246–63). On the harbour facilities of Delos, see Duchêne and Fraisse (2001).

Delos struck silver coins on the Euboic standard from C6l to C5e, stopping after 478. The Archaic and Classical coinage of Delos still lacks a thorough scholarly study (Hackens (1973); Bruneau and Ducat (1983) 107–11; V. Chankowski is planning such a study). Types: *obv.* lyre, sometimes with legend Δ; *rev.* incuse square in eight or four compartments; or spokes of wheel with retrograde legend ΔΗΛΙ (Head, *HN*² 485; Erxleben (1970) 70; Kraay (1976) 45–46).

479. Helene Map 59 (by a lapsus there as Helena). Lat. 37.40, long. 24.05. Size of territory: 1 (18 km²). Type: [A]. The toponym is *Ἑλένη, ἡ* (Strabo 10.5.3), denoting both the island and the town (Ps.-Skylax 58), or *Μάκρις* (Steph. Byz. 265.5). Steph. Byz. 265.6–7 conjectures two different forms of the city-ethnic. Artemidoros (*apud* Strabo) starts the Kyklades with Helene; Strabo excludes it. In Ps.-Skylax 58 *Ἑλένη* is one of the toponyms listed after *πόλεις αἰθε ἐν ταῖς νήσοις*.

IKAROS (IKARIOS) Map 61. Lat. 37.35, long. 26.10. Size of territory: 4 (256 km²). The toponym is *Ἰκαρος, ἡ* (*IG I*³ 261.v.6; *F.Delphes* III.1 497.12 (C4l/C3e); Hdt. 6.95.2; Thuc. 3.29.1), in late sources sometimes *Ἰκαρία, ἡ* (Strabo 14.1.19; Papalas (1992) 183 no. 5, 185 no. 11). The ethnic is *Ἰκάριος* (*IG II*² 8935 (C4s)), in late sources sometimes *Ἰκαριεύς* (*IG XII*.5 723.18 (C2)). According to Ps.-Skylax 58, Ikaros was *δίπολις*, and indeed two *poleis*, Oinoe and Thermai, are known. Unlike other islands with multiple *poleis*, the inhabitants do not always appear simply as Ikarians. Both *poleis* were members of the Delian League but always paid separately; in the tribute lists they are recorded as *Οἰναῖοι ἐν Ἰκάρῳ* (*IG I*³ 263.11.2–3) or *ἐχς Ἰκάρῳ* (*IG I*³ 262.11.9–10) and as *Θερμαῖοι ἐν Ἰκάρῳ* (*IG I*³ 261.vV.6–7) or *ἐχς Ἰκάρῳ* (*IG I*³ 262.11.2–3). Both *poleis* are attested fifteen times in the tribute lists (*infra*), but only twice are they recorded next to each other (264.1.27–8, 265.1.29–30). According to Anaximenes of Lampsakos, Ikaros was “settled” by Milesians (no. 854) (*FGrHist* 72) fr. 26); the date must be C4 or earlier, perhaps in the Archaic period (Manganaro (1963–64) 297); if Archaic, perhaps starting with the Milesian expedition against Naxos, the island had expelled the Milesians by c.478 (see Ehrhardt (1983) 18–19). There are no known coins struck as island issues (see L. Robert (1969–90) i. 333–34 n. 2, 554–55 n. 4).

480. Oine (Oin(o)aios) Map 61. Lat. 37.40, long. 26.10. Size of territory: 3 (c.125 km²). Type: A. The toponym is *Οἴνη, ἡ* (*IG XI*.4 539.7 (C4l/C3e)); but note that this is an honorific decree for an individual described as *Ἰκάρῳ ἐξ Οἴνης*; cf. also L. Robert (1938) 113 n. 1 and *SEG* 42 779) or sometimes in later sources *Οἰνόη, ἡ* (Strabo 14.1.19; Ath. 30D). The city-ethnic is *Οἰναῖος* (*IG I*³ 262.11.9; *I.Délos* 98.A.13; coins, see *infra*), in late sources sometimes *Οἰνόαιος* (Ath. 30D, perhaps quoting Eparchides (*FGrHist* 437) fr. 1). In the Athenian tribute lists the community is referred to as *Οἰναῖοι ἐχς Ἰκάρῳ* (*IG I*³ 262.11.9, 262.11.9–10, 263.11.2–3) or *ἐν Ἰκάρῳ* (*IG I*³ 263.11.2). Oine is referred to as a *polis* in the urban sense by the term *δίπολις* at Ps.-Skylax

58. It is called a *polis* in the political sense in a C4 proxy decree (IG XII.6 1224.5; see also *I.Délos* 98.A.13 and B.5 (377–373), where the *Oīvaíoi* ἐξ Ἰκάρου are listed under the heading: αἰδέε τῶν πόλεων (A.11, B.1). The collective use of the city-ethnic is attested internally on coins: *OINAIΩN* (Head, *HN*² 602, from c.300) and externally in the Athenian tribute lists (IG I³ 262.II.9). The earliest attestation of the individual use of the city-ethnic is from C2e (IG XI.4 811.3–4).

Oine was a member of the Delian League. It belonged to the Ionian district (IG I³ 269.I.9) and is recorded in the tribute lists from 454/3 (IG I³ 259.IV.7) to 429/8 (IG I³ 282.IV.57) a total of fifteen times, once completely restored, paying a *phoros* of first 1 tal., 2,000 dr. (IG I³ 259.IV.7–8), reduced to 1 tal. in 447/6 (IG I³ 265.I.30) and further reduced to 4,000 dr. in the following year (IG I³ 266.I.9), but raised again to 1 tal. in 433/2 (IG I³ 279.I.52–53). It was assessed for tribute in 425/4 (IG I³ 71.I.175–76). Apart from membership of the Delian League and contributions to the Delian Amphiktyony, the only two pieces of information we have about Oine as a political community are the Oinaians' grant of *proxenia* to a citizen of Byzantion (no. 674) (IG XII.6 1224 (C4)) and a grant of *proxenia* by the Delians (no. 478) to a citizen of Oine (IG XI.4 539 (C4/C3e)).

The ancient settlement was once thought to occupy a hill (an acropolis) near modern Kambos, but in 1939 Politis showed that there was no ancient settlement on the hill; he favoured a location by the sea on the left bank of the river that flows by Kambos into the sea (Politis (1939–40) 139–43). The *polis* centre is located on the north coast. It seems likely that Oine's territory included the western part of the island, and thus the temple of Artemis Tauropolos. Graves and villages of Classical date have been reported (N. Zappeiropoulos (1963a), (1963b)).

The Tauropolion, the sanctuary of Artemis (Strabo 14.1.19), was located on the north coast, c.9 km west of Oine, in whose territory it surely was (though it seems to have operated in some sense as an island-wide sanctuary, perhaps rather like Klopédi on Lesbos). Ceramics start in C7, and building by C6, and continuously thereafter (Papalas (1983); Politis (1939–40); Ph. Zappeiropoulou (1989)). Recent finds of rock-cut inscriptions mention the *Theoi Samothrakoi* (Hatzianastasiou (1981) 378).

481. *Therma (Thermaios) Map. 61. Lat. 37.40, long. 26.10. Size of territory: 3 (125 km²). Type: A. The toponym is unattested. In the Hellenistic period the urban centre was called *Δράκανον* (Strabo 14.1.19) after the nearby promon-

tory. The city-ethnic is *Θερμαῖος* (IG I³ 259.III.9–10, 261.V.6–7). In the Athenian tribute lists the community is referred to as *Θερμαῖοι* ἐχς Ἰκάρου (262.II.2–3) or ἐν Ἰκάρου (IG I³ 263.II.36–37). The Thermaioi are referred to as having a *polis* in the urban sense by the term *δίπολις* at Ps.-Skylax 58. For *polis* in the political sense, see *I.Délos* 98.A.14 and B.4–5 (377–373), where the *Θερμαῖοι* ἐξ Ἰκάρου are listed under the heading αἰδέε τῶν πόλεων (A.11, B.1). The collective use of the ethnic is attested externally in the Athenian tribute lists (IG I³ 259.III.9–10). The earliest attestation of the individual use of the city-ethnic is from C2e (IG XI.4 811.3–4). Asklepios has been suggested as the chief deity on the basis of the Hellenistic renaming of the city as Asklepieis (L. Robert (1969–90) i.549–68).

Therma was a member of the Delian League. It belonged to the Ionian district (IG I³ 269.I.4) and is recorded in the tribute lists from 454/3 (IG I³ 259.III.9–10) to 429/8 (IG I³ 282.IV.35), a total of fifteen times, once completely restored, paying a *phoros* of 3,000 dr. in all years (IG I³ 259.III.9–10).

The urban centre was located on the south-east coast of the island. A nearby cemetery shows use from the Archaic period (Leekley and Noyes (1975) 20). Ancient remains are few (a bath complex has been reported (Laufer (1989) 278; Pleket (1960)) because most of the site slid into the sea, perhaps as a result of an earthquake in 198 (Papalas (1992) 122).

482. Ikos (Ikios) Map 55. Lat. 39.10, long. 23.55. Size of territory: 2 (65 km²). Type: A. The toponym is Ἰκος, ἡ (Ps.-Skymnos 582) or Ἰκόσ (Strabo 9.5.16), denoting both the island and the town (Ps.-Skylax 58). The city-ethnic is Ἰκιος (IG I³ 262.IV.2). The island is sometimes regarded as one of the Kyklades (Steph. Byz. 330.8), but Strabo groups it with the islands that lie off Magnesia (Strabo 9.5.16). Ps.-Skylax 58 calls the island *δίπολις*, principally in the urban sense, but no trace of two *poleis* recurs in the sources (which are meagre) or the archaeology (likewise). The political sense is attested in IG II² 43.78 and 84, where the *Ikioi* under the heading *πόλεις* are listed as members of the Second Athenian Naval League. The collective use of the city-ethnic appears internally on amphora stamps (*infra*) and externally in the Athenian tribute lists (IG I³ 262.IV.2). The individual and external use is attested in an Attic sepulchral inscription (IG II² 8936 (C4f)). The amphora stamps inscribed *IKIΩN* (IG XII.8 665) or *IKION* (nominative neuter singular) are from C3 or earlier (Dougeri-Intzessiloglou and Garlan (1990) 388 with n. 78, 373 fig. 7; cf. Garlan (1999) 19).

Ikos was a member of the Delian League. It belonged to the Thracian district (IG I³ 271.II.51) and is recorded in the

tribute lists from 451/0 (*IG* 1³ 262.IV.2) to 429/8 (*IG* 1³ 282.II.18), a total of seventeen times, twice completely restored, paying a *phoros* of 1,500 dr. in all years (*IG* 1³ 262.IV.2). Ikos also joined the Second Athenian Confederacy in the 370s (*IG* II² 43.84). Remains of the ancient urban centre on the south-eastern coast of the island include fortification walls of C4 (Philippson (1959) 48). An atelier for the production of amphoras has been found at Tsoukalia, dating from the Classical period and later; finds include stamps marked *IKION* or *IKIΩN* (*supra*). Farmsteads of C4 have also been located (*BCH* 124 (2000) 960–61).

483. Imbros (Imbrios) Map 51. Lat. 40.10, long. 25.45. Size of territory: 4 (275 km²). Type: A. The toponym is *Ἰμβρος*, ἡ (Hom. *Il.* 13.33; *Hymn. Hom. Ap.* 36; Thuc. 8.102.2; *F. Delphes* III.1 497.14 (C4I/C3e)), denoting both the island and the town (Ps.-Skylax 67). The city-ethnic is *Ἰμβριος* (Archil. 114.3, West; *IG* 1³ 265.II.112). Imbros is called a *polis* in the urban sense by Ps.-Skylax 67 and in the political sense in the King's Peace (Xen. *Hell.* 5.1.31). In the Athenian tribute lists the Imbrians are twice recorded under the heading *ἡαῖδε πόλεις* (*IG* 1³ 282.BI.15–16, 19, 285.I.107–8, 110). The collective use of the city-ethnic is attested internally on coins (*infra*) and externally in the Athenian tribute lists (*infra*). For the external and individual use, see Archil. 114.3. A C5s Athenian sepulchral inscription has, instead, *ἐξ Ἰμβριου* (*IG* 1³ 1350).

Like Lemnos, Imbros was seized by the Athenians c.500 (Hdt. 6.41.2–4, 104.1; see Salomon (1997) 45) and resettled with expatriate Athenians. The Imbrians were members of the Delian League. Imbros belonged to the Island district (*IG* 1³ 269.V.34), which indicates that, like the Lemnians, the Imbrians were allies (Thuc. 3.5.1, 7.57.2, 8.102–3) and not Athenian klerouchs like the Skyrians (Graham (1983) 175–84; Salomon (1997) 31–66; cf. Cargill (1995) 5–6). Imbros is recorded in the tribute lists from 447/6 (*IG* 1³ 265.II.112) to 421/20 (*IG* 1³ 285.I.110) a total of twelve times, five times completely restored, paying a *phoros* of 3,300 dr. in 447/6 (*IG* 1³ 265.II.112), raised to 1 tal. in, perhaps, 442/1 (*IG* 1³ 270.V.36). In 429/8 Imbros is listed among *poleis* which *καταδελοσι τὸ μ φόρον* (present a voucher for tribute), presumably contributing to the maintenance of the *Hellespontophylakes* and serving as bases for the fleet patrolling the Hellespontine waters (*IG* 1³ 282.BI.15–16, 19; cf. *IG* 1³ 285.I.107–8, 10; Thuc. 2.24.1). Imbros was assessed for tribute in 425/4 (*IG* 1³ 71.I.98) (1 tal., but both ethnic and amount restored). In the Peace of 404 Athens had to surrender Imbros (Andoc. 3.12; Aeschin. 2.76–77), but by 392, after a short period of independence (Andoc. 3.12, 14) the Athenians had regained control of the

island (Xen. *Hell.* 4.8.15), and Athenian possession was confirmed by the King's Peace of 386 (Xen. *Hell.* 5.1.31). Like Lemnos (*Agora* XIX L3.13, 20, 22, 33, 42, 47), Imbros was now inhabited by Athenian klerouchs. For the view that only some of the inhabitants were klerouchs, whereas the rest were naturalised Imbrians, see Salomon (1997) 75–76. Imbros was still Athenian in the 320s (Arist. *Ath. Pol.* 62.2; *IG* II² 3206; cf. *SEG* 39 211), and remained Athenian by the Peace of 322 (Diod. 18.18.4; see Cargill (1995) 42–58). In C4 the Imbrians were in full possession of Athenian citizenship (Dem. 4.34, 7.4; Aeschin. 2.72).

As an Athenian dependency the Imbrian state is called *Ἀθηναίων ὁ δῆμος ὁ ἐν Ἰμβρῳ* (*IG* XII.8 46; *IG* II² 3206, cf. *SEG* 39.211 (c.325)) or *ὁ δῆμος ὁ ἐν Ἰμβρῳ* (*IG* II² 3203 (C4m)), but in the Athenian tribute lists it is given as *Ἰμβριοι* (*IG* 1³ 265.II.112, etc.). All attestations of civic subdivisions copy Athens: citizens were organised into the Kleisthenic *phylai* and *demoi* (*IG* XII.8 63 (352/1)), and retained this system even after Imbros had broken away from Athens (*IG* XII.8 47 (c.318–307)); see Jones, *POAG* 187–88. Both when the Imbrians were part of the Athenian state (*IG* XII.8 46 (c.350–325)) and when they were independent (*IG* XII.8 47–48 (c.318–307)), decrees were proposed in accordance with a probouleumatic procedure (46.4–7) and passed by the *boule* and the *demoi* (46.1, 47.13, 48.6–7) in an *ἐκκλησία* (47.3, 48.4) presided over by an *epistates* and two *symproedroi* (47.3–4, 48.4–5). The eponymous official was the Athenian archon when Imbros was part of the Athenian state (*IG* XII.8 63.1) and the island's own archon when Imbros was independent (*IG* XII.8 47.9), but see Cargill (1995) 146; Sherk (1990) 270–72. An Athenian law of 374/3 regulates the 8⅓ per cent tax on grain imports from Imbros (Stroud (1998) 4–5; cf. *IG* II² 1672.297). One month-name is known: Hekatombaion, an Athenian reflection (*IG* XII.8 47; see Trümper, *Monat.* 117).

The patron deity was Athena Polias (*IG* XII.8 58.10). There was a cult of the Twelve Gods (*IG* XII.8 63 (352/1)), and the famous Kabeirion for the *Θεοὶ Μεγάλοι* attested in inscriptions (*IG* XII.8 51, 71–74 (all Hell.)); cf. Fredrich (1908) 97–99) and by Strabo (10.3.21) (see Hemberg (1950) 37–43). Steph. Byz. 331.14–15 reports a sanctuary of Hermes, whose worship is attested in C4 (*IG* XII.8 68–69; Fredrich (1908) 100). The chief Imbrian river was called the Ilisus (Plin. *HN* 4.72), no doubt an echo of Attika to be attributed to the klerouchs (see Fredrich (1908) 82). The urban centre has remains, including a city wall, that have been dated to C4 (Fredrich (1908) 85–88). The island is still little explored archaeologically.

The Imbrians struck bronze coins in C4s. Types: (1) *obv.* female head; *rev.* naked ithyphallic figure of Hermes Imbramos; legend: *IMBPOY*. (2) *Obv.* head of Athena; *rev.* owl; legend: *IMBPOY*. (3) *Obv.* head of Athena; *rev.* caps of the Dioskouroi; legend: *INBPI* (Head, *HN*² 261; *SNG Cop. Thrace* 952–61).

484. Ios (Ietes) Map 61. Lat. 36.45, long. 25.15. Size of territory: 3 (109 km²). Type: A. The toponym is *Ἴος*, *ἷ* (*IG XII.5 1004.4* (C4/C3); *F. Delphes III.1 497.13* (C4l/C3e); Strabo 10.5.1), denoting both the island (*Ath. Pal.* 7.1) and the town (Ps.-Skylax 67). The city-ethnic is *Ἰήτης* (*IG XII.5 1002.3* (C4); *I. Délos* 98A.13 (377/6)). Ios is called a *polis* both in the urban sense (Ps.-Skylax 58) and in the political sense (*IG XII.5 1002.3* (C4)). The collective use of the city-ethnic is attested internally on coins (*infra*) and in inscriptions (*IG XII.5 1002-4* (C4l); *IG XII suppl. 168* (C4 in *LGN*, but for the Antigonos as Gonatas, not Monophthalmos, see Habicht (1996)) and externally in the Athenian tribute lists (*infra*) and on Delos (*I. Délos* 98A.13 (377/6)). The individual and external use appears also on inscriptions of Delos (*I. Délos* 76.3 (C4s); *I. Délos* 104-26.C.2 = *Choix* no. 12 (C4), 104-26B (C4m), which record the acquittal of an Ietan tried in Athens; cf. Stumpf (1987) 211-13). *Patris* is found in Arist. fr. 76, Rose.

Ios was a member of the Delian League. It belonged to the Island district (*IG I³ 269.v.27*) and is recorded in the tribute lists from 450/49 (*IG I³ 259.vi.14*) to 416/15 (*IG I³ 289.i.20*), a total of sixteen times, twice completely restored, paying a *phoros* of 1 tal. in 454/3 (*IG I³ 259.vi.14*) to 452/1 (261.i.13), lowered to 840 dr. in 450/49 (*IG I³ 263.iv.23*), but raised to 3,000 dr. in 433/2 (*IG I³ 279.i.87*) or some years before. Ios was assessed for tribute in 425/4 (*IG I³ 71.i.77*) (1 tal., but amount restored). In C4 Ios was a member of the Delian Amphiktyony (*I. Délos* 98A.13, 104-28aA.14, bA 20).

Decrees (*psephismata*) moved by named individuals (*IG XII.5 1001-4* (C4-C3e)) were put to the vote by *prytaneis* (*IG XII suppl. 168*) or four *proedroi* (*IG XII.5 1002, 1004*) and passed by the *boule* and *demos* (*IG XII.5 2, 1002, 1004*) or sometimes just the *demos* (*IG XII.5 1001, suppl. 168*) presided over by an *epistates* (*IG XII.5 2, 1001*). Attested officials are a board of *strategoí* and some trierarchs (*IG XII.5 1004*), a board of *praktoreis* (*IG XII.5 1001*), a board of *eklogeis* (*IG XII.5 1001-2, 1004*) and a board of *hieropoioi* (*IG XII.5 2 = LSCG 199-200 no. 105*). A decree of C4l (308-306) speaks of the restoration of the ancestral laws (*τοὺς νόμους τοὺς πατρίους*) (*IG XII suppl. 168.3*). From C5l and C4 are preserved two laws about grazing sheep (*IG XII.5 1, 2A = LSCG*

nos. 104-5). There is no real evidence for civic subdivisions (Jones, *POAG* 214).

Ios bestowed *proxenia* on citizens of Karystos (no. 373) (*IG XII.5 2A* (C4)), Athens (no. 361) (*IG XII.5 1000* (C4)) and Astypalaia (no. 476) (*IG XII.5 1003* (c.300)). Citizens of Ios were appointed *proxenoi* by Delos (no. 478) (*I. Délos* 76 (C4s)) and Pholegandros (no. 513) (*IG XII.5 9* (C4)).

The protective deities were Athena Polias and Zeus Polieus (*IG XII.5 8* (C3s)). The Ietan calendar included a month named after Homer, though from when is not clear (Masouris (1992)); the poet's mother is said to have been from Ios ([Plut.] *Vit. Hom.* 4). An extra-mural sanctuary of Poseidon Phyalalmios(?) has been reported (Graindor (1904) 310). There was a sanctuary of Apollo Pythios, where public enactments were published (*IG XII.5 3* (C5), 1000.16-17 (C4)), and a communal cult of Homer, which probably had a sanctuary or heroon of some sort (Paus. 10.24.2; Strabo 10.5.1; *IG XII.5 *1¹-*1⁶*).

The urban centre lies under modern Chora, but remains of the temple of Apollo Pythios have been identified (*IG XII.5 100* with Graindor (1904) 308-9, 311-12). An inscription mentions a place called Philotos (*IG XII.5 1005.4*), but it has not been further identified. Remains of an undated defence circuit are still visible; it enclosed an area of less than 10 ha, perhaps, 5-9 ha (Brun (1996) 149-50 and personal information).

Ios struck coins of silver and bronze from C4l on. Types: *obv.* head of Homer; legend: *OMHPOY*; *rev.* laurel wreath, or Athena hurling spear, or palm-tree; legend: *IHTΩN* (Head, *HN*² 486; *SNG Cop. Argolis-Aegean Islands* 673-77).

485. Kalymna (Kalymnios) Map 61. Lat. 37.00, long. 27.00. Size of territory: 2 (93 km²). Type: A. The toponym is originally *Κάλυδνα*, *ἷ* (Hom. *Il.* 2.677; Diod. 5.54.1; Steph. Byz. 350.6; cf. Segre in *Tit. Cal.* p. 2), from C4 *Κάλυμνα*, *ἷ* (Ps.-Skylax 99; *Tit. Cal.* x.1 (C4-C3); 1B.16 (C4); Strabo 10.5.19; Steph. Byz. 350.12). In Homer (*Il.* 2.677: *νήσοις τε Κάλυδνας*), and in a number of late interpretations of this line (Strabo 10.5.14, 19; Eust. *Il.* 1.495.4ff, 496.12ff; Hsch. *K*527) the toponym occurs in the plural, and it seems reasonable to suppose that the islands in the vicinity of Kalymna were subsumed under the plural toponym Kalydnai, even if we cannot say for sure which islands were included. The contrast *ATL* finds in a Kalymnian inscription between the Kalydnian islands and the *demos* of the Kalymnians (*Tit. Cal.* 64 (C3l) = *Syll.* 3 567; *ATL* cites *SGDI III* 3586) rests on a false restoration; lines 9-10 are better restored as *ἐπὶ τὰν πόλυν καὶ τὰν χώραν καὶ τὰς νάσος*

τὰς Κα[λυμνίων] as proposed by Herzog (1902) 319, who saw in the islands Pserimos, Telendos and other small islands near Kalymna.

The city-ethnic was originally *Καλύδνιος* (*IG* 1³ 261.1.10; Hdt. 7.99.2; Androtion (*FGrHist* 324) fr. 27), from C4 *Καλύμνιος* (*Tit. Cal.* 1 (C4); Men. fr. 348). Kalymna is called a *polis* both in the urban sense (*Tit. Cal.* 11.9 (C4–C3)) and in the political sense (*Tit. Cal.* 7.15–16 (C4/C3e); *I.Knidos* 221A.6–7, 15, 35–36, B36 (c.300)). The collective use of the city-ethnic appears internally in Kalymnian decrees of C4 (*Tit. Cal.* 1A–C) and externally in the Knidian arbitration between Kos (no. 497) and Kalymna (*I.Knidos* 221A.15 (c.300)) and in literary sources (Hdt. 7.99.2). The external and individual use of the ethnic is attested in the arbitration decree (*I.Knidos* 221B.36–37) and in a fragment of Menander (fr. 348). It is called *patris* in *Tit. Cal.* 235 (C5) and *Tit. Cal.* no. x = *CEG* II 716 (C4/C3e).

According to Hdt. 7.99.2–3, Kalymna was colonised by Epidauros (no. 348). Diodorus' version (5.54.3), which replaces Epidauros with Kos (no. 497), should almost certainly be seen as an invention related to the absorption of Kalymna by Kos in C31 (*Tit. Cal.* XII). Diodorus gives Thettalos, son of Herakles, as the oecist (5.54.1).

Herodotos noted one or two warships of the Kalydnians under the command of Artemisia at Salamis (7.99.2). The Kalydnians were members of the Delian League. They belonged to the Karian district (*IG* 1³ 269.v.7) and are recorded in the tribute lists from 452/1 (*IG* 1³ 261.1.10) to 415/14 (*IG* 1³ 290.1.19) a total of fourteen times, twice completely restored, paying a *phoros* of 1 tal. 3,000 dr. down to 433/2 (*IG* 1³ 279.1.55) and thereafter an unknown amount (*IG* 1³ 280.1.50). The Kalydnians were assessed for tribute in 425/4 (*IG* 1³ 71.1.148). It seems clear that here we have some kind of grouping around Kalymna to pay tribute, since there seems to be no evidence that the Kalydnai islands were a *polis*.

On the other hand, some scholars have proposed that Kalymna hosted three *poleis*, none of which was called Kalymna. Bean and Cook ((1957) 131–33), following and systematising earlier suggestions, argue that Kalymna had three *poleis*, called Pothaia, located by modern Damos and encompassing the whole valley there, Orkatos, which would have occupied the region of modern Rina (Vathy) and its valley (cf. Newton (1865) i. 319–20), and Panormos, located on the nearby island of Telendos, or possibly at Sykia. Our evidence for the organisation of these entities is Hellenistic, but it seems clear that by some point in C4 there was a Kalymnian *polis*, well attested epigraphically (see *infra*; but

see also Bean and Cook (1957) 131–33, who argue that there never was a single state called Kalymna on Kalymna). If there were in fact three *poleis* on Kalymna before c.C4m, which had formed some kind of *synteleia* with several of the smaller nearby islands to pay Athenian tribute in C5, perhaps they, like Kos, may have undergone a synoecism at roughly the same time.

In C4 the Kalymnians had a council (*boule*) (*Tit. Cal.* 3.1, 8.1) and an assembly, called *ekklesia* (*Tit. Cal.* 1A–B, 2.1–2, 3.2) or *damos* (*Tit. Cal.* 7.3, 8.1). Decrees (*pséphismata*) were passed by the *ekklesia* (*Tit. Cal.* 1A–B, 2.1–2) or by the *boule* and the *damos* (*Tit. Cal.* 8.1, 9.1) or by the *damos* alone (*Tit. Cal.* 7.19); sometimes proposals were put forward by a board of *prostatai* (*Tit. Cal.* 7.1, 8.2), and sometimes they were brought forward on the motion of an individual (*Tit. Cal.* 2.3–4, 3.3). Kalymna bestowed *proxenia* on citizens of Delphi (no. 177) (*Tit. Cal.* 1B), Sikyon (no. 228) (*Tit. Cal.* 1C), Athens (no. 361) and (the region of) Oita (*Tit. Cal.* 3), and citizenship on citizens of Thera (no. 527) (*Tit. Cal.* 8) and Miletos (no. 854) (*Tit. Cal.* 7.23).

The citizens were organised into tribes (*φυλαί*) and demes (*δᾶμοι*). In the Hellenistic period there were a minimum of five *phylai* and seven *damoí* (Jones, *POAG* 231–36). The three ancient Doric *phylai* are attested in C2 (*Tit. Cal.* 88), probably as a survival of a much earlier period. A citizenship decree of C4/C3e stipulates that the new citizen be inscribed in the *phyle* called *Περφίδαί* and in the *damos* called *Ποθαίων* (*Tit. Cal.* 8.20–23; cf. 9.7). The names of two months are attested in C4 inscriptions (*Tit. Cal.* 1A–B); they show that the Kalymnian calendar was identical with that of Kos already in the Classical period (Trümper, *Monat.* 179–81). A late inscription attests directly to Apollo Delios as the chief deity (*Ischr. Cos* EV 232 (first/second century AD), but there is no doubt that he had served in this role earlier as well (see *infra*).

The site of the *polis* centre of Kalymna has not been identified with certainty, though it may well have occupied the site of the modern town of Embolos, which has produced remains of Classical and Hellenistic date as well as Roman period sigillata (Bean and Cook (1957) 128–29). Others have suggested a site at Sykia (Maiuri (1925–26b) 323 n. 1, “Periboli”). The main Kalymnian sanctuary was dedicated to Apollo (*Tit. Cal.* 8.25–26) and lay outside the putative *polis* centre. It was in use throughout the Archaic and Classical periods (Newton (1865) i. 304–12). Near it was a theatre possibly antedating C3 (*TGR* ii. 144).

The territory of Kalymna included not only the island of the same name, but several neighbouring islands. Of

these perhaps only Telendos, Kalinos and Pserimos were large enough to have been occupied permanently. On Telendos have been reported ruins of a theatre and other evidence of habitation (Segre (1944–45) 219); Pserimos has yielded an inscription of (probably) third century AD, which confirms the island's toponym as *Ψήριμος* (*Tit. Cal.* 250.1).

The C6 coins long attributed to Kalymna (Head, *HN*² 631; Segre (1944–45) 5) have now been dissociated from the island (Wartenberg (1998), unknown to Figueira (1998) 578), which leaves Kalymna to the best of my knowledge without coinage before the Hellenistic period.

KARPATHOS (KARPATHIOS) Map 60 (inset). Lat. 35.25–55, long. 27.5–15. Size of territory: 4 (301 km², or, if Saros is included, 324 km²). The toponym is *Κάρπαθος*, *ἡ* (*Hdt.* 3.45.1; *Diod.* 20.93.2); the form *Κράπαθος* occurs in the Homeric Catalogue of Ships (*Il.* 2.676). The toponym denotes both the island (*Hymn. Hom. Ap.* 43; *Diod.* 5.54.4; *Strabo* 10.5.17; *Steph. Byz.* 361.8) and one of the towns on the island (*IG* I³ 1454.35–37 (C5s), see *infra*). The regional ethnic is *Καρπάθιος* (*Archil. fr.* 248; *Arist. Rhet.* 1413^a19; *IG* I³ 271.1.66); for *Καρπάθιος* as a city-ethnic, see *infra*. Ps.-Skylax 99 calls Karpathos *tripolis*, and the names of three *poleis* are attested independently, *viz.* Arkes(s)ia, Brykous and Karpathos (*infra*); but in C5 the island was also home to the semi-independent *koinon* of the Eteokarpathians (*infra*). *Strabo* (10.5.17), however, calls the island *tetrapolis*. This must reflect *Strabo's* confusion (Reger (1997) 453) and not the absorption of Saros as suggested by Susini (1963–64) 245 (see under Saros for further discussion).

Hsch. *K*3967 speaks of Karpathos as *νησον* 'Πόδου. The island was indeed incorporated by the Rhodians (no. 1000), but the date is not certain (Papachristodoulou (1989) 45–46); some scholars see the incorporation as a process that occurred across C4 (Susini (1963–64) 231). Karpathos had a sanctuary of Poseidon Porthmios, who was perhaps the guardian deity. Epigraphic evidence in the form of decrees published at the sanctuary belongs in the Hellenistic period (*IG* XII.1 1031–37), but the archaeological record reaches back into the Archaic period (Hope Simpson and Lazenby (1962) 167), when the sanctuary must have been in the territory of Brykous.

On Karpathos have been found remains of three settlements of the Archaic and Classical periods, one at modern Ag. Ioannis, identified with ancient Brykous, one at modern Arkassa, identified with ancient Arkessia, and one at

modern Pegadi, identified with ancient Potidaion (Hope Simpson and Lazenby (1962) 158).

The Athenian tribute lists record four communities on Karpathos as members of the Delian League: Arkesia, the Brykontioi, the Karpathioi and the Eteokarpathioi. A combination of the tribute lists with the other sources and the archaeological evidence results in the following reconstruction.

486. Arke(s)seia (Arkesieus) Map 60 (inset). Lat. 35.30, long. 27.05. Size of territory: presumably 1 or 2. Type: A. The toponym is *Ἀρκέσεια*, *ἡ* (*IG* I³ 271.1.66–67) or *Ἀρκέσσεια* (*IG* I³ 272.1.77). The city-ethnic is *Ἀρκασ(ε)ιεύς*, attested in late sources only (*IG* XII.1 218 (Hell.), 990 (Roman)). Arkeseia is convincingly identified with modern Arkassa, where an abundance of sherds from the Geometric through the Hellenistic periods were found in and around an acropolis with walls of the late Classical or Hellenistic period enclosing an area of c.1.5 ha (Della Seta (1924–25) 91–92; Hope Simpson and Lazenby (1962) 162–63). It follows that Arkeseia is one of the three *poleis* referred to by *tripolis* at Ps.-Skylax 99 and thus attested as a *polis* in the urban sense of the term.

Arkeseia was a member of the Delian League. It belonged to the Karian district (*IG* I³ 269.IV.22) and is recorded in the tribute lists from 450/49 (*IG* I³ 263.II.26–27) to 428/7 (*IG* I³ 283.III.3) a total of nine times, twice completely restored, paying a *phoros* of 1,000 dr. (*IG* I³ 263.II.26–27). It is listed by toponym (*IG* I³ 265.II.49: *Ἀρ[κ]έσσεια*), usually specified as *Καρπάθο Ἀρκέσσεια*, that is, "Arkes(s)eia of Karpathos" (*IG* I³ 272.1.77), or as *Καρπαθίω[v] Ἀρκέσεια*, "Arkeseia of the Karpathians" (*IG* I³ 271.1.66–67). Since there seems to be no pattern to the use, no change in status should be inferred.

487. Brykous (Brykountios) Map 60 (inset). Lat. 35.50, long. 27.10. Size of territory: presumably 1 or 2. Type: A. The toponym is *Βρυκοῦς*, *-ντος* (*IG* XII.1 995 (first century AD); *IG* I³ 282.IV.9–10, completely restored). The city-ethnic is *Βρυκόντιος* (*IG* I³ 71.II.139) or *Βρυκούντιος* (*IG* XII.1 220.3 (Hell.); *IG* I³ 100.II.4, restored). Inscriptions (*IG* XII.1 994–1009 (C2 and later)) secure identification with modern Ag. Ioannis, with remains from the Archaic through the late Roman period, including a city wall of the late Classical or Hellenistic period (Hope Simpson and Lazenby (1962) 161–62), but Susini (1963–64) 233 gives no date for the fortifications. It follows that Brykous is one of the three *poleis* referred to by *tripolis* at Ps.-Skylax 99 and thus attested as a *polis* in the urban sense of the term. The collective use of the city-ethnic is attested internally in late

inscriptions (*IG XII.1* 994–95 (first century AD)) and externally in the Athenian tribute lists (*IG I³* 71.II.139). The individual use is attested both internally (*IG XII.1* 1000–9) and externally (*IG XII.1* 220 (Hell.)).

Brykous was a member of the Delian League and is recorded in the tribute lists mostly by city-ethnic but once probably by toponym (*IG I³* 282.IV.9–10) from 448/7 (*IG I³* 264.III.17) to 429/8 (*IG I³* 282.IV.9–10) a total of three times, once completely restored, paying a *phoros* of 500 dr. (*IG I³* 264.III.17). Brykous is absent from the full panel of 441/0 (*IG I³* 271.I–II.64–86), and in 429/8 it paid the *phoros* of that year and the preceding year (*IG I³* 282.IV.9–10). It was assessed for tribute in 425/4 (*IG I³* 71.II.139) (500 dr.) and perhaps also in 410/9 (*IG I³* 100.II.4). The sanctuary of Poseidon Porthmios was presumably in the territory of Brykous; perhaps Poseidon was the chief deity. Inscriptions starting in the Hellenistic period attest to a temple of Athena Lindia on the acropolis: that is, in the period when Karpathos was controlled by the Rhodians and formed part of the Rhodian state (*IG XII.1* 997–98). On the unlikely possibility that the island of Saros was part of the territory of Brykous, see under Saros, *infra*.

488. Eteokarpathioi Map 60 (inset). Lat. 35.35, long. 27.10. Type: [A]. Since the Eteokarpathians were organised as a *koinon* (*IG I³* 1454.7, 12, restored), there is no toponym. The ethnic, attested only in the plural, is Ἐτεοκαρπάθιοι (*IG I³* 1454.6, 11, 21, 28 (445–430)). In the Athenian tribute lists the Eteokarpathians are listed under the heading πόλεις αὐταὶ φόρον ταχσάμεναι (*IG I³* 279.II.76–77, 81–82). C.445–430 the Athenians declared a Karpathian, his children and τὸ Ἐτεοκαρπαθίων κοινόν as *euergetai* of the Athenians, and the *koinon* was declared autonomous (*IG I³* 1454.12: [α]ὐτονόμος). This inscription is said to have been found at Pini (see *IG I³* p. 899), which is located in the south-central part of the island. If the inscription was found *in situ*, or at least near its original position, this site should then be that of the sanctuary of Apollo where the cypress was cut for Athena in Athens (for a copy of the inscription was to be erected ἐν Καρ[πάθωι ἐν τῶι] ἱερῶι τῷ Ἀπόλλ[ωνος] ἔτμηθη ἢ κυπάρι[ττος] (*IG I³* 1454 35–37) (for the view that the tree was used on Karpathos, not in Athens, see Alfieri Tonini (1999)). No material earlier than the Hellenistic period seems, however, to have been reported (Leekley and Noyes (1975) 27). Sites in the general region with Archaic and/or Classical period remains have been suggested as villages of the Eteokarpathians (Hope Simpson and Lazenby (1962) 163–65). After the Eteokarpathians had

been declared autonomous, they appear in the Athenian tribute lists among the *poleis* that voluntarily paid *phoros* (πόλεις αὐταὶ φόρον ταχσάμεναι), *viz.* in the years 434/3 (*IG I³* 278.VI.14), 433/2 (*IG I³* 279.II.81–82) and 432/1 (*IG I³* 280.II.75, restored). Thereafter they appear twice as regular members of the League, in 428/7 (*IG I³* 283.III.1) and in 415/14 (*IG I³* 290.I.23). The Eteokarpathians seem to have had no separate city, but a separate organisation (*ATL* i. 497), probably set up by the Athenians as a short-lived splinter community of Karpathos. There is no trace of their existence after C5. Thus, they are not likely to have been one of the three *poleis* on Karpathos recorded by Ps.-Skylax in C4s.

489. Karpathos (Karpathios) Map 60 (inset). Unlocated, not in *Barr.* Type: A. The toponym is Κάρπαθος (*IG I³* 1454.35–37: ἐγ Καρ[πάθωι ἐν τῶι] ἱερῶι τῷ Ἀπόλλ[ωνος], probably referring to a site on Karpathos and not to the island as a whole, c.445–430, see now Alfieri Tonini (1999). The city-ethnic is Καρπάθιος (*IG I³* 1454.5), recorded in, e.g., the Athenian tribute list of 428/7 (*IG I³* 283.III.5) alongside the Eteokarpathians (III.1) and Arkeseia on Karpathos (III.2–3), which “implies a geographical unit less than the entire island for Καρπάθιοι alone” (*ATL* i. 497). It follows that Karpathos is one of the three *poleis* referred to by *tripolis* at Ps.-Skylax 99 and thus attested as a *polis* in the urban sense of the term. The external use of the city-ethnic is attested collectively in the Athenian tribute lists (*IG I³* 269.IV.19) and individually in an Athenian honorific decree (*IG I³* 1454.5). Karpathos was a member of the Delian League. It belonged to the Karian district (*IG I³* 269.IV.19) and is recorded in the tribute lists from 445/4 (*IG I³* 267.III.23) to 415/14 (*IG I³* 290.I.5) a total of nine times, twice completely restored, paying a *phoros* of 1,000 dr. (*IG I³* 267.III.23), raised to 1,500 dr. in or before 415/14 (*IG I³* 290.I.5). The urban centre of the Karpathioi remains unidentified (Hope Simpson and Lazenby (1962) 164–65 suggests a site near modern Aperi, but see Susini (1963–64) 232–33). A stater attributed to Karpathos was found in a hoard dated to c.375 (*IGCH* 1790).

In, probably, the territory of Karpathos, at modern Pegadi, are the remains of “a sizeable classical town . . . convincingly identified with Potidaion” (Hope Simpson and Lazenby (1962) 159). The toponym is Ποτίδαιον, τό (*I.Lindos* p. 1009, l. 25 (Maier (1959–61) i. 188–91 no. 50) (C2m); Ποσειδίου πόλις in *Ptol. Geog.* 5.2.33). The ethnic is Ποσιδαίεύς (*I.Lindos* p. 1009, ll. 31–32 (Maier (1959–61) i. 188–91 no. 50), C2m). Our written sources for this place are all post-Classical and refer to the *κτοίνα* of the Potidaieis

when it was part of the Rhodian state. Because Potidaion does not appear in the Athenian tribute lists, it has been taken to be the *polis* centre of the Eteokarpathioi (Head, *HN*² 631; but see *infra*). Others have seen it as the port (*epineion*) of the Karpathioi (so Hiller von Gaertringen in *IG XII.1* p. 158, followed by Hope Simpson and Lazenby (1962) 159). But given the lateness of our sources, it is difficult to be confident that this entity existed before the Hellenistic period, and in any case it is not needed to make up the number of *poleis* attested by Ps.-Skylax. Perhaps the best solution is to connect it, as Hiller von Gaertringen does, with the Karpathioi, who otherwise have no obvious civic centre, and who—if they reappear as the Rhodian deme of the *Καρπαθιοπολίται* in the Hellenistic period, as seems very likely—are closely associated in our epigraphical evidence with the *ktoina* of the Potidaieis (see, e.g., *I. Lindos* p. 1009; Susini (1963–64) 231). The acropolis of Potidaion has walls that have been attributed to C4, and it has yielded pottery of Classical date (Melas (1991) M–25).

The coins long attributed to this city (silver staters with *obv.* three dolphins; *rev.* incuse square) in fact belong elsewhere (Cahn (1957), and already Hiller von Gaertringen in *IG XII.1* p. 158). The Elmali hoard, which was buried in C5m, is said to contain a Karpathian coin (Figueira (1998) 578).

490. Kasos (Kasios) Map 60 (inset). Lat. 35.25, long. 27.00. Size of territory: 2 (69 km²). Type: [A]. The toponym is *Κάσος*, ἡ (Hom. *Il.* 2.676; Ps.-Skylax 99 emended by Voss, MSS *Κράσος*; Steph. Byz. 364.3; Hsch. *Κ977*), denoting both the island and the town (Strabo 10.5.18). The city-ethnic is *Κάσιος* (*IG I*³ 279.11.83; *IG XI.2* 199.B.14). In the Athenian tribute lists of 434/3 (*IG I*³ 278.VI.5–6, 11) and 433/2 (*IG I*³ 279.11.76–77, 83) the Kasioi are recorded under the heading *πόλεις αὐταὶ φόρον ταχσάμεναι*. The collective use of the city-ethnic is attested externally in the Athenian tribute lists (*supra*).

Steph. Byz. 364.3 catalogues the island among the Kyklades. The islands around Kasos, the *Κασίων νῆσοι* (Strabo 10.5.18), were part of its territory. Kasos was a member of the Delian League. It belonged to the Ionian–Karian district (*IG I*³ 283.III.4) and is recorded in the tribute lists from 434/3 (*IG I*³ 278.CI.11) to 415/14 (*IG I*³ 290.I.6) a total of six times, once completely restored, paying a *phoros* of 1,000 dr. (*IG I*³ 279.11.83). The presence of Kasian *theoroi* on Delos in 274 provides a *terminus post quem* for the absorption of Kasos by the Rhodians (*IG XI.2* 199.B.14 with Fraser and Bean (1954) 152; Papachristodoulou (1989) 48). The urban centre and its harbour were connected by an ancient road

(Susini (1963–64) 206). A sanctuary of Apollo Temenitas is attested from the Hellenistic period (*I.Cret.* I xxii 4.C.XII. I.66–69; cf. Susini (1963–64) 211). Otherwise, physical remains are sparse; see Hope Simpson and Lazenby (1962) 168.

Κεος (Κεῖος) Map 61. Lat. 37.35, long. 24.20. Size of territory: 3 (159 km²). The toponym is *Κέος* (Bacchyl. *Epin.* 6.5; Hdt. 8.76.1) or *Κέως*, ἡ (Ps.-Skylax 58; *IG II*² 404.6–7 (C4s)). The ethnic is *Κεῖος* (*IG XII.5* 594.7) or *Κήιος* (*CID II* 6.B.10–26). Strabo, quoting Artemidoros, places Keos among the Kyklades (Strabo 10.5.3). Keos had four *poleis* (Ps.-Skylax 58: *τετράπολις*). Harpokration s.v. *Κεῖοι* quotes Lysias (fr. 96, Sauppe) for referring to Keos as being one *polis*: “οἱ Κεῖοι μὲν πόλις τσσαύτη”. Harpokration notes the anomaly and takes *polis* to be used synonymously with *nesos*: *τὴν νῆσον δὲ πόλιν ὠνόμασεν ὁ ῥήτωρ*. But Lysias’ use of the ethnic instead of the toponym indicates that the reference is to Keos as a kind of political community (*CPCActs* 5: 126–27). The individual use of the ethnic is attested internally in C4 decrees (*SEG* 14 531.7) and externally in the Athenian tribute lists (*infra*) and in the C4 lists of the Delian Amphiktyony (*I.Délos* 98.A.12 = *IG II*² 1635.113 (377/6)). The individual and external use is attested in an Athenian list of crews of ships of 405 (*IG I*³ 1032.VI.72–82) and in Delphic inscriptions (*CID II* 4.III.40 and 6.B.10–26). In the accounts of the Delphian *naorpoi* we find *Κεῖος ἐξ Ἰουλίδος* (*CID II* 12.1.33) and *Κεῖος ἐξ Καρθαίας* (*CID II* 12.1.1) alongside the simple *Κεῖος* (*CID II* 17), also attested in a Delphic proxeny decree of C41 (*SEG* 31 536). This probably reflects the federation (cf. Reger and Risser (1991) 316–17).

It is not always easy to distinguish between the use of the island ethnic *Κεῖος* (*IG XII.5* 594.7 = *SEG* 14 531) or *Κήιος* (*CID II* 6.10–26) to designate merely “a person from Keos” (without reference to his or her *polis* of origin) and its use to denote “a citizen of (one of) the Keian federation(s)” of three of the four *poleis* in C5 and C4 (cf. Reger (1997) 474 and *infra*). “Keios” probably means “from the island of Keos”, in Bacchylides (*Epigr.* 1.4: *Κήιος*; 17.130: *Κήιοι*), in the expression *Κηία φλυαρία* in Timokreon (10.1–2 West (C5f)), and in the Parian Chronicle mentioning Simonides as a Keian (*IG XII.5* 444.70 (*FGrHist* 239)). Cf. also the Keians in Plato: Simonides, Prodikos and Pythokleides (Pl. *Hipparch.* 228C; *Ap.* 19E; *Prt.* 314C (all rC5)), as again in the Athenian list of crews (*IG I*³ 1032.VI.72–82) or in the victor lists for the Olympic, Nemean and Isthmian Games (*Olympionikai* 116 (540), 203 (480), 288 (452)). But when Herodotos speaks of

the Hestiatorion of the Keians on Delos (4.35.4) (the building has not been identified: see Bruneau and Ducat (1983) 160), a building publicly dedicated to Apollo, it is far more likely that he wants his reader to understand that a political body, “the Keians”, dedicated it. Moreover, Herodotos has the Keians supply two ships at Artemision (Hdt. 8.1.2) and seven at Salamis (Hdt. 8.46.2). The Keians are recorded on the Serpent Column commemorating the victory at Plataiai (ML 27.7), and at Olympia after the Persian War (Paus. 5.23.2).

The Keians were members of the Delian League, and may have been among the original members (*ATL* iii. 198–99). They belonged to the Island district (*IG* I³ 270.v.23) and are recorded in the tribute lists from 451/50 (*IG* I³ 262.v.22) to 416/15 (*IG* I³ 289.i.13) a total of thirteen times, twice completely restored, paying a *phoros* of at first more than 1 tal. (*IG* I³ 262.v.22), raised to 4 tal. in 450/49 (*IG* I³ 263.iv.21), reduced to 3 tal. in 433/2 (*IG* I³ 279.i.74), but raised again to 6 tal. in 417/16 (*IG* I³ 288.i.10). They were assessed for tribute in 425/4 (*IG* I³ 71.i.69) (10 tal.) and in 410/9 (*IG* I³ 100.II.3). They are recorded among the paying members in 413 (Thuc. 7.57.4). Although the most recent study of Keian coinage assigns no coins with the legend *KEI(ΩN)* to before the end of C4 (Papageorgiadou-Banis (1997) 43; but cf. Sheedy (1998b)), this need mean only that a C5 federation did not issue coins. Archaic coins minted by Ioulis, Karthaia and Koresia have a dolphin alongside the individual type of each *polis* (*infra* 749, 750 and 751). On balance the evidence strongly suggests, as already argued by Brun (1989), that the Keian *poleis* created in C5 a federal state of some kind with ties between the participant *poleis* that reached beyond merely joint payment of a *phoros* to Athens.

In C4 under the heading *Κείων*, the Ioulitai, Karthaias and Koresioi are listed individually as members of the Second Athenian Naval League (*IG* II² 43B.23–26); the Poiessians are recorded separately (l. 82). Two *isopoliteiai* agreements between the Keians and the Euboian cities of Histiaia (no. 372) (*SEG* 14.531 = improved text of *IG* XII.5 594 = Tod 141) and Eretria (no. 370) (*SEG* 14 530), both of perhaps c.364 (cf. Brun (1989) 124), show that at least the three usual Keian *poleis* formed a federation again at this time: there was a common citizenship for all Keians, and the citizens were subdivided into *phylai*, *trittyes* and *choroi* (*χώροι*) (Jones, *POAG* 203–4). A common *boule* and boards of *thesmophylakes*, *probouloi* and *astynomoi* are also attested. According to Heracl. Lemb. 28, quoting Aristotle, the Keians passed a law (*nomos*) forbidding girls and boys from drinking wine (cf. Villard (1997)); but he also says (26) that Keos

was settled by one Keos from Naupaktos (no. 165), a story which may owe its origins to Keian relations with that town in C3 (see *IG* XII.5 527); otherwise the best ancient testimony agrees that the Keians were Ionians from Athens (Hdt. 8.46; Thuc. 7.57.4; schol. Dionys. Perig. 525, giving Thersidamas as the leader). Ioulis seems to have been the capital of the federation. The Keians appear as debtors on Delos in 377/6 (*I.Délos* 98.A.12). An Aristotelian *Constitution of the Keians* is attested (Heracl. Lemb. 26–29). Lys. fr. 96 indicates that the federation was formed before c.380, and it may go back to 411 (D. M. Lewis (1962) 3–4). The Keians defected from the Athenian League in 364 but were subdued by a squadron under Chabrias and forced to dissolve the federation (*IG* II² 111 = Tod 142). The injunction to remain as separate *poleis* is repeated in a decree of 354–338 (*IG* II² 404.13–14 with Dreher (1985) 268; for the date, see Hansen (1984) 125 n. 6). Again, in the list of recipients of grain from Kyrene c.330 (*SEG* 9 2), Ioulis, Koresia and Karthaia are listed individually alongside an amount to the Keians as such (45, 51–55); Ruschenbusch (1982) 183 argues that the Poiessians are inadvertently omitted after the Keians; *contra* Brun (1989) 137. It has been suggested that *IG* XII.5 609 was a list of citizens of a C4 *sympoliteia* between Ioulis and Koresia (Ruschenbusch (1982); see still D. M. Lewis (1962)). Poiessa seems never to have participated in any of these federal states (Phylarchos, *FHG* 1.346; Brun (1989) 131–32). Trümpy, *Monat.* 55–60 argues that the calendars of all four Keian *poleis* must have been identical, but the evidence to support this is slim.

491. Ioulis (Ioulietes) Map 57. Lat. 37.40, long. 24.20. Size of territory: 2 (c.47 km²). Type: A. The toponym is *Ἰουλίς*, ἡ (*CID* II 12.II.30). The city-ethnic is *Ἰουλιήτης* (*IG* II² 43B24; as *Ἰολιήτης* in *IG* II² 1128.25 = Ro 40) or (once) *Ὀβλιάτης* (*SEG* 9 2.45, but the ethnics in this inscription are generally odd). Ioulis is referred to as a *polis* in the urban sense by the term *τετράπολις* at Ps.-Skylax 58. It is called *polis* in the political sense in *IG* II² 111.6 = Tod 142, and in the territorial sense (city plus hinterland) in *SEG* 14.532.3 = Migeotte (1992) no. 56 (C4I/C3e). The collective use of the city-ethnic is attested both externally (*IG* II² 43.B24; *SEG* 9 2.45) and internally (*IG* II² 1128.25). The individual use of the city-ethnic is probably attested in a Delian inscription of 301 (*IG* XI.2 146.45). For a later unquestionable attestation, see *I.Délos* 2634.17 (C2), with *SEG* 45 1049 for the date.

A fragmentary C4m list of citizens (or rather citizens fit for military service) must originally have recorded about 480 names, corresponding to a citizenry of about 700 adult males and a population of roughly 3,500 persons (*IG* XII.5

609; see Ruschenbusch (1982); Cherry, Davis and Mantzourani (1991) 236–37; Hansen (1997) 28–29 with n. 147; Brun (1989) 126–27 for the date). The citizens were organised into seven *phylai*, of which the names of four are preserved: Leodai, Hyllichidai, Thyssidai and Koresioi. The presence of the Koresioi shows that in this period Koresia had already been turned into a subdivision of Ioulis (but this absorption did not last, since Koresia appears once again in the Hellenistic period as an independent *polis* before Ioulis finally absorbs it; see Reger (1998)). The number of adult male citizens of Ioulis before the incorporation of Koresia comes to c.550 and the population to c.2,500 persons. ‘Υλιχίδης is attested as a sub-ethnic in an undated sepulchral inscription: IG XII.5 637 (Jones, *POAG* 204–6). In C4/C3e the citizens were further subdivided in units called *κοινεία* (SEG 14 532.16–17).

Ioulis occupied the north-eastern quadrant of the island and bordered on the territories of Koresia and Karthaia (*infra*). Its harbour (*limen*) (IG II² 1128.38) lay at Otzias, where recent work has revealed the traces of docks and other facilities (Spondyles (1998)). The river Elixos (Strabo 10.5.6) rose near Ioulis and flowed down into the sea by Koresia. The approximate boundaries of Ioulis can be worked out on the basis of topography and some of the sites that recent intensive fieldwork by several teams have discovered (see generally Reger (1998) and the map at Cherry, Davis and Mantzourani (1991) 6).

The eponymous official was an archon, known first from Hellenistic texts (IG XII.5 610.1 (C3l), 597 with Mendoni (1989) 292–95 no. II (C3), 595 (C3–C2)). As early as C5s, however, we hear of a *boule* and a *demos* meeting in an *ekklesia* (IG XII.5 593.B.1–3, C.1). Other C4 officials include a board of, probably, five *stratēgoi* (IG II² 111.15–17), a board of judicial officials called *prostatai* (IG II² 1128.36) and a *grammateus* (SEG 14 532.18). The references to *Thesmophylakes* and a *grammateus* may be C4 or C3e (IG XII.5 595B; SEG 14 532). Laws (*nomoi*) and decrees were passed by the *boule* and the *ekklesia* (IG XII.5 593 (C5); IG II² 1128 (C4m)). Of public enactments preserved in inscriptions the most notable is the C5s law on burial rites and customs (IG XII.5.593; cf. SEG 45 2263). In connection with the abortive revolt against Athens in the 360s, the death penalty and confiscation of property were imposed on pro-Athenian citizens, and the Ioulitai murdered the citizen who served as Athenian *proxenos* (IG II² 111). The protective deity was certainly Apollo Pythios (cf. IG II² 111.22). Other communal cults include Athena (IG XII.5 611 (C6–C5)). The month of Hermaion is attested (IG II² 1128; Trümper, *Monat.* 55).

The urban centre lay inland at modern Chora, about 3 km from the coast. Part of the C5 acropolis fortification wall still exists (Welter (1954) 71–74). The walls were repaired in C4/C3e (SEG 14 532 = Migeotte (1992) no. 56). In C4 inscriptions are mentioned a *prytaneion* (IG II² 1128.34–35), a sanctuary of Apollo Pythios where many public documents were inscribed (IG II² 111.22; IG XII.5 1102 = Migeotte (1984) no. 63 (C4–C3); cf. Welter (1954) 74–78), and a Lykeion (SEG 14 532.19). A theatre is attested for C3 (IG XII.5 597.8). A sanctuary of Zeus Ikmaios may have stood on the border between Ioulis and Karthaia (IG XII.5 543; K. Manthos (1991) 62–63 with 135 n. 328; Büchner (1921) 186; for sacrifices by Aristaios to Zeus on Keos, see Theophr. *De vent.* 14). Within the territory of Ioulis K. Manthos believed he had identified a sanctuary of Aphrodite, but this has been doubted (Manthos (1991) 46 with Mendoni’s comments at 119 n. 179); two other sanctuaries have been identified archaeologically but not assigned to deities (Georgiou and Faraklas (1985) nos. 18.08, 13.06). *Miltos*, which figured so importantly in relations with Athens in C4 (and undoubtedly earlier as well), was mined at two or more sites in the territory of Ioulis (Georgiou and Faraklas (1985) no. 17.04; Mendoni (1985–86) 181–82), and the Ioulietan decree on the export of *miltos* refers to the harbour (*limen*) of the city (IG II² 1128.38).

Ioulis struck coins of silver and bronze from C6m onward. The most recent study of Keian coins assigns four series of silver coins to Ioulis in C6–C4. (1) Silver on the Aiginetan standard. Types: *obv.* bunch of grapes; *rev.* incuse square. (2)–(3) Silver, c.520–480 and after 480. Types: *obv.* grapes, or dolphin; *rev.* incuse square. (4) Silver, C4. Types: *obv.* Zeus Aristaieus; *rev.* bee, or head of Sirius. Ioulis may also have struck a bronze coinage in C4. Types: *obv.* Zeus Aristaieus; *rev.* bee; legend: IOY or IOYAIIE (Head, *HN*² 484; Papageorgiadou-Banis (1997) 25–27; *SNG Cop. Argolis-Aegean Islands* 646–49).

492. Karthaia (Karthaieus) Map 57. Lat. 37.35, long. 24.20. Size of territory: 2 (c.67 km²). Type: A. The toponym is *Κάρθαια*, ἡ (Pind. *Pae.* 4.13–14; *CID* II 12.π.66 (C4s)). The city-ethnic is *Καρθαίεύς* (IG II² 43.B.25); the dative plural *Καρθαίεσσι* is attested at SEG 9 2.51. Karthaia is referred to as a *polis* in the urban sense by the term *τετραπόλις* at Ps.-Skylax 58 (for MS *Αἶραι*, read *Καρθαία*). It is called *polis* in the political sense in several C4s decrees (IG XII.5 528.2–3, 5; 537.6–7; 538.6, dates: Brun (1989) 126–28). The collective use of the city-ethnic can be found internally on Karthaian coins (*infra*) and decrees (IG XII.5 528.4) and externally in C4 Athenian decrees (IG II² 43.B.25, 111.54). The individual

and external use is first attested in a C3f proxy decree from Delos (IG XI.4 592.3–4, 12). In C3, and presumably in C4 as well, the citizens were organised into *phylai* and *oikoi* (IG XII.5 540.15; see Jones, *POAG* 206).

The eponymous official was the archon (IG XII.5 544.A1.8, 12 (C4–C3); cf. also 552). Other officials attested in Classical sources are a board of, probably three, *strategoí* (IG XII.5 544.A1.15–19, A2.11–15, 19–23) and envoys (*presbeis*) sent to Karystos (IG XII.5 537.2). Decrees were passed by the *boule* and the *demos* on the motion of an individual (IG XII.5 537.1, 528, 538 with add. (C4/C3)). Public enactments preserved on inscriptions include an undated and rather obscure sacred law (IG XII.5 530) and a regulation about a spring in the sanctuary of Demeter of C4l (IG XII.5 569). Public enactments were set up in the sanctuary of Apollo (IG XII.5 528.16, 538.12). Particularly important is a fragmentary C4m list of Karthaian *proxenoi* comprising a total of 110 + *proxenoi* in, probably, 50 + different *poleis* (IG XII.5 542).

The protective deity was probably Apollo (IG XII.5 544, found *inter rudera templi Apollinis*), whose temple as Pythios dates from about C6l (Mendoní (1985–86) 163–65). Public cults of him (IG XII.5 545 (C4)) and Hestia, or possibly private, (IG XII.5 554 (C5)) are known before Alexander. An official has left a dedication to Aphrodite, which probably dates from C4 (IG XII.5 552 with Mitsos (1957) 164 no. 1 and *BE* (1962) 264) and an *hieron* of Hermes is mentioned in an inscription (IG XII.5 553). The temple of Athena, which was rebuilt in C4 (Mendoní (1990)), dates originally from C6l (Mendoní (1985–86) 161); see also the construction history of both temples in Papanikolaou (1998). We hear also of a sanctuary of Demeter (IG XII.5 569 (C4l)), with Graindor (1905) 333–37; that to Hermes is mentioned in an undated inscription (IG XII.5 553).

The site of the town has long been known, on the east coast at one of the island's best anchorages, with a productive plain that stretches out at the mouth of the river that flows down off the Keian plateau. The town walls were probably demolished by Chabrias in 364, but with the Athenians' permission the Karthaians were thereafter allowed to restore a rather slim defence circuit, probably as protection against pirates (IG II² 404 (C4s)), with Maier (1959–61) no. 37; cf. also Maier (1958). A *prytaneion* was present by C5 (IG XII.5 1060.2). For the temple of Apollo, which sits on a little acropolis jutting out from the surrounding rock, see *supra*.

Karthaia struck coins of silver and bronze from C6s onwards. Four series of coins seem to belong to the Archaic and Classical periods. (1)–(2) The first series seems to start c.510 (or 530 at the earliest), the second by c.500, though

there are problems with both the attributions of the coins and the dates. Types: *obv.* amphora, or amphora and dolphin; *rev.* incuse square. (3) Silver, C4. Types: *obv.* Zeus Aristaieus; *rev.* Sirius; legend: *KAPΘAI*. (4) Bronze, C4. Types: *obv.* amphora; *rev.* grapes; legend: *KAP* (Head, *HN*² 483; Papageorgiadou-Banis (1997) 34–39; *SNG Cop. Argolis-Aegean Islands* 628).

493. Koresia (Koresios) Map 57. Lat. 37.40, long. 24.20. Size of territory: 1 (c.15 km²; cf. Cherry, Davis and Mantzourani (1991) 235). Type: A. The toponym appears variously as *Κορησία*, ἡ (IG XII.5 647.11 (C3e)) and *Κορησσία* (Ps.-Skylax 58; Strabo 10.5.6). The only attestation of *Κορησσός* referring to the *polis* on Keos is in a spurious letter (Aeschin. *Ep.* 1.1). For the distinction between *Κορησ(σ)ία* on Keos and *Κορησσός* in Asia Minor, see L. Robert (1960a) 144–45. The city-ethnic is *Κορήσιος* (*SEG* 9 2.55 (c.330)). Koresia is referred to as a *polis* in the urban sense by the term *τετραπόλις* at Ps.-Skylax 58. It is called *polis* in the political sense in an inscription recording a series of loans extended to the *polis* by “the god”, probably Apollo: *ἐδάνεισεν ὁ θεὸς τε[ῆ] πό]λει* (IG XII suppl. 236; cf. *SEG* 39 873 (C4)); but Migeotte (1984) 156 n. 32 assigns this inscription possibly to Karthaia. The collective use of the city-ethnic is attested internally on coins in abbreviated form (*infra*) and in inscriptions (IG II² 1128.12), and externally in inscriptions (IG II² 43.B.26; *SEG* 9 2.55). The earliest individual and external use of the city-ethnic is in a C3 decree of Karthaia (IG XII.5 531).

An Archaic inscription in the Eretrian alphabet has sometimes been cited as evidence of Eretrian domination (IG XII.5 649; see *LSAG* 297–98 with 648 by lapsus). Koresia was a member of the Delian League. In their first appearance in the Athenian tribute lists (IG I³ 262.1.21), the Koresians are recorded separately from the Keians (IG I³ 262.v.22); later they are subsumed under a *synteleia* (*supra* 748). In the list of members of the Second Athenian League they appear as Keians along with the Ioulietai and the Karthaians (IG II² 43.B.23–26). Koresia was undoubtedly a member of the Keian Federation, dissolved by the Athenians in 362 (IG II² 1128 and 404; see *supra*). Koresia was incorporated into Ioulis for a while in C4s (IG XII.5 609.175), but was again a separate *polis* in C3 until finally completely absorbed by Ioulis (Strabo 10.5.6; Reger (1998)). In C4s Koresia may have been both a dependent *polis* and a *phyle* of Ioulis. For the double status as dependent *polis* and civic subdivision of a major *polis*, see Hansen (1997) 37. But its status as an independent *polis* in C3–C2 follows not only from the evidence of its inscriptions—which could be compatible with a status

of dependent *polis* (IG XII.5 647.9; SEG 14 541; PEP Chios 51)—but also from its status as the chief station of the Ptolemaic fleet in C3, when it was renamed Arsinoe and is attested operating as an independent *polis* as late as c.207 (Davis and Cherry (1991); L. Robert (1960a); I. Magnesia 50).

Decrees were passed by the *boule* and the *demos* (IG II² 1128.9, where the restoration of $\tau\acute{\omega}\iota$ $\delta\eta\mu\omega\iota$ in l. 9 is virtually certain). Public enactments were set up in the sanctuary of Apollo (ibid. ll. 15–16), which is probably the sanctuary of Apollo Smintheus attested by Strabo 10.5.6. A board of *astynomoi* (l. 17) and a *dikasterion* (l. 18) are known from the same inscription and likewise a *prytaneion* (l. 24).

In C4l Koresia seems to have had some 154 citizens fit for military service, corresponding to c.230 adult male citizens and a total population of c.1,200 persons (IG XII.5 609.175ff) (see Ruschenbusch (1982); Cherry, Davis and Mantzourani (1991) 236–37; Hansen (1997) 28–29 with n. 147).

The urban centre, located on the hill above the present harbour town, has been thoroughly studied (Cherry, Davis and Mantzourani (1991) 265–81). Koresia was permitted to restore its walls after the revolt of the 360s and 350s (IG II² 404.16 = Maier (1959–61) no. 37 and Maier (1958)). The northern part is preserved, and the circuit may have enclosed an area of c.18 ha (Cherry, Davis and Mantzourani (1991) 236). The countryside was full of structures during the Archaic and Classical periods, but most of the population lived in the urban centre (Cherry, Davis and Mantzourani (1991) 327–47, esp. 337).

Koresia struck silver coins from C6e to c.480. Three series of coins have been assigned to Koresia. Types: *obv.* cuttlefish, or dolphin and cuttlefish, or dolphin; legend: φ or $\varphi\omicron$; *rev.* incuse square; legend: *K* (third series only). The identification and dating remain somewhat problematic. No C4 issues are assigned till the end of the century (Head, *HN*² 483–84; Papageorgiadou-Banis (1997) 19–21; *SNG Cop. Argolis-Aegean Islands* 637–41).

494. Poiessa (Poiessios) Map 57. Lat. 37.35, long. 24.25. Size of territory: 2 (c.30 km²). Type: A. The toponym is variously reported as *Ποιήσσα*, η (IG XII.5 1076.53 (C4–C3)) or *Ποιήεσσα* (Strabo 10.5.6) or *Ποιάσσα* (IG XII.5 568.10 (C5)). The city-ethnic is *Ποιήσσιος* (IG II² 43.82) or *Ποιάσσιος* (IG XII.5 568.1 (C5)). That Poiessa is a *polis* in the urban sense is implied by the term $\tau\epsilon\tau\rho\acute{\alpha}\pi\omicron\lambda\iota\varsigma$ at Ps.-Skylax 58. It is called *polis* in the political sense in a decree of C4l–C3e (IG XII.5 570.A7); for the date see Brun (1996) 114. The collective use of the city-ethnic is attested internally in inscriptions of C5l/C4e (IG XII.5 568.1, 1100.1) and external-

ly in Athenian inscriptions (IG II² 43.82). The individual use of the city-ethnic is unattested.

A text inscribed in *stoichedon* strongly suggests that the chief official was the *prytanis* (Mendonì (1989) 295–96 no. III). In C4l/C3e decrees were passed by the *boule* and the *demos*; a board of *praktores* is also mentioned (IG XII.5 570.A1, B2). By C5l there was a sanctuary of Apollo Pythios, a Pythion (IG XII.5 1100, see also 571.1); he may well have been the protective deity. Public enactments were set up in the sanctuary (IG XII.5 1100.7–9 (C5)). A dedication of C5 is made to Apollo without epithet (Dunant and Thomopoulos (1954) 346–48 no. 17 = SEG 14.547). But there is also evidence of a temple dedicated to Apollo Smintheus within the territory of Poiessa (IG XII.5 1101 with Graindor (1903) 290; Galani *et al.* (1982–84) 242). An individual who served in a public office (*arxas*) made a dedication (C5? C4?) to Hermes Prytaneios (Mendonì (1989) 295–96 no. III). Strabo mentions a sanctuary of Athena Nedousia (10.5.6). Communal cults of Apollo Melanthios (IG XII.5 1101 (undated)) and an Apollo without epithet (and so perhaps Pythios?, SEG 14.547 (C5)) are attested. Poiessa was probably among the Keian cities permitted to restore their fortification walls in the period 354–338 (IG II² 404 with Maier (1959–61) no. 37 and Maier (1958)). Remains of city walls have been dated as starting in C6l (Galani *et al.* (1982–84) 239). If correctly restored by Müller, Ps.-Skylax 58 refers to Poiessa's harbour. The approximate boundaries of its territory have been worked out (see Papageorgiadou-Banis (1999) 161 fig. 1). The territory is referred to as *Ποιασσίων ἡ γῆ* (IG XII.5 568.1, 1100.1). For the boundary, see Galani *et al.* (1982–84) 238). No coins are known (see Papageorgiadou-Banis (1997) 51–52 *re* a false attribution).

495. Keria (Keraitas) Map 61. Lat. 36.55, long. 25.40. Size of territory: 1 (15 km²). Type: C. *Κερία*, η (IG I³ 71.1.86). In *Stadiasmus* 282 *Κέρεια* is an emendation of MSS *ΚΟΡΣΙΑ*. The city-ethnic is *Κεραΐτας* (*I.Cret.* IV 206K (C3–C2)). The Kerians were assessed for tribute by the Athenians in 425/4 (*supra*), apparently 13 dr., but the entry is exceptional in being the only one in which the sum is recorded to the right of the toponym/ethnic. In the Hellenistic period a Kerian citizen received *proxenia* from Gortyns (no. 960) on Crete (*supra*). Despite the lack of explicit attestation, it seems reasonable to infer that Keria was possibly a *polis* in the Classical period.

496. Kimolos (Kimolios) Map 58. Lat. 36.45, long. 24.30. Size of territory: 2 (36 km²). Type: B. The toponym is *Κίμωλος*, η (Strabo 10.5.1; IG I³ 71.1.89; *F.Delphes* III.1 497.12

(C4/C3e)). The city-ethnic is *Κιμώλιος* (*IG* 1³ 289.1.18; perhaps also at 1032.87, where Osborne and Byrne (1996) 123 suggest reading *Κιμώ<λι>(ος)* instead of *Κίμων*). There is no explicit Classical attestation of Kimolos as a *polis*, but in C5s the Kimolians were members of the Delian League (*infra*); in a C4s arbitration they were on equal terms with the *polis* of Melos (*infra*), and a C3s text from Karystos does explicitly refer to *τὰς πόλεις τὰς Κιμωλίων* (*SEG* 44 710.28). The collective use of the city-ethnic is attested internally on coins of C3 (Head, *HN*² 484) and externally in inscriptions (*IG* 1² 289.1.18; *IG* XII.3 1259.7 (C4s) = Tod 179; Ager (1996) no. 3; Magnetto (1997) no. 1). The individual and external use is attested in the Athenian naval catalogue of C51 (*IG* 1³ 1032.87).

Kimolos was a member of the Delian League. It belonged to the Island district, but is absent from the full panel of 441/0 (*IG* 1³ 271.1–11.88–101). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.89) (1,000 dr.), but is recorded only once in the tribute lists, *viz.* in 416/15 (*IG* 1³ 289.1.18), paying an unknown amount.

Soon after 338 the Kimolians were involved in a dispute with the Melians (no. 505) over the possession of the three small islands of Polyaiğa (which, later at least, had no permanent population but was used as pasturage (L. Robert (1949) 167)), Etereia and Libeia. In accordance with a decision of the *synedrion* of the League of Corinth, the dispute was submitted to arbitration by Argos (no. 347), and the Argives decided in favour of Kimolos (*IG* XII.3 1259 = Tod 179; Ager (1996) no. 3; Magnetto (1997) 1–8 no. 1). A certain amount of the ancient *polis* centre (which, unlike most Aegean Islands, does not lie under modern Chora) has been lost due to sea level changes (Mustakas (1954–55) 153–54). Lauffer (1989) 329 has references to walls, sanctuaries and other remains.

497. Kos (Koos) Map 61. Lat. 36.50, long. 27.15. Size of territory: 4 (290 km²). Type: A (from 366/5, *infra*). The toponym is *Κῶς*, ἡ (Hom. *Il.* 2.677; Hdt. 9.76.2; Thuc. 8.41.3; Herzog (1928) 14–16 no. 5.B.8 (C4m); Head, *HN*² 632 (C5)) or *Κόως* (*Hymn. Hom. Ap.* 42; Hes. fr. 43a.57). The toponym denotes sometimes the island (Thuc. 8.41.3), sometimes, probably, the city *Κῶς ἡ Μεροπίς* (Hdt. 1.144.3; Thuc. 8.41.2), and sometimes the C4 synoecised *polis* (Dem. 15.27). The ethnic is *Κῶος* (*IG* 1³ 262.IV.15; Hdt. 7.99.2). It sometimes denotes the inhabitants of the island (Hdt. 9.76.2–3; Pl. *Prt.* 311B), and sometimes the citizens of the *polis* (*IG* 1³ 1454.A.29; *Iscr. Cos* ED 34.5 (C4)). Kos is called a *polis* both in the urban sense (Ps.-Skylax 99; Dem. 35.35, see Hansen (2000) 154; LSCG

151.55 (C4m); perhaps Paton and Hicks (1891) no. 5.7–8) and in the political sense (Dem. 15.27 and inscriptions of after 366/5; *Iscr. Cos* ED 19.4–5 (C4–C3), 20.1, 3, 11 (all C41), 54.8–9 (C4), 55.A11, 17, B10, 13 (C4), 241.26 (C4)). The collective use of the city-ethnic is attested internally in inscriptions (*Iscr. Cos* ED 19.5, 54.4, 55.B.3) and externally in literary sources (Hdt. 1.144.3, 7.99.2) and in inscriptions (*IG* 1³ 262.IV.15; *CID* I 12.2 (C4f); *F.Delphes* III.1 497.11 (C41/C3e); *SEG* 9 2.28, Kyrene (c.330–326)). The external and individual use of the ethnic is attested in literary sources (Hdt. 7.163.2, 9.76.2; Pl. *Prt.* 311B) and in inscriptions (*IG* 1³ 1454.29 (C5s); *IG* II² 9143 (C4f); Peek (1969) 25 no. 53 (C5)).

The Koans belonged to the Dorian *pentapolis* (Hdt. 1.144.3 with Sherwin-White (1978) 47) and to the Delian League, paying tribute (*infra*). Within this framework fit at least two *poleis* up until 366/5, and it is not always easy to distinguish before this date the use of the ethnic as a city-ethnic from its use as a regional ethnic denoting an inhabitant of the island of Kos.

In Homer Kos and the Kalydnian islands (no. 485) are explicitly decried as “the *poleis* of Eurypylos” (Hom. *Il.* 2.677, see also 14.255, 15.28). *Hymn. Hom. Ap* 42 describes Kos as *πόλις Μερόπων ἀνθρώπων*. According to Herodotus (7.99.3), Kos was settled by the Epidaurians (no. 348).

After the collapse of Kroisos’ Lydian kingdom and the imposition of Achaemenid suzerainty in western Asia Minor in 546, Kos was controlled by the tyrant Skythes. C.490 his son Kadmos voluntarily abdicated the tyranny (Hdt. 7.164.1), and control of Kos passed to the Karian dynasty under Artemisia, whose command at Salamis included Koan sailors (Hdt. 6.22–24, 7.99.2, 163–64,). Kos may have controlled the island of Nisyros (no. 508) c.500 (Hdt. 7.99 with Hicks in Paton and Hicks (1891) p. xii).

Kos was a member of the Delian League. It belonged to the Karian district (*IG* 1³ 269.IV.15) and is recorded in the tribute lists from 451/0 (*IG* 1³ 262.IV.15) to 427/6 or 426/5 (*IG* 1³ 284.18) a total of eleven times, once completely restored, paying a *phoros* of 5 tal. (*IG* 1³ 271.II.67); but in some years (450/49, 447/6) the *phoros* is split up into smaller amounts (*IG* 1³ 263.I.7 and v.40). The explanation may be that in these years two *poleis* on Kos paid separately, whereas in other years they paid together in a *synteleia*. Kos was assessed for tribute in 425/4 (*IG* 1³ 71.1.132).

Some time in the same period a *temenos* of Athena Medeoussa, an indication of Athenian authority, was installed; but from this a *klerouchia* should not necessarily be inferred (*Iscr. Cos* EV 361, see also EV 333; Mattingly (1996) 65). A copy of the famous Athenian Coinage Decree

was posted on Kos (*Iscr. Cos* ED 1 = ML 45). Kos remained under the Athenians until 411 (Thuc. 8.108.2); over the next five years its position shifted, till apparently coming under Spartan sway for good in 407 (Diod. 13.69.5; Xen. *Hell.* 1.5.1; cf. Hicks in Paton and Hicks (1891) pp. xxv–xxvi). The Koans fell away from the Spartans in 394 following the battle of Knidos (Diod. 14.84.3), but their name does not appear on the stele of Aristoteles among the members of the Second Athenian Naval League (for membership: Cargill (1981) 37–38; *contra* Hornblower (1982) 133; *non liquet* Dreher (1995) 123). But in 357, when Chios (no. 840), Rhodos (no. 1000) and Byzantion (no. 674) seceded from the Naval League, Kos joined the alliance concluded with Mausolos and took part in the Social War against Athens (Dem. 15.3, 27; Diod. 16.7.3; cf. *Staatsverträge* 305).

In C4m Kos was controlled by the Hekatomnids (*Suda* Δ238 with Hornblower (1982) 132–33). In 333 the island was conquered by Alexander (Arr. *Anab.* 2.5.7), won back by the Persians, but conquered definitively in 332 (Arr. *Anab.* 3.2.6). During the crisis of c.330–326, Kos received 10,000 *medimnoi* of grain from Kyrene (no. 1028) (*SEG* 9 2.28).

A unified Koan state was created in 366/5 by the *metoikismos* of at least two pre-existing *poleis*, Astypalaia and Kos Meropis (see *infra*). This action is attested by Diodorus (15.76.2) and Strabo (14.2.19). The event has been treated often: e.g. Hicks in Paton and Hicks (1891) p. xxvii; Moggi, *Sin.* 333–41 no. 47; Sherwin-White (1978) 63–67; Hornblower (1982) 83–84, 103–4 n. 197; Demand (1990) 127–32; Reger (2001) 171–74. Strabo attributes the decision to *stasis*. The incident referred to by Arist. *Pol.* 1304^b25 is surely later (Sherwin-White (1978) 65–66, *contra* Gehrke, *Stasis* 98). It has been denied that a political unification of separate *poleis* in fact occurred, as has been virtually the universal scholarly opinion until recently (Stylianou (1998) 484–85), but the details of the organisation of the two *poleis* leave little doubt that the standard view is right (see now Reger (2001) 171–74 and *infra*), except in so far as the Koans, like other islanders and certain other small states, paid their tribute to Athens as a group and were identified as a group of islands.

The eponymous magistrate of the unified Koan *polis* was the *monarchos* (Herzog (1928) 20–25 no. 8.A1 (C3f); cf. Gehrke, *Stasis* 97 n.1; Sherk (1990) 265–66). Decrees were passed by the *boule* and the *ekklesia* (*Iscr. Cos* ED 54.1 (C4)) or by the *ekklesia* (*Iscr. Cos* ED 34.1 (C4)) on the motion of a board of *prostatai* as moved by the head of the board (*Iscr. Cos* ED 40.1–4; Paton and Hicks (1891) no. 2.9–10) or by an individual (*Iscr. Cos* ED 34.2, 54.1–2). An *epistates* is also attested (*Iscr. Cos* ED 106.2–3 (C4)); cf. Rhodes, *DGS* 237.

Koan officials included a board of *poletai* (*Iscr. Cos* ED 20.16 (C4l), 54.13–14 (C4)). One text mentions *ἐκκληῖται δικαστ[αί]* (*Iscr. Cos* ED 26c5 (C4l?)), and a *dikasterion* is mentioned in *Iscr. Cos* ED 90.4, 9 (C4e).

Aristotle says that the Koan constitution was a democracy subverted by demagogues and then replaced by an oligarchy (Arist. *Pol.* 1304^b25–27). Kos became a democracy once again in, probably, 332 (Gehrke, *Stasis* 99 n. 18).

A fragmentary early sacred law mentions τὸ ἱερόν (*Iscr. Cos* ED 53 (C4; C5–C4 according to Herzog (1899) 128–30 no. 194)); a later law of C4 protects the trees of the *temenos* of Apollo Kyparissios and Asklepios from being cut down for any reason, and forbade even the introduction of a motion to that effect (Herzog (1928) 32 no. 12 + *Iscr. Cos* ED 181). A series of sacred laws of C4m seems to regulate religious observances of the newly constructed Koan state (Herzog (1928) 5–10 no. 1, 12–14 no. 4 = *LSCG* 151, 19–25 nos. 6–8, 32–33 no. 12 = *LSCG* 150 + *Iscr. Cos* ED 55, 140, 181, 241; perhaps also ED 53 of C4). The many public cults known from Kos thanks in large part to the rich harvest of sacred laws include those of (1) Apollo Kyparissios (cf. *Hymn. Hom. Ap.* 42) and (2) Asklepios (Herzog (1928) 32–33 no. 12 + *Iscr. Cos* ED 181); (3) Hera (Makareus, *FGH* 4.442 (Ath. 262C)); (4) Rhea, Hera Argeia Eleia Basileia, Zeus Machanes, the Twelve Gods, Zeus Polieus, Athena Machanis (*Iscr. Cos* ED 241); (5) Homonoia, Hekate, Histia Tamia, Aphrodite Pandemos (Pugliese Carratelli (1963–64) 158 no. I; Paton and Hicks (1891) 401; *LSCG* 295–98 no. 169 (C3)) with the important discussion of the circumstances of the origin of the cult of Homonoia in Thériault (1996) 134–36); (6) Zeus Basileus (*Iscr. Cos* EV 27 (C4)); (7) Kore (*Iscr. Cos* EV 235 (C4l)); (8) Demeter (*Iscr. Cos* EV 270 (C4)); (9) the Nymphs (*LSCG* 152–53); and (10) Herakles (*Iscr. Cos* ED 140.8–9; cf. also ED 149), whose worship should no doubt be associated with his adventure on Kos in which he was wounded (see Koenen and Merkelbach (1976)).

In C4 the Koans awarded *proxenia* to citizens of Tyros (*Iscr. Cos* ED 54), Knidos (no. 903) (*Iscr. Cos* ED 34), Byzantion (no. 674) (*Iscr. Cos* ED 40), Mytilene (no. 798) (*Iscr. Cos* ED 106) and Sinope (no. 729) (*Iscr. Cos* ED 20). Koan citizens were awarded *proxenia* by Epidauros (no. 348) (*IAEpid.* 42.58 (C4l/C3e)) and the Plataseis (*Labraunda* 48 = Mausolos M8).

The Koan state was organised into the three traditional Dorian tribes of Pamphyloi, Hylleis and Dymanes, further subdivided into three *chiliastyes* each, also called *enatai* (*LSCG* 151A.5, 16 (C4m); Herzog (1928) 6 no. 1.7, 11, 12, 15; cf. Jones, *POAG* 236–38). Each tribe had its own special location

for sacrifice (*Iscr. Cos* ED 140.2–5 (C4)). In addition there were an unknown number of *triakades* (*Iscr. Cos* ED 55.A2 (C4m)) and *pentekostyies* (*Iscr. Cos* ED 91.3 (C4)) whose relationship to the tribes and their subdivisions remains uncertain (Jones, *POAG* 238–39). Cutting across this system of personal groupings there was a subdivision into at least ten demes (cf. the list in Jones, *POAG* 239). One of these, Isthmos (demotic: ὁ δῆμος ὁ Ἴσθμιατῶν, *IG* XI.2 287.B.45 (C3m)), was located at the site of Astypalaia (see *infra*). Another deme—which one is not known, unfortunately—also had at least one tribal subdivision (*Iscr. Cos* ED 138.1–2 (c.206/5); see Habicht (2000) 309–10, 327 (date)).

Parts of Kos town have been the object of intensive excavation, particularly after a severe earthquake of the 1930s opened up opportunities for the Italian archaeologists working there; no final excavation reports have ever been published, but there is a good summary of the state of work as of the 1940s (Morricone (1950)). Long runs of the fortification walls have been uncovered (des Courtils *et al.* (1982) 414; *BCH* 118 (1994) 798), perhaps the walls of 366/5 (Diod. 15.76.2). Sanctuaries include the great Asklepieion, begun in C4 but a site of worship originally of Apollo in C5 (Schatzmann (1932) “Zeittafel”; for an altar of C4 bearing the names of some of Asklepios’ children, see p. 26); a sanctuary for Artemis, Zeus Hikesios and the Theoi Patrioi (*SEG* 14 529 (C2)); temples for Demeter and Dionysos in the town centre (*Iscr. Cos* ED 140.5 (C4); *BCH* 118 (1994) 795). Remains of the theatre (*TGR* ii. 147) are Hellenistic (Sherwin-White (1978) 25); but references to the theatre in Eudoxos (fr. 363, Lasserre) testify to a C4 antecedent. A sanctuary of the Twelve Gods is attested in a C4 inscription (*Iscr. Cos* ED 54.15; see also their worship at the Charmyleion: Paton and Hicks (1891) no. 349 with Kader (1995) 201–2). A sanctuary of Demeter, a *Δαμάτριον*, is attested (*Iscr. Cos* ED 140.5). A sanctuary starting in C4m to the Eleusinian gods has been located at Kyparisi (Laurenzi (1931) 623–25). A stoa by the harbour may date from C4 (Coulton (1976) 248).

Next to nothing is known about Hippokrates of Kos (Pl. *Phdr.* 270C; *Prt.* 311B) and his medical school of Asklepiadaí (*CID* I 12 (C4f)). The various pseudepigraphica about Hippokrates and Kos are late innovations and cannot be used for reliable information about the institutions and history of the Koan polis in C6l–C5s (Jouanna (1999) 12–16, 21–24; for the writings, see now Smith (1990)).

Kos struck coins of electrum and silver on the Aeginetan standard in C6, coins of silver on the Persic standard in C5f, and coins of silver and bronze after 366/5. (1) Silver and electrum, C6. Types: *obv.* crab; *rev.* incuse square. (2) Silver, C5f.

Types: *obv.* naked diskobolos with tripod behind; legend: *KOΣ* or *KΩΣ* or *KΩΙON*; *rev.* crab in incuse square. (3) Silver from 395; *obv.* head of bearded or beardless Herakles often with lion’s scalp, facing l. or r.; *rev.* crab and club in dotted incuse square, or draped female head facing l. (Demeter?); legend: *KΩΙ* or *KΩΙON* and magistrate’s name. (4) Bronze from c.330; *obv.* head of beardless Herakles with lion’s scalp; *rev.* crab; legend: *KΩΙ* and magistrate’s name (Head, *HN*² 632–34; Paton and Hicks (1891) pp. 305–6; Barron (1968); Erxleben (1970) 87–88; Kraay (1976) 245–46; Ingvaldsen (2002); *SNG Cop. Caria* 615–26). There has been some discussion about whether the legend *KΩΙON* on some coins should be taken as a Doric genitive plural (hence the ethnic) or as a ktetikon (so Sherwin-White (1978) 45); in light of the widespread variability in practice with respect to amphora stamps, even in *poleis* that used the Ionic alphabet (see Garland (1999) 19–20), final judgement must be suspended. (Koray Konuk (pers. comm.) reports that he has reinvestigated Koan coins and come up with important new results, but these have not been published.)

The Koans are said to have participated in the colonisation of Elpia in Apulia (Strabo 14.2.10). In an inscription of C3m the Koans are called *synoikistai* of Kamarina (no. 28) (*SEG* 12 379 = Rigsby (1996) no. 48 (C3m); Plut. *Tim.* 35.1–2 (emended); see Talbert (1974) 204).

There are two *poleis* well attested for Kos before the *metoikismos* of 366/5: Astypalaia and Kos Meropis.

498. Astypalaia Map 61. Lat. 36.45, long. 27.00. Size of territory: 3 (c.145 km² or less). Type: C. The toponym is *Ἀστυπάλαια, ἡ* (Strabo 14.2.19; Steph. Byz. 140.8). There is no explicit attestation of the city-ethnic (*infra*). The name of this town is known certainly only from the description by Strabo (14.2.19) of the *metoikismos* of Kos in 366/5 (*supra*). For the possibility that the city was mentioned in Galen, see Walzer (1935) 336 app. with further references. Astypalaia became the deme of Isthmos in the unified Koan state (Sherwin-White (1978) 59 and especially Pugliese Carratelli (1963–64)). The toponym is *Ἴσθμός* (*LSCG* 154A.18 (C3f)). The demotic is *Ἴσθμώτας* (*Iscr. Cos* ED 55B.9 (C4)). Isthmos displayed its own internal organisation: in the Hellenistic period the deme was itself divided into three tribes, the Theadaí, Kyniadaí and Melainadaí (Pugliese Carratelli (1963–64) 161–63 no. VI.a4–5 and a25 with a8; 165–81 nos. IX–XVIII with Jones, *POAG* 239–41). Although there is no explicit evidence, the peculiarity of this deme in having its own tribal organisation would seem to find its best explanation in Isthmos’ earlier status, like that of

Astypalaia, as a self-governing *polis* before the *metoikismos*, or in the possibility that it persisted to function as a *polis*, albeit a dependent *polis*, after the synoecism. Another possible piece of evidence is the fact that Isthmos dispatched a *theoria* on its own account to Delos in 250 (*IG* XI.2 287.B.45). A *monarchos* attested at Astypalaia should be taken as the eponymous magistrate (Reger (2001) 173–74 with refs.; *contra* Pugliese Carratelli (1957)). A sanctuary of C5 sits on the acropolis at Kephalos, the urban site of Astypalaia (MacKenzie (1897–98); Herzog (1901) 138, (1903) 2–4; Sherwin-White (1978) 27 n. 84 for more refs.). The cult of Asklepios was a local cult here before the *metoikismos*, which introduced it to the island as a whole.

499. Kos Meropis Map 61. Lat. 36.50, long. 27.15. Size of territory: 3 (c.145 km² or less). Type: A. The toponym is *Κῶς ἢ Μεροπίς* (Thuc. 8.41.2; Paus. 6.14.12) or just *Κῶς* (Thuc. 8.108.2). The city-ethnic is *Κῶος* (Ebert (1972) 154–57 no. 49 with Reger (2001) and *supra*). Kos Meropis is called a *polis* in the urban sense by Thucydides at 8.41.2. The eponymous office may have been a board of *prostatai* (*Inscr. Cos* ED 272 with Pugliese Carratelli (1957) 335 n. 3, a decree of C4f dated ἐπὶ προστ[ατῶν] who continued to play an important role in the Koan polity after 366 (see *Inscr. Cos* ED 57.2–3: ἐπὶ προστατῶν τῶν σὺν---καὶ Μονάρχου ἐγ Κῶι . . . , but which may be a decree of a deme (Herzog (1928) 20–25 8.A.1–3)). Two citizens of Kos Meropis were Olympic victors (*Olympionikai* 340 (420) and 363 (400)).

The urban centre seems to have been located at modern Chora. The later site of the Asklepieion was occupied in C5 by a sanctuary of Apollo Kyparissios overseen by a board of ἐπιμεληταὶ τοῦ τεμένεος (Herzog (1928) 32–33 no. 11.8–9). A sacred law forbade the cutting down of cypress trees in the *temenos* except for public need (Herzog (1928) 32 no. 11); this law was strengthened after the *metoikismos* and the establishment of Asklepios in the sanctuary (see *supra*). The site had a temple of Demeter and a sacred spring (dating not clear). Kos Meropis was unfortified in 412 (Thuc. 8.41.2) but was fortified by Alkibiades in the following year (Thuc. 8.108.2). Remains of a fortification wall have been identified with that mentioned by Thucydides (Kantzia (1988) 182; Bean and Cook (1957) 121, followed by Pugliese Carratelli (1963–64) 148).

It has been suggested from time to time that Kos may have hosted other *poleis* as well (Sherwin-White (1978) 63), and certainly every deme attested from after the *metoikismos* is a potential candidate for being seen as such a *polis*. The mention in Ps.-Hippoc. *Ep.* 27 of τεσσάρων . . . τειχέων ἐν τῇ

νῆσῳ has been cited as evidence of additional towns (Hicks in Paton and Hicks (1891) p. xix; cf. generally Sherwin-White (1978) 58–63 but also Reger (1997) 454–55, 483–84 n. 32). Of the possibilities, only Halasarna is noted here.

500. Halasarna (Halasarnitas) Map 61. Lat. 36.45, long. 27.10. Size of territory: 1? Type: B. The toponym is *Ἥλασάρνα* (Paton and Hicks (1891) no. 7.3; -η Hsch. *A2772*) or *Ἄλισάρνα* (Strabo 14.2.19). The ethnic is *Ἥλασαρνίτας* (Paton and Hicks (1891) 372–74 (all late)). Halasarna is called a *polis* in an inscription of C4l (Paton and Hicks (1891) no. 7.3; for the date, see Herzog (1942) 13–18 6B.6)), and a *chorion* in Strabo 14.2.19 (657). There was a temple of C6–C4 apparently dedicated to Apollo Pythaios (Kantzia (1988) 176); Aleura *et al.* (1990), more evidence now in the form of sherds inscribed *ΑΠΟΛΙ* (λῶνι), but some doubts about the identification are expressed by Kokkorou-Aleuras *et al.* (1995–96) 318). The urban centre was occupied from C6 (Hope Simpson and Lazenby (1962) 171–72; see also Kokkorou-Aleuras *et al.* (1995–96) 324 for pottery dating c.575–550). Cults attested at the site include those of Apollo, Herakles, Leto, Artemis, Hekate Stratia, Aphrodite, Zeus Polieus, Athena Polias and the Dioskouroi (Kokkorou-Aleuras *et al.* (1995–96) 313–15, with refs.).

501. Kythnos (Kythnios) Map 58. Lat. 37.55, long. 24.25. Size of territory: 2 (100 km²). Type: A. The toponym is *Κύθνος*, *ῆ* (Hdt. 7.90, 8.67.1; Strabo 10.5.3), denoting both the island and the town (Ps.-Skylax 58). The city-ethnic is *Κύθνιος* (Hdt. 8.46.4; Dem. 13.34; *Agora* xvii 526 (C4)) or, once, *Κίθνιος* (*SEG* 9.2.25). Artemidoros and Strabo agree in placing Kythnos among the Kyklades (Strabo 10.5.3). Kythnos is called a *polis* in the urban sense (Ps.-Skylax 58), and in Hdt. 8.46.1 it is subsumed under the heading *polis* where *polis* occurs in the political sense (Hdt. 8.42.1, 49.1). The external use of the city-ethnic is attested collectively in inscriptions (*IG* I³ 264.IV.37; *SEG* 25 357, Nemea (C4l)) and in literary sources (Hdt. 8.46; Dem. 13.34), and individually in Athenian sepulchral inscriptions (*IG* II² 9115; *Agora* xvii 526 (both C4)) and in a C5l list of sailors (*IG* I³ 1032.VI.88–89).

The Kythnians contributed two ships to the Greek fleet at Salamis (Hdt. 8.46.4) and participated in the communal dedications at Delphi and Olympia after Plataia (ML 27.10; Paus. 5.23.2). Kythnos was a member of the Delian League, and may have been among the original members (*ATL* iii. 198–99). It belonged to the Island district (*IG* I³ 271.I.91) and is recorded in the tribute lists from 450/49 (*IG* I³ 263.IV.27) to 416/15 (*IG* I³ 289.I.19) a total of eleven times, three times

completely restored, paying a *phoros* of first 3 tal. (*IG* 1³ 263.iv.27), raised to 6 tal. in, probably, 425/4 (*IG* 1³ 288.1.5). It was assessed for tribute in 425/4 (*IG* 1³ 71.1.72) (6 tal.) and in 410/9 (*IG* 1³ 100.1.2). Hyperides wrote a *Κυθηριακὸς λόγος* (fr. 138, Sauppe) and Aristotle a *Κυθνίων πολιτεία* (Harp. *K*90). In C4s the Kythnians had a board of five *strategoî*, of whom three were elected from among those who had served as *strategoî* before (Vat. Gr. 2306.B.1.134–40). During the crisis of 330–326 Kythnos received 10,000 *medimnoi* of grain from Kyrene (no. 1028) (*SEG* 9.2.25).

The urban centre was situated in the north-western part of the island and was walled, probably by C4s (Mazarakis Ainian (1993), (1996) 251, 256–70, (1998) 368–70; Gounaris (1998)). A temple on the acropolis, which has produced material of the Archaic through the Hellenistic periods, has been attributed to Demeter, or, less probably, Artemis or Hera (Mazarakis Ainian (1998) 370–71); for a *temenos* on Kythnos controlled by the Athenian sanctuary of Demeter at Eleusis, see *IG* 1³ 386.III.147. Other temples of uncertain identity have been discovered; one of these may be a sanctuary of Aphrodite, whose cult, long known from the Hellenistic period (*IG* v 123.100–20 with Themelis (1998)), can now be attested from a C4 dedication (*SEG* 47 1300; Mazarakis Ainian (1998) 372–73). A C4 sanctuary to the Samothrakian gods is attested epigraphically (*IG* XII.5 1057 (C4/C3e); see Hemberg (1950) 220; Mazarakis Ainian (1998) 372) and archaeologically (Mazarakis Ainian (1996) 252). The doubts of Cole (1984) 68 can now be dismissed. There is now evidence for a settlement starting in the Geometric period at the island of Vryokastraki (Mazarakis Ainian (1998) 374).

The island is said to have taken its name from one Kythnos (Steph. Byz. 392.2); later it was settled by Athenians under Kestor and Kephaleos (Dio Chrys. 80.26.9)

The Kythnians now seem to have coined in silver in C6l or C5e. Denominations: one-third stater down to hemiobol. Types: *obv.* head of a wild boar, or Gorgoneion, or lily, or seated dog; *rev.* incuse square or plain flat surfaces (Kyrou and Artemis (1998)).

LEMNOS (LEMNIOS) Map 56. Lat. 39.55, long. 29.15. Size of territory: 4 (478 km²). The toponym is *Λήμνος*, ἡ (Hom. *Od.* 8.283; Hdt. 6.139.4; *IG* 1³ 1466). The ethnic is *Λήμνιος* (Thuc. 3.5.1; *IG* 1³ 261.1.3). Lemnos is called a *polis* in the political sense in the King's Peace (Xen. *Hell.* 5.1.31). Lemnos is described as *δίπολις* in *Eth. Magn.* 279.6; cf. schol. Ap. Rhod. 1.601. The collective use of the ethnic is attested internally on coins: *ΛΗΜΝΙ* (Head, *HN*² 262 (C4m)) and

externally in a list of mercenaries (*IG* II² 1956.91 (c.300)). For the individual and external use of the ethnic, see *Ἀντιδωρος Λήμνιος* (Hdt. 8.11.3); Antilochos, the philosopher opponent of Sokrates (Diog. Laert. 2.46); Apollodoros, a writer on farming (Arist. *Pol.* 1259^a1); and *Λημνίαν* (Isae. 6.13) and Theoris (Dem. 25.79–80 (C4); see Collins (2001)).

Ancient sources mention many non-Greek peoples as inhabiting Lemnos before the arrival of the Greeks (see *IG* XII.8, pp. 2–3). C.511 the Persians conquered Lemnos, exposed the island to an *andrapodismos*, and appointed a *hyparchos* (Hdt. 5.27.1–2). The Lemnians are said to have had military forces and penteconters (Hdt. 6.138.1). In 499 Lemnos was seized by the Athenians (Hdt. 6.137–40; *IG* 1³ 552 *bis* and 1466 with Rausch (1999); the restoration of *IG* 1³ 518 is uncertain; see also Salomon (1997) 31–37), and thereafter the Lemnians were organised into the Kleisthenic tribes and demes (*IG* 1³ 522 *bis*, 1164–65 (C5s); *IG* XII suppl. 337 (C5e); cf. Jones, *POAG* 187–88). Colonists, however, though losing citizen rights in their metropolis, often copied its civic subdivision, and it seems likely that in C5 the Lemnians, though organised like the Athenians, were not Athenian citizens (Salomon (1997) 31–66), but in C5m they were probably supplemented with klerouchs (Graham (1983) 175–84, (2001) 325–26). For a brief period between 404 and 394/3, Lemnos was free of Athenian control; see Aeschin. 2.76; Andoc. 3.12. In C4, on the other hand, the Lemnians were indisputably Athenian klerouchs (*Agora* XIX L3 *passim*; Cargill (1995) 59–60) and Athenian citizens (Dem. 4.34). It is a moot point whether it is possible to distinguish between Athenian klerouchs and Athenians permanently settled on the island, as argued by Salomon (1997) 91–155.

In 480 a Lemnian ship defected from the Persian fleet (Hdt. 8.11.3). The Lemnians are recorded once in the *ATL* (*IG* 1³ 261.1.3 (452/1)). Thereafter all payments of *phoros* were made by the Hephastieis and the Myrinaioi separately (*infra*). By the Peace of 404 Athens had to surrender Lemnos (Andoc. 3.12; Aeschin. 2.76–77), but by 392, after a short period of independence (Andoc. 3.12, 14, which Salomon (1997) 63–66 sees, however, as in reality a Spartan hegemony, rejecting the standard interpretation of *IG* XII.8 2 of Myrina), the Athenians had regained control of the island (Xen. *Hell.* 4.8.15), and Athenian possession was confirmed by the King's Peace of 386 (Xen. *Hell.* 5.1.31). The grain law of 374/3 shows that Lemnos was an Athenian possession (*Hesperia* suppl. 29 5.6–8), in spite of the decision of 378/7 to renounce the klerouchies (Diod. 15.29.8). Lemnos was still Athenian in the 320s (Arist. *Ath. Pol.* 62.2; *IG* II² 3207.28; cf. Cargill (1995) 63–64) and remained Athenian by the Peace of 322 (Diod.

18.18.4; see Cargill (1995) 42–58). In C4 the Athenians seem to have had an archon on Lemnos (*Agora* xix L3.5 (387/6)), and from the 350s onwards they appointed a salaried *hipparchos eis Lemnon* (Arist. *Ath. Pol.* 61.6, 62.2; Dem. 4.26; Bugh (1988) 209–18).

In C4m the Lemnians struck bronze coins. Types: *obv.* bearded head of Zeus(?); *rev.* ram walking in incuse square; legend: *ΛΗΜΝΙ* (Head, *HN*² 262; Steinhardt (2000)).

502. Myrina (Myrinaios) Map 56. Lat. 39.50, long. 25.05. Size of territory: probably 3. Type: A. The toponym is *Μύρινα*, ἡ (Hecat. fr. 138c; Hyp. 2.18; *IG* II² 550.16; *SEG* 19 59 (307/6); *IG* XII.8 4.7, 12 (C4m)). The city-ethnic is *Μυριναῖος* (*IG* XII.8 2.8). Myrina is called a *polis* in the political sense by Hypereides at 2.18, and in the urban and political senses combined by Dionysios of Chalkis (*FGH* IV 393 fr. 2 (C4?)). The collective use of the ethnic is attested internally in a proxeny decree of c.400 (*IG* XII.8 2) and externally in the *ATL* (*IG* I³ 267.IV.30). The only attestation of the individual use is in a sepulchral inscription of C2: *Μυριναία* (*IG* II² 9975).

As an Athenian dependency Myrina is called ὁ δῆ[μος ὁ] Ἀθηναίων ὁ ἐ[ν Μυρίνῃ] οἰκῶν (*IG* XII.8 4.1–2 (C4m); cf. Cargill (1995) 13). In *IG* XII.8 2 ὁ δῆμος ὁ Μυριναίων (ll. 2–3, usually dated 404–394/3; see also *IG* XII.8 7.19 (C4)) granting a citizen of Akrothooi (no. 560) *proxenia* with *ateleia*; the standard view, that this represents a briefly independent Myrina, has been rejected by Salomon (1997) 63–66. In the Athenian tribute lists Myrina is listed as *Μυριναῖοι* (*IG* I³ 267.IV.30, etc.). All attestations of civic subdivisions copy Athens: citizens were organised into the Kleisthenic *phylai* and *demoi* (*IG* XII.8 5 (C4m); *IG* I³ 1164 (C5m)). Both when the Myrinaians were part of the Athenian state (*IG* XII.8 3–5 (C4m)) and when they were independent (*IG* XII.8 2 (c.400) and 7 (c.318–307)), decrees were proposed and carried by the *boule* and the *demos* presided over by an *epistates* (*IG* XII.8 5.5).

The Athenian siege of Myrina c.500 implies city walls (Hdt. 6.140.2). We hear of walls again in 307/6 (*IG* II² 550; cf. Maier (1959–61) no. 54). The urban centre which covered an area of c.25 ha lay on a peninsula outside modern Kastro. There are remains of an older acropolis wall in polygonal masonry; and the settlement was cut off from the island by a younger wall across the neck of the peninsula (Fredrich (1906a) 243–47; Sealey (1918–19) 159–60; cf. Lang (1996) 249). There were two sanctuaries of Artemis: one on the acropolis attested by remains (Fredrich (1906a) 246; see also Sealey (1918–19) 160–61) and boundary *horoi* (Segre (1932–33)

297–98 no. 5). An extra-mural sanctuary to Athena, probably as Selene, is attested by archaeological evidence from the Archaic period (Fredrich (1906a) 244, 246, identifying the archaeological remains as a temple associated with the Great Goddess; Archontidou-Arghyri (1994) 53; *BCH* 122 (1998) 912–13) and by *horoi* (Segre (1932–33) 294–97 no. 4 with Jeffery (1990) 299; *SEG* 45 1192, 40 745); archaeological evidence places its start in the Archaic period (Archontidou-Arghyri (1994); *BCH* 122 (1998) 912–13). Many decrees have been discovered at this sanctuary, which may well have been the Myrinaians' state archive and the goddess the protective deity (so Parker (1993); on Athena Lemnia, see further Steinhardt (2000)). Generally, see Archontidou-Arghyri (1994). A community of Chalkideans living in Myrina passed a decree honouring the Athenian *epimeletes* (*IG* XII.8 4 (after 348; see *SEG* 45 1182)).

Myrina struck bronze coins from C4f onwards. Types: *obv.* head of Athena; *rev.* owl; legend: *ΜΥΡΙ* (Head, *HN*² 263; for the date, see Kroll and Walker (1993) 179).

503. Hephaistia (Hephaistieus) Map 56. Lat. 39.55, long. 25.20. Size of territory: probably 3. Type: A. The toponym is *Ἡφαιστία*, ἡ (Hyp. 2.18; fr. 7, Sauppe; *IG* II² 1672.277 (329/8; *IG* XII.8 5.5)). The city-ethnic is *Ἡφαιστιεύς* (Hdt. 6.140.2) or (late) *Ἡφαιστιαῖος* (*IG* XII.8 28.13–14 (third century AD)). Hephaistia is called a *polis* in the political sense by Hypereides at 2.18, and in the urban and political senses combined by Dionysios of Chalkis (*FGH* IV 393 fr. 2 (C4?)). The collective use of the ethnic is attested internally on coins (*infra*) and externally in the *ATL* (*IG* I³ 267.IV.31). Individuals are described as ἐξ *Ἡφαιστίας* (*IG* II² 8826 (C4f)).

As an Athenian dependency Hephaistia is called τὸν [δῆμον τῶν Ἀθηναίων τῶν ἐν Ἡφαιστίαι] (*IG* XII.8 15.3–4 (C4s); cf. 26b), or just ὁ δῆμος ὁ ἐν Ἡφαιστίᾳ (Hyp. 2.18). In the *ATL* Hephaistia is listed as *Ἐφαιστιᾶς* (*IG* I³ 267.IV.31, etc.). All attestations of civic subdivisions copy Athens: citizens were organised into the Kleisthenic *phylai* and *demoi* (*IG* I³ 1477 (C5e); *SEG* 45 1181 (C4/C3e); *SEG* 45 1189 (C4)). A number of decrees concerning the Kabeireion were passed by the *demos* of the initiated (ὁ δῆμος τῶν τετελεσμένων). The organisation of the *ekklesia* is an exact copy of the Athenian *ekklesia* (*SEG* 45 1181, 1187, 1189; cf. Cargill (1995) 181–82). The eponymous official was an archon (*SEG* 45 1181 (c.300)).

The name of the *polis* derives from Hephaistos, who is said to have landed on Lemnos after Zeus threw him out of Olympos (Hom. *Il.* 1.593); in a late inscription Hephaistia is

called “the *polis* of Hephaistos” (*IG* xii.8 27.1–2). The Kabeireion, the sanctuary of the Dioskouroi, started in C8 and was in continuous use thereafter (Akousilaos (*FGrHist* 2) fr. 20; Pherekydes (*FGrHist* 3) fr. 48, etc.; see Accame (1941–43) for the inscriptions; Hemberg (1950) 160–70; Beschi (1994), *non videt*; cf. *SEG* 45 1194). Temples of Herakles and of course of Hephaistos are known (Fredrich (1906a) 251, 255; Sealey (1918–19) 168–69); the theatre is early Hellenistic (*TGR* ii. 244). A possible fort or settlement within the territory of the *polis* has been reported at Kaminia (Fredrich (1906a) 252–53). The famous Lemnian earth was mined here, though our earliest sources are late (Hasluck (1909–10)). In the territory of Hephaestia a number of *horoi* inscriptions have been found, all modelled on the Athenian *horoi* (Finley (1985) nos. 103–10; *SEG* 45 1185–91). Recent Italian excavations have revealed town walls probably of C4 or later (see E. Carando, *ASAtene* forthcoming; *AR* (2000–2001) 111; A. Di Vita, *ASAtene* (1998/2000) 386, for the opinion that the walls are Archaic, perhaps as old as C7). They enclosed an area of 31.6 ha (Lang (1996) 56).

Hephaestia struck bronze coins from C4f onwards. Types: *obv.* head of Athena in Corinthian helmet; *rev.* owl facing; legend: *ΗΦΑΙΣΤΙ* (Head, *HN*² 262; for the date, see Kroll and Walker (1993) 179).

504. Leros (Lerios) Map 61. Lat. 37.05, long. 26.50. Size of territory: 2 (53 km²). Type: C. The toponym is *Λέρος*, ἡ (Thuc. 8.26.1; Hdt. 5.125). The city-ethnic is *Λέριος* (Demodokos fr. 2.1–2, West; in Strabo 10.5.12 erroneously ascribed to Phokylides). The fragment runs: *καὶ τὸδε Δημοδόκου. Λέριοι κακοί. οὐχ ὁ μὲν, ὅς δ' οὐ. Πάντες, πλὴν Προκλέους—καὶ Προκλῆς Λέριος* (*Anth. Pal.* 11.235). If Prokles was the tyrant of Leros, as suggested by Manganaro (1963–64) 297, Leros was probably a tyrannically governed *polis* in C6, and *Λέριος* is a city-ethnic attested externally both collectively and individually. But, even so, it is far from clear whether Prokles was a creature of the Milesians (no. 854) or was overthrown by them, as has been suggested on the basis of Demodokos' verses (see Manganaro (1963–64) 297). A Milesian settlement on Leros, mentioned by Anaximenes in a list of Milesian colonies, cannot be closely dated and need not mean, as some have suggested, a Milesian *klerouchia* on Leros (*FGrHist* 72 fr. 26, from Strabo 14.1.6; Manganaro (1963–64) 297; N. Ehrhardt (1983) 16). Hekataios urged Aristagoras during the Ionian Revolt to fortify Leros as a refuge, lest he be expelled from Miletos (Hdt. 5.125); Leros may therefore have been a Milesian possession by c.495, or the circumstances of the

Revolt may have impelled the Milesians to take full control of the island. In any case the island was clearly Milesian by 454/3, when the Athenian tribute lists record payment by *Μιλέσιοι* [ἐ]χς *Λέρο* (*IG* I³ 259.vi.19–20; see *infra* 1085), who are probably to be regarded as citizens who stayed loyal to Athens after the Milesians revolted (Meiggs (1972) 112). The main settlement shows occupation from C6. There is, however, some dispute about its location (Bean and Cook (1957) 135; Benson (1963) 2–12, (1976) 501; Büchner (1925) 2095–96). At the north end of the island stood an extramural sanctuary dedicated to Parthenos and attested by C4l (Klytos of Miletos (*FGrHist* 490) fr. 1; Manganaro (1963–64) 306–8 no. 3.22–23: [ἐν τῶι ἱερ]ῶι τῆς Παρθένου ἐν [Λέρωι] (C3–C2); see 308–9 no. 4.9, where the expression appears in full; Benson (1963) 16–19); she was probably the protective deity. She is also mentioned as *Παρθένος Λερία* in a dedication found on Thera (*IG* xii.3 440). She has been identified as a type of Artemis (Manganaro (1963–64) 301; cf. Nikandros in *Anth. lib.* 2, *non videt*), but others see her as an indigenous goddess (Laumonier (1958) 550; see also N. Ehrhardt (1983) 149). Benson (1963) 12–13 believed he had identified remains of an Asklepieion. The fort or fortified settlement at Xerokambos starts only in C4 (Hope Simpson and Lazenby (1970) 54). See Gorman (2001) 49–51 for an overview. For the other so-called Milesian islands, see the Introduction.

505. Melos (Melios) Map 58. Lat. 36.45, long. 24.25. Size of territory: 3 (151 km²). Type: A. The toponym is *Μᾶλος* (*SEG* 20 716.29 (c.330); *I.Cret.* II xxiii 2.4 (C3)) or *Μῆλος*, ἡ (Thuc. 3.91.1; Isoc. 19.21; *IG* I³ 370.72, restored) denoting both the island and the town (Steph. Byz. 450.9–10). An alternative toponym is *Ζεφυρία* (Steph. Byz. 450.11; Plin. *HN* 4.70 = Arist. fr. 564). The city-ethnic is *Μάλιος* (*IvO* 272 = *CEG* I 419 (C61); *IG* xii.3 1259.6 Tod 179; Ager (1996) no. 3; Magnetto (1997) no. 1 (C48) or *Μῆλιος* (Thuc. 3.91.2; *IG* I³ 71.1.65; *I.Délos* 104.73 (364/3)) or *Μηλιάς* (*IG* II² 9356 (C4m)). Melos is called a *polis* both in the urban sense (Andoc. 4.23) and in the political sense (Thuc. 5.87, 91.2, 112.2). Isokrates describes Melos as a *polichnion* (12.98), perhaps as part of his effort to minimise the atrocities committed in C5 by the Athenians. The collective use of the city-ethnic is attested internally on some coins of C5 (*infra*) and on an inscription of C2 (*IG* xii.3 1097) and externally in inscriptions (ML 27.7 (479); *IG* xii.3 1259 (C4s) = Tod 179.6; Ager (1996) no. 3; Magnetto (1997) 1–8 no. 1) and in literary sources (Thuc. 5.84.3; Dem. 58.56). For the individual and external use, see *IvO* 272 (C61); *IG* II² 9356 (C4m); *IG* xii.5

801 (C3f)). The most famous Melians were the poet Melanippides, victorious in Athens in 494/3 (*JG* XII.5 444.61–62 = *FGrHist* 239 fr. 47), and Diagoras the Melian, condemned in Athens as *atheos* in 416/15; a price of 1 tal. was offered for his death (Ar. *Av.* 1073–74; *Lys.* 6.17; *Diod.* 13.6.7; see Woodbury (1965) and Janko (2001), (2002)). *Patris* is found in *Thuc.* 5.111.5.

Strabo, quoting Artemidoros, places Melos among the *Kyklades* (10.5.3). The Melians were allegedly colonists from Lakedaimon (no. 345) (*Hdt.* 8.48; *Thuc.* 5.84.2; *Xen. Hell.* 2.2.3; *Diod.* 12.65.2; cf. Malkin (1994) 74–76; Cartledge (2002) 93–94), and the Melians believed themselves that this colonisation took place 700 years before the Athenian attack in 416/15 (*Thuc.* 5.112.2; see Malkin (1994) 74–77). A C1 historian reports that the Milesians (no. 854) attacked Melos, perhaps in C8e or C7 (Konon (*FGrHist* 26) fr. 1.44); perhaps this event, if historical, should be associated with the Parian and Milesian struggles in the Archaic period (see 765 and 1084 *infra*). The Melians refused Persian demands to submit in 490, and supplied troops and two pentekonters to the war effort in 480 (*Hdt.* 8.46.4, 48); they are recorded on the Serpent Column in Delphi (*ML* 27.7) and also appear in the dedication at Olympia (*Paus.* 5.23.2; cf. *Hdt.* 9.81.1). The Melians, however, did not join the Delian League (*Thuc.* 2.9.4). They are recorded as having contributed to the Spartan war fund (*ML* 67.1–7, 13–17, with Loomis (1992), perhaps in the earlier phases of the Peloponnesian War, perhaps around 410–405 (so Piérart (1995)). At about the same time the Athenians ravaged the island (*Thuc.* 3.91.1–3 (426/5)) and soon thereafter added the Melians to the assessment for 425/4 (*JG* I³ 71.1.65) (15 tal.). Thucydides' description of the famous Athenian siege of 416/15 shows Melian troops active, often quite successfully, on the island in opposition to the Athenian invaders (5.84, 114.1–2, 115.4, 116.2–4), but the town was betrayed, and at defeat the Athenians killed the adult male citizens and subjected the rest of the population to *andropodismos* (*Thuc.* 5.116.4; cf. also *Isoc.* 12.63; *Andoc.* 4.22). Five hundred Athenian colonists were installed in 415 (*Thuc.* 5.116.4; see Figueira (1991) 220). A tombstone of C5l probably commemorates one of the Melian traitors who was afterwards rewarded with Athenian citizenship (*JG* XII.3 1187). It is to this period that most of our evidence about civic organisation dates (see Jones, *POAG* 214–15). The Spartans took Melos in 405 from the Athenians and allowed the population to return (*Xen. Hell.* 2.2.9; *Plut. Lys.* 14.4). In C4m Melos was a pirates' nest, and Athens had the Melians fined 10 tal. for harbouring the pirates (*Dem.* 58.56). Soon after 338 the Melians were involved in a dispute with the

Kimolians (no. 496) over the possession of the three small islands of Polyaiqa, Eteireia and Libeia. In accordance with a decision of the *synedrion* of the League of Corinth, the dispute was submitted to arbitration by Argos (no. 347), and the Argives decided in favour of Kimolos (*JG* XII.3 1259 = *Tod* 179; Ager (1996) no. 3; Magnetto (1997) 1–8 no. 1). C.330, in consequence of an offence committed by, among others, a Melian Olympic victor, the Melians, alongside a number of Peloponnesian *poieis*, paid damages to envoys sent from Kyrene (no. 1028) (*SEG* 20 716; for the context, see *SEG* 39 1717; for the date, see *SEG* 46 2198 p. 636).

The Aristotelian collection of *politeiai* seems to have included a Constitution of the Melians (fr. 564); but we know next to nothing about the Melian political institutions. In 416/15 Thucydides (5.84.4–86) notes the absence of a decision-making popular assembly (*τὸ πλῆθος*), combined with the presence of Melian magistrates (*ἀρχαί*) and a council (*σύνεδροι*) described as “the few” (*οἱ δλίγοι*). The presumption is that Melos was oligarchically governed; but we cannot tell whether that was the normal situation or the result of the Athenian attack. The betrayal of Melos to the Athenians in 416 testifies to a *stasis* between a pro-Athenian and an anti-Athenian faction (*Thuc.* 5.116.3). A Melian *proxenos* has been restored in a C4m inscription from Karthaia (*JG* XII.5 542.30, but dubiously).

The urban centre of Melos must have been fortified in 424, when the Athenians under Nikias attacked the island (*Thuc.* 3.91.1–3, 94.1; *Diod.* 12.65.3), but the walls mentioned in Thucydides' account were built by the Athenians as part of their operations; the isodomnic sections may represent repair and enhancement of a pre-existing (C6l–C5e?) wall in Lesbian/polygonal masonry (*Thuc.* 5.114.1, 115.4, 116.2; Cherry and Sparkes (1982), with further refs.; Wagstaff and Cherry (1982*b*) 261). The agora mentioned by Thucydides in the same context (5.115.4) may actually refer not to the Melians', but to a military agora serving the Athenian besiegers. However, Melos did have an agora in the Classical period, which has been identified archaeologically (Kenzler (1999) 112–13, with further refs.). A C6 inscription may attest to a cult of Athena (*JG* XII.3 1075 with Pontani (1937); Jeffery (1990) 320). A cult of Asklepios has been inferred for C4 (Semeria (1986) 954).

The Melian countryside appears to have supported a considerable number of settlements, some of which may have been large enough to be regarded as villages (Cherry (1982) 18 fig. 2.1, 22 fig. 2.6; Wagstaff and Cherry (1982*a*) 142–45). Growth of the urban centre to a maximum size of about 19 ha during the Classical period has been interpreted as

nucleation, perhaps in response to the Athenian conquest of 416/15 (so Snodgrass (1987–89) 60).

In C61 (c.515; Boutin (1986) 3) the Melians began to produce silver coins on the Milesian–Phoenician standard, although a stater on the Aiginetan standard has been attributed to the island (see Erxleben (1970) 72). (1) Silver, C6. Denomination: stater. Types: *obv.* ewer; legend: *MAAI*; *rev.* incuse square with diagonal bands. (2) Silver, C5. Denominations: stater, hemiobol. Types: *obv.* pomegranate with leaves; legend: *MAAI* (sometimes retrograde); *rev.* incuse square with diagonal bands; legend: *MA*. Some staters have *rev.* triskeles or crescent; legend: *MAAION*. (3) Silver on the Rhodian standard, C4. Denominations: didrachm, drachm. Types: *obv.* pomegranate (both denominations); *rev.* on didrachms: trident, or kantharos, or ram's head; legend: *MA*. On drachms: spearhead, or eagle on rock with crescent; legend: *MA*, or naked archer shooting (Head, *HN*² 486–87; Kraay (1976) 45–49; *SNG Cop. Aegean Islands* 679–89). A hoard of about 100 staters found on Melos in 1907 (*IGCH* 27) has been argued to reflect anxieties about possible Athenian attacks c.420 (Kraay (1964)).

The Melians colonised Kryassos in Karia, an event that cannot be closely dated (Plut. *Mor.* 246D–E; Polyae. 8.64; cf. Nigdelis (1990) 199; Malkin (1994) 76).

506. Mykonos (Mykonios) Map 61. Lat. 37.25; long. 25.20. Size of territory: 2 (86 km²). Type: A. The toponym is *Μύκονος*, ἡ (Aesch. *Pers.* 885; Hdt. 6.118.1; Eph. fr. 63; *I.Délos* 104.26 (364/3)). The city-ethnic is *Μυκόνιος* (Archil. fr. 124a; *IG XII.3* 251.9). Mykonos is attested as a *polis* in the urban sense in an inscription of C4–C3 (*Syll.*³ 1215.19) and appears under the heading *polis* used in the political sense in the so-called Charter of the Second Athenian Naval League (*IG II*² 43.32, 70, 78, B19) and in the accounts of the Delian *amphiktyones* (*I.Délos* 98.A11, B3 = *IG II*² 1635 (377–373)). Ps.-Skylax (58) calls Mykonos *dipolis*. We do not know anything more about these two *poleis* except that they merged completely in C3s; it is likely that they were always involved in a federation or that one was dependent on the other (*Syll.*³ 1024.3 (c.200): *ἄτε συνοικίσθησαν αἱ πόλεις*; cf. Reger (2001)). The collective use of the city-ethnic is attested internally in abbreviated form on coins of C4 (*infra*) and externally in the Athenian tribute lists (*IG I*³ 264.rv.8) and in Archilochos fr. 124a. For the individual and external use, see the C4 dedication by a Mykonian woman at Delos (*I.Délos* 52).

Strabo, citing Artemidoros, classes Mykonos with the Kyklades (10.5.3). There seem to be the remains of a sanctu-

ary at Leno, located south-east of the modern town. The locations of the two *polis* centres remain uncertain, although one is likely to have been at Palaiokastro and the other at the site of the modern town (see Reger (2001) 163–67).

Mykonos was subdued by Persia during the reign of Dareios (Aesch. *Pers.* 885; Hdt. 6.118.1). After Xerxes' invasion of Greece, Mykonos became a member of the Delian League. It belonged to the Island district and is recorded in the tribute lists from 452/1 (*IG I*³ 261.11.7) to 416/15 (*IG I*³ 289.1.28) a total of thirteen times, three times completely restored, paying a *phoros* of 1½ tal. in 452/1, reduced to 1 tal. (*IG I*³ 271.1.90) in 443/2 (*IG I*³ 269.v.23). It was assessed for tribute in 425/4 (*IG I*³ 71.1.75) (2 tal., restored). Mykonos also belonged in the 370s to the Second Athenian Naval League (*IG II*² 43.B.19). In C4 a citizen of Mykonos received *proxenia* from Anaphe (no. 474) (*IG XII.3* 251.8–11).

Bronze coins with the legend *MY* or *MYKO* and obverses often bearing the head of Dionysos are dated starting C4 by Head, *HN*² 487; see also Svoronos (1893)), but this may be too early (Reger (2001) 178–79).

507. Naxos (Naxios) Map 61. Lat. 37.05, long. 25.25. Size of territory: 4 (430 km²). Type: A. The toponym is *Νάξος*, ἡ (Aesch. *Pers.* 885; Hdt. 5.28; Ant. 1.16; *SEG* 19 204.A3 (c.375)), denoting both the island (Hdt. 5.31.2) and the town (Thuc. 1.137.2). The city-ethnic is *Νάξιος* (*I.Délos* 1.3 (c.600); *IG VII* 3225.1 (c.500); *IG I*³ 1357.3 = *CEG* 1.58 (510–500); Hdt. 8.46.3). Naxos is called a *polis* both in the urban sense (Hdt. 6.96; Arist. fr. 566, Gigon (rC6)) and in the political sense (Hdt. 5.30.1; Thuc. 1.98.4; *SEG* 12.390.6–7, 32, 44 (c.320); cf. *SEG* 30 1070). The territorial sense is attested at Hdt. 5.30.3–4. In the Delphic *naopoioi* accounts the Naxians appear as contributors in a list headed by the formula: *τάδε πόλεις καὶ ἰδιῶται ἐπάρξαντο* (*CID II* 4.1.14–16). The collective use of the city-ethnic is attested internally on coins of C4 (*infra*) and externally in inscriptions (ML 27.8 (479); *I.Délos* 98B.9 (377/6); *CID II* 4.1.16, 20, 21 (C4f)) and in literary sources (Archil. fr. 89.6, West; Hdt. 8.4.3; Thuc. 1.98.4; Arist. *Pol.* 1305^b1). The individual use is attested internally on a tombstone of C4–C3 (*IG XII.5* 67, but perhaps a *Pierre errante*) and externally in inscriptions from Delos of C7 (*I.Délos* 2), Athens of C61 (*IG I*³ 1357 = *CEG* 1.58), Delphi of C4f (*CID II* 4.1.20, 21, 24, 26), and Olympia of C4s (*Ivo* 651) and in literary sources (Hdt. 1.61.4; Arist. *Ath. Pol.* 15.2; *Oec.* 1346^b7; *Δύδαμυς Νάξιος*). *Patris* is found in Arist. fr. 558, Rose.

Naxos is the largest Kykladic island (Strabo 10.5.3). In the Archaic period some of the wealthy Naxians lived in the *asty*

and some in *komai*, of which one was called *Ληστάδαι* (Arist. fr. 566). Steph. Byz. claims that on Naxos there was a *polis* named *Νύσα* (479.9) and another named *Τραγία* (630.8), where a certain Tragios Apollo was worshipped; he cites Eupolis for the plural form *Τραγέαι* (PCG fr. 487), but it is not wholly clear whether the plural form denotes the *polis* on Naxos (in which case we have testimony for it from C5s) or the homonymous island (less likely). Herbst (1935) 2083 associates this sanctuary with a *horos* inscribed *ὄρος χωρίου ἱεροῦ Ἀπόλλωνος* (IG XII.5 43 (C4–C3?)); cf. also the remarks of F. Hiller von Gaertringen *apud* IG XII.5 50). An inscription of C4 gives the toponyms *ἐν Ἐλαιούντι* and *ἐν Μέλανι*, persuasively identified with modern Melanes, so rich in sanctuaries (IG XII suppl. 194.16 with Hiller von Gaertringen's comm. there, 14–15). *Πολίχνη* was a district on the east coast (IG XII.5 test. 1415). The famous Naxian marble quarries had been opened by C7 and continued to operate throughout the Archaic and Classical periods (Kokkorou-Aleura (1992); Brun (1997) 407–8).

Naxos was said to have been occupied first by Thracians and then by Karians from Mt. Latmos under the leadership of Naxos, son of Polemon (Diod. 5.50.2–7, 51.1–2 and 3–4; schol. Dionys. Per. 525, GGM II 451; Steph. Byz. 468.7–8). Later, Ionians from Athens colonised the island (Hdt. 8.46.3; Ael. VH 8.5; Paus. 7.3.3; Costa (1997) 51).

The Naxians played a predominant role in the central Aegean during the Archaic period; their activities left remains both in the decoration of Delos and in a continuing hostility to Paros (no. 509). The Naxians and the Parians fought on and off in C7f (cf. Kontoleon (1952) E2 col. I ll. 4–32 (SEG 15 517); Lanzillotta (1987) 71–88; Berranger (1992) 205–7; Costa (1997) 115–28); at least once, the Parians imposed a severe defeat on the Naxians (IG XII.5 445.54; the Parians). In C6s an oligarchy was followed by the tyranny of Lygdamis (Arist. *Pol.* 1305^a39–^b1) after a major *stasis* (Arist. fr. 566). Helped by “the Naxian man Lygdamis” (Hdt. 1.61.4), Peisistratos in turn installed Lygdamis as tyrant on Naxos (540–524) (Hdt. 1.61.3–4, 64.1–2; Arist. *Ath. Pol.* 15.2–3; Arist. *Oec.* 1346^b6–12; see also Ath. 348A–C; Costa (1996), (1997) 147–68). Lygdamis' tyranny was replaced by an oligarchy of *οἱ παχεῖς* (Hdt. 5.30.1)—established perhaps with assistance of the Spartans who overthrew him (Plut. *Mor.* 859D)—until it in turn was overthrown c.500 by the *demos* (E. W. Robinson (1997) 117–18) after a new *stasis* (Gehrke, *Stasis* 123–24); the oligarchs fled to Miletos (no. 854) and contributed to the outbreak of the Ionian Revolt against the Persians in 494 (Hdt. 5.30). The so-called list of thalassocracies in Eusebios (*Chronikon*, p. 226, Schoene; M. Miller

(1971) 5–6, 40–41) credits the Naxians with one in 515–505. Naxos was subdued by Persia during the reign of Dareios (Aesch. *Pers.* 885). In 499 the Naxians are said to have controlled Paros (no. 509), Andros (no. 475) and the other Cyclades around it (Hdt. 5.31.2; Paros doubted by Lanzillotta (1987) 105–6). Led by Aristagoras and Megabates, the Persians attacked Naxos, but the Naxians learned about their plans beforehand and prepared for a siege by completing their walls and storing food and water, and the operation failed (Hdt. 5.34). Nine years later in 490 another Persian force successfully took the island when the Naxians abandoned their city and fled into the mountains; the Persians burned the city and temples and exposed the inhabitants they captured to an *andrapodismos* (Hdt. 6.96; see Costa (1997) 171–80). The Naxian ships (four, five or six) under Persian authority at Salamis defected to the Greek side (Hdt. 8.46.3; cf. Aesch. *Pers.* 879–887; for the numbers, Hdt. 8.46.3, four; Hellanikos (*FGrHist* III B 323a) fr. 28, six; Ephor. fr. 187, five, both cited at Plut. *Mor.* 869A).

The Naxians joined the Delian League in the summer of 477 as a *πόλις συμμαχίς*, contributing ships (Thuc. 1.98.4, 99). Naxos belonged to the Island district and is recorded in the tribute lists from 450/49 (IG I³ 263.iv.35, restored) to 416/15 (IG I³ 289.i.27) a total of eleven times, three times completely restored, paying a *phoros* of 6 tal., 4,000 dr. (IG I³ 264.iii.25), raised to 9 tal. in or before 417/16 (IG I³ 288.i.4). It was assessed for tribute in 425/4 (IG I³ 71.1.63) (15 tal.). C.475–470 (Rhodes (1985) 12–13) Naxos defected from the League but was reduced after a siege (Thuc. 1.98.4, 137.2; Polyae. *Strat.* 1.30.8). In 453–448, 500 Athenian klerouchs were settled on Naxos (Plut. *Per.* 11.5–6; Diod. 11.88.3; Paus. 1.27.5; Pl. *Euthphr.* 4C; Aeschin. 2.175; cf. Figueira (1991) 220). In C4e Naxos was allied with Sparta (no. 345), and in 376 an Athenian squadron under Chabrias laid siege to the city and defeated the Lakedaimonian auxiliary squadron in a major sea battle fought between Naxos and Paros (Diod. 15.34.3–5; SEG 19 204). Thereafter the Naxians may have joined the Second Athenian Naval League in the 370s (*I.Délos* 98.B9 = IG II² 1635.119; cf. Dreher (1995) 219 with 137–38), but they are not recorded among the members listed in IG II² 43. They struck a treaty with Athens some time before 353/2 (IG II² 179 with Gauthier (1972) 168, 331). In 345/4 the Naxians awarded the Athenian *demos* a crown (IG II² 1443.114).

Naxian military prowess is relatively well attested. The war with the Milesians (C6?), recorded in two different traditions, by Plutarch (*Mor.* 254B–F, probably based on the Aristotelian Constitution of Naxos (fr. 567.1)) and Parthenios, probably following Andriskos (*FGrHist* 500 fr.

1.9), involved a siege in which the Naxians were locked up within the city walls and an expedition against the besiegers by Naxian forces. Polykrates the Samian tyrant borrowed troops from Lygdamis to secure his tyranny (Polyaen. *Strat.* 1.23.2). The Constitution of Naxos mentioned a *strategia* of Lygdamis (fr. 566), and the Naxians are said to have been able to muster 8,000 hoplites and “many big ships” in 499 (Hdt. 5.30.4); a few years later they manned several triremes for the invasion of Greece (Hdt. 8.46.3; on the number, cf. *supra*).

The Aristotelian collection of constitutions included a *Ναξίων πολιτεία* (fr. 566). In C4l decrees were passed by the *boule* and/or the *demos* (SEG 33 676.5–6, 10 (c.300)). They were published by the *grammateus* of the *boule*, and set up in the sanctuary of Apollo at the expense of a board of *tamiai* (Matthaiou (1990–91) 114). In C2 the eponymous official was the priest of Dionysos (IG XII.5 128.23 in add. p. 308), but an inscription from Arkesine on Amorgos of 325–275 is dated by a board of *aisymnontes* (IG XII.7 67B.36 = Migeotte (1984) 168–77 no. 49)). A court in Naxos ([δικασ]τήριον) is mentioned in the C4f treaty between Athens (no. 361) and Naxos (IG II² 179.9). Naxos granted *proxenia* to a citizen of Megaran (no. 225) (SEG 33 676 (c.300)), and five Naxians received *proxenia* and citizenship from Chios (no. 840) (SEG 12 390.2, 27, 49–54 (c.320); cf. SEG 30 1070).

The protective deity was Dionysos (so the coins, see *infra*; Diod. 3.66.1, 4.61.5, 5.52; Plut. *Thes.* 20.1; Plut. *Mor.* 741A), who appears both without an epithet (IG XII.5 45 (C5–C4)) and as Dionysos Meilichios and Dionysos Bakcheus (Ath. 78C, quoting the local historians Aglaosthenes (FGrHist 499) fr. 4. and Andriskos (FGrHist 500) fr. 3 (both C4s–C3f)). Ananios, however, speaks of Apollo who “has” (ἔχεις) Naxos (Ananios fr. 1.2, West; cf. *Hymn. Hom. Ap.* 44; IG XII.5 42 (C6–C5), 43 (C4–C3); and see the Delion of C6, *supra*). We hear in C4 also of Athena Poliouchos (IG XII.5 41), Athena without an epithet (IG XII.5 40 (C6–C5)) and a sanctuary of the Kabeiroi (SEG 25 939). Other communal cults include Zeus Melosios (IG XII.5 48 (C4); cf. Herbst (1935) 2082–83), Zeus Euboulos (IG XII suppl. 196 (C4), with Matthaiou (1992–98a), Zeus Olympios (IG XII.5 49 (date not clear)), and Zeus Stratios (IG XII.5 50 (date not clear)); Demeter and Kore (IG XII suppl. 196 (C4), with Matthaiou (1992–98a); Demeter Hadreus (Lambrinoudakis (1979) 252–54); Poseidon Helikonios (SEG 36 761 (C5–C4); cf. SEG 45 1138); the Nymphai Mychieis (IG XII.5 53 (C4)); and Hestia (Plut. *Mor.* 254B (C6)). Only three Naxian months are attested: Ekatombaion, Kronion and Artemision (IG

XII.7 67B.36 = Migeotte (1984) no. 49 (325–275); IG XII.5 45 (C4?); IG XII.5 38.2 (C1); see Trümpy, *Monat.* 72–73 and Loukopoulou (1989) 119).
